Medicare Program; CY 2021 Payment Policies Under the Physician Fee Schedule and Other Changes to Part B Payment Policies; Medicare Shared Savings Program Requirements; Medicaid Promoting Interoperability Program Requirements for Eligible Professionals; Quality Payment Program; Coverage of Opioid Use Disorder Services Furnished by Opioid Treatment Programs; Medicare Enrollment of Opioid Treatment Programs; Electronic Prescribing for Controlled Substances for a Covered Part D Drug; Payment for Office/Outpatient Evaluation and Management Services; Hospital IQR Program; Establish New Code Categories; Medicare Diabetes Prevention Program (MDPP) Expanded Model Emergency Policy; Coding and Payment for Virtual Check-in Services Interim Final Rule Policy; Coding and Payment for Personal Protective Equipment (PPE) Interim Final Rule Policy; Regulatory Revisions in Response to the Public Health Emergency (PHE) for COVID–19; and Finalization of Certain Provisions from the March 31st, May 8th and September 2nd Interim Final Rules in Response to the PHE for COVID–19

AGENCY: Centers for Medicare & Medicaid Services (CMS), Health and Human Services (HHS).

ACTION: Final rule and interim final rule.

SUMMARY: This major final rule addresses: Changes to the physician fee schedule (PFS); other changes to Medicare Part B payment policies to ensure that payment systems are updated to reflect changes in medical practice, relative value of services, and changes in the statute; Medicare Shared Savings Program requirements; Medicaid Promoting Interoperability Program requirements for Eligible Professionals; updates to the Quality Payment Program; Medicare coverage of opioid use disorder services furnished by opioid treatment programs; Medicare enrollment of Opioid Treatment Programs; payment for office/outpatient

evaluation and management services; Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D drug under a prescription drug plan or an MA–PD plan and Medicare Diabetes Prevention Program (MDPP) expanded model Emergency Policy. This final rule also finalizes certain provisions of the interim final rules with comment period that CMS issued on March 31, 2020, May 8, 2020 and September 2, 2020 in response to the Public Health Emergency (PHE) for the Coronavirus Disease 2019 (COVID–19). This rule also establishes coding and payment for virtual check-in services and for personal protective equipment (PPE) on an interim final basis.

DATES: *Effective Date:* The regulations in the final rule are effective on January 1, 2021.

Applicability date: The policies in this final rule are applicable on January 1, 2021, except as follows:

(1) The revisions to 42 CFR 400.200 and 425.611(b)(1)(ii) are applicable retroactively to the start of the PHE for COVID–19 on January 27, 2020. (See discussions in sections II.J. and III.G.5.d.(2) of this final rule, respectively.)

(2) The revisions to 42 CFR 425.400(c)(2) are applicable retroactively for the performance year starting on January 1, 2020. (See discussion in section III.G.5.e.(3) of this final rule.)

Comment date: Comments will be accepted/considered ONLY on the “Interim Final Rule with Comment Period for Coding and Payment of Virtual Check-in Services” contained in section II.D. of the preamble of this document and “Interim Final Rule with Comment Period for Coding and Payment for Personal Protective Equipment (PPE)” contained in section II.H. of the preamble of this document. To be assured consideration, comments must be received at one of the addresses provided below, no later than 5 p.m. on February 1, 2021.

ADDRESSES: In commenting, please refer to file code CMS–1734–IFC.

Comments, including mass comment submissions, must be submitted in one of the following three ways (please choose only one of the ways listed):

1. *Electronically.* You may submit electronic comments on this regulation to <http://www.regulations.gov>. Follow the “Submit a comment” instructions.

2. *By regular mail.* You may mail written comments to the following address ONLY:

Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–

1734–IFC, P.O. Box 8016, Baltimore, MD 21244–8016.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments to the following address ONLY:

Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1734–IFC, Mail Stop C4–26–05, 7500 Security Boulevard, Baltimore, MD 21244–1850.

FOR FURTHER INFORMATION CONTACT:

Jamie Hermansen, (410) 786–2064, for any issues not identified below.

Michael Soracoe, (410) 786–6312, for issues related to practice expense, work RVUs, conversion factor, PFS specialty-specific impacts, and the interim final rule with comment period for coding and payment for PPE.

Larry Chan, (410) 786–6864, for issues related to potentially misvalued services under the PFS.

Emily Yoder, (410) 786–1804, Donta Henson, (410) 786–1947, and Patrick Sartini, (410) 786–9252, for issues related to telehealth, other services involving communications technology, and interim final rule with comment period for coding and payment of virtual check-in services.

Liane Grayson, (410) 786–6583, for issues related to care management services and remote physiologic monitoring services.

Emily Yoder, (410) 786–1804, Christiane LaBonte, (410) 786–7237, Ann Marshall, (410) 786–3059, and Patrick Sartini, (410) 786–9252, for issues related to payment for office/outpatient evaluation and management visits.

Christiane LaBonte, (410) 786–7237, and Cindy Bergin, (401) 786–1176, for issues related to teaching physician services.

Roberta Epps, (410) 786–4503, and Regina Walker-Wren, (410) 786–9160, for issues related to supervision of diagnostic tests.

Ann Marshall, (410) 786–3059, for issues related to incident to pharmacist services.

Gift Tee, (410) 786–9316, for issues related to therapy services.

Sarah Leipnik, (410) 786–3933, for issues related to medical record documentation.

Lindsey Baldwin, (410) 786–1694 and Terry Simananda, (410) 786–8144, for issues related to Medicare coverage of opioid use disorder treatment services furnished by opioid treatment programs.

Laura Ashbaugh, (410) 786–1113, for issues related to Clinical Laboratory Fee

Schedule: Revised Data Reporting Period and Phase-in of Payment Reductions

Joseph Schultz, (410) 786–2656, for issues related to opioid treatment program provider enrollment regulation updates for institutional claim submissions.

Lisa Parker, (410) 786–4949, for issues related to RHCs and FQHCs, primary care management services, and the FQHC market basket.

Rachel Katonak, (410) 786–8564, or JoAnna Baldwin (410) 786–7205, for issues related to comprehensive screenings for seniors: Section 2002 of the Substance Use-Disorder Prevention that Promote Opioid Recovery and Treatment for Patients and Communities Act (SUPPORT Act).

David Koppel, (303) 844–2883, or Elizabeth LeBreton (202) 615–3816 for issues related to the Medicaid Promoting Interoperability Program.

Fiona Larbi, (410) 786–7224, or Sabrina Ahmed, (410) 786–7499, for issues related to the Medicare Shared Savings Program (Shared Savings Program) Quality performance standard, quality reporting requirements and finalization of Shared Savings Program provisions from the March 31st COVID–19 IFC.

Janae James, (410) 786–0801, or Elizabeth November, (410) 786–4518, or SharedSavingsProgram@cms.hhs.gov, for issues related to Shared Savings Program beneficiary assignment, repayment mechanism requirements, and finalization of Shared Savings Program provisions from the May 8th COVID–19 IFC.

Cheryl Gilbreath, (410) 786–5919, for issues related to home infusion therapy benefit.

Heather Hostetler, (410) 786–4515 for issues related to removal of selected national coverage determinations.

Joella Roland, (410) 786–7638, for issues related to requirement for electronic prescribing for controlled substances for a covered Part D drug under a prescription drug plan or an MA–PD plan.

Edmund Kasaitis, (410) 786–0477, for issues related to Part B drug payment and Food Drug & Cosmetic Act section 505(b)(2) drug products.

Elizabeth Holland, (410) 786–1309, for issues related to updates to certified electronic health record technology due to the 21st Century Cures Act.

Julia Venanzi, (410) 786–1471, for issues related to the Hospital Inpatient Quality Reporting (IQR) Program.

Cynthia Hake, (410) 786–3404, for issues related to HCPCS Level II codes.

Amanda Rhee, (410) 786–3888, for the Medicare Diabetes Prevention Program

(MDPP) expanded model emergency policy.

Molly MacHarris, (410) 786–4461, for inquiries related to Merit-based Incentive Payment System (MIPS).

Brittany LaCouture, (410) 786–0481, for inquiries related to Alternative Payment Models (APMs).

Patricia Taft, (410) 786–4561, for issues related to the Physician Self-Referral Law: Annual Update to the List of CPT/HCPCS Codes.

SUPPLEMENTARY INFORMATION:

Inspection of Public Comments: All comments received before the close of the comment period are available for viewing by the public, including any personally identifiable or confidential business information that is included in a comment. We post all comments received before the close of the comment period on the following website as soon as possible after they have been received: <http://www.regulations.gov>. Follow the search instructions on that website to view public comments. CMS will not post on *Regulations.gov* public comments that make threats to individuals or institutions or suggest that the individual will take actions to harm the individual. CMS continues to encourage individuals not to submit duplicative comments. We will post acceptable comments from multiple unique commenters even if the content is identical or nearly identical to other comments.

Addenda Available Only Through the internet on the CMS website: The PFS Addenda along with other supporting documents and tables referenced in this final rule are available on the CMS website at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html>. Click on the link on the left side of the screen titled, “PFS Federal Regulations Notices” for a chronological list of PFS **Federal Register** and other related documents. For the CY 2021 PFS final rule, refer to item CMS–1734–F. Readers with questions related to accessing any of the Addenda or other supporting documents referenced in this final rule and posted on the CMS website identified above should contact Jamie Hermansen at (410) 786–2064.

Applicable Federal

Acquisition Regulations (FAR) and Defense Federal Acquisition Regulations (DFAR) apply.

I. Executive Summary

A. Purpose

This major final rule revises payment policies under the Medicare PFS and makes other policy changes, including to the implementation of certain provisions of the Bipartisan Budget Act of 2018 (BBA of 2018) (Pub. L. 115–123, February 9, 2018) and the Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment (SUPPORT) for Patients and Communities Act (the SUPPORT Act) (Pub. L. 115–271, October 24, 2018), related to Medicare Part B payment. In addition, this final rule includes provisions related to other payment policy changes that are addressed in sections III. and IV. of this final rule.

We are issuing an interim final rule with comment period (IFC) to establish coding and payment for virtual check-in services to support the continuing need for coding and payment to reflect the provision of lengthier audio-only services outside of the PHE for COVID–19, if not as substitutes for in-person services, then as a tool to determine whether an in-person visit is needed, particularly as beneficiaries may still be cautious about exposure risks associated with in-person services. We are also issuing an interim final rule with comment period to establish coding and payment for PPE as a bundled service and certain supply pricing increases in recognition of the increased market-based costs for certain types of PPE.

1. Summary of the Major Provisions

The statute requires us to establish payments under the PFS based on national uniform relative value units (RVUs) that account for the relative resources used in furnishing a service. The statute requires that RVUs be established for three categories of resources: Work; practice expense (PE); and malpractice (MP) expense. In addition, the statute requires that we establish by regulation each year’s payment amounts for all physicians’ services paid under the PFS, incorporating geographic adjustments to reflect the variations in the costs of furnishing services in different geographic areas.

In this major final rule, we are establishing RVUs for CY 2021 for the PFS to ensure that our payment systems are updated to reflect changes in medical practice and the relative value of services, as well as changes in the statute. This final rule also includes

discussions and provisions regarding several other Medicare Part B payment policies.

Specifically, this final rule addresses:

- Practice Expense RVUs (section II.B.)
- Potentially Misvalued Services Under the PFS (section II.C.)
- Telehealth and Other Services Involving Communications Technology, and the Interim Final Rule with Comment Period for Coding and Payment for Virtual Check-in Services (section II.D.)
- Care Management Services and Remote Physiologic Monitoring Services (section II.E.)
- Refinements to Values for Certain Services to Reflect Revisions to Payment for Office/Outpatient Evaluation and Management (E/M) Visits and Promote Payment Stability during the PHE for COVID-19 (section II.F.)
- Scopes of Practice and Related Issues (section II.G.)
- Valuation of Specific Codes, and the Interim Final rule with Comment Period for Coding and Payment for Personal Protective Equipment (PPE) (section II.H.)
- Modifications related to Medicare Coverage for Opioid Use Disorder (OUD) Services Furnished by Opioid Treatment Programs (OTPs) (section II.I.)
- Technical Correction to the Definition of Public Health Emergency (section II.J.)
- Clinical Laboratory Fee Schedule (section III.A.)
- Opioid Treatment Program Provider Enrollment Regulation Updates for Institutional Claim Submissions (section III.B.)
- Payment for Primary Care Management Services in RHCs and FQHCs (section III.C.)
- Changes to the Federally Qualified Health Center Prospective Payment System (FQHC PPS) for CY 2021: Rebasings and Revising of the FQHC Market Basket (section III.D.)
- Comprehensive Screenings for Seniors: Section 2002 of the Substance Use-Disorder Prevention that Promote Opioid Recovery and Treatment for Patients and Communities Act (SUPPORT Act) (section III.E.)
- Medicaid Promoting Interoperability Program Requirements for Eligible Professionals (EPs) (section III.F.)
- Medicare Shared Savings Program (section III.G.)
- Notification of Infusion Therapy Options Available Prior to Furnishing Home Infusion Therapy Services (section III.H.)
- Modifications to Quality Reporting Requirements and Comment

Solicitation on Modifications to the Extreme and Uncontrollable Circumstances Policy for Performance Year 2020 (section III.I.)

- Removal of Selected National Coverage Determinations (section III.J.)
- Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D drug under a prescription drug plan or an MA-PD plan (section III.K.)
- Medicare Part B Drug Payment for Drugs Approved Through the Pathway Established Under Section 505(b)(2) of the Food, Drug, and Cosmetic Act (section III.L.)
- Updates to Certified Electronic Health Record Technology Requirements in the Promoting Interoperability Program, Quality Payment Program, and Hospital Inpatient Quality Reporting Program due to the 21st Century Cures Act (section III.M.)
- Establishing New Code Categories (section III.N.)
- Medicare Diabetes Prevention Program (MDPP) expanded model emergency policy (section III.O.)
- Updates to the Quality Payment Program (section IV.)
- Physician Self-Referral Law: Annual Update to the List of CPT/HCPCS Codes (section V.)
- Waiver of Delay in Effective Date for this Final Rule (section VI.)
- Collection of Information Requirements (section VII.)
- Regulatory Impact Analysis (section VIII.)

2. Provisions Related to the PHE for COVID-19

The United States is currently responding to an outbreak of respiratory disease caused by a novel (new) coronavirus. This virus has been named “severe acute respiratory syndrome coronavirus 2” (“SARS-CoV-2”), and the disease it causes has been named “coronavirus disease 2019” (“COVID-19”). On January 31, 2020, the Secretary determined that a PHE existed nationwide as a result of the consequences of the COVID-19 pandemic (hereafter referred to as the PHE for COVID-19). On March 13, 2020, President Trump declared the COVID-19 pandemic a national emergency. Effective, October 23, 2020, the Secretary renewed the January 31, 2020 determination that a PHE exists and has existed since January 27, 2020. (Note: This declaration was previously renewed on April 21, 2020 and July 25, 2020.)

As the healthcare community continues to establish and implement recommended infection prevention and

control practices, regulatory agencies operating under appropriate waiver authority during the PHE for COVID-19 are also working to revise and implement regulations that support these healthcare community infection prevention and treatment practices. We addressed some of these regulations in three previous interim final rules with comment period (IFCs):

- The “Medicare and Medicaid Programs; Policy and Regulatory Revisions in Response to the COVID-19 Public Health Emergency” IFC appeared in the April 6, 2020 **Federal Register** (85 FR 19230) with an effective date of March 31, 2020 (hereafter referred to as the “March 31st COVID-19 IFC”);
- The “Medicare and Medicaid Programs, Basic Health Program, and Exchanges; Additional Policy and Regulatory Revisions in Response to the COVID-19 Public Health Emergency and Delay of Certain Reporting Requirements for the Skilled Nursing Facility Quality Reporting Program” IFC appeared in the May 8, 2020 **Federal Register** (85 FR 27550) with an effective date of May 8, 2020 (hereafter referred to as the “May 8th COVID-19 IFC”); and
- The “Medicare and Medicaid Programs, Clinical Laboratory Improvement Amendments (CLIA), and Patient Protection and Affordable Care Act; Additional Policy and Regulatory Revisions in Response to the COVID-19 Public Health Emergency” IFC appeared in the September 2, 2020 **Federal Register** (85 FR 54820) with an effective date of September 2, 2020 (hereinafter referred to as the “September 2nd COVID-19 IFC”).

In this final rule, we are finalizing certain provisions of the March 31st, May 8th, and September 2nd COVID-19 IFCs.

We indicated in the CY 2021 PFS proposed rule (85 FR 50140 and 50147) our intent that for certain provisions of the March 31st, May 8th, and September 2nd COVID-19 IFCs, we would respond to comments received in this final rule. In this final rule, we are responding to public comments and finalizing certain provisions of the March 31st, May 8th, and September 2nd COVID-19 IFCs.

3. Summary of Costs and Benefits

We have determined that this final rule is economically significant. For a detailed discussion of the economic impacts, *see* section VIII. of this final rule.

4. Waiver of the 60-Day Delay in Effective Date for the Final Rule

The United States is responding to an outbreak of respiratory disease caused by a novel (new) coronavirus that has now been detected in more than 190

locations internationally, including in all 50 States and the District of Columbia. The virus has been named “SARS CoV 2” and the disease it causes has been named “Coronavirus disease 2019” (abbreviated “COVID-19”).

Due to the significant devotion of resources to the COVID-19 response, as discussed in section VI. of the preamble of this final rule, we are hereby waiving the 60-day delay in the effective date for this final rule as proposed, and replacing it with a 30-day delay in the effective date for this final rule.

II. Summary of the Proposed Provisions, Analysis of and Response to Public Comments, and the Provisions of the Final Rule for the PFS

A. Background

Since January 1, 1992, Medicare has paid for physicians’ services under section 1848 of the Social Security Act (the Act), “Payment for Physicians’ Services.” The PFS relies on national relative values that are established for work, practice expense (PE), and malpractice (MP), which are adjusted for geographic cost variations. These values are multiplied by a conversion factor (CF) to convert the relative value units (RVUs) into payment rates. The concepts and methodology underlying the PFS were enacted as part of the Omnibus Budget Reconciliation Act of 1989 (Pub. L. 101–239, enacted on December 19, 1989) (OBRA ’89), and the Omnibus Budget Reconciliation Act of 1990 (Pub. L. 101–508, enacted on November 5, 1990) (OBRA ’90). The final rule published in the November 25, 1991 **Federal Register** (56 FR 59502) set forth the first fee schedule used for payment for physicians’ services.

We note that throughout this final rule, unless otherwise noted, the term “practitioner” is used to describe both physicians and nonphysician practitioners (NPPs) who are permitted to bill Medicare under the PFS for the services they furnish to Medicare beneficiaries.

1. Development of the RVUs

a. Work RVUs

The work RVUs established for the initial fee schedule, which was implemented on January 1, 1992, were developed with extensive input from the physician community. A research team at the Harvard School of Public Health developed the original work RVUs for most codes under a cooperative agreement with the Department of Health and Human Services (HHS). In constructing the code-specific vignettes used in determining the original physician work

RVUs, Harvard worked with panels of experts, both inside and outside the federal government, and obtained input from numerous physician specialty groups.

As specified in section 1848(c)(1)(A) of the Act, the work component of physicians’ services means the portion of the resources used in furnishing the service that reflects physician time and intensity. We establish work RVUs for new, revised and potentially misvalued codes based on our review of information that generally includes, but is not limited to, recommendations received from the American Medical Association/Specialty Society Relative Value Scale Update Committee (RUC), the Health Care Professionals Advisory Committee (HCPAC), the Medicare Payment Advisory Commission (MedPAC), and other public commenters; medical literature and comparative databases; as well as a comparison of the work for other codes within the Medicare PFS, and consultation with other physicians and health care professionals within CMS and the federal government. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters, and the rationale for their recommendations. In the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329), we discussed a variety of methodologies and approaches used to develop work RVUs, including survey data, building blocks, crosswalk to key reference or similar codes, and magnitude estimation. More information on these issues is available in that rule.

b. Practice Expense RVUs

Initially, only the work RVUs were resource-based, and the PE and MP RVUs were based on average allowable charges. Section 121 of the Social Security Act Amendments of 1994 (Pub. L. 103–432, enacted on October 31, 1994), amended by section 1848(c)(2)(C)(ii) of the Act and required us to develop resource-based PE RVUs for each physicians’ service beginning in 1998. We were required to consider general categories of expenses (such as office rent and wages of personnel, but excluding MP expenses) comprising PEs. The PE RVUs continue to represent the portion of these resources involved in furnishing PFS services.

Originally, the resource-based method was to be used beginning in 1998, but section 4505(a) of the Balanced Budget Act of 1997 (Pub. L. 105–33, enacted on August 5, 1997) (BBA ’97) delayed implementation of the resource-based PE RVU system until January 1, 1999. In

addition, section 4505(b) of the BBA ’97 provided for a 4-year transition period from the charge-based PE RVUs to the resource-based PE RVUs.

We established the resource-based PE RVUs for each physicians’ service in the November 2, 1998 final rule (63 FR 58814), effective for services furnished in CY 1999. Based on the requirement to transition to a resource-based system for PE over a 4-year period, payment rates were not fully based upon resource-based PE RVUs until CY 2002. This resource-based system was based on two significant sources of actual PE data: The Clinical Practice Expert Panel (CPEP) data; and the AMA’s Socioeconomic Monitoring System (SMS) data. These data sources are described in greater detail in the CY 2012 PFS final rule with comment period (76 FR 73033).

Separate PE RVUs are established for services furnished in facility settings, such as a hospital outpatient department (HOPD) or an ambulatory surgical center (ASC), and in nonfacility settings, such as a physician’s office. The nonfacility RVUs reflect all of the direct and indirect PEs involved in furnishing a service described by a particular HCPCS code. The difference, if any, in these PE RVUs generally results in a higher payment in the nonfacility setting because in the facility settings some resource costs are borne by the facility. Medicare’s payment to the facility (such as the outpatient prospective payment system (OPPS) payment to the HOPD) would reflect costs typically incurred by the facility. Thus, payment associated with those specific facility resource costs is not made under the PFS.

Section 212 of the Balanced Budget Refinement Act of 1999 (Pub. L. 106–113, enacted on November 29, 1999) (BBRA) directed the Secretary of Health and Human Services (the Secretary) to establish a process under which we accept and use, to the maximum extent practicable and consistent with sound data practices, data collected or developed by entities and organizations to supplement the data we normally collect in determining the PE component. On May 3, 2000, we published the interim final rule (65 FR 25664) that set forth the criteria for the submission of these supplemental PE survey data. The criteria were modified in response to comments received, and published in the **Federal Register** (65 FR 65376) as part of a November 1, 2000 final rule. The PFS final rules published in 2001 and 2003, respectively, (66 FR 55246 and 68 FR 63196) extended the period during which we would accept

these supplemental data through March 1, 2005.

In the CY 2007 PFS final rule with comment period (71 FR 69624), we revised the methodology for calculating direct PE RVUs from the top-down to the bottom-up methodology beginning in CY 2007. We adopted a 4-year transition to the new PE RVUs. This transition was completed for CY 2010. In the CY 2010 PFS final rule with comment period, we updated the practice expense per hour (PE/HR) data that are used in the calculation of PE RVUs for most specialties (74 FR 61749). In CY 2010, we began a 4-year transition to the new PE RVUs using the updated PE/HR data, which was completed for CY 2013.

c. Malpractice RVUs

Section 4505(f) of the BBA '97 amended section 1848(c) of the Act to require that we implement resource-based MP RVUs for services furnished on or after CY 2000. The resource-based MP RVUs were implemented in the PFS final rule with comment period published November 2, 1999 (64 FR 59380). The MP RVUs are based on commercial and physician-owned insurers' MP insurance premium data from all the states, the District of Columbia, and Puerto Rico.

d. Refinements to the RVUs

Section 1848(c)(2)(B)(i) of the Act requires that we review RVUs no less often than every 5 years. Prior to CY 2013, we conducted periodic reviews of work RVUs and PE RVUs independently. We completed 5-year reviews of work RVUs that were effective for calendar years 1997, 2002, 2007, and 2012.

Although refinements to the direct PE inputs initially relied heavily on input from the RUC Practice Expense Advisory Committee (PEAC), the shifts to the bottom-up PE methodology in CY 2007 and to the use of the updated PE/HR data in CY 2010 have resulted in significant refinements to the PE RVUs in recent years.

In the CY 2012 PFS final rule with comment period (76 FR 73057), we finalized a proposal to consolidate reviews of work and PE RVUs under section 1848(c)(2)(B) of the Act and reviews of potentially misvalued codes under section 1848(c)(2)(K) of the Act into one annual process.

In addition to the 5-year reviews, beginning for CY 2009, CMS and the RUC identified and reviewed a number of potentially misvalued codes on an annual basis based on various identification screens. This annual review of work and PE RVUs for

potentially misvalued codes was supplemented by the amendments to section 1848 of the Act, as enacted by section 3134 of the Affordable Care Act, that require the agency to periodically identify, review and adjust values for potentially misvalued codes.

e. Application of Budget Neutrality to Adjustments of RVUs

As described in section VIII. of this final rule, the Regulatory Impact Analysis, in accordance with section 1848(c)(2)(B)(ii)(II) of the Act, if revisions to the RVUs cause expenditures for the year to change by more than \$20 million, we make adjustments to ensure that expenditures do not increase or decrease by more than \$20 million.

2. Calculation of Payments Based on RVUs

To calculate the payment for each service, the components of the fee schedule (work, PE, and MP RVUs) are adjusted by geographic practice cost indices (GPCIs) to reflect the variations in the costs of furnishing the services. The GPCIs reflect the relative costs of work, PE, and MP in an area compared to the national average costs for each component. Please refer to the CY 2020 PFS final rule for a discussion of the last GPCI update (84 FR 62615 through 62623).

RVUs are converted to dollar amounts through the application of a CF, which is calculated based on a statutory formula by CMS' Office of the Actuary (OACT). The formula for calculating the Medicare PFS payment amount for a given service and fee schedule area can be expressed as:

$$\text{Payment} = [(\text{RVU work} \times \text{GPCI work}) + (\text{RVU PE} \times \text{GPCI PE}) + (\text{RVU MP} \times \text{GPCI MP})] \times \text{CF}$$

3. Separate Fee Schedule Methodology for Anesthesia Services

Section 1848(b)(2)(B) of the Act specifies that the fee schedule amounts for anesthesia services are to be based on a uniform relative value guide, with appropriate adjustment of an anesthesia CF, in a manner to ensure that fee schedule amounts for anesthesia services are consistent with those for other services of comparable value. Therefore, there is a separate fee schedule methodology for anesthesia services. Specifically, we establish a separate CF for anesthesia services and we utilize the uniform relative value guide, or base units, as well as time units, to calculate the fee schedule amounts for anesthesia services. Since anesthesia services are not valued using RVUs, a separate methodology for

locality adjustments is also necessary. This involves an adjustment to the national anesthesia CF for each payment locality.

B. Determination of PE RVUs

1. Overview

Practice expense (PE) is the portion of the resources used in furnishing a service that reflects the general categories of physician and practitioner expenses, such as office rent and personnel wages, but excluding MP expenses, as specified in section 1848(c)(1)(B) of the Act. As required by section 1848(c)(2)(C)(ii) of the Act, we use a resource-based system for determining PE RVUs for each physicians' service. We develop PE RVUs by considering the direct and indirect practice resources involved in furnishing each service. Direct expense categories include clinical labor, medical supplies, and medical equipment. Indirect expenses include administrative labor, office expense, and all other expenses. The sections that follow provide more detailed information about the methodology for translating the resources involved in furnishing each service into service-specific PE RVUs. We refer readers to the CY 2010 PFS final rule with comment period (74 FR 61743 through 61748) for a more detailed explanation of the PE methodology.

2. Practice Expense Methodology

a. Direct Practice Expense

We determine the direct PE for a specific service by adding the costs of the direct resources (that is, the clinical staff, medical supplies, and medical equipment) typically involved with furnishing that service. The costs of the resources are calculated using the refined direct PE inputs assigned to each CPT code in our PE database, which are generally based on our review of recommendations received from the RUC and those provided in response to public comment periods. For a detailed explanation of the direct PE methodology, including examples, we refer readers to the 5-year review of work RVUs under the PFS and proposed changes to the PE methodology CY 2007 PFS proposed notice (71 FR 37242) and the CY 2007 PFS final rule with comment period (71 FR 69629).

b. Indirect Practice Expense per Hour Data

We use survey data on indirect PEs incurred per hour worked, in developing the indirect portion of the PE RVUs. Prior to CY 2010, we primarily used the PE/HR by specialty

that was obtained from the AMA's SMS. The AMA administered a new survey in CY 2007 and CY 2008, the Physician Practice Expense Information Survey (PPIS). The PPIS is a multispecialty, nationally representative, PE survey of both physicians and NPPs paid under the PFS using a survey instrument and methods highly consistent with those used for the SMS and the supplemental surveys. The PPIS gathered information from 3,656 respondents across 51 physician specialty and health care professional groups. We believe the PPIS is the most comprehensive source of PE survey information available. We used the PPIS data to update the PE/HR data for the CY 2010 PFS for almost all of the Medicare-recognized specialties that participated in the survey.

When we began using the PPIS data in CY 2010, we did not change the PE RVU methodology itself or the manner in which the PE/HR data are used in that methodology. We only updated the PE/HR data based on the new survey. Furthermore, as we explained in the CY 2010 PFS final rule with comment period (74 FR 61751), because of the magnitude of payment reductions for some specialties resulting from the use of the PPIS data, we transitioned its use over a 4-year period from the previous PE RVUs to the PE RVUs developed using the new PPIS data. As provided in the CY 2010 PFS final rule with comment period (74 FR 61751), the transition to the PPIS data was complete for CY 2013. Therefore, PE RVUs from CY 2013 forward are developed based entirely on the PPIS data, except as noted in this section.

Section 1848(c)(2)(H)(i) of the Act requires us to use the medical oncology supplemental survey data submitted in 2003 for oncology drug administration services. Therefore, the PE/HR for medical oncology, hematology, and hematology/oncology reflects the continued use of these supplemental survey data.

Supplemental survey data on independent labs from the College of American Pathologists were implemented for payments beginning in CY 2005. Supplemental survey data from the National Coalition of Quality Diagnostic Imaging Services (NCQDIS), representing independent diagnostic testing facilities (IDTFs), were blended with supplementary survey data from the American College of Radiology (ACR) and implemented for payments beginning in CY 2007. Neither IDTFs, nor independent labs, participated in the PPIS. Therefore, we continue to use the PE/HR that was developed from their supplemental survey data.

Consistent with our past practice, the previous indirect PE/HR values from the supplemental surveys for these specialties were updated to CY 2006 using the Medicare Economic Index (MEI) to put them on a comparable basis with the PPIS data.

We also do not use the PPIS data for reproductive endocrinology and spine surgery since these specialties currently are not separately recognized by Medicare, nor do we have a method to blend the PPIS data with Medicare-recognized specialty data.

Previously, we established PE/HR values for various specialties without SMS or supplemental survey data by crosswalking them to other similar specialties to estimate a proxy PE/HR. For specialties that were part of the PPIS for which we previously used a crosswalked PE/HR, we instead used the PPIS-based PE/HR. We use crosswalks for specialties that did not participate in the PPIS. These crosswalks have been generally established through notice and comment rulemaking and are available in the file titled "CY 2021 PFS Final Rule PE/HR" on the CMS website under downloads for the CY 2021 PFS final rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

As noted above, we have established PE/HR values for various specialties without SMS or PPIS survey data by crosswalking them to other similar specialties to estimate a proxy PE/HR. On this note, stakeholders have raised concerns regarding the appropriate specialty crosswalk used for home PT/INR monitoring services. These services are currently classified under the independent diagnostic testing facilities (IDTF) specialty for PE/HR purposes, due to a lack of survey data for these services, and stakeholders have suggested to CMS that this specialty does not reflect the indirect costs associated with furnishing these services. Stakeholders have raised concerns that the practice pattern of PT/INR monitoring services are markedly different from that of the dominant parent specialty as most of the services are furnished remotely and require long-term relationship with beneficiaries similar to chronic therapy. Stakeholders also stated that this is a unique request due to the lack of home PT/INR monitoring supplier involvement in the last PPIS, and that payments for these services are derived from previously used supplemental survey data from the Association for Quality Imaging (AQI), blended with supplementary survey data from the American College of Radiology (ACR)—neither of which

reflect indirect cost inputs for home PT/INR monitoring.

Therefore, we are solicited comment from the public regarding the most accurate specialty crosswalk to use for indirect PE when it comes to home PT/INR monitoring services. We sought information on any additional costs associated with these services that are not reflected in our currently assigned PE/HR for independent diagnostic testing facilities, as well as which specialties would best capture these costs through the use of a crosswalk.

We received public comments on our comment solicitation regarding the most accurate specialty crosswalk to use for indirect PE for home PT/INR monitoring services. The following is a summary of the comments we received and our responses.

Comment: Several commenters stated that they had numerous concerns about the labor, supplies, equipment, and utilization associated with home PT/INR monitoring services. Commenters questioned why the typical clinical staff type for these services is an RN when 95 percent of Medicare claims for HCPCS code G0248 indicate that the service is instead furnished by the IDTF provider specialty. Commenters also questioned the clinical staff labor associated with HCPCS code G0249, as the commenters stated that they did not believe that an electrodiagnostic technologist is the appropriate clinical staff type since these technologists furnish cardiac event monitoring (CEM)-related services, not PT/INR monitoring services. Commenters stated that they believed a patient education booklet is likely a duplicative supply item for HCPCS code G0248, as the patient is expected to have already received booklet(s) related to anticoagulation at previous physician visits, and a free booklet is also supplied with INR meters. Commenters also questioned the discrepancy between the description and billing rules for this code, which state that four tests are performed, and the supply details for this code, which include supplies for six tests. Commenters stated that CMS should decrease the minutes assigned to the home INR monitor (EQ031) equipment and questioned whether this frequency of physician review meets Medicare medical necessity criteria for all patients receiving such services. One commenter submitted a shipping invoice for the INR test strip (SJ055) supply.

Response: We appreciate the additional information provided by the commenters regarding the direct PE inputs and claims data utilization for home PT/INR monitoring services. However, our comment solicitation

sought information regarding the most accurate specialty crosswalk to use for indirect PE as well as which specialties would best capture these costs through the use of a crosswalk. We did not propose to make revisions to the direct PE inputs or conduct a review of the Medicare claims data. Although we appreciate the information provided by the commenters, we are not finalizing any changes to the direct PE inputs for home PT/INR monitoring services. With regard to the shipping invoice for the INR test strip supply, we welcome the submission of invoices or other pricing information as part of our ongoing market-based supply and equipment pricing update. However, this invoice listed the transportation costs of shipping the test strips and not the price of the test strips themselves, and as a result we were unable to make use of it.

Comment: Many commenters stated that there were inherent differences between home PT/INR monitoring services and independent diagnostic testing facilities. Several commenters stated that given the significant changes to technology and associated decrease in costs since the IDTF PE/HR value was first developed, they believed that many of the indirect PE inputs originally recognized for IDTFs in 2007 no longer apply in 2020 and home PT/INR monitoring services should no longer be crosswalked to them. Several commenters stated that typical IDTF services include the use of large, capital-intensive equipment while home PT/INR monitoring services typically involve the use of equipment by a patient in his/her home, frequently intended for use for the remainder of the patient's life—more like a therapeutic device than a diagnostic one. Several commenters emphasized that PT/INR monitoring services are very different from typical imaging and scanning services provided by IDTFs, and because there are so few suppliers of home PT/INR monitoring services, the distribution of direct and indirect costs and the indirect practice cost index (IPCI) applied to IDTFs do not accurately reflect indirect resources expended by the specialty suppliers of home PT/INR monitoring.

Several commenters provided feedback regarding the most accurate specialty crosswalk to use for indirect PE when it comes to home PT/INR monitoring services. Several commenters submitted data indicating that the direct to indirect cost percentages used to furnish home PT/INR monitoring are in the range of 31:69 rather than the approximately 50:50 currently considered in determining the PE RVUs for these services as IDTFs.

These commenters recommended a crosswalk to the Pathology or All Physicians specialty type based on the submitted data. One commenter stated that they were not equipped to say which specific indirect factors may be optimal for crosswalk due to a lack of information on direct and indirect cost data from the suppliers but did wish to highlight the importance of ensuring sure that home PT/INR monitoring rates are adequate to assure access. Several commenters stated that the payment rates for these services have fallen dramatically over the past several years and they were very concerned about the impact of these cuts on patient access to these critically important services.

Response: We appreciate the detailed feedback from the commenters regarding home PT/INR monitoring services and especially the submission of data associated with the direct to indirect cost percentages. We also share the concerns of the commenters regarding maintaining access to care for these services. After consideration of the comments, we are finalizing a crosswalk to the General Practice specialty to use for indirect PE when it comes to home PT/INR monitoring services (HCPCS codes G0248, G0249, and G0250). The data submitted by the commenters indicated that the direct to indirect cost percentages to furnish home PT/INR monitoring are in the range of 31:69, similar to the ratio associated with the General Practice specialty. We also share the concerns of the commenters who were uncertain which specific indirect factors may be optimal for crosswalking due to a lack of information, and we believe that the broad nature of the General Practice specialty will serve as a more accurate proxy for home PT/INR monitoring services as opposed to trying to select a more specific specialty designation.

c. Allocation of PE to Services

To establish PE RVUs for specific services, it is necessary to establish the direct and indirect PE associated with each service.

(1) Direct Costs

The relative relationship between the direct cost portions of the PE RVUs for any two services is determined by the relative relationship between the sum of the direct cost resources (that is, the clinical staff, medical supplies, and medical equipment) typically involved with furnishing each of the services. The costs of these resources are calculated from the refined direct PE inputs in our PE database. For example, if one service has a direct cost sum of \$400 from our PE database and another

service has a direct cost sum of \$200, the direct portion of the PE RVUs of the first service would be twice as much as the direct portion of the PE RVUs for the second service.

(2) Indirect Costs

We allocate the indirect costs at the code level on the basis of the direct costs specifically associated with a code and the greater of either the clinical labor costs or the work RVUs. We also incorporate the survey data described earlier in the PE/HR discussion. The general approach to developing the indirect portion of the PE RVUs is as follows:

- For a given service, we use the direct portion of the PE RVUs calculated as previously described and the average percentage that direct costs represent of total costs (based on survey data) across the specialties that furnish the service to determine an initial indirect allocator. That is, the initial indirect allocator is calculated so that the direct costs equal the average percentage of direct costs of those specialties furnishing the service. For example, if the direct portion of the PE RVUs for a given service is 2.00 and direct costs, on average, represent 25 percent of total costs for the specialties that furnish the service, the initial indirect allocator would be calculated so that it equals 75 percent of the total PE RVUs. Thus, in this example, the initial indirect allocator would equal 6.00, resulting in a total PE RVU of 8.00 (2.00 is 25 percent of 8.00 and 6.00 is 75 percent of 8.00).

- Next, we add the greater of the work RVUs or clinical labor portion of the direct portion of the PE RVUs to this initial indirect allocator. In our example, if this service had a work RVU of 4.00 and the clinical labor portion of the direct PE RVU was 1.50, we would add 4.00 (since the 4.00 work RVUs are greater than the 1.50 clinical labor portion) to the initial indirect allocator of 6.00 to get an indirect allocator of 10.00. In the absence of any further use of the survey data, the relative relationship between the indirect cost portions of the PE RVUs for any two services would be determined by the relative relationship between these indirect cost allocators. For example, if one service had an indirect cost allocator of 10.00 and another service had an indirect cost allocator of 5.00, the indirect portion of the PE RVUs of the first service would be twice as great as the indirect portion of the PE RVUs for the second service.

- Then, we incorporate the specialty-specific indirect PE/HR data into the calculation. In our example, if, based on the survey data, the average indirect

cost of the specialties furnishing the first service with an allocator of 10.00 was half of the average indirect cost of the specialties furnishing the second service with an indirect allocator of 5.00, the indirect portion of the PE RVUs of the first service would be equal to that of the second service.

(3) Facility and Nonfacility Costs

For procedures that can be furnished in a physician's office, as well as in a facility setting, where Medicare makes a separate payment to the facility for its costs in furnishing a service, we establish two PE RVUs: Facility and nonfacility. The methodology for calculating PE RVUs is the same for both the facility and nonfacility RVUs, but is applied independently to yield two separate PE RVUs. In calculating the PE RVUs for services furnished in a facility, we do not include resources that would generally not be provided by physicians when furnishing the service. For this reason, the facility PE RVUs are generally lower than the nonfacility PE RVUs.

(4) Services With Technical Components and Professional Components

Diagnostic services are generally comprised of two components: A professional component (PC); and a technical component (TC). The PC and TC may be furnished independently or by different providers, or they may be furnished together as a global service. When services have separately billable PC and TC components, the payment for the global service equals the sum of the payment for the TC and PC. To achieve this, we use a weighted average of the ratio of indirect to direct costs across all the specialties that furnish the global service, TCs, and PCs; that is, we apply the same weighted average indirect percentage factor to allocate indirect expenses to the global service, PCs, and TCs for a service. (The direct PE RVUs for the TC and PC sum to the global.)

(5) PE RVU Methodology

For a more detailed description of the PE RVU methodology, we refer readers to the CY 2010 PFS final rule with comment period (74 FR 61745 through 61746). We also direct readers to the file titled "Calculation of PE RVUs under Methodology for Selected Codes" which is available on our website under downloads for the CY 2021 PFS final rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>. This file contains a table that illustrates the

calculation of PE RVUs as described in this final rule for individual codes.

(a) Setup File

First, we create a setup file for the PE methodology. The setup file contains the direct cost inputs, the utilization for each procedure code at the specialty and facility/nonfacility place of service level, and the specialty-specific PE/HR data calculated from the surveys.

(b) Calculate the Direct Cost PE RVUs

Sum the costs of each direct input.

Step 1: Sum the direct costs of the inputs for each service.

Step 2: Calculate the aggregate pool of direct PE costs for the current year. We set the aggregate pool of PE costs equal to the product of the ratio of the current aggregate PE RVUs to current aggregate work RVUs and the projected aggregate work RVUs.

Step 3: Calculate the aggregate pool of direct PE costs for use in ratesetting. This is the product of the aggregate direct costs for all services from Step 1 and the utilization data for that service.

Step 4: Using the results of Step 2 and Step 3, use the CF to calculate a direct PE scaling adjustment to ensure that the aggregate pool of direct PE costs calculated in Step 3 does not vary from the aggregate pool of direct PE costs for the current year. Apply the scaling adjustment to the direct costs for each service (as calculated in Step 1).

Step 5: Convert the results of Step 4 to a RVU scale for each service. To do this, divide the results of Step 4 by the CF. Note that the actual value of the CF used in this calculation does not influence the final direct cost PE RVUs as long as the same CF is used in Step 4 and Step 5. Different CFs would result in different direct PE scaling adjustments, but this has no effect on the final direct cost PE RVUs since changes in the CFs and changes in the associated direct scaling adjustments offset one another.

(c) Create the Indirect Cost PE RVUs

Create indirect allocators.

Step 6: Based on the survey data, calculate direct and indirect PE percentages for each physician specialty.

Step 7: Calculate direct and indirect PE percentages at the service level by taking a weighted average of the results of Step 6 for the specialties that furnish the service. Note that for services with TCs and PCs, the direct and indirect percentages for a given service do not vary by the PC, TC, and global service.

We generally use an average of the 3 most recent years of available Medicare claims data to determine the specialty

mix assigned to each code. Codes with low Medicare service volume require special attention since billing or enrollment irregularities for a given year can result in significant changes in specialty mix assignment. We finalized a policy in the CY 2018 PFS final rule (82 FR 52982 through 52983) to use the most recent year of claims data to determine which codes are low volume for the coming year (those that have fewer than 100 allowed services in the Medicare claims data). For codes that fall into this category, instead of assigning specialty mix based on the specialties of the practitioners reporting the services in the claims data, we use the expected specialty that we identify on a list developed based on medical review and input from expert stakeholders. We display this list of expected specialty assignments as part of the annual set of data files we make available as part of notice and comment rulemaking and consider recommendations from the RUC and other stakeholders on changes to this list on an annual basis. Services for which the specialty is automatically assigned based on previously finalized policies under our established methodology (for example, "always therapy" services) are unaffected by the list of expected specialty assignments. We also finalized in the CY 2018 PFS final rule (82 FR 52982 through 52983) a policy to apply these service-level overrides for both PE and MP, rather than one or the other category.

We received public comments on the proposed list of expected specialty assignments for CY 2021. The following is a summary of the comments we received and our responses.

Comment: One commenter stated that the 2021 expected specialty assignment for the low volume services code list included a number of services that were reassigned from cardiac surgery to thoracic surgery in CY 2020. The commenter identified these services and stated that they had concerns that CMS had erroneously assigned them as thoracic surgery procedures instead of cardiac surgery procedures. The commenter requested that CMS to correct the list and permanently assign the identified codes to the requested thoracic surgery specialty assignment.

Response: We finalized a proposal in CY 2020 to update the expected specialty list to accurately reflect a previously finalized crosswalk to thoracic surgery for the services in question. As we stated at the time, we did not finalize a proposal to assign the codes in question to the cardiac surgery specialty. Instead, we finalized a proposal to update the incorrect

documentation in our expected specialty list to accurately reflect a previously finalized crosswalk to thoracic surgery for these services. The previously finalized assignment of the cardiac specialty to these services has been in place since the CY 2012 rule cycle, and we believe that the expected specialty list should be updated to reflect the correct specialty assignment. We did not propose to make further changes to the anticipated specialty assignment of these codes for CY 2021 and we are not finalizing any changes. We direct readers to the discussion of this topic in the CY 2020 PFS final rule (84 FR 62574 through 62578) and we reiterate again that we do not anticipate this finalized proposal having a discernible effect on the valuation of the affected codes due to the similarity between the cardiac surgery and thoracic surgery specialties.

Step 8: Calculate the service level allocators for the indirect PEs based on the percentages calculated in Step 7. The indirect PEs are allocated based on the three components: The direct PE RVUs; the clinical labor PE RVUs; and the work RVUs.

For most services the indirect allocator is: Indirect PE percentage * (direct PE RVUs/direct percentage) + work RVUs.

There are two situations where this formula is modified:

- If the service is a global service (that is, a service with global, professional, and technical components), then the indirect PE allocator is: Indirect percentage (direct PE RVUs/direct percentage) + clinical labor PE RVUs + work RVUs.
- If the clinical labor PE RVUs exceed the work RVUs (and the service is not a global service), then the indirect allocator is: Indirect PE percentage (direct PE RVUs/direct percentage) + clinical labor PE RVUs.

(Note: For global services, the indirect PE allocator is based on both the work RVUs and the clinical labor PE RVUs. We do this to recognize that, for the PC service, indirect PEs would be allocated using the work RVUs, and for the TC service, indirect PEs would be allocated using the direct PE RVUs and the clinical labor PE RVUs. This also allows the global component RVUs to equal the sum of the PC and TC RVUs.)

For presentation purposes, in the examples in the download file titled "Calculation of PE RVUs under Methodology for Selected Codes", the formulas were divided into two parts for each service.

- The first part does not vary by service and is the indirect percentage (direct PE RVUs/direct percentage).

- The second part is either the work RVU, clinical labor PE RVU, or both depending on whether the service is a global service and whether the clinical PE RVUs exceed the work RVUs (as described earlier in this step).

Apply a scaling adjustment to the indirect allocators.

Step 9: Calculate the current aggregate pool of indirect PE RVUs by multiplying the result of step 8 by the average indirect PE percentage from the survey data.

Step 10: Calculate an aggregate pool of indirect PE RVUs for all PFS services by adding the product of the indirect PE allocators for a service from Step 8 and the utilization data for that service.

Step 11: Using the results of Step 9 and Step 10, calculate an indirect PE adjustment so that the aggregate indirect allocation does not exceed the available aggregate indirect PE RVUs and apply it to indirect allocators calculated in Step 8.

Calculate the indirect practice cost index.

Step 12: Using the results of Step 11, calculate aggregate pools of specialty-specific adjusted indirect PE allocators for all PFS services for a specialty by adding the product of the adjusted indirect PE allocator for each service and the utilization data for that service.

Step 13: Using the specialty-specific indirect PE/HR data, calculate specialty-specific aggregate pools of indirect PE for all PFS services for that specialty by adding the product of the indirect PE/HR for the specialty, the work time for the service, and the specialty's utilization for the service across all services furnished by the specialty.

Step 14: Using the results of Step 12 and Step 13, calculate the specialty-specific indirect PE scaling factors.

Step 15: Using the results of Step 14, calculate an indirect practice cost index at the specialty level by dividing each specialty-specific indirect scaling factor by the average indirect scaling factor for the entire PFS.

Step 16: Calculate the indirect practice cost index at the service level to ensure the capture of all indirect costs. Calculate a weighted average of the practice cost index values for the specialties that furnish the service. (Note: For services with TCs and PCs, we calculate the indirect practice cost index across the global service, PCs, and TCs. Under this method, the indirect practice cost index for a given service (for example, echocardiogram) does not vary by the PC, TC, and global service.)

Step 17: Apply the service level indirect practice cost index calculated in Step 16 to the service level adjusted

indirect allocators calculated in Step 11 to get the indirect PE RVUs.

(d) Calculate the Final PE RVUs

Step 18: Add the direct PE RVUs from Step 5 to the indirect PE RVUs from Step 17 and apply the final PE budget neutrality (BN) adjustment. The final PE BN adjustment is calculated by comparing the sum of steps 5 and 17 to the aggregate work RVUs scaled by the ratio of current aggregate PE and work RVUs. This adjustment ensures that all PE RVUs in the PFS account for the fact that certain specialties are excluded from the calculation of PE RVUs but included in maintaining overall PFS budget neutrality. (See "Specialties excluded from ratesetting calculation" later in this final rule.)

Step 19: Apply the phase-in of significant RVU reductions and its associated adjustment. Section 1848(c)(7) of the Act specifies that for services that are not new or revised codes, if the total RVUs for a service for a year would otherwise be decreased by an estimated 20 percent or more as compared to the total RVUs for the previous year, the applicable adjustments in work, PE, and MP RVUs shall be phased in over a 2-year period. In implementing the phase-in, we consider a 19 percent reduction as the maximum 1-year reduction for any service not described by a new or revised code. This approach limits the year one reduction for the service to the maximum allowed amount (that is, 19 percent), and then phases in the remainder of the reduction. To comply with section 1848(c)(7) of the Act, we adjust the PE RVUs to ensure that the total RVUs for all services that are not new or revised codes decrease by no more than 19 percent, and then apply a relativity adjustment to ensure that the total pool of aggregate PE RVUs remains relative to the pool of work and MP RVUs. For a more detailed description of the methodology for the phase-in of significant RVU changes, we refer readers to the CY 2016 PFS final rule with comment period (80 FR 70927 through 70931).

(e) Setup File Information

- **Specialties excluded from ratesetting calculation:** For the purposes of calculating the PE and MP RVUs, we exclude certain specialties, such as certain NPPs paid at a percentage of the PFS and low-volume specialties, from the calculation. These specialties are included for the purposes of calculating the BN adjustment. They are displayed in Table 1.

TABLE 1: Specialties Excluded from Ratesetting Calculation

Specialty Code	Specialty Description
49	Ambulatory surgical center
50	Nurse practitioner
51	Medical supply company with certified orthotist
52	Medical supply company with certified prosthetist
53	Medical supply company with certified prosthetist-orthotist
54	Medical supply company not included in 51, 52, or 53.
55	Individual certified orthotist
56	Individual certified prosthetist
57	Individual certified prosthetist-orthotist
58	Medical supply company with registered pharmacist
59	Ambulance service supplier, e.g., private ambulance companies, funeral homes, etc.
60	Public health or welfare agencies
61	Voluntary health or charitable agencies
73	Mass immunization roster biller
74	Radiation therapy centers
87	All other suppliers (e.g., drug and department stores)
88	Unknown supplier/provider specialty
89	Certified clinical nurse specialist
96	Optician
97	Physician assistant
A0	Hospital
A1	SNF
A2	Intermediate care nursing facility
A3	Nursing facility, other
A4	HHA
A5	Pharmacy
A6	Medical supply company with respiratory therapist
A7	Department store
A8	Grocery store
B1	Supplier of oxygen and/or oxygen related equipment (eff. 10/2/2007)
B2	Pedorthic personnel
B3	Medical supply company with pedorthic personnel
B4	Rehabilitation Agency
B5	Ocularist
C1	Centralized Flu
C2	Indirect Payment Procedure
C5	Dentistry

• *Crosswalk certain low volume physician specialties:* Crosswalk the utilization of certain specialties with relatively low PFS utilization to the associated specialties.

• *Physical therapy utilization:* Crosswalk the utilization associated with all physical therapy services to the specialty of physical therapy.

• *Identify professional and technical services not identified under the usual TC and 26 modifiers:* Flag the services that are PC and TC services but do not use TC and 26 modifiers (for example, electrocardiograms). This flag associates the PC and TC with the associated global code for use in creating the indirect PE RVUs. For example, the

professional service, CPT code 93010 (Electrocardiogram, routine ECG with at least 12 leads; interpretation and report only), is associated with the global service, CPT code 93000 (Electrocardiogram, routine ECG with at least 12 leads; with interpretation and report).

• *Payment modifiers:* Payment modifiers are accounted for in the creation of the file consistent with current payment policy as implemented in claims processing. For example, services billed with the assistant at surgery modifier are paid 16 percent of the PFS amount for that service; therefore, the utilization file is modified

to only account for 16 percent of any service that contains the assistant at surgery modifier. Similarly, for those services to which volume adjustments are made to account for the payment modifiers, time adjustments are applied as well. For time adjustments to surgical services, the intraoperative portion in the work time file is used; where it is not present, the intraoperative percentage from the payment files used by contractors to process Medicare claims is used instead. Where neither is available, we use the payment adjustment ratio to adjust the time accordingly. Table 2 details the manner in which the modifiers are applied.

TABLE 2: Application of Payment Modifiers to Utilization Files

Modifier	Description	Volume Adjustment	Time Adjustment
80,81,82	Assistant at Surgery	16%	Intraoperative portion
AS	Assistant at Surgery – Physician Assistant	14% (85% * 16%)	Intraoperative portion
50 or LT and RT	Bilateral Surgery	150%	150% of work time
51	Multiple Procedure	50%	Intraoperative portion
52	Reduced Services	50%	50%
53	Discontinued Procedure	50%	50%
54	Intraoperative Care only	Preoperative + Intraoperative Percentages on the payment files used by Medicare contractors to process Medicare claims	Preoperative + Intraoperative portion
55	Postoperative Care only	Postoperative Percentage on the payment files used by Medicare contractors to process Medicare claims	Postoperative portion
62	Co-surgeons	62.5%	50%
66	Team Surgeons	33%	33%

We also make adjustments to volume and time that correspond to other payment rules, including special multiple procedure endoscopy rules and multiple procedure payment reductions (MPPRs). We note that section 1848(c)(2)(B)(v) of the Act exempts certain reduced payments for multiple imaging procedures and multiple therapy services from the BN calculation under section 1848(c)(2)(B)(ii)(II) of the Act. These MPPRs are not included in the development of the RVUs.

For anesthesia services, we do not apply adjustments to volume since we use the average allowed charge when simulating RVUs; therefore, the RVUs as calculated already reflect the payments as adjusted by modifiers, and no volume adjustments are necessary. However, a time adjustment of 33 percent is made only for medical direction of two to four cases since that is the only situation where a single practitioner is involved with multiple beneficiaries concurrently, so that counting each service without regard to the overlap with other services would overstate the amount of time spent by the practitioner furnishing these services.

- **Work RVUs:** The setup file contains the work RVUs from this final rule.

(6) Equipment Cost per Minute

The equipment cost per minute is calculated as:

$$(1/(\text{minutes per year} * \text{usage})) * \text{price} * ((\text{interest rate}/(1-(1/((1 + \text{interest rate})^{\wedge} \text{life of equipment})))) + \text{maintenance})$$

Where:

minutes per year = maximum minutes per year if usage were continuous (that is, usage=1); generally 150,000 minutes.
usage = variable, *see* discussion below in this final rule.
price = price of the particular piece of equipment.
life of equipment = useful life of the particular piece of equipment.
maintenance = factor for maintenance; 0.05.
interest rate = variable, *see* discussion below in this final rule.

Usage: We currently use an equipment utilization rate assumption of 50 percent for most equipment, with the exception of expensive diagnostic imaging equipment, for which we use a 90 percent assumption as required by section 1848(b)(4)(C) of the Act.

We received public comments on equipment utilization rate assumptions. The following is a summary of the comments we received and our responses.

Comment: Several commenters requested that CMS review the utilization assumptions for equipment due to decreased practice capacity during the public health emergency (PHE) for COVID-19. Commenters stated that equipment was used less frequently than normal and that this should be reflected in the equipment utilization rate. Commenters stated that any modifications to the equipment utilization during the public health emergency also should not be subject to budget neutrality.

Response: We disagree with the commenters that utilization assumptions for equipment should be revisited as part of the public health emergency. While we agree that many services had a reduced volume of

Medicare beneficiaries at times during the 2020 calendar year, we note that equipment costs under the PFS are amortized across the full useful life of the equipment which in the vast majority of cases is 5–10 years. We believe that it would distort relatively to apply a temporary decrease in utilization caused by the public health emergency to the pricing structure of the equipment's full useful life duration. We also note that we do not have statutory authority to exempt any modifications to the equipment utilization assumptions from budget neutrality calculations.

Useful Life: In the CY 2005 PFS final rule we stated that we updated the useful life for equipment items primarily based on the AHA's "Estimated Useful Lives of Depreciable Hospital Assets" guidelines (69 FR 66246). The most recent edition of these guidelines was published in 2018. This reference material provides an estimated useful life for hundreds of different types of equipment, the vast majority of which fall in the range of 5 to 10 years, and none of which are lower than 2 years in duration. We believe that the updated editions of this reference material remain the most accurate source for estimating the useful life of depreciable medical equipment.

In the CY 2021 PFS proposed rule, we noted that stakeholders including the RUC, specialty societies, and other commenters suggested a useful life of less than 1 year for several of the new equipment items for CY 2021, and as low as 3 months in one case. We have rarely, if ever, received requests for equipment useful life of less than one

year in duration and note that these very short useful life durations are significantly lower than anything in our current equipment database, and if

finalized would represent major outliers when compared to the rest of the equipment. Table 3 details the distribution of useful life durations of

the equipment currently in our database:

TABLE 3: Equipment Life Durations

Useful Life Duration	Number of Equipment Codes	Percentage of Total
15 years or greater	37	5%
10-14 years	159	20%
6-9 years	210	27%
5 years	313	40%
3-4 years	54	7%
1-2 years	4	1%

As Table 3 demonstrates, the vast majority of equipment items have a useful life duration of 5 to 10 years, and only 4 out of the 777 equipment codes have a useful life duration of less than 3 years. We also noted that due to the formula used to calculate the equipment cost per minute, decreasing the useful life of any equipment item from 5 years to 3 months has the same effect as increasing the price of the equipment 20 times over. In other words, decreasing the useful life from 5 years to 0.25 years has the same multiplicative effect as increasing the price of the equipment from \$5,000 to 100,000 due to the formula listed above. Since we currently do not have any equipment items in our database with a useful life of less than one year, we proposed a clarification on how to address these cases.

We disagreed that assigning a useful life at these very short durations would be typical for new equipment, especially in light of the data provided by the AHA's "Estimated Useful Lives of Depreciable Hospital Assets" reference. The equipment life durations listed in Table 3 were finalized over the last 15 years through the use of this reference material. We noted concerns that assigning very low useful life durations to equipment items would fail to maintain relativity with other equipment on the PFS, effectively assigning a much higher price than other equipment items with more typical useful life durations. We noted that we believe that equipment items with very low useful life durations represent outlier cases that are not handled appropriately by the current equipment methodology and which we clarified through this rulemaking. We also noted that the equipment cost per minute formula was designed under the assumption that each equipment item would remain in use for a period of several years and depreciate over that span of time. Our current equipment

formula is not designed to address cases in which equipment is replaced multiple times per year, and we believe that applying a multi-year depreciation in these situations would not be reflective of market pricing. We noted that we did not believe that items which are replaced on a monthly basis can be accurately priced using a formula which assumes they will be in use for years at a time, and that the use of such a formula would distort relativity with the overwhelming majority of equipment items which are in use for 5–10 years.

Therefore, we proposed to treat equipment life durations of less than 1 year as having a duration of 1 year for the purpose of our equipment price per minute formula. We noted that we believe that this is the most accurate way to incorporate these short equipment life durations within the framework of our current methodology. In the rare cases where items are replaced every few months, we noted that we believe that it is more accurate to treat these items as disposable supplies with a fractional supply quantity as opposed to equipment items with very short equipment life durations. For example, we proposed to establish the EECF compression equipment package (SD341) and the EECF electrical equipment package (SD342) as disposable supplies instead of equipment items as described in the Valuation of Specific Codes (section II.H. of this final rule) portion of the preamble. We noted that we expect these situations to occur only rarely, and we will evaluate them on an individual case-by-case basis. Our criteria will be based on whether or not the item in question could be more accurately classified as a disposable supply while maintaining overall relativity within our PE methodology. We welcomed additional comments from stakeholders regarding the subject of useful life durations for new

equipment items with unique useful life durations as described above and any additional suggestions on alternative ways to incorporate these items into our methodology or potential wider changes to the equipment cost per minute formula more broadly.

We received public comments on our proposals associated with equipment life duration. The following is a summary of the comments we received and our responses.

Comment: A commenter stated that although they had asked CMS to use 0.75 years as the useful life duration for the radionuclide rod source set (ER044) equipment, the commenter recognized that one year was in accordance with the CMS policy to treat equipment useful life durations of less than one year as having a duration of one year.

Response: We appreciate the feedback from the commenter and the acknowledgment of our proposed policy.

After consideration of the public comments, we are finalizing our proposal to treat equipment life durations of less than 1 year as having a duration of 1 year for the purpose of our equipment price per minute formula. In the rare cases where items are replaced every few months, we noted that we believe that it is more accurate to treat these items as disposable supplies with a fractional supply quantity as opposed to equipment items with very short equipment life durations.

• *Maintenance:* This factor for maintenance was finalized in the CY 1998 PFS final rule with comment period (62 FR 33164). As we previously stated in the CY 2016 PFS final rule with comment period (80 FR 70897), we do not believe the annual maintenance factor for all equipment is precisely 5 percent, and we concur that the current rate likely understates the true cost of maintaining some equipment. We also

noted that we believe it likely overstates the maintenance costs for other equipment. When we solicited comments regarding sources of data containing equipment maintenance rates, commenters were unable to identify an auditable, robust data source that could be used by CMS on a wide scale. We noted that we did not believe that voluntary submissions regarding the maintenance costs of individual equipment items would be an appropriate methodology for determining costs. As a result, in the

absence of publicly available datasets regarding equipment maintenance costs or another systematic data collection methodology for determining a different maintenance factor, we did not propose a variable maintenance factor for equipment cost per minute pricing as we did not believe that we have sufficient information at present. We noted that we would continue to investigate potential avenues for determining equipment maintenance costs across a broad range of equipment items.

- *Interest Rate:* In the CY 2013 PFS final rule with comment period (77 FR 68902), we updated the interest rates used in developing an equipment cost per minute calculation (*see* 77 FR 68902 for a thorough discussion of this issue). The interest rate was based on the Small Business Administration (SBA) maximum interest rates for different categories of loan size (equipment cost) and maturity (useful life). The Interest rates are listed in Table 4.

TABLE 4: SBA Maximum Interest Rates

Price	Useful Life	Interest Rate
<\$25K	<7 Years	7.50%
\$25K to \$50K	<7 Years	6.50%
>\$50K	<7 Years	5.50%
<\$25K	7+ Years	8.00%
\$25K to \$50K	7+ Years	7.00%
>\$50K	7+ Years	6.00%

We did not propose any changes to the equipment interest rates for CY 2021.

3. Changes to Direct PE Inputs for Specific Services

This section focuses on specific PE inputs. The direct PE inputs are included in the CY 2021 direct PE input public use files, which are available on the CMS website under downloads for the CY 2021 PFS final rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

a. Standardization of Clinical Labor Tasks

As we noted in the CY 2015 PFS final rule with comment period (79 FR 67640 through 67641), we continue to make improvements to the direct PE input database to provide the number of clinical labor minutes assigned for each task for every code in the database instead of only including the number of clinical labor minutes for the preservice, service, and post service periods for each code. In addition to increasing the transparency of the information used to set PE RVUs, this level of detail would allow us to compare clinical labor times for activities associated with services across the PFS, which we believe is important to maintaining the relativity of the direct PE inputs. This information would facilitate the identification of the usual numbers of minutes for clinical labor tasks and the identification of

exceptions to the usual values. It would also allow for greater transparency and consistency in the assignment of equipment minutes based on clinical labor times. Finally, we believe that the detailed information can be useful in maintaining standard times for particular clinical labor tasks that can be applied consistently to many codes as they are valued over several years, similar in principle to the use of physician preservice time packages. We believe that setting and maintaining such standards would provide greater consistency among codes that share the same clinical labor tasks and could improve relativity of values among codes. For example, as medical practice and technologies change over time, changes in the standards could be updated simultaneously for all codes with the applicable clinical labor tasks, instead of waiting for individual codes to be reviewed.

In the CY 2016 PFS final rule with comment period (80 FR 70901), we solicited comments on the appropriate standard minutes for the clinical labor tasks associated with services that use digital technology. After consideration of comments received, we finalized standard times for clinical labor tasks associated with digital imaging at 2 minutes for “Availability of prior images confirmed”, 2 minutes for “Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocolled by radiologist”, 2 minutes for “Review examination with

interpreting MD”, and 1 minute for “Exam documents scanned into PACS” and “Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue.” In the CY 2017 PFS final rule (81 FR 80184 through 80186), we finalized a policy to establish a range of appropriate standard minutes for the clinical labor activity, “Technologist QC images in PACS, checking for all images, reformats, and dose page.” These standard minutes will be applied to new and revised codes that make use of this clinical labor activity when they are reviewed by us for valuation. We finalized a policy to establish 2 minutes as the standard for the simple case, 3 minutes as the standard for the intermediate case, 4 minutes as the standard for the complex case, and 5 minutes as the standard for the highly complex case. These values were based upon a review of the existing minutes assigned for this clinical labor activity; we determined that 2 minutes is the duration for most services and a small number of codes with more complex forms of digital imaging have higher values. We also finalized standard times for a series of clinical labor tasks associated with pathology services in the CY 2016 PFS final rule with comment period (80 FR 70902). We do not believe these activities would be dependent on number of blocks or batch size, and we believe that the finalized standard values accurately reflect the typical time it takes to perform these clinical labor tasks.

In reviewing the RUC-recommended direct PE inputs for CY 2019, we noticed that the 3 minutes of clinical labor time traditionally assigned to the “Prepare room, equipment and supplies” (CA013) clinical labor activity were split into 2 minutes for the “Prepare room, equipment and supplies” activity and 1 minute for the “Confirm order, protocol exam” (CA014) activity. We proposed to maintain the 3 minutes of clinical labor time for the “Prepare room, equipment and supplies” activity and remove the clinical labor time for the “Confirm order, protocol exam” activity wherever we observed this pattern in the RUC-recommended direct PE inputs. Commenters explained in response that when the new version of the PE worksheet introduced the activity codes for clinical labor, there was a need to translate old clinical labor tasks into the new activity codes, and that a prior clinical labor task was split into two of the new clinical labor activity codes: CA007 (*Review patient clinical extant information and questionnaire*) in the preservice period, and CA014 (*Confirm order, protocol exam*) in the service period. Commenters stated that the same clinical labor from the old PE worksheet was now divided into the CA007 and CA014 activity codes, with a standard of 1 minute for each activity. We agreed with commenters that we would finalize the RUC-recommended 2 minutes of clinical labor time for the CA007 activity code and 1 minute for the CA014 activity code in situations where this was the case. However, when reviewing the clinical labor for the reviewed codes affected by this issue, we found that several of the codes did not include this old clinical labor task, and we also noted that several of the reviewed codes that contained the CA014 clinical labor activity code did not contain any clinical labor for the CA007 activity. In these situations, we continue to believe that in these cases the 3 total minutes of clinical staff time would be more accurately described by the CA013 “Prepare room, equipment and supplies” activity code, and we finalized these clinical labor refinements. For additional details, we direct readers to the discussion in the CY 2019 PFS final rule (83 FR 59463 and 59464).

Following the publication of the CY 2020 PFS proposed rule, a commenter expressed concern with the published list of common refinements to equipment time. The commenter stated that these refinements were the formulaic result of the applying refinements to the clinical labor time

and did not constitute separate refinements; the commenter requested that CMS no longer include these refinements in the table published each year. In the CY 2020 PFS final rule, we agreed with the commenter that that these equipment time refinements did not reflect errors in the equipment recommendations or policy discrepancies with the RUC’s equipment time recommendations. However, we believed that it was important to publish the specific equipment times that we were proposing (or finalizing in the case of the final rule) when they differed from the recommended values due to the effect that these changes can have on the direct costs associated with equipment time. Therefore, we finalized the separation of the equipment time refinements associated with changes in clinical labor into a separate table of refinements. For additional details, we direct readers to the discussion in the CY 2020 PFS final rule (84 FR 62584).

Historically, the RUC has submitted a “PE worksheet” that details the recommended direct PE inputs for our use in developing PE RVUs. The format of the PE worksheet has varied over time and among the medical specialties developing the recommendations. These variations have made it difficult for both the RUC’s development and our review of code values for individual codes. Beginning with its recommendations for CY 2019, the RUC has mandated the use of a new PE worksheet for purposes of their recommendation development process that standardizes the clinical labor tasks and assigns them a clinical labor activity code. We believe the RUC’s use of the new PE worksheet in developing and submitting recommendations will help us to simplify and standardize the hundreds of different clinical labor tasks currently listed in our direct PE database. As we did in previous calendar years, to facilitate rulemaking for CY 2021, we are continuing to display two versions of the Labor Task Detail public use file: One version with the old listing of clinical labor tasks, and one with the same tasks crosswalked to the new listing of clinical labor activity codes. These lists are available on the CMS website under downloads for the CY 2021 PFS final rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

b. Equipment Recommendations for Scope Systems

During our routine reviews of direct PE input recommendations, we have

regularly found unexplained inconsistencies involving the use of scopes and the video systems associated with them. Some of the scopes include video systems bundled into the equipment item, some of them include scope accessories as part of their price, and some of them are standalone scopes with no other equipment included. It is not always clear which equipment items related to scopes fall into which of these categories. We have also frequently found anomalies in the equipment recommendations, with equipment items that consist of a scope and video system bundle recommended, along with a separate scope video system. Based on our review, the variations do not appear to be consistent with the different code descriptions.

To promote appropriate relativity among the services and facilitate the transparency of our review process, during the review of the recommended direct PE inputs for the CY 2017 PFS proposed rule, we developed a structure that separates the scope, the associated video system, and any scope accessories that might be typical as distinct equipment items for each code. Under this approach, we proposed standalone prices for each scope, and separate prices for the video systems and accessories that are used with scopes.

(1) Scope Equipment

Beginning in the CY 2017 PFS proposed rule (81 FR 46176 through 46177), we proposed standardizing refinements to the way scopes have been defined in the direct PE input database. We believe that there are four general types of scopes: Non-video scopes; flexible scopes; semi-rigid scopes, and rigid scopes. Flexible scopes, semi-rigid scopes, and rigid scopes would typically be paired with one of the scope video systems, while the non-video scopes would not. The flexible scopes can be further divided into diagnostic (or non-channeled) and therapeutic (or channeled) scopes. We proposed to identify for each anatomical application: (1) A rigid scope; (2) a semi-rigid scope; (3) a non-video flexible scope; (4) a non-channeled flexible video scope; and (5) a channeled flexible video scope. We proposed to classify the existing scopes in our direct PE database under this classification system, to improve the transparency of our review process and improve appropriate relativity among the services. We planned to propose input prices for these equipment items through future rulemaking.

We proposed these changes only for the reviewed codes for CY 2017 that made use of scopes, along with updated

prices for the equipment items related to scopes utilized by these services. We did not propose to apply these policies to codes with inputs reviewed prior to CY 2017. We also solicited comment on this separate pricing structure for scopes, scope video systems, and scope accessories, which we noted we could consider proposing to apply to other codes in future rulemaking. We did not finalize price increases for a series of other scopes and scope accessories, as the invoices submitted for these components indicated that they are different forms of equipment with different product IDs and different prices. We did not receive any data to indicate that the equipment on the newly submitted invoices was more typical in its use than the equipment that we were currently using for pricing.

We did not make further changes to existing scope equipment in CY 2017 to allow the RUC's PE Subcommittee the opportunity to provide feedback. However, we believed there was some miscommunication on this point, as the RUC's PE Subcommittee workgroup that was created to address scope systems stated that no further action was required following the finalization of our proposal. Therefore, we made further proposals in the CY 2018 PFS proposed rule (82 FR 33961 through 33962) to continue clarifying scope equipment inputs, and sought comments regarding the new set of scope proposals. We considered creating a single scope equipment code for each of the five categories detailed in this rule: (1) A rigid scope; (2) a semi-rigid scope; (3) a non-video flexible scope; (4) a non-channeled flexible video scope; and (5) a channeled flexible video scope. Under the current classification system, there are many different scopes in each category depending on the medical specialty furnishing the service and the part of the body affected. We stated our belief that the variation between these scopes was not significant enough to warrant maintaining these distinctions, and we believed that creating and pricing a single scope equipment code for each category would help provide additional clarity. We sought public comment on the merits of this potential scope organization, as well as any pricing information regarding these five new scope categories.

After considering the comments on the CY 2018 PFS proposed rule, we did not finalize our proposal to create and price a single scope equipment code for each of the five categories previously identified. Instead, we supported the recommendation from the commenters to create scope equipment codes on a

per-specialty basis for six categories of scopes as applicable, including the addition of a new sixth category of multi-channeled flexible video scopes. Our goal was to create an administratively simple scheme that would be easier to maintain and help to reduce administrative burden. In 2018, the RUC convened a Scope Equipment Reorganization Workgroup to incorporate feedback from expert stakeholders with the intention of making recommendations to us on scope organization and scope pricing. Since the workgroup was not convened in time to submit recommendations for the CY 2019 PFS rulemaking cycle, we delayed proposals for any further changes to scope equipment until CY 2020 in order to incorporate the feedback from the aforementioned workgroup.

(2) Scope Video System

We proposed in the CY 2017 PFS proposed rule (81 FR 46176 through 46177) to define the scope video system as including: (1) A monitor; (2) a processor; (3) a form of digital capture; (4) a cart; and (5) a printer. We believe that these equipment components represent the typical case for a scope video system. Our model for this system was the "video system, endoscopy (processor, digital capture, monitor, printer, cart)" equipment item (ES031), which we proposed to re-price as part of this separate pricing approach. We obtained current pricing invoices for the endoscopy video system as part of our investigation of these issues involving scopes, which we proposed to use for this re-pricing. In response to comments, we finalized the addition of a digital capture device to the endoscopy video system (ES031) in the CY 2017 PFS final rule (81 FR 80188). We finalized our proposal to price the system at \$33,391, based on component prices of \$9,000 for the processor, \$18,346 for the digital capture device, \$2,000 for the monitor, \$2,295 for the printer, and \$1,750 for the cart. In the CY 2018 PFS final rule (82 FR 52991 through 52993), we outlined, but did not finalize, a proposal to add an LED light source into the cost of the scope video system (ES031), which would remove the need for a separate light source in these procedures. We also described a proposal to increase the price of the scope video system by \$1,000 to cover the expense of miscellaneous small equipment associated with the system that falls below the threshold of individual equipment pricing as scope accessories (such as cables, microphones, foot pedals, etc.). With the addition of the

LED light (equipment code EQ382 at a price of \$1,915), the updated total price of the scope video system would be set at \$36,306.

We did not finalize this updated pricing to the scope video system in CY 2018, but we did propose and finalize the updated pricing for CY 2019 to \$36,306 along with changing the name of the ES031 equipment item to "scope video system (monitor, processor, digital capture, cart, printer, LED light)" to reflect the fact that the use of the ES031 scope video system is not limited to endoscopy procedures.

(3) Scope Accessories

We understand that there may be other accessories associated with the use of scopes. We finalized a proposal in the CY 2017 PFS final rule (81 FR 80188) to separately price any scope accessories outside the use of the scope video system, and individually evaluate their inclusion or exclusion as direct PE inputs for particular codes as usual under our current policy based on whether they are typically used in furnishing the services described by the particular codes.

(4) Scope Proposals for CY 2020

The Scope Equipment Reorganization Workgroup organized by the RUC submitted detailed recommendations to CMS for consideration in the CY 2020 rule cycle, describing 23 different types of scope equipment, the HCPCS codes associated with each scope type, and a series of invoices for scope pricing. Based on the recommendations from the workgroup, we proposed to establish 23 new scope equipment codes. For the eight new scope equipment items where we received submitted invoices for pricing, we proposed to replace the existing scopes with the new scope equipment at the same amount of equipment time. This scope replacement involved approximately 100 HCPCS codes in total and was detailed in a table published in the CY 2020 PFS proposed rule (84 FR 40495 through 40498). We noted that we did not receive pricing information along with the workgroup recommendations for the other 15 new scope equipment items. Therefore, although we proposed to establish new equipment codes for these scopes, we did not propose to replace existing scope equipment with the new equipment items as we did for the other eight new scope equipment items for CY 2020.

Following the publication of the CY 2020 PFS proposed rule, commenters provided additional information regarding pricing for the new scope equipment and their associated HCPCS

codes. Based on this information provided by the commenters, we finalized a price for eight additional new scope equipment items and

finalized the replacement of the existing scopes with the new scope equipment at the same amount of equipment time for approximately two dozen additional

HCPSC codes (84 FR 62593 through 62595). Table 5 lists the CY 2020 finalized price for the new scope equipment codes:

TABLE 5: CY 2020 New Scope Equipment Codes

CMS Code	Scope Equipment Description	Finalized Price
ES070	rigid scope, cystoscopy	
ES071	rigid scope, channeled, hysteroscopy	\$6,795.00
ES072	rigid scope, otoscopy	\$2,333.98
ES073	rigid scope, nasal/sinus endoscopy	\$3,004.75
ES074	rigid scope, proctosigmoidoscopy	
ES075	rigid scope, laryngoscopy	\$3,966.08
ES076	rigid scope, colposcopy	\$14,500.00
ES077	non-channeled flexible digital scope, hysteroscopy	
ES078	non-channeled flexible digital scope, nasopharyngoscopy	\$21,923.43
ES079	non-channeled flexible digital scope, bronchoscopy	
ES080	non-channeled flexible digital scope, laryngoscopy	\$21,485.51
ES081	channeled flexible digital scope, cystoscopy	
ES082	channeled flexible digital scope, hysteroscopy	
ES083	channeled flexible digital scope, bronchoscopy	
ES084	channeled flexible digital scope, laryngoscopy	\$18,694.39
ES085	multi-channeled flexible digital scope, flexible sigmoidoscopy	\$17,360.00
ES086	multi-channeled flexible digital scope, colonoscopy	\$38,058.81
ES087	multi-channeled flexible digital scope, esophagoscopy gastroscopy duodenoscopy (EGD)	\$34,585.35
ES088	multi-channeled flexible digital scope, esophagoscopy	\$34,585.35
ES089	multi-channeled flexible digital scope, ileoscopy	\$34,585.35
ES090	multi-channeled flexible digital scope, pouchoscopy	\$17,360.00
ES091	ultrasound digital scope, endoscopic ultrasound	\$0.00
ES092	non-video flexible scope, laryngoscopy	\$5,105.97

We noted that although we updated the scope equipment pricing for CY 2020 such that the ES087 and ES089 scopes shared the same price with the ES088 scope, and the ES090 scope shared the same price with the ES085 scope, we did not mean to suggest that these scopes that shared pricing were identical with one another. We assigned the same price to these scopes because they replaced the same current scope equipment codes, and because we did not have individual pricing information for them. We noted in the CY 2021 PFS proposed rule (85 FR 50087) that we remain open to the submission of additional invoices to establish individual pricing for these scopes, and we welcomed more data to help identify pricing for the remaining seven scope equipment codes that still lack invoices.

(5) Scope Proposals for CY 2021

We did not receive further recommendations from the Scope Equipment Reorganization Workgroup organized by the RUC following the publication of the CY 2020 PFS final rule. However, we did receive invoices

associated with the pricing of the scope video system (monitor, processor, digital capture, cart, printer, LED light) (ES031) equipment item as part of the review of the Esophagogastroduodenoscopy (EGD) with Biopsy and the Colonoscopy code families. We previously finalized a price of \$36,306 for the ES031 equipment based on the sum of component prices of \$9,000 for the processor, \$18,346 for the digital capture device, \$2,000 for the monitor, \$2,295 for the printer, \$1,750 for the cart, \$1,915 for the LED light, and \$1,000 to cover the expense of miscellaneous small equipment associated with the system that falls below the threshold of individual equipment pricing as scope accessories (such as cables, microphones, foot pedals, etc.) We received 37 invoices associated with the components of the ES031 scope video system, which averaged out to prices of \$21,988.89 for the processor, \$16,175.87 for the digital capture device, \$6,987.56 for the monitor, \$7,922.80 for the printer, \$4,945.45 for the cart, and \$12,652.82 for the LED light. Based on the sum of

these component prices, we proposed to update the price the ES031 scope video system equipment to \$70,673.38. We did not propose to include an additional \$1,000 to cover the expense of miscellaneous small equipment as the products listed on the component invoices indicated that cost of cables were already included in this significantly higher equipment pricing. We solicited additional comments from stakeholders regarding the pricing of the full ES031 scope equipment system as well as its components.

As part of our market-based supply and equipment pricing transition, we finalized a policy in CY 2019 to phase in any updated pricing established during the 4-year transition period for very commonly used supplies and equipment that are included in 100 or more codes, even if invoices are provided as part of the formal review of a code family (83 FR 59473 through 59475). Because the ES031 scope equipment system is utilized by more than 250 HCPSC codes, we proposed to transition this pricing increase over the remaining 2 years of the pricing update,

such that the CY 2021 equipment price will be \$53,489.69 before moving to its destination price of \$70,673.38 in CY 2022. We noted that this transition policy also applies to the price of the suction machine (Gomco) (EQ235) equipment, which, although it is not a scope, is utilized by approximately 360 HCPCS codes, and therefore, is another example of this pricing transition policy. We proposed to transition the EQ235 pricing increase over the remaining 2 years of the pricing update, such that the CY 2021 equipment price would be \$1,981.66 before moving to its destination price of \$3,195.85 in CY 2022. As we stated previously, this policy was intended to minimize any potential disruptive effects during the pricing transition period due to the high number of services that make use of these very common supply and equipment items included in 100 or more HCPCS codes.

We also received invoices for the colonoscopy videoscope (ES033) and gastroscopy videoscopes (ES034) as part of the review of the Esophagogastroduodenoscopy (EGD) with Biopsy and the Colonoscopy code families. We finalized the replacement of both of these scope equipment items in the CY 2020 PFS final rule (84 FR 62588 through 62590), replacing the colonoscopy videoscope (ES033) with the multi-channelled flexible digital scope, colonoscopy (ES086) equipment item and the gastroscopy videoscopes (ES034) with the multi-channelled flexible digital scope, esophagoscopy gastroscopy duodenoscopy (EGD) (ES087) equipment item. In both cases, the submitted invoices were nearly identical to the finalized prices for the ES086 (\$38,058.81) and ES087 (\$34,585.35) equipment. We believe that these invoices reinforce the prices finalized through rulemaking last year,

and therefore, we did not propose to further update the prices of these scopes.

We noted that we remain open to further comments regarding the pricing of the remaining seven scope equipment codes that still lack invoices, as well as additional data regarding the pricing of the scope equipment codes that currently share the same price.

We received public comments on our proposals associated with equipment recommendations for scope systems. The following is a summary of the comments we received and our responses.

Comment: Several commenters thanked CMS for updating the prices of the scope video system (ES031) and Gomco suction machine (EQ235) to reflect the submitted invoices. Commenters stated that they supported the proposed transition in price increase for both pieces of equipment over the remaining 2 years of the pricing update and supported the ES031 price update to correctly account for the cost of the various components included in this scope video system.

Response: We appreciate the support for our proposals from the commenters.

Comment: A commenter stated that although they appreciated CMS's efforts to ensure the accuracy of the inputs for scope equipment, the price inputs for scope video systems do not capture all of the costs needed for near infrared fluorescence visualization with 4K monitors. The commenter stated that the actual cost of these processor, monitor, and digital capture device components are 45 to 97 percent higher than current CMS prices. The commenter encouraged CMS to seek additional price inputs for this newer technology and planned to submit invoices to demonstrate the costs related to the near infrared fluorescence scope video price inputs.

Response: We appreciate the feedback from the commenter regarding the costs associated with new technology being incorporated into scope video systems and we look forward to the submission of invoices or other data sources with additional pricing information. However, in the absence of information demonstrating these additional costs, we will continue to maintain our current scope pricing.

Comment: A commenter submitted invoices associated with three of the eight scope equipment items that still lacked a price: The cystoscopy rigid scope (ES070), the cystoscopy channelled flexible digital scope (ES081), and the hysteroscopy channelled flexible digital scope (ES082). The commenter stated that these invoices were representative of national pricing for these scopes and compiled a list of procedures associated with these scopes. This procedure list submitted by the commenter also included the hysteroscopy rigid scope, channelled (ES071) equipment item which was previously priced in CY 2020.

Response: We appreciate the additional pricing information submitted by the commenter in helping us assign a price to the remaining scope equipment codes. Based on this information, we are finalizing a price of \$7,270.00 for the rigid scope, cystoscopy (ES070) equipment, a price of \$22,274.36 for the channelled flexible digital scope, cystoscopy (ES081) equipment, and a price of \$19,081.82 for the channelled flexible digital scope, hysteroscopy (ES082) equipment. When added to the previously finalized prices for the other scope equipment items from CY 2020, the total list is shown in Table 6.

TABLE 6: CY 2021 New Scope Equipment Codes

CMS Code	Scope Equipment Description	Finalized Price
ES070	rigid scope, cystoscopy	\$7,270.00
ES071	rigid scope, channeled, hysteroscopy	\$6,795.00
ES072	rigid scope, otoscopy	\$2,333.98
ES073	rigid scope, nasal/sinus endoscopy	\$3,004.75
ES074	rigid scope, proctosigmoidoscopy	
ES075	rigid scope, laryngoscopy	\$3,966.08
ES076	rigid scope, colposcopy	\$14,500.00
ES077	non-channeled flexible digital scope, hysteroscopy	
ES078	non-channeled flexible digital scope, nasopharyngoscopy	\$21,923.43
ES079	non-channeled flexible digital scope, bronchoscopy	
ES080	non-channeled flexible digital scope, laryngoscopy	\$21,485.51
ES081	channeled flexible digital scope, cystoscopy	\$22,274.36
ES082	channeled flexible digital scope, hysteroscopy	\$19,081.82
ES083	channeled flexible digital scope, bronchoscopy	
ES084	channeled flexible digital scope, laryngoscopy	\$18,694.39
ES085	multi-channeled flexible digital scope, flexible sigmoidoscopy	\$17,360.00
ES086	multi-channeled flexible digital scope, colonoscopy	\$38,058.81
ES087	multi-channeled flexible digital scope, esophagoscopy gastroscopy duodenoscopy (EGD)	\$34,585.35
ES088	multi-channeled flexible digital scope, esophagoscopy	\$34,585.35
ES089	multi-channeled flexible digital scope, ileoscopy	\$34,585.35
ES090	multi-channeled flexible digital scope, pouchoscopy	\$17,360.00
ES091	ultrasound digital scope, endoscopic ultrasound	\$0.00
ES092	non-video flexible scope, laryngoscopy	\$5,105.97

With regard to the procedure list submitted by the commenter, we are not finalizing the replacement of any current scope equipment with the new scope equipment codes. We did not propose to make any such replacements in the proposed rule and we had reservations about some of the procedures on the submitted list, which included CPT codes that currently do not contain scopes or any direct PE inputs at all in some cases. We appreciate the submission of this additional information from the commenter and we will consider the procedure list for potential use in future rulemaking.

After consideration of the public comments, we are finalizing our proposal to update the price the ES031 scope video system equipment to \$70,673.38 along with our proposed update to the price of the suction machine (Gomco) (EQ235) equipment. We are also finalizing the price for the three new scope equipment items as detailed above.

c. Technical Corrections to Direct PE Input Database and Supporting Files

For CY 2021, we proposed to address the following inconsistencies:

- Following the publication of the CY 2020 PFS final rule, stakeholders contacted CMS and clarified that CPT

code 0466T (Insertion of chest wall respiratory sensor electrode or electrode array, including connection to pulse generator) is always performed on an add-on basis and would never be used as a standalone code. Therefore, we proposed to update the global period for CPT code 0466T to add-on status (ZZZ) to more accurately reflect the way in which this service is performed.

We received public comments on the technical corrections to direct PE input database and supporting files. The following is a summary of the comments we received and our responses.

Comment: A commenter stated that they supported the proposed change to the global period of CPT code 0466T and agreed that this technical correction was appropriate.

Response: We appreciate the support for our proposal from the commenter.

Comment: Several commenters stated that in the direct PE inputs for CPT code 33202 (*Insertion of epicardial electrode(s); open incision (e.g., thoracotomy, median sternotomy, subxiphoid approach)*), there are two tables listed under the equipment inputs: An exam table (EF023) and a power table (EF031). Commenters stated that spreadsheet information from CPT 2007 listed a power table and an exam light for this service, not an exam table. Commenters stated that it seemed likely

that this was an accidental data entry error and requested that the equipment inputs for CPT code 33202 be corrected in the CMS equipment database to include a power table and exam light.

Response: We agree with the commenters that this was likely a data entry error confusing the exam light with the exam table. Based on the information supplied by the commenters, we are finalizing the replacement of the exam table with an exam light (EQ168) at the same equipment time of 36 minutes for CPT code 33202.

Comment: Several commenters stated that in the 2020 CMS direct PE inputs supplies listing, the “unit” type is missing for the skin prep barrier wipes (SM029) supply. Commenters stated that although this omission does not affect pricing, it makes it ambiguous what the units mean and could have an unintended impact if there are multiple different possible unit types, such as a liquid, where it would be unclear if it were ounces, milliliters, or something else. Commenters recommended that each supply item in the CMS database should have a unit type and provided a list of the supply items in the CY 2020 PFS final rule that were missing a unit type, with potential unit type suggestions for each item.

Response: We agree with the commenters that each supply item in the CMS database should include a unit

type in order to avoid potential confusion regarding pricing. We are

finalizing the addition of the unit types as listed in Table 7.

TABLE 7: Addition of Supply Unit Types

CMS Code	Description	Unit Type
SA115	hemorrhoidal banding system	item
SA116	continuous peripheral nerve block tray	tray
SA119	kit, low frequency ultrasound wound therapy (MIST)	kit
SA122	Claravein Kit	kit
SA123	Hysteroscopic fluid management tubing kit	kit
SC101	ultrasound needle	item
SC102	EBUS, single use aspiration needle, 21g	item
SC103	catheter, RF ablation, endoscopic	item
SD290	electrode, BIS (bioimpedance spectroscopy)	item
SD291	Urolift Implant and implantation device	item
SD292	10g IVAS drill	item
SD293	10g cannulae	item
SD294	Balloon for Bronchoscopy Fiberscope	item
SH106	CavityShield 5% Varnish .25mL	item
SJ089	ultrasound transmission gel, sterile (single use)	item
SK126	Beck Depression Inventory, Second Edition	item
SL519	Urethane Foaming Agent	item
SM029	skin prep barrier wipes	item

All of the supply items in the CMS database should now include a unit type with the additions from this list. We note that we did not add a unit type for the “No Supplies” (SX007) category as the commenter requested since this is not a supply item.

Comment: Several commenters questioned the proposed RVUs associated with several occupational therapy evaluation procedures (CPT codes 97165–97167). Commenters stated that the PE valuation for these codes appeared to be illogical, with the proposed valuation of the codes demonstrating an inverse relationship between PE value and complexity. Commenters stated that it was counterintuitive for the PE RVU to go down as the level of complexity increased. Commenters stated that the distribution of code usage has not changed in any manner to justify a reduction in the code values and that all three evaluation codes should reimburse at the same rate.

Response: We appreciate the commenters bringing this issue to our attention. However, although we agree with the commenters that the proposed valuation of these services is somewhat illogical, we do not agree that their proposed valuation represents a technical error. Although the three codes in question share the same work RVU and the same direct PE inputs, they do not share the same specialty

distribution in the claims data and therefore will not necessarily receive the same allocation of indirect PE. In response to the comments, we are implementing a technical change which should ensure that these three services receive the same allocation of indirect PE.

Following the publication of the proposed rule, we also discovered a technical error in the published RVUs for three HCPCS codes. Code G0102 (*Prostate cancer screening; digital rectal examination*) was assigned the same value as CPT code 99211, the lowest level E/M service, in the CY 2000 PFS final rule (64 FR 59414). Code G0102 was assigned a work RVU of 0.17 which matched the work RVU of CPT code 99211 at the time. However, when we increased the work RVU for CPT code 99211 to 0.18 in CY 2010 as part of the last E/M revaluation, the work RVU for HCPCS code G0102 was not increased to match. We are correcting this technical oversight by finalizing an increase in the work RVU of code G0102 from 0.17 to 0.18 to match the previously finalized crosswalk to CPT code 99211.

We also previously finalized and valued in the CY 1998 PFS final rule (62 FR 59082) the following two G codes for use when a barium enema is being substituted for either a screening sigmoidoscopy or screening colonoscopy: HCPCS codes G0106 (*Colorectal cancer screening; alternative*

to G0104, screening sigmoidoscopy, barium enema) and G0120 (*Colorectal cancer screening; alternative to G0105, screening colonoscopy, barium enema*). We established the same RVUs for these screening G codes as for the diagnostic barium enema procedure, CPT code 74280 (*Radiologic examination, colon, including scout abdominal radiograph(s) and delayed image(s), when performed; double-contrast (e.g., high density barium and air) study, including glucagon, when administered*). The work RVU for codes G0106 and G0120 has matched the work RVU for CPT code 74280 for the last two decades; however, we reviewed CPT code 74280 last year and, in the CY 2020 PFS final rule, increased the work RVU for CPT code 74280 to 1.26. Through an oversight, we did not make corresponding changes in the work RVUs for HCPCS codes G0106 and G0120. We are therefore correcting this technical oversight by finalizing an increase in the work RVU for HCPCS codes G0106 and G0120 to match the previously finalized crosswalk to CPT code 74280.

After consideration of the public comments, we are finalizing our proposals along with the additions as detailed above.

d. Updates to Prices for Existing Direct PE Inputs

In the CY 2011 PFS final rule with comment period (75 FR 73205), we finalized a process to act on public requests to update equipment and supply price and equipment useful life inputs through annual rulemaking, beginning with the CY 2012 PFS proposed rule. For CY 2021, we proposed to update the price of one supply and four equipment items in response to the public submission of invoices. As these pricing updates were each part of the formal review for a code family, we proposed that the new pricing take effect for CY 2021 for these items instead of being phased in over 4 years. These supply and equipment items with updated prices associated with the formal review of a code family are listed in the valuation of specific codes section of the preamble under Table 31: CY 2021 Invoices Received for Existing Direct PE Inputs.

(1) Market-Based Supply and Equipment Pricing Update

Section 220(a) of the Protecting Access to Medicare Act of 2014 (PAMA) (Pub. L. 113–93, enacted April 1, 2014) provides that the Secretary may collect or obtain information from any eligible professional or any other source on the resources directly or indirectly related to furnishing services for which payment is made under the PFS, and that such information may be used in the determination of relative values for services under the PFS. Such information may include the time involved in furnishing services; the amounts, types and prices of PE inputs; overhead and accounting information for practices of physicians and other suppliers, and any other elements that would improve the valuation of services under the PFS.

As part of our authority under section 1848(c)(2)(M) of the Act, we initiated a market research contract with StrategyGen to conduct an in-depth and robust market research study to update the PFS direct PE inputs (DPEI) for supply and equipment pricing for CY 2019. These supply and equipment prices were last systematically developed in 2004–2005. StrategyGen submitted a report with updated pricing recommendations for approximately 1300 supplies and 750 equipment items currently used as direct PE inputs. This report is available as a public use file displayed on the CMS website under downloads for the CY 2019 PFS final rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/>

PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.

The StrategyGen team of researchers, attorneys, physicians, and health policy experts conducted a market research study of the supply and equipment items currently used in the PFS direct PE input database. Resources and methodologies included field surveys, aggregate databases, vendor resources, market scans, market analysis, physician substantiation, and statistical analysis to estimate and validate current prices for medical equipment and medical supplies. StrategyGen conducted secondary market research on each of the 2,072 DPEI medical equipment and supply items that CMS identified from the current DPEI. The primary and secondary resources StrategyGen used to gather price data and other information were:

- Telephone surveys with vendors for top priority items (Vendor Survey).
- Physician panel validation of market research results, prioritized by total spending (Physician Panel).
- The General Services Administration system (GSA).
- An aggregate health system buyers database with discounted prices (Buyers).
- Publicly available vendor resources, that is, Amazon Business, Cardinal Health (Vendors).
- The **Federal Register**, current DPEI data, historical proposed and final rules prior to CY 2018, and other resources; that is, AMA RUC reports (References).

StrategyGen prioritized the equipment and supply research based on current share of PE RVUs attributable by item provided by CMS. StrategyGen developed the preliminary Recommended Price (RP) methodology based on the following rules in hierarchical order considering both data representativeness and reliability.

(1) If the market share, as well as the sample size, for the top three commercial products were available, the weighted average price (weighted by percent market share) was the reported RP. Commercial price, as a weighted average of market share, represents a more robust estimate for each piece of equipment and a more precise reference for the RP.

(2) If no data were available for commercial products, the current CMS prices were used as the RP.

GSA prices were not used to calculate the StrategyGen recommended prices, due to our concern that the GSA system curtails the number and type of suppliers whose products may be accessed on the GSA Advantage website, and that the GSA prices may often be lower than prices that are

available to non-governmental purchasers. After reviewing the StrategyGen report, we proposed to adopt the updated direct PE input prices for supplies and equipment as recommended by StrategyGen.

StrategyGen found that despite technological advancements, the average commercial price for medical equipment and supplies has remained relatively consistent with the current CMS price. Specifically, preliminary data indicated that there was no statistically significant difference between the estimated commercial prices and the current CMS prices for both equipment and supplies. This cumulative stable pricing for medical equipment and supplies appears similar to the pricing impacts of non-medical technology advancements where some historically high-priced equipment (that is, desktop PCs) has been increasingly substituted with current technology (that is, laptops and tablets) at similar or lower price points. However, while there were no statistically significant differences in pricing at the aggregate level, medical specialties would experience increases or decreases in their Medicare payments if we were to adopt the pricing updates recommended by StrategyGen. At the service level, there may be large shifts in PE RVUs for individual codes that happened to contain supplies and/or equipment with major changes in pricing, although we note that codes with a sizable PE RVU decrease would be limited by the requirement to phase in significant reductions in RVUs, as required by section 1848(c)(7) of the Act. The phase-in requirement limits the maximum RVU reduction for codes that are not new or revised to 19 percent in any individual calendar year.

We believe that it is important to make use of the most current information available for supply and equipment pricing instead of continuing to rely on pricing information that is more than a decade old. Given the potentially significant changes in payment that would occur, both for specific services and more broadly at the specialty level, in the CY 2019 PFS proposed rule we proposed to phase in our use of the new direct PE input pricing over a 4-year period using a 25/75 percent (CY 2019), 50/50 percent (CY 2020), 75/25 percent (CY 2021), and 100/0 percent (CY 2022) split between new and old pricing. This approach is consistent with how we have previously incorporated significant new data into the calculation of PE RVUs, such as the 4-year transition period finalized in CY 2007 PFS final rule with comment period when changing to the “bottom-

up” PE methodology (71 FR 69641). This transition period will not only ease the shift to the updated supply and equipment pricing, but will also allow interested parties an opportunity to review and respond to the new pricing information associated with their services.

We proposed to implement this phase-in over 4 years so that supply and

equipment values transition smoothly from the prices we currently include to the final updated prices in CY 2022. We proposed to implement this pricing transition such that one quarter of the difference between the current price and the fully phased-in price is implemented for CY 2019, one third of the difference between the CY 2019

price and the final price is implemented for CY 2020, and one half of the difference between the CY 2020 price and the final price is implemented for CY 2021, with the new direct PE prices fully implemented for CY 2022. An example of the transition from the current to the fully-implemented new pricing is provided in Table 8.

TABLE 8: Example of Direct PE Pricing Transition

Current Price	\$100	
Final Price	\$200	
Year 1 (CY 2019) Price	\$125	1/4 difference between \$100 and \$200
Year 2 (CY 2020) Price	\$150	1/3 difference between \$125 and \$200
Year 3 (CY 2021) Price	\$175	1/2 difference between \$150 and \$200
Final (CY 2022) Price	\$200	

For new supply and equipment codes for which we establish prices during the transition years (CYs 2019, 2020 and 2021) based on the public submission of invoices, we proposed to fully implement those prices with no transition since there are no current prices for these supply and equipment items. These new supply and equipment codes would immediately be priced at their newly established values. We also proposed that, for existing supply and equipment codes, when we establish prices based on invoices that are submitted as part of a revaluation or comprehensive review of a code or code family, they will be fully implemented for the year they are adopted without being phased in over the 4-year pricing transition. The formal review process for a HCPCS code includes a review of pricing of the supplies and equipment included in the code. When we find that the price on the submitted invoice is typical for the item in question, we believe it would be appropriate to finalize the new pricing immediately along with any other revisions we adopt for the code valuation.

For existing supply and equipment codes that are not part of a comprehensive review and valuation of a code family and for which we establish prices based on invoices submitted by the public, we proposed to implement the established invoice price as the updated price and to phase in the new price over the remaining years of the proposed 4-year pricing transition. During the proposed transition period, where price changes for supplies and equipment are adopted without a formal review of the HCPCS codes that include them (as is the case for the many updated prices we proposed to phase in over the 4-year transition period), we

believe it is important to include them in the remaining transition toward the updated price. We also proposed to phase in any updated pricing we establish during the 4-year transition period for very commonly used supplies and equipment that are included in 100 or more codes, such as sterile gloves (SB024) or exam tables (EF023), even if invoices are provided as part of the formal review of a code family. We would implement the new prices for any such supplies and equipment over the remaining years of the proposed 4-year transition period. Our proposal was intended to minimize any potential disruptive effects during the proposed transition period that could be caused by other sudden shifts in RVUs due to the high number of services that make use of these very common supply and equipment items (meaning that these items are included in 100 or more codes).

We believed that implementing the proposed updated prices with a 4-year phase-in would improve payment accuracy, while maintaining stability and allowing stakeholders the opportunity to address potential concerns about changes in payment for particular items. Updating the pricing of direct PE inputs for supplies and equipment over a longer timeframe will allow more opportunities for public comment and submission of additional, applicable data. We welcomed feedback from stakeholders on the proposed updated supply and equipment pricing, including the submission of additional invoices for consideration.

We received many comments regarding the market-based supply and equipment pricing proposal following the publication of the CY 2019 PFS proposed rule. For a full discussion of these comments, we direct readers to

the CY 2019 PFS final rule (83 FR 59475 through 59480). In each instance in which a commenter raised questions about the accuracy of a supply or equipment code’s recommended price, the StrategyGen contractor conducted further research on the item and its price with special attention to ensuring that the recommended price was based on the correct item in question and the clarified unit of measure. Based on the commenters’ requests, the StrategyGen contractor conducted an extensive examination of the pricing of any supply or equipment items that any commenter identified as requiring additional review. Invoices submitted by multiple commenters were greatly appreciated and ensured that medical equipment and supplies were re-examined and clarified. Multiple researchers reviewed these specified supply and equipment codes for accuracy and proper pricing. In most cases, the contractor also reached out to a team of nurses and their physician panel to further validate the accuracy of the data and pricing information. In some cases, the pricing for individual items needed further clarification due to a lack of information or due to significant variation in packaged items. After consideration of the comments and this additional price research, we updated the recommended prices for approximately 70 supply and equipment codes identified by the commenters. Table 9 in the CY 2019 PFS final rule lists the supply and equipment codes with price changes based on feedback from the commenters and the resulting additional research into pricing (83 FR 59479 through 59480).

After consideration of the public comments, we finalized our proposals

associated with the market research study to update the PFS direct PE inputs for supply and equipment pricing. We continue to believe that implementing the proposed updated prices with a 4-year phase-in will improve payment accuracy, while maintaining stability and allowing stakeholders the opportunity to address potential concerns about changes in payment for particular items. We continue to welcome feedback from stakeholders on the proposed updated supply and equipment pricing, including the submission of additional invoices for consideration.

For CY 2021, we received invoice submissions for approximately a dozen supply and equipment codes from stakeholders as part of the third year of the market-based supply and equipment

pricing update. The submitted invoices were used in many cases to supplement the pricing originally proposed for the CY 2019 PFS rule cycle. We reviewed the invoices, as well as prior data for the relevant supply/equipment codes to make sure the item in the invoice was representative of the supply/equipment item in question and aligned with past research. Based on this research, we proposed to update the prices of the supply and equipment items listed in Table 7 of the CY 2021 PFS proposed rule.

We finalized a policy in CY 2019 to phase in the new supply and equipment pricing over 4 years so that supply and equipment values transition smoothly from their current prices to the final updated prices in CY 2022. We finalized our proposal to implement this pricing

transition such that one quarter of the difference between the current price and the fully phased in price was implemented for CY 2019, one third of the difference between the CY 2019 price and the final price is implemented for CY 2020, and one half of the difference between the CY 2020 price and the final price is implemented for CY 2021, with the new direct PE prices fully implemented for CY 2022. An example of the transition from the current to the fully-implemented new pricing is provided in Table 8. For CY 2021, one half of the difference between the CY 2020 price and the final price will be implemented as per the previously finalized policy. Table 9 contains the list of proposed CY 2021 market-based supply and equipment pricing updates:

TABLE 9: CY 2021 Proposed Market-Based Supply and Equipment Updates

CMS CODE	Description	CMS 2020 Price	Prior CMS 2022 Price	Prior CMS 2021 Price	Updated CMS 2022 Price	Updated CMS 2021 Price
SA105	UroVysion test kit	\$153.040	\$129.280	\$141.160	\$187.490	\$170.265
SD089	guidewire, hydrophilic	\$39.435	\$43.370	\$41.403	\$13.350	\$26.393
SD136	vascular sheath	\$36.650	\$52.800	\$44.725	\$24.444	\$30.547
SD155	catheter, RF endovenous occlusion	\$637.500	\$550.000	\$593.750	\$382.500	\$510.000
EQ041	Vmax 22d and 62j (PFT equip, autobox, computer system)	\$47,930.000	\$47,930.000	\$47,930.000	\$47,406.540	\$47,668.270
ER044	nuclide rod source set	\$1,783.167	\$2,171.333	\$1,977.250	\$2,081.167	\$1,932.167

The prices for the supply and equipment items listed in Table 9 were calculated based on averaging together the prices on the submitted invoices. In the case of the vascular sheath (SD136) and RF endovenous occlusion catheter (SD155) supplies, the price was determined by removing the sheath or catheter from the eight submitted kit invoices and then averaging the resulting price together with the single standalone sheath/catheter invoice.

In addition to submitting invoices with information updating the price of the “Vmax 22d and 62j (PFT equip, autobox, computer system)” (EQ041) equipment, stakeholders also clarified that the “Vmax 229 (spirometry testing equip, computer system)” (EQ040) and “Vmax 29s (spirometry testing equip, computer system)” (EQ043) equipment items have become obsolete and are no longer typically used in any HCPCS codes. Based on the information supplied by the stakeholders, we proposed to remove the EQ040 and

EQ043 equipment items, replacing them with the EQ041 equipment at the same number of minutes in the six HCPCS codes where they are utilized.

We did not propose to update the price of additional supply and equipment items for which invoices were submitted following the publication of the CY 2020 PFS final rule. We did not propose to update the price for the “pipette, transfer 23ml” (SL109), “slide specimen mailer (1–5 microscope slides)” (SL121), “stain, hematoxylin” (SL135), “stain, eosin” (SL201), and “stain, PAP OG–6” (SL491) supplies. In each case we received a single invoice for these five supplies detailing price increases ranging from 82 percent to 160 percent above the current pricing. These supplies are commonly used in cytopathology procedures and we disagree that the typical price for these supplies has more than doubled since being reviewed by the StrategyGen contractor 2 years ago for CY 2019.

We also did not propose to update the price for the “embedding mold” (SL060) supply or the “microscope, compound” (EP060) equipment based on the same rationale. The submitted invoices represent pricing increases of 339 percent for the compound microscope and 7800 percent for the embedding mold and, based on the recent review of the pricing of these items by our contractor, we do not believe that the submitted invoices reflect typical market-based pricing. The same stakeholder also submitted an invoice to update the price of the surgical mask (SB033) supply by 617 percent over the current price. However, the invoice in question contains the price for a surgical mask with face shield, which is described by the SB034 supply code, not the SB033 supply code. Therefore, we did not propose to update the price of the surgical mask (SB033) supply based on this invoice. Finally, we received an invoice for a ClosureFast Procedure Pack (CFP) but it was unclear

what supply or equipment item this invoice was intended to update. As a result, we noted in the CY 2021 PFS proposed rule that we were unable to use this invoice to make a pricing proposal.

We received public comments on the market-based supply and equipment pricing update. The following is a summary of the comments we received and our responses.

Comment: Several commenters stated that they continued to support the engagement from the agency to work with CMS contractors and stakeholders to incorporate current pricing data based on invoices into the calculation of direct PE cost. Commenters stated that bringing in an outside vendor in addition to accepting invoices from stakeholders was a reasonable approach, and that the incorporation of this new data and the process for determining what is accepted and what is rejected should be done in a transparent manner. Several different commenters urged CMS to be more deliberate and transparent about this decision-making process regarding supply and equipment pricing.

Response: We appreciate the feedback from the commenters and share the desire for transparency in pricing. We continue to believe that it is important to make use of the most current information available for supply and equipment pricing through the use of market-based research, and we agree with the need to explain the rationale behind the adoption or rejection of invoices submitted by stakeholders. We routinely accept public submission of invoices as part of our process for developing payment rates for new, revised, and potentially misvalued codes. We consider invoices submitted as public comments during the comment period following the publication of the PFS proposed rule, and would consider any invoices received after February 10th or outside of the public comment process as part of our established annual process for requests to update supply and equipment prices. Stakeholders are encouraged to submit invoices as part of their public comments or, if outside the public comment process, via email at PE_Price_Input_Update@cms.hhs.gov.

Comment: A commenter stated that they supported the proposed pricing for the UroVysion test kit (SA105) supply. The commenter stated that establishing a price that is in line with invoice pricing ensures that reimbursement for the service reflects accurately the cost of resources involved in providing the service.

Response: We appreciate the support for our proposed pricing from the commenter.

Comment: A commenter disagreed with the proposed pricing of the lysing reagent (FACS) (SL089) supply. The commenter submitted six invoices for the supply and requested that CMS use them to update the pricing.

Response: We appreciate the submission of these additional invoices for use in pricing the SL089 supply. Therefore, we are finalizing an update in the price of this supply to \$3.645 as indicated on the submitted invoices. As part of our ongoing pricing transition, the CY 2021 price of the supply will be \$3.764 before reaching the finalized price of \$3.645 in CY 2022.

Comment: One commenter disagreed with the proposed pricing of the radiofrequency introducer kit (SA026). The commenter stated that although some vendors now include this supply in an overall catheter pack, it is still common that many practices purchase this item separately. The commenter submitted two invoices for the supply and requested that CMS use them to update the pricing.

Response: We appreciate the submission of these additional invoices for use in pricing the SA026 supply. Therefore, we are finalizing an update in the price of this supply to \$28.575 based on an average of the prices on the two submitted invoices. As part of our ongoing pricing transition, the CY 2021 price of the SA026 supply will be \$32.83 before reaching the finalized price of \$28.575 in CY 2022.

Comment: Several commenters disagreed with the proposed pricing of the hydrophilic guidewire (SD089) supply. Commenters stated that \$27.76 would be a more appropriate reimbursement rate and submitted an invoice in support of their suggested pricing.

Response: We appreciate the submission of these additional invoices for use in pricing the SD089 supply. We noted that the guidewire on the newly submitted invoice was a different size than the guidewire on the invoice that we previously used for pricing the SD089 supply. Since we do not have information currently available as to which of these guidewires would be more typical, we are averaging together the two submitted invoices for a price of \$20.555. As part of our ongoing pricing transition, the CY 2021 price of the SD089 supply will be \$29.995 before reaching the finalized price of 20.555 in CY 2022.

Comment: A commenter disagreed with the proposed pricing of the endovascular laser treatment kit

(SA074). The commenter stated that they were not sure that the proposed pricing was typical for the average clinic due to the economy of scale advantages available for larger providers. The commenter submitted three invoices for the supply and requested that CMS use them to update the pricing.

Response: We appreciate the submission of these additional invoices for use in pricing the SA074 supply. The unit prices on the three submitted invoices were \$431.08 (for a pack of five), \$438.60 (for a pack of two), and \$535.60 for an individual supply. The price for the individual endovascular laser treatment kit was significantly higher than the other invoice prices and we believe that this price would not be typical in light of the other pricing data that we have available. Therefore, we are finalizing an update in the price of this supply to \$438.60 based on taking the median of the submitted invoices which we believe to be more representative of typical pricing. As part of our ongoing pricing transition, the CY 2021 price of the SA074 supply will be \$429.88 before reaching the finalized price of \$438.60 in CY 2022.

Comment: A commenter disagreed with the proposed pricing of the tubing set (Liposorber) (SC083) and plasma separator (Liposorber) (SD188) supplies. The commenter stated that the proposed prices did not accurately reflect the actual average prices paid by their U.S. provider customers. The commenter submitted 45 invoices for the two supplies and requested that CMS use them to update the pricing.

Response: We appreciate the submission of this large quantity of additional invoices for use in pricing the SC083 and SD188 supplies. After reviewing the invoices, we agree with the commenter that the average sales price matches the numbers listed in their comment letter. Therefore, we are finalizing an update in the price of the SC083 supply to \$75.71 and an update in the price of the SD188 supply to \$131.42 as indicated on the submitted invoices. As part of our ongoing pricing transition, the CY 2021 price of the SC083 supply will be \$62.28 and the CY 2021 price of the SD188 supply will be \$113.04 before reaching their finalized prices in CY 2022.

Comment: Several commenters disagreed with the proposed pricing for the RF endovenous ablation catheter (SD 155) and the vascular sheath (SD 136) supplies. Commenters stated that the proposed prices did not reflect the reality of their practice's economics and expressed concern that such reductions could encourage office-based physicians to curtail or cease performing these

procedures. Commenters stated that the proposed pricing for RF catheters and sheaths represented the price being paid by high-volume or large multi-location practices and did not reflect the prices paid by smaller providers who are more typical. Due to the greater negotiating power and high volume discounts available to larger practices, commenters stated that the proposed supply pricing did not seem to be what typical providers pay and that the current pricing of \$52.80 was more representative for the vascular sheath. One commenter requested a more thorough review of the data CMS used to determine the updated pricing for the SD136 and SD155 supplies as well as the opportunity to provide additional data to validate their pricing. Several commenters submitted a series of invoices for the RF endovenous occlusion catheter (SD155) that they stated were more typical of pricing and urged CMS to update the supply pricing accordingly.

Response: We appreciate the additional information provided by the commenters regarding the pricing of these supplies, especially the invoices with additional pricing data for the SD155 catheter. The commenters are correct that the proposed pricing for the SD155 supply was based in part on a bulk order and that ordering the catheters on an individual basis resulted in higher prices. However, we do not agree that it would be accurate to base the pricing of the SD155 supply solely on the basis of individual orders with no discounts included, as it is clear from the submitted invoices that there

exists a variety of discounts available for providers. Therefore, we are averaging together the newly submitted invoices together with our previous invoices for the SD155 supply and finalizing the resulting price of \$487.92. As part of our ongoing pricing transition, the CY 2021 price of the supply will be \$562.71 before reaching the finalized price of \$487.92 in CY 2022.

We did not receive any invoices with updated pricing information for the vascular sheath (SD136) supply. In the absence of additional information, we believe that the proposed price for the vascular sheath accurately reflects the cost of this supply and we are finalizing the proposed price of \$24.44. We continue to welcome the submission of invoices with additional information regarding the pricing of these two or any other supply items.

Comment: Several commenters stated that they believe the HDR Afterload System, Nucletron—Oldelft (ER003) and the SRS System, SBRT, Six Systems (ER083) equipment items remain significantly undervalued relative to fair market pricing. The commenters stated that it was imperative for CMS equipment pricing to accurately reflect marketplace pricing given the high cost of these items and their substantial utilization in certain radiation oncology delivery codes. One commenter stated that the pricing for this equipment may represent a less costly electronic brachytherapy system used to treat skin cancer or an equipment upgrade or refurbished equipment. The commenters requested that CMS conduct additional research regarding

fair and accurate market pricing for these two equipment items and accept newly submitted invoices during the 60-day comment period. One commenter requested a one-year moratorium on phasing in the StrategyGen revised pricing inputs and maintain all direct PE inputs at 2020 levels.

Response: We share the desire of the commenter for fair and accurate market-based pricing for these two equipment items. However, both of these equipment items were priced based on research conducted by our StrategyGen contractor and then were updated in response to additional information supplied by commenters in the CY 2019 PFS final rule (83 FR 59478–59479). In the absence of additional information, we believe that the current prices accurately reflect the cost of these equipment items. We continue to welcome the submission of invoices with additional information regarding the pricing of these two or any other equipment items. We also note that the ongoing market-based supply and equipment pricing update was previously finalized in CY 2019 rulemaking and we do not agree that a one-year moratorium on the continuing pricing transition would facilitate our goal of ensuring current pricing.

After consideration of the public comments, we are finalizing our proposals associated with the market-based supply and equipment pricing update as detailed above. Table 10 contains the list of finalized CY 2021 market-based supply and equipment pricing updates:

TABLE 10: CY 2021 Finalized Market-Based Supply and Equipment Updates

CMS CODE	Description	CMS 2020 Price	Prior CMS 2022 Price	Prior CMS 2021 Price	Updated CMS 2022 Price	Updated CMS 2021 Price
SA026	kit, radiofrequency introducer	\$37.080	\$24.160	\$30.620	\$28.575	\$32.828
SA074	kit, endovascular laser treatment	\$421.165	\$323.330	\$372.248	\$438.600	\$429.883
SA105	UroVysion test kit	\$153.040	\$129.280	\$141.160	\$187.490	\$170.265
SC083	tubing set (Liposorber)	\$48.840	\$47.680	\$48.260	\$75.710	\$62.275
SD089	guidewire, hydrophilic	\$39.435	\$13.350	\$26.393	\$20.555	\$29.995
SD136	vascular sheath	\$36.650	\$52.800	\$44.725	\$24.444	\$30.547
SD155	catheter, RF endovenous occlusion	\$637.500	\$382.500	\$510.000	\$487.920	\$562.710
SD188	plasma separator (Liposorber)	\$94.660	\$89.320	\$91.990	\$131.420	\$113.040
SL089	lysing reagent (FACS)	\$3.883	\$3.280	\$3.581	\$3.645	\$3.764
EQ041	Vmax 22d and 62j (PFT equip, autobox, computer system)	\$47,930.000	\$47,930.000	\$47,930.000	\$47,406.540	\$47,668.270
ER044	nuclide rod source set	\$1,783.167	\$2,171.333	\$1,977.250	\$2,081.167	\$1,932.167

(2) Invoice Submission

The full list of updated supply and equipment pricing as it will be implemented over the 4-year transition period will be made available as a public use file displayed on the CMS website under downloads for the CY 2021 PFS final rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

We routinely accept public submission of invoices as part of our process for developing payment rates for new, revised, and potentially misvalued codes. Often these invoices are submitted in conjunction with the RUC-recommended values for the codes. To be included in a given year's proposed rule, we generally need to receive invoices by the same February 10th deadline we noted for consideration of RUC recommendations. However, we will consider invoices submitted as public comments during the comment period following the publication of the PFS proposed rule, and would consider any invoices received after February 10th or outside of the public comment process as part of our established annual process for requests to update supply and equipment prices. Stakeholders are encouraged to submit invoices as part of their public comments or, if outside the public comment process, via email at PE_Price_Input_Update@cms.hhs.gov.

(3) Updated Supply Pricing for Venous and Arterial Stenting Services

Following the publication of the CY 2020 PFS final rule, stakeholders contacted CMS and presented additional information regarding supply pricing for certain venous and arterial stenting services. These stakeholders stated that the use of the “stent, vascular, deployment system, Cordis SMART” (SA103) supply was no longer typical in CPT codes 37238 (*Transcatheter placement of an intravascular stent(s), open or percutaneous, including radiological supervision and interpretation and including angioplasty within the same vessel, when performed; initial vein*) and 37239 (*Transcatheter placement of an intravascular stent(s), open or percutaneous, including radiological supervision and interpretation and including angioplasty within the same vessel, when performed; each additional vein*). The stakeholders stated that a new venous stent system had become the typical standard of care for these services, and they supplied ten invoices for use in pricing this supply.

The stakeholders also requested additional information regarding the nature of the “stent, balloon, implantable” (SD299) supply included in CPT codes 37236 (*Transcatheter placement of an intravascular stent(s) (except lower extremity artery(s) for occlusive disease, cervical carotid,*

extracranial vertebral or intrathoracic carotid, intracranial, or coronary), open or percutaneous, including radiological supervision and interpretation and including all angioplasty within the same vessel, when performed; initial artery) and 37237 (*Transcatheter placement of an intravascular stent(s) (except lower extremity artery(s) for occlusive disease, cervical carotid, extracranial vertebral or intrathoracic carotid, intracranial, or coronary), open or percutaneous, including radiological supervision and interpretation and including all angioplasty within the same vessel, when performed; each additional artery*). The stakeholders specifically were unclear what the implantable stent balloon represented and sought guidance on whether pricing involved a stent, a balloon, or a combination of both.

In response to the additional information provided by the stakeholders, we proposed to remove the SA103 supply item from CPT codes 37238 and 37239. We proposed to replace it with a newly created “venous stent system” (SD340) supply at the same supply quantity. We proposed a price of \$1,750.00 for the venous stent system based on the median price of the ten invoices supplied by the stakeholders. We proposed the use of the median price due to the presence of several invoices that appear to be outliers, which are not reflective of

market pricing for the venous stent system. With regards to the request for additional information regarding the nature of the “stent, balloon, implantable” (SD299) supply, the original invoice used to price this supply during the CY 2015 rule cycle listed an item named “Renal and Biliary Stent System 7.0 mm × 15 mm × 135 cm”. We welcomed additional information from stakeholders regarding the nature and pricing of this supply item.

We received public comments on our proposals associated with updated supply pricing for venous and arterial stenting services. The following is a summary of the comments we received and our responses.

Comment: Several commenters stated that they supported the proposed change to replace the stent for CPT codes 37238 and 37239. One commenter stated that they appreciated the additional information on the two CPT codes and looked forward to researching this issue further.

Response: We appreciate the support for our proposals from the commenters.

After consideration of the public comments, we are finalizing our proposals associated with updated supply pricing for venous and arterial stenting services.

(4) Myocardial PET Equipment Inputs

Following the publication of the CY 2020 PFS final rule, stakeholders contacted CMS and presented additional information regarding the direct PE inputs for several codes associated with Myocardial PET services. The stakeholders stated that the nuclide rod source set (ER044) equipment was inadvertently excluded from the direct PE recommendations for CPT codes 78432 (*Myocardial imaging, positron emission tomography (PET), combined perfusion with metabolic evaluation study (including ventricular wall motion[s] and/or ejection fraction[s], when performed)*), 78459 (*Myocardial imaging, positron emission tomography (PET), metabolic evaluation study (including ventricular wall motion[s] and/or ejection fraction[s], when performed)*), 78491 (*Myocardial imaging, positron emission tomography (PET), perfusion study (including ventricular wall motion[s] and/or ejection fraction[s], when performed)*), and 78492 (*Myocardial imaging, positron emission tomography (PET), perfusion study (including ventricular wall motion[s] and/or ejection fraction[s], when performed)*);

multiple studies at rest and stress (exercise or pharmacologic)), and requested that CMS add this equipment to the direct inputs for this group of CPT codes. The stakeholders also stated that the current useful life of 5 years for the ER044 equipment was incorrect as these sources are replaced every 9 months to 1 year. The stakeholders requested that CMS update the useful life of ER044 to 0.75 years. Finally, the stakeholders stated that the costs for the purchase of the Rubidium PET Generator (ER114) equipment are captured elsewhere through the billing of HCPCS supply code A9555, and the stakeholders recommended that we remove equipment item ER114 to avoid incorrect billing duplication.

We noted that we appreciate the additional information submitted by the stakeholders regarding the direct PE inputs for these Myocardial PET services. In response to this new information, we proposed to update the price for the nuclide rod source set (ER044) equipment to \$2,081.17 based on averaging together the price of the three submitted invoices after removing the shipping and delivery costs according to our standard pricing methodology. We also proposed to add the ER044 equipment to CPT codes 78432, 78459, 78491, and 78492 as requested, assigning the same equipment time utilized by the “PET Refurbished Imaging Cardiac Configuration” (ER110) equipment in each service. We proposed to update the useful life of the ER044 equipment to one year in accordance with our proposed policy to treat equipment useful life durations of less than 1 year as having a duration of one year. As we stated previously in section II.B, we have concerns that assigning very low useful life durations of less than 1 year would fail to maintain relativity with other equipment on the PFS, and the equipment cost per minute formula was designed under the assumption that each equipment item would remain in use for a period of several years and depreciate over that span of time. We direct readers to the previous discussion regarding equipment cost per minute methodology earlier in section II.B. of this final rule. Finally, we are removing the “PET Generator (Rubidium)” (ER114) equipment from our database as requested by the stakeholders. We noted that since the technical components for CPT codes 78432, 78459, 78491, and 78492 are all contractor-priced, there will be no change to the national pricing of these codes.

We received public comments on our proposals associated with Myocardial PET equipment inputs. The following is

a summary of the comments we received and our responses.

Comment: Several commenters stated that they agreed with and supported all four of the CMS proposals associated with Myocardial PET equipment inputs. Commenters also stated that they supported the decision to maintain contractor pricing for the technical components for all the new and revised Myocardial PET codes. Commenters stated that the standard CMS formula and RUC PE inputs do not allow for certain high-cost expenses that are generally part of overhead to be factored into the RVUs and requested that contractor pricing continue to be maintained for these services.

Response: We appreciate the support for our proposals from the commenters.

After consideration of the public comments, we are finalizing our proposals associated with Myocardial PET equipment inputs.

(5) Autologous Platelet-Rich Plasma (HCPCS Code G0460) Supply Inputs

We did not make any proposals associated with HCPCS code G0460 (*Autologous platelet rich plasma for chronic wounds/ulcers, including phlebotomy, centrifugation, and all other preparatory procedures, administration and dressings, per treatment*) in the CY 2021 PFS proposed rule. Following the publication of the rule, stakeholders contacted CMS regarding the creation of a new 3C patch system supply which is topically applied for the management of exuding cutaneous wounds, such as leg ulcers, pressure ulcers, and diabetic ulcers and mechanically or surgically-debrided wounds. Stakeholders first sought clarification on how CMS calculated the underlying nonfacility PE RVUs for HCPCS code G0460. Stakeholders also stated that autologous platelet rich plasma administration procedures furnished in clinical trials (including the new 3C patch system) are reported using HCPCS code G0460 and requested that CMS revalue the service to reflect the PEs associated with the new patch system supply. The stakeholders stated that the use of the new 3C patch system will represent the typical case for HCPCS code G0460 and the therefore the cost inputs for this supply should be used to establish the RVUs for this code as the current MPFS rate is substantially less than the amount it costs to furnish the 3C patch.

We clarify for stakeholders that the valuation of the direct PE inputs increased for HCPCS code G0460 as a result of the ongoing market-based supply and equipment pricing update. However, there was also a minor

decrease in the indirect PE allocation associated with this service, with the net result that the proposed PE RVU coincidentally ended up remaining the same as in the previous year. We also clarify for stakeholders that HCPCS code G0460 is not included in the Anticipated Specialty Assignment for Low Volume Services list, and therefore, was unaffected by low utilization in the claims data.

We understand that the stakeholders originally believed that the new 3C patch system would be reported using new HCPCS coding before CMS issued a clarification that the clinical trials associated with this supply would be reported under HCPCS code G0460. We share the concerns of the stakeholders that patient access to the 3C patch will be materially impacted if CMS maintains reimbursement for HCPCS G0460 at the current rate. However, we note that we did not propose to increase the price of HCPCS code G0460 in the PFS proposed rule, and we have concerns about finalizing a fivefold increase in the pricing of this service without going through notice and comment rulemaking. Therefore, we are finalizing contractor pricing for HCPCS code G0460 for CY 2021 to allow for increased pricing for this service when it includes the 3C patch system without establishing a new national price. We believe that the use of contractor pricing will allow additional time to determine the most accurate pricing for HCPCS code G0460. We are also adding the 3C patch system to our supply database under supply code SD343 at a price of \$625.00 based on an average of the submitted invoices.

(6) Adjustment to Allocation of Indirect PE for Some Office-Based Services

In the CY 2018 PFS final rule (82 FR 52999 through 53000), we established criteria for identifying the services most affected by the indirect PE allocation anomaly that does not allow for a site of service differential that accurately reflects the relative indirect costs involved in furnishing services in nonfacility settings. We also finalized a modification in the PE methodology for allocating indirect PE RVUs to better reflect the relative indirect PE resources involved in furnishing these services. The methodology, as described, is based on the difference between the ratio of indirect PE to work RVUs for each of the codes meeting eligibility criteria and the ratio of indirect PE to work RVU for the most commonly reported visit code. We refer readers to the CY 2018 PFS final rule (82 FR 52999 through 53000) for a discussion of our process for selecting services subject to the revised

methodology, as well as a description of the methodology, which we began implementing for CY 2018 as the first year of a 4-year transition.

For CY 2021, we proposed to continue with the fourth and final year of the transition of this adjustment to the standard process for allocating indirect PE.

We did not receive public comments on this provision, and therefore, we are finalizing as proposed.

e. Update on Technical Expert Panel Related to Practice Expense

The RAND Corporation is currently studying potential improvements to CMS' PE allocation methodology and the data that underlie it. As we noted earlier in this section, our current system for setting PE RVUs relies in part on data collected in the Physician Practice Information Survey (PPIS), which was administered by the AMA in CY 2007 and 2008.

RAND, in its first phase of research, available at https://www.rand.org/pubs/research_reports/RR2166.html, found that the PPIS data are outdated and may no longer reflect the resource allocation, staffing arrangements, and cost structures that describe practitioners' resource requirements in furnishing services to Medicare beneficiaries, and consequently may not accurately capture the indirect PE resources required to furnish services to Medicare FFS beneficiaries. For example, the PPIS preceded the widespread adoption of electronic health records, quality reporting programs, billing codes that promote team-based care, and hospital acquisition of physician practices. Notably, RAND found that practice ownership was strongly associated with indirect PE, with physician-owned practices requiring 190% higher indirect PE compared to facility-owned practices, suggesting a need to potentially update demographic information. Additionally, RAND found that aggregating Medicare provider specialties into broader categories resulted in small specialty-level impacts relative to the current system, suggesting that specialty-specific inputs may not be required to accurately reflect resource costs.

To follow up on these and other issues raised in the first phase of RAND's research, in the CY 2020 PFS, we announced that RAND was convening a technical expert panel (TEP) to obtain input from stakeholders including physicians, practice and health system managers, health care accountants, and health policy experts. The TEP occurred on January 10, 2020 and its report is available at [https://](https://www.rand.org/pubs/working_papers/WR1334.html)

www.rand.org/pubs/working_papers/WR1334.html. Topics discussed included identifying issues with the current system; changes in medicine that have affected PE; how PE inputs could be updated, including through a potential new survey instrument; how best to aggregate PE categories if there were to be new survey instrument; ways to maximize response rates in a potential new survey; and using existing data to inform PFS PE rates. In addition, RAND has issued the results of its subsequent phase of research, available at www.rand.org/t/RR3248. This report is also available as a public use file displayed on the CMS website under downloads for the CY 2021 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

Based on the results of the TEP and RAND's other ongoing research, we are interested in potentially refining the PE methodology and updating the data used to make payments under the PFS. We believe that potential refinements could improve payment accuracy and strengthen Medicare. Our goals are to balance obtaining the data as soon as practicable and in a way that would allow stakeholders and CMS to collectively examine many of the issues the TEP and RAND's research identified. We noted that we were considering several questions, including how to best incorporate market-based information, which could be similar to the market research that we recently conducted to update supply and equipment pricing used to determine direct PE inputs under the PFS payment methodology. For example, stakeholders have expressed an interest in updating the clinical labor data that we use for direct PE inputs based on current salaries and compensation for the health care workforce. We solicited comment regarding how we might update the clinical labor data. We noted that historically we have used data from the Bureau of Labor Statistics and sought comment to determine if this is the best data source or if there is an alternative. We also noted that we are interested in hosting a Town Hall meeting at a date to be determined to provide an open forum for discussion with stakeholders on our ongoing research to potentially update the PE methodology and the underlying inputs. Finally, we welcomed feedback from all interested parties regarding RAND's report and clarified that we were not making any proposals based on this report for this rulemaking cycle. We encouraged stakeholders to submit feedback as part

of their public comments or, if outside the public comment process, via email at PE_Price_Input_Update@cms.hhs.gov.

We received public comments on the update on technical expert panel related to PE. The following is a summary of the comments we received and our responses.

Comment: In response to the RAND report, commenters encouraged CMS to work with stakeholders on any new PE data collection effort.

Response: We agree that we would want to engage with stakeholders as part of any new PE data collection effort. Our public notice and comment rulemaking process is the venue we would use for any potential future proposals.

Comment: Commenters were supportive of CMS convening a Town Hall meeting.

Response: We appreciate and are encouraged by commenters' support. We continue to believe that a Town Hall would provide open forum for discussions with stakeholders. We remain interested in hosting this meeting at a date to be determined.

C. Potentially Misvalued Services Under the PFS

1. Background

Section 1848(c)(2)(B) of the Act directs the Secretary to conduct a periodic review, not less often than every 5 years, of the relative value units (RVUs) established under the PFS. Section 1848(c)(2)(K) of the Act requires the Secretary to periodically identify potentially misvalued services using certain criteria and to review and make appropriate adjustments to the relative values for those services. Section 1848(c)(2)(L) of the Act also requires the Secretary to develop a process to validate the RVUs of certain potentially misvalued codes under the PFS, using the same criteria used to identify potentially misvalued codes, and to make appropriate adjustments.

As discussed in section II.H. of this final rule, Valuation of Specific Codes, each year we develop appropriate adjustments to the RVUs taking into account recommendations provided by the American Medical Association (AMA) Resource-Based Relative Value Scale (RVS) Update Committee (RUC), the Medicare Payment Advisory Commission (MedPAC), and other stakeholders. For many years, the RUC has provided us with recommendations on the appropriate relative values for new, revised, and potentially misvalued PFS services. We review these recommendations on a code-by-code basis and consider these

recommendations in conjunction with analyses of other data, such as claims data, to inform the decision-making process as authorized by law. We may also consider analyses of work time, work RVUs, or direct PE inputs using other data sources, such as Department of Veteran Affairs (VA), National Surgical Quality Improvement Program (NSQIP), the Society for Thoracic Surgeons (STS), and the Merit-based Incentive Payment System (MIPS) data. In addition to considering the most recently available data, we assess the results of physician surveys and specialty recommendations submitted to us by the RUC for our review. We also consider information provided by other stakeholders. We conduct a review to assess the appropriate RVUs in the context of contemporary medical practice. We note that section 1848(c)(2)(A)(ii) of the Act authorizes the use of extrapolation and other techniques to determine the RVUs for physicians' services for which specific data are not available and requires us to take into account the results of consultations with organizations representing physicians who provide the services. In accordance with section 1848(c) of the Act, we determine and make appropriate adjustments to the RVUs.

In its March 2006 Report to the Congress (http://www.medpac.gov/docs/default-source/reports/Mar06_Ch03.pdf?sfvrsn=0), MedPAC discussed the importance of appropriately valuing physicians' services, noting that misvalued services can distort the market for physicians' services, as well as for other health care services that physicians order, such as hospital services. In that same report, MedPAC postulated that physicians' services under the PFS can become misvalued over time. MedPAC stated, "When a new service is added to the physician fee schedule, it may be assigned a relatively high value because of the time, technical skill, and psychological stress that are often required to furnish that service. Over time, the work required for certain services would be expected to decline as physicians become more familiar with the service and more efficient in furnishing it." We believe services can also become overvalued when PE costs decline. This can happen when the costs of equipment and supplies fall, or when equipment is used more frequently than is estimated in the PE methodology, reducing its cost per use. Likewise, services can become undervalued when physician work increases or PE costs rises.

As MedPAC noted in its March 2009 Report to Congress (<http://www.medpac.gov/docs/default-source/reports/march-2009-report-to-congress-medicare-payment-policy.pdf>), in the intervening years since MedPAC made the initial recommendations, CMS and the RUC have taken several steps to improve the review process. Also, section 1848(c)(2)(K)(ii) of the Act augments our efforts by directing the Secretary to specifically examine, as determined appropriate, potentially misvalued services in the following categories:

- Codes that have experienced the fastest growth.
- Codes that have experienced substantial changes in PE.
- Codes that describe new technologies or services within an appropriate time period (such as 3 years) after the relative values are initially established for such codes.
- Codes which are multiple codes that are frequently billed in conjunction with furnishing a single service.
- Codes with low relative values, particularly those that are often billed multiple times for a single treatment.
- Codes that have not been subject to review since implementation of the fee schedule.
- Codes that account for the majority of spending under the PFS.
- Codes for services that have experienced a substantial change in the hospital length of stay or procedure time.
- Codes for which there may be a change in the typical site of service since the code was last valued.
- Codes for which there is a significant difference in payment for the same service between different sites of service.
- Codes for which there may be anomalies in relative values within a family of codes.
- Codes for services where there may be efficiencies when a service is furnished at the same time as other services.
- Codes with high intraservice work per unit of time.
- Codes with high PE RVUs.
- Codes with high cost supplies.
- Codes as determined appropriate by the Secretary.

Section 1848(c)(2)(K)(iii) of the Act also specifies that the Secretary may use existing processes to receive recommendations on the review and appropriate adjustment of potentially misvalued services. In addition, the Secretary may conduct surveys, other data collection activities, studies, or other analyses, as the Secretary determines to be appropriate, to

facilitate the review and appropriate adjustment of potentially misvalued services. This section also authorizes the use of analytic contractors to identify and analyze potentially misvalued codes, conduct surveys or collect data, and make recommendations on the review and appropriate adjustment of potentially misvalued services. Additionally, this section provides that the Secretary may coordinate the review and adjustment of any RVU with the periodic review described in section 1848(c)(2)(B) of the Act. Section 1848(c)(2)(K)(iii)(V) of the Act specifies that the Secretary may make appropriate coding revisions (including using existing processes for consideration of coding changes) that may include consolidation of individual services into bundled codes for payment under the PFS.

2. Progress in Identifying and Reviewing Potentially Misvalued Codes

To fulfill our statutory mandate, we have identified and reviewed numerous potentially misvalued codes as specified in section 1848(c)(2)(K)(ii) of the Act, and we intend to continue our work examining potentially misvalued codes in these areas over the upcoming years. As part of our current process, we identify potentially misvalued codes for review, and request recommendations from the RUC and other public commenters on revised work RVUs and direct PE inputs for those codes. The RUC, through its own processes, also identifies potentially misvalued codes for review. Through our public nomination process for potentially misvalued codes established in the CY 2012 PFS final rule with comment period, other individuals and stakeholder groups submit nominations for review of potentially misvalued codes as well. Individuals and stakeholder groups may submit codes for review under the potentially misvalued codes initiative to CMS in one of two ways. Nominations may be submitted to CMS via email or through postal mail. Email submissions should be sent to the CMS mailbox *MedicarePhysicianFeeSchedule@cms.hhs.gov*, with the phrase “Potentially Misvalued Codes” and the referencing CPT code number(s) and/or the CPT descriptor(s) in the subject line. Physical letters for nominations should be sent via the U.S. Postal Service to the Centers for Medicare & Medicaid Services, Mail Stop: C4–01–26, 7500 Security Blvd., Baltimore, Maryland 21244. Envelopes containing the nomination letters must be labeled “Attention: Division of Practitioner Services, Potentially Misvalued Codes”. Nominations for

consideration in our next annual rule cycle should be received by our February 10th deadline. Since CY 2009, as a part of the annual potentially misvalued code review and Five-Year Review process, we have reviewed over 1,700 potentially misvalued codes to refine work RVUs and direct PE inputs. We have assigned appropriate work RVUs and direct PE inputs for these services as a result of these reviews. A more detailed discussion of the extensive prior reviews of potentially misvalued codes is included in the Medicare Program; Payment Policies Under the Physician Fee Schedule, Five-Year Review of Work Relative Value Units, Clinical Laboratory Fee Schedule: Signature on Requisition, and Other Revisions to Part B for CY 2012; final rule (76 FR 73052 through 73055) (hereinafter referred to as the “CY 2012 PFS final rule with comment period”). In the CY 2012 PFS final rule with comment period (76 FR 73055 through 73958), we finalized our policy to consolidate the review of physician work and PE at the same time, and established a process for the annual public nomination of potentially misvalued services.

In the Medicare Program; Revisions to Payment Policies Under the Physician Fee Schedule, DME Face-to-Face Encounters, Elimination of the Requirement for Termination of Non-Random Prepayment Complex Medical Review and Other Revisions to Part B for CY 2013 (77 FR 68892) (hereinafter referred to as the “CY 2013 PFS final rule with comment period”), we built upon the work we began in CY 2009 to review potentially misvalued codes that have not been reviewed since the implementation of the PFS (so-called “Harvard-valued codes”). In the Medicare Program; Revisions to Payment Policies Under the Physician Fee Schedule and Other Revisions to Part B for CY 2009; and Revisions to the Amendment of the E-Prescribing Exemption for Computer Generated Facsimile Transmissions; Proposed Rule (73 FR 38589) (hereinafter referred to as the “CY 2009 PFS proposed rule”), we requested recommendations from the RUC to aid in our review of Harvard-valued codes that had not yet been reviewed, focusing first on high-volume, low intensity codes. In the fourth Five-Year Review (76 FR 32410), we requested recommendations from the RUC to aid in our review of Harvard-valued codes with annual utilization of greater than 30,000 services. In the CY 2013 PFS final rule with comment period, we identified specific Harvard-valued services with annual allowed

charges that total at least \$10,000,000 as potentially misvalued. In addition to the Harvard-valued codes, in the CY 2013 PFS final rule with comment period we finalized for review a list of potentially misvalued codes that have stand-alone PE (codes with physician work and no listed work time and codes with no physician work that have listed work time). We continue each year to consider and finalize a list of potentially misvalued codes that have or will be reviewed and revised as appropriate in future rulemaking.

3. CY 2021 Identification and Review of Potentially Misvalued Services

In the CY 2012 PFS final rule with comment period (76 FR 73058), we finalized a process for the public to nominate potentially misvalued codes. In the CY 2015 PFS final rule with comment period (79 FR 67606 through 67608), we modified this process whereby the public and stakeholders may nominate potentially misvalued codes for review by submitting the code with supporting documentation by February 10th of each year. Supporting documentation for codes nominated for the annual review of potentially misvalued codes may include the following:

- Documentation in peer reviewed medical literature or other reliable data that demonstrate changes in physician work due to one or more of the following: Technique, knowledge and technology, patient population, site-of-service, length of hospital stay, and work time.
- An anomalous relationship between the code being proposed for review and other codes.
- Evidence that technology has changed physician work.
- Analysis of other data on time and effort measures, such as operating room logs or national and other representative databases.
- Evidence that incorrect assumptions were made in the previous valuation of the service, such as a misleading vignette, survey, or flawed crosswalk assumptions in a previous evaluation.
- Prices for certain high cost supplies or other direct PE inputs that are used to determine PE RVUs are inaccurate and do not reflect current information.
- Analyses of work time, work RVU, or direct PE inputs using other data sources (for example, VA, NSQIP, the STS National Database, and the MIPS data).
- National surveys of work time and intensity from professional and management societies and

organizations, such as hospital associations.

We evaluate the supporting documentation submitted with the nominated codes and assess whether the nominated codes appear to be potentially misvalued codes appropriate for review under the annual process. In the following year's PFS proposed rule, we publish the list of nominated codes and indicate for each nominated code whether we agree with its inclusion as a potentially misvalued code. The public has the opportunity to comment on these and all other proposed potentially misvalued codes. In that year's final rule, we finalize our list of potentially misvalued codes.

a. Public Nominations

We received submissions nominating codes for review under the potentially misvalued code initiative, and several requests for review of PE related inputs prior to our February 10, 2020 deadline. We refer readers to section II.B. of this final rule, Determination of Practice Expense RVUs, for further discussion on the PE-related submissions. The summary of the submissions reviewed under the potentially misvalued code initiative is discussed below.

We received multiple submissions requesting that CMS consider CPT code 22867 (*Insertion of interlaminar/ interspinous process stabilization/ distraction device, without fusion, including image guidance when performed, with open decompression, lumbar; single level*) for nomination as potentially misvalued. In their request, the submitters suggested that the physician work assigned to this code significantly undervalues the procedure relative to the value of CPT code 63047 (*Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [e.g., spinal or lateral recess stenosis]), single vertebral segment; lumbar*). The submitters stated that the work performed during the surgical steps to perform a laminectomy for both procedures is generally similar except for the additional intensity and complexity involved in CPT code 22867 to implant the interspinous stabilization device. The submitters also requested that the malpractice RVUs assigned to this code be increased to better align with similar spine procedures, in terms of specialty-level and service-level risk factors, in addition to the intensity and complexity of the procedure. After considering the information provided by the submitter, which suggests that the current valuation for the service may not reflect the level of intensity inherent

in furnishing the service relative to other similar services with inputs that exceed those for the nominated service, we proposed to nominate CPT code 22867 as potentially misvalued and welcomed public comment on this code.

We received public comments on the CY 2021 identification and review of potentially misvalued services. The following is a summary of the comments we received and our responses.

Comment: The AMA RUC has indicated that CPT code 22867 will be placed on a list they call the "next Level of Interest for review."

Response: We acknowledge and thank the AMA RUC's placement of CPT code 22867 on their "next Level of Interest for review" list and look forward to their input, as well as input from the initial submitters of CPT code 22867 and all other parties.

Comment: Some commenters expressed support for the nomination of CPT code 22867 as a potentially misvalued code, but disagreed with the comparison to CPT code 63047. Some commenters stated that CPT code 22867 was misvalued from its last review in 2016, when CMS determined a work RVU of 13.50 over the AMA RUC recommended work RVU of 15.00. Commenters stated that CMS already has the necessary survey data from the specialties who perform this service—which had been surveyed and reviewed twice by the AMA RUC with the same outcome, and that the procedure's technology has not changed since the last survey. One commenter also highlighted differences between CPT code 63047 and CPT code 22867, noting that CPT code 63047 involves more postoperative work (as an inpatient service), spends more time with intense imaging services and device sizing, and that the decompression performed is more extensive than CPT code 22867, all of which supports the relative greater RVU amount for CPT code 63047.

Response: We acknowledge and appreciate comments and feedback from CPT code 22867 stakeholders who have expressed their reasons both for and against the nomination of this code as potentially misvalued.

Comment: Some commenters requested that CMS nominate HCPCS codes G0442 (*Annual alcohol misuse screening, 15 minutes*) and G0444 (*Annual depression screening, 15 minutes*) as potentially misvalued due to the possible misinterpretation of their descriptors. These commenters highlighted that the descriptors may appear to convey that the physician providing the service must provide a full 15 minutes of screening to report either of these services. The commenters

stated their understanding of the descriptor to mean "up to 15 minutes" to perform the screenings, and suggested that CMS adjust the official descriptors to say G0442 (*Annual alcohol misuse screening, up to 15 minutes*) and G0444 (*Annual depression screening, up to 15 minutes*), and for CMS to provide an educational announcement to clarify the proposed change.

Response: We thank the commenters for these suggestions for clarifications on HCPCS codes G0442 and G0444 descriptors and welcome comments and continued engagement with stakeholders on all aspects of coding that improves accuracy and promotes clarity.

Comment: Several commenters nominated CPT code 49436 (*Delayed creation of exit site from embedded subcutaneous segment of intraperitoneal cannula or catheter*) as being potentially misvalued, due to the PFS presently only making payment for this service in the facility setting and not in the office setting. Commenters requested that CMS review this code, and value the required resources for correct payment in the office setting. They contend that the procedure can be performed in the office, just as safely as it is done in an ASC or outpatient setting, and that it might be a more convenient site of service for the physician and for the patient. CPT code 49436 helps promote home peritoneal dialysis, which falls in line with the President's Executive Order (E.O.) on Advancing American Kidney Health and keeps patients at home during the PHE for COVID-19 rather than having to travel to a dialysis center three times a week.

Response: While CMS had decided not to nominate CPT code 49436 in the proposed rule as being potentially misvalued, commenters resubmitted their nomination during this comment period. We appreciate all of the comments and feedback that we have received for nominating CPT code 49436 as potentially misvalued and further to consider valuing CPT code 49436 in the office setting. We intend to research the information provided and understand more about the potential impact of valuing CPT code 49436 in the office setting and may consider for future rulemaking.

Comment: Commenters referenced codes that were publicly nominated in CY 2019 as misvalued by a national commercial insurer. The commenter expressed disappointment that CMS accepted these public nominations from a private national commercial insurer, as they could potentially represent a possible conflict of interest in their role

as a private commercial medical insurance and Medicare Advantage payer to the providers of physician services. The commenter urged CMS to evaluate how it considers public nominations from parties with possible conflicts in payment determinations.

Response: CMS will accept and review all public nomination of services that may be potentially misvalued, as appropriate. As we had stated in our CY 2019 PFS final rule, we also reiterate that we continue to be open to reviewing additional and supplemental sources of data furnished by stakeholders, and providing such information to CMS is not limited to the public nomination process for potentially misvalued codes. We encourage stakeholders to continue to provide such information for our consideration, as this information may support CMS' review and refinement of work RVUs that are the basis for payment for many services under the PFS.

Comment: One commenter urged CMS to use its authority to adjust CY 2018 Medicare payments for physicians' services to increase the current rate for managing home patients (CPT code 90966 (*End-stage renal disease (ESRD) related services for home dialysis per full month, for patients 20 years of age and older*) 6.77 RVU) and to the maximum payment amount for managing in-center patients (CPT code 90960 (*End-stage renal disease (ESRD) related services monthly, for patients 20 years of age and older; with 4 or more face-to-face visits by a physician or other qualified health care professional per month*) 8.07 RVU); however, no supporting documentation was included with this nomination request.

Response: Should there be compelling evidence of substantial change in the nature of CPT codes 90966 and 90960 and their relationship to each other since their 2018 review, the commenter is free to nominate these codes as potentially misvalued and lend support and evidence to that effect for the next proposed rule.

After consideration of the public comments, we are finalizing our proposal to nominate CPT code 22867 as potentially misvalued. We appreciate all of the comments and information we have received from stakeholders about services that they believe to be potentially misvalued and look forward to receiving new and additional information prior to our February 10th deadline for our next round of rulemaking.

D. Telehealth and Other Services Involving Communications Technology, and Interim Final Rule With Comment Period for Coding and Payment of Virtual Check-In Services

1. Payment for Medicare Telehealth Services Under Section 1834(m) of the Act

As discussed in the CY 2021 PFS proposed rule (85 FR 50095) and in prior rulemaking, several conditions must be met for Medicare to make payment for telehealth services under the PFS. For further details, see the full discussion of the scope of Medicare telehealth services in the CY 2018 PFS final rule (82 FR 53006) and in 42 CFR 410.78 and 414.65.

a. Adding Services to the Medicare Telehealth Services List

In the CY 2003 PFS final rule with comment period (67 FR 79988), we established a regulatory process for adding services to or deleting services from the Medicare telehealth services list in accordance with section 1834(m)(4)(F)(ii) of the Act (§ 410.78(f)). This process provides the public with an ongoing opportunity to submit requests for adding services, which are then reviewed by us and assigned to categories established through notice and comment rulemaking. Specifically, we assign any submitted request to add to the Medicare telehealth services list to one of the following two categories:

- **Category 1:** Services that are similar to professional consultations, office visits, and office psychiatry services that are currently on the Medicare telehealth services list. In reviewing these requests, we look for similarities between the requested and existing telehealth services for the roles of, and interactions among, the beneficiary, the physician (or other practitioner) at the distant site and, if necessary, the telepresenter, a practitioner who is present with the beneficiary in the originating site. We also look for similarities in the telecommunications system used to deliver the service; for example, the use of interactive audio and video equipment.

- **Category 2:** Services that are not similar to those on the current Medicare telehealth services list. Our review of these requests includes an assessment of whether the service is accurately described by the corresponding code when furnished via telehealth and whether the use of a telecommunications system to furnish the service produces demonstrated clinical benefit to the patient. Submitted evidence should include both a description of relevant clinical studies

that demonstrate the service furnished by telehealth to a Medicare beneficiary improves the diagnosis or treatment of an illness or injury or improves the functioning of a malformed body part, including dates and findings, and a list and copies of published peer reviewed articles relevant to the service when furnished via telehealth. Our evidentiary standard of clinical benefit does not include minor or incidental benefits.

Some examples of clinical benefit include the following:

- Ability to diagnose a medical condition in a patient population without access to clinically appropriate in-person diagnostic services.
- Treatment option for a patient population without access to clinically appropriate in-person treatment options.
- Reduced rate of complications.
- Decreased rate of subsequent diagnostic or therapeutic interventions (for example, due to reduced rate of recurrence of the disease process).
- Decreased number of future hospitalizations or physician visits.
- More rapid beneficial resolution of the disease process treatment.
- Decreased pain, bleeding, or other quantifiable symptom.
- Reduced recovery time.

The Medicare telehealth services list, including the additions described later in this section, is available on the CMS website at <https://www.cms.gov/Medicare/Medicare-General-Information/Telehealth/index.html>.

For CY 2021, requests to add services to the Medicare telehealth services list must have been submitted and received by February 10, 2020. Each request to add a service to the Medicare telehealth services list must have included any supporting documentation the requester wishes us to consider as we review the request. Because we use the annual PFS rulemaking process as the vehicle to make changes to the Medicare telehealth services list, requesters are advised that any information submitted as part of a request is subject to public disclosure for this purpose. For more information on submitting a request in the future to add services to the Medicare telehealth services list, including where to mail these requests, see our website at <https://www.cms.gov/Medicare/Medicare-General-Information/Telehealth/index.html>.

b. Requests To Add Services to the Medicare Telehealth Services List for CY 2021

Under our current policy, we add services to the Medicare telehealth services list on a Category 1 basis when we determine that they are similar to

services on the existing Medicare telehealth services list for the roles of, and interactions among, the beneficiary, physician (or other practitioner) at the distant site and, if necessary, the telepresenter. As we stated in the CY 2012 PFS final rule with comment period (76 FR 73098), we believe that the Category 1 criteria not only streamline our review process for publicly requested services that fall into this category, but also expedite our ability to identify codes for the Medicare telehealth services list that resemble those services already on the Medicare telehealth services list. We received several requests to add various services as Medicare telehealth services effective for CY 2021. We also conducted an internal review of potential services to add to the Medicare telehealth services list.

In response to the public health emergency (PHE) for Coronavirus Disease 2019 (COVID-19), CMS undertook emergency rulemaking to add a number of services to the Medicare telehealth services list on an interim final basis. In the “Medicare and Medicaid Programs; Policy and Regulatory Revisions in Response to the COVID-19 Public Health Emergency” interim final rule with comment period (IFC), (which was issued on March 31, 2020 and appeared in the April 6, 2020 **Federal Register** (85 FR 19230, 19234 through 19241) (hereinafter referred to as the “March 31st COVID-19 IFC”), on an interim final basis for the duration of the PHE for COVID-19, we also finalized the addition of a number of services to the Medicare telehealth services list on a Category 2 basis. The following is a list of those services:

- Emergency Department (ED) Visits, Levels 1–5 (CPT codes 99281–99285).
- Initial and Subsequent Observation and Observation Discharge Day Management (CPT codes 99217–99220; CPT codes 99224–99226; CPT codes 99234–99236).
- Initial Hospital Care and Hospital Discharge Day Management (CPT codes 99221–99223; CPT codes 99238–99239).
- Initial nursing facility visits, All levels (Low, Moderate, and High Complexity) and nursing facility discharge day management (CPT codes 99304–99306; CPT codes 99315–99316).
- Critical Care Services (CPT codes 99291–99292).
- Domiciliary, Rest Home, or Custodial Care services, New and Established patients (CPT codes 99327–99328; CPT codes 99334–99337).

- Home Visits, New and Established Patient, All levels (CPT codes 99341–99345; CPT codes 99347–99350).

- Inpatient Neonatal and Pediatric Critical Care, Initial and Subsequent (CPT codes 99468–99472; CPT codes 99475–99476).

- Initial and Continuing Intensive Care Services (CPT code 99477–994780).

- Assessment and Care Planning for Patients with Cognitive Impairment (CPT code 99483).

- Group Psychotherapy (CPT code 90853).

- End-Stage Renal Disease (ESRD) Services (CPT codes 90952, 90953, 90959, and 90962).

- Psychological and Neuropsychological Testing (CPT codes 96130–96133; CPT codes 96136–96139).

- Therapy Services, Physical and Occupational Therapy, All levels (CPT codes 97161–97168; CPT codes 97110, 97112, 97116, 97535, 97750, 97755, 97760, 97761, 92521–92524, 92507).

- Radiation Treatment Management Services (CPT codes 77427).

When we previously considered adding these services to the Medicare telehealth services list, either through a public request or through our own internal review, we considered whether these services met the Category 1 or Category 2 criteria. In many cases, we reviewed requests to add these services on a Category 1 basis, but did not receive or identify information that allowed us to review the services on a Category 2 basis. While we stated in the March 31st COVID-19 IFC that we did not believe the context of the PHE for COVID-19 would change the assessment of these services as Category 1, we did reassess all of these services on a Category 2 basis in the context of the widespread presence of COVID-19 in the community.

Given the exposure risks for beneficiaries, the health care work force, and the community at large, we stated that in-person interactions between professionals and patients posed an immediate potential risk that would not have been present when we previously reviewed these services. We were concerned that this new risk created a unique circumstance where health care professionals might have to choose between mitigating exposure risk for themselves and for their patients or seeking Medicare payment for the service. For example, certain persons, especially older adults who are particularly vulnerable to complications

from this specific viral infection; those considered at risk because of underlying health conditions; and those known to be recently exposed or diagnosed, and therefore, likely to spread the virus to others, were often being directed by local public health officials to self-isolate as much as possible. At the same time, we noted that the risk to medical professionals treating patients is high and we considered it likely that medical professionals would try to treat patients as effectively as possible without exposing themselves or their patients unnecessarily. We explained that, in some cases, the use of telecommunications technology could mitigate the exposure risk; and in such cases, there is a clear clinical benefit of using such technology in furnishing the service. In other words, patients who should not be seen by a professional in-person due to the exposure risk were highly likely to be without access to clinically appropriate treatment or diagnostic options unless they have access to services furnished through interactive communication technology.

Therefore, in the context of the PHE for COVID-19, we believed that all of the services we added met the Category 2 criteria to be added to the Medicare telehealth services list on the basis that there was a patient population that would otherwise not have access to clinically appropriate treatment. We noted that, as with other services on the Medicare telehealth services list, it may not be clinically appropriate or possible to use telecommunications technology to furnish these particular services to every person or in every circumstance. In the context of the PHE for COVID-19, with specific regard to the exposure risks noted above, we recognized the clinical benefit of access to medically reasonable and necessary services furnished using telecommunications technology as opposed to the potential lack of access that could occur to mitigate the risk of disease exposure.

The following presents a discussion of these services and the related proposals.

After reviewing the requests we received and the services we identified for consideration, we identified the services listed in Table 11 as being sufficiently similar to services currently on the Medicare telehealth services list to be added on a Category 1 basis. Therefore, we proposed to add the services in Table 11 to the Medicare telehealth services list on a Category 1 basis for CY 2021.

**TABLE 11: CY 2021 Proposed and Final Additions to the Medicare Telehealth Services
List on a Category 1 Basis**

HCPSC Code	Long Descriptor
G2211	Visit complexity inherent to evaluation and management associated with medical care services that serve as the continuing focal point for all needed health care services and/or with medical care services that are part of ongoing care related to a patient's single, serious condition or a complex condition. (Add-on code, list separately in addition to office/outpatient evaluation and management visit, new or established)
90853	Group psychotherapy (other than of a multiple-family group)
96121	Neurobehavioral status exam (clinical assessment of thinking, reasoning and judgment, [e.g., acquired knowledge, attention, language, memory, planning and problem solving, and visual spatial abilities]), by physician or other qualified health care professional, both face-to-face time with the patient and time interpreting test results and preparing the report; each additional hour (List separately in addition to code for primary procedure)
G2212	Prolonged office or other outpatient evaluation and management service(s) beyond the maximum required time of the primary procedure which has been selected using total time on the date of the primary service; each additional 15 minutes by the physician or qualified healthcare professional, with or without direct patient contact (List separately in addition to CPT codes 99205, 99215 for office or other outpatient evaluation and management services)
99483	Assessment of and care planning for a patient with cognitive impairment, requiring an independent historian, in the office or other outpatient, home or domiciliary or rest home, with all of the following required elements: Cognition-focused evaluation including a pertinent history and examination; Medical decision making of moderate or high complexity; Functional assessment (e.g., basic and instrumental activities of daily living), including decision-making capacity; Use of standardized instruments for staging of dementia (e.g., functional assessment staging test [FAST], clinical dementia rating [CDR]); Medication reconciliation and review for high-risk medications; Evaluation for neuropsychiatric and behavioral symptoms, including depression, including use of standardized screening instrument(s); Evaluation of safety (e.g., home), including motor vehicle operation; Identification of caregiver(s), caregiver knowledge, caregiver needs, social supports, and the willingness of caregiver to take on caregiving tasks; Development, updating or revision, or review of an Advance Care Plan; Creation of a written care plan, including initial plans to address any neuropsychiatric symptoms, neuro-cognitive symptoms, functional limitations, and referral to community resources as needed (e.g., rehabilitation services, adult day programs, support groups) shared with the patient and/or caregiver with initial education and support. Typically, 50 minutes are spent face-to-face with the patient and/or family or caregiver.
99334	Domiciliary or rest home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused interval history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self-limited or minor. Typically, 15 minutes are spent with the patient and/or family or caregiver.
99335	Domiciliary or rest home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused interval history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 25 minutes are spent with the patient and/or family or caregiver.
99347	Home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused interval history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self limited or minor. Typically, 15 minutes are spent face-to-face with the patient and/or family.

HCPSC Code	Long Descriptor
99348	Home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused interval history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 25 minutes are spent face-to-face with the patient and/or family.

We noted that we believe the services described by the HCPCS codes in Table 11 are similar to services currently on the Medicare telehealth services list. The HCPCS codes G2211 and G2212 are add-on codes to the office/outpatient evaluation and management (O/O E/M) services and are, by definition, part of the O/O E/M services with which they are billed; they cannot be billed with any other codes. These codes were previously described by placeholder HCPCS codes GPC1X and 99XXX (for G2211 and G2212, respectively). For further discussion of these codes, please see section II.F.2.c of this rule. The Assessment of and Care Planning for Patients with Cognitive Impairment was defined as a service meant to be billed in specific clinical scenarios in lieu of a level 5 O/O E/M visit. As such, these services fall within the Category 1 criteria, because they are similar to the office visits that are already on the Medicare telehealth services list. As it describes group therapy, CPT code 90853 is similar to the other group therapy services currently on the Medicare telehealth services list.

While the patient's home cannot serve as an originating site (where the patient is located) for purposes of most Medicare telehealth services, the SUPPORT for Patients and Communities Act amended section 1834(m)(4)(C) of the Act and added a new paragraph at section 1834(m)(7) of the Act to remove geographic limitations and authorize the

patient's home to serve as a telehealth originating site for purposes of treatment of a substance use disorder (SUD) or a co-occurring mental health disorder, furnished on or after July 1, 2019, to an individual with a SUD diagnosis. These domiciliary/home visits contain the same elements and similar descriptors to the O/O E/M visits, and therefore, we noted that there is sufficient justification to add them to the Medicare telehealth services list on a Category 1 basis. Additionally, we noted that, due to the vulnerability of this particular patient population that are receiving treatment for a diagnosed SUD or co-occurring mental health disorder, we should maximize the availability of telehealth services for the treatment of SUDs and co-occurring mental health disorders. We also noted that, because the home is not generally a permissible telehealth originating site, these services could be billed when furnished as telehealth services only for treatment of a SUD or co-occurring mental health disorder.

Finally, we received a request to add CPT code 96121 (*Neurobehavioral status exam (clinical assessment of thinking, reasoning and judgment, [e.g., acquired knowledge, attention, language, memory, planning and problem solving, and visual spatial abilities]), by physician or other qualified health care professional, both face-to-face time with the patient and time interpreting test results and*

preparing the report; each additional hour (List separately in addition to code for primary procedure)) on the basis that this is an add-on code to CPT code 96116 (*Neurobehavioral status exam (clinical assessment of thinking, reasoning and judgment, [e.g., acquired knowledge, attention, language, memory, planning and problem solving, and visual spatial abilities]), by physician or other qualified health care professional, both face-to-face time with the patient and time interpreting test results and preparing the report; first hour*), which is currently on the Medicare telehealth services list. In the past, we have added services to the Medicare telehealth services list that are add-on codes that describe a continuation or additional elements of services currently on the Medicare telehealth services list since the services would only be considered telehealth services when billed as an add-on to codes already on the Medicare telehealth services list (82 FR 53008). Therefore, we proposed to add CPT code 96121 to the Medicare telehealth services list.

We also received a request to add services to the Medicare telehealth services list that do not meet our criteria for addition to the Medicare telehealth services list. We did not propose to add the services listed in Table 12 to the Medicare telehealth services list.

TABLE 12: Services Requested for Addition to the Medicare Telehealth Services List Not Proposed for Addition

Service Type	HCPCS	Long Descriptor
Medical Genetics	96040	Medical genetics and genetic counseling services, each 30 minutes face-to-face with patient/family
	S0265	Genetic counseling, under physician supervision, each 15 minutes

We received a request to add Medical Genetics services to the Medicare telehealth services list. We note that

CPT code 96040 is considered bundled into O/O E/M visits, which are already on the Medicare telehealth services list.

Therefore, we do not believe it is necessary to add CPT code 96040. As we stated in the CY 2012 PFS final rule

with comment period (76 FR 73096 through 73097), physicians and NPPs who may independently bill Medicare for their services and who are counseling individuals would generally report office or other outpatient E/M CPT codes for office visits that involve significant counseling, including genetic counseling, and these office visit CPT codes are already on the Medicare telehealth services list. CPT code 96040 would only be reported by genetic counselors for genetic counseling services. Genetic counselors are not among the practitioners who can bill Medicare directly for their professional services, and they are also not practitioners who can furnish telehealth services as specified in section 1834(m)(4)(E) of the Act. As such, we noted that we do not believe that it would be necessary or appropriate to add CPT code 96040 to the Medicare telehealth services list.

HCPSC code S0265 is a Medication, Supplies, and Services code. There is no separate payment under the PFS for this category of codes. Therefore, we did not propose to add this service to the Medicare telehealth services list.

We received public comments on the requests to add services to the Medicare telehealth services list for CY 2021. The following is a summary of the comments we received and our responses.

Comment: Commenters broadly supported our proposal to add HCPSC codes and CPT codes 90853, 96121, G2212, 99483, 99334, 99335, 99347, and 99348 to the Medicare telehealth list on a Category 1 basis.

Response: We thank the commenters for their support and feedback.

Comment: One commenter opposed the addition of G2211 to the Medicare telehealth list on the basis they do not agree the creation of the code.

Response: We thank the commenter for their feedback and refer them to section II.F.2.c. of this final rule for further discussion of payment policies for HCPSC code G2211. We note that HCPSC codes G2211 and G2212 replace GPC1X and 99XXX respectively, please see section II.F.2.c in this final rule.

Comment: One commenter requested clarification on the addition of CPT codes 99347 and 99348 (*Home visit for the evaluation and management of an established patient*). Specifically, the commenter requested clarification from CMS on the situations in which a home visit after the end of the PHE for COVID-19 would be allowed via telehealth.

Response: While the patient's home cannot serve as an originating site (where the patient is located) for purposes of most Medicare telehealth

services, the SUPPORT for Patients and Communities Act amended section 1834(m)(4)(C) of the Act and added a new paragraph at section 1834(m)(7) of the Act to remove geographic limitations and authorize the patient's home to serve as a telehealth originating site for purposes of treatment of a SUD or a co-occurring mental health disorder, furnished on or after July 1, 2019, to an individual with a SUD diagnosis. These domiciliary/home visits contain the same elements and similar descriptors to the O/O E/M visits, and therefore, we believe there is sufficient justification to add them to the Medicare telehealth services list on a Category 1 basis. We are adding these to the telehealth services list because an office/outpatient visit might not always most accurately or specifically describe the type of visit furnished to treat an individual in their home for an SUD or co-occurring mental health disorder; and that sometimes one of the domiciliary/home visit codes would more accurately describe the service.

Comment: One commenter stated that Assessment and Care Planning for Patients with Cognitive Impairment (CPT Code 99483) should not be added at this time until more study can be done to assess the appropriateness of this service being delivered in the telehealth context given that many cognitive impairments and symptoms may require in-person assessment.

Response: We continue to believe that CPT code 99483 is sufficiently similar to an office visit to warrant addition to the Medicare telehealth list on a permanent basis in that it involves evaluating and managing a patient's cognitive impairment in an office/outpatient setting. When the AMA CPT Editorial Panel created this code, they assumed that the work associated with assessment and care planning for patients with cognitive impairment had been reported with CPT code 99215 (*Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 40 minutes are spent face-to-face with the patient and/or family*), which is currently on the Medicare telehealth list.

After considering the public comments received, we are finalizing our proposal and adding HCPSC codes G2211 and CPT codes 90853, 96121, G2212, 99483, 99334, 99335, 99347, and 99348 to the Medicare telehealth list for CY 2021.

Comment: Commenters expressed opposition to CMS' decision not to propose to add Medical Genetics services (CPT code 96040) to the Medicare telehealth services list.

Response: We note that CPT code 96040 is not separately billable under the PFS; it is considered bundled into O/O E/M visits, which are already on the Medicare telehealth services list. Therefore, we believe it is unnecessary, and could potentially be confusing, to add CPT code 96040 to the list. Only codes that are separately billable can be added to the Medicare telehealth list. As we stated in the CY 2012 PFS final rule with comment period (76 FR 73096 through 73097), physicians and NPPs who furnish and bill Medicare for these services would generally report office or other outpatient E/M CPT codes for office visits that involve significant counseling, including genetic counseling; and the office visit CPT codes are already on the Medicare telehealth services list. CPT code 96040 would only be reported by genetic counselors for genetic counseling services. Genetic counselors are not among the practitioners who can bill Medicare directly for their professional services, and they are also not practitioners who can furnish telehealth services as specified in section 1834(m)(4)(E) of the Act. As such, we do not believe that it would be necessary or appropriate to add CPT code 96040 to the Medicare telehealth services list.

c. Proposed Temporary Addition of a Category 3 Basis for Adding to or Deleting Services From the Medicare Telehealth Services List

Legislation enacted to address the PHE for COVID-19 provided the Secretary with new authorities under section 1135(b)(8) of the Act, as added by section 102 of the Coronavirus Preparedness and Response Supplemental Appropriations Act, 2020 (Pub. L. 116-123, March 6, 2020) and subsequently amended by section 6010 of the Families First Coronavirus Response Act (Pub. L. 116-127, March 18, 2020) and section 3703 of the Coronavirus Aid, Relief, and Economic Security Act (CARES Act) (Pub. L. 116-136, March 27, 2020)), to waive or modify Medicare telehealth payment requirements during the PHE for COVID-19. We established several flexibilities to accommodate these

changes in the delivery of care. Through waiver authority under section 1135(b)(8) of the Act, in response to the PHE for COVID-19, we removed the geographic and site of service originating site restrictions in section 1834(m)(4)(C) of the Act, as well as the restrictions in section 1834(m)(4)(E) of the Act on the types of practitioners who may furnish telehealth services, for the duration of the PHE for COVID-19.¹ We also used waiver authority to allow certain telehealth services to be furnished via audio-only communication technology. In the March 31st COVID-19 IFC, we added 89 services to the Medicare telehealth services list on an interim basis. Through the “Medicare and Medicaid Programs; Additional Policy and Regulatory Revisions in Response to the COVID-19 Public Health Emergency” interim final rule with comment period (IFC), (which was issued on May 1, 2020, and was effective upon publication in the May 8, 2020 **Federal Register** (85 FR 27550 through 27649)) (hereinafter referred to as the “May 8th COVID-19 IFC”), on an interim basis for the duration of the PHE for COVID-19, we removed the requirement in our regulations that we undertake rulemaking to add or delete services on the Medicare telehealth services list so that we could consider the addition of services on a subregulatory basis as they were recommended by the public or identified internally. On a subregulatory basis, we simultaneously added 46 more services to the Medicare telehealth services list on an interim basis when we issued the May 8th COVID-19 IFC. Finally, on October 14, 2020 we added 11 more services to the Medicare telehealth list on a subregulatory basis. For a full list of Medicare telehealth services please see the CMS website: <https://www.cms.gov/Medicare/Medicare-General-Information/Telehealth/Telehealth-Codes>.

At the conclusion of the PHE for COVID-19, these waivers and interim policies will expire, payment for Medicare telehealth services will once again be limited by the requirements of section 1834(m) of the Act, and we will return to the policies established through the regular notice and comment rulemaking process, including the previously established Medicare telehealth services list, as modified by subsequent changes in policies and additions to the telehealth services list adopted through rulemaking, including in this final rule. We believe that the experiences of clinicians who are

furnishing telehealth services during the PHE for COVID-19 will be useful to inform decisions about which of the services we added temporarily to the Medicare telehealth services list might be appropriate to add on a permanent basis. However, we also recognize that the annual PFS rulemaking schedule may not align perfectly with the expiration of the PHE for COVID-19, and that the clinicians providing services via telehealth during the PHE may not have the opportunity to conduct the kinds of review or develop the kind of evidence we usually consider when adding services to the Medicare telehealth services list on a permanent basis. In the event that the PHE for COVID-19 ends prior to the end of CY 2021, stakeholders might not have the opportunity to use our current consideration process for telehealth services to request permanent additions to the Medicare telehealth services list prior to those services being removed from the Medicare telehealth services list. This is especially true for those services that might need to be considered on a Category 2 basis, which involves providing supporting documentation to illustrate the clinical benefit of such services. Recognizing the extent to which practice patterns are shifting as a result of the PHE for COVID-19 from a model of care based on in-person services to one that relies on a combination of in-person services and virtual care, we noted that we believe that it would be disruptive to both clinical practice and beneficiary access to abruptly eliminate Medicare payment for these services when furnished via telehealth as soon as the PHE for COVID-19 ends without first providing an opportunity to use information developed during the PHE to support requests for permanent changes to the Medicare telehealth services list.

As previously noted, in response to the PHE for COVID-19, we added a broad range of services to the Medicare telehealth services list. Before eliminating the full range of these services from the Medicare telehealth services list and potentially jeopardizing beneficiary access to those services that have been clinically beneficial, based primarily on the timing of annual rulemaking, we noted that we believe it would be prudent to collect information from the public regarding which, where, and how various telehealth services have been in use in various communities during the COVID-19 response. Feedback from patients and clinicians is essential to helping CMS understand how the use of telehealth

services may have contributed positively to, or negatively affected, the quality of care provided to beneficiaries during the PHE for COVID-19, enabling us to better determine which services should be retained on the Medicare telehealth services list until we can give them full consideration under our established rulemaking process.

Therefore, we proposed to create a third category of criteria for adding services to the Medicare telehealth services list on a temporary basis. This new category would describe services that would be included on the Medicare telehealth services list on a temporary basis. We would include in this category the services that were added during the PHE for COVID-19 for which there is likely to be clinical benefit when furnished via telehealth, but for which there is not yet sufficient evidence available to consider the services as permanent additions under Category 1 or Category 2 criteria. Recognizing that the services we would add on a temporary basis under Category 3 would ultimately need to meet the criteria under categories 1 or 2 in order to be permanently added to the Medicare telehealth services list, and the potential for evidence development that could continue through the Category 3 temporary addition period, we considered each of the services we added on an interim final basis during the PHE for COVID-19.

In developing the proposal to add specific services on a Category 3 basis, we conducted a clinical assessment to identify those services for which we could foresee a reasonable potential likelihood of clinical benefit when furnished via telehealth outside the circumstances of the PHE for COVID-19 and that we anticipate would be able to demonstrate that clinical benefit in such a way as to meet our Category 2 criteria in full. Any service added under the proposed Category 3 would remain on the Medicare telehealth services list through the calendar year in which the PHE for COVID-19 ends. When assessing whether there was a potential likelihood of clinical benefit for a service such that it should be added to the Medicare telehealth services list on a Category 3 basis, we considered the following factors:

- Whether, outside of the circumstances of the PHE for COVID-19, there are increased concerns for patient safety if the service is furnished as a telehealth service.
- Whether, outside of the circumstances of the PHE for COVID-19, there are concerns about whether the provision of the service via telehealth is likely to jeopardize quality of care.

¹ <https://www.cms.gov/files/document/summary-covid-19-emergency-declaration-waivers.pdf>.

- Whether all elements of the service could fully and effectively be performed by a remotely located clinician using two-way, audio/video telecommunications technology.

We recognized that the circumstances of the PHE for COVID-19 have provided clinicians with the opportunity to use telecommunications technology in health care delivery in a scope and manner far surpassing the telehealth services described under section 1834(m) of the Act, particularly as a result of the removal of geographic and site of service restrictions, and the addition of many services to the Medicare telehealth services list. When adding services to the Medicare telehealth services list on an interim basis during the PHE for COVID-19, we reassessed services on a Category 2 basis in the context of the widespread presence of COVID-19 in the community. We recognized that healthcare access issues could arise due to the immediate potential exposure risks to patients and healthcare workers, and that the use of telecommunication technology could mitigate risk and facilitate clinically appropriate treatment. In the context of the PHE for COVID-19, we found that all of the added services met the Category 2 criteria on the basis that there is a patient population who would otherwise not have access to clinically appropriate care (85 FR 19234). While the interim addition of a broad swath of services to the Medicare telehealth services list is responsive to critical needs during the PHE for COVID-19, the impact of adding these services to the Medicare telehealth services list on a permanent basis is currently unknown. Specifically, although it is possible to assess the uptake among health care practitioners of the added telehealth services, the extent to which service delivery via telehealth demonstrates clinical benefit outside the conditions of the PHE for COVID-19 is not known. Adding services to the Medicare telehealth services list on a Category 3 basis will give the public the opportunity to gather data and generate requests to add certain services to the Medicare telehealth services list permanently, which would be adjudicated on a Category 1 or Category 2 basis during future PFS annual rulemaking, while maintaining access to telehealth services with potential likelihood of clinical benefit. We proposed that the Category 3 criteria and the basis for considering additions to the Medicare telehealth services list would be temporary, to expire at the

end of the calendar year in which the PHE for COVID-19 expires.

We identified a number of services that we believe, based on our clinical assessment, fit the Category 3 criteria enumerated above in that we did not identify significant concerns over patient safety, quality of care, or the ability of clinicians to provide all elements of the service remotely if these services were to remain on the Medicare telehealth services list for an additional period beyond the PHE for COVID-19. Therefore, we proposed to continue including the services listed in Table 13 on the Medicare telehealth services list through the calendar year in which the PHE for COVID-19 ends. We solicited public comment on the services we identified for temporary addition to the Medicare telehealth services list through the Category 3 criteria, including whether some should not be considered as Category 3 temporary additions to the Medicare telehealth services list, or whether services currently not proposed as Category 3 additions to the Medicare telehealth services list should be considered as such. We noted that while our clinical assessment indicated that the services in Table 13 demonstrate potential likelihood of clinical benefit when furnished as telehealth services and, as such, the potential to meet the Category 1 or Category 2 criteria for permanent addition to the Medicare telehealth services list with the development of additional evidence, we solicited information from the public that would supplement our clinical assessment and assist us in consideration of our proposals regarding the Category 3 addition of services, even though we recognize that formal analyses may not yet be available. The following are examples of the types of information we sought from the public to help inform our decisions about proposed additions under Category 3:

- By whom and for whom are the services being delivered via telehealth during the PHE;
- What practical safeguards are being employed to maintain safety and clinical effectiveness of services delivered via telehealth; and how are practices quickly and efficiently transitioning patients from telehealth to in-person care as needed;
- What specific health outcomes data are being or are capable of being gathered to demonstrate clinical benefit;
- How is technology being used to facilitate the acquisition of clinical information that would otherwise be obtained by a hands-on physical examination if the service was furnished in person. Certain services on the Medicare telehealth services list prior to

the PHE, specifically the O/O E/M code set, involve a physical exam. With the telehealth expansions during the PHE, clinicians may have had valuable experience providing other telehealth services to patients in higher acuity settings of care, such as an emergency department, that involve a hands-on physical examination when furnished in person.

- Whether patient outcomes are improved by the addition of one or more services to the Medicare telehealth services list, including whether inclusion on the Medicare telehealth services list increases access, safety, patient satisfaction, and overall quality of care;

- Whether furnishing this service or services via telecommunication technology promotes prudent use of resources;

- Whether the permanent addition of specific, individual services or categories of services to the Medicare telehealth services list supports quick responses to the spread of infectious disease or other emergent circumstances that may require widespread use of telehealth; and

- What is the impact on the health care workforce of the inclusion of one or more services or categories of services on the Medicare telehealth services list (for example, whether the health care workforce and its capabilities to provide care are expanded).

In addition, we noted that CMS is committed to the following broad goals, and these weigh heavily in our decision-making around the addition, whether temporary or permanent, of a service or services to the Medicare telehealth services list. We requested that commenters consider these goals in conjunction with their comments on the proposals for the treatment of the telehealth services we added on an interim basis during the PHE for COVID-19:

- Maintaining the capacity to enable rapid assessment of patterns of care, safety, and outcomes in the Medicare, Medicaid, CHIP, and Marketplace populations;
- Establishing system safeguards to detect and avert unintended patient harms that result from policy adjustments;
- Ensuring high quality care is maintained;
- Demonstrating ongoing quality improvement efforts by Medicare participating providers, while maintaining access to necessary care;
- Establishing protections for vulnerable beneficiary populations (those with multiple chronic conditions, functional limitations, heart failure,

COPD, diabetes, dementia), and sites of heightened vulnerability (such as nursing homes, rural communities) with high risk of adverse outcomes;

- Ensuring appropriate resource utilization and supporting cost efficiency;

- Supporting emergency preparedness and maintaining capacity to surge for potential coronavirus resurgence or other healthcare issues; and

- Considering timing and pace of policy corrections in light of local and

regional variations in systems of care and the impact of the PHE for COVID-19.

BILLING CODE 4120-01-P

TABLE 13: Services Proposed for Temporary Addition to the Medicare Telehealth Services List

Service Type	HCPCS	Long Descriptor
Domiciliary, Rest Home, or Custodial Care services, Established patients	99336	Domiciliary or rest home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed interval history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 40 minutes are spent with the patient and/or family or caregiver.
	99337	Domiciliary or rest home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive interval history; A comprehensive examination; Medical decision making of moderate to high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. The patient may be unstable or may have developed a significant new problem requiring immediate physician attention. Typically, 60 minutes are spent with the patient and/or family or caregiver.
Home Visits, Established Patient	99349	Home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed interval history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are moderate to high severity. Typically, 40 minutes are spent face-to-face with the patient and/or family.
	99350	Home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive interval history; A comprehensive examination; Medical decision making of moderate to high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. The patient may be unstable or may have developed a significant new problem requiring immediate physician attention. Typically, 60 minutes are spent face-to-face with the patient and/or family.
Emergency Department Visits	99281	Emergency department visit for the evaluation and management of a patient, which requires these 3 key components: A problem focused history; A problem focused examination; and Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self limited or minor.
	99282	Emergency department visit for the evaluation and management of a patient, which requires these 3 key components: An expanded problem focused history; An expanded problem focused examination; and Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity.
	99283	Emergency department visit for the evaluation and management of a patient, which requires these 3 key components: An expanded problem focused history; An expanded problem focused examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate severity.
Nursing facilities discharge day management	99315	Nursing facility discharge day management; 30 minutes or less
	99316	Nursing facility discharge day management; more than 30 minutes

Service Type	HCPSCS	Long Descriptor
Psychological and Neuropsychological Testing	96130	Psychological testing evaluation services by physician or other qualified health care professional, including integration of patient data, interpretation of standardized test results and clinical data, clinical decision making, treatment planning and report, and interactive feedback to the patient, family member(s) or caregiver(s), when performed; first hour
	96131	Psychological testing evaluation services by physician or other qualified health care professional, including integration of patient data, interpretation of standardized test results and clinical data, clinical decision making, treatment planning and report, and interactive feedback to the patient, family member(s) or caregiver(s), when performed; each additional hour (List separately in addition to code for primary procedure)
	96132	Neuropsychological testing evaluation services by physician or other qualified health care professional, including integration of patient data, interpretation of standardized test results and clinical data, clinical decision making, treatment planning and report, and interactive feedback to the patient, family member(s) or caregiver(s), when performed; first hour
	96133	Neuropsychological testing evaluation services by physician or other qualified health care professional, including integration of patient data, interpretation of standardized test results and clinical data, clinical decision making, treatment planning and report, and interactive feedback to the patient, family member(s) or caregiver(s), when performed; each additional hour (List separately in addition to code for primary procedure)

TABLE 14: Final Services for Temporary Addition to the Medicare Telehealth Services List

Service Type	HCPSCS	Long Descriptor
End-Stage Renal Disease Monthly Capitation Payment Services	90952	End-stage renal disease (ESRD) related services monthly, for patients younger than 2 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 2-3 face-to-face visits by a physician or other qualified health care professional per month
	90953	End-stage renal disease (ESRD) related services monthly, for patients younger than 2 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 1 face-to-face visit by a physician or other qualified health care professional per month
	90956	End-stage renal disease (ESRD) related services monthly, for patients 2-11 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 1 face-to-face visit by a physician or other qualified health care professional per month
	90959	End-stage renal disease (ESRD) related services monthly, for patients 12-19 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 1 face-to-face visit by a physician or other qualified health care professional per month
	90962	End-stage renal disease (ESRD) related services monthly, for patients 20 years of age and older; with 1 face-to-face visit by a physician or other qualified health care professional per month
Emergency Department Visits	99281	Emergency department visit for the evaluation and management of a patient, which requires these 3 key components: A problem focused history; A problem focused examination; and Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self limited or minor.
	99282	Emergency department visit for the evaluation and management of a patient, which requires these 3 key components: An expanded problem focused history; An expanded problem focused examination; and Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care

Service Type	HCPCS	Long Descriptor
		professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity.
	99283	Emergency department visit for the evaluation and management of a patient, which requires these 3 key components: An expanded problem focused history; An expanded problem focused examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate severity.
	99284	Emergency department visit for the evaluation and management of a patient, which requires these 3 key components: A detailed history; A detailed examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of high severity, and require urgent evaluation by the physician, or other qualified health care professionals but do not pose an immediate significant threat to life or physiologic function.
	99285	Emergency department visit for the evaluation and management of a patient, which requires these 3 key components within the constraints imposed by the urgency of the patient's clinical condition and/or mental status: A comprehensive history; A comprehensive examination; and Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of high severity and pose an immediate significant threat to life or physiologic function.
Domiciliary, Rest Home, or Custodial Care services, Established patients	99336	Domiciliary or rest home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed interval history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 40 minutes are spent with the patient and/or family or caregiver.
	99337	Domiciliary or rest home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive interval history; A comprehensive examination; Medical decision making of moderate to high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. The patient may be unstable or may have developed a significant new problem requiring immediate physician attention. Typically, 60 minutes are spent with the patient and/or family or caregiver.
Home Visits, Established Patient	99349	Home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed interval history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are moderate to high severity. Typically, 40 minutes are spent face-to-face with the patient and/or family.
	99350	Home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive interval history; A comprehensive examination; Medical decision making of moderate to high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. The patient may be unstable or may have developed a significant new problem requiring immediate physician attention. Typically, 60 minutes are spent face-to-face with the patient and/or family.

Service Type	HCPCS	Long Descriptor
Nursing facilities discharge day management	99315	Nursing facility discharge day management; 30 minutes or less
	99316	Nursing facility discharge day management; more than 30 minutes
Psychological and Neuropsychological Testing	96121	Neurobehavioral status exam (clinical assessment of thinking, reasoning and judgment, [eg, acquired knowledge, attention, language, memory, planning and problem solving, and visual spatial abilities]), by physician or other qualified health care professional, both face-to-face time with the patient and time interpreting test results and preparing the report; each additional hour (List separately in addition to code for primary procedure)
	96130	Psychological testing evaluation services by physician or other qualified health care professional, including integration of patient data, interpretation of standardized test results and clinical data, clinical decision making, treatment planning and report, and interactive feedback to the patient, family member(s) or caregiver(s), when performed; first hour
	96131	Psychological testing evaluation services by physician or other qualified health care professional, including integration of patient data, interpretation of standardized test results and clinical data, clinical decision making, treatment planning and report, and interactive feedback to the patient, family member(s) or caregiver(s), when performed; each additional hour (List separately in addition to code for primary procedure)
	96132	Neuropsychological testing evaluation services by physician or other qualified health care professional, including integration of patient data, interpretation of standardized test results and clinical data, clinical decision making, treatment planning and report, and interactive feedback to the patient, family member(s) or caregiver(s), when performed; first hour
	96133	Neuropsychological testing evaluation services by physician or other qualified health care professional, including integration of patient data, interpretation of standardized test results and clinical data, clinical decision making, treatment planning and report, and interactive feedback to the patient, family member(s) or caregiver(s), when performed; each additional hour (List separately in addition to code for primary procedure)
	96136	Psychological or neuropsychological test administration and scoring by physician or other qualified health care professional, two or more tests, any method; first 30 minutes
	96137	Psychological or neuropsychological test administration and scoring by physician or other qualified health care professional, two or more tests, any method; each additional 30 minutes (List separately in addition to code for primary procedure)
	96138	Psychological or neuropsychological test administration and scoring by technician, two or more tests, any method; first 30 minutes
	96139	Psychological or neuropsychological test administration and scoring by technician, two or more tests, any method; each additional 30 minutes (List separately in addition to code for primary procedure)
Therapy Services, Physical and Occupational Therapy, All levels	97161	Physical therapy evaluation: low complexity, requiring these components: A history with no personal factors and/or comorbidities that impact the plan of care; An examination of body system(s) using standardized tests and measures addressing 1-2 elements from any of the following: body structures and functions, activity limitations, and/or participation restrictions; A clinical presentation with stable and/or uncomplicated characteristics; and Clinical decision making of low complexity using standardized patient assessment instrument and/or measurable assessment of functional outcome. Typically, 20 minutes are spent face-to-face with the patient and/or family.
	97162	Physical therapy evaluation: moderate complexity, requiring these components: A history of present problem with 1-2 personal factors and/or comorbidities that impact the plan of care; An examination of body systems using standardized tests and measures in addressing a total of 3 or more elements from any of the following: body structures and functions, activity limitations, and/or participation restrictions; An evolving clinical presentation with changing characteristics; and Clinical decision making of moderate complexity using standardized patient assessment instrument and/or measurable assessment of functional outcome. Typically, 30 minutes are spent face-to-face with the patient and/or family.
	97163	Physical therapy evaluation: high complexity, requiring these components: A history of present problem with 3 or more personal factors and/or comorbidities that impact the plan of care; An examination of body systems using standardized tests and measures

Service Type	HCPCS	Long Descriptor
		addressing a total of 4 or more elements from any of the following: body structures and functions, activity limitations, and/or participation restrictions; A clinical presentation with unstable and unpredictable characteristics; and Clinical decision making of high complexity using standardized patient assessment instrument and/or measurable assessment of functional outcome. Typically, 45 minutes are spent face-to-face with the patient and/or family.
	97164	Re-evaluation of physical therapy established plan of care, requiring these components: An examination including a review of history and use of standardized tests and measures is required; and Revised plan of care using a standardized patient assessment instrument and/or measurable assessment of functional outcome Typically, 20 minutes are spent face-to-face with the patient and/or family.
	97165	Occupational therapy evaluation, low complexity, requiring these components: An occupational profile and medical and therapy history, which includes a brief history including review of medical and/or therapy records relating to the presenting problem; An assessment(s) that identifies 1-3 performance deficits (ie, relating to physical, cognitive, or psychosocial skills) that result in activity limitations and/or participation restrictions; and Clinical decision making of low complexity, which includes an analysis of the occupational profile, analysis of data from problem-focused assessment(s), and consideration of a limited number of treatment options. Patient presents with no comorbidities that affect occupational performance. Modification of tasks or assistance (eg, physical or verbal) with assessment(s) is not necessary to enable completion of evaluation component. Typically, 30 minutes are spent face-to-face with the patient and/or family.
	97166	Occupational therapy evaluation, moderate complexity, requiring these components: An occupational profile and medical and therapy history, which includes an expanded review of medical and/or therapy records and additional review of physical, cognitive, or psychosocial history related to current functional performance; An assessment(s) that identifies 3-5 performance deficits (ie, relating to physical, cognitive, or psychosocial skills) that result in activity limitations and/or participation restrictions; and Clinical decision making of moderate analytic complexity, which includes an analysis of the occupational profile, analysis of data from detailed assessment(s), and consideration of several treatment options. Patient may present with comorbidities that affect occupational performance. Minimal to moderate modification of tasks or assistance (eg, physical or verbal) with assessment(s) is necessary to enable patient to complete evaluation component. Typically, 45 minutes are spent face-to-face with the patient and/or family.
	97167	Occupational therapy evaluation, high complexity, requiring these components: An occupational profile and medical and therapy history, which includes review of medical and/or therapy records and extensive additional review of physical, cognitive, or psychosocial history related to current functional performance; An assessment(s) that identifies 5 or more performance deficits (ie, relating to physical, cognitive, or psychosocial skills) that result in activity limitations and/or participation restrictions; and Clinical decision making of high analytic complexity, which includes an analysis of the patient profile, analysis of data from comprehensive assessment(s), and consideration of multiple treatment options. Patient presents with comorbidities that affect occupational performance. Significant modification of tasks or assistance (eg, physical or verbal) with assessment(s) is necessary to enable patient to complete evaluation component. Typically, 60 minutes are spent face-to-face with the patient and/or family.
	97168	Re-evaluation of occupational therapy established plan of care, requiring these components: An assessment of changes in patient functional or medical status with revised plan of care; An update to the initial occupational profile to reflect changes in condition or environment that affect future interventions and/or goals; and A revised plan of care. A formal reevaluation is performed when there is a documented change in functional status or a significant change to the plan of care is required. Typically, 30 minutes are spent face-to-face with the patient and/or family.
	97110	Therapeutic procedure, 1 or more areas, each 15 minutes; therapeutic exercises to develop strength and endurance, range of motion and flexibility

Service Type	HCP/CS	Long Descriptor
	97112	Therapeutic procedure, 1 or more areas, each 15 minutes; neuromuscular reeducation of movement, balance, coordination, kinesthetic sense, posture, and/or proprioception for sitting and/or standing activities
	97116	Therapeutic procedure, 1 or more areas, each 15 minutes; gait training (includes stair climbing)
	97535	Self-care/home management training (eg, activities of daily living (ADL) and compensatory training, meal preparation, safety procedures, and instructions in use of assistive technology devices/adaptive equipment) direct one-on-one contact, each 15 minutes
	97750	Physical performance test or measurement (eg, musculoskeletal, functional capacity), with written report, each 15 minutes
	97755	Assistive technology assessment (eg, to restore, augment or compensate for existing function, optimize functional tasks and/or maximize environmental accessibility), direct one-on-one contact, with written report, each 15 minutes
	97760	Orthotic(s) management and training (including assessment and fitting when not otherwise reported), upper extremity(ies), lower extremity(ies) and/or trunk, initial orthotic(s) encounter, each 15 minutes
	97761	Prosthetic(s) training, upper and/or lower extremity(ies), initial prosthetic(s) encounter, each 15 minutes
	92521	Evaluation of speech fluency (eg, stuttering, cluttering)
	92522	Evaluation of speech sound production (eg, articulation, phonological process, apraxia, dysarthria);
	92523	Evaluation of speech sound production (eg, articulation, phonological process, apraxia, dysarthria); with evaluation of language comprehension and expression (eg, receptive and expressive language)
	92524	Behavioral and qualitative analysis of voice and resonance
	92507	Treatment of speech, language, voice, communication, and/or auditory processing disorder; individual
Subsequent Observation and Observation Discharge Day Management	99217	Observation care discharge day management (This code is to be utilized to report all services provided to a patient on discharge from outpatient hospital "observation status" if the discharge is on other than the initial date of "observation status." To report services to a patient designated as "observation status" or "inpatient status" and discharged on the same date, use the codes for Observation or Inpatient Care Services [including Admission and Discharge Services, 99234-99236 as appropriate.])
	99224	Subsequent observation care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: Problem focused interval history; Problem focused examination; Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is stable, recovering, or improving. Typically, 15 minutes are spent at the bedside and on the patient's hospital floor or unit.
	99225	Subsequent observation care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: An expanded problem focused interval history; An expanded problem focused examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is responding inadequately to therapy or has developed a minor complication. Typically, 25 minutes are spent at the bedside and on the patient's hospital floor or unit.
	99226	Subsequent observation care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A detailed interval history; A detailed examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is unstable or has developed a significant complication

Service Type	HCPCS	Long Descriptor
		or a significant new problem. Typically, 35 minutes are spent at the bedside and on the patient's hospital floor or unit.
Initial hospital care and hospital discharge day management	99221	Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A detailed or comprehensive history; A detailed or comprehensive examination; and Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of low severity. Typically, 30 minutes are spent at the bedside and on the patient's hospital floor or unit.
	99222	Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of moderate severity. Typically, 50 minutes are spent at the bedside and on the patient's hospital floor or unit.
	99223	Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of high severity. Typically, 70 minutes are spent at the bedside and on the patient's hospital floor or unit.
	99238	Hospital discharge day management; 30 minutes or less
	99239	Hospital discharge day management; more than 30 minutes
Critical Care Services	99291	Critical care, evaluation and management of the critically ill or critically injured patient; first 30-74 minutes
	99292	Critical care, evaluation and management of the critically ill or critically injured patient; each additional 30 minutes (List separately in addition to code for primary service)
Inpatient Neonatal and Pediatric Critical Care, Subsequent	99469	Subsequent inpatient neonatal critical care, per day, for the evaluation and management of a critically ill neonate, 28 days of age or younger
	99472	Subsequent inpatient pediatric critical care, per day, for the evaluation and management of a critically ill infant or young child, 29 days through 24 months of age
	99476	Subsequent inpatient pediatric critical care, per day, for the evaluation and management of a critically ill infant or young child, 2 through 5 years of age
Continuing Neonatal Intensive Care Services	99478	Subsequent intensive care, per day, for the evaluation and management of the recovering very low birth weight infant (present body weight less than 1500 grams)
	99479	Subsequent intensive care, per day, for the evaluation and management of the recovering low birth weight infant (present body weight of 1500-2500 grams)
	99480	Subsequent intensive care, per day, for the evaluation and management of the recovering infant (present body weight of 2501-5000 grams)

BILLING CODE 4120-01-C

We received public comments on the proposed temporary addition of a category 3 basis for adding to or deleting services from the Medicare telehealth services list. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported our proposal to use a third, temporary category of criteria for adding services to the Medicare telehealth list on a provisional basis. Commenters agreed that keeping certain services added on an interim basis during the

PHE for COVID-19 on the Medicare telehealth list on a temporary basis after the end of the PHE will give the medical community time to gather much needed data on services in this category to support Category 2 requests through the regular process for considering additions to the telehealth services list, while maintaining beneficiary access and allowing practitioners to transition back to models of care focused primarily on in-person, rather than virtual, services. The majority of commenters also supported adding the services CMS

proposed to add to the Medicare telehealth list on a Category 3 basis.

Response: We appreciate commenters' support for these proposals.

Comment: Most commenters supported the proposed timeframe for services added on a Category 3 basis to remain on the Medicare telehealth list; however, a few commenters stated that adding services to the Medicare telehealth list on a temporary basis would create unnecessary burden for clinicians who are attempting to both treat patients in the midst of a pandemic and develop an evidence base to

support adding these services to the Medicare telehealth list permanently. In addition, by stipulating that certain codes would remain on the list through the year in which the PHE ends, commenters suggested that CMS was creating ambiguity as to when services added to the list on a Category 3 basis would expire. The commenters stated that this would be an impediment to investing in the infrastructure necessary to furnish these services. Some commenters requested that CMS fund the studies necessary to demonstrate whether a given service should be added permanently to the Medicare telehealth list, or at least articulate clear standards CMS would use to assess efficacy.

Response: While we understand commenters' concerns that adding services temporarily to the Medicare telehealth list without a fixed end date would create ambiguity that could serve as a disincentive to providing the services as telehealth services, we would note that the PHE for COVID-19 has now been extended into CY 2021.² The extension of the PHE into CY 2021 ensures that clinicians will have at least the entirety of 2021 to collect evidence to support a request to add these services permanently to the Medicare telehealth list.

Comment: Some commenters also expressed concern with the timeframe for which services added on a Category 3 basis will be on the Medicare telehealth list after the conclusion of the PHE. Some commenters suggested alternative timeframes, ranging between 90 days and 2 years after the end of the PHE. Some commenters suggested that CMS should specify a year in which the category 3 additions to the telehealth list will expire, such as 2022.

Response: As stated above, the PHE for COVID-19 has been extended into CY 2021, allowing for services added to the Medicare telehealth list on a Category 3 basis to remain there for at least the entirety of 2021. Any potential extension of this timeframe would be proposed in future rulemaking.

After considering the public comments, we are finalizing the additions in Table 14 to the telehealth list on a Category 3 basis through the later of the end of the year in which the PHE ends or December 31, 2021, as proposed.

d. Comment Solicitation on Medicare Telehealth Services Added on an Interim Basis During the PHE for COVID-19 That CMS Did Not Propose To Retain After the PHE Ends

In the March 31st COVID-19 IFC and the May 8th COVID-19 IFC, we finalized on an interim basis during the PHE for COVID-19 the addition of a number of services to the Medicare telehealth services list. While a number of these services were previously requested by external stakeholders and reviewed for addition as part of our standard process for updating the Medicare telehealth services list, a few were identified through internal review. As discussed above, we conducted a clinical assessment of each of the services added on an interim basis during the PHE for COVID-19 to the Medicare telehealth services list to identify those for which we could foresee a reasonable potential likelihood of clinical benefit when furnished via telehealth outside the circumstances of the PHE for COVID-19. In our clinical review of these services, we did not identify sufficient information to suggest there is a potential likelihood of clinical benefit for the services described below such that they could meet the Category 1 or Category 2 criteria outside the circumstances of the PHE for COVID-19. We specifically considered the potential for these services to be furnished, outside the circumstances of the PHE for COVID-19, without increased concerns for patient safety or jeopardizing quality of care; and furnished fully and effectively, including all elements of the service, by a remotely located clinician via two-way, audio/video telecommunications technology. After assessing these factors, we did not find a potential likelihood that the services could meet Category 2 criteria even with development of additional evidence. As such, we proposed not to extend them on the Medicare telehealth services list beyond the end of the PHE for COVID-19. However, we solicited public comment on whether any service added to the Medicare telehealth services list on an interim basis for the duration of the PHE for COVID-19 should be added to the Medicare telehealth services list on a temporary, Category 3 basis, based on the criteria outlined above. We welcomed additional information from commenters about these services.

We also sought comment on the following considerations associated with particular services. We noted that comments on these specific concerns would inform our final decisions on whether these services should be added

to the Medicare telehealth services list on a temporary, Category 3 basis:

- *Initial and final/discharge interactions (CPT codes 99234–99236 and 99238–99239):* We noted that we believe that the potential acuity of the patient described by these codes would require an in-person physical exam in order to fulfill the requirements of the service. We expressed concerns that, without an in-person physical examination, the need for the physician or health care provider to fully understand the health status of the person with whom they are establishing a clinical relationship would be compromised. We noted that we believe the need for an in-person interaction would rise beyond any specific diagnosis, and serves as the foundation upon which any and all clinical decisions are based for these services. We noted that, without an in-person interaction, care planning that includes risk-benefit considerations and clinical decision-making will be less well-informed and create risk of patient harm.

- *Higher level emergency department visits (CPT codes 99284–99285):* We expressed concern that the full scope of service elements of these codes cannot be met via two-way, audio/video telecommunications technology as higher levels are indicated by patient characteristics, clinical complexity, urgency for care, and require complex decision-making. We also noted that we believe, due to the acuity of the patient described by these codes, that an in-person physical examination is necessary to fulfill the service requirements.

- *Hospital, Intensive Care Unit, Emergency care, Observation stays (CPT codes 99217–99220; 99221–99226; 99484–99485, 99468–99472, 99475–99476, and 99477–99480):* These codes describe visits that are furnished to patients who are ill enough to require hospital evaluation and care. We noted that we believe that the codes describe an evaluation for these potentially high acuity patients that is comprehensive and includes an in-person physical examination. Our view that in-person care is necessary to fulfill the requirements of the code is driven by the need for the physician or health provider to fully understand the health status of the person with whom they are establishing a clinical and therapeutic relationship. We also noted that we believe that the need for an in-person interaction would rise above any specific diagnosis, and serves as the foundation upon which any and all clinical decisions are based for these services. We noted that, without an in-

² <https://www.phe.gov/emergency/news/healthactions/phe/Pages/covid19-2Oct2020.aspx>.

person interaction, care planning that includes risk-benefit considerations and clinical decision-making would be less well-informed and create risk of patient harm. With regard to the physical therapy, occupational therapy, and speech-language pathology services in Table 13, we have received a number of requests that we add therapy services to the Medicare telehealth services list. In the CY 2017 PFS final rule, we noted that section 1834(m)(4)(E) of the Act specifies the types of practitioners who may furnish and bill for Medicare telehealth services as those practitioners under section 1842(b)(18)(C) of the Act. Physical therapists (PTs), occupational therapists (OTs) and speech-language pathologists (SLPs) are not among the practitioners identified in section 1842(b)(18)(C) of the Act. We stated in the CY 2017 PFS final rule (81 FR 80198) that because these services are predominantly furnished by PTs, OTs, and SLPs, we did not believe it would be appropriate to add them to the Medicare telehealth services list at that time. In a subsequent request to consider adding these services for 2018, the original requester suggested that we might propose these services to be added to the Medicare telehealth services list so that payment can be made for them when furnished via telehealth by physicians or practitioners who can serve as distant site practitioners. We stated that since the majority of the codes are furnished over 90 percent of the time by therapy

professionals who are not included on the statutory list of eligible distant site practitioners, we believed that adding therapy services to the Medicare telehealth services list could result in confusion about who is authorized to furnish and bill for these services when furnished via telehealth.

In the proposed rule, we noted that we continue to believe this is generally the case, and we did not propose to add these services permanently to the Medicare telehealth services list. We solicited comment on whether these services should be added to the Medicare telehealth services list so that, in instances when a practitioner who is eligible to bill for telehealth services furnishes these services via telehealth, they could bill and receive payment for them. We also solicited comment on whether all aspects of these services can be fully and effectively furnished via two-way, audio/video telecommunications technology. We noted that given our clarification regarding telehealth services furnished incident to the professional services of a physician or practitioner (85 FR 27562), if these services were added to the Medicare telehealth services list, they could be furnished by a therapist and billed by a physician or practitioner who can furnish and bill for telehealth services provided that all of the “incident to” requirements are met.

Comment: Commenters expressed concern that we did not propose to add the vast majority of the interim PHE

telehealth services to the telehealth list on a Category 3 basis. Commenters stated that, by limiting the availability of these interim PHE telehealth services to the duration of the PHE, CMS would jeopardize access to care for beneficiaries who have come to rely on the provision of these services virtually, and would disrupt practice patterns for those clinicians who were accustomed to furnishing a broader array of telehealth services than included in the proposed permanent and temporary Category 3 additions to the Medicare telehealth list.

Response: We appreciate commenters’ concerns. In response, we are finalizing the addition of a broader array of services to the Medicare telehealth list on a Category 3 basis, as described below.

Comment: Many commenters requested that CMS add specific interim PHE telehealth services that we did not propose to the Medicare telehealth list on a Category 3 basis. Most commenters did not provide sufficient (or in some cases, any) evidence to support their requests to be considered under Category 3 criteria. Other commenters did provide additional evidence sufficient to consider certain services on a Category 3 basis. Table 15 includes the complete list of services commenters requested for addition to the CMS Medicare telehealth list on a Category 3 basis.

BILLING CODE 4120-01-P

TABLE 15: All Category 3 Requests

Code	Long Descriptor
77427	Radiation treatment management, 5 treatments
90952	End-stage renal disease (ESRD) related services monthly, for patients younger than 2 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 2-3 face-to-face visits by a physician or other qualified health care professional per month
90953	End-stage renal disease (ESRD) related services monthly, for patients younger than 2 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 1 face-to-face visit by a physician or other qualified health care professional per month
90959	End-stage renal disease (ESRD) related services monthly, for patients 12-19 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 1 face-to-face visit by a physician or other qualified health care professional per month
90962	End-stage renal disease (ESRD) related services monthly, for patients 20 years of age and older; with 1 face-to-face visit by a physician or other qualified health care professional per month
92521	Evaluation of speech fluency (e.g., stuttering, cluttering)
92522	Evaluation of speech sound production (e.g., articulation, phonological process, apraxia, dysarthria);
92523	Evaluation of speech sound production (e.g., articulation, phonological process, apraxia, dysarthria); with evaluation of language comprehension and expression (e.g., receptive and expressive language)
92524	Behavioral and qualitative analysis of voice and resonance
92526	Treatment of swallowing dysfunction and/or oral function for feeding
92601	Diagnostic analysis of cochlear implant, patient younger than 7 years of age; with programming
92602	Diagnostic analysis of cochlear implant, patient younger than 7 years of age; subsequent reprogramming
92603	Diagnostic analysis of cochlear implant, age 7 years or older; with programming
92604	Diagnostic analysis of cochlear implant, age 7 years or older; subsequent reprogramming
93797	Physician or other qualified health care professional services for outpatient cardiac rehabilitation; without continuous ECG monitoring (per session)
93798	Physician or other qualified health care professional services for outpatient cardiac rehabilitation; with continuous ECG monitoring (per session)
95249	Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; patient-provided equipment, sensor placement, hook-up, calibration of monitor, patient training, and printout of recording.
95250	Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; physician or other qualified health care professional (office) provided equipment, sensor placement, hook-up, calibration of monitor, patient training, removal of sensor, and printout of recording
96112	Developmental test administration (including assessment of fine and/or gross motor, language, cognitive level, social, memory and/or executive functions by standardized developmental instruments when performed), by physician or other qualified health care professional, with interpretation and report; first hour
96113	Developmental test administration (including assessment of fine and/or gross motor, language, cognitive level, social, memory and/or executive functions by standardized developmental instruments when performed), by physician or other qualified health care professional, with interpretation and report; each additional 30 minutes (List separately in addition to code for primary procedure)
96136	Psychological or neuropsychological test administration and scoring by physician or other qualified health care professional, two or more tests, any method; first 30 minutes

Code	Long Descriptor
96137	Psychological or neuropsychological test administration and scoring by physician or other qualified health care professional, two or more tests, any method; each additional 30 minutes (List separately in addition to code for primary procedure)
96138	Psychological or neuropsychological test administration and scoring by technician, two or more tests, any method; first 30 minutes
96139	Psychological or neuropsychological test administration and scoring by technician, two or more tests, any method; each additional 30 minutes (List separately in addition to code for primary procedure)
97110	Therapeutic procedure, 1 or more areas, each 15 minutes; therapeutic exercises to develop strength and endurance, range of motion and flexibility
97112	Therapeutic procedure, 1 or more areas, each 15 minutes; neuromuscular reeducation of movement, balance, coordination, kinesthetic sense, posture, and/or proprioception for sitting and/or standing activities
97116	Therapeutic procedure, 1 or more areas, each 15 minutes; gait training (includes stair climbing)
97151	Behavior identification assessment, administered by a physician or other qualified health care professional, each 15 minutes of the physician's or other qualified health care professional's time face-to-face with patient and/or guardian(s)/caregiver(s) administering assessments and discussing findings and recommendations, and non-face-to-face analyzing past data, scoring/interpreting the assessment, and preparing the report/treatment plan
97152	Behavior identification-supporting assessment, administered by one technician under the direction of a physician or other qualified health care professional, face-to-face with the patient, each 15 minutes
97153	Adaptive behavior treatment by protocol, administered by technician under the direction of a physician or other qualified health care professional, face-to-face with one patient, each 15 minutes
97154	Group adaptive behavior treatment by protocol, administered by technician under the direction of a physician or other qualified health care professional, face-to-face with two or more patients, each 15 minutes
97155	Adaptive behavior treatment with protocol modification, administered by physician or other qualified health care professional, which may include simultaneous direction of technician, face-to-face with one patient, each 15 minutes
97156	Family adaptive behavior treatment guidance, administered by physician or other qualified health care professional (with or without the patient present), face-to-face with guardian(s)/caregiver(s), each 15 minutes
97157	Multiple-family group adaptive behavior treatment guidance, administered by physician or other qualified health care professional (without the patient present), face-to-face with multiple sets of guardians/caregivers, each 15 minutes
97158	Group adaptive behavior treatment with protocol modification, administered by physician or other qualified health care professional, face-to-face with multiple patients, each 15 minutes
97161	Physical therapy evaluation: low complexity, requiring these components: A history with no personal factors and/or comorbidities that impact the plan of care; An examination of body system(s) using standardized tests and measures addressing 1-2 elements from any of the following: body structures and functions, activity limitations, and/or participation restrictions; A clinical presentation with stable and/or uncomplicated characteristics; and Clinical decision making of low complexity using standardized patient assessment instrument and/or measurable assessment of functional outcome. Typically, 20 minutes are spent face-to-face with the patient and/or family.
97162	Physical therapy evaluation: moderate complexity, requiring these components: A history of present problem with 1-2 personal factors and/or comorbidities that impact the plan of care; An examination of body systems using standardized tests and measures in addressing a total of 3 or more elements from any of the following: body structures and functions, activity limitations, and/or participation restrictions; An evolving clinical presentation with changing characteristics; and Clinical decision making of moderate complexity using standardized patient assessment instrument and/or measurable assessment of functional outcome. Typically, 30 minutes are spent face-to-face with the patient and/or family.
97163	Physical therapy evaluation: high complexity, requiring these components: A history of present problem with 3 or more personal factors and/or comorbidities that impact the plan of care; An

Code	Long Descriptor
	examination of body systems using standardized tests and measures addressing a total of 4 or more elements from any of the following: body structures and functions, activity limitations, and/or participation restrictions; A clinical presentation with unstable and unpredictable characteristics; and Clinical decision making of high complexity using standardized patient assessment instrument and/or measurable assessment of functional outcome. Typically, 45 minutes are spent face-to-face with the patient and/or family.
97164	Re-evaluation of physical therapy established plan of care, requiring these components: An examination including a review of history and use of standardized tests and measures is required; and Revised plan of care using a standardized patient assessment instrument and/or measurable assessment of functional outcome Typically, 20 minutes are spent face-to-face with the patient and/or family.
97165	Occupational therapy evaluation, low complexity, requiring these components: An occupational profile and medical and therapy history, which includes a brief history including review of medical and/or therapy records relating to the presenting problem; An assessment(s) that identifies 1-3 performance deficits (i.e., relating to physical, cognitive, or psychosocial skills) that result in activity limitations and/or participation restrictions; and Clinical decision making of low complexity, which includes an analysis of the occupational profile, analysis of data from problem-focused assessment(s), and consideration of a limited number of treatment options. Patient presents with no comorbidities that affect occupational performance. Modification of tasks or assistance (e.g., physical or verbal) with assessment(s) is not necessary to enable completion of evaluation component. Typically, 30 minutes are spent face-to-face with the patient and/or family.
97166	Occupational therapy evaluation, moderate complexity, requiring these components: An occupational profile and medical and therapy history, which includes an expanded review of medical and/or therapy records and additional review of physical, cognitive, or psychosocial history related to current functional performance; An assessment(s) that identifies 3-5 performance deficits (i.e., relating to physical, cognitive, or psychosocial skills) that result in activity limitations and/or participation restrictions; and Clinical decision making of moderate analytic complexity, which includes an analysis of the occupational profile, analysis of data from detailed assessment(s), and consideration of several treatment options. Patient may present with comorbidities that affect occupational performance. Minimal to moderate modification of tasks or assistance (e.g., physical or verbal) with assessment(s) is necessary to enable patient to complete evaluation component. Typically, 45 minutes are spent face-to-face with the patient and/or family.
97167	Occupational therapy evaluation, high complexity, requiring these components: An occupational profile and medical and therapy history, which includes review of medical and/or therapy records and extensive additional review of physical, cognitive, or psychosocial history related to current functional performance; An assessment(s) that identifies 5 or more performance deficits (i.e., relating to physical, cognitive, or psychosocial skills) that result in activity limitations and/or participation restrictions; and Clinical decision making of high analytic complexity, which includes an analysis of the patient profile, analysis of data from comprehensive assessment(s), and consideration of multiple treatment options. Patient presents with comorbidities that affect occupational performance. Significant modification of tasks or assistance (e.g., physical or verbal) with assessment(s) is necessary to enable patient to complete evaluation component. Typically, 60 minutes are spent face-to-face with the patient and/or family.
97168	Re-evaluation of occupational therapy established plan of care, requiring these components: An assessment of changes in patient functional or medical status with revised plan of care; An update to the initial occupational profile to reflect changes in condition or environment that affect future interventions and/or goals; and A revised plan of care. A formal reevaluation is performed when there is a documented change in functional status or a significant change to the plan of care is required. Typically, 30 minutes are spent face-to-face with the patient and/or family.
97535	Self-care/home management training (e.g., activities of daily living (ADL) and compensatory training, meal preparation, safety procedures, and instructions in use of assistive technology devices/adaptive equipment) direct one-on-one contact, each 15 minutes
97750	Physical performance test or measurement (e.g., musculoskeletal, functional capacity), with written report, each 15 minutes

Code	Long Descriptor
97755	Assistive technology assessment (e.g., to restore, augment or compensate for existing function, optimize functional tasks and/or maximize environmental accessibility), direct one-on-one contact, with written report, each 15 minutes
97760	Orthotic(s) management and training (including assessment and fitting when not otherwise reported), upper extremity(ies), lower extremity(ies) and/or trunk, initial orthotic(s) encounter, each 15 minutes
97761	Prosthetic(s) training, upper and/or lower extremity(ies), initial prosthetic(s) encounter, each 15 minutes
97763	Orthotic(s)/prosthetic(s) management and/or training, upper extremity(ies), lower extremity(ies), and/or trunk, subsequent orthotic(s)/prosthetic(s) encounter, each 15 minutes
99217	Observation care discharge day management (This code is to be utilized to report all services provided to a patient on discharge from outpatient hospital "observation status" if the discharge is on other than the initial date of "observation status." To report services to a patient designated as "observation status" or "inpatient status" and discharged on the same date, use the codes for Observation or Inpatient Care Services [including Admission and Discharge Services, 99234-99236 as appropriate.]
99224	Subsequent observation care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: Problem focused interval history; Problem focused examination; Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is stable, recovering, or improving. Typically, 15 minutes are spent at the bedside and on the patient's hospital floor or unit.
99225	Subsequent observation care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: An expanded problem focused interval history; An expanded problem focused examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is responding inadequately to therapy or has developed a minor complication. Typically, 25 minutes are spent at the bedside and on the patient's hospital floor or unit.
99226	Subsequent observation care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A detailed interval history; A detailed examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is unstable or has developed a significant complication or a significant new problem. Typically, 35 minutes are spent at the bedside and on the patient's hospital floor or unit.
99234	Observation or inpatient hospital care, for the evaluation and management of a patient including admission and discharge on the same date, which requires these 3 key components: A detailed or comprehensive history; A detailed or comprehensive examination; and Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually the presenting problem(s) requiring admission are of low severity. Typically, 40 minutes are spent at the bedside and on the patient's hospital floor or unit.
99235	Observation or inpatient hospital care, for the evaluation and management of a patient including admission and discharge on the same date, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually the presenting problem(s) requiring admission are of moderate severity. Typically, 50 minutes are spent at the bedside and on the patient's hospital floor or unit.
99236	Observation or inpatient hospital care, for the evaluation and management of a patient including admission and discharge on the same date, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of high

Code	Long Descriptor
	complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually the presenting problem(s) requiring admission are of high severity. Typically, 55 minutes are spent at the bedside and on the patient's hospital floor or unit.
99238	Hospital discharge day management; 30 minutes or less
99239	Hospital discharge day management; more than 30 minutes
99281	Emergency department visit for the evaluation and management of a patient, which requires these 3 key components: A problem focused history; A problem focused examination; and Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self limited or minor.
99282	Emergency department visit for the evaluation and management of a patient, which requires these 3 key components: An expanded problem focused history; An expanded problem focused examination; and Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity.
99283	Emergency department visit for the evaluation and management of a patient, which requires these 3 key components: An expanded problem focused history; An expanded problem focused examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate severity.
99284	Emergency department visit for the evaluation and management of a patient, which requires these 3 key components: A detailed history; A detailed examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of high severity, and require urgent evaluation by the physician, or other qualified health care professionals but do not pose an immediate significant threat to life or physiologic function.
99285	Emergency department visit for the evaluation and management of a patient, which requires these 3 key components within the constraints imposed by the urgency of the patient's clinical condition and/or mental status: A comprehensive history; A comprehensive examination; and Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of high severity and pose an immediate significant threat to life or physiologic function.
99291	Critical care, evaluation and management of the critically ill or critically injured patient; first 30-74 minutes
99292	Critical care, evaluation and management of the critically ill or critically injured patient; each additional 30 minutes (List separately in addition to code for primary service)
99324	Domiciliary or rest home visit for the evaluation and management of a new patient, which requires these 3 key components: A problem focused history; A problem focused examination; and Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low severity. Typically, 20 minutes are spent with the patient and/or family or caregiver.
99325	Domiciliary or rest home visit for the evaluation and management of a new patient, which requires these 3 key components: An expanded problem focused history; An expanded problem focused examination; and Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or

Code	Long Descriptor
	family's needs. Usually, the presenting problem(s) are of moderate severity. Typically, 30 minutes are spent with the patient and/or family or caregiver.
99326	Domiciliary or rest home visit for the evaluation and management of a new patient, which requires these 3 key components: A detailed history; A detailed examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 45 minutes are spent with the patient and/or family or caregiver.
99327	Domiciliary or rest home visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of high severity. Typically, 60 minutes are spent with the patient and/or family or caregiver.
99328	Domiciliary or rest home visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is unstable or has developed a significant new problem requiring immediate physician attention. Typically, 75 minutes are spent with the patient and/or family or caregiver.
99336	Domiciliary or rest home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed interval history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 40 minutes are spent with the patient and/or family or caregiver.
99337	Domiciliary or rest home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive interval history; A comprehensive examination; Medical decision making of moderate to high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. The patient may be unstable or may have developed a significant new problem requiring immediate physician attention. Typically, 60 minutes are spent with the patient and/or family or caregiver.
99341	Home visit for the evaluation and management of a new patient, which requires these 3 key components: A problem focused history; A problem focused examination; and Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low severity. Typically, 20 minutes are spent face-to-face with the patient and/or family.
99342	Home visit for the evaluation and management of a new patient, which requires these 3 key components: An expanded problem focused history; An expanded problem focused examination; and Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate severity. Typically, 30 minutes are spent face-to-face with the patient and/or family.
99343	Home visit for the evaluation and management of a new patient, which requires these 3 key components: A detailed history; A detailed examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of

Code	Long Descriptor
	moderate to high severity. Typically, 45 minutes are spent face-to-face with the patient and/or family.
99344	Home visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of high severity. Typically, 60 minutes are spent face-to-face with the patient and/or family.
99345	Home visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is unstable or has developed a significant new problem requiring immediate physician attention. Typically, 75 minutes are spent face-to-face with the patient and/or family.
99349	Home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed interval history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are moderate to high severity. Typically, 40 minutes are spent face-to-face with the patient and/or family.
99350	Home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive interval history; A comprehensive examination; Medical decision making of moderate to high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. The patient may be unstable or may have developed a significant new problem requiring immediate physician attention. Typically, 60 minutes are spent face-to-face with the patient and/or family.
99468	Supervision by a control physician of interfacility transport care of the critically ill or critically injured pediatric patient, 24 months of age or younger, includes two-way communication with transport team before transport, at the referring facility and during the transport, including data interpretation and report; each additional 30 minutes (List separately in addition to code for primary procedure)
99469	Subsequent inpatient neonatal critical care, per day, for the evaluation and management of a critically ill neonate, 28 days of age or younger
99472	Subsequent inpatient pediatric critical care, per day, for the evaluation and management of a critically ill infant or young child, 29 days through 24 months of age
99473	Self-measured blood pressure using a device validated for clinical accuracy; patient education/training and device calibration
99474	Self-measured blood pressure using a device validated for clinical accuracy; patient education/training and device calibration
99476	Subsequent inpatient pediatric critical care, per day, for the evaluation and management of a critically ill infant or young child, 2 through 5 years of age
99478	Subsequent intensive care, per day, for the evaluation and management of the recovering very low birth weight infant (present body weight less than 1500 grams)
99479	Subsequent intensive care, per day, for the evaluation and management of the recovering low birth weight infant (present body weight of 1500-2500 grams)
99480	Subsequent intensive care, per day, for the evaluation and management of the recovering infant (present body weight of 2501-5000 grams)
G0422	Intensive cardiac rehabilitation; with or without continuous ecg monitoring with exercise, per session
G0423	Intensive cardiac rehabilitation; with or without continuous ecg monitoring; without exercise, per session
G0424	Pulmonary rehabilitation, including exercise (includes monitoring), one hour, per session, up to two sessions per day

initial nursing facility visits, which are currently interim PHE telehealth services, to the telehealth list on a Category 3 basis. Commenters did provide information regarding how telehealth is used in long-term care facilities; however, they did not provide information indicating how the full scope of service elements of an initial nursing facility visit could be furnished via two-way, audio/telecommunications technology.

Response: We continue to believe that there are components of the initial visit, such as the physical exam, that in the vast majority of circumstances can only be properly performed in person given the vulnerability and frailty of this particular patient population. Commenters did not provide evidence to indicate otherwise. We note that patients in a nursing facility may still receive subsequent visits as telehealth services; however, we are not persuaded that these services, in general, could be furnished via telehealth as described by the CPT codes based upon information provided by commenters.

Comment: Many commenters requested that we add physical therapy, occupational therapy, and speech language pathology services to the Medicare telehealth list on a category 3 basis. Commenters provided extensive information on how they furnish these services via two-way, audio/video telecommunications technology. In response to CMS's longstanding concerns that the practitioners who furnish and bill for the overwhelming majority of these services are, outside of the circumstances of the PHE for COVID-19, not among the statutorily authorized practitioners who may independently bill Medicare for telehealth services, commenters pointed to our proposed clarification that telehealth services could be furnished by a therapist incident to the professional services of a billing clinician in accordance with our regulations at § 410.26.

Response: We appreciate the additional information commenters provided suggesting a possible scenario whereby services furnished by therapists may be provided and billed incident to the professional services of a physician or practitioner who is authorized to furnish and bill for telehealth services. While we continue to have concerns as to whether certain elements of therapy services, particularly when provided to new patients, could be furnished in total via two-way, audio/video telecommunications technology, we recognize that the clarification of billing requirements for these services may

allow for additional information to be collected and submitted for consideration by CMS. We are therefore finalizing addition of these services to the Medicare telehealth list on a Category 3 basis.

Comment: Some commenters requested that we add several audiology services to the Medicare telehealth list on a Category 3 basis. These codes are currently interim PHE telehealth services. Commenters explained that including CPT codes for device evaluation and therapeutic services with a device is necessary to support access for patients in needs of these assistive technologies, and that not including them would inhibit the ability of speech language pathologists to perform the evaluation and therapeutic services via telehealth.

Response: We note that, outside of the circumstances of the PHE, speech language pathologists are not eligible to independently bill for Medicare telehealth services, although these services could possibly be furnished by a therapist incident to an eligible billing practitioner. Furthermore, we do not agree that the information provided by commenters demonstrates that, under most circumstances, these services can be furnished, in full, via two-way audio/video communication technology given that these codes describe a new patient interaction which would likely require hands-on, clinical assessment and direct, one-on-one interaction/observation.

Comment: Some commenters requested that we add ESRD MCP services with 1 monthly visit to the Medicare telehealth list on a Category 3 basis. Commenters cited information that they say demonstrates that retaining the ESRD-specific telehealth flexibilities post-pandemic would be valuable to both patients and health care providers and would pose no material detriments to patient safety or quality of care. Commenters further offered that technology exists that would enable physicians and other practitioners to deliver effective ESRD care on a virtual basis beyond the PHE for COVID-19. Additionally, commenters noted that it may take time for medically complex and vulnerable patients to travel for in-person care, and that determining when a patient should return to a physician's office should be left to the patient and the physician.

Response: We did not propose to add these services to the Medicare telehealth list on a Category 3 basis due to concerns regarding the patient receiving an adequate physical examination of the vascular access site and in-person evaluation of the patient's fluid status

when a patient is only receiving 1 visit per month. We appreciate the additional information provided by commenters, particularly the information on how ESRD services are furnished using audio/video technology outside of the circumstances of the PHE for COVID-19. Based upon this information, we are finalizing the addition of the ESRD MCP services with a single face-to-face visit per month to the Medicare telehealth list on a Category 3 basis. We would note that, during the PHE for the COVID-19 pandemic, section 3705 of the CARES Act allowed for a waiver of the statutory provision in section 1881(b)(3)(B)(ii) of the Act, which requires that an individual determined to have ESRD receiving home dialysis must receive certain face-to-face clinical assessments without the use of telehealth. Therefore, outside of the PHE for COVID-19, for beneficiaries receiving home dialysis services, a face-to-face ESRD-related clinical assessment must be provided in person (without the use of telehealth) for the first 3 months of home dialysis, and once every 3 months thereafter.

Comment: Some commenters requested that we add hospital observation and discharge day management services to the Medicare telehealth list on a Category 3 basis. Commenters cited information that they believe demonstrates that telehealth services in the emergency setting have proven to be successful and add clinical benefit to patients, and that they should be added on a Category 3 basis, if not permanently. Commenters stated that furnishing these services as telehealth services can be helpful or even essential to enable patients to receive high-quality specialty care in isolated rural communities, communities affected by natural disasters, communities affected by local disease outbreaks, and similar situations. Commenters also requested that we add critical care services and established patient neonatal critical care services to the Medicare telehealth list on a Category 3 basis, stating that there are certain situations where it is appropriate to provide higher level and critical care to patients via telehealth. Commenters further offered that the clinical value of telehealth is particularly clear for patients being treated in rural EDs or at rural hospitals where effective telehealth collaboration for high-level cases could facilitate clinical collaboration and decrease unnecessary transfers. Commenters stated that there is a shortage of rural board-certified emergency physicians, and that, if shortages of these physicians continue, more critical care services

may need to be delivered via telehealth over time to ensure that patients receive timely and necessary care. Finally, we received requests to add level four and five emergency department visits to the Medicare telehealth list on a Category 3 basis.

All of these requests were accompanied by robust supporting evidence including information on teleICU and tele-stroke models of care. Commenters also submitted clinical studies pointing to the efficacy of telehealth in more acute care settings.

Response: We are responding to the comments on these codes together because they are all E/M services that are furnished in a hospital or ED setting. We did not propose to add these services to the Medicare telehealth list on a Category 3 basis due to the presumption that in-person assessment and care, particularly an in-person physical exam, was necessary for patients at this level of acuity. Based upon a review of the information provided by commenters, which included information on how distant site practitioners could collaborate with individuals at the originating site (which, outside of the circumstances of the PHE, must be a medical facility) to obtain an accurate and comprehensive evaluation of the patient, we agree that telehealth in the acute settings described by these codes could offer an excellent opportunity for care to patients if both the distant site and originating site facilities/teams have the appropriate infrastructure, technology, and training to effectively conduct such visits via telehealth. We continue to believe that in most instances, in order to fulfill the full scope of service elements described by codes for new patients, an in-person physical exam is necessary; however, we agree that, for services provided to established patients, such as established patient observation services and established patient neonatal critical care, and for emergency department visits and critical care services (the latter of which is being used extensively during the PHE to support surge capacity), more data are needed to understand how these E/M code families are being used in the field and whether their addition to the telehealth services list ultimately could be supported on a Category 2 basis. Therefore, we are finalizing the addition of established patient observation services and established patient neonatal critical care services to the Medicare telehealth list on a Category 3 basis. We are also finalizing the addition of critical care services to the Medicare telehealth list on a Category 3 basis.

Comment: Some commenters requested that we add electronic device management and treatment services to the Medicare telehealth list on a Category 3 basis, stating that safeguards are being developed to deliver safe and effective remote management of neuromodulation technologies during the PHE and beyond. The commenter suggested rationale for monitoring the provision of these services through use of these codes to ensure improved outcomes.

Response: While we appreciate the additional information as to the safeguards being developed to ensure safe access to these services and the information on improved outcomes, it was not clear whether the capability for clinicians to remotely connect to a patient's hand-held device for the purposes of electronic assessment and analysis is widely available. It is also not within CMS's mandate under the PFS to ensure improved outcomes. Therefore, we remain unconvinced by the evidence provided by the commenter that these services can, in most instances, be conducted in full using two-way, audio/video communication technology. We were also uncertain as to which of these services involve a direct, clinical interaction between the patient and practitioner such that, if the service is furnished as a telehealth service, the interaction would be facilitated by audio/video technology; and those that do not involve such an interaction. To the extent these services do not involve a direct, clinical interaction between the patient and practitioner facilitated by audio/video technology, the services would not be subject to the statutory requirements for telehealth services under section 1834(m) of the Act, and there would be no need to consider adding them to the telehealth services list.

Comment: Most commenters supported CMS not adding CPT code 77427 (*Radiation treatment management, 5 treatments*) to the Medicare telehealth list on a Category 3 basis. These commenters stated that, given that most radiation oncology practices have been able to secure adequate PPE, it was no longer necessary for radiation treatment management to be available as a telehealth service. A few commenters disagreed, but did not provide supporting information.

Response: We did not propose to add this service to the Medicare telehealth list on a Category 3 basis due to concerns over whether the full service elements described by CPT code 77427 could, in most cases, be furnished in

full via two way, audio-video communication technology. We continue to believe this is the case and appreciate the additional information provided by commenters as to the necessity of adding this service to the Medicare telehealth list on a Category 3 basis.

After considering the public comments, we are finalizing the addition of services to the Medicare telehealth list on a Category 3 basis as explained above and detailed in Table 16.

2. Analysis and Response to the Comment Solicitation on Coding and Payment for Tele-ICU

With regard to the critical care services listed in A–D 5 we have received a number of requests in prior years to add these services to the Medicare telehealth services list. In response to one such request, we finalized creation of two HCPCS G codes, G0508 (*Telehealth consultation, critical care, initial, physicians typically spend 60 minutes communicating with the patient and providers via telehealth*) and G0509 (*Telehealth consultation, critical care, subsequent, physicians typically spend 50 minutes communicating with the patient and providers via telehealth*), to describe the work associated with furnishing consultation services via Medicare telehealth to critically ill patients in the CY 2017 PFS final rule (81 FR 80196 through 80197). We stated that CPT guidance makes clear that a variety of other services are bundled into the payment rates for critical care, including gastric intubations and vascular access procedures, among others. While we are adding critical care services to the Medicare telehealth list temporarily, on a Category 3 basis, we also solicited comment on whether current coding (either through the CPT codes describing in-person critical care or the HCPCS G codes describing critical care consults furnished via telehealth) does not reflect additional models of critical care delivery, specifically, models of care delivery that utilize a combination of remote monitoring and clinical staff at the location of the beneficiary to allow, when an onsite practitioner is not available, for a practitioner at a distant site to monitor vital signs and direct in-person care as needed.

We sought comment on the definition, potential coding and valuation for this kind of remote service. Specifically, we sought comment on the following concerns:

- How to distinguish the technical component of the remote monitoring portion of the service from the

diagnosis-related group (DRG) payment already being provided to the hospital.

- How to provide payment only for monitoring and interventions furnished to Medicare beneficiaries when the remote intensivist is monitoring multiple patients, some of which may not be Medicare beneficiaries.

- How this service intersects with both the critical care consult G codes and the in-person critical care services.

Comment: One commenter stated that, generally, there are two models of remote critical care services; the first of which is more of a telehealth consultant. Services performed under this scenario may be accurately reported via existing critical care consult G codes. The other model of care includes physicians providing tele-ICU services, which may be enhanced through the use of robotic technology or other methods

to complete a remote clinical assessment of the critically ill patient. Commenters stated current critical care consult G-codes may be used for an episodic evaluation and recommendation to the bedside team or may be used for episodic telemedicine consults and do not reflect current models of care. One commenter noted the tele-ICU is involved both before and after the bedside intensivist or physician arrives and leaves the bedside. Several commenters also stated that current CPT and HCPCS coding does not adequately reflect the additional component of monitoring, surveillance, coaching of bedside nurses, physicians who are not intensivists, and active management in real-time and over extended timeframes by tele-ICU Intensivists. Many

commenters encouraged CMS to adopt a coding proposal currently under consideration by the CPT editorial panel and the AMA RUC.

Response: We appreciate the feedback regarding the different tele-ICU models. As noted by commenters, the AMA is currently engaged in evaluating coding and valuation for services similar to those identified by commenters. We will keep these comments in mind and look forward to evaluating any new CPT coding and AMA RUC recommendations as part of our future annual rulemaking process.

After considering the public comments, we will consider all of the feedback on the different tele-ICU models of care as well as potential gaps in coding for possible future rulemaking.

TABLE 16: Summary of CY 2021 Services Added to the Medicare Telehealth Services List

Type of Service	Specific Services and CPT Codes
1. Services we are finalizing for permanent addition as Medicare Telehealth Services	<ul style="list-style-type: none"> • Group Psychotherapy (CPT 90853) • Domiciliary, Rest Home, or Custodial Care services, Established patients (CPT 99334-99335) • Home Visits, Established Patient (CPT 99347- 99348) • Cognitive Assessment and Care Planning Services (CPT 99483) • Visit Complexity Inherent to Certain Office/Outpatient E/Ms (HCPCS G2211) • Prolonged Services (HCPCS G2212) • Psychological and Neuropsychological Testing (CPT 96121)
2. Services we are finalizing to remain temporarily on the Medicare telehealth list through the end of the year in which the PHE for COVID-19 ends (Category 3 services), to allow for continued development of evidence to demonstrate clinical benefit and facilitate post-PHE care transitions.	<ul style="list-style-type: none"> • Domiciliary, Rest Home, or Custodial Care services, Established patients (CPT 99336-99337) • Home Visits, Established Patient (CPT 99349-99350) • Emergency Department Visits, Levels 1-5 (CPT 99281-99285)* • Nursing facilities discharge day management (CPT 99315-99316) • Psychological and Neuropsychological Testing (CPT 96130- 96133; CPT 96136- 96139) • Therapy Services, Physical and Occupational Therapy, All levels (CPT 97161- 97168; CPT 97110, 97112, 97116, 97535, 97750, 97755, 97760, 97761, 92521- 92524, 92507)* • and Hospital discharge day management (CPT 99238- 99239)* • Inpatient Neonatal and Pediatric Critical Care, Subsequent (CPT 99469, 99472, 99476)* • Continuing Neonatal Intensive Care Services (CPT 99478- 99480)* • Critical Care Services (CPT 99291-99292)* • End-Stage Renal Disease Monthly Capitation Payment codes (CPT 90952, 90953, 90956, 90959, and 90962)* • Subsequent Observation and Observation Discharge Day Management (CPT 99217; CPT 99224- 99226)*
3. Services we are not adding to the Medicare telehealth list either permanently or temporarily.	<ul style="list-style-type: none"> • Initial Nursing Facility Visits, All Levels (Low, Moderate, and High Complexity) (CPT 99304-99306) • Initial hospital care (CPT 99221-99223) • Radiation Treatment Management Services (CPT 77427) • Domiciliary, Rest Home, or Custodial Care services, New (CPT 99324- 99328) • Home Visits, New Patient, all levels (CPT 99341- 99345) • Inpatient Neonatal and Pediatric Critical Care, Initial (CPT 99468, 99471, 99475, 99477) • Initial Neonatal Intensive Care Services (CPT 99477) • Initial Observation and Observation Discharge Day Management (CPT 99218 – 99220; CPT 99234- 99236) • Medical Nutrition Therapy (CPT G0271)

* Services that were not proposed as Category 3 additions to the Medicare telehealth list but are being finalized as such.

3. Technical Refinement to the Medicare Telehealth Services List To Reflect Current Coding

For CY 2020, the CPT Editorial Panel deleted the six existing Health and

Behavior Assessment and Intervention procedure CPT codes and replaced them with nine new CPT codes. The six deleted CPT codes include CPT code 96150 (Health and behavior assessment

(e.g., health-focused clinical interview, behavioral observations, psychophysiological monitoring, health oriented questionnaires), each 15 minutes face-to-face with the patient;

initial assessment), CPT code 96151 (*Health and behavior assessment (e.g., health-focused clinical interview, behavioral observations, psychophysiological monitoring, health oriented questionnaires), each 15 minutes face-to-face with the patient; reassessment*), CPT code 96152 (*Health and behavior intervention, each 15 minutes, face-to-face; individual*), CPT code 96153 (*Health and behavior intervention, each 15 minutes, face-to-face; group (2 or more patients)*), CPT code 96154 (*Health and behavior intervention, each 15 minutes, face-to-face; family (with the patient present)*), and CPT code 96155 (*Health and behavior intervention, each 15 minutes, face-to-face; family (without the patient present)*). However, we inadvertently neglected to make the corresponding update to reflect these coding changes on the Medicare telehealth services list in CY 2020 PFS rulemaking. Therefore, we proposed to delete CPT codes 96150–96155 from the Medicare telehealth services list and replace them with the following successor codes: CPT code 96156 (*Health behavior assessment, including reassessment (i.e., health-focused clinical interview, behavioral observations, clinical decision making)*); CPT code 96158 (*Health behavior intervention, individual, face-to-face; initial 30 minutes*); CPT code 96159 (*Health behavior intervention, individual, face-to-face; each additional 15 minutes (list separately in addition to code for primary service)*); CPT code 96164 (*Health behavior intervention, group (2 or more patients), face-to-face; initial 30 minutes*); CPT code 96165 (*Health behavior intervention, group (2 or more patients), face-to-face; each additional 15 minutes (list separately in addition to code for primary service)*); CPT code 96167 (*Health behavior intervention, family (with the patient present), face-to-face; initial 30 minutes*); CPT code 96168 (*Health behavior intervention, family (with the patient present), face-to-face each additional 15 minutes (list separately in addition to code for primary service)*); CPT code 96170 (*Health behavior intervention, family (without the patient present), face-to-face; initial 30 minutes*); and CPT code 96171 (*Health behavior intervention, family (without the patient present), face-to-face; each additional 15 minutes (list separately in addition to code for primary service)*).

We also proposed to amend our regulations to stipulate that when new codes are issued to replace codes that describe the same clinical services that are currently on the Medicare telehealth

services list, we would consider those new codes to be successor codes to those that are on the Medicare telehealth services list, and would update the Medicare telehealth services list accordingly. At § 410.78(f), we proposed to revise the final sentence of the paragraph to read: CMS maintains on the CMS website the Medicare telehealth services list under this section, including the current HCPCS codes that describe the services.

We received public comments on the technical refinement to the Medicare telehealth services list to reflect current coding. The following is a summary of the comments we received and our responses.

Comment: Commenters supported this proposal.

Response: We are finalizing this technical refinement as proposed.

4. Furnishing Telehealth Visits in Inpatient and Nursing Facility Settings, and Critical Care Consultations

The long term care facility regulations at § 483.30(c) require that residents of SNFs receive an initial visit from a physician, and periodic personal visits subsequently by either a physician or other NPP. In the CY 2010 PFS final rule with comment period (74 FR 61762), we stated that these regulations ensure that at least a minimal degree of personal contact between a physician or a qualified NPP and a resident is maintained, both at the point of admission to the facility and periodically during the course of the resident's stay. In that rule we stated that we believe that these federally-mandated visits should be conducted in-person, and not as Medicare telehealth services. Therefore, we revised § 410.78 to restrict physicians and practitioners from using telehealth to furnish the physician visits required under § 483.30(c).

During the PHE for COVID-19, we waived the requirement in 42 CFR 483.30 for physicians and NPPs to perform in-person required visits for nursing home residents, and allowed visits to be conducted via telehealth (<https://www.cms.gov/files/document/summary-covid-19-emergency-declaration-waivers.pdf>).

We solicited public comment on whether it would be appropriate to maintain this flexibility on a permanent basis outside of the PHE for COVID-19. We invited public comment on whether the in-person visit requirement is necessary, or whether two-way, audio/video telecommunications technology would be sufficient in instances when, due to continued exposure risk, workforce capacity, or other factors, the

clinician determines an in-person visit is not necessary.

We also received requests to revise our frequency limitations for telehealth subsequent inpatient and nursing facility visits. We limit the provision of subsequent inpatient visits via Medicare telehealth to once every 3 days and subsequent nursing facility visits to once every 30 days. We received a request to remove the frequency limitation on the subsequent inpatient services and a separate request to revise the subsequent nursing facility visits to once every 3 days, rather than 30 days.

As we stated in the CY 2019 PFS final rule, we believed the potential acuity of illness of hospital inpatients is greater than that of patients who are likely to receive services that were on the Medicare telehealth services list at that time. We also stated that it would be appropriate to permit some subsequent hospital care services to be furnished through telehealth to ensure that hospitalized patients have sufficiently frequent encounters with their admitting practitioner. In addition, we expressed our belief that the majority of these visits should be furnished in person to facilitate the comprehensive, coordinated, and personal care that medically volatile, acutely ill patients require on an ongoing basis. Because of our concerns regarding the potential acuity of illness of hospital inpatients, we finalized the addition of CPT codes 99231–99233 to the Medicare telehealth services list, but limited the provision of these subsequent hospital care services through telehealth to once every 3 days. We noted that we continue to believe that admitting practitioners should continue to make appropriate in-person visits to all patients who need such care during their hospitalization. Our concerns with, and position on, the provision of subsequent hospital care services via telehealth have not changed (83 FR 59493). Therefore, we did not propose to modify the current policy.

In the CY 2018 PFS final rule, we reiterated that we believed it would be appropriate to permit some subsequent nursing facility (NF) care services to be furnished through telehealth to ensure that complex nursing facility patients have frequent encounters with their admitting practitioner, but because of our concerns regarding the potential acuity and complexity of NF inpatients, we limited the provision of subsequent NF care services furnished through telehealth to once every 30 days. We also stated that we continued to have concerns regarding more routine use of telehealth given the potential acuity and complexity of NF inpatients, and therefore, we were not proposing to

remove the frequency limitation for subsequent NF care services (83 FR 59494). We received comments from stakeholders who stated that the once every 30-day frequency limitation for subsequent NF visits furnished via Medicare telehealth limits access to care for Medicare beneficiaries in the NF setting. Stakeholders stated that the use of Medicare telehealth is crucial to maintaining a continuum of care in this setting and that CMS should leave it up to clinicians to decide how frequently a visit may be furnished as a Medicare telehealth service rather than in person depending on the needs of specific patients. We noted that we were persuaded by the comments from these stakeholders, and therefore, we proposed to revise the frequency limitation from one visit every 30 days to one visit every 3 days. We noted that we believe this interval strikes the right balance between requiring in-person visits and allowing flexibility to furnish services via telehealth when clinically appropriate to do so. We solicited comment on whether frequency limitations broadly are burdensome and limit access to necessary care when services are available only through telehealth, and how best to ensure that patients are receiving necessary in-person care.

We received public comments on furnishing telehealth visits in inpatient and nursing facility settings, and critical care consultations. The following is a summary of the comments we received and our responses.

Comment: Many commenters requested that CMS revise the long term care facility regulations at § 483.30(c), which require that residents of NFs receive an initial visit from a physician, and periodic personal visits subsequently by either a physician or other NPP, to allow the initial visit to be conducted via Medicare telehealth.

Response: As we stated in the CY 2010 PFS final rule with comment period (74 FR 61762), we continue to believe that in-person contact between a physician or a qualified NPP and a resident is needed at the point of admission to the facility to ensure the appropriate level of care.

Comment: Many commenters have stated their support for revising the frequency limitation for subsequent nursing facility visits furnished via telehealth from once every 30 days to once every 3 days, while other commenters encouraged CMS to remove frequency limitations entirely. A few commenters stated that CMS should maintain some frequency limitations so as to not to create a disincentive for in-person care.

Response: We thank all the commenters for their feedback. As discussed in the proposed rule, we have received requests to revise the frequency limitations on subsequent nursing facility visits from one every 30 days to one every 3 days to align with the frequency limitations in the inpatient setting; however, after additional consideration of the issue, we noted that patients in the nursing facility setting tend to have a longer lengths of stay compared to the patients in the inpatient setting. As such, we have further considered whether the frequency limitations for subsequent nursing facility visits furnished via telehealth should be the same as for the inpatient setting. Additionally, we acknowledge commenters' concerns about creating a disincentive for in-person care in the absence of any frequency limitations on services furnished through telehealth, and that a broader view of our frequency limitation policies across the different Part A and B care settings could potentially lead to inadequate in-person care in certain scenarios. While we appreciate that, in some cases, a subsequent nursing facility visit furnished via telehealth may allow flexibility for practitioners to appropriately treat patients, there are also situations where an in-person visit may be more appropriate. In seeking to find the right balance between providing greater access to care through more telehealth visits and ensuring adequate in-person care, especially given the longer length of stays for NF patients, we believe that one telehealth visit every 30 days may be too infrequent and once every 3 days poses a risk of creating a disincentive for in-person care. Therefore, we believe it is appropriate to revise the frequency limitation for subsequent nursing facility visits to permit one Medicare telehealth visit every 14 days. This limitation provides an appropriate balance between increased access to care through telehealth and maintaining appropriate in-person care.

After consideration of the public comments, we are finalizing a policy to allow subsequent nursing visits to be furnished via Medicare telehealth once every 14 days in the NF setting. We are not finalizing any revisions to the frequency limitations on inpatient visits or critical care consultations provided as telehealth services.

5. Proposed Technical Amendment To Remove References to Specific Technology

The final sentence of our regulation at § 410.78(a)(3) prohibits the use of telephones, facsimile machines, and

electronic mail systems for purposes of furnishing Medicare telehealth services. In the March 31st COVID-19 IFC, we added a new § 410.78(a)(3)(i) (and reserved § 410.78(a)(3)(ii) for later use) to provide for an exception that removes application of that sentence during the PHE for COVID-19. We added the new section on an interim final basis because we believe that the first sentence of § 410.78(a)(3) adequately describes the technology requirements for an interactive telecommunication system that may be used to furnish a Medicare telehealth service. That sentence defines interactive telecommunication system as “multimedia communications equipment that includes, at a minimum, audio and video equipment permitting two-way, real-time interactive communication.” We noted that we were also concerned that the reference to “telephones” in the second sentence of the regulation as impermissible technology could cause confusion in instances where otherwise eligible equipment, such as a smart phone, may also be used as a telephone. Because these concerns are not situation- or time-limited to the PHE for COVID-19, we proposed to remove the second sentence of the regulation at § 410.78(a)(3) that specified that telephones, facsimile machines, and electronic mail systems do not meet the definition of an interactive telecommunications system. As we proposed to adopt this change on a permanent basis, we also proposed to delete the paragraphs at § 410.78(a)(3)(i) and (ii). We noted that we believe these amendments to our regulations would remove outdated references to specific types of technology and provide a clearer statement of our policy.

We received public comments on proposed technical amendment to remove references to specific technology. The following is a summary of the comments we received and our responses.

Comment: Commenters supported our proposal to amend the regulation. One commenter cited our statement in the March 31st COVID-19 IFC that mobile computing technology colloquially referred to as “phones” are now ubiquitous, and the wording of the regulatory text could be construed to prevent their use for purposes of conducting a telehealth service. According to another commenter, advances in digital communication technology should not be unnecessarily excluded as communication methods for patients and clinicians to utilize for telehealth services. Commenters agreed that the reference in the current regulation creates confusion about use

of equipment such as a smart phone or even an interactive telehealth platform operating within an electronic health information system. Commenters agreed that the reference to “telephones” in the regulation as an impermissible technology in the final sentence of regulation at § 410.78(a)(3) has caused confusion in instances where equipment, such as smartphones, are also used as a telephone. They state that the references in these sections of the CFR are not situation- or time-limited to the PHE for COVID-19 and should be deleted.

Response: We thank commenters for their support and agree with their stated points.

After consideration of the comments, we are finalizing this proposed technical amendment.

6. Communication Technology-Based Services (CTBS)

In the CY 2019 PFS final rule, we finalized separate payment for a number of services that could be furnished via telecommunications technology, but that are not considered Medicare telehealth services. Specifically, we finalized HCPCS code G2010 (*Remote evaluation of recorded video and/or images submitted by an established patient (e.g., store and forward), including interpretation with follow-up with the patient within 24 business hours, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment*), and HCPCS code G2012 (*Brief communication technology-based service, e.g. virtual check-in, by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5–10 minutes of medical discussion*). We finalized maintenance of these codes as part of the set of codes that is only reportable by those practitioners that can furnish E/M services. We stated that we believed this was appropriate since the service describes a check-in directly with the billing practitioner to assess whether an office visit is needed. However, we did note that similar check-ins provided by nurses and other clinical staff can be important aspects of coordinated patient care (83 FR 59486).

In the CY 2020 PFS final rule, we finalized separate payment for HCPCS codes G2061 (*Qualified nonphysician*

healthcare professional online assessment and management, for an established patient, for up to seven days, cumulative time during the 7 days; 5–10 minutes), G2062 (*Qualified nonphysician healthcare professional online assessment and management service, for an established patient, for up to seven days, cumulative time during the 7 days; 11–20 minutes*), and G2063 (*Qualified nonphysician qualified healthcare professional assessment and management service, for an established patient, for up to seven days, cumulative time during the 7 days; 21 or more minutes*). In that rule, we stated that these codes may be billed by NPPs consistent with the definition of their respective benefit category, although we did not provide specific examples (84 FR 62796).

We received a number of questions regarding which benefit categories HCPCS codes G2061 through G2063 fall under. In the March 31st COVID-19 IFC (85 FR 19244–19245) we established on an interim basis for the duration of the PHE for COVID-19 that these services could be billed for example, by licensed clinical social workers and clinical psychologists, as well as PTs, OTs, and SLPs who bill Medicare directly for their services when the service furnished falls within the scope of these practitioner’s benefit categories. In the CY 2021 PFS proposed rule (85 FR 50112 and 50113), we proposed to adopt that policy on a permanent basis. We noted that this is not an exhaustive list and we solicited comment on other benefit categories into which these services may fall.

We also proposed to allow billing of other CTBS by certain NPPs, consistent with the scope of these practitioners’ benefit categories, through the creation of two additional HCPCS G codes that can be billed by practitioners who cannot independently bill for E/M services:

- G2250 (*Remote assessment of recorded video and/or images submitted by an established patient (e.g., store and forward), including interpretation with follow-up with the patient within 24 business hours, not originating from a related service provided within the previous 7 days nor leading to a service or procedure within the next 24 hours or soonest available appointment.*)
- G2251 (*Brief communication technology-based service, e.g. virtual check-in, by a qualified health care professional who cannot report evaluation and management services, provided to an established patient, not originating from a related e/m service provided within the previous 7 days nor leading to a service or procedure within*

the next 24 hours or soonest available appointment; 5–10 minutes of medical discussion).

We proposed to value the services identically to HCPCS codes G2010 and G2012, respectively. We acknowledged that it has been agency policy, in general, to differentially value similar services that are performed by practitioners who can and cannot, respectively, bill independently for E/M services, with higher values for the service performed by practitioners who can independently bill E/M services. However, given the relatively low values for HCPCS codes G2010 and G2012, we noted that we did not believe that there was a significant differential in resource costs to warrant different values, but solicited comment on whether we should value these services differentially, including potentially increasing the valuation of HCPCS codes G2010 and G2012.

Further, to facilitate billing of the CTBS by rehabilitative therapists, we proposed to designate HCPCS codes G2250, G2251, G2061, G2062, and G2063 as “sometimes therapy” services. When billed by a private practice PT, OT, or SLP, the codes would need to include the corresponding GO, GP, or GN therapy modifier to signify that the CTB are furnished as therapy services furnished under an OT, PT, or SLP plan of care.

We also noted that we proposed for CY 2021 to replace the eVisit G-codes with corresponding CPT codes, and that this policy would also apply to those codes.

For all of these CTBS, we also clarified that the consent from the patient to receive these services can be documented by auxiliary staff under general supervision, as well as by the billing practitioner. While we continue to believe that beneficiary consent is necessary so that the beneficiary is notified of cost sharing when receiving these services, we noted that we did not believe that the timing or manner in which beneficiary consent is acquired should interfere with the provision of one of these services. We retained the requirement that, in instances when the brief CTBS originates from a related E/M service (including one furnished as a telehealth service) provided within the previous 7 days by the same physician or other qualified health care professional, this service would be considered bundled into that previous E/M service and would not be separately billable.

We received public comments on the CTBS proposals. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported our proposal to replace the eVisit G codes (G2061–G2063) with corresponding CPT codes 98970–98972 for qualified nonphysician health care professional online digital E/M service.

Response: We thank commenters for their feedback. After consideration of the comments received, we are finalizing our proposal to replace G2061–G2063 with CPT codes 98970–98972.

Comment: Many commenters were supportive of the proposal to allow NPPs, such as licensed clinical social workers, clinical psychologists, PTs, OTs, and SLPs to bill HCPCS codes G2061 through G2063, consistent with the definition of their respective benefit category.

Response: We thank the commenters for their support and feedback. After consideration of the comments received, we are finalizing our proposal to allow NPPs, such as licensed clinical social workers, clinical psychologists, PTs, OTs, and SLPs to bill HCPCS codes G2061 through G2063, consistent with the definition of their respective benefit category.

Comment: Commenters requested that CMS clarify that HCPCS codes G2061 through G2063 fell within the scope of the audiology diagnostic benefit category or the medical nutrition therapist benefit category.

Response: We disagree with the commenter. HCPCS codes G2061–G2063 describe online assessment and management while the audiology benefit is for diagnostic testing. Therefore, we believe these services fall outside the audiologists' benefit category. The benefit for medical nutrition therapists is limited by statute to a few specific services described by certain HCPCS codes, which do not include G2061–G2063.

Comment: Many commenters were supportive of the proposal to allow billing of HCPCS codes G2250 and G2251 by certain NPPs, consistent with the scope of these practitioners' benefit categories.

Response: We thank the commenters for their support and feedback. After consideration of the comments received, we are finalizing our proposal to allow billing of HCPCS codes G2250 and G2251 by certain NPPs, consistent with the scope of these practitioners' benefit categories.

Comment: Many commenters supported the proposal to identically value HCPCS codes G2250 and G2251 to G2010 and G2012, respectively.

Response: We thank commenters for their support and feedback.

Comment: One commenter disagreed with the proposal to identically value HCPCS codes G2250 and G2251 to G2010 and G2012, respectively. The commenter stated that services furnished by NPPs should not be valued the same as those provided by physicians and encouraged CMS to increase the valuation of G2010 and G2012 while not offering recommended value for G2250 and G2251.

Response: As we stated in the proposed rule, given the relatively low values for HCPCS codes G2010 and G2012, we do not believe that there is a significant differential in resource costs to warrant differential values for codes G2250 and G2251, and codes G2010 and G2012.

After consideration of the comments, we are finalizing our proposal to identically value HCPCS codes G2250 and G2251 to G2010 and G2012, respectively.

Comment: Several commenters urged CMS to consider increasing the value of G2010 and G2012.

Response: We thank commenters for their feedback and will consider this matter and propose any potential changes through future rulemaking.

Comment: Many commenters supported the proposal to designate HCPCS codes G2250, G2251, G2061, G2062, and G2063 as “sometimes therapy” services to facilitate billing of these CTBS by therapists. Including when billed by a private practice PT, OT, or SLP, the codes would need to include the corresponding GO, GP, or GN therapy modifier to signify that the CTB are furnished as therapy services furnished under an OT, PT, or SLP plan of care.

Response: We thank the commenters for their support and feedback. After consideration of the comments received, we are finalizing our proposal to designate HCPCS codes G2250, G2251, G2061, G2062, and G2063 as “sometimes therapy” services to facilitate billing of the CTBS by therapists. Additionally, we note that when billed by a private practice PT, OT, or SLP, the codes would need to include the corresponding GO, GP, or GN therapy modifier to signify that the CTB are furnished as therapy services furnished under an OT, PT, or SLP plan of care.

Comment: Many commenters supported and thanked CMS for the clarification that consent from the patient to receive CTBS services can be documented by auxiliary staff under general supervision as well as by the billing practitioner.

Response: We thank commenters for their feedback.

Comment: Several commenters encouraged CMS to permanently allow the use of virtual check-ins and e-visits for new as well as established patients.

Response: In the CY 2019 PFS proposed rule (83 FR 35724), we created HCPCS code G2012 and stated our expectation that these services would be initiated by the patient, especially since many beneficiaries would be financially liable for sharing in the cost of these services. Additionally, MedPAC noted particular concern regarding potential increases in volume that are not related to ongoing, informed patient care. CMS remains concerned about these issues outside of the PHE for COVID-19. As such, we did not propose, and do not anticipate proposing, to permanently allow billing for HCPCS codes G2020 and G2012 when furnished to new patients.

Comment: One commenter suggested it may be helpful for CMS to provide data on specialty-specific uptake of CTBS and e-Visits, both before and after the PHE for COVID-19, in order to determine if there are access challenges in specific specialties.

Response: We thank the commenter for their suggestion and will take this into future consideration after the PHE for COVID-19 ends.

7. Continuation of Payment for Audio-Only Visits

a. Background

In the March 31st COVID-19 IFC, we established separate payment for audio-only telephone E/M services (85 FR 19264 through 19266). The telephone E/M services are CPT codes 99441 (*Telephone evaluation and management service by a physician or other qualified health care professional who may report evaluation and management services provided to an established patient, parent, or guardian not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5–10 minutes of medical discussion*); 99442 (*Telephone evaluation and management service by a physician or other qualified health care professional who may report evaluation and management services provided to an established patient, parent, or guardian not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 11–20 minutes of medical discussion*); and 99443 (*Telephone evaluation and management service by a physician or other qualified health*

care professional who may report evaluation and management services provided to an established patient, parent, or guardian not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 21–30 minutes of medical discussion). We noted that, although these services were previously considered non-covered under the PFS, in the context of the PHE for COVID–19 and with the goal of reducing exposure risks associated with COVID–19, especially in the case that two-way, audio and video technology is not available to furnish a Medicare telehealth service, we believed there are circumstances where prolonged, audio-only communication between the practitioner and the patient could be clinically appropriate, yet not fully replace a face-to-face visit. For example, an established patient who was experiencing an exacerbation of their condition could have a 25-minute phone conversation with their physician during which the physician determines that an adjustment to the patient's medication would alleviate their symptoms. The use of CPT code 99443 in this situation prevents a similar in-person service as the evaluation of the patient's symptoms and determination to adjust medication could be conducted without patient and the practitioner being in the same location. We stated our belief that these telephone E/M codes, with their established description and valuation, were the best way to recognize the relative resource costs of these kinds of services and make payment for them under the PFS. For these codes, we initially finalized on an interim basis during the PHE for COVID–19, work RVUs as recommended by the American Medical Association (AMA) Relative Value Scale Update Committee (RUC), as discussed in the CY 2008 PFS final rule with comment period (72 FR 66371), of 0.25 for CPT code 99441, 0.50 for CPT code 99442, and 0.75 for CPT code 99443. We also finalized the RUC-recommended direct PE inputs which consist of 3 minutes of post-service Registered Nurse/Licensed Practical Nurse/Medical Technical Assistant clinical labor time for each code.

In the May 8th COVID–19 IFC, we noted that in the time since we established these payment amounts, stakeholders had informed us that use of audio-only services was more prevalent than we had previously considered, especially because many beneficiaries were not utilizing video-enabled

communication technology from their homes. In other words, there were many cases where practitioners would under ordinary circumstances utilize telehealth or in-person visits to evaluate and manage patients' medical concerns, but were instead using audio-only interactions to manage more complex care (85 FR 27589 through 27590). While we had previously acknowledged the likelihood that, under the circumstances of the PHE for COVID–19, more time would be spent interacting with the patient via audio-only technology, we stated that the intensity of furnishing an audio-only visit to a beneficiary during the unique circumstances of the PHE for COVID–19 was not accurately captured by the valuation of these services we established in the March 31st COVID–19 IFC. This would be particularly true to the extent that these audio-only services are actually serving as a substitute for office/outpatient Medicare telehealth visits for beneficiaries not using video-enabled telecommunications technology contrary to the situation we anticipated when establishing payment for them in the March 31st COVID–19 IFC. We stated that, given our understanding that these audio-only services were being furnished primarily as a replacement for care that would otherwise be reported as an in-person or telehealth visit using the O/O E/M codes, we established new RVUs for the telephone E/M services based on crosswalks to the most analogous O/O E/M codes, based on the time requirements for the telephone codes and the times assumed for valuation for purposes of the O/O E/M codes. Specifically, we crosswalked CPT codes 99212, 99213, and 99214 to CPT codes 99441, 99442, and 99443, respectively. We therefore finalized, on an interim basis and for the duration of the PHE for COVID–19, the following work RVUs: 0.48 for CPT code 99441; 0.97 for CPT code 99442; and 1.50 for CPT code 99443. We also finalized the direct PE inputs associated with CPT code 99212 for CPT code 99441, the direct PE inputs associated with CPT code 99213 for CPT code 99442, and the direct PE inputs associated with CPT code 99214 for CPT code 99443. We did not finalize increased payment rates for CPT codes 98966–98968 as these codes describe services furnished by practitioners who cannot independently bill for E/M services and so these telephone assessment and management services, by definition, are not being furnished in lieu of an O/O E/M service. We noted that to the extent that these extended phone services are taking place instead of O/O E/M visits (either

in-person or via telehealth), the direct crosswalk of RVUs also better maintains overall budget neutrality and relativity under the PFS. We stated that we believed that the resources required to furnish these services during the PHE for COVID–19 are better captured by the RVUs associated with the level 2–4 established patient O/O E/M visits. Additionally, we stated that, given our understanding that these audio-only services were being furnished as substitutes for O/O E/M services, we recognized that they should be considered as telehealth services, and added them to the Medicare telehealth services list for the duration of the PHE for COVID–19. For these audio-only E/M services, we separately issued a waiver under section 1135(b)(8) of the Act, as amended by section 3703 of the CARES Act, of the requirements under section 1834(m) of the Act and our regulation at § 410.78 that Medicare telehealth services must be furnished using video technology.

b. Summary of Comments Received in Response to Comment Solicitation on Continuation of Payment for Audio-Only Visits

In the CY 2021 PFS proposed rule (85 FR 50113–50114), we did not propose to continue to recognize CPT codes 99441, 99442, and 99443 for payment under the PFS after conclusion of the PHE for COVID–19 because, outside of the circumstances of the PHE, we are not able to waive the requirement that telehealth services be furnished using an interactive telecommunications system that includes two-way, audio/video communication technology. However, we recognized that the need for audio-only interaction could remain as beneficiaries continue to try to avoid sources of potential infection, such as a doctor's office; and in that circumstance, a longer phone conversation may be needed to determine if an in-person visit is necessary rather than what is described by the virtual check-in. We solicited comment on whether CMS should develop coding and payment for a service similar to the virtual check-in but for a longer unit of time and with an accordingly higher value. We sought input from the public on the appropriate duration interval for such services and the resources in both work and PE that would be associated with furnishing them. We also solicited comment on whether separate payment for such telephone-only services should be a provisional policy to remain in effect until a year or some other period after the end of the PHE for COVID–19 or if

it should be PFS payment policy permanently.

We received public comments on the comment solicitation on continuation of payment for audio-only visits. The following is a summary of the comments we received and our responses.

Comment: Commenters broadly supported maintaining the availability of certain audio-only services after the duration of the PHE for COVID-19. Commenters stated that many beneficiaries may not have access to or choose not to use two-way, audio/video communication technology, and therefore, maintaining some form of payment for audio-only services would be crucial for ensuring access to care for this vulnerable population. Some commenters urged CMS to continue payment for audio-only evaluation or assessment and management services beyond the end of the PHE for COVID-19. Other commenters stated that allowing practitioners to furnish certain behavioral health and counseling services via audio-only communication technology has been crucial to ensuring access to these services and that CMS should continue payment for these audio-only services after the conclusion of the PHE for COVID-19. Commenters further suggested, in response to both this proposal and in the context of the proposed revision to the agency's regulation at § 410.78(a)(3), that the statutory text laying out the telehealth services benefit uses the term "telecommunications system" but does not include an explicit definition of that term, except to say that in the case of federal telemedicine demonstrations in Alaska or Hawaii, the term "includes store-and-forward technologies that provide for the asynchronous transmission of health care information in single or multimedia formats." Therefore, the statute leaves it up to the Department of Health and Human Services (HHS) to determine whether a telehealth telecommunications system must include both audio and video capabilities, and HHS is free to make the modification it proposes under this heading. Based on this assessment, commenters stated that CMS has the authority to redefine our longstanding regulatory interpretation of "interactive telecommunications system" at § 410.78 to include audio-only services.

While the majority of commenters stated that they preferred CMS continuing to recognize the audio evaluation/assessment and management services outside of the PHE for COVID-19, some commenters did state that, in the absence of continuing to recognize those codes, CMS should provide coding and payment for a longer virtual

check-in. With regard to the valuation of a longer virtual check in, commenters provided a few recommendations. One commenter suggested that we value this service the same as CPT code 99213 (*Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 15 minutes are spent face-to-face with the patient and/or family*), other commenters suggested a range of times for a new virtual check in, such as 11–22 minutes or 15–20 minutes. Another commenter suggested that CMS could create more than one additional virtual check-in code.

Response: We appreciate these comments. Section 1834(m)(2)(A) of the Act expressly provides payment to the distant site physician or practitioner of an amount equal to the amount that such physician or practitioner would have been paid under this title had such service been furnished without the use of a telecommunications system. This means that we pay an equal amount for a service furnished using a "telecommunications system" as for a service furnished in person (without the use of a telecommunications system). Section 1834(m)(1) of the Act specifies that telehealth services must be furnished via a "telecommunications system," and it includes an exception to allow "store and forward" technology to be considered a telecommunications system only for purposes of certain federal demonstrations. CMS has in place a longstanding interpretation of "telecommunications system" that includes only technology that enables a visit that is analogous to an in person visit—which aligns closely with our resource-based payment policy under the PFS, given that payment is made for a telehealth service at the same rate as an in-person visit. Our criteria for considering the addition of services to the telehealth services list also rely on an assessment of whether the service furnished via telehealth is analogous to one furnished in person. We continue to believe that our longstanding regulatory definition of "telecommunications system" reflects the intent of statute.

As the audio-only assessment and management or E/M visits are by

definition replacements for in-person office visits, they would be subject to the statutory restrictions outlined in section 1834(m) of the Act. Outside of the circumstances of the PHE for COVID-19, we continue to believe that our longstanding regulatory interpretation of "telecommunications system" precludes the use of audio-only technology for purposes of Medicare telehealth services.

Comment: Some commenters stated that if CMS continues payment for the audio-only E/M visits, these should continue to be paid at rates commensurate to the level 2–4 established patient office visits, consistent with how these services have been paid during the PHE for COVID-19. Other commenters disagreed, stating that outside the circumstances of the PHE for COVID-19, these services should not have the same payment rate as in-person services.

Response: After the end of the PHE, there will be no separate payment for the audio-only E/M visit codes. At the conclusion of the PHE, we will assign a status of "bundled" and post the RUC-recommended RVUs for these codes in accordance with our usual practice.

Comment: A few commenters requested that, if CMS continues to recognize the audio-only evaluation/assessment and management services or if CMS creates a longer virtual check-in service, the service should be available to both new and established patients. A few commenters, including MedPAC, suggested that if CMS creates a longer virtual check-in, the policy should be provisional rather than permanent—for example, through the calendar year in which the PHE for COVID-19 ends.

Response: We continue to believe that, outside of the circumstances of the PHE for COVID-19, CTBS services broadly should be billed only for established patients.

c. Interim Final Rule With Comment Period for Coding and Payment of Virtual Check-In Services (HCPCS Code GSADX1)

i. Background

We note that we have historically established coding and payment on an interim final basis for truly new services when it is in the public interest to do so. Outside of the circumstances of the PHE for COVID-19, Medicare does not provide separate payment for a service that would be a substitute for an in-person visit but is furnished using synchronous audio-only technology. However, we recognize that commenters were clear about the continuing need for coding and payment to reflect the

provision of lengthier audio-only services outside of the PHE for COVID-19, if not as substitutes for in-person services, then as a tool to determine whether an in-person visit is needed, particularly as beneficiaries may still be cautious about exposure risks associated with in-person services.

ii. Interim Final Policy

Given the widespread concerns expressed by commenters about the continuing need for audio-only conversations with patients, we believe it would be expedient to establish additional coding and payment for an extended audio-only assessment service on an interim basis for CY 2021. We believe that establishing payment for this service on an interim basis will support access to care for beneficiaries who may be reluctant to return to in-person visits unless absolutely necessary, and allow us to consider whether this policy should be adopted on a permanent basis. Therefore, for CY 2021, on an interim basis, we are establishing HCPCS code G2252 (*Brief communication technology-based service, e.g., virtual check-in, by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 11–20 minutes of medical discussion.*). We are finalizing a direct crosswalk to CPT code 99442, the value of which we believe most accurately reflects the resources associated with a longer service delivered via synchronous communication technology, which can include audio-only communication. This is consistent with our approach to valuing the virtual check-in service (HCPCS code G2012), which used CPT code 99441 as the basis for valuation. In the case of HCPCS code G2252 and CPT code 99442, both codes describe 11–20 minutes of medical discussion when the practitioner may not necessarily be able to visualize the patient, and is used when the acuity of the patient's problem is not necessarily likely to warrant a visit, but when the needs of the particular patient require more assessment time from the practitioner. In the case of HCPCS code G2252, the additional time would be used to determine the necessity of an in person visit result in a work time/intensity that is similar to the crosswalk code. We are finalizing a work RVU of 0.50, direct PE inputs of 3 minutes of clinical labor code L037D, and 1 minute, 15 minutes, and 5 minutes of

pre, intra and post service time, respectively. As this service is not a substitute for an in-person visit, but rather an assessment to determine the need for one, the restrictions in section 1834(m) of the Act do not apply and the only technological requirement is that the communication technology must be synchronous. If this service originates from a related E/M service provided within the previous 7 days or leads to an E/M service or procedure within the next 24 hours or soonest available appointment it would be considered bundled into that in-person service. We would consider this service to be a CTBS and refer readers to the CY 2019 PFS final rule for additional discussion as to why these fall outside of the restrictions in 1834(m) of the Act (83 FR 59482 through 59491). We also note that HCPCS code GSADX1 is subject to the same billing requirements as HCPCS code G2012.

iii. Waiver of Proposed Rulemaking for Provisions

Under the Administrative Procedure Act (APA), 5 U.S.C. 553(b), an agency is generally required to publish a notice and solicit comment on a proposed rule in the **Federal Register** before issuing a final rule. Similarly, section 1871(b)(1) of the Act requires the Secretary to provide for notice of a proposed rule in the **Federal Register** and provide a period of not less than 60 days for public comment. The APA provides for exceptions from the notice and comment requirements *see* 5 U.S.C. 553(b)(B); in cases in which the APA exceptions apply, section 1871(b)(2)(C) of the Act provides for exceptions from the notice and 60-day comment period requirements of the Act as well. Section 1871(b)(2)(C) of the Act authorize an agency to dispense with normal rulemaking requirements if the agency for good cause finds that the notice and comment process is impracticable, unnecessary, or contrary to the public interest.

We find that there is good cause to waive the notice and comment requirements under sections 553(b)(B) of the APA and section 1871(b)(2)(C) due to widespread concerns expressed by commenters about the continuing need for audio-only conversations with patients. We believe that establishing payment for this service on an interim basis will support access to care for beneficiaries who may be reluctant to return to in-person visits unless absolutely necessary, and allow us to consider whether this policy should be adopted on a permanent basis. We find that it would be impracticable and

contrary to the public interest to undergo notice and comment procedures before finalizing these payment policies on an interim basis. We also find that delaying implementation of these policies is unnecessary because the impact on other PFS services for 2021 is negligible and the practical alternative for this treatment is no payment under Medicare Part B. In either case, payments for 2022 and beyond would be informed by public comments.

Therefore, we find good cause to waive the notice of proposed rulemaking as provided under section 1871(b)(2)(C) of the Act and section 553(b)(B) of the APA and to issue this interim final rule with an opportunity for public comment. We are providing a 60-day public comment period as specified in the **DATES** section of this document.

8. Comment Solicitation on Coding and Payment for Virtual Services

The health care community uses the term “telehealth” broadly to refer to medical services furnished via communications technology. Under current PFS payment rules, Medicare routinely pays for many of these kinds of services. This includes some kinds of remote patient monitoring (either as separate services or as parts of bundled services), interpretations of diagnostic tests when furnished remotely and, under conditions specified in section 1834(m) of the Act, services that would otherwise be furnished in person but are instead furnished via real-time, interactive communication technology. Over the past several years, we have also established several PFS policies to make separate payment for non-face-to-face services included as part of ongoing care management. Although all of the kinds of services stated above might be called “telehealth” by patients, payers of health care services, and health care providers, we have generally used the term “Medicare telehealth services” to refer to the subset of services defined in section 1834(m) of the Act. Section 1834(m) of the Act defines Medicare telehealth services and specifies the payment amounts and circumstances under which Medicare makes payment for a discrete set of services, all of which must ordinarily be furnished in-person, when they are instead furnished using interactive, real time telecommunication technology.

In the CY 2021 PFS proposed rule, we noted that we believe that the provisions in section 1834(m) of the Act apply particularly to the kinds of professional services explicitly enumerated in the statutory provisions,

like professional consultations, office visits, and office psychiatry services. Generally, the services we have added to the Medicare telehealth services list are similar to these kinds of services. As has long been the case, certain other kinds of services that are furnished remotely using communications technology are not considered “Medicare telehealth services” and are not subject to the restrictions articulated in section 1834(m) of the Act. This is true for services that were routinely paid separately prior to the enactment of the provisions in section 1834(m) of the Act and do not usually include patient interaction (such as remote interpretation of diagnostic imaging tests), and for services that were not discretely defined or separately paid for at the time of enactment and that do include patient interaction (such as chronic care management services).

In recent years, we have begun making separate payment for a number of services that use telecommunications technology but are not considered Medicare telehealth services. These CTB services include, for example, certain kinds of remote patient monitoring (either as separate services or as parts of bundled services), a virtual check-in, and a remote asynchronous service. These services are different than the kinds of services specified in section 1834(m) of the Act, in that they are not the kind of services that are ordinarily furnished in person but are routinely furnished using a telecommunications system.

In the past, we have received requests to add certain services, such as chronic care management or remote physiologic monitoring to the Medicare telehealth services list. However, as these services fall outside the scope of services addressed, and the enumerated list of services included, in section 1834(m) of the Act, they are not considered telehealth services and, therefore, are not subject to the same restrictions. We solicited comment on whether there are additional services that fall outside the scope of telehealth services under section 1834(m) of the Act where it would be helpful for us to clarify that the services are inherently non-face-to-face, so do not need to be on the Medicare telehealth services list in order to be billed and paid when furnished using telecommunications technology rather than in person with the patient present. We also solicited comment on physicians’ services that use evolving technologies to improve patient care that may not be fully recognized by current PFS coding and payment, including, for example, additional or more specific coding for

care management services. Finally, we solicited comment on any impediments that contribute to healthcare provider burden and that may result in practitioners being reluctant to bill for CTBS. We noted that we appreciate the ongoing engagement and additional information from stakeholders as we work to improve coding and payment for these services that utilize telecommunications technology.

We received public comments on the comment solicitation on coding and payment for virtual services. The following is a summary of the comments we received and our responses.

Comment: Some commenters stated that CMS should provide utilization information for CTBS services before, during, and after the PHE. Others suggested that CMS establish separate coding and payment for additional consultations that may be furnished using communication technology. Other comments suggested that CMS issue clear and consistent guidance on how to code for and appropriately document both telehealth and CTBS. Commenters recommended that CMS collaborate with the AMA to accurately value services furnished using communication technology.

Response: We thank commenters for their input and will consider them for potential future rulemaking or future subregulatory guidance, as appropriate.

9. Clarification of Current PFS Policies for Telehealth Services

In response to the waiver of statutory requirements and the relaxation of regulatory requirements for telehealth during the PHE for COVID-19, we received a number of requests to clarify existing PFS policy for telehealth. For example, we received questions as to whether Medicare allows incident-to billing for telehealth services, particularly for practitioners such as counselors who are supervised by a physician in private practice. We noted that there are no Medicare regulations that explicitly prohibit eligible distant site practitioners from billing for telehealth services provided incident to their services. However, we also noted that our existing definition of direct supervision requires on-site presence of the billing clinician when the service is provided. That requirement could make it difficult for a billing clinician to provide the direct supervision of services provided via telehealth that is required for services furnished incident to their professional services by auxiliary personnel. Under the proposed revision to the definition of direct supervision to permit virtual presence (FR 85 50114 and 50115), we

acknowledged that billing practitioners could more easily meet the direct supervision requirements for telehealth services provided incident to their services. Consequently, we noted that we believe services provided incident to the professional services of an eligible distant site physician or practitioner could be reported when they meet direct supervision requirements at both the originating and distant site through the virtual presence of the billing physician or practitioner. Therefore, we proposed to clarify that services that may be billed incident-to may be provided via telehealth incident to a physicians’ (or authorized NPP’s) service and under the direct supervision of the billing professional. This is consistent with a policy clarification that we made through the May 8th COVID-19 IFC (85 FR 27562).

We also received questions as to whether services should be reported as telehealth services when the individual physician or practitioner furnishing the service is in the same location as the beneficiary; for example, if the physician or practitioner furnishing the service is in the same institutional setting but is utilizing telecommunications technology to furnish the service due to exposure risks. We also clarified, as we did in the May 8th COVID-19 IFC (85 FR 27562), that if audio/video technology is used in furnishing a service when the beneficiary and the practitioner are in the same institutional or office setting, then the practitioner should bill for the service furnished as if it was furnished in person, and the service would not be subject to any of the telehealth requirements under section 1834(m) of the Act or § 410.78 of our regulations.

We received public comments on these proposed clarifications of current policies for telehealth services. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported our proposal to amend the definition of direct supervision to permit supervision through virtual presence because it would allow billing practitioners to more easily meet the direct supervision requirements for telehealth services provided “incident to” their services. Commenters stated that this policy would expand access to needed care in communities that may not have a supervising physician on site, and could make available services that another qualified healthcare professional could provide within their scope of practice if only they had the necessary direct supervision.

Response: We appreciate commenters’ support for this clarification. We are

finalizing our proposed clarification that telehealth services may be furnished and billed when provided incident to a distant site physicians' (or authorized NPP's) service under the direct supervision of the billing professional provided through virtual presence in accordance with our regulation at § 410.26.

Comment: One commenter requested that we specify in detail how time should be counted for services furnished and billed incident to the commenter's professional services when the required direct supervision is provided through virtual presence.

Response: As we do not provide specific coding guidance, we suggest that this commenter refer to the AMA CPT guidelines for using time to bill for services furnished and also contact their Medicare Administrative Contractor for further assistance. We further note that time should be counted for telehealth services furnished by auxiliary personnel incident to a billing professional's services in the same way time is counted for other "incident to" services.

Comment: Commenters supported our clarification that, if audio/video technology is used while furnishing a service when the beneficiary and the practitioner are in the same institutional or office setting, then the practitioner should bill for the service furnished as if it was furnished in person. In addition, the service would not be subject to any of the telehealth requirements, such as geographic or site restrictions. Commenters state that this flexibility helps conserve personal protective equipment (PPE) and supports access to care.

Response: We appreciate commenters' support for this clarification.

Comment: One commenter recommended that CMS institute tracking methods to accurately attribute services to the professional who delivered the care when submitting services using Medicare's "incident to" billing provision. They reasoned that, when there is a lack of transparency regarding which clinicians are providing what services, it is difficult, if not impossible, to appropriately measure the type or volume of services or the quality of care delivered by each health professional.

Response: We thank commenters for their feedback and suggestions. We note that CMS has very clear rules about when a physician or practitioner is permitted to bill for services furnished incident to their own. When practitioners bill for their services, they attest to the accuracy of the information they provide; and failure to provide

accurate information can result in civil and criminal liability.

10. Direct Supervision by Interactive Telecommunications Technology

Many services for which payment is made under the PFS can be furnished under a level of physician or NPP supervision rather than being performed directly by the billing practitioner. In many cases, the supervision requirements necessitate the presence of the physician or NPP in a particular location, usually in the same location as the beneficiary when the service is provided. For example, as described at § 410.26, services furnished by auxiliary personnel incident to a physician's or NPP's professional service usually require the direct supervision of the physician or NPP. In addition to these "incident to" services, there are a number of diagnostic services under the PFS that also must be furnished under direct supervision. As currently defined in §§ 410.26 and 410.32(b)(3)(ii), direct supervision means that the physician or NPP must be present in the office suite and immediately available to furnish assistance and direction throughout the performance of the procedure. Direct supervision does not require the physician or NPP to be present in the room when the service or procedure is performed.

For the duration of the PHE for COVID-19, for purposes of limiting exposure to COVID-19, we adopted an interim final policy revising the definition of direct supervision to include virtual presence of the supervising physician or practitioner using interactive audio/video real-time telecommunications technology (85 FR 19245). We recognized that in some cases, the physical proximity of the physician or practitioner might present additional infection exposure risk to the patient and/or practitioner. In the context of the PHE for COVID-19, given the risks of exposure, the immediate risk of foregone medical care, the increased demand for healthcare professionals, and the widespread use of telecommunications technology, we believed that individual practitioners were in the best position to make decisions about how to meet the requirement to provide appropriate direct supervision based on their clinical judgment in particular circumstances.

We proposed to extend the policy until the later of the end of the calendar year in which the PHE for COVID-19 ends or December 31, 2021, to recognize the different and unique circumstances faced by individual communities that may continue after the PHE ends, and

provide time to solicit public input on circumstances where the flexibility to use interactive audio/video real-time telecommunications technology to provide virtual direct supervision could still be needed and appropriate. The extension of this flexibility would allow time for clinicians to make adjustments and for us to obtain public input on services and circumstances for which this policy might be appropriate on a permanent basis. We noted that if the proposal were finalized and the PHE for COVID-19 ended before the CY 2021 PFS final rule takes effect, the interim policy adopted during the PHE to allow direct supervision using real-time, interactive audio and video technology would no longer be in effect during the period between expiration of the PHE and the date the final policy takes effect.

Given our continued interaction with practitioners during the PHE for COVID-19 and our growing understanding of how services may be furnished remotely and safely, we noted that we have a better understanding of how, in some cases, depending upon the unique circumstances of individual patients and billing practitioners or physicians, telecommunications technology could safely allow the practitioner or physician's immediate availability to furnish assistance and direction without necessarily requiring the supervising practitioner's or physician's physical presence in the location where the service is being furnished. In such cases, the use of real-time, audio and video telecommunications technology may allow the supervising practitioner or physician to observe the beneficiary and the auxiliary staff performing the service or be engaged (Direct supervision does not require the physician or NPP to be present in the room when the service or procedure is performed) to provide assistance and direction of the service through virtual means, and without the supervising practitioner or physician being physically present.

Consequently, we proposed to revise § 410.32(b)(3)(ii) to allow direct supervision to be provided using real-time, interactive audio and video technology through the later of the end of the calendar year in which the PHE for COVID-19 ends or December 31, 2021. Specifically, we proposed to continue our current rule that "Direct supervision" in the office setting would mean the physician (or other supervising practitioner) must be present in the office suite and immediately available to furnish assistance and direction throughout the performance of the procedure. It would not mean that the physician (or other

supervising practitioner) must be present in the room when the procedure is performed. We proposed to add that, until the later of the end of the calendar year in which the PHE for COVID-19 ends or December 31, 2021, the presence of the physician (or other practitioner) may include virtual presence through audio/video real-time communications technology (excluding audio-only) subject to the clinical judgement of the supervising physician or (other supervising practitioner). In response to questions received since we issued the interim policy for the PHE for COVID-19, we clarified that, to the extent our policy allows direct supervision through virtual presence using audio/video real-time communications technology, the requirement could be met by the supervising physician (or other practitioner) being immediately available to engage via audio/video technology (excluding audio-only), and would not require real-time presence or observation of the service via interactive audio and video technology throughout the performance of the procedure.

While flexibility to provide direct supervision through audio/video real-time communications technology was adopted to be responsive to critical needs during the PHE for COVID-19 to ensure beneficiary access to care, reduce exposure risk and to increase the capacity of practitioners and physicians to respond to COVID-19, we expressed concern that direct supervision through virtual presence may not be sufficient to support PFS payment on a permanent basis, beyond the PHE for COVID-19, due to issues of patient safety. For instance, in complex, high-risk, surgical, interventional, or endoscopic procedures, or anesthesia procedures, a patient's clinical status can quickly change, and we believe it is necessary for such services to be furnished or supervised in person to allow for rapid on-site decision-making in the event of an adverse clinical situation. For example, there could be a case in which a practitioner or physician uses audio/video interactive communications to virtually supervise a nurse performing a post-op evaluation following surgery for hip fracture, and the nurse might note that the patient is uncooperative. In this scenario, had a full exam been performed directly by the practitioner or physician, or under the in-person supervision of a practitioner or physician who was physically or immediately available in the clinic to provide the necessary direction, the physician or practitioner would have recognized that the patient exhibited

signs of crystal-mediated acute arthritis, and that the patient's lack of cooperation was likely due to hypoactive delirium. Instead, the supervising practitioner or physician may not have been able to identify this clinical issue as a result of being available only via audio/video interactive communications technology. In this case, the presence of the supervising practitioner or physician through audio/video interactive communications technology would have been insufficient. There also may be certain patient populations that require greater clinical attentiveness and skill than the supervising practitioner or physician could provide via audio/video interactive communications technology. For example, patients with cognitive impairment or dementia, or patients with communication disabilities, may require the experience and skill of a physically present supervising practitioner or physician to recognize needs such as the need for specialized testing. It may not be possible for a supervising practitioner or physician to recognize or meet these clinical needs while being present for the service only through audio/video interactive communications technology. Moreover, the virtual connection between the individual performing the service and the supervising practitioner or physician could be disrupted, making it challenging for the supervising practitioner or physician to remain immediately available to provide assistance and direction to the physically present clinical staff or auxiliary personnel to furnish appropriate care to the patient.

We solicited information from commenters as to whether there should be any additional "guardrails" or limitations to ensure patient safety/clinical appropriateness, beyond typical clinical standards, as well as restrictions to prevent fraud or inappropriate use if we were to finalize a policy to permit direct supervision through audio/video interactive communications technology, with consideration of relevant patient safety, clinical appropriateness criteria or other restrictions, on a temporary basis through the later of the end of the calendar year in which the PHE for COVID-19 ends or December 31, 2021, or consider it beyond the time specified. We solicited information on what risks this policy might introduce to beneficiaries as they receive care from practitioners that would supervise care virtually in this way. Further, we solicited comment on potential concerns around induced utilization and fraud, waste, and abuse and how

those concerns might be addressed. We also invited commenters to provide data and information about their implementation experience with direct supervision using virtual presence during the PHE for COVID-19, and are interested in comments on the degree of aging and disability competency training that is required for effective use of audio/video real-time communications technology.

We received public comments on the direct supervision by interactive telecommunications technology. The following is a summary of the comments we received and our responses.

Comment: Commenters supported our proposal to revise the definition of direct supervision to allow virtual presence of the supervising physician or practitioner using real-time, interactive audio-video technology until the later of the end of the calendar year in which the PHE for COVID-19 ends or December 31, 2021, stating that this revision will greatly help reduce barriers to access, and that allowing physicians and auxiliary personnel to provide services from two separate locations will work to support the expansion of telehealth services and protects frontline workers by allowing appropriate social distancing.

Response: We thank the commenters for their support and feedback.

Comment: Many commenters requested that CMS make permanent the current temporary regulatory flexibility allowing physicians to provide direct supervision of clinical staff virtually, using real-time audio/video technology. Others opposed the use of virtual direct supervision following the termination of the PHE due to issues of patient safety, stating it may not be possible for a supervising physician to recognize or meet urgent clinical needs while being present for the service, and potentially other services at the same time, only through audio/video interactive communications technology.

We also received a variety of responses to our stated concerns that direct supervision through virtual presence may not be sufficient to support PFS payment on a permanent basis, beyond the PHE for COVID-19, due to issues of patient safety. Many commenters did not share these concerns, stating that there is no situation whereby clinical staff or auxiliary personnel would conduct complex, high-risk, surgical, interventional, or endoscopic procedures under any circumstance other than in-person. Many other commenters shared our patient-safety concerns, citing increased utilization and spending, and the potential for

fraud and abuse. Many stressed that virtual supervision can be done safely in certain scenarios, but it is not warranted in other scenarios. More specifically, some commenters said remote supervision would not be appropriate for in-person diagnostic or therapeutic procedures since the physician would not be physically available to help the individual being supervised if the need arises. Similarly, commenters suggested that it may not be appropriate when a remote physician is not on-site for an E/M service that requires finesse when performing the physical examination in person. According to some commenters, virtual direct supervision would not be appropriate for data interpretation, such as imaging studies or certain physiologic studies, where the patient is not physically present. A commenter agreed with the agency's assessment that anesthesia services must be furnished or supervised in person to allow for rapid, on-site decision-making in the event of an adverse clinical situation. One commenter recommended that CMS provide clarifying language in the final rule to ensure that the supervising physician is in the United States when using audio-visual technology for purposes of direct supervision.

Commenters offered a range of responses and suggestions in the interest of patient safety and program integrity in response to our request for information as to whether there should be any additional "guardrails" or limitations to ensure patient safety/clinical appropriateness, beyond typical clinical standards, as well as restrictions to prevent fraud or inappropriate use, if we were to finalize a policy to permit direct supervision through audio/video interactive communications technology on a temporary basis. According to some commenters, we should defer entirely to physician judgment to determine clinical appropriateness. Others offered suggestions including that we should closely monitor the use of virtual direct supervision during the interim period to gain information on potential induced utilization or fraud, waste, and abuse concerns. Some commenters stated that virtual direct supervision should be robustly documented to ensure that patients are safely receiving clinically appropriate care from members of the care team. A commenter stated that program integrity concerns could be addressed through provider enrollment rather than through administrative barriers. Other suggestions included: That CMS develop a list of high risk procedures and complex patient populations for whom this policy may

not be appropriate; that CMS limit the number of clinicians with whom a supervising physician may simultaneously engage, as well as the number of incident-to relationships in which a supervising physician may be involved at a given time, via audio/video technology; that testing sites that use interactive technologies rely on documentation and training; that we require that a caregiver be present physically with the patient when the services are furnished virtually; and that CMS identify conditions under which the extension of the virtual direct supervision policy may be revoked if evidence suggests such supervision is inadequate.

Response: We appreciate the information and suggestions we received in response to this request for comment. This information will allow us to consider safety and program integrity issues in the context of virtual supervision, and to what degree and on what basis this flexibility could be continued following the PHE. We will consider this and other information as we determine future policy regarding use of communication technology to satisfy direct supervision requirements as well as the best approach for safeguarding patient safety while promoting use of technology to enhance access.

After consideration of the comments, we are finalizing our proposal to allow direct supervision to be provided using real-time, interactive audio and video technology through the later of the end of the calendar year in which the PHE for COVID-19 ends or December 31, 2021.

11. Comment Solicitation on PFS Payment for Specimen Collection for COVID-19 Tests

When physicians and other practitioners collect specimens for clinical diagnostic laboratory tests as part of their professional services, Medicare generally makes payment for the services under the PFS, though often that payment is bundled into the payment rate for other services, including office and outpatient visits. Typically, collection of a specimen via nasal swab or other method during the provision of a service might be reported as part of (bundled with) an O/O E/M visit (CPT codes 99201 through 99205, 99211 through 99215). In visits where a patient has a face-to-face interaction with a billing professional with whom they have an established relationship, these services are generally reported with a level 2 through a level 5 visit (CPT codes 99212 through 99215). In cases where the specimen is collected

during a visit where the face-to-face interaction only involves clinical staff of the billing professional with whom the patient has an established relationship, these services are generally reported using CPT code 99211.

In the May 8th COVID-19 IFC (85 FR 27604–27605), we finalized on an interim basis that physicians and NPPs may use CPT code 99211 to bill for services furnished incident to their professional services, for both new and established patients, when clinical staff assess symptoms and collect specimens for purposes of COVID-19 testing, if the billing practitioner does not also furnish a higher level E/M service to the patient on the same day. In the CY 2021 PFS proposed rule, we noted that we considered whether to extend or make permanent the policy to allow physicians and NPPs to use CPT code 99211 to bill for services furnished incident to their professional services, for both new and established patients, when clinical staff assess symptoms and collect specimens for purposes of COVID-19 testing, and solicited public comments on whether we should continue this policy for a period of time, or permanently, after the PHE for COVID-19 ends.

We received public comments in response to our comment solicitation on PFS payment for specimen collection for COVID-19 tests. We appreciate the information and feedback provided. We will consider this information for potential future rulemaking.

12. Finalization of Interim Final Rule Provisions Related to Requirements of the Substance Use Disorder (SUD) Prevention That Promotes Opioid Recovery and Treatment (SUPPORT) for Patients and Communities Act

a. Expanding Medicare Telehealth Services for the Treatment of Opioid Use Disorder and Other SUDs

In the CY 2019 PFS interim final rule with comment period (83 FR 59452, 59496, Nov. 23, 2018), we implemented on an interim final basis the amendments made by section 2001(a) of the SUPPORT for Patients and Communities Act (Pub. L. 115–271, October 24, 2018) (the SUPPORT Act) to section 1834(m) of the Act. First, section 2001(a) of the SUPPORT Act removed the originating site geographic requirements under section 1834(m)(4)(C)(i) of the Act for telehealth services furnished on or after July 1, 2019 for the purpose of treating individuals diagnosed with a SUD or a co-occurring mental health disorder, as determined by the Secretary, at an originating site described in section

1834(m)(4)(C)(ii) of the Act, other than an originating site described in subclause (IX) of section 1834(m)(4)(C)(ii) of the Act. Subclause (IX) of section 1834(m)(4)(C)(ii) of the Act refers to a renal dialysis facility, which is only an allowable originating site for purposes of home dialysis monthly ESRD-related clinical assessments in section 1881(b)(3)(B) of the Act. Section 2001(a) of the SUPPORT Act also added the home of an individual as a permissible originating site for telehealth services for the purpose of treating individuals diagnosed with a SUD or a co-occurring mental health disorder. Section 2001(a) of the SUPPORT Act also amended section 1834(m)(2)(B)(ii) of the Act to require that no originating site facility fee will be paid in instances when the individual's home is the originating site. Section 2001(b) of the SUPPORT Act granted the Secretary specific authority to implement the amendments made by section 2001(a) through an interim final rule, and under that authority, we issued such an interim final rule. In accordance with section 1834(m)(4)(C)(ii)(X) of the Act, as amended by section 2001(a) of the SUPPORT for Patients and Communities Act, we revised § 410.78(b)(3) on an interim final basis, by adding § 410.78(b)(3)(xii), which adds the home of an individual as a permissible originating site for telehealth services furnished on or after July 1, 2019 to individuals with a SUD diagnosis for purposes of treatment of a SUD or a co-occurring mental health disorder. We amended § 414.65(b)(3) on an interim final basis to reflect the requirement in section 1834(m)(2)(B)(ii) of the Act that there is no originating site facility fee paid when the originating site for these services is the individual's home. Additionally, we added § 410.78(b)(4)(iv)(C) on an interim final basis to specify that the geographic requirements in section 1834(m)(4)(C)(i) of the Act do not apply for telehealth services furnished on or after July 1, 2019, to individuals with a SUD diagnosis for purposes of treatment of a SUD or a co-occurring mental health disorder at an originating site other than a renal dialysis facility. We noted that section 2001 of the SUPPORT Act did not amend section 1834(m)(4)(F) of the Act, which limits the scope of telehealth services to those on the Medicare telehealth list. We also noted that practitioners would be responsible for assessing whether individuals have a SUD diagnosis and whether it would be clinically appropriate to furnish telehealth services for the treatment of

the individual's SUD or a co-occurring mental health disorder. By billing codes on the Medicare telehealth list with the telehealth place of service code, practitioners would be indicating that the codes billed were used to furnish telehealth services to individuals with a SUD diagnosis for the purpose of treating the SUD or a co-occurring mental health disorder.

Comment: Several commenters expressed support for the changes authorized by section 2001(a) of the SUPPORT Act, noting that these changes that will benefit beneficiaries and advance the use of telehealth as a critical tool to improving access to care. One commenter noted that the changes will mitigate barriers to treatment for this patient population, decreasing stigma associated with seeking mental health and SUD services caused by presenting at a qualified originating site, allow patients to receive services at home, and open access to telehealth services for patients living in urban areas.

Response: We thank the commenters for their comments.

Comment: A few commenters urged CMS to consider expanding this flexibility to beneficiaries without SUDs, particularly those with mental health disorders without a co-occurring SUD.

Response: The interim final changes we adopted to our regulations under § 410.78 described above were based on amendments to the statute made by section 2001(a) of the SUPPORT Act. These amendments were limited to telehealth services furnished to individuals diagnosed with a SUD for purposes of treatment of the SUD or a co-occurring mental health disorder. We do not have the statutory authority at this time to expand these changes to include treatment of mental health disorders that are not co-occurring with a SUD diagnosis.

Comment: A few commenters urged CMS to ensure that the full scope of both SUD treatment services and applicable services for the treatment of co-occurring mental health disorders are included in the Medicare telehealth list in the future, citing examples such as screening, counseling, consultation, psychiatric services, care planning, initiation and continued management of Medication-Assisted Treatment (MAT), and others.

Response: Thank you for your comment. We note that HCPCS codes G2086, G2087, and G2088 were added to the Medicare Telehealth list beginning in CY 2020 (84 FR 62628). These codes describe bundled payments for office-based treatment for opioid use

disorder, including development of the treatment plan, care coordination, individual therapy, and group therapy and counseling. We note that for CY 2021, we are finalizing a revision to these code descriptions to include the treatment of any substance use disorder rather than just OUD. See discussion in this final rule describing expansion of these codes to be inclusive of all SUDs beginning in CY 2021. Also, as discussed earlier in this final rule, we are finalizing the addition of CPT codes 99347 and 99348 (*Home visit for the evaluation and management of an established patient*) to the Medicare Telehealth list for CY 2021, which could be appropriately billed for treatment of an SUD or co-occurring mental health disorder, as well as CPT code 90853 (*Group psychotherapy*). We welcome recommendations of other codes for addition to the Medicare Telehealth list through our usual process by the February 10th deadline.

Comment: One commenter encouraged CMS to amend section 1834(m)(4)(f) of the Act to include MAT and remote opioid treatment as covered services on the Medicare telehealth list in order to provide the care needed to all patients with SUDs, including Opioid Use Disorder.

Response: We do not have the authority to amend the statute; however, the services associated with the provision of MAT in the office setting, such as E/M visits and psychotherapy, are on the Medicare Telehealth List.

Comment: One commenter cautioned against creating any administrative procedures that would complicate billing for these services when furnished via telehealth, which could create a barrier to implementation and stifle the ability of telehealth to be used effectively to facilitate SUD and co-occurring mental health services, while another commenter stated that CMS should publish clear sub-regulatory guidance on how the current Medicare telehealth services can be billed when treating SUD.

Response: As discussed in the CY 2019 PFS interim final rule with comment period (83 FR 59496), we noted that practitioners are responsible for assessing whether individuals have a SUD diagnosis and whether it would be clinically appropriate to furnish telehealth services for the treatment of the individual's SUD or a co-occurring mental health disorder. By billing codes on the Medicare telehealth list with the telehealth place of service code, practitioners would be indicating that the codes billed were used to furnish telehealth services to individuals with a SUD diagnosis for the purpose of

treating the SUD or a co-occurring mental health disorder.

In summary, after consideration of the comments, we are finalizing the interim revisions to the regulation text at §§ 410.78(b)(3) and 414.65(b)(3) described above.

E. Care Management Services and Remote Physiologic Monitoring Services

1. Background

In recent years, we have updated PFS policies to improve payment for care

management and coordination. Working with the CPT Editorial Panel and other clinicians, we have expanded the suite of codes describing these services. New CPT codes were created that describe services that involve direct patient contact (for some services, in-person) or do not involve direct patient contact; represent a single encounter, monthly service, or both; are timed services; address specific conditions; and represent the work of the billing practitioner, auxiliary personnel

(specifically, clinical staff), or both (see Table 17). In this final rule for CY 2021, we continue our work to improve payment for care management services through code refinements related to remote physiologic monitoring (RPM), transitional care management (TCM), and psychiatric collaborative care model (CoCM) services.

TABLE 17: Summary of Care Management Codes

Service	Summary
Care Plan Oversight (CPO) (also referred to as Home Health Supervision, Hospice Supervision) (HCPCS codes G0181, G0182)	Supervision of home health, hospice, per month
ESRD Monthly Services (CPT codes 90951-70)	ESRD management, with and without face-to-face visits, by age, per month
Transitional Care Management (TCM) (adopted in 2013) (CPT codes 99495, 99496)	Management of transition from acute care or certain outpatient stays to a community setting, with face-to-face visit, once per patient within 30 days post-discharge
Chronic Care Management (CCM) (adopted in 2015, 2017, 2019, 2020, 2021) (CPT codes 99487, 99489, 99490, 99491, HCPCS code G2058 to be replaced by CPT code 99439, in CY 2021)	Management of all care for patients with two or more serious chronic conditions, timed, per month
Advance Care Planning (ACP) (adopted in 2016) (CPT codes 99497, 99498)	Counseling/discussing advance directives, face-to-face, timed
Behavioral Health Integration (BHI) (adopted in 2017) (CPT codes 99484, 99492, 99493, 99494, HCPCS code G2214)	Management of behavioral health condition(s), timed, per month
Cognitive Impairment Assessment and Care Planning (adopted in 2017) (CPT code 99483)	Assessment and care planning of cognitive impairment, face-to-face visit
Prolonged Evaluation & Management (E/M) Without Direct Patient Contact (adopted in 2017) (CPT codes 99358, 99359)	Prolonged non-face-to-face E/M work related to a face-to-face visit (other than office/outpatient visits beginning in 2021), timed
Prolonged Office/Outpatient E/M Visit (adopted for 2021) (HCPCS code G2212)	Prolonged face-to-face and/or non-face to face E/M work related to an office/outpatient E/M visit, timed
Remote Physiologic Monitoring Treatment Management Services (RPM) (adopted in 2020) (CPT codes 99457, 99458)	Development and management of a plan of treatment based upon patient physiologic data
Interprofessional Consultation (adopted in 2019) (CPT codes 99446, 99447, 99448, 99449, 99451, 99452)	Inter-practitioner consultation
Principal Care Management (adopted in 2020) (HCPCS codes G2064, G2065)	Management of a single, high risk disease

2. Digitally Stored Data Services/Remote Physiologic Monitoring/Treatment Management Services (RPM)

RPM involves the collection and analysis of patient physiologic data that are used to develop and manage a treatment plan related to a chronic and/or acute health illness or condition. In recent years, we have finalized payment for seven CPT codes in the RPM code

family. Five of the seven codes have been the focus of frequent questions from stakeholders.

In response to proposals in the CY 2019 PFS proposed rule (83 FR 35771) and the CY 2020 PFS proposed rule (84 FR 40555 through 40556), stakeholders requested that we clarify how we interpret aspects of the RPM code descriptors for CPT codes 99453, 99454,

99091, and 99457. Commenters asked us, for example, to identify who can furnish RPM services, what kinds of devices can be used to collect data, how data should be collected, and how “interactive communication” is defined. We stated in the CY 2020 PFS final rule (84 FR 62697) that we would provide guidance in the future about the codes. For CY 2021, we are clarifying how we

read CPT code descriptors and instructions associated with CPT codes 99453, 99454, 99091, and 99457 (and the add-on code, CPT code 99458) and their use for remote monitoring of physiologic parameters of a patient's health.

The RPM process begins with two PE only codes, CPT codes 99453 and 99454, finalized in the CY 2019 PFS final rule (83 FR 59574 through 59576). As PE only codes, they are valued to include clinical staff time, supplies, and equipment, including the medical device for the typical case of remote monitoring. CPT code 99453 (*Remote monitoring of physiologic parameter(s) (e.g., weight, blood pressure, pulse oximetry, respiratory flow rate), initial; set-up and patient education on use of equipment*) is valued to reflect clinical staff time that includes instructing a patient and/or caregiver about using one or more medical devices. CPT code 99454 (*Remote monitoring of physiologic parameter(s) (e.g., weight, blood pressure, pulse oximetry, respiratory flow rate), initial; device(s) supply with daily recording(s) or programmed alert(s) transmission, each 30 days*) is valued to include the medical device or devices supplied to the patient and the programming of the medical device for repeated monitoring. We reviewed the PE inputs for CPT code 99454 in the proposed rule and clarified that the medical devices that are supplied to the patient and used to collect physiologic data are considered equipment and, as such, are direct PE inputs for the code.

Review of CPT prefatory language (CPT® 2021 Professional Codebook (hereafter, CPT Codebook), pp. 52–53) provides additional information about the two PE-only codes. For example, the CPT prefatory language indicates that monitoring must occur over at least 16 days of a 30-day period in order for CPT codes 99453 and 99454 to be billed. Additionally, these two codes are not to be reported for a patient more than once during a 30-day period. This language suggests that even when multiple medical devices are provided to a patient, the services associated with all the medical devices can be billed only once per patient per 30-day period and only when at least 16 days of data have been collected. We also noted that CPT code 99453 can be billed only once per episode of care where an episode of care is defined as “beginning when the remote physiologic monitoring service is initiated and ends with attainment of targeted treatment goals” (CPT Codebook, p. 52).

Other stakeholder inquiries about CPT codes 99453 and 99454 focused upon

the kinds of medical devices that can be used to collect a patient's physiologic data. Prefatory language in the CPT Codebook states that “the device must be a medical device as defined by the FDA.” CPT simply specifies that the device must meet the FDA's definition of a medical device as described in section 201(h) of the Federal, Food, Drug and Cosmetic Act (FFDCA). As discussed in the CY 2021 PFS proposed rule (85 FR 50118), we found no language in the CPT Codebook indicating that a medical device must be FDA cleared as some stakeholders suggested, although such clearance may be appropriate. We also noted that we did not find information that suggested a medical device must be prescribed by a physician, although this could be possible depending upon the medical device. Beyond acknowledging the CPT specification that the medical device supplied for CPT code 99454 must meet the FDA definition of a medical device, we clarified in the proposed rule that the medical device should digitally (that is, automatically) upload patient physiologic data (that is, data are not patient self-recorded and/or self-reported). We also noted that use of the medical device or devices that digitally collect and transmit a patient's physiologic data must, as usual for most Medicare covered services, be reasonable and necessary for the diagnosis or treatment of the patient's illness or injury or to improve the functioning of a malformed body member. Further, we noted that the device must be used to collect and transmit reliable and valid physiologic data that allow understanding of a patient's health status in order to develop and manage a plan of treatment.

The CPT Codebook lists the RPM codes under the main heading Evaluation and Management (E/M). We clarified in the proposed rule that as E/M codes, CPT codes 99453, 99454, 99091, 99457, and 99458, can be ordered and billed only by physicians or NPPs who are eligible to bill Medicare for E/M services.

Although we initially described RPM services in the CY 2019 PFS final rule (83 FR 59574) as services furnished to patients with chronic conditions, we clarified in the CY 2021 PFS proposed rule (85 FR 50118) that practitioners may furnish these services to remotely collect and analyze physiologic data from patients with acute conditions as well as from patients with chronic conditions.

After the data collection period for CPT codes 99453 and 99454, the physiologic data that are collected and transmitted may be analyzed and

interpreted as described by CPT code 99091, a code that includes only professional work (that is, there are no direct PE inputs). We finalized payment for CPT code 99091 (*Collection and interpretation of physiologic data (e.g., ECG, blood pressure, glucose monitoring) digitally stored and/or transmitted by the patient and/or caregiver to the physician or other qualified health care professional, qualified by education, training, licensure/regulation (when applicable) requiring a minimum of 30 minutes of time, each 30 days*) in the CY 2018 PFS final rule (82 FR 53013 through 53014). The valuation for CPT code 99091 includes a total time of 40 minutes of physician or NPP work, broken down as follows: 5 minutes of preservice work (for example, chart review); 30 minutes of intra-service work (for example, data analysis and interpretation, report based upon the physiologic data, as well as a possible phone call to the patient); and 5 minutes of post-service work (that is, chart documentation). We noted that stakeholders have expressed confusion about the specification in the code descriptor for CPT code 99091 that the service is furnished by a “physician or other qualified health care professional, qualified by education, training, licensure/regulation.” The phrase “physician or other qualified health care professional” is defined by CPT as “an individual who is qualified by education, training, licensure/regulation (when applicable) and facility privileging (when applicable) who performs a professional service within his/her scope of practice and independently reports that professional service. These professionals are distinct from “clinical staff . . . [which refers to] a person who works under the supervision of a physician or other qualified health care professional and who is allowed by law, regulation, and facility policy to perform or assist in the performance of a specified professional service but does not individually report that professional service.”³ Accordingly, when referring to a particular service described by a CPT code for Medicare purposes, a physician or other qualified health care professional is an individual whose scope of practice and Medicare benefit category includes the service, and who is authorized to independently bill Medicare for the service. See our previous discussion of this in the CY 2016 PFS final rule at 80 FR 70957. Medicare also covers and makes payment for certain services performed by auxiliary personnel (which includes

³ CPT Codebook, p. xiv.

clinical staff) “incident to” the professional services of the billing practitioner. Our regulation at § 410.26(a) defines auxiliary personnel and delineates the conditions for payment for “incident to” services.

After analyzing and interpreting a patient’s remotely collected physiologic data, we noted that the next step in the process of RPM is the development of a treatment plan that is informed by the analysis and interpretation of the patient’s data. It is at this point that the physician or NPP develops a treatment plan with the patient and/or caregiver (that is, develops a patient-centered plan of care) and then manages the plan until the targeted goals of the treatment plan are attained, which signals the end of the episode of care. CPT code 99457 (*Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; first 20 minutes*) and its add-on code, CPT code 99458 (*Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; each additional 20 minutes (list separately in addition to code for primary procedure)*) describe the treatment and management services associated with RPM. Medicare stakeholders have requested that we clarify aspects of these two codes. The two most frequently asked questions include “Who can furnish the services described by CPT codes 99457 and 99458?” and “What does it mean to have an ‘interactive communication’ with a patient?”

We addressed who can furnish CPT codes 99457 and 99458 in the CY 2020 PFS final rule (84 FR 62697 through 62698) when we designated both codes as care management services. We explained that, like other care management services, services described by CPT codes 99457 and 99458 can be furnished by clinical staff under the general supervision of the physician or NPP. We noted that RPM services are not considered to be diagnostic tests; that is, they cannot be furnished and billed by an Independent Diagnostic Testing Facility on the order of a physician or NPP.

The services described by CPT codes 99457 and 99458 are services that are typically furnished remotely using communications technologies that allow “interactive communication,” which we read as real-time interaction, between a

patient and the physician, NPP, or clinical staff who provide the services. Stakeholders have requested that we define “interactive communication” as used in the code descriptors for CPT codes 99457 and 99458. We explained in the proposed rule that we saw this remote, non-face-to-face exchange as being similar to the exchange that occurs in providing services described by HCPCS code G2012, *Brief Communication Technology-Based Service*, which we finalized in the CY 2019 PFS final rule (83 FR 59483 through 59486). We clarified that “interactive communication” for purposes of CPT codes 99457 and 99458 involves, at a minimum, a real-time synchronous, two-way audio interaction that is capable of being enhanced with video or other kinds of data transmission. As indicated in the code descriptor for CPT code 99457, we believed during the writing of the proposed rule that the interactive communication should total at least 20 minutes of time with the patient over the course of a calendar month for CPT code 99457 to be reported. Each additional 20 minutes of interactive communication between the patient and the physician/NPP/clinical staff would be reported using CPT code 99458. We developed our definition of time using the CPT Codebook. The CPT Codebook states that unless there are code- or code-range specific instructions, parenthetical instructions, or code descriptors to the contrary, time is considered to be “face-to-face” time with the patient or patient’s caregiver/medical decision-maker. See the CPT Codebook, page xvii for more information about measuring time. Although the services described by CPT codes 99457 and 99458 are not typically in-person services, we interpreted time in the code descriptor to mean the time the practitioner spent in direct, real-time interactive communication with a patient.

Lastly, we proposed to establish as permanent policy two of the changes we made on an interim basis to the requirements for furnishing RPM services in the March 31st and the May 8th COVID-19 IFCs. (See 85 FR 19264 and 85 FR 27605 through 27606 for the interim modifications and clarifications to RPM services in response to the PHE for COVID-19).

Our goals during the PHE for COVID-19 have been to reduce exposure risks to the virus for practitioners and patients while also increasing access to health care services. We eliminated as many obstacles as possible to allow timely delivery of reasonable and necessary health care. We wanted

patients to be able to access services quickly and without barriers. With the goals of reducing exposure and increasing access to services, we finalized that RPM services could be furnished to new patients, as well as established patients on an interim basis for the duration of the PHE for COVID-19. We also finalized several policies on an interim basis for the duration of the PHE for COVID-19. These include: (1) Allowing consent to be obtained at the time services are furnished; (2) allowing consent to be obtained by individuals providing RPM services under contract with the billing physician or practitioner; and (3) allowing RPM codes to be billed for a minimum of 2 days of data collection over a 30-day period, rather than the required 16 days of data collection over a 30-day period as provided in the CPT code descriptors.

For CY 2021, we proposed on a permanent basis to allow consent to be obtained at the time that RPM services are furnished. Because the CPT code descriptors do not specify that clinical staff must perform RPM services, we also proposed to allow auxiliary personnel (which includes other individuals who are not clinical staff but are employees or leased or contracted employees) to furnish services described by CPT codes 99453 and 99454 under the general supervision of the billing physician or practitioner.

When the PHE for COVID-19 ends, we again will require that RPM services be furnished only to an established patient. We believe that a physician or practitioner who has an established relationship with a patient would likely have had an opportunity to provide a new patient E/M service. During the new patient E/M service, the physician or practitioner would have collected relevant patient history and conducted a physical exam, as appropriate. As a result, the physician or practitioner would possess information needed to understand the current medical status and needs of the patient prior to ordering RPM services to collect and analyze the patient’s physiologic data and to develop a treatment plan. Additionally, and in keeping with the CPT prefatory language for CPT codes 99453 and 99454, when the PHE for COVID-19 ends, we will once again require that 16 days of data be collected within 30 days to meet the requirements to bill CPT codes 99453 and 99454.

In response to the May 19, 2020 E.O. 13924, “Regulatory Relief To Support Economic Recovery,” (85 FR 31353 through 31356), we solicited comment from the medical community and other members of the public on whether

current RPM coding accurately and adequately describes the full range of clinical scenarios where RPM services may be of benefit to patients. We requested information that would help us to understand whether it would be beneficial to consider establishing coding and payment rules that would allow practitioners to bill and be paid for RPM services with shorter monitoring periods. We expressed interest in understanding whether one or more codes that describe a shorter duration, for example, 8 or more days of remote monitoring within 30 days, might be useful. For example, CPT codes 99453 and 99454 currently require use of a medical device as defined by the FDA in section 201(h) of FFDCA that digitally collects and transmits 16 or more days of data every 30 days in order for the codes to be billed; however, some patients may not require remote monitoring for 16 or more days in a 30-day period. For some patients, continuous short-term monitoring might be more appropriate. For example, a post-surgical patient who is recovering at home might benefit from remote monitoring of his or her body temperature as a means of assessing infection and managing medications or dosage. In some clinical situations, monitoring several times throughout a day, over a period of 10 days, may be reasonable and necessary. Sixteen or more days might be unnecessary. We requested information that would help us to understand whether it would be beneficial to consider establishing coding and payment rules that would allow practitioners to bill and be paid for RPM services with shorter monitoring periods. Specifically, we were interested in understanding whether one or more codes that describe a shorter duration, for example, 8 or more days of remote monitoring within 30 days, might be useful. We welcomed comments including any additional information that the medical community and other members of the public believe might provide further clarification on how RPM services are used in clinical practice, and how they might be coded, billed, and valued under the Medicare PFS.

We received public comments on our clarifications and proposals related to digitally stored data services/remote physiologic monitoring/treatment management services. The following is a summary of comments we received and our responses.

Comment: Overall, commenters expressed appreciation and support for the clarifications proposed by CMS regarding RPM CPT codes 99453, 99454,

99091, and 99457 (and the add-on code, CPT code 99458).

Response: We thank commenters for their support, as well as for suggesting additional ways we might interpret the RPM codes. We hope to continue this dialogue as CPT creates more RPM codes.

Comment: A group of commenters disagreed with our clarification that CPT codes 99453, 99454, 99091, 99457, and 99458 can be ordered and billed only by physicians and NPPs who are eligible to bill Medicare for E/M services. Some commenters suggested that we allow the CPT Editorial Panel and the RUC to establish appropriate coding for other practitioners.

Response: We believe that as E/M codes, CPT codes 99453, 99454, 99091, 99457, and 99458, can be ordered and billed only by physicians or NPPs who are eligible to bill Medicare for E/M services. We agree with commenters that additional coding would be necessary, specifically for practitioners who cannot order and bill E/M services.

Comment: Commenters disagreed with our suggestion that CPT codes 99091 and 99457 can be billed together. Commenters reported that these two codes are incompatible and cannot be reported in the same calendar month or in conjunction with one another.

Response: We continue to believe that, if reasonable and necessary, CPT codes 99091 (*Collection & interpretation physiologic data*) and 99457 (*Remote physiologic monitoring treatment management*), given their descriptions of services in the CPT Codebook, could be reported for the same patient. We believe the two codes, as currently described, provide different types of services. We agree with commenters that the CPT Codebook states on page 53, “Do not report 99091 in conjunction with 99457.” However, the next section states, “Do not report 99091 for time in a calendar month when used to meet the criteria for 99339, 99340, 99374, 99375, 99377, 99378, 99379, 99380, 99457, and 99491.” We note that these two statements suggest that there may be instances where both codes could be billed for the same patient in the same month as long as the same time was not used to meet the criteria for both CPT codes 99091 and 99457. We remind readers that the valuation for CPT code 99091 includes a total time of 40 minutes of physician or NPP work broken down as follows: 5 minutes of pre-service work (for example, chart review); 30 minutes of intra-service work (for example, data analysis and interpretation, report based upon the physiologic data, as well as a possible phone call to the patient); and 5 minutes

of post-service work (that is, chart documentation). We believe that in some instances when complex data are collected, more time devoted exclusively to data analysis and interpretation by a physician or NPP may be necessary such that the criteria could be met to bill for both CPT codes 99091 and 99457 within a 30-day period. The medically necessary services associated with all the medical devices for a single patient can be billed by only one practitioner, only once per patient per 30-day period, and only when at least 16 days of data have been collected.

Comment: Commenters suggested that other devices that do not meet the FDA’s definition of medical device, but collect physiologic data, should satisfy the requirements of RPM services.

Response: We disagree with the commenters. The prefatory language and code descriptors developed by the CPT Editorial Panel indicate the device must meet the FDA definition of a medical device as found in section 201(h) of the FFDCA.

Comment: One commenter stated that a coding gap exists between physiologic and non-physiologic remote monitoring and stated that additional coding is required for non-physiologic parameters.

Response: We thank the commenter for this insight. We look forward to engaging with stakeholders on this topic to inform how we might consider a “coding gap” that exists for services related to remote monitoring for non-physiologic measures of health.

Comment: Several commenters suggested that CMS should allow RPM services to be furnished to new patients, as well as to established patients. Other commenters supported our decision to require that patients be known to the practitioner (established patients) prior to the start of RPM services.

Response: We continue to believe that a physician or NPP who has an established relationship with a patient would possess the information needed to understand the current medical status and needs of the patient prior to ordering RPM services to collect and analyze the patient’s physiologic data and to develop a treatment plan. We note that during the PHE for COVID–19, RPM services may be furnished and billed for both new and established patients. We refer readers to the March 31st COVID–19 IFC (85 FR 19264) where we adopted the policy on an interim basis for the duration of the PHE for COVID–19 that RPM services could be furnished to new patients as well as established patients.

After considering public comments, we are not extending this interim policy beyond the end of the PHE for COVID-19. At the conclusion of the PHE, there will need to be an established patient-practitioner relationship in order to bill Medicare for CPT codes 99453, 99454, 99457, and 99458.

Comment: Some commenters suggested that we permit fewer than the required 16 days of monitoring per month that are required to bill CPT codes 99453 and 99454. One commenter indicated that patients and health care personnel are served best by a maximum data collection requirement of 6 days. Another commenter stated that the 8 days we suggested would be best. Another commenter suggested that at least 16 days of data should be required, and when 16 days of data are not collected within the 30-day period, that a modifier should be reported as a means of communicating that the service duration was reduced with an associated reduction in payment.

Response: While we agree that a full 16 days of monitoring may not always be reasonable and necessary, we requested detailed information about meaningful, clinical situations that require fewer days or shorter durations of remote monitoring. We were interested in understanding under what clinical circumstances fewer days of monitoring would be medically reasonable and necessary and allow a practitioner to establish clinically meaningful care. Although we received general support for a reduction in the number of days of data collection required to bill for CPT codes 99453 and 99454, we did not receive specific clinical examples.

After considering public comments, we are not extending the interim policy to permit billing for CPT codes 99453 and 99454 for fewer than 16 days in a 30-day period beyond the end of the PHE for COVID-19. At the conclusion of the PHE for COVID-19, we will require, in accordance with the code descriptors for CPT codes 99453 and 99454, that 16 days of data each 30 days must be collected and transmitted to meet the requirements to bill CPT codes 99453 and 99454.

Comment: A few commenters requested that Independent Diagnostic Testing Facilities (IDTFs) be allowed to bill for RPM services.

Response: As we noted in the proposed rule, RPM services are not considered to be diagnostic tests; therefore, RPM services cannot be furnished and billed by an IDTF on the order of a physician or NPP.

Comment: Commenters agreed with our clarification that practitioners

should be allowed to furnish RPM services to patients with acute conditions, as well as patients with chronic conditions.

Response: We thank commenters for their support of our clarification that practitioners may furnish RPM services to patients with acute conditions, as well as patients with chronic conditions.

In the CY 2021 PFS proposed rule, we proposed to make permanent two policies that we adopted in the March 31st COVID-19 IFC (85 FR 19264). We received comments on our proposed policies. The following is a summary of the comments we received and our responses.

Comment: Commenters wrote in favor of our proposal to allow consent to be obtained at the time the services of CPT codes 99453 and 99454 are furnished.

Response: We thank our stakeholders for their comments and support of this proposal.

Comment: Commenters agreed with our proposal to allow auxiliary personnel to furnish the services of CPT codes 99453 and 99454 under the general supervision of the billing physician or practitioner.

Response: We thank commenters for their support of this proposal.

After considering comments related to these two proposals, we are finalizing both as proposed.

3. Transitional Care Management (TCM)

Payment for TCM CPT codes 99495 (*Transitional Care Management services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within two business days of discharge; medical decision-making of at least moderate complexity during the service period; face-to-face visit within 14 calendar days of discharge*) and 99496 (*Transitional Care Management services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within two business days of discharge; medical decision making of at least high complexity during the service period; face-to-face visit within seven calendar days of discharge*) was finalized in the CY 2013 PFS final rule (77 FR 68979 through 68993). At that time, we identified a list of 57 HCPCS codes (see 77 FR 68990 for the original guidance) that we stated could not be billed concurrently with TCM services because of potential duplication of services.

For CY 2020, recognizing that use of TCM services was low when compared to the number of Medicare beneficiaries with eligible discharges and that

increased utilization of medically necessary TCM services could improve patient outcomes, one of our proposals included modifying our prior rule that prohibited the billing of TCM services with many other services that we had viewed as duplicative (77 FR 68990). In the CY 2020 PFS final rule (84 FR 62685 through 62687), we finalized a policy to allow concurrent billing of TCM services, when reasonable and necessary, with 16 actively priced (that is, not bundled or non-covered) codes during the 30-day period covered by TCM services. We stated at the time that we would continue to refine our billing policies for TCM through future notice and comment rulemaking.

In the CY 2021 PFS proposed rule (85 FR 50120), we proposed to remove 14 additional actively priced (not bundled or non-covered) HCPCS codes from the list of remaining HCPCS codes that cannot be billed concurrently with TCM for CY 2021. We noted that we believe that no overlap exists that would warrant preventing concurrent reporting between TCM and the services of these 14 codes. We also proposed to allow the new Chronic Care Management code HCPCS code G2058 to be billed concurrently with TCM when reasonable and necessary. We stated that the minutes counted for TCM services cannot also be counted towards other services. Table 18 lists the 15 codes that we proposed could be billed concurrently with TCM services when reasonable and necessary. We welcomed comment on our proposal to allow these additional services to be billed concurrently with the TCM service.

We received public comments on the TCM proposals. The following is a summary of the comments we received and our responses.

Comment: Commenters wrote in support of our proposal to allow HCPCS code G2058 to be billed concurrently with TCM when reasonable and necessary. Commenters agreed that time should not be double-counted, and that services should not overlap, but should be separately reportable.

Response: We thank the commenters for their support of our proposal to allow HCPCS code G2058 to be billed concurrently with TCM when reasonable and necessary.

Comment: Commenters stated that the services described by the 14 ESRD codes proposed for separate payment do not overlap or duplicate TCM services and should be paid separately when reasonable and necessary.

Response: We appreciate the support of commenters.

Comment: A few commenters disagreed with our proposal to allow the

ESRD codes and the chronic care management code HCPCS code G2058 to be billed concurrently with TCM. These commenters instead urged CMS to allow the RUC process and recommendations determine how these codes should be valued/revalued and reported, rather than having CMS apply a different approach.

Response: We recognize that some commenters would prefer that we follow the AMA RUC recommendations for code valuations and billing policies. We appreciate the work the AMA

committees, and in particular the RUC, do to provide recommendations. We will continue to consider those recommendations along with other information when we develop values and payment policies under the PFS. We believe that allowing concurrent billing of TCM services with the proposed ESRD codes and HCPCS code G2058, when reasonable and necessary, can improve patient outcomes.

After considering the public comments, we are finalizing our proposal to remove 14 additional

actively priced (not bundled or non-covered) HCPCS codes from the list of remaining HCPCS codes that cannot be billed concurrently with TCM for CY 2021. We also are finalizing our proposal to allow HCPCS code G2058 (which we are finalizing in this rule as new CPT code 99439, see the codes in section II.H. for further information) to be billed concurrently with TCM when reasonable and necessary.

TABLE 18: 15 Additional Codes That Could Be Billed Concurrently with TCM

Code Family	CPT Code	Descriptor
End Stage Renal Disease Services (for ages less than 2 months through 20+ years)	90951	ESRD related services with 4 or more face-to-face visits per month; for patients <2 years of age
	90954	ESRD related services with 4 or more face-to-face visits per month; for patients 2-11 years
	90955	ESRD related services with 2-3 face-to-face visits per month; for patients 2-11 years
	90956	ESRD related services with 1 face-to-face visit per month; for patients 2-11 years
	90957	ESRD related services with 4 or more face-to-face visits per month; for patients 12-19 years
	90958	ESRD related services with 2-3 face-to-face visits per month; for patients 12-19 years
	90959	ESRD related services with 1 face-to-face visit per month; for patients 12-19 years
	90963	ESRD related services for home dialysis per full month; for patients <2 years of age
	90964	ESRD related services for home dialysis per full month; for patients 2-11 years
	90965	ESRD related services for home dialysis per full month; for patients 12-19 years
	90966	ESRD related services for home dialysis per full month; for patients 20 years and older
	90967	ESRD related services for dialysis less than a full month of service; per day; for patients <2 years of age
	90968	ESRD related services for dialysis less than a full month of service; per day; for patients 2-11 years
	90969	ESRD related services for dialysis less than a full month of service; per day; for patients 12-19 years
Complex Chronic Care Management Services	HCPCS G2058 (Beginning CY 2021, CPT code 99439)	Chronic care management services, each additional 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month

4. Psychiatric Collaborative Care Model (CoCM) Services (HCPCS Code G2214)

In the CY 2017 PFS final rule (81 FR 80230), we established G-codes used to bill for monthly services furnished using the Psychiatric Collaborative Care Model (CoCM), an evidence-based approach to behavioral health integration that enhances “usual” primary care by adding care management support and regular

psychiatric inter-specialty consultation. These G-codes were replaced by CPT codes 99492–99494, which we established for payment under the PFS in the CY 2018 PFS final rule (82 FR 53077).

Stakeholders have requested additional coding to capture shorter increments of time spent, for example, when a patient is seen for services, but is then hospitalized or referred for

specialized care, and the number of minutes required to bill for services using the current coding is not met. To accurately account for these resources costs, in the CY 2021 PFS proposed rule (85 FR 50121), we proposed to establish a G-code to describe 30 minutes of behavioral health care manager time. Since this code would describe one half of the time described by the existing code that describes subsequent months

of CoCM services, we proposed to price this code based on one half the work and direct PE inputs for CPT code 99493 (*Subsequent psychiatric collaborative care management, first 60 minutes in a subsequent month of behavioral health care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified health care professional, with the following required elements*):

- Tracking patient follow-up and progress using the registry, with appropriate documentation; participation in weekly caseload consultation with the psychiatric consultant;
- Ongoing collaboration with and coordination of the patient's mental health care with the treating physician or other qualified health care professional and any other treating mental health practitioners;
- Additional review of progress and recommendations for changes in treatment, as indicated, including medications, based on recommendations provided by the psychiatric consultant;
- Provision of brief interventions using evidence-based techniques such as behavioral activation, motivational interviewing, and other focused treatment strategies;
- Monitoring of patient outcomes using validated rating scales; and
- Relapse prevention planning with patients as they achieve remission of symptoms and/or other treatment goals and are prepared for discharge from active treatment.), which is assigned a work RVU of 1.53.

Therefore, as proposed, the work RVU for the new proposed code is 0.77. We proposed that this code could be used for either the initial month or subsequent months. We noted that the existing CPT time rules for the CoCM services would apply. As proposed, the code would be:

- *GCOL1*: Initial or subsequent psychiatric collaborative care management, first 30 minutes in a month of behavioral health care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified health care professional.

We proposed that the required elements listed for CPT code 99493 would also be required elements for billing HCPCS code GCOL1. Additionally, we proposed that CPT time rules would apply, consistent with the guidance in the CPT codebook for CPT codes 99492–99494.

In the CY 2017 PFS final rule (81 FR 80235), we finalized that CCM and BHI services could be billed during the same

month for the same beneficiary if all the requirements to bill each service are separately met. We also proposed that HCPCS code GCOL1 could be billed during the same month as CCM and TCM services, provided that all requirements to report each service are met and time and effort are not counted more than once. We noted that the patient consent requirement would apply to each service independently.

In the CY 2017 PFS final rule (81 FR 80235), we finalized that the psychiatric CoCM services may be furnished under general supervision because we do not believe it is clinically necessary that the professionals on the team who provide services other than the treating practitioner (namely, the behavioral health care manager and the psychiatric consultant) must have the billing practitioner immediately available to them at all times, as would be required under a higher level of supervision. Therefore, consistent with the other codes in this code family (CPT codes 99492–99494), we proposed to add HCPCS code GCOL1 to the list of designated care management services for which we allow general supervision.

We welcomed comments on the proposal to create this new code, as well as the proposed valuation.

We received public comments on the CoCM services (HCPCS code GCOL1) proposal. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the creation of a new code to describe a shorter duration of time than is captured by the existing codes describing the psychiatric collaborative care model, noting that this will provide greater flexibility, remove barriers, and encourage further adoption of this model of care. One commenter opposed implementing this code without obtaining further evidence that it is warranted, while another commenter encouraged CMS to work with the CPT Editorial Panel to create a CPT code that would be available for billing by all payers. One commenter urged CMS to eliminate the copayment and deductible for CoCM and other care management services.

Response: We note that we do not have the statutory authority to remove application of the copayment or deductible for these services. After considering the public comments, we are finalizing the creation of HCPCS code GCOL1 as proposed. We note that HCPCS GCOL1 was a placeholder code identifier. The final code is HCPCS code G2214 (*Initial or subsequent psychiatric collaborative care management, first 30 minutes in a month of behavioral health*

care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified health care professional). We welcome the opportunity to work with the CPT Editorial Panel in the event they are interested in adopting this code into the CPT code set.

F. Refinements to Values for Certain Services To Reflect Revisions to Payment for Office/Outpatient Evaluation and Management (E/M) Visits and Promote Payment Stability During the PHE for COVID-19

1. Background

a. Evaluation and Management (E/M) Visits Overview

Physicians and other practitioners who are paid under the PFS bill for common office visits for E/M visits using a relatively generic set of CPT codes (Level I HCPCS codes) that distinguish visits based on the level of complexity, site of service, and whether the patient is new or established. These CPT codes are broadly referred to as E/M visit codes and historically have included three key components within their code descriptors: History of present illness (history), physical examination (exam), and medical decision-making (MDM).⁴

Currently, there are five levels of O/O E/M visits. There are five codes representing each level for new patients (CPT codes 99201 through 99205), and five codes representing each level for established patients (CPT codes 99211 through 99215). CPT code 99211 (*Level 1 established patient*) is the only code in the O/O E/M visit code set that describes a visit that may be performed by the billing practitioner or by clinical staff under supervision, and that has no specified history, exam or MDM (see Table 19).

In total, E/M visits billed using these CPT codes comprise approximately 40 percent of allowed charges for PFS services; and O/O E/M visits, in particular, comprise approximately 20 percent of allowed charges for PFS services. Within the E/M visits represented in these percentages, there is wide variation in the volume and level of E/M visits billed by different specialties. According to Medicare claims data, E/M visits are furnished by nearly all specialties, but represent a greater share of total allowed charges for physicians and other practitioners who do not routinely furnish procedural interventions or diagnostic tests.

⁴ 2019 CPT Codebook, Evaluation and Management, pages 6 through 13.

Generally, these practitioners include primary care practitioners and certain other specialists such as neurologists, endocrinologists and rheumatologists. Certain specialties, such as podiatry, tend to furnish lower level E/M visits more often than higher level E/M visits. Some specialties, such as dermatology, tend to bill more E/M visits on the same day as they bill minor procedures.

b. Overview of Policies Finalized in CY 2020 for CY 2021

In the CY 2020 PFS final rule (84 FR 62844 through 62860), for the O/O E/M visit code set (CPT codes 99201 through 99215), we finalized a policy to

generally adopt the new coding, prefatory language, and interpretive guidance framework that has been issued by the AMA's CPT Editorial Panel (see <https://www.ama-assn.org/practice-management/cpt/cpt-evaluation-and-management>) and will be effective January 1, 2021. Under this new CPT coding framework, history and exam will no longer be used to select the level of code for O/O E/M visits. Instead, an O/O E/M visit will include a medically appropriate history and exam, when performed. The clinically outdated system for number of body systems/areas reviewed and examined under history and exam will no longer

apply, and the history and exam components will only be performed when, and to the extent, reasonable and necessary, and clinically appropriate.

The changes will include deletion of CPT code 99201 (*Level 1 office/outpatient visit, new patient*), which the CPT Editorial Panel decided to eliminate because CPT codes 99201 and 99202 are both straightforward MDM and currently largely differentiated by history and exam elements. Table 19 provides an overview of how the level 1 and level 2 O/O E/M visits are currently structured, demonstrating this current overlap.

TABLE 19: Overview of Levels 1 and 2 Office/Outpatient E/M Visits, CY 2020

CPT Code	Service Overview
CPT code 99201 (level 1 new patient)	<ul style="list-style-type: none"> • Problem-focused history and exam • Straightforward medical decision-making • Typically 10 minutes face-to-face, presenting problem(s) usually self-limited or minor
CPT code 99202 (level 2 new patient)	<ul style="list-style-type: none"> • Expanded problem-focused history and exam • Straightforward medical decision-making • Typically 20 minutes face-to-face, presenting problem(s) usually of low to moderate severity
CPT code 99211 (level 1 established patient)	<ul style="list-style-type: none"> • Evaluation and management that may not require the presence of a physician or other qualified healthcare professional • Typically 5 minutes are spent performing or supervising these services, presenting problem(s) usually minimal
CPT code 99212 (level 2 established patient)	<ul style="list-style-type: none"> • Problem-focused history and exam • Straightforward medical decision-making • Typically 10 minutes face-to-face, presenting problem(s) usually self-limited or minor

For levels 2 through 5 O/O E/M visits, selection of the code level to report will be based on either the level of MDM (as redefined in the new AMA/CPT guidance framework, also available on the AMA website at <https://www.ama-assn.org/practice-management/cpt/cpt-evaluation-and-management>) or the total time personally spent by the reporting practitioner on the day of the visit (including face-to-face and non-face-to-face time). We continue to believe these policies will further our ongoing effort to reduce administrative burden, improve payment accuracy, and update the O/O E/M visit code set to better reflect the current practice of medicine.

Regarding prolonged visits, we finalized separate payment for a new prolonged visit add-on CPT code (CPT code 99XXX), and discontinued the use

of CPT codes 99358 and 99359 (*prolonged E/M visit without direct patient contact*) to report prolonged time associated with O/O E/M visits. We refer readers to the CY 2020 PFS final rule for a detailed discussion of this policy (84 FR 62849 through 62850). We are not opposed in concept to reporting prolonged office/outpatient visit time on a date other than the visit, but we believe there should be a single prolonged code specific to O/O E/M visits that encompasses all related time.

Also, we finalized separate payment for HCPCS code GPC1X, to provide payment for visit complexity inherent to E/M associated with medical care services that serve as the continuing focal point for all needed health care services and/or with medical care services that are part of ongoing care

related to a patient's single, serious condition, or a complex condition.

The AMA RUC resurveyed and revalued the revised O/O E/M visit code set, concurrent with the CPT Editorial Panel redefining the services and associated interpretive guidance, and provided us with its recommendations. In the CY 2020 PFS final rule, we also addressed and responded to the AMA RUC recommendations. We finalized new values for CPT codes 99202 through 99215, and assigned RVUs to the new O/O E/M prolonged visit CPT code 99XXX, as well as the new HCPCS code GPC1X. These valuations were finalized with an effective date of January 1, 2021. In Table 20, we provide a summary of the codes and work RVUs finalized in the CY 2020 PFS final rule for CY 2021.

TABLE 20: Summary of Codes and Work RVUs Finalized in the CY 2020 PFS Final Rule for CY 2021

HCPCS Code	Current Total Time (mins)	Current Work RVU	CY 2021 Total Time (mins)	CY 2021 Work RVU
99201	17	0.48	N/A	N/A
99202	22	0.93	22	0.93
99203	29	1.42	40	1.6
99204	45	2.43	60	2.6
99205	67	3.17	85	3.5
99211	7	0.18	7	0.18
99212	16	0.48	18	0.7
99213	23	0.97	30	1.3
99214	40	1.5	49	1.92
99215	55	2.11	70	2.8
G2212	N/A	N/A	15	0.61
G2211	N/A	N/A	11	0.33

c. Continuing Stakeholder Feedback

Since issuing the CY 2020 PFS final rule, we have continued to engage with the stakeholder community on the issues addressed in this section of our CY 2021 PFS final rule. These include the time values for levels 2–5 O/O E/M visit codes, revaluation of services that are analogous to O/O E/M visits, the definition and utilization assumptions for the add-on code for office/outpatient visit complexity (GPC1X), and the required time to report prolonged O/O E/M visits. In the CY 2021 PFS proposed rule (85 FR 50121 through 50139), we included proposals on these topics based on continued feedback from stakeholders in the form of public comments, written requests, meetings, and other formal and informal discussions. In this section of our final rule, we summarize and respond to the public comments we received in response to our CY 2021 PFS proposals, and discuss our final policies.

2. Revisions for CY 2021

a. Time Values for Levels 2–5 Office/Outpatient E/M Visit Codes

In the CY 2020 PFS proposed rule (84 FR 40675), we sought comment on the times associated with the O/O E/M visits as recommended by the AMA RUC. When surveying these services for purposes of valuation, the AMA RUC requested that survey respondents consider the total time spent on the day of the visit, as well as any pre- and post-service time occurring within a timeframe of 3 days prior to the visit and 7 days after, respectively. In developing its recommendations to us, the AMA RUC then separately averaged the survey results for pre-service, day of service, and post-service times, and the survey results for total time, with the result that, for some of the codes, the sum of the times associated with the three service periods does not match the RUC-recommended total time. The approach used by the AMA RUC to develop recommendations sometimes resulted in two conflicting sets of times: The component times as surveyed and

the total time as surveyed. In the CY 2020 PFS final rule, we finalized adoption of the RUC-recommended times as explained below, but stated that we would continue to consider whether this issue has implications for the PFS broadly. When we establish pre-, intra-, and post-service times for a service under the PFS, these times always sum to the total time. We believe it would be illogical for component times not to sum to the total, and this idea is reflected in our ratesetting system, which requires component times to sum to the total time. Commenters on the CY 2020 PFS proposed rule (84 FR 62849) stated that we should adopt the times as recommended by the RUC, and did not provide any additional details on the times they believed we should use when the total time is not the sum of the component times. Table 21 illustrates the AMA RUC surveyed times for each service period and the surveyed total time. It also shows the actual total time calculated as the sum of the component times.

TABLE 21: RUC-Recommended Pre-, Intra-, Post-Service Times, RUC-Recommended Total Times for CPT codes 99202-99215 and Actual Total Time

HCPCS	Pre-Service Time	Intra-Service Time	Immediate Post-Service Time	Actual Total Time	RUC-recommended Total Time
99202	2	15	3	20	22
99203	5	25	5	35	40
99204	10	40	10	60	60
99205	14	59	15	88	85
99211		5	2	7	7
99212	2	11	3	16	18
99213	5	20	5	30	30
99214	7	30	10	47	49
99215	10	45	15	70	70

Given the lack of clarity provided by commenters on the CY 2020 PFS proposed rule about why the sum of minutes in the components would differ from the total minutes, and our view and systems requirement that total time must equal the mathematical total of component times, we proposed beginning in CY 2021 to adopt the actual total times (defined as the sum of the component times) rather than the total times recommended by the RUC for CPT codes 99202 through 99215. The following is a summary of the comments we received and our responses.

Comment: Some commenters did not support our proposal to adopt the actual total times (defined as the sum of the component times) rather than the total times recommended by the RUC for CPT codes 99202 through 99215. These commenters further stated, if we were to use the sum of the component times instead of the RUC-recommended median total time, that we would not be appropriately capturing the physician time for the office visits, which were based on a robust survey, if we were to use the sum of the component times instead of the RUC recommended median total time.

One commenter suggested that the median survey total time for the office visits should be utilized to retain relativity. The commenter explained that, while total time is usually a sum of the pre-, intra- and immediate post-service time, for purposes of the office visit survey, the pre-service time was described as 3 calendar days prior to the office visit, the intra-service time was described as the calendar day of the office visit and the post-service time was described as within 7 days following the office visit. The commenter stated that the median survey total time will not necessarily equal the sum of the median times for each of the 3 time periods because of different practitioner workflow patterns

that result in different proportions of the practitioners' times being spent in different components of the service. However, the total times as recommended by the RUC accurately capture the time associated with furnishing the service, regardless of whether that work was performed on the date of encounter or other dates surrounding the office visit. The commenter also suggested that the median of the component times was mathematically more appropriate than the median of the total times, because the function of a median is to limit the influence of outlier values.

Some commenters supported our proposal, stating that the RUC's survey methodology, which included collection of time before and after the day of the encounter, resulted in an overestimation of time and work, and that the total time in the CMS work time database should reflect the sum of the pre-, intra-, and post-times collected using the RUC survey. This methodology is consistent with the total times for all other codes in the fee schedule.

Response: We continue to believe that it would be illogical for component times not to sum to the total, and we reiterate that our ratesetting programs are constructed in a manner that assumes this. While we recognize the value of robust survey data, for purposes of consistency and relativity, we believe we should use a consistent methodology across the fee schedule. Also it is not clear why the RUC surveyed time before and after the date of service since the new CPT coding guidance instructs practitioners to report this time using CPT codes 99358 and 99359 (although CMS will no longer recognize 99358–99359 for this purpose, for reasons discussed elsewhere in this section). Having considered the public comments received, we are finalizing our proposal to adopt the actual total times (defined as the sum of the component times) rather than the total times

recommended by the RUC for CPT codes 99202 through 99215.

b. Revaluing Services That Are Analogous to Office/Outpatient E/M Visits

In our proposed rule, we recognized that there are services other than the global surgical codes for which the values are closely tied to the values of the O/O E/M visit codes. We proposed to increase the valuations for these services commensurate with the valuation increases we previously finalized for the O/O E/M visit codes for 2021. Our proposals took into account input from the public (especially our 2020 comment solicitation on this topic) and our own internal review. We proposed to increase valuations for the following:

- End-Stage Renal Disease Monthly Capitation Payment (ESRD MCP) services.
- Transitional care management (TCM) services.
- Maternity services.
- Cognitive impairment assessment and care planning.
- Annual wellness visits (AWV) and initial preventive physical exam (IPPE).
- Emergency department (ED) visits.
- Therapy evaluations.
- Certain behavioral healthcare services.

Many of these services were valued via a building block methodology and have O/O E/M visits explicitly built into their definition or valuation. We noted that, unlike the global surgical codes, some of these services always include an O/O E/M visit(s) furnished by the reporting practitioner as part of the service, and therefore, it may be appropriate to adjust their valuations commensurate with any changes made to the values for O/O E/M visits. Some of these services do not actually include an E/M visit, but we valued them using a direct crosswalk to the RVUs assigned to an O/O E/M visit(s), and for this

reason they are closely tied to values for O/O E/M visits. Overall, we believed that the magnitude of the changes to the values of the O/O E/M visit codes and the associated redefinitions of the codes themselves are significant enough to warrant an assessment of the accuracy of the values of services containing, or closely analogous to, O/O E/M visits.

We received public comments in response to the CY 2020 PFS proposed rule in support of revaluing certain services commensurate with the new O/O E/M visit values. There was particular support from commenters for revaluing the ESRD (MCP) services, TCM services, cognitive impairment assessment and care planning services, and the (ED) visits. Based on input provided after publication of the CY 2020 PFS final rule by the American College of Obstetricians and Gynecologists (ACOG), we also proposed to revalue the maternity surgical packages, which, unlike other global surgery services, were valued using a methodology, described in more detail below, that allowed the valuation of the composite parts of the package to sum to the total value. Additionally, unlike the 10- and 90-day global surgical services codes (referred to in this section as 10- and 90-day globals), we had never expressed concerns as to the accuracy of the values of the maternity packages, and these services were not part of the policy we adopted to transition all 10- and 90-day globals to 0-day globals (79 FR 67591), though that policy was overridden by statutory amendments before it took effect. We also proposed to revalue certain physical therapy evaluations and behavioral healthcare services as closely analogous to the office/outpatient E/M visits. We did not propose to revalue certain ophthalmology services that the public brought to our attention.

In general, some commenters to the CY 2021 PFS proposed rule indicated that they believe CMS used inconsistent methodologies to revise the proposed RVUs to reflect the marginal increase in

office/outpatient E/M visits; that other code sets should go through the same consensus process whereby CMS, CPT and the AMA RUC all agree that the services need to be redefined to better describe existing practice and then be revalued; and that CMS should increase all of the global surgical codes if any single global code is increased to reflect changes to the office/outpatient E/M visits. Other commenters agreed with our proposals and methodologies, and a few suggested additional services that should be revalued as analogous to office/outpatient E/M visits. In the following section of our final rule, we discuss the public comments we received in greater detail, respond to the comments and discuss our final policies. By way of overview, we note that we did not rely on any single factor in deciding whether to consider a given code(s) as analogous to office/outpatient E/M visits. Different factors apply to different services, and we took into consideration all of the factors relevant for the code(s) in question, considered together.

(1) End-Stage Renal Disease Monthly Capitation Payment Services

In the CY 2004 PFS final rule with comment period (68 FR 63216), we established new Level II HCPCS G codes for ESRD services and established MCP rates for them as specified under section 1881(b)(3)(A)(ii) of the Act. For ESRD center-based patients, payment for the G codes varied based on the age of the beneficiary and the number of face-to-face visits furnished each month (for example, 1 visit, 2–3 visits and 4 or more visits). We believed that many physicians would provide 4 or more visits to center-based ESRD patients, and a small proportion would provide 2 to 3 visits or only one visit per month. Under the MCP methodology, to receive the highest payment, a physician would have to furnish at least 4 ESRD-related visits per month. In contrast, payment for home dialysis MCP services only

varied by the age of beneficiary.

Although we did not initially specify a frequency of required visits for home dialysis MCP services, we stated that we expect physicians to provide clinically appropriate care to manage the home dialysis patient.

The CPT Editorial Panel created new CPT codes to replace the G codes for monthly ESRD-related services, and we finalized the new codes for use under the PFS in CY 2009 (73 FR 69898). The codes created were CPT codes 90951 through 90962 for monthly ESRD-related services with a specified number of visits; CPT codes 90963 through 90966 for monthly ESRD-related services for home dialysis patients; and CPT codes 90967 through 90970 for home dialysis patients with less than a full month of services. The latter set of codes is billed per encounter and valued to be 1/30 of the value of CPT codes 90965 and 90966.

In response to our comment solicitation in the CY 2020 PFS final rule and interim final rule regarding whether to adjust the values of the ESRD MCP codes to reflect the increased values of the office/outpatient E/M visit codes, we received a number of supportive comments. These commenters stated that the MCP bundled payments for all ESRD-related care for a month were constructed using a building block methodology and a number of office/outpatient E/M visits were component parts of those bundles; and that the specified number of visits in the code descriptor must be furnished in order to bill for the service. Commenters also noted that although the values of office/outpatient E/M visit codes have been increased once since the creation of the MCP G codes and once after adoption of the MCP CPT codes, the valuation of the ESRD MCP codes was never adjusted to account for increases to the office/outpatient E/M visit codes. In Table 22, we provide a summary of the visits included in the valuation of each ESRD MCP service.

TABLE 22: Number and Level of Office/Outpatient E/M Visits Bundled into the ESRD MCP Services

HCPCS	Short Descriptor	Bundled Office/Outpatient visit(s)
90951	Esrd serv 4 visits p mo <2yr	13x 99214
90954	Esrd serv 4 vsts p mo 2-11	Crosswalked to CPT code 99471
90955	Esrd srv 2-3 vsts p mo 2-11	1x 99215
		2x 99214
90956	Esrd srv 1 visit p mo 2-11	1x 99215
90957	Esrd srv 4 vsts p mo 12-19	1x 99215
		3x 99214
		3x 99213
90958	Esrd srv 2-3 vsts p mo 12-19	1x 99215
		2x 99214
90959	Esrd serv 1 vst p mo 12-19	1x 99215
90960	Esrd srv 4 visits p mo 20+	1x 99213
		3x 99214
90961	Esrd srv 2-3 vsts p mo 20+	3x 99214
90962	Esrd serv 1 visit p mo 20+	1x 99214
90963	Esrd home pt serv p mo <2yrs	1x 99215
		2x 99214
90964	Esrd home pt serv p mo 2-11	1x 99215
		1x 99214
90965	Esrd home pt serv p mo 12-19	1x 99215
		1x 99214
90966	Esrd home pt serv p mo 20+	3x 99214
90968	Esrd svc pr day pt 2-11	RVU of 90964/30
90969	Esrd svc pr day pt 12-19	RVU of 90965/30
90970	Esrd svc pr day pt 20+	RVU of 90966/30

In the past, we have not updated the valuation of this code set to reflect updates to the valuation of the office/outpatient E/M visit code set, and we do not have information on the number and level of visits actually furnished in connection with these services. So over time, the values of the ESRD MCP codes may have become out of step with valuation of their constituent visits. We believe there is sufficient reason to revalue these services to take into account the changes in valuation for the office/outpatient E/M visits. These services were initially valued using a building block methodology that summed the value of the individual service from its components, and for some of the codes in this code set, a specified number of visits must be furnished in order to bill for the respective ESRD MCP code because they are included in the code descriptor.

Therefore, we noted that we believe that the ESRD MCP codes should be updated to more accurately account for the associated office/outpatient E/M visits. We proposed to increase the work, physician time, and PE inputs in the form of clinical staff time of the ESRD MCP codes based on the marginal difference between the 2020 and 2021

office/outpatient E/M visit work, physician time, and PE inputs built into each code, as summarized in Tables 23 and 24. By improving payment accuracy for the ESRD MCP codes, we would also be supporting broader efforts at advancing kidney health.⁵ We noted that we believe the majority of the visits included in the ESRD MCP bundles are being furnished, but sought comment on whether there are instances where the number and/or level of visits being furnished are not consistent with the number and level of visits built into the valuation of the code. The following is a summary of the comments we received and our responses.

Comment: One commenter noted that CMS inadvertently indicated a proposed work RVU of 8.04 for CPT code 90966 in in Table 19 in the CY 2021 PFS proposed rule (85 FR 50129). The commenter urged CMS to finalize a work RVU of 8.04 for this code to help eliminate structural barriers the commenter believes exist to home dialysis, and relieve the disparity in

⁵ HHS Launches President Trump's 'Advancing American Kidney Health' Initiative: <https://www.hhs.gov/about/news/2019/07/10/hhs-launches-president-trump-advancing-american-kidney-health-initiative.html>.

modality choice, as home dialysis receives a low RVU remuneration compared to in-center hemodialysis. Another commenter stated that the work RVU published in Addendum B of the proposed rule, 5.52, is the more accurate value.

Response: We regret the drafting error, and we reiterate that we did indeed propose a work RVU of 5.52 for CPT code 90966 as reflected in Addendum B. While we appreciate the concerns regarding access to care, we agree with comments stating that the proposed work RVU of 5.52 is the more accurate value.

Comment: Some commenters supported our proposal to increase the value of these services in light of previous changes to the E/M visit values. However, some commenters did not support increases to these code values absent a formal review, stating that it would be inconsistent to consider increasing values for some services and not others that are closely tied to the values of the office/outpatient E/M visit codes and/or codes that have E/M visits explicitly built into their definition or valuation, and that these codes should be subject to the same process for other potentially misvalued services. One

commenter disapproved of our proposed increasing the rates for these services, and stated that not all of the ESRD-related service CPT codes 90951–90962 were valued with a building block methodology of discrete E/M services. These commenters stated that CPT code 90951 was valued using magnitude estimation with a crosswalk to CPT code 99295, while CPT code 90954 was valued with a crosswalk to CPT code 99293. The commenters noted that both CPT code 99293 and 99295 have since been deleted. The commenters further stated that for the rest of the ESRD codes, the numbers and levels of visits were not determined based on surveys that led to use of the building block methodology; rather, they were negotiated using magnitude estimation in comparison to the two codes, CPT codes 99295 and 99293.

Response: Commenters are incorrect as to the methodology used to value CPT code 90951 in the proposed rule (as summarized in Table 22). We adopted the RUC recommended value for this service, which included the value of 13 instances of CPT code 99214 in the bundle. It was not valued using a crosswalk. However, we continue to believe it is accurate to consider these services as being among those for which values are closely tied to the values of the office/outpatient E/M visit codes. The ESRD MCP codes have numbers of visits explicitly built into their definitions, the majority of which we believe are taking place. Proportionate increases for these two codes will also maintain the relative relationships among the codes in this family.

We agree with commenters that CPT code 90954, this code was initially valued based on a crosswalk to CPT code 99293. When CPT code 99293 was deleted, it was replaced by CPT code 99471. By crosswalking CPT code 90954 to CPT code 99471, the relationship established between the two services is preserved. The public may nominate any code(s) as potentially misvalued through the usual misvalued code process or request resurvey or valuation through the AMA RUC.

We did not receive responses to our request for comments on whether there are instances where the number and level of visits actually furnished by practitioners reporting the ESRD MCP services differs from the number and level assumed in the valuation. For example, as shown in Table 22, the valuations included specified numbers and levels of office/outpatient E/M visits, but because the descriptors do not require the same level and number of visits to be furnished in order to report the services, the office/outpatient

E/M visit resources assumed to be included in the ESRD services might not actually be expended. CPT code 90957 (*End-stage renal disease (ESRD) related services monthly, for patients 12–19 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 4 or more face-to-face visits by a physician or other qualified health care professional per month*) was valued with 1x 99215, 3x 99214, and 3x 99213. However, CPT code 90957 includes four or more visits of unspecified levels. Similar to the global surgical codes, this might suggest that we should not “transfer” the increase in valuation of the stand-alone office/outpatient E/M visits into these ESRD bundles. Unlike TCM, the number and level of visit included in the ESRD service valuations does not necessarily match the actual services furnished and billed. We continue to be concerned that the number and level of visits built into the valuation of these codes may not accurately reflect the number and level of visits actually being furnished, such that they may be misvalued. We may consider this issue through future rulemaking, as we have for the global surgical codes. However, we still believe the ESRD MCP codes are different from the global surgical codes in that they are valued using building block and involve largely medical care rather than procedural care. The ESRD monthly services include ongoing medical management of a chronic condition, which makes them more similar to the kind of work typically furnished and billed as office/outpatient E/M visits. Therefore, we continue to believe that the ESRD MCP services’ valuation should be increased commensurate with the changes made to the values for office/outpatient E/M visits at this time as was proposed, and we are finalizing as proposed.

2. TCM Services (CPT Codes 99495 and 99496)

The goal of TCM services is to improve the health outcomes of patients recently discharged from inpatient and certain outpatient facility stays. We began making separate payment for TCM services in CY 2013. At that time, CPT code 99495 (*Transitional Care Management Services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver with 2 business days of discharge; medical decision making of at least moderate complexity during the service period; face-to-face visit within 14 calendar days of discharge*) was valued to include one, level 4 established patient

office/outpatient visit, while CPT code 99496 (*Transitional Care Management Services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver with 2 business days of discharge; medical decision making of high complexity during the service period; face-to-face visit within 7 calendar days of discharge*) was valued to include one, level 5 established patient office/outpatient visit (77 FR 68991). In the CY 2020 PFS final rule (84 FR 62687), we finalized the RUC-recommended work and direct PE inputs for the TCM codes which resulted in small RVU increases for both codes.

Because both TCM codes include a required face-to-face E/M visit (either a level 4 or 5 office/outpatient E/M visit), we proposed to increase the work RVUs associated with the TCM codes directly to the new valuations for the level 4 (CPT code 99214) and level 5 (CPT code 99215) office/outpatient E/M visits for established patients. Please see Tables 23 and 24 for long descriptors, as well as current and final work RVUs, physician time, and clinical staff time, for the TCM codes.

Comment: We received several comments specific to TCM, all in support of our proposal to revalue the TCM codes, although they did not provide specific rationale.

Response: We continue to believe that the values for services that explicitly include a single E/M visit of a given setting and level, and that were valued using a direct crosswalk to that visit, should be increased to reflect the new values for the included E/M visit. At this time, we are finalizing our proposed revised values for the two TCM codes shown in Table 23.

3. Maternity Services

In the CY 2002 PFS final rule with comment period (66 FR 55392–55393), we finalized separate global payment for maternity care services. The maternity packages are unique within the PFS in that they are the only global codes that provide a single payment for almost 12 months of services, including visits and other medical care, delivery services (that may include surgical services), and imaging; and were valued using a building-block methodology as opposed to the magnitude estimation method that is commonly used to value the 10- and 90-day global services. Seventeen CPT codes are used to bill for delivery, antepartum, and postpartum maternity care services, and these codes are all designated with a unique global period indicator “MMM.”

For CY 2021, the AMA RUC made a recommendation to revalue these services, along with their recommendations to revalue the 10- and 90- day global surgical packages, to account for increases in the values of office/outpatient E/M visits. In the CY 2020 PFS final rule, we decided not to make changes to the valuation of 10- and 90- day global surgical packages to reflect changes made to values for the office/outpatient E/M visit codes while we continue to collect and analyze the data on the number and level of office/outpatient E/M visits that are actually being performed as part of these services.

The 10- and 90-day global surgical packages are commonly valued using a methodology known as magnitude estimation. Magnitude estimation refers to a methodology for valuing work that identifies the appropriate work RVU for a service by gauging the total amount of work for that service relative to the work for a similar service across the PFS, without explicitly valuing the components of that work. Since its inception, the AMA RUC has worked under the prevailing assumption that magnitude estimation is the standard for valuation of all physicians' services, including those with global surgical packages. Consequently, the work values associated with expected typical E/M visits within a code's global period are not necessarily added to the physician work value for the code to determine the final work RVU. The postoperative visits in the 10- or 90-day global surgical code periods are often valued with reference to RVUs for separately-billed E/M visits, but the bundled post-operative visit RVUs do not directly contribute a certain number of RVUs to the valuation of the procedures.

In contrast, the MMM codes are unique in both the length of the global period and the methodology under which they were valued. When CMS established values for the maternity packages, we based them on RUC recommendations developed by the relevant specialty societies using the building block methodology. When it is used for a CPT code representing a bundle of services, the building block methodology components are the CPT codes that are considered to make up the bundled code and the inputs associated with those codes. Therefore, when the maternity packages were valued, the work (and other inputs) associated with the office/outpatient E/M visits in each package were explicitly included (along with values associated with imaging and other services in the package).

In addition, unlike the global surgical codes, we have reason to believe the visits included in the maternity codes are actually furnished given the evidence-based standards and professional guidelines for obstetrical care. For example, The *Guidelines for Perinatal Care* state that "a woman with an uncomplicated first pregnancy is examined every 4 weeks for the first 28 weeks of gestation, every 2 weeks until 36 weeks of gestation, and weekly thereafter."⁶ For this reason, we excluded the maternity codes from our recent global surgery data collection.

Given the valuation methodology and expectations for office/outpatient E/M visits in the maternity package codes, and the revaluation recommendation developed by the AMA RUC, we believe that the maternity packages should be updated to more accurately reflect the values of the office/outpatient E/M visits included in the packages. We believe that, due to the use of the building block valuation methodology rather than magnitude estimation, and the likelihood that the bundled visits are actually being furnished, the valuations recommended to us by the AMA RUC more accurately reflect the resource costs associated with furnishing these services. In the past, the work, physician time, and PE for these services have not been revalued to reflect changes to the office/outpatient E/M visits that are included as part of the package and therefore, the valuation of the MMM surgical packages have become misaligned with the valuation of their constituent office visits.

When revaluing the maternity packages, the AMA RUC used a methodology similar to what we used when revaluing the ESRD MCP codes and TCM by adding in the marginal differences in work, physician time, and PE in the form of clinical staff time between the current and 2021 E/M values. We noted that we believe that this method accurately accounts for the increase in valuation relative to the office/outpatient E/M visits. Therefore, we proposed to increase the work RVUs, physician time, and PE inputs in the form of clinical staff time associated with the maternity packages by accepting the revaluation recommendation from the AMA RUC as detailed in Tables 23 and 24.

We also noted that, in addition to appropriately reflecting changes to values of the office and outpatient E/M visits, increases made to the valuation of

the maternity package codes would be consistent with our broader focus on improving maternal health and birth outcomes. The proposed changes would account for additional resources involved with additional work that is needed on the part of practitioners to improve care for this patient population, such as risk identification and ensuring appropriate interventions and referrals.⁷

We received public comments on our proposal. The following is a summary of the comments we received and our responses.

Comment: Some commenters supported our proposal regarding the global maternity codes. However, other commenters requested a fair and relative payment for maternity care codes and for all global codes, whether the value of the code is based on magnitude estimation, building block methodology, or a mix of both methodologies, not any subset of them using potentially disparate valuation methodologies. Some commenters stated that it is unfair to apply the RUC-recommended E/M value increases to stand-alone E/M visits, select global codes (for example, monthly end-stage renal disease (ESRD) and bundled maternity care), and select bundled services (for example, monthly psychiatric management), but not to the E/M visits that are included in the global surgical packages, and that this will disrupt the relativity of the MPFS.

Response: We continue to believe that the maternity global surgical packages are distinct from the 10- and 90-day globals for the reasons articulated above. We note that commenters did not provide any information to suggest that the number and level of visits accounted for in the valuation of these codes are not being performed. In addition, unlike the global surgical packages, the maternity packages (and the ESRD monthly services discussed above) are focused on ongoing, comprehensive medical care. This kind of care is similar to the type of care typically furnished and billed as office/outpatient E/M visits and, as such, makes the services analogous. Having considered the public comments we received, we are finalizing our proposal to revalue the maternity bundles as recommended by the AMA RUC.

4. Assessment and Care Planning for Patients With Cognitive Impairment (CPT Code 99483)

In CY 2017, we established payment for HCPCS code G0505 (*Assessment and care planning for patients with cognitive impairment*) to provide payment for cognitive assessment and care planning for patients with cognitive impairments, believing that the CPT Editorial Panel was developing new coding for that service. In response to the CY 2017 PFS proposed rule, the AMA RUC submitted recommended values for this code, which we adopted in the CY 2017 PFS final rule. In CY 2018, the CPT Editorial Panel created CPT code 99483 for reporting of this service and in CY 2018, CMS adopted CPT code 99483 (deleting HCPCS code G0505) without changing the service valuation. Based upon input from commenters and the AMA RUC, the valuation of this service reflected the complexity involved in assessment and care planning for patients with cognitive impairment by including resource costs that are greater than the highest valued office/outpatient E/M visit (CPT code 99205, new patient level 5 visit) (81 FR 80352). Specifically, the service includes an evaluation of a patient's cognitive functioning and requires collecting pertinent history and current cognitive status all of which require medical decision making of moderate or high complexity.

With the forthcoming increased valuation for CPT code 99205 in CY 2021, we noted that the current work RVU for CPT code 99483 would have a lower work RVU than a new patient level 5 office/outpatient E/M visit. Given the way CPT code 99483 was valued initially, we noted that this valuation would create a rank order anomaly between the two codes. Since CPT code 99483 was valued in relation to a level 5 office/outpatient E/M new patient visit, we believed that an adjustment to the work, physician time, and PE for this service to reflect the marginal difference between the value of the level 5 new patient office/outpatient E/M visit in CY 2020 and CY 2021 would be appropriate to maintain payment accuracy. Therefore, we proposed to adjust the work, time, and PE in the form of clinical staff time for CPT code 99483 as shown in Tables 23 and 24. We used the ratio between the CY 2020 and CY 2021 values for the level 5 new patient office/outpatient visits and applied that ratio to increase the value of CPT code 99483 commensurate with the increase to CPT code 99205.

We received public comments on the Assessment and Care Planning for

Patients with Cognitive Impairment (CPT code 99483). The following is a summary of the comments we received and our responses.

Comment: Commenters generally supported our proposal to increase the valuation of CPT code 99483 in order to maintain the relationship between CPT code 99483 and the level 5 new patient office/outpatient visit, which was an important part of the initial valuation. Commenters stated that accurate payment for this service is essential for maintaining access to care for beneficiaries with cognitive impairment.

However, several commenters disagreed with our proposed revaluation of CPT code 99483. These commenters indicated that our proposed increase to CPT code 99483 would create a rank order anomaly between CPT codes 99205 and 99483. Commenters explained that the work RVU and time for code 99483 were based upon survey data and magnitude estimation. The RUC did not use any code as a crosswalk for valuation of CPT code 99483, and CPT code 99205 is not inherent to this service. Commenters suggested that in order to identify the relative valuation for the services of CPT code 99483, the code should be referred to the RUC for review.

Response: While we appreciate the additional insight into the valuation of these codes, we continue to believe that maintaining the value of CPT code 99483 at its current rate would create a rank order anomaly. This service comprises a stand-alone E/M visit that is always furnished; has most of the same components as CPT code 99205, including identical interpretive guidance for level of medical decision making; and was (and continues to appropriately be) valued in direct relation to CPT code 99205. While the cognitive assessment and care planning code was valued using magnitude estimation, these other factors provide additional support for continuing to reflect its exact relationship with the level 5 new patient office/outpatient visit. Therefore, we believe these services are sufficiently analogous to warrant preserving the same relationship. Members of the public can request that the RUC review certain code sets at any time. After consideration of the public comments, we are finalizing this proposal to revalue CPT code 99483 as proposed.

5. Initial Preventive Physical Examination (IPPE) and Initial and Subsequent Annual Wellness Visits (AWV)

In the CY 2011 PFS final rule with comment period, we finalized separate

payment for HCPCS codes G0438 (*Annual wellness visit; includes a personalized prevention plan of service (pps), initial visit*) and G0439 (*Annual wellness visit, includes a personalized prevention plan of service (pps), subsequent visit*). These services were valued via a direct crosswalk to the work, time, and direct PE inputs associated with CPT codes 99204 and 99214, respectively. In that same rule, we stated that the HCPCS code G0402 (*Initial preventive physical examination; face-to-face visit, services limited to new beneficiary during the first 12 months of Medicare enrollment*) was also valued based on a direct crosswalk to the work, time, and direct PE inputs for CPT code 99204 (75 FR 73408 through 73411).

Because these codes are valued using direct crosswalks to office/outpatient E/M visits, we believed that to maintain payment accuracy for the IPPE and the AWV, their values should be adjusted to reflect the changes in value for CPT codes 99204 and 99214. Therefore, we proposed to revise the work, physician time, and direct PE inputs for these codes as shown in Tables 23 and 24. The following is a summary of the comments we received and our responses.

Comment: Several commenters agreed with our proposal to revalue the IPPE and AWV HCPCS codes. These commenters agreed that because these services were valued using direct crosswalks to CPT codes 99204 and 99214, their values should be updated to reflect the increases to those visits finalized for CY 2021.

Response: We thank the commenters for their support.

Comment: Several commenters disagreed with our proposal to revalue the IPPE and AWV HCPCS codes. A commenter indicated that because the AMA RUC has never reviewed these codes, it is unclear that the work associated with the services represents work described by a level 4 office/outpatient E/M visit.

Response: We continue to believe that because the IPPE and AWV were valued using direct crosswalks to CPT codes 99204 and 99214, respectively, changes to the work associated with CPT codes 99204 and 99214 should be applied to the valuation of the IPPE and AWV codes. Regarding the point that these codes have not been reviewed by the RUC, we note that the IPPE and AWV are services that are unique to the Medicare program. These services are reported using Medicare-specific HCPCS G codes that are not applicable for other payers. As such, we do not see a need for these codes to be reviewed by

the RUC. If the RUC did review them, however, we would consider any RUC recommendations through our usual rulemaking process. As discussed above, our decision to consider a given code(s) as analogous to the office/outpatient E/M visits is not based on any single factor, but rather, takes into account various applicable factors. The

public may nominate any code(s) as potentially misvalued through the usual misvalued code process, or request that codes reviewed by the AMA RUC.

We received comments primarily in support of our proposal to revalue the IPPE and AWV codes. Our proposed revaluations reflect changes in value to the two office and outpatient E/M codes (that is, CPT codes 99204 and 99214)

upon which the IPPE and AWV code values were originally crosswalked. We continue to believe that to maintain payment accuracy, the values for the IPPE and AWV codes should be adjusted accordingly. After considering the comments, we are finalizing as proposed.

BILLING CODE 4120-01-P

TABLE 23: CY 2020 Work RVUs and CY 2021 Final Work RVUs

HCPSC Code	Long Descriptor	CY 2020 Work RVUs	Final CY 2021 Work RVUs
59400	Routine obstetric care including antepartum care, vaginal delivery (with or without episiotomy, and/or forceps) and postpartum care	32.16	36.58
59410	Vaginal delivery only (with or without episiotomy and/or forceps); including postpartum care	18.01	18.34
59425	Antepartum care only; 4-6 visits	6.31	7.80
59426	Antepartum care only; 7 or more visits	11.16	14.3
59430	Postpartum care only (separate procedure)	2.47	3.22
59510	Routine obstetric care including antepartum care, cesarean delivery, and postpartum care	35.64	40.39
59515	Cesarean delivery only; including postpartum care	21.47	22.13
59610	Routine obstetric care including antepartum care, vaginal delivery (with or without episiotomy, and/or forceps) and postpartum care, after previous cesarean delivery	33.87	38.29
59614	Vaginal delivery only, after previous cesarean delivery (with or without episiotomy and/or forceps); including postpartum care	19.73	20.06
59618	Routine obstetric care including antepartum care, cesarean delivery, and postpartum care, following attempted vaginal delivery after previous cesarean delivery	36.16	40.91
59622	Cesarean delivery only, following attempted vaginal delivery after previous cesarean delivery; including postpartum care	22.00	22.66
90951	End-stage renal disease (ESRD) related services monthly, for patients younger than 2 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 4 or more face-to-face visits by a physician or other qualified health care professional per month	18.46	23.92
90954	End-stage renal disease (ESRD) related services monthly, for patients 2-11 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 4 or more face-to-face visits by a physician or other qualified health care professional per month	15.98	15.98
90955	End-stage renal disease (ESRD) related services monthly, for patients 2-11 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 2-3 face-to-face visits by a physician or other qualified health care professional per month	8.79	10.32
90956	End-stage renal disease (ESRD) related services monthly, for patients 2-11 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 1 face-to-face visit by a physician or other qualified health care professional per month	5.95	6.64
90957	End-stage renal disease (ESRD) related services monthly, for patients 12-19 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 4 or more face-to-face visits by a physician or other qualified health care professional per month	12.52	15.46
90958	End-stage renal disease (ESRD) related services monthly, for patients 12-19 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 2-3 face-to-face visits by a physician or other qualified health care professional per month	8.34	9.87
90959	End-stage renal disease (ESRD) related services monthly, for patients 12-19 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of	5.50	6.19

HCPCS Code	Long Descriptor	CY 2020 Work RVUs	Final CY 2021 Work RVUs
	parents; with 1 face-to-face visit by a physician or other qualified health care professional per month		
90960	End-stage renal disease (ESRD) related services monthly, for patients 20 years of age and older; with 4 or more face-to-face visits by a physician or other qualified health care professional per month	5.18	6.77
90961	End-stage renal disease (ESRD) related services monthly, for patients 20 years of age and older; with 2-3 face-to-face visits by a physician or other qualified health care professional per month	4.26	5.52
90962	End-stage renal disease (ESRD) related services monthly, for patients 20 years of age and older; with 1 face-to-face visit by a physician or other qualified health care professional per month	3.15	3.57
90963	End-stage renal disease (ESRD) related services for home dialysis per full month, for patients younger than 2 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents	10.56	12.09
90964	End-stage renal disease (ESRD) related services for home dialysis per full month, for patients 2-11 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents	9.14	10.25
90965	End-stage renal disease (ESRD) related services for home dialysis per full month, for patients 12-19 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents	8.69	9.80
90966	End-stage renal disease (ESRD) related services for home dialysis per full month, for patients 20 years of age and older	4.26	5.52
90968	End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 2-11 years of age	0.30	0.34
90969	End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 12-19 years of age	0.29	0.33
90970	End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 20 years of age and older	0.14	0.18
99483	Assessment of and care planning for a patient with cognitive impairment, requiring an independent historian, in the office or other outpatient, home or domiciliary or rest home, with all of the following required elements: Cognition-focused evaluation including a pertinent history and examination; Medical decision making of moderate or high complexity; Functional assessment (eg, basic and instrumental activities of daily living), including decision-making capacity; Use of standardized instruments for staging of dementia (eg, functional assessment staging test [FAST], clinical dementia rating [CDR]); Medication reconciliation and review for high-risk medications; Evaluation for neuropsychiatric and behavioral symptoms, including depression, including use of standardized screening instrument(s); Evaluation of safety (eg, home), including motor vehicle operation; Identification of caregiver(s), caregiver knowledge, caregiver needs, social supports, and the willingness of caregiver to take on caregiving tasks; Development, updating or revision, or review of an Advance Care Plan; Creation of a written care plan, including initial plans to address any neuropsychiatric symptoms, neuro-cognitive symptoms, functional limitations, and referral to community resources as needed (eg, rehabilitation services, adult day programs, support groups) shared with the patient and/or caregiver with initial education and support. Typically, 50 minutes are spent face-to-face with the patient and/or family or caregiver.	3.44	3.80

HCPCS Code	Long Descriptor	CY 2020 Work RVUs	Final CY 2021 Work RVUs
99492	Initial psychiatric collaborative care management, first 70 minutes in the first calendar month of behavioral health care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified health care professional, with the following required elements: outreach to and engagement in treatment of a patient directed by the treating physician or other qualified health care professional; initial assessment of the patient, including administration of validated rating scales, with the development of an individualized treatment plan; review by the psychiatric consultant with modifications of the plan if recommended; entering patient in a registry and tracking patient follow-up and progress using the registry, with appropriate documentation, and participation in weekly caseload consultation with the psychiatric consultant; and provision of brief interventions using evidence-based techniques such as behavioral activation, motivational interviewing, and other focused treatment strategies.	1.70	1.88
99493	Subsequent psychiatric collaborative care management, first 60 minutes in a subsequent month of behavioral health care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified health care professional, with the following required elements: tracking patient follow-up and progress using the registry, with appropriate documentation; participation in weekly caseload consultation with the psychiatric consultant; ongoing collaboration with and coordination of the patient's mental health care with the treating physician or other qualified health care professional and any other treating mental health providers; additional review of progress and recommendations for changes in treatment, as indicated, including medications, based on recommendations provided by the psychiatric consultant; provision of brief interventions using evidence-based techniques such as behavioral activation, motivational interviewing, and other focused treatment strategies; monitoring of patient outcomes using validated rating scales; and relapse prevention planning with patients as they achieve remission of symptoms and/or other treatment goals and are prepared for discharge from active treatment.	1.53	2.05
99495	Transitional Care Management services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within 2 business days of discharge; medical decision making of at least moderate complexity during the service period; face-to-face visit within 14 calendar days of discharge	2.36	2.78
99496	Transitional Care Management services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within 2 business days of discharge; medical decision making of high complexity during the service period; face-to-face visit within 7 calendar days of discharge	3.10	3.79
G0402	Initial preventive physical examination; face-to-face visit, services limited to new beneficiary during the first 12 months of Medicare enrollment	2.43	2.60
G0438	Annual wellness visit; includes a personalized prevention plan of service (pps), initial visit	2.43	2.60
G0439	Annual wellness visit, includes a personalized prevention plan of service (pps), subsequent visit	1.50	1.92

BILLING CODE 4120-01-C**6. Emergency Department Visits**

We have revalued the ED visit codes (CPT codes 99281–99285, see Table 25 for long descriptors) under the PFS three times: In 1997, 2007, and most recently in 2020 as part of the misvalued code initiative. In the past, consistent with AMA RUC recommendations, we revalued these services such that the values of levels 1 through 3 of the ED visits were equal to levels 1 through 3 new patient office/outpatient E/M visits, and the levels 4 and 5 ED visits were valued higher than the levels 4 and 5 new patient office/outpatient E/M visits to reflect higher typical intensity. Also in the CY 2018 PFS final rule, we finalized a proposal to nominate all five ED visit codes as potentially misvalued, based on information suggesting that the work RVUs for ED visits may not appropriately reflect the full resources involved in furnishing these services. Specifically, some stakeholders expressed concerns that the work RVUs for these services have been undervalued given the increased acuity of the patient population and the heterogeneity of the sites, such as freestanding and off-campus EDs, where ED visits are furnished (82 FR 53018). Accordingly, the AMA RUC resurveyed and reviewed these five codes for the April 2018 RUC meeting, and provided a recommendation to CMS for consideration in CY 2020 rulemaking. In the CY 2020 PFS final rule (84 FR 62796), we finalized the RUC-recommended increases to the work

RVUs of 0.48 for CPT code 99281, a work RVU of 0.93 for CPT code 99282, a work RVU of 1.42 for 99283, a work RVU of 2.60 for 99284, and a work RVU of 3.80 for CPT code 99285. The RUC did not recommend, and we did not finalize, any change in direct PE inputs for the codes in this family. We note that the AMA RUC submitted these recommended values to CMS prior to the submission of the RUC-recommended revaluation of the office/outpatient E/M visit code family.

In response to our proposal to accept the RUC-recommended values for the ED visits, and to our comment solicitation in CY 2020 PFS proposed rule regarding whether we should revalue certain services commensurate with increases to the office/outpatient E/M visits (84 FR 62859 through 62860), a commenter submitted a public comment stating that relativity between the ED visits and office/outpatient E/M visits should be maintained, and submitting a specific recommendation for CPT codes 99283–99285 that was higher than the RUC-recommended values. The commenter stated we should preserve the relationship between the ED and office/outpatient E/M visit code sets that was established in prior years and that they believe would have likely been maintained had the office/outpatient E/M visits been reviewed prior to the ED visits. In order to avoid the rank order anomaly whereby an ED visit would be valued lower than the analogous office/outpatient E/M visit in CY 2021, we proposed in this current rulemaking

cycle to adopt the values recommended by this commenter, and as shown in Table 25. The following is a summary of the comments we received and our responses.

Comment: One commenter supported our proposal. This commenter stated that levels 1–3 ED visits should remain the same as the levels 1–3 new patient office visits, and that levels 4–5 ED visits should have a higher value than the corresponding office visits due to the complexity of the patients requiring that level of emergency care.

Response: We are finalizing as proposed, as shown in Table 25, in order to avoid a rank order anomaly. We understand that the AMA workgroup on E/M services is continuing to consider further changes in coding and interpretive guidance for visit level selection for all of the E/M visit code sets other than the office/outpatient E/M visits, in light of the recent changes for office/outpatient visits. We will continue to stay abreast of this important work and continue considering the appropriate valuation of ED and other E/M visit code sets in light of any future changes in this arena by the CPT Editorial Panel and the AMA RUC.

Comment: Several commenters requested that we consider the nursing facility visits (CPT codes 99304–99318), domiciliary visits (CPT codes 99324–99337), and home visits (CPT codes 99341–99350) to be analogous to the office/outpatient E/M visits, noting that they are identical in every way except the setting of care and vulnerability of

the patient population. These commenters indicated that the CPT Editorial Panel and the AMA RUC will be reviewing these code sets in the near future, and their primary concern was to maintain access to care until this review is complete. Accordingly, these commenters recommended that we increase the work RVUs for these services to the extent necessary to maintain the payment rate for these codes at 2020 levels. These commenters provided an estimate of the revised work RVUs necessary to achieve this as a temporary measure, stating that due to relatively low service volume, these changes would not negatively impact the conversion factor.

Response: We did not propose to treat and revalue nursing facility visits, domiciliary visits and home visits as analogous to office/outpatient E/M visits. We do not agree with the commenters' assertions that these visits are identical to the office/outpatient E/M visit codes. The setting of care means that these visits involve different resources. In particular, skilled nursing facility (SNF) visits are reported using the nursing facility visit codes, rendering them substantially different from office/outpatient visits. For these reasons, we do not believe the commenters' requested changes to values for nursing facility visits, domiciliary visits, and home visits would be appropriate at this time. Additionally, we understand that the AMA workgroup on E/M services is continuing to consider further changes in coding and interpretive guidance for visit level selection for all of the E/M visit code sets other than the office/outpatient E/M visits, in light of the forthcoming changes for office/outpatient visits. We will continue to stay abreast of this important work and consider the appropriate valuation of home, domiciliary, nursing facility and other E/M visit code sets in light of any future changes in this arena by the CPT Editorial Panel and the AMA RUC.

7. Therapy Evaluations

There are a number of services paid under the PFS that are similar in many respects to the office/outpatient E/M visit code set, but do not specifically include, were not valued to include, and were not necessarily valued relative to, office/outpatient E/M visits. Some codes inherently include work associated with assessment and work associated with management, similar to the work included in the office/outpatient E/M visits, which involve time spent face-to-face assessing and treating the patient. These services include therapy evaluation services and psychiatric

diagnostic evaluation services. The practitioners who furnish these services are prohibited by CMS from billing E/M services due to the limitations of their Medicare benefit categories. As such, the CPT Editorial Panel has created specific coding to describe the services furnished by these practitioners. Although these services are billed using specific, distinct codes relating to therapy evaluations and psychiatric diagnostic evaluations, we believe that a significant portion of the overall work in the codes is for assessment and management of patients, as it is for the office/outpatient E/M visit codes.

Therefore, we proposed to adjust the work RVUs for these services based on a broad-based estimate of the overall change in the work associated with assessment and management to mirror the overall increase in the work of the office/outpatient E/M visits. We calculated this adjustment based on a volume-weighted average of the increases to the office/outpatient E/M visit work RVUs from CY 2020 to CY 2021. Details on this calculation are available as a public use file on the CMS website at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices>. We proposed to apply that percentage increase, which we estimated to be approximately 28 percent, to the work RVUs for the therapy evaluation and psychiatric diagnostic evaluation services codes. We noted that we believe that it is important to the relativity of the PFS to revalue these services to reflect the overall increase in value associated with spending time assessing and managing patients, as reflected in the changes to work values for the office/outpatient E/M visits, particularly in recognition of the value of the clinicians' time which is spent treating a growing number of patients with greater needs and multiple medical conditions. We recognized that this is not the methodology typically used to value services under the PFS and solicited comment on potential alternative methodologies or specific values for these services, particularly about whether commenters believe it would be better to develop values using comparator codes from the office/outpatient E/M visit code set, and if so, why.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Some commenters supported our proposal to adjust the work RVUs for outpatient therapy evaluations and to consider alternative

approaches submitted by stakeholders in future rulemaking that may better reflect the true values. Many commenters urged us to implement similar increases to the work RVUs of additional therapy services, including CPT codes 97140 (*Manual therapy techniques (eg, mobilization/manipulation, manual lymphatic drainage, manual traction), 1 or more regions, each 15 minutes*), 97537 (*Community/work reintegration training (eg, shopping, transportation, money management, avocational activities and/or work environment/modification analysis, work task analysis, use of assistive technology device/adaptive equipment), direct one-on-one contact, each 15 minutes*), 97542 (*Wheelchair management (eg, assessment, fitting, training), each 15 minutes*), 97760 (*Orthotic(s) management and training (including assessment and fitting when not otherwise reported), upper extremity(ies), lower extremity(ies) and/or trunk, initial orthotic(s) encounter, each 15 minutes*), 97761 (*Prosthetic(s) training, upper and/or lower extremity(ies), initial prosthetic(s) encounter, each 15 minutes*), 97763 (*Orthotic(s)/prosthetic(s) management and/or training, upper extremity(ies), lower extremity(ies), and/or trunk, subsequent orthotic(s)/prosthetic(s) encounter, each 15 minutes*), 97597 (*Debridement (eg, high pressure waterjet with/without suction, sharp selective debridement with scissors, scalpel and forceps), open wound, (eg, fibrin, devitalized epidermis and/or dermis, exudate, debris, biofilm), including topical application(s), wound assessment, use of a whirlpool, when performed and instruction(s) for ongoing care, per session, total wound(s) surface area; first 20 sq cm or less*), 97598 (*Debridement (eg, high pressure waterjet with/without suction, sharp selective debridement with scissors, scalpel and forceps), open wound, (eg, fibrin, devitalized epidermis and/or dermis, exudate, debris, biofilm), including topical application(s), wound assessment, use of a whirlpool, when performed and instruction(s) for ongoing care, per session, total wound(s) surface area; each additional 20 sq cm, or part thereof (List separately in addition to code for primary procedure)*), 97750 (*Physical performance test or measurement (eg, musculoskeletal, functional capacity), with written report, each 15 minutes*), and 97755 (*Assistive technology assessment (eg, to restore, augment or compensate for existing function, optimize functional tasks and/or maximize environmental accessibility)*),

direct one-on-one contact, with written report, each 15 minutes). These commenters stated that these services also involve assessment and management, and thus, are analogous to office/outpatient E/M visit codes.

Response: In the proposed rule, we discussed that these evaluations contained types of work, specifically time spent assessing and managing patients, that is similar to the work described by the office/outpatient E/M visit code set. We stated that the increase in value associated with the office/outpatient E/M visits reflected the changes to work values, particularly in recognition of the value of the clinicians' time spent treating a growing number of patients with greater needs and multiple medical conditions, that could also apply to physical therapy, occupational therapy, and speech language pathology evaluations. The CPT codes identified by commenters involve work that is not similar to that captured by the office/outpatient E/M codes, such as various types of therapeutic treatment. Therefore, we do not believe it would be appropriate to adjust the values of these codes to reflect the changes in valuation for the office/outpatient E/M codes.

Comment: Some commenters did not support our proposal to implement the proposed increases to these therapy codes, stating that it will amplify a previous misvaluation by CMS for codes that do not specifically include, were not valued to include, and were not necessarily valued relative to, office/outpatient E/M visits. According to the commenters, these therapy codes were originally misvalued when CMS finalized a single RVU of 1.20 for all three codes rather than the RUC-recommended work RVUs, which created an overvaluation in aggregate for these services.

Response: In the proposed rule, we discussed our rationale for proposing to increase the values of these services relative to the increased values for the

office/outpatient E/M visit code set. If the commenters believe the therapy codes are not appropriately valued, we note the public may nominate any code(s) as potentially misvalued through the usual misvalued code process or request that it be surveyed or valued through the AMA RUC.

After considering the public comments, we are finalizing the changes in values for the therapy codes as proposed.

8. Behavioral Healthcare Services

The psychotherapy code set is divided into psychotherapy that can be furnished as a standalone service and psychotherapy furnished in conjunction with an office/outpatient E/M visit. The standalone psychotherapy services are CPT codes 90832, 90834, and 90837 (See Table 25 for long descriptors). The CPT codes describing psychotherapy furnished in conjunction with an office/outpatient E/M visit are CPT codes 90833 (*Psychotherapy, 30 minutes with patient when performed with an evaluation and management service (List separately in addition to the code for primary procedure)*), 90836 (*Psychotherapy, 45 minutes with patient when performed with an evaluation and management service (List separately in addition to the code for primary procedure)*) and 90838 (*Psychotherapy, 60 minutes with patient when performed with an evaluation and management service (List separately in addition to the code for primary procedure)*). As the values for the office/outpatient E/M visits are increasing, there will necessarily be an increase in the overall value for psychotherapy furnished in conjunction with office/outpatient E/M visits. We believe that it is important, both in terms of supporting access to behavioral health services through appropriate payment and maintaining relativity within this code family, to increase the values for the standalone psychotherapy services to reflect changes to the value of the

office/outpatient E/M visits which are most commonly furnished with the add-on psychotherapy services with equivalent times. For example, under the finalized revaluation of the office/outpatient E/M visits, the proportional work value of the standalone psychotherapy CPT code 90834 (*Psytx w pt 45 minutes*) would decrease relative to the combined work RVUs for CPT code 99214 (*Level 4 Office/outpatient visit est*) when billed with CPT code 90836 (*Psytx w pt w e/m 45 min*). The current combined work RVU for CPT code 99214 when reported with CPT code 90836 is 3.40 (1.90 + 1.50) and the current work RVU for CPT code 90834 is 2.0. With the revaluation of the office/outpatient E/M visits beginning for CY 2021, the combined work RVU for CPT codes 99214 and 90836 would be 3.82 (1.90 + 1.92), while the current work RVU for 90834 would remain at 2.0, resulting in a change to relativity between these services.

To maintain the current relativity, which we believe to be appropriate based on the proportionate difference between these services, we are proposing to increase the work RVU for CPT code 90834 from 2.00 to 2.25 based on the marginal increase in work value for CPT code 99214 from CY 2020 to CY 2021. Similarly, for CPT code 90832, which describes 30 minutes of psychotherapy, we proposed to increase its work RVU based on the increase to CPT code 99213, which is most commonly billed with the 30 minutes of psychotherapy add-on, CPT code 90833. For CPT code 90837, which describes 60 minutes of psychotherapy, we propose to increase the work RVU based on the proportional increase to CPT codes 99214 and 90838, which is the office/outpatient E/M visit code most frequently billed with the 60 minutes of psychotherapy add-on. Table 25 provides a summary of the current and final RVUs for these services.

BILLING CODE 4120-01-P

TABLE 25: Current and Final Work RVUS for ED Visits, Therapy, and Psychotherapy Services

HCPCS Code	Long Descriptor	CY 2020 Work RVU	CY 2021 Final Work RVU
99283	Emergency department visit for the evaluation and management of a patient, which requires these 3 key components: An expanded problem focused history; An expanded problem focused examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate severity.	1.42	1.60
99284	Emergency department visit for the evaluation and management of a patient, which requires these 3 key components: A detailed history; A detailed examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of high severity, and require urgent evaluation by the physician, or other qualified health care professionals but do not pose an immediate significant threat to life or physiologic function.	2.60	2.74
99285	Emergency department visit for the evaluation and management of a patient, which requires these 3 key components within the constraints imposed by the urgency of the patient's clinical condition and/or mental status: A comprehensive history; A comprehensive examination; and Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of high severity and pose an immediate significant threat to life or physiologic function.	3.80	4.00
90791	Psychiatric diagnostic evaluation	3.00	3.84
90792	Psychiatric diagnostic evaluation with medical services	3.25	4.16
90832	Psychotherapy, 30 minutes with patient	1.50	1.70
90834	Psychotherapy, 45 minutes with patient	2.00	2.24
90837	Psychotherapy, 60 minutes with patient	3.00	3.31
97161	Physical therapy evaluation: low complexity, requiring these components: A history with no personal factors and/or comorbidities that impact the plan of care; An examination of body system(s) using standardized tests and measures addressing 1-2 elements from any of the following: body structures and functions, activity limitations, and/or participation restrictions; A clinical presentation with stable and/or uncomplicated characteristics; and Clinical decision making of low complexity using standardized patient assessment instrument and/or measurable assessment of functional outcome. Typically, 20 minutes are spent face-to-face with the patient and/or family.	1.2	1.54
97162	Physical therapy evaluation: moderate complexity, requiring these components: A history of present problem with 1-2 personal factors and/or comorbidities that impact the plan of care; An examination of body systems using standardized tests and measures in addressing a total of 3 or more elements from any of the following: body structures and functions, activity limitations, and/or participation restrictions; An evolving clinical presentation with changing characteristics; and Clinical decision making of moderate complexity using standardized patient assessment instrument and/or measurable assessment of functional outcome. Typically, 30 minutes are spent face-to-face with the patient and/or family.	1.2	1.54
97163	Physical therapy evaluation: high complexity, requiring these components: A history of present problem with 3 or more personal factors and/or comorbidities that impact the plan of care; An examination of body systems using standardized tests and measures addressing a total of 4 or more elements from any of the following: body structures and functions, activity	1.2	1.54

HCPES Code	Long Descriptor	CY 2020 Work RVU	CY 2021 Final Work RVU
	limitations, and/or participation restrictions; A clinical presentation with unstable and unpredictable characteristics; and Clinical decision making of high complexity using standardized patient assessment instrument and/or measurable assessment of functional outcome. Typically, 45 minutes are spent face-to-face with the patient and/or family.		
97164	Re-evaluation of physical therapy established plan of care, requiring these components: An examination including a review of history and use of standardized tests and measures is required; and Revised plan of care using a standardized patient assessment instrument and/or measurable assessment of functional outcome Typically, 20 minutes are spent face-to-face with the patient and/or family.	0.75	0.96
97165	Occupational therapy evaluation, low complexity, requiring these components: An occupational profile and medical and therapy history, which includes a brief history including review of medical and/or therapy records relating to the presenting problem; An assessment(s) that identifies 1-3 performance deficits (ie, relating to physical, cognitive, or psychosocial skills) that result in activity limitations and/or participation restrictions; and Clinical decision making of low complexity, which includes an analysis of the occupational profile, analysis of data from problem-focused assessment(s), and consideration of a limited number of treatment options. Patient presents with no comorbidities that affect occupational performance. Modification of tasks or assistance (eg, physical or verbal) with assessment(s) is not necessary to enable completion of evaluation component. Typically, 30 minutes are spent face-to-face with the patient and/or family.	1.2	1.54
97166	Occupational therapy evaluation, moderate complexity, requiring these components: An occupational profile and medical and therapy history, which includes an expanded review of medical and/or therapy records and additional review of physical, cognitive, or psychosocial history related to current functional performance; An assessment(s) that identifies 3-5 performance deficits (ie, relating to physical, cognitive, or psychosocial skills) that result in activity limitations and/or participation restrictions; and Clinical decision making of moderate analytic complexity, which includes an analysis of the occupational profile, analysis of data from detailed assessment(s), and consideration of several treatment options. Patient may present with comorbidities that affect occupational performance. Minimal to moderate modification of tasks or assistance (eg, physical or verbal) with assessment(s) is necessary to enable patient to complete evaluation component. Typically, 45 minutes are spent face-to-face with the patient and/or family.	1.2	1.54
97167	Occupational therapy evaluation, high complexity, requiring these components: An occupational profile and medical and therapy history, which includes review of medical and/or therapy records and extensive additional review of physical, cognitive, or psychosocial history related to current functional performance; An assessment(s) that identifies 5 or more performance deficits (ie, relating to physical, cognitive, or psychosocial skills) that result in activity limitations and/or participation restrictions; and Clinical decision making of high analytic complexity, which includes an analysis of the patient profile, analysis of data from comprehensive assessment(s), and consideration of multiple treatment options. Patient presents with comorbidities that affect occupational performance. Significant modification of tasks or assistance (eg, physical or verbal) with assessment(s) is necessary to enable patient to complete evaluation component. Typically, 60 minutes are spent face-to-face with the patient and/or family.	1.2	1.54
97168	Re-evaluation of occupational therapy established plan of care, requiring these components: An assessment of changes in patient functional or medical status with revised plan of care; An update to the initial occupational profile to reflect changes in condition or environment that affect future interventions and/or goals; and A revised plan of care. A formal reevaluation is performed	0.75	0.96

HCPSC Code	Long Descriptor	CY 2020 Work RVU	CY 2021 Final Work RVU
	when there is a documented change in functional status or a significant change to the plan of care is required. Typically, 30 minutes are spent face-to-face with the patient and/or family.		
92521	Evaluation of speech fluency (eg, stuttering, cluttering)	1.75	2.24

BILLING CODE 4120-01-C

We received public comments on the Behavioral Healthcare services. The following is a summary of the comments we received and our responses.

Comment: A few commenters did not support this proposal, stating it relies on a flawed methodology; specifically, the stand-alone codes, which were established for NPPs to report psychotherapy services, were not valued based on a comparison to the psychotherapy codes delivered in conjunction with an E/M (codes 90833, 90836 and 90838). These commenters noted that these are two distinct codes sets: one for NPPs and one for physicians/QHPs representing different levels of similar work. CMS should compare psychotherapy to psychotherapy, not psychotherapy to psychotherapy plus E/M. Accordingly, these commenters did not support CMS's proposal to increase the values of 90832, 90834, and 90837 to reflect changes to the value of the office/outpatient E/M visits which are most commonly furnished with the add-on psychotherapy services with equivalent times.

Other commenters were concerned that the increases to some of the psychotherapy services will skew the relativity not only to the psychotherapy services provided along with an E/M service but to other services within the psychiatry section.

Some commenters supported increases for these services, but stated that commensurate relativity adjustments are needed for all Psychotherapy, Psychological and Neuropsychological Testing, and HBAI codes. Specifically, these commenters recommended proportionate increases to CPT codes 90791 (*Psychiatric diagnostic evaluation*), 90839 (*Psychotherapy for crisis; first 60 minutes*), 90845 (*Psychoanalysis*), 90847 (*Family psychotherapy (conjoint*

psychotherapy) (with patient present), 50 minutes), and 90853 (*Group psychotherapy (other than of a multiple-family group)*), as well as to the HBAI code set (CPT codes 96156 (*Health behavior assessment, or re-assessment (ie, health-focused clinical interview, behavioral observations, clinical decision making)*), 96158 (*Health behavior intervention, individual, face-to-face; initial 30 minutes*), 96159 (*Health behavior intervention, individual, face-to-face; each additional 15 minutes (List separately in addition to code for primary service)*), and 97170 (*Athletic training evaluation, moderate complexity, requiring these components: A medical history and physical activity profile with 1–2 comorbidities that affect physical activity; An examination of affected body area and other symptomatic or related systems addressing a total of 3 or more elements from any of the following: body structures, physical activity, and/or participation deficiencies; and Clinical decision making of moderate complexity using standardized patient assessment instrument and/or measurable assessment of functional outcome. Typically, 30 minutes are spent face-to-face with the patient and/or family.*); and to the Psychological and Neuropsychological Testing code set (CPT codes 96116 (*Neurobehavioral status exam (clinical assessment of thinking, reasoning and judgment, [eg, acquired knowledge, attention, language, memory, planning and problem solving, and visual spatial abilities])*), by physician or other qualified health care professional, both face-to-face time with the patient and time interpreting test results and preparing the report; first hour), 96121 (*Neurobehavioral status exam (clinical assessment of thinking, reasoning and judgment, [eg, acquired knowledge, attention, language, memory, planning and problem solving, and visual spatial*

abilities]), by physician or other qualified health care professional, both face-to-face time with the patient and time interpreting test results and preparing the report; each additional hour (List separately in addition to code for primary procedure)), 96130 (*Psychological testing evaluation services by physician or other qualified health care professional, including integration of patient data, interpretation of standardized test results and clinical data, clinical decision making, treatment planning and report, and interactive feedback to the patient, family member(s) or caregiver(s), when performed; first hour*), 96131 (*Neuropsychological testing evaluation services by physician or other qualified health care professional, including integration of patient data, interpretation of standardized test results and clinical data, clinical decision making, treatment planning and report, and interactive feedback to the patient, family member(s) or caregiver(s), when performed; first hour*), 96132 (*Neuropsychological testing evaluation services by physician or other qualified health care professional, including integration of patient data, interpretation of standardized test results and clinical data, clinical decision making, treatment planning and report, and interactive feedback to the patient, family member(s) or caregiver(s), when performed; first hour*), 96133 (*Neuropsychological testing evaluation services by physician or other qualified health care professional, including integration of patient data, interpretation of standardized test results and clinical data, clinical decision making, treatment planning and report, and interactive feedback to the patient, family member(s) or caregiver(s), when performed; each additional hour (List separately in addition to code for*

primary procedure)), 96136 (Psychological or neuropsychological test administration and scoring by physician or other qualified health care professional, two or more tests, any method; first 30 minutes), 96137 (Psychological or neuropsychological test administration and scoring by physician or other qualified health care professional, two or more tests, any method; each additional 30 minutes (List separately in addition to code for primary procedure)), 96138 (Psychological or neuropsychological test administration and scoring by technician, two or more tests, any method; first 30 minutes), 96139 (Psychological or neuropsychological test administration and scoring by technician, two or more tests, any method; each additional 30 minutes (List separately in addition to code for primary procedure)), and 96146 (Psychological or neuropsychological test administration, with single automated, standardized instrument via electronic platform, with automated result only)), all of which were valued relative to the family of psychotherapy services through the AMA RUC process.

Response: We identified standalone psychotherapy services for adjustment to preserve the relative value of these services to psychotherapy services performed in conjunction with an office/outpatient E/M. We disagree with commenters who stated that, as the standalone psychotherapy codes were purposefully and appropriately valued without reference to the values of E/M services, we should not consider updating these values to retain relativity between standalone psychotherapy and psychotherapy billed in conjunction with an office/outpatient E/M. With regard to requests from commenters to adjust values of additional services, we continue to believe that our rationale for proposing proportionate adjustments to the stand-alone psychotherapy services does not apply to the wider psychotherapy code set. We believe that the value of stand-alone psychotherapy is analogous to the values of the office/outpatient E/M visit codes due to the nature of the work performed. These services describe E/M-type services furnished in some circumstances by practitioners who would not bill E/M services. Health and Behavior Assessment and Intervention and Psychological and Neuropsychological Testing are fundamentally different in that they describe testing services.

Having considered the public comments we received, we are finalizing our proposed increases to the values of CPT codes 90832, 90834, and 90837.

9. Ophthalmological Services

Prior to the CY 2021 PFS proposed rule, we had received a request to revalue the following ophthalmological services that we did not propose to revalue:

- CPT code 92002: *Ophthalmological services: Medical examination and evaluation with initiation of diagnostic and treatment program; intermediate, new patient.*
- CPT code 92004: *Ophthalmological services: Medical examination and evaluation with initiation of diagnostic and treatment program; comprehensive, new patient, 1 or more visits.*
- CPT code 92012: *Ophthalmological services: Medical examination and evaluation, with initiation or continuation of diagnostic and treatment program; intermediate, established patient.*
- CPT code 92014: *Ophthalmological services: Medical examination and evaluation, with initiation or continuation of diagnostic and treatment program; comprehensive, established patient, 1 or more visits.*

We did not propose to revalue these services because they are not sufficiently analogous to the office/outpatient E/M visit codes. While these ophthalmological services have historically been valued relative to office/outpatient E/M visits, the AMA RUC has not reviewed them since 2007. Two of these ophthalmological services can include more than one visit, and the number of visits included in the package is uncertain and therefore not so closely tied to office and outpatient E/M services, which describe a single visit. In addition, starting in 2021, the office/outpatient E/M visit codes will be substantially redefined to allow time or medical decision-making for code level selection—concepts that do not apply to the ophthalmological visits which rely on criteria specific to evaluation, examination, specified technical procedures, and treatment of ocular conditions for purposes of level selection.⁸ The number of levels is different within the two code sets, and the number of levels has changed for office/outpatient E/M visits. Given the revised code set and framework for level selection for office/outpatient E/M visits, the level of office/outpatient E/M visits to which the ophthalmological visits might be analogous is unclear. We also noted that we are aware that ophthalmologists report office/outpatient E/M visits as well these ophthalmologic-specific evaluation codes. The relationship between the two

separate code sets and the reason for maintaining and using both of them is unclear.

In the proposed rule, we also noted that the four ophthalmological evaluation codes are frequently reported with modifier -25 (significant, separately identifiable E/M service by the same physician on the same day of the procedure or other service), as are ED visits. For the ophthalmological evaluations and ED visits, approximately one-third of the time, the same-day E/M service is a zero-day global surgical code, whereas for the office/outpatient E/M visits, approximately one-fifth of the same-day claims are for zero-day global services. We noted that we believe that visit/evaluation codes furnished the same day as a minor procedure are not closely analogous to stand-alone office/outpatient E/M visits. As we discussed in prior rulemaking, we continue to believe that separately identifiable visits occurring on the same day as minor procedures (such as zero-day global procedures) have resources that are sufficiently distinct from the costs associated with furnishing office/outpatient E/M visits to warrant different payment (see, for example, the CY 2019 PFS final rule, 83 FR 59639). As we were still in process of analyzing these data, we solicited public comment on whether visits/evaluations that are furnished frequently with same-day procedures should be revalued commensurate with increases to the office/outpatient E/M visits, or whether they are substantially different enough to warrant independent valuation. We noted further that the stand-alone psychotherapy services would be revalued to maintain relativity with the psychotherapy services that can be performed in conjunction with an E/M visit. Stand-alone psychotherapy services cannot be billed with office/outpatient E/M visits while ophthalmological visits can, as well as with a separate procedure.

We received public comments on our decision not to propose new valuations for these ophthalmological services. The following is a summary of the comments we received and our responses.

Comment: One commenter stated that concurrent billing with same-day, zero-day global procedures should not be factor in whether or not we increase the ophthalmology evaluation codes commensurate with office/outpatient E/M visits. The commenter stated that the intravitreal injection code accounting for much of the volume of these zero-day global procedures (CPT code 67028) does not include an office examination. The commenter also stated that resource

⁸ CPT Codebook pp. 656–7.

duplication between the same-day services is accounted for in the RUC valuation that reduces the pre- and post-times for the procedure if it is furnished more than 50 percent of the time with an E/M visit or eye evaluation. Another commenter noted that the AWV can be reported the same day as an office/outpatient E/M visit, and urged CMS not to treat primary care and surgical specialties differentially.

Response: We continue to believe that separately identifiable visits occurring on the same day as minor procedures (such as zero-day global procedures) have resources that are sufficiently distinct from the costs associated with furnishing stand-alone office/outpatient E/M visits to warrant different payment. However, we understand that such a policy would apply to ophthalmology evaluations, ED visits and other services. We believe the better way to account for duplicative resources across the fee schedule would be a payment reduction along the lines of a multiple procedure payment reduction for services reported using modifier – 25. We will continue to consider implementing a policy to address this issue. We note that the policy that we proposed and declined to finalize for CY 2019 would have applied a multiple “procedure” payment adjustment to two visits reported the same day, as well as a visit with a minor procedure. We are also considering whether the office/outpatient visit complexity HCPCS add-on code GPC1X should be reported when the visit is reported with modifier – 25 (see section II.F.2.c. of this final rule).

Comment: One commenter stated that while the ophthalmological evaluations have not been recently revalued by the AMA RUC, the AWV has never been reviewed by the RUC.

Response: We discuss above our rationale for considering the AWV as an analogous service to the office/outpatient E/M services. Regarding consideration of the AWV by the RUC, we note that the AWV is a service described by a code that is unique to Medicare and not applicable for other payers. As such, we do not see a need for the RUC to review this service, but if it did, we would consider its recommendations through our usual rulemaking process. As discussed above, our decision to consider a given code(s) as analogous to the office/outpatient E/M visits is not based on any single factor, but rather takes into account various applicable factors. The public may nominate any code(s) as potentially misvalued through the usual misvalued code process or request that

it be surveyed or valued through the AMA RUC.

Comment: The same commenter stated that all four of the ophthalmology codes are valued based on a single visit on the date of encounter, and the level of that visit is directly compared to levels of office E/M codes. The commenter also stated that while the ophthalmological codes do not rely on time to select visit level, both code sets will be able to use MDM to select visit level, and that MDM was a basis for prior comparison to office/outpatient E/M visit codes.

Response: We continue to note that two of these ophthalmological services can include more than one visit, and therefore, the resource costs are not as closely tied to office and outpatient E/M visits (that describe a single visit) as the AWV/IPPE, TCM, cognitive impairment and other codes we are considering to be analogous to office/outpatient E/M visits. We disagree that reliance on time and differences in MDM interpretive guidance are not substantial differences between the 2021 office/outpatient E/M visit codes and the ophthalmology evaluation codes. Also, we continue to believe that the corresponding visit levels for the two code sets are not clear, such that the level of office/outpatient E/M visits to which the ophthalmological visits might be analogous is not apparent. We continue to note that ophthalmologists report office/outpatient E/M visits as well these ophthalmologic-specific evaluation codes. The relationship between the two separate code sets and the reason for maintaining and using both of them remains unclear. Having considered the public comments we received, we are finalizing our decision not to revalue the ophthalmological evaluations commensurate with the changes to the office/outpatient EM visit valuations for 2021. Stakeholders may still request review of these services by the RUC or through our misvalued code initiative.

c. Comment Solicitation on the Definition of HCPCS Add-On Code G2211

Although we believe that the RUC-recommended values for the revised office/outpatient E/M visit codes will more accurately reflect the resources involved in furnishing a typical office/outpatient E/M visit, we continue to believe that the typical visit described by the revised and revalued office/outpatient E/M visit code set still does not adequately describe or reflect the resources associated with primary care and certain types of specialty visits. Therefore, in the CY 2020 PFS final rule

(84 FR 62856), we finalized the HCPCS add-on code G2211 (which replaces temporary HCPCS add-on code GPC1X) and which describes the “visit complexity inherent to evaluation and management associated with medical care services that serve as the continuing focal point for all needed health care services and/or with medical care services that are part of ongoing care related to a patient’s single, serious, or complex condition.” We stated that we were not restricting billing based on specialty, but that we did assume that certain specialties furnished these types of visits more than others.

Since the publication of the CY 2020 PFS final rule, some specialty societies have stated that our definition of this service, as articulated in the code descriptor and the associated preamble discussion, is unclear. For example, some stakeholders have suggested that HCPCS add-on code G2211, as currently described, could be applicable for every office/outpatient E/M visit. They have also expressed concerns regarding our utilization assumptions, since we assumed that specialties that predominantly furnish the kind of care described by the code would bill it with every visit. Therefore, we solicited public comments providing additional, more specific information regarding what aspects of the definition of HCPCS add-on code G2211 are unclear, how we might address those concerns, and how we might refine our utilization assumptions for the code.

We continue to believe that the time, intensity, and PE involved in furnishing services to patients on an ongoing basis that result in a comprehensive, longitudinal, and continuous relationship with the patient and involves delivery of team-based care that is accessible, coordinated with other practitioners and providers, and integrated with the broader health care landscape, are not adequately described by the revised office/outpatient E/M visit code set. We believe the inclusion of HCPCS add-on code G2211 appropriately recognizes the resources involved when practitioners furnish services that are best-suited to patients’ ongoing care needs and potentially evolving illness. We also believe the work reflected in HCPCS add-on code G2211 is inherently distinct from existing coding that describes preventive and care management services. For example, the AWV describes and pays for a static annual health assessment rather than the time, intensity, and PE involved in furnishing services to patients on an ongoing basis. Similarly, TCM service codes are focused on care management for 30 days

following a discharge rather than the time, intensity, and PE involved in furnishing services to patients on an ongoing basis. Chronic care management and principal care management service codes are limited to patients with chronic condition(s). Under chronic care management codes, patients have two or more chronic conditions that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, whereas principal care management services are for patients who have a single high-risk disease of sufficient severity to place the patient at risk of hospitalization or have been the cause of recent hospitalization. In contrast, we believe HCPCS add-on code G2211 reflects the time, intensity, and PE when practitioners furnish services that enable them to build longitudinal relationships with all patients (that is, not only those patients who have a chronic condition or single-high risk disease) and to address the majority of patients' health care needs with consistency and continuity over longer periods of time. For example, in the context of primary care, HCPCS add-on code G2211 could recognize the resources inherent in holistic, patient-centered care that integrates the treatment of illness or injury, management of acute and chronic health conditions, and coordination of specialty care in a collaborative relationship with the clinical care team. In the context of specialty care, HCPCS add-on code G2211 could recognize the resources inherent in engaging the patient in a continuous and active collaborative plan of care related to an identified health condition the management of which requires the direction of a clinician with specialized clinical knowledge, skill and experience. Such collaborative care includes patient education, expectations and responsibilities, shared decision-making around therapeutic goals, and shared commitments to achieve those goals. In both examples, HCPCS add-on code G2211 reflects the time, intensity, and PE associated with providing services that result in care that is personalized to the patient. Finally, we believe that the HCPCS add-on code G2211 could bolster the efforts of practitioners in rural communities, including NPPs, to deliver the comprehensive and longitudinal care that HCPCS add-on code G2211 describes.

We received public comments on our comment solicitation related to HCPCS add-on code G2211. The following is a

summary of the comments we received and our responses.

Comment: Many commenters who rely upon office/outpatient E/M visits to report the majority of their services continued to be supportive of HCPCS add-on code G2211. These commenters agreed with CMS that the revised office/outpatient E/M visit codes do not adequately describe or reflect the resources associated with primary care and certain types of specialty visits and agreed that the code descriptor fits its intended purpose, is well-defined, and did not allude to specific specialties. Other commenters disagreed, maintaining that the definition of HCPCS add-on code G2211 is unclear. Some commenters stated that it appeared that HCPCS add-on code G2211 could be reported with most office/outpatient E/M visits and questioned whether widespread use accurately captured genuine longitudinal care relationships. These commenters requested that CMS provide clinical examples for appropriate reporting. Other commenters provided CMS with suggested clinical examples for when HCPCS add-on code G2211 could be reported. For example, some commenters stated that HCPCS add-on code G2211 would capture additional work by the reporting practitioner to treat patients with disease processes that require active monitoring outside of office/outpatient E/M visits and are not captured in current coding. This work could include oversight of medication refills; evaluating appropriateness of current and new medications, including those initially prescribed by other practitioners; and conducting medication-related monitoring and safety activities when these activities are not part of a visit. It could also include review of lab and imaging reports, including those requested by another practitioner, that fall outside the timeframe of an office/outpatient E/M visit, and do not necessitate a new visit. Finally, some commenters suggested that CMS describe circumstances when HCPCS add-on code G2211 would not be reported with an office/outpatient E/M visit.

Response: We appreciate all of the feedback from the commenters. We believe that HCPCS add-on code G2211 captures the work by the reporting practitioner for many office/outpatient E/M visits that is not accounted for in the valuation of the primary office/outpatient E/M visit code. In the context of primary care, a clinical example for the use of HCPCS add-on code G2211 could be: a 68 year-old woman with progressive congestive heart failure

(CHF), diabetes, and gout, on multiple medications, who presents to her physician for an established patient visit. The clinician discusses the patient's current health issues, which includes confirmation that her CHF symptoms have remained stable over the past 3 months. She also denies symptoms to suggest hyper- or hypoglycemia, but does note ongoing pain in her right wrist and knee. The clinician adjusts the dosage of some of the patient's medications, instructs the patient to take acetaminophen for her joint pain, and orders laboratory tests to assess glycemic control, metabolic status, and kidney function. The practitioner also discusses age appropriate prevention with the patient and orders a pneumonia vaccination and screening colonoscopy. In this clinical example, the practitioner is serving as a focal point for the patient's care, addressing the broad scope of the patient's health care needs, by furnishing care for some or all of the patient's conditions across a spectrum of diagnoses and organ systems with consistency and continuity over time.

Moreover, we believe that similar visits might be furnished by other specialists when management of a particular disease condition(s) is ongoing or serves as a focal point of care for a patient's overall health needs over a period of time. In other words, when care by specialists for a particular disease condition(s) is consistent and continuous over long periods of time, the work associated with those visits is similar to the kind of work described above.

In contrast, there are many visits with new or established patients where HCPCS add-on code G2211 would not be appropriately reported, such as when the care furnished during the office/outpatient E/M visit is provided by a professional whose relationship with the patient is of a discrete, routine, or time-limited nature, such as a mole removal or referral to a physician for removal of a mole; for treatment of a simple virus; for counseling related to seasonal allergies, initial onset gastroesophageal reflux disease; treatment for a fracture; and where comorbidities are either not present or not addressed, and/or when the billing practitioner has not taken responsibility for ongoing medical care for that particular patient with consistency and continuity over time, or does not plan to take responsibility for subsequent, ongoing medical care for that particular patient with consistency and continuity over time. Reporting the add-on code with these types of visits would be inconsistent with the code

descriptor, which describes care that is a continuing focal point and/or part of ongoing care. We also would not expect that HCPCS add-on code G2211 would be reported when the office/outpatient E/M is reported with a payment modifier, such as the modifier -25 described in the ophthalmological services section above. It seems likely that visits reported with payment modifiers have resources that are sufficiently distinct from stand-alone office/outpatient E/M visits. We will be considering this issue to inform potential future rulemaking.

Comment: Some commenters suggested that a lack of clarity in the definition of HCPCS add-on code G2211 poses program integrity challenges for CMS. They pointed out that CMS has offered no information about how appropriate use will be determined or what documentation will be expected. Some commenters requested guidance on what documentation would need to be included when HCPCS add-on code G2211 is reported.

Response: We appreciate the concerns raised by the commenters. Since HCPCS add-on code G2211 is a new service paid under the PFS, we plan to monitor utilization for appropriate use of the add-on code, which could inform additional efforts to refine the code descriptor, or provide further guidance, as appropriate. With respect to documentation, we are considering an approach to minimize burden similar to what we finalized in the CY 2019 PFS final rule (83 FR 59560) for HCPCS add-on codes GPC1X and GCG0X. In that rule, we discussed that we would expect that information included in the medical record or in the claims history for a patient/practitioner combination, such as diagnoses, the practitioner's assessment and plan for the visit, and/or other service codes billed could serve as supporting documentation. We believe Medicare claims data could be a useful gauge of appropriate use of the code. For example, when billing practitioners are separately reporting care management services for particular beneficiaries, the G2211 add-on service would be appropriately reported with their visits, as claims for these care management services could indicate an ongoing, continuous relationship with the patient. Likewise, patients returning to the same practitioner for routine preventive services would indicate that the practitioner has taken responsibility for ongoing medical needs for that patient with consistency and continuity over time. In contrast, an annual visit for ophthalmologic care, or a single episode of dermatologic care—even when several services are billed over a

few months—would not suggest ongoing care provided with consistency and continuity over time and would suggest an inappropriate use of the code, were it to be billed with such visits.

Additionally, to provide evidence of the ongoing relationship between the patient and practitioner, it is possible that use of patient relationship codes that were established under MACRA and finalized in the CY 2018 PFS (82 FR 53234) could be further example of evidence in the claims record to support the use of HCPCS add-on code G2211. These codes are Level II HCPCS modifiers that help define and distinguish the relationship and responsibility of a clinician with a patient at the time of furnishing an item or service, facilitate the attribution of patients and episodes to one or more clinicians, and to allow clinicians to self-identify their patient relationships.

Comment: Some commenters recommended that HCPCS add-on code G2211 should be available for both new and established patients. A few other commenters noted that the code descriptor for HCPCS add-on code G2211 had one version of the long descriptor in this section of the proposed rule and another version of the long descriptor in section II.D. Another commenter recommended an edit to the code descriptor to eliminate the comma between “single” and “serious.”

Response: We are confirming that HCPCS add-on code G2211 can be reported for both new and established patients. With respect to the version of the long descriptor, the version used in section II.D of the proposed rule was a drafting error. We regret the error and have corrected the description in section II.D of this final rule. While we appreciate the suggested edit to the code descriptor, we did not believe it offered additional clarification. To improve the clarity of the code descriptor, we are finalizing a refinement for the code description to clarify that the code applies to a single condition that is serious, rather than any single condition. We are inserting the word “condition” after “single, serious”. The revised descriptor reads as follows, “Visit complexity inherent to evaluation and management associated with medical care services that serve as the continuing focal point for all needed health care services and/or with medical care services that are part of ongoing care related to a patient's single, serious condition or a complex condition. (Add-on code, list separately in addition to office/outpatient evaluation and management visit, new or established).”

Comment: A few commenters recommended that CMS allow HCPCS add-on code G2211 to be reported with E/M services furnished in domiciliary care settings.

Response: We reiterate that we are implementing HCPCS add-on code G2211 because we believe that the typical visit described by the revised and revalued office/outpatient E/M visit code set still does not adequately describe or reflect the resources associated with primary care and certain types of specialty visits and as such, does not include other types of E/M visits. As the CPT Editorial Panel, the AMA RUC and CMS consider future changes to other E/M visit code sets, we will consider this issue in that context.

Comment: Other commenters expressed continued concern regarding the necessity of HCPCS add-on code G2211 entirely and recommended that CMS withdraw the code. A few stated that HCPCS add-on code G2211 is not a separately identifiable service given the changes to the office/outpatient E/M visit code set and that it may be duplicative to care management services, such as TCM or CCM.

Response: As we stated in the proposed rule, we continue to believe that the time, intensity, and PE involved in furnishing services to patients on an ongoing basis that result in a comprehensive, longitudinal, and continuous relationship with the patient and involves delivery of team-based care that is accessible, coordinated with other practitioners and providers, and integrated with the broader health care landscape, are not adequately described by the revised office/outpatient E/M visit code set. We also reiterate what we stated in the proposed rule that HCPCS add-on code G2211 is inherently distinct from coding that describes care management services. For example, TCM service codes are focused on care management for 30 days following a discharge rather than the time, intensity, and PE involved in furnishing services to patients on an ongoing basis. Chronic care management and principal care management service codes are limited to patients with chronic condition(s). Under chronic care management codes, patients have two or more chronic conditions that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, whereas principal care management services are for patients who have a single high-risk disease of sufficient severity to place the patient at risk of hospitalization or have been the cause of recent hospitalization. In contrast, we believe HCPCS add-on code G2211 reflects the time, intensity,

and PE when practitioners furnish services that enable them to build longitudinal relationships with all patients (that is, not only those patients who have a chronic condition or single-high risk disease) and to address the majority of patients' health care needs with consistency and continuity over longer periods of time.

Comment: Many commenters expressed concerns about the utilization assumptions for HCPCS add-on code G2211. Commenters stated that, in the CY 2020 PFS rulemaking cycle, CMS appeared to assume that HCPCS add-on code G2211 would be reported with 50 percent of all office/outpatient E/M visits; and in the CY 2021 PFS proposed rule, CMS appeared to assume that HCPCS add-on code G2211 would be reported with 75 percent of all office/outpatient E/M visits. Commenters noted that this additional utilization further contributed to the redistributive effect of the budget neutrality adjustment related to revaluing the office/outpatient visit codes. The AMA RUC requested that CMS publish the methodology used for the utilization assumptions in the CY 2021 PFS proposed rule prior to HCPCS add-on code G2211's implementation.

Response: In the CY 2020 PFS rulemaking cycle, we proposed and finalized that HCPCS add-on code G2211 would be billed with every level of an office/outpatient E/M visit. We assumed that specialties that rely on office/outpatient E/M visit coding to report the majority of their services would be most likely to report HCPCS add-on code G2211 with every office/outpatient E/M visit they reported and we did not restrict billing to any particular specialty or group of specialties. We published the utilization estimates for HCPCS add-on code G2211 in the CY 2020 PFS final rule in this public use file: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/Downloads/CY2020-PFS-FR-EM-Add-on-Code.zip>.

In the CY 2021 PFS proposed rule, we continued to assume that the specialties listed in the aforementioned public use file would report HCPCS add-on code G2211 with all of their office/outpatient E/M visits. As part of updating our data sources from CY 2018 to CY 2019 claims data for setting rates for the CY 2021 PFS proposed rule, we included modifier – 25 utilization, meaning that we assumed that HCPCS add-on code G2211 would also be reported with office/outpatient E/M visits that were reported with a modifier – 25. While this additional utilization was included in the budget neutrality calculations, we

note that other proposals for CY 2021 also factor into the budget neutrality adjustment.

As we noted above, while we would not expect that HCPCS add-on code G2211 would be reported when the office/outpatient E/M visits is reported with a payment modifier, such as a modifier – 25, we are not establishing any policies that prohibit reporting the add-on code under those circumstances. Thus, we will continue to include office/outpatient visits reported with a modifier – 25 in our utilization assumptions for HCPCS code G2211 as part of calculating the budget neutrality adjustment for the policies we are finalizing in this rule. As we noted above, we would not expect HCPCS add-on code G2211 to be reported when the visit is reported with a modifier 2 – 5, and will consider whether to establish an explicit prohibition in future rulemaking. We continue to believe that separately identifiable visits occurring on the same day as minor procedures (such as zero-day global procedures) have resources that are sufficiently distinct from the costs associated with furnishing stand-alone office/outpatient E/M visits to warrant different payment. We are also analyzing our data to determine if separately identifiable visits occurring on the same day as another visit have resources that are sufficiently distinct from the costs associated with furnishing stand-alone office/outpatient E/M visits to warrant different payment. We will consider these analyses to inform potential future rulemaking.

Comment: Many commenters recommended that CMS reexamine and lower utilization assumptions for HCPCS add-on code G2211. These commenters stated that utilization tends to be lower than expected in the first year of implementation and cited the initial low utilization of the TCM and CCM codes. These commenters also stated that they expected adoption to be slow given the necessity for medical societies to educate their members about appropriate use, ongoing implementation of the revisions to the office/outpatient E/M visit code set, electronic health records integration, and the persistence of the COVID–19 pandemic in many parts of the country. They recommended that utilization in the initial year could be as low as 10 percent of reported office/outpatient E/M visits and could range as high as 25 percent of reported office/outpatient E/M visits. Other commenters recommended that CMS delay the implementation of HCPCS add-on code G2211, citing the expected budget neutrality offset.

Response: We acknowledge commenters' concerns that, given the necessity of medical societies to educate their members about appropriate use, ongoing implementation of the revisions to the office/outpatient E/M visit code set, electronic health records integration, and the persistence of the COVID–19 pandemic, practitioners that rely on office/outpatient E/M visits to report the majority of their services are not likely to report HCPCS add-on code G2211 with every office visit. However, we disagree the utilization will be as low as the 10 percent to 25 percent range as recommended by these commenters. We have not implemented any additional policies that restrict the billing of this code, and so we are assuming that utilization will be 90 percent of office/outpatient E/M visits instead of the 100 percent that we assumed in the proposed rule.

d. Prolonged Office/Outpatient E/M Visits (CPT Code 99417/HCPCS Code G2212)

We reviewed our final policy for 2021 regarding the reporting of prolonged office/outpatient E/M visits finalized in the CY 2020 PFS final rule (84 FR 62848 through 62850). To report these visits beginning in 2021, we finalized CPT code 99417 (*Prolonged office or other outpatient evaluation and management service(s) (beyond the total time of the primary procedure which has been selected using total time), requiring total time with or without direct patient contact beyond the usual service, on the date of the primary service; each additional 15 minutes (List separately in addition to CPT codes 99205, 99215 for office or other outpatient evaluation and management services)*), which was referred to in our previous rules as temporary CPT code 99XXX. Under CPT prefatory language, CPT code 99417 should only be reported when time is used to select the visit level, and only time of the physician or qualified healthcare professional is counted. In the CY 2020 PFS final rule, we stated that our interpretation of revised CPT prefatory language and reporting instructions would mean that CPT code 99417 could be reported when the physician's (or NPP's) time is used for code level selection and the time for a level 5 office/outpatient E/M visit (the floor of the level 5 time range) is exceeded by 15 minutes or more on the date of service (84 FR 62848 through 62849). The intent of the CPT Editorial Panel was unclear because of the use of the terms "total time" and "usual service" in the CPT code descriptor (*"requiring total time with or without direct patient contact beyond the usual*

service.”) The term “total time” is unclear because office/outpatient E/M visits now represent a range of time, and “total” time could be interpreted as including prolonged time. Further, the term, “usual service” is undefined. There is no longer a typical time in the code descriptor that could be used as point of reference for when the “usual time” is exceeded for all practitioners, and there would be variation (as well as potential double counting of time) if applied at the individual practitioner level.

Having reviewed the policy we finalized last year, we believe that allowing reporting of CPT code 99417 after the minimum time for the level 5 visit is exceeded by at least 15 minutes would result in double counting time. As a specific example, the time range for CPT code 99215 is 40–54 minutes. If the reporting practitioner spent 55 minutes of time, 14 of those minutes are included in the services described by CPT code 99215. Therefore, only 1 minute should be counted towards the additional 15 minutes needed to report

CPT code 99417 and prolonged services should not be reportable as we finalized last year (see Table 33 of the CY 2020 PFS final rule (84 FR 62849)). Therefore, we proposed that when the time of the reporting physician or NPP is used to select office/outpatient E/M visit level, CPT code 99417 could be reported when the maximum time for the level 5 office/outpatient E/M visit is exceeded by at least 15 minutes on the date of service. In Tables 26 and 27, we provided examples.

TABLE 26: Proposed Prolonged Office/Outpatient E/M Visit Reporting - New Patient

CPT Code(s)	Total Time Required for Reporting*
99205	60-74 minutes
99205 x 1 and 99417 x 1	89-103 minutes
99205 x 1 and 99417 x 2	104-118 minutes
99205 x 1 and 99417 x 3 or more for each additional 15 minutes.	119 or more

*Total time is the sum of all time, including prolonged time, spent by the reporting practitioner on the date of service of the visit.

TABLE 27: Proposed Prolonged Office/Outpatient E/M Visit Reporting – Established Patient

CPT Code(s)	Total Time Required for Reporting*
99215	40-54 minutes
99215 x 1 and 99417 x 1	69-83 minutes
99215 x 1 and 99417 x 2	84- 98 minutes
99215 x 1 and 99417 x 3 or more for each additional 15 minutes.	99 or more

*Total time is the sum of all time, including prolonged time, spent by the reporting practitioner on the date of service of the visit.

We received public comments on our proposal for use of CPT code 99417. The following is a summary of the comments we received and our responses.

Comment: Several commenters agreed with our concerns about the lack of clarity in the code descriptor and the potential for double-counting time. Several other commenters disagreed with our proposal and recommended that CMS adopt the CPT code descriptors. These commenters stated that a change in policy by CMS could be confusing to practitioners and disruptive to the ongoing work of medical societies to educate practitioners about the use of these codes. Some commenters also stated the CPT Editorial Panel intended to apply the general CPT rule where practitioners can report a timed code once the midpoint is reached.

Response: In the CPT 2021 Professional Edition, CPT code 99417 is

described as, “*Prolonged office or other outpatient evaluation and management service(s) beyond the minimum required time of the primary procedure which has been selected using total time, requiring total time with or without direct patient contact beyond the usual service, on the date of the primary service; each additional 15 minutes (List separately in addition to CPT codes 99205, 99215 for office or other outpatient evaluation and management services).*” The terms “total time” and “usual service” continue to be unclear.

While we prefer to align with CPT coding to reduce potential confusion to practitioners, we continue to believe that CPT code 99417 as written is unclear and that allowing reporting of CPT code 99417 when the minimum required time for the level 5 visit is exceeded by at least 15 minutes would result in double counting time. It has not been our understanding that CPT

intended for the midpoint time to suffice for reporting this code, and regardless, we did not previously finalize or intend to apply such a policy.

We continue to believe it is important for CMS and other stakeholders to know with certainty how much time practitioners spend furnishing office/outpatient E/M visits, in order to assess whether resources are accurately accounted for in their valuation. This is especially true once time can be used to select visit level, with new times established for this code set. To resolve the lack of clarity, we are finalizing our proposal regarding the time that may be counted for prolonged office/outpatient E/M visits; and to resolve the potential inconsistency of our policy with CPT code 99417, we are creating a new HCPCS code G2212 to be used when billing Medicare for this service instead of CPT code 99417, starting in 2021. HCPCS code G2212 is as follows,

“Prolonged office or other outpatient evaluation and management service(s) beyond the maximum required time of the primary procedure which has been selected using total time on the date of the primary service; each additional 15 minutes by the physician or qualified healthcare professional, with or without direct patient contact (List separately in addition to CPT codes 99205, 99215 for office or other outpatient evaluation and management services) “(Do not report G2212 on the same date of service as 99354, 99355, 99358, 99359, 99415, 99416). (Do not report G2212 for any time unit less than 15 minutes)”.”

We believe the creation of HCPCS code G2212 will serve to resolve the potential differences between Medicare and other interpretations of CPT rules, and better address questions we frequently receive about the required times and what time may be counted toward the required time to report prolonged office/outpatient E/M visits. We also note that we are not opposed in concept to reporting prolonged office/outpatient visit time on a date other than the visit. However, we continue to believe there should be a single prolonged code specific to office/outpatient E/M visits that encompasses all related time (see the CY 2020 PFS final rule for a more detailed discussion of this issue, (84 FR 62849 through 62850)). We will continue to stay abreast of any changes in CPT coding. The valuation for HCPCS code G2212 will be the same as for CPT code 99417.

G. Scope of Practice and Related Issues

We proposed several policies consistent with the President’s E.O. 13890 on “Protecting and Improving Medicare for Our Nation’s Seniors” to modify supervision and other requirements of the Medicare program that limit healthcare professionals from practicing at the top of their license (84 FR 53573, October 8, 2019, E.O. 13890). In December 2019, we requested feedback in response to part of this E.O. seeking the public’s help in identifying additional Medicare regulations which contain more restrictive supervision requirements than existing state scope of practice laws, or which limit health professionals from practicing at the top of their license (the request for feedback is available at <https://www.cms.gov/files/document/request-information-reducing-scope-practice-burden.pdf>). Through review of the feedback we received, we identified the proposed policies in section II.G. of the CY 2021 PFS proposed rule (85 FR 50139). We noted that we believe that physicians, NPPs, and other professionals should be able to furnish services to Medicare

beneficiaries in accordance with their scope of practice and state licensure, including education and training, to the extent permitted under the Medicare statute, as long as it is not likely to result in fraud, waste or abuse or create potential risks to beneficiary safety. The proposed policies may also help ensure an adequate number of clinicians, in addition to physicians, are able to furnish critical services including primary care services in areas where there is a shortage of physicians.⁹ We noted that some of the proposals may also help alleviate the opioid crisis.

We solicited information about the number and names of states that have licensure or scope of practice laws in place, as well as any facility-specific policies, that would impact the ability of clinicians to exercise the flexibilities we proposed, to help us assess the potential impact of, or challenges for, the proposed changes. We noted that information about specific services (service-level information) would be especially helpful. We solicited public comment on whether applicable state laws, scope of practice, and facility policies would permit practitioners to exercise the proposed flexibilities if we were to adopt the proposed policies, and to what extent practitioners would be permitted to exercise the proposed flexibilities, such as for all diagnostic tests or only a subset.

We solicited information on these topics because the responses to our request for feedback issued in 2019 did not indicate the number of states that have more flexible scope of practice rules than our federal regulations, or whether facilities (such as hospitals or nursing facilities) have relevant policies that limit the ability of the impacted professionals to perform certain services. For example, if Medicare payment policy provided for payment of diagnostic tests supervised by NPPs, there may still be facility- or state-specific policies in place that limit NPPs’ ability to supervise some or all diagnostic tests, and those limitations would inform the potential impact of changing our policy. While our proposed flexibility may increase the capacity and availability of practitioners who can supervise diagnostic tests, which would alleviate some of the demand on physicians as the only source to perform this particular function, we noted that we have not located information indicating the

degree to which NPP scope of practice includes supervision of auxiliary staff, especially for the subset of services that are diagnostic tests. There is a wide range of diagnostic tests, from a simple strep throat swab to more sophisticated and/or invasive tests such as x-rays and cardiology procedures. We would need to understand the scope of practice for many types of auxiliary staff (some of whom are not licensed) who could potentially provide these tests under the supervision of an NPP, including RNs, LPNs, medical assistants, radiologic technicians, and many others. To the extent practice patterns change, there could be induced utilization that would increase costs, but this might be offset by reduced payment rates because direct payment to NPPs is at a lower rate than payment to physicians.

1. Teaching Physician and Resident Moonlighting Policies

a. Background

In the March 31st COVID-19 IFC (85 FR 19258 through 19261) and the May 8th COVID-19 IFC (85 FR 27587 through 27589), we implemented several policies on an interim final basis related to PFS payment for the services of teaching physicians involving residents and resident moonlighting during the PHE for COVID-19. In the proposed rule, we noted that we planned to address comments received on the IFCs for those policies that we made proposals or solicited comment on in the proposed rule when we published the PFS final rule.

b. Finalization of Interim Final Rule With Comment Period Provisions Related to Application of Teaching Physician and Moonlighting Regulations During the PHE for the COVID-19 Pandemic

We received public comments on the policies that we adopted on an interim basis in the Interim Final Rule with Comment Period provisions related to the Application of Teaching Physician and Moonlighting Regulations During the PHE for the COVID-19 Pandemic (85 FR 19258 through 19261). The following is a summary of the comments we received and our responses.

i. Virtual Presence of a Teaching Physician Using Audio/Video Real-Time Communications Technology

Comment: Commenters were generally supportive of the virtual presence policies in §§ 415.172, 415.174, 415.180, and 415.184 that we implemented on an interim basis during the PHE for COVID-19. Several commenters supported extending the flexibilities permanently, while several

⁹ Zhang et al. Physician workforce in the United States of America: forecasting nationwide shortages. *Human Resources for Health* (2020); 18:8. Published online February 6, 2020 and available online at <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7006215/>.

other commenters recommended continuing the policy temporarily through the end of the PHE for COVID-19, or for a period of time following the end of the PHE for COVID-19.

Response: We appreciate commenters' support for the virtual presence policies adopted on an interim basis during the PHE for COVID-19. After considering the comments, we are finalizing these policies for the duration of the PHE for COVID-19.

Comment: One commenter, in support of the virtual presence policies adopted on an interim basis during the PHE for COVID-19, recommended that CMS encourage residency programs, residency review committees, and ACGME to increase monitoring of clinical and educational work hour standards, acknowledge the impact of the changes to the teaching physician presence requirements on the residents and their optimal learning environment, and share additional information regarding how to best meet the need for reporting of information related to workload and growing service demands, patient safety, medical error, continuity of care, resident well-being and burnout, development of professionalism, resident learning outcomes, and preparation for independent practice as they relate to the use of teaching physician presence through real-time interactive audio and video technology.

Response: We do not believe it is CMS' role to regulate or monitor training outcomes or advocate on behalf of the residents themselves. Organizations representing the interests of residents and overseeing the actual operation of residency programs are in a better position to establish rules regarding the impact of virtual presence and involvement of teaching physicians on residency training outcomes.

Comment: One commenter noted that the GME community has learned many lessons during the pandemic, related to resident education and supervision. Consequently, the commenter believed that the GME community should be provided the flexibility to test new and better modalities of treatment and learning.

Response: We appreciate the commenter's support of our policies. As described previously, we are finalizing these policies for the duration of the PHE for COVID-19.

Comment: One commenter requested clarification of the definition of "telecommunications," and asked whether supervision, in the context of a teaching institution, can be performed by telephone as opposed to a tablet or smartphone.

Response: The policy to allow a teaching physician to use audio/video real-time communications technology for purposes of furnishing care with a resident, and in the case of the primary care exception, directing, managing, and reviewing the care furnished by the resident, generally requires real-time direct observation (not mere availability) by the teaching physician through interactive, real-time audio and video technology, and does not include audio-only technology (for example, telephone without video).

Comment: Several commenters expressed support for the exclusion of surgical, high risk, interventional, endoscopic, or other complex procedures identified under § 415.172(a)(1), and anesthesia services under § 415.178 from the policy to allow the teaching physician to be present using audio/video real-time communications technology. One commenter recommended that the teaching physician virtual presence policy be permitted for CPT codes 31231 (*Nasal endoscopy, diagnostic, unilateral or bilateral (separate procedure)*), 31575 (*Laryngoscopy, flexible; diagnostic*), and 31579 (*Laryngoscopy, flexible or rigid telescopic, with stroboscopy*) performed through an endoscope.

Response: We continue to believe the requirement for the physical, in-person presence of the teaching physician during all key or critical portions of the procedure and immediately availability to furnish services during the entire service or procedure is necessary for patient safety given the risks associated with these services. In complex, high-risk procedures, including the endoscopic procedures associated with CPT codes 31231, 31575 and 31579, a patient's clinical status can quickly change. To permit payment under the PFS for such teaching physician services, we believe the services must be furnished with a certain level of personal oversight and involvement of the teaching physician who has the experience and judgment that is necessary for rapid on-site decision-making during these procedures. With respect to the procedures associated with CPT codes 31231, 31575 and 31579, we do not believe that virtual presence by a teaching physician would provide sufficient personal involvement and control over the service to warrant billing of the services under the PFS or allow for the rapid on-site decision-making that could be necessary during the procedures, which could pose an increased risk to patients.

ii. Virtual Presence of a Teaching Physician During Medicare Telehealth Services

Comment: Commenters were generally supportive of the policy adopted on an interim basis to allow payment under the PFS when residents furnish telehealth services to beneficiaries with the teaching physician present using audio/video real-time communications technology. In addition, several commenters supported extending the flexibility permanently.

Response: We appreciate commenters' support for the policy, adopted on an interim basis during the PHE for COVID-19, to allow payment under the PFS when residents furnish telehealth services to beneficiaries with the teaching physician present using interactive, audio/video real-time communications technology (excluding audio-only). After considering the comments, we are finalizing this policy for the duration of the PHE for COVID-19.

iii. Resident Moonlighting in the Inpatient Setting

Comment: Commenters were generally supportive of the policy under § 415.208 that we adopted on an interim basis during the PHE for COVID-19 to allow PFS payment for services provided by fully licensed residents that are not related to their approved GME program in the inpatient setting of a hospital in which they are training, provided that the conditions specified in § 415.208(b)(2)(i) through (iii) are met. Several commenters recommended that this policy be implemented permanently, and some other commenters recommended that the policy be implemented for the duration of the PHE only.

Response: We appreciate commenters' support for the moonlighting policy we adopted on an interim basis during the PHE for COVID-19. After considering the comments, we are finalizing this policy for the duration of the PHE for COVID-19.

iv. Primary Care Exception Policies

Comment: Commenters were generally supportive of the policy adopted on an interim basis under § 415.174 to expand the primary care exception to include all levels of office and outpatient E/M codes. Some commenters recommended that this policy be implemented permanently, and some other commenters recommended that the policy be implemented for the duration of the PHE for COVID-19 only.

Response: We appreciate commenters' support of the expansion of the primary care exception policy adopted on an interim basis during the PHE for COVID-19. After considering the comments, we are finalizing this policy for the duration of the PHE for COVID-19.

Comment: One commenter interpreted the policy described in § 415.174 to mean that the "immediately available supervision" requirement described in this section could be met by the teaching physician being "immediately available" via real-time audio/video technology.

Response: Subsequent to the publication of the March 31st COVID-19 IFC, the May 8th COVID-19 IFC amended § 415.174 to add a new paragraph (c) to allow that, on an interim basis for the duration of the PHE for COVID-19, the teaching physician may not only direct the care furnished by residents, but also review the services provided with the resident, during or immediately after the visit, remotely through virtual means via interactive, audio/video real-time communications technology (excluding audio-only).

v. Payment Under the PFS for Teaching Physician Services When Resident Under Quarantine

Comment: A commenter supported the interim policy for the duration of the PHE for COVID-19 to permit PFS payment for teaching physician services that do not require face-to-face patient care when the resident is furnishing such services while in quarantine when the teaching physician is present through audio/video real-time communications technology.

Response: We thank the commenter for their support. After considering the comments, we are finalizing this policy for the duration of the PHE for COVID-19.

c. Finalization of Interim Final Rule Provisions Related to Additional Flexibility Under the Teaching Physician Regulations

We received public comments on the policies that we adopted on an interim basis in the Interim Final Rule provisions related to Additional Flexibility Under the Teaching Physician Regulations (85 FR 27587 through 27589). The following is a summary of the comments we received and our responses.

i. Primary Care Exception Policies

Comment: Several commenters supported the policy adopted on an interim basis to allow, under the

primary care exception described in § 415.174(c), the teaching physician to direct the care furnished by the resident, and to review the services furnished by the resident during or immediately after the visit, remotely using audio/video real-time communications technology. Several commenters supported a temporary extension of the policy through the end of the PHE for COVID-19 or through 2021, while other commenters suggested a permanent extension of this flexibility.

Response: We appreciate the commenters' support of this policy during the PHE for COVID-19. After considering the comments and for the reasons discussed above, we are finalizing this policy for the duration of the PHE for COVID-19.

Comment: Some commenters requested clarification of the phrase "interactive audio/visual real-time communication technology" because CMS has used various terms when expressing technology requirements for remote supervision and in the context of teaching physician services, and because the presence of the slash mark in the phrase makes it unclear whether both audio and visual communication must be utilized to meet the requirement, or if one or the other is sufficient. One commenter also recommended that the phrase be revised to explicitly state that a real-time audio-only communication is sufficient in order to meet the regulations set forth in § 415.174(a)(3) for use of the primary care exception.

Response: While we believe our statements have been clear on this point, we clarify here that this virtual presence policy requires real-time observation (not mere availability) by the teaching physician through a contemporaneous, interactive combination of both audio and video communications technology, and does not include audio-only technology (for example, telephone without video). We note that we have used the "audio/video" formulation in our regulations, and that the "slash" should be read consistently to mean a synchronous, interactive, real-time combination of both audio and video technology, which would not include audio-only communications for any portion of the time of the furnished service.

Comment: Commenters were generally supportive of the policy adopted on an interim basis to allow Medicare to make payment to the teaching physician for additional services under the primary care exception, including all levels of office and outpatient E/M codes, audio-only telephone E/M services, transitional

care management, and communication technology-based services. Several commenters supported a temporary extension of the policy through the end of the PHE for COVID-19 or through 2021, while other commenters suggested a permanent expansion of the services that residents could furnish under the primary care exception.

Response: We appreciate commenters' support of this policy during the PHE for COVID-19. After considering the comments, we are finalizing the policy for the duration of the PHE for COVID-19.

Comment: Several commenters thanked CMS for the clarification that Medicare may make payment under the PFS for teaching physician services when a resident furnishes services permitted under the primary care exception, including via telehealth, and the teaching physician can provide the necessary direction, management and review of the resident's services using interactive audio/video real-time communications technology.

Response: We appreciate the commenters' support for this policy during the PHE.

Comment: Several commenters supported the interim policy during the PHE for COVID-19 that the office/outpatient E/M level selection for services under the primary care exception when furnished via telehealth can be based on medical decision-making or time.

Response: We thank the commenters for their support of this policy during the PHE. This policy is similar to the policy that will apply to all office/outpatient E/M services beginning in 2021 under policies finalized in the CY 2020 PFS final rule and thus, we are not finalizing it.

d. Summary of Proposed Rule Provisions and Public Comments

i. Background

In the proposed rule, we considered whether the policies implemented on an interim basis in the March 31st COVID-19 IFC or the May 8th COVID-19 IFC should be extended on a temporary basis (that is, if the PHE for COVID-19 ends in 2021, these policies could be extended to December 31, 2021, to allow for a transition period before reverting to status quo policy) or be made permanent, and solicited public comment. We noted that the public comments would assist us in identifying appropriate policies that we would consider in drafting the CY 2021 PFS final rule.

For teaching physicians, section 1842(b)(7)(A)(i)(I) of the Act specifies

that in the case of physicians' services furnished to a patient in a hospital with a teaching program, the Secretary shall not provide payment for such services unless the physician renders sufficient personal and identifiable physicians' services to the patient to exercise full, personal control over the management of the portion of the case for which payment is sought.

Regulations regarding PFS payment for teaching physician services and services of moonlighting residents are codified in 42 CFR part 415. In general, under § 415.170, payment is made under the PFS for services furnished in a teaching hospital setting if the services are personally furnished by a physician who is not a resident, or the services are furnished by a resident in the presence of a teaching physician, with exceptions as specified in subsequent regulatory provisions in part 415. Under § 415.172, if a resident participates in a service furnished in a teaching setting, PFS payment is made only if the teaching physician is present during the key portion of any service or procedure for which payment is sought. The regulation at § 415.180 states that, for the interpretation of diagnostic radiology and other diagnostic tests, PFS payment is made if the interpretation is performed or reviewed by a physician other than a resident. Under § 415.184, PFS payment is made for psychiatric services furnished under an approved graduate medical education (GME) program if the requirements of §§ 415.170 and 415.172 are met, except that the requirement for the presence of the teaching physician during psychiatric services in which a resident is involved may be met by observation of the service by use of a one-way mirror, video equipment, or similar device.

ii. Supervision of Residents in Teaching Settings Through Audio/Video Real-Time Communications Technology

In both the March 31st COVID-19 IFC (85 FR 19258 through 19261) and the May 8th COVID-19 IFC (85 FR 27587 through 27589), we adopted a policy on an interim basis during the PHE for COVID-19 that, under § 415.172, the requirement for the presence of a teaching physician during the key portion of the service furnished with the involvement of a resident can be met using audio/video real-time communications technology. In other words, the teaching physician must be present, either in person or virtually through audio/video real-time communications technology, during the key portion of the service. This policy generally requires real-time observation

(not mere availability) by the teaching physician through audio and video technology, and does not include audio-only technology (for example, telephone without video). For the primary care exception under § 415.174(c), we adopted a policy on an interim final basis for the duration of the PHE for COVID-19 to allow the teaching physician to direct the care furnished by the resident, and to review the services furnished by the resident during or immediately after the visit, remotely using audio/video real-time communications technology.

Under § 415.180, we adopted a policy on an interim basis for the duration of the PHE for COVID-19 to allow PFS payment for the interpretation of diagnostic radiology and other diagnostic tests if the interpretation is performed by a resident when the teaching physician is present through audio/video real-time communications technology. A physician other than the resident must still review the resident's interpretation. Under § 415.184, we adopted a policy on an interim basis during the PHE for COVID-19 that the requirement for the presence of the teaching physician during the psychiatric service in which a resident is involved may be met by the teaching physician's direct supervision using audio/video real-time communications technology. We considered whether the flexibilities described above that we implemented on an interim basis during the PHE for COVID-19 under §§ 415.172, 415.174, 415.180, and 415.184 should be extended on a temporary basis (that is, if the PHE ends in 2021, these policies could be extended to December 31, 2021, to allow for a transition period before reverting to status quo policy) or be made permanent, and solicited public comments on whether these policies should continue once the PHE for COVID-19 ends. We noted that the public comments would assist us in identifying appropriate policy continuation decisions that we would consider finalizing in the CY 2021 PFS final rule. In addition, we proposed to make a technical edit to the regulation text at § 415.184 to eliminate the term "direct supervision" to conform with the language in sections §§ 415.172, 415.174, and 415.180 regarding the presence of the teaching physician via audio/video real-time communications technology.

While we believe it was appropriate to permit teaching physicians to be involved in services furnished with residents through audio/video real-time communications technology to respond to critical needs during the PHE to

reduce exposure risk and to increase the capacity of teaching settings to respond to COVID-19, we expressed concern that continuing to permit teaching physicians to be involved through their virtual presence may not be sufficient to warrant PFS payment to the teaching physician on a temporary or permanent basis. Absent the circumstances of the PHE for COVID-19, the physical, in-person presence of the teaching physician may be necessary to provide oversight to ensure that care furnished to Medicare beneficiaries is medically reasonable and necessary, and to ensure that the teaching physician renders sufficient personal services to exercise full, personal control of the key portion of the case.

We also noted concerns about patient safety when the teaching physician is only virtually present. For example, in the March 31st COVID-19 IFC, we excluded the surgical, high risk, interventional, endoscopic, or other complex procedures identified under § 415.172(a)(1), and anesthesia services under § 415.178 from the policy to allow the teaching physician to be present using audio-video real-time communications technology because we believed the requirement for the physical, in-person presence of the teaching physician for either the entire procedure or the key portion of the service with immediate availability throughout the procedure, as applicable, is necessary for patient safety given the risks associated with these services. In complex, high-risk, surgical, interventional, or endoscopic procedures, or anesthesia procedures, a patient's clinical status can quickly change. To permit payment under the PFS for these teaching physician services, we believed the services must be furnished with a certain level of personal oversight and involvement of the teaching physician who has the experience and judgment that is necessary for rapid on-site decision-making during these procedures.

We also noted that there may be circumstances in which virtual presence of the teaching physician, considered in light of the potential risks to patient safety and absent exposure risk concerns due to COVID-19, does not demonstrate sufficient personal involvement in the service to the patient to warrant payment to the teaching physician under the PFS. For example, a resident could evaluate a patient for change in mental status following surgery for hip fracture, perform a physical exam and report it as unrevealing, and note that the patient is uncooperative with a full exam. If a full exam had been performed by the

teaching physician or with the physical presence of the teaching physician (or with the teaching physician immediately available in the clinic to provide the necessary direction, under the primary care exception) to render personal and identifiable physicians' services to the patient, the exam would likely have revealed crystal-mediated acute arthritis, and that the patient's lack of cooperation was due to hypoactive delirium. However, the teaching physician may not have been able to identify this concern through the use of audio/video interactive communications technology. In this case, the presence of the teaching physician through audio/video interactive communications technology might have been insufficient to allow the teaching physician to render personal and identifiable physicians' services to exercise full, personal control over the key portion of the encounter.

We stated that there also may be certain patient populations that require greater clinical attentiveness and skill than the teaching physician could provide via audio/video interactive communications technology. For example, patients with cognitive impairment or dementia may require the experience and skill to recognize a need for specialized testing, and patients with communication disabilities may require more experience and skill to recognize specialized needs. It may not be possible for the teaching physician to meet these clinical needs and exercise full, personal control while being present for the key portion of the service through audio/video interactive communications technology. Moreover, the virtual connection between the teaching physician and the resident who is with the patient could be disrupted (as with any virtual supervision scenario), rendering it impossible for the teaching physician to provide necessary direction for the resident to furnish appropriate care to the patient, thus foreclosing the ability of the teaching physician to exercise full, personal control over the key portion of the services, and potentially putting the patient's safety at risk.

While we expressed significant concerns about extending our interim policy to permit virtual presence of the teaching physician, whether on a temporary or permanent basis, we noted that we believe public comments would be helpful as we further consider the status of this policy. For example, because COVID-19 may continue to persist in some communities after the expiration of the PHE for COVID-19, we considered extending our policy to

permit the teaching physician to be present through audio/video interactive communications technology on a temporary basis until the end of the calendar year in which the PHE for COVID-19 ends. The presence of COVID-19 may result in a need for some teaching settings to continue to limit exposure risks, especially for high risk patients isolated for their own protection or in cases where the teaching physician has been exposed to the virus and must be under quarantine. If the teaching physician is under quarantine, termination of the policy to permit virtual presence of the teaching physician could unintentionally limit the number of licensed practitioners available to furnish services to Medicare patients in some communities, and could have the unintended consequence of limiting access to services for Medicare patients. Some communities may experience a resurgence of COVID-19, and extending our policy until the end of the calendar year in which the PHE for COVID-19 ends to permit PFS payment when the teaching physician is present through audio/video real-time communications technology could temporarily help teaching settings remain prepared with surge capacity.

Based on the clinical experience gained during the PHE for COVID-19, we noted that we might identify circumstances or procedures for which the teaching physician can routinely render sufficient personal and identifiable services to the patient to exercise full, personal control over the management of the key portion of the case when the services are furnished by a resident with the teaching physician present through audio/video real-time communications technology. For example, under ordinary circumstances for the primary care exception at § 415.174, we permit PFS payment to the teaching physician when a resident furnishes office/outpatient evaluation and management (E/M) visit codes of lower and mid-level complexity and annual wellness visits without the presence of a teaching physician (these codes are discussed in section II.F. of this final rule (85 FR XXXXX)). Additionally, the teaching physician may be able to provide sufficient involvement for simple procedures such as CPT code 36410 (*Venipuncture, age 3 years or older, necessitating the skill of a physician or other qualified health care professional (separate procedure), for diagnostic or therapeutic purposes (not to be used for routine venipuncture)*) or CPT code 51701 (*Insertion of non-indwelling bladder catheter (e.g., straight catheterization for residual*

urine)). For such circumstances and procedures, we stated that it may be appropriate to continue the virtual presence policy on a temporary or permanent basis.

We noted that having the virtual presence policy in place temporarily or permanently would not preclude teaching physicians from providing a greater degree of involvement in services furnished with residents, and teaching physicians would still have discretion to determine whether, and if so, when it is appropriate to be present virtually rather than in person depending on the services being furnished and the experience of the particular residents involved. We solicited comments to help us understand how the option to provide for teaching physician presence using audio/video real-time communications technology would support patient safety for all patients and particularly for at-risk patients (for example, patients who are aged and/or who have a disability); ensure burden reduction without creating risks to patient care or increasing fraud; avoid duplicative payment between the PFS and the IPPS for GME programs; and support emergency preparedness. We also solicited comments to provide data and other information on experiences implementing this policy during the PHE for COVID-19.

We received public comments on our proposal to make a technical edit to the regulation text at § 415.184 to eliminate the term "direct supervision" to conform with the language in sections §§ 415.172, 415.174, and 415.180 regarding the presence of the teaching physician via audio/video real-time communications technology. The following is a summary of the comments we received and our responses.

Comment: Multiple commenters supported striking the term "direct supervision" from § 415.184 to conform to related sections describing the requirements for supervision of residents in teaching settings.

Response: We appreciate the commenters' support and are finalizing the technical edit to the regulation text at § 415.184 as proposed.

We also received public comments in response to the CY 2021 PFS proposed rule on whether the policies we adopted on an interim basis during the PHE for COVID-19 under §§ 415.172, 415.174, 415.180, and 415.184 should continue once the PHE ends. The following is a summary of the comments we received and our responses.

Comment: Commenters were generally supportive of the virtual presence policies in §§ 415.172,

415.174, 415.180, and 415.184 that we implemented on an interim basis during the PHE for COVID-19. Several commenters supported extending the flexibilities permanently and asserted that a permanent expansion would promote patient access to physicians' services, particularly in rural areas, as well as continuity, convenience, flexibility, choice, and a decrease in the spread of COVID-19. Another commenter stated that in rural settings, it was not always possible for the teaching physician to accompany a resident while also being present with other residents. This commenter stated that the ability for the resident to be physically with a patient while the teaching physician is virtually present has increased patient access to physicians' services in rural areas. Similarly, other commenters stated that the permanent ability for teaching physicians to be virtually present when not physically present could open up additional training opportunities to care for underserved populations or increase specialty training opportunities for rural training programs.

Commenters broadly supported the exclusion of surgical, high risk, interventional, endoscopic, or other complex procedures, including anesthesia, from the virtual presence policy. While supportive of the flexibilities that we implemented on an interim basis, some commenters recommended temporarily extending the policies through the end of the PHE for COVID-19 to provide flexibility for communities that may experience resurgences in COVID-19 infections. These commenters cited a need to gather data regarding patient safety and potential impacts on resident training outside the context of the PHE before considering permanent implementation of the policies. For example, one commenter noted that CMS could use data from procedures furnished by residents during the PHE under virtual presence of the teaching physician to determine which procedures may be appropriate for virtual supervision on an ongoing basis.

Response: We appreciate commenters' support of the virtual presence policies that we implemented on an interim basis during the PHE for COVID-19. We remain concerned that, absent the circumstances of the PHE, virtual presence may not allow the teaching physician to render sufficient personal and identifiable physicians' services to the patient to exercise full, personal control over the management of the portion of the case for which the payment is sought, in accordance with section 1842(b)(7)(A)(i)(I) of the Act in

most settings. For rural areas, however, we found compelling the commenters' statements that our virtual presence policy has increased access to Medicare-covered services. Accordingly, we believe that permitting the teaching physician to meet the requirements to bill under the PFS for their services through virtual presence when furnishing services involving residents in rural training settings could increase access to Medicare-covered services by preventing the beneficiary from potentially having to travel long distances to obtain care, particularly as rural areas have stretched and diminishing clinical workforces.¹⁰

Increasing beneficiary access to care in rural areas is also consistent with our longstanding interest in increasing beneficiary access to Medicare-covered services in rural areas.¹¹ Further, permitting the virtual presence of the teaching physician could facilitate expanded training opportunities for residents in rural settings, which have historically been in limited supply.¹² As such, the need to improve rural access to care for patients and training for residents overshadows our concerns about the ability for the teaching physician to render sufficient personal and identifiable physicians' services through virtual presence. Accordingly, we believe it would be appropriate to continue our policy to permit teaching physicians to meet the requirements to bill under the PFS for their services through virtual presence when furnishing services involving residents in rural settings after the conclusion of the PHE for COVID-19. This policy not only furthers our goals to increase beneficiary access to Medicare-covered services, it also facilitates needed training opportunities in a similar way to the longstanding primary care exception under § 415.174. The primary care exception permits the teaching physician to bill for certain types of physicians' services furnished by residents in certain settings even when the teaching physician is not present with the resident. Like the policy we are finalizing in this rule, the primary care

exception facilitates access to Medicare-covered services and expanded residency training opportunities in primary care settings.

Therefore, we are finalizing a permanent policy to permit teaching physicians to meet the requirements to bill for their services involving residents through virtual presence, but only for services furnished in residency training sites that are located outside of an OMB-defined metropolitan statistical area (MSA).¹³ In order to ensure that the teaching physician renders sufficient personal and identifiable physicians' services to the patient to exercise full, personal control over the management of the portion of the case for which the payment is sought in accordance with section 1842(b)(7)(A)(i)(I) of the Act, we are clarifying our existing documentation requirements to specify that, when a teaching physician, through virtual presence, furnishes services involving residents in a residency training site located outside of a MSA, the patient's medical record must clearly reflect how and when the teaching physician was present for the service in accordance with our regulations. For example, in the medical record, the teaching physician could document their physical or virtual presence at the training site during the key portion of a service, along with a notation describing the specific portion(s) of the service for which the teaching physician was virtually present, and/or that the teaching physician reviewed the service with the resident during or immediately after the service in accordance with the primary care exception under § 415.174. We also expect that, if the teaching physician is virtually present and bills for services during which there is a disruption to the virtual connection between the teaching physician and the resident who is with the patient, the encounter would be paused until the connection resumes, or the appointment would be rescheduled.

For all other settings, we are not permanently finalizing our teaching physician virtual presence policies; however, they will remain in place for the duration of the PHE to provide flexibility for communities that may experience resurgences in COVID-19 infections. While we do not anticipate any program integrity concerns to arise from this expanded flexibility in rural areas, we agree with commenters that it is necessary for use to consider

additional data prior to proposing additional policies in this area, which could range from expanding this flexibility to include non-rural settings to terminating this flexibility in all settings. Specifically, we anticipate considering to what degree the permanent establishment of the policy to permit teaching physician virtual presence in residency training sites that are located outside of a MSA increased patient access to Medicare-covered services and provided additional training opportunities for residents while enabling the teaching physician to render sufficient personal and identifiable physicians' services. We may use such information, obtained through, for example, a commissioned study, analysis of Medicare claims data or another assessment mechanism, to further study the impacts of this limited permanent expansion of the virtual presence policy to inform potential future rulemaking, and in an effort to prevent possible fraud, waste and abuse.

We are amending our regulations to reflect this final policy. In § 415.172(a), to conform with the regulation text we are finalizing to describe direct supervision in § 410.32(b)(3)(ii), we are adding language to state that, as a general rule, the required presence of a teaching physician in order to bill under the PFS for their services at a residency training site that is located outside of a MSA can be met through interactive, audio/video real-time communications technology, which, as noted above, means synchronous, interactive, audio and video communications technology, and does not include audio-only communications. We are also adding language to provide that, for the duration of the PHE for COVID-19, in all teaching settings, the required presence of a teaching physician can be met through interactive, audio/video real-time communications technology (excluding audio-only).

In § 415.172(a)(2), we are adding language to note the exceptions under which virtual presence is permitted in the case of E/M services.

In § 415.172(b), which discusses existing documentation requirements, we are adding language to clarify that, for residency training sites that are located outside of a MSA, the medical record must clearly reflect whether the teaching physician was physically or virtually present at the training site during the key portion of the service. We are also adding language to clarify that, for all teaching settings and for the duration of the PHE for COVID-19, the patient's medical record must clearly reflect whether the teaching physician was physically or virtually present

during the key portion of the service. Finally, we are adding language to clarify that the medical records must contain a notation describing the specific portion(s) of the service for which the teaching physician was present through interactive, audio/video real-time communications technology (excluding audio-only).

In § 415.174(c), we are adding language to state that, for all teaching settings and for the duration of the PHE for COVID-19, the teaching physician may not only direct the care furnished by residents, but also review the services provided with the resident, during or immediately after the visit, remotely through interactive, audio/video real-time communications technology (excluding audio-only).

In § 415.174(d), we are adding language to state that, for residency training sites that are located outside of a MSA, the teaching physician may not only direct the care furnished by residents, but also review the services provided with the resident, during or immediately after the visit, remotely through interactive, audio/video real-time communications technology (excluding audio-only).

In § 415.180(a), we are adding language to state that, for residency training sites that are located outside of an MSA, PFS payment may be made for the interpretation of diagnostic radiology and other diagnostic tests when the interpretation is performed by a resident and when the teaching physician is present through interactive, audio/video real-time communications technology (excluding audio-only). We are also adding language to state that, for all teaching settings and for the duration of the PHE for COVID-19, PFS payment may be made for the interpretation of diagnostic radiology and other diagnostic tests when the interpretation is performed by a resident and when the teaching physician is present through interactive, audio/video real-time communications technology (excluding audio-only). Finally, we are adding language to clarify that the medical records must document the extent of the teaching physician's participation in the interpretation or review of the diagnostic radiology or diagnostic test.

In § 415.184, we are adding language to state that, for residency training sites that are located outside of a MSA, the requirement for the presence of the teaching physician during the psychiatric service in which a resident is involved may be met using interactive, audio/video real-time communications technology (excluding audio-only). We are also adding

language to state that, for all teaching settings and for the duration of the PHE for COVID-19, the requirement for the presence of the teaching physician during the psychiatric service in which a resident is involved may be met using interactive, audio/video real-time communications technology (excluding audio-only). Finally, we are adding language to clarify that the medical records must document the extent of the teaching physician's participation in the service.

While difficult to quantify, we believe that permanently extending the policy to permit virtual presence of teaching physicians in residency training sites that are located outside of an MSA will improve patient access to Medicare-covered physicians' services in rural areas. In addition, the ability of a teaching physician to meet the requirements to bill for services furnished involving residents through their virtual presence in these settings will improve teaching capabilities and potentially allow for additional resident education opportunities in rural areas. Settings that have traditionally been inaccessible as training sites for residents due to the limited ability of teaching physicians to be physically present will be more readily available, thereby affording increased access to physicians' services to patients in these areas. However, in order to ensure that this limited extension of the virtual presence policy is also consistent with section 1842(b)(7)(A)(i)(I) of the Act, we are clarifying our existing documentation requirements to specify that the medical record must clearly reflect how and when the teaching physician was present for the service. We believe this documentation clarification will ensure that the teaching physician renders sufficient personal and identifiable physicians' services to the patient to exercise full, personal control over the management of the portion of the case for which the payment is sought. Further, in order to minimize potential risks to patients, we remind physicians and other practitioners that the adoption of these virtual presence policies in residency training sites that are located outside a MSA does not preclude teaching physicians from being physically present when providing services furnished with residents. We therefore urge teaching physicians to continue to use their professional judgment to determine the circumstances under which it is appropriate to be present virtually rather than in person depending on the services being furnished and the experience of the

particular resident(s) and/or teaching physician involved.

Comment: In response to our comment solicitation for information regarding how the virtual presence of a teaching physician would support patient safety, several commenters stated that guardrails exist through the Accreditation Council for Graduate Medical Education (ACGME) and other accrediting organizations that have standards and systems to ensure patient safety and oversight of residents when virtual supervision of residents occurs.

Response: We appreciate commenters' suggestions that the policies of the ACGME and other accrediting organizations could serve as guardrails in the context of virtual supervision; however, the commenters provided no specific description of any such policies or any other evidence to further identify those guardrails. Without further information, CMS cannot opine on the sufficiency of ACGME or other accrediting organization policies. Therefore, we continue to rely on the clinical judgment of teaching physicians and the residents they involve in their care to ensure appropriate patient safety.

iii. Virtual Teaching Physician Presence During Medicare Telehealth Services

In the March 31st COVID-19 IFC (85 FR 19230), we adopted a policy on an interim basis to allow Medicare to make payment under the PFS for teaching physician services when a resident furnishes Medicare telehealth services to beneficiaries while a teaching physician is present using audio/video real-time communications technology. We also noted that we were considering whether this policy should be extended on a temporary basis (that is, if the PHE for COVID-19 ends in 2021, this policy could be extended to December 31, 2021, to allow for a transition period before reverting to status quo policy) or be made permanent, and solicited public comments on whether this policy should continue once the PHE for COVID-19 ends. We noted that the public comments would assist us in identifying appropriate policy continuation decisions that we would consider finalizing in the CY 2021 PFS final rule. Outside the circumstances of the PHE for COVID-19, under the requirements at section 1834(m) of the Act that discuss payment for telehealth services, the patient would be located at a telehealth originating site, and the teaching physician would be furnishing the service as the distant site practitioner with the involvement of the resident.

While teaching physician presence through audio/video real-time communications technology when a resident furnishes Medicare telehealth services was responsive to critical needs during the PHE for COVID-19 to reduce exposure risk and to increase the capacity of teaching settings to respond to COVID-19, we expressed concern that the policy to permit virtual presence of the teaching physician may not allow for sufficient personal and identifiable physicians' services to exercise full, personal control over the services such that PFS payment to the teaching physician would be appropriate outside the circumstances of the PHE for COVID-19 on a temporary or permanent basis. We also noted concern that if the resident was furnishing the service at the distant site and the teaching physician was at a third site and present with the resident through audio/video real-time communications technology, the teaching physician may not be able to render sufficient personal and identifiable physicians' services to the patient to exercise full, personal control over the service to warrant separate payment on the PFS.

Absent the need to reduce exposure risk to COVID-19 during the PHE, we also expressed some concerns about patient safety when the teaching physician is present only virtually during a telehealth service furnished by a resident. For example, the virtual connection between the teaching physician and the resident who is with the patient could be disrupted (as with any virtual supervision scenario), rendering it impossible for the teaching physician to provide necessary direction for the resident to furnish appropriate care to the patient, thus foreclosing the ability of the teaching physician to exercise full, personal control over the key portion of the service, and potentially putting the patient's safety at risk.

However, because COVID-19 may continue to persist in some communities and some communities may experience a resurgence of COVID-19 after the expiration of the PHE for COVID-19, we solicited comments about whether it would be appropriate to extend this policy on a temporary basis until the end of the calendar year in which the PHE for COVID-19 ends. The presence of COVID-19 may result in a need to continue to limit exposure risks. In cases where the teaching physician has been exposed to the virus and is under quarantine, termination of the policy to permit virtual presence of the teaching physician could unintentionally limit the number of

licensed practitioners available to furnish services to Medicare patients in some communities, and could have the unintended consequence of limiting access for Medicare patients. Finally, based on experience gained during the PHE for COVID-19, we noted that we might identify circumstances for which the teaching physician can routinely render sufficient personal and identifiable services to the patient to exercise full, personal control over the management of the key portion of the case while providing virtual presence during Medicare telehealth services furnished by a resident on a permanent basis. For example, under ordinary circumstances for the primary care exception at § 415.174, we permit PFS payment to the teaching physician when a resident furnishes office/outpatient E/M visit codes of lower and mid-level complexity and annual wellness visits without the presence of a teaching physician (these codes were discussed in section II.F. of the proposed rule (85 FR 50121)). For such services, we noted that it may be appropriate to continue the virtual presence policy on a temporary or permanent basis. We solicited comments to help us understand how the option to allow teaching physician presence using audio/video real-time communications technology could support patient safety for all patients and particularly for at-risk patients (for example, patients who are aged and/or who have a disability), ensure burden reduction without creating risks to patient care or increasing fraud, avoid duplicative payment between the PFS and the IPPS for GME programs, and support emergency preparedness. We also solicited comments to provide data and other information on experiences implementing this policy during the PHE for COVID-19.

We received public comments on whether the policy we adopted on an interim basis during the PHE for COVID-19 to allow Medicare to make payment under the PFS to the teaching physician when a resident furnishes Medicare telehealth services to beneficiaries while a teaching physician is present using audio/video real-time communications technology should continue once the PHE for COVID-19 ends. The following is a summary of the comments we received and our responses.

Comment: Commenters were generally supportive of our interim policy to allow Medicare to make payment under the PFS to the teaching physician when a resident furnishes Medicare telehealth services to beneficiaries while a teaching physician

is present using audio/video real-time communications technology. Several commenters supported extending the flexibility permanently, while others recommended temporarily extending the policy through the end of the PHE for COVID-19, and cited a need to gather data regarding patient safety and potential impacts on resident training outside the context of the PHE for COVID-19. One commenter stated that in rural settings, it was not always possible for the teaching physician to accompany a resident while also being present to other residents. This commenter stated that the ability for the teaching physician is virtually present has increased patient access to physicians' services in rural areas. Similarly, other commenters stated that the permanent ability for teaching physicians to be virtually present when not physically present could increase training opportunities for rural training programs, and better prepare residents for the nuances and differences of providing care over video instead of in person.

Response: We appreciate commenters' support of our interim policy to allow Medicare to make payment under the PFS for teaching physician services when a resident furnishes Medicare telehealth services to beneficiaries while a teaching physician is present using interactive, audio/video real-time communications technology (excluding audio-only). We remain concerned that, absent the circumstances of the PHE, a teaching physician's presence via interactive, audio/video real-time communications technology (excluding audio-only) when a resident is furnishing Medicare telehealth services may not allow the teaching physician to render sufficient personal and identifiable physicians' services to the patient to exercise full, personal control over the management of the portion of the case for which payment is sought, in accordance with section 1842(b)(7)(A)(i)(I) of the Act, in most settings. For rural areas, however, we found compelling the commenters' statements that our virtual presence policy has increased access to Medicare-covered services. Accordingly, we believe that a policy to permit Medicare to make PFS payment for teaching physician services when a resident located within a rural training setting furnishes Medicare telehealth services to beneficiaries while a teaching physician is present through interactive, audio/video real-time communications technology (excluding audio-only) could increase access to Medicare-covered services in rural areas by

preventing the beneficiary from potentially having to travel long distances to obtain care, particularly as rural areas have stretched and diminishing clinical workforces.¹⁴ Increasing beneficiary access to care in rural areas is also consistent with our longstanding interest in increasing beneficiary access to Medicare-covered services in rural areas; therefore, in order to allow for more widespread access to care for beneficiaries in rural areas, we believe it would be appropriate for a resident located within a rural training setting to furnish telehealth services to a beneficiary who is in a separate location within the same rural area as the resident or within a different rural area, while a teaching physician is present, through interactive, audio/video real-time communications technology (excluding audio-only), in a third location, either within the same rural training setting as the resident or outside of that rural training setting.¹⁵ Further, allowing Medicare to make PFS payment for teaching services when a resident furnishes Medicare telehealth services to a beneficiary while a teaching physician is present through interactive, audio/video real-time communications technology (excluding audio-only) could facilitate additional training opportunities for residents in rural settings, which have historically been in limited supply.¹⁶ As such, the need to improve rural access to care for patients and training for residents overshadows our concerns about the ability for the teaching physician to render sufficient personal and identifiable physicians' services to the patient to exercise full, personal control over the management of the portion of the case for which payment is sought. Accordingly, in rural areas, we believe it would be appropriate to continue our policy to permit teaching physicians to meet the requirements to bill under the PFS for their services when a resident furnishes Medicare telehealth services to beneficiaries while a teaching physician is present through interactive, audio/video real-time communications technology (excluding audio-only) after the conclusion of the PHE for COVID-

19. This policy not only furthers our goals to increase beneficiary access to Medicare-covered services, it also facilitates needed training opportunities in a similar way to the longstanding primary care exception under § 415.174. The primary care exception permits the teaching physician to bill for certain types of physicians' services furnished by residents in certain settings even when the teaching physician is not present with the resident. Like the policy we are finalizing in this rule, the primary care exception facilitates access to Medicare-covered services and expanded residency training opportunities in primary care settings. Therefore, we are permanently finalizing our policy that Medicare may make payment under the PFS for teaching physician services when a resident furnishes Medicare telehealth services in a residency training site located outside of a MSA to a beneficiary who is in a separate location outside the same MSA (that is, in the same rural area) as the residency training site or is within a rural area outside of a different MSA, while a teaching physician is present, through interactive, audio/video real-time communications technology (excluding audio-only), in a third location, either within the same rural training site as the resident or outside of that rural training site. In order to ensure that the teaching physician renders sufficient personal and identifiable physicians' services to the patient to exercise full, personal control over the management of the portion of the case for which the payment is sought, in accordance with section 1842(b)(7)(A)(i)(I) of the Act, we are clarifying our existing documentation requirements to specify that, when a resident furnishes Medicare telehealth services in a residency training site located outside of a MSA and the teaching physician is present using interactive, audio/video real-time communications technology (excluding audio-only), the patient's medical record must clearly reflect how and when the teaching physician was present during the key portion of the service, in accordance with our regulations. For example, in the medical record, the teaching physician could document their physical or virtual presence at the training site during the key portion of the service, along with a notation describing the specific portion(s) of the service for which the teaching physician was virtually present, and/or that the teaching physician reviewed the service with the resident during or immediately after the service in accordance with the primary

¹⁶ HHS awards \$20 million to 27 organizations to increase the rural workforce through the creation of new rural residency programs: <https://www.hhs.gov/about/news/2019/07/18/hhs-awards-20-million-to-27-organizations-to-increase-rural-workforce.html>.

care exception under § 415.174. We also expect that, if the teaching physician is virtually present and bills for services during which there is a disruption to the virtual connection between the teaching physician and the resident who is with the patient, the encounter would be paused until the connection resumes, or the appointment would be rescheduled.

For all other settings, we are not permanently finalizing this policy; however, the policy will remain in place for the duration of the PHE for COVID-19 to provide flexibility for communities that may experience resurgences in COVID-19 infections. While we do not anticipate any program integrity concerns from this expanded flexibility, we agree with commenters that it is necessary for us to consider additional data prior to proposing additional policies in this area, which could range from expanding this flexibility to include non-rural settings to terminating this flexibility in all settings. Specifically, we anticipate considering to what degree the permanent implementation of the policy to allow PFS payment for teaching services when a teaching physician is virtually present while a resident furnishes Medicare telehealth services in a residency training site located outside of an MSA increased patient access to Medicare-covered services and provided more training opportunities for residents while enabling the teaching physician to render sufficient personal and identifiable physicians' services. We may use such information, obtained through, for example, a commissioned study, analysis of Medicare claims data or another assessment mechanism, to further study the impacts of this limited permanent expansion of the policy to allow PFS payment for teaching services when a teaching physician is virtually present while a resident furnishes Medicare telehealth services to inform potential future rulemaking, and in an effort to prevent possible fraud, waste and abuse.

We are amending our regulations to reflect this final policy. In § 415.172(a), we are adding language to state that, in a residency training site located outside of an MSA, a teaching physician may bill under the PFS for services furnished when they are present with the resident during the key portion of the service through interactive, audio/video real-time communications technology (excluding audio-only), including when the resident provides Medicare telehealth services. We are also adding language to state that, for all teaching settings and for the duration of the PHE for COVID-19, payment under the PFS is permitted if a teaching physician is

present during the key portion of the service, including Medicare telehealth services, through interactive, audio/video real-time communications technology (excluding audio-only). In § 415.172(b), which discusses existing documentation requirements, we are adding language to clarify that, for residency training sites that are located outside of a MSA, the patient's medical record must clearly reflect whether the teaching physician was physically or virtually present at the training site during the key portion of the service, including for Medicare telehealth services. We are also adding language to clarify that, for all teaching settings and for the duration of the PHE for COVID-19, the patient's medical record must clearly reflect whether the teaching physician was physically or virtually present during the key portion of the service, including for Medicare telehealth services. Finally, we are adding language to clarify that the medical records must contain a notation describing the specific portion(s) of the service, including Medicare telehealth services, for which the teaching physician was present through interactive, audio/video real-time communications technology (excluding audio-only).

While difficult to quantify, we believe that permanently extending our policy to allow payment under the PFS for teaching physician services when a resident furnishes Medicare telehealth services in a residency training site located outside of an MSA and the teaching physician is present through interactive audio/video real-time communications technology (excluding audio-only) will promote enhanced patient access to Medicare-covered physicians' services in rural areas. In addition, allowing PFS payment for teaching physician services when a resident furnishes Medicare telehealth services in a residency training site located outside of an MSA and the teaching physician is present through interactive audio/video real-time communications technology (excluding audio-only) will improve teaching capabilities and potentially allow for additional resident education opportunities in rural areas. Settings that have traditionally been inaccessible as training sites for residents due to the limited ability of teaching physicians to be physically present will be more readily available, thereby affording increased access to physicians' services to patients in these areas. However, in order to ensure that the limited extension of this policy is also consistent with section

1842(b)(7)(A)(i)(I) of the Act, we are clarifying the existing documentation requirements to specify that the medical record must clearly reflect how and when the teaching physician was present for the Medicare telehealth service. We believe this documentation clarification will ensure that the teaching physician renders sufficient personal and identifiable physicians' services to the patient to exercise full, personal control over the management of the portion of the case for which payment is sought. Further, in order to minimize potential risks to patients, we remind physicians and other practitioners that the adoption of this policy in residency training sites that are located outside of an MSA does not preclude teaching physicians from being physically present when a resident is furnishing Medicare telehealth services. We therefore urge teaching physicians to continue to use their professional judgment to determine the circumstances under which it is appropriate to be present virtually rather than in person, depending on the Medicare telehealth services being furnished and the experience of the particular residents involved.

Comment: One commenter, who favored a permanent policy to allow PFS payment for teaching physician services when a resident furnishes Medicare telehealth services in a residency training site located outside of a MSA and the teaching physician is present using interactive audio/video real-time communications technology, advocated for the permanent extension of the policy by noting that ACGME recognizes and endorses an expansion of telemedicine as well as the use of audio/visual communications devices by residents and their teaching physicians. Further, the commenter stated that, as long as the virtual presence of teaching physicians during Medicare telehealth services continues to adhere to ACGME standards, an optimal learning environment, with appropriate education and supervision, would be maintained.

Response: We appreciate the commenter's feedback regarding ACGME standards in the context of the expansion of telemedicine and the use of audio/visual communication devices by residents and teaching physicians; however, the commenter provided no specific description of ACGME's standards or any evidence to support a permanent implementation of the policy to allow PFS payment for teaching services when a resident furnishes Medicare telehealth services in all settings when a teaching physician is present through interactive, audio/video

real-time communications technology (excluding audio-only). Without further information, CMS cannot opine on whether or not ACGME's standards would support a wider permanent implementation of this policy. Therefore, we continue to rely on the clinical judgment of teaching physicians and the residents they involve in their care to ensure appropriate patient safety.

iv. Resident Moonlighting in the Inpatient Setting

Under certain conditions, the services of a licensed resident physician who is "moonlighting" are considered to be furnished by the individual in their capacity as a physician, rather than as a resident in an approved GME program. As specified in the regulation at § 415.208, except during the PHE for COVID-19, as defined in the regulation at § 400.200, the services of residents to inpatients of hospitals in which the residents have their approved GME program are not considered separately billable as physicians' services and instead are payable under §§ 413.75 through 413.83 regarding direct GME payments, whether or not the services are related to the approved GME training program. When a resident furnishes services that are not related to their approved GME programs in an outpatient department or emergency department of a hospital in which they have their training program, those services can be billed separately as physicians' services and payable under the PFS if they meet the criteria described in our regulation at § 415.208(b)(2)(i) through (iii). In addition, under § 415.208(c), services of a licensed resident furnished outside the scope of an approved GME program when moonlighting in a hospital or other setting that does not participate in the approved GME program are payable under the PFS when the resident is fully licensed to practice in the state where the services are furnished, and the resident's time spent in patient care activities in that setting is not counted for the purpose of Medicare direct GME payments.

In the March 31st COVID-19 IFC, we amended our regulation at § 415.208 to state that, during the PHE for COVID-19, the services of residents that are not related to their approved GME programs and are furnished to inpatients of a hospital in which they have their training program are separately billable physicians' services for which payment can be made under the PFS provided that the services are identifiable physicians' services and meet the conditions for payment of physicians'

services to beneficiaries by providers in § 415.102(a), the resident is fully licensed to practice medicine, osteopathy, dentistry, or podiatry by the state in which the services are performed, and the services can be separately identified from those services that are required as part of the approved GME program. We considered whether this flexibility that we implemented on an interim basis should be extended on a temporary basis (that is, if the PHE for COVID-19 ends in 2021, these policies could be extended to December 31, 2021, to allow for a transition period before reverting to status quo policy) or be made permanent, and solicited public comments on whether this policy should continue once the PHE ends. We expressed concerns that there may be risks to program integrity in allowing residents to furnish separately billable physicians' services to inpatients in the teaching hospitals where they are training when the services are outside the scope of their approved GME program. For example, there could be a risk of duplicate Medicare payment for the resident's services under the IPPS for GME and the PFS if the physicians' services furnished by residents were not adequately separately identified from those services that are required as part of the GME program. However, because COVID-19 may continue to persist in some communities or some communities may experience a resurgence of COVID-19 after the expiration of the PHE, we noted that it may be appropriate for us to extend this policy on a temporary basis to meet the needs of teaching hospitals to ensure that there are as many qualified practitioners available as possible. We noted that the public comments would assist us in identifying appropriate policy continuation decisions that we would consider finalizing in this CY 2021 PFS final rule. We also solicited comments to provide data and other information on experiences implementing this policy during the PHE for COVID-19.

We received public comments from our comment solicitation in the proposed rule regarding whether our resident moonlighting policy under § 415.208 that we implemented on an interim basis for the PHE for COVID-19 should continue once the PHE ends. The following is a summary of the comments we received and our responses.

Comment: Commenters were generally supportive of the policy under § 415.208 that we adopted on an interim basis during the PHE for COVID-19. Several commenters supported extending the flexibility permanently,

while others recommended temporarily extending the policy through the end of the PHE for COVID-19, and cited a need to maintain surge capacity and to allow more data to be gathered regarding patient safety and potential impacts on resident training outside the context of the PHE. A few commenters suggested that to prevent duplicate billing, CMS should educate practitioners about the need for sufficient documentation to demonstrate that services furnished while residents are moonlighting are separate from those services that are required as part of approved GME programs.

Response: We appreciate commenters' support for our interim policy. After considering the comments, we are finalizing our interim policy for the services of moonlighting residents on a permanent basis. Consequently, we are amending our regulation at § 415.208(b)(2) to state that the services of residents that are not related to their approved GME programs and are performed in the outpatient department, emergency department, or inpatient setting of a hospital in which they have their training program are separately billable physicians' services for which payment can be made under the PFS provided that the services are identifiable physicians' services and meet the conditions of payment for physicians' services to beneficiaries in providers in § 415.102(a), the resident is fully licensed to practice medicine, osteopathy, dentistry, or podiatry by the State in which the services are performed, and the services are not performed as part of the approved GME program.

We agree with commenters about the need for sufficient documentation to allay concerns about potential duplication of payment with the IPPS for GME. Thus, we are also amending § 415.208(b)(2) to clarify that, regardless of whether the resident's services are performed in the outpatient department, emergency department or inpatient setting of a hospital in which they have their training program, the patient's medical record must clearly reflect that the resident furnished identifiable physician services that meet the conditions of payment of physician services to beneficiaries in providers in § 415.102(a), that the resident is fully licensed to practice medicine, osteopathy, dentistry, or podiatry by the State in which the services are performed, and that the services are not performed as part of the approved GME program. For example, in the medical record, the resident could state that they are licensed to practice medicine, osteopathy, dentistry or podiatry by the

state in which the service was performed, document that the service was performed outside of their approved GME program, and include a notation describing the specific physician service that was furnished,

v. Primary Care Exception Policies

The regulation at § 415.174 sets forth an exception to the conditions for PFS payment for services furnished in teaching settings in the case of certain E/M services furnished in certain centers. Under the so-called “primary care exception,” Medicare makes PFS payment in certain teaching hospital primary care centers for certain services of lower and mid-level complexity furnished by a resident without the physical presence of a teaching physician. Section 415.174(a)(3) requires that the teaching physician must not direct the care of more than four residents at a time, and must direct the care from such proximity as to constitute immediate availability (that is, provide direct supervision) and must review with each resident during or immediately after each visit, the beneficiary’s medical history, physical examination, diagnosis, and record of tests and therapies. Section 415.174(a)(3) also requires that the teaching physician must have no other responsibilities at the time, assume management responsibility for the beneficiaries seen by the residents, and ensure that the services furnished are appropriate.

As provided in the regulation at § 415.174(a), the codes of lower and mid-level complexity that can be furnished under the primary care exception are specified in section 100 of chapter 12 of the Medicare Claims Processing Manual (<https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c12.pdf>). They are the following:

- CPT code 99201 (*Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A problem focused history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient’s and/or family’s needs. Usually, the presenting problem(s) are self-limited or minor. Typically, 10 minutes are spent face-to-face with the patient and/or family;*)
- CPT code 99202 (*Office or other outpatient visit for the evaluation and management of a new patient, which*

requires these 3 key components: An expanded problem focused history; An expanded problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient’s and/or family’s needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 20 minutes are spent face-to-face with the patient and/or family;)

- CPT code 99203 (*Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A detailed history; A detailed examination; Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient’s and/or family’s needs. Usually, the presenting problem(s) are of moderate severity. Typically, 30 minutes are spent face-to-face with the patient and/or family;*)

- CPT code 99211 (*Office or other outpatient visit for the evaluation and management of an established patient, that may not require the presence of a physician or other qualified health care professional. Usually, the presenting problem(s) are minimal. Typically, 5 minutes are spent performing or supervising these services;*)

- CPT code 99212 (*Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient’s and/or family’s needs. Usually, the presenting problem(s) are self-limited or minor. Typically, 10 minutes are spent face-to-face with the patient and/or family;*)

- CPT code 99213 (*Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the*

problem(s) and the patient’s and/or family’s needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 15 minutes are spent face-to-face with the patient and/or family;)

- HCPCS code G0402 (*Initial preventive physical examination; face-to-face visit, services limited to new beneficiary during the first 12 months of Medicare enrollment;*)

- HCPCS code G0438 (*Annual wellness visit; includes a personalized prevention plan of service (PPS), initial visit;*) and

- HCPCS code G0439 (*Annual wellness visit, includes a personalized prevention plan of service (PPS), subsequent visit.*)

In the March 31st COVID-19 IFC, we amended § 415.174 of our regulations to allow, during the PHE for COVID-19, all levels of office/outpatient E/M visits to be furnished by the resident and billed by the teaching physician under the primary care exception. In the May 8th COVID-19 IFC, we further expanded the list of services included in the primary care exception during the PHE for COVID-19. We also allowed PFS payment to the teaching physician for services furnished by residents via telehealth under the primary care exception if the services were also on the list of Medicare telehealth services.

We noted that we were considering whether these policies should be extended on a temporary basis (that is, if the PHE for COVID-19 ends in 2021, these policies could be extended to December 31, 2021, to allow for a transition period before reverting to status quo policy) or be made permanent, and solicited public comments on whether these policies should continue once the PHE for COVID-19 ends. We also noted that the public comments would assist us in identifying appropriate policy continuation decisions that we would consider finalizing in the CY 2021 PFS final rule. We also considered whether specific services added under the primary care exception should be extended temporarily or made permanent and solicited public comments on whether these services should continue as part of the primary care exception once the PHE for COVID-19 ends. These services are the following:

- CPT code 99204 (*Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of moderate complexity. Counseling and/or*

coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 45 minutes are spent face-to-face with the patient and/or family);

- CPT code 99205 (Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 60 minutes are spent face-to-face with the patient and/or family);

- CPT code 99214 (Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 25 minutes are spent face-to-face with the patient and/or family);

- CPT code 99215 (Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 40 minutes are spent face-to-face with the patient and/or family);

- CPT code 99495 (Transitional Care Management services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within two business days of discharge; medical decision making of at least moderate complexity during the service period;

face-to-face visit within 14 calendar days of discharge);

- CPT code 99496 (Transitional Care Management services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within two business days of discharge; medical decision making of at least high complexity during the service period; face-to-face visit within 7 calendar days of discharge);

- CPT code 99421 (Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 5–10 minutes);

- CPT code 99422 (Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 11–20 minutes);

- CPT code 99423 (Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 21 or more minutes);

- CPT code 99452 (Interprofessional telephone/internet/electronic health record referral service(s) provided by a treating/requesting physician or qualified health care professional, 30 minutes);

- HCPCS code G2012 (Brief communication technology-based service, e.g. virtual check-in, by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5–10 minutes of medical discussion); and

- HCPCS code G2010 (Remote evaluation of recorded video and/or images submitted by an established patient (e.g., store and forward), including interpretation with follow-up with the patient within 24 business hours, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment).

We noted that expanding the array of services for which Medicare may make PFS payment to the teaching physician when furnished by a resident under the primary care exception was responsive to critical needs during the PHE for COVID–19 for patients who may be quarantined at home or who may need to be isolated for purposes of minimizing exposure risk based on presumed or confirmed COVID–19 infection. Because COVID–19 may

continue to persist in some communities or some communities may experience a resurgence of COVID–19 after the expiration of the PHE for COVID–19, we also noted that it may be appropriate for us to extend all of these services on a temporary basis (that is, until the end of the calendar year in which the PHE for COVID–19 ends).

However, we expressed concern that it may be inappropriate to extend all of these services on a temporary basis or add them to the primary care exception permanently. The intent of the primary care exception as described in § 415.174 is that E/M visits of lower and mid-level complexity furnished by residents are simple enough to permit a teaching physician to be able to direct and manage the care of up to four residents at any given time and direct the care from such proximity as to constitute immediate availability. While CPT code 99421 and HCPCS code G2012 may be simple services, others such as levels 4 and 5 office/outpatient E/M visits (CPT codes 99204 through 99205 and CPT codes 99214 through 99215) and transitional care management codes (CPT codes 99495 through 99496) require medical decision-making that is of at least moderate complexity. We also noted concern that the teaching physician may not be able to maintain sufficient personal involvement in all of the care to warrant PFS payment for the services being furnished by up to four residents when some or all of the residents might be furnishing services that are more than lower and mid-level complexity. We noted that when the teaching physician is directing the care of a patient that requires moderate or higher medical decision-making, the ability to be immediately available to other residents could be compromised, potentially putting patients at risk. Thus, we considered whether, upon expiration of the PHE for COVID–19, we should extend on a temporary basis some or all of the services we added to the primary care exception list during the PHE and solicited public comments on whether these services should continue as part of the primary care exception after the PHE ends. We also solicited comments to provide data and other information on experiences implementing this policy during the PHE for COVID–19.

We also considered whether our interim policy that PFS payment could be made to the teaching physician when residents furnish telehealth services under the primary care exception should be extended on a temporary basis or be made permanent, and solicited public comments on whether this policy should continue once the

PHE for COVID-19 ends. In these cases, outside the circumstances of the PHE for COVID-19, the patient would be at the originating site and the resident furnishing the care, along with the teaching physician billing for it, would be located at the primary care center as the distant site practitioner. If we were to temporarily extend or add permanently to the primary care exception services such as e-visits or communication technology-based services, we noted that it may also make sense to permit PFS payment to the teaching physician when the resident furnishes an office/outpatient E/M visit via telehealth, on the basis that the patient is not physically in the clinic and that these services all involve the use of virtual technology (for example, patient portals for e-visits, telecommunications technology for the office/outpatient E/M visit) to facilitate care delivery. Further, we noted that, if we were to remove the services that we added to the primary care exception on an interim basis, we could separately consider continuing to permit PFS payment to the teaching physician when the resident furnishes an office/outpatient E/M visit via telehealth because the teaching physician would be immediately available in the distant site clinic with the resident to direct and manage the care.

We received public comments on the primary care exception policies. The following is a summary of the comments we received and our responses.

Comment: Commenters were generally supportive of the policy adopted on an interim basis under § 415.174 to allow Medicare to make payment to the teaching physician for additional services under the primary care exception, including all levels of office and outpatient E/M, audio-only telephone E/M services, transitional care management, and communication technology-based services. Commenters were also generally supportive of our interim policy to allow Medicare to make payment under the PFS to the teaching physician for services furnished by residents via telehealth under the primary care exception if the services are on the list of Medicare telehealth services. These commenters stated that in general, the expansion of the primary care exception increases beneficiary access to Medicare-covered services and provides additional training opportunities for residents, particularly in rural areas.

Several commenters supported making permanent all the services that we implemented on an interim basis during the PHE for COVID-19. Several other commenters supported making

certain services permanent, stating that services such as communication technology-based services (for example, CPT codes 99421–99423 and HCPCS codes G2010 and G2012) were simple, require low to moderate complexity medical decision-making, and do not involve a diagnostic complexity that is beyond a resident's skill. In addition, some commenters supported the permanent inclusion of CPT code 99452 and stated that in some models of care, these inter-professional consults are typically initiated by a primary care practitioner to a specialist for a low acuity, condition-specific question that can be answered without an in-person visit.

Some commenters supported the permanent inclusion of CPT codes 99204 and 99214, while other commenters did not. Commenters in support of including these codes stated that office/outpatient level 4 visits are typical visit for the Medicare population and that these visits do not involve a level of diagnostic complexity that is beyond a resident's skill. Other commenters stated that office/outpatient level 4 visits should be furnished with the teaching physician present, either physically or through interactive audio/video real-time communications technology. These commenters were concerned that allowing office/outpatient level 4 visits to be furnished without the presence of the teaching physician could pose risks to patient safety and potential for abuse.

Some commenters did not support the permanent inclusion of high-complexity services, including office/outpatient level 5 visits (CPT codes 99205 and 99215) and transitional care management (CPT code 99496), due to the high level of medical complexity, patient safety concerns, and potential for abuse.

Several commenters recommended temporarily extending the primary care exception policies through the end of the PHE for COVID-19 and cited a need to gather data regarding patient safety and potential impacts on resident training outside the context of the PHE. Other commenters stated that the expansion of the primary care exception has allowed residents to be trained based on “real life,” which will leave them better prepared to furnish additional services upon completion of their residency programs.

Response: We appreciate commenters' support of our interim policy to allow Medicare to make payment to the teaching physician when the resident furnishes an expanded array of services under the primary care exception. We remain concerned that permanently

adding all of the proposed services to the primary care exception may be inappropriate because some of the services require at least a moderate level of medical decision-making, whereas the intent of the primary care exception as described in § 415.174 is that E/M visits of lower and mid-level complexity furnished by residents are simple enough for a teaching physician to be able to direct and manage the care of up to four residents at any given time and direct the care from such proximity as to constitute immediate availability. We also remain concerned that the teaching physician may not be able to maintain sufficient personal involvement in all of the care to warrant PFS payment for the services being furnished by up to four residents when some or all of the residents might be furnishing services that are more than lower and mid-level complexity. However, we found the comments regarding the advantages of an expansion of services under the primary care exception in rural areas particularly compelling. Specifically, allowing PFS payment for additional primary care services furnished by residents without the physical presence of a teaching physician in rural areas could increase the availability of Medicare-covered services, which is consistent with our longstanding interest in increasing beneficiary access to Medicare-covered services in rural areas¹⁷. For example, permitting PFS payment to the teaching physician when the resident furnishes communication-technology based services, an inter-professional consultation, or an office/outpatient visit via telehealth without a teaching physician present could prevent the beneficiary from potentially having to travel long distances to obtain care. Accordingly, we believe that permitting Medicare to make PFS payment to the teaching physician when the resident furnishes an expanded array of services under the primary care exception in rural settings could increase access to Medicare-covered services. Further, this policy could also provide the benefit of additional training opportunities for residents in rural settings, which have historically been in limited supply. As such, the need to improve rural access to care for patients and training for resident overshadows our concerns that the teaching physician may not be able to maintain sufficient personal involvement in all of the care to warrant PFS payment for the services being furnished by up to four residents when

¹⁷ CMS Rural Health Strategy: <https://www.cms.gov/About-CMS/Agency-Information/OMH/Downloads/Rural-Strategy-2018.pdf>.

some or all of the residents might be furnishing services that are more than lower and mid-level complexity. Accordingly, we are finalizing, for residency training sites that are located outside of a MSA, a policy to allow Medicare to make payment to the teaching physician when the resident furnishes an expanded array of services under the primary care exception. However, in accordance with the original intent of the primary care exception to limit the scope of services to those of lower and mid-level complexity, we are limiting the permanent expanded array of services under the primary care exception to include communication-technology based services and inter-professional consults. These services are described by CPT codes 99421–99423, and 99452, and HCPCS codes G2010 and G2012. We are also adding to the primary care exception, for residency training sites that are located outside of an MSA, Medicare telehealth services that furnished by residents. Based on the descriptors, these codes all represent E/M services of a low-to-mid-level complexity, which is consistent with our regulations in § 415.174.

As noted above, some commenters supported adding office/outpatient E/M level 4 visits (CPT codes 99204 and 99214) to the primary care exception. While we included these services in the exception during the PHE to meet the needs of all teaching settings to ensure that there are as many qualified practitioners available as possible, we agree with the commenters who stated that it is inappropriate to allow these services to be billed by the teaching physician when furnished by residents without the presence of a teaching physician on a permanent basis because these services involve medical decision-making of at least a moderate level of complexity, so the ability for the teaching physician to be immediately available to other residents could be compromised. Thus, we agree with the commenters who stated that adding office/outpatient E/M level 4 visits to the primary care exception could pose risks to patient safety. We also believe that, because the transitional care management codes require medical decision-making of at least moderate complexity, the ability for the teaching physician to be immediately available to other residents could be compromised.

This policy to limit the expanded array of services permitted to be furnished under the primary exception only to those services furnished in residency training sites that are located outside of a MSA is consistent with other teaching physician payment

policies regarding virtual presence and telehealth that we are finalizing as described earlier in this final rule, and which were also similarly limited to residency training sites that are located outside of a MSA. However, practitioners are reminded that the permanent extension of the expanded primary care exception in residency training sites that are located outside of a MSA does not preclude teaching physicians from being physically present when a resident is furnishing these primary care services. We therefore urge teaching physicians to continue to use their professional judgment to determine the circumstances under which it is appropriate for residents to perform these services without the presence of the teaching physician, depending on the Medicare service being furnished and the experience of the particular resident involved.

For all other settings, we are not finalizing a policy to allow Medicare to make payment to the teaching physician when the resident furnishes an expanded array of services under the primary care exception, including when those services are furnished under Medicare telehealth; however, the interim policy to include an expanded set of services under the primary care exception will remain in place for the duration of the PHE for COVID–19 to provide flexibility for communities that may experience resurgences in COVID–19 infections. Accordingly, at the end of the PHE, we will be terminating the inclusion of CPT codes 99204, 99214, 99205, 99215, 99495 and 99496 from the primary care exception for all settings.

While we do not anticipate any program integrity concerns to arise from the final policy to expand the services that may be furnished under the primary care exception in rural settings, we also agree with commenters that it is necessary for us to consider additional data prior to proposing additional policies in this area, which could range from expanding this flexibility to include non-rural settings to terminating this flexibility in all settings. Specifically, anticipate considering to what degree the permanent establishment of the policy to allow PFS payment to teaching physicians when the resident furnishes an expanded array of services under the primary care exception in residency training sites that are located outside of an MSA increased patient access to care and provided more training opportunities for residents while enabling the teaching physician to remain immediately available. We may use such information, obtained through,

for example, a commissioned study, analysis of Medicare claims data or another assessment mechanism, to further study the impacts of this limited permanent expansion of the policy to allow PFS payment to teaching physicians when the resident furnishes an expanded array of services under the primary care exception in residency training sites of a teaching setting that are outside of an MSA to inform potential future rulemaking, and in an effort to prevent possible fraud, waste and abuse.

Comment: One commenter requested clarification that when teaching physicians meet all of the requirements of the primary care exception, they are also able to provide direction and immediate availability thru virtual presence for moderate to high complexity encounters, such CPT codes 99204, 99205, 99214, and 99215.

Response: Through the end of the PHE for COVID–19, a teaching physician that meets the requirements of the primary care exception described in § 415.174(c) to direct the care and then to review the services furnished by each resident during or immediately after each visit may be met through interactive, audio/video real-time communications technology (excluding audio-only). This policy applies for moderate to high complexity encounters, including all levels of office/outpatient services. Once the PHE for COVID–19 ends, in accordance with the final policy to allow PFS payment to teaching physicians when the resident furnishes an expanded array of services under the primary care exception in residency training sites that are located outside of an MSA, a teaching physician may meet the requirements of the primary care exception described in § 415.174 to direct the care and then to review the services furnished by each resident during or immediately after each visit through interactive, audio/video real-time communications technology (excluding audio-only) when residents furnish services that we are including under the primary care exception, as described above. We believe that establishing this policy for residency training sites that are located outside of an MSA is consistent with the expansion of services that are permitted under the primary care exception in residency training sites that are located outside of an MSA, and that similarly, this policy will also increase beneficiary access to Medicare-covered primary care services and provide additional training opportunities for residents in settings to which there has previously been limited access. However, as noted above, the

services we are permanently including under the primary care exception in residency training sites that are located outside of an MSA do not include codes 99204, 99214, 99205, 99215, 99495 and 99496 because these services are of moderate to high complexity, and we believe it is inappropriate to allow these services to be furnished by residents without the presence of a teaching physician.

We are amending our regulations to reflect this final policy. In § 415.174, we are adding a new paragraph (d) to state that, in residency training sites that are located outside of an MSA, a teaching physician that meets the requirements of the primary care exception described in § 415.174 may meet the requirement to direct the care and then to review the services furnished by each resident during or immediately after each visit through interactive, audio/video real-time communications technology (excluding audio-only) when residents furnish services that are included under the primary care exception associated with these sites.

Comment: One commenter requested clarification that office/outpatient E/M services furnished by residents under the primary care exception described in § 415.174 may be billed on the basis of time, and also requested confirmation that, under the primary care exception, the teaching physician need not be present with the resident for the period of time billed.

Response: In the May 8th COVID-19 IFC, we stated that, consistent with policy that we established in the March 31st COVID-19 IFC for selecting the level of office/outpatient E/M visits when furnished as Medicare telehealth services, (85 FR 19268 through 19269), the office/outpatient E/M level selection for services under the primary care exception when furnished via telehealth can be based on medical decision-making or time, with time defined as all of the time associated with the E/M on the day of the encounter; and the requirements regarding documentation of history and/or physical exam in the medical record do not apply. As described in section II.Z. of the May 8th COVID-19 IFC, the typical times for purposes of level selection for an office/outpatient E/M are the times listed in the CPT code descriptor.

vi. Conclusion

In summary, we reminded stakeholders that during the PHE for COVID-19 we implemented these policies on an interim basis to support our goals of ensuring beneficiary access to necessary services and maintenance of sufficient workforce capacity by

offering flexibility to practitioners. While we anticipated reverting to our previous teaching physician policy that was in place prior to the PHE for COVID-19 for the reasons discussed above, we considered whether the teaching physician and resident moonlighting policies that we implemented on an interim basis during the PHE for COVID-19 should be extended on a temporary basis (that is, if the PHE ends in 2021, these policies could be extended to December 31, 2021, to allow for a transition period before reverting to status quo policy) or be made permanent policy for CY 2021. As discussed above, we noted concern that the teaching physician may not be able to maintain sufficient personal involvement in all of the care to warrant PFS payment for the services being furnished by up to four residents when some or all of the residents might be furnishing services that are more than lower or mid-level complexity. We also noted concern that when the teaching physician is directing the care of a patient that requires moderate or higher medical decision-making, their ability to be immediately available to other residents could be compromised, which can potentially put patients at risk. We noted that we would consider under which scenarios our policies for moonlighting or virtual presence as discussed above, should apply, if any. As discussed for our moonlighting policy, we expressed concern that there may be risks to program integrity in allowing residents to furnish separately billable physicians' services to inpatients in the teaching hospitals where they are training when the services are outside the scope of their approved GME program. For example, there could be a risk of duplicate Medicare payment for the resident's services under the IPPS for GME and the PFS if the physicians' services furnished by residents were not adequately separately identified from those services that are required as part of the GME program. Under our discussion of virtual presence, we highlighted concerns about how continuing to permit teaching physicians to be involved through their virtual presence may not be sufficient to warrant PFS payment to the teaching physician on a temporary or permanent basis. Absent the circumstances of the PHE for COVID-19, the physical, in-person presence of the teaching physician may be necessary to provide oversight to ensure that care furnished to Medicare beneficiaries is medically reasonable and necessary, and to ensure that the teaching physician renders sufficient

personal services to exercise full, personal control of the key portion of the case. We also discussed concerns about patient safety when the teaching physician is only virtually present.

We noted that public comments, especially those that focused on the variables we identified regarding the specific services included on the primary care exception list, and clinical scenarios under which residents could moonlight or furnish certain types of services under the supervision of a teaching physician via virtual presence, would assist us in identifying the appropriate policy continuation decisions after the end of the PHE for COVID-19, which we would consider while drafting this CY 2021 PFS final rule. As part of our review of public comments, we would weigh and make decisions based on the potential benefits and risks associated with the potential temporary or permanent continuation, in whole or in part, of these policies. We noted that the benefits of continuation may include limiting COVID-19 exposure risk for practitioners and patients, increasing workforce capacity of teaching settings to respond to continuing effects following the PHE for COVID-19 as practitioners may be asked to assist with the response, and increasing access so that we do not unintentionally limit the number of licensed practitioners available to furnish services to Medicare beneficiaries. We noted that the risks may include the potential for duplicative payment with Medicare Part A reimbursement for GME training programs, the potential for increases to cost-sharing for Medicare beneficiaries that could result from additional Part B claims for services furnished by the teaching physician with the involvement of residents, and potential threats to patient safety.

Comment: Commenters were generally supportive of the teaching physician and resident moonlighting policies that we implemented on an interim basis during the PHE for COVID-19. Several commenters recommended that we finalize our policies and asserted that making these policies permanent would promote patient access to physicians' services, particularly in rural and underserved areas and could provide additional training opportunities for rural training programs. Other commenters recommended that we extend the policies on a temporary basis, to provide flexibility for communities that may experience resurgences in COVID-19 infections. In addition, these commenters cited a need to gather data regarding patient safety and potential

impacts on resident training outside the context of the PHE before considering permanent implementation of the policies.

Response: We appreciate commenters' support of the teaching physician and resident moonlighting policies that we implemented on an interim basis during the PHE for COVID-19. As we reviewed these comments, we considered the benefits and risks of finalizing the proposals. After considering the comments, we are finalizing our virtual presence and primary care exception policies for residency training sites that are located outside of an MSA. We are finalizing our resident moonlighting policies for all inpatient teaching settings.

We found compelling the comments regarding the benefits of the virtual presence and primary care exception policies in rural settings. Accordingly, we believe that permitting the teaching physician to meet the requirements to bill under the PFS for their services through virtual presence when furnishing services involving residents in rural training settings, and allowing PFS payment for additional primary care services furnished by residents without the physical presence of a teaching physician in rural areas could increase access to Medicare-covered services by preventing the beneficiary from potentially having to travel long distances to obtain care, particularly as rural areas have stretched and diminishing clinical workforces.¹⁸ Increasing beneficiary access to care in rural areas is also consistent with our longstanding interest in increasing beneficiary access to Medicare-covered services in rural areas.¹⁹ Further, these policies could provide the benefit of additional training opportunities for residents in rural settings, which have historically been in limited supply.²⁰ As such, the need to improve rural access to care for patients and training for residents overshadows our aforementioned concerns about the teaching physician's ability to render sufficient personal and identifiable physicians' services through virtual presence, or to maintain sufficient personal involvement in all of the care

to warrant PFS payment for the services being furnished by up to four residents when some or all of the residents might be furnishing services that are more than lower and mid-level complexity. Accordingly, we believe it would be appropriate to continue these policies in rural settings after the conclusion of the PHE for COVID-19. These policies not only further our goal to increase beneficiary access to Medicare-covered services, they also facilitate needed training opportunities is similar to the rationale for the existing primary care exception under § 415.174. The primary care exception permits the teaching physician to bill for certain types of physicians' services furnished by residents in certain settings even when the teaching physician is not present with the resident. Like the policies we are finalizing in this rule, the primary care exception facilitates access to Medicare-covered services and expanded residency training opportunities in primary care settings. Therefore, we are finalizing our virtual presence and primary care exception policies for residency training sites that are located outside of an OMB-defined MSA. In addition, in order to ensure that the teaching physician renders sufficient personal and identifiable physicians' services to the patient to exercise full, personal control over the management of the portion of the case for which the payment is sought in accordance with section 1842(b)(7)(A)(i)(I) of the Act, we are clarifying existing documentation requirements to specify that the patient's medical record must clearly reflect how and when the teaching physician was present during the key portion of the service, in accordance with our regulations.

For our resident moonlighting policies, we believe that complete documentation in the medical record would guard against the risk of potential duplicative payment with the IPPS. Consequently, we are clarifying that, regardless of whether the resident's services are performed in the outpatient department, emergency department or inpatient setting of a hospital in which they have their training program, the patient's medical record must clearly reflect that the resident furnished identifiable physician services that meet the conditions of payment of physician services to beneficiaries in providers in § 415.102(a), that the resident is fully licensed to practice medicine, osteopathy, dentistry, or podiatry by the State in which the services are performed, and that the services are not

performed as part of the approved GME program.

For the virtual presence, primary care exception and resident moonlighting policies, while we do not anticipate any program integrity concerns, we agree with commenters that it is necessary for us to consider additional data prior to proposing additional policies in this area, which could range from expanding these flexibilities to include non-rural settings to terminating these flexibilities in all settings. Specifically, we anticipate considering to what degree the permanent establishment of these policies increased patient access to Medicare-covered services and provided additional training opportunities for residents while enabling the teaching physician to render sufficient personal and identifiable physicians' services. We may use such information, obtained through, for example, a commissioned study, analysis of Medicare claims data, or another assessment mechanism, to further study the impacts of these policies to inform potential future rulemaking, and in an effort to prevent possible fraud, waste and abuse.

2. Supervision of Diagnostic Tests by Certain NPPs

In response to E.O. 13890 discussed above, we sought assistance from stakeholders in identifying Medicare regulations that contain more restrictive supervision requirements than existing state scope of practice laws, or that limit health professionals from practicing at the top of their license. In response to our request for feedback discussed above, physician assistants (PAs) and nurse practitioners (NPs) recommended regulatory changes that would allow them to supervise the performance of diagnostic tests because they are currently authorized to do so under their state scope of practice rules in many states. In the May 8th COVID-19 IFC (85 FR 27550 through 27629), we established on an interim basis during the PHE for COVID-19, a policy to permit these and certain other NPPs to supervise diagnostic tests. In the CY 2021 PFS proposed rule, we proposed to make those changes permanent by making modifications to the regulations at § 410.32. We noted that we planned to address comments we received on the proposals from the CY 2021 PFS proposed rule and comments received on the May 8th COVID-19 IFC (85 FR 27550 through 27629) simultaneously in this final rule.

Prior to the PHE for COVID-19, under § 410.32(a)(2), physicians, NPs, CNSs, PAs, certified nurse-midwives (CNMs), clinical psychologists (CPs), and clinical social workers (CSWs) who are treating

¹⁸ A Guide for Rural Health Care Collaboration and Coordination: <https://www.hrsa.gov/sites/default/files/hrsa/ruralhealth/reports/HRSA-Rural-Collaboration-Guide.pdf>.

¹⁹ CMS Rural Health Strategy. <https://www.cms.gov/About-CMS/Agency-Information/OMH/Downloads/Rural-Strategy-2018.pdf>.

²⁰ HHS awards \$20 million to 27 organizations to increase the rural workforce through the creation of new rural residency programs: <https://www.hhs.gov/about/news/2019/07/18/hhs-awards-20-million-to-27-organizations-to-increase-rural-workforce.html>.

a beneficiary for a specific medical problem may order diagnostic tests when they use the results of the tests in the management of the beneficiary's specific medical problem. However, generally only physicians were permitted to supervise diagnostic tests. The regulation at § 410.32(b)(1) provided as a basic general rule that all diagnostic tests paid under the PFS must be furnished under an appropriate level of supervision by a physician as defined in section 1861(r) of the Act. Section 410.32(b)(2) then provided for certain exceptions to which this basic rule did not apply. For instance, under § 410.32(b)(2)(v), the requirement that diagnostic tests must be furnished under the appropriate level of supervision by a physician did not apply for tests performed by an NP or CNS authorized under applicable state law to furnish the test. (We noted that, as for all services furnished by a NP or CNS, they would have to be furnished working in collaboration with a physician as provided in regulations at §§ 410.75 and 410.76, respectively). Similarly, under the regulation at § 410.32(b)(2)(vii), the requirement that diagnostic tests must be furnished under the appropriate level of supervision by a physician did not apply for tests performed by a CNM authorized under applicable state law to furnish the test. This exception is in place because the Medicare statute does not include any physician supervision requirement for CNM services. Thus, while NPs, CNSs, PAs, and CNMs were permitted to furnish diagnostic tests to the extent they were authorized under state law and their scope of practice to do so, the regulations at § 410.32 did not address whether these practitioners could supervise others who furnished diagnostic tests.

In light of stakeholder feedback to CMS on identifying additional Medicare regulations that contain more restrictive supervision requirements than existing state scope of practice laws, or that limit health professionals from practicing at the top of their license, effective January 1, 2021, we proposed to amend the basic rule under the regulation at § 410.32(b)(1) to allow NPs, CNSs, PAs or CNMs to supervise diagnostic tests on a permanent basis as allowed by state law and scope of practice. These NPPs have separately enumerated benefit categories under Medicare law that permit them to furnish services that would be physician's services if furnished by a physician, and are authorized to receive payment under Medicare Part B for the professional services they furnish either directly or "incident to" their own professional

services, to the extent authorized under state law and scope of practice.

We proposed to amend the regulation at § 410.32(b)(2)(iii)(B) on a permanent basis to specify that supervision of diagnostic psychological and neuropsychological testing services can be done by NPs, CNS's, PAs or CNMs to the extent that they are authorized to perform the tests under applicable State law and scope of practice, in addition to physicians and CPs who are currently authorized to supervise these tests. We also proposed to amend on a permanent basis, the regulation at § 410.32 to add paragraph (b)(2)(ix) to specify that diagnostic tests performed by a PA in accordance with their scope of practice and State law do not require the specified level of supervision assigned to individual tests, because the relationship of PAs with physicians as defined under § 410.74 would continue to apply. We also proposed to make permanent the removal of the parenthetical, previously made as part of the May 8th COVID-19 IFC (85 FR 27550 through 27629), at § 410.32(b)(3) that required a general level of physician supervision for diagnostic tests performed by a PA.

We received public comments on whether the policies we adopted on an interim basis during the PHE for COVID-19 under § 410.32 should continue once the PHE ends. The following is a summary of the comments we received and our responses.

Comment: We received many comments expressing appreciation for the flexibilities that we put in place for purposes of the PHE for COVID-19, allowing NPPs to supervise the performance of diagnostic tests and treat patients at the top of their scope of practice. Additionally, they encouraged CMS to make this flexibility permanent, beyond the COVID-19 pandemic.

Response: We appreciate the feedback from these commenters and plan to finalize these provisions as proposed, with modifications described below.

Comment: We received a comment that certified registered nurse anesthetists (CRNAs) should be listed among the delineated NPPs, explaining the value of their services within the health care system. The commenter noted that in the CY 2013 PFS final rule (77 FR 69006), CMS indicated Medicare coverage of CRNA services within their state scope of practice. The commenter stated that CRNAs have continuously practiced autonomously, and provide every aspect of anesthesia delivery as well as acute and chronic pain management services.

Response: We appreciate the information provided and are adding

CRNAs to the previously enumerated list of NPPs.

Comment: Some commenters opposed our proposed change to allow NPPs to supervise the performance of psychological and neuropsychological tests. These commenters provided information indicating that these tests are not within the scope of practice of the proposed NPPs, and require special training only available to psychologists and physicians.

Response: We appreciate the information provided by these commenters stating that the specified NPPs are not qualified or authorized by their scope of practice and State law to supervise the performance of this specific category of diagnostic tests. As directed under the E.O. to allow NPPs to practice at the top of their license, our intent regarding this supervision flexibility is to allow NPPs with separate benefit categories under Medicare law to supervise the performance of diagnostic tests, regardless of the specific category of diagnostic tests, only to the extent their scope of practice and State laws authorize them to do so. Accordingly, we believe that the scope of practice and State laws for the State in which the specified NPPs furnish diagnostic psychological and neuropsychological tests will determine whether these NPPs are qualified to supervise the performance of diagnostic psychological and neuropsychological tests in addition to physicians and clinical psychologists who are already authorized to supervise such tests.

Comment: Some commenters expressed concern about the ability of NPPs to supervise diagnostic tests beyond the PHE for COVID-19. They opined that such supervision should not extend beyond the PHE for COVID-19. These commenters expressed that while NPPs are critical team members, it is vital to maintain physician-led teams for quality and cost of care. They cited information indicating that NPPs order more tests and prescribe opioids more than physicians, that patients prefer physicians, and that increasing the supply of NPPs does not increase access to care.

Response: We appreciate the commenters' feedback; however, we did not find sufficient evidence to support altering our proposal. Accordingly, we are finalizing our policy as proposed on a permanent basis and amending regulations text at § 410.32(b) to include CRNAs in the group of specified NPPs with a separately enumerated Medicare benefit category to who are allowed to supervise the performance of diagnostic tests, as permitted within their scope of

practice and State law for the State in which the test is furnished.

3. Pharmacists Providing Services Incident to Physicians' Services

Stakeholders have asked us to clarify that pharmacists can provide services incident to the professional services of a physician or other NPP just as other clinical staff may do. These stakeholders have asked us, in particular, about pharmacists who provide medication management services. Medication management is covered under both Medicare Part B and Part D. We are reiterating the clarification we provided in the May 8th COVID-19 IFC (85 FR 27550 through 27629), that pharmacists fall within the regulatory definition of auxiliary personnel under our regulations at § 410.26. As such, pharmacists may provide services incident to the services, and under the appropriate level of supervision, of the billing physician or NPP, if payment for the services is not made under the Medicare Part D benefit. This includes providing the services incident to the services of the billing physician or NPP and in accordance with the pharmacist's state scope of practice and applicable state law.

We noted that when a pharmacist provides services that are paid under the Part D benefit, the services are not also reportable or paid for under Part B. In addition to circumstances where medication management is offered as part of the Part D benefit, Part B payment is also not available for services included in the Medicare Part D dispensing fees, such as a pharmacist's time in checking the computer for information about an individual's coverage, measurement or mixing of the covered Part D drug, filling the container, physically providing or delivering the completed prescription to the Part D enrollee. Similarly, performing required quality assurance activities consistent with § 423.153(c)(2), such as screening for potential drug therapy problems due to therapeutic duplication, age/gender-related contraindications, potential over-utilization and under-utilization, drug-drug interactions, incorrect drug dosage or duration of drug therapy, drug-allergy contraindications, and clinical abuse/misuse are considered part of dispensing fees under Part D and are not separately reportable services under Part B. Additionally, services and supplies paid under the incident to benefit must be an integral, though incidental, part of the service of a physician (or other practitioner) in the course of diagnosis or treatment of an injury or illness (§ 410.26). We also

noted that our manual provisions specify that "incident to" services must be of a type that are medically appropriate to provide in the office setting; and that where a physician supervises auxiliary personnel to assist him or her in rendering services to patients and includes the charges for their services in his or her own bills, the services of such personnel are considered incident to the physicians' service if there is a physicians' service rendered to which the services of such personnel are an incidental part and there is direct supervision by the physician (section 60.1 of chapter 15 of the Medicare Benefit Policy Manual (Pub. 100-02) available on the CMS website at <https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/bp102c15.pdf>).

Although it is fully consistent with current CMS policy for pharmacists to provide services incident to the services of the billing physician or NPP, we believe this clarification may encourage pharmacists to work with physicians and NPPs in new ways where pharmacists are working at the top of their training, licensure and scope of practice. It may free up the time of physicians and NPPs for other work and increase access to medication management services, for individuals with chronic conditions and other conditions. As an example, we found that this clarification was helpful in recently addressing in the May 8th COVID-19 IFC (85 FR 27550 through 27629), the ability of pharmacies to enroll as laboratories and work with physicians in the assessment of clinical information, specimen collection and reporting results of COVID-19 clinical diagnostic laboratory tests.

We received a few public comments on this clarification made in our IFC and proposed rule. The following is a summary of the comments we received and our responses.

Comment: We received several comments asking us to allow pharmacists to directly bill office/outpatient E/M visit codes (CPT codes 99202-99215), or if this is not possible, allow physicians to bill these codes for time spent by pharmacists providing services incident to a physician's service. One commenter questioned why we referred to pharmacists as auxiliary staff or auxiliary personnel, and whether the AMA CPT Editorial Panel would agree with this classification.

Response: As mentioned above, the Medicare Part B benefit category of services furnished "incident to" the professional services of a physician, describe services furnished by the staff

(or contracted staff) of a physician under his or her supervision. Specifically, section 1861(s)(2)(A) of the Act describes, services and supplies (including drugs and biologicals which are not usually self-administered by the patient) furnished as an incident to a physician's professional service, of kinds which are commonly furnished in physicians' offices and are commonly either rendered without charge or included in the physicians' bills." Our regulation that implements section 1861(s)(2)(A) of the Act similarly describes these services in § 410.26(b) where we specify, among other things, that "incident to" services and supplies must be an integral, though incidental, part of the service of a physician (or other practitioner) in the course of diagnosis or treatment of an injury or illness. In the regulation at § 410.26(a), we have long used the term "auxiliary personnel" to describe the individuals who may provide services incident to the professional services of a physician or practitioner who is authorized by law to bill Medicare for their services. The regulation defines the term as any individual who is acting under the supervision of a physician (or other practitioner), regardless of whether the individual is an employee, leased employee, or independent contractor of the physician (or other practitioner) or of the same entity that employs or contracts with the physician (or other practitioner) and meets other stated rules, including licensure rules imposed by the State in which the services are being furnished. This Medicare Part B framework applies to any individual working with the billing physician or other practitioner to provide services on an "incident to" basis, for example, a physician assistant, medical assistant, nurse, pharmacist, administrative assistant or others, whether they have a clinical role or not. The Medicare term "auxiliary personnel" could include staff that have clinical roles and staff that do not.

The CPT codebook that delineates a common system of codes for use by all payers, describes individuals who perform or report a given service using different terms, "physician or qualified health care professional" (QHP) and "clinical staff." The CPT codebook defines these terms as follows, "A 'physician or other qualified health care professional' as an individual who is qualified by education, training, licensure/regulation (when applicable), and facility privileging (when applicable) who performs a professional service within his or her scope of practice and independently reports that

professional service. These professionals are distinct from ‘clinical staff.’ A clinical staff member is a person who works under the supervision of physician or other qualified healthcare professional, and who is allowed by law, regulation, and facility policy to perform or assist in the performance of a professional service, but does not individually report that professional service. Other policies may also affect who may report specific services.”²¹ Under the PFS, we sometimes use the term “clinical staff” to describe specially qualified auxiliary personnel who perform services specifically comprised of “clinical staff” time (such as chronic care management services by clinical staff), even though our regulations refers to them as “auxiliary personnel.” Under the PFS, “clinical staff” is a subset of “auxiliary personnel.”

As commenters noted, pharmacists could be considered QHPs by some other payers who provide for their direct payment. We do not consider them such because there is no Medicare statutory benefit allowing them to enroll, bill and receive direct payment for PFS services. As such, pharmacists are not among the physicians and QHPs that can furnish and bill for the 2021 office/outpatient E/M visit codes, because levels two through five are by definition only performed and directly reported by physicians or QHPs.²² For example, when time is used to select visit level, only the time of the physician or QHP is counted. By definition, these codes cannot be furnished and billed as “incident to” services; therefore, they cannot be used to report services consisting of time spent solely by a pharmacist working “incident to” the services of a billing physician. We also note that services furnished directly by pharmacists are listed in a separate section of the CPT Codebook that includes codes describing Medication Therapy Management Services.²³

In summary, we agree with certain stakeholders that under the general CPT framework, pharmacists could be considered QHPs or clinical staff, depending on their role in a given service. However, under the current Medicare law which includes the PFS, we do not have ability to pay (or even price) services that are furnished and billed directly by pharmacists. Regarding office/outpatient E/M visit levels 2 through 5 in particular, because CPT does not define these codes as

clinical staff codes and instead designed them to be directly furnished and reported by physicians and other QHPs, they cannot be used to bill the PFS for services performed by a pharmacist on an “incident to” basis. We understand and appreciate the expanding, beneficial roles certain pharmacists play, particularly by specially trained pharmacists with broadened scopes of practice in certain states, commonly referred to as collaborative practice agreements. We note that new coding might be useful to specifically identify these particular models of care.

4. Provision of Maintenance Therapy by Therapy Assistants

a. Finalization of the Interim Final Rule Related to Provision of Maintenance Therapy by Therapy Assistants During the PHE for COVID-19

As a means of increasing the availability of needed health care services during the PHE for COVID-19, we amended our therapy policy on an interim basis in the May 8th COVID-19 IFC (85 FR 27550 through 27629) to allow physical therapists (PT) and occupational therapists (OT) that have established a therapy maintenance program for a patient to assign a PTA or OTA to furnish the maintenance therapy services when clinically appropriate. We indicated as part of the CY 2021 PFS proposed rule that we would respond to comments we received in response to our amended policy for the provision of maintenance therapy services.

Comment: We received several comments, all of which expressed support for allowing therapy assistants to furnish maintenance therapy when delegated by a therapist, including one commenter that requested the CMS make the change permanent.

Response: We appreciate the commenters’ support for our adopted interim policy to allow therapy assistants to furnish maintenance therapy services.

After considering comments, we are finalizing our interim policy from the May 8th COVID-19 IFC to allow physical and occupational therapists to delegate maintenance therapy services to therapy assistants as clinically appropriate through the end of the PHE for COVID-19.

b. Summary of Proposals and Public Comments Related to Provision of Maintenance Therapy by Therapy Assistants

In response to our request for feedback on scope of practice (noted above), consistent with E.O. 13890 (84 FR 53573 through 53576), respondents

requested that we allow physical therapy assistants (PTAs) and occupational therapy assistants (OTAs) to furnish maintenance therapy services associated with a maintenance therapy program. Respondents commented that our Part B therapy policy was not consistent with policies for these services when provided to patients in skilled nursing facilities (SNF) and home health (HH) settings paid under Part A. Respondents also wrote that because a therapist is responsible for a patient’s care over an episode, that this should allow the therapist to assign responsibility for maintenance therapy to an assistant when it is clinically appropriate. Some respondents stated that permitting PTAs and OTAs to furnish maintenance therapy services would give Medicare patients greater access to care and give therapists more flexibility in allocating therapy resources.

After considering respondents’ concerns about the incongruity between our Part B and Part A maintenance therapy policies and as a means of increasing availability of needed health care services during the PHE for COVID-19, we amended our policy on an interim final basis in the May 8th COVID-19 IFC (85 FR 27550 through 27629) to allow the physical therapist (PT) or occupational therapist (OT) who establishes a maintenance program to assign a PTA or OTA to furnish maintenance therapy services when clinically appropriate.

We explained that making this change could free-up the PT or OT to furnish other services, particularly services related to the PHE for COVID-19 that require a therapist’s assessment and intervention skills. We stated explicitly that the maintenance therapy services furnished by therapist-supervised OTAs and PTAs will be paid in the same manner as those we already pay for as rehabilitative therapy services. We referred readers to regulatory payment conditions for Part B outpatient occupational and physical therapy services (§§ 410.59 and 410.60, respectively) that require, as a basic rule, that the services be provided by an individual meeting qualifications in 42 CFR part 484 for an OT or PT, or an appropriately supervised OTA or PTA.

In the CY 2021 PFS proposed rule, we proposed to make permanent our Part B policy for maintenance therapy services effective January 1, 2021 in order to create greater conformity in payment policy for maintenance therapy services that are furnished and paid under Part B with those in SNF and HH settings under Part A. We noted that if finalized, our policy would dovetail with our

²¹ CPT 2021 Professional Edition, p. xiv.

²² CPT 2021 Professional Edition, pp.14–17.

²³ CPT 2021 Professional Edition, p.818.

amended policy set forth in the May 8th COVID–19 IFC (85 FR 27550 through 27629) that grants PTs and OTs the discretion to delegate maintenance therapy services to the PTAs and OTAs, as clinically appropriate, for the duration of the PHE for COVID–19. If the PHE for COVID–19 were to end prior to January 1, 2021, the therapist would need to personally furnish the maintenance therapy services until the finalized policy change took effect. We also noted that we planned to address comments from the May 8th COVID–19 IFC in conjunction with the comments from the CY 2021 PFS proposed rule in the CY 2021 PFS final rule.

Our policy for maintenance therapy services is explained in section 220.2 of chapter 15 of the Medicare Benefit Policy Manual (see <https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/bp102c15.pdf>). Maintenance programs that can be carried out by a patient alone or with the assistance of caregivers are not covered. Also, sections 230.1 and 230.2 of chapter 15 of the Medicare Benefit Policy Manual specify that a PTA or OTA may not provide skilled maintenance program services.

In considering this proposal, we reviewed regulatory requirements for conditions of payment for outpatient occupational therapy, physical therapy, and speech-language pathology services at §§ 410.59, 410.60, and 410.62; the regulation for therapy treatment plans at § 410.61; and the regulations specifying treatment plan certification and recertification requirements at § 424.24 for Part B occupational therapy, physical therapy, and speech-language pathology services along with the above mentioned manual provisions.

Given that we already make payment for rehabilitative services requiring improvement in the patient's functional status when they are furnished by PTAs and OTAs at the discretion of the supervising therapist treating the patient in accordance with the therapist-established plan of care, we noted that it would be appropriate for the therapist to use that same judgment to decide whether to delegate maintenance therapy services under the associated plan of care to a PTA or OTA. We stated that there is little difference between the rehabilitative therapy services furnished to improve a patient's functional status and those for maintenance therapy services other than the goals set by the therapist in the therapy plan. We do not believe that the therapist-only maintenance therapy requirement is needed in the case of outpatient physical or occupational therapy

services. Instead, we believe that it would be appropriate for an OT or PT to use their professional judgment to assign the performance of maintenance therapy services to an OTA or PTA when it is clinically appropriate to do so.

As such, we proposed to allow, on a permanent basis, therapists to delegate performance of maintenance therapy services to an OTA or PTA for outpatient occupational and physical therapy services in Part B settings beginning January 1, 2021. This proposal would better align our Part B policy with that in SNFs and HH paid under Part A where maintenance therapy services may be performed by a therapist or a therapy assistant. Since our regulations at §§ 410.59, 410.60, 410.61, 410.62, and 424.24, do not distinguish between rehabilitative and maintenance therapy services, we did not propose to amend them. Instead, we proposed to revise sections 220.2, 230.1 and 230.2 of chapter 15 of the Medicare Benefit Policy Manual to clarify that PTs and OTs no longer need to personally perform maintenance therapy services and to specifically remove the prohibitions on PTAs and OTAs from furnishing such services. We noted that we believe the proposal to allow PTs and OTs to delegate maintenance therapy services to their supervised assistants is in keeping with E.O. 13890 and appeals by respondents to our request for feedback on scope of practice that followed, rather than the alternative option of maintaining the pre-COVID–19 policy of requiring PTs and OTs to personally furnish them, after the PHE for COVID–19 has ended.

We noted also that therapists and therapy providers should consult the CQ and CO modifier policies to consider whether these modifiers should be applied to claims for services furnished in whole or in part by PTAs and OTAs which will, beginning January 1, 2022, be paid at 85 percent of the amount that would otherwise apply for the service, as required by section 1834(v) of the Act, which was added to section 53107 of the Bipartisan Budget Act of 2018. See the CY 2020 PFS rulemaking for policies related to the application of CQ and CO modifiers and the associated regulatory requirements (84 FR 40558 through 40564 (proposed rule) and 84 FR 62702 through 60708 (final rule)).

We received public comments on the provision of maintenance therapy to be furnished by therapy assistants. The following is a summary of the comments we received and our responses.

Comment: Commenters expressed uniform support for our proposal to allow therapy assistants to furnish

maintenance therapy services. Commenters indicated that having Part B policy align with current Part A policy for Home Health and SNF settings will promote consistency as well as continuity of care across Medicare programs.

Response: We appreciate the commenters' support for our proposal to allow therapy assistants to furnish maintenance therapy services. After considering comments, we are finalizing our proposal to allow physical and occupational therapists to delegate maintenance therapy services to therapy assistants on a permanent basis as clinically appropriate.

5. Medical Record Documentation

a. Finalization of Interim Final Rule With Comment Period Provisions Related to Therapy Student Documentation During the PHE for the COVID–19 Pandemic

In the May 8th COVID–19 IFC (85 FR 27556 through 27557), to increase the availability of clinicians who may furnish healthcare services during the PHE, we announced a general policy that there is broad flexibility for all members of the medical team to add documentation in the medical record which is then reviewed and verified (signed) by the appropriate clinician. Specifically, we stated on an interim basis during the PHE for COVID–19, any individual who has a separately enumerated benefit under Medicare law that authorizes them to furnish and bill for their professional services, whether or not they are acting in a teaching role, may review and verify (sign and date), rather than re-document, notes in the medical record made by physicians, residents, nurses, and students (including students in therapy or other clinical disciplines), or other members of the medical team. We noted that although there are currently no statutory or regulatory documentation requirements that would impact payment for therapists when documentation is added to the medical record by persons other than the therapist, we discussed this issue in response to stakeholder concerns about burden and in consideration of the current PHE for COVID–19. Specifically, this policy will ensure that therapists, as members of the clinical workforce, are able to spend more time furnishing therapy services, including pain management therapies to patients that may minimize the use of opioids and other medications, rather than spending time documenting in the medical record. We emphasized that our established principle is focused on the

clinician, as described above who furnishes and bills for their professional services rather than the individuals who may enter information into the medical record. We emphasized that information entered into the medical record should document that the furnished services are reasonable and necessary.

We received public comments on Therapy Student Documentation. The following is a summary of the comments we received and our responses.

Comment: One commenter recommended that CMS make the therapy student documentation waiver under the PHE for COVID-19 permanent so that it aligns with the flexibility extended to physicians and several NPPs as promulgated in the CY 2020 PFS final rule.

Response: We appreciate the commenter's support of this provision for student documentation and making permanent the broad flexibility for all members of the medical team to add documentation in the medical record which is then reviewed and verified (signed) by the appropriate clinician.

Comment: One commenter supported these changes which will give more flexibility to practitioners and other providing clinically appropriate therapy services but asked that CMS clarify who would be considered other members of the "treatment team" in addition to those enumerated (that is, physicians, residents, nurses, and students)—in particular, whether this would encompass non-licensed member.

Response: We appreciate the commenters request for clarification. Any individual who is authorized under Medicare law to furnish and bill for their professional services, whether or not they are acting in a teaching role, may review and verify (sign and date) the medical record for the services they bill, rather than re-document, notes in the medical record made by physicians, residents, nurses, and students (including students in therapy or other clinical disciplines), or other members of the medical team), or other members of the medical team.

Comment: One commenter agreed with CMS that these measures should be temporary, and should not persist once the PHE for COVID-19 has ended. The commenter stated that training-appropriate scope of practice standards are important to ensuring quality of care for our members.

Response: We appreciate the commenter's feedback. We are discussing this issue in response to stakeholder concerns about burden and in consideration of the current PHE for COVID-19. Specifically, this policy will ensure that therapists, as members of

the clinical workforce, are able to spend more time furnishing therapy services, including pain management therapies to patients that may minimize the use of opioids and other medications, rather than spending time documenting in the medical record. The provision related to therapy student documentation was to increase the availability of clinicians who may furnish healthcare services during the PHE for COVID-19 and on an interim basis during the PHE for COVID-19.

In summary, we reiterate that our clarification about this policy as discussed in the May 8th COVID-19 IFC (85 FR 27556 through 27557) notes that any individual who has a separately enumerated benefit under Medicare law that authorizes them to furnish and bill for their professional services, whether or not they are acting in a teaching role, may review and verify (sign and date), rather than re-document, notes in the medical record made by physicians, residents, nurses, and students (including students in therapy or other clinical disciplines), or other members of the medical team. We emphasized that our established principle is focused on the clinician, as described above who furnishes and bills for their professional services rather than the individuals who may enter information into the medical record. We emphasized that information entered into the medical record should document that the furnished services are reasonable and necessary.

b. Medical Record Documentation Clarification

As we established in the CY 2020 PFS final rule (84 FR 62681 through 62684), and similarly expressed in the May 8th COVID-19 IFC (85 FR 27556 through 27557), any individual who is authorized under Medicare law to furnish and bill for their professional services, whether or not they are acting in a teaching role, may review and verify (sign and date) the medical record for the services they bill, rather than re-document, notes in the medical record made by physicians, residents, nurses, and students (including students in therapy or other clinical disciplines), or other members of the medical team. We noted that although there are currently no documentation requirements that would impact payment for PTs, OTs, or SLPs when documentation is added to the medical record by persons other than the therapist, we are responding in this proposed rule to stakeholder requests for clarification. Specifically, we clarified that the broad policy principle that allows billing clinicians to review and verify documentation added to the medical record for their

services by other members of the medical team also applies to therapists. We noted that this would help ensure that therapists are able to spend more time furnishing therapy services, including pain management therapies to patients that may minimize the use of opioids and other medications, rather than spending time documenting in the medical record. We emphasized that, while any member of the medical team may enter information into the medical record, only the reporting clinician may review and verify notes made in the record by others for the services the reporting clinician furnishes and bills. We also emphasized that information entered into the medical record should document that the furnished services are reasonable and necessary.

We received public comments on the medical record documentation clarification. The following is a summary of the comments we received and our responses.

Comment: Many commenters were in support of and commended CMS for including therapists in the list of practitioners who may review and verify documentation instead of having to re-document notes made by students for Medicare Part B patients and stated that this is a significant burden reduction that will allow for better use of therapists' time.

Two commenters appreciated this medical record documentation flexibility so long as the provision falls within existing scope of practice laws and only reduces the burden of re-documenting. The commenter noted that administrative burden is a major reason for physician burnout and by alleviating this burden and allowing others to share in the administrative process, physicians will spend less time documenting and perhaps have a decrease in burnout. Another commenter noted in rural areas, there are shortages of therapy and mental health professionals and that documentation and paperwork take time away from patients who need help.

A few commenters noted that this flexibility would better prepare clinicians to enter practice by increasing safety and education on how to document effectively and appropriately the skilled services they provide. One commenter questioned how this flexibility may impact documentation requirements pertaining to completion of the progress report and Medicare's billing rules in relation to therapy students. Another commenter requested licensed audiologists be added to the group that can review and verify (sign and date) the documentation entered into the medical record by members of

their medical team for their own, appropriately supervised services that are paid under the PFS.

One commenter requested that CMS issue guidance to clarify that it is possible that no additional documentation is required if the entirety of the documentation could be included from members of the medical team, thus allowing the billing practitioner to “sign and verify” the entire note.

Response: We appreciate commenters’ support of this clarification to allow therapists to review and verify student documentation instead of therapists having to re-document notes made by students. We appreciate the insight provided by commenters about how the broad flexibility would aide in burden reduction and allow for better use of time by therapists.

This clarification similarly aligns with what was finalized in the CY 2020 PFS final rule which provided broad flexibility to the physicians, PAs and APRNs (regardless of whether they are acting in a teaching capacity) who document and who are paid under the PFS for their professional services. We explained that this principle would apply across the spectrum of all Medicare-covered services paid under the PFS. We emphasize that, while any member of the medical team may enter information into the medical record, only the billing clinician may review and verify notes made in the record by others for the services the reporting clinician furnishes and bills. As we emphasized in our proposal, information entered into the medical record should document that the services furnished are reasonable and necessary if the billing practitioner has signed and verified complete medical record documentation by other members of the medical team.

Comment: One commenter supported the CMS policy to provide added flexibility for NPPs authorized to deliver part B services including nurse practitioners, CNSs and PAs to document teaching physician involvement and another commenter noted they believe that the additional flexibility will significantly reduce burden for teaching physicians.

Response: We appreciate the support of this flexibility for NPPs to document teaching physician involvement. We would like to reiterate that this flexibility does not negate the teaching physician rules, or the need to document personal services or split share rules, or other aspects of the service provided.

Comment: One commenter urged CMS not to expand payment for independent NPPs and pressure

inappropriate scope-of-practice expansion through these proposed rules. The commenter encouraged all advanced nurse practitioners and physician assistants to work within their respective licensed scope of practice in a team approach to expand access and ensure quality of care. Another commenter expressed concern that based on the language proposed by CMS, this policy might allow therapists to change or modify a physician’s documentation, including their diagnostic evaluation and treatment plan.

Response: We appreciate the commenters concerns and want to emphasize that this medical record documentation clarification only applies to the clinician who is billing for their professional service. The intent of this clarification is to reduce burden and allow the billing practitioner to review and verify the documentation in the medical record instead of re-documenting information entered by students and other members of the medical team. The billing practitioner needs to ensure, as we reiterated in our clarification, that, while any member of the medical team may enter information into the medical record, they review and verify that the information in the medical record is accurate and complete for the services the reporting clinician furnishes and bills.

After considering the comments received, we note that we are reiterating what we finalized in the CY 2020 PFS final rule, that any individual who is authorized under Medicare law to furnish and bill for their professional services, whether or not they are acting in a teaching role, may review and verify (sign and date) the medical record for the services they bill, rather than re-document, notes in the medical record made by physicians, residents, nurses, and students (including students in therapy or other clinical disciplines), or other members of the medical team. We emphasize that, while any member of the medical team may enter information into the medical record, only the reporting clinician may review and verify notes made in the record by others for the services the reporting clinician furnishes and bills. We want to emphasize that information entered into the medical record must document that the furnished services are reasonable and necessary.

H. Valuation of Specific Codes

1. Background: Process for Valuing New, Revised, and Potentially Misvalued Codes

Establishing valuations for newly created and revised CPT codes is a routine part of maintaining the PFS. Since the inception of the PFS, it has also been a priority to revalue services regularly to make sure that the payment rates reflect the changing trends in the practice of medicine and current prices for inputs used in the PE calculations. Initially, this was accomplished primarily through the 5-year review process, which resulted in revised work RVUs for CY 1997, CY 2002, CY 2007, and CY 2012, and revised PE RVUs in CY 2001, CY 2006, and CY 2011, and revised MP RVUs in CY 2010 and CY 2015. Under the 5-year review process, revisions in RVUs were proposed and finalized via rulemaking. In addition to the 5-year reviews, beginning with CY 2009, CMS and the RUC identified a number of potentially misvalued codes each year using various identification screens, as discussed in section II.C. of this proposed rule, Potentially Misvalued Services under the PFS. Historically, when we received RUC recommendations, our process had been to establish interim final RVUs for the potentially misvalued codes, new codes, and any other codes for which there were coding changes in the final rule with comment period for a year. Then, during the 60-day period following the publication of the final rule with comment period, we accepted public comment about those valuations. For services furnished during the calendar year following the publication of interim final rates, we paid for services based upon the interim final values established in the final rule. In the final rule with comment period for the subsequent year, we considered and responded to public comments received on the interim final values, and typically made any appropriate adjustments and finalized those values.

In the CY 2015 PFS final rule with comment period (79 FR 67547), we finalized a new process for establishing values for new, revised and potentially misvalued codes. Under the new process, we include proposed values for these services in the proposed rule, rather than establishing them as interim final in the final rule with comment period. Beginning with the CY 2017 PFS proposed rule (81 FR 46162), the new process was applicable to all codes, except for new codes that describe truly new services. For CY 2017, we proposed new values in the CY 2017 PFS proposed rule for the vast majority of

new, revised, and potentially misvalued codes for which we received complete RUC recommendations by February 10, 2016. To complete the transition to this new process, for codes for which we established interim final values in the CY 2016 PFS final rule with comment period (81 FR 80170), we reviewed the comments received during the 60-day public comment period following release of the CY 2016 PFS final rule with comment period (80 FR 70886), and re-proposed values for those codes in the CY 2017 PFS proposed rule.

We considered public comments received during the 60-day public comment period for the proposed rule before establishing final values in the CY 2017 PFS final rule. As part of our established process, we will adopt interim final values only in the case of wholly new services for which there are no predecessor codes or values and for which we do not receive recommendations in time to propose values.

As part of our obligation to establish RVUs for the PFS, we thoroughly review and consider available information including recommendations and supporting information from the RUC, the Health Care Professionals Advisory Committee (HCPAC), public commenters, medical literature, Medicare claims data, comparative databases, comparison with other codes within the PFS, as well as consultation with other physicians and healthcare professionals within CMS and the federal government as part of our process for establishing valuations. Where we concur that the RUC's recommendations, or recommendations from other commenters, are reasonable and appropriate and are consistent with the time and intensity paradigm of physician work, we proposed those values as recommended. Additionally, we continually engage with stakeholders, including the RUC, with regard to our approach for accurately valuing codes, and as we prioritize our obligation to value new, revised, and potentially misvalued codes. We continue to welcome feedback from all interested parties regarding valuation of services for consideration through our rulemaking process.

2. Methodology for Establishing Work RVUs

For each code identified in this section, we conduct a review that includes the current work RVU (if any), RUC-recommended work RVU, intensity, time to furnish the preservice, intraservice, and postservice activities, as well as other components of the service that contribute to the value. Our

reviews of recommended work RVUs and time inputs generally include, but have not been limited to, a review of information provided by the RUC, the HCPAC, and other public commenters, medical literature, and comparative databases, as well as a comparison with other codes within the PFS, consultation with other physicians and health care professionals within CMS and the federal government, as well as Medicare claims data. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters and the rationale for the recommendations. In the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329), we discussed a variety of methodologies and approaches used to develop work RVUs, including survey data, building blocks, crosswalks to key reference or similar codes, and magnitude estimation (see the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329) for more information). When referring to a survey, unless otherwise noted, we mean the surveys conducted by specialty societies as part of the formal RUC process.

Components that we use in the building block approach may include preservice, intraservice, or postservice time and post-procedure visits. When referring to a bundled CPT code, the building block components could include the CPT codes that make up the bundled code and the inputs associated with those codes. We use the building block methodology to construct, or deconstruct, the work RVU for a CPT code based on component pieces of the code. Magnitude estimation refers to a methodology for valuing work that determines the appropriate work RVU for a service by gauging the total amount of work for that service relative to the work for a similar service across the PFS without explicitly valuing the components of that work. In addition to these methodologies, we frequently utilize an incremental methodology in which we value a code based upon its incremental difference between another code and another family of codes. The statute specifically defines the work component as the resources in time and intensity required in furnishing the service. Also, the published literature on valuing work has recognized the key role of time in overall work. For particular codes, we refine the work RVUs in direct proportion to the changes in the best information regarding the time resources involved in furnishing particular services, either

considering the total time or the intraservice time.

Several years ago, to aid in the development of preservice time recommendations for new and revised CPT codes, the RUC created standardized preservice time packages. The packages include preservice evaluation time, preservice positioning time, and preservice scrub, dress and wait time. Currently, there are preservice time packages for services typically furnished in the facility setting (for example, preservice time packages reflecting the different combinations of straightforward or difficult procedure, and straightforward or difficult patient). Currently, there are three preservice time packages for services typically furnished in the nonfacility setting.

We developed several standard building block methodologies to value services appropriately when they have common billing patterns. In cases where a service is typically furnished to a beneficiary on the same day as an E/M service, we believe that there is overlap between the two services in some of the activities furnished during the preservice evaluation and postservice time. Our longstanding adjustments have reflected a broad assumption that at least one-third of the work time in both the preservice evaluation and postservice period is duplicative of work furnished during the E/M visit.

Accordingly, in cases where we believe that the RUC has not adequately accounted for the overlapping activities in the recommended work RVU and/or times, we adjust the work RVU and/or times to account for the overlap. The work RVU for a service is the product of the time involved in furnishing the service multiplied by the intensity of the work. Preservice evaluation time and postservice time both have a long-established intensity of work per unit of time (IWPUT) of 0.0224, which means that 1 minute of preservice evaluation or postservice time equates to 0.0224 of a work RVU.

Therefore, in many cases when we remove 2 minutes of preservice time and 2 minutes of postservice time from a procedure to account for the overlap with the same day E/M service, we also remove a work RVU of 0.09 (4 minutes \times 0.0224 IWPUT) if we do not believe the overlap in time had already been accounted for in the work RVU. The RUC has recognized this valuation policy and, in many cases, now addresses the overlap in time and work when a service is typically furnished on the same day as an E/M service.

The following paragraphs contain a general discussion of our approach to reviewing RUC recommendations and

developing proposed values for specific codes. When they exist we also include a summary of stakeholder reactions to our approach. We note that many commenters and stakeholders have expressed concerns over the years with our ongoing adjustment of work RVUs based on changes in the best information we had regarding the time resources involved in furnishing individual services. We have been particularly concerned with the RUC's and various specialty societies' objections to our approach given the significance of their recommendations to our process for valuing services and since much of the information we used to make the adjustments is derived from their survey process. We are obligated under the statute to consider both time and intensity in establishing work RVUs for PFS services. As explained in the CY 2016 PFS final rule with comment period (80 FR 70933), we recognize that adjusting work RVUs for changes in time is not always a straightforward process, so we have applied various methodologies to identify several potential work values for individual codes.

We have observed that for many codes reviewed by the RUC, recommended work RVUs have appeared to be incongruous with recommended assumptions regarding the resource costs in time. This has been the case for a significant portion of codes for which we recently established or proposed work RVUs that are based on refinements to the RUC-recommended values. When we have adjusted work RVUs to account for significant changes in time, we have started by looking at the change in the time in the context of the RUC-recommended work RVU. When the recommended work RVUs do not appear to account for significant changes in time, we have employed the different approaches to identify potential values that reconcile the recommended work RVUs with the recommended time values. Many of these methodologies, such as survey data, building block, crosswalks to key reference or similar codes, and magnitude estimation have long been used in developing work RVUs under the PFS. In addition to these, we sometimes use the relationship between the old time values and the new time values for particular services to identify alternative work RVUs based on changes in time components.

In so doing, rather than ignoring the RUC-recommended value, we have used the recommended values as a starting reference and then applied one of these several methodologies to account for the reductions in time that we believe were

not otherwise reflected in the RUC-recommended value. If we believe that such changes in time are already accounted for in the RUC's recommendation, then we do not make such adjustments. Likewise, we do not arbitrarily apply time ratios to current work RVUs to calculate proposed work RVUs. We use the ratios to identify potential work RVUs and consider these work RVUs as potential options relative to the values developed through other options.

We do not imply that the decrease in time as reflected in survey values should always equate to a one-to-one or linear decrease in newly valued work RVUs. Instead, we believe that, since the two components of work are time and intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, significant decreases in time should be reflected in decreases to work RVUs. If the RUC's recommendation has appeared to disregard or dismiss the changes in time, without a persuasive explanation of why such a change should not be accounted for in the overall work of the service, then we have generally used one of the aforementioned methodologies to identify potential work RVUs, including the methodologies intended to account for the changes in the resources involved in furnishing the procedure.

Several stakeholders, including the RUC, have expressed general objections to our use of these methodologies and deemed our actions in adjusting the recommended work RVUs as inappropriate; other stakeholders have also expressed general concerns with CMS refinements to RUC-recommended values in general. In the CY 2017 PFS final rule (81 FR 80272 through 80277), we responded in detail to several comments that we received regarding this issue. In the CY 2017 PFS proposed rule (81 FR 46162), we requested comments regarding potential alternatives to making adjustments that would recognize overall estimates of work in the context of changes in the resource of time for particular services; however, we did not receive any specific potential alternatives. As described earlier in this section, crosswalks to key reference or similar codes are one of the many methodological approaches we have employed to identify potential values that reconcile the RUC-recommended work RVUs with the recommended time values when the RUC-recommended work RVUs did not appear to account for significant changes in time.

We received several comments regarding our methodologies for work valuation in response to the CY 2021 PFS proposed rule and those comments are summarized below.

Comment: Several commenters disagreed with our reference to older work time sources, and stated that their use led to the proposal of work RVUs based on flawed assumptions. Commenters stated that codes with "CMS/Other" or "Harvard" work time sources, used in the original valuation of certain older services, were not surveyed, and therefore, were not resource-based. Commenters also stated that it was invalid to draw comparisons between the current work times and work RVUs of these services to the newly surveyed work time and work RVUs as recommended by the RUC.

Response: We agree that it is important to use the recent data available regarding work times, and we note that when many years have passed between when time is measured, significant discrepancies can occur. However, we also believe that our operating assumption regarding the validity of the existing values as a point of comparison is critical to the integrity of the relative value system as currently constructed. The work times currently associated with codes play a very important role in PFS ratesetting, both as points of comparison in establishing work RVUs and in the allocation of indirect PE RVUs by specialty. If we were to operate under the assumption that previously recommended work times had routinely been overestimated, this would undermine the relativity of the work RVUs on the PFS in general, given the process under which codes are often valued by comparisons to codes with similar times. It also would undermine the validity of the allocation of indirect PE RVUs to physician specialties across the PFS.

Instead, we believe that it is crucial that the code valuation process take place with the understanding that the existing work times used in the PFS ratesetting processes are accurate. We recognize that adjusting work RVUs for changes in time is not always a straightforward process and that the intensity associated with changes in time is not necessarily always linear, which is why we apply various methodologies to identify several potential work values for individual codes. However, we reiterate that we believe it would be irresponsible to ignore changes in time based on the best data available, and that we are statutorily obligated to consider both time and intensity in establishing work RVUs for PFS services. For additional

information regarding the use of old work time values that were established many years ago and have not since been reviewed in our methodology, we refer readers to our discussion of the subject in the CY 2017 PFS final rule (81 FR 80273 through 80274).

Comment: Several commenters disagreed with the use of time ratio methodologies for work valuation. Commenters stated that this use of time ratios is not a valid methodology for valuation of physician services. Commenters stated that treating all components of physician time (preservice, intraservice, postservice and post-operative visits) as having identical intensity is incorrect, and inconsistently applying it to only certain services under review creates inherent payment disparities in a payment system, which is based on relative valuation. Commenters stated that in many scenarios, CMS selects an arbitrary combination of inputs to apply rather than seeking a valid clinically relevant relationship that would preserve relativity. Commenters suggested that CMS determine the work valuation for each code based not only on surveyed work times, but also the intensity and complexity of the service and relativity to other similar services, rather than basing the work value entirely on time.

Response: We disagree and continue to believe that the use of time ratios is one of several appropriate methods for identifying potential work RVUs for particular PFS services, particularly when the alternative values recommended by the RUC and other commenters do not account for information provided by surveys that suggests the amount of time involved in furnishing the service has changed significantly. We reiterate that, consistent with the statute, we are required to value the work RVU based on the relative resources involved in furnishing the service, which include time and intensity. When our review of recommended values reveals that changes in time have been unaccounted for in a recommended RVU, then we believe we have the obligation to account for that change in establishing work RVUs since the statute explicitly identifies time as one of the two elements of the work RVUs.

We recognize that it would not be appropriate to develop work RVUs solely based on time given that intensity is also an element of work, but in applying the time ratios, we are using derived intensity measures based on current work RVUs for individual procedures. We clarify again that we do not treat all components of physician

time as having identical intensity. If we were to disregard intensity altogether, the work RVUs for all services would be developed based solely on time values and that is definitively not the case, as indicated by the many services that share the same time values but have different work RVUs. For example, among the codes reviewed in this current CY 2021 PFS final rule, CPT codes 10006 (*Fine needle aspiration biopsy, including ultrasound guidance; each additional lesion*) and 57465 (*Computer-aided mapping of cervix uteri during colposcopy, including optical dynamic spectral imaging and algorithmic quantification of the acetowhitening effect*), 76513 (*Ophthalmic ultrasound, diagnostic; anterior segment ultrasound, immersion (water bath) B-scan or high resolution biomicroscopy, unilateral or bilateral*), 93224 (*External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation by a physician or other qualified health care professional*) and 99439 (*Prolonged office or other outpatient evaluation and management service(s) (beyond the total time of the primary procedure which has been selected using total time), requiring total time with or without direct patient contact beyond the usual service, on the date of the primary service; each 15 minutes*) share the identical total work time of 15 minutes. However, these codes have very different proposed work RVUs of 1.00 and 0.81 and 0.53 and 0.39 and 0.61 respectively. In addition, CPT codes 10010 (*Fine needle aspiration biopsy, including CT guidance; each additional lesion*) and 93662 (*Intracardiac echocardiography during therapeutic/diagnostic intervention, including imaging supervision and interpretation*) both share the same intraservice and total work time of 25 minutes but each code has a different work RVU. These examples demonstrate that we do not value services purely based on work time; instead, we incorporate time as one of multiple different factors employed in our review process. Furthermore, we reiterate that we use time ratios to identify potentially appropriate work RVUs, and then use other methods (including estimates of work from CMS medical personnel and crosswalks to key reference or similar codes) to validate these RVUs. For more details on our methodology for developing work RVUs, we direct readers to the discussion CY 2017 PFS final rule (81 FR 80272 through 80277).

We also want to clarify for the commenters that our review process is not arbitrary in nature. Our reviews of recommended work RVUs and time inputs generally include, but have not been limited to, a review of information provided by the RUC, the HCPAC, and other public commenters, medical literature, and comparative databases, as well as a comparison with other codes within the PFS, consultation with other physicians and health care professionals within CMS and the federal government, as well as Medicare claims data. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters and the rationale for the recommendations. In the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329), we discussed a variety of methodologies and approaches used to develop work RVUs, including survey data, building blocks, crosswalks to key reference or similar codes, and magnitude estimation (see the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329) for more information). With regard to the invocation of clinically relevant relationships by the commenters, we emphasize that we continue to believe that the nature of the PFS relative value system is such that all services are appropriately subject to comparisons to one another. Although codes that describe clinically similar services are sometimes stronger comparator codes, we do not agree that codes must share the same site of service, patient population, or utilization level to serve as an appropriate crosswalk.

Comment: Several commenters discouraged the use of valuation based on work RVU increments. Commenters stated that this methodology inaccurately treats all components of the physician time as having identical intensity and would lead to incorrect work valuations. Commenters stated that CMS should carefully consider the clinical information justifying the changes in physician work intensity provided by the RUC and other stakeholders.

Response: We believe the use of an incremental difference between codes is a valid methodology for setting values, especially in valuing services within a family of revised codes where it is important to maintain appropriate intra-family relativity. Historically, we have frequently utilized an incremental methodology in which we value a code based upon its incremental difference between another code or another family of codes. We note that the RUC has also

used the same incremental methodology on occasion when it was unable to produce valid survey data for a service. We have no evidence to suggest that the use of an incremental difference between codes conflicts with the statute's definition of the work component as the resources in time and intensity required in furnishing the service. We do consider clinical information associated with physician work intensity provided by the RUC and other stakeholders as part of our review process, although we remind readers again that we do not agree that codes must share the same site of service, patient population, or utilization level to serve as an appropriate crosswalk.

Comment: Several commenters stated that they were concerned about CMS' lack of consideration for compelling evidence that services have changed. Commenters stated that CMS appeared to dismiss the fact that services may change due to technological advances, changes in the patient population, shifts in the specialty of physicians providing services or changes in the physician work or intensity required to perform services. Commenters requested that CMS address the compelling evidence that was submitted with the RUC recommendations when the agency does not accept the RUC recommendation.

Response: The concept of compelling evidence was developed by the RUC as part of its review process for individual codes to justify an increase in valuation. The RUC's compelling evidence criteria include documented changes in physician work, an anomalous relationship between the code and multiple key reference services, evidence that technology has changed physician work, analysis of other data on time and effort measures, and evidence that incorrect assumptions were made in the previous valuation of the service. While we appreciate the submission of this additional information for review, we emphasize that compelling evidence is a concept developed by the RUC for its own review process. Compelling evidence is not part of our statutory framework which requires that the valuation of codes should be based on time and intensity. We do consider changes in technology, patient population, etc. insofar as they affect the time and intensity of the service under review. However, we do not specifically address the RUC's compelling evidence criteria in our rulemaking since it is outside the purview of the code valuation process stipulated by statute.

In response to comments, in the CY 2019 PFS final rule (83 FR 59515), we clarified that terms "reference services",

"key reference services", and "crosswalks" as described by the commenters are part of the RUC's process for code valuation. These are not terms that we created, and we do not agree that we necessarily must employ them in the identical fashion for the purposes of discussing our valuation of individual services that come up for review. However, in the interest of minimizing confusion and providing clear language to facilitate stakeholder feedback, we will seek to limit the use of the term, "crosswalk," to those cases where we are making a comparison to a CPT code with the identical work RVU. We also occasionally make use of a "bracket" for code valuation. A "bracket" refers to when a work RVU falls between the values of two CPT codes, one at a higher work RVU and one at a lower work RVU.

We look forward to continuing to engage with stakeholders and commenters, including the RUC, as we prioritize our obligation to value new, revised, and potentially misvalued codes; and will continue to welcome feedback from all interested parties regarding valuation of services for consideration through our rulemaking process. We refer readers to the detailed discussion in this section of the valuation considered for specific codes. Table 28 contains a list of codes and descriptors for which we proposed work RVUs; this included all codes for which we received RUC recommendations by February 10, 2020. As noted in the CY 2021 PFS proposed rule, the proposed work RVUs, work time and other payment information for all CY 2021 payable codes are available on the CMS website under downloads for the CY 2021 PFS final rule at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html>.

3. Methodology for the Direct PE Inputs To Develop PE RVUs

a. Background

On an annual basis, the RUC provides us with recommendations regarding PE inputs for new, revised, and potentially misvalued codes. We review the RUC-recommended direct PE inputs on a code by code basis. Like our review of recommended work RVUs, our review of recommended direct PE inputs generally includes, but is not limited to, a review of information provided by the RUC, HCPAC, and other public commenters, medical literature, and comparative databases, as well as a comparison with other codes within the PFS, and consultation with physicians and health care professionals within

CMS and the federal government, as well as Medicare claims data. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters and the rationale for the recommendations. When we determine that the RUC's recommendations appropriately estimate the direct PE inputs (clinical labor, disposable supplies, and medical equipment) required for the typical service, are consistent with the principles of relativity, and reflect our payment policies, we use those direct PE inputs to value a service. If not, we refine the recommended PE inputs to better reflect our estimate of the PE resources required for the service. We also confirm whether CPT codes should have facility and/or nonfacility direct PE inputs and refine the inputs accordingly.

Our review and refinement of the RUC-recommended direct PE inputs includes many refinements that are common across codes, as well as refinements that are specific to particular services. Table 29 details our refinements of the RUC's direct PE recommendations at the code-specific level. In section II.B. of the proposed rule (85 FR 50077), Determination of Practice Expense Relative Value Units (PE RVUs), we addressed certain refinements that would be common across codes. Refinements to particular codes are addressed in the portions of that section that are dedicated to particular codes. We noted that for each refinement, we indicated the impact on direct costs for that service. We noted that, on average, in any case where the impact on the direct cost for a particular refinement is \$0.35 or less, the refinement has no impact on the PE RVUs. This calculation considers both the impact on the direct portion of the PE RVU, as well as the impact on the indirect allocator for the average service. We also noted that approximately half of the refinements listed in Table 29 result in changes under the \$0.35 threshold and are unlikely to result in a change to the RVUs.

We also noted that the direct PE inputs for CY 2021 are displayed in the CY 2021 direct PE input files, available on the CMS website under the downloads for the CY 2021 PFS final rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>. The inputs displayed there have been used in developing the CY 2021 PE RVUs as displayed in Addendum B.

b. Common Refinements

(1) Changes in Work Time

Some direct PE inputs are directly affected by revisions in work time. Specifically, changes in the intraservice portions of the work time and changes in the number or level of postoperative visits associated with the global periods result in corresponding changes to direct PE inputs. The direct PE input recommendations generally correspond to the work time values associated with services. We noted that we believe that inadvertent discrepancies between work time values and direct PE inputs should be refined or adjusted in the establishment of proposed direct PE inputs to resolve the discrepancies.

(2) Equipment Time

Prior to CY 2010, the RUC did not generally provide CMS with recommendations regarding equipment time inputs. In CY 2010, in the interest of ensuring the greatest possible degree of accuracy in allocating equipment minutes, we requested that the RUC provide equipment times along with the other direct PE recommendations, and we provided the RUC with general guidelines regarding appropriate equipment time inputs. We appreciate the RUC's willingness to provide us with these additional inputs as part of its PE recommendations.

In general, the equipment time inputs correspond to the service period portion of the clinical labor times. We clarified this principle over several years of rulemaking, indicating that we consider equipment time as the time within the intraservice period when a clinician is using the piece of equipment plus any additional time that the piece of equipment is not available for use for another patient due to its use during the designated procedure. For those services for which we allocate cleaning time to portable equipment items, because the portable equipment does not need to be cleaned in the room where the service is furnished, we do not include that cleaning time for the remaining equipment items, as those items and the room are both available for use for other patients during that time. In addition, when a piece of equipment is typically used during follow-up postoperative visits included in the global period for a service, the equipment time would also reflect that use.

We believe that certain highly technical pieces of equipment and equipment rooms are less likely to be used during all of the preservice or postservice tasks performed by clinical labor staff on the day of the procedure (the clinical labor service period) and

are typically available for other patients even when one member of the clinical staff may be occupied with a preservice or postservice task related to the procedure. We also note that we believe these same assumptions would apply to inexpensive equipment items that are used in conjunction with and located in a room with non-portable highly technical equipment items since any items in the room in question would be available if the room is not being occupied by a particular patient. For additional information, we refer readers to our discussion of these issues in the CY 2012 PFS final rule with comment period (76 FR 73182) and the CY 2015 PFS final rule with comment period (79 FR 67639).

(3) Standard Tasks and Minutes for Clinical Labor Tasks

In general, the preservice, intraservice, and postservice clinical labor minutes associated with clinical labor inputs in the direct PE input database reflect the sum of particular tasks described in the information that accompanies the RUC-recommended direct PE inputs, commonly called the "PE worksheets." For most of these described tasks, there is a standardized number of minutes, depending on the type of procedure, its typical setting, its global period, and the other procedures with which it is typically reported. The RUC sometimes recommends a number of minutes either greater than or less than the time typically allotted for certain tasks. In those cases, we review the deviations from the standards and any rationale provided for the deviations. When we do not accept the RUC-recommended exceptions, we refine the proposed direct PE inputs to conform to the standard times for those tasks. In addition, in cases when a service is typically billed with an E/M service, we remove the preservice clinical labor tasks to avoid duplicative inputs and to reflect the resource costs of furnishing the typical service.

We refer readers to section II.B. of the proposed rule (85 FR 50077), Determination of Practice Expense Relative Value Units (PE RVUs), for more information regarding the collaborative work of CMS and the RUC in improvements in standardizing clinical labor tasks.

(4) Recommended Items That Are Not Direct PE Inputs

In some cases, the PE worksheets included with the RUC's recommendations include items that are not clinical labor, disposable supplies, or medical equipment or that cannot be allocated to individual services or

patients. We addressed these kinds of recommendations in previous rulemaking (78 FR 74242), and we do not use items included in these recommendations as direct PE inputs in the calculation of PE RVUs.

(5) New Supply and Equipment Items

The RUC generally recommends the use of supply and equipment items that already exist in the direct PE input database for new, revised, and potentially misvalued codes. However, some recommendations include supply or equipment items that are not currently in the direct PE input database. In these cases, the RUC has historically recommended that a new item be created and has facilitated our pricing of that item by working with the specialty societies to provide us copies of sales invoices. For CY 2021 we received invoices for several new supply and equipment items. Tables 31 and 32 detail the invoices received for new and existing items in the direct PE database. As discussed in section II.B. of the proposed rule (85 FR 50077), Determination of Practice Expense Relative Value Units, we encouraged stakeholders to review the prices associated with these new and existing items to determine whether these prices appear to be accurate. Where prices appear inaccurate, we encouraged stakeholders to submit invoices or other information to improve the accuracy of pricing for these items in the direct PE database by February 10th of the following year for consideration in future rulemaking, similar to our process for consideration of RUC recommendations.

We remind stakeholders that due to the relativity inherent in the development of RVUs, reductions in existing prices for any items in the direct PE database increase the pool of direct PE RVUs available to all other PFS services. Tables 31 and 32 also included the number of invoices received and the number of nonfacility allowed services for procedures that use these equipment items. We provide the nonfacility allowed services so that stakeholders will note the impact the particular price might have on PE relativity, as well as to identify items that are used frequently, since we believe that stakeholders are more likely to have better pricing information for items used more frequently. A single invoice may not be reflective of typical costs and we encourage stakeholders to provide additional invoices so that we might identify and use accurate prices in the development of PE RVUs.

In some cases, we did not use the price listed on the invoice that

accompanies the recommendation because we identify publicly available alternative prices or information that suggests a different price is more accurate. In these cases, we include this in the discussion of these codes. In other cases, we cannot adequately price a newly recommended item due to inadequate information. Sometimes, no supporting information regarding the price of the item has been included in the recommendation. In other cases, the supporting information does not demonstrate that the item has been purchased at the listed price (for example, vendor price quotes instead of paid invoices). In cases where the information provided on the item allows us to identify clinically appropriate proxy items, we might use existing items as proxies for the newly recommended items. In other cases, we included the item in the direct PE input database without any associated price. Although including the item without an associated price means that the item does not contribute to the calculation of the final PE RVU for particular services, it facilitates our ability to incorporate a price once we obtain information and are able to do so.

(6) Service Period Clinical Labor Time in the Facility Setting

Generally speaking, our direct PE inputs do not include clinical labor minutes assigned to the service period because the cost of clinical labor during the service period for a procedure in the facility setting is not considered a resource cost to the practitioner since Medicare makes separate payment to the facility for these costs. We addressed code-specific refinements to clinical labor in the individual code sections.

(7) Procedures Subject to the Multiple Procedure Payment Reduction (MPPR) and the OPPS Cap

We noted that the public use files for the PFS proposed and final rules for each year display the services subject to the MPPR for diagnostic cardiovascular services, diagnostic imaging services, diagnostic ophthalmology services, and therapy services. We also include a list of procedures that meet the definition of imaging under section 1848(b)(4)(B) of the Act, and therefore, are subject to the OPPS cap for the upcoming calendar year. The public use files for CY 2021 are available on the CMS website under downloads for the CY 2021 PFS final rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>. For more information regarding the history of the MPPR policy, we refer readers to the CY

2014 PFS final rule with comment period (78 FR 74261 through 74263). For more information regarding the history of the OPPS cap, we refer readers to the CY 2007 PFS final rule with comment period (71 FR 69659 through 69662).

4. Proposed Valuation of Specific Codes for CY 2021

(1) Fine Needle Aspiration (CPT Codes 10021, 10004, 10005, 10006, 10007, 10008, 10009, 10010, 10011, and 10012)

In June 2017, the CPT Editorial Panel deleted CPT code 10022, revised CPT code 10021, and created nine new codes to describe fine needle aspiration procedures with and without imaging guidance. These ten codes were surveyed and reviewed for the October 2017 and January 2018 RUC meetings. In the CY 2019 PFS final rule, we finalized the RUC-recommended work RVU for seven of the ten codes in the family, while finalizing a lower work RVU for CPT codes 10005 (*Fine needle aspiration biopsy, including ultrasound guidance; first lesion*), 10009 (*Fine needle aspiration biopsy, including CT guidance; first lesion*), and 10021 (*Fine needle aspiration biopsy, without imaging guidance; first lesion*). For a full discussion of this review, we refer readers to the CY 2019 PFS final rule (83 FR 59517 through 59521).

Following the publication of the CY 2019 PFS final rule, RUC staff stated that CMS erroneously double-counted the utilization for new codes that had image guidance bundled. We disagreed that this constituted a technical error and communicated to the RUC in conversations following the publication of the rule that the surveying specialties could instead nominate the affected codes from these families as being potentially misvalued. At the January 2020 RUC meeting, the RUC reaffirmed its CY 2019 recommendations for physician work and direct PE for the ten codes in the Fine Needle Aspiration code family.

In discussing this group of codes, we would like to clarify again that we disagree with the RUC and do not believe that utilization was erroneously double-counted for this code family. We publish our proposed utilization crosswalk each year as a public use file available on the CMS website; the current such file is available under downloads for the CY 2021 PFS final rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>. During the CY 2019 rule cycle, we proposed the utilization crosswalk for the Fine

Needle Aspiration family as it was recommended to CMS by the RUC, and we did not receive any comments on this subject until after the valuation of these codes had been finalized. We proposed and finalized the utilization crosswalk for this code family as recommended by the RUC without receiving any comments from the RUC or other stakeholders. If the RUC or other stakeholders believed that what CMS had proposed was incorrect or misunderstood what the RUC had recommended, there was an opportunity to comment during the 60 days following the publication of the proposed rule. We disagreed that the utilization crosswalk was erroneous, and we did not make a technical correction following the publication of the CY 2019 PFS final rule for this reason.

We also disagreed with the RUC that the utilization crosswalk was “the principle reason CMS rejected the RUC recommendations” for the codes in the Fine Needle Aspiration family, as stated in the RUC’s CY 2021 recommendations for this code family. As we stated in the CY 2019 PFS proposed rule and restated in the CY 2019 PFS final rule, our refinements to the work RVUs of CPT codes 10021, 10005, and 10009 were primarily based on changes in surveyed work time and the relationship between the codes in the family. For example, this was our rationale for refining the work RVU of CPT code 10021 from the RUC-recommended value of 1.20 to the finalized value of 1.03: In reviewing CPT code 10021, we noted that the recommended intraservice time is decreasing from 17 minutes to 15 minutes (12 percent reduction), and the recommended total time is decreasing from 48 minutes to 33 minutes (32 percent reduction); however, the RUC-recommended work RVU is only decreasing from 1.27 to 1.20, which is a reduction of just over 5 percent. In the case of CPT code 10021, we believed that it was more accurate to propose a work RVU of 1.03 based on a crosswalk to CPT code 36440 to account for these decreases in the surveyed work time (83 FR 59518). We noted that this primary rationale for refining the work RVU did not mention the utilization crosswalk at all.

When we communicated to the RUC following the publication of the CY 2019 PFS final rule that the codes in the Fine Needle Aspiration family could be nominated as potentially misvalued, we indicated that we were open to receiving new information about the valuation of these codes. In reaffirming its recommendations from CY 2019, however, the RUC has not provided any

new information that was not already presented for the previous CMS review of these codes. Therefore, we did not propose any changes to the codes in the Fine Needle Aspiration family, as the reaffirmed CY 2021 RUC recommendations are identical to the CY 2019 RUC recommendations that already went through notice and comment rulemaking. We welcomed the submission of new information regarding these services that was not part of the previous CY 2019 review of the code family.

We received public comments on the Fine Needle Aspiration code family. The following is a summary of the comments we received and our responses.

Comment: Several commenters maintained that CMS inadvertently double counted each bundled image guidance code during their RUC recommendation evaluation in CY 2019 due to a misinterpretation of the RUC's utilization crosswalk recommendations. Commenters stated that after correcting for double counting the utilization for the newly created bundled codes, the work pool based on the RUC-recommended values would have instead resulted in a decrease by 15 percent using the CMS utilizations from the CY 2019 PFS proposed rule. Commenters stated that based on the CMS proposed reductions, the work pool for the family would decrease by 23 percent based on the utilization data available during the CY 2019 rulemaking.

Response: As we stated in the CY 2021 PFS proposed rule (85 FR 50152), we continue to disagree with the RUC and do not believe that utilization was erroneously double-counted for this code family. We proposed and finalized the utilization crosswalk for this code family as recommended by the RUC without receiving any comments from the RUC or other stakeholders and we did not make a technical correction following the publication of the CY 2019 PFS final rule for this reason.

Comment: Several commenters stated that they had new information to provide based on reviewing actual claim data from CY 2019 to assess the accuracy of the RVU pool estimates during the CY 2019 rulemaking process. Commenters stated that CMS' projected RVU pool for CY 2019 for the updated Fine Needle Aspiration code family was over twice as high as what actually occurred in 2019 even though the utilization for the newly created codes is largely identical to the source utilization from CPT codes 10021 and 10022. Commenters recommended CMS to finalize the RUC-recommended work

RVUs for CPT codes 10005, 10009, and 10021.

Response: We appreciate the additional information provided by the commenters in their review of the claims data from CY 2019. However, we note that it is not typically part of our methodology to review the accuracy of the RUC-recommended utilization crosswalk against the claims data when it becomes available 2 years later. Historically, there have been many times when the projected crosswalk overestimated utilization for a new service. Also, there have been many times when the projected crosswalk underestimated utilization. In the absence of a systematic process to investigate the accuracy of these projected utilization crosswalks across a broad range of services, we do not believe that it would serve the interests of relativity to single out individual code families and compare them against their projected crosswalks. It would distort relativity to conduct this analysis in situations where it might be advantageous for valuation while failing to conduct the same analysis in situations where it might be disadvantageous.

More importantly, we continue to disagree with the RUC that the utilization crosswalk was "the principle reason CMS rejected the RUC recommendations" for the codes in the Fine Needle Aspiration family, as stated in the RUC's CY 2021 recommendations for this code family. As we stated in the CY 2019 PFS proposed rule, restated in the CY 2019 PFS final rule, and again restated in the CY 2021 PFS proposed rule, our refinements to the work RVUs of CPT codes 10021, 10005, and 10009 were primarily based on changes in surveyed work time and the relationship between the codes in the family. We noted that this primary rationale for refining the work RVU did not mention the utilization crosswalk at all. We continue to believe that the changes in surveyed work time and the relationship between the codes in the family support the work valuations finalized in CY 2019 rulemaking.

Comment: Several commenters disagreed with the rationale provided by CMS when the work RVUs for these codes were finalized in CY 2019 rulemaking. Commenters stated that CMS continued to use intraservice time ratios to revalue codes and then applied inappropriate crosswalks to justify their logic. Commenters stated that the CMS crosswalk codes, such as CPT code 36440 (*Push transfusion, blood, 2 years or younger*), are not clinically similar to the reviewed codes including the associated risks and required decision-

making. Commenters stated that the work RVU for CPT code 10005 could be more appropriately crosswalked to CPT code 76978 (*Ultrasound, targeted dynamic microbubble sonographic contrast characterization (non-cardiac); initial lesion*) based on the identical intraservice work time, intensity, complexity similarities, and ultrasound service similarities. Commenters similarly stated that the work RVU of CPT code 10021 could be more accurately crosswalked to CPT code 95866 (*Needle electromyography; hemidiaphragm*). Commenters again suggested CMS to finalize the RUC's reaffirmed work RVUs for these services.

Response: We disagree with these valuation suggestions presented by the commenters as they reiterate the same arguments that we considered and ultimately did not finalize when the codes in the Fine Needle Aspiration were previously reviewed. For a full discussion of this subject, we direct readers to the CY 2019 PFS final rule (83 FR 59517–59521). We continue to believe that the changes in surveyed work time and the relationship between the codes in the family support the work valuations finalized in CY 2019 rulemaking.

Comment: Several commenters stated that for several equipment items, including the mayo stand (EF015), the exam table (EF023), and the portable ultrasound unit (EQ250), it appeared that there was a calculation error in CMS' direct PE refinement table. Commenters provided a spreadsheet which clarified the RUC's comments on individual refinements of direct PE inputs with suggested equipment times for these items.

Response: We disagree with the commenters and we continue to believe that the equipment times finalized in CY 2019 rulemaking are correct. The finalized equipment times for these three equipment items conform to the standard established policies for non-highly technical equipment. The equipment times recommended by the commenters do not conform to these standard equipment time formulas, instead adding additional time for the "Complete post-procedure diagnostic forms, lab and x-ray requisitions" (CA027) and "Review home care instructions, coordinate visits/prescriptions" (CA035) clinical labor activities. In particular, we note that the CA035 clinical labor activity is not part of the standard established policies for non-highly technical equipment formula; the RUC has mistakenly labeled it as such on some of their recommended PE spreadsheets. Since

these clinical labor activities are not part of the standard equipment time formula, and we have no reason to believe that they would be typical for the services in question; we continue to believe that the equipment times finalized in CY 2019 rulemaking are correct.

We did not propose any changes to the codes in the Fine Needle Aspiration family and although we appreciate the information supplied by the commenters, we are not finalizing any changes to these services. In the event that there is a new review of these services, as opposed to a reaffirmation of the previous review, we would look forward to receiving any additional information or new data.

(2) Tissue Expander Other Than Breast (CPT Code 11960)

This service was included in a larger group of similarly related codes that were recommended for review for the October 2019 RUC meeting. The RUC recommended re-reviewing this code at a more granular level for the January 2020 RUC meeting.

We disagreed with the RUC-recommended work RVU of 12.40 for CPT code 11960 (*tissue expander other than breast*). We proposed to maintain the current work RVU of 11.49 supported by a reference code, CPT code 45560 (*repair of rectocele (separate procedure)*), which has a work RVU of 11.50. CPT code 45560 shares the same intraservice time of 90 minutes with CPT code 11960 and has a slightly higher total time of 367 minutes. The recommended total time for CPT code 11960 decreased from 444 minutes to 357 minutes, with a slight increase in intraservice time of 78 minutes to 90 minutes. We noted that we believe the similar work RVU of the reference CPT code 45560, as well as the reduction in total time, supports maintaining the current work RVU of 11.49 for CPT code 11960. We proposed the RUC-recommended direct PE inputs for CPT code 11960 without refinements.

We received public comments on the Tissue Expander Other Than Breast.

The following is a summary of the comments we received and our responses.

Comment: Several commenters disagreed with the proposal to maintain the current work RVU of 11.49 for CPT code 11960 (*Tissue expander other than breast*) and stated that CMS should finalize the RUC-recommended work RVU of 12.40. In particular, commenters stated they believe that there is an anomalous relationship between current work RVU and current physician time reflected in an inappropriate intensity.

The commenters also believe that we have not appropriately accounted for the RUC-recommended increase in intraservice time.

Response: We acknowledge that the RUC recommended an increase in intraservice time. However, we believe that when our review of recommended values reveals changes in time that have been unaccounted for in a recommended RVU, such as in the decrease of total time unaccounted for with CPT code 11960, we believe it is appropriate to account for that change in establishing work RVUs since the statute explicitly identifies time as one of the two elements of the work RVUs. To validate further our valuations for work RVUs, we incorporate multiple methodologies, which also consider intensity of the service. For additional information regarding our use of methodologies for code valuation, we refer readers to our discussion of the subject in the Methodology for Establishing Work RVUs section of this rule (section II.H.2. of this final rule).

Comment: Commenters stated that they disagree with our use of the chosen reference code, CPT code 45560 (*Repair of rectocele (separate procedure)*). Commenters stated that they believe the chosen reference code does not accurately support the proposed work times for this code because it is “low volume” and it has been too long since the last survey to be an accurate comparison for determining an appropriate valuation. The commenters also stated that there is no evidence to support a clinical comparison between CPT code 11960 and the chosen reference code.

Response: We consider reference codes as supportive of a code valuation rather than as a direct “cross-walk.” CPT code 45560 has a work RVU of 11.50. It shares the same intraservice time of 90 minutes with CPT code 11960 and has a slightly higher total time of 367 minutes. We do not agree that codes must share the same patient population or utilization level to serve as an appropriate reference code. We also recognize that it is important to use recent data available regarding work times. However, we believe that while some reference codes may not have been recently surveyed, they still provide support for revision of work RVUs when survey times show a marked decrease in time.

After consideration of these public comments, we are finalizing the work RVU and direct PE inputs for CPT code 11960 as proposed.

(3) Breast Implant-Expander Placement (CPT Codes 11970, 19325, 19340, 19342, and 19357)

These services were included in a larger group of 22 breast reconstruction and similarly related codes that were recommended for survey for the October 2019 RUC meeting. At the October 2019 RUC meeting, these codes were recommended for a more granular review for the January 2020 RUC meeting.

We disagreed with the RUC-recommended work RVU of 8.01 for CPT code 11970 (*replacement of tissue expander with permanent implant*). We proposed a work RVU of 7.49 supported by a reference code CPT code 35701 (*exploration not followed by surgical repair, artery; neck (e.g., carotid, subclavian)*), which has a work RVU of 7.50. CPT code 35701 shares the same intraservice time of 60 minutes with CPT code 11970 and has a slightly higher total time of 229 minutes as compared to 216 minutes. In addition, during our review of CPT code 11970, we noted that the recommended intraservice time is decreasing from 78 minutes to 60 minutes and the recommended total time of 231 minutes is decreasing to 216 minutes. We also noted that the proposed work RVU of 7.49 for CPT code 11970 is equal to the total time ratio amount, which is the current total time compared to the RUC-recommended total time. We proposed the RUC-recommended direct PE inputs for CPT code 11970.

We disagreed with the RUC-recommended work RVU of 8.64 for CPT code 19325 (*breast augmentation with implant*). Although we disagreed with the RUC-recommended work RVU, we concurred that the relative difference in work between CPT codes 11970 and 19325 is equivalent to the RUC-recommended interval of 0.63 RVUs. Therefore, we proposed a work RVU of 8.12 for CPT code 19325, based on the RUC-recommended interval of 0.63 additional RVUs above our proposed work RVU of 7.49 for CPT code 11970. We noted that we believe the use of an incremental difference between these CPT codes is a valid methodology for setting values, especially in valuing services within a family of revised codes where it is important to maintain appropriate intra-family relativity. We also supported the proposed work RVU of 8.12 based on a reference code, CPT code 25652 (*open treatment of ulnar styloid fracture*). CPT code 25652 shares the same intraservice time of 60 minutes and the same total time of 225 minutes with a lower work RVU of 8.06. In addition, during our review of CPT code

19325, we noted that the total time has decreased from 244 minutes to 225 minutes and the intraservice time has decreased from 90 minutes to 60 minutes. We proposed the RUC-recommended direct PE inputs for CPT code 19325.

We disagreed with the RUC-recommended work RVU of 11.00 for CPT code 19340 (*insertion of breast implant on same day of mastectomy (i.e. immediate)*). Although we disagreed with the RUC-recommended work RVU, we concurred that the relative difference in work between CPT codes 19325 and 19340 is equivalent to the RUC-recommended interval of 2.36 RVUs. Therefore, we proposed a work RVU of 10.48 for CPT code 19340, based on the recommended interval of 2.36 additional RVUs above our proposed work RVU of 8.12 for CPT code 19325. We also supported our proposed work RVU of 10.48 based on a reference code, CPT code 47562 (*laparoscopy, surgical; cholecystectomy*). CPT code 47562 shares the same intraservice time of 80 minutes and only a slightly lower total time of 251 minutes with a similar work RVU of 10.47. In addition, during our review of CPT code 19340, we noted that the total time has decreased from 366 minutes to 261 minutes and the intraservice time has decreased from 120 minutes to 80 minutes. We proposed the RUC-recommended direct PE inputs for CPT code 19340.

We disagreed with the RUC-recommended work RVU of 11.00 for CPT code 19342 (*insertion or replacement of breast implant on different day from mastectomy*). Although we disagreed with the RUC-recommended work RVU, we concurred that the relative difference in work between CPT codes 19325 and 19342 is equivalent to the RUC-recommended interval of 2.36 RVUs. Therefore, we proposed a work RVU of 10.48 for CPT code 19342, based on the recommended interval of 2.36 additional RVUs above our proposed work RVU of 8.12 for CPT code 19325. We also noted that the RUC-recommended work RVU of 11.00 is equal to the RUC-recommended work RVU for CPT code 19340 because they have stated that both services involve an identical amount of physician work and similar times. We also supported our proposed work RVU of 10.48 based on a reference code, CPT code 47562 (*laparoscopy, surgical; cholecystectomy*). CPT code 47562 shares the same intraservice time of 80 minutes and only a slightly lower total time of 251 minutes with a similar work RVU of 10.47. The total time for CPT code 19342 has decreased from 320 minutes to 252 minutes and the

intraservice time has decreased from 115 minutes to 80 minutes. We proposed the RUC-recommended direct PE inputs for CPT code 19342.

We disagreed with the RUC-recommended work RVU of 15.36 for CPT code 19357 (*tissue expander placement in breast reconstruction, including subsequent expansion*). Although we disagreed with the RUC-recommended work RVU, we concurred that the relative difference in work between CPT codes 11970 and 19357 is equivalent to the RUC-recommended interval of 7.35 RVUs. Therefore, we proposed a work RVU of 14.84 for CPT code 19357, based on the recommended interval of 7.35 additional RVUs above our proposed work RVU of 7.49 for CPT code 11970. We also supported our proposed work RVU of 14.84 based on a reference code, CPT code 37605 (*ligation; internal or common carotid artery*). CPT code 37605 shares the same intraservice time of 90 minutes and only a slightly lower total time of 342 minutes with a lower work RVU of 14.28. In addition, during our review of CPT code 19357, we noted that the total time has decreased from 468 minutes to 344 minutes and the intraservice time has decreased from 110 minutes to 90 minutes. We proposed the RUC-recommended direct PE inputs for CPT code 19357.

We received public comments on the Breast Implant-Expander Placement code family. The following is a summary of the comments we received and our responses.

Comment: Commenters disagreed with the proposed work RVU of 7.49 for CPT code 11970 and stated that CMS should finalize the RUC-recommended work RVU of 8.01. Commenters stated that they disagree with the use of the total time ratio methodology for the valuation of this code. The commenters stated that they believe the total time ratio is invalid because it uses 30-year-old total time from the Harvard Study. Additionally, commenters stated that they believe CMS did not consider intensity of the service while using this methodology, which they believe is actually much higher than what CMS has accounted for. Commenters stated that they believe CMS substituted an arbitrary determination of work values derived from time and a subjective estimate of intensity based on an unknown and clinically uniformed opinion.

Response: We disagree and continue to believe that the use of time ratios is an appropriate method for identifying potential work RVUs for particular PFS services. In regard to the age of the data from the Harvard study, if we were to

operate under the assumption that previously recommended work times are now arbitrarily invalid, this would undermine the relativity of the work RVUs on the PFS in general, given that codes are, and have been over many years, often valued by comparisons to codes with similar times. For CPT code 11970, survey times showed a total time and intraservice time decrease. Therefore, we believe the total time ratio, as a comparison of the current work time versus the RUC-recommended work times, is an appropriate methodology to value the work for this CPT code. For additional information regarding our use of time ratios for code valuation, we refer readers to our discussion of the subject in the Methodology for Establishing Work RVUs section of this rule (section II.H.2. of this final rule).

Comment: Commenters disagreed with the proposed work RVU of 8.12 for CPT code 19325 and stated that CMS should finalize the RUC-recommended work RVU of 8.64. Commenters also disagreed with the proposed work RVU of 10.48 for CPT code 19340 and CPT code 19342 and stated that we should finalize the RUC-recommended work RVU of 11.00 for both CPT codes. Commenters also stated that they disagreed with the proposed work RVU of 14.84 for CPT code 19357 and stated that instead we should finalize the RUC-recommended work RVU of 15.36. Commenters stated that they do not support the use of an incremental methodology as an appropriate method for identifying work RVUs for these PFS services. In particular, commenters noted that they believe this methodology adds fragility to the relative value system, as an error in the foundation code could affect the entire code family.

Response: We believe the use of an incremental difference between codes is a valid methodology for setting values, especially in valuing services within a family of revised codes where it is important to maintain appropriate intra-family relativity. We have no evidence to suggest that the use of an incremental difference between codes conflicts with the statute's definition of the work component as the resources in time and intensity required in furnishing the service. We do consider clinical information associated with physician work intensity provided by the RUC and other stakeholders as part of our review process, although we remind readers again that we do not agree that codes must share the same site of service, patient population, or utilization level to serve as an appropriate crosswalk. For additional information regarding

our use of an incremental difference for code valuation, we refer readers to our discussion of the subject in the Methodology for Establishing Work RVUs section of this rule (section II.H.2. of this final rule).

Comment: Commenters disagreed with our use of the chosen supporting reference codes throughout the code family. For CPT code 11970, CPT code 19325, and CPT code 19357, commenters stated that they believe the chosen reference codes are too “low-volume” to accurately support the proposed work times for these codes. Additionally, commenters stated that for CPT code 19325, CPT code 19340, CPT code 19342, and CPT code 19357, that the work values for the reference codes chosen by CMS are too old to be accurate comparisons for determining appropriate valuations. The commenters also stated that several of the reference codes are not relevant for purposes of valuation because there is no evidence to support clinical comparison.

Response: We are statutorily obligated to consider both time and intensity in establishing work RVUs for PFS services. Additionally, we use other methods to validate work RVUs, such as reference codes. When using reference codes to support a proposed work RVU, we do not consider them as a direct “cross-walk” between the CPT code that is being revalued and the chosen reference code. Instead, a reference code used as a supportive check in validating work times. We continue to believe that the relative value system of the PFS is such that all services are appropriately subject to comparisons to one another. We do not agree that codes must share the same patient population or utilization level to serve as an appropriate reference code. We also recognize that it is important to use the most recent data available regarding work times. However, we believe that while some reference code values may be considered older, they still provide support for revision of work RVUs when survey times show a marked increase or decrease in total and intraservice time, such as was the case for this code family.

Comment: Commenters stated that CMS must ensure that any RVU reduction of more than 19 percent is phased in over 2 years, under 1848(c)(7) of the Act. The commenter stated that the magnitude of the proposed RVU reductions for CPT codes 19340 and 19357 would trigger the phase-in requirements since they would be decreasing by more than 19 percent.

Response: Section 1848(c)(7) of the Act, as added by section 220(e) of the PAMA, specifies that for services that

are not new or revised codes, if the total RVUs for a service for a year would otherwise be decreased by an estimated 20 percent or more as compared to the total RVUs for the previous year, the applicable adjustments in work, PE, and MP RVUs shall be phased-in over a 2-year period. We proposed to exempt all of the CPT codes in the Breast Implant-Expander Placement family from the phase-in of significant RVU reductions required by section 1848(c)(7) of the Act due to the fact that they were designated as “revised” codes by CPT as a result of significant revisions to their code descriptors. Since all of the codes in the family fall under the revised designation, the phase-in requirement does not apply to them.

Comment: Commenters stated that they are concerned that reducing reimbursement for the services in this code family could limit access to breast reconstruction following mastectomy. The commenters cited a study done by Kamali P et al., titled: Immediate Breast Reconstruction among Patients with Medicare and Private Insurance: A Matched Cohort Analysis. Commenters also stated that they wanted to bring to our attention the Women’s Health and Cancer Rights Act of 1998 (WHCRA). The commenters stated that this act provides coverage protection for patients who choose to have breast reconstruction following a mastectomy.

Response: We remain committed to supporting the health of all Medicare beneficiaries, as well as remaining vigilant in support of all services related to minority and women’s health. While the WHCRA (Pub. L. 105–277, Title IX, Oct. 21, 1998) is an important federal law that furthers protections for women’s healthcare rights and access to services, we note that Medicare does provide coverage for these important services.

After consideration of these public comments, we are finalizing the work RVU and direct PE inputs for the Breast Implant-Expander

(4) Breast Implant-Expander Removal (CPT Codes 11971, 19328, and 19330)

These services were included in a group of codes that were recommended for survey for the October 2019 RUC meeting as part of a large group of 22 breast reconstruction and similarly related services. At its October 2019 meeting, the RUC agreed that a 22-code family was too expansive. They recommended these codes be re-reviewed as part of a smaller and more granular code family for the January 2020 RUC meeting.

We disagreed with the RUC-recommended work RVU of 7.02 for

CPT code 11971 (*removal of tissue expander w/out insertion of implant*). Although we disagreed with the RUC-recommended work RVU, we concurred that the relative difference in work between CPT codes 11970 and 11971 is equivalent to the RUC recommended interval of 0.99 RVUs. Therefore, we proposed a work RVU of 6.50 for CPT code 11971, based on the recommended interval of 0.99 RVUs below our proposed work RVU of 7.49 for CPT code 11970. We noted that as stated previously, we believed the use of an incremental difference between these CPT codes is a valid methodology for setting values, especially in valuing services within families of similarly revised codes. We also supported our proposed work RVU of 6.50 based on a reference code, CPT code 25671 (*percutaneous skeletal fixation of distal radioulnar dislocation*). CPT code 25671 shares the same intraservice time of 45 minutes and a slightly less total time of 210 minutes with a very similar work RVU of 6.46. In addition, during our review of CPT code 11971, we noted that the total time has decreased from 303 minutes to 215 minutes and the intraservice time has decreased from 90 to 45 minutes. We proposed the RUC-recommended direct PE inputs for CPT code 11971.

We disagreed with the RUC-recommended work RVU of 7.44 for CPT code 19328 (*removal of intact breast implant*). Although we disagreed with the RUC-recommended work RVU, we proposed increasing the current work RVU from 6.48 to 6.92 to account for the increases in total and intraservice time. We also concurred that the relative difference in work between CPT codes 11971 and 19328 is equivalent to the RUC-recommended interval of 0.42 RVUs. Therefore, we proposed a work RVU of 6.92 for CPT code 19328, based on the recommended interval of 0.42 additional RVUs above our proposed work RVU of 6.50 for CPT code 11970. We also supported our proposed work RVU of 6.92 based on a reference code, CPT code 28289 (*Hallux rigidus correction with cheilectomy, debridement and capsular release of the first metatarsophalangeal joint; without implant*). CPT code 28289 shares the same intraservice time of 45 minutes and a slightly higher total time of 210 minutes with a very similar work RVU of 6.90. The total time for CPT code 19328 has increased from 173 minutes to 199 minutes and the intraservice time has increased from 38 to 45 minutes. We proposed the RUC-recommended direct PE inputs for CPT code 19328.

We proposed the RUC-recommended work RVU of 9.00 for CPT code 19330

(removal of ruptured breast implant, including implant contents). The survey total time for CPT code 19330 has increased from 218 minutes to 229 minutes and the intraservice time has increased from 62 minutes to 75 minutes. We also proposed the RUC-recommended direct PE inputs for this code without refinements.

We received public comments on the Breast Implant-Expander Removal code family. The following is a summary of the comments we received and our responses.

Comment: Commenters disagreed with the proposed work RVU of 6.50 for CPT code 11971 and stated that CMS should finalize the RUC-recommended work RVU of 7.02. Commenters also disagreed with the proposed work RVU of 6.92 for CPT code 19328 and stated that CMS should finalize the RUC-recommended work RVU of 7.44. Commenters stated that they do not support the proposed work RVU because they do not support the use of an incremental methodology as an appropriate tool for valuing services in this code family. In particular, commenters noted that they believe this methodology is further inappropriate because it uses a foundation code that is not within the same code family, which adds further fragility to the use of the incremental methodology for valuation of this code family.

Response: We believe the use of an incremental difference between codes is a valid methodology for setting values, especially in valuing services within a family of revised codes where it is important to maintain appropriate intra-family relativity.

Comment: Commenters disagreed with our use of the chosen supporting reference codes for CPT code 11971 and CPT code 19328. The commenters stated that they believe there is not adequate clinical comparison for the work portion of the service. Commenters also stated that they believe the reference code values are too old because they are from outdated survey results and do not have adequately comparable intensities.

Response: When using referencing codes to support a proposed work RVU, we do not consider them as a direct “cross-walk” between the CPT code that is being revalued and the chosen reference code. Instead, reference codes are used as a supportive check in validating work times. We continue to believe that the relative value system of the PFS is such that all services are appropriately subject to comparisons to one another.

After consideration of these public comments, we find the arguments for maintaining consistency in

methodology and reducing the risk of anomalies within the valuation of this code family to be compelling. We are finalizing the RUC-recommended work RVU of 7.02 for CPT code 11971 and the RUC-recommended work RVU of 7.44 for CPT code 19328. We are also finalizing the direct PE inputs as proposed.

(5) Modified Radical Mastectomy (CPT Code 19307)

The RUC recommended that CPT code 19307 (*Mastectomy, modified radical, including axillary lymph nodes, with or without pectoralis minor muscle, but excluding pectoralis major muscle*) be surveyed for the January 2020 RUC meeting for site of service anomaly. The Relativity Assessment Workgroup identified services performed less than 50 percent of the time in the inpatient setting yet included inpatient hospital E/M services within the global period and with 2018 Medicare utilization over 5,000. The RUC recommended lowering the work RVU to 17.99 which is the survey's 25th percentile.

We proposed the RUC-recommended work RVUs of 17.99 for CPT code 19307. We also proposed the RUC-recommended direct PE inputs for this code.

We received public comments on Modified Radical Mastectomy (CPT code 19307). The following is a summary of the comments we received and our responses.

Comment: Commenters were overall in support of CMS proposing the RUC recommendations for this code. One commenter noted strong support for the process and of the RUC. Additionally, the commenters suggested CMS to accept the RUC recommendations to extend the office and outpatient E/M work RVU increases to the office and outpatient visits included in 10- and 90-day globals.

Response: We appreciate the commenters' support for CMS proposing the RUC recommendation for Modified Radical Mastectomy (CPT code 19307) and note the commenters concern with regard to office and outpatient E/M work RVU increases to the office and outpatient visits included in 10- and 90-day global.

After consideration of these public comments, we are finalizing as proposed the RUC-recommended work RVU of 17.99 for CPT code 19307. We are also finalizing as proposed the RUC-recommended direct PE inputs for this code.

(6) Breast Lift-Reduction (CPT Codes 19316 and 19318)

These services were included in a larger code group of similarly related services that were recommended for review for the October 2019 RUC meeting. CPT code 19316 (*mastopexy*) and CPT code 19318 (*Breast reduction*) were then recommended for a more granular review for the January 2020 RUC meeting.

We proposed the RUC-recommended work RVU of 11.09 for CPT code 19316 (*mastopexy*) and 16.03 for CPT code 19318 (*Breast reduction*). We proposed the RUC-recommended direct PE inputs for this code family without refinements.

We did not receive public comments on this code family, and are finalizing as proposed.

(7) Secondary Breast Mound Procedure (CPT Codes 19370, 19371, and 19380)

These services were included in a large group of breast reconstruction codes that were recommended to be surveyed for the October 2019 RUC meeting. At the October 2019 RUC meeting, the RUC concurred with the more granular code families but recommended these codes be re-surveyed for the January 2020 RUC meeting.

We disagreed with the RUC-recommended work RVU of 10.0 for CPT code 19370 (*Revision of peri-implant capsule, breast, including capsulorrhaphy, and/or partial capsulectomy*). We proposed to maintain the current work RVU of 9.17 based on a supporting reference code, CPT code 28299 (*Correction, hallux valgus (bunionectomy)*), with sesamoidectomy, when performed; with double osteotomy, any method), which has a work RVU of 9.29. CPT code 28299 shares a similar intraservice time of 75 minutes with CPT code 19370 and has a slightly higher total time of 256 minutes. In addition, we noted during our review of CPT code 19370 that the recommended total time has increased minimally from 253 minutes to 255 minutes, with a slight decrease in intraservice time of 82 minutes to 78 minutes. We noted that we believe the similar work RVU of the supporting CPT code 28299, as well as the minimal changes in physician work time for CPT code 19370, supports maintaining the current work RVU of 9.17. We proposed the RUC-recommended direct PE inputs for CPT code 19370 without refinements.

We disagreed with the RUC-recommended work RVU of 10.81 for CPT code 19371 (*Peri-implant*

capsulectomy, breast, complete, including removal of all intra-capsular contents). Although we disagreed with the RUC-recommended work RVU, we concur that the relative difference in work between CPT codes 19370 and 19371 is equivalent to the RUC-recommended interval of 0.81 RVUs. Therefore, we proposed a work RVU of 9.98 for CPT code 19371, based on the recommended interval of 0.81 additional RVUs above our proposed work RVU of 9.17 for CPT code 19370. We noted that as stated previously, we believe the use of an incremental difference between these CPT codes is a valid methodology for setting values, especially in valuing services within a family of revised codes where it is important to maintain appropriate intra-family relativity. We also supported our proposed work RVU of 9.98 based on a reference code, CPT code 25628 (*Open treatment of carpal scaphoid (navicular) fracture, includes internal fixation, when performed*). CPT code 25628 shares the same intraservice time of 90 minutes and a slightly higher total time of 277 minutes with a work RVU of 9.67. In addition, during our review of CPT code 19371, we noted that the total time for CPT code 19371 has decreased from 306 minutes to 261 minutes and the intraservice time has decreased from 117 to 90 minutes. We proposed the RUC-recommended direct PE inputs for CPT code 19371.

We disagreed with the RUC-recommended work RVU of 12.00 for CPT code 19380 (*Revision of reconstructed breast (e.g., significant removal of tissue, re-advancement and/or re-inset of flaps in autologous reconstruction or significant capsular revision combined with soft tissue excision in implant-based reconstruction*)). Although we disagreed with the RUC-recommended work RVU, we concurred that the relative difference in work between CPT codes 19371 and 19380 is equivalent to the RUC recommended interval of 1.19 RVUs. Therefore, we proposed a work RVU of 11.17 for CPT code 19380, based on the recommended interval of 1.19 additional RVUs above our proposed work RVU of 9.98 for CPT code 19371. We also supported our proposed work RVU of 11.17 based on a reference code, CPT code 64569 (*Revision or replacement of cranial nerve (e.g., vagus nerve) neurostimulator electrode array, including connection to existing pulse generator*). CPT code 64569 shares the same intraservice time of 120 minutes and only a slightly higher total time of 312 minutes with a work RVU of 11.0. The total time increased from 277

minutes to 307 minutes and the intraservice time has increased from 89 minutes to 120 minutes. We proposed the RUC-recommended direct PE inputs for CPT code 19380.

We received public comments on the Secondary Breast Mound Procedure (CPT codes 19370, 19371, and 19380). The following is a summary of the comments we received and our responses.

Comment: Several commenters disagreed with the proposal to maintain the current work RVU of 9.17 for CPT code 19370 (*Revision of peri-implant capsule, breast, including capsulorrhaphy, and/or partial capsulectomy*) and stated that CMS should finalize the RUC-recommended work RVU of 10.00. Some of the commenters disagreed with comparing the current intraservice time and total time from the Harvard study to the RUC-recommended physician time. The commenters also believed that we have not appropriately accounted for the CPT Editorial Panel's revised additional physician work that is now inclusive in the code descriptor and increased intensity.

Response: We disagree with the commenter. For CPT code 19370, survey times showed only a slight increase in total time and slight decrease in intraservice time. Therefore, we continue to believe that the survey time does not support increasing the work RVU; in particular, there was no significant change in total time.

Comment: Commenters disagreed with the proposed work RVU of 9.98 for CPT code 19371 (*Peri-implant capsulectomy, breast, complete, including removal of all intra-capsular contents*) and stated that CMS should finalize the RUC-recommended work RVU of 10.81. Commenters also disagreed with the proposed work RVU of 11.17 for CPT code 19380 (*Revision of reconstructed breast (e.g., significant removal of tissue, re-advancement and/or re-inset of flaps in autologous reconstruction or significant capsular revision combined with soft tissue excision in implant-based reconstruction*)) and stated that we should finalize the RUC-recommended work RVU of 12.00. Commenters stated that they do not support the use of an incremental methodology as an appropriate method for identifying work RVUs for these PFS services. In particular, commenters noted that they believe this methodology adds fragility to the relative value system, as an error in the foundation code could affect the entire code family.

Response: We believe the use of an incremental difference between codes is

a valid methodology for setting values, especially in valuing services within a family of revised codes where it is important to maintain appropriate intra-family relativity. We have no evidence to suggest that the use of an incremental difference between codes conflicts with the statute's definition of the work component as the resources in time and intensity required in furnishing the service. We do consider clinical information associated with physician work intensity provided by the RUC and other stakeholders as part of our review process, although we remind readers again that we do not agree that codes must share the same site of service, patient population, or utilization level to serve as an appropriate crosswalk. For additional information regarding our use of an incremental difference for code valuation, we refer readers to our discussion of the subject in the Methodology for Establishing Work RVUs section of this rule (section II.H.2. of this final rule).

Comment: For CPT codes 19370, CPT code 19371, and CPT code 19380, commenters disagreed with our use of the chosen supporting reference codes throughout the code family stating they were not strong reference codes, and not relevant for purposes of valuation because there is no evidence of clinical comparison. A commenter also stated that the reference code used for CPT code 19380 had very low volume.

Response: We are statutorily obligated to consider both time and intensity in establishing work RVUs for PFS services. Additionally, we use other methods to validate work RVUs, such as reference codes. When using referencing codes to support a proposed work RVU, we do not consider there to be a direct "cross-walk" between the CPT code that is being revalued and the chosen reference code. Instead, it is meant to be supportive in validating work times. We continue to believe that the relative value system of the PFS is such that all services are appropriately subject to comparisons to one another. We do not agree that codes must share the same patient population or utilization level to serve as an appropriate reference code. We also recognize that it is important to use recent available data regarding work times. However, we believe that while some reference code values may be considered older, they still provide support for revision of work RVUs when survey times show a marked increase or decrease in total and intraservice time, such as was the case for this code family.

After consideration of public comments, we are finalizing the work RVU and direct PE inputs for the

Secondary Breast Mound Procedure code family as proposed.

(8) Hip-Knee Arthroplasty (CPT Codes 27130 and 27447)

CPT codes 27130 (*Arthroplasty, acetabular and proximal femoral prosthetic replacement (total hip arthroplasty), with or without autograft or allograft*) and 27447 (*Arthroplasty, knee, condyle and plateau; medial AND lateral compartments with or without patella resurfacing (total knee arthroplasty)*) were identified as potentially misvalued codes under the CMS high expenditure procedural code screen in the CY 2014 PFS final rule with comment period (78 FR 74334). These codes were reviewed by the AMA RUC who provided recommendations for work RVUs and physician time for these services for CY 2014. We agreed with the RUC recommendation to value CPT code 27130 and CPT code 27447 equally and thus established the same CY 2014 interim final work RVUs for these two procedures (78 FR 74334). This change resulted in a 1.12 work RVU increase for the visits in the global period. We added the additional work to the AMA RUC-recommended work RVU of 19.60 for CPT codes 27130 and 27447, resulting in an interim final work RVU of 20.72 for both services.

In the CY 2015 PFS final rule with comment period (79 FR 67632), we discussed how in the CY 2014 PFS final rule with comment period, we sought public comment regarding the appropriate work RVUs for these services and the most appropriate reconciliation for the conflicting information regarding time values for these services as presented to us by the physician community. We did not find the rationales provided for modifying the interim final work values established in CY 2014 compelling, and thus we finalized the CY 2014 interim final values for these procedures based upon the best data we had available and to preserve appropriate relativity with other codes.

In the CY 2019 PFS final rule (83 FR 59500 through 595303), CPT code 27130 and CPT code 27447 were added to the list of potentially misvalued codes. A stakeholder submitted information requesting that CMS nominate these codes as potentially misvalued. The stakeholder stated that there were substantial overestimates in pre-service and post-service time including follow-up inpatient and outpatient visits that do not take place included in the valuation of the service. As a result, the codes were resurveyed for the October 2019 RUC meeting.

We proposed the RUC-recommended work RVU of 19.60 for CPT code 27130 and the RUC-recommended work RVU of 19.60 for CPT code 27447. We also proposed the RUC-recommended direct PE inputs for both codes. Additionally, we solicited comment from the medical community on how to consider and/or include pre-optimization time (pre-service work and/or activities to improve surgical outcomes) going forward. We also noted that we were interested in stakeholders' thoughts on what codes could be used to capture these pre-optimization activities that could be billed in conjunction with the services discussed previously. Overall, we noted interest in continuing our ongoing dialog with stakeholders about how CMS might pay more accurately for improved clinical outcomes that may result from increased efficiency in furnishing care through activities, such as pre-optimization and are appreciative of information provided by the medical community. We invited the medical community to continue to engage with CMS on this and other topics.

We received public comments on Hip-Knee Arthroplasty (CPT codes 27130 and 27447). The following is a summary of the comments we received and our responses.

Comment: Many commenters were overall opposed to the proposal to reduce the work RVUs associated with CPT codes 27447 and 27130. Commenters noted that pre-optimization time is not captured in the current RUC survey. Commenters requested that CMS forgo any changes or delay adoption of the reduced work RVU for these procedures until an accurate assessment of this time can be determined. The commenters noted that delaying the adoption of these RVUs would provide time for CMS to work with stakeholders to better capture pre-optimization work performed by physicians to improve surgical outcomes. One commenter recommended the creation of a G code to account for arthroplasty pre-optimization work.

Two commenters appreciated CMS' interest in capturing these pre-optimization activities and seeking comment from the medical community on how to consider and/or include pre-optimization time going forward. Some stakeholders articulated that CMS may not have fully accounted for the preoperative work required to make value-based care cost-effective and high-quality. Commenters note, in light of the pandemic, that any cuts in payment to health care providers or medically necessary services would be harmful, and a reduction in work RVU is not

justified by a reduction in time spent on patients, but will undercut the transition to bundled models.

One commenter was in support of CMS accepting the RUC recommendation for hip and knee arthroplasty and believes accepting the RUC recommendation will address the reimbursement imbalance, increase the primary care workforce, and improve the finances in primary care. Another commenter opposed the reduction because, if both the CF and RVU changes take effect, it would be a 15 percent reduction for physician payment. The commenter noted the RUC methodology does not capture the patient pre-optimization work related to the APM incentive that improves patient outcomes and lowers costs.

One commenter noted that patients with a higher BMI are more complex and the RVU should go up or a separate category be made for complicated joint replacement for those with a Body Mass Index (BMI) over 40. Additionally, the commenter noted that implants (for these procedures) should be reimbursed to facilities at cost or cost plus 10 percent, which would save millions of dollars per calendar year; and the commenter also believed lowering the RVUs may cause physicians to stop taking Medicare and reduce access to care.

One commenter noted overwhelming evidence that physicians and/or QHPs are spending more time with the typical patient in pre-service optimization work and stated that they believe CMS has broad authority to remedy the issues presented by the RUC recommendations for preservice time. Another commenter stated that there was logical outgrowth to add preservice time to the existing code.

One commenter noted that there are issues with the existing CPT codes in capturing arthroplasty pre-optimization activities or changes in practice patterns, and that creation of a new G code would account for arthroplasty pre-optimization work. For these procedures, this time includes patient screening and education, as well as coordinating with other health care providers to help manage the entire episode of care.

Response: We appreciate the commenters' feedback about maintaining the work RVU and potential resource costs that are not reflected in the RUC recommendation. We are also appreciative of the dialog we have had with stakeholders. We continue to assess the accuracy of service valuations, including global services paid under the PFS, and believe it would be prudent before considering

further changes to better understand how existing codes that could be billed prior to these procedures do not reflect the pre-optimization activities as described by stakeholders.

After considering the comments received, we are finalizing the RUC-recommended work RVU of 19.60 for CPT code 27130 and the RUC-recommended work RVU of 19.60 for CPT code 27447. We are also finalizing the RUC-recommended direct PE inputs for both codes. As we continue to consider this issue and how to best reflect pre-optimization in the valuation for the services, we welcome information from stakeholders as to which services may be included or which coding selections would be appropriate for various services that are or would be provided outside of the global period. We continue to be interested in stakeholders' thoughts and would like to discuss and consider the potential for more accurate coding, and what kind of coding framework, if there is currently none, could be used to capture these pre-optimization activities.

(9) Toe Amputation (CPT Codes 28820 and 28825)

These services were identified by the RUC Relativity Assessment Workgroup through a site of service anomaly screen based on the review of 3 years of data (2015, 2016 and 2017) for services with utilization over 10,000 in which a service is typically performed in the inpatient hospital setting, yet only a half discharge day management identified by CPT code 99238 is included. Prior to conducting the RUC survey, the specialty societies recommended that it would be appropriate for these services to have their global period changed from 090-day to 000-day so the site of service is less of a contributing factor to the codes' valuation. These codes were surveyed as a 000-day global service, and we proposed them as 000-day global services.

We disagreed with the RUC-recommended work RVU of 4.10 for CPT code 28820 (*Amputation, toe; metatarsophalangeal joint*). We noted that we believe that it would be more accurate to propose a work RVU of 3.51, and we are supporting this value with a crosswalk to CPT code 33958 (*Extracorporeal membrane oxygenation (ECMO)/extracorporeal life support (ECLS) provided by physician; reposition peripheral (arterial and/or venous) cannula(e), percutaneous, 6 years and older (includes fluoroscopic guidance, when performed)*), which has a work RVU of 3.51, to account for the decrease in the surveyed work time. We

do not believe the RUC-recommended reduction in work RVU from the current value of 5.82 is commensurate with the RUC-recommended 102-minute reduction in total time. We believe that a further reduction in work RVUs is warranted given the significant reduction in RUC-recommended physician time.

We disagreed with the RUC-recommended work RVU of 4.00 for CPT code 28825 (*Amputation, toe; interphalangeal joint*). We proposed a work RVU of 3.41 based on the RUC-recommended increment relationship between this code and CPT code 28820 (a difference of -0.10), which we apply to our proposed value for the latter code. We noted that we do not believe the RUC-recommended reduction in work RVU from the current value of 5.37 is commensurate with the RUC-recommended 97-minute reduction in total time. We also noted that we believe that a further reduction in work RVUs is warranted given the significance of RUC-recommended reduction in physician time.

For the direct PE inputs, we proposed to refine the pre-service clinical labor times to conform to the 000-day global period standards for both codes in the family for CPT codes 28820 and 28825. We also proposed to refine the clinical labor times for the "Provide education/obtain consent" (CA011) and the "Prepare room, equipment and supplies" (CA013) activities to conform to our established standard time of 2 minutes each in the non-facility setting for CPT codes 28820 and 28825. We proposed to refine the equipment time to conform to these changes in the clinical labor time for both codes.

We received public comments on the Toe Amputation (CPT codes 28820 and 28825). The following is a summary of the comments we received and our responses.

Comment: Commenters stated that CMS made this proposal without demonstrating that the agency also considered the disparity between the physician work intensity of the post-operative services that were previously bundled in 28820 and the physician work intensity of the skin-to-skin time of the service.

Response: We disagree with the commenter that we did not consider the disparity in intensity between the post-operative services that were previously bundled in CPT code 28820 and the skin-to-skin time of the service. Consistent with the statute, we are required to value the work RVU based on the relative resources involved in furnishing the service, which include time and intensity. When our review of

recommended values reveals that changes in time have been unaccounted for in a recommended RVU, then we believe it is appropriate to account for that change in establishing work RVUs since the statute explicitly identifies time as one of the two elements of the work RVUs. This includes changes in the resource of time associated with the post-operative services that were previously bundled in CPT code 28820. We clarify again that we do not treat all components of physician time as having identical intensity. If we were to disregard intensity altogether, the work RVUs for all services would be developed based solely on time values and that is definitively not the case, as indicated by the many services that share the same time values but have different work RVUs. In the case of CPT codes 28220 and 28222, we believe that in many cases the work time was reduced substantially but the work RVU only minimally, which resulted in an implied increase in the intensity of work that does not appear to be valid, and ultimately creates work intensity anomalies.

Comment: Commenters stated that the crosswalk code that CMS used to support its proposal to reject the RUC recommendation, CPT code 33958, is not an appropriate reference code to use for making valuation decisions. The commenter stated that CPT code 33958 is an atypical 000-day global code that includes a bundled inpatient hospital visit making it inappropriate to use as a direct work value crosswalk for a service that does not include bundled visits and it is a low volume service.

Response: We continue to believe that the nature of the PFS relative value system is such that all services are appropriately subject to comparisons to one another. Although codes that describe clinically similar services are sometimes stronger comparator codes, we do not agree that codes must share the same site of service, patient population, or utilization level to serve as an appropriate crosswalk.

Comment: One commenter stated that they would also like to remind CMS of both the Agency's and the RUC's longstanding position that treating all components of physician time (pre-service, intra-service, post-service and post-operative visits) as having identical intensity is incorrect and that inconsistently applying it to only certain services under review creates inherent payment disparities in a payment system which is based on relative valuation.

Response: We reiterate our previous clarification that we do not treat all components of physician time as having

identical intensity. As we have consistently stated, when our review of recommended values reveals that changes in time have been unaccounted for in a recommended RVU, then we believe it is appropriate to account for that change in establishing work RVUs since the statute explicitly identifies time as one of the two elements of the work RVUs.

Comment: Commenters stated that it does not appear that CMS considered the change in the global surgical period from a 90-day global to a 000-day global when referencing the decrease in total time for the procedure, which would make sense for a change in the global period and the associated intensity for the procedure. The intra-service time for the procedure did not change.

Response: We noted that in reviewing the recommended values for CPT codes 28820 and 28825, the change in global periods was taken into consideration. However, consistent with the statute, we are required to value the work RVU based on the relative resources involved in furnishing the service, which include time and intensity. When our review of recommended values reveals that changes in time have been unaccounted for in a recommended RVU, then we believe it is appropriate to account for that change in establishing work RVUs since the statute explicitly identifies time as one of the two elements of the work RVUs. This includes changes in the resource of time associated with the post-operative services that were previously bundled in CPT code 28820.

Comment: Several commenters stated that CMS should not impose the standard 000-day clinical labor times for CA011 and CA013 with respect to CPT codes 28820 and 28825 without regard to the clinically significant information that these are major procedures that are typically performed in a facility setting.

Response: We have reviewed all the information provided by commenters and we believe it would be appropriate to maintain standard times for particular clinical labor tasks that can be applied consistently to many codes, as they are valued over several years, similar in principle to the use of physician preservice time packages. We believe that setting and maintaining such standards provides greater consistency among codes that share the same clinical labor tasks and could improve relativity of values among codes. Therefore, we maintain that these refinements are consistent with the clinical labor times of a 000-day global service.

After consideration of the comments, we are finalizing the work RVUs and

direct PE inputs for the Toe Amputation codes as proposed.

(10) Shoulder Debridement (CPT Codes 29822 and 29823)

In September 2019, the CPT Editorial Panel approved revision of CPT code 29822 (*Arthroscopy, shoulder, surgical; debridement, limited, 1 or 2 discrete structures (e.g., humeral bone, humeral articular cartilage, glenoid bone, glenoid articular cartilage, biceps tendon, biceps anchor complex, labrum, articular capsule, articular side of the rotator cuff, bursal side of the rotator cuff, subacromial bursa, foreign body[ies])*) and CPT code 29823 (*Arthroscopy, shoulder, surgical; debridement, extensive, 3 or more discrete structures (e.g., humeral bone, humeral articular cartilage, glenoid bone, glenoid articular cartilage, biceps tendon, biceps anchor complex, labrum, articular capsule, articular side of the rotator cuff, bursal side of the rotator cuff, subacromial bursa, foreign body[ies])*) to clarify limited and extensive debridement by specifying the number of discrete structures debrided and providing examples of the structures.

We proposed the RUC-recommended work RVU of 7.03 for CPT code 29822 and 7.98 for CPT code 29823 without refinement.

For the direct PE inputs, we proposed the RUC recommendations CPT codes 29822 and 29823 without refinement.

We did not receive public comments on this code family, and are finalizing as proposed.

(11) Absorbable Nasal Implant Repair (CPT Codes 30468)

In September 2019, the CPT Editorial Panel approved the addition of CPT code 30468 (*Repair of nasal valve collapse with subcutaneous/submucosal lateral wall implant(s) to report repair of nasal valve collapse with subcutaneous/submucosal lateral wall implant(s)*).

We proposed the RUC-recommended value of 2.80 work RVUs without refinement for CPT code 30468.

For the direct PE inputs, we also proposed the RUC-recommended values without refinement.

We received public comments on the Absorbable Nasal Implant Repair family (CPT code 30468). The following is a summary of the comments we received and our responses.

Comment: Several commenters stated their support for our proposal to adopt the RUC-recommended values without refinement.

Response: We thank commenters for their feedback and support.

After consideration of the comments, we are finalizing the work RVU and direct PE inputs for CPT code 30468 as proposed.

(12) Lung Biopsy-CT Guidance Bundle (CPT Code 32408)

CPT codes 32405 (*Biopsy, lung or mediastinum, percutaneous needle*) and 77012 (*Computed tomography guidance for needle placement (e.g., biopsy, aspiration, injection, localization device), radiological supervision and interpretation*) were identified by the AMA through a screen of code pairs that are reported on the same day, same patient and same NPI number at or more than 75 percent of the time. The CPT Editorial Panel deleted CPT code 32405 and replaced it with 32408 (*Core needle biopsy, lung or mediastinum, percutaneous, including imaging guidance, when performed*).

We did not propose the RUC-recommended work RVU of 4.00, which is the survey median, because we believe this value somewhat overstates the increase in intensity. Although we do not imply that the decrease in time, when considering the aggregate time values for CPT codes 32405 and 77012, as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be appropriately reflected in the work RVU. Intraservice and total time ratios using the aggregate time values of current CPT codes 32405 and 77012 suggest a significantly lower work RVU; however, we did not believe a decrease from the current aggregate value of 32405 and 77012 was warranted. We noted that we believe there is some overlap in physician work and time for the two current services, and that the recommended increase to 4.00 does not appropriately recognize this overlap. Therefore, we proposed a work RVU of 3.18, which is the sum of the work RVUs of the two base codes.

We proposed the RUC-recommended direct PE inputs without refinement.

We received public comments on Lung Biopsy-CT Guidance Bundle (CPT code 32408). The following is a summary of the comments we received and our responses.

Comment: A commenter disagreed with our valuation methodology, stating that it inappropriately relies on time-based ratios. The commenter stated this methodology is flawed and inaccurately treats all components of the physician time as having identical intensity and is incorrect. In addition, the commenter suggested it lacks the rigor of the survey

process and RUC panel evaluation. The commenter stated that CMS does not provide any supporting rationale or clinical information for the proposed work RVU of 3.18 other than debating survey times, primarily the intraservice time and total time ratios for this service, then justifying the proposed work RVU with the work RVU sum of deleted code 32405 and imaging code 77012.

The commenter also states that CMS overlooked the compelling evidence rationale for why this service is presently misvalued, and that cancer treatment protocols have evolved significantly to require more definitive tissue diagnosis including biomolecular marker profiles. The new code 32408 has increased the total time and the intensity/complexity, warranting the RUC-recommended work RVU of 4.00

Response: We disagree and continue to believe that the use of time ratios is one of several appropriate methods for identifying potential work RVUs for particular PFS services, particularly when the alternative values recommended by the RUC and other commenters do not account for information provided by surveys that suggests the amount of time involved in furnishing the service has changed significantly. We reiterate that, consistent with the statute, we are required to value the work RVU based on the relative resources involved in furnishing the service, which include time and intensity. When our review of recommended values reveals that changes in time have been unaccounted for in a recommended RVU, then we believe it is appropriate to account for that change in establishing work RVUs since the statute explicitly identifies time as one of the two elements of the work RVUs. Please see above for our discussion of compelling evidence rationale. We do consider changes in technology, patient population, etc., insofar as they affect the time and intensity of the service under review. However, we do not specifically address the RUC's compelling evidence criteria in our rulemaking since it is outside the purview of the code valuation framework stipulated by statute. In addition, we reiterate that our proposal for this code was based on our analysis which indicated that there is some overlap in the work described in the two base services CPT codes 32405 and 77012. We continue to believe that a work RVU that is in excess of the aggregate work RVU of these two codes would result in an overestimation of intensity.

After consideration of the comments, we are finalizing the work RVU and

direct PE inputs for CPT code 32408 as proposed.

(13) Atrial Septostomy (CPT Codes 33741, 33745, 33746)

Septostomy procedures are performed on extremely small newborns and neonates with severe forms of congenital heart disease and are lifesaving/temporizing procedures that do not provide definitive therapy to these critically ill patients. These procedures are not typical of the Medicare population and are of low volume. CPT code 92992 (*Atrial septectomy or septostomy; transvenous method, balloon (e.g., Rashkind type) (includes cardiac catheterization)*) and CPT code 92993 (*Atrial septectomy or septostomy; blade method (Park septostomy) (includes cardiac catheterization)*), are carrier-priced codes. These services were not formally designated as potentially misvalued in the CY 2019 PFS final rule (83 FR 59500), but we did make mention that the RUC had signaled its intention to review these two codes. Both services were referred to the CPT Editorial Panel by the specialty societies who indicated that CPT code 92992 may not have included related imaging guidance, and also commented that CPT code 92993 was antiquated and rarely performed. The CPT Editorial Panel deleted both CPT codes and proposed to replace them with the following new CPT codes.

CPT code 33741 (*Transcatheter atrial septostomy (TAS) for congenital cardiac anomalies to create effective atrial flow, including all imaging guidance by the proceduralist, when performed, any method (e.g., Rashkind, Sang-Park, balloon, cutting balloon, blade)*), is one of three codes intended to replace the two deleted Septostomy codes. For CPT code 33741, the RUC recommended an RVU only crosswalk to CPT code 33340 (*Percutaneous transcatheter closure of the left atrial appendage with endocardial implant, including fluoroscopy, transseptal puncture, catheter placement(s), left atrial angiography, left atrial appendage angiography, when performed, and radiological supervision and interpretation*), which has a work RVU of 14.00. The RUC recommended 20 minutes of preservice evaluation time, 15 minutes of preservice positioning time, 15 minutes preservice scrub/dress/wait time, 55 minutes intraservice time and 45 minutes immediate postservice time, for 150 minutes total time. We proposed the RUC-recommended work RVU of 14.00 and physician times without refinement.

CPT code 33745 (*Transcatheter intracardiac shunt (TIS) creation by stent placement for congenital cardiac anomalies to establish effective intracardiac flow, all imaging guidance by the proceduralist when performed, left and right heart diagnostic cardiac catheterization for congenital cardiac anomalies, and target zone angioplasty, when performed (e.g., atrial septum, Fontan fenestration, right ventricular outflow tract, Mustard/Senning/Warden baffles); initial intracardiac shunt*) is another new procedure code proposed by the CPT Editorial Panel. The service is currently performed on neonate infants to children with severe forms of congenital heart disease, by having a stent implanted inside of an infant's beating heart (and not within a blood vessel). This stent replaces the methods described in the deleted atrial septostomy codes utilizing the balloon and blade method. The RUC recommended 25 minutes preservice evaluation time, 15 minutes preservice positioning time, 15 minutes preservice scrub/dress/wait time, 92 minutes intraservice time and 60 minutes immediate postservice time, for 207 minutes total time. The RUC recommended 20.00 work RVUs for CPT code 33745. We proposed to adopt the RUC-recommended work RVUs and physician times.

CPT code 33746, (*Transcatheter intracardiac shunt (TIS) creation by stent placement for congenital cardiac anomalies to establish effective intracardiac flow, all imaging guidance by the proceduralist when performed, left and right heart diagnostic cardiac catheterization for congenital cardiac anomalies, and target zone angioplasty, when performed (e.g., atrial septum, Fontan fenestration, right ventricular outflow tract, Mustard/Senning/Warden baffles); each additional intracardiac shunt location (List separately in addition to code for primary procedure)*), is the add-on code to the proposed new procedure CPT code 33745, for 60 minutes of physician intraservice time. The RUC recommended a work RVU of 10.50 for CPT code 33746. This value for the add-on code, in comparison to the recommended work value of 20.00 RVUs with 92 minutes/intraservice time and 207 minutes of total time for CPT code 33745, appears to be unsupportable given the 60 minutes of additional physician intraservice time. We proposed a work RVU of 8.00 for add-on CPT code 33746, which is the 25th percentile value from the survey and of similar valuation from reference CPT code 93592 (*Percutaneous*

transcatheter closure of paravalvular leak; each additional occlusion device (List separately in addition to code for primary procedure)).

This family of CPT codes are facility-only services and have no direct PE inputs.

We received public comments on the proposed values for the Atrial Septostomy CPT codes 33741, 33745, 33746. The following is a summary of the comments we received and our responses.

Comment: Commenters were supportive of CMS proposing the work RVUs as recommended by the AMA RUC for CPT code 33741, at 14.00, and for CPT code 33745, at 20.00. Commenters disagreed with CMS proposing 8.00 work RVUs for CPT code 33746, that differs from the AMA RUC recommended value of 10.50.

Commenters did not believe that the work RVU of 8.00 from CPT reference code 93592 (also an add-on code with the same amount of physician time), and from the survey's 25th-percentile work RVU value adequately reflected the resources involved in furnishing the service and suggested instead the survey's 50th-percentile median value of 10.50 RVUs due to the intensity of the work in CPT code 33746, which involves the typical patient who is a small child or infant. The commenters stated that add-on code 33746 is not intended as an extension of an initial stent procedure described by CPT code 33745 and that CPT code 33746 is the placement of a second stent where the work is more intense than the primary procedure, CPT code 33745.

Response: For the new proposed CPT codes 33741 and 33745, the AMA RUC-recommended work RVUs values are considered higher in relationship to the physician times to perform the procedures and they note that this higher relationship is due to these procedures' higher than typical work intensity. The surveyed work RVU for CPT code 33741 at the 25th-percentile was 10.99 but the AMA RUC-recommended value was 14.00, which was lower than the 50th-percentile median value of 17.00 RVUs and about midpoint between these upper and low quartiles. The surveyed work RVU at the 25th-percentile for CPT code 33745 was 20.00 which the AMA RUC recommended.

The surveyed work RVU for add-on code CPT code 33746 at the 25th-percentile was 8.00 but the AMA RUC recommended the work RVU of 10.50 from the 50th-percentile median value, based on rationale similar to the rationale discussed above. For CPT code 33746, on the measure of physician time

alone for 60 minutes we see comparable add-on codes with the identical amounts of physician time, valued at much less than their recommended 10.50 work RVUs, and much less than the CMS' referenced CPT code 93592's 8.00 work RVUs. Seeing that AMA RUC surveyed work RVU at the 25th percentile yielded a value of 8.00 and that our comparator CPT code 93592 is also valued at 8.00 for 60 minutes of physician time, we continue to believe that 8.00 work RVUs is the correct value for CPT code 33746.

After consideration of the comments, we are finalizing the work RVU for CPT code 33741, CPT code 33745, and CPT code 33746, as proposed.

(14) Percutaneous Ventricular Assist Device Insertion (CPT Codes 33995, 33990, 33991, 33992, 33997, and 33993)

In May 2019, the CPT Editorial Panel approved the revision of four codes to clarify the insertion and removal of right and left heart percutaneous ventricular assist devices (PVAD), and the addition of two codes to report insertion of PVAD venous access and removal of right heart PVAD. These codes were surveyed with 000-day global periods and reviewed at the October 2019 RUC meeting.

We proposed the RUC-recommended work RVUs for all six codes in the family. We proposed a work RVU of 6.75 for CPT code 33990 (*Insertion of ventricular assist device, percutaneous, including radiological supervision and interpretation; left heart, arterial access only*), a work RVU of 6.75 for CPT code 33995 (*Insertion of ventricular assist device, percutaneous, including radiological supervision and interpretation; right heart, venous access only*), a work RVU of 8.84 for CPT code 33991 (*Insertion of ventricular assist device, percutaneous, including radiological supervision and interpretation; left heart, both arterial and venous access, with transseptal puncture*), a work RVU of 3.55 for CPT code 33992 (*Removal of percutaneous left heart ventricular assist device, arterial or arterial and venous cannula(s), separate and distinct session from insertion*), a work RVU of 3.00 for CPT code 33997 (*Removal of percutaneous right heart ventricular assist device, venous cannula, separate and distinct session from insertion*), and a work RVU of 3.10 for CPT code 33993 (*Repositioning of percutaneous right or left heart ventricular assist device, with imaging guidance, at separate and distinct session from insertion*).

Stakeholders contacted CMS regarding the valuation of the codes in this family following the arrival of the RUC recommendations. They stated that

the RUC recommendations did not accurately reflect the work time of these procedures, which they stated to be increasing due to the adoption of new technology. The stakeholders requested that CMS propose to maintain the current work RVUs for the codes in this family and to crosswalk the work RVU of the new codes to existing codes.

We disagreed with the stakeholders and proposed the RUC-recommended work RVUs for each code in this family as noted previously. We noted that in this case where the surveyed work times for the existing codes are decreasing and the utilization of CPT code 33990 is increasing significantly (quadrupling in the last 5 years), we have reason to believe that practitioners are becoming more efficient at performing the procedure, which, under the resource-based nature of the RVU system, lends support for proposing the RUC's recommended work RVUs. Although the incorporation of new technology can sometimes make services more complex and difficult to perform, it can also have the opposite effect by making services less reliant on manual skill and technique. We disagreed with the stakeholders that the incorporation of this new technology would necessarily be grounds for maintaining the current work RVU, as improvements in technology are commonplace across many different services and are not specific to this procedure. As detailed earlier, we also have reason to believe that the improved technology has led to greater efficiencies in the procedure which, under the resource-based nature of the RVU system, lends further support for proposing a lower work RVU for the existing CPT codes.

The RUC did not recommend and we did not propose any direct PE inputs for this facility only code family. We proposed a 000-day global period for all six codes as surveyed by the RUC.

We received public comments on the codes in the Percutaneous Ventricular Assist Device Insertion family. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the CMS decision to propose the RUC-recommended work RVUs for each code in the family and recommended that CMS finalize the proposal.

Response: We appreciate the commenters' support for our proposals.

Comment: A commenter stated that the RUC recommendations included in the PFS proposed rule did not accurately reflect the full work associated with percutaneous ventricular assist device (PVAD) procedures. The commenter stated that

the RUC recommendations do not reflect increases in intra-procedure time resulting from the increased usage of SmartAssist technology and that if work value reductions continue over multiple years, it will impede physician adoption of these new technologies, resulting in a negative impact on patient access.

Response: We appreciate the information provided by the commenter and we share in their concerns regarding the need to maintain patient access to these services. However, as we stated in the proposed rule, we have reason to believe that practitioners are becoming more efficient at performing the procedures, which, under the resource-based nature of the RVU system, gives support for proposing the RUC's recommended work RVUs. We disagree with the commenter that the incorporation of this new technology would necessarily be grounds for maintaining the current work RVU, as improvements in technology are commonplace across many different services and are not specific to this procedure. We continue to believe that the RUC-recommended work RVUs are the most accurate valuations for the codes in this family.

After consideration of the public comments, we are finalizing our proposed work RVUs for the codes in the Percutaneous Ventricular Assist Device Insertion family. We did not propose and we are not finalizing any direct PE inputs for this facility only code family.

(15) Esophagogastroduodenoscopy (EGD) With Biopsy (CPT Code 43239)

In the CY 2019 PFS final rule (83 FR 59500), CPT code 43239 (*Esophagogastroduodenoscopy, flexible, transoral; with biopsy, single or multiple*) was publicly nominated for review under the potentially misvalued code initiative. As requested, the specialty societies conducted a survey for the April 2019 RUC meeting. The RUC survey results showed that the current work RVU of 2.39, which is below the survey 25th percentile work RVU of 2.50, accurately reflects the physician work for CPT code 43239.

We proposed to maintain the current work RVU of 2.39 as recommended by the RUC. We proposed the RUC-recommended direct PE inputs for CPT code 43239 without refinement.

We received public comments on Esophagogastroduodenoscopy (EGD) with Biopsy (CPT code 43239). The following is a summary of the comments we received and our responses.

Comment: The commenters all agreed with the CMS proposal to maintain the current work RVU of 2.39 as

recommended by the RUC. The commenters also all agreed with the CMS proposal of the RUC-recommended direct PE inputs with without refinement.

Response: We appreciate the commenters' support for CMS proposing the RUC recommendation for CPT code 43239.

After consideration of the public comments, we are finalizing the RUC-recommended work RVU of 2.39 for CPT code 43239. We are also finalizing the RUC-recommended direct PE inputs for CPT code 43239 without refinement.

(16) Colonoscopy (CPT Code 45385)

In the CY 2019 PFS final rule (83 FR 59500), CPT code 45385 (*Colonoscopy, flexible; with removal of tumor(s), polyp(s), or other lesion(s) by snare technique*) was publicly nominated for review under the potentially misvalued code initiative. As requested, the specialty societies conducted a survey for the April 2019 RUC meeting. The RUC survey results showed that the current work RVU of 4.57, which is slightly above the survey 25th percentile work RVU of 4.50, accurately reflects the physician work for CPT code 45385.

We proposed to maintain the current work RVU of 4.57 as recommended by the RUC. We proposed the RUC-recommended direct PE inputs for CPT code 45385 without refinement.

We received public comments on Colonoscopy (CPT code 45385). The following is a summary of the comments we received and our responses.

Comment: The commenters all agreed with the CMS proposal to maintain the current work RVU of 4.57 as recommended by the RUC. The commenters also all agreed with the CMS proposal of the RUC-recommended direct PE inputs with without refinement.

Response: We appreciate the commenters' support for our proposal to adopt the RUC recommendation for CPT code 45385.

After consideration of the public comments, we are finalizing the RUC-recommended work RVU of 4.57 for CPT code 45385. We are also finalizing the RUC-recommended direct PE inputs for CPT code 45385 without refinement.

(17) Transrectal High Intensity Focused US Prostate Ablation (CPT Codes 55880)

In May 2019, the CPT Editorial Panel established a new code to report ablation of malignant prostate tissue with high intensity focused ultrasound (HIFU), including ultrasound guidance. For CPT code 55880, we did not propose the RUC recommendation to use the survey median work RVU of

20.00 to value this service because we believe total time ratios to the two key reference codes, CPT codes 55840 (*Prostatectomy, retropubic radical, with or without nerve sparing*) and 55873 (*Cryosurgical ablation of the prostate (includes ultrasonic guidance and monitoring)*) indicate that this value is somewhat overstated and does not accurately reflect the physician time, and because an analysis of all 090-global period codes with similar time values indicates that this service is overvalued.

We proposed a work RVU of 17.73 based on a crosswalk to CPT code 69930 (*Cochlear device implantation, with or without mastoidectomy*) which has similar total time and identical intraservice time values and is more consistent with other codes of similar time. We proposed the RUC-recommended PE inputs without refinement.

We received public comments on Transrectal High Intensity Focused US Prostate Ablation (CPT code 55880). The following is a summary of the comments we received and our responses.

Comment: Commenters noted that, for CPT code 55880, the RUC recommended the survey 25th percentile work RVU of 20.00, not the survey median work RVU, as it is misstated in the proposed rule.

Response: We regret the error, and we note that the RUC indeed recommended the survey 25th percentile work RVU.

Comment: In response to this section, the RUC commented that they are increasingly concerned that CMS is eschewing the bedrock principles of valuation within the RBRVS (namely, magnitude estimation, survey data and clinical expertise) in favor of arbitrary mathematical formulas and, in their opinion, making distinctions in the different types of physician time, which are "CMS/Other" time source, "Harvard" time source, and "RUC" time source (from physician surveys). The RUC suggested CMS use valid survey data and review the actual relativity for all elements (physician work, time, intensity and complexity) when developing work values for services and not foster flawed methodologies.

Response: As we have discussed in previous rules, we agree that it is important to use the most recent data available regarding time, and we note that when many years have passed between when physician times are measured, significant discrepancies can occur. However, we also continue to believe that our operating assumption regarding the validity of the existing time values as a point of comparison is critical to the integrity of the current relative value system. The physician times and intensities currently

associated with codes play important roles in PFS ratesetting in their comparativeness to each other, in establishing work RVUs. The PFS is grounded in and reliant on the original relativity of the RBRVS, and then as services, codes and values evolve over the years, the PFS statute contemplates maintaining and building on that base-level of relativity. If we were to question the assumption that previously recommended work times had routinely been over- or underestimated, this would undermine the basis for relativity of the work RVUs on the PFS. Given that the process under which codes are often valued by comparison to codes with similar times, we acknowledge the distinction between “CMS/Other” times, “Harvard” times, and “RUC” physician surveyed times, but we do not believe we can apply different validation weights to any of these sources of time values while remaining consistent with our obligation to consider time and intensity as these are currently reflected in the fee schedule. They are all physician time data collected over many years. We understand that some time values may not have been reviewed or re-surveyed in a number of years, but that alone is not an indicator of the current relative accuracy of a time value.

We believe that, over the years as more codes are being reviewed and examined, the entire collective fee schedule of procedure codes should align in a very reliable and accurate relative value system reflecting each code's relativity with respect to other codes (in their work RVUs, in their procedure times, and in their work intensities). We recognize that adjusting work RVUs for changes in physician times is not always a straightforward process and that the intensity associated with changes in time is not necessarily always linear, which is why we always try to apply various methodologies to identify several potential work values for individual codes before deciding on the one we find most appropriate. Our review of code values under the PFS not only examines the relationships between work, time, and intensity, but we also look at magnitude and rank order anomalies, particularly in families or groups of codes that are closely related but may differ slightly in degrees found in their clinical descriptions and possibly in the typical beneficiary populations that each code might serve. Among these codes, we try to maintain the accurate relative relationships in terms of time, work, and intensity measurements. In some cases, where there are marked improvements in

medical techniques and technologies, we may find efficiencies in physician's work for certain services that warrant decreases in physician's times, but we also recognize that some improvements may introduce greater complexity and either an increase in intensity and/or in physician times. We reiterate that we believe it would be irresponsible to ignore or discount “CMS/Other” times or “Harvard” times in our data system, and that we need to consider all times and all intensities and all clinically relevant relatedness (or non-relatedness) of procedure codes to each other in establishing more refined work RVUs for PFS services. Also note that physician times considered to be “RUC” physician times as they are listed in the RUC database are not always necessarily AMA RUC surveyed times. We may have adjusted AMA RUC surveyed times in our annual review of all HCPCS codes; and the same can be said of times that the AMA labels as “Harvard” or “CMS/Other” physician times.

Comment: Many commenters stated that the proposed work RVU was too low to adequately reflect the work, skill and complexity required for this procedure. Commenters were concerned about patient access, stating that a significant number of Medicare beneficiaries with prostate cancer will not have access to this procedure. Commenters encouraged CMS to finalize the RUC-recommended work RVU of 20.00. Commenters stated that CMS did not provide any supporting rationale or clinical information for the proposed work RVU of 17.73 other than debating survey times, primarily the total time ratios between a service that is not currently covered to the two key reference codes, then justifying our proposed work RVU with a crosswalk to CPT code 69930. Commenters stated that this crosswalk is flawed in that it was surveyed 12 years ago, and it is clinically a very different procedure. A commenter suggested CPT code 42420 (*Excision of the parotid tumor or parotid gland*) with a work RVU of 19.53 as a more appropriate crosswalk as it is a more intense procedure than our proposed crosswalk CPT code 69930.

Response: Our proposed work RVU of 17.73 is not solely derived from time ratios. Our analysis included comparisons to other codes of similar time values as well as to codes with similar numbers of the total number of post-op visits, as well as a consideration of the RUC-recommended key reference services. These factors all indicated a work RVU lower than the recommended 20.00. Comparison of relative intensity values further indicates this RVU is

somewhat overvalued. Our proposed value of 17.73 produces an intensity value of 0.066, which is very similar to the intensity value for our crosswalk CPT code 69930, which is 0.067. We disagree that the patient populations of these two codes are too different; the description and vignettes of CPT code 69930 do not indicate that this is primarily a pediatric procedure. Further, we reiterate that, although codes that describe clinically similar services are sometimes stronger comparator codes, we do not agree that codes must share the same site of service, patient population, or utilization level to serve as an appropriate crosswalk. We continue to believe the time values and relative intensity of this procedure indicate that a work RVU of 17.73 is a more accurate valuation, and we are finalizing this work RVU as proposed.

After consideration of the public comments, we are finalizing as proposed a work RVU of 17.73, as well as the RUC-recommended direct PE inputs without refinement.

(18) Computer-Aided Mapping of Cervix Uteri (CPT Code 57465)

In September 2019, the addition of CPT code 57465 (*Computer-aided mapping of cervix uteri during colposcopy, including optical dynamic spectral imaging and algorithmic quantification of the acetowhitening effect (List separately in addition to code for primary procedure)*) was approved by the CPT Editorial Panel to report computer-aided mapping of cervix uteri during colposcopy. The RUC recommended the survey median work RVU of 0.81 for this service.

We proposed the RUC-recommended value of 0.81 for CPT code 57465. We also proposed the RUC-recommended direct PE inputs for this code.

We solicited comment on a new medical supply indicated on the PE spreadsheet submitted by the RUC. A “computer aided spectral imaging system (colposcopy) disposal speculum” was noted in the RUC PE meeting materials. This name suggests it is digital. However, on the actual invoice submitted, the supply item in question was listed as a “disposable medium speculum” with no mention of a spectral imaging system or a digital component. We researched this speculum and could not find any evidence that it has a digital component. Therefore, we proposed to change the name of this new supply item to “disposable speculum, medium” (SD337) to reflect the actual product on the invoice submitted. We sought clarification as to what aspect of the

speculum is digital or if a cheaper, non-digital speculum would suffice. We noted for example that the vaginal specula (SD118) supply has a CY 2021 price of \$1.12 and we were able to find disposable medium specula readily available online for a price of roughly \$1.00. We proposed the new SD337 supply at the \$5.80 price as listed on the invoice submitted in the RUC materials and sought comment as to why other disposable speculums at a lower price would not be typical for this procedure.

We received public comments on the Computer-Aided Mapping of Cervix Uteri code family (CPT code 57465). The following is a summary of the comments we received and our responses.

Comment: Commenters were overall in support and appreciated CMS proposing the RUC-recommended work RVU and the direct PE inputs for code 57465. We also received comments with additional information on the SD337 supply item in question. Commenters stated that in order for the map to be successfully generated, there are stringent technical requirements of the vaginal speculum that require it to be attached to the optical head of the system. Commenters stated that the specula are therefore custom designed to meet performance standards, and are an integral part of the imaging system. One commenter noted that the speculum referenced is typical. The coating on the plastic that enhances the image is necessary, and without its light reflection on plastic interferes with the image processing.

Response: We appreciate the additional information provided from commenters and the commenters' agreement with the proposed name change and that the item referenced is typical for the service noted.

After consideration of the public comments, we are finalizing the RUC-recommended work RVU of 0.81 for CPT code 57465. We are also finalizing the proposed RUC-recommended direct PE inputs for this code. We are finalizing the new SD337 supply at the \$5.80 price as listed on the invoice submitted in the RUC materials based on the public comments submitted. To clarify the nature of the supply, we are renaming SD337 to "digital imaging speculum" to reflect what the commenters stated would be more accurate.

(19) Colpopexy (CPT Codes 57282 and 57283)

The CPT codes 57282 (*Colpopexy, vaginal; extra-peritoneal approach (sacrospinous, iliococcygeus)*) and 57283 (*Colpopexy, vaginal; intra-*

peritoneal approach (uterosacral, levator myorrhaphy)) were identified by the RUC Relativity Assessment Workgroup as services performed less than 50 percent of the time in the inpatient setting yet include inpatient hospital E/M services within the global period and the 2018 Medicare utilization is over 5,000. This code family was surveyed and reviewed for the January 2020 RUC meeting. For CY 2021, the RUC recommended a work RVU of 13.48 for CPT code 57282, and a work RVU of 13.51 for CPT code 57283.

We disagreed with the RUC-recommended work RVUs for the CPT code family of 57282 and 57283. We proposed a work RVU of 11.63 for CPT code 57282, and also proposed to maintain the current work RVU of 11.66 for CPT code 57283. For CPT code 57283, we based our disagreement on the total time ratio between the current time of 349 minutes and the recommended time established by the survey of 231 minutes. This ratio equals 66 percent, and 66 percent of the current work RVU of 11.66 for CPT code 57283 equals a work RVU of 7.70. When we reviewed CPT code 57283, we found that the recommended work RVU was higher than other codes with similar time values. This is supported by the reference CPT codes we compared to CPT code 57283 with 90 minutes of intraservice time; reference CPT code 19350 (*Nipple/areola reconstruction*) has a work RVU of 9.11 with 229 minutes of total time, and reference CPT code 47563 (*Laparoscopy, surgical; cholecystectomy with cholangiography*) which has a work RVU of 11.47 with 238 minutes of total time. Although we did not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we noted that we believe that since the two components of work are time and intensity, significant decreases in time should be reflected in decreases to work RVUs. The recommendation from the RUC acknowledged that the time had decreased for CPT code 57283, and also noted that there has been an increase in intensity due to a change in technique and knowledge necessary to perform the service. In the case of CPT code 57283, we noted that we believe it would be more accurate to propose maintaining the current work RVU of 11.66 instead of the RUC-recommended work RVU of 13.51 to account for these decreases in the surveyed work time while still accounting for the increase in intensity. We also noted that the intensity of CPT code 57283 would nearly double by

maintaining the proposed work RVU of 11.66, due to the significant decreases in surveyed work time, which we believe supported the RUC's contention that the intensity of this code has increased over time.

For CPT code 57282, we disagreed with the RUC-recommended RVU of 13.48. We noted that the significant decrease in total time for code 57282 suggests an RVU lower than 13.48. Although we disagreed with the RUC-recommended work RVU, we concurred that the relative difference in work between CPT codes 57282 and 57283 is equivalent to the RUC-recommended interval of 0.03 RVUs. We noted that we believe the use of an incremental difference between these CPT codes is a valid methodology for setting values, especially in valuing services within a family of revised codes where it is important to maintain appropriate intra-family relativity. Therefore, we proposed a work RVU of 11.63 for CPT code 57282, based on the RUC-recommended interval of 0.03 RVUs below our proposed work RVU of 11.66 for CPT code 57283.

We proposed the RUC-recommended direct PE inputs for the CPT code family of 57282 and 57283 without refinement.

We received public comments on the Colpopexy code family (CPT codes 57282 and 57283). The following is a summary of the comments we received and our responses.

Comment: The commenters disagreed with our proposal to value CPT code 57282 using an incremental methodology, and stated that the proposal inaccurately treats all components of the physician time as having identical intensity. The commenters would prefer that CMS finalize the RUC-recommended value rather than values derived by increments. Moreover, commenters stated that CMS proposed the RUC work RVU increment (0.03) between CPT codes 57282 and 57283 for this code family, yet disagreed with the RUC-recommended work RVU.

Response: We believe the use of an incremental difference between codes is a valid methodology for setting values, especially in valuing services within a family of revised codes where it is important to maintain appropriate intra-family relativity. Historically, we have frequently utilized an incremental methodology in which we value a code based upon its incremental difference between another code or another family of codes. We noted that the RUC has also used the same incremental methodology on occasion when it was unable to produce valid survey data for a service.

Comment: Commenters stated that the RUC recommendation for CPT code 57282 was based on robust survey results and requested that CMS adopt the RUC-recommended work values. The commenters stated that the current work value and time for CPT code 57282 were derived from the Harvard studies, and therefore, are not resource based. Commenters stated that they could not support comparing the original Harvard value of this service, which is over 25 years old and whose source is unknown, to time and work derived from a recent survey. Commenters stated that CPT code 57282 has never been surveyed by the RUC and the IWPUR for the current times and work RVU (0.014) are inappropriately low for this intense major surgical procedure, not that much higher than the intensity for pre-service scrub/dress/wait time, which strongly implies the current total times are inflated relative to the current work RVU and not valid for comparison to the new times. Commenters stated that the increased intra-service time can be attributed to the support sutures being placed at multiple points of attachment, which was not done in the past. Commenters stated that the largest difference in the total time comes from the hospital visit time assigned by Harvard in 1992.

Response: We agree that it is important to use the recent data available regarding time, and we acknowledge that when many years have passed between when work time is measured, significant discrepancies can occur. However, we also believe that our operating assumption regarding the validity of the existing values as a point of comparison is critical to the integrity of the relative value system as currently constructed. The times currently associated with codes play a very important element in PFS ratesetting, both as points of comparison in establishing work RVUs and in the allocation of indirect PE RVUs by specialty. If we were to operate under the assumption that previously recommended work times had routinely been underestimated or overestimated, this would undermine the relativity of the work RVUs on the PFS in general, given the process under which codes are often valued by comparisons to codes with similar times and it undermines the validity of the allocation of indirect PE RVUs to physician specialties across the PFS.

Instead, we believe that it is crucial that the code valuation process take place with the understanding that the existing work times, used in the PFS ratesetting processes, are accurate. We

recognize that adjusting work RVUs for changes in time is not always a straightforward process and that the intensity associated with changes in time is not necessarily always linear, which is why we apply various methodologies to identify several potential work values for individual codes. However, we want to reiterate that we believe it would be irresponsible to ignore changes in time based on the best data available and that we are statutorily obligated to consider both time and intensity in establishing work RVUs for PFS services. For additional information regarding the use of old work time values in our methodology, we refer readers to our discussion of the subject in the CY 2017 PFS final rule (81 FR 80273 through 80274).

Comment: We received several comments regarding the decrease in total times for CPT codes 57282 and 57283. For CPT code 57282, a few commenters stated that the largest difference in the total time comes from the hospital visit time assigned by Harvard in 1992, which makes CMS' rationale to recommend a lower work RVU based on the "significant decrease in total time" completely flawed and unjustified. For CPT code 57283, the commenters disagreed that the decreased total time should result in a lower work RVU than the RUC recommendation, and stated that although the current times for CPT code 57283 have decreased according to the RUC survey data, the overall intensity and complexity has increased significantly.

Response: For CPT codes 57282 and 57283, we disagree with the commenters and continue to believe that the use of time ratios is one of several appropriate methods for identifying potential work RVUs for particular PFS services, particularly when the alternative values recommended by the RUC and other commenters do not account for information provided by surveys that suggests the amount of time involved in furnishing the service has changed significantly. We reiterate that, consistent with the statute, we are required to value the work RVU based on the relative resources involved in furnishing the service, which include time and intensity. When our review of recommended values reveals that changes in the resource of time have been unaccounted for in a recommended RVU, then we believe we have the obligation to account for that change in establishing work RVUs since the statute explicitly identifies time as one of the two elements of the work

RVUs. We recognize that it would not be appropriate to develop work RVUs solely based on time given that intensity is also an element of work, but in applying the time ratios, we are using derived intensity measures based on current work RVUs for individual procedures. Were we to disregard intensity altogether, the work RVUs for all services will be developed based solely on time values and that is definitively not the case, as indicated by the many services that share the same time values but have different work RVUs. Furthermore, we reiterate that we use time ratios to identify potentially appropriate work RVUs, and then use other methods (including estimates of work from CMS medical personnel and crosswalks to key reference or similar codes) to validate these RVUs. For more details on our methodology for developing work RVUs, we direct readers to the discussion CY 2017 PFS final rule (81 FR 80272 through 80277).

Comment: Some comments stated that the proposed rule did not discuss the RUC's compelling evidence rationale for why CPT codes 57282 and 57283 are presently undervalued, suggesting that CMS missed considering this rationale. Commenters stated that there has been a change in the physician work necessary to perform these services based on a change in technique and knowledge of the problem. Commenters stated that there has been a change in technology due to functional MRI studies which have increased what is known about pelvic organ prolapse and what structures are important to successful repair. Some commenters went on to describe the extent of dissection required and the change in technique which is now standardized when performing CPT codes 57282 and 57283.

Response: We agree with the commenters that due to changes in technology for CPT codes 57282 and 57283 we had reason to believe that practitioners are becoming more efficient at performing these procedures. While the incorporation of new technology can sometimes make services more complex and difficult to perform, it can also have the opposite effect by making services less reliant on manual skill and technique. We do not agree with the commenters that a change in the work pattern, and more dissections and greater use of sutures, would necessarily be grounds for increasing the work RVUs as recommended by the RUC, as improvements in technology are commonplace across many different services and are not specific to these procedures. We also have reason to

believe that the improved technology has led to greater efficiencies in these procedures which, under the resource-based nature of the RVU system, lends further support for the proposed work RVU of 11.63 for CPT code 57282 and 11.66 for CPT code 57283. Also, compelling evidence is not part of our statutory guidelines which require that the valuation of codes should be based on time and intensity. We do consider changes in technology, patient population, etc. insofar as they affect the time and intensity of the service under review. However, we do not specifically address the RUC's compelling evidence criteria in our rulemaking since it is outside the purview of the code valuation process stipulated by statute.

Comment: Several commenters stated that CMS is incorrect in proposing a work RVU of 11.66 for CPT code 57283 based on referencing codes 19350 and 47563. CPT code 19350, involves an incision made externally on the breast to dissect a small amount of tissue at the site where the nipple will be made. The surgical site is external to the body without proximate anatomical structures that would be affected by a subcutaneous incision. Also, CPT code 19350 can be performed under local anesthesia and is performed in the office setting 19 percent of the time. CPT code 47563 does not include the amount of dissection and tissue reattachment that CPT code 57283 does, and the radiographic work included in CPT code 47563 is not comparable to the intensity or risk of CPT code 57283.

Response: We continue to believe that the nature of the PFS relative value system is such that all services are appropriately subject to comparisons to one another. Although codes that describe clinically similar services are sometimes stronger comparator codes, we do not agree that codes must share the same site of service, patient population, or utilization level to serve as an appropriate code comparison or an appropriate crosswalk.

Comment: Commenters appreciated that CMS proposed to accept the RUC-recommended direct PE inputs for CPT codes 57282 and 57283.

Response: We appreciated the commenters for their support.

After consideration of the public comments, we are finalizing the proposed work RVU of 11.63 for CPT code 57282 and the work RVU of 11.66 for CPT code 57283. We are also finalizing the RUC-recommended direct PE inputs for the codes in the Colpopexy family of codes (CPT codes 57282 and 57283) without refinement.

(20) Laparoscopic Colpopexy (CPT code 57425)

The CPT code 57425 (*Laparoscopy, surgical, colpopexy (suspension of vaginal apex)*) was identified by the RUC Relativity Assessment Workgroup as a service performed less than 50 percent of the time in the inpatient setting yet includes inpatient hospital E/M services within the global period and the 2018 Medicare utilization is over 5,000. This service was surveyed and reviewed for the January 2020 RUC meeting.

We disagreed with the RUC-recommended work RVU of 18.02 for CPT code 57425 and proposed to maintain the current RVU of 17.03 based on the total time ratio between the current time of 404 minutes and the recommended time established by the survey of 351 minutes. This was supported by the reference CPT codes we compared to CPT code 57425 with the same intraservice time; reference CPT code 26587 (*Reconstruction of polydactylous digit, soft tissue and bone*) which has a work RVU of 14.50, and reference CPT code 20696 (*Application of multiplane (pins or wires in more than 1 plane), unilateral, external fixation with stereotactic computer-assisted adjustment (e.g., spatial frame), including imaging; initial and subsequent alignment(s), assessment(s), and computation(s) of adjustment schedule(s)*) which has a work RVU of 17.56. Both CPT codes 26587 and 20696 have 180 minutes of intraservice time, which is equal to the 180 minutes of intraservice time in the RUC recommendation for CPT code 57425, and over 400 minutes of total time. The total time for CPT code 57425 decreased from 404 to 351 minutes and the RUC did not appear to take this into account. Therefore, we proposed to maintain the current work RVU of 17.03.

We proposed the RUC-recommended direct PE inputs for CPT code 57425 without refinement.

We received public comments on the Laparoscopic Colpopexy code family (CPT code 57425). The following is a summary of the comments we received and our responses.

Comment: The commenters disagreed that a decrease in total time for CPT code 57425 should result in a lower work RVU than the RUC recommendation since the intraservice time required to perform CPT code 57425 increased significantly. The commenters also stated that using a total time ratio approach in lieu of the RUC survey data for CPT code 57425 is erroneous.

Response: For CPT code 57425, we disagree with the commenters and continue to believe that the use of time

ratios is one of several appropriate methods for identifying potential work RVUs for particular PFS services, particularly when the alternative values recommended by the RUC and other commenters do not account for information provided by surveys that suggests the amount of time involved in furnishing the service has changed significantly. We reiterate that, consistent with the statute, we are required to value the work RVU based on the relative resources involved in furnishing the service, which include time and intensity. When our review of recommended values reveals that changes in the resource of time have been unaccounted for in a recommended RVU, then we believe it is appropriate to account for that change in establishing work RVUs since the statute explicitly identifies time as one of the two elements of the work RVUs. We recognize that it would not be appropriate to develop work RVUs solely based on time given that intensity is also an element of work, but in applying the time ratios, we are using derived intensity measures based on current work RVUs for individual procedures. Were we to disregard intensity altogether, the work RVUs for all services would be developed based solely on time values and that is definitively not the case, as indicated by the many services that share the same time values but have different work RVUs. Furthermore, we reiterate that we use time ratios to identify potentially appropriate work RVUs, and then use other methods (including estimates of work from CMS medical personnel and crosswalks to key reference or similar codes) to validate these RVUs. For more details on our methodology for developing work RVUs, we direct readers to the discussion CY 2017 PFS final rule (81 FR 80272 through 80277).

Comment: Commenters stated that CMS did not discuss the RUC's compelling evidence rationale in the proposed rule text for why CPT code 57425 is presently undervalued, and suggested CMS missed considering this rationale. The commenters further stated that the surgical techniques and technology for CPT code 57425 have changed drastically. Specifically, commenters stated that the technique has been refined and is now much more standardized than when CPT code 57425 was last surveyed in 2003. This decreased the complication rate and has changed the physician work. In addition, commenters stated that there is a change in technology due to functional MRI studies which have increased what is known about pelvic

organ prolapse and what is important for a successful repair. Some commenters stated that the dissection is difficult and requires more time, as shown in the RUC survey, for CPT code 57425.

Response: We agree with the commenters that due to a change in technology for CPT code 57425 we had reason to believe that practitioners are becoming more efficient at performing the procedure. While the incorporation of new technology can sometimes make services more complex and difficult to perform, it can also have the opposite effect by making services less reliant on manual skill and technique. We do not agree with the commenters that a change in the work practice and new technology would necessarily be grounds for increasing the work RVU to 18.02 as recommended by the RUC, as improvements in technology are commonplace across many different services and are not specific to this procedure. We also have reason to believe that the improved technology has led to greater efficiencies in the procedure which, under the resource-based nature of the RVU system, lends further support for maintaining the current work RVU value of 17.03 for CPT code 57425 as proposed. Also, compelling evidence is not part of our statutory guidelines which require that the valuation of codes should be based on time and intensity. We do consider changes in technology, patient population, etc., insofar as they affect the time and intensity of the service under review. However, we do not specifically address the RUC's compelling evidence criteria in our rulemaking since it is outside the purview of the code valuation process stipulated by statute.

Comment: Some commenters stated that CMS is incorrect in proposing the current work RVU of 17.03 for CPT code 57425 when referencing CPT codes 26587 and 20696 because both procedures are performed on an external part of the body. Commenters went on to describe how the difficulty performing CPT codes 26587 and 20696 is not as great as performing CPT code 57425. For CPT code 26587, the physician is removing an external amount of tissue that includes bone and could be considered a sixth toe or finger, and has little risk to other organs or permanent disability. Commenters stated that there are not any close major blood vessels or an entire nerve plexus that must be avoided with CPT code 26587, while CPT code 57425 involves the placement of a synthetic mesh which must be performed properly to avoid erosion into a viscus, causing

permanent long-term harm and multiple follow up surgeries. In addition, commenters stated that CPT code 26587 is a low volume Medicare procedure and was last reviewed by the RUC in 2001. CPT code 20696 is fixating an external metal frame onto someone's leg, which involves less risk and more space and visualization to perform than CPT code 57425.

Response: We continue to believe that the nature of the PFS relative value system is such that all services are appropriately subject to comparisons to one another. Although codes that describe clinically similar services are sometimes stronger comparator codes, we do not agree that codes must share the same site of service, patient population, or utilization level to serve as an appropriate code comparison or an appropriate crosswalk. We looked to CPT codes 26587 and 20696 as reference codes for comparison to CPT code 57425 based on their total time ratios. Few other supporting codes with similar intraservice time and total time were found. The current work RVU of 17.03 is closer to the higher end of the RVUs within this reference code bracket that uses 26587 on the low end, and 20696 on the high end.

Comment: Commenters supported the CMS proposal of the RUC-recommended direct PE inputs for CPT code 57425.

Response: We thank the commenters for their support.

After consideration of the public comments, we are finalizing maintaining the current work RVU of 17.03 as proposed for CPT code 57425. We are also finalizing the RUC-recommended direct PE inputs for the codes in the Laparoscopic Colpopexy family of codes (CPT code 57425) without refinement.

(21) Intravitreal Injection (CPT Code 67028)

CPT code 67028 (*Intravitreal injection of a pharmacologic agent*) was identified via the RUC's Relativity Assessment Workgroup as a code where the original valuation was based on a crosswalk code that had since been revalued. The RUC recommended that CPT code 67028 should be surveyed for the April 2019 RUC meeting. We proposed the RUC-recommended work RVU of 1.44 for CPT code 67028.

For the direct PE inputs, we proposed to refine the clinical labor time for the "Clean room/equipment by clinical staff" (CA024) activity from the RUC-recommended 5 minutes to 3 minutes for CPT code 67028, because 3 minutes is the standard time for this clinical labor activity code, and we disagree that there would typically be a need for 2

additional minutes for cleaning, sterilizing, and re-packaging a reusable eyelid speculum in a sterile package to prepare for its next case. Additionally, 3 minutes is the standard time for cleaning the room *and* cleaning the equipment; although we agreed that these cleaning tasks would take place, we do not believe that the removal of the same day E/M visit would result in the need for 2 additional minutes of cleaning time. We noted that we are proposed to maintain the current time for this clinical labor activity, which was previously finalized in the CY 2011 PFS final rule at the standard value of 3 minutes (75 FR 73353). We also proposed to refine the equipment times to match the change in clinical labor time.

We received public comments on CPT code 67028. The following is a summary of the comments we received and our responses.

Comment: A commenter stated that they agreed with the CMS proposal of the RUC-recommended work RVU of 1.44. However, the commenter disagreed with the proposal to refine the clinical labor time for the "Clean room/equipment by clinical staff" (CA024) activity from the RUC-recommended 5 minutes to 3 minutes. The commenter stated that the 5 minutes listed for time to clean the room/equipment was not increased because of the absence of a same day E/M visit; rather, it was increased to appropriately reflect the current time it takes to clean/disinfect the room and equipment. The commenter stated that the eyelid speculum is soaked in an antiseptic solution for a fixed period of time, then scrubbed, repackaged, and sterilized in an autoclave, and that an infection from an unsterile piece of equipment for this intraocular procedure can directly lead to endophthalmitis which is permanently blinding. The commenter also stated that they disagreed with the CMS refinement of the equipment time for the vaccine refrigerator (ED043) equipment since the medication must be logged into an inventory tracking system and it is now typical for each physician to hire a private temperature monitoring service that requires a recurring fee.

Response: We disagree with the commenter regarding the refinements to the direct PE inputs for CPT code 67028. As we stated in the proposed rule, 3 minutes is the standard time for cleaning the room as well as cleaning the equipment, not one or the other. Although we appreciate the additional information stating that this cleaning time is not associated with an E/M visit, we do not agree that 2 minutes of additional clinical time would be

typical for this procedure, especially given that CPT code 67028 currently allocates the standard 3 minutes of clinical labor time for cleaning activities. For the vaccine refrigerator (ED043) equipment, the refinement to the equipment time was made to conform to the refinement in clinical labor time associated with cleaning the room. We also note that any fees associated with a monitoring service for the refrigerator's temperature would be an indirect cost akin to office rent and therefore would not be included in the direct PE inputs.

After consideration of the public comments, we are finalizing our proposed work RVU of 1.44 and our proposed direct PE inputs for CPT code 67028.

(22) Dilation of Eustachian Tube (CPT Codes 69705 and 69706)

In September 2019, the CPT Editorial Panel created two new codes, CPT code 69705 (*Nasopharyngoscopy, surgical, with dilation of eustachian tube (i.e., balloon dilation); unilateral*) and CPT code 69706 (*Nasopharyngoscopy, surgical, with dilation of eustachian tube (i.e., balloon dilation); bilateral*) to describe the dilation of the eustachian tube via surgical nasopharyngoscopy, unilateral and bilateral. We proposed the RUC-recommended work RVUs of 3.00 and 4.27 for CPT codes 69705 and 69706, respectively. For the direct PE inputs, we proposed the RUC-recommended values without refinement.

We received public comments on the Dilation of Eustachian Tube (CPT codes 69705 and 69706). The following is a summary of the comments we received and our responses.

Comment: Several commenters stated their support for CMS proposing the RUC-recommended values without refinement.

Response: We thank commenters for their feedback and support.

After consideration of the public comments, we are finalizing the work RVUs and direct PE inputs for the codes in the Dilation of Eustachian Tube family as proposed.

(23) X-Ray of Eye (CPT Code 70030)

CPT code 70030 (*Radiologic examination, eye, for detection of foreign body*) was identified through an updated screen of CMS/Other source codes with Medicare utilization over 20,000. We proposed the RUC-recommended work RVU of 0.18 for this service. We proposed the RUC-recommended direct PE inputs without refinement.

We received public comments on the X-Ray of Eye family (CPT code 70030). The following is a summary of the comments we received and our responses.

Comment: A commenter appreciated CMS' acceptance of the RUC recommendation for this code.

Response: We appreciate the support for our proposals.

After consideration of the public comments, we are finalizing the proposed work RVU of 0.18 as well as the proposed direct PE inputs for CPT code 70030.

(24) CT Head-Brain (CPT Codes 70450, 70460, and 70470)

In the CY 2019 PFS final rule (83 FR 59500 through 59503), a stakeholder nominated CPT code 70450 (*Computed tomography, head or brain; without contrast material*) as potentially misvalued, citing GAO and MedPAC reports that suggest that work RVUs are overstated for procedures such as these, and the specialty society surveyed family codes 70460 (*Computed tomography, head or brain; with contrast material(s)*) and 70470 (*Computed tomography, head or brain; without contrast material, followed by contrast material(s) and further sections*). We proposed the RUC recommendation to maintain the current work RVUs of 0.85, 1.13, and 1.27 for CPT codes 70450, 70460, and 70470, respectively. For CPT code 70450, we note that the surveyed times are nearly identical to the current times for these services, and we believe that the RUC's reference to CPT code 70486 (*Computed tomography, maxillofacial area; without contrast material*), which has similar physician time and the same work RVU, is appropriate. For CPT code 70460, we noted that the surveyed times are nearly identical to the current times for these services, and we believe that the RUC's reference to CPT code 70487 (*Computed tomography, maxillofacial area; with contrast material(s)*), which has similar physician time and the same work RVU is appropriate. Similarly, for CPT code 70470, we noted that the surveyed times are nearly identical to the current times for these services, and we believe that the RUC's reference to CPT code 70488 (*Computed tomography, maxillofacial area; without contrast material, followed by contrast material(s) and further sections*), which has similar physician time and the same work RVU, is appropriate. We also noted that these codes are relatively consistently valued compared to other codes with similar time values and a global period of XXX. We proposed the RUC-recommended direct PE inputs without refinement.

We received public comments on the CT Head-Brain (CPT codes 70450, 70460, and 70470). The following is a summary of the comments we received and our responses.

Comment: Commenters supported our proposal to adopt the RUC-recommended work RVUs and PE inputs.

Response: We appreciate the support for our proposals from the commenters.

After consideration of the public comments, we are finalizing as proposed work RVUs of 0.85, 1.13, and 1.27 for CPT codes 70450, 70460, and 70470 respectively.

(25) Screening CT of Thorax (CPT Codes 71250, 71260, 71270, and 71271)

In October 2018, AMA staff identified the CMS/Other Source codes with 2017 Medicare utilization over 30,000.

HCPCS code G0297 (*Low dose ct scan (ldct) for lung cancer screening*) was identified. In January 2019, the RUC recommended to refer to CPT Editorial Panel to establish a permanent code for this procedure. In May 2019, the CPT Editorial Panel revised three codes and added one code to distinguish diagnostic computed tomography, thorax from computed tomography, thorax, low dose for lung cancer screening.

For CPT code 71250 (*Computed tomography, thorax; without contrast material*), we did not propose the RUC recommendation to maintain the current work RVU of 1.16 as we believe this does not accurately reflect the reduction in physician work time, and because an analysis of all XXX-global period codes with similar time values indicates that this service is overvalued. Instead, we recommended proposing a work RVU of 1.08 based on the ratio of current to RUC-recommended intraservice time. As support for this value, we note that it falls slightly below CPT code 76391 (*Magnetic resonance (e.g., vibration) elastography*), which has a work RVU of 1.10 and also has higher physician time values.

Similarly, for CPT code 71260 (*Computed tomography, thorax; with contrast material(s)*), we did not propose the RUC recommendation to maintain the current work RVU of 1.24 as we believe this does not accurately reflect the reduction in physician time, and proposed a work RVU of 1.16 based the ratio of current to RUC-recommended intraservice time. Although we disagreed with the RUC-recommended work RVU, we concurred that the relative difference between CPT codes 71250 and 71260 is equivalent to the RUC-recommended interval of 0.08 RVUs. As stated previously, we noted

that we believe the use of an incremental difference between these CPT codes is a valid methodology for setting values, especially in valuing services within a family of revised codes where it is important to maintain appropriate intra-family relativity. We noted that the proposed work RVU of 1.16 maintains the RUC-recommended interval of 0.08 additional RVUs above our proposed work RVU of 1.08 for CPT code 71250.

For CPT code 71270 (*Computed tomography, thorax; without contrast material, followed by contrast material(s) and further sections*), we did not propose the RUC recommendation to maintain the current work RVU of 1.38 as we believed this does not accurately reflect the reduction in physician time, and instead, we proposed a work RVU of 1.25 with a crosswalk to CPT code 93284 (*Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; multiple lead transvenous implantable defibrillator system*) and we supported this value by noting that it is slightly higher than values suggested by the ratio of current to RUC-recommended intraservice time. For CPT code 71271 (*Computed tomography, thorax, low dose for lung cancer screening, without contrast material(s)*), we did not propose the RUC-recommended work RVU of 1.16, but proposed a work RVU of 1.08 so that the value of this code is consistent with that of CPT code 71250 as current code G0297 is valued based on the value of CPT code 71250, and to maintain the relative relationship among these codes. In the CY 2016 PFS final rule (80 FR 70974) we finalized that CPT code G0297 should be identically valued to CPT code 71250.

We proposed the RUC-recommended direct PE inputs without refinement for CPT codes 71250, 71260, and 71270. For the direct PE inputs for CPT code 71271, we proposed 2 minutes for the clinical labor activity CA011: "Provide education/obtain consent" rather than the RUC-recommended 3 minutes to be consistent with other non-contrast screening codes, and we proposed 4 minutes for the clinical labor activity CA038 "Coordinate post-procedure services" rather than the RUC-recommended 6 minutes to be consistent with other screening services, and because we did not see any compelling evidence that this service has changed significantly since G0297

was implemented for CY 2015 to warrant the recommended 2 additional minutes.

We received public comments on the codes in the Screening CT of Thorax family. The following is a summary of the comments we received and our responses.

Comment: A commenter disagreed with the use of intraservice time ratios to account for changes in time, arguing that it negates CMS' longstanding position that we do not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs.

A commenter attributed the decreases in intra-service times for CPT codes 71250 and 71270 to survey variation. The commenter stated that reductions in pre and post-service time values do not necessarily justify a reduction in physician work value as intraservice work has a higher intensity than pre-service and post-service work. Additionally, the commenter stated that at these lower ends of time in the RBRVS, it is unreliable to draw conclusions based on single minute increments, which may simply be a result of rounding to whole integers.

Response: While we agree that the surveyed intraservice times are not substantially lower than they are currently, we disagree that the differences in total time values are negligible or that they should not be accounted for in work RVU. In addition, we note that we considered the RUC-recommended values based on the relationship between work RVU and time as well as through comparisons to other CPT codes of similar time values. We continue to believe that in light of this analysis, the RUC-recommended values are overestimations.

Comment: For CPT code 71250, a commenter disagreed with the use of a comparison to a magnetic resonance (MR) code with higher physician times, CPT code 76391 (*Magnetic resonance (e.g., vibration) elastography*). The commenter stated that this is a suboptimal comparison as CPT code 76391 involves work predominantly focused on a single organ (the liver) with, in general, a single pathology (fibrosis). In contrast, the commenter stated that CPT code 71250 requires evaluation of numerous structures in the thorax including the heart, lungs, mediastinum, pleura and pleural space, bones, etc. which can be affected by a multitude of pathologies. For CPT code 71260, the RUC objected to the CMS statement that the proposed work RVUs maintain the RUC-recommended relative difference between CPT codes

71250 and 71260, stating that time survey data and comparison codes, not ratios and intervals, were used in arriving at the value of 1.24 for CPT code 71260.

Response: We reiterate that a comparison to all XXX-global period codes with similar time values indicated that the RUC-recommended work RVU was overestimated for CPT code 71250. While we recognize that the RUC did not base its recommended valuation for CPT code 71260 on an incremental relationship, we continue to believe the use of an incremental difference between codes is a valid methodology for considering appropriate values, especially in valuing services within a family of revised codes where it is important to maintain appropriate intra-family relativity.

Comment: For CPT code 71270, a commenter disagreed with the use of a crosswalk to CPT code 93284 (*Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; multiple lead transvenous implantable defibrillator system*) because these codes describe completely different clinical work.

Response: We do consider clinical information associated with physician work intensity provided by the RUC and other stakeholders as part of our review process, although we remind readers that we do not agree that codes must share the same site of service, patient population, or utilization level to serve as an appropriate crosswalk.

Comment: For CPT code 71271, the RUC noted that HCPCS code G0297 is CMS/Other sourced. Therefore, how the times and values were established is unknown or flawed. The RUC also agreed that the physician work involved in the new code for low-dose screening exam is comparable to the diagnostic exam performed in CPT code 71250. While CMS finalized a policy that HCPCS code G0297 should be identically valued to CPT code 71250 in the CY 2016 PFS final rule (80 FR 70974–70975), the G-code is currently not valued the same. CPT code 71250 is currently valued higher than HCPCS code G0297 because CPT code 71250 was revalued in 2016; its work RVU increasing from 1.02 to 1.16, however HCPCS code G0297 was not revalued at that time and remains currently valued at 1.02. The RUC suggested CMS to accept a work RVU of 1.16 for CPT code 71271 and requests deletion of HCPCS code G0297. In the event this G-code is

not deleted, the RUC requests that HCPCS code G0297 be crosswalked to 71271 and the same value and inputs be assigned.

Response: Our proposed work RVU of 1.08 for HCPCS code 71271 is partly based on our assumption that this code has an identical work RVU to CPT code 71250. Our proposed values will restore parity between the two codes by increasing the work RVU for the former to match our proposed value for the latter.

After consideration of the public comments, we are finalizing the work RVUs and direct PE inputs for the codes in the Screening CT of Thorax family as proposed.

(26) X-Ray Bile Ducts (CPT Codes 74300, 74328, 74329, and 74330)

CPT codes 74300 (*Cholangiography and/or pancreatography; intraoperative, radiological supervision and interpretation*) and 74328 (*Endoscopic catheterization of the biliary ductal system, radiological supervision and interpretation*) were identified through a screen of CMS/Other Source codes with 2017 Medicare utilization over 30,000. CPT codes 74329 (*Endoscopic catheterization of the pancreatic ductal system, radiological supervision and interpretation*) and 74330 (*Combined endoscopic catheterization of the biliary and pancreatic ductal systems, radiological supervision and interpretation*) were included as part of the same code family and the family was surveyed. The codes describe x-rays of the liver, pancreas, and bile ducts. They are performed in facilities and have no direct PE inputs.

We disagreed with the RUC-recommended work RVU of 0.32 for CPT code 74300. We proposed a work RVU of 0.27 based on a crosswalk to CPT code 74021 (*Radiologic examination, abdomen; 3 or more views*), one of the reference services from the RUC survey and that has an intraservice time of 4 minutes, nearly identical to the RUC's recommendation of 5 minutes of intraservice time for CPT code 74300. The proposal was supported by CPT code 93922 (*Limited bilateral noninvasive physiologic studies of upper or lower extremity arteries*) with a work RVU of 0.25 and an intraservice time of 5 minutes and a total time of 10 minutes. These times are nearly identical to the RUC's recommended intraservice of 5 minutes and total time of 10 minutes for CPT code 74300.

We proposed the RUC-recommended work RVU of 0.47 for CPT code 74328 (*Endoscopic catheterization of the biliary ductal system, radiological*

supervision and interpretation), with an intraservice time of 10 minutes and a total time of 20 minutes.

We disagreed with the RUC's recommended work RVU of 0.50 for CPT code 74329 (*Endoscopic catheterization of the pancreatic ductal system, radiological supervision and interpretation*). We proposed a crosswalk to CPT code 74328 at a work RVU of 0.47 because the intraservice and total times for both codes are identical and we noted that we believe the work involved in the biliary ductal and pancreatic ductal systems is similar.

We disagreed with the RUC's recommended work RVU of 0.70 for CPT code 74330 (*Combined endoscopic catheterization of the biliary and pancreatic ductal systems, radiological supervision and interpretation*) and we proposed a work RVU of 0.56 based on the proposal of the RUC's recommendation for CPT code 74328 to create internal consistency within the code family, based on our time ratio methodology and further supported by a reference to CPT code 93228 (*External mobile cardiovascular telemetry with electrocardiographic recording, concurrent computerized real time data analysis and greater than 24 hours of accessible ECG data storage (retrievable with query) with ECG triggered and patient selected events transmitted to a remote attended surveillance center for up to 30 days; review and interpretation with report by a physician or other qualified health care professional*) with nearly identical and total time values to CPT code 74330.

The RUC did not recommend and we did not propose any direct PE inputs for these codes.

We received public comments on the X-Ray Bile Ducts code family. The following is a summary of the comments we received and our responses.

Comment: A few commenters did not support the proposal of 0.27 work RVUs for CPT code 74300, stating that based on the RUC survey data, the overall intensity and complexity to perform CPT code 74300 is greater than that required to perform the key reference service of CPT code 74021. Commenters also stated that the crosswalk to CPT code 74021 was inappropriate due to the service time difference between the codes.

Response: Based on the survey results, we disagree that the overall intensity and complexity to perform CPT code 74300 is greater than that required to perform CPT code 74021. Based on the survey results, only the technical skill component of intensity suggested that CPT code 74300 may be more intense than CPT code 74021, with

67 percent of respondents stating that CPT code 74300 was more intense. Comparing CPT code 74300 to its key reference service CPT code 74321, 50 percent of survey respondents reported that CPT code 74300 had identical intensity, 50 percent of survey respondents reported physical effort as having identical or less intensity, and 67 percent of survey respondents reported psychological stress as having identical or less intensity. We also disagree that the crosswalk to CPT code 74021 was inappropriate because the RUC used CPT code 74021 as a key reference survey in its survey. Thus, we are finalizing 0.27 work RVUs for CPT code 74300 as proposed.

Comment: A few commenters supported the CMS proposal of 0.47 work RVUs for CPT code 74328.

Response: We appreciate commenters' support and are finalizing 0.47 work RVUs for CPT code 74328 as proposed.

Comment: A few commenters did not support the proposal of 0.47 work RVUs for CPT code 74329. These commenters asserted that the work associated with assessing the pancreatic ductal system in CPT code 74329 and is more intense and complex than CPT code 74328. They also stated that codes with identical times are not assigned the same RVU because both the AMA RUC and CMS recognize that procedures with equivalent times do not have equivalent intensities.

Response: While it may be true that codes that have identical times can have different intensities, because the survey did not use CPT code 74328 as a key reference service for the valuation of CPT code 74329, we do not believe the survey results provided sufficient evidence to support the assertion that CPT code 74329 is more intense. Thus, we are finalizing 0.47 work RVUs for CPT code 74329 as proposed.

Comment: A few commenters did not support the proposal of 0.56 work RVUs for CPT code 74330. These commenters were concerned that we did not apply our time ratio methodology correctly. The commenters also disagreed with the use of time ratio methodologies for work valuation for these services. Commenters stated that this use of time ratios is not a valid methodology for the valuation of physician services.

Response: To clarify, we used an intraservice time ratio and not a total time ratio. We disagree with the commenters and continue to believe that the use of time ratios is one of several appropriate methods for identifying potential work RVUs for PFS services.

We have responded to concerns about our methodology earlier in this section

of this final rule. For additional information regarding the use of use of time ratios in our methodology, we refer readers to our discussion of the subject in the Methodology for Establishing Work RVUs section of this rule (section II.N.2), as well as a longer discussion in the CY 2017 PFS final rule (81 FR 80273 through 80274). Thus, we are finalizing 0.56 work RVUs for CPT code 74330 as proposed.

After consideration of the public comments, we are finalizing the work RVUs for the codes in the X-Ray Bile Ducts family as proposed. We did not propose and we are not finalizing any direct PE inputs for these codes.

(27) Venography (CPT Codes 75820 and 75822)

The review of CPT code 75820 (*Venography, extremity, unilateral, radiological supervision and interpretation*) was prompted by the Relativity Assessment Workgroup Medicare utilization screen of over 20,000 claims in a year. CPT code 75820 currently has a work RVU of 0.70 with 14 minutes of total time. This service involves the supervision and interpretation of a contrast injection and imaging of either the upper or lower extremity. For CPT code 75820, the RUC recommended 12 minutes preservice time, 20 minutes intraservice time, 10 minutes postservice time and 42 minutes of total time. The specialty societies' survey at the 25th percentile yielded a 1.05 work RVU, and it is the RUC's recommended work value. We proposed the RUC-recommended value for CPT code 75820.

CPT code 75822 (*Venography, extremity, bilateral, radiological supervision and interpretation*) is reviewed as part of the family of codes included with CPT code 75820. CPT code 75822 has a current 1.06 work RVU and 21 minutes of total time. The RUC recommended 15 minutes preservice time, 30 minutes intraservice time, 12 minutes postservice time and 57 minutes of total time, and the survey's 25th percentile work RVU of 1.48. The service is similar to CPT code 75820, except that this CPT code is bilateral, involving the supervision and interpretation of a contrast injection and imaging of both of either the upper or lower extremities. The RUC recommended 1.48 work RVU and 57 minutes of total time for CPT code 75822. We proposed these RUC-recommended values for CPT code 75822.

We received public comments on the Venography services CPT codes 75820 and 75822. The following is a summary

of the comments we received and our responses.

Comment: The commenters appreciated CMS' proposal of the AMA RUC recommended RVU values.

Response: We appreciate the commenters' support for our proposal to adopt the RUC recommendations for CPT codes 75820 and 75822.

After consideration of the public comments, we are finalizing the RUC recommendations for CPT codes 75820 and 75822, as proposed.

(28) Introduction of Catheter or Stent (CPT Code 75984)

The RUC recommended reviewing CPT code 75984 (*Change of percutaneous tube or drainage catheter with contrast monitoring (e.g., genitourinary system, abscess) radiological supervision and interpretation*) after more utilization data was available, which resulted in this service being surveyed and reviewed for the April 2019 RUC meeting. We proposed the work RVU of 0.83 as recommended by the RUC. We proposed the RUC-recommended direct PE inputs for CPT code 75984 without refinement.

We received public comments on the Introduction of Catheter or Stent family (CPT code 75984). The following is a summary of the comments we received and our responses.

Comment: Commenters supported the CMS proposal of 0.83 for the work RVU as recommended by the RUC, as well as the proposal of the direct PE inputs without refinements.

Response: We appreciate the commenters' support for our proposal to adopt the RUC recommendations for CPT code 75984.

After consideration of the public comments, we are finalizing the RUC-recommended work RVU of 0.83 for CPT code 75984. We are also finalizing the RUC-recommended direct PE inputs for CPT code 75984 without refinement.

(29) Medical Physics Dose Evaluation (CPT Code 76145)

The CPT Editorial Panel created CPT code 76145 (*Medical physics dose evaluation for radiation exposure that exceeds institutional review threshold, including report*), which is a new PE-only code. Because of the high amount of clinical staff time and the fact that there are not analogous services, the PE Subcommittee requested that the specialty societies conduct a PE survey. In addition, they stated that the service is stand-alone, meaning that the medical physicist works independently from a physician and there are no elements of the PE that are informed by time from

a physician work survey. Following the meeting, the specialty societies developed a PE survey which was reviewed and approved by the Research Subcommittee. We proposed the RUC-recommended direct PE inputs for CPT code 76145 without refinement.

The following is a summary of the comments we received and our responses.

Comment: Commenters supported the proposal to implement the RUC-recommended direct PE inputs for CPT code 76145 without refinement.

Response: We appreciate the support for our proposals from the commenters.

Comment: Commenters recommended that CMS remove the Deficit Reduction Act (DRA) cap designation for CPT code 76145, stating that this is not an imaging service but a patient-specific organ dose assessment and evaluation performed by a medical physicist that can be utilized across a broad spectrum of cardiology and interventional radiology services. These dose calculations are commonly associated with interventional procedures and not diagnostic imaging studies.

Response: We are persuaded by the commenters that this service does not describe an imaging service as defined for purposes of the "DRA cap," also known as the "OPPS cap," under section 1848(b)(4)(B) of the Act. We note it is more akin to physics consultation services similar to those described by CPT codes 77331 (*Special dosimetry (e.g., TLD, microdosimetry) (specify), only when prescribed by the treating physician*), 77336 (*Continuing medical physics consultation, including assessment of treatment parameters, quality assurance of dose delivery, and review of patient treatment documentation in support of the radiation oncologist, reported per week of therapy*), and 77370 (*Special medical radiation physics consultation*). Therefore, we are not including CPT code 76145 within the codes that are subject to the adjustment under section 1848(b)(4) will not be subject to the OPPS cap.

After consideration of the public comments, we are finalizing the direct PE inputs for CPT code 76145 as proposed and removing this code from the OPPS Cap List.

(30) Ophthalmic Ultrasound Anterior Segment (CPT Code 76513)

CPT code 76513 (*Ophthalmic ultrasound, diagnostic; anterior segment ultrasound, immersion (water bath) B-scan or high resolution biomicroscopy*) was identified by the RUC due to volume growth, attributed to improved equipment. The CPT Editorial Panel has

since revised this code to clarify that it is either unilateral or bilateral (it was previously unilateral). It was then surveyed. The code describes a test for glaucoma and is performed on the same day as an office/outpatient evaluation and management (O/O E/M) visit. The CPT and RUC removed CPT code 76513 from its former code family, creating a family of 1 service.

In reviewing this code, we noted that the recommended total time is decreasing from 19 minutes to 15 minutes (21 percent) while the RUC-recommended work RVU is decreasing from 0.66 to 0.60 (9 percent). We did not believe the RUC-recommended work RVU appropriately accounts for the substantial reductions in the surveyed work times for the procedure. Although we did not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we noted we believe that since the two components of work are time and intensity, significant decreases in time should be appropriately reflected in decreases to work RVUs. In the case of CPT code 76513, we noted that we believe that it would be more accurate to propose a work RVU of 0.53 based on a crosswalk to CPT code 74230 (*Radiologic examination, swallowing function, with cineradiography/ videoradiography, including scout neck radiograph(s) and delayed image(s), when performed, contrast (e.g., barium) study*) with identical intraservice and total times.

For the direct PE inputs, we proposed to make two refinements to the clinical labor times of CPT code 76513. We proposed a reduction of 1 minute for the clinical labor task CA009: “Greet patient, provide gowning, ensure appropriate medical records are available” because the EHR information should already be linked from the preceding O/O E/M visit and the entry of information would be redundant and paid under indirect PE. We also proposed a reduction of 1 minute for the clinical labor task CA011: “Provide education/obtain consent” to be consistent with the time for this clinical labor task for the services in CPT code 76513’s former code family.

We received public comments on CPT code 76513. The following is a summary of the comments we received and our responses.

Comment: A few commenters disagreed with the CMS proposed work RVU of 0.53 and stated that CMS should finalize the RUC-recommended work RVU value of 0.60. Commenters stated that CPT code 76513 is more complex and intense than the proposed

crosswalk of CPT code 74320 due to a wider number of potential diagnoses, and requires placing a probe with water bath on the patient’s cornea, which is more uncomfortable than swallowing contrast, requiring extra skill and effort to obtain appropriate images.

Response: We appreciate the additional information from the commenters regarding the intensity of CPT codes 76513 and 74320. In light of this additional information, we agree with the commenters that the diagnostic ophthalmic ultrasound service described by 76513 may have a higher intensity than the radiologic examination service described by CPT code 74320. Therefore, we are finalizing the RUC-recommended work RVU of 0.60 for CPT code 76513.

Comment: A few commenters stated that the crosswalk or methodology used in the original valuation of CPT code 76513 is unknown and not resource-based, and therefore, it was invalid for CMS to compare the current time and work to the surveyed time and work.

Response: We appreciate the commenters’ concerns regarding our interpretation of older work time sources and their use in the code valuation process for establishing work RVUs for these services. We agree that it is important to use the most recent data available regarding work times, and we acknowledge that when many years have passed between when time is measured, significant discrepancies can occur. However, we also believe that our operating assumption regarding the validity of the existing values as a point of comparison is critical to the integrity of the relative value system as currently constructed. We have responded to concerns about our methodology earlier in this section. For additional information regarding the use of old work time values that were established many years ago and have not since been reviewed; we refer readers to our discussion of the subject in the Methodology for Establishing Work RVUs section of this rule (section II.N.2. of this final rule), as well as a longer discussion in the CY 2017 PFS final rule (81 FR 80273 through 80274).

Comment: A few commenters disagreed with our reduction of 1 minute of clinical labor task CA009: “Greet patient, provide gowning, ensure appropriate medical records are available” and stated that our assumption that the EHR information should already be linked from the preceding O/O E/M visit was incorrect. Commenters stated that it is not typical for the EHR and the ultrasound equipment to be linked and that staff time is required to enter the data into

the ultrasound equipment software and ensure that it matches the information in the main EHR and therefore it would be inappropriate to reduce the RUC-recommended staff time.

Response: While we appreciate the additional information that the EHR and the ultrasound equipment are not linked, we believe that the staff time required to enter the data into the equipment constitutes a data entry task and paid under indirect PE. Therefore, we are finalizing our proposed reduction of 1 minute of clinical staff time for CPT code 76513.

Comment: A few commenters also disagreed with our proposed reduction of 1 minute for the clinical labor task CA011: “Provide education/obtain consent.” Commenters stated that this test involves placement of a device directly onto the ocular surface, with a risk of corneal abrasion and associated loss of vision. Thus, a clear and detailed explanation of what to expect was necessary to reduce patient anxiety and increase the patient’s ability to cooperate with the exam. Thus, patient consent would require the RUC-recommended 3 minutes.

Response: We appreciate the additional information from the commenters regarding the steps that are involved in providing education and obtaining consent and we agree with the commenters that the additional minute of time would be required. Thus, we are finalizing the RUC-recommended 3 minutes of clinical staff time.

After consideration of the public comments, we are not finalizing our proposed work RVU of 0.53 for CPT code 76513 and are instead finalizing the RUC-recommended work RVU of 0.60. We are finalizing the direct PE inputs as proposed, with the exception of the proposed reduction of 1 minute for the clinical labor task CA011 as detailed above.

(31) Dual-Energy X-Ray Absorptiometry (CPT Code 77080)

We did not make any proposals regarding CPT code 77080 (*Dual-energy X-ray absorptiometry (DXA), bone density study, 1 or more sites; axial skeleton (e.g., hips, pelvis, spine)*) in the proposed rule. Following the publication of the CY 2021 PFS proposed rule, a stakeholder contacted CMS and stated that Medicare payment for the CPT code 77080 has declined in the nonfacility setting from \$140 in 2006 to approximately \$40 in 2020. The stakeholder stated that due to policies proposed in the CY 2021 PFS proposed rule, payment for DXA would be subject to an eight percent decrease bringing the payment rate to \$36.78. The stakeholder

suggested CMS to address DXA payment in the CY 2021 PFS final rule.

In response to the stakeholder, we note that the payment decreases for CPT code 77080 were produced by two factors: The adoption of the current PE methodology during CY 2007–2010 and the code's last RUC review in CY 2014. Payment for CPT code 77080 has been stable at approximately \$40 for the last 6 years. We also note that our ratesetting methodology proposed a modest increase in total RVUs for CY 2021 for CPT code 77080. However, the proposed decrease of 10.6 percent to the CF resulted in the proposed payment for CPT code 77080 decreasing by approximately eight percent. This decrease would result from implementation of budget neutrality adjustment to the PFS conversion factor, and would not be caused by any policy changes associated with CPT code 77080. We remind stakeholders that, in accordance with section 1848(c)(2)(B)(ii)(II) of the Act, if revisions to the RVUs under the PFS cause expenditures for the year to change by more than \$20 million, we are statutorily obligated to make budget neutrality adjustments to ensure that expenditures do not increase or decrease by more than \$20 million. For additional information, we direct readers to the Regulatory Impact Analysis (section VIII.) of this rule. We may consider future rulemaking regarding CPT code 77080 under the misvalued code initiative if there is continued stakeholder concern regarding the valuation of this service.

(32) Radiation Treatment Delivery (CPT Code 77401)

CPT code 77401 (*Radiation treatment delivery, superficial and/or ortho voltage, per day*) was identified by the RUC Relativity Assessment Workgroup through a screen of high-volume growth, for services with 2017 Medicare utilization of 10,000 or more that has increased by at least 100 percent from 2012 through 2017. In January 2019, the RUC recommended to refer to this service to the CPT Editorial Panel to better define the set of services associated with delivery of superficial radiation therapy (SRT).

We proposed the following direct PE refinements: A reduction of 2 minutes for the clinical labor task CA024: "Clean room/equipment by clinical staff," to the standard 3 minutes, and we did not propose to include the new equipment item ER119 "Lead Room," as we noted that we did not have enough information on what this equipment item contains, and we are requesting more information to allow us to

determine if it is more accurately priced as direct or indirect PE. CPT code 77401 is a PE only code and we proposed to maintain the current work RVU of 0.00.

We received public comments on the Radiation Treatment Delivery (CPT code 77401). The following is a summary of the comments we received and our responses.

Comment: Many commenters stated that while they still believe more should be done with regard to the work RVUs for 77401 in order to make this treatment option more fair and equitable, the commenters greatly appreciate CMS' willingness to increase the PE RVUs for SRT. The commenters stated that this is a much needed increase for the modality as a whole and should result in an increase in availability for patients that truly need access to this technology for non-melanoma skin cancer and keloids.

Response: We appreciate the support for our proposals from the commenters.

Comment: Commenters provided information on the recommended new equipment item ER 119 ("Lead Room"), noting that all states require a lead shielded room for radiation therapy. Some commenters said that physicians can also utilize this room for other services when not using the SRT. Some commenters stressed that although the lead lined room may be used for other services when there is no patient receiving superficial radiation therapy (SRT), there should not be payment for the lead room when SRT is not being performed.

Response: We continue to believe that, given the fact that the lead-shielded room may be used for other types of services as indicated by commenters, this item is not allocable specifically to CPT code 77401, but is rather a general practice cost akin to office rent expenses. Therefore, we consider the lead-shielded room to be indirect PE, and we are finalizing the direct PE inputs as proposed, without including the lead lined room.

Comment: Commenters disagreed with the proposed reduction of 2 minutes for the clinical labor task CA024: "Clean room/equipment by clinical staff", to the standard 3 minutes. Commenters stated that the 2 minutes were added by the RUC because the room and the equipment must be cleaned after each use and this has increased at least 5 fold under COVID. Commenters stated that the standard 3 minutes is for the room only and is insufficient to do both and that CMS should restore the 2 minutes that were removed.

Response: The commenters stated that 5 minutes are necessary to clean both

the room and the equipment; however, the standard time of 3 minutes already assumes that both the room and equipment will be cleaned. Therefore, we are finalizing this PE refinement as proposed.

After consideration of the public comments, we are finalizing the direct PE inputs for this service as proposed.

(33) Proton Beam Treatment Delivery (CPT Codes 77520, 77522, 77523, and 77525)

In April 2018, the RUC's Relativity Assessment Workgroup (RAW) identified CPT code 77522 (*Proton treatment delivery; simple, with compensation*) and CPT code 77523 (*Proton treatment delivery; intermediate*) as contractor-priced Category I CPT codes with 2017 estimated Medicare utilization over 10,000 services. Although the RAW agreed with the specialty society that this family of codes should remain contractor priced, the RUC determined that these services should be surveyed for PE. CPT codes 77520 (*Proton treatment delivery; simple, without compensation*) and 77525 (*Proton treatment delivery; complex*) were added to the family and the group was surveyed for PE for the April 2019 RUC meeting.

We noted in the proposed rule that we encountered significant difficulties in reviewing the recommended direct PE inputs for the codes in the Proton Beam Treatment Delivery family. These difficulties were largely associated with determining a price for the two new equipment items in the code family, the Proton Treatment Vault (ER115) and the Proton Treatment Delivery System (ER116). These equipment items had extraordinarily high prices of \$19,001,914 and \$30,400,000 respectively on the invoices submitted with the code family. By way of comparison, the highest equipment price currently existing in our database for CY 2021 is the "SRS system, Linac" (ER082) equipment item at \$4,233,825. We noted concerns that establishing equipment pricing for the proton treatment vault and delivery system at a rate that is so much higher than anything else in our equipment database could distort relativity.

We also noted concerns about the information provided on the submitted invoices used for the pricing of these two new equipment items. The invoices for both the Proton Treatment Vault and the Proton Treatment Delivery System contained building construction costs such as asphalt paving, masonry and carpentry expenses, drywall packaging, and the installation of electrical

systems. We noted that we understood that these proton treatment equipment items are extremely capital-intensive and require the construction of custom-built offices to house the equipment. However, the expenses associated with constructing new office facilities fall outside of our direct PE methodology, and would be more accurately classified as a form of building maintenance or office rent under indirect PE. We did not agree that construction costs should be included as a form of direct PE because they are not individually allocable to a particular patient for a particular service. Although we agreed that the proton beam treatment practitioners do need to bear the costs associated with the storage of this equipment, we noted that this is a form of indirect PE under our methodology. Therefore, we noted that we did not believe that it would serve the interests of relativity to include these building construction costs for the proton treatment equipment as a type of direct PE expense.

As a result, we proposed to maintain contractor pricing for CPT codes 77520, 77522, 77523, and 77525 instead of proposing active pricing for these services. We noted that we believe that maintaining contractor pricing will allow the limited providers of these very expensive services to adapt more quickly to shifts in the market-based costs associated with the proton treatment equipment. The RUC similarly expressed concern in its recommendations about the extremely high cost of this equipment, agreed that these services were extremely hard to value, and noted the difficulties that had taken place in surveying the family of codes. The recommendations from the RUC also noted that proton treatment is a rapidly changing technology and the change in the treatment equipment often requires extensive modification to the vault. We also noted that we believe that these frequent changes can be more accurately captured through contractor pricing as opposed to the need to update the pricing of the proton treatment equipment on an annual basis.

As discussed in the proposed rule, if we were to propose active pricing for the codes in this family, we believe that we would need to remove the building construction costs from the Proton Treatment Vault and the Proton Treatment Delivery System as forms of indirect PE, which would substantially lower their overall equipment prices. We would also refine the equipment times to the standard formula for highly technical equipment, which would result in 3 minutes less time for each

equipment item (such as 14 minutes for all three equipment items in CPT code 77522).

We received public comments on the codes in the Proton Beam Treatment Delivery family. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported the proposal to maintain contractor pricing for CPT codes 77520, 77522, 77523, and 77525 instead of proposing active pricing for these services. Commenters stated that they applauded CMS for carefully considering the unintended consequences of pricing high equipment cost items using the current CMS methodology and agreed that contractor pricing will allow proton therapy practitioners to adapt quickly to shifts in the market-based costs associated with the proton treatment equipment. Commenters stated that until there is a way to accurately reflect the price of this advanced technology, they agreed with the proposal and requested that CMS maintain contractor pricing for the proton treatment delivery codes.

Response: We appreciate the support for our proposals from the commenters.

Comment: One commenter stated that although they currently supported the continuation of contractor pricing, the commenter also could envision proton beam treatment pricing at some percentage of OPPS rates (*e.g.*, 95 percent of OPPS payment amount) as CMS looks to potentially value PE RVUs using OPPS rates. The commenter stated that while this rate might not adequately cover the PE component in some larger facilities, it would allow continued support for other facilities showing significant positive patient outcomes.

Response: We appreciate the feedback from the commenter regarding the potential use of OPPS payment rates for PFS pricing.

Comment: One commenter disagreed with the CMS proposal to maintain contractor pricing for CPT codes 77520, 77522, 77523, and 77525 and recommended that CMS finalize the RUC recommendations. The commenter stated that although it is not the purview of the RUC to make recommendations about pricing and useful life of equipment, CMS should accept the direct PE inputs for CPT codes 77520, 77522, 77523, and 77525 as submitted by the RUC.

Response: We disagree with the commenter and continue to believe that the unique nature of the equipment costs associated with these services poses problems for our PE methodology. We believe that maintaining contractor pricing will incorporate these costs into

the payment rate while also allowing the limited practitioners of these very expensive services to adapt more quickly to shifts in the market-based costs associated with the proton treatment equipment.

After consideration of the comments, we are finalizing our proposal to maintain contractor pricing for CPT codes 77520, 77522, 77523, and 77525.

(34) Immunization Administration (CPT Codes 90460, 90461, 90471, 90472, 90473, and 90474 and HCPCS Codes G0008, G0009, and G0010)

Especially in the context of the current PHE for COVID-19, it is evident that consistent beneficiary access to vaccinations is vital to public health. Many stakeholders have raised concerns regarding the reductions in payment rates for vaccine administration services over the past several years. The codes that describe these services have generally been valued based on a direct crosswalk to CPT code 96372 (*Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular*). Because we proposed and finalized reductions in valuation for that code for CY 2018 and because the reductions in overall valuation have been subject to the multi-year phase-in of significant reductions in RVUs, the payment rate for the vaccine administration codes has been concurrently reduced.

In the CY 2020 PFS final rule, we acknowledged that it is in the public interest to ensure appropriate resource costs are reflected in the valuation of the immunization administration services that are used to deliver vaccines, and noted that we planned to review the valuations for these services in future rulemaking. For CY 2020, we maintained the CY 2019 national payment amount for immunization administration services described by HCPCS codes G0008 (*Administration of influenza virus vaccine*), G0009 (*Administration of pneumococcal vaccine*), and G0010 (*Administration of hepatitis b vaccine*) in the interim.

The RUC has recently resubmitted recommendations from 2009 regarding the appropriate valuation for the broader range of vaccine administration services, including CPT codes 90460 (*Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered*), 90471 (*Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular*

injections); 1 vaccine (single or combination vaccine/toxoid)), and 90473 (*Immunization administration by intranasal or oral route; 1 vaccine (single or combination vaccine/toxoid)*). In its recommendation, the RUC noted that the current RVUs assigned are directly crosswalked from CPT code 96372 (like the vaccine administration G-codes had been) and the resulting payment rates are substantially lower than current Centers for Disease Control and Prevention (CDC) regional maximum charges. The RUC also pointed out that appropriate payment for immunization administration that reflects resource cost is critical in maintaining high immunization rates in the United States, as well as having the capacity to respond quickly to vaccinate against preventable disease outbreaks.

We agreed with the RUC's assertions regarding the importance of appropriate resource-based valuations for vaccine administration services. We also recognized that the importance of these services is increased in the context of the current PHE for COVID-19, especially should there be a vaccine for this particular disease.

We reviewed and considered the 2009 RUC-recommended direct PE inputs for CPT codes 90460–90474 (as well as the related G-codes) in place of the existing policy, based on a crosswalk to CPT code 96372. However, the RUC-recommended direct PE inputs from 2009 would result in significant decreases in valuation for these 6 CPT codes, even compared to the current crosswalk. At the time of the proposed rule, we did not believe that either the existing crosswalk or the RUC recommendations from over a decade ago reflect the relative resource costs associated with these services. Without updated information to use in developing rates specific to these codes based on direct PE inputs, and in consideration of the importance of these services for Medicare beneficiaries, as well as the public health concerns raised by commenters, we believed that it would be most appropriate to value these services using a crosswalk methodology that better reflects the relative resources involved in furnishing all of these services.

Therefore, we proposed to crosswalk the valuation of CPT codes 90460, 90471, and 90473 and HCPCS codes G0008, G0009, and G0010 to CPT code 36000 (*Introduction of needle or intracatheter, vein*). CPT code 36000 is a service with a nearly identical work RVU (0.18 as compared to 0.17 for CPT codes 90460, 90471, and 90473) and a similar clinical vignette. We noted that we believe that the additional clinical

labor, supply, and equipment resources associated with the furnishing of CPT code 36000 more accurately capture the costs associated with these immunization codes. We also noted that this crosswalk would result in payment rates for vaccine administration services at approximately the same CY 2017 rates that were paid prior to the revaluation of CPT code 96372, which had previously served as the basis of the crosswalk. We noted that we believe that the proposed crosswalk is the most accurate valuation of these services and would also serve to ensure the appropriate relative resources involved in furnishing all of these services is reflected in the payment for these critical immunization and vaccination services in the context of the health needs of Medicare beneficiaries.

Regarding the add-on codes associated with these services, CPT codes 90461 (*Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; each additional vaccine or toxoid component administered*), 90472 (*Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); each additional vaccine (single or combination vaccine/toxoid)*), and 90474 (*Immunization administration by intranasal or oral route; each additional vaccine (single or combination vaccine/toxoid)*), we noted that the previous valuation methodology set their RVUs at approximately half of the valuation for the associated base codes, described above. Absent additional information, we proposed to maintain that approach by valuing the three add-on codes at half of the RVUs of the aforementioned crosswalk to CPT code 36000.

Finally, we proposed this valuation to apply to all of these existing vaccine administration codes, using the valuation of CPT code 90471 for base codes and CPT code 90472 for add-on codes. We also noted that should a vaccine for COVID-19 or other infectious disease become available during CY 2021, we would anticipate applying the same approach to valuing the administration of such vaccines, regardless of whether separate coding for such services would need to be introduced.

We received public comments on the codes in the Immunization Administration family. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported the proposal to crosswalk the valuation of CPT codes 90460, 90471,

and 90473 and HCPCS codes G0008, G0009, and G0010 to CPT code 36000. Commenters stated that the current vaccine administration rates do not adequately cover the costs of purchasing, storing, monitoring, and administering vaccines and that appropriate valuation and reimbursement for these services is critical to ensuring widespread access to vaccines. Commenters agreed that the current crosswalk does not recognize the resources needed to provide the immunization procedure and that the proposed crosswalk to CPT code 36000 more accurately captures the direct clinical labor and resources needed to perform immunizations.

Response: We appreciate the support for our proposals from the commenters.

Comment: Many commenters supported the proposal to crosswalk the valuation of CPT codes 90460, 90471, and 90473 and HCPCS codes G0008, G0009, and G0010 to CPT code 36000 while also disagreeing with the proposal to value the three add-on codes (CPT codes 90461, 90472, and 90474) at half of the RVUs of the aforementioned crosswalk to CPT code 36000. Commenters stated that the value of the work RVU for the add-on Immunization Administration codes is not half of the base codes but rather 88 percent of the value of the base codes. Commenters requested that CMS apply the same magnitude relationship between the base and add-on codes as in the previous valuation.

Response: We appreciate the feedback from the commenters regarding the relationship between the base codes and add-on codes in this family. After reviewing the issue and looking at the historic relationship in payment rates for the base codes and add-on codes, we agree with the commenters that the add-on codes have typically been valued at 88 percent of the RVU of the base codes, not half of the value. Therefore, we are finalizing the value of the three add-on codes at 88 percent of the RVUs assigned to the immunization administration codes.

Comment: Several commenters stated that they supported the proposals for this code family; however, they noted that there has been some confusion about the actual payment amount because RVUs for the CMS-issued immunization administration HCPCS “G” codes are not listed in the files sent to the contractors nor made available to the public. The commenters suggested CMS to include the crosswalked values for the immunization codes in the RVU files to ensure that the crosswalk is accurately implemented, and that stakeholders can identify the rate

Medicare will pay for vaccine administration.

Response: HCPCS codes G0008, G0009, and G0010 are used to bill Medicare for administration of the preventive vaccines described under section 1861(s)(10) of the Act. They are not technically valued under the PFS, as they do not fit within the statutory definition of physicians' services in section 1848(j)(3) of the Act. CMS established HCPCS codes G0008, G0009, and G0010 to describe the administration of these preventive vaccines. As a result, no RVUs or payment amounts are shown for these codes in the PFS tables, and payment for them is not made under the PFS. While it is true that we have established payment rates for these codes using a crosswalk to the values of codes listed on the PFS, these three HCPCS codes do not have PFS rates themselves.

Comment: Several commenters requested that in the future CMS should ensure a long-term sustainable valuation for vaccine administration by severing any linkage to other non-related CPT codes. The commenters recommend CMS consider determining the value of vaccine administration codes based on actual, updated physician time and PE inputs for vaccine administration.

Response: We agree with the commenters that it would be helpful to be able to value the vaccine administration codes using direct PE inputs instead of relying on crosswalks to other services; however, as we mentioned in the proposed rule, we reviewed and considered the 2009 RUC-recommended direct PE inputs and found that they would result in significant decreases in valuation for the six vaccine administration CPT codes, even compared to the current crosswalk. We would welcome the results of an updated formal review of these services as well as any additional information that may be helpful for improved valuation.

Comment: Several commenters supported the proposal and further suggested CMS to use its available authority to make this proposed change in vaccine administration valuation effective prior to January 1, 2021. Commenters stated that timely and appropriate payment for immunization administration that reflects resource cost is critical in maintaining high immunization rates in the United States as well as having the capacity to respond quickly to vaccinate against preventable disease outbreaks.

Response: While we share the concerns of the commenters regarding the importance of appropriate payment for vaccine administration, this final

rule takes effect beginning for CY 2021. We did not propose to modify payment policies for these services for any earlier timeframe and we continue to believe that the payment policies that we finalized last year were appropriate for these services.

Comment: One commenter stated that Medicare pays a travel allowance to cover the transportation and personnel expenses for specimen collection from an individual or a patient in an inpatient facility other than a hospital. The commenter recommended that CMS establish a travel fee for providers/practitioners of current adult vaccines and for COVID-19 vaccinations to support access to immunizations, following the same approach and with the same value as established for specimen collection.

Response: Travel and transportation fees are considered to be a form of indirect PE under our methodology and would not be included as a direct cost. Therefore, we do not believe it would be appropriate to establish a separate payment for these costs under the PFS or otherwise.

Comment: One commenter disagreed with the rationale that CMS provided to crosswalk the PE RVUs for this set of codes to equal those for CPT code 36000. The commenter stated that CPT code 36000 is a bundled service that is not recognized for payment by CMS, nor has it ever been reviewed by the RUC; and this code includes a multispecialty visit pack that would be a duplication of resources for the vaccination codes, and that also includes an angi catheter, which would never be used for vaccine administration. The commenter stated that arbitrarily assigning a specific PE RVU to this set of vaccination codes was another example of CMS's failure to consistently apply the same standards to all codes in the PFS, and as such, takes payment for resources away from one group of health care providers and assigns it to another group of health care providers.

Response: We note that our proposal to crosswalk valuation for the vaccine administration services was based on methodological approaches that have long been used for valuation under the PFS and reflect our best estimate of resource cost for these services at the time of the proposal. As we mentioned in the proposed rule, we reviewed and considered the 2009 RUC-recommended direct PE inputs and found that they would result in significant decreases in valuation for the six vaccine administration CPT codes, even compared to the current crosswalk. We would welcome the results of an updated formal review of these services

as well as any additional information that may be helpful for improved valuation.

After considering the comments, we are not finalizing our proposal to crosswalk the valuation of CPT codes 90460, 90471, and 90473 and HCPCS codes G0008, G0009, and G0010 to CPT code 36000. We are instead finalizing a policy to maintain the CY 2019 payment for all nine of the services in this family, including the add-on codes. We note that maintaining the CY 2019 rates for these services will also maintain the historical relationship between the base administration codes and the add-on CPT codes 90461, 90472, and 90474, instead of our proposal to value the add-on codes at 50 percent of the base codes. As previously discussed, in our proposal, we approximated a cost for these services, but acknowledge the concerns that were raised in the comments we received and will continue to seek additional information that specifically reflects the resource costs and inputs that should be considered to establish payment for these services on a long-term basis. Again, we would welcome the results of an updated formal review of these services as well as any additional information that may be helpful for valuation in the immediate future.

(35) Liver Elastography (CPT Code 91200)

CPT code 91200 (*Liver elastography, mechanically induced shear wave (e.g., vibration), without imaging, with interpretation and report*) was targeted for review through the RUC's new technology/new services screen. The RUC reviewed 3 years of available Medicare claims data (2016, 2017 and 2018) and surveyed the code for the January 2020 meeting.

We proposed the RUC-recommended work RVU of 0.21. We also proposed the RUC-recommended direct PE inputs for CPT code 91200 without refinement.

We received public comments on CPT code 91200. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the proposal of the RUC-recommended work RVU and direct PE inputs for CPT code 91200.

Response: We appreciate the support for our proposals from the commenters.

Comment: Several commenters discussed the clinical benefits of liver elastography treatments using Fibroscan equipment. Commenters stated that this service expedites patient diagnosis and keeps care centered in the office while allowing for non-invasive screenings of this population to identify those

patients with advanced fibrosis and cirrhosis who are at high risk for complications and costly care, allowing for earlier successful outpatient intervention. Commenters recommended that Fibroscan reimbursement should be increased, not decreased, which will allow expanded utilization and access for more GI physicians providing more widespread use of this effective and non-invasive practice based technology.

Response: We appreciate the additional information provided by commenters regarding the clinical benefits of the technology. However, the PFS is a resource-based payment system and we agree with the RUC that the resources associated with furnishing this service have decreased over time as the technology has become more widespread.

Comment: Several commenters disagreed with the proposed price for the Fibroscan with printer (ER101) equipment. Commenters stated that the proposed price of \$102,495 is not supported by customer invoices or StrategyGen's market research and that there is no available data that supports a 31 percent reduction in equipment pricing. The commenters recommended pricing the ER101 equipment at \$136,449 based on the submission of seven new invoices. The commenters stated that the average cost on the invoices was \$180,000, which included hardware costs and service contracts, and their recommended pricing of \$136,449 included the cost for CAP, which is an integral FibroScan component and not an optional addition. This price also included training and an S+ probe.

Response: We appreciate the additional information provided by the commenters, especially the submission of invoices for use in pricing the Fibroscan equipment. Based on this additional information, we agree with the commenters that the CAP is an integral part of the Fibroscan equipment and should be included in the price of the equipment. However, training expenses are an indirect cost under our PE methodology and therefore are not included in the price of the equipment. We also noted that the S+ probe was only included on 2 of the 7 submitted invoices and as a result we do not believe that this is typically part of the cost of the Fibroscan equipment. (By contrast, the CAP option was present in all cases.) Therefore, we are finalizing an update in the price of the Fibroscan (ER101) to \$125,096.21 based on an average of six invoices, as we were unable to use one invoice since it did not have individually itemized costs.

Comment: Several commenters stated that Medicare and commercial payor utilization data for CPT code 91200 demonstrate that the usage of FibroScan in the physician office setting is well below 50 percent. Commenters stated that at a 50 percent usage rate, each FibroScan would generate 6,250 exams per year, or 24 per day, resulting in 3,656,250 total national exams per year but the Medicare database identifies 39,556 actual in-office claims in 2018 and 51,000 in 2019, resulting in less than 1 scan per day. Commenters stated that CMS can assign an equipment utilization rate of lower than 50 percent and the change is warranted by actual claims data. Commenters requested that CMS establish an equipment utilization rate of 10 percent for CPT code 91200.

Response: We disagree with the commenters that an equipment utilization rate of 10 percent would be typical for the Fibroscan. We currently use an equipment utilization rate assumption of 50 percent for most equipment, with the exception of expensive diagnostic imaging equipment, for which we use a 90 percent assumption as required by section 1848(b)(4)(C) of the Act. It would distort relativity to assign a utilization rate of 10 percent for the Fibroscan equipment which would have the same effect as a fivefold increase in the price of the equipment. We continue to agree with the RUC's recommended direct PE inputs for CPT code 91200.

After considering the comments, we are finalizing the RUC-recommended work RVU of 0.21 and the RUC-recommended direct PE inputs for CPT code 91200. We are also finalizing an update in the price of the Fibroscan (ER101) equipment to \$125,096.21.

(36) Remote Retinal Imaging (CPT Codes 92227, 92228, and 92229)

The AMA CPT Editorial Panel revised CPT code 92227 (*Imaging of retina for detection or monitoring of disease; with remote clinical staff review and report, unilateral or bilateral*) and CPT code 92228 (*Imaging of retina for detection or monitoring of disease; with remote physician or qualified health professional review and report, unilateral or bilateral*) that are reported for the treatment of diabetic retinopathy. Two practice sites are involved in these services: The acquiring site (for example, a primary care practice) and the reading site (for example, the ophthalmology practice). Both codes can be used to report diagnostic and monitoring services and the distinction is in whom provides the service: Physician (CPT code 92228) or clinical staff only (CPT code 92227). Thus, only

CPT code 92228 includes work, accounting for the physician at the reading site. For both CPT codes 92227 and 92228, direct PE pays for the clinical staff at both sites.

The AMA CPT Editorial Panel also created CPT code 92229 (*Imaging of retina for detection or monitoring of disease; with point-of-care automated analysis with diagnostic report; unilateral or bilateral*) for point-of-care automated analysis that uses innovative artificial intelligence technology to perform the interpretation of the eye exam, without requiring that an ophthalmologist interpret the results. CPT code 92229 can be used at a primary care practice site and the artificial intelligence technology interprets the test instead of a remotely located ophthalmologist. Because no physician is involved, this service is PE only. We considered CPT code 92229 to be a diagnostic service under the PFS and are created separate payment for it.

For CPT code 92228, we proposed the RUC's recommended work RVU of 0.32. CPT codes 92227 and 92229 are PE only codes, and proposed a work RVU of 0.00 for both codes.

For both CPT codes 92227 and 92228, we proposed the AMA RUC's recommended direct PE inputs. We proposed two refinements to the direct PE inputs for CPT code 92229. We proposed a reduction of 1 minute for the clinical labor task CA009, "Greet patient, provide gowning, ensure appropriate medical records are available," to be consistent with the amount of clinical labor for this task in CPT codes 92228 and 92227. We did not propose the RUC's recommendation of a \$25 "per click" analysis fee for remote imaging because we considered this a service fee that constitutes a form of indirect PE and that this cost is appropriately captured via the indirect PE methodology as opposed to being included as a separate direct PE input. We did not believe that the analysis fee would be allocated to the use of an individual patient for an individual service, and can be better understood as an indirect cost similar to other administrative expenses.

We received public comments on the Remote Retinal Imaging family. The following is a summary of the comments we received and our responses.

Comment: For CPT code 92228, a few commenters supported our proposals for 0.32 work RVUs with no refinements to the direct PE inputs.

Response: We appreciate the commenters' support and are finalizing 0.32 work RVUs and no refinements to the direct PE inputs as proposed.

Comment: For CPT code 92227, a few commenters supported our proposals for 0.00 work RVUs with no refinements to the direct PE inputs.

Response: We appreciate the commenters' support and are finalizing 0.00 work RVUs with no refinements to the direct PE inputs as proposed.

Comment: We received no comments on our proposal for 0.00 work RVU for CPT code 92229.

Response: We are finalizing 0.00 work RVUs for CPT code 92229 as proposed.

Comment: Several commenters disagreed with our proposals for the direct PE inputs for CPT code 92229. A few commenters disagreed with our reduction of 1 minute of clinical labor task CA009: "Greet patient, provide gowning, ensure appropriate medical records are available." Commenters stated that it is not typical for the EHR and the imaging and analyzing software to be linked and that staff time is required to enter the data into the imaging and analyzing software and ensure that it matches the information in the main EHR and therefore it would be inappropriate to reduce the RUC-recommended staff time.

Response: While we appreciate the additional information that the EHR and the imaging and analyzing software are not linked, we believe that the staff time required to enter the data into the imaging and analyzing constitutes a data entry task and is paid under indirect PE. Therefore, we are finalizing our proposed reduction of 1 minute of clinical staff time for CPT code 92229.

Comment: Several commenters also disagreed with the elimination of the analysis fee for remote imaging. They asserted that the analysis fee is a direct cost because it is directly attributable to a specific patient and incurred for each patient. The commenters also stated that because the analysis is conducted by artificial intelligence (AI) software, there would be no service if the software was not used on a per patient basis.

Response: As the PE data have aged and AI applications are emerging, we recognize that issues involving the use of AI are complex. While we agree that the costs for AI applications should be accounted for in payment, AI applications are not well accounted for in our PE methodology. In recent years, we have considered other services that use algorithms or artificial intelligence components to render key portions of a service. For example, in the CY 2018 OPPS final rule (82 FR 59284), we discussed the fractional flow reserve computed tomography (FFRCT) service. We noted that that the service, which we considered to be separate and distinct from the original coronary

computed tomography angiography service is not an image processing service but rather, the diagnostic output from the FFRCT reports functional flow values that can only be obtained using FFRCT. We found FFRCT to be similar to other technologies that use algorithms, artificial intelligence, or other new forms of analysis to determine a course of treatment, where the analysis portion of the service cannot adequately be reflected under the PFS payment methodology.

Accordingly, we established contractor pricing for the service and have continued to gather information from stakeholders on payment that appropriately reflects resource cost for this service under the PFS payment methodology for the codes below. Our recent reviews of the overall cost for the service and specifically for the analysis component of the service related to the analysis services listed below have shown the costs to be similar, to the costs reflected in payment under the CY 2021 OPPS final rule for CPT code 0503T (analysis of fluid dynamics and simulated maximal coronary hyperemia, generation of estimated FFR model).

We look forward to continuing to seek out new data sources and ongoing conversations with stakeholders to help in updating the PE methodology and the underlying data to better reflect such services. In the meantime, we are finalizing payment based on contractor pricing for CPT code 92229.

After consideration of the comments, we are finalizing the work RVUs and direct PE inputs for CPT codes 92227 and 92228 as proposed and are finalizing contractor pricing for CPT code 92229 as detailed above.

(37) Auditory Evoked Potentials (CPT Codes 92584, 92650, 92651, 92652, and 92653)

CPT codes 92585 (*Auditory evoked potentials for evoked response audiometry and/or testing of the central nervous system; comprehensive*) and 92586 (*Auditory evoked potentials for evoked response audiometry and/or testing of the central nervous system; limited*) were identified through a RAW requested screen of CMS/Other Source codes with 2017 Medicare utilization over 30,000. Since these codes were last valued, audiologists, the primary reporter of these services, can now report Medicare services independently. As a result, the audiologist work for these services is moving from PE to work.

To better describe tests of auditory function, the CPT created CPT code 92584 (*Electrocochleography*) and replaced CPT codes 92585 and 92586

with four new services. We proposed the RUC-recommended work RVUs of 1.00 for CPT code 92584, 1.00 for CPT code 92651 (*Auditory evoked potentials; for hearing status determination, broadband stimuli, with interpretation and report*), 1.50 for CPT code 92652 (*Auditory evoked potentials; for threshold estimation at multiple frequencies, with interpretation and report*), and 1.05 for CPT code 92653 (*Auditory evoked potentials; neurodiagnostic, with interpretation and report*). CPT code 92650 (*Auditory evoked potentials; screening of auditory potential with broadband stimuli, automated analysis*) is a screening service and is not payable by Medicare. Therefore, we did not propose a valuation for this code; however, we noted we will display RUC-recommended values associated with the code.

We proposed the RUC-recommended direct PE inputs for this code family without refinement.

We received public comments on the Auditory Evoked Potentials codes (CPT codes 92584, 92650, 92651, 92652, and 92653). The following is a summary of the comments we received and our responses.

Comment: Commenters uniformly expressed support for our proposal to accept the RUC-recommended work RVUs and direct PE inputs for CPT codes 92584, 92651, 92652, and 92653.

Response: We appreciate the commenters' support.

Comment: Commenters requested that CMS publish the RUC-recommended work, PE, and malpractice RVUs for CPT code 92650. CPT code 92650 is a key component of universal newborn hearing screening programs that are widely furnished across the country. As such, it is critical for CMS to display the total RVUs—to include the RUC's recommended work, PE, and MP RVUs—to allow state Medicaid agencies, newborn hearing programs, and commercial insurers to appropriately value 92650.

Response: We did not propose values for CPT code 92650 because it is not a covered Medicare service. However, we will post the RUC-recommended RVUs for this code.

Comment: Commenters also noted a discrepancy between Addendum B—which indicates 92650 is an active code (status indicator "A")—and the narrative in the proposed rule, which states that 92650 is a screening code and not payable by Medicare.

Response: We acknowledge the error and have corrected it in Addendum B.

Comment: Commenters requested that CMS create a professional and technical

component (PC/TC) split for CPT codes 92650, 92651, 92652, and 92653. Other audiology codes including CPT codes 92585 and 92586, which are being replaced by 92650–92651, also included the PC/TC split.

Response: We appreciate commenters' suggestion that we create PC/TC splits for CPT codes 92650, 92651, 92652, and 92653. When we reviewed the code descriptors and the RUC recommendations for the codes, we noted that the direct PE for the new codes no longer includes clinical staff time. We also noted that the now deleted codes included clinical staff time that was assigned to an audiologist. We understood that the new codes represented changes to the service; audiologists were now able to bill independently for the work. During our review, we did not consider a PC/TC split and were surprised by the commenters' suggestion. Looking forward, we may consider this suggestion during future rulemaking.

After considering the comments, we are finalizing the work RVUs and direct PE inputs for the codes in the Auditory Evoked Potentials family as proposed.

(38) Vestibular Evoked Myogenic Potential Testing (CPT Codes 92517, 92518, and 92519)

In response to a 2017 RAW request, AMA staff compiled a list of CMS/Other codes with Medicare Utilization of 30,000 or more. CPT code 92585 (*Auditory evoked potentials for evoked response audiometry and/or testing of the central nervous system; comprehensive*) was identified as one of the codes. In 2018, the AMA/RUC referred CPT code 92585 and its family member CPT code 92586 (*Auditory evoked potentials for evoked response audiometry and/or testing of the central nervous system; limited*) to the February 2019 CPT Editorial Panel meeting to clarify code descriptors and define the terms "limited" and "comprehensive" auditory evoked potentials.

During the discussion of CPT codes 92585 and 92586 at the February 2019 CPT Editorial Panel meeting, specialty societies introduced a new procedure, Vestibular Evoked Myogenic Potential (VEMP), and suggested new coding. As a result, the CPT Editorial Panel created 3 new codes: CPT code 92517 (*Vestibular evoked myogenic potential testing, with interpretation and report; cervical (cVEMP)*); CPT code 92518 (*Vestibular evoked myogenic potential testing, with interpretation and report; ocular (oVEMP)*); and CPT code 92519 (*Vestibular evoked myogenic potential testing, with interpretation and report; cervical and ocular*). The RUC reviewed

the three codes at its April 2019 meeting.

We proposed the RUC-recommended work RVU of 0.80 for CPT codes 92517 and 92518. For CPT code 92519, we proposed the RUC-recommended work RVU of 1.20. We also proposed the RUC-recommended direct PE inputs without refinement for these three VEMP codes.

We received public comments on the Vestibular Evoked Myogenic Potential Testing family (CPT codes 92517, 92518, and 92519). The following is a summary of the comments we received and our responses.

Comment: Commenters wrote to express support for our proposal to accept the RUC-recommended work RVUs.

Response: We appreciate the support of commenters.

Comment: Commenters requested that CMS create a professional and technical component (PC/TC) split for the new codes. These commenters noted that audiologists who perform services in a facility setting require a mechanism to accurately report the professional component for their services.

Commenters cited other vestibular testing codes such as CPT codes 92548 and 92549 that have a PC/TC split.

Response: We appreciate commenters' interest in the creation of a PC/TC split for CPT codes 92517, 92518, and 92519. When we reviewed the code descriptors and the RUC recommendations, we noted that the direct PE for this set of new codes did not include clinical staff time. As a result, we did not consider a PC/TC split. However, as a result of the commenters' suggestion, we may consider the PC/TC split a topic of future rulemaking.

After consideration of public comments, we are finalizing the work RVUs and direct PE inputs for the codes in the Vestibular Evoked Myogenic Potential Testing family as proposed.

(39) Complete Electrocardiogram (CPT Codes 93000, 93005, and 93010)

In the CY 2019 PFS final rule (83 FR 59452), CPT code 93000 was nominated for review under the potentially misvalued code initiative. The RUC reviewed these services at the April 2019 meeting where the specialty societies explained that the family of electrocardiogram (ECG) codes were relatively unique in that CPT code 93000 (*Electrocardiogram, routine ECG with at least 12 leads; with interpretation and report*) is the global service which is billed in the hospital setting, CPT code 93005 (*Electrocardiogram, routine ECG with at least 12 leads; tracing only, without*

interpretation and report) is the technical component and CPT code 93010 is the professional component.

We proposed the RUC-recommended work RVU of 0.17, which is the current value for both codes, for CPT codes 93000 and 93010. CPT code 93005 is a PE only technical component code, and we proposed to maintain the current work RVU of 0.00.

For the direct PE inputs, we proposed the RUC-recommended values without refinement.

We did not receive public comments on this code family, and therefore, we are finalizing as proposed.

(40) External Extended ECG Monitoring (CPT Codes 93224, 93225, 93226, 93227, 93241, 93242, 93243, 93244, 93245, 93246, 93247, and 93248)

In September 2019, the CPT Editorial Panel replaced four Category III codes with 8 new Category I codes to report external electrocardiographic (ECG) recording by continuous rhythm recording and storage for periods longer than 48 hours. The existing Holter monitor codes (CPT codes 93224 through 93227) that include up to 48 hours of continuous recording were also reviewed as part of this family of services at the January 2020 RUC meeting.

We proposed the RUC-recommended work RVU for all 12 codes in the family. We proposed a work RVU of 0.39 for CPT codes 93224 (*External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation by a physician or other qualified health care professional*) and 93227 (*External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; review and interpretation by a physician or other qualified health care professional*); a work RVU of 0.50 for CPT codes 93241 (*External electrocardiographic recording for more than 48 hours up to 7 days by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation*) and 93244 (*External electrocardiographic recording for more than 48 hours up to 7 days by continuous rhythm recording and storage; review and interpretation*); and a work RVU of 0.55 for CPT codes 93245 (*External electrocardiographic recording for more than 7 days up to 15 days by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation*) and 93248 (*External electrocardiographic recording for more*

than 7 days up to 15 days by continuous rhythm recording and storage; review and interpretation).

The other six codes in the family are technical component codes that do not have a work RVU; we proposed a work RVU of 0.00 for CPT codes 93225 (*External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; recording (includes connection, recording, and disconnection)*), 93226 (*External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; scanning analysis with report*), 93242 (*External electrocardiographic recording for more than 48 hours up to 7 days by continuous rhythm recording and storage; recording (includes connection and initial recording)*), 93243 (*External electrocardiographic recording for more than 48 hours up to 7 days by continuous rhythm recording and storage; scanning analysis with report*), 93246 (*External electrocardiographic recording for more than 7 days up to 15 days by continuous rhythm recording and storage; recording (includes connection and initial recording)*), and 93247 (*External electrocardiographic recording for more than 7 days up to 15 days by continuous rhythm recording and storage; scanning analysis with report*).

For the direct PE inputs, we proposed to refine the clinical labor time for the “Perform procedure/service—NOT directly related to physician work time” (CA021) activity for CPT codes 93241, 93243, 93245, and 93247. We proposed to reduce the clinical labor time by 5 minutes for each code as the description of the tasks taking place in the recommended materials includes activities that are considered to be indirect PE under our methodology. The recommended materials stated that “incoming patch deliveries are sorted and distributed to work queues. The return box is opened, diary book removed, top housing is removed using a custom tool to expose USB connection, and device is plugged in to extract serial number and diagnostic logs.” These unboxing and filing activities are classified as administrative expenses under our PE methodology, and therefore, do not constitute clinical labor as a direct expense. We proposed to remove 5 minutes from the clinical labor to reflect these activities, which are indirect as opposed to direct costs. We also proposed to refine the equipment time for the desktop computer (ED021) to reflect these changes in the clinical labor time.

We noted an inconsistency in the RUC-recommended direct PE inputs for

CPT codes 93241 and 93245. Both of these codes are the “global component” for their respective group of codes, such that the direct costs for CPT codes 93242–93244 must sum up to the direct cost of CPT code 93241 and the direct costs for CPT codes 93246 through 93248 must sum up to the direct cost of CPT code 93245. However, CPT codes 93241 and 93245 each contained 2 pairs of non-sterile gloves (SB022) whereas their constituent technical component codes (93242 and 93246 respectively) only contained a single pair of non-sterile gloves. Therefore, we proposed to refine the quantity of the non-sterile gloves down to 1 pair for CPT codes 93241 and 93245 to correct this inconsistency. We noted we also considered increasing the quantity of the gloves to 2 as in CPT codes 93224 through 93227. However, we believed that only 1 pair of gloves would typically be needed to attach the ECGs, as the patient does not return to have the ECGs removed in CPT codes 93241 through 93248 as opposed to CPT codes 93224 through 93227 where the patient does return for ECG removal.

We proposed the RUC-recommended equipment time of 1,474 minutes for the Holter monitor (EQ127) equipment included in CPT codes 93224 and 93226, based on an equipment time of 34 minutes during the procedure along with 1,440 minutes (24 hours) of equipment time thereafter. We noted that an external stakeholder wrote to request that the number of minutes of equipment time for the Holter monitor be increased from 1,440 minutes (24 hours) to 2,160 minutes (36 hours) to reflect the average length of equipment time. The stakeholder wrote that the 24-hour and 48-hour test were each performed approximately 50 percent of the time and stated that the most accurate number of equipment minutes would be the average time. The RUC disagreed with the stakeholder’s request in its review because it concluded that there was insufficient evidence to warrant a change from the current 24 hours of equipment time; the RUC-recommended equipment time for the Holter monitor was based on the typical rather than the average service. We proposed the RUC-recommended equipment time of 1,474 minutes because our PE methodology is indeed based on the typical case, specifically what would be typical and reasonable and necessary for the procedure in question. Although we appreciated the feedback from the stakeholder, our previously finalized PE methodology establishes pricing based on the typical case. For a detailed explanation of the

direct PE methodology, including examples, we refer readers to the 5-year review of work RVUs under the PFS and proposed changes to the PE methodology CY 2007 PFS proposed notice (71 FR 37242) and the CY 2007 PFS final rule with comment period (71 FR 69629).

The recommendations for this family of codes contain one new supply item, the “extended external ECG patch, medical magnetic tape recorder” (SD339). We did not receive a traditional invoice to establish a price for this supply item, instead receiving pricing information from two sources: A weighted median of claims data with the cost of the other direct PE inputs removed, and a top-down approach calculating the cost of the supply per service based on summing the total costs of the health care provider and dividing by the total number of tests furnished. The former methodology yielded a supply price of approximately \$440 while the latter methodology produced an estimated supply price of \$416.85. Stakeholders also submitted a series of invoices from the clinical study marketplace with a price of \$595. Although we are appreciative of the data provided by the stakeholder, we require an invoice representative of commercial market pricing to establish a national price for a new supply or equipment item. Although we are aware of the unusual circumstances surrounding the “extended external ECG patch, medical magnetic tape recorder” in terms of how it uploads data to the health care provider, we cannot establish supply pricing based on an analysis of claims data and in absence of a representative invoice.

Therefore, we proposed to employ a crosswalk to an existing supply for use as a proxy price until we have an invoice to use for the “extended external ECG patch, medical magnetic tape recorder” item. We proposed to use the “kit, percutaneous neuro test stimulation” (SA022) supply as our proxy item at a price of \$413.24. Although this kit is not clinically similar to the extended external ECG patch, we believe that it is the closest match from a pricing perspective to employ as a proxy until we are able to arrive at an invoice that is representative of commercial market pricing. We welcomed the submission of invoices or other additional information for use in pricing the “extended external ECG patch, medical magnetic tape recorder” supply.

We received public comments on the codes in the External Extended ECG Monitoring family. The following is a

summary of the comments we received and our responses.

Comment: Several commenters supported the proposal of the RUC-recommended work RVUs for all of the codes in the External Extended ECG Monitoring family.

Response: We appreciate the support for our proposals from the commenters.

Comment: One commenter supported the proposal to refine the quantity of the non-sterile gloves down to 1 pair for CPT codes 93241 and 93245 to correct an inconsistency in the RUC recommendations. The commenter agreed that this corrected a summing error.

Response: We appreciate the support for our proposals from the commenter.

Comment: Several commenters disagreed with the proposal to reduce the clinical labor time for the “Perform procedure/service—NOT directly related to physician work time” (CA021) activity for CPT codes 93241, 93243, 93245, and 93247 by 5 minutes. Commenters stated that delivery and assignment tasks may be fair to characterize as administrative, but accessing the device, connecting it, and downloading data is more akin to the CA032 activity code (“Scan exam documents into PACS. Complete exam in RIS system to populate images into work queue.”) when clinical data is put into the system. Commenters recommended that CMS reduce clinical staff time by 1 minute, not 5, to account for the delivery sorting, distribution, and box opening.

Response: We continue to disagree with the commenters and maintain that the proposed reduction of 5 minutes of clinical labor time is warranted as the activities listed by commenters are forms of indirect PE. Data entry tasks such as connecting a device and downloading data are typically considered to be forms of indirect PE unless they are directly allocable to a particular patient for a particular service. We do not agree that the suggested comparison to the CA032 activity code would be accurate for these services, as the CA032 activity code requires the use of a PACS workstation, which is not present in any of these CPT codes.

Comment: Several commenters disagreed with CMS’ position regarding equipment time for the wearable holter monitor (EQ127) device. Commenters stated that they had presented evidence to the RUC demonstrating that about half of the services described by CPT code 93226 involve 24 hours of monitoring and about half are for 48 hours; based on this, the commenter suggested that the “typical” service was

36 hours—the average of 24 and 48 hours. The commenter stated that the RUC and CMS did not agree as both take the view that the “typical” service requires a binary choice between 24 and 48 hours. The commenter stated that they believe a more accurate methodology for valuing equipment time is to look to objective and quantifiable data such as the average number of hours of use rather than the “either/or” methodology which inevitably undervalues approximately 50 percent of tests.

Response: Although we appreciated the feedback from the stakeholder, as we stated in the proposed rule, our previously finalized PE methodology establishes pricing based on the typical case and not the average result. For a detailed explanation of the direct PE methodology, including examples, we refer readers to the 5-year review of work RVUs under the PFS and proposed changes to the PE methodology CY 2007 PFS proposed notice (71 FR 37242) and the CY 2007 PFS final rule with comment period (71 FR 69629).

Comment: We received many comments regarding our proposal to price the “extended external ECG patch, medical magnetic tape recorder” (SD339) supply via a proxy item at a price of \$413.24. Several commenters supported the proposed proxy pricing, stating that because the independent diagnostic testing facilities that furnish the extended ECG services are also the manufacturers of the devices, there are no invoices that reflect the sale or purchase of this supply item or the related software required to scan and analyze the extended ECG data recorded on this patch. These commenters stated that CMS should finalize the pricing as proposed and advised caution when reviewing pricing for what appear to be extended ECG system components, and to assess whether the invoiced items represent the supplies and equipment required to furnish the typical case of the service described by the new codes.

Other commenters strongly disagreed with the proposed proxy pricing for the SD339 supply. Commenters stated that they were alarmed that CMS’s proposal would result in payment rates far in excess of the costs incurred when performing these services in direct violation of CMS’s stated principles for reimbursement rates. One commenter stated that CMS proposed rates at more than four times where they should be valued under its standard PE cost accounting methodology. Several commenters stated that the SD339 patch was available for purchase at roughly \$100 to \$120 if bought in bulk quantities, which the commenters stated

made sense because these ECG patches are not high tech equipment. Several commenters were concerned that CMS had not followed its traditional methodology for supply pricing by valuing the SD339 patch without receiving an invoice submission. Commenters stated that the proposed proxy pricing incorporated the research and development costs associated with developing the patch, which are typically indirect costs under the PE methodology, and CMS was therefore double-paying for these expenses by including them as a direct cost. Commenters also raised concerns that providers of these services might be able to make up to \$200 per patient through the sale of discounted patch kits by profiting from the spread between the CMS payment and the much lower cost of the product. Commenters stated that this could create an incentive for significant overutilization of these services. One commenter submitted a lengthy report suggesting that CMS reject the proxy supply input approach and value the external ECG patch not as a supply but as a form of reusable equipment. This commenter submitted a series of invoices to support their contention that the external ECG patch would be more accurately priced as a reusable form of equipment at a much lower reimbursement rate.

One commenter who supported the proposed proxy pricing later submitted a second comment responding to the commenters’ criticisms of the proposal. This commenter stated that the devices and systems described by the invoices presented by other commenters were not consistent with the diagnostic system typically used to furnish the services described by these new codes. The commenter stated that there were systemic differences between the extended external ECG patch and the items described by the invoices referenced by other commenters. The commenter reiterated that the proposed proxy price should be finalized as it is supported by peer-reviewed clinical evidence from the specialty societies.

Response: Given the conflicting information and assertions provided by commenters, we are unable to identify accurate national pricing for the “extended external ECG patch, medical magnetic tape recorder” (SD339) supply. To allow additional time to receive more pricing information, we are finalizing contractor pricing for CY 2021 for the four codes that include this supply input (CPT codes 93241, 93243, 93245, and 93247). We will retain the SD339 supply in our pricing database while removing the proxy price pending additional information. We welcome the

submission of additional invoices or other pricing information to assist us to determine the most accurate values for these services.

After consideration of the comments, we are finalizing the work RVUs and direct PE inputs for CPT codes 93224, 93225, 93226, 93227, 93242, 93244, 93246, and 93248. We are finalizing contractor pricing for CPT codes 93241, 93243, 93245, and 93247 as detailed above.

(41) Complete Transthoracic Echocardiography (TTE) With Doppler (CPT Code 93306)

In the CY 2019 PFS final rule (83 FR 59500), a submitter nominated CPT code 93306 (*Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, complete, with spectral Doppler echocardiography, and with color flow Doppler echocardiography*) as potentially misvalued, citing GAO, MedPAC, and Urban Institute reports that suggest the work RVUs are overstated. Although the code was most recently surveyed in 2016, the specialty societies and the RUC stated that there has been a change in the technique and technology used to perform the procedure, so they resurveyed the code. The RUC recommended decreasing the work RVU from 1.50 to 1.46 and we proposed this value.

Although we proposed the RUC-recommended direct PE inputs without refinement, we noted that the RUC's recommendation included both 25 mL and 50 mL of ultrasound transmission gel. We proposed a supply quantity of 25 mL and sought clarification on the correct amount.

We received public comments on the proposed valuation of CPT code 93306. The following is a summary of the comments we received and our responses.

Comment: A few commenters were supportive of our proposals for the work RVUs and direct PE inputs for the codes in this family.

Response: We appreciate the support for our proposals from the commenters.

Comment: A few commenters confirmed that the correct supply quantity of the ultrasound transmission gel was 25 mL.

Response: We appreciate the clarification and are finalizing the ultrasound transmission gel supply quantity as proposed.

After consideration of the public comments, we are finalizing the work RVUs and direct PE inputs for CPT code 93306 as proposed.

(42) Pacing Heart Stimulation (CPT Code 93623)

Review of CPT code 93623 (*Programmed stimulation and pacing after intravenous drug infusion (List separately in addition to code for primary procedure)*), was prompted by the Relativity Assessment Workgroup Medicare utilization screen of over 30,000 claims in a year. This service is to create an arrhythmia by an intravenous drug infusion and it is an add-on code with 60 minutes of total time and a current work RVU of 2.85.

The RUC recommended the 25th percentile survey value of 2.04 work RVUs and 20 minutes of intraservice time.

The revision of CPT code 93623 physician's time adjusting from the current 60 minutes to 20 minutes is a significant change. We noted that we do not believe the RUC-recommended work RVU appropriately accounts for the substantial reductions in the surveyed work times for the procedure. Although we do not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we noted that we believe that since the two components of work are time and intensity, significant decreases in time should be appropriately reflected in decreases to work RVUs. In the case of CPT code 93623, we believed that it would be more accurate to propose a work RVU of 0.98 based on CPT code 76810 (*Ultrasound, pregnant uterus, real time with image documentation, fetal and maternal evaluation, after first trimester (> or = 14 weeks 0 days), transabdominal approach; each additional gestation (list separately in addition to code for primary procedure)*) with 20 minutes of intraservice time. We proposed a work RVU of 0.98 with 20 minutes of intraservice time for CPT code 93623.

This CPT code is a facility-only service and has no direct PE inputs.

We received public comments on the Pacing Heart Stimulation CPT code 93623. The following is a summary of the comments we received and our responses.

Comment: Commenters disagreed with our selection of CPT code 76810 as an equivalent comparator to CPT code 93623 in regard to the work RVUs and the number of total minutes derived from the 'CMS Other' category listed in CMS's physician time file. Commenters stated that the nature of the type of work and intensity for the service described by CPT code 76810 are vastly different from Pacing Heart Stimulation. The commenters strongly suggested that

CMS accept the 25th percentile work RVU of 2.04 from their recent survey of 46 cardiologists.

Response: We continue to believe that CPT code 76810 is a valid reference for purposes of valuing CPT code 93623, and that the physician time change from the current 60 minutes to 20 minutes indicates a reduction in work RVUs. As we have discussed in previous rules, we continue to believe that our use of the existing time values as a point of comparison is critical to the integrity of the current relative value system and we do not accept the characterizing of a time source as "CMS-Other" as being less valid. As for CPT code 76810 having only total time instead of intraservice time, for add-on codes, total time is almost always the equivalent of intraservice time, and both of these add-on codes have 20 minutes of total time. We do not regard the 20 minutes of physician time assigned to CPT code 76810 to be any different from the 20 minutes of physician time with CPT code 93623. While the clinical nature of the work for CPT code 76810 is different from the clinical nature of the work for CPT code 93623, our review of the assigned RVU is based on a comparison of the physician times and intensity assigned to each code, which are the same.

After consideration of the public comments, we are finalizing the work and time values for CPT code 93623 as proposed.

(43) Intracardiac Echocardiography (ECG) (CPT Code 93662)

The review of CPT code 93662 (*Intracardiac echocardiography during therapeutic/diagnostic intervention, including imaging supervision and interpretation (List separately in addition to code for primary procedure)*), was prompted by the Relativity Assessment Workgroup Medicare utilization screen of over 10,000 claims in a year that had an increase in volume by 100 percent between the 2012 to 2017. This procedure has since changed from its last review, in its reduced use of fluoroscopy, now replaced with ultrasound that create arrhythmia mapping systems with intracardiac echo images processed to produce 3-dimensional electroanatomical maps. The physician can now visualize better and have more accurate details for more effective catheter ablation for a wide range of arrhythmias. CPT code 93662 currently has a work RVU of 2.80 with 5 minutes of preservice evaluation time, 55 minutes of intraservice time, 10 minutes of immediate postservice time, and 70 minutes of total time.

The survey resulted in a median intraservice time of 25 minutes, a significant shift from the current intraservice time of 55 minutes. The RUC recommended a work RVU of 2.53 and 25 minutes of intraservice time for add-on CPT code 93662. We noted that we do not believe the RUC-recommended work RVU appropriately accounts for the substantial reductions in the surveyed work times for the procedure. Although we do not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believed that since the two components of work are time and intensity, significant decreases in time should be appropriately reflected in decreases to work RVUs. CPT code 92979 (*Endoluminal imaging of coronary vessel or graft using intravascular ultrasound (ivus) or optical coherence tomography (oct) during diagnostic evaluation and/or therapeutic intervention including imaging supervision, interpretation and report; each additional vessel (list separately in addition to code for primary procedure)*), with 1.44 work RVUs and 25 minutes of intraservice time, is a good equivalent comparator code in light of the significant physician time reduction from 55 minutes. A similarly proportioned reduction of physician intraservice time from the current 55 minutes to the surveyed 25 minutes, if applied to the current work RVU would result in a value much lower than our reference CPT code 92979's work RVU, so we proposed a work RVU of 1.44 and 25 minutes of intraservice time for add-on CPT code 93662.

This CPT code is a facility only service and has no direct PE inputs.

We received public comments on the service of Intracardiac Echocardiography (ECG) CPT code 93662. The following is a summary of the comments we received and our responses.

Comment: The AMA RUC disagreed with our selection of CPT code 92979 as an equivalent comparator code to CPT code 93662 because of ECG's higher technical nature, and its use of anesthesia which supports a higher intensity and a difference in the nature of the work. As in their AMA RUC recommendation, they referenced their selection of CPT code 34713 (*Percutaneous access and closure of femoral artery for delivery of endograft through a large sheath (12 French or larger), including ultrasound guidance, when performed, unilateral (List separately in addition to code for primary procedure)*) with a work RVU of

2.50 and an intraservice time of 20 minutes. The commenters strongly suggested that CMS accept their comparison code and the 25th percentile work RVU of 2.53 from their recent survey of 42 cardiologists.

Response: We consider CMS' selection of CPT code 92979 to be a more appropriate comparator to value CPT code 93662, than the AMA RUC's selection of comparator CPT code 34713, and believe that the physician time change from the current 55 minutes to 25 minutes indicates a reduction in work RVUs of greater than 0.27. We also do not agree with the AMA RUC that the increase in ECG's work intensity supports the AMA RUC recommended 2.53 work RVUs (90% of the current value). The substantial reduction in physician time (45%) and increase in work intensity, is not reflected in the AMA RUC-recommended reduction of work RVUs. CPT code 92979's intraservice time of 25 minutes and 1.44 work RVUs is a better equivalent that reflects the halving on the physician's current time and we do not believe that the work intensity has substantial change enough to justify the AMA RUC's recommended work value. We note that CPT code 93662's work value is for the professional component (26) that is set in the fee schedule and that CPT code 93622's technical component and global are also add-on codes and are carrier-priced, meaning that if the health care provider performs both components, their final payment will be more than the work RVUs finalized here.

After consideration of the public comments, we are finalizing a work RVU of 1.44 with 25 minutes of intraservice time for CPT code 93662 as proposed.

(44) Ventricular Assist Device (VAD) Interrogation (CPT Code 93750)

The review of CPT code 93750, (*Interrogation of ventricular assist device (VAD), in person, with physician or other qualified health care professional analysis of device parameters (e.g., drivelines, alarms, power surges), review of device function (e.g., flow and volume status, septum status, recovery), with programming, if performed, and report*) was prompted by the Relativity Assessment Workgroup Medicare utilization screen of over 10,000 claims in a year and had had an increased in volume by 100 percent between the 2012 to 2017. CPT code 93750 currently has a work RVU of 0.92 with 30 minutes of intraservice time.

For physician times, the societies' survey for CPT code 93750 yielded 6 minutes preservice time, 10 minutes

intraservice time, 7 minutes immediate post-service time, and 23 minutes of total time. The 25th percentile surveyed work RVU was 0.96. The RUC compared the survey code to CPT code 78598 (*Quantitative differential pulmonary perfusion and ventilation (e.g., aerosol or gas), including imaging when performed*) (0.85 work RVU and 5 minutes of preservice time, 10 minutes of intraservice time, 9 minutes of immediate postservice time, and total time of 24 minutes). The RUC recommended crosswalking the work RVU of 0.85 from CPT code 78598 to 93750.

CPT code 93289 (*Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified health care professional, includes connection, recording and disconnection per patient encounter; single, dual, or multiple lead transvenous implantable defibrillator system, including analysis of heart rhythm derived data elements*), with 0.75 work RVUs and 5 minutes of preservice time, 10 minutes of intraservice time, 8.5 minutes of immediate postservice time, and total time of 23.5 minutes, we noted we believe is a more precise comparator code. CPT code 93289's intraservice times, pre and post times, and total times are almost identical to CPT code 93750's survey times; therefore, we proposed a work RVU of 0.75 and 23 minutes of total time for CPT code 93750.

The PE Subcommittee corrected the equipment times based on the formulas as provided by CMS. In addition, the PE Subcommittee changed the clinical staff type for direct labor item ID CA013 Prepare Room, Equipment and Supplies, from an RN to the RN/LPN/MTA blend and the direct equipment item ID EQ168 light, exam was removed from CPT code 93750. We proposed to accept the RUC-recommended direct PE inputs.

We received public comments on the Ventricular Assist Device (VAD) Interrogation CPT code 93750. The following is a summary of the comments we received and our responses.

Comment: The AMA RUC surveyed CPT code 93750 and initially reviewed their surveyed 25th percentile recommendation of 0.96 work RVUs for this code, finding it to be overestimated, since the current work RVU value is 0.92 for the current 30 minutes of physician time. Instead, they selected CPT code 78598 as a comparator code with a work RVU of 0.85. Commenters disagreed with our selection of CPT code 93289 with a work RVU of 0.75 as inappropriately low, but they noted that they had originally reviewed CPT code

93289 only to abandon this code on the basis that it did not involve device programming.

Response: We disagree with commenters that our selection of comparator CPT code 93289 is inappropriate. The reduction in time from 30 minutes to 23 minutes suggests that the work RVUs should be decreasing, and the survey's 25th percentile reflects an increase. We do not believe the RUC-recommended work RVU appropriately accounts for the substantial reductions in the work times for the procedure. Although we do not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we continue to believe that, since the two components of work are time and intensity, significant decreases in time should be appropriately reflected in decreases to work RVUs; and that CPT code 93289 is a more appropriate comparator to CPT code 93750.

After consideration of the public comments, we are finalizing a work RVU of 0.75 with a total time of 23 minutes for CPT code 93750, as proposed.

(45) Spirometry (CPT Codes 94010 and 94060)

CPT code 94010 (*spirometry, including graphic record, total and timed vital capacity, expiratory flow rate measurement(s), with or without maximal voluntary ventilation*) and CPT code 94060 (*Bronchodilation responsiveness, spirometry as in 94010, pre- and post-bronchodilator administration*) were identified as part of a Relativity Assessment Workgroup (RAW) review of action plans on the status of services that were RUC referrals to develop CPT Assistant articles. These codes were recommended to be surveyed.

We proposed the RUC-recommended work RVU of 0.17 for CPT code 94010 (*spirometry, including graphic record, total and timed vital capacity, expiratory flow rate measurement(s), with or without maximal voluntary ventilation*) and the RUC-recommended work RVU of 0.22 for CPT code 94060 (*Bronchodilation responsiveness, spirometry as in 94010, pre- and post-bronchodilator administration*). We proposed the RUC-recommended direct PE inputs for this code family without refinements.

We did not receive public comments on this code family, and are finalizing as proposed.

(46) Exercise Test for Bronchospasm (CPT Codes 94619, 94617, 94618, and 94621)

In 2018, the CPT Editorial Panel created CPT code 94617 (*Exercise test for bronchospasm, including pre- and post-spirometry, electrocardiographic recording(s), and pulse oximetry*), and CPT code 94618 (*Pulmonary stress testing (e.g., 6-minute walk test), including measurement of heart rate, oximetry, and oxygen titration, when performed*) from the now deleted CPT code 94620 (*Pulmonary stress testing; simple (e.g., 6-minute walk test, prolonged exercise test for bronchospasm with pre- and post-spirometry and oximetry)*), and revised CPT code 94621 (*Cardiopulmonary exercise testing, including measurements of minute ventilation, co2 production, o2 uptake, and electrocardiographic recordings*) to better describe the specialty's pulmonary exercise test. Shortly after the creation and revision of these codes, the specialty society became aware of some health care providers performing CPT code 94617 without ECG monitoring, so to more accurately account for this work without the ECG monitoring, the CPT Editorial Panel proposed to establish CPT code 94619 with the descriptor, (*Exercise test for bronchospasm, including pre- and post-spirometry and pulse oximetry; without electrocardiographic recording(s)*). For the October 2019 RUC meeting, the specialty societies surveyed CPT code 94619, and included a request to reaffirm the values of the rest of the codes in the code family.

For CPT code 94619, the surveyed physician time yielded 5 minutes of preservice time, 9 minutes of intraservice time, followed by 10 minutes of immediate post-service time, for a total time of 24 minutes. This distribution of physician times is of course very similar to the times for CPT code 94617, total time of 26 minutes, except without the task of including an electrocardiographic recording. The RUC recommended the survey's median work RVU of 0.49 for CPT code 94619.

We proposed the RUC's recommendation of a work RVU of 0.49 and a total physician time of 24 minutes for CPT code 94619.

This CPT family of codes that includes CPT code 94619, are CPT codes 94617, 94618, and 94621 and there are no changes to their physician service times, no change to their descriptors, nor their work RVUs, and remain as they currently are. The specialty societies reaffirmed these

current valuations and we proposed to accept them without change.

We proposed the RUC-recommended PE changes without refinement.

We did not receive public comments on this provision, and are finalizing as proposed.

(47) Evaluation of Wheezing (CPT Codes 94640, 94667, 94668, and 94669)

At the April 2019 RUC meeting, four PE only CPT codes from the Evaluation of Wheezing code family were reviewed. The codes included CPT codes 94640 (*Pressurized or nonpressurized inhalation treatment for acute airway obstruction for therapeutic purposes and/or for diagnostic purposes such as sputum induction with an aerosol generator, nebulizer, metered dose inhaler or intermittent positive pressure breathing (IPPB) device*), 94667 (*Manipulation chest wall, such as cupping, percussing, and vibration to facilitate lung function; initial demonstration and/or evaluation*), 94668 (*Manipulation chest wall, such as cupping, percussing, and vibration to facilitate lunch function; subsequent*), and 94669 (*Mechanical chest wall oscillation to facilitate lung function, per session*).

We proposed the RUC-recommended direct PE inputs for the four PE only codes. The RUC did not recommend work RVUs and we proposed to maintain the current work RVU of 0.00 for all four codes.

We did not receive public comments on this code family, and are finalizing as proposed.

(48) Exhaled Nitric Oxide Measurement (CPT Code 95012)

In January 2019, the RAW reviewed services with 2017 Medicare utilization of 10,000 or more that had increased by at least 100 percent from 2012 through 2017. The RUC recommended that CPT code 95012 (*Nitric oxide expired gas determination*) be surveyed for the April 2019 meeting. We proposed the direct PE inputs for CPT code 95012 without refinement. CPT code 95012 is a PE-only code with no work RVU, and we proposed to maintain the current work RVU of 0.00.

We did not receive public comments on this code family and are finalizing as proposed.

(49) Acupuncture Services (CPT Codes 97810, 97811, 97813, and 97814)

The CPT Editorial Panel created two new codes and two new add-on codes in 2004 to describe the appropriate time or additional time and levels of service that can be performed using acupuncture and electroacupuncture,

acupuncture therapy with electrical stimulation. These codes were designated as noncovered services since Medicare did not reimburse for acupuncture services at the time. In January 2020, we issued a decision memo stating that Medicare will cover acupuncture for chronic low back pain under section 1862(a)(1)(A) of the Act (CAG-00452N). This was reflected in the April 2020 PFS Quarterly Update which changed CPT codes 97810 through 97814 to active payment status (CMS Change Request 11661). Because we had never conducted a review of these four acupuncture codes, the CY 2020 payment rate consisted of the work RVUs recommended by the RUC in 2004.

For CY 2021, we proposed to establish work RVUs for these four acupuncture codes based on a pair of crosswalks to two recently reviewed codes in the Dry Needling family. We proposed a work RVU of 0.48 for CPT codes 97810 (*Acupuncture, 1 or more needles; without electrical stimulation, initial 15 minutes of personal one-on-one contact with the patient*) and 97813 (*Acupuncture, 1 or more needles; with electrical stimulation, initial 15 minutes of personal one-on-one contact with the patient*) based on a crosswalk to CPT code 20561 (*Needle insertion(s) without injection(s); 3 or more muscles*). We proposed a work RVU of 0.32 for CPT codes 97811 (*Acupuncture, 1 or more needles; without electrical stimulation, each additional 15 minutes of personal one-on-one contact with the patient, with re-insertion of needle(s)*) and 97814 (*Acupuncture, 1 or more needles; with electrical stimulation, each additional 15 minutes of personal one-on-one contact with the patient, with re-insertion of needle(s)*) based on a crosswalk to CPT code 20560 (*Needle insertion(s) without injection(s); 1 or 2 muscle(s)*).

CPT codes 20560 and 20561 are clinically similar services associated with dry needling that were reviewed last year for CY 2020. We finalized work RVUs of 0.32 and 0.48 respectively for these two codes following our review of their associated RUC recommendations, while noting that dry needling services were non-covered by Medicare unless otherwise specified through a national coverage determination (NCD) (84 FR 62722 through 62724). Like the acupuncture codes, CPT codes 20560 and 20561 were updated to active payment status in the April 2020 PFS Quarterly Update to reflect the Medicare coverage of acupuncture for chronic low back pain. We noted that CPT codes 97810 and 97813 share the identical work time values with CPT code 20561,

and that CPT codes 97811 and 97814 differ from CPT code 20560 by only 1 minute of work time, 15 minutes as compared to 16 minutes. Although we did not imply that codes with similar work times must equate to a one-to-one or linear relationship in the valuation of work RVUs, we believed that, since the two components of work are time and intensity, clinically related services with similar intensities and work times should, generally speaking, be valued similarly. Due to the similar clinical nature of these services and their nearly identical work times, we believed that it is more accurate to propose crosswalking CPT codes 97810 through 97814 to the work RVUs of the Dry Needling codes, which were finalized last year, as opposed to proposing work RVUs from 2004, which were never reviewed by CMS.

The RUC did not make any recommendations and we did not propose any changes to the direct PE inputs for CPT codes 97810 through 97814.

We received public comments on the codes in the Acupuncture Services family. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the proposed work RVUs assigned to the acupuncture codes and appreciated CMS' recent coverage determination. The commenters stated that it is important for CMS to provide coverage and adequate reimbursement to a broad array of services that provide non-opioid pain management alternatives.

Response: We appreciate the support for our proposals from the commenters.

Comment: Many commenters were supportive of the Medicare decision to provide coverage for acupuncture services but disagreed with the proposed valuation crosswalk to two recently reviewed codes in the Dry Needling family. Commenters stated that the dry needling services were not clinically similar to the acupuncture codes as CMS had claimed in the proposed rule, as the dry needling codes do not reflect the training or expertise required to perform an acupuncture treatment. Commenters stated that acupuncture is more physically and mentally intensive than inserting a dry needle into a tender muscle. Commenters stated that the higher skill and knowledge set that is required to perform acupuncture therapy is evidenced in the licensure requirements to perform these services, whereas there are no standardized training curriculums or accreditation programs for dry needling. Commenters stated

that the current acupuncture therapy codes are specifically intended to include pre- and post-service intervention assessment/evaluation, as per the CPT guidelines, which is lacking in the dry needling codes. Many commenters stated that if Medicare rates are reduced for acupuncture services then providers of acupuncture services will not be able to afford to treat Medicare beneficiaries and this would create additional barriers to care.

Response: We appreciate the detailed feedback from the commenters detailing the differences between acupuncture and dry needling services. After reviewing the comments, we agree that there are significant differences between these services and it would not be appropriate to use the proposed crosswalk for valuation. Therefore, we are not finalizing our proposal to establish work RVUs for these four acupuncture codes based crosswalks to CPT codes 20560 and 20561. We are instead finalizing the current CY 2020 work RVUs of 0.60 for CPT code 97810, 0.50 for CPT code 97811, 0.65 for CPT code 97813, and 0.55 for CPT code 97814. As this valuation is based on a RUC review that took place in 2005, we welcome the prospect of an updated formal review or other new information regarding the valuation of these services for potential future rulemaking.

(50) Interim Final Rule With Comment Period for Coding and Payment for Personal Protective Equipment (PPE) (CPT Code 99072)

a. Background

Following the publication of the CY 2021 PFS proposed rule, the CPT Editorial Panel approved the creation of CPT code 99072 (*Additional supplies, materials, and clinical staff time over and above those usually included in an office visit or other non-facility service(s), when performed during a Public Health Emergency, as defined by law, due to respiratory-transmitted infectious disease*). During the comment period for the proposed rule, stakeholders contacted CMS and stated that practices have incurred significant costs of maintaining safe offices, particularly in implementing specific infection control measures related to screening patients, purchasing personal protective equipment (PPE), and implementing office redesign measures to ensure social distancing. Stakeholders requested that CMS immediately consider implementation of relative values and payment (outside of budget neutrality) for the newly created CPT code 99072 in recognition of these costs.

Stakeholders submitted recommended direct PE inputs associated with CPT code 99072 designed to capture the additional supplies, materials, and clinical staff time over and above the PE inputs included in an office visit or other nonfacility service(s) when the office visit or other non-facility service(s) are rendered during a public health emergency (PHE). Stakeholders submitted more than 500 invoices associated with PPE supplies and requested that CMS use them to update their pricing, as well as requested that N95 masks should be added to the direct PE supply list. Stakeholders stated that payment for these additional costs should be fully funded and not be subject to budget neutrality, and that CMS could use remaining money from the CARES Act funding to pay physicians for these costs and/or recognize the decreased expenditures during the early months of the pandemic to waive budget neutrality. Stakeholders also stated that CMS should review the utilization assumptions for equipment due to decreased practice capacity during the PHE for COVID-19 and that any modifications to the equipment utilization during the PHE should not be subject to budget neutrality.

b. Interim Final Policy

We appreciate the submission of this additional information regarding CPT code 99072, especially the large number of invoice submissions for use in updating the pricing of PPE supplies. We share in the concerns of the stakeholders regarding the additional costs borne by providers during the public health emergency. After reviewing the information provided by the stakeholders, we are finalizing CPT code 99072 as a bundled service on an interim basis. We believe that use of these additional forms of PPE would be inherent to the furnishing of separately paid services under these practitioner/patient interactions. We agree with the stakeholders that there have been additional costs for providers as part of the PHE for COVID-19; however payment for the services as described under CPT code 99072 are always bundled into payment for other services and payment for them is subsumed by the payment for the services to which they are incident.

In recognition of the increased market-based costs for certain types of PPE, we are finalizing on an interim basis several supply pricing increases using the invoices submitted along with CPT code 99072. We did not previously include the N95 mask in our supply database and we are finalizing on an

interim basis its addition under supply code SD344 at the median price of \$2.36 based on 94 submitted invoices. We are also finalizing on an interim basis an increase in the price of the surgical mask (SB033) supply to the median price of \$0.43 based on 259 submitted invoices and an increase in the price of the surgical mask with face shield (SB034) supply to the median price of \$3.40 based on 49 submitted invoices. We are using the median price as opposed to the average price of the submitted invoices as the median was more typical of market-based pricing and avoided the effect of outlier prices. The increased cost associated with these forms of PPE will be reflected in payment for services that include these supply inputs.

We also received additional invoices associated with non-sterile gloves (SB022), nitrile gloves (SB023), patient gowns (SB026), and sterile surgical gowns (SB028). We are not finalizing changes in the prices of these supplies at this time due to concerns that we had regarding the data on the submitted invoices. The non-sterile gloves and nitrile gloves contained median prices which were significantly lower than their CY 2021 prices, \$0.05 as compared to \$0.25 for the non-sterile gloves and \$0.06 as compared to \$1.01 for the nitrile gloves. The sterile surgical gowns followed the same pattern with a median invoice price of \$3.39 as compared to the CY 2021 price of \$5.02. We do not believe that the typical price for these supplies has undergone significant decreases as a result of the PHE and we are not finalizing any price changes at this time pending additional discussion with stakeholders. For the patient gown (SB026) supply, the median price of the 43 submitted invoices was \$0.51 and the average price was \$0.67. We believe that this additional data supports the current CY 2021 price of \$0.58 and we are not finalizing a price change since the invoice data suggested that the current price remains typical during the PHE. We also received a small quantity of invoices associated with other PPE supplies but we did not believe that we had enough data in these cases to determine typical pricing and therefore we are not finalizing any additional price changes to supply items.

As described in section VIII. of this final rule, Regulatory Impact Analysis, in accordance with section 1848(c)(2)(B)(ii)(II) of the Act, if revisions to the RVUs cause expenditures for the year to change by more than \$20 million, we make adjustments to ensure that expenditures do not increase or decrease by more

than \$20 million. We do not have authority to waive the budget neutrality provision for CPT code 99072 unless explicitly stated by statute. In addition, as described in section II.B. of this rule (PE section), we also disagree with the stakeholders that utilization assumptions for equipment should be revisited as part of the public health emergency. While we agree that many services had a reduced volume of Medicare beneficiaries at times during CY 2020, we note that equipment costs under the PFS are amortized across the full useful life of the equipment, which in the vast majority of cases is 5–10 years. We believe that it would distort relativity to apply a temporary decrease in utilization caused by the PHE to the pricing structure of the equipment's full useful life duration. We also note that we do not have statutory authority to exempt any modifications to the equipment utilization assumptions from budget neutrality calculations.

c. Waiver of Proposed Rulemaking Provisions

Under the Administrative Procedure Act (APA), 5 U.S.C. 553(b), an agency is generally required to publish a notice and solicit comment on a proposed rule in the **Federal Register** before issuing a final rule. Similarly, section 1871(b)(1) of the Act requires the Secretary to provide for notice of a proposed rule in the **Federal Register** and provide a period of not less than 60 days for public comment. The APA provides for exceptions from the notice and comment requirements, *see* 5 U.S.C. 553(b)(B); in cases in which the APA exceptions apply, section 1871(b)(2)(C) of the Act provides for exceptions from the notice and 60-day comment period requirements of the Act as well. Section 553(b)(B) of Title 5 and section 1871(b)(2)(C) of the Act authorize an agency to dispense with normal rulemaking requirements if the agency for good cause finds that the notice and comment process is impracticable, unnecessary, or contrary to the public interest.

We find that there is good cause to waive the notice and comment requirements under sections 553(b)(B) of the APA and section 1871(b)(2)(C) due to the September 2020 creation of CPT code 99072 which did not allow for its inclusion in the proposed rule. We believe that establishing payment for this service on an interim basis will allow for its provision as a bundled service during the public health emergency. We find that it would be impracticable and contrary to the public interest to undergo notice and comment procedures before finalizing these

payment policies on an interim basis. We also find that delaying implementation of these policies is unnecessary because the impact on other PFS services for 2021 is negligible and the practical alternative for this treatment is no payment under Medicare Part B. In either case, payments for 2022 and beyond would be informed by public comments.

Therefore, we find good cause to waive the notice of proposed rulemaking as provided under section 1871(b)(2)(C) of the Act and section 533(b)(B) of the APA and to issue this interim final rule with an opportunity for public comment. We are providing a 60-day public comment period as specified in the **DATES** section of this document. We are seeking interim final comment on our general approach to CPT code 99072, as well as how to think about services that may not include these specific PPE items but for which there are incurred costs as described by the stakeholders. Additionally, we will consider the market cost for these supply items relative to the changing conditions in the market, as appropriate.

(51) Chronic Care Management Services (CPT Code 99439 and HCPCS Code G2058)

We established payment for HCPCS code G2058 (*Chronic care management services, each additional 20 minutes of clinical staff time directed by a physician or other qualified healthcare professional, per calendar month*) in the CY 2020 PFS final rule (84 FR 62690). At the January 2020 RUC meeting, specialty societies requested a temporary crosswalk through CY 2021 between the value established by CMS for HCPCS code G2058 and the value of new CPT code 99439 (with a descriptor identical to G2058). The Chronic Care Management code family will be resurveyed during CY 2020 and is expected to be presented for review as part of the 2022 RUC review process.

For CY 2021, we proposed the RUC-recommended work RVU of 0.54 and the RUC-recommended direct PE inputs for CPT code 99439.

We received several public comments all in support of our proposed valuations for Chronic Care Management Services (CPT code 99439 and G2058). After consideration of the comments, we are finalizing as proposed.

(52) External Counterpulsation (HCPCS Code G0166)

In the CY 2020 PFS proposed rule (84 FR 40516), an external stakeholder nominated HCPCS code G0166 as potentially misvalued due to concerns

that the PE RVUs for this code did not fully reflect the total resources required to deliver the service and CMS proposed G0166 as potentially misvalued. The RUC reviewed the direct PE inputs for HCPCS code G0166 at the October 2019 RUC meeting.

We proposed the RUC-recommended preservice period, service period and postservice period with refinements. We proposed to replace CA010 (*obtain vital signs*) during the postservice of service period with CA023 (*monitor patient following procedure/service, no multitasking*).

For the equipment items, we proposed to update the price of the “EECP, external counterpulsation system” (EQ012) equipment to \$101,247.50 based on an average of the five invoices submitted along with the recommendations. We noted that the EQ012 equipment is the only current equipment item in our direct PE database with an equipment utilization rate of 25 percent and the only equipment item with a utilization rate under 50 percent. Although we did not propose to change the equipment utilization rate, we solicited feedback from commenters regarding the utilization rate for the EQ012 equipment to help us understand why it should differ from all other medical equipment.

We also received invoices for a series of additional equipment items: An EECP service contract, an EECP compression equipment package, and an EECP electrical equipment package. We did not propose to establish a price for the EECP service contract, as service contracts are considered to be an administrative expense and a form of indirect PE under our methodology. As for the two equipment packages, there were a number of unusual factors involving these items that created difficulties for our equipment methodology. Both equipment packages had a suggested utilization rate of 25 percent, half of our typical utilization rate of 50 percent, and both had a suggested useful life duration of only 3 months. As we stated in section II.B. of the proposed rule (85 FR 50082–50083), Determination of Practice Expense RVUs, we have concerns that assigning very low useful life durations to this type of equipment would fail to maintain relativity with other equipment on the PFS. We also noted that the equipment cost per minute formula was designed under the assumption that each equipment item would remain in use for a period of several years and depreciate over that span of time. Our current equipment formula is not designed to address cases in which equipment is replaced

multiple times per year, and we noted that we believe that applying a multi-year depreciation in these situations would not be reflective of market pricing. Although we agreed that these costs should be reflected in the pricing of HCPCS code G0166, we believed that the very frequent replacement of the items in the two equipment packages makes them a poor fit under our equipment methodology.

Therefore, we proposed to treat the two EECP equipment packages as supplies instead of treating them as equipment. We proposed to establish the EECP compression equipment package (SD341) as a supply with a cost of \$645 based on an average of the submitted invoices, and proposed to establish the EECP electrical equipment package (SD342) as a supply with a cost of \$500 again based on an average of the submitted invoices. Based on information provided by stakeholders, we proposed a supply quantity of 1/325 for these two items (0.00308) based on the supply being used on average five times per day and replaced every 3 months (5 uses * 5 days * 13 weeks = 325). We noted that we believe that assigning these two items as supplies rather than equipment more accurately captures the unusual circumstances associated with providing this service.

We received public comments on External Counterpulsation. The following is a summary of the comments we received and our responses.

Comment: Several commenters disagreed with CMS’s proposal to move 3 minutes of clinical labor time for checking vitals at the end of the session to post-procedure monitoring, stating this is not monitoring in the sense of the CA023 activity code but taking vitals to evaluate the effectiveness of the treatment and the patient’s condition.

Response: We disagree with the commenters and continue to believe our proposal to replace CA010 (*obtain vital signs*) during the postservice of the service period with CA023 (*monitor patient following procedure/service, no multitasking*) was appropriate. We understand that the clinical labor taking place is not a monitoring activity, however the CA010 activity code is used to describe clinical labor that takes place before the service occurs, not afterward. We proposed to use the CA023 activity code as the closest proxy available to describe this clinical labor. We note that there is no change in valuation for the service as we proposed the same 3 minutes for the CA023 activity code as the RUC recommended under the CA010 activity code.

Comment: Several commenters disagreed with the proposal to price the

“EECP, external counterpulsation system” (EQ012) equipment at \$101,247.50. Commenters stated that one of the previous invoices used for pricing the EQ012 equipment reflected a discount of \$10,000 and was not for the purchase of a new ECP system. Commenters stated that although it was not explicitly listed, it was highly likely that another invoice used for pricing was either the result of a trade-in credit or reflected a refurbished system. Commenters submitted a new invoice for the EQ012 equipment with a listed price of \$130,890 and requested that CMS use this invoice for pricing while disregarding the prior invoices.

Response: We disagree with the commenters that the previous invoices used for pricing the EQ012 equipment should be disregarded for pricing. We do not agree that invoices from 2015 and 2017 have no validity; while we prefer to use current invoices wherever possible, we also believe in the importance of using multiple data points as opposed to relying on a single invoice. We also note that the same commenter submitted invoices for pricing the supply packages, which ranged in date from 2012 to 2020. We have no indication that the previous invoices were part of trade-in programs, and our pricing methodology uses the actual market rate for supplies/equipment, which does include discounts. We also do not agree with the commenter that the use of new equipment would be typical in all cases as it is clear that providers of these services can and do purchase used versions of the EQ012 equipment. As a result, we are employing our standard policy for invoice submissions and averaging together the previously submitted invoices with the new invoice submission, which results in a price of \$111,128.30 for the EQ012 equipment. We are finalizing this as the new price for the EECP, external counterpulsation system.

Comment: Several commenters supported the current equipment utilization rate of 25 percent for the EQ012 equipment. Commenters stated that this rate reflected 80 minutes (proposed nonfacility time) \times 1.57 services per day \times 5 days per week \times 50 weeks = 31,400 minutes for a total utilization rate of 20.9 percent (31,400 divided by 150,000). Commenters stated that the utilization rate was accurate based on their experience delivering this service and their discussions with other ECP therapy providers in different regions across the country. One commenter disagreed with the proposed equipment utilization rate of 25 percent and requested that CMS review the

equipment utilization for this service and explain why it differs from all other medical equipment.

Response: We appreciate the additional information provided by the commenters regarding the utilization rate for the EQ012 equipment. Based on the information supplied by the commenters, we continue to believe that the current equipment utilization rate of 25 percent is the most accurate value for this unique type of equipment.

Comment: Several commenters provided feedback on the proposal to establish the EECP compression equipment package (SD341) and the EECP electrical equipment package (SD342) as disposable supplies. Commenters were supportive of the concept of treating these items as supplies instead of as equipment and provided additional details regarding the supply contents and supply quantities. Commenters stated that the EECP compression equipment package (SD341) supply should contain eight total inputs consisting of cuffs, bladders, hoses, straps, connectors, and specialized treatment pants. Several commenters stated that the total cost for the SD341 supply package summed to \$847.00 while other commenters stated the cost of the same supply to be \$826.75. For the EECP electrical equipment package (SD342), commenters stated that CMS accurately captured the finger plethysmograph and ECG cable in this package while omitting the Spo2 probe. Commenters stated that the Spo2 probe is a required item needed to perform the pulse oximetry and the price of the SD342 package should be updated to \$752.00. Commenters submitted an extensive list of invoices to support these requested prices.

Response: We appreciate the additional information provided by the commenters regarding these supply packages, especially the pricing data contained in the submitted invoices. For the SD341 compression equipment package, we note that the invoices show that the two sets of cuffs are often sold together at a price of \$220 instead of separately at \$245. This accounts for the difference between the \$847.00 and \$826.75 prices listed by different commenters, and since the bundling of these cuffs appears to be the typical case, we are finalizing an update in the price of the EECP compression equipment package (SD341) supply at \$826.75. For the second supply package, we agree with the commenters and we are finalizing an update in the price of the EECP electrical equipment package (SD342) at \$752.00.

Comment: Several commenters provided additional details regarding the quantities for the two supply packages. Commenters stated that the compression package items typically have to be replaced every 13 weeks while the electrical package items typically have to be replaced every 50 weeks. Commenters stated that a provider of these services would be highly unlikely to be able to use the same cuffs, bladders, hoses, and straps in the SD341 supply package for 325 hours as these items would be completely deteriorated by this point and would be likely to lose the structural integrity needed to maintain clinical effectiveness. Commenters stated that a 100 hour life span would be more accurate for the SD341 supply as it reflected the typical wear and tear with inflating the compression items at high pressure (300 mm Hg every heartbeat) and was consistent with the manufacturer's estimated usage. Commenters stated that the electrical package does not experience the same level of stress and wear, and instead those items have a 400 hour life span.

Response: We appreciate the additional information provided by the commenters regarding the quantities for these two supply packages. Given that the intraservice treatment time for HCPCS code G0166 lasts for one hour, we are finalizing an update in the quantity of the SD341 supply pack to 1/100 and an update in the quantity of the SD342 supply pack to 1/400. These updated supply quantities reflect how many times the service can be performed before the supply package needs to be replaced.

Comment: Several commenters disagreed with the proposal of the RUC-recommended clinical labor time of 83 minutes. Commenters stated that the proposed time omitted 8 minutes of required clinical activities consistent with the ECP user manual. Commenters stated that ECP therapy providers must check legs, conduct a patient assessment, auscultate/assess lungs, and review change in baseline. Commenters stated that ECP therapy providers also must perform patient checks immediately following the service such as assess signs related to blood sugar levels (for diabetic patients), assess the patient's lower body for redness, blistering, and/or ulceration, and assist patients from the treatment area following the service. Commenters stated that these are essential safety measures to ensure patients have tolerated the treatment well and these activities must be performed every treatment and must be captured as part of the clinical labor time. Commenters

requested that CMS add 8 minutes to the total time under the CA016 activity code ("Prepare, set-up and start IV, initial positioning and monitoring of patient"), increasing the time for this clinical activity from 6 minutes to 14 minutes.

Response: Although we appreciate the additional information supplied by the commenters, we continue to agree with the RUC's recommendation of 83 minutes of total clinical labor time. The RUC reviewed the same information provided by the commenters and concluded that this additional clinical labor time would not be typical. We also note that the recommended 83 minutes of total clinical labor time already represents an increase over the prior total time of 73 minutes for the service, with additional clinical labor time for preparing and positioning the patient as well as completing post-procedure forms. We believe that the typical clinical labor activities for HCPCS code G0166 are captured in the RUC-recommended clinical labor time.

After considering the comments, we are finalizing the RUC-recommended preservice period, service period, and postservice period clinical labor times for HCPCS code G0166 along with our proposal to replace the CA010 clinical labor time with an equivalent 3 minutes of CA023 clinical labor time. We are also finalizing updates in the price of the EQ012 equipment and the SD341 and SD342 supply packages, along with updates to the supply quantity for the two supply packages.

(53) Molecular Pathology Interpretation (HCPCS Code G0452)

At the October 2018 RUC meeting, the Relativity Assessment Workgroup (RAW) identified HCPCS code G0452 (*Molecular pathology procedure; physician interpretation and report*) as potentially misvalued on a CMS/Other screen. The RUC had never reviewed HCPCS code G0452 and assumptions regarding work and time were based upon a 1995 vignette. In addition, the specialty society noted that the technology available for furnishing the service, as well as the patient population receiving the service, had changed since the code was valued by CMS.

The RUC requested a physician work survey be completed for the October 2019 RUC meeting. It was during the October meeting that the work and PE values for HCPCS code G0452 were reviewed and recommended.

For CY 2021, we proposed the RUC-recommended work RVU of 0.93 and the RUC-recommended direct PE inputs for HCPCS code G0452.

We received several public comments on Molecular Pathology Interpretation (HCPCS code G0452) all in support of our proposal to adopt the RUC's recommendations for the service.

After consideration of the comments, we are finalizing the work RVU and direct PE inputs as proposed.

(54) Evaluation and Management, Observation and Provision of Self-Administered Esketamine (HCPCS Codes G2082 and G2083)

In the CY 2020 PFS final rule (84 FR 63102 through 63104), we issued an interim final rule with comment period (IFC) to establish coding and payment for E/M, observation, and the provision of self-administered Esketamine to facilitate beneficiary access to care for treatment-resistant depression as efficiently as possible. We created two new HCPCS G codes, G2082 and G2083, effective January 1, 2020 on an interim final basis. For CY 2020, we established RVUs for these services that reflect the relative resource costs associated with the E/M, observation and provision of the self-administered esketamine product. The HCPCS G-codes are described as follows: HCPCS code G2082 (*Office or other outpatient visit for the evaluation and management of an established patient that requires the supervision of a physician or other qualified health care professional and provision of up to 56 mg of esketamine nasal self-administration, includes 2 hours post-administration observation*) and HCPCS code G2083 (*Office or other outpatient visit for the evaluation and management of an established patient that requires the supervision of a physician or other qualified health care professional and provision of greater than 56 mg esketamine nasal self-administration, includes 2 hours post-administration observation*).

In developing the interim final values for these codes, we used a building block methodology that sums the values associated with several codes. For the overall E/M and observation elements of the services, we incorporated the work RVUs, work time and direct PE inputs associated with a level two office/outpatient visit for an established patient, CPT code 99212 (*Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the*

problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self limited or minor. Typically, 10 minutes are spent face-to-face with the patient and/or family), which has a work RVU of 0.48 and a total work time of 16 minutes, which is based on a pre-service evaluation time of 2 minutes, an intraservice time of 10 minutes, and a postservice time of 4 minutes.

We also incorporated CPT codes 99415 (*Prolonged clinical staff service (the service beyond the typical service time) during an evaluation and management service in the office or outpatient setting, direct patient contact with physician supervision; first hour (List separately in addition to code for outpatient Evaluation and Management service)*) and 99416 (*Prolonged clinical staff service (the service beyond the typical service time) during an evaluation and management service in the office or outpatient setting, direct patient contact with physician supervision; each additional 30 minutes (List separately in addition to code for prolonged service)*) in which neither code has a work RVU, but includes direct PE inputs reflecting the prolonged time for clinical staff under the direct supervision of the billing practitioner.

In addition, to account for the cost of the provision of the self-administered esketamine as a direct PE input, we incorporated the wholesale acquisition cost (WAC) data from the most recent available quarter. For HCPCS code G2082, we used a price of \$590.02 for the supply input that describes 56 mg (supply code SH109) and for HCPCS code G2083, we used a price of \$885.02 for the supply input describing 84 mg of esketamine (supply code SH110).

We sought comment on the interim final values we established for HCPCS codes G2082 and G2083, including the assigned work RVUs, work times, and direct PE inputs. See the CY 2021 PFS proposed rule (85 FR 50169 through 50172) for a summary of the comments we received and our responses.

After considering the comments we received, we proposed to refine the values for HCPCS codes G2082 and G2083 using a building block methodology that sums the values associated with several codes. For the overall E/M and observation elements of the services, we incorporated the work RVUs, work time and direct PE inputs associated with a level two office/outpatient visit for an established patient, CPT code 99212. We also proposed to include the clinical labor for CPT codes 95076 and 95079 (in lieu of CPT codes 99415 and 99416 as detailed earlier); and to account for the

cost of the provision of the self-administered esketamine as a direct PE input, we proposed to incorporate the wholesale acquisition cost (WAC) data from the most recent available quarter. We solicited comment on this updated payment proposal and valuation of HCPCS code G2082 and G2083.

We received public comments on the Evaluation and Management, Observation and Provision of Self-Administered Esketamine (HCPCS Codes G2082 and G2083). The following is a summary of the comments we received and our responses.

Comment: Overall, commenters were in support of our proposal to refine the values for HCPCS codes G2082 and G2083.

Response: We appreciate the support for our proposal to refine the direct PE inputs of HCPCS codes G2082 and G2083, in part, by using the clinical labor time for CPT codes 95076 and 95079, in lieu of the clinical labor time of CPT codes 99415 and 99416, which increased the clinical labor time from 30 minutes to 150 minutes.

Comment: A commenter stated that administering esketamine may on occasion necessitate a higher level of E/M from the physician, and therefore, encouraged CMS to provide the ability to bill a separate E/M service on those occasions where medical necessity dictates a higher level of service. The commenter also requested that CMS issue a J-code specifically for esketamine treatment and create a HCPCS code that separates the clinical work of the service from the cost of the medication.

Response: HCPCS codes G2082 and G2083 are bundled services that include, as discussed in the CY 2021 PFS proposed rule (85 FR 50169 through 50172), the E/M, observation and the provision of self-administered esketamine. We continue to believe that HCPCS codes G2082 and G2083 should be a bundled services. We do not believe it would be appropriate to create a J-code that could permit esketamine to be billed separately, particularly given that the product is only available through a restricted distribution system under a REMS; patients must be monitored by a health care provider for at least 2 hours after receiving their Spravato dose; the prescriber and patient must both sign a Patient Enrollment Form; and the product will only be administered in a certified medical office where the health care provider can monitor the patient.²⁴

Additionally, we continue to believe that the building block methodology we used incorporating CPT code 99212 is appropriate for valuing this service. Since HCPCS codes G2082 and G2083 already take into account E/M provided as part of these services, it would be duplicative for a clinician to bill for a separate E/M code along with HCPCS codes G2082 and G2083. We believe the direct PE input refinements made for HCPCS codes G2082 and G2083, which increased the clinical labor time to 150 minutes, are appropriate for the necessary observation associated with esketamine administration. However, other reasonable and necessary E/M services may be furnished and billed for a patient on dates before and after HCPCS codes G2082 and G2083, for example, when the services are furnished in the course of treating and diagnosing treatment-resistant depression. Additionally, the self-administered esketamine is considered a supply item for this bundled service. Therefore, esketamine cannot be billed separately along with HCPCS codes G2082 and G2033 under the PFS.

After consideration of public comments, we are finalizing our proposal to refine the values for HCPCS codes G2082 and G2083 using a building block methodology that sums the values associated with several codes.

(55) Bundled Payments Under the PFS for Substance Use Disorders (HCPCS Codes G2086, G2087, and G2088)

In the CY 2020 PFS final rule (84 FR 62673), we finalized the creation of new coding and payment describing a bundled episode of care for the treatment of Opioid Use Disorder (OUD). The codes and descriptors we finalized for CY 2020 were:

- HCPCS code G2086: *Office-based treatment for opioid use disorder, including development of the treatment plan, care coordination, individual therapy and group therapy and counseling; at least 70 minutes in the first calendar month.*

- HCPCS code G2087: *Office-based treatment for opioid use disorder, including care coordination, individual therapy and group therapy and counseling; at least 60 minutes in a subsequent calendar month.*

- HCPCS code G2088: *Office-based treatment for opioid use disorder, including care coordination, individual therapy and group therapy and counseling; each additional 30 minutes beyond the first 120 minutes (List separately in addition to code for primary procedure).*

As noted in the CY 2020 PFS final rule (84 FR 62673), if a patient's treatment involves MAT, this bundled payment would not include payment for the medication itself. Billing and payment for medications under Medicare Part B or Part D would remain unchanged.

As discussed in the CY 2021 PFS proposed rule (85 FR 50172), we received requests to expand these bundled payments to be inclusive of other SUDs, not just OUD. We agreed that doing so could expand access to needed care. We proposed to expand these bundled payments to be inclusive of all SUDs. To accomplish this, we proposed to revise the code descriptors for HCPCS codes G2086, G2087, and G2088 by replacing "opioid use disorder" with "a substance use disorder." The payment and billing rules would otherwise remain unchanged. We noted that HCPCS codes G2086, G2087, and G2088 were added to the Medicare Telehealth list in the CY 2020 PFS final rule (84 FR 62628). The revised code descriptors are:

- HCPCS code G2086: *Office-based treatment for a substance use disorder, including development of the treatment plan, care coordination, individual therapy and group therapy and counseling; at least 70 minutes in the first calendar month.*

- HCPCS code G2087: *Office-based treatment for a substance use disorder, including care coordination, individual therapy and group therapy and counseling; at least 60 minutes in a subsequent calendar month.*

- HCPCS code G2088: *Office-based treatment for a substance use disorder, including care coordination, individual therapy and group therapy and counseling; each additional 30 minutes beyond the first 120 minutes (List separately in addition to code for primary procedure).*

In addition, in the CY 2020 PFS final rule we stated that we anticipated that the services described by HCPCS codes G2086, G2087, and G2088 would often be billed by addiction specialty practitioners, but note that these codes are not limited to any particular physician or NPP specialty. We also noted that consultation was not a required condition of payment for these codes, but that consultation with a specialist could be counted toward the minutes required for billing HCPCS codes G2086, G2087, and G2088 (84 FR 62674). Although it is not a requirement for billing the code, we encouraged that practitioners consult with specialists in cases where it is warranted and refer the patient to specialty care as needed.

²⁴ <https://www.fda.gov/news-events/press-announcements/fda-approves-new-nasal-spray-medication-treatment-resistant-depression-available-only-certified>.

We noted that while these codes describe treatment for any SUD, information about which specific SUDs are being treated would provide valuable information that can help assess local, state, and national trends and needs. We believe it is important that the diagnosis codes listed on the claim form reflect all SUDs being treated; however, we also noted that we do not wish to add any additional burden on practitioners related to claims submission, and therefore, we solicited information on whether there are sources of data we could explore in order to provide this information. We also solicited information on whether there are differences in the resource costs associated with furnishing services for the various SUDs, and accordingly whether there is a need for more stratified coding to describe these services. We noted that in some instances, the CPT Editorial Panel has created CPT codes to replace G codes created by CMS, and that we welcomed such input on those services.

We received public comments on the proposal to expand these bundled payments to be inclusive of all SUDs. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported this proposal. Some noted that this flexibility would permit practitioners to furnish comprehensive services for individuals with SUDs, the majority of whom have polysubstance use disorder. One commenter noted that every service code can have one or more diagnosis codes connected to it on a claim, therefore, a generic SUD treatment code still permits physicians to specify which SUDs were treated, allowing CMS to track that information without adding additional administration burden. Some commenters also stated they were not aware of any significant variation in resource costs between SUDs. One stakeholder encouraged CMS to work with the medical societies through the CPT Editorial Panel process to examine the different resource costs involved in treating different SUDs to determine the need for more stratified coding, but advised that in the meantime, CMS should finalize the proposal to ensure that more patients have access to these critical services. A few commenters suggested that these codes should account for risk stratification, noting that some patients, such as pregnant or postpartum women have more complex needs and require more frequent services. One commenter stated that expanding the use of these codes to all SUD diagnoses may present opportunity

for fraudulent, duplicative coding, were providers to bill the codes for each SUD diagnosis, noting that many patients with SUD use multiple substances and require treatment for more than one substance, therefore, the commenter recommended that CMS limit billing of these codes to once per month per patient.

Response: We thank the commenters for their feedback. After consideration of the comments, we are finalizing our proposal to expand the bundled payments described by HCPCS codes G2086–G2088 to be inclusive of all SUDs. We appreciate the commenter that pointed out that duplicative billing could occur in cases where a beneficiary is being treated for more than one SUD. We agree that HCPCS codes G2086–G2088 should not be billed more than once per month per beneficiary since these codes describe treatment for one or more SUDs. Additionally, we welcome the opportunity to work with the medical societies and CPT Editorial Panel to determine whether there is a need to stratify this coding to reflect variation in service intensity, through future rulemaking.

(56) Initiation of Medication Assisted Treatment (MAT) in the Emergency Department (HCPCS Code G2213)

In the CY 2020 PFS proposed rule (84 FR 40545), we sought comment on the use of medication assisted treatment (MAT) in the emergency department (ED) setting, including initiation of MAT and the potential for either referral or follow-up care, to better understand typical practice patterns to help inform whether we should consider making separate payment for such services in future rulemaking. We noted that the term MAT generally refers to treatment of OUD that includes both an FDA-approved medication for the treatment of OUD and behavioral/psychosocial treatment, but that care provided in the ED typically would include medication for the treatment of OUD and referral or linkage to primary care or a hospital-based bridge clinic for continuation of medication and potentially other services, including counseling and other psychosocial services.

The public comments received in response to the comment solicitation were supportive of us making a proposal, several citing research that indicates improved outcomes for patients who initiate medications for the treatment of OUD in the ED. One commenter noted that by implementing this treatment regimen, practitioners can address a patient's immediate withdrawal symptoms, which allows time to coordinate care and provide a

referral to substance use disorder specialists and other community resources who can appropriately carry out long-term treatment. Another commenter cited that the national rate of overdose-related visits seen in EDs nearly doubled between 2005 and 2014 and noted that hospital-based care represents a critical opportunity to initiate treatment and connect patients with OUD to care, noting that patients who receive information about drug treatment in the hospital post-overdose are more likely to seek treatment.²⁵ The commenter also cited a randomized clinical trial that showed that more patients were engaged in treatment 30 days after buprenorphine was initiated in the ED and coupled with a referral, compared to interventions that did not include buprenorphine.²⁶ Another study found that ED induction of buprenorphine was more cost-effective than either brief intervention or referral upon discharge.²⁷ One commenter suggested that CMS institute a G-code to address this coding gap in the short term, while a more permanent solution is pursued to address this site-of-service specification.

We were persuaded by the comments received in response to our comment solicitation that this work is not currently accounted for in the existing code set. To account for the resource costs involved with initiation of medication for the treatment of opioid use disorder in the ED and referral for follow-up care, we proposed to create one add-on G-code to be billed with E/M visit codes used in the ED setting. We discussed that this code would include payment for assessment, referral to ongoing care, follow-up after treatment begins, and arranging access to supportive services, but we note that the drug itself would be paid separately. We proposed the following code:

- HCPCS code GMAT1: *Initiation of medication for the treatment of opioid use disorder in the emergency department setting, including assessment, referral to ongoing care, and arranging access to supportive*

²⁵ Agency for Healthcare Research and Quality, "Statistical Brief #219: Opioid-Related Inpatient Stays and Emergency Department Visits by State, 2009–2014," (2017), <https://www.hcup-us.ahrq.gov/reports/statbriefs/sb219-Opioid-Hospital-Stays-ED-Visits-by-State.pdf>.

²⁶ Gail D'Onofrio et al., "Emergency Department—Initiated Buprenorphine/Naloxone Treatment for Opioid Dependence Randomized Clinical Trial," *JAMA* 16, no. 313 (2015): 2002–2010, <https://www.ncbi.nlm.nih.gov/pubmed/25919527>.

²⁷ Susan Busch et al., "Cost Effectiveness of Emergency Department—Initiated Treatment for Opioid Dependence," *Journal of Addiction* 11, no. 112 (2017), <https://www.ncbi.nlm.nih.gov/pubmed/28815789>.

services (List separately in addition to code for primary procedure).

To price this service, we proposed to use a direct crosswalk to the work and direct PE inputs for HCPCS code G0397 (*Alcohol/subs interv >30 min*), which is assigned a work RVU of 1.30. We noted that we believe that the work and PE described by this crosswalk code is similar in nature and magnitude to the services described in HCPCS code GMAT1. We noted that unlike the requirements for reference code, we did not propose a required number of minutes to bill HCPCS code GMAT1. We welcomed comment on the proposal and whether we should consider a different valuation to account for the resource costs involved with these services.

We received public comments on our proposal to create an add-on G-code to be billed with E/M visit codes used in the ED setting. The following is a summary of the comments we received and our responses.

Comment: Commenters were very supportive of finalizing this proposal, noting that payment for this service will encourage hospitals to engage in this evidence-based practice. One commenter sought clarification on which of these elements were mandatory given that “initiation” of the service for patients will involve a transition of care to other health care providers and requested that CMS provide guidance on what “follow-up” is required of the emergency department provider given that post-initiation care is administered by the practitioner to whom the ED provider would have transitioned the patient care.

Response: We are finalizing payment for this code as proposed. We note that HCPCS code GMAT1 was a placeholder code in the proposed rule. The finalized code is HCPCS code G2213 (*Initiation of medication for the treatment of opioid use disorder in the emergency department setting, including assessment, referral to ongoing care, and arranging access to supportive services (List separately in addition to code for primary procedure)*). In response to the request for clarification about which elements are required in order to bill for this code, practitioners should furnish only those activities that are clinically appropriate for the beneficiary that is being treated.

(57) Percutaneous Creation of an Arteriovenous Fistula (AVF) (HCPCS Codes G2170 and G2171)

We received a comment in response to the CY 2020 PFS proposed rule (84 FR 40481), as well as inquiries from stakeholders, requesting that we

establish new coding for the percutaneous creation of an arteriovenous fistula (AVF) used for dialysis access.

For CY 2019, based on two new technology applications for arteriovenous fistula creation, we established two new HCPCS codes to describe the two modalities of this service. Specifically, we established HCPCS code C9754 (*Creation of arteriovenous fistula, percutaneous; direct, any site, including all imaging and radiologic supervision and interpretation, when performed and secondary procedures to redirect blood flow (e.g., transluminal balloon angioplasty, coil embolization, when performed)*) and HCPCS code C9755 (*Creation of arteriovenous fistula, percutaneous using magnetic-guided arterial and venous catheters and radiofrequency energy, including flow-directing procedures (e.g., vascular coil embolization with radiologic supervision and interpretation, when performed) and fistulogram(s), angiography, venography, and/or ultrasound, with radiologic supervision and interpretation, when performed*). The HCPCS codes were created for institutional payment systems, and thus do not allow for payment for the physician’s work portion of the service. Stakeholders have stated that the lack of proper coding to report the physician work associated with these procedures is problematic, as physicians are either billing an unlisted procedure code, or are billing other CPT codes that do not appropriately reflect the resource cost associated with the physician work portion of the service. Stakeholders stated that separate coding for physician payment will allow billing when the procedures are furnished in either a physician office or an institutional setting, and be paid under the respective payment systems, as appropriate. We have recognized that the lack of appropriate coding for this critical physician’s service has become an even greater burden given the PHE for COVID-19. In order to mitigate potential health risks to beneficiaries, physicians and practitioners as a result of having this procedure performed in an institutional setting, we created two HCPCS G codes for percutaneous creation of an arteriovenous fistula (AVF). The codes are contractor priced and effective July 1, 2020. This will allow for more accurate billing and coding of a crucial physician service that could then be performed in both institutional and office settings, thus mitigating unnecessary risk to beneficiaries, physicians and

practitioners caused by disease transmission. The HCPCS G codes are described as follows:

- HCPCS G code G2170 (*Percutaneous arteriovenous fistula creation (AVF), direct, any site, by tissue approximation using thermal resistance energy, and secondary procedures to redirect blood flow (e.g., transluminal balloon angioplasty, coil embolization) when performed, and includes all imaging and radiologic guidance, supervision and interpretation, when performed.*)

- HCPCS G code G2171 (*Percutaneous arteriovenous fistula creation (AVF), direct, any site, using magnetic-guided arterial and venous catheters and radiofrequency energy, including flow-directing procedures (e.g., vascular coil embolization with radiologic supervision and interpretation, when performed) and fistulogram(s), angiography, venography, and/or ultrasound, with radiologic supervision and interpretation, when performed.*)

We proposed to maintain contractor pricing for these HCPCS codes for CY 2021, however, we also solicited information from stakeholders on the resource costs involved in furnishing the services described by HCPCS codes G2170 and G2171 to ensure proper payment for these physician’s services, for consideration in future rulemaking. We noted that under the OPPS these services are assigned to APC 5193, which for CY 2020 has an assigned payment rate of \$15,938.20.

We received public comments on Percutaneous Creation of an Arteriovenous Fistula (AVF) (HCPCS code G2170 and G2171).

The following is a summary of the comments we received and our responses.

Comment: Commenters stated that they were supportive of the creation of the HCPCS codes G2170 and G2171. Many commenters stated that they believe this will increase access for beneficiaries by allowing this service to be performed in outpatient settings. Commenters were also appreciative of the creation of these codes for use during the PHE.

Response: We appreciate the commenters’ support of the creation of HCPCS codes G2170 and G2171.

Comment: A few commenters stated that they did not understand the logic of our proposal to contractor price HCPCS codes G2170 and G2171 to avoid disease transmission.

Response: We believe that our statement about reduced risk of disease transmission in connection with our proposal to maintain contractor pricing

for calendar year 2021 for HCPCS codes G2170 and G2171 may have been confusing to some commenters. We created HCPCS codes G2170 and G2171 to facilitate provision of these services outside of institutional facility settings. We stated that expanded access to this service outside of facility settings, especially in light of the PHE for COVID-19, could reduce the potential health risks to beneficiaries, physicians and other health care practitioners that could occur when these services are furnished in higher acuity health care settings. The proposal to contractor price these services was not related to risks of disease transmission.

Comment: Commenters stated that they believe HCPCS codes G2170 and G2171 should be nationally priced for calendar year 2021 and beyond. The commenters stated that they believe contractor pricing creates unnecessary variability and unreliable payment.

Response: CMS routinely contractor prices new HCPCS codes. The services described by G2170 and G2171 are new technology and are just beginning to be performed outside of the facility setting. As such, we anticipate collecting more information for purposes of national pricing. We expect to take these comments into consideration for future rulemaking and we hope to continue a dialogue with stakeholders on these important services.

Comment: A few commenters stated that they are displeased with the publication of a proposed Local Coverage Determination (LCD) that would limit coverage for these services.

Response: We appreciate the concern of some commenters regarding a proposed LCD for HCPCS codes G2170 and G2171. We did not address coverage policies for these services in the proposed rule. Such local coverage policies are not within the scope of the CY 2021 PFS rulemaking process.

Comment: A few commenters responded to our request for information from stakeholders on the resource costs involved in furnishing the services described by HCPCS codes G2170 and G2171 for consideration in future rulemaking. Some commenters submitted invoices for various equipment as well as a breakdown of their estimated supply and clinical staff costs.

Response: We appreciate the information commenters provided on the resource costs involved in furnishing these services. We will take this information into consideration for future rulemaking.

After consideration of these public comments, we are finalizing our proposals for HCPCS codes G2170 and

G2171 with contractor pricing as proposed, and will consider addressing national pricing through potential future rulemaking.

(58) Insertion, Removal, and Removal and Insertion of Implantable Interstitial Glucose Sensor System (Category III CPT Codes 0446T, 0447T, and 0448T)

Category III CPT codes 0446T, 0447T, and 0448T describe the services related to the insertion, removal, and removal and insertion of an implantable interstitial glucose sensor from subcutaneous pocket, in a subcutaneous pocket via incision. The implantable interstitial glucose sensors are part of systems that can allow real-time glucose monitoring, provides glucose trend information, and signal alerts for detection and prediction of episodes of low blood glucose (hypoglycemia) and high blood glucose (hyperglycemia). The codes that describe the implantation, removal, and removal and implantation of implantable interstitial glucose sensors are currently contractor-priced.

- Category III CPT code 0446T (*Creation of subcutaneous pocket with insertion of implantable interstitial glucose sensor, including system activation and patient training*);
- Category III CPT code 0447T (*Removal of implantable interstitial glucose sensor from subcutaneous pocket via incision*); and
- Category III CPT code 0448T (*Removal of implantable interstitial glucose sensor with creation of subcutaneous pocket at different anatomic site and insertion of new implantable sensor, including system activation*).

In the CY 2020 PFS final rule (84 FR 62627), we requested information from stakeholders to ensure proper payment for this important physician's service and welcomed recommendations on appropriate valuation for these services to be considered in future rulemaking.

We proposed to establish national payment amounts for the codes describing the insertion, removal, and removal and insertion of an implantable interstitial glucose sensor, effective January 1, 2021. We proposed a work RVU of 1.14 for Category III CPT code 0446T, a work RVU of 1.34 for Category III CPT code 0447T, and work RVU of 1.91 for Category III CPT code 0448T based on a crosswalk to the work RVUs, work time, and direct PE inputs of CPT codes 11981 (*Insertion, non-biodegradable drug delivery implant*), 11982 (*Removal, non-biodegradable drug delivery implant*), and 11983 (*Removal with reinsertion, non-biodegradable drug delivery implant*),

respectively, due to the similar clinical nature of these procedures.

We also proposed to include one supply and one equipment item to the direct PE inputs crosswalked from CPT codes 11981–11983. We added a new “implantable interstitial glucose sensor” (supply code SD334) for Category III CPT codes 0446T and 0448T to include the supply costs of the “implantable interstitial glucose sensor” (supply code SD334) included in these procedures, which we proposed to price at \$1,500.00, based on information we received from stakeholders. We also proposed to include the smart transmitter associated with the use of this implantable interstitial glucose sensor. We proposed to price the smart transmitter involved in furnishing this service by using a similar equipment item finalized in the CY 2019 PFS final rule (83 FR 59624) as a proxy, the “heart failure patient physiologic monitoring equipment package” (EQ392); the EQ392 has a price of \$1,000.00, and is similarly used for long term remote monitoring of patients. We proposed to use the EQ392 equipment as a proxy for the valuation of the smart transmitter associated with the implantable interstitial glucose sensor, to which we are assigning a time of 25,920 minutes for EQ392 in Category III CPT codes 0446T and 0448T. We explained that this time is derived from 60 minutes per hour times 24 hours per day times 90 days per billing quarter, divided by 1 minute of equipment use out of every 5 minutes of time. We did not include the implantable interstitial glucose sensor or the EQ392 equipment proxy for Category III CPT code 0447T, as it describes only a removal procedure.

We solicited comment on the proposed values for these Category III CPT codes (0446T, 0447T, and 0448T), and we solicited comment on the appropriateness and accuracy of the proposed work RVUs, work times, and direct PE inputs.

We received public comments on the Insertion, Removal, and Removal and Insertion of Implantable Interstitial Glucose Sensor System code family. The following is a summary of the comments we received and our responses.

Comment: Commenters supported the proposed work RVUs for the Category III CPT codes, 1.14 for Category III CPT code 0446T, 1.34 for Category III CPT code 0447T, and 1.91 for Category III CPT code 0448T.

Response: We appreciate the support for the proposed work RVUs for these Category III CPT codes (0446T, 0447T, and 0448T).

Comment: Several commenters stated that they agreed with the inclusion of

the “implantable interstitial glucose sensor” supply (SD334) for Category III CPT codes 0446T and 0448T, which should include the supply costs of the implantable interstitial glucose sensor at the proposed price of \$1,500.00. However, the commenters stated that the cost of the smart transmitter equipment (EQ392) associated with the use of the implantable interstitial glucose sensor should be included only for Category III CPT code 0446T and not be included as part of the cost of Category III CPT code 0448T. A commenter stated that the 90-day implantable sensor will be implanted for the first time and linked to the

transmitter device in the first procedure, Category III CPT code 0446T. The commenter stated that there is no need to report the cost of the transmitter with Category III CPT 0448T as the sensor will be removed and replaced, but the patient will not receive a new smart transmitter during this visit.

Response: We appreciate the additional information supplied by the commenter regarding the use of the smart transmitter equipment in Category III CPT codes 0446T and 0448T. Given that there is no need to report the cost of the transmitter with Category III CPT 0448T because the sensor will be removed and replaced, but the patient

will not receive a new smart transmitter during this visit, we are finalizing the removal of the heart failure patient physiologic monitoring equipment package (EQ392) from Category III CPT code 0448T.

After consideration of public comments, we are finalizing the work RVUs as proposed for Category III CPT codes 0446T, 0447T, and 0448T, and finalizing the direct PE inputs as proposed except that we are removing the equipment package (EQ392) from the Category III CPT code 0448T in response to comments as explained above.

BILLING CODE 4120-01-P

TABLE 28: CY 2021 Work RVUs for New, Revised, and Potentially Misvalued Codes

HCPCS	Descriptor	CY 2020 Work RVU	Proposed CY 2021 Work RVU	Final CY 2021 Work RVU	CMS Work Time Refinement
0446T	Creation of subcutaneous pocket with insertion of implantable interstitial glucose sensor, including system activation and patient training	0.00	1.14	1.14	Yes
0447T	Removal of implantable interstitial glucose sensor from subcutaneous pocket via incision	0.00	1.34	1.34	Yes
0448T	Removal of implantable interstitial glucose sensor with creation of subcutaneous pocket at different anatomic site and insertion of new implantable sensor, including system activation	0.00	1.91	1.91	Yes
10004	Fine needle aspiration biopsy, without imaging guidance; each additional	0.80	0.80	0.80	No
10005	Fine needle aspiration biopsy, including ultrasound guidance; first lesion	1.46	1.46	1.46	No
10006	Fine needle aspiration biopsy, including ultrasound guidance; each additional lesion	1.00	1.00	1.00	No
10007	Fine needle aspiration biopsy, including fluoroscopic guidance; first lesion	1.81	1.81	1.81	No
10008	Fine needle aspiration biopsy, including fluoroscopic guidance; each additional lesion	1.18	1.18	1.18	No
10009	Fine needle aspiration biopsy, including CT guidance; first lesion	2.26	2.26	2.26	No
10010	Fine needle aspiration biopsy, including CT guidance; each additional lesion	1.65	1.65	1.65	No
10011	Fine needle aspiration biopsy, including MR guidance; first lesion	C	C	C	No
10012	Fine needle aspiration biopsy, including MR guidance; each additional lesion	C	C	C	No
10021	Fine needle aspiration biopsy, without imaging guidance; first lesion	1.03	1.03	1.03	No

HCPCS	Descriptor	CY 2020 Work RVU	Proposed CY 2021 Work RVU	Final CY 2021 Work RVU	CMS Work Time Refinement
11960	Insertion of tissue expander(s) for other than breast, including subsequent expansion	11.49	11.49	11.49	No
11970	Replacement of tissue expander with permanent implant	8.01	7.49	7.49	No
11971	Removal of tissue expander without insertion of implant	3.41	6.50	7.02	No
19307	Mastectomy, modified radical, including axillary lymph nodes, with or without pectoralis minor muscle, but excluding pectoralis major muscle	18.23	17.99	17.99	No
19316	Mastopexy	11.09	11.09	11.09	No

	patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 60-74 minutes of total time is spent on the date of the encounter				
99211	Office or other outpatient visit for the evaluation and management of an established patient, that may not require the presence of a physician or other qualified health care professional. Usually, the presenting problem(s) are minimal	0.18	0.18	0.18	No
99212	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 10-19 minutes of total time is spent on the date of the encounter	0.48	0.70	0.70	Yes
99213	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 20-29 minutes of total time is spent on the date of the encounter	0.97	1.30	1.30	No
99214	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter	1.50	1.92	1.92	Yes

HCPCS	Descriptor	CY 2020 Work RVU	Proposed CY 2021 Work RVU	Final CY 2021 Work RVU	CMS Work Time Refinement
99215	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 40-54 minutes of total time is spent on the date of the encounter	2.11	2.80	2.80	No
99417	Prolonged office or other outpatient evaluation and management service(s) (beyond the total time of the primary procedure which has been selected using total time), requiring total time with or without direct patient contact beyond the usual service, on the date of the primary service; each 15 minutes	NEW	0.61	I	No
99439	Chronic care management services, with the following required elements: * multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, * chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, * comprehensive care plan established, implemented, revised, or monitored; each additional 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month	NEW	0.54	0.54	No
G0166	External counterpulsation, per treatment session	0.00	0.00	0.00	No
G0452	Molecular pathology procedure; physician interpretation and report	0.37	0.93	0.93	No
G2082	Office or other outpatient visit for the evaluation and management of an established patient that requires the supervision of	0.48	0.70	0.70	Yes

HCPCS	Descriptor	CY 2020 Work RVU	Proposed CY 2021 Work RVU	Final CY 2021 Work RVU	CMS Work Time Refinement
	a physician or other qualified health care professional and provision of up to 56 mg of esketamine nasal self-administration, includes 2 hours post-administration observation				
G2083	Office or other outpatient visit for the evaluation and management of an established patient that requires the supervision of a physician or other qualified health care professional and provision of greater than 56 mg esketamine nasal self-administration, includes 2 hours post-administration observation	0.48	0.70	0.70	Yes
G2170	Percutaneous arteriovenous fistula creation (AVF), direct, any site, by tissue approximation using thermal resistance energy, and secondary procedures to redirect blood flow (e.g., transluminal balloon angioplasty, coil embolization) when performed, and includes all imaging and radiologic guidance, supervision and interpretation, when performed	NEW	0.00	0.00	No
G2171	Percutaneous arteriovenous fistula creation (AVF), direct, any site, using magnetic-guided arterial and venous catheters and radiofrequency energy, including flow-directing procedures (e.g., vascular coil embolization with radiologic supervision and interpretation, when performed) and fistulogram(s), angiography, enography, and/or ultrasound, with radiologic supervision and interpretation, when performed	NEW	0.00	0.00	No
G2211	Visit complexity inherent to evaluation and	NEW	0.33	0.33	No

HCPCS	Descriptor	CY 2020 Work RVU	Proposed CY 2021 Work RVU	Final CY 2021 Work RVU	CMS Work Time Refinement
	management associated with medical care services that serve as the continuing focal point for all needed health care services and/or with medical care services that are part of ongoing care related to a patient's single, serious condition or a complex condition. (Add-on code, list separately in addition to office/outpatient evaluation and management visit, new or established)				
G2212	Prolonged office or other outpatient evaluation and management service(s) beyond the maximum required time of the primary procedure which has been selected using total time on the date of the primary service; each additional 15 minutes by the physician or qualified healthcare professional, with or without direct patient contact (List separately in addition to CPT codes 99205, 99215 for office or other outpatient evaluation and management services) “(Do not report G2212 on the same date of service as 99354, 99355, 99358, 99359, 99415, 99416). (Do not report G2212 for any time unit less than 15 minutes))	NEW	-	0.61	No
G2213	Initiation of medication assisted treatment in the emergency department setting, including assessment, referral to ongoing care, and arranging access to supportive services (List separately in addition to code for primary procedure)	NEW	1.30	1.30	No
G2214	Initial or subsequent psychiatric collaborative care management, first 30 minutes in a month of	NEW	0.77	0.77	No

HCPCS	Descriptor	CY 2020 Work RVU	Proposed CY 2021 Work RVU	Final CY 2021 Work RVU	CMS Work Time Refinement
	behavioral health care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified health care professional				
G2215	Take-home supply of nasal naloxone (provision of the services by a Medicare-enrolled Opioid Treatment Program); List separately in addition to code for primary procedure.	NEW	0.00	0.00	No
G2216	Take-home supply of auto-injector naloxone (provision of the services by a Medicare-enrolled Opioid Treatment Program); List separately in addition to code for primary procedure.	NEW	0.00	0.00	No
G2250	Remote assessment of recorded video and/or images submitted by an established patient (e.g., store and forward), including interpretation with follow-up with the patient within 24 business hours, not originating from a related service provided within the previous 7 days nor leading to a service or procedure within the next 24 hours or soonest available appointment.	NEW	0.18	0.18	No
G2251	Brief communication technology-based service, e.g. virtual check-in, by a qualified health care professional who cannot report evaluation and management services, provided to an established patient, not originating from a related e/m service provided within the previous 7 days nor leading to a service or procedure within the next 24 hours or soonest available appointment; 5–10 minutes of clinical discussion	NEW	0.25	0.25	No

BILLING CODE 4120-01-C

I. Modifications Related to Medicare Coverage for Opioid Use Disorder (OUD) Treatment Services Furnished by Opioid Treatment Programs (OTPs)

1. Background

Section 2005 of the Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment for Patients and Communities (SUPPORT) Act established a new Medicare Part B benefit category for OUD treatment services furnished by OTPs during an episode of care beginning on or after January 1, 2020. In the CY 2020 PFS final rule (84 FR 62630 through 62677), we implemented coverage requirements and established new codes describing the bundled payments for episodes of care for the treatment of OUD furnished by OTPs. We established new codes for and finalized bundled payments for weekly episodes of care that include methadone, oral buprenorphine, implantable buprenorphine, injectable buprenorphine or naltrexone, and non-drug episodes of care, as well as add-on codes for intake and periodic assessments, take-home dosages for methadone and oral buprenorphine, and additional counseling. We are monitoring Medicare enrollment by OTPs and utilization of the new benefit to ensure that Medicare beneficiaries have appropriate access to care. For CY 2021, we proposed several refinements and also provided clarification of certain issues that stakeholders have brought to our attention.

2. Definition of OUD Treatment Services

In the CY 2020 PFS final rule (84 FR 62631 through 62635), we finalized a definition of “OUD treatment services” that reflects the statutory definition in section 1861(jjj)(1)(A) of the Act, which defines covered OUD treatment services to include oral, injected, and implanted opioid agonist and antagonist treatment medications approved by the Food and Drug Administration (FDA) under section 505 of the Federal Food, Drug, and Cosmetic Act (FFDCA) for use in the treatment of OUD. There are three drugs currently approved by FDA for the treatment of opioid dependence: Buprenorphine; methadone; and naltrexone. In the CY 2020 PFS final rule, we noted that we had received comments supporting the proposed definition of OUD treatment services but also requesting that CMS include naloxone to treat opioid overdose in that definition as a medication used in treatment of OUD. Although we did not finalize including naloxone in the definition of OUD treatment services in that final rule, we indicated that as we

continue to work on refining this new Medicare benefit, we would consider including additional drugs in the definition of OUD treatment services under our discretionary authority in section 1861(jjj)(1)(F) of the Act to include other items and services the Secretary determines are appropriate. As explained in the CY 2021 PFS proposed rule (85 FR 50203), we determined, after further consideration, that it would be appropriate to propose to extend the definition of OUD treatment services to include opioid antagonist medications, such as naloxone, that are approved by FDA under section 505 of the FFDCA for emergency treatment of opioid overdose.

Naloxone is an opioid antagonist indicated for the emergency treatment of known or suspected opioid overdose, as manifested by respiratory and/or central nervous system depression.^{28 29} Naloxone should be given to a person who shows signs of an opioid overdose or when an overdose is suspected. FDA-approved naloxone products for overdose reversal are effective in reversing opioid overdose, including fentanyl-involved opioid overdoses, although overdoses involving potent (for example, fentanyl) or large quantities of opioids may require higher-than-normal doses of naloxone or repeated administration to reverse overdose.³⁰

Naloxone attaches to opioid receptors and reverses and blocks the effects of other opioids.³¹ FDA has approved injectable naloxone, intranasal naloxone, and naloxone auto-injector as emergency treatments for opioid overdose. The nasal spray is a prefilled, needle-free device that requires no assembly and can deliver a single dose into each nostril with two sprays. The auto-injector is injected into the outer thigh to deliver naloxone to the muscle (intramuscular). Both the nasal spray and naloxone auto-injector are packaged in a carton containing two doses to allow for repeat dosing if needed.^{32 33} These forms of naloxone can easily be administered by persons who do not have medical training and they may be prescribed to a patient who is receiving medication-assisted treatment (MAT) for

OUD, especially if the patient is considered to be at risk for opioid overdose.³⁴ However, it is important to understand how to administer naloxone properly. A doctor or pharmacist can show patients, their family members, or caregivers how to administer naloxone.³⁵ We expect that a treating practitioner that is prescribing naloxone will also educate the patient, as appropriate, on how to administer the specific form of naloxone prescribed.

The U.S. Surgeon General Jerome M. Adams, M.D., M.P.H. has released a public health advisory stating that, “Research shows that when naloxone and overdose education are available to community members, overdose deaths decrease in those communities. Therefore, increasing the availability and targeted distribution of naloxone is a critical component of our efforts to reduce opioid-related overdose deaths and, when combined with the availability of effective treatment, to ending the opioid epidemic.”³⁶

In the CY 2021 PFS proposed rule, we proposed to add naloxone to the definition of OUD treatment services in order to increase access to this important emergency treatment and to allow OTPs to be paid under Medicare for dispensing naloxone to Medicare beneficiaries who are receiving other OUD treatment services from the OTP. Under the proposal, beneficiaries receiving OUD treatment services from the OTP would be able to receive naloxone from the OTP under the OUD treatment services benefit, to the extent it is medically reasonable and necessary as part of their OUD treatment. We noted that naloxone is already covered under Medicare Part D. In 2017, 72.5 percent of all Medicare beneficiaries were enrolled in Medicare Part D plans.³⁷ However, as we explained in the proposed rule, we believe allowing beneficiaries to access this important emergency treatment at the OTP may help to decrease barriers to access because there currently are no copayments for services furnished by OTPs and beneficiaries would not need to visit a separate provider to access naloxone.

Accordingly, to align with efforts to end the opioid epidemic, under the discretionary authority in section

³⁷ http://www.medpac.gov/docs/default-source/reports/mar18_medpac_ch14_sec.pdf.

1861(jjj)(1)(F) of the Act, we proposed to amend the definition of OUD treatment services at § 410.67(b) by adding § 410.67(b)(8) to include opioid antagonist medications that are approved by FDA under section 505 of the FFDCA for the emergency treatment of known or suspected opioid overdose. We proposed to amend the definition of OUD treatment services under the discretionary authority in section 1861(jjj)(1)(F) of the Act rather than the authority under section 1861(jjj)(1)(A) of the Act because section 1861(jjj)(1)(A) of the Act pertains to opioid agonist and antagonist treatment medications (including oral, injected, or implanted versions) that are approved by FDA under section 505 of the FFDCA for use in the treatment of opioid use disorder. As we explained in the CY 2021 PFS proposed rule, naloxone is not one of the three drugs currently approved by FDA for the treatment of opioid dependence (buprenorphine, methadone, and naltrexone);³⁸ and, as a result, we do not believe naloxone fits the criteria of section 1861(jjj)(1)(A) of the Act. We sought comment on our proposal to expand the definition of OUD treatment services.

Additionally, we noted that we agree with the public health advisory quoted previously that community education related to overdose prevention is needed to address the opioid crisis. We believe that prevention and community education efforts would increase awareness of treatment options and could play a role in decreasing opioid overdose deaths. We solicited comments on whether the definition of OUD treatment services should be further revised to include overdose education. Additionally, we also solicited comments on whether payment for providing overdose education to the beneficiary and/or the beneficiary's family or partner should be considered to be included in the current weekly bundled payments for episodes of care or whether we should consider establishing an add-on payment for education related to overdose prevention when such services are furnished by OTPs. We specifically sought information related to what inputs we might consider in developing the payment rate for such a service, such as payment amounts for similar services under the PFS, if we were to include this type of education as part of the proposed new add-on codes for naloxone discussed later in this section (HCPCS codes GOTP1 and GOTP2). For

example, in order to establish a payment rate for education related to overdose prevention for the beneficiary and/or the beneficiary's family or partner, we could consider a crosswalk to the Medicare payment rate for CPT code 96161 (*Administration of caregiver-focused health risk assessment instrument (e.g., depression inventory) for the benefit of the patient, with scoring and documentation, per standardized instrument*). The current non-facility payment rate under the PFS for CPT code 96161 is \$2.53.

a. Adjustment to the Bundled Payments for OUD Treatment Services

Consistent with the proposal to expand the definition of OUD treatment services to include opioid antagonist medications indicated for the emergency treatment of known or suspected opioid overdose, we noted that we believed it would be appropriate to propose changes to the payment rates for the bundled payments to reflect the costs of these medications. Therefore, we proposed to adjust the bundled payment rates through the use of add-on codes to account for instances in which OTPs provide Medicare beneficiaries with naloxone. We explained that we believe beneficiaries receiving naloxone will need a supply at the start of treatment and would only require refills later if the supply is used in an emergency. As a result, we noted that we would not expect naloxone to be provided weekly to all patients, but only on an as-needed basis. Accordingly, we noted that we believed that making payment for naloxone through the use of an add-on code would be the most accurate approach to pricing rather than including the costs of these medications as part of the bundled payment rates for all episodes of care.

We proposed to adopt the following add-on G codes:

- *HCPCS code GOTP1*: Take-home supply of nasal naloxone (provision of the services by a Medicare-enrolled Opioid Treatment Program); List separately in addition to code for primary procedure.
- *HCPCS code GOTP2*: Take-home supply of auto-injector naloxone (provision of the services by a Medicare-enrolled Opioid Treatment Program); List separately in addition to code for primary procedure.

We proposed to adopt an approach similar to the pricing methodology that was used to price the drug component of the bundled payments in the CY 2020 PFS final rule to determine the payment rate for these proposed new add-on codes for naloxone. In the CY 2020 PFS proposed rule (84 FR 40530), we

explained that payment structures that are closely tailored to the provider's actual acquisition cost reduce the likelihood that a drug will be chosen primarily for a reason that is unrelated to the clinical care of the patient, such as the drug's profit margin for a provider. Therefore, we noted that we believe it would be appropriate to use a methodology similar to the one we adopted in the CY 2020 PFS final rule (84 FR 62650 through 62657), for purposes of determining the payment rate for the drug component of the bundled payments to determine the payment rates for the add on codes for naloxone because this methodology would provide the best estimate of an OTP's cost in dispensing naloxone.

In the CY 2020 PFS final rule, we adopted a policy under which we apply the methodology set forth in section 1847A of the Act to determine the payment amount for the drug component of the bundled payment for an episode of care that includes implantable or injectable medications, except that the payment amount shall be 100 percent of the average sales price (ASP), if ASP is used. For oral medications, the payment for the drug component is based on 100 percent of ASP, if ASP data are available. However, if ASP is not available, the payment amount for methadone will be based on the TRICARE rate and the payment amount for oral buprenorphine is calculated using the national average drug acquisition cost (NADAC).

We received public comments on the proposed adjustment to the bundled payments for OUD treatment services to account for instances in which OTPs provide Medicare beneficiaries with naloxone. The following is a summary of the comments we received and our responses.

Comment: Commenters were overwhelmingly supportive of extending the definition of OUD treatment services to include opioid antagonist medications, such as naloxone.

Response: We thank commenters for their support of extending the definition of OUD treatment services to include opioid antagonist medications, such as naloxone. Because we continue to believe that the availability of emergency treatment medications is an important component of treatment for OUD, we are finalizing our proposal to amend the definition of OUD treatment service in § 410.67 to add paragraph (b)(8) to include opioid antagonist medications approved by the FDA under section 505 of the FFDCA for emergency treatment of known or suspected opioid overdose.

³⁸ <https://www.fda.gov/drugs/information-drug-class/information-about-medication-assisted-treatment-mat>.

Comment: Overall, commenters were in support of revising the definition of OUD treatment services to include overdose education. Several commenters indicated that overdose education should be included in the currently established bundled payment. Some other commenters suggested creating a separate add-on code and payment for providing overdose prevention education. Some commenters supported including community education for naloxone as an add-on service, but disagreed with the example provided in the proposed rule (85 FR 50203 and 50204) of using the CY 2020 Medicare payment rate for CPT code 96161 of \$2.53 to determine the additional payment amount. Rather, a commenter stated that CPT code 96161 is not commensurate with the cost of the service nor reflective of the required staff involvement and overhead cost and recommended a payment rate of \$20 at 15-minute increments. While another commenter thought the clinical activities are more aligned with 98960 (*Education and training for patient self-management by a qualified, nonphysician health care professional using a standardized curriculum, face-to-face with the patient (could include caregiver/family) each 30 minutes; individual patient*). Another commenter indicated that overdose education was proposed for Medicare Part D plans for contract year 2021 as part of Medication Therapy Management (MTM) and Drug Management Programs (DMP). However, no additional payment was proposed for these services when delivered in Medicare Part D. Another commenter stated that all patients receiving treatment at an OTP as well as their families should receive overdose education and urged CMS to include this payment in the add-on payments for intake activities and periodic assessments, and in the bundled payment for the initial month of substance use disorder treatment. One commenter stated that the availability of naloxone and other medications that can rapidly reverse an opioid overdose, along with education on its proper use, will save lives. The commenter also recommended that, whether reimbursement for overdose education is included as part of the bundled payment or billed as an add-on service, CMS include guardrails on what services OTPs are permitted to code as education to prevent waste and abuse, including specific requirements regarding the quality of services.

Response: After consideration of comments, we are revising the definition of OUD treatment services to

include overdose education. We continue to agree with the U.S. Surgeon General's public health advisory discussed above that community education related to overdose prevention is needed to address the opioid crisis. Overdose education includes educating patients and caregivers on how to recognize respiratory depression, the signs and symptoms of a possible opioid overdose, how to administer naloxone in the event of an overdose, and the importance of calling 911 or getting emergency medical help right away, even if naloxone is administered.³⁹ Providing naloxone and teaching people to use it is an effective means of preventing deaths among people who misuse opioids. With brief training, most adults can learn to administer life-saving naloxone.⁴⁰ We are modifying the proposed provision at § 410.67(b)(8) to include a reference to overdose education that is furnished in conjunction with opioid antagonist medications. After considering the commenters' recommendations regarding the payment rate for this type of education, which ranged from a payment rate of \$20 for each 15 minutes of education, to no separate payment for this education, we have determined that it would be appropriate to use a crosswalk to the CY 2020 Medicare payment rate for CPT code 96161 (*Administration of caregiver-focused health risk assessment instrument (e.g., depression inventory) for the benefit of the patient, with scoring and documentation, per standardized instrument*), which is assigned a non-facility payment rate under the PFS of \$2.53. We believe this reference code describes a similar level of service intensity and amount of clinical staff time involved in furnishing overdose education. We believe establishing a separate add-on code for overdose education to be billed in 15-minute increments is unnecessary and may result in overpayment for this service. As noted in the CY 2017 PFS final rule (81 FR 80331), we recognize that practitioners' interactions with caregivers or family members are an integral part of treatment for some patients. Overdose education and naloxone distribution programs have reduced opioid-related overdose for

³⁹ <https://www.fda.gov/media/140360/download#:~:text=%E2%80%A2%20Naloxone%20is%20an%20FDA-approved%20medicine%20used%20to,Signs%20of%20an%20opioid%20overdose%20include%20breathing%20problems%2C>.

⁴⁰ <https://www.samhsa.gov/homelessness-programs-resources/hpr-resources/useful-resources/opioid-overdose-prevention>.

over 20 years.⁴¹ Therefore, as naloxone and overdose education complement one another, we are finalizing add-on codes for naloxone that consist of both a drug component and a non-drug component that would account for overdose education furnished by the OTP. Therefore, the overdose education add-on will be included each time naloxone is furnished by the OTP. We will consider for future rulemaking whether separate coding is needed to allow payment for overdose education when it is furnished separate from the OTP furnishing the patient with naloxone.

Comment: Several commenters were in support of creating a new code for auto-injector naloxone and nasal naloxone. One commenter stated that the generic version of the auto-injector naloxone is currently not available in the marketplace.

Response: We thank the commenters for their support for creating new codes for the auto-injector naloxone and nasal naloxone. After consideration of the comments, we are finalizing our proposal to establish an add-on code for nasal naloxone that is dispensed in conjunction with an episode of care for treatment of OUD. We believe establishing an add-on code for nasal naloxone to allow OTPs to receive payment when they dispense this medication will allow beneficiaries access to this important emergency treatment at OTPs and may help decrease barriers to access because there are currently no copayments for services furnished by OTPs and beneficiaries would not need to visit a separate provider to access naloxone. We note that both the brand and authorized generic formulation of the auto-injector naloxone have been discontinued with obsolete dates effective September 4, 2020.⁴² Therefore, we are not finalizing our proposal to create an add-on code for auto-injector naloxone.

After consideration of comments, we are extending the definition of OUD treatment services to include short acting opioid antagonist medications, such as naloxone. We are further revising the definition of OUD treatment services to include overdose education furnished in conjunction with providing an opioid antagonist medication. We are also finalizing our proposal to create a code for nasal naloxone: HCPCS code G2215 (*Take-home supply of nasal naloxone (provision of the services by a*

⁴¹ [https://www.japha.org/article/S1544-3191\(17\)30002-X/fulltext](https://www.japha.org/article/S1544-3191(17)30002-X/fulltext).

Medicare-enrolled Opioid Treatment Program)); *List separately in addition to code for primary procedure.*), which will include both a drug component and a non-drug component for overdose education. The payment for the non-drug component of this code will be determined using a crosswalk to the Medicare payment rate for CPT code 96161 of \$2.53.

Drug Pricing for Nasal Naloxone

Consistent with the approach that we adopted for pricing the drug component of the weekly bundled payments, we proposed to price the add-on code describing the take home supply of nasal naloxone, using the same methodology we previously adopted for pricing the drug component of episodes of care that include implantable or injectable medications. Accordingly, the payment methodology would be based upon the methodology set forth in section 1847A of the Act, except that payment amounts determined based on ASP and wholesale acquisition cost (WAC) would not include any add-on percentages. In the CY 2021 PFS proposed rule (85 FR 50204), we acknowledged that nasal naloxone is not an oral, implantable or injectable medication; however, ASP data are available. We explained that, as noted in the CY 2020 PFS final rule (84 FR 62653), we believe using ASP provides a transparent and public benchmark for manufacturers' pricing as it reflects the manufacturers' actual sales prices to all purchasers (with limited exceptions as noted in section 1847A(c)(2) of the Act) and is the only pricing methodology that includes off-invoice rebates and discounts as described in section 1847A(c)(3) of the Act. Therefore, we believe ASP to be the most market-based approach to set drug prices. We sought public comment on our proposal to use ASP+0 to price the add-on payment for nasal naloxone and other potential sources of pricing data for nasal naloxone either generally or specifically with respect to acquisition by OTPs.

We received public comments on the proposed drug pricing for nasal naloxone. The following is a summary of the comments we received and our responses.

Comment: Several commenters opposed the proposed ASP + 0 payment for nasal naloxone and asserted that if payment for nasal naloxone is below cost, OTPs would not be able to offer this medication to Medicare beneficiaries. A commenter indicated that this product is made by one manufacturer that does not offer volume discounts. Commenters generally recommended including an add-on

payment similar to other drugs. A couple of commenters stated that the cost for OTPs to purchase nasal naloxone is \$125. Accordingly, they recommended a payment of cost + 6 percent for nasal naloxone (\$125 + 6 percent). A commenter indicated the cost + 6 percent payment rate would avoid imposing a financial loss on OTPs for providing naloxone and take into account OTP overhead costs (for example, training, security), thereby encouraging OTPs to provide this critical medication. A few commenters were in support of the proposed ASP + 0 payment for nasal naloxone. One commenter agreed that setting the payment rate for nasal naloxone at ASP is a reasonable approach.

Response: After review of the comments, we are finalizing our proposal to apply the payment methodology set forth in section 1847A of the Act to determine the payment for the nasal naloxone. However, as proposed, payment amounts for nasal naloxone, determined based on ASP and wholesale acquisition cost (WAC) will not include any add-on percentages. The use of ASP provides a transparent and public benchmark for the acquisition cost of a drug as it reflects the manufacturers' actual sales prices to all purchasers (with limited exceptions) and is the only pricing methodology that includes off-invoice rebates and discounts as described in section 1847A(c)(3) of the Act. We believe this approach is most consistent with the approach we adopted in the CY 2020 PFS final rule for pricing the drug component of an episode of care that includes implantable or injectable medications. For the reasons discussed in the CY 2020 PFS final rule (84 FR 62652 and 62653), we continue to believe that limiting the payment amount to 100 percent of the volume-weighted ASP for a HCPCS code instead of 106 percent of the volume-weighted ASP for a HCPCS code will incentivize the use of the most clinically appropriate drug for a given patient. We understand that many OTPs purchase medications directly from drug manufacturers, thereby limiting the markup from distribution channels. We continue to believe that the selection of drugs purchased by most OTPs is quite limited, which theoretically limits the utility of third-parties, such as wholesalers, and their associated costs and increases the purchase volume for OTPs and accompanying manufacturer discounts. We believe that this situation could lend itself to an OTP drug channel for purchasing at discounted rates either directly or through the use

of buying groups as is the standard in the pharmacy industry today. We believe that our proposed approach of paying for nasal naloxone based on ASP offers the most appropriate balance between ensuring OTPs receive appropriate reimbursement for their drug acquisition costs, while also preserving the incentive to use the most clinically appropriate drug for the treatment of individual beneficiaries.

We are interested in continuing to obtain feedback regarding access concerns related to naloxone payment. We will monitor utilization of these codes in the claims data to determine whether CMS should consider proposing changes in the future to the payment policies finalized in this rule.

Drug Pricing for Auto-Injector Naloxone

We proposed to price the add-on code describing the take-home supply of auto-injector naloxone, using the lowest pricing available (the lower of ASP + 0, WAC + 0, or NADAC). Currently, there is no ASP or NADAC reported or calculated for auto-injector naloxone. Accordingly, we proposed to use WAC + 0 to determine the pricing for the add-on payment for auto-injector naloxone. We explained that we believe 100 percent of WAC is a closer estimate of the actual acquisition cost for OTPs compared to WAC with an add-on percentage because, as defined in section 1847A(c)(6)(B) of the Act, WAC does not include prompt pay discounts, rebates or reductions in price. Thus, there should be no need to pay an add-on percentage to ensure OTPs are reimbursed for their acquisition costs for auto-injector naloxone. However, we also noted that in the future, using the lowest pricing available for auto-injector naloxone may be most appropriate, because if ASP and/or NADAC pricing were to become available for auto-injector naloxone, they would be more reflective of actual costs than a list price.

We noted that auto-injector naloxone was available in both a generic and brand name version. We explained that we had considered comparing the Medicare Part D utilization for each formulation to determine the frequency with which the generic and brand name versions might be dispensed by OTPs. However, because the generic auto-injector naloxone was rather new to the marketplace⁴³, we acknowledged that there were limited utilization data available for the generic product. Based on historical information reflecting a

⁴³ <https://kaleo.com/in-the-news/authorized-generic-for-evzio-naloxone-hcl-injection-to-be-available-at-a-reduced-list-price-of-178/>.

trend of increased generic utilization uptake,⁴⁴ we explained that we believed that in most cases where the auto-injector naloxone would be prescribed and dispensed by OTPs to beneficiaries, it would be the generic formulation of the product. Therefore, we noted that we believed using the price for the generic formulation would be a reasonable approach to pricing the proposed add-on code for auto-injector naloxone and would ensure that beneficiaries who need this drug as part of their treatment for OUD would have access to it and that OTPs would receive a reasonable payment for dispensing the drug. Accordingly, we proposed to use the price of the generic formulation, determined as WAC + 0, to pay for auto-injector naloxone when the drug is provided by an OTP as part of an episode of care. We sought comment on our proposed pricing methodology to pay for auto-injector naloxone and other potential sources of pricing data for auto-injector naloxone either generally or specifically with respect to acquisition by OTPs.

We received public comments on the proposed drug pricing for auto-injector naloxone. The following is a summary of the comments we received and our response.

Comment: One commenter pointed out that generic auto-injector naloxone is not currently available in the marketplace and stated that the brand name auto-injector naloxone costs about \$4,000. The commenter stated that the proposed payment rate for auto-injector naloxone is inadequate and should be revised to accurately reflect the true acquisition cost of the drug. Another commenter recommended a payment rate of cost plus 6 percent for auto-injector naloxone. Some other commenters also recommended including an add-on of plus 6 percent to the payment rate, similar to other drugs.

Response: As previously discussed, both the brand name auto-injector (Evzio) and authorized generic naloxone auto-injector were recently discontinued with obsolete dates effective September 4, 2020. Because auto-injector naloxone is no longer available in the marketplace, we are not finalizing the proposed code and pricing for auto-injector naloxone.

Frequency Limit

In the CY 2021 PFS proposed rule (85 FR 50205), we noted that Medicare Part D allows prescription drug plans to

place quantity limits (QL) on most drugs, including on naloxone. While most Medicare Part D plans do not limit the amount of naloxone a beneficiary is able to receive in a given month, when they do, they most frequently allow a plan enrollee a maximum of 4 units per 30 days (2 boxes of 2 units). In the current contract year (2020) only 22 percent of Medicare Part D formularies apply a QL to naloxone (115/535 formularies), while for the 2021 contract year only 19 percent of Medicare Part D formularies plan to apply a QL to this product (106/564 formularies). However, a review of Medicare Part D claims data shows that beneficiaries who use naloxone most frequently use only one box (2 units) within a 30-day period even though nearly all plans would have permitted additional doses. We also noted that under TRICARE, auto-injector naloxone is covered for a maximum quantity of one carton at retail network pharmacies for up to a 30-day supply.⁴⁵ We explained our belief that it would be appropriate to apply a similar limit on the frequency of the add-on payment for naloxone dispensed by OTPs. We stated that applying a frequency limit would assist in enhancing patient safety and discourage misuse, waste and abuse. Furthermore, we noted that such a limitation was reasonable because there are other services that OTPs should already be performing, and which are already included in the weekly bundled payments for episodes of care, such as counseling and individual and group therapy, that should limit the need for this emergency treatment. However, we noted that we do not want to limit access to naloxone when it is a medically reasonable and necessary part of the treatment for OUD. Therefore, we proposed to limit Medicare payment to OTPs for naloxone to one add-on code (HCPCS code G0TP1 or G0TP2) every 30 days to the extent that it is medically reasonable and necessary. We sought comment on whether this proposed limit was reasonable and whether special circumstances may arise under which more frequent payment would be medically reasonable and necessary and the types of circumstances that should qualify for more frequent payment. However, we noted that we also expect OTPs and their treating practitioners will use their clinical judgment as to whether there may be cases in which a referral to a higher level of care may be needed for some beneficiaries in order to reduce the risk of overdose and the

need for more frequent emergency treatment. We proposed to add § 410.67(d)(4)(i)(E) to describe payment for a take-home supply of opioid antagonist medications that are approved by FDA under section 505 of the FFDCA for the emergency treatment of known or suspected opioid overdose.

We invited public comments on the proposed pricing for nasal naloxone and auto-injector naloxone. We also sought comment on the proposal to limit payment for the proposed add-on codes for take-home supplies of these medications to once every 30 days to the extent that it is medically reasonable and necessary.

We received public comments on the proposed frequency limit. The following is a summary of the comments we received and our responses.

Comment: Several commenters did not support imposing frequency limits on the provision of naloxone to once per month and stated that clinicians should determine medical necessity, noting that naloxone is a life-saving drug and patient access should not be limited. One commenter recommended that exceptions be allowed for patients with a recent (within the last 30 days) overdose. Other commenters supported the proposed frequency limit and found it reasonable.

Response: After consideration of the comments, we are finalizing a frequency limit on Medicare payments to OTPs for naloxone to one add-on code (HCPCS code G2215 or G2216) every 30 days. However, we agree with commenters that access to naloxone should not be limited when it is a medically reasonable and necessary part of the treatment for OUD. Therefore, we will allow exceptions to this limit in the case where the beneficiary overdoses and uses the initial supply of naloxone dispensed by the OTP to the extent that it is medically reasonable and necessary to furnish additional naloxone. We note that section 1862(a)(1)(A) of the Act requires that in order for payment to be made for most Part A and Part B services furnished to Medicare beneficiaries, those services must be reasonable and necessary for the diagnosis or treatment of illness or injury or to improve the malfunctioning of a malformed body member. If an additional supply of naloxone is needed within 30 days of the original supply being provided, OTPs must document in the medical record the reason for the exception. Additionally, CMS will monitor utilization of these codes in the claims data and will refer cases of disproportionate use for further review.

Additionally, we sought comment on whether we should consider creating a

⁴⁴ In 2015, approximately 87 percent of prescriptions filled under Part D were for generic drugs, compared with 61 percent in 2007. http://www.medpac.gov/docs/default-source/reports/mar18_medpac_ch14_sec.pdf.

⁴⁵ <https://www.express-scripts.com/static/formularySearch/2.9.6/#/formularySearch/drugSearch>.

code and establishing an add-on payment for injectable naloxone. We noted that all three forms of naloxone (injectable, auto-injector, and nasal spray) are FDA-approved and may be considered as options for community distribution.

It is important to understand how to administer naloxone properly, therefore, we defer to the clinical judgment of practitioners in the OTP as to which formulation of naloxone would be the most appropriate to dispense to a patient. Brief education on how to administer naloxone using a syringe can be obtained from the provider of the naloxone kit or from <http://prescribetoprevent.org/>.⁴⁶ Additionally, we note that in this final rule, we are including overdose education in the non-drug component of the payment rate for both of the new add-on codes for naloxone (HCPCS codes G2215 and G2216), and expect that when OTPs provide beneficiaries with a supply of naloxone, they will also inform them about how to use the medication they are being given.

We stated in the CY 2021 PFS proposed rule (85 FR 50205) that if we were to establish an add-on payment for injectable naloxone, we would consider using the same methodology we adopted for pricing the drug component of an episode of care that includes implantable or injectable medications, as described in § 410.67(d)(2)(i)(A).

We received public comments in response to our request for input on whether we should create a code and establish an add-on payment for injectable naloxone. The following is a summary of the comments we received and our responses.

Comment: Commenters supported the creation of coding and payment for injectable naloxone. Some commenters stated that ensuring payment for all three forms of FDA-approved naloxone would allow providers to select the most appropriate form of naloxone for the particular Medicare beneficiary and provide options in the case of drug shortages. The commenters also noted

that traditionally, injectable naloxone is the least expensive form, but can be more difficult to administer in an overdose emergency. Another commenter stated that they believe formulations of naloxone that are intended for use by medical professionals (that is, injectable naloxone) are also valuable in the prevention and treatment of opioid overdose. The commenter stated that given that it is highly probable that OTP providers will be in a position to provide care to a beneficiary who has overdosed, the availability of injectable naloxone at these facilities can facilitate timely opioid overdose reversal. Some commenters stated that the payment rate for injectable naloxone must be adequate and another stated that they believe payment should align with payment for other Medicare Part B medications (that is, ASP plus 6 percent).

Response: We agree with the commenters that providing for Medicare payment to OTPs for all available forms of FDA-approved naloxone will allow practitioners in OTPs to select the most appropriate form of naloxone for the beneficiary, provide options in the case of drug shortages, and expand access to treatment for opioid overdoses. Although we acknowledge that individuals experiencing an opioid overdose will not be able to use injectable naloxone to treat an overdose themselves,⁴⁷ self-administration of naloxone is not necessarily a goal of overdose death prevention training. A safer, more reliable approach may be to prescribe naloxone to at-risk patients and train and also equip members of their household and social networks in overdose prevention and response.⁴⁸

After consideration of the comments received, we are finalizing a second new add-on code to cover the cost of providing patients with a supply of injectable naloxone. We recognize the importance of making injectable naloxone available to Medicare

beneficiaries. Additionally, creating a new add-on code for injectable and nasal naloxone will provide options in the case of drug shortages or in the event a drug is no longer available in the market, as occurred with auto-injector naloxone.

The add-on code for injectable naloxone is HCPCS code G2216 (*Take-home supply of injectable naloxone (provision of the services by a Medicare-enrolled Opioid Treatment Program); List separately in addition to code for primary procedure.*), which will include both a drug component and a non-drug component. As stated in previous rulemaking (84 FR 62650), we use the typical maintenance dose to calculate the drug component for the OTP benefit. According to the package insert,^{49 50} an initial dose of 0.4 mg to 2 mg of injectable naloxone may be administered through intravenous, intramuscular, or subcutaneous routes. If needed, it may be repeated at two- to three-minute intervals up to a total dose of 10mg. Because the information we have is not based upon a typical dose, we are contractor pricing this code for CY 2021. This will provide beneficiaries access to injectable naloxone under the OTP benefit and will also allow us the opportunity to obtain more information to better understand the typical dosage of injectable naloxone, in order to potentially establish national pricing for injectable naloxone through future rulemaking. The payment for the non-drug component of this code will be determined using a crosswalk to the Medicare payment rate for CPT code 96161 of \$2.53, as discussed previously in conjunction with the new code for nasal naloxone (HCPCS G2215).

Table 34 details the new add-on codes for nasal naloxone and injectable naloxone, and the accompanying payment amounts, which reflect the cost of the drug plus an additional \$ 2.53 for overdose education, as discussed previously in this section.

TABLE 34: OTP Code Descriptors and Payment Amounts*

HCPSCS	Descriptor	Total Payment
G2215	Take-home supply of nasal naloxone (provision of the services by a Medicare-enrolled Opioid Treatment Program); List separately in addition to code for primary procedure.	\$92.13
G2216	Take-home supply of injectable naloxone (provision of the services by a Medicare-enrolled Opioid Treatment Program); List separately in addition to code for primary procedure.	Contractor-priced

* Nasal naloxone drug costs are calculated using ASP data plus a payment of \$2.53 for overdose education. HCPSCS code G2216 will be contractor-priced and will also include a payment of \$2.53 for overdose education.

Duplicative Payment

Section 1834(w)(1) of the Act, added by section 2005(c) of the SUPPORT Act, requires the Secretary to ensure, as determined appropriate by the Secretary, that no duplicative payments are made under Medicare Part B or Part D for items and services furnished by an OTP. In the CY 2021 PFS proposed rule (85 FR 50206), we noted that under the proposal, OTPs would be able to provide naloxone to Medicare beneficiaries and bill for it as an add-on to the bundled payment for the episode of care. Consistent with § 410.67(e), the beneficiary's copayment amount would remain zero. We also noted that naloxone may also be appropriately available to beneficiaries through other Medicare benefits, including, for example, Medicare Part D, under which the beneficiary would be responsible for the applicable cost sharing. As discussed in the CY 2020 PFS final rule (84 FR 62664) and codified at § 410.67(d)(5), we define duplicative payment to involve only those circumstances where medications that are delivered, administered or dispensed to a beneficiary are paid as part of the OTP bundled payment, and where the delivery, administration or dispensing of the same medication (that is, same drug, dosage and formulation) is also separately paid under Medicare Part B or Part D for the same beneficiary on the same date of service. Because we proposed to pay for naloxone as an add-on to the weekly bundled payment, any payment to an OTP for naloxone would be duplicative if the same medication is separately paid under Medicare Part B or Part D for the same beneficiary on the same date of service. Consistent with § 410.67(d)(5), CMS would recoup any duplicative payment made to an OTP for naloxone.

Additionally, we noted that we understand some OTPs negotiate arrangements whereby community pharmacies supply MAT-related medications to OTPs. However, we

reiterated that, as stated in the CY 2020 PFS final rule, if the OTP provides reasonable and necessary MAT-related medications as part of an episode of care, we would expect the OTP to take measures to ensure that there is no claim for payment for these drugs other than as part of the OTP bundled payment. Thus, naloxone billed by an OTP as an add-on to the bundled payment should not be reported to or paid under a Medicare Part D plan. We noted that we expect OTPs will take reasonable steps to prevent duplicative payment for naloxone furnished under their care by ensuring it is not reported or billed under a different Medicare benefit. We also noted that we intend to monitor for duplicative payments, and would take appropriate action as needed when and if such duplicative payments are identified.

We received public comments on the discussion of duplicative payment for naloxone. The following is a summary of the comments we received and our responses.

Comment: Several commenters opposed recoupment of duplicative payments made to OTPs for naloxone. One commenter noted that OTPs do not have the capacity to be aware of or prevent other providers from prescribing naloxone through Medicare Part D. A commenter recommended that CMS inform health plans if a member is receiving services from an OTP, but acknowledged this may be difficult due to privacy laws. A commenter stated that CMS should either establish a means of coordination or recoup payment from Medicare Part D plans and other healthcare providers if naloxone is provided outside of the OTP. Another commenter stated that if the proposal to establish an add-on payment for naloxone is finalized, CMS will need to provide instructions to guard against duplicative payment.

Response: As we are finalizing the proposal to pay for naloxone as an add-on to the weekly bundled payment, we

reiterate that consistent with § 410.67(d)(5), any payment to an OTP for naloxone would be duplicative if a claim for the same medication is separately paid under Medicare Part B or Part D for the same beneficiary on the same date of service, and CMS would recoup any duplicative payment made to an OTP for naloxone. Section 1834(w)(1) of the Act, added by section 2005(c) of the SUPPORT Act, requires the Secretary to ensure, as determined appropriate by the Secretary, that no duplicative payments are made under Medicare Part B or Part D for items and services furnished by an OTP. Therefore, for purposes of implementing section 1834(w)(1) of the Act, payment for medications delivered, administered or dispensed to the beneficiary as part of the OTP bundled payment is considered duplicative if delivery, administration or dispensing of the same medication was also separately paid under Medicare Part B or D. CMS would recoup any duplicative payment made to an OTP for naloxone because OTPs will be in the best position to know whether naloxone that is included as part of the beneficiary's treatment plan is being furnished by the OTP or by another provider or supplier given that the OTP is responsible for managing the beneficiary's overall OUD treatment. OTPs should make a good faith effort to ensure that no duplicative payments are made for naloxone, for example, by inquiring whether the beneficiary has already received a supply of naloxone through Medicare Part B or D. Please see the CY 2020 PFS final rule (84 FR 62663 and 62664) for a more detailed discussion of our policy on duplicative payments.

3. WAC Pricing

Section 1834(w) of the Act gives the Secretary significant discretion to establish bundled payment rates for OUD treatment services. In the CY 2020 PFS final rule, we finalized a payment methodology for the drug component of

the bundled payment rates for OUD treatment services, under which we use the payment methodology set forth in section 1847A of the Act (which bases most payment on ASP) to set the payment rates for implantable and injectable drugs and limited the payment amount for these drugs to 100 percent of the volume-weighted ASP for a drug category or code, if ASP is used. We codified this payment methodology at § 410.67(d)(2)(i)(A).

Section 1847A of the Act provides for the use of other payment methodologies in certain circumstances, including payment based on WAC or average manufacturer price (AMP). In the CY 2020 PFS final rule, we limited payments to OTPs for injectable and implantable drugs to 100 percent of ASP, but did not otherwise diverge from the payment methodology that would apply under section 1847A of the Act. In the CY 2021 PFS proposed rule (85 FR 50206), we noted our belief that it was necessary to amend the OTP drug pricing methodology in order to limit WAC-based payments to 100 percent of WAC. As discussed previously, we proposed to use WAC pricing to determine the payment rate for the add-on code for the auto-injector naloxone. Although none of the drugs that are currently included in the drug component of an episode of care is currently paid based on WAC, we also noted that it is possible that we may use WAC to determine the payment for the drug component of an episode of care in the future, and we wanted to establish, in advance, the methodology that would apply for purposes of determining the payment rate.

As authorized under section 1847A of the Act, some Medicare Part B drugs are paid based on WAC. For example, for single source drugs, payment is 106 percent of the lesser of WAC or ASP (section 1847A(b)(4) of the Act), and in cases where ASP is unavailable during the first quarter of sales (section 1847A(c)(4) of the Act), 103 percent of WAC is used. Additionally, there are some instances where drugs lack ASP data for reasons other than being new, for example, in cases where the manufacturer had no sales in a reporting quarter. In those situations, the Medicare payment method varies, but in some cases, the payment may be 106 percent of the WAC.⁵¹ As we stated in the CY 2020 PFS final rule (84 FR 62651), payment structures that are closely tailored to the provider's actual acquisition cost reduce the likelihood

that a drug will be chosen primarily for a reason that is unrelated to the clinical care of the patient, such as the drug's profit margin for a provider. The WAC is defined in section 1847A(c)(6)(B) as the manufacturer's list price for a drug to wholesalers or direct purchasers in the United States, not including prompt pay or other discounts, rebates, or reductions in price. A drug's WAC is ultimately controlled by the manufacturer. Unlike ASP, a drug's WAC does not incorporate prompt-pay or other discounts. If discounts are available on drugs reimbursed by Medicare at 106 percent of WAC, then Medicare is paying more for drugs than it otherwise would under the ASP-based formula.⁵² Therefore, consistent with our existing policy to set the payment amount at 100 percent of the ASP, if ASP is used to determine the payment for the drug component of an episode of care, we proposed that when WAC-based pricing is used, the payment amount shall be WAC + 0. We proposed to amend the provision at § 410.67(d)(2)(i)(A) to reflect this limitation.

We solicited comments on this proposed alternative pricing methodology when the payment for an implantable or injectable medication included in the drug component of an episode of care is determined using the methodology set forth in section 1847A of the Act, and ASP pricing data are not available.

We received public comments on the WAC pricing proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter expressed concern with CMS establishing payment rates for medications that deviate from the standard methodology under Medicare Part B of paying for drugs at the current rate of ASP plus 6 percent. The commenter also stated that they were concerned that limiting payment to Wholesale Acquisition Cost (WAC) when ASP is not available would limit OTPs' ability to treat Medicare beneficiaries effectively. Another commenter supported the use of WAC + 0 and stated, in reference to auto-injector naloxone, that any payments above WAC would likely only serve to encourage price increases in the market more broadly.

Response: We thank the commenters for their feedback on our proposal that when the payment for an implantable or injectable medication included in the drug component of an episode of care is determined using the methodology set

forth in section 1847A of the Act, and ASP pricing data are not available, and WAC-based pricing is used, the payment amount shall be WAC + 0. We continue to believe that payment structures that are closely tailored to the provider's acquisition cost reduce the likelihood that a drug will be chosen primarily for a reason that is unrelated to the clinical care of the patient, such as the drug's profit margin for a provider. Because WAC does not include prompt pay discounts, rebates or price reductions, we believe WAC could be a much higher than acquisition cost. However, we continue to believe that 100 percent of WAC is a closer estimate of the actual acquisition cost for OTPs compared to WAC with an add-on percentage. Therefore, we are finalizing our proposal that when WAC-based pricing is used, the payment amount shall be WAC + 0. We are also finalizing the proposed amendment to the provision at § 410.67(d)(2)(i)(A) to reflect this pricing methodology.

4. Billing and Payment Policies

a. Institutional Claim Forms

As discussed in the CY 2021 PFS proposed rule (85 FR 50207), we have received several requests to allow OTPs to bill on an institutional claim form. We were informed by representatives from the state of New York that all OTPs in New York state bill on institutional claim forms, not just those that are part of a hospital system. Given the public health need related to the opioid epidemic, we explained that we were exploring claims processing flexibilities requested by some OTPs that would allow them to bill services on institutional claims. See also section III.B. of this final rule, OTP Provider Enrollment Regulation Updates for Institutional Claim Submissions, for a discussion related to OTP enrollment as it relates to institutional claims. As we explained in the CY 2021 PFS proposed rule, there would be no differences in coverage or payment between services billed on the institutional claim form versus the professional claim form. We noted that the National Uniform Billing Committee (NUBC) approved a new Type Of Bill (087x) for Freestanding Non-residential Opioid Treatment Program provider billing, as well as a new condition code (89) for Opioid Treatment Program/Indicates claim for opioid treatment program services, to be used on hospital based OTP claims (TOB 013x and 085x). We sought information on the reasons this claims-processing flexibility is necessary for OTPs, and stated that we would address any changes to provider billing policies

⁵¹ <http://www.medpac.gov/-blog/-requiring-reporting-of-sales-price-data/2019/06/14/payment-for-part-b-drugs>.

⁵² http://medpac.gov/docs/default-source/reports/jun17_ch2.pdf.

in subsequent claims processing instructions.

We received public comments on allowing OTPs to bill on an institutional claim form. The following is a summary of the comments we received and our response.

Comment: Several commenters expressed support for allowing this flexibility. One commenter noted that they anticipate there will be a significant increase in OTP enrollment as a result of this flexibility, especially in states that have a significant number of hospital-based OTPs. Another commenter noted that allowing OTPs to submit claims on the institutional claim form (837i) will help to facilitate the processing of crossover claims between Medicare and Medicaid.

Response: We are continuing to explore how best to implement these flexibilities. We will provide notice of any relevant changes through claims processing instructions.

b. Periodic Assessments

In the CY 2020 PFS final rule (84 FR 62634), we stated that we understood that intake activities and periodic assessments are integral services for the establishment and maintenance of OUD treatment for a beneficiary at an OTP, and therefore, we believed it was reasonable to include these services in the definition of OUD treatment services. Accordingly, we finalized a definition of OUD treatment services in § 410.67(b) that reflected the required intake activities and periodic assessments. We stated it was our understanding that these services are furnished much less frequently than the other services included in the weekly bundled payments; therefore, we created add-on G codes to describe these services, which would allow us to make more targeted payments for these services. We noted that the add-on code describing intake activities should only be billed for new patients (that is, patients starting treatment at the OTP). We agreed with the commenters that the level 4 office/outpatient E/M visits for new and established patients are a good approximation of the services provided at intake and during periodic assessments at OTPs based on the expected acuity of patients with OUD receiving services at OTPs, who are likely to have multiple co-morbidities and present with problems that are of moderate to high severity and require medical decision making of moderate complexity. The finalized add-on codes are HCPCS code G2076 (*Intake activities; including initial medical examination that is a complete, fully documented physical evaluation and*

initial assessment conducted by a program physician or a primary care physician, or an authorized health care professional under the supervision of a program physician or qualified personnel that includes preparation of a treatment plan that includes the patient's short-term goals and the tasks the patient must perform to complete the short-term goals; the patient's requirements for education, vocational rehabilitation, and employment; and the medical, psycho-social, economic, legal, or other supportive services that a patient needs, conducted by qualified personnel) and HCPCS code G2077 (*Periodic assessment; assessing periodically by qualified personnel to determine the most appropriate combination of services and treatment*). The medical services described by these add-on codes can be furnished by a program physician, a primary care physician or an authorized healthcare professional under the supervision of a program physician or qualified personnel such as nurse practitioners (NPs) and physician assistants (PAs). The other assessments, including psychosocial assessments can be furnished by practitioners who are eligible to do so under state law and their scope of licensure. We noted that to bill for the add-on code, the services need to be medically reasonable and necessary and that OTPs should document the rationale for billing the add-on code in the patient's medical record (84 FR 62647).

As we explained in the CY 2021 PFS proposed rule (85 FR 50207), we have received inquiries from stakeholders related to what activities would qualify to bill the add-on code for periodic assessments, HCPCS code G2077. In the CY 2020 PFS final rule (84 FR 62647), we noted that the add-on code describing periodic assessments can be billed for each periodic assessment performed for patients that require multiple assessments during an episode of care, such as patients who are pregnant or postpartum. We noted that in order to bill for the add-on code, the services would need to be medically reasonable and necessary and that OTPs should document the rationale for billing the add-on code in the patient's medical record. Based on our understanding of the typical resources costs involved in furnishing periodic assessments, we priced HCPCS code G2077 based on a crosswalk to a level 4 office/outpatient E/M visit. Consistent with our understanding of the expected acuity of patients with OUD receiving services at OTPs, including the likelihood of the patient having

multiple co-morbidities and presenting with problems that are of moderate to high severity and requiring medical decision making of moderate complexity, as well as the associated payment rate assigned to this code, we explained that we believe it is important for the clinician to be able to visually assess the patient as part of any periodic assessment. Therefore, for CY 2021, we proposed that in order to bill for HCPCS code G2077, a face-to-face medical exam or biopsychosocial assessment would need to have been performed. Accordingly, we proposed to amend the definition of periodic assessment in § 410.67(b)(7) to provide that the definition is limited to a face-to-face encounter.

Additionally, we noted that in the May 8th COVID-19 IFC, CMS revised § 410.67(b)(7) on an interim final basis to allow periodic assessments to be furnished during the PHE for COVID-19 via two-way interactive audio-video communication technology and, in cases where beneficiaries do not have access to two-way audio-video communication technology, to permit the periodic assessments to be furnished using audio-only telephone calls rather than via two-way interactive audio-video communication technology, provided all other applicable requirements are met. We explained our belief that allowing periodic assessments to be furnished via two-way interactive audio-video communication technology beyond the conclusion of the PHE for COVID-19 would help to expand access to care for patients who may have a difficult time getting to the OTP in person. Therefore, in the proposed rule, we proposed to revise § 410.67(b)(7) to allow periodic assessments to be furnished via two-way interactive audio-video communication technology, provided all other applicable requirements are met. We noted that we are currently permitting the use of audio-only telephone calls to furnish these services during the PHE for COVID-19, because we believe it is important to maintain access to these services while the public is following infection control guidelines to stay at home and practice social distancing, and not all beneficiaries receiving OUD treatment services from OTPs may have access to interactive audio-video communication technology. However, we did not believe this flexibility would be needed in order to ensure access after the PHE for COVID-19 ends. Therefore, we did not propose to extend the flexibility to use audio-only telephone services to furnish periodic assessments once the PHE for COVID-19 has ended.

We noted that we would consider payment for any periodic assessment-related services furnished via audio-only telephone calls to be included in the bundled payment for a weekly episode of care, but that audio-only telephone services would not qualify for billing HCPCS code G2077 after the end of the PHE for COVID-19. We sought input from the public on whether we should consider continuing to make add-on payments for audio-only periodic assessments furnished by OTPs after the conclusion of the PHE for COVID-19, and if so, whether the payment rate for audio-only services should reflect any differences in resource costs.

We received public comments on the proposals related to periodic assessments. The following is a summary of the comments we received and our responses.

Comment: Commenters supported our proposal to allow OTPs to utilize two-way interactive audio-video communication to satisfy the proposed requirement that periodic assessments include a face-to-face encounter. Several commenters requested that CMS allow audio only communication to continue to be used for periodic assessments beyond the PHE for beneficiaries who do not have video capabilities, noting that many individuals who receive treatment at OTPs do not have access to devices with audio-video capability and beneficiaries in rural areas may not have broadband internet access.

Response: While we believe it is important to allow the flexibility to furnish periodic assessments via audio-only telephone calls during the PHE for COVID-19, we continue to have concerns about continuing this flexibility after the end of the PHE. For example, we are concerned that the effectiveness and/or quality of the care furnished during these interactions may be lower when practitioners cannot observe visual cues while furnishing these assessments. Therefore, after consideration of the comments, we are finalizing our proposal that in order to bill for HCPCS code G2077, a face-to-face medical exam or biopsychosocial assessment would need to have been performed. Additionally, we are finalizing our proposal to revise § 410.67(b)(7) to provide that periodic assessments must be furnished during a face-to-face encounter, but may be furnished via two-way interactive audio-video communication technology, as clinically appropriate, provided all other applicable requirements are met. We plan to analyze differences in utilization in the claims data during and after the PHE for COVID-19, and are

interested in feedback related to differences in frequency, effectiveness, and quality of care furnished by OTPs when services are furnished via audio-only communication in order to help assess whether we should consider making any changes to our current policies regarding the use of communication technology in future rulemaking.

c. Date of Service

In the CY 2020 PFS final rule (84 FR 62641), we defined an episode of care as a 1-week (contiguous 7-day) period at § 410.67(b). We have received inquiries related to the date of service used on claims for the weekly bundles and add-on codes, particularly related to an approach that many providers informed us they use, which is to establish a “standard billing cycle” in which episodes of care for all patients at that OTP begin on the same day of the week. We do not believe that the definition of an episode of care that was finalized for CY 2020 precludes the use of a “standard billing cycle.” Therefore, OTPs may choose to apply a standard billing cycle by setting a particular day of the week to begin all episodes of care. In this case, the date of service would be the first day of the OTP’s billing cycle. If a beneficiary starts treatment at the OTP on a day that is in the middle of the OTP’s standard weekly billing cycle, the OTP may still bill the applicable code for that episode of care provided that the threshold to bill for the code has been met. Alternatively, OTPs may choose to adopt weekly billing cycles that vary across patients. Under this approach, the initial date of service will depend upon the day of the week when the patient was first admitted to the program or when Medicare billing began. Therefore, under this approach of adopting weekly billing cycles that vary across patients, when a patient is beginning treatment or re-starting treatment after a break in treatment, the date of service would reflect the first day the patient was seen and the date of service for subsequent consecutive episodes of care would be the first day after the previous 7-day period ends. For the codes describing add-on services (HCPCS codes G2076–G2080), the date of service should reflect the date that service was furnished; however, if the OTP has chosen to apply a standard weekly billing cycle, the date of service for codes describing add-on services may be the same as the first day in the weekly billing cycle.

In the CY 2021 PFS proposed rule (50208), we noted that this approach is consistent with earlier guidance that

was issued in the OTP Billing and Payment Fact sheet that is posted on the CMS OTP web page (<https://www.cms.gov/files/document/otp-billing-and-payment-fact-sheet.pdf>).

We received public comments on the discussion of the date of service used on claims in the proposed rule. The following is a summary of the comments we received and our responses.

Comment: Commenters expressed support for the flexibility to use either a “standard billing cycle” or a weekly billing cycle that varies across patients.

Response: We intend to continue to offer this flexibility to OTPs.

Additionally, we note that the current policies regarding the date of services for add-on codes will apply to the new add-on codes we are adopting in this final rule for nasal naloxone and injectable naloxone.

d. Coding

In the CY 2021 PFS proposed rule (85 FR 50208), we explained that we recognize the importance of allowing OTPs to become accustomed to billing Medicare using the coding that was established in the CY 2020 PFS final rule; however, we remain interested in refining the code set through future rulemaking, including stratifying the coding and associated payment amounts to account for significant differences in resource costs among patients, especially in relation to amounts of expected counseling. In the CY 2020 PFS final rule (84 FR 62645), we finalized an add-on code to describe an adjustment to the bundled payment when additional counseling or therapy services are furnished, HCPCS code G2080. This add-on code may be billed when counseling or therapy services are furnished that substantially exceed the amount specified in the patient’s individualized treatment plan. We stated that we have received feedback from stakeholders noting a range of OTP attendance patterns that represent a continuum of care and service intensity, noting significant differences in services received during the induction phase versus the maintenance phase. We also understand that patients’ needs for service may fluctuate over time, depending on a variety of factors and circumstances. We sought comments on how we might better account for differences in resource costs among patients over the course of treatment. We noted that we would consider the comments received in developing any proposed refinements to our coding policies in future rulemaking.

We received public comments on the discussion of billing and payment policies in the proposed rule. The

following is a summary of the comments we received and our responses.

Comment: Commenters expressed support for CMS' retaining the coding framework that was established in the CY 2020 rulemaking. A few commenters stated that CMS should maintain the current bundle structure because it has proven to be successful and viable during the first year of the new Medicare Part B benefit for OUD treatment services furnished by OTPs, and therefore there is no need to overly tinker with a functioning reimbursement structure. Another commenter stated that the current bundled payment methodology, with the ability to bill for additional counseling via add-on codes has worked remarkably well due to its simplicity. They stated that the current bundled payments reflect the costs associated with treating a patient with average needs and that while some patients require greater services and some require less, it usually balances out from a reimbursement-to-costs standpoint. They also stated that they have found that Medicare beneficiaries generally are a more health care service intensive population than non-Medicare patients, and therefore many OTPs are working to increase counseling resources to meet the unique needs of the Medicare population. They also stated that changing the current bundled payment methodology would undermine the progress OTPs have made in this area and therefore recommended that CMS maintain the current bundled payment structure.

Response: We are pleased to hear that the coding and payment policies that we established in CY 2020 PFS final rule have been effective and well received. We plan to retain the current coding structure for 2021, and will continue to consider any refinements to that structure for future rulemaking.

5. Annual Updates

In the CY 2020 PFS final rule (84 FR 62667 through 62669), we finalized a policy under which the payment for the drug component of episodes of care will be determined using the most recent data available at the time of ratesetting for the applicable calendar year. The payment for the non-drug component of the bundled payment for OUD treatment services will be updated annually based upon the Medicare Economic Index. The current payment rates, as finalized in the CY 2020 PFS final rule, both with and without locality adjustments, can be found on the CMS OTP web page under Billing and Payment at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/Opioid-Treatment->

[Program/billing-payment](https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSchd/PFS-Federal-Regulation-Notices?DLSort=2&DLEntries=10&DLPage=1&DLSortDir=descending). The list of the payment rates for OUD treatment services furnished by OTPs, with the annual update applied for CY 2021, is available in the file called CY 2021 PFS final rule OTP Payment Rates on the CMS website under downloads for the CY 2021 PFS proposed rule at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSchd/PFS-Federal-Regulation-Notices?DLSort=2&DLEntries=10&DLPage=1&DLSortDir=descending>.

Comment: Commenters stated that using the Medicare Economic Index (MEI), which focuses more narrowly on physician practices, to update the payment rates for the non-drug component of the bundled payments does not ensure that Medicare payment rates for OTPs keep pace with growing practice costs. The commenters stated that OTPs' cost structures are more similar to HOPDs than they are to physician offices, in that they employ interdisciplinary teams, including medical directors, doctors, counselors, nurses, pharmacists, laboratory technicians, social workers, and case managers, to provide care to patients. They also noted that like hospitals, OTPs serve patients 7 days per week and go through extensive accreditation and certification process and are subject to thorough inspections by deferral regulators. OTPs are also required to employ diversion control systems to ensure treatment medication is being used properly, while physicians in the office setting who prescribe buprenorphine are not subject to those requirements. Commenters stated that given these similarities between OTPs and HOPDs, the IPPS market basket update would be a more accurate measure of annual price growth in the OTP setting for the non-drug component of the OTP bundled payment rates, noting that TRICARE increases its payments to OTPs by the IPPS update factor annually.

Response: We did not propose any changes for CY 2021 to the annual update process that was established in the CY 2020 PFS final rule (84 FR 62667), however, we will consider this feedback for future rulemaking.

J. Technical Correction to the Definition of Public Health Emergency

In the March 31st COVID-19 IFC (85 FR 19285), we amended 42 CFR part 400 by adding the definition of "Public Health Emergency." We made an inadvertent typographical error in the regulations at § 400.200 by referring to the authority for the Public Health Emergency (PHE) as the "Public Health

Security Act" rather than the "Public Health Service Act." We are correcting this error in this final rule and amending § 400.200 by revising the definition. Public Health Emergency (PHE) now means the Public Health Emergency determined to exist nationwide as of January 27, 2020, by the Secretary pursuant to section 319 of the Public Health Service Act on January 31, 2020, as a result of confirmed cases of COVID-19, including any subsequent renewals. This revised definition has an applicability date of March 1, 2020, which is the same applicability date as the March 31st COVID-19 IFC.

III. Summary of the Proposals for Other Part B Provisions, Analysis of and Responses to Public Comments, and Provisions of the Final Rule

A. Clinical Laboratory Fee Schedule: Revised Data Reporting Period and Phase-In of Payment Reductions, and Comment Solicitation on Payment for Specimen Collection for COVID-19 Clinical Diagnostic Laboratory Tests

1. Background on the Clinical Laboratory Fee Schedule

Prior to January 1, 2018, Medicare paid for clinical diagnostic laboratory tests (CDLTs) on the Clinical Laboratory Fee Schedule (CLFS), with certain exceptions, under section 1833(a), (b), and (h) of the Act. Under the previous payment system, CDLTs were paid based on the lesser of: (1) The amount billed; (2) the local fee schedule amount established by the Medicare Administrative Contractor (MAC); or (3) a national limitation amount (NLA), which is a percentage of the median of all the local fee schedule amounts (or 100 percent of the median for new tests furnished on or after January 1, 2001). In practice, most tests were paid at the NLA. Under the previous payment system, the CLFS amounts were updated for inflation based on the percentage change in the Consumer Price Index for All Urban Consumers (CPI-U), and reduced by a multi-factor productivity adjustment and other statutory adjustments, but were not otherwise updated or changed. Coinsurance and deductibles generally do not apply to CDLTs paid under the CLFS.

Section 1834A of the Act, as established by section 216(a) of the Protecting Access to Medicare Act of 2014 (PAMA), required significant changes to how Medicare pays for CDLTs under the CLFS. In the June 23, 2016 **Federal Register** (81 FR 41036), we published a final rule entitled Medicare Clinical Diagnostic Laboratory Tests

Payment System (CLFS final rule), that implemented section 1834A of the Act at 42 CFR part 414, subpart G.

Under the CLFS final rule, “reporting entities” must report to CMS during a “data reporting period” “applicable information” collected during a “data collection period” for their component “applicable laboratories.” The first data collection period occurred from January 1, 2016 through June 30, 2016. The first data reporting period occurred from January 1, 2017 through March 31, 2017. On March 30, 2017, we announced a 60-day period of enforcement discretion for the application of the Secretary’s potential assessment of Civil Monetary Penalties (CMPs) for failure to report applicable information with respect to the initial data reporting period. This announcement is available on the CMS website at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ClinicalLabFeeSched/Downloads/2017-March-Announcement.pdf>.

In the CY 2018 PFS proposed rule (82 FR 34089 through 34090), we solicited public comments from applicable laboratories and reporting entities to better understand the applicable laboratories’ experiences with data reporting, data collection, and other compliance requirements for the first data collection and reporting periods. We discussed these comments in the CY 2018 PFS final rule (82 FR 53181 through 53182) and stated that we would consider the comments for potential future rulemaking or guidance.

As part of the CY 2019 Medicare PFS rulemaking, we finalized two changes to the definition of “applicable laboratory” at § 414.502 (see 83 FR 59667 through 59681, 60074; 83 FR 35849 through 35850; 83 FR 35855 through 35862). First, we excluded Medicare Advantage (MA) plan payments under Part C from the denominator of the Medicare revenues threshold calculation, in an effort to broaden the types of laboratories qualifying as an applicable laboratory. Specifically, excluding MA plan payments could allow additional laboratories of all types serving a significant population of beneficiaries enrolled in Medicare Part C to meet the majority of Medicare revenues threshold and potentially qualify as an applicable laboratory (if they also meet the low expenditure threshold) and report data to CMS during the data reporting period. Because MA plan payments are now excluded from the total Medicare revenues calculation, the denominator amount (total Medicare revenues) would decrease. If the denominator amount decreases, the likelihood increases that a laboratory would qualify as an

applicable laboratory. This is because the laboratory’s PFS and CLFS revenues are being compared to a lower total Medicare payment amount (than what they would have been compared to if MA plan payments remained in the denominator). Second, consistent with our goal of obtaining a broader representation of laboratories that could potentially qualify as an applicable laboratory and report data, we also amended the definition of applicable laboratory to include hospital outreach laboratories that bill Medicare Part B using the CMS–1450 14x Type of Bill.

2. Payment Requirements for Clinical Diagnostic Laboratory Tests

In general, under section 1834A of the Act, the payment amount for each CDLT on the CLFS furnished beginning January 1, 2018, is based on the applicable information collected during the data collection period and reported to CMS during the data reporting period, and is equal to the weighted median of the private payor rates for the test. The weighted median is calculated by arraying the distribution of all private payor rates, weighted by the volume for each payor and each laboratory. The payment amounts established under the CLFS are not subject to any other adjustment, such as geographic, budget neutrality, or annual update, as required by section 1834A(b)(4)(B) of the Act. Additionally, section 1834A(b)(3) of the Act, implemented at § 414.507(d), provides for a phase-in of payment reductions, limiting the amounts the CLFS rates for each CDLT (that is not a new advanced diagnostic laboratory test (ADLT) or new CDLT) can be reduced as compared to the payment rates for the preceding year. Under the provisions enacted by section 216(a) of PAMA, for the first 3 years after implementation (CY 2018 through CY 2020), the reduction cannot be more than 10 percent per year, and for the next 3 years (CY 2021 through CY 2023), the reduction cannot be more than 15 percent per year. Under section 1834A(a)(1) and (b) of the Act, as enacted by PAMA, for CDLTs that are not ADLTs, the data collection period, data reporting period, and payment rate update occur every 3 years. As such, the second data collection period for CDLTs that are not ADLTs occurred from January 1, 2019 through June 30, 2019, and the next data reporting period was scheduled to take place from January 1, 2020 through March 31, 2020, with the next update to the Medicare payment rates for these tests based on that reported applicable information scheduled to take effect as of January 1, 2021.

Section 216(a) of PAMA established a new subcategory of CDLTs known as ADLTs, with separate reporting and payment requirements under section 1834A of the Act. As defined in § 414.502, an ADLT is a CDLT covered under Medicare Part B that is offered and furnished only by a single laboratory, and cannot be sold for use by a laboratory other than the single laboratory that designed the test or a successor owner. Also, an ADLT must meet either Criterion (A), which implements section 1834A(d)(5)(A) of the Act, or Criterion (B), which implements section 1834A(d)(5)(B) of the Act, as follows:

- **Criterion (A):** The test is an analysis of multiple biomarkers of deoxyribonucleic acid (DNA), ribonucleic acid (RNA), or proteins; when combined with an empirically derived algorithm, yields a result that predicts the probability a specific individual patient will develop a certain condition(s) or respond to a particular therapy(ies); provides new clinical diagnostic information that cannot be obtained from any other test or combination of tests; and may include other assays; or

- **Criterion (B):** The test is cleared or approved by the FDA.

Generally, under section 1834A(d) of the Act, the Medicare payment rate for a new ADLT is equal to its actual list charge during an initial period of 3 calendar quarters. After the new ADLT initial period, ADLTs are paid using the same methodology based on the weighted median of private payor rates as other CDLTs. However, under section 1834A(d)(3) of the Act, updates to the Medicare payment rates for ADLTs occur annually instead of every 3 years.

Additional information on the private payor rate-based CLFS is detailed in the CLFS final rule (81 FR 41036 through 41101) and is available on the CMS website at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ClinicalLabFeeSched/PAMA-regulations>.

3. Statutory Revisions to the Data Reporting Period and Phase-In of Payment Reductions

Section 105(a) of the Further Consolidated Appropriations Act, 2020 (FCAA) (Pub. L. 116–94, enacted on December 20, 2019), and section 3718 of the Coronavirus Aid, Relief, and Economic Security Act, 2020 (CARES Act) (Pub. L. 116–136, enacted on March 27, 2020), made revisions to the CLFS requirements for the next data reporting period for CDLTs that are not ADLTs under section 1834A of the Act. Additionally, the CARES Act made

revisions to the phase-in of payment reductions under section 1834A of the Act. Specifically, section 105(a)(1) of the FCAA amended the data reporting requirements in section 1834A(a) of the Act to delay the next data reporting period for CDLTs that are not ADLTs by 1 year, so that data reporting would be required during the period of January 1, 2021 through March 31, 2021; the 3-year data reporting cycle for CDLTs that are not ADLTs would resume after that data reporting period. Section 105(a)(1) of the FCAA also specified that the data collection period that applies to the data reporting period of January 1, 2021 through March 30, 2021 would be the period of January 1, 2019 through June 30, 2019, which is the same data collection period that would have applied absent the amendments. In addition, section 105(a)(2) of the FCAA amended section 1834A(b)(3) of the Act regarding the phase-in of payment reductions to provide that payments may not be reduced by more than 10 percent as compared to the amount established for the preceding year through CY 2020, and for CYs 2021 through 2023, payment may not be reduced by more than 15 percent as compared to the amount established for the preceding year. These statutory changes were consistent with our regulations implementing the private payor rate-based CLFS (81 FR 41036; § 414.507(d)).

Subsequently, section 3718 of the CARES Act further amended the data reporting requirements for CDLTs that are not ADLTs and the phase-in of payment reductions under the CLFS. Specifically, section 3718(a) of the CARES Act amended section 1834A(a)(1)(B) of the Act to delay the next data reporting period for CDLTs that are not ADLTs by one additional year, to require data reporting during the period of January 1, 2022 through March 31, 2022. As amended by the CARES Act, section 1834A(a)(1)(B) of the Act now provides that in the case of reporting with respect to CDLTs that are not ADLTs, the Secretary shall revise the reporting period under subparagraph (A) such that—(i) no reporting is required during the period beginning January 1, 2020, and ending December 31, 2021; (ii) reporting is required during the period beginning January 1, 2022, and ending March 31, 2022; and (iii) reporting is required every 3 years after the period described in clause (ii).

The CARES Act did not modify the data collection period that applies to the next data reporting period for these tests. Thus, under section 1834A(a)(4)(B) of the Act, as amended

by section 105(a)(1) of the FCAA, the next data reporting period for CDLTs that are not ADLTs (January 1, 2022 through March 31, 2022) will be based on the data collection period of January 1, 2019 through June 30, 2019. In § 414.502, the current definition of data collection period is defined as the 6 months from January 1 through June 30 during which applicable information is collected and that precedes the data reporting period. Additionally, in § 414.502 the data reporting period is defined as the 3-month period, January 1 through March 31, during which a reporting entity reports applicable information to CMS and that follows the preceding data collection period. Unless we revised our current definitions of data collection period and data reporting period, the definitions would have been incorrect with regard to the data collection period that applies to the next data reporting period. Therefore, we proposed to revise the definitions of data collection period and data reporting period in § 414.502 to reflect that the data collection period will be January 1, 2019 through June 30, 2019 for the data reporting period of January 1, 2022 through March 31, 2022.

Section 3718(b) of the CARES Act further amended the provisions in section 1834A(b)(3) of the Act regarding the phase-in of payment reductions under the CLFS. First, it extended the statutory phase-in of payment reductions resulting from private payor rate implementation by an additional year, that is, through CY 2024. It further amended section 1834A(b)(3)(B)(ii) of the Act to specify that the applicable percent for CY 2021 is 0 percent, meaning that the payment amount determined for a CDLT for CY 2021 shall not result in any reduction in payment as compared to the payment amount for that test for CY 2020. Section 3718(b) of the CARES Act further amended section 1834A(b)(3)(B)(iii) of the Act to state that the applicable percent of 15 percent will apply for CYs 2022 through 2024, instead of CYs 2021 through 2023.

4. Conforming Regulatory Changes

In accordance with section 105(a) of the FCAA and section 3718 of the CARES Act, we proposed to make conforming changes to the data reporting and payment requirements at part 414, subpart G. Specifically, we proposed to revise § 414.502 to update the definitions of both the data collection period and data reporting period, specifying that for the data reporting period of January 1, 2022 through March 31, 2022, the data collection period is January 1, 2019

through June 30, 2019. We also proposed to revise § 414.504(a)(1) to indicate that initially, data reporting begins January 1, 2017 and is required every 3 years beginning January 2022. In addition, we proposed conforming changes to our requirements for the phase-in of payment reductions to reflect the CARES Act amendments. Specifically, we proposed to revise § 414.507(d) to indicate that for CY 2021, payment may not be reduced by more than 0.0 percent as compared to the amount established for CY 2020, and for CYs 2022 through 2024, payment may not be reduced by more than 15 percent as compared to the amount established for the preceding year.

We received public comments on the revised data reporting requirements and phase-in of payment reductions for the CLFS. The following is a summary of the comments we received and our responses.

Comment: Several commenters expressed support for the proposed conforming regulatory changes to the data reporting and payment requirements.

Response: We appreciate the commenters' support for these changes that reflect the recent statutory revisions required by section 105(a) of the FCAA and section 3718 of the CARES Act.

Comment: One commenter suggested that CMS delay implementation of the phase-in of payment reductions under the CLFS.

Response: We note that the phase-in of payment reductions to the CLFS payment amounts is statutory; therefore, we are unable to delay implementation. Additionally, we note that there will be a 0.0% payment reduction for CY 2021 and, for CYs 2022 through 2024, payment may not be reduced by more than 15 percent as compared to the amount established for the preceding year.

In consideration of these public comments and in accordance with section 105(a) of the FCAA and section 3718 of the CARES Act, we are finalizing the proposed conforming changes to the data reporting and payment requirements at part 414, subpart G.

5. Response to the Comment Solicitation on Payment for Specimen Collection for COVID-19 Clinical Diagnostic Laboratory Tests

In the "Medicare and Medicaid Programs; Policy and Regulatory Revisions in Response to the COVID-19 Public Health Emergency" interim final rule with comment period (March 31st COVID-19 IFC), which displayed and became effective on March 31, 2020 and

appeared in the April 6, 2020 **Federal Register** (85 FR 19230), we established that Medicare will pay a nominal specimen collection fee and associated travel allowance to independent laboratories for the collection of specimens for COVID-19 clinical diagnostic laboratory testing for homebound and non-hospital inpatients (85 FR 19256 through 19258). This policy provides independent laboratories with additional resources to provide COVID-19 testing and helps with efforts to limit patients' exposure to the general population and alleviate patients' unease with leaving the home. To identify specimen collection for COVID-19 testing specifically, we established two new level II HCPCS codes: Code G2023 (*specimen collection for severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (Coronavirus disease [COVID-19]), any specimen source*); and code G2024 (*specimen collection for severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (Coronavirus disease [COVID-19]), from an individual in a SNF or by a laboratory on behalf of a HHA, any specimen source*), for independent laboratories to use when billing Medicare for the nominal specimen collection fee for COVID-19 testing for the duration of the PHE for COVID-19.

We indicated in the March 31st COVID-19 IFC that this specimen collection fee policy was established for the duration of the PHE for COVID-19 (85 FR 19256). In the CY 2021 PFS proposed rule, we requested comments on whether we should delete HCPCS codes G2023 and G2024 once the PHE for COVID-19 ends (85 FR 50211). We noted that comments received may inform a future proposal. Specifically, we sought public input on why these codes, and their corresponding payment amounts, which are higher than the nominal specimen collection fees for other conditions, would be necessary or useful outside of the context of the PHE for COVID-19. We stated that we were particularly interested in why separate, increased payment for specimen collection specifically for COVID-19 tests, in contrast to other tests, may be needed following the end of the PHE.

We received public comments on the specimen collection fees for COVID-19 clinical diagnostic laboratory tests. The following is a summary of the comments we received and our response.

Comment: Several commenters expressed support for permanently extending payment for specimen collection for COVID-19 tests after the PHE, as commenters expect the COVID-19 virus to be present into CY 2021,

thus making it appropriate for CMS to continue to pay for specimen collection. Commenters recommended that CMS expand and permanently authorize the specimen collection fees under HCPCS codes G2023 and G2024 to apply to all CDLTs to compensate for the supplies, equipment, and sterilization protocols required for safe and uncontaminated specimen collection and handling in the presence of COVID-19. Commenters noted that COVID-19 will continue to spread and may become an ongoing and/or seasonal infectious disease event, and because of this possibility, they expect that the heightened safety precautions, the need for personal protective equipment, and the requirement for special training for specimen collection will persist beyond the immediate PHE.

Commenters also recommended that CMS confirm that HCPCS code G2023 applies to any site where clinical laboratory personnel collect specimens, and not solely to homebound and nonhospital inpatients. Some commenters requested that CMS confirm that when a laboratory receives a health care professional's order for COVID-19 test specimen collection in a beneficiary's home, the laboratory may consider this order to be a determination by the health care professional that the beneficiary is homebound, and therefore, the laboratory is eligible for the increased specimen collection fee represented by HCPCS code G2023.

Response: We appreciate the comments regarding the nominal specimen collection fees and associated travel allowance to independent laboratories for the collection of specimens for COVID-19 clinical diagnostic laboratory testing. We plan to take this feedback into consideration for possible future rulemaking or guidance.

B. OTP Provider Enrollment Regulation Updates for Institutional Claim Submissions

1. Modifications to OTP Enrollment Process

a. Background

Under 42 CFR 424.510, a provider or supplier must complete, sign, and submit to its assigned Medicare Administrative Contractor (MAC) the Form CMS-855 (OMB Control No. 0938-0685) application to enroll in the Medicare program and obtain Medicare billing privileges. The Form CMS-855, which can be submitted via paper or electronically through the internet-based Provider Enrollment, Chain, and Ownership System (PECOS) process (SORN: 09-70-0532, Provider

Enrollment, Chain, and Ownership System), captures information about the provider or supplier that CMS or its MACs reviews and verifies to determine whether the provider or supplier meets all Medicare requirements. (The specific Form CMS-855 application (of which there are several variations) to be completed will depend upon the type of provider or supplier submitting said application.) This process of enrollment helps ensure that: (1) All prospective providers and suppliers are carefully screened and reviewed; and (2) unqualified providers and suppliers are kept out of the Medicare program, which helps protect the Trust Funds and Medicare beneficiaries. Indeed, without this process, billions of taxpayer dollars might be paid to fraudulent or otherwise non-compliant parties.

b. Completion of Form CMS-855

Existing § 424.67 outlines a number of enrollment requirements for OTPs. One requirement, addressed in § 424.67(b)(1), is that OTPs must complete the Form CMS-855B application (Medicare Enrollment Application: Clinics/Group Practices and Certain Other Suppliers; OMB #: 0938-0685) to enroll in Medicare. The reference to the Form CMS-855B in § 424.67(b)(1) was predicated in part on the assumption that OTPs would generally submit the CMS-1500 claim form (Health Insurance Claim Form; OMB Control No.: 0938-1197) to receive payment for their services. However, as mentioned previously in section II.I.4. of the CY 2021 PFS proposed rule (85 FR 50074), we have received requests to allow OTPs to bill for services on an institutional claim form (specifically, the 837I). To do so, these OTPs would have to enroll in Medicare via the Form CMS-855A (Medicare Enrollment Application for Institutional Providers (OMB #: 0938-0685)). To account for circumstances where an OTP wishes to pursue Form CMS-855A enrollment for the reason stated above, we proposed the following revisions to § 424.67:

- Current § 424.67(b)(1) states that a newly enrolling OTP must fully complete and submit the Form CMS-855B application (or its successor application). We proposed to revise this paragraph to state that the newly enrolling OTP must fully complete and submit, as applicable, the Form CMS-855A or Form CMS-855B application (or their successor applications).
- Existing § 424.67(b)(1)(ii) requires the OTP to certify compliance with the requirements and standards described in paragraphs § 424.67(b) and (d) via the Form CMS-855B and/or the applicable

supplement or attachment thereto. We proposed to revise this paragraph such that the OTP must certify compliance with the above-referenced requirements and standards via the Form CMS–855A or Form CMS–855B (as applicable) and/or the applicable supplement or attachment thereto.

- Existing § 424.67(b)(5) requires the OTP to report on the Form CMS–855B and/or any applicable supplement all OTP staff who meet the definition of “managing employee” in § 424.502. We proposed to change this to state that the OTP must report on the Form CMS–855A or Form CMS–855B (as applicable) and/or any applicable supplement all OTP staff who meet this definition.

We believed these revisions would accomplish two objectives. First, they would permit OTPs to submit a Form CMS–855A in lieu of a Form CMS–855B based on their preferred method of billing. Second, they would confirm that the requirements of § 424.67 apply to all OTPs regardless of whether they complete the Form CMS–855A or the Form CMS–855B.

c. Screening Activities Associated With Risk Designation

Section 424.518 outlines provider enrollment screening categories and requirements based on our assessment of the degree of risk of fraud, waste, and abuse posed by a particular category of provider or supplier. In general, the higher the level of risk that a certain provider or supplier type presents, the greater the degree of scrutiny with which we will screen and review enrollment applications submitted by providers or suppliers within that category. There are three levels of screening addressed in § 424.518: Limited; moderate; and high.

Irrespective of which level a provider or supplier type falls within, the MAC performs certain minimum screening functions upon receipt of an initial enrollment application, a revalidation application, or an application to add a new practice location. These include:

- Verification that the provider or supplier meets all applicable federal regulations and state requirements for their provider or supplier type.
- State license verifications.
- Database reviews on a pre- and post-enrollment basis to ensure that providers and suppliers continue to meet the enrollment criteria for their provider or supplier type.

Providers and suppliers at the moderate and high categorical risk levels must also undergo a site visit. Moreover, for those in the high categorical risk level, the MAC performs

two additional functions under § 424.518(c)(2). First, the MAC requires the submission of a set of fingerprints for a national background check from all individuals who maintain a 5 percent or greater direct or indirect ownership interest in the provider or supplier. Second, it conducts a fingerprint-based criminal history record check of the Federal Bureau of Investigation’s (FBI) Integrated Automated Fingerprint Identification System on all individuals who maintain a 5 percent or greater direct or indirect ownership interest in the provider or supplier. These additional verification activities are intended to correspond to the heightened risk involved with such provider or supplier types.

For newly enrolling OTPs, those that have been fully and continuously certified by the Substance Abuse and Mental Health Services Administration (SAMHSA) since October 23, 2018 fall within the moderate level of categorical screening. OTPs that have not been so certified since the aforementioned date are subject to the high screening level. As discussed in the CY 2021 PFS proposed rule (85 FR 50074), we recognize that certain providers and suppliers have already enrolled as OTPs via the Form CMS–855B—and, accordingly, undergone a site visit and, if applicable, fingerprinting—but would seek to newly enroll via the Form CMS–855A should our proposals be finalized. (Said enrollment would be considered “new” for purposes of enrollment because the OTP would be enrolling via a different variation of the Form CMS–855.) While not seeking to minimize the importance of the enhanced screening activities associated with the moderate and high categorical levels, we do not wish to unduly burden currently enrolled OTPs that would pursue Form CMS–855A enrollment as an OTP. More specifically, we noted that we did not believe such OTPs should have to undergo another site visit and, if applicable, fingerprinting when they previously did so as an OTP via their original Form CMS–855B enrollment. This, in our view, would constitute an unnecessary expenditure of CMS, MAC, and OTP resources. We add that the same would hold true if, in the future, an OTP that is enrolled via the Form CMS–855A under revised § 424.67(b) decides to change to a Form CMS–855B enrollment. In both cases, we believe a duplication of effort should be avoided to the extent consistent with safeguarding the integrity of the Medicare program.

Existing § 424.67(b)(3) states that an enrolling OTP must successfully complete the assigned categorical risk

level screening required under, as applicable, § 424.518(b) and (c) (which outline the screening requirements for newly enrolling parties in, respectively, the moderate and high categorical levels). Given the foregoing discussion, we proposed several changes to § 424.67(b)(3). First, we proposed to redesignate existing § 424.67(b)(3) as new § 424.67(b)(3)(i), though with an exception to its requirements. Second, and to address this exception, we proposed to add paragraph (b)(3)(ii) to state that currently enrolled OTPs that are changing their OTP enrollment from a Form CMS–855B to a Form CMS–855A, or vice versa, must successfully complete the limited level of categorical screening under § 424.518(a) if the OTP has already completed, as applicable, the moderate or high level of categorical screening under § 424.518(b) or (c), respectively. Third, we proposed to redesignate existing § 424.518(a)(1)(xii) through (xvii) as § 424.518(a)(1)(xiii) through (xviii). Fourth, proposed new § 424.518(a)(1)(xii) would add OTPs that fall within the purview of new paragraph (b)(3)(ii) to the provider and supplier types subject to limited risk categorical screening.

d. Additional OTP Enrollment Clarifications Regarding the Form CMS–855A

We proposed three additional clarifications related to our previously mentioned OTP enrollment provisions. To incorporate these into § 424.67, we proposed to redesignate existing paragraphs (c), (d), (e), and (f) as paragraphs (d), (e), (f), and (g), respectively. The three clarifications would be included in new paragraph (c).

With the redesignation of existing paragraph (d) as paragraph (e), we also proposed to change the reference to:

- Paragraph (d) in existing paragraph (b)(1)(ii) to paragraph (e).
- Paragraph (d)(1) in existing paragraph (d)(2)(i) to paragraph (e)(1) in redesignated paragraph (e)(2)(i).

(1) Single Enrollment

We proposed in new § 424.67(c)(1) that an OTP may only be enrolled as such via the Form CMS–855A or the Form CMS–855B but not both. The OTP, in other words, must opt for either Form CMS–855A enrollment or Form CMS–855B enrollment. This is to help ensure that the OTP does not bill twice for the same service via separate claim vehicles (specifically, the CMS–1500 and the 837I).

(2) Effective Date of Billing

Section 424.520(d) outlines the effective date of billing privileges for newly enrolling OTPs (and certain other provider and supplier types). This date is the later of: (1) The date of the OTP's filing of a Medicare enrollment application that was subsequently approved by a Medicare contractor; or (2) the date that the OTP first began furnishing services at a new practice location. In a similar vein, § 424.521(a) states that OTPs (and certain other provider and supplier types) may retrospectively bill for services when the OTP has met all program requirements (including state licensure requirements), and services were provided at the enrolled practice location for up to—

- 30 days prior to their effective date if circumstances precluded enrollment in advance of providing services to Medicare beneficiaries; or
- 90 days prior to their effective date if a Presidentially-declared disaster under the Robert T. Stafford Disaster Relief and Emergency Assistance Act, 42 U.S.C. 5121 through 5206 (Stafford Act) precluded enrollment in advance of providing services to Medicare beneficiaries.

In light of proposed § 424.67(c)(1) (and as further explained in the collection of information section of this proposed rule), we anticipate that a number of OTPs would end their existing enrollment and apply as a new OTP via, as applicable, the Form CMS–855A or Form CMS–855B. Given this, we believe it is important to clarify for stakeholders the new enrollment's effective date of billing. Accordingly, at § 424.67, we proposed in new paragraph (c)(2) that if a Form CMS–855B-enrolled OTP changes to a Form CMS–855A enrollment, or vice versa, the effective date of billing that was established for the OTP's prior enrollment under §§ 424.520(d) and 424.521(a) would be applied to the OTP's new enrollment. This would allow OTPs that have been unable to bill for furnished services via their preferred claim form (and have consequently chosen to delay the submission of these claims for services) to do so retroactive to the effective billing date of its prior enrollment. To illustrate, suppose an OTP initially enrolled via the Form CMS–855B in 2020. The effective date of billing was April 1, 2020. Wishing to submit an 837I claim form for the services it has provided since April 1, 2020, the OTP elects to end its Form CMS–855B enrollment and enroll via the Form CMS–855A pursuant to revised § 424.67. It successfully does the latter

in March 2021. Under § 424.67(c)(2), the billing effective date of the Form CMS–855A enrollment would be retroactive to April 1, 2020. However, we noted in the proposed rule that the time limits for filing claims found in § 424.44 would continue to apply. Specifically, all Medicare Part A and Part B claims must be filed within 1 calendar year after the date of service unless one of a very limited number of exceptions applies. Switching from a Form CMS–855B enrollment to a Form CMS–855A enrollment, or vice versa, is not grounds for an exception.

We recognized that not every OTP that seeks to change its enrollment will have chosen to withhold submission of all of its claims under its prior enrollment. (Using our example in the previous paragraph, the OTP may have submitted some claims via the CMS–1500 while planning to eventually submit the remaining ones via the 837I.) Irrespective of this, CMS has long had operational safeguards in place to prevent double-billing for the same service. Said protections would be used in the scenario described in proposed § 424.67(c)(2) so that claims submitted under the prior enrollment could not be resubmitted under the new one.

(3) Application Fee

As stated in § 424.514, prospective and revalidating institutional providers that are submitting a Medicare enrollment application generally must pay the applicable application fee in accordance with § 424.514. (For CY 2020, the fee amount is \$595.) The term “institutional provider” is defined in § 424.502 as any provider or supplier that submits a paper Medicare enrollment application using the Form CMS–855A, Form CMS–855B (not including physician and NPP organizations, which are exempt from the fee requirement if they are enrolling as a physician or NPP organization), Form CMS–855S, Form CMS–20134, or an associated internet-based PECOS enrollment application.

As stated previously, OTPs currently complete the Form CMS–855B to enroll in Medicare. They are considered “institutional providers” (as defined in § 424.502) and must pay an application fee, a requirement addressed in existing § 424.67(b)(2). Since the existing OTPs referenced in new paragraph (c)(2) would be enrolling as new providers via the Form CMS–855A or Form CMS–855B (as applicable), we stated our belief in the proposed rule that they would fall within the scope of both (1) the aforementioned definition of “institutional provider” and (2) § 424.514(a)(1); as described therein,

§ 424.514(a)(1) applies to prospective institutional providers that are submitting an initial application. To clarify this issue for the OTP community, we proposed to add language to § 424.67(b)(2) stating that compliance with the application fee requirements in § 424.514 would also apply to those OTPs enrolling under the circumstances described in § 424.67(c)(2).

We emphasized that the flexibilities described in this section III.B. are complementary to those in section II.I. (“Medicare Coverage for Opioid Use Disorder (OUD) Treatment Services Furnished by Opioid Treatment Programs (OTPs)”) regarding OTP billing via the 837I. Our OTP enrollment revisions are intended to facilitate greater flexibility for OTPs.

We received the following public comment on our OTP provider enrollment proposals:

Comment: Several commenters supported our proposal to permit an OTP to enroll via the Form CMS–855B or the Form CMS–855A. One commenter also questioned whether this applies to a Medicare OTP Part B provider sharing the same clinical space as a Medicare Part A provider.

Response: We appreciate the commenters' support. However, we emphasize that an OTP may only enroll as such via the Form-855B or the Form-855A, not both. In the situation the OTP appears to describe, the OTP operating in the clinical space in question would have to elect which of the two available enrollment mechanisms to pursue.

Based on the comments received, we are finalizing our provisions pertaining to OTP enrollment as proposed.

C. Payment for Principal Care Management (PCM) Services in Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs)

1. Background

a. RHC and FQHC Payment Methodologies

RHC and FQHC visits generally are face-to-face encounters between a patient and one or more RHC or FQHC practitioners during which time one or more RHC or FQHC qualifying services are furnished. RHC and FQHC practitioners are physicians, nurse practitioners (NPs), physician assistants (PA), certified nurse midwives (CNMs), clinical psychologists (CPs), and clinical social workers, and under certain conditions, a registered nurse or licensed practical nurse furnishing care to a homebound RHC or FQHC patient. A Transitional Care Management (TCM) service can also be an RHC or FQHC

visit. In addition, a Diabetes Self-Management Training (DSMT) service or a Medical Nutrition Therapy (MNT) service furnished by a certified DSMT or MNT program may also count as an FQHC visit. Only medically necessary medical, mental health, or qualified preventive health services that require the skill level of an RHC or FQHC practitioner are RHC or FQHC billable visits. Services furnished by auxiliary personnel (for example, nurses, medical assistants, or other clinical personnel acting under the supervision of the RHC or FQHC practitioner) are considered incident to the visit and are included in the per visit payment.

RHCs are paid an all-inclusive rate (AIR) for all medically necessary medical and mental health services and qualified preventive health services furnished on the same day (with some exceptions). In general, the A/B Medicare Administrative Contractor (MAC) calculates the AIR for the year for each RHC by dividing total allowable costs by the total number of visits for all patients. Productivity, payment limits, and other factors are also considered in the calculation. Allowable costs must be reasonable and necessary and may include practitioner compensation, overhead, equipment, space, supplies, personnel, and other costs incident to the delivery of RHC services. The AIR is subject to a payment limit, except for certain provider-based RHCs that have an exception to the payment limit.

FQHCs were paid under the same AIR methodology until October 1, 2014 when, in accordance with section 1834(o) of the Act (as added by section 10501(i)(3) of the Affordable Care Act), they began to transition to an FQHC PPS system in which they are paid based on the lesser of the FQHC PPS rate or their actual charges. The FQHC PPS rate is adjusted for geographic differences in the cost of services by the FQHC PPS geographic adjustment factor (GAF).

b. Care Management Services in RHCs and FQHCs

In the CY 2018 PFS final rule with comment period (82 FR53180), we finalized revisions to the payment methodology for Chronic Care Management (CCM) services furnished by RHCs and FQHCs and established requirements for general Behavioral Health Integration (BHI) and psychiatric Collaborative Care Management (CoCM) services furnished in RHCs and FQHCs, beginning on January 1, 2019. Specifically, we revised § 405.2464(c) to permit RHCs and FQHCs to bill for care management services (HCPCS codes G0511 and G0512).

HCPCS code, G0511, is a General Care Management code for use by RHCs or FQHCs when at least 20 minutes of qualified CCM or general BHI services are furnished to a patient in a calendar month.

The payment amount for HCPCS code G0511 is set at the average of the 3 national non-facility PFS payment rates for the CCM and general BHI codes and updated annually based on the PFS amounts. The 3 codes are CPT 99490 (*20 minutes or more of CCM services*), CPT 99487 (*60 minutes or more of complex CCM services*), and CPT 99484 (*20 minutes or more of BHI services*).

In the CY 2019 PFS final rule with comment period (83 FR 59687), we added CPT code 99491 (*30 minutes or more of CCM furnished by a physician or other qualified health care professional*) as a general care management service and included it in the calculation of HCPCS code G0511. Beginning January 1, 2019, the payment for HCPCS code G0511 is set at the average of the national non-facility PFS payment rates for CPT codes 99490, 99487, 99484, and 99491 and is updated annually based on the PFS amounts. Additional information on CCM requirements is available on the CMS Care Management web page at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/Care-Management.html>, and on the CMS RHC and FQHC web pages at <https://www.cms.gov/Center/Provider-Type/Rural-Health-Clinics-Center.html> and <https://www.cms.gov/Center/Provider-Type/Federally-Qualified-Health-Centers-FQHC-Center.html>.

2. Requirements for PCM Services in RHCs and FQHCs

In the CY 2020 PFS final rule with comment (84 FR 62692), we established a separate payment for PCM services. PCM services include comprehensive care management services for a single high-risk disease or complex condition, typically expected to last at least 3 months and may have led to a recent hospitalization, and/or placed the patient at significant risk of death. Beginning January 1, 2020, practitioners billing under the PFS can bill for PCM services using HCPCS codes G2064 or G2065.

HCPCS code G2064 is for at least 30 minutes of PCM services furnished by physicians or NPPs during a calendar month with the following elements: One complex chronic condition lasting at least 3 months, which is the focus of the care plan; the condition is of sufficient severity to place patient at risk of hospitalization or have been the cause

of a recent hospitalization; the condition requires development or revision of disease-specific care plan; the condition requires frequent adjustments in the medication regimen; and/or the management of the condition is unusually complex due to comorbidities.

HCPCS code G2065 is for at least 30 minutes of PCM services furnished by clinical staff under the direct supervision of a physician or NPP with the following elements: One complex chronic condition lasting at least 3 months, which is the focus of the care plan; the condition is of sufficient severity to place patient at risk of hospitalization or have been cause of a recent hospitalization; the condition requires development or revision of disease-specific care plan; the condition requires frequent adjustments in the medication regimen; and/or the management of the condition is unusually complex due to comorbidities.

In the CY 2021 PFS proposed rule (85 FR 50214), we stated that a national stakeholder organization representing rural health clinics requested that RHCs be allowed to furnish and bill for PCM services. We agreed that there can be significant resources involved in care management for a single high-risk disease or complex chronic condition, and that the requirements for the new PCM codes are similar to the requirements for the care management services described by HCPCS code G0511. We explained that these are services that do not currently meet the requirements for an RHC or FQHC billable visit, and they provide an array of care management services that are not generally included in the RHC AIR or the FQHC PPS. Therefore, we proposed to add HCPCS codes G2064 and G2065 to G0511 as a comprehensive care management service for RHCs and FQHCs starting January 1, 2021. The payment rate for HCPCS G0511 is set at the average of the national non-facility PFS payment rate for the RHC and FQHC care management and general behavioral health codes (CPT codes 99490, 99487, 99484, and 99491), and we proposed that these 2 new codes be added to the calculation of the G0511 payment rate.

3. Other Options Considered

In the CY 2021 PFS proposed rule (85 FR 50214), we stated that we also considered creating a separate G code for PCM services. We did not propose this approach because PCM and CCM are similar services and grouping them together is consistent with an integrated approach to care with reduced reporting

requirements. As we stated in the CY 2018 PFS final rule, if a new care management code is proposed and subsequently finalized for practitioners billing under the PFS, we would review the new code to determine if it should be included in the calculation of the RHC and FQHC General Care Management Code. The determination of whether a new care management code should be added to the codes used to determine the payment rate is based on the applicability of the service in RHCs and FQHCs, and may result in either an increase or decrease in the payment amount for HCPCS code G0511.

4. Implementation

In the CY 2021 PFS proposed rule (85 FR 50214), we explained that if this proposal is finalized as proposed, RHCs and FQHCs that furnish PCM services would also be able to bill the services using HCPCS code G0511, either alone or with other payable services on an RHC or FQHC claim for dates of service on or after January 1, 2021. The payment rate for HCPCS code G0511 would continue to be the average of the national non-facility PFS payment rates for the RHC/FQHC care management and general behavioral health codes (CPT codes 99484, 99487, 99490, and 99491). HCPCS G2064 and G2065 would be added to G0511 to calculate a new average for the national non-facility PFS payment rate. The payment rate for HCPCS code G0511 would be updated annually based on the PFS amounts for these codes.

We received approximately 27 public comments on the proposed requirements for PCM services in RHCs and FQHCs from a mix of stakeholders, including individuals, associations, advocate groups, and provider groups. The following is a summary of the comments we received and our responses.

Comment: All commenters supported the proposal to add the PCM HCPCS codes to the general care management HCPCS code (G0511) for care management services furnished in RHCs and FQHCs. One commenter recommended we create two new G codes for PCM services furnished in RHCs and FQHCs. A few commenters suggested that CMS waive the coinsurance for PCM services.

Response: Per the comment that recommended that we create two new G codes, we considered creating new G codes for PCM services as we stated in the CY 2021 PFS proposed rule (85 FR 50214); however, we explained that since the requirements for PCM services are similar to the requirements for care management services furnished in an

RHC and FQHC, grouping them together is consistent with an integrated approach to care with reduced reporting requirements.

Regarding the comment suggesting that CMS waive the coinsurance for PCM services, we remind commenters that we have no authority to waive coinsurance for care management services. Coinsurance for care management services is 20 percent of lesser of submitted charges or the payment rate for general care management HCPCS code.

Comment: We received several public comments that were out-of-scope for this rule. Commenters requested that CMS expand certain flexibilities provided during the PHE for COVID-19, including the addition of services to the Medicare Telehealth Services List. In addition, several commenters requested that CMS create a separate G code for remote physiologic monitoring (RPM) services and add RPM treatment management services (RPMTMS) to the general care management services.

Response: We appreciate the feedback from commenters, and will continue to monitor Medicare telehealth services during the PHE for COVID-19. RHCs are paid an AIR when a medically-necessary, face-to-face visit is furnished by an RHC practitioner. FQHCs are paid the lesser of their charges or the FQHC PPS rate when a medically-necessary, face-to-face visit is furnished by an FQHC practitioner. Both the RHC AIR and the FQHC PPS rate include all services and supplies furnished incident to the visit. Services such as RPM are not separately billable because they are already included in the RHC AIR or FQHC PPS payment. We may consider analyzing the RPMTMS services and how they would impact the payment for general care management services in future rulemaking; however, we note that we did not specifically make any proposals associated with these subjects in the CY 2021 PFS proposed rule.

In consideration of these public comments, we are finalizing the proposal to add the PCM HCPCS codes, G2064 and G2065, to the general care management code, G0511, as a comprehensive care management service for RHCs and FQHCs, starting January 1, 2021 as proposed. We are also finalizing that when RHCs and FQHCs furnish PCM services, they will also be able to bill the services using HCPCS code G0511, either alone or with other payable services on an RHC or FQHC claim for dates of service on or after January 1, 2021. The payment rate for HCPCS code G0511 will be the average of the national non-facility PFS payment rates for the RHC/FQHC care

management and general behavioral health codes (CPT codes 99484, 99487, 99490, and 99491) with the addition of HCPCS G2064 and G2065. That is, the PCM services will be added to G0511 to calculate a new average for the national non-facility PFS payment rate. The payment rate for HCPCS code G0511 will be updated annually based on the PFS amounts for these codes.

D. Changes to the Federally Qualified Health Center Prospective Payment System (FQHC PPS) for CY 2021: Rebasing and Revising of the FQHC Market Basket

1. Background

Section 10501(i)(3)(A) of the Affordable Care Act added section 1834(o) of the Act to establish a payment system for the costs of FQHC services under Medicare Part B based on prospectively set rates. In the Prospective Payment System (PPS) for FQHC final rule published in the May 2, 2014 **Federal Register** (79 FR 25436), we implemented a methodology and payment rates for the FQHC PPS. Beginning on October 1, 2014, FQHCs began to transition to the FQHC PPS based on their cost reporting periods, and as of January 1, 2016, all FQHCs have been paid under the FQHC PPS.

Section 1834(o)(2)(B)(ii) of the Act requires that the payment for the first year after the implementation year be increased by the percentage increase in the Medicare Economic Index (MEI). Therefore, in CY 2016, the FQHC PPS base payment rate was increased by the MEI. The MEI is based on 2006 data from the American Medical Association (AMA) for self-employed physicians and was used in the PFS sustainable growth rate (SGR) formula to determine the CF for physician service payments. (See the CY 2014 PFS final rule (78 FR 74264) for a complete discussion of the 2006-based MEI.) Section 1834(o)(2)(B)(ii) of the Act also requires that beginning in CY 2017, the FQHC PPS base payment rate will be increased by the percentage increase in a market basket of FQHC goods and services, or if such an index is not available, by the percentage increase in the MEI.

Beginning with CY 2017, FQHC PPS payments were updated using a 2013-based market basket reflecting the operating and capital cost structures for freestanding FQHC facilities (hereafter referred to as the FQHC market basket). A complete discussion of the 2013-based FQHC market basket can be found in the CY 2017 PFS final rule (81 FR 80393 through 80403).

In the CY 2021 PFS proposed rule (85 FR 50214 through 50223), we proposed

to rebase and revise the 2013-based FQHC market basket to reflect a 2017 base year. The proposed 2017-based FQHC market basket is primarily based on Medicare cost report data for FQHCs for 2017, which are for cost reporting periods beginning on and after October 1, 2016, and prior to September 30, 2017. We proposed to use data from cost reports beginning in FY 2017 because these data are the latest available complete data for purposes of calculating cost weights for the market basket at the time of rulemaking.

In the following discussion, we provide an overview of the proposed FQHC market basket, describe the proposed methodologies for developing the 2017-based FQHC market basket, and provide information on the proposed price proxies. We then describe any comments received, responses to these comments, and our final decision for this final rule.

2. Overview of the 2017-Based FQHC Market Basket

Similar to the 2013-based FQHC market basket, the proposed 2017-based FQHC market basket is a fixed-weight, Laspeyres-type price index. A Laspeyres price index measures the change in price, over time, of the same mix of goods and services purchased in the base period. Any changes in the quantity or mix (that is, intensity) of goods and services purchased over time are not measured. The index itself is constructed using three steps. First, a base period is selected (we proposed to use 2017 as the base period) and total base period expenditures are estimated for a set of mutually exclusive and exhaustive spending categories, with the proportion of total costs that each category represents being calculated. These proportions are called “cost weights” or “expenditure weights.” Second, each expenditure category is matched to an appropriate price or wage variable, referred to as a “price proxy.” In almost every instance, these price proxies are derived from publicly available statistical series that are published on a consistent schedule (preferably at least on a quarterly basis). Finally, the expenditure weight for each cost category is multiplied by the level of its respective price proxy. The sum of these products (that is, the expenditure weights multiplied by their price levels) for all cost categories yields the composite index level of the market basket in a given period. Repeating this step for other periods produces a series of market basket levels over time. Dividing an index level for a given period by an index level for an earlier period produces a rate of growth in the

input price index over that timeframe. As noted above, the market basket is described as a fixed-weight index because it represents the change in price over time of a constant mix (quantity and intensity) of goods and services needed to furnish FQHC services. The effects on total expenditures resulting from changes in the mix of goods and services purchased subsequent to the base period are not measured. For example, a FQHC hiring more nurse practitioners to accommodate the needs of patients would increase the volume of goods and services purchased by the FQHC, but would not be factored into the price change measured by a fixed-weight FQHC market basket. Only when the index is rebased would changes in the quantity and intensity be captured, with those changes being reflected in the cost weights. Therefore, we rebase the market basket periodically so that the cost weights reflect a recent mix of goods and services that FQHCs purchase (FQHC inputs) to furnish inpatient care.

3. Development of the 2017-Based FQHC Market Basket Cost Categories and Weights

We solicited public comments on the proposed methodology for deriving the 2017-based FQHC market basket.

a. Use of Medicare Cost Report Data

We proposed a 2017-based FQHC market basket that consists of eleven major cost categories and a residual derived from the 2017 Medicare cost reports (CMS Form 224–14, OMB Control Number 0938–1298) for FQHCs, hereafter referred to as the 2014 Medicare Cost Report form. The eleven cost categories are FQHC Practitioner Wages and Salaries, FQHC Practitioner Employee Benefits, FQHC Practitioner Contract Labor, Clinical Staff Wages and Salaries, Clinical Staff Employee Benefits, Clinical Staff Contract Labor, Non-Health Staff Compensation, Medical Supplies, Pharmaceuticals, Fixed Capital and Moveable Capital. The residual category reflects all remaining costs not captured in the 11 cost categories such as non-medical supplies and utilities for example. We noted that for the 2013-based FQHC market basket, we estimated six cost categories from the Medicare cost reports (CMS Form 222–92, OMB Control Number 0938–0107), hereafter referred to as the 1992 Medicare cost report form: FQHC Practitioner Compensation, Clinical Staff Compensation, Non-Health Staff Compensation, Pharmaceuticals, Fixed Capital and Moveable Capital.

The resulting 2017-based FQHC market basket cost weights reflect

Medicare allowable costs. We proposed to define Medicare allowable costs for freestanding FQHC facilities as the total expenses reported on: Worksheet A, columns 1 and 2, lines 1 through 7 and lines 9 through 12; Worksheet A, column 1, lines 23 through 36; and Worksheet S3 Part II, columns 1 and 2, lines 2 through 14. We noted that we continue to exclude Professional Liability Insurance (PLI) costs from the total Medicare allowable costs because FQHCs that receive section 330 grant funds also are eligible to apply for medical malpractice coverage under Federally Supported Health Centers Assistance Act (FSHCAA) of 1992 (Pub. L. 102–501) and FSHCAA of 1995 (Pub. L. 104–73 amending section 224 of the Public Health Service Act).

The following is a summary of how we proposed to derive the eleven major cost category weights. Prior to estimating any costs, we remove any providers that did not report any total gross patient revenues as reported on the FQHC cost report Worksheet F–1, line 1, column 4.

(1) FQHC Practitioner Wages and Salaries Costs

A FQHC practitioner is defined as one of the following occupations: Physicians; nurse practitioners (NPs); physician assistants (PAs); certified-nurse midwife (CNMs); clinical psychologist (CPs); and clinical social workers (CSWs). We proposed to derive FQHC Practitioner Wages and Salaries costs as the sum of direct care costs salaries as reported on Worksheet A, column 1, lines 23, 25, 26, 29, 30, and 31. These lines represent the wages and salaries costs for physicians, PAs, NPs, CNMs, CPs, and CSWs. For the 2013-based FQHC market basket, we estimated FQHC Practitioner Total Compensation costs based on a similar methodology using cost data reported on Worksheet A of the 1992 Medicare cost report form (81 FR 80394) for specific details on the prior methodology.

(2) FQHC Practitioner Employee Benefits Costs

Effective with the implementation of the 2014 Medicare cost report form, we began collecting Employee Benefits and Contract Labor data on Worksheet S–3, part II and proposed to derive FQHC Practitioner Employee Benefits costs using data obtained from that worksheet. Approximately 66 percent of FQHCs included in the sample of FQHCs reporting Salary costs also reported data on Worksheet S–3, part II for 2017. We continue to encourage all providers to report these data on the

Medicare cost report. Therefore, we proposed to calculate FQHC Practitioner Employee Benefits costs using Worksheet S–3, part II data.

Specifically, we proposed to use data from Worksheet S–3, part II, column 2, lines 2, 3, 4, 7, 8, and 9 to derive FQHC Practitioner Employee Benefits costs. These lines represent the employee benefits costs for physicians, PAs, NPs, CNMs, CPs, and CSWs. Our analysis of the Worksheet S–3, part II data submitted by these FQHCs indicates that we had a large enough sample to enable us to produce a reasonable Employee Benefits cost weight.

For the 2013-based FQHC market basket, we did not have data at the level of detail to separately estimate FQHC Practitioner Employee Benefits costs, and instead computed FQHC Practitioner Total Compensation costs, which reflected costs for wages and salaries, employee benefits, and contract labor together. Anytime direct costs can be obtained for a cost category directly from the Medicare Cost Reports we consider that to be a technical improvement to the market basket weight methodology as it allows the index to reflect the relative shares specific to the provider type. Therefore, as discussed in the CY 2021 PFS proposed rule, we noted that we believe the proposed method of separately estimating FQHC Practitioner Employee Benefits is a technical improvement over the 2013-based FQHC market basket.

(3) FQHC Practitioner Contract Labor Costs

FQHC Practitioner Contract labor costs are primarily associated with direct patient care services. Contract labor costs for services such as accounting, billing, and legal are estimated using other government data sources as described below. Approximately 60 percent of FQHCs reported contract labor costs on Worksheet S–3, part II, which we noted that we believe is an adequate sample size to enable us to produce a reasonable FQHC Practitioner Contract Labor cost weight. Therefore, we proposed to derive the FQHC Practitioner Contract Labor costs for the proposed 2017-based FQHC market basket from data reported on Worksheet S–3, part II, column 1, lines 2, 3, 4, 7, 8, and 9. These lines represent the contract labor costs for physicians, PAs, NPs, CNMs, CPs, and CSWs. We would also add in the costs for physician services under agreement as reported on Worksheet A, column 2, line 24 to derive the total FQHC Practitioner

Contract Labor cost weight in the 2017-based FQHC market basket.

For the 2013-based FQHC market basket, we did not have data at the level of detail to separately estimate FQHC Practitioner Contract Labor costs and instead computed FQHC Practitioner Total Compensation costs, which reflected costs for wages and salaries, employee benefits, and contract labor together. As noted previously, anytime direct costs can be obtained for a cost category directly from the Medicare Cost Reports we consider that to be a technical improvement to the market basket weight methodology as it allows the index to reflect the relative shares specific to the provider type. Therefore, we noted that we believe the proposed method of separately estimating FQHC Practitioner Contract Labor is a technical improvement over the 2013-based FQHC market basket.

(4) Clinical Staff Wages and Salaries Costs

Clinical Compensation includes any health-related clinical staff who does not fall under the definition of a FQHC Practitioner described in paragraph. We proposed to derive Clinical Staff Wages and Salaries costs as the sum of direct care costs salaries as reported on Worksheet A, column 1, lines 27, 28, 32, 33, 34, 35, and 36. These lines represent the wages and salaries costs for visiting registered nurses (RNs), visiting licensed practical nurses (LPNs), laboratory technicians, registered dietitian/Certified DSMT/MNT educators, physical therapists (PTs), occupational therapists (OTs), and other allied health personnel.

- For the 2013-based FQHC market basket, we estimated a clinical staff total compensation cost based on a similar methodology using cost data reported on Worksheet A of Medicare Cost Report Form CMS–222–92, (see 81 FR 80394 for specific details on the prior methodology).

(5) Clinical Staff Employee Benefits Costs

Effective with the implementation of the 2014 Medicare cost report form, we began collecting employee benefits and contract labor data on Worksheet S–3, part II and proposed to derive clinical staff employee benefits costs using data obtained from that worksheet. Approximately 64 percent of FQHCs included in the sample of FQHCs reporting salary expenses also reported data on Worksheet S–3, part II for 2017. We noted that we continue to encourage all providers to report these data on the Medicare cost report. Therefore, we proposed to calculate clinical staff

employee benefits costs using Worksheet S–3, part II, column 2, lines 5, 6, 10, 11, 12, 13, and 14. These lines represent the employee benefits costs for visiting RNs, visiting LPNs, laboratory technicians, registered dietitian/Certified DSMT/MNT educators, PTs, OTs, and other allied health personnel.

- For the 2013-based FQHC market basket, we did not have data at the level of detail to separately estimate clinical staff employee benefits costs and instead computed clinical staff total compensation costs, which reflected costs for wages and salaries, employee benefits, and contract labor together. We noted that we believe the proposed method of separately estimating clinical staff employee benefits is a technical improvement over the 2013-based FQHC market basket.

(6) Clinical Staff Contract Labor Costs

We proposed to derive the clinical staff contract labor costs for the proposed 2017-based FQHC market basket from data reported on Worksheet S–3, part II, column 1, lines 5, 6, 10, 11, 12, 13, and 14 to derive clinical staff contract labor costs. These lines represent the contract labor costs for visiting RNs, visiting LPNs, laboratory technicians, registered dietitian/Certified DSMT/MNT educators, PTs, OTs, and other allied health personnel.

For the 2013-based FQHC market basket, we did not have data at the level of detail to separately estimate clinical staff contract labor costs and instead computed clinical staff total compensation costs, which reflected costs for wages and salaries, employee benefits, and contract labor together. We noted that we believe the proposed method of separately estimating FQHC clinical staff contract labor is a technical improvement over the 2013-based FQHC market basket.

(7) Non-Health Staff Compensation Costs

Non-Health Staff Compensation includes wage and salary costs for personnel in general service cost centers including: Employee Benefits department; Administrative & General; Plant Operation & Maintenance; Janitorial; Medical Records; Pharmacy; Transportation; and Other General Services. Specifically, non-health staff compensation costs are derived as the sum of compensation costs as reported on Worksheet A, column 1 for lines 3, 4, 5, 6, 7, 9, 10, 11, and 12. Additionally, we add a portion of employee benefit costs reported on Worksheet A, line 3, column 2 accounting for the non-health staff. We

estimate the ratio of non-health staff related wages and salaries as a percentage of total wages and salaries. We then apply the percentage of non-health staff related wages and salary costs to the total employee benefits costs (Worksheet A, line 3, column 2) for each FQHC. We noted that we believe this is a reasonable estimate of non-health staff employee benefits. We proposed to only use the costs from column 1 for most of the general service cost centers other than employee benefits since we believe that there are noncompensation costs reported in column 2 (such as maintenance and janitorial supplies). The remaining other costs for the general service categories are reflected in the remaining proposed cost categories as explained in more detail below.

(8) Pharmaceuticals Costs

We proposed to calculate pharmaceuticals costs using the non-salary costs for the pharmacy cost center reported on Worksheet A, column 2, line 9. We proposed to exclude the costs for drugs charged to patients as reported on Worksheet A, line 67 since these drugs are not included in the Medicare allowable costs for the FQHC PPS and are separately reimbursed. For the 2013-based FQHC market basket we were not able to exclude non-reimbursable drug costs (such as drugs charged to patient costs) from the pharmacy cost weight as the 1992 Medicare cost report form did not capture these costs separately. We noted that we believe our proposed methodology is a technical improvement as it is more consistent with the FQHC PPS reimbursement.

(9) Medical Supplies

We proposed to calculate medical supplies costs using the non-salary costs for the medical supplies cost center reported on Worksheet A, column 2, line 10. The medical supplies cost weight for the 2013-based FQHC market basket was derived based on the relative share of the medical supply costs in the MEI since these costs were not separately reported on the 1992 Medicare cost report form (81 FR 80395 through 80396). Since these costs are now directly reported by FQHC providers we noted that we believe that the proposed method is a technical improvement to the method used in the 2013-based FQHC market basket.

(10) Fixed Capital

We proposed that fixed capital costs be equal to costs reported on Worksheet A, line 1, column 2 of the Medicare Cost Report. A similar methodology was used for the 2013-based FQHC market basket.

(11) Moveable Capital Costs

We proposed that moveable capital costs be equal to the capital costs as reported on Worksheet A, line 2, column 2. A similar methodology was used for the 2013-based FQHC market basket.

Comment: Several commenters expressed support, as well as some concerns with the proposed use of the Medicare cost reports. Specifically, the commenters supported the proposed use of the Medicare cost report data to derive eleven major cost categories in the 2017-based FQHC market basket—an increase from 6 cost categories used in the 2013-based FQHC market basket. They stated this calculation will give a broader base to more accurately compute the increasing costs of providing FQHC services.

The commenters also agreed with the proposed lines included in the calculation of the Medicare Allowable total expenses (Worksheet A, columns 1 and 2, lines 1 through 7 and lines 9 through 12; Worksheet A, column 1, lines 23 through 36; and Worksheet S3 Part II, columns 1 and 2, lines 2 through 14). However, they disagreed with the use of columns 1 and 2 from Worksheet A to capture a health center's expenses because they reflect their internal accounting records in accordance with generally accepted accounting principles (GAAP). The commenters noted that the net expenses as listed in Worksheet A, column 7 of the Medicare cost report most accurately reflects Medicare allowable cost for a community health center as these reflect the reclassification entries which are common on the Medicare cost report, particularly for expenses related to compensation and drugs. They also noted that CMS must factor in the reclassification and adjustment entries that are recorded on health center Medicare cost reports to accurately calculate a 2017-based market basket that reflects the change in Medicare allowable costs. Furthermore, the commenters noted that the costs that are used to calculate the costs per visits in Worksheet B reflect the reclassifications and adjustments and so the 2017-based FQHC market basket should be calculated using the same cost information.

Response: Using the data from the net cost column (column 7) presents unique challenges because a detailed breakdown of the net expenses is not provided on the FQHC cost report, particularly for employee benefits, which is why we proposed to utilize the data from Worksheet A column 1 and 2 to estimate salary and all other costs.

Specifically, the FQHC cost report does not have a detailed step down of the net expenses allocated to each General Service cost center like other provider cost reports such as the hospice cost report (CMS Form 1984–14). This means that for some categories, particularly Employee Benefits cost center, we must make assumptions on how the total employee benefit costs are allocated across cost centers. On the other hand, Worksheet B on the hospice cost report gives a detailed allocation of General Service cost centers' net expenses (including employee benefits) across the patient-care cost centers.

Based on the commenters' concerns, we reviewed the FQHC Medicare cost report data and found that a large percentage of providers had reclassifications and adjustments and these had an impact on the distribution of total expenses among the major cost weight categories, particularly pharmaceuticals and FQHC practitioner salaries. Therefore, based on public comments, for this final rule we are revising our methodology from the proposed rule to reflect the use of net expenses as reported on Worksheet A, column 7 rather than the proposed Worksheet A, column 1 and column 2 to derive the FQHC cost share weights. Below we provide the revised detailed methodology for the major market basket cost weights in response to public comment.

In response to public comments to use net costs rather than total costs to derive the FQHC market basket cost weights, we are defining Medicare allowable costs for freestanding FQHC facilities as the total expenses reported on: Worksheet A, column 7, for lines 1 through 7, lines 9 through 12, and lines 23 through 36. These are the same cost centers that were used in the proposed market basket for which the commenters agreed was appropriate.

(1–3) FQHC Practitioner Compensation (Wages & Salaries, Benefits, and Contract Labor)

In response to public comment to use net costs rather than total costs to derive the FQHC market basket cost weights, we are defining the FQHC Practitioner Compensation as the sum of net expenses (that is, costs after reclassifications and adjustments) as reported on Worksheet A, column 7, lines 23, 25, 26, 29, 30, and 31. These lines represent the total net costs for physicians, PAs, NPs, CNMs, CPs, and CSWs—the same lines that were used for the proposed methodology for which the commenters agreed was appropriate. Using this finalized methodology, we derive a 2017-based FQHC market

basket FQHC Practitioner Compensation cost weight of 28.4 percent compared to the proposed rule with 30.0 percent.

To further divide the FQHC Practitioner Compensation costs into FQHC Practitioner Wages and Salaries, Benefits, and Contract Labor costs, we are using the shares derived for each of these costs using the proposed methodologies for each FQHC provider as described in sections III.D.3.a.1, D.3.a.2 and D.3.a.3 of this final rule. Specifically, for each line included in the FQHC Practitioner category, the FQHC Practitioner Wages and Salaries costs is equal to the FQHC Practitioner Compensation costs as described above multiplied by the FQHC Practitioner Wages and Salaries costs (described in section III.D.3.a.1 of this final rule) as a percent of FQHC Practitioner Compensation costs. This revised methodology reflects the net expenses (Worksheet A, column 7) to address the commenters' concerns while also using the Medicare cost report data to reflect the split among the types of compensation costs: Wages and salaries, employee benefits, and contract labor.

Therefore, for this final rule, in response to public comment to use net costs rather than total costs to derive the FQHC market basket cost weights, the FQHC Practitioner Wages and Salaries cost weight is 19.4 percent, and accounts for 68 percent of the FQHC Practitioner Compensation cost weight. The FQHC Practitioner Employee Benefit cost weight is 4.5 percent, and accounts for 16 percent of the FQHC Practitioner Compensation cost weight. The FQHC Practitioner Contract Labor cost weight is 4.6 percent, and accounts for 16 percent of the FQHC Practitioner Compensation cost weight.

(4–6) Clinical Staff Compensation (Wages & Salaries, Benefits, and Contract Labor)

In response to public comment to use net costs rather than total costs to derive the FQHC market basket cost weights, we are defining Clinical Staff Compensation costs as the sum of net expenses (that is, costs after reclassifications and adjustments) as reported on Worksheet A, column 7, lines 27, 28, 32, 33, 34, 35, and 36. These lines represent the net expenses for visiting RNs, visiting LPNs, laboratory technicians, registered dietitian/Certified DSMT/MNT educators, PTs, OTs, and other allied health personnel—the same lines that were used for the proposed methodology for which the commenters agreed was appropriate. Using this finalized methodology, we derive a 2017-based FQHC market basket

Clinical Staff Compensation cost weight of 16.8 percent compared to the proposed rule with 16.2 percent.

To further divide the Clinical Staff Compensation costs into Clinical Staff Wages and Salaries, Clinical Staff Employee Benefits, and Clinical Staff Contract Labor costs, we are using the shares derived for each of these costs using the proposed methodologies for each FQHC provider as described in sections III.D.3.a.4, D.3.a.5 and D.3.a.6 of this final rule. Specifically, for each line included in the Clinical Staff Compensation category, the Clinical Staff Wages and Salaries costs is equal to the Clinical Staff Compensation costs as described above multiplied by the Clinical Staff Wages and Salaries costs (described in section III.D.3.a.4 of this final rule) as a percent of Clinical Staff Compensation costs. This same methodology is being used for the FQHC Practitioner Wages and Salaries, Employee Benefits, and Contract Labor, which again reflects the net expenses (Worksheet A, column 7) to address the commenters concerns. Therefore, for this final rule, the Clinical Staff Wages and Salaries cost weight is 12.9 percent, which accounts for 77 percent of the Clinical Staff Compensation cost weight. The Clinical Staff Employee Benefit cost weight is 3.1 percent, which accounts for 18 percent of the Clinical Staff Compensation cost weight. The Clinical Staff Contract Labor cost weight is 0.8 percent, which accounts for 5 percent of the Clinical Staff Compensation cost weight.

(7) Non-Health Staff Compensation Costs

As stated above, the Non-Health Staff Compensation costs are for personnel in general service cost centers including: Employee Benefits department; Administrative & General; Plant Operation & Maintenance; Janitorial; Medical Records; Pharmacy; Medical Supplies; Transportation; and Other General Services.

In response to public comment to use net costs rather than total costs to derive the FQHC market basket cost weights, we are defining Non-Health Staff Compensation costs using net expenses (that is, costs after reclassifications and adjustments) as the estimated share of compensation costs from Worksheet A, column 7 for lines 3, 4, 5, 6, 7, 9, 10, 11, and 12. Since the net expenses for the General Service Cost centers include both compensation and other costs we estimate the share of net expenses for each general service cost center that reflects compensation costs.

First, we estimate a share of Non-Health Staff Wages and Salaries costs for

each general service cost center as reported on Worksheet A, column 1 for lines 3, 4, 5, 6, 7, 9, 10, 11, and 12 divided by Worksheet A, column 1 and 2 for lines 3, 4, 5, 6, 7, 9, 10, 11, and 12. Then, we multiply the Non-Health Staff Net expenses (that is, costs after reclassifications and adjustments) by the Non-Health Staff Wages and Salaries share to derive estimated Non-Health Staff Wages and Salaries for each general service cost center (lines 3–7 and lines 9–12).

Second, we estimate Non-Health Staff Employee Benefit costs by multiplying the Non-Health Staff Wages and Salaries costs (step one) by the facility benefit to salary ratio. Finally, we add the derived Non-Health Staff Wages and Salaries costs and the derived Non-Health Staff Employee Benefits costs for each general service cost center (line 3–7 and lines 9–12). The results is the 2017-based FQHC market basket Non-health Staff Compensation cost weight of 27.2 percent compared to the proposed rule with 25.4 percent.

(8) Pharmaceuticals Costs

In response to public comment to use net costs rather than total costs to derive the FQHC market basket cost weights, we are calculating Pharmaceuticals costs as the non-compensation costs for the pharmacy cost center. We define this as Worksheet A, column 7, line 9 less derived Pharmacy compensation costs. Similar to the methodology used for the Non-Health Staff compensation, we derive estimated Pharmacy compensation costs.

First we derive the share of pharmacy wages and salaries as Worksheet A, column 1, line 9 divided by the sum of Worksheet A, Column 1 & 2, for line 9. Then, we multiply the pharmacy wages and salaries share by pharmacy net expenses (Worksheet A, column 7, line 9).

Second, we estimate Pharmacy employee benefits by multiplying the derived Pharmacy wages and salaries by the facility benefit to salary ratio. The derived Pharmacy compensation costs are equal to the sum of the estimated pharmacy wages and salaries and pharmacy benefits costs. Using this finalized methodology, we derive a 2017-based FQHC market basket Pharmacy cost weight of 2.4 percent compared to the proposed rule with 3.9 percent.

(9) Medical Supplies

In response to public comment to use net costs rather than total costs to derive the FQHC market basket cost weights, we are calculating medical supplies costs as the non-compensation costs for

the Medical Supplies costs center. We define this as Worksheet A, column 7, line 10 less derived Medical Supplies compensation costs. Similar to the methodology used for the Non-Health Staff compensation, we estimate Medical Supplies compensation costs.

First, we derive the share of medical supplies wages and salaries as Worksheet A, column 1, line 10 divided by the sum of Worksheet A, Column 1 & 2, line 10. Then, we multiply the medical supplies wages and salaries share by the medical supplies net expense (Worksheet A, column 7, line 10).

Second we estimate Medical Supplies employee benefits by multiplying the derived Medical Supplies wages and salaries by the facility benefit to salary ratio. The derived Medical Supplies compensation costs are equal to the sum of the estimated medical supplies wages and salaries and medical supplies benefits costs. Using this finalized methodology, we derive a 2017-based FQHC market basket Medical Supplies cost weight of 2.2 percent compared to the proposed rule with 2.4 percent.

(10) Fixed Capital

In response to public comment to use net costs rather than total costs to derive the FQHC market basket cost weights, we are defining fixed capital costs to be equal to costs reported on Worksheet A, line 1, column 7 of the Medicare Cost Report. Using this finalized methodology, we derive a 2017-based FQHC market basket fixed capital cost weight of 4.4 percent compared to the proposed rule with 4.6 percent.

(11) Moveable Capital Costs

In response to public comment to use net costs rather than total costs to derive the FQHC market basket cost weights,

we are defining moveable capital costs to be equal to the capital costs as reported on Worksheet A, line 2, column 7. Using this finalized methodology, we derive a 2017-based FQHC market basket Moveable Capital cost weight of 2.0 percent compared to the proposed rule with 1.9 percent.

b. Major Cost Category Computation

After we derive costs for the major cost categories for each provider using the Medicare cost report data as previously described, we proposed to trim the data for outliers. For each of the eleven major cost categories, we proposed to divide the calculated costs for the category by total Medicare allowable costs calculated for the provider to obtain cost weights for the universe of FQHC providers. For the 2017-based FQHC market basket (similar to the 2013-based FQHC market basket), we proposed that total Medicare allowable costs would be equal to the total costs as reported on Worksheet A, columns 1 and 2, lines 1 through 7 and lines 9 through 12; Worksheet A, column 1, lines 23 through 36; and Worksheet S3 Part II, columns 1 and 2, lines 2 through 14. In response to public comment to use net costs rather than total costs to derive the FQHC market basket cost weights, we are defining Medicare allowable costs for freestanding FQHC facilities as the total net expenses (after reclassifications and adjustments) reported on: Worksheet A, column 7, for lines 1 through 7, lines 9 through 12; and lines 23 through 36. These are the same cost centers that were used in the proposed market basket for which the commenters agreed was appropriate.

For the FQHC Practitioner Wages and Salaries, FQHC Practitioner Employee Benefits, FQHC Practitioner Contract

Labor, Clinical Staff Wages and Salaries, Clinical Staff Employee Benefits, Clinical Staff Contract Labor, Non-Health Staff Compensation, Pharmaceuticals, Medical Supplies, Fixed Capital, and Moveable Capital cost weights, after excluding cost weights that are less than or equal to zero, we proposed to then remove those providers whose derived cost weights fall in the top and bottom 5 percent of provider-specific derived cost weights to ensure the exclusion of outliers. A 5 percent trim is the standard trim applied to the mean cost weights in all CMS market baskets and is consistent with the trimming used in the 2013-based FQHC market basket. After the outliers have been excluded, we add the costs for each category across all remaining providers. We proposed to then divide this by the sum of total Medicare allowable costs across all remaining providers to obtain a cost weight for the 2017-based FQHC market basket for the given category. This trimming process is done for each cost weight separately. We did not receive any comments on this proposal, and therefore, we are going to use the same trimming methodology to remove outliers as proposed but with the revised cost weights reflecting the new methodology in response to public comment.

Finally, we proposed to calculate the residual "All Other" cost weight that reflects all remaining costs that are not captured in the eleven major cost categories listed. We referred readers to Table 35 for the resulting cost weights for these major cost categories.

Table 35 also shows the proposed and final 2017-based FQHC market basket cost weights compared to the 2013-based FQHC market basket cost weights.

TABLE 35: Major Cost Categories as Derived from Medicare Cost Reports

Major Cost Categories	Final 2017-Based FQHC Cost Report Weights (Percent)	Proposed 2017-Based FQHC Cost Report Weights (Percent)	2013-Based FQHC Market Basket (Percent)
FQHC Practitioner Compensation*	28.4	30.0	31.7
FQHC Practitioner Wages & Salaries	19.4	20.5	-
FQHC Practitioner Employee Benefits	4.5	4.5	-
FQHC Practitioner Contract Labor	4.6	4.9	-
Clinical Staff Compensation*	16.8	16.2	9.5
Clinical Staff Wages & Salaries	12.9	12.4	-
Clinical Staff Employee Benefits	3.1	3.0	-
Clinical Staff Contract Labor	0.8	0.8	-
Non-Health Staff Compensation*	27.2	25.4	27.4
Pharmaceuticals	2.4	3.9	5.1
Medical Supplies	2.2	2.4	-
Fixed Capital	4.4	4.7	4.5
Moveable Capital	2.0	1.9	1.7
All Other (Residual)	16.5	15.5	20.1

*Employee Benefits weight from the 2013-based FQHC Market Basket (10.7 percent), which was derived from the Medicare Cost Reports (81 FR 80395) and distributed across the three compensation categories: FQHC Practitioner, Clinical Staff, and Non-Health Staff based on the relative shares of each category.

Note: Totals may not sum to 100.0 due to rounding

The total compensation cost weight of 72.5 percent (sum of FQHC Practitioner Compensation, Clinical Compensation, Non-health Staff Compensation) calculated from the Medicare cost reports for the final 2017-based FQHC market basket is approximately 4.0 percentage point higher than the total compensation cost weight for the 2013-based FQHC market basket (68.6 percent). The 2017-based cost weight for FQHC Practitioner Compensation are about 3 percentage points lower compared to the 2013-based FQHC market basket, while the clinical staff compensation cost weight is about 7 percentage points higher. Part of the reason for the shift in the weights between compensation categories may be due to the change to the FQHC Medicare cost report form. On the 1992 Medicare cost report form (used for the 2013-based FQHC market basket), there were four open ended “fill-in” categories for healthcare staff costs and costs under agreement. Since we were unable to determine what specific category the “other health care staff” costs should be allocated to (that is, either FQHC practitioner, or clinical staff) we used a methodology where we applied the expenses for the “other health care staff costs” between the categories for FQHC practitioner and clinical staff, based on the relative shares of expenses for both categories,

excluding the open-ended fill in lines of Worksheet A, lines 9–11 and line 15. This may have resulted in an over allocation of some of the 2013 expenses to the FQHC Practitioner category relative to the clinical staff. On the 2014 Medicare cost report form, there is no longer an ambiguous category for other direct patient care staff costs.

The final 2017-based Pharmaceuticals cost weight is roughly 2.7 percentage points lower than the cost weight in the 2013-based FQHC market basket. The pharmaceutical costs included in the weight for 2017-based FQHC market basket includes only non-compensation costs reported in Pharmacy (under general services). We believe the cost share is lower with the new data because there is more specificity on where to report reimbursable and non-reimbursable drugs. Additionally, using the net expense data (that is after reclassifications and adjustments) results in a lower share for pharmacy expenses relative to if total costs are used. This implies that there are notable reclassifications and adjustments to the Medicare Allowable pharmacy expenses as mentioned by commenters as a reason for the concern for not using Net expense data.

As we did for the 2013-based FQHC market basket, we proposed to allocate the contract labor cost weight to the Wages and Salaries and Employee Benefits cost weights based on their

relative proportions under the assumption that contract labor costs comprise both Wages and Salaries and Employee Benefits for both FQHC Practitioners and Clinical Staff. The contract labor allocation proportion for Wages and Salaries is equal to the Wages and Salaries cost weight as a percent of the sum of the Wages and Salaries cost weight and the Employee Benefits cost weight. This rounded percentage based on the proposed cost weights was 82 percent for FQHC Practitioners and 80 percent for clinical staff. Therefore, we proposed to allocate 82 percent of the FQHC Practitioner Contract Labor cost weight to the FQHC Practitioner Wages and Salaries cost weight and 18 percent to the FQHC Practitioner Employee Benefits cost weight. Similarly, we proposed to allocate 80 percent of the clinical staff contract labor cost weight to the Clinical Staff Wages and Salaries cost weight and 20 percent to the clinical staff employee benefits cost weight. In response to comment, in the final 2017-based FQHC market basket, we are allocating 81 percent of the FQHC Practitioner Contract Labor to FQHC Practitioner Wages and Salaries and 19 percent to the FQHC Practitioner Employee Benefits. We are also allocating 81 percent of the Clinical Staff Contract Labor to Clinical Staff Wages and Salaries and 19 percent to

the Clinical Staff Employee Benefits. We refer readers to Table 36 that shows the

final Wages and Salaries and Employee Benefits cost weights after Contract

Labor cost weight allocation for the final 2017-based FQHC market basket.

TABLE 36: Wages and Salaries and Employee Benefits Cost Weights After Contract Labor Allocation

Major Cost Categories	Final 2017-Based FQHC Practitioner	Final 2017-Based Clinical Staff	Proposed 2017-Based FQHC Practitioner	Proposed 2017-Based Clinical Staff
Wages and Salaries	23.1	13.6	24.6	13.0
Employee Benefits	5.4	3.3	5.4	3.2
Compensation	28.4	16.8	30.0	16.2

*Totals may not sum due to rounding

c. Derivation of the Detailed Operating Cost Weights

To further divide the “All Other” residual cost weight estimated from the 2017 Medicare cost report data into more detailed cost categories, we proposed to use the 2012 Benchmark Input-Output (I-O) “Use Tables/Before Redefinitions/Purchaser Value” for NAICS 621100, Offices of Physicians, published by the Bureau of Economic Analysis (BEA). We note that the BEA benchmark I-O data is used to further disaggregate residual expenses in other CMS market baskets. Therefore, we noted that we believe the data from this industry are the most technically appropriate for disaggregation of the residual expenses since both physician offices and FQHCs provide similar types of care. These data are publicly available at <https://www.bea.gov/industry/input-output-accounts-data>. For the 2013-based FQHC market basket, we used the relative shares of certain categories from the 2006-based MEI (81 FR 80396).

The BEA Benchmark I-O data are scheduled for publication every 5 years with the most recent data available for 2012. The 2012 Benchmark I-O data are derived from the 2012 Economic Census and are the building blocks for BEA’s economic accounts. Therefore, they represent the most comprehensive and complete set of data on the economic processes or mechanisms by which output is produced and distributed.⁵³ BEA also produces Annual I-O estimates. However, while based on a

similar methodology, these estimates reflect less comprehensive and less detailed data sources and are subject to revision when benchmark data becomes available. Instead of using the less detailed Annual I-O data, we proposed to inflate the 2012 Benchmark I-O data forward to 2017 by applying the annual price changes from the respective price proxies to the appropriate market basket cost categories that are obtained from the 2012 Benchmark I-O data. We repeated this practice for each year. We then calculated the cost shares that each cost category represents of the 2012 data inflated to 2017. These resulting 2017 cost shares were applied to the “All Other” residual cost weight to obtain the detailed cost weights for the proposed 2017-based FQHC market basket. For example, the cost for Medical Equipment represents 7.2 percent of the sum of the “All Other” 2012 Benchmark I-O Offices of Physicians Expenditures inflated to 2017. Therefore, the proposed Medical Equipment cost weight represents 7.2 percent of the proposed 2017-based FQHC market basket’s “All Other” cost category (16.5 percent), yielding a Medical Equipment cost weight of 1.2 percent in the 2017-based FQHC market basket ($0.072 \times 16.5 \text{ percent} = 1.2 \text{ percent}$).

Using this methodology, we proposed to derive six detailed FQHC market basket cost category weights from the proposed 2017-based FQHC market basket residual cost weight (15.5 percent). These categories are: (1)

Utilities; (2) Medical Equipment; (3) Miscellaneous Products; (4) Professional, Scientific, and Technical Services; (5) Administrative Support and Waste Management Services; (6) All Other Services. We note that for the 2013-based FQHC market basket, we had Telephone and Postage cost weights. For the 2017-based FQHC market basket, we proposed to include Telephone and Postage costs in the Miscellaneous Products cost weight due to the small amount of costs in this category (each were less than .05 percent).

We did not receive any comments on our proposed derivation of the detailed operating cost weights. Therefore, we are finalizing our methodology as proposed. In response to public comment to use net costs rather than total costs to derive the FQHC market basket cost weights, the “All Other” residual cost weight was revised from the proposed rule to reflect the revised methodology as explained in section III.D.3.a of this final rule. The “All Other” residual cost weight is 16.5 percent compared to the proposed 15.5 percent weight.

d. 2017-Based FQHC Market Basket Cost Categories and Weights

Table 37 shows the cost categories and weights for the Final 2017-based FQHC market basket compared to the proposed 2017-based FQHC market basket and the 2013-based FQHC market basket.

⁵³ http://www.bea.gov/papers/pdf/IOmanual_092906.pdf.

TABLE 37: Final 2017-Based FQHC Market Basket Cost Weights Compared to Proposed 2017-Based FQHC Market Basket, and the 2013-Based FQHC Market Basket Cost Weights

Cost Category	Final 2017-based FQHC Market Basket Cost Weight	Proposed 2017-based FQHC Market Basket Cost Weight	2013-based FQHC Market Basket Cost Weight
Total	100.0	100.0	100.0
Compensation	72.5	71.6	68.7
FQHC Practitioner Compensation	28.4	30.0	31.7
FQHC Practitioner Wages and Salaries	23.1	24.6	-
FQHC Practitioner Employee Benefits	5.4	5.4	-
Clinical Staff Compensation	16.8	16.2	9.5
Clinical Staff Wages and Salaries	13.6	13.0	-
Clinical Staff Employee Benefits	3.3	3.2	-
Non-Health Staff Compensation	27.2	25.4	27.4
All Other Products	8.5	10.0	16.1
Pharmaceuticals	2.4	3.9	5.1
Utilities	0.6	0.5	1.4
Telephone	-	-	1.7
Postage	-	-	1.0
Medical Equipment	1.2	1.1	2.2
Medical Supplies	2.2	2.4	2.0
Miscellaneous Products	2.2	2.1	2.8
All Other Services	12.6	11.8	9.0
Professional, Scientific, and Technical Services	6.4	6.0	2.9
Administrative and Facilities Support Services	1.7	1.6	3.4
All Other Services	4.5	4.2	2.7
Capital-Related Costs	6.4	6.6	6.1
Fixed Assets	4.4	4.7	4.5
Movable Equipment	2.0	1.9	1.7

Note: Totals may not sum due to rounding.

4. Selection of Price Proxies

After developing the cost weights for the 2017-based FQHC market basket, we selected the most appropriate wage and price proxies currently available to represent the rate of price change for each expenditure category. For the majority of the cost weights, we base the price proxies on U.S. Bureau of Labor Statistics (BLS) data, as they produce indexes that best meet the criteria of reliability, timeliness, availability, and relevance, and group them into one of the following BLS categories:

- **Employment Cost Indexes.** Employment Cost Indexes (ECIs) measure the rate of change in employment wage rates and employer costs for employee benefits per hour worked. These indexes are fixed-weight indexes and strictly measure the change in wage rates and employee benefits per hour. ECIs are superior to Average Hourly Earnings (AHE) as price proxies for input price indexes because they are

not affected by shifts in occupation or industry mix, and because they measure pure price change and are available by both occupational group and by industry. The industry ECIs are based on the North American Industry Classification System (NAICS) and the occupational ECIs are based on the Standard Occupational Classification System (SOC).

- **Producer Price Indexes.** Producer Price Indexes (PPIs) measure the average change over time in the selling prices received by domestic producers for their output. The prices included in the PPI are from the first commercial transaction for many products and some services (<https://www.bls.gov/ppi/>).

- **Consumer Price Indexes.** Consumer Price Indexes (CPIs) measure the average change over time in the prices paid by urban consumers for a market basket of consumer goods and services (<https://www.bls.gov/cpi/>). CPIs are only used when the purchases are similar to

those of retail consumers rather than purchases at the producer level, or if no appropriate PPIs are available.

We evaluate the price proxies using the criteria of reliability, timeliness, availability, and relevance:

- **Reliability.** Reliability indicates that the index is based on valid statistical methods and has low sampling variability. Widely accepted statistical methods ensure that the data were collected and aggregated in a way that can be replicated. Low sampling variability is desirable because it indicates that the sample reflects the typical members of the population. (Sampling variability is variation that occurs by chance because only a sample was surveyed rather than the entire population.)

- **Timeliness.** Timeliness implies that the proxy is published regularly, preferably at least once a quarter. The market baskets are updated quarterly, and therefore, it is important for the

underlying price proxies to be up-to-date, reflecting the most recent data available. We believe that using proxies that are published regularly (at least quarterly, whenever possible) helps to ensure that we are using the most recent data available to update the market basket. We strive to use publications that are disseminated frequently, because we believe that this is an optimal way to stay abreast of the most current data available.

- **Availability.** Availability means that the proxy is publicly available. We prefer that our proxies are publicly available because this will help ensure that our market basket updates are as transparent to the public as possible. In addition, this enables the public to be able to obtain the price proxy data on a regular basis.

- **Relevance.** Relevance means that the proxy is applicable and representative of the cost category weight to which it is applied.

The CPIs, PPIs, and ECIs that we have selected meet these criteria. Therefore, we believe that they continue to be the best measure of price changes for the cost categories to which they would be applied.

Table 38 lists all price proxies we proposed to use in the 2017-based FQHC market basket. Below is a detailed explanation of the price proxies we proposed for each cost category, many of which are the same as those used for the 2013-based FQHC market basket.

a. Price Proxies for the 2017-Based FQHC Market Basket

(1) FQHC Practitioner Wages and Salaries

We proposed to use the ECI for Wages and Salaries for Private Industry Workers in Professional and Related (BLS series code CIU2010000120000I) to measure price growth of this category. There is no specific ECI for physicians or FQHC Practitioners, and therefore, we proposed to use an index that is based on professionals that receive advanced training similar to those performing at the FQHC Practitioner level of care. This index is consistent with the price proxy used to measure wages and salaries inflation pressure for physicians own time in the Medicare Economic Index (MEI) and is based on the MEI technical panel recommendation from 2012 (78 FR 74266 through 74271). Additionally, this price proxy is consistent with the proxy used for FQHC practitioner compensation in the 2013-based FQHC market basket (81 FR 80397). We noted that the 2013-based FQHC market basket

has a single cost category for Total Compensation reflecting both wages and salaries and employee benefits costs for FQHC Practitioners and this single compensation category uses the similar price proxy, the ECI Total Compensation for Private Industry Workers in Professional and Related, reflecting both types of compensation costs together rather than separately (81 FR 80397).

(2) FQHC Practitioner Employee Benefits

We proposed to use the ECI for Total Benefits for Private Industry Workers in Professional and Related to measure price growth of this category. This ECI is calculated using the ECI for Total Compensation for Private Industry Workers in Professional and Related (BLS series code CIU1016220000000I) and the relative importance of wages and salaries within total compensation. The 2013-based FQHC market basket did not include a separate category for FQHC Practitioner employee benefit costs.

(3) Clinical Staff Wages and Salaries

We proposed to use the ECI for Wages and Salaries for all Civilian Workers in Health Care and Social Assistance (BLS series code CIU1026200000000I) to measure the price growth of this cost category. This cost category consists of wage and salary costs for Nurses, Laboratory Technicians, and all other healthcare staff not included in the FQHC Practitioner compensation categories. Based on the clinical staff composition of these workers, we noted that we believe that the ECI for health-related workers is an appropriate proxy to measure wage and salary price pressures for these workers. We noted that the 2013-based FQHC market basket has a single cost category for Total Compensation reflecting both wages and salaries and employee benefits costs for Clinical Staff and this single compensation category uses the similar price proxy, the ECI Total Compensation for all Civilian Workers in Health Care and Social Assistance, reflecting both types of compensation costs together rather than separately (81 FR 80398).

(4) Clinical Staff Employee Benefits

We proposed to use the ECI for Total Benefits for all Civilian Workers in Health Care and Social Assistance to measure price growth of this category. This ECI is calculated using the ECI for Total Compensation for all Civilian Workers in Health Care and Social Assistance (BLS series code CIU1016220000000I) and the relative

importance of wages and salaries within total compensation. The 2013-based FQHC market basket did not include a separate category for Clinical Staff employee benefit costs.

(5) Non-Health Staff Compensation

We proposed to continue to use the ECI for Total Compensation for Private Industry Workers in Office and Administrative Support (BLS series code CIU2010000220000I) to measure the price growth of this cost category. The Non-health Staff Compensation cost weight is predominately attributable to administrative and facility type occupations, as reported in the data from the Medicare cost reports. This is the same price proxy used in the 2013-based FQHC market basket (81 FR 80398).

(6) Pharmaceuticals

We proposed to continue to use the PPI Commodities for Pharmaceuticals for Human Use, Prescription (BLS series code WPUSI07003) to measure the price growth of this cost category. This price proxy is used to measure prices of Pharmaceuticals in other CMS market baskets, such as 2014-based Inpatient Prospective Payment System and 2014-based Skilled Nursing Facility market baskets. This is the same proxy used in the 2013-based FQHC market basket (81 FR 80398).

(7) Utilities

We proposed to continue to use the CPI for Fuel and Utilities (BLS series code CUUR0000SAH2) to measure the price growth of this cost category. This is the same proxy used in the 2013-based FQHC market basket (81 FR 80398).

(8) Medical Equipment

We proposed to continue to use the PPI Commodities for Surgical and Medical Instruments (BLS series code WPU1562) as the price proxy for this category. This is the same proxy used in the 2013-based FQHC market basket (81 FR 80398).

(9) Medical Supplies

We proposed to continue to use a 50/50 blended index that comprises the PPI Commodities for Medical and Surgical Appliances and Supplies (BLS series code WPU156301) and the CPI-U for Medical Equipment and Supplies (BLS series code CUUR0000SEMG). The 50/50 blend is used in all market baskets where we do not have an accurate split available. We noted that we believe FQHCs purchase the types of supplies contained within these proxies, including such items as bandages,

dressings, catheters, intravenous equipment, syringes, and other general disposable medical supplies, via wholesale purchase, as well as at the retail level. Consequently, we proposed to combine the two aforementioned indexes to reflect those modes of purchase. This is the same blended price proxy used in the 2013-based FQHC market basket (81 FR 80398).

(10) Miscellaneous Products

We proposed to use the CPI for All Items Less Food and Energy (BLS series code CUUR0000SA0L1E) to measure the price growth of this cost category. We noted that we believe that using the CPI for All Items Less Food and Energy is appropriate as it reflects a general level of inflation. This is the same proxy used in the 2013-based FQHC market basket (81 FR 80398).

(11) Professional, Scientific, and Technical Services

We proposed to continue to use the ECI for Total Compensation for Private Industry Workers in Professional, Scientific, and Technical Services (BLS series code CIU2015400000000I) to measure the price growth of this cost

category. This is the same proxy used in the 2013-based FQHC market basket (81 FR 80398).

(12) Administrative and Facilities Support Services

We proposed to continue to use the ECI Total Compensation for Private Industry Workers in Office and Administrative Support (BLS series code CIU2010000220000I) to measure the price growth of this cost category. This is the same proxy used in the 2013-based FQHC market basket (81 FR 80398).

(13) All Other Services

We proposed to continue to use the ECI for Total Compensation for Private Industry Workers in Service Occupations (BLS series code CIU2010000300000I) to measure the price growth of this cost category. This is the same proxy used in the 2013-based FQHC market basket (81 FR 80398).

(14) Fixed Capital

We proposed to continue to use the PPI Industry for Lessors of Nonresidential Buildings (BLS series code PCU531120531120) to measure the

price growth of this cost category (81 FR 80398). This is the same price proxy used in the 2013-based FQHC market basket. We noted that we believe this continues to be the most appropriate price proxy since fixed capital expenses in FQHCs should reflect inflation for the rental and purchase of business office space.

(15) Moveable Capital

We proposed to continue to use the PPI Commodities for Machinery and Equipment (BLS series code WPU11) to measure the price growth of this cost category as this cost category represents nonmedical moveable equipment. This is the same proxy used in the 2013-based FQHC market basket (81 FR 80398).

We did not receive any comments on the proposed price proxies in the 2017-based FQHC market basket, and therefore, we are finalizing this proposal without modification.

c. Summary of Price Proxies of the Final 2017-Based FQHC Market Basket

Table 38 shows the cost categories and associated price proxies for the 2017-based FQHC market basket.

TABLE 38: Cost Categories and Price Proxies for the Final 2017-Based FQHC Market Basket

Cost Description	Price Proxies
FQHC Practitioner Wages and Salaries	ECI for Wages and Salaries for Private Industry Workers in Professional and Related
FQHC Practitioner Employee Benefits	ECI for Total Benefits for Private Industry Workers in Professional and Related
Clinical Staff Wages and Salaries	ECI for Wages and Salaries for All Civilian Workers in Health care and Social Assistance
Clinical Staff Employee Benefits	ECI for Total Benefits for All Civilian Workers in Health Care and Social Assistance
Non-Health Staff Compensation	ECI for Total Compensation for Private Industry Workers in Office and Administrative Support
Pharmaceuticals	PPI Special Index for Pharmaceuticals for Human Use, Prescription
Utilities	CPI-U for Fuels and Utilities
Medical Equipment	PPI Commodity Index for Surgical and Medical Instruments
Medical Supplies	Composite: PPI Commodity Index for Medical and Surgical Appliances and Supplies (50%) and CPI for Medical Equipment and Supplies (50%)
Miscellaneous Products	CPI-U for All items less food and energy
Professional, Scientific, and Technical Services	ECI for Total compensation for Private industry workers in Professional, Scientific, and Technical Services
Administrative and Facilities Support Services	ECI for Total Compensation for Private Industry Workers in Office and Administrative Support
All Other Services	ECI for Total Compensation for Private Industry Workers in Service Occupations
Fixed Capital	PPI Industry Index for Lessors of Nonresidential Buildings
Movable Capital	PPI Commodity Index for Machinery and Equipment

Comment: Several commenters applauded CMS, both for implementing an FQHC-specific market basket adjuster, per section 1834(o)(2)(B) of the Act, and for taking the initiative to rebase the market basket percentage, effective in 2021, using more recent cost data. One commenter stated they had been a long-term supporter of the FQHC specific market basket serving as the annual update method for health centers, in both Medicare and Medicaid. The commenter stated that they believe that the alternative, the MEI, is outdated and does not appropriately capture the services that health centers provide and therefore is not an appropriate update factor. The commenters appreciated that CMS updates the calculation periodically so that the cost weights reflect a current mix of goods and services purchased in providing FQHC services. The commenters stated that they did not have concerns with the overall structure of the calculation, and they noted that they believe the use of a fixed-weight, Laspeyres-type price index that uses cost weights and price proxies (based on publicly available cost indexes) is a reasonable way to measure the increase in the price over time of goods and services needed to furnish FQHC services.

Response: We appreciate the commenters' support of the FQHC market basket and the periodic rebasing and revision of the market basket to account for changes in the mix of goods and services purchased in providing FQHC services as well as the general methodological approach of using Medicare Cost Report data, a Laspeyres-type index formula, and the use of publically available price proxies when available and appropriate.

In response to public comment, we are finalizing the 2017-based FQHC market basket with modification effective with CY 2021 FQHC PPS update.

5. CY 2021 Productivity Adjusted Market Basket Update for FQHCs

For CY 2021 (that is, January 1, 2021 through December 31, 2021), we proposed to use the 2017-based FQHC market basket increase factor to update the PPS payments to FQHCs. Consistent with CMS practice, we estimated the market basket update for the FQHC PPS based on the most recent forecast from IGI. IGI is a nationally recognized economic and financial forecasting firm with which we contract to forecast the components of the market baskets and multifactor productivity (MFP). We proposed to use the update based on the most recent historical data available at the time of publication of the final rule.

For example, the final CY 2021 FQHC update would be based on the four-quarter moving-average percent change of the 2017-based FQHC market basket through the second quarter of 2020 (based on the final rule's statutory publication schedule). At the time of the proposed rule, we did not have the second quarter of 2020 historical data, and therefore, we proposed to use the most recent projection available at the time.

Based on IGI's third quarter 2020 forecast with historical data through the second quarter of 2020, the final 2017-based FQHC market basket increase factor for CY 2021 is 2.4 percent. For comparison, the 2013-based FQHC market basket update is projected to be 2.3 percent in CY 2021; this estimate is based on IGI's third quarter 2020 forecast (with historical data through the second quarter of 2020). We note that the forecast used for the proposed market basket update was developed prior to the economic impacts of the COVID-19 pandemic. The lower final update (2.4 percent) for CY 2021 relative to the proposed rule (2.5 percent) is primarily driven by slower anticipated compensation growth for both health-related and other occupations as labor markets have been significantly impacted during the recession that started in February 2020.

Section 1834(o)(2)(B)(ii) of the Act describes the methods for determining updates to FQHC PPS payment. We have included a productivity adjustment to the FQHC PPS annual payment update since implementation of the FQHC PPS (81 FR 80393) and we proposed to continue to include a productivity adjustment to the 2017-based FQHC market basket. We proposed to use the most recent estimate of the 10-year moving average of changes in annual private nonfarm business (economy-wide) multifactor productivity (MFP), which is the same measure of MFP applied to other CMS Market Basket updates including the MEI. The BLS publishes the official measure of private nonfarm business MFP (see <http://www.bls.gov/mfp> for the published BLS historical MFP data). For the final FQHC market basket update, we proposed to use the most recent historical estimate of annual MFP as published by the BLS. Generally, the most recent historical MFP estimate is lagged 2 years from the payment year.

Therefore, we proposed to use the 10-year moving average percent change in annual private nonfarm business MFP through 2019 as published by BLS in the CY 2021 FQHC market basket update. We noted that MFP is derived by subtracting the contribution of labor

and capital input growth from output growth. Since at the time of development of the proposed rule the 2019 MFP was not yet published by BLS, we proposed to use IGI's first quarter 2020 forecast of MFP. A complete description of the MFP projection methodology is available at <http://www.cms.gov/Research-Statistics-Dataand-Systems/Statistics-Trends-andReports/MedicareProgramRatesStats/MarketBasketResearch.html>.

Using IGI's first quarter 2020 forecast, the productivity adjustment for CY 2021 (the 10-year moving average of MFP for the period ending CY 2019) was projected to be 0.6 percent. Therefore, the proposed CY 2021 productivity-adjusted FQHC Market basket update was 1.9 percent, based on IGI's first quarter 2020 forecast with historical data through the fourth quarter of 2019. This reflected a 2.5-percent increase in the proposed 2017-based FQHC market basket and a 0.6-percent adjustment for productivity. Finally, we proposed that if more recent data subsequently become available, we would use such data, if appropriate, to determine the CY 2021 market basket update and the MFP adjustment for the final rule.

For this final rule, as proposed, we are using the latest historical data for MFP as published by the BLS to determine the MFP adjustment. The 10-year moving average percent change in MFP for the period ending CY 2019 as published by BLS is 0.7 percent. Therefore, the final CY 2021 productivity-adjusted FQHC Market basket update is 1.7 percent, based on IGI's third quarter 2020 forecast with historical data through the second quarter of 2020. This reflects a 2.4 percent increase in the final 2017-based FQHC market basket less a 0.7 percentage point adjustment for productivity.

E. Comprehensive Screenings for Seniors: Section 2002 of the Substance Use-Disorder Prevention That Promote Opioid Recovery and Treatment for Patients and Communities Act (SUPPORT Act)

Opioid overdose deaths continue to impact communities across the United States. In 2018, about 47,000 Americans died as a result of an opioid overdose, where 32 percent of these deaths involved a prescription opioid.⁵⁴ In addition to the risk of death from overdose, opioids carry a number of other health risks, including respiratory

⁵⁴ Wilson N, Kariisa M, Seth P, et al. Drug and Opioid-Involved Overdose Deaths—United States, 2017–2018. *MMWR Morb Mortal Wkly Rep* 2020;69:290–297.

depression, drowsiness, confusion, nausea, increased drug tolerance, and physical dependence. An estimated 1.4 million people in the United States have substance use disorders (SUDs) involving prescription opioid pain relievers.⁵⁵

CMS has a vital role in addressing opioid use disorder prevention, treatment and recovery. The intent of the SUPPORT Act (Pub. L. 115–271, enacted on October 24, 2018) is to provide for opioid use disorder prevention, treatment and recovery. In section 2002 of the SUPPORT Act, Comprehensive Screening for Seniors, the Congress required the Initial Preventive Physical Examination (IPPE) and Annual Wellness Visit (AWV) to include screening for potential SUDs and a review of any current opioid prescriptions. We believe that these provisions are complementary to the existing components of the IPPE and AWV. We proposed to add these new elements to the IPPE and AWV regulations, to draw attention to their importance and fulfil the section 2002 SUPPORT Act requirements. In the CY 2021 PFS proposed rule (85 FR at 50224), we provided background on the IPPE and AWV, discussed how the requirements of the SUPPORT Act are related to the IPPE and AWV, and made proposals to implement these provisions.

1. Background: IPPE and AWV

a. IPPE Required Elements

The IPPE is defined in section 1861(w) of the Act and codified in regulations at § 410.16. The IPPE must be performed within 1 year after the effective date of a beneficiary's first Medicare Part B coverage period as stated in section 1861(hhh)(4)(G) of the Act. The IPPE includes all of the following services furnished to an eligible beneficiary by a physician or other qualified NPP with the goal of health promotion and disease detection:

- Review of the beneficiary's medical and social history with attention to modifiable risk factors for disease, as those terms are defined in § 410.16.
- Review of the beneficiary's potential (risk factors) for depression, including current or past experiences with depression or other mood

disorders, based on the use of an appropriate screening instrument for persons without a current diagnosis of depression, which the physician or other qualified NPP may select from various available standardized screening tests designed for this purpose and recognized by national professional medical organizations.

- Review of the beneficiary's functional ability, and level of safety as those terms are defined in § 410.16 based on the use of appropriate screening questions or a screening questionnaire, which the physician or other qualified NPP may select from various available screening questions or standardized questionnaires designed for this purpose and recognized by national professional medical organizations.
- An examination to include measurement of the beneficiary's height, weight, body mass index, blood pressure, a visual acuity screen, and other factors as deemed appropriate, based on the beneficiary's medical and social history, and current clinical standards.
- End-of-life planning upon agreement with the individual.
- Education, counseling, and referral, as deemed appropriate by the physician or qualified NPP, based on the results of the review and evaluation services described in § 410.16.
- Education, counseling, and referral, including a brief written plan such as a checklist provided to the individual for obtaining an electrocardiogram, as appropriate, and the appropriate screening and other preventive services that are covered as separate Medicare Part B benefits.

b. AWV Required Elements

Section 1861(hhh) of the Act expanded Medicare coverage under Part B to include an AWV effective for services furnished on or after January 1, 2011. We codified the AWV at § 410.15.

The AWV is a wellness visit that focuses on identification of certain risk factors, personalized health advice, and referral for additional preventive services and lifestyle interventions (which may or may not be covered by Medicare). The elements included in the AWV differ from comprehensive physical examination protocols with which some providers may be familiar since it is a visit that is specifically designed to provide personalized prevention plan services as defined in the Act. The AWV includes a health risk assessment (HRA) and the AWV takes into account the results of the HRA.

The AWV may be performed when the beneficiary is no longer within 12

months after the effective date of his or her first Medicare Part B coverage period and when the beneficiary has not received either an IPPE or AWV within the past 12 months. The AWV may be performed by a physician, NPP (physician assistant, nurse practitioner, or clinical nurse specialist), medical professional (including a health educator, a registered dietitian, or nutrition professional, or other licensed practitioner) or a team of such medical professionals, working under the direct supervision of a physician. In summary, the first AWV includes the following:

- Review (and administration if needed) of a health risk assessment (as defined in § 410.15).
- Establishment of an individual's medical and family history.
- Establishment of a list of current providers and suppliers that are regularly involved in providing medical care to the individual.
- Measurement of an individual's height, weight, body-mass index (or waist circumference, if appropriate), blood pressure, and other routine measurements as deemed appropriate, based on the beneficiary's medical and family history.
- Detection of any cognitive impairment that the individual may have, as that term is defined in § 410.15.
- Review of the individual's potential (risk factors) for depression, including current or past experiences with depression or other mood disorders, based on the use of an appropriate screening instrument for persons without a current diagnosis of depression, which the health professional may select from various available standardized screening tests designed for this purpose and recognized by national medical professional organizations.
- Review of the individual's functional ability and level of safety, based on direct observation or the use of appropriate screening questions or a screening questionnaire, which the health professional as defined in § 410.15 may select from various available screening questions or standardized questionnaires designed for this purpose and recognized by national professional medical organizations.
- Establishment of the following:
 - ++ A written screening schedule for the individual such as a checklist for the next 5 to 10 years, as appropriate, based on recommendations of the United States Preventive Services Task Force (USPSTF) and the Advisory Committee on Immunization Practices, and the individual's health risk assessment (as that term is defined in § 410.15), health

⁵⁵ Substance Abuse and Mental Health Services Administration. (2020). Key substance use and mental health indicators in the United States: Results from the 2019 National Survey on Drug Use and Health (HHS Publication No. PEP20–07–01–001, NSDUH Series H–55). Rockville, MD: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration. Retrieved from <https://www.samhsa.gov/data/>.

status, screening history, and age-appropriate preventive services covered by Medicare.

++ A list of risk factors and conditions for which primary, secondary or tertiary interventions are recommended or are underway for the individual, including any mental health conditions or any such risk factors or conditions that have been identified through an IPPE (as described under § 410.16), and a list of treatment options and their associated risks and benefits.

++ Furnishing of personalized health advice to the individual and a referral, as appropriate, to health education or preventive counseling services or programs aimed at reducing identified risk factors and improving self-management, or community-based lifestyle interventions to reduce health risks and promote self-management and wellness, including weight loss, physical activity, smoking cessation, fall prevention, and nutrition.

++ At the discretion of the beneficiary, furnish advance care planning services to include discussion about future care decisions that may need to be made, how the beneficiary can let others know about care preferences, and explanation of advance directives which may involve the completion of standard forms.

++ Any other element determined appropriate through the national coverage determination process.

In summary, subsequent AWWs include the following:

- Review (and administration, if needed) of an updated health risk assessment (as defined in § 410.15).
- An update of the individual's medical and family history.
- An update of the list of current providers and suppliers that are regularly involved in providing medical care to the individual as that list was developed for the first AWW providing personalized prevention plan services or the previous subsequent AWW providing personalized prevention plan services.
- Measurement of an individual's weight (or waist circumference), blood pressure and other routine measurements as deemed appropriate, based on the individual's medical and family history.
- Detection of any cognitive impairment that the individual may have, as that term is defined in § 410.15.
- An update to the following:

++ The written screening schedule for the individual as that schedule is defined in paragraph (a) of § 410.15 for the first AWW providing personalized prevention plan services.

++ The list of risk factors and conditions for which primary, secondary or tertiary interventions are recommended or are underway for the individual as that list was developed at the first AWW providing personalized prevention plan services or the previous subsequent AWW providing personalized prevention plan services.

++ Furnishing of personalized health advice to the individual and a referral, as appropriate, to health education or preventive counseling services or programs as that advice and related services are defined in paragraph (a) of § 410.15.

++ At the discretion of the beneficiary, furnish advance care planning services to include discussion about future care decisions that may need to be made, how the beneficiary can let others know about care preferences, and explanation of advance directives which may involve the completion of standard forms.

++ Any other element determined appropriate through the national coverage determination process.

2. Section 2002 of the SUPPORT Act Requirement

In section 2002 of the SUPPORT Act, sections 1861(ww) and 1861(hhh)(2) of the Act were amended to include a review of any current opioid prescriptions and screening for potential SUDs as elements of the IPPE and AWW, effective January 1, 2020.

3. Revisions to Section 2002 of the SUPPORT Act Requirements

We proposed to add the requirements of section 2002 of the SUPPORT Act to our regulations at §§ 410.15 and 410.16 for the AWW and IPPE, respectively.

Section 2002 of the SUPPORT Act, requires a review of any current opioid prescriptions as part of the IPPE and AWW. Such review includes a review of the potential risk factors to the individual for opioid use disorder, an evaluation of the individual's severity of pain and current treatment plan, educational information on non-opioid treatment options, and a referral to a specialist, as appropriate. Section 2002 of the SUPPORT Act also requires adding an element to the IPPE and AWW to include screening for potential SUDs. Along with the screening for SUD, a referral for treatment, as appropriate, was added to the AWW.

The definitions and conditions for and limitations on coverage of the IPPE outlined in § 410.16 includes a review of the beneficiary's medical and social history. The medical history is defined to include a review of current medications, which would include a

review of current opioid prescriptions. Furthermore, social history is defined to include, at a minimum, a history of alcohol, tobacco, and illicit drug use. Illicit drug use may include the non-medical use of prescription drugs. The physician or other qualified health professional may then provide education, counseling, and referral, as deemed appropriate, based on the results of the review and evaluation services provided during the IPPE.

The definitions and conditions for and limitations on coverage of the AWW in § 410.15 includes a health risk assessment, which entails an evaluation of psychosocial risks, including but not limited to, depression/life satisfaction, stress, anger, loneliness/social isolation, pain, and fatigue. The patient's substance use, if applicable, could be reviewed as part of the health risk assessment. The AWW also covers establishment of, or an update to the individual's medical and family history. The medical history includes medication use, and may have included a review of any opioid prescriptions. The health professional may also establish or update a list of risk factors and conditions for which primary, secondary or tertiary interventions are recommended or are underway for the individual, including any mental health conditions or any such risk factors or conditions that have been identified through the initial or subsequent AWW or IPPE, and a list of treatment options and their associated risks and benefits. If the clinician detected, through the above methods for screening, that a patient was at high-risk for SUD in the course of the visit, it would have been appropriate to note in the patient's IPPE written plan or the AWW personalized prevention plan and to have referred the patient for further assessment and treatment.

Awareness of a patient's use of substances, including nonmedical use of prescription drugs and illicit drug use, is an important aspect of the IPPE and AWW. In general, screening for potential SUDs may include screening questions, the use of a specific tool, screening for licit and/or illicit drugs (for example, alcohol, non-medical use of prescription opioids, methamphetamine, heroin, cocaine, and other substances), review of the beneficiary's medical and social history and medical records, or prescription drug monitoring program query when clinically indicated. Given the existing elements of the IPPE and AWW, we do not expect the proposed new regulatory elements to add significant burdens on physicians and practitioners who furnish these services because review of medical and social

history, risk factor identification, education, counseling, and referrals are already fundamental parts of the IPPE and AWW. The new regulatory elements elevate the importance of physicians' and other qualified health professionals' vigilance in identifying and addressing opioid risks and SUDs in Medicare beneficiaries.

4. Summary of Proposed Regulatory Text Changes

We proposed to add elements to our regulations to reflect the provisions of section 2002 of the SUPPORT Act. Consistent with sections 1861(w) and 1861(h)(2) of the Act, we proposed to amend §§ 410.15 and 410.16 by: (1) Adding the term "screening for potential substance use disorders"; (2) Adding the term "a review of any current opioid prescriptions" and its definition; and (3) revising the "Initial Preventive Physical Examination," "first annual wellness visit providing personalized prevention plan services," and "subsequent annual wellness visit providing personalized prevention plan services".

a. "Screening for Potential Substance Use Disorders"

We proposed to revise §§ 410.15 and 410.16 by adding the element "Screening for Potential Substance Use Disorders" and describing the requirement as a review of the individual's potential risk factors for SUD and referral for treatment as appropriate.

b. Definition of "a review of any current opioid prescriptions"

We proposed to revise §§ 410.15 and 410.16 by adding the element "a review of any current opioid prescriptions" and defining such term, consistent with section 1861(w)(4) of the Act, as a review of any current opioid prescriptions, including a review of the potential risk factors to the individual for opioid use disorder, an evaluation of the individuals' severity of pain and current treatment plan, the provision of information on non-opioid treatment options, and a referral to a specialist, as appropriate.

c. Proposed Changes to the "Initial Preventive Physical Examination," "First Annual Wellness Visit" and "Subsequent Annual Wellness Visit"

In §§ 410.15 and 410.16, we adopted the components of the IPPE and AWW, consistent with the statutory elements described in sections 1861(w) and 1861(h)(2) of the Act. The IPPE, first and subsequent AWWs are meant to represent a beneficiary visit focused on

prevention. Among other things, the IPPE and AWW encourage beneficiaries to obtain the preventive services covered by Medicare that are appropriate for them. First and subsequent AWWs also include elements that focus on the furnishing of personalized health advice and referral, as appropriate, to health education, preventive counseling services, or programs aimed at reducing identified risk factors and improving self-management, or community-based lifestyle interventions.

We proposed to revise "initial preventive physical examination," "first annual wellness visit providing personalized prevention plan services," and "subsequent annual wellness visit providing personalized prevention plan services" by adding:

- In § 410.15(a):

++ A revised paragraph (xi) to the definition of the term "First annual wellness visit providing personalized prevention plan services," and a revised paragraph (ix) to the definition of the term "Subsequent annual wellness visit" that would add furnishing of a review of any current opioid prescriptions as that term is defined in this section.

++ A new paragraph (xii) to the definition of "First annual wellness visit providing personalized prevention plan services," and a new paragraph (x) to the definition of "Subsequent annual wellness visit" that would add screening for potential SUDs including a review of the individual's potential risk factors for SUD and referral for treatment as appropriate.

++ A new paragraph (xiii) to the definition of "First annual wellness visit providing personalized prevention plan services," and a new paragraph (xi) to the definition of "Subsequent annual wellness visit" that would add any other element determined appropriate through the national coverage determination process.

- In § 410.16:

++ A revised paragraph (a)(6) to the definition of "Initial preventive physical examination" that would include a review of any current opioid prescriptions as that term is defined in this section.

++ A revised paragraph (a)(7) to the definition of "Initial preventive physical examination" that would add screening for potential SUDs to include a review of the individual's potential risk factors for SUD and referral for treatment as appropriate.

++ A new paragraph (a)(8) to the definition of "Initial preventive physical examination" that would add, education, counseling, and referral, as

deemed appropriate by the physician or qualified NPP, based on the results of the review and evaluation services described in this section.

++ A new paragraph (a)(9) to the definition of "Initial preventive physical examination" that would include, education, counseling, and referral, including a brief written plan such as a checklist provided to the individual for obtaining an electrocardiogram, as appropriate, and the appropriate screening and other preventive services that are covered as separate Medicare Part B benefits as described in sections 1861(s)(10), (jj), (nn), (oo), (pp), (qq)(1), (rr), (uu), (vv), (xx)(1), (yy), (bbb), and (ddd) of the Act.

5. Summary of Public Comments and Responses

We received public comments on the proposed revisions to the requirements under section 2002 of the SUPPORT Act. The following is a summary of the comments we received and our responses.

Comment: The vast majority of commenters supported the proposal to add the requirements of section 2002 of the SUPPORT Act to the regulations at §§ 410.15 and 410.16. Commenters stated that they believe these provisions are complementary to the existing components of the IPPE and AWW and help underscore the importance of prevention and appropriate pain management to stymie the opioid epidemic and detect substance use disorders on a regular schedule. Furthermore, commenters specifically noted that while Medicare has previously emphasized a review of opioid prescriptions is appropriate when collecting a patient's medical and social history within the IPPE and AWW, adding explicit requirements to the regulations regarding opioid prescription review and substance use disorder screening is an important distinction and welcomed by the majority of commenters.

Response: We appreciate the commenters for their support of CMS' efforts to include section 2002 of the SUPPORT ACT in the regulations, which are intended to strengthen provider engagement with patients on appropriate pain management and detection of substance use disorders through the IPPE and AWW.

Comment: According to one commenter a thorough patient assessment for pain and opioid use could take 30–90 minutes and such services should not be part of the AWW or IPPE but should be a separate encounter.

Response: We thank the commenter for highlighting the time it can take for practitioners to appropriately care for patients with pain. Section 2002 of the SUPPORT Act modified the statute to require the addition of certain additional services to the AWP and IPPE. We are not adopting the commenter's suggestion to only pay for these additional services as a separate encounter. We note, however, that there are other opportunities throughout the year outside of the AWP and IPPE, such as E/M services for practitioners to evaluate their patient's pain, consider treatment options and review medications when those services would be reasonable and necessary. In addition, other medically necessary services may be provided on the same date of service as an AWP or IPPE. The Part B deductible and coinsurance or copayment obligations would apply to those additional medically necessary services.

Comment: Some commenters advocated for CMS to increase the payment rate for the AWP and IPPE as a result of these additional required elements. Another commenter stated that the increase in reimbursement for CY 2021 will offset the additional work related to these new requirements. One commenter agreed with CMS that the new elements are aligned and similar to the services already being furnished during the visits and, therefore, would not result in significant added burden. One commenter disagreed with adding the requirements to the AWP and IPPE under section 2002 of the SUPPORT Act because practitioners already address prescriptions and substance abuse issues during these visits and formally including them adds to the paperwork and documentation burden around the visits.

Response: We note that we are required by law through section 2002 of the SUPPORT Act to include the new elements in the AWP and IPPE.

Commenters had various opinions about the appropriate payment rate for the AWP and IPPE with the additional requirements. We note for commenters that in section III.F. of this final rule, we finalized increases in the values of office/outpatient E/M visit codes for CY 2021. The AWP and IPPE services are valued via direct cross walk from the office/outpatient E/M visits. To maintain payment accuracy for the IPPE and the AWP, we finalized adjusting the valuation of these services to reflect the changes in value for E/M services to which they are crosswalked. The payment increase coincides with but is not related to the newly required elements in the AWP and IPPE.

We continue to agree with commenters who believe any additional burden for the new required elements will be minimal and we disagree with commenters that state the additional work will be a significant burden.

Comment: Commenters requested CMS clarify in more detail what is required of practitioners to meet the new required elements of the AWP and IPPE. One commenter specifically requested clarification that if a patient is found at risk for potential substance use disorder after screening that a comprehensive evaluation of that finding is not part of the AWP and IPPE. Another commenter specifically requested clarification around screening.

Response: In an effort to minimize burden and allow flexibility, we have not been more prescriptive with the regulatory language. We believe this allows practitioners to tailor screening to their patients. Medically necessary services beyond the scope of those required as part of the AWP and IPPE, as discussed in an earlier response, may be provided on the same date of service as an AWP or IPPE. The deductible and coinsurance or copayment may apply for these other medically necessary services.

Comment: One commenter asked for clarification on how CMS will enforce these new requirements.

Response: We are planning to enforce the new elements of the AWP and IPPE in the same manner as other services furnished to Medicare beneficiaries.

Comment: One commenter asked CMS to consider the community pharmacy as a provider of screening and referral services.

Response: We appreciate that the commenter is looking to expand access to screening and referral services by including community pharmacies as potential suppliers of these services, but this expansion would exceed the scope of our proposed rule. We did not seek to amend the definition of either "health professional" for the AWP or the definition of "qualified nonphysician practitioner" for the IPPE. The types of practitioners that are eligible to furnish the AWP are specified in section 1861(hhh)(3) of the Act and defined in our regulations in § 410.15(a). For the IPPE, the practitioners eligible to furnish these services under certain conditions are based on statutory requirements in sections 1861(s)(2)(K) and (ww)(1) of the Act and are defined in our regulations at § 410.16(a).

As a result of the comments, we are finalizing the proposal to add explicit requirements to the regulations regarding opioid prescription review

and substance use disorder screening. Specifically, we are adding the requirements of section 2002 of the SUPPORT Act to §§ 410.15 and 410.16 for the AWP and IPPE, respectively.

We did not receive public comments on our proposed regulatory text, and, therefore, we are finalizing the regulatory language as proposed.

F. Medicaid Promoting Interoperability Program Requirements for Eligible Professionals (EPs)

1. Background

Sections 1903(a)(3)(F) and 1903(t) of the Act provide the statutory basis for incentive payments made to Medicaid EPs and eligible hospitals for the adoption, implementation, upgrade, and meaningful use of Certified EHR Technology (CEHRT). We have implemented these statutory provisions in prior rulemakings to establish the Medicaid Promoting Interoperability Program.

Under sections 1848(o)(2)(A)(iii) and 1903(t)(6)(C)(i)(II) of the Act, and the definition of "meaningful EHR user" in regulations at § 495.4, one of the requirements of being a meaningful EHR user is to successfully report the clinical quality measures selected by CMS to CMS or a state, as applicable, in the form and manner specified by CMS or the state, as applicable. Section 1848(o)(2)(B)(iii) of the Act requires that in selecting electronic clinical quality measures (eCQMs) for EPs to report under the Promoting Interoperability Program, and in establishing the form and manner of reporting, the Secretary shall seek to avoid redundant or duplicative reporting otherwise required. We have taken steps to align various quality reporting and payment programs that include the submission of eCQMs.

In the CY 2020 PFS final rule (84 FR 62568, 62900), we established for 2020 that Medicaid EPs are required to report on any six eCQMs that are relevant to the EP's scope of practice, regardless of whether they report via attestation or electronically. We also adopted the Merit-based Incentive Payment System (MIPS) requirement that EPs report on at least one outcome measure (or, if an applicable outcome measure is not available or relevant, one other high priority measure). We explained that if no outcome or high priority measure is relevant to a Medicaid EP's scope of practice, the EP may report on any six eCQMs that are relevant.

2. eCQM Reporting Requirements for EPs Under the Medicaid Promoting Interoperability Program for 2021

We annually review and revise the list of eCQMs for each MIPS performance year to reflect updated clinical standards and guidelines. In Appendix 1 of the CY 2021 PFS proposed rule (85 FR 50412), we proposed to amend the list of available eCQMs for the CY 2021 performance period. In Appendix 1 of this final rule, we list the clinical quality measures added (Table Group A), removed (Table Group C), and changed (Table Group D) for the CY 2021 performance period. To keep eCQM specifications current and minimize complexity, we proposed to align the eCQMs available for Medicaid EPs in 2021 with those available for MIPS eligible clinicians for the CY 2021 performance period. Specifically, we proposed that the eCQMs available for Medicaid EPs in 2021 would consist of the list of quality measures available under the eCQM collection type on the final list of quality measures established for the MIPS CY 2021 performance period.

In previous years, CMS proposals to align the list of eCQMs for MIPS and the Medicaid Promoting Interoperability Program for EPs received positive comments that indicated that alignment between these two programs would help reduce health care provider reporting burden (84 FR 62900; see also 83 FR 59452, 59702). These comments thus suggest that aligning the eCQM lists might encourage EP participation in the Medicaid Promoting Interoperability Program by giving Medicaid EPs that are also MIPS eligible clinicians the ability to report the same eCQMs for both programs. Not aligning the eCQM lists could lead to increased burden, because EPs might have to report on different eCQMs for the Medicaid Promoting Interoperability Program if they opt to report on newly added eCQMs for MIPS. In addition, we believe that aligning the eCQMs available in each program would help to ensure the most uniform application of up-to-date clinical standards and guidelines possible.

As discussed in the CY 2021 PFS proposed rule (85 FR 50227), we anticipate that the proposal would reduce burden for Medicaid EPs by aligning the requirements for multiple reporting programs, and that the system changes required for EPs to implement this change would not be significant, particularly in light of our belief that many EPs would report eCQMs to meet the quality performance category of MIPS, and therefore, should be prepared to report on the available eCQMs for

2021. We noted that we expect that the proposal would have only a minimal impact on states, by requiring minor adjustments to state systems for 2021 to maintain current eCQM lists and specifications.

For 2021, we proposed to again require (as we did for 2020) that Medicaid EPs report on any six eCQMs that are relevant to their scope of practice, regardless of whether they report via attestation or electronically. This policy of allowing Medicaid EPs to report on any six measures relevant to their scope of practice would generally align with the MIPS data submission requirement for eligible clinicians using the eCQM collection type for the quality performance category, which is established at § 414.1335(a)(1). MIPS eligible clinicians who elect to submit eCQMs must generally submit data on at least six quality measures, including at least one outcome measure (or, if an applicable outcome measure is not available, one other high priority measure). We referred readers to § 414.1335(a) for the data submission criteria that apply to individual MIPS eligible clinicians and groups that elect to submit data with other collection types.

In addition, as we did for 2020, we proposed that for 2021, EPs in the Medicaid Promoting Interoperability Program would be required to report on at least one outcome measure (or, if an outcome measure is not available or relevant, one other high priority measure). We noted that this policy would improve alignment with the MIPS quality performance category requirements for eligible clinicians using the eCQM collection type. We also proposed that if no outcome or high priority measures are relevant to a Medicaid EP's scope of practice, the clinician may report on any six eCQMs that are relevant, as was the policy in 2020.

In the CY 2020 PFS final rule (84 FR 62899 and 62900), we established the following three methods to identify which of the available measures are high priority measures for EPs participating in the Medicaid Promoting Interoperability Program. We proposed to use the same three methods for identifying high priority eCQMs for the Medicaid Promoting Interoperability Program for 2021:

- The same set of measures that are identified as high priority measures for reporting on the quality performance category for eligible clinicians participating in MIPS.
- All e-specified measures from the previous year's core set of quality measures for Medicaid and the

Children's Health Insurance Program (CHIP) (Child Core Set) or the core set of health care quality measures for adults enrolled in Medicaid (Adult Core Set) (hereinafter together referred to as "Core Sets") that are also included on the MIPS list of eCQMs.

Sections 1139A and 1139B of the Act require the Secretary to identify and publish core sets of health care quality measures for child Medicaid and CHIP beneficiaries and adult Medicaid beneficiaries. These measure sets are required by statute to be updated annually and are voluntarily reported by states to CMS. These Core Sets are composed of measures that specifically focus on populations served by the Medicaid and CHIP programs and are of particular importance to their care. The MIPS eCQM list includes several, but not all, of the measures in the Core Sets. Because the Core Sets are released at the beginning of each year, it is not possible to update the list of high-priority eCQMs with those added to the current year's Core Sets.

The eCQMs that would be available for Medicaid EPs to report in 2021, that are both part of the Core Sets and on the MIPS list of eCQMs, and that would be considered high priority measures under the proposal are: CMS2, "Preventive Care and Screening: Screening for Depression and Follow-Up Plan"; CMS122, "Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%)"; CMS125, "Breast Cancer Screening"; CMS128, "Anti-depressant Medication Management"; CMS136, "Follow-Up Care for Children Prescribed ADHD Medication (ADD)"; CMS137, "Initiation and Engagement of Alcohol and Other Drug Dependence Treatment"; CMS153, "Chlamydia Screening for Women"; CMS155, "Weight Assessment and Counseling for Nutrition and Physical Activity for Children and Adolescents"; and CMS165, "Controlling High Blood Pressure."

- Through an amendment to § 495.332(f), we gave each state the flexibility to identify which of the eCQMs available for reporting in the Medicaid Promoting Interoperability Program are high priority measures for Medicaid EPs in that state, with review and approval by CMS, through the State Medicaid HIT Plan (SMHP). States are thus able to identify high priority measures that align with their state health goals or other programs within the state.

All eCQMs identified via any of these three methods are high priority measures for EPs participating in the Medicaid Promoting Interoperability Program for 2020. We proposed to use

the same three methods for identifying high priority eQCMs for the Medicaid Promoting Interoperability Program for 2021. We solicited comments as to whether any of these methods should be altered or removed, or whether any additional methods should be considered for 2021.

Finally, we note that the eQCM reporting period in 2021 for EPs in the Medicaid Promoting Interoperability Program is a minimum of any continuous 90-day period within CY 2021, provided that the end date for this period falls before October 31, 2021, or falls before a state-specific alternative date prior to October 31, 2021 that is specified in the SMHP, as described in § 495.332(f)(4). This 2021 eQCM reporting period will help ensure that states can issue all Medicaid Promoting Interoperability Program payments on or before December 31, 2021. (See 83 FR 59452, 59704 through 59706).

We received public comments on our proposals for eQCM reporting requirements for EPs under the Medicaid Promoting Interoperability Program for 2021. The following is a summary of the comments we received and our responses.

Comment: The overwhelming majority of commenters supported our proposals and stated that having the same eQCM specifications for the Medicaid Promoting Interoperability program and the MIPS quality performance category requirements for eligible clinicians using the eQCM collection type would indeed reduce the reporting burden on health care providers.

Response: We appreciate the support for our proposals.

Comment: Two commenters noted that the accuracy of eQCM data may be skewed by the timeline necessitating that EPs submit less than a full year of data. They explain that some measures are seasonal, such as those related to influenza, and an EP may report data that do not represent their true level of care over a full year. We also note that both of these commenters supported our proposals.

Response: We acknowledge and understand that reporting periods of less than a year may result in inaccurate or incomplete data. However, the applicable meaningful use requirement to receive an incentive payment is that an EP must simply report the eQCM data to the state. The actual data reported are not used to determine whether an EP is eligible for an incentive payment as a meaningful user of CEHRT. Furthermore, the length of the eQCM reporting period for Medicaid EPs in 2021 is consistent with the length

of the eQCM reporting period for 2020. Therefore, health care providers and states should already be aware of issues regarding the statistical validity of partial-year eQCM data. Additionally, when we established the 90-day eQCM reporting period for 2020, we concluded that, generally, the potential data quality issues associated with a shorter eQCM reporting period were outweighed by the benefits of that shorter period to all stakeholders (including to states preparing for the final year of the Medicaid Promoting Interoperability program in 2021), and that establishing 90-day eQCM reporting periods in both 2020 and 2021 might provide better data for comparison across the 2 years (see 84 FR 62901 and 62902). Finally, when we established the 90-day eQCM reporting period for 2021, we noted that it would help ensure that states can make all incentive payments before the statutory deadline (see 83 FR 59705).

Comment: One health care provider commented that the statutory deadline created a shortened time period to update the eQCM specifications in their EHR, which could have cost and staff workload implications. The commenter suggested that we allow EPs the option to report using 2020 specifications or to extend the reporting and payment deadlines.

Response: The December 31, 2021 deadline for payments is statutory and we do not have the authority to alter that deadline. In the 2019 PFS final rule (83 FR 59452), we explained that for states to make payments by that deadline, there must be sufficient time after EHR and eQCM reporting periods end for Medicaid EPs to attest to states, for states to conduct their prepayment processes, and for states to issue payments. Therefore, we amended § 495.4 to provide that the EHR reporting period in 2021 for all EPs in the Medicaid Promoting Interoperability Program will be a minimum of any continuous 90-day period within CY 2021, provided that the end date for this period falls before October 31, 2021, to help ensure that states can issue all Medicaid Promoting Interoperability Program payments on or before December 31, 2021. We also established that the eQCM reporting period in 2021 for EPs in the Medicaid Promoting Interoperability Program will be a minimum of any continuous 90-day period within CY 2021, provided that the end date for this period falls before October 31, 2021, to help ensure that states can issue all Medicaid Promoting Interoperability Program payments on or before December 31, 2021. However, we also allowed states the flexibility to set alternative, earlier final end dates for

EHR or eQCM reporting periods for Medicaid EPs in CY 2021, with prior approval from us, through their State Medicaid HIT Plans (SMHP). Any alternative end date for CY 2021 EHR and eQCM reporting periods set by a state may not be any earlier than the day prior to the attestation deadline for Medicaid EPs attesting to that state. For more information, see our discussion of the EHR and eQCM reporting periods for 2021 at 83 FR 59704–6.

We believe that allowing some EPs to report eQCMs in 2021 according to 2020 specifications, and some to report eQCMs in 2021 according to 2021 specifications, could cause undue confusion about the requirements for providers participating in the Medicaid Promoting Interoperability Program and/or MIPS and increase the administrative burden on states to determine which EPs submitted data in accordance with which specifications. As explained above, we believe that the latest eQCM specifications provide the most up-to-date clinical standards and guidelines. Furthermore, none of the EHR vendors who submitted comments indicated that the accelerated 2021 timeline would pose an obstacle to issuing system updates in time for EPs to attest to meaningful use. For the reasons explained in our proposal, we believe that maintaining a single set of the most up-to-date eQCM specifications for EPs to use in 2021 reduces the burden on EPs who may be reporting to multiple quality programs.

After considering public comments, we are finalizing the proposals in this section as proposed.

G. Medicare Shared Savings Program

On March 23, 2010, the Patient Protection and Affordable Care Act (Pub. L. 111–148) was enacted, followed by enactment of the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152) on March 30, 2010, which amended certain provisions of the Patient Protection and Affordable Care Act (hereinafter collectively referred to as “the Affordable Care Act”). Section 3022 of the Affordable Care Act amended Title XVIII of the Act (42 U.S.C. 1395 *et seq.*) by adding section 1899 to the Act to establish the Medicare Shared Savings Program (Shared Savings Program) to facilitate coordination and cooperation among healthcare providers to improve the quality of care for Medicare fee-for-service (FFS) beneficiaries and reduce the rate of growth in expenditures under Medicare Parts A and B. (See 42 U.S.C. 1395jjj.) Eligible groups of providers and suppliers, including physicians, hospitals, and other healthcare

providers, may participate in the Shared Savings Program by forming or participating in an Accountable Care Organization (ACO). Under the Shared Savings Program, providers of services and suppliers that participate in an ACO continue to receive traditional Medicare FFS payments under Parts A and B, but the ACO may be eligible to receive a shared savings payment if it meets specified quality and savings requirements.

Section 1899 of the Act has been amended through subsequent legislation. The requirements for assignment of Medicare FFS beneficiaries to ACOs participating under the program were amended by the 21st Century Cures Act (Pub. L. 114–255). The Bipartisan Budget Act of 2018 (Pub. L. 115–123, enacted on February 9, 2018), further amended section 1899 of the Act to provide for the following: Expanded use of telehealth services by physicians or practitioners participating in an applicable ACO to furnish services to prospectively assigned beneficiaries, greater flexibility in the assignment of Medicare FFS beneficiaries to ACOs by allowing ACOs in tracks under retrospective beneficiary assignment a choice of prospective assignment for the agreement period; permitting Medicare FFS beneficiaries to voluntarily identify an ACO professional as their primary care provider and requiring that such beneficiaries be notified of the ability to make and change such identification, and mandating that any such voluntary identification will supersede claims-based assignment; and allowing ACOs under certain two-sided models to establish CMS-approved beneficiary incentive programs.

The Shared Savings Program regulations are codified at 42 CFR part 425. The final rule establishing the Shared Savings Program appeared in the November 2, 2011 **Federal Register** (Medicare Program; Medicare Shared Savings Program: Accountable Care Organizations; final rule (76 FR 67802) (hereinafter referred to as the “November 2011 final rule”). A subsequent major update to the program rules appeared in the June 9, 2015 **Federal Register** (Medicare Program; Medicare Shared Savings Program: Accountable Care Organizations; final rule (80 FR 32692) (hereinafter referred to as the “June 2015 final rule”). The final rule entitled, “Medicare Program; Medicare Shared Savings Program; Accountable Care Organizations—Revised Benchmark Rebased Methodology, Facilitating Transition to Performance-Based Risk, and Administrative Finality of Financial Calculations,” which addressed changes

related to the program’s financial benchmark methodology, appeared in the June 10, 2016 **Federal Register** (81 FR 37950) (hereinafter referred to as the “June 2016 final rule”). A final rule, “Medicare Program; Revisions to Payment Policies Under the Physician Fee Schedule and Other Revisions to Part B for CY 2019; Medicare Shared Savings Program Requirements; Quality Payment Program; Medicaid Promoting Interoperability Program; Quality Payment Program—Extreme and Uncontrollable Circumstance Policy for the 2019 MIPS Payment Year; Provisions From the Medicare Shared Savings Program—Accountable Care Organizations—Pathways to Success; and Expanding the Use of Telehealth Services for the Treatment of Opioid Use Disorder Under the Substance Use-Disorder Prevention That Promotes Opioid Recovery and Treatment (SUPPORT) for Patients and Communities Act”, appeared in the November 23, 2018 **Federal Register** (83 FR 59452) (herein referred to as the “November 2018 final rule” or the “CY 2019 PFS final rule”). In the November 2018 final rule, we finalized a voluntary 6-month extension for existing ACOs whose participation agreements would otherwise expire on December 31, 2018; allowed beneficiaries greater flexibility in designating their primary care provider and in the use of that designation for purposes of assigning the beneficiary to an ACO if the clinician they align with is participating in an ACO; revised the definition of primary care services used in beneficiary assignment; provided relief for ACOs and their clinicians impacted by extreme and uncontrollable circumstances in performance year 2018 and subsequent years; established a new Certified Electronic Health Record Technology (CEHRT) use threshold requirement; and reduced the Shared Savings Program quality measure set from 31 to 23 measures (83 FR 59940 through 59990 and 59707 through 59715).

A final rule redesigning the Shared Savings Program appeared in the December 31, 2018 **Federal Register** (Medicare Program: Medicare Shared Savings Program; Accountable Care Organizations—Pathways to Success and Uncontrollable Circumstances Policies for Performance Year 2017; final rule) (83 FR 67816) (hereinafter referred to as the “December 2018 final rule”). In the December 2018 final rule, we finalized a number of policies for the Shared Savings Program, including a redesign of the participation options available under the program to encourage ACOs

to transition to two-sided models; new tools to support coordination of care across settings and strengthen beneficiary engagement; and revisions to ensure rigorous benchmarking.

In the interim final rule with comment period (IFC) entitled “Medicare and Medicaid Programs; Policy and Regulatory Revisions in Response to the COVID–19 Public Health Emergency”, which was effective on the March 31st date of display and appeared in the April 6, 2020 **Federal Register** (85 FR 19230) (hereinafter referred to as the “March 31st COVID–19 IFC”), we removed the restriction which prevented the application of the Shared Savings Program extreme and uncontrollable circumstances policy for disasters that occur during the quality reporting period if the reporting period is extended, to offer relief under the Shared Savings Program to all ACOs that may be unable to completely and accurately report quality data for 2019 due to the PHE for COVID–19 (85 FR 19267 and 19268). In the IFC entitled “Medicare and Medicaid Programs; Basic Health Program, and Exchanges; Additional Policy and Regulatory Revisions in Response to the COVID–19 Public Health Emergency and Delay of Certain Reporting Requirements for the Skilled Nursing Facility Quality Reporting Program” which was effective on May 8th and appeared in the May 8, 2020 **Federal Register** (85 FR 27573 through 27587) (hereinafter referred to as the “May 8th COVID–19 IFC”), we modified Shared Savings Program policies to: (1) Allow ACOs whose current agreement periods expire on December 31, 2020, the option to extend their existing agreement period by 1-year, and allow ACOs in the BASIC track’s glide path the option to elect to maintain their current level of participation for performance year 2021; (2) adjust program calculations to remove payment amounts for episodes of care for treatment of COVID–19; and (3) expand the definition of primary care services for purposes of determining beneficiary assignment to include telehealth codes for virtual check-ins, e-visits, and telephonic communication. We also clarified the applicability of the program’s extreme and uncontrollable circumstances policy to mitigate shared losses for the period of the PHE for COVID–19 starting in January 2020.

We have also made use of the annual CY PFS rules to address quality reporting for the Shared Savings Program and certain other issues. Refer to the CY 2020 PFS proposed rule for a summary of policies finalized in prior rules (84 FR 40705).

Policies applicable to Shared Savings Program ACOs for purposes of reporting for other programs have also continued to evolve based on changes in the law. The Medicare Access and CHIP Reauthorization Act of 2015 (Pub. L. 114–10) (MACRA) established the Quality Payment Program. In the CY 2017 Quality Payment Program final rule with comment period (81 FR 77008), we established regulations for the Merit-Based Incentive Payment System (MIPS) and Advanced Alternative Payment Models (APMs) and related policies applicable to eligible clinicians who participate in the Shared Savings Program. These policies included requirements for Shared Savings Program ACOs regarding reporting for the MIPS Quality performance category and a policy that gives ACOs full credit for the MIPS Improvement Activities performance category based on their participation in the Shared Savings Program.

In the CY 2021 PFS proposed rule (85 FR 50229), we explained our belief that the changes we were proposing to the quality reporting requirements under the Shared Savings Program for performance year 2021 and subsequent years would reduce ACO burden by establishing a smaller measure set, out of which ACOs would only be required to actively report 3 measures. This would represent a significant reduction in reporting requirements from the 10 measures on which ACOs are currently required to actively report. Under our proposal, reporting for these measures would begin in January 2022, for the 2021 performance year. We also noted that we believed this timeline would allow organizations sufficient time to prepare to report on the new measure set. In addition, the reporting options for the three ACO-reported measures would leverage existing MIPS collection types and more closely align existing CEHRT and registries used by ACOs and their clinicians, including use of APIs to submit data.

In sections III.G.1 through III.G.4 of this final rule, we summarize and respond to public comments we received on proposed modifications to the Shared Savings Program's policies discussed in section III.G. of the CY 2021 PFS proposed rule (85 FR 50228 through 50252). Some commenters' suggestions for modifications to Shared Savings Program policies went beyond the scope of the policies addressed in section III.G. of the CY 2021 PFS proposed rule, and will not be addressed in this section of this final rule. As a general summary, in sections III.G.1 through III.G.4 of this final rule we are finalizing the following changes

to the Shared Savings Program's regulations to:

- Modify the approach to measuring ACO quality performance under the Shared Savings Program which includes:

- ++ Applying the Alternative Payment Model (APM) Performance Pathway (APP) to Shared Savings Program ACOs for performance years beginning on or after January 1, 2021. Specifically, we are finalizing that:

- For performance year 2021, ACOs will be required to report quality data via the APP, and can choose to report either the 10 measures under the CMS Web Interface or the 3 eCQM/MIPS CQM measures. In addition, ACOs will be required to field the CAHPS for MIPS survey, and CMS will calculate 2 measures using administrative claims data.

- For performance year 2022 and subsequent performance years, ACOs will be required to actively report quality data on the 3 eCQM/MIPS CQM measures via the APP. In addition, ACOs will be required to field the CAHPS for MIPS survey, and CMS will calculate two measures using administrative claims data.

- ++ Revising the Shared Savings Program Quality Performance Standard. ACOs will meet the quality performance standard if:

- For performance years 2021 and 2022, ACOs achieve a quality performance score that is equivalent to or higher than the 30th percentile across all MIPS Quality performance category scores; and

- For performance year 2023 and subsequent performance years, ACOs achieve a quality performance score that is equivalent to or higher than the 40th percentile across all MIPS Quality performance category scores.

- ++ Changing the methodology for determining shared savings and shared losses based on ACO quality performance.

- ++ Revising the approach to monitoring ACO quality performance and addressing ACOs that fail to meet the Quality Performance Standard.

- ++ Updating the process used to validate ACO Quality Data Reporting, where we are finalizing that CMS retains the right to audit and validate quality data reported by an ACO via the APP according to the MIPS DVA process for performance years beginning on or after January 1, 2021.

- ++ Updating the extreme and uncontrollable circumstances policy as it relates to quality performance.

- Update the definition of primary care services used in beneficiary assignment, and codify in regulations

the adjustment that is made to an ACO's historical benchmark to reflect any changes to the beneficiary assignment methodology specified in part 425, subpart E, during an ACO's agreement period, including revisions to the definition of primary care services at § 425.402(c).

- Revise the repayment mechanism arrangement policy in the following manner:

- ++ To reduce the repayment mechanism amount for certain ACOs entering an agreement period starting on January 1, 2022, and in subsequent years.

- ++ To allow a one-time opportunity for certain ACOs that renewed for a new agreement period beginning on July 1, 2019, or January 1, 2020, to elect to decrease the amount of their existing repayment mechanisms.

- ++ To permit a re-entering ACO that is the same legal entity as an ACO that previously participated in the program, to use its existing repayment mechanism to support its new agreement period, in a similar manner as applies to renewing ACOs.

In section III.G.5. of this final rule, we summarize and respond to public comments received in response to the May 8th COVID–19 IFC, and discuss our final policies after taking into consideration the public comments.

1. Quality and Other Reporting Requirements

a. Background

Section 1899(b)(3)(C) of the Act states that the Secretary shall establish quality performance standards to assess the quality of care furnished by ACOs and seek to improve the quality of care furnished by ACOs over time by specifying higher standards, new measures, or both. In the November 2011 final rule establishing the Shared Savings Program, we adopted a quality measure set spanning four domains: patient experience of care, care coordination/patient safety, preventative health, and at-risk population (76 FR 67872 through 67891). Since then, we have updated the measures that comprise the quality performance measure set for the Shared Savings Program through rulemaking in the CY 2015, 2016, 2017, and 2019 PFS final rules (79 FR 67907 through 67920, 80 FR 71263 through 71268, 81 FR 80484 through 80489, and 83 FR 59707 through 59715 respectively).

As we stated in the November 2011 final rule (76 FR 67872), our principal goal in selecting quality measures for ACOs has been to identify measures of success in the delivery of high-quality

health care at the individual and population levels, with a focus on outcomes. In the CY 2019 PFS final rule, we finalized that for performance years (or a performance period) starting in 2019 and subsequent years, 23 quality measures would be used to determine ACO quality performance (83 FR 59707 through 59715). The information used to determine ACO performance on these quality measures is submitted by the ACO through the CMS Web Interface, calculated by us from administrative claims data, and collected via a patient experience of care survey referred to as the Consumer Assessment of Healthcare Provider and Systems (CAHPS) for ACOs Survey.

Eligible clinicians who are participating in an ACO and who are subject to MIPS (MIPS eligible clinicians) are currently scored under the APM scoring standard under MIPS (81 FR 77260). These MIPS eligible clinicians include any eligible clinicians who are participating in an ACO in a track, or payment model within a track (Track 1 and Levels A through D of the BASIC track) of the Shared Savings Program that is not an Advanced APM, as well as those MIPS eligible clinicians participating in an ACO in a track, or payment model within a track (Track 2, Level E of the BASIC track, and the ENHANCED track, or the Medicare ACO Track 1+ Model (Track 1+ Model)) that is an Advanced APM, but who do not become Qualifying APM Participants (QPs) as specified in § 414.1425, and are not otherwise excluded from MIPS.

b. Applying the Alternative Payment Model (APM) Performance Pathway (APP) to Shared Savings Program ACOs

As provided in section 1899(d)(2) of the Act and § 425.502(a) of the Shared Savings Program regulations, ACOs must meet a quality performance standard to qualify to share in savings. In the CY 2017 PFS final rule, we finalized revisions to § 425.502 related to the quality performance standard and minimum attainment, including clarifying that the quality performance standard is the overall standard the ACO must meet to qualify to share in savings; defining the minimum attainment level for pay for performance measures at the 30th percent or the 30th percentile of the quality performance benchmark and for pay for reporting measures at the level of complete and accurate reporting; specifying that only pay for performance measures are assessed on a sliding scale while pay for reporting measures earn the maximum number of points for a measure when the minimum attainment level is met (81 FR 80492 through 80494).

We explained in the CY 2021 PFS proposed rule (85 FR 50230) that currently, the quality performance standard is based on an ACO's experience in the program rather than its financial track. The quality performance standard is currently defined at the level of full and complete reporting (pay-for-reporting (P4R)) for the first performance year of an ACO's first agreement period under the Shared Savings Program. In the second or subsequent years of the ACO's first agreement period and all years of subsequent agreement periods, quality measures are scored as pay-for-performance (P4P) according to the phase-in schedule for the specific measure and the ACO's performance year in the Shared Savings Program:

- For all performance years, ACOs must completely and accurately report all quality data used to calculate and assess their quality performance.
- CMS designates a performance benchmark and minimum attainment level for each P4P measure and establishes a point scale for the measure. An ACO's quality performance for a measure is evaluated using the appropriate point scale, and these measure-specific scores are used to calculate the final quality score for the ACO.
- ACOs must meet minimum attainment (defined as 30 percent or the 30th percentile of the performance benchmark for P4P measures) on at least one measure in each domain to be eligible to share in any savings generated (§ 425.502(d)(2)(iii)(A)).

In the CY 2020 PFS proposed rule (84 FR 40709 through 40713), we sought comment on how we might align the Shared Savings Program quality reporting requirements and scoring methodology more closely with the MIPS quality reporting and scoring methodology. We discussed utilizing the MIPS Quality performance category score to adjust shared savings and shared losses under the Shared Savings Program, as applicable. We also sought comment on a possible new approach to determining the threshold for minimum attainment. Under this potential policy, minimum attainment would continue to be defined as complete and accurate reporting for ACOs in their first performance year of their first agreement period, while a MIPS Quality performance category score at or above the 4th decile across all MIPS Quality performance category scores would be required for ACOs in all other performance years under the Shared Savings Program. ACOs with MIPS Quality performance category scores below the 4th decile of all MIPS Quality

performance category scores would not meet the quality performance standard for the Shared Savings Program, and thus, would not be eligible to share in savings or would owe the maximum shared losses, if applicable. In addition, we sought comment on a potential policy under which ACOs with quality scores below the 4th decile of all MIPS Quality performance category scores would be subject to compliance actions and possible termination.

We noted in the CY 2021 PFS proposed rule (85 FR 50230) that the majority of feedback received in response to our comment solicitation did not support this approach as it would hold ACOs to a higher standard to be eligible to share in savings, if earned. In addition, commenters that opposed aligning the Shared Savings Program quality score with the MIPS Quality performance category score, stated that significant restructuring of the Shared Savings Program quality performance requirements would introduce more confusion for ACOs that are also transitioning into new tracks under the December 2018 final rule. Commenters also expressed concern regarding the uncertainty associated with such an approach, as we had also proposed extensive revisions to MIPS as the program transitions to MIPS Value Pathways. Furthermore, commenters noted that ACOs are unique in that they are responsible for the total cost of care of their beneficiaries and should not be compared to clinicians in MIPS who are not participating in total cost of care programs.

In the CY 2021 PFS proposed rule (85 FR 50230 and 50231), we acknowledged the commenters' concerns, but noted that section 1899(b)(3)(C) of the Act not only gives us discretion to establish quality performance standards for the Shared Savings Program, but also indicates that we should seek to improve the quality of care furnished by ACOs over time by specifying higher standards, new measures, or both for purposes of assessing quality of care. The Shared Savings Program is now in its eighth performance year, and 85 percent of ACOs participating in the program are considered PY3 ACOs for purposes of quality reporting, with 65 percent of those ACOs participating in a second or subsequent agreement period. In light of the maturity of the program and consistent with section 1899(b)(3)(C) of the Act, we stated that we believe that it is appropriate to require a higher standard of care in order for ACOs to continue to share in any savings they achieve. In addition, holding ACOs to a higher standard is in line with CMS' goals of incentivizing

value-based care and driving the Medicare system to greater value and quality. However, we explained that after taking into consideration the stakeholder feedback, we had also considered ways to reduce reporting burden, offer more flexibility in the way quality data can be reported and submitted, and create a more meaningful measure set that would focus on population health measures and be more outcome-oriented, while also including patient experience of care metrics.

We stated in the CY 2021 PFS proposed rule (85 FR 50231) that although the Alternative Payment Model Performance Pathway (APP) was designed for all MIPS APMs, it is also responsive to the concerns raised by commenters in their responses to our solicitation in the CY 2020 PFS proposed rule, while still taking into consideration the maturity of the Shared Savings Program, ACOs' quality performance over time, and the intent of section 1899(b)(3)(C) of the Act. The APP contains a narrower measure set than has previously been used for Shared Savings Program quality measurement, 6 measures versus the current 23 scored measures, and is specifically intended for use in APMs and population health. The design of the APP aligns with stakeholder interests expressed through comments on our solicitation about aligning the Shared Savings Program with MIPS in the CY 2020 PFS proposed rule. These comments suggested adopting a smaller, more focused measure set in recognition of the fact that APM Entities are incentivized through the terms of the respective APMs to improve value. The measure set proposed for the APP aligns with the Meaningful Measures framework by identifying measures that address the highest priorities for quality measurement and improvement, while also reducing reporting burden, promoting alignment of measures and consolidation of reporting requirements across CMS programs moving payment toward value, and identifying consumers' key quality performance metrics. We noted that the measures proposed for inclusion in the APP measure set encompass the meaningful measure domains of patient voice, wellness and prevention, seamless communication, chronic disease management, and behavioral health. For these reasons, we stated in the CY 2021 PFS proposed rule that we believe that the proposed APP, along with the narrower measure set, which comprises it, would be appropriate to assess the

quality performance of Shared Savings Program ACOs.

The construction of the proposed APP for Shared Savings Program ACOs and the proposed measures within it were described in detail in section III.G.1.b.(1) of the CY 2021 PFS proposed rule (85 FR 50231 through 50235). A detailed discussion of the proposal for use of the APP for MIPS APMs more generally can be found in section IV.A.3.b. of the CY 2021 PFS proposed rule (85 FR 50285 through 50288).

(1) APM Performance Pathway for Shared Savings Program ACOs

In section III.G.1.b.(1) of the CY 2021 PFS proposed rule (85 FR 50231 through 50235), we described the proposals related to the APM Performance Pathway for Shared Savings Program ACOs. In response to the stakeholder feedback and in order to improve alignment and integration with the Quality Payment Program policies and operations, align with CMS' Meaningful Measure Framework, increase participation in APMs and Advanced APMs by reducing reporting burden, and raise the quality performance standard under the Shared Savings Program, we proposed to revise the Shared Savings Program quality performance standard effective for performance year 2021 and subsequent performance years. We explained that the proposed revision would align the Shared Savings Program quality performance standard with the proposed APP under the Quality Payment Program as participants in the Shared Savings Program would be required to report quality for purposes of the Shared Savings Program via the APP, which was described in more detail in section IV.A.3.b. of the CY 2021 PFS proposed rule (85 FR 50285 through 50288).

At a high level, we proposed that the APP would replace the current Shared Savings Program quality measure set to streamline reporting requirements for Shared Savings Program ACOs and would be a complementary path to the MIPS Value Pathways. The APP is designed to reduce reporting burden, create new scoring opportunities for participants in MIPS APMs, and encourage participation in APMs.

Under this proposed new approach, ACOs would only need to report one set of quality metrics that would satisfy the reporting requirements under both MIPS and the Shared Savings Program. There would not be separate quality reporting requirements under the Shared Savings Program, as under the proposed new approach the quality measures reported

for purposes of the APP would also be used to determine the quality performance of the ACO for purposes of the Shared Savings Program, which is used for purposes of calculating shared savings and also shared losses, where applicable. We stated that we believe this approach of streamlining the quality reporting requirements under the Shared Savings Program while maintaining alignment with the Quality Payment Program will help ACOs and their participating providers and suppliers dedicate their finite resources to engaging in efforts to improve quality and reduce costs for their assigned beneficiary population. In addition, we explained that using a single methodology to measure quality performance under both the Shared Savings Program and MIPS would allow ACOs to better focus on increasing the value of healthcare, improving care, and engaging patients. It would also reduce burden as ACOs would be able to track to a smaller set of measures under a unified scoring methodology.

We received many public comments on the proposals to apply the APP to determine the quality performance of Shared Savings Program ACOs. The following is a summary of the comments we received and our responses.

Comment: We received many comments on the proposal to apply the APP to determine quality performance of Shared Savings Program ACOs. Supportive commenters noted that this proposal would align reporting requirements for MIPS and the Shared Savings Program, shift the focus from process measures to clinical outcomes, move toward eliminating unnecessary and inappropriate measures, focus on appropriate measures for ACO accountability, and provide entities more flexibility for reporting and allow MIPS eligible clinicians the option of reporting quality data separately from the ACO for purposes of MIPS scoring. Further, one commenter noted that alignment between MIPS and quality reporting requirements for Advanced APMs would create a better glidepath for healthcare providers looking to transition away from fee-for-service. Additionally, commenters noted that streamlined reporting requirements, a smaller set of measures, and a unified scoring methodology for the Shared Savings Program and MIPS would result in reduced burden for ACOs and allow ACOs to dedicate limited resources toward improving care for beneficiaries. One commenter noted that alignment of Shared Savings Program quality reporting requirements under the APP with reporting requirements under the MIPS program would minimize the

barrier for practices transitioning to an APM.

However, a majority of commenters expressed concerns about the proposal. The most common concerns were the time, effort, and cost involved in transitioning to a new measure set, new reporting mechanisms, and all-payer reporting, with potentially unintended negative impacts on quality, particularly during a time when healthcare organizations are impacted by the PHE for COVID-19. Specific concerns included the time needed to identify and implement new data collection mechanisms, modify operational workflows and clinical strategies to align with the six APP quality measures, secure new technology capabilities, assess and respond to the impacts of the PHE for COVID-19, understand the differences in measure specifications, train clinicians and office staff on a new reporting platform, and evaluate performance against the consolidated measure set to understand the impact this change will have on scoring standards. Comments included requests that implementation of the APP be delayed until 2022 or later; a voluntary transition period be offered to allow time for ACOs to adapt to the new requirements; a modified plan be implemented to allow ACOs to only report on a sample of patients while they prepare to implement automated population measurement; the first year following implementation of the APP be a pay-for-reporting year; exemptions to reporting requirements be offered; a bonus be offered to ACOs that are able to make the transition in 2021 without penalizing ACOs that need more time to prepare; and the timelines for implementing the APP and implementing the MIPS Value Pathways be aligned. One commenter requested that if the proposal is delayed until 2022 that CMS confirm the measure set that will be used starting in performance year 2022 in the CY 2021 PFS final rule so that ACOs have time to prepare. Commenters suggested that more stakeholder feedback should be collected before the proposed changes are finalized and that CMS should provide time for provider education, outreach, and support between finalizing a rule and implementing significant revisions to the quality reporting requirements.

Some commenters supported sunseting the CMS Web Interface as a way to meet the CMS objective of increasing the utilization of CEHRT and digital quality measures or interoperability initiatives; but, many commenters had concerns about sunseting the CMS Web Interface.

Several commenters requested that sunseting the CMS Web Interface should either be a gradual transition or be delayed to allow organizations to prepare for the transition to reporting under the APP and ease financial constraints practices are currently facing due to the PHE for COVID-19.

One commenter noted that even small changes to the program design could cause significant variance in performance for ACOs. The commenter recommended that CMS keep the current measure set, reporting mechanism, and scoring methods in place for performance 2021. Additionally, the commenter stated that healthcare providers should not be held accountable for performance against a benchmark that would not be set until the performance period closed and expressed concern that the PHE would continue to impact quality improvement efforts in 2021. The commenter recommended that CMS continue to monitor data submitted through the CMS Web Interface, evaluate the impact of the PHE for COVID-19 on quality performance, and revert all measures to pay-for-reporting or provide ACOs with the option to choose historical performance scores.

Other concerns raised by commenters included that the proposed APP does not align with the approach CMS uses to assess the quality of care furnished by other non-fee-for-service providers, such as Medicare Advantage organizations, even though the proposal would align quality scoring under the Shared Savings Program with MIPS. Two commenters noted that aligning requirements for Advanced APMs with MIPS program methodologies was a step backwards. One of these commenters stated that the guiding principle should be to ensure that there are strong incentives to participate in Advanced APMs relative to traditional Medicare fee-for-service, including being excluded from MIPS quality reporting processes, to increase the uptake of participation in Advanced APMs and decrease the need for MIPS over time. The other commenter stated that APMs should not have to align with MIPS, but rather MIPS reporting requirements should be structured to encourage clinicians to participate in APMs. Several commenters had concerns about changes to how ACO quality is reported, scored, and assessed and recommended that CMS obtain more stakeholder feedback before moving forward. One commenter expressed concern that the proposed APP does not support the Shared Savings Program's commitment to improved value, stating that the quality performance of ACOs should not

be evaluated for purposes of the Shared Savings Program in the same manner as under other APMs or for individual MIPS clinicians because each APM has specific goals and objectives. Further, commenters noted that ACOs are distinct from single physician groups or hospital systems because ACOs are focused on managing population health and total cost of care for their aligned Medicare patient population, and therefore, should not be evaluated and assessed in the same manner as other types of healthcare providers. One commenter noted that the proposed APP will require significant investments while healthcare providers are still recovering from the PHE and this may disproportionately disadvantage smaller and rural ACOs and multi-practice independent physician ACOs operating many EHR systems.

Response: We thank commenters for their detailed feedback on the proposal to apply the APP to Shared Savings Program ACOs beginning in performance year 2021. We appreciate the support for our proposal, but also understand the concerns raised by a number of commenters about the proposed implementation of the APP for Shared Savings Program ACOs starting in performance year 2021. The primary concern expressed by commenters centered around the timeline for ACOs to implement appropriate infrastructure changes in order to be able to report under the APP beginning in performance year 2021, particularly given the PHE for COVID-19. Commenters also raised concerns about the proposed removal of the CMS Web Interface as a collection type. In addition, commenters were concerned about the proposed APP measure set, including use of measures based on all payer data. In light of the significant concerns raised by the commenters about implementing the APP for Shared Savings Program ACOs beginning in performance year 2021, we are modifying our proposal to apply the APP to determine the quality performance of Shared Savings Program ACOs as described below.

As discussed in section IV.A.3.c.1.c. of this final rule, we are extending the use of the CMS Web Interface as a collection type for the Quality Payment Program for CY 2021, and will sunset the CMS Web Interface starting with CY 2022. Accordingly, we are also modifying the quality measure set for the APP for Shared Savings Program ACOs to add the CMS Web Interface as an additional reporting option for performance year 2021, as discussed in this section and section IV.A.3.b. of this final rule. In addition, as discussed in

section III.G.1.c. of this final rule, we are modifying the proposed quality performance standard to include a gradual phase-in of the increase in the level of quality performance that would be required for ACOs to meet the quality performance standard under the APP for Shared Savings Program ACOs. We believe that these changes alleviate many of the concerns raised by commenters about the implementation of the APP for Shared Savings Program ACOs beginning in performance year 2021.

Therefore, we are finalizing, with modifications, our proposed revisions to the quality reporting requirements under the Shared Savings Program effective for performance year 2021 and subsequent performance years. These revisions will align the Shared Savings Program quality reporting requirements with the requirements that will apply under the APP under the Quality Payment Program as Shared Savings Program ACOs will be required to report quality data for purposes of the Shared Savings Program via the APP. Under this new approach, ACOs will only need to report one set of quality metrics via the APP that will satisfy the quality

reporting requirements under both the Shared Savings Program and the MIPS. As discussed in the CY 2021 PFS proposed rule (85 FR 50231), there will not be separate quality reporting requirements under the Shared Savings Program as the quality measures reported for purposes of the APP will be used to determine the quality performance of the ACO for purposes of calculating shared savings and also shared losses, where applicable. The final APP quality measure set is listed in Tables 40 and 46 in this final rule. The policies finalized for the APP are discussed in section IV.A.3.b. of this final rule. In order to meet the quality reporting requirements under the Shared Savings Program, ACOs must meet the requirements described below and summarized in Table 39.

- For performance year 2021, ACOs will be required to report quality data via the APP, and can choose to actively report either the 10 measures under the CMS Web Interface or the 3 eCQM/MIPS CQM measures. In addition, ACOs will be required to field the CAHPS for MIPS survey, and CMS will calculate 2 measures using administrative claims data.

As noted in Tables 40 and 46 in this final rule three of the CMS Web Interface measures (Statin Therapy for the Prevention and Treatment of Cardiovascular Disease (Quality ID# 438); Depression Remission at Twelve Months (Quality ID# 370), and Preventive Care and Screening: Screening for Depression and Follow-up Plan (Quality ID# 134)) do not have benchmarks, and therefore, will not be scored. However, these measures are required to be reported in order to complete the CMS Web Interface dataset. Based on the ACO's chosen reporting option, either 6 or 10 measures will be included in the calculation of the ACO's quality performance score.

- For performance year 2022 and subsequent performance years, ACOs will be required to actively report quality data on the 3 eCQM/MIPS CQM measures via the APP. In addition, ACOs will be required to field the CAHPS for MIPS survey, and CMS will calculate two measures using administrative claims data. All 6 measures will be included in the calculation of the ACO's quality performance score.

TABLE 39: Summary of final policies on applying the APP to Shared Savings Program ACOs beginning performance year 2021

	Performance Year (PY) 2021 (Reporting in CY 2022)	PY 2022 (Reporting in CY 2023)	PY 2023 (Reporting in CY 2024) and Subsequent PYs
Quality Reporting requirements	ACOs will be required to report the 10 measures under the CMS Web Interface or the 3 eCQM/MIPS CQM measures. ACOs will be required to field the CAHPS for MIPS survey. CMS will calculate the HWR and MCC measures using administrative claims data. Based on the ACO's chosen reporting option, either 6 or 10* measures will be included in calculating the ACO's quality performance score.	ACOs will be required to actively report on the 3 eCQM/CQM MIPS measures and field the CAHPS for MIPS survey. CMS will calculate the HWR and MCC measures using administrative claims data. All 6 measures will be included in calculating the ACO's quality performance score.	Same as PY2022
Quality Performance Standard	<p>A quality performance score that is equivalent to or higher than the 30th percentile across all MIPS Quality performance category scores.</p> <p><u>Quality performance standard met:</u> ACOs are eligible to share in savings at the maximum sharing rate; ACOs in two-sided models share in losses based on their quality score or at a fixed percentage based on Track.</p> <p><u>Quality performance standard not met:</u> ACOs are ineligible to share savings and owe the maximum amount of shared losses, if applicable.</p>	<p>Same as PY 2021</p> <p>Shared savings and shared losses determinations same as PY2021</p>	<p>A quality performance score that is equivalent to or higher than the 40th percentile across all MIPS Quality performance category scores.</p> <p>Shared savings and shared losses determinations same as PY2021</p>

* For performance year 2021, if ACOs choose to report via the CMS Web Interface, they will be required to report all 10 measures, but will be scored on only 7 of those measures.

The quality reporting requirements described above will provide ACOs with a one-year transition period during performance year 2021 where they will have the option either to continue to report via the CMS Web Interface or to report on the 3 eCQM/CQM MIPS measures before being required to report on the 3 eCQM/MIPS CQM measures beginning in performance year 2022. As discussed in section III.G.1.c. of this final rule, we are also finalizing policies to phase-in the increase in the quality performance standard over 3 years. We believe that the phase-in policies, as summarized in Table 39, for applying the APP to Shared Savings Program ACOs address concerns raised by the commenters regarding the proposed timeline for implementing the APP and also help to mitigate the impact of the PHE for COVID-19 on ACOs. The phase-in policies provide ACOs with additional time to set up their systems and educate providers and office staff in order to report on the 3 eCQM/MIPS CQM measures beginning in performance year 2022 and will also allow ACOs to become familiar with the

new quality reporting requirements under the APP and gain experience reporting on the new measures before they are assessed under the higher quality performance standard beginning in performance year 2023. Commenters' concerns related to the APP quality measure set are addressed later in this section.

In the CY 2021 PFS proposed rule, we explained that the APP is designed to reduce reporting burden by enabling ACOs to track to a smaller set of measures under a unified scoring methodology. The policies we are adopting in this final rule are consistent with our goal of reducing reporting burden for ACOs. Under our final policies, the total number of measures will be reduced from 23 to either 6 or 13 measures (depending on the ACO's chosen reporting option) for performance year 2021 and to 6 measures beginning in performance year 2022.

For the commenter that expressed concern that providers should not be held accountable for performance against a benchmark that would not be

set until the end of the performance period, we note that as discussed in section IV.A.3.d.1.b.ii. of this final rule, we are not finalizing the proposal to use performance period benchmarks and instead will continue to use historical benchmarks for quality measures for the CY 2021 MIPS performance period.

We stated in the CY 2021 PFS proposed rule (85 FR 50231) that, under the APP proposed in section III.C.3.b., eligible clinicians in Shared Savings Program ACOs would continue to receive full credit for the improvement activities performance category in 2021 based on their performance of activities required under § 425.112 of the Shared Savings Program regulations, as they do under current MIPS scoring policy. We also proposed that under the APP, the Promoting Interoperability performance category would be reported and scored by MIPS eligible clinicians and groups and calculated in the same manner described at § 414.1375. Shared Savings Program ACOs are not currently assessed on the MIPS Cost performance category as they are already subject to cost and utilization performance

assessments as part of the Shared Savings Program, and we proposed that the cost performance category would continue to be weighted at zero percent under the APP. Under the proposed APP, the four performance categories would be weighted as follows: Quality: 50 percent; Promoting Interoperability: 30 percent; Improvement Activities: 20 percent; and Cost: 0 percent. These policies are being finalized as proposed in section IV.A.3.b.4. of this final rule.

Under the APP, the quality performance score will be calculated for ACOs based on the same MIPS benchmarks that are used for other non-ACO group and individual reporters and reflect the method of data submission (for example, eCQM measures have benchmarks calculated using EHR data and CQM measures have benchmarks calculated using data for each specific non-EHR collection type). As discussed in section IV.A.3.d.1.b.ii of this final rule, we are not finalizing the proposal to use performance period benchmarks and instead will continue to use historical benchmarks for quality measures for the CY 2021 MIPS performance period. However, we note that, for the measures reported under the CMS Web Interface for performance year 2021, we will continue to use the Shared Savings Program benchmarks developed for the CMS Web Interface for performance year 2020. These Shared Savings Program benchmarks are based on data reported by ACOs, physicians, and groups through the CMS Web Interface, claims, and/or a registry from 2016, 2017, and 2018. The use of the Shared Savings Program benchmarks for the CMS Web Interface measures for performance year 2021 will allow us to be consistent with the approach currently used for scoring CMS Web Interface measures in the Shared Savings Program. We note that the Shared Savings Program benchmarks will also be used for the CMS Web Interface measures reported by groups and virtual groups under MIPS.

In the proposed CY 2021 PFS proposed rule (85 FR 50231 and 50232) we proposed that ACOs would be scored on the measures they report and will receive zero points for those measures they do not report. For example, if an ACO reported all three measures it is actively required to report but did not field a CAHPS for MIPS survey measure, the ACO would receive zero points for the CAHPS for MIPS survey measure, and that zero would be included in its MIPS Quality performance category score, along with its performance rates on the three measures it did actively report as well

as the two claims-based measures included in the APP measure set. This proposed approach aligns with scoring under MIPS, rather than the current Shared Savings Program quality performance scoring methodology, which uses quality benchmarks established specifically for the Shared Savings Program and awards zero points for quality for ACOs that report some but not all of the required measures. We also noted that we believe this approach would be less punitive for ACOs than the current quality performance standard, under which ACOs that fail to completely report all quality measures receive a zero score for quality. We also noted that we believe that alignment with the MIPS scoring methodology would reduce the burden on ACOs of tracking to two different scoring methodologies. However, we proposed that if an ACO does not report any of the three APP measures it is required to actively report and does not field a CAHPS for MIPS survey the ACO would not meet the quality performance standard for purposes of the Shared Savings Program and would not be able to share in savings and would owe maximum shared losses, if applicable. We explained that if an ACO does not report any of the three measures it is required to actively report and does not field a CAHPS for MIPS survey, we did not believe that the remaining two claims-based measures in the APP core measure set would be sufficient to assess the quality of care provided by an ACO to its assigned beneficiaries and would likely not allow the ACO to achieve a MIPS Quality performance category score at or above the 40th percentile. Under our proposal, there would be no quality “phase in” for new ACOs or for newly introduced measures or for quality measures that undergo significant changes. All ACOs, regardless of performance year and agreement period, would be scored on all the measures in the APP for purposes of the Shared Savings Program quality performance standard.

We did not receive any comments on the proposal that if an ACO does not report any of the three APP measures it is required to actively report and does not field a CAHPS for MIPS survey, the ACO would not meet the quality performance standard.

Consistent with the quality reporting requirements finalized for Shared Savings Program ACOs under the APP, as discussed above, we are finalizing that:

- *For performance year 2021:* If an ACO does not report any of the ten CMS Web Interface measures or any of the three eCQM/MIPS CQM measures it is

actively required to report and does not field a CAHPS for MIPS survey via the APP, the ACO would not meet the quality performance standard for purposes of the Shared Savings Program.

- *For performance year 2022 and subsequent performance years:* If an ACO does not report any of the three eCQM/MIPS CQM measures it is actively required to report and does not field a CAHPS for MIPS survey via the APP, the ACO would not meet the quality performance standard for purposes of the Shared Savings Program.

Comment: We received several comments related to the proposal to remove the pay-for-reporting year for ACOs in the first year of their first agreement period. Commenters expressed concern that new ACOs may require an initial performance year in the Shared Savings Program to build operations before they will be prepared to meet pay-for-performance standards. One commenter noted that new ACOs should have 1–2 years to learn the quality measures and plan improvement processes. Additionally, commenters expressed that removing the pay-for-reporting option for new ACOs would deter participation in the Shared Savings Program and negatively impact ACOs that are comprised of smaller physician practices and do not have hospital system support.

Response: We appreciate the commenters’ concerns regarding the removal of the pay-for-reporting year for ACOs beginning an initial agreement period under the Shared Savings Program. The goal of the proposal was to align the Shared Savings Program quality performance standard with the APP under the Quality Payment Program, and there is no pay-for-reporting policy under the Quality Payment Program. However, in recognition of the concerns expressed by the commenters, we are modifying our original proposal and finalizing the following policy: Beginning January 1, 2022, for ACOs in the first performance year of their first agreement period under the Shared Savings Program, an ACO would meet the quality performance standard if it meets the MIPS data completeness and case minimum requirements on all three of the eCQM/MIPS CQM measures and fields the CAHPS for MIPS survey via the APP. The scoring policy under MIPS would be the same as for other ACOs.

We note that, as a result of CMS’ decision to forgo an application cycle for a January 1, 2021 agreement start date in the Shared Savings Program, there will be no ACOs whose first

performance year of its first agreement period under the Shared Savings Program will begin on January 1, 2021. Therefore, this policy will be applicable for ACOs that are in the first performance year of their first agreement period in performance year 2022 or a subsequent performance year. We believe continuing this policy under the APP will provide new ACOs with additional time to set up their systems and educate providers and office staff, become familiar with the quality reporting requirements under the APP, and gain experience reporting on the measures under the APP before their performance is assessed in order to share in savings.

Comment: We received several comments related to the proposal to remove the pay-for-reporting year for newly introduced quality measures and quality measures that have undergone significant changes. Commenters suggested that a pay-for-reporting transition year ensures that quality measures that are new or have undergone significant changes do not have unintended consequences and allows potential issues with measure specifications to be identified before ACOs are held accountable for measure performance. Additionally, commenters suggested that a pay-for-reporting transition year would allow ACOs to adjust workflows and operations to ensure that quality data for the new or significantly changed measure is appropriately captured.

Response: We appreciate the commenters' concerns regarding the removal of the pay-for-reporting year under the Shared Savings Program for newly introduced quality measures and quality measures that undergo significant changes. We note that for each quality measure that an ACO submits that has significant changes, the total available measure achievement points are reduced by 10 points under the APP under current MIPS scoring policy (§ 414.1380(b)(1)(vii)(A)). We believe that adopting these policies for the Shared Savings Program is consistent with our goal to align the quality scoring methodology under the Shared Savings Program with MIPS. Therefore, we are finalizing our proposal to remove the pay-for-reporting year under the Shared Savings Program for newly introduced quality measures and quality measures that undergo significant changes.

In the CY 2021 PFS proposed rule (85 FR 50232), we stated that for MIPS scoring purposes, an ACO that fails to report via the APP would receive a zero in the Quality performance category under MIPS. If an ACO fails to report

via the APP on behalf of its ACO participants then the ACO participants could report outside the ACO, on behalf of the MIPS eligible clinicians who bill through the TIN of the ACO participant and receive a MIPS Quality performance category score calculated at the ACO participant level. If ACO participants report outside the ACO via the APP, they would be eligible to earn full credit for improvement activities based on ACO participation. If ACO participants choose to report outside the ACO via a different MIPS reporting option, then regular MIPS scoring rules would apply (that is, eligibility to earn full credit for improvement activities and zero cost category weight would not be applied). We proposed in the CY 2021 PFS proposed rule (85 FR 50285) that MIPS eligible clinicians participating in ACOs also would have the option of reporting outside the APP, or within it at an individual or group level, for purposes of being scored under MIPS.

Comment: One commenter supported the proposal to allow reporting at the clinician, group practice, or ACO level for purposes of MIPS scoring as it would allow clinicians more flexibility and allow clinicians to be recognized for the work they are doing both inside and outside the context of the ACO. Other commenters expressed concerns regarding a policy under which individual clinicians and group TINs would have the option to report outside of the ACO for the purposes of MIPS scoring. The commenters expressed concerns that this approach would cause unnecessary confusion and instability and could fracture the foundation of the ACO by negating the commitment to the ACO. Similarly, one provider expressed concern that individual reporting adds a layer of complexity that is not conducive to ACO shared learnings and best practice identification. Additionally, commenters were concerned that this approach would not allow for a fair assessment of quality improvement efforts by clinicians or group practices participating in ACOs because certain organizations could select measures for which they have the highest historical performance. One commenter was concerned that reporting separately could disproportionately impact rural and smaller providers. The commenter recommended that CMS instead maintain the APM Scoring Standard approach for all ACO clinicians.

Another commenter had concerns that allowing TINs and/or NPIs to report data on their own, outside of the ACO, would cause even more confusion, citing previous concerns with the QPP help desk not understanding Medicare

Shared Savings Program reporting requirements. Specifically, the commenter was concerned that ACO participant practices would think they do not need to report on the same measures that the ACO is required to report on under the Medicare Shared Savings Program.

Response: Policies related to eligible clinicians and groups reporting outside of the APP are discussed in detail in section IV.A.3.c.5 of this final rule. We note that the policy discussion above relates to ACO participants reporting outside of the ACO via the APP when the ACO fails to report data via the APP on behalf of its participant TINs. Eligible clinicians participating in an ACO may report to MIPS independently at the individual or TIN level. If ACO participants report outside the ACO via the APP, they will be eligible to earn full credit for improvement activities based on ACO participation and to have the cost performance category reweighted. However, if ACO participants report to MIPS according to traditional MIPS rules, as a group or individual MIPS eligible clinician, MIPS scoring rules apply. These policies are discussed in further detail in section IV.A.3.b. of this final rule. Additionally, we refer readers to section IV.A.3.e. of this final rule for information concerning our final policy on the hierarchy that will apply when more than one final score is associated with a TIN/NPI. We also refer readers to the discussion earlier in this section where we are finalizing our proposal that if an ACO does not report any of the three APP measures it is required to actively report and does not field a CAHPS for MIPS survey, the ACO would not meet the quality performance standard.

In the CY 2021 PFS proposed rule (85 FR 50232 and 50233), we proposed that for performance year 2021 and subsequent performance years, ACOs would be assessed on a smaller measure set under the APP for Shared Savings Program ACOs. The measures ACOs would be scored on would decrease from 23 measures to 6 measures and the number of measures on which ACOs would be required to actively report would be reduced from 10 to 3.

ACOs would report under the APP on the following 3 measures:

- Quality ID#: 001: Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%);
- Quality ID#: 134 Preventive Care and Screening: Screening for Depression and Follow-Up Plan; and
- Quality ID#: 236 Controlling High Blood Pressure.

ACOs would report these measures via a submission method of their choice

that aligns with the MIPS data submission types for groups at § 414.1325(c) (direct, login and upload, or a third-party intermediary, described at § 414.1400, submitting on behalf of the ACO). ACOs would receive a score of between 3 to 10 points for each measure that meets the data completeness and case minimum requirements, which would be determined by comparing measure performance to established benchmarks. In addition, ACOs would need to field a CAHPS for MIPS survey and would be measured on two claims-based measures: The Hospital-Wide, 30-day, All-Cause Unplanned Readmission (HWR) Rate for the Merit-Based Incentive Payment Program (MIPS) Eligible Clinician Groups; and the All-Cause Unplanned Admissions for Patients with Multiple Chronic Conditions (MCC). Please see Table 36 in the CY 2021 PFS proposed rule (85 FR 50233) for full details on the measures proposed under the APP.

The measures proposed for inclusion in the measure set for the APP would align with the Meaningful Measures framework by identifying the highest priorities for quality measurement and improvement with the goals of reducing burden, promoting alignment, moving payment toward value, and identifying key quality performance metrics for consumers. The proposed measures would also encompass the meaningful measure domains of patient voice, wellness and prevention, seamless communication, chronic disease management, and behavioral health. We explained that we believe that the measures included in the APP are appropriate to assess the quality performance of Shared Savings Program ACOs as they focus on the management of chronic health conditions that are high priority and have high prevalence among the population of Medicare beneficiaries assigned to ACOs. We also noted that we believe that the measure set chosen for inclusion within the APP would move the quality measure set used in the Shared Savings Program toward a more outcome based, primary care focused measure set. In addition to creating a pathway that would reduce reporting burden for ACOs and allow their participating MIPS eligible clinicians to meet requirements under MIPS through a smaller measure set, requiring ACOs to report through the APP would also eliminate differences in the way ACOs are scored under the Shared Savings Program, as compared to the way their MIPS eligible clinicians are scored under MIPS.

We noted that under the current Shared Savings Program quality scoring

methodology, the CAHPS for ACOs survey is counted as ten separate measures, while under the APP, the CAHPS for MIPS survey would be counted as one. We explained that we continue to value the patient voice and believe it should play a significant role in quality scoring. Using the CAHPS for MIPS survey would achieve that goal while further aligning the way in which the quality performance of ACOs and their MIPS eligible clinicians is scored under the Shared Savings Program and under MIPS, respectively. We noted that under the current Shared Savings quality scoring methodology, the 10 CAHPS for ACOs survey measures are scored as one domain, which makes up 25 percent of the Shared Savings Program quality score. In contrast, under the proposed approach, the CAHPS for MIPS survey would be counted as one measure out of the 6 measures that would be included in the calculation of the ACO's quality score under the APP. Both of these approaches have a similar weighting, which would maintain the relevance of patient voice. We also noted that we believed that the proposed approach under the APP of combining the CAHPS survey measures into a single measure for quality scoring purposes would allow Shared Savings Program ACOs to effectively target resources toward improving their assigned beneficiaries' experience of care in the areas for improvement on which they choose to focus, rather than having to track to ten separate survey measures, as is currently required by the CAHPS for ACOs used under the Shared Savings Program. We believed this approach would strike the right balance in reducing burden on ACOs and their participating providers and suppliers while preserving the patient's voice.

Shared Savings Program ACOs are currently required to report on a set of ten measures via the CMS Web Interface. While these measures were appropriate for use in the program in the past because they are primary care focused, we explained that we now recognize that the majority of the measures have highly clustered performance. This means that they cannot meaningfully distinguish quality performance across groups or ACOs. We also noted that we recognize the value in the use of primary care-focused measures and in that developing the proposed measure set for use under the APP, we had sought to preserve the measures we believed most reflect high priority quality measurement areas while also placing more emphasis on outcome-based claims measures, which

minimize reporting burden and reflect greater opportunity for improvement.

We received many public comments on the proposed APP quality measure set as applied to Shared Savings Program quality performance scoring. The following is a summary of the comments we received and our responses. Please refer to section IV.A.3.b.(3)a. of this final rule for further discussion of comments and responses on the APP measure set.

Comment: Many commenters were supportive of the overall goal of simplifying reporting and aligning quality measurement approaches across federal programs. Several commenters were supportive of the reduction in the number of measures to reduce burden for healthcare providers, including the reporting burden placed on rural primary care practices. One commenter supported the proposed measure set, stating that it was adequate to address the chronic conditions among Medicare beneficiaries. One commenter indicated that the proposed reduced measure set focused on clinical outcomes and patient experience and is less burdensome for healthcare providers. One commenter supported this proposal and specifically stated that requiring former users of the CMS Web Interface to report all payer data will result in more patients receiving the benefit of services captured in the quality metrics, such as depression screening and pneumococcal vaccination status, rather than practices focusing those wellness measures solely on Medicare patients.

Response: We thank commenters for their positive feedback on the proposed APP quality measure set. The reduced measure set is intended to reduce reporting burden on ACOs and focus on quality measures that address patient outcomes and appreciate hearing that commenters also believe that the proposed measure set is consistent with those goals.

Comment: Several commenters were concerned that the proposed measure set is not appropriate for healthcare providers, such as ACOs, that are responsible for the total cost of care for the populations they serve and will not allow for robust assessment of clinical quality. Some commenters noted that the reduction in measures would significantly increase the impact of each measure on an ACO's overall quality score, which could risk over-emphasizing certain metrics and underlying patient conditions, as well as create more disruption when the measure set is revised. Additionally, several commenters were concerned that reducing the quality measure set would de-emphasize quality and would

not allow for a representative assessment of ACOs' quality improvement efforts, making it more difficult for ACOs to distinguish themselves based on the care they provide. One commenter was concerned that the reduction in measures would limit the ability for consumers to evaluate and compare the quality of providers. Another commenter had concerns that reducing the number of ACO quality measures would make specialists less likely to participate in the Shared Savings Program. Another commenter stated that the proposed measures are not relevant to ophthalmology specialty practices and suggested that the same measure sets used in MIPS be permitted for reporting through the APP or a protocol be put in place to determine if the measures are relevant to the clinicians reporting under the APP.

One commenter expressed concern that the narrower quality measure set would not appropriately protect patients because it would narrow the lens through which quality is assessed. Several commenters recommended that CMS work with stakeholders to refine the current set of measures to make it more appropriate for ACOs, which are responsible for total cost of care for the populations they serve. Another commenter stated that CMS should clarify if the outcome measures selected are representative of all of the different types of populations that ACOs treat and recommended that CMS take patient compliance and case mix into consideration when selecting measures because some patients may take longer to achieve health goals and ACOs may not have the same relative volume of patients with diagnoses such as diabetes and hypertension. One commenter suggested that CMS demonstrate that the proposed measures are of high significance to beneficiaries. Due to the impacts of the PHE for COVID-19, one commenter recommended that measures, such as breast cancer and colorectal cancer screening, be removed or treated as pay-for-reporting for performance year 2021.

Some commenters also expressed concern that the limited measure set would allow little room for random variation in one measure because random variation in one measure will have a larger impact when there are fewer measures to absorb the impact. One commenter stated that the limited measure set puts ACOs at a disadvantage compared to entities that are able to report outside of the APP and who can choose from larger pool of measures. Commenters also expressed concern that the reduction in the

number of measures was too drastic and may have unforeseeable impacts on quality scoring for ACOs. One commenter suggested a more gradual, phased reduction where measures would be removed in rounds based on level of priority so that the impact of reducing the size of the measure set could be evaluated before additional measures are removed. Commenters also suggested that CMS monitor the smaller measure set to ensure the measures are not overly sensitive to minor changes in performance, random variation, or risk adjustment methodologies.

Other commenters suggested that CMS consider a broader measure set, and many commenters made recommendations for measures to be added to the measure set. One commenter suggested that a larger set of quality measures would be worth the additional burden because it would protect ACOs against errors in scoring, changes in risk adjustment methodology, and anomalies. Another commenter noted that while reducing the number of measures will reduce burden, ACOs also experience administrative burden due to year-to-year changes in the Shared Savings Program and the lack of alignment in measures between programs.

Response: We appreciate the commenters' concerns and recommendations regarding the narrower set of quality metrics that we proposed for the APP and its appropriateness for assessing the quality of care furnished by ACOs and their ACO participants. The transition to the APP measure set is intended to reduce reporting burden and eliminate differences in the way ACOs are scored compared to their MIPS eligible clinicians, while also moving toward a more outcome-based, primary care focused measure set. Additionally, we selected the measures to be included in the measure set because they are broadly applicable for the primary care population and population health goals that are associated with the Shared Savings Program. These measures align with the Meaningful Measures framework while also being appropriate for assessing ACO quality performance as they focus on prevalent and high priority chronic health conditions. For example, hypertension and diabetes are chronic conditions that are applicable to both primary care practitioners and specialists.

Comment: Several commenters expressed concern that two of the six proposed quality measures (Measure # 479 Hospital-Wide, 30-day, All-Cause Unplanned Readmission (HWR) Rate for MIPS Eligible Clinician Groups and

Measure # TBD Risk Standardized, All-Cause Unplanned Admissions for Multiple Chronic Conditions for ACOs) are focused on utilization even though the Shared Savings Program provides financial incentives for reducing avoidable hospital admissions and readmissions. Additionally, commenters stated that ACOs should be evaluated on quality measures that reflect core ACO competencies, such as care coordination activities and preventative health.

Response: Under the Shared Savings Program, an ACO that lowers growth in Medicare Parts A and B expenditures such that performance year expenditures for the ACO's assigned beneficiary population are below the ACO's updated historical benchmark by an amount that meets or exceeds the applicable minimum savings rate, may be eligible to share in savings. We do not believe that the incentive for ACOs to lower growth in expenditures, in order to generate shared savings, conflicts with assessment of the quality of care furnished by an ACO that includes measures of utilization, such as Measure # 479 Hospital-Wide, 30-day, All-Cause Unplanned Readmission (HWR) Rate for MIPS Eligible Clinician Groups and Measure # TBD Risk Standardized, All-Cause Unplanned Admissions for Multiple Chronic Conditions for ACOs. We note that section 1899(b)(3)(A) of the Act requires the Secretary to determine appropriate measures to assess the quality of care furnished by the ACO, such as measures of clinical processes and outcomes; patient, and, wherever practicable, caregiver experience of care; and utilization (such as rates of hospital admission for ambulatory sensitive conditions). Additionally, regarding the commenters' concerns about quality measures addressing core ACO competencies, we note that the APP measure set includes measures that address preventive health and care coordination. For example, the All-Cause Readmission (HWR) and All-Cause Unplanned Admissions for Multiple Chronic Condition measures fall into the Meaningful Measure domain of Promoting Effective Communication and Coordination of Care and the Preventive Care and Screening: Screening for Depression and Follow up plan falls into the Meaningful Measure domain of Promoting Effective Prevention & Treatment of Chronic Disease.

Comment: Several commenters expressed concerns about data collection methods in light of the increasing use of telehealth visits, as well as the various measure types (such as eCQM/MIPS CQM measures, CAHPS

for MIPS survey measures, and claims-based measures) used in the APP measure set. Commenters recommended that the measures selected be viewed through the lens of the current PHE environment and that all quality measures allow data to be collected during telehealth visits because many ACO participants have been relying on telehealth visits to continue seeing their patients during the PHE.

Response: We understand commenters' concerns related to the PHE for COVID-19. For the claims-based measures in the APP measure set, telehealth codes are not used to exclude claims from the measure calculation algorithm or the claims used to identify comorbidities as part of the risk adjustment model. Nine out of the ten CMS Web Interface measures, which are in the measure set for performance year 2021, allow the requirements for inclusion in the numerator to be met during a telehealth encounter. Quality ID#: 438 is the only measure that does not allow the quality action required to meet numerator compliance, to occur during a telehealth encounter. Similar to the Web Interface measures, the three eCQM/MIPS CQM measures in the APP measure set allow the requirements for inclusion in the numerator to be met during a telehealth encounter.

Comment: Commenters suggested that further consideration was needed to determine the appropriate composition of the quality measure set by measure type (that is, proportion of clinical, patient experience, and administrative claims measures) and the appropriate balance between clinical outcome measures and preventive care measures. One commenter recommended that, to the extent possible, CMS make use of administrative claims data, including CPT Category II codes, to determine measure performance with an opportunity for ACOs to provide supplementary data to reduce healthcare provider burden. One commenter supported the inclusion of eCQMs because eCQMs tie the use of technology to the Quality performance category by encouraging the proper use of EHRs and increase the reliability of data based upon not having human manipulation or intervention, but did not support the inclusion of administrative claims measures, citing concerns with reliability of the data and the cost to large practices.

Response: In response to comments on the appropriate composition of the quality measure set by measure type (that is, proportion of clinical, patient experience, and administrative claims measures) and the appropriate balance between clinical outcome measures and

preventive care measures, we note that the APP measure set is intended to assess a sample of the areas where ACOs should be focused on improving the quality of care; it is expected that ACOs should be working to improve quality in additional areas as well. We appreciate the commenters' concerns regarding the use of administrative claims measures. Administrative claims measures have historically been used successfully to measure ACO quality performance under the Shared Savings Program. CMS calculates the administrative claims measures for ACOs, which minimizes the burden associated with these measures.

Comment: Commenters stated they would like to see more publicly available comparative data on ACO performance on the core quality measures under the Shared Savings Program, such as ACO-14, Influenza Immunization; ACO-19, Colorectal Cancer Screening; ACO-20, Breast Cancer Screening; and the previously used Pneumonia Vaccination measure. The commenters asserted that ACOs cannot be fairly assessed if they are only measured on the proposed APP measures because the measures do not reflect the true purpose of ACOs and the work they do in quality improvement.

Response: Each year when CMS releases the Shared Savings Program Financial and Quality reconciliation results, Public Use files (PUFs) are posted that provide the public with comparative data on the quality results for a given performance year. We note that data on the measures referenced by the commenters are publicly available in these PUF files. We disagree with commenters that ACOs cannot be fairly assessed if they are only measured on the measures in the APP measure set. As discussed above, we believe that the measures in the APP measure set are broadly applicable for the primary care population and population health goals that are associated with the Shared Savings Program. These measures align with the Meaningful Measures framework while also being appropriate for assessing ACO quality performance as they focus on high prevalence, high cost, and high priority chronic health conditions.

Comment: Several commenters expressed concern that half of an ACO's quality score would depend on the CAHPS measure and two administrative claims measures. One commenter asserted that these measures have potential for unpredictability because minor differences in CAHPS scores can cause significant variation in ACOs' overall quality scores and there can be variance in scores on administrative

claims measures related to risk adjustment changes. These commenters also expressed concern that CMS does not publish detailed measure specifications for the CAHPS or administrative claims measures. One commenter was concerned that the readmission measure would have a greater impact on the overall quality score under our proposed changes to the quality measure set because the commenter believes that the readmission measure is volatile.

Response: In regard to commenters' concern that the number of CAHPS measures is disproportionately high compared to clinical quality and outcomes measures, we note that under the new APP, the results of the CAHPS survey will account for a smaller proportion of ACOs' total quality score. Under the current scoring methodology, the CAHPS measures make up 1 domain or 25 percent of an ACO's quality score. Under the APP for Shared Savings Program ACOs that we are finalizing in this final rule, the results on the CAHPS measures will be combined to calculate a single composite score that will account for one sixth of the ACO's quality score or 16.7 percent or one tenth of the ACO's quality score or 10.0 percent, depending on which measure set the ACO reports on in 2021. Under both measure sets, patients' experience of care will meaningfully contribute to the overall quality score, while at the same time allowing other important measures of quality to also meaningfully contribute to the overall quality score.

Comment: Some commenters expressed concern that quality measures in the APP quality measure set have narrow performance ranges. One commenter suggested an alternative approach to calculating the benchmarks for quality measures that includes creating expanded percentiles due to concern that the current percentiles result in too narrow of a performance range where variation could be due to a small number of events or beneficiaries.

Response: We appreciate the commenter's recommendations regarding calculating benchmarks. We note that the seven CMS Web Interface measures with benchmarks for performance year 2020 are flat benchmarks that are used in accordance with § 425.502(b)(2)(ii) for measures that have clustered high performance rates. For the measures reported under the CMS Web Interface for performance year 2021, we will continue to use the Shared Savings Program benchmarks developed for the CMS Web Interface for performance year 2020.

We believe this practice addresses commenters' concerns about clustered performance having an adverse effect on ACOs' performance on the web interface measures. We refer readers to the MIPS benchmarking policy as defined at § 414.1380(b)(1)(ii), topped out measure scoring as defined at § 414.1380(b)(1)(iv), and flat percentage benchmark policy as defined at § 414.1380(b)(1)(ii)(C).

Comment: Several commenters suggested that CMS conduct further testing for risk adjustment of outcome measures, including social risk factors. These commenters requested CMS test the measures to ensure that minor changes to the risk adjustment methodology did not have significant impacts on the ACOs' quality scores. One commenter suggested that CMS enhance the risk adjustment of the outcome measures to address the high-risk patient populations of ACOs. Another commenter expressed concern that CMS should not include measures in the quality measure set used to assess ACO quality performance until they have been appropriately risk adjusted for sociodemographic factors, including socioeconomic status. The commenter explained that without appropriate risk adjustment for outcomes measures, such as the proposed readmission measure, the APP measure set could disproportionately impact the quality performance of ACOs that have an assigned beneficiary population served by "essential hospitals".

Response: Both of the proposed claims-based measures are risk-adjusted with beneficiary demographic characteristics and a wide range of clinical comorbidities to improve comparison of measure performance between organizations. These measures use a large number of Hierarchical Condition Category (HCC) comorbidity categories that account for many high-risk conditions among beneficiaries, which helps to adjust for differences in patient populations between ACOs. Risk adjusting in this manner is in accordance with best practices for risk adjustment to account for the higher level of risk for certain beneficiaries. We also note that the revised MCC measure has an additional risk adjustment not present in the original MCC measure that is in the current Shared Savings Program measure set. The revised measure adjusts for two area level social risk factors: (1) AHRQ socio-economic status (SES) index; and (2) specialist density. The original MCC measure does not contain any social risk factors in the risk adjustment.

We received several comments regarding the feasibility of using the

alternative MIPS reporting options for purposes of quality reporting under the Shared Savings Program, which are summarized below.

Comment: Several commenters requested clarification of whether ACOs would report quality data for all patients regardless of attribution or payer status. Additionally, commenters explained that ACOs often operate using multiple EHR systems and requested clarification of whether ACOs would report separately for each EHR system. Several commenters expressed concern that using the alternative MIPS reporting options would result in ACOs being evaluated on the quality of the care furnished to all of the patients they serve. These commenters were concerned that this data would not be a true reflection of an ACO's quality improvement efforts and objected that it would not be fair to measure ACO quality based on non-attributed patients. Commenters also expressed concern that ACOs may not have the legal ability to access data for patients that are not attributed to the ACO, which may skew any assessment of quality. Additionally, one commenter noted that the differences between community health center populations and private practice populations would be magnified by the requirement to report on all patients served and that unlike the administrative claims measures that use HCC risk adjustment, the three clinical quality measures do not have similar adjustments. The commenter recommended that "CMS use the same eligibility category definitions used in cost calculations for peer groups that can be assumed to carry forward to the entire patient population." The commenter also recommended that CMS further consider whether reporting for all patients will improve or worsen disparities and urged CMS to seek to incentivize improvement of disparities between patients served by community health centers and private practices through clinical quality and claims based measurement and benchmarking. Another commenter noted that current measure specifications would result in patients being eligible for measure denominators regardless of provider specialty designation and recommended that CMS incorporate logic into the measures to require a qualifying visit with a primary care provider. This commenter also recommended that CMS modify the reporting requirements for the eCQM/MIPS CQM measures to exclude patients who are not assigned to the ACO for purposes of reporting under the Medicare Shared Savings Program. The commenter explained that if

reporting on the measures is not limited to the ACO's assigned beneficiary population, ACOs that include an Academic Medical Center (AMC) could be particularly negatively impacted because AMCs often care for patients who have primary care providers in other states and patients that are seen for short term destination services.

Some commenters expressed concern that vendors and developers would require additional lead time to update and test systems, configure tools and measurement algorithms to aggregate data at an ACO level, and handle the wave of new entities reporting using eQMs/MIPS CQMs. Several commenters also noted that some ACOs would need to revise vendor participation agreements and contracts to allow them to access and report on data across all patients served by their ACO participants, which may cause further delays. Additionally, commenters also expressed concern that measure results may be unreliable due to vendors interpreting measure specifications differently.

Although some commenters acknowledged that ACOs would be reporting fewer quality metrics under the proposed APP, these commenters believe the proposal would increase reporting burden because ACOs would be required to report on a larger pool of patients and to become familiar with new data collection and reporting mechanisms. The commenters recommended that if we were to finalize the proposed eCQM/MIPS CQM measures, ACOs should be required to report on a sample population or a maximum of 50 percent of ACO beneficiaries. Alternatively, one commenter suggested that instead of ACOs being responsible for aggregating data for the eCQM/MIPS CQM measures included in the APP to create an ACO-wide score, CMS should be responsible for aggregating data on behalf of the ACO. The commenter stated that this process would reduce burden on the ACOs. Other commenters suggested that ACOs should only be required to report eQMs for assigned beneficiaries while ACOs are transitioning away from the CMS Web Interface reporting mechanism and that CMS should work with industry leaders to create QRDA III aggregate TIN level reporting for assigned beneficiaries so that each ACO Participant TIN could submit the QRDA III file via the QPP website and CMS would calculate performance scores for the ACO. Additionally, commenters suggested that some ACOs may not have the time or financial capacity to explore other data collection and reporting mechanism workflows, especially due

to constraints caused by the PHE for COVID-19. For example, commenters explained that some ACOs would need to pay fees to modify EHRs, obtain new EHR interfaces and aggregation tools, update performance dashboards, and potentially work with a registry, and that these costs could pose a significant hardship for smaller ACOs.

Response: We acknowledge the concerns raised by the commenters about the change to reporting eCQMs/CQM MIPS measures, the need for time to transition to this new data collection format and collecting data on all-payer data and the time needed to set up new infrastructures for submitting this data to CMS. The CMS Quality Measurement Strategy is continuing to drive towards patient-centered, value-based care through the development, selection, and implementation of measurement that includes accelerating the move to digital measures, promoting the use of all payer data, increasing alignment of measures, and unleashing the voice of the patient through the use of patient reported outcomes. The APP measures include all-payer, patient-centric, and population-based outcome measures that are designed to promote the goals of the CMS Quality Measurement Strategy and align with the Meaningful Measures framework.

While the three eCQM/MIPS CQM measures are based on all payer data, we believe they are appropriate for assessing the quality of care furnished by the ACO as required by section 1899(b)(3) of the Act. These measures focus on the management of chronic health conditions that are a high priority and have high prevalence among Medicare beneficiaries. To the extent that these conditions are also prevalent among other populations of patients that receive services from the eligible clinicians participating in an ACO, we believe it is relevant to consider the quality of care that is furnished by ACO participants across all of their patients as part of assessing the overall quality of care furnished by the ACO. We also note that measuring care delivery to all patients is appropriate because improving care processes and practices is expected to improve care for all patients (for example, improvements to an electronic health record would be expected to improve care for all patients, not just Medicare patients). Additionally, CMS would not want ACOs participating in the Shared Savings Program to improve care for Medicare beneficiaries by reducing care quality for non-Medicare beneficiaries. Thus looking at the overall quality of care furnished to all patients is consistent with the goal of improving

care furnished by ACOs by ensuring that care delivery is improving across all patients, rather than encouraging ACOs to focus disproportionately on improving measure performance for Medicare beneficiaries.

In addition, we believe the use of all-payer measures will provide an additional incentive for ACO participants to standardize care processes across all of their patient populations, which should improve the quality of care for all patients, including the ACO's assigned Medicare beneficiaries, while also making it easier to capture and report required data because ACOs would only need to capture and report one set of quality metrics to satisfy the reporting requirements under both MIPS and the Shared Savings Program.

With regard to concerns about reporting the three eCQM/CQM measures, ACOs will need to determine which collection type, either eCQM specifications captured via an EHR or MIPS CQM specifications intended to be used by groups or ACOs submitting measures via qualified registry, they will use to collect and report quality measure data. The ACO will report data in the aggregate on behalf of its ACO participants using the relevant measure specifications and could submit data via the following MIPS submission types using either direct login, such as application program interface or API, or sign in and upload. For example, the ACO could, on behalf of its ACO participants combine the results from all the ACO participant TIN QRDA 3 files, by adding numerators, denominators, etc. and create an aggregate QRDA3 file (or other compliant file format) and submit as an ACO to CMS. ACOs could also contract with a third party intermediary (such as a registry) to submit data on behalf of the ACO. We acknowledge commenters' concerns about the time needed to set up new infrastructures to report all-payer data; therefore, we are finalizing a phase-in approach to the quality reporting requirements under the Shared Savings Program. For performance year 2021, ACOs can opt to report 10 measures via the CMS Web Interface or the three eCQM/CQM measures as part of the APP. If an ACO opts to report via the CMS Web Interface, the requirements for which patients must be included for purposes of quality reporting would remain unchanged, ACOs would report on the provided beneficiary sample.

As discussed earlier in this section, in order to meet the quality reporting requirements under the Shared Savings Program and the MIPS, ACOs must meet the following requirements:

- For performance year 2021, ACOs will be required to report quality data via the APP, and an ACO can choose to actively report either the 10 measures under the CMS Web Interface or the 3 eCQM/MIPS CQM measures. In addition, ACOs will be required to field the CAHPS for MIPS survey, and CMS will calculate 2 measures using administrative claims data.

- For performance year 2022 and subsequent performance years, ACOs will be required to actively report quality data on the 3 eCQM/MIPS CQM measures via the APP. In addition, ACOs will be required to field the CAHPS for MIPS survey, and CMS will calculate two measures using administrative claims data.

As discussed in section III.G.1.c. of this final rule, we are also finalizing policies to phase-in the increase in the quality performance standard over 3 years. We believe that the phase-in policies for applying the APP to Shared Savings Program ACOs and increasing the quality performance standard address the concerns raised by the commenters regarding the proposed timeline for implementing APP and the challenges of reporting on the measures in the APP measure set. The quality reporting requirements described above will provide ACOs with a one-year transition period during performance year 2021 in which they will have the option either to continue to report via the CMS Web Interface or to report on the 3 eCQM/CQM MIPS measures before being required to report on the 3 eCQM/MIPS CQM measures beginning in performance year 2022. This transition period, coupled with the phase-in of the new quality performance standard discussed earlier in this section, will provide ACOs with additional time to set up their systems and educate providers and office staff in order to be prepared report on the 3 eCQM/MIPS CQM measures beginning in performance year 2022 and will also allow ACOs to become familiar with the new quality reporting requirements under the APP and gain experience reporting on the new measures before they are assessed under the higher quality performance standard beginning in performance year 2023.

We received comments on the individual measures in the proposed measure set, which are summarized below.

Comment: We received several comments related to the proposal to include the CAHPS for MIPS measure in the APP for Shared Savings Program ACOs. One commenter noted support for the measures included in the CAHPS for MIPS. Several commenters

expressed concerns related to the CAHPS for MIPS measure. Specifically, the commenters noted that for this measure, small differences in quality can result in large quality score differences. The commenters stated that these differences are not meaningful and recommended that CMS work with stakeholders to improve the measure specifications before this measure is used as part of a limited quality measure set. Additionally, commenters were concerned that CMS has not detailed how the single composite CAHPS measure score will be calculated and were concerned with how the CAHPS measures are collected. Specifically, several commenters were concerned that the CAHPS measures use a small patient sample and rely on patients to recollect experiences that took place months before. One commenter had concerns about the small sample size for the CAHPS survey, citing previous experience with anomalies and unpredictable measure adjustments. Another commenter was concerned that the CAHPS sample size is the same for all ACOs regardless of ACO size; sampled patients do not represent the full population that ACOs serve; healthcare providers cannot provide supplemental information, such as more accurate contact information, in an effort to reach more patients; and surveys are only administered once annually with results received midway through the following performance year. Commenters recommended that CMS release additional information regarding how the CAHPS measure score will be calculated as soon as possible and recommended that CMS consider using a larger sample and modify the survey so that it is shorter and takes place closer in time to the care that beneficiaries are asked to assess.

Another commenter expressed concern that survey fatigue among patients was leading to declining survey response rates. The commenter recommended that CMS allow providers to use surveys already in place rather than requiring administration of an additional CAHPS for MIPS survey. Another commenter expressed concern over the subjective nature of the survey leading to significant variation in scores over time. Another commenter noted that the methodology of the CAHPS for MIPS and CAHPS for ACO surveys differ, with the CAHPS for MIPS survey having minimum survey size requirements as a function of the Taxpayer Identification Number (TIN) and the CAHPS for ACOs survey having minimum survey size requirements as a function of the ACO. The commenter

requested that CMS be explicit if it intends to make any changes in the survey methodology with this proposal because shifting the survey size requirement to be based on TINs rather than the ACO as a whole will result in substantial financial burden to ACOs.

Response: We appreciate the commenters' concerns and recommendations regarding the CAHPS for MIPS measure. The CAHPS for MIPS survey uses the same survey instrument to assess the same patient experience domains as the CAHPS for ACO survey that is currently successfully used to measure ACO quality. The same shortened, streamlined version of the survey was implemented for both CAHPS for ACOs and CAHPS for MIPS in 2018, reflecting efforts by CMS to reduce the number of questions. We conducted analyses to assess the impact of aligning CAHPS scoring and benchmarking using 2019 CAHPS for ACOs and CAHPS for MIPS survey data. In 2019, the two programs used identical survey instruments. Analyses examined the impact of alignment on SSM scores, benchmarks, and quality points by comparing newly calculated SSM scores, benchmarks and quality points under the aligned approach to the official SSM scores, benchmarks, and quality points calculated under the original 2019 approach. The results of these analyses indicate that scoring ACOs using the MIPS methodology resulted in ACOs having a similar distribution of quality points as MIPS groups, which is wider than the distribution of quality points using the ACO scoring methodology. The wider score distribution is largely due to the differences across the two programs in the approach to benchmarking; CAHPS for ACOs uses flat percentage benchmarks for summary survey measures for which the 60th percentile of scores is greater than or equal to 80, or for which the 90th percentile of scores is greater than or equal to 95. CAHPS for MIPS does not use a flat percentage approach. While the shift away from flat percentage benchmarks may have the effect of creating larger differences in quality scores across Shared Savings Program ACOs, we believe that the scores will better reflect small differences in quality performance and will support the goal to improve the Shared Savings Program quality standard over time.

Beneficiaries assigned to an ACO or MIPS group, who are eligible for the CAHPS for MIPS or CAHPS for ACOs survey, are randomly selected for inclusion in the sample. Each ACO or MIPS group sample is therefore representative of the ACO or group

population. Sample size requirements for both CAHPS for MIPS and CAHPS for ACOs were established using the results of analyses that sought to establish measures that allowed for meaningful comparisons to be made across ACOs and MIPS groups. Samples are drawn at the ACO level for CAHPS for ACOs, and at the MIPS group TIN level for groups. Target samples for all participating ACOs, groups, and virtual groups is 860; for ACOs, groups, and virtual groups with 860 or more survey-eligible patients, a random sample of 860 patients is drawn. In addition, groups and virtual groups with fewer than 860 survey-eligible patients are eligible to participate if they meet the following minimum sampling thresholds: Large groups or virtual groups with 100 or more eligible clinicians: 416 eligible patients; medium groups or virtual groups with 25–99 eligible clinicians: 255 eligible patients; and small groups or virtual groups with 2–24 eligible clinicians: 125 eligible patients. CMS will continue to draw the CAHPS survey samples for Shared Savings Program ACOs administering the CAHPS for MIPS survey at the Shared Savings Program ACO level, with a target sample size of 860 going forward.

Both surveys ask respondents to provide responses about their experiences of primary care during the previous 6 months. This look back period is used across many CAHPS survey efforts and enables a beneficiary to reflect on multiple care experiences with the focal provider named on the survey. While response rates have declined over time, the CAHPS for MIPS and CAHPS for ACOs surveys still reliably capture important information about the quality of care from patients' perspective, which are not captured via other data sources such as administrative claims data. We refer readers to section IV.A.3.b.3.a. of this final rule for additional details on the CAHPS for MIPS measure. With the alignment of CAHPS for ACOs with CAHPS for MIPS, the benchmarking and scoring methodology used for CAHPS for MIPS will be used. A single set of benchmarks will be calculated using data from all applicable CAHPS for MIPS reporters. The CAHPS for MIPS survey is scored as one quality measure, which is a different scoring approach from the current SSP quality scoring methodology that scores the ten CAHPS for ACOs summary survey measures in one patient/caregiver experience quality domain. As described in the CY 2017 Quality Payment Program final rule, each summary survey measure (SSM)

will have an individual benchmark and each SSM will be scored individually and compared against the benchmark to establish the number of points earned. The CAHPS score will be the average number of points across SSMs (81 FR 77284).

We received comments on the Hospital-Wide, 30-day, All-Cause Unplanned Readmission (HWR) Rate for MIPS Eligible Clinician Groups measure, which are summarized below.

Comment: Several commenters expressed concerns related to the Hospital-Wide, 30-day, All-Cause Unplanned Readmission (HWR) Rate for MIPS Eligible Clinician Groups measure. One commenter did not support this measure. Another commenter recommended that CMS consider NCQA's Plan All-Cause Readmission (PCR) measure instead because health plans use the PCR measure more widely as it is an NCQA accreditation requirement and the PCR measure is more robust and broader than the HWR measure because it includes patients 18 and older, while the HWR measure only includes patients 65 and older. Another commenter was concerned that the measure was sensitive to risk adjustment and has a narrow range, which negatively impacts "community health center ACOs". Another commenter noted that readmissions are low volume and can be influenced by factors outside the control of healthcare providers. Additionally, the commenter explained that an unintended consequence can occur when an ACO's base number of admissions is low compared to other ACOs with high numbers of admissions because it

increases the sensitivity of this measure. This commenter suggested that CMS consider the Ambulatory Sensitive Condition Acute Composite measure instead. Other commenters noted that for this measure, small differences in performance can result in large quality score differences. The commenters stated that these differences in performance are not meaningful and recommended that CMS work with stakeholders to improve the measure specifications before this measure is used as part of a limited quality measure set. One commenter noted concerns about unintended consequences due to the measure not adequately considering the competing risk of mortality. This commenter suggested using an alternative measure, such as risk-adjusted home time.

Response: The proposed Hospital-Wide, 30-day, All-Cause Unplanned Readmission (HWR) Rate for MIPS Eligible Clinician Groups measure is a re-specified version of NQF #1789 (Hospital-Wide All-Cause Unplanned Readmission Measure), and an adapted version of NQF #1789 that is currently being used successfully to assess ACO quality performance (ACO-8: Risk-standardized, All Condition Readmission (ACR)). We note that the MIPS HWR is clinically aligned to the ACO ACR measure, with the same cohort inclusion and exclusion criteria, outcome, measurement period, and risk adjustment variables, but the attribution and risk-standardized readmission rate calculation methodologies differ between the two measures. The ACO ACR measure attributes beneficiaries to ACOs prior to measurement, whereas

the MIPS HWR measure is attributed to three clinician groups—primary inpatient provider, discharge clinician, and primary outpatient provider—based on measure specifications and care utilization data. In addition, the ACO ACR uses hierarchical logistic regression modeling to calculate risk adjustment while the MIPS HWR cannot use hierarchical logistic regression modeling because of attribution to multiple providers.

We believe that this re-specified version of NQF #1789 will provide a meaningful assessment of ACO quality performance. We will use the MIPS HWR three clinician group attribution method to attribute episodes at the ACO level. However, we will monitor and evaluate the ACOs' performance on the MIPS HWR measure to ensure compatibility including evaluating attribution at the ACO level, as well as refinements to risk adjustment and risk stratification and may revisit the decision to include this measure in the APP measure set for Shared Savings Program ACOs in future rulemaking. Both the MIPS HWR and ACO ACR measures will undergo the NQF endorsement/re-endorsement process during 2021, and we welcome stakeholder feedback on these measures.

We received comments on the three eCQM/CQM MIPS measures and the Risk Standardized, All-Cause Unplanned Admissions for Multiple Chronic Conditions for ACOs measure. These comments are summarized and responded to in section IV.A.3.B. of this final rule.

Table 40 lists the measures included in the final APP measure set.

TABLE 40: Measures included in the Final APM Performance Pathway Measure Set¹

Measure #	Measure Title	Collection Type	Submitter Type	Meaningful Measure Area
Quality ID#: 321	CAHPS for MIPS	CAHPS for MIPS Survey	Third Party Intermediary	Patient's Experience
Measure # 479	Hospital-Wide, 30-day, All-Cause Unplanned Readmission (HWR) Rate for MIPS Eligible Clinician Groups	Administrative Claims	N/A	Admissions & Readmissions
Measure # TBD	Risk Standardized, All-Cause Unplanned Admissions for Multiple Chronic Conditions for ACOs	Administrative Claims	N/A	Admissions & Readmissions
Quality ID#: 001	Diabetes: Hemoglobin A1c (HbA1c) Poor Control	eCQM/MIPS CQM/CMS Web Interface*	APM Entity/Third Party Intermediary	Mgt. of Chronic Conditions
Quality ID#: 134	Preventive Care and Screening: Screening for Depression and Follow-up Plan	eCQM/MIPS CQM/CMS Web Interface*	APM Entity/Third Party Intermediary	Treatment of Mental Health
Quality ID#:236	Controlling High Blood Pressure	eCQM/MIPS CQM/CMS Web Interface*	APM Entity/Third Party Intermediary	Mgt. of Chronic Conditions
Quality ID#: 318	Falls: Screening for Future Fall Risk	CMS Web Interface*	APM Entity/Third Party Intermediary	Preventable Healthcare Harm
Quality ID#: 110	Preventive Care and Screening: Influenza Immunization	CMS Web Interface*	APM Entity/Third Party Intermediary	Preventive Care
Quality ID#: 226	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention	CMS Web Interface*	APM Entity/Third Party Intermediary	Prevention and Treatment of Opioid and Substance Use Disorders
Quality ID#: 113	Colorectal Cancer Screening	CMS Web Interface*	APM Entity/Third Party Intermediary	Preventive Care
Quality ID#: 112	Breast Cancer Screening	CMS Web Interface*	APM Entity/Third Party Intermediary	Preventive Care
Quality ID#: 438	Statin Therapy for the Prevention and Treatment of Cardiovascular Disease	CMS Web Interface*	APM Entity/Third Party Intermediary	Mgt. of Chronic Conditions
Quality ID#: 370	Depression Remission at Twelve Months	CMS Web Interface*	APM Entity/Third Party Intermediary	Treatment of Mental Health

¹ We note that Statin Therapy for the Prevention and Treatment of Cardiovascular Disease (Quality ID# 438); Depression Remission at Twelve Months (Quality ID# 370), and Preventive Care and Screening: Screening for Depression and Follow-up Plan (Quality ID# 134) do not have benchmarks and are therefore not scored; they are, however, required to be reported in order to complete the Web Interface dataset.

* ACOs will have the option to report via Web Interface for the 2021 MIPS Performance year only.

In the CY 2021 PFS proposed rule (85 FR 50234), we noted that in addition to the measures included in the proposed APP measure set, based on recommendations from MedPAC in its 2015 Report to Congress: Medicare and the Health Care Delivery System,⁵⁶ we were considering adding a “Days at Home” measure that is currently under

development, to the APP core measure set in future years, once it has been through the MAP pre-rulemaking process. We explained that any future additions to the measure set, including to add a “Days at Home” measure would be proposed and finalized through notice and comment rulemaking.

While CMS is not proposing to incorporate a “Days at Home” measure at this time, we received several public comments and recommendations about

this measure. We greatly appreciate the commenters' views on a “Days at Home” measure, and we will take this feedback into consideration as this measure is developed and considered during future rulemaking cycles.

In addition, in the CY 2021 PFS proposed rule (85 FR 50234), we noted that we have received feedback from a few ACOs, including ACOs that have a significant number of beneficiaries in long-term care facilities or who are chronically ill or high-risk home bound

⁵⁶ <http://medpac.gov/docs/default-source/reports/june-2015-report-to-the-congress-medicare-and-the-health-care-delivery-system.pdf>.

patients, that the measures ACOs are required to report are not always applicable to their patient population. Although we proposed to require ACOs to report via the APP, we also sought comment on an alternative approach that could be used in the event the three measures ACOs are required to actively report on are not applicable to their beneficiary population and there are more appropriate measure available under MIPS. Under this alternate approach, ACOs could opt out of the APP and report to MIPS as an APM entity. If the ACO decides to report as an APM entity to MIPS outside of the APP, CAHPS for MIPS would become optional; however, the ACO would be required to report PI and IA and would also be subject to cost under MIPS. In the event an ACO decides to report as an APM entity to MIPS outside the APP, we would use the ACO's MIPS Quality performance category score to determine if the ACO met the Shared Savings Program quality performance standard.

We sought comment on this alternative reporting approach for ACOs in the event the three measures ACOs are required to actively report are not applicable to their beneficiary population.

The following is a summary of the comments we received on this alternative approach and our response.

Comment: One commenter supported this approach as it would allow more flexibility for clinicians to be recognized for the work they are doing inside and outside the context of an ACO. A few commenters stated that they believed all three eCQM/MIPS CQM measures were applicable to all ACOs and expressed concerns that allowing some ACOs to report under this alternative approach would make program evaluation challenging and would not allow for a fair assessment of quality across ACOs because certain organizations would have the opportunity to select measures for which they have the highest historical performance.

Response: We appreciate the commenter's feedback on the alternate approach and CMS will consider the commenters' feedback as part of the development of any future policies in connection with this alternative approach.

c. Shared Savings Program Quality Performance Standard

The quality performance standard is the minimum performance level ACOs must achieve in order to share in any savings earned, avoid maximum shared losses under certain payment tracks, and avoid quality-related compliance actions. We proposed to increase the

level of quality performance that would be required for all ACOs to meet the Shared Savings Program quality performance standard. As discussed in the CY 2021 PFS proposed rule (85 FR 50234), we explained that we believed the proposed changes would simplify the Shared Savings Program quality performance standard and were also consistent with the statutory requirement that we seek to improve the quality of care furnished by ACOs over time by specifying higher standards, new measures or both (section 1899(b)(3)(C) of the Act). We proposed to increase the quality performance standard for all ACOs to achievement of a quality performance score equivalent to the 40th percentile or above across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring. We proposed to exclude entities/providers eligible for facility-based scoring from the overall MIPS quality score because facility-based scoring is determined using the Hospital Value Based Purchasing (HVBP) Total Performance Score (TPS), which includes quality and cost.

Given that the statute requires that we seek to increase the quality performance standard over time, we explained our belief that changing the quality performance standard from the 30th percentile on one measure in each domain to a requirement that ACOs achieve a quality performance score equivalent to the 40th percentile or above across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, would be the next incremental step in increasing the quality performance standard. In the CY 2021 PFS proposed rule, we summarized the quality performance results for ACOs participating in the program in performance year 2018. Since the proposed rule was issued, we now have updated 2019 results. Under the current Shared Savings Program quality measurement methodology, 98.71 percent or 534 ACOs participating in the program in 2019 met the quality performance standard of complete and accurate reporting for ACOs in the first year of their first agreement period or the 30th percentile on one measure in each domain, for ACOs in their second or subsequent years of participation in the program. Of these ACOs, 497 were ACOs in second or subsequent years of participation in the program for which most quality measures were scored as pay-for-performance (P4P).

As discussed in the CY 2021 PFS proposed rule (85 FR 50234), eligible clinicians participating in Shared

Savings Program ACOs who obtain QP status would continue to be exempt from MIPS, and therefore, would not be subject to MIPS payment adjustments. ACOs participating in a track (or payment model within a track) that is an Advanced APM may elect to report on behalf of their eligible clinicians who do not meet the threshold to earn QP status but do meet the lower payment or patient count threshold to achieve Partial QP status, and these Partial QPs would be subject to a MIPS payment adjustment. Conversely, if an ACO does not elect to report for the Partial QPs, they would not receive a MIPS score or payment adjustment and would have no reporting responsibilities for MIPS. We also explained that utilizing the MIPS Quality performance category scoring methodology to assess the quality performance for purposes of the Shared Savings Program of ACOs participating in tracks (or payment models within a track) that qualify as an Advanced APM would not change whether the eligible clinicians participating in the ACO obtain QP status and are excluded from MIPS, nor would it change the eligible clinicians' eligibility to receive Advanced APM incentive payments.

We received public comments on the proposal to revise the Shared Savings Program quality performance standard. The following is a summary of the comments we received and our responses.

Comment: We received several comments in support of increasing the quality performance standard to the 40th percentile of MIPS Quality performance category scores, all noting that the proposal aligned with CMS' goal of improving quality and reducing cost. We also received many comments opposing the overall approach of changing the quality performance standard to the 40th percentile of all MIPS Quality Performance Category Scores. Several commenters noted the potential uncertainty that ACOs would experience because they would not have a clear indication ahead of the performance year of what standards need to be met to be eligible to receive shared savings. Commenters suggested that CMS set a threshold for the number of measures that must meet the 40th percentile benchmark of at least 50 percent of all measures. Other commenters suggested that the quality performance standard should remain at the current level to allow more time for ACOs to familiarize the new reporting requirements under the APP. One commenter suggested that the MIPS scoring methodology is flawed and introducing a change in the quality performance standard now would cause

instability in the Shared Savings Program. One commenter expressed concerns over ACOs' abilities to meet thresholds on certain measures. One commenter noted that moving the quality performance standard to the 40th percentile would pose difficulties for organizations struggling with the readmission and unplanned admission for multiple chronic condition metrics. One commenter noted that the threshold change is drastic and also noted that with CAHPS data supplied only at the ACO level, not at the individual TIN level, it is hard to provide feedback to each participant TIN, and with ACOs trying to handle the current pandemic, it is difficult to influence performance in this area. In addition, several commenters expressed concerns over the potential impact of the pandemic and other natural disasters on quality performance and the uncertainty ACOs could face and suggested the implementation of a new quality performance standard should be delayed. Commenters expressed concern over the limited time to gain familiarity with the new requirements and difficulty meeting this new quality performance standard for certain measures. Several commenters expressed concerns regarding the shift from a domain-based scoring approach to the proposed approach of requiring an ACO to achieve an overall quality score equivalent to the 40th percentile of all MIPS quality performance category scores. One commenter expressed concerns that such a scoring approach would have major financial implications for the sustainability of the Shared Savings Program as financial implications for ACOs are much higher than MIPS participants.

Response: We appreciate the commenters' feedback on our proposal to revise the Shared Savings Program quality performance standard. In light of the concerns raised by the commenters, we are finalizing a modified version of our original proposal to allow for a gradual phase-in of the increase in the level of quality performance that would be required for all ACOs to meet the Shared Savings Program quality performance standard. Specifically, we are finalizing that an ACO would meet the quality performance standard if:

- For performance years 2021 and 2022, the ACO achieves a quality performance score that is equivalent to or higher than the 30th percentile across all MIPS Quality performance category scores; and
- For performance year 2023 and subsequent performance years, the ACO achieves a quality performance score that is equivalent to or higher than the

40th percentile across all MIPS Quality performance category scores.

Achieving the applicable quality performance standard for a performance year will enable the ACO to share in the maximum amount of savings based on their Track, avoid maximum shared losses under certain payment tracks, and avoid quality-related compliance actions for that performance year.

These policies are summarized in Table 39 in this final rule. The impact on shared savings payments as a result of these final policies is described in section VIII.H.7.a. of this final rule. We are also finalizing our proposal to exclude entities/providers eligible for facility-based scoring from the determination of the overall MIPS Quality performance category score because facility-based scoring is determined using the Hospital Value Based Purchasing (HVBP) Total Performance Score (TPS), which includes quality and cost.

We believe that this phase-in of the quality performance standard, coupled with our decision to phase-in the reporting requirements under the APP for Shared Savings Program ACOs, as described in section III.G.1.b.(1). of this final rule, will alleviate many of the concerns raised by the commenters, especially those related to the PHE for COVID-19 and other natural disasters in 2020. We will monitor ACO performance under the new quality reporting requirements to determine the impact of this measured increase to the quality performance standard and may revisit this policy in future rulemaking if necessary to promote an attainable quality performance standard and degree of improvement. With respect to the concerns raised by commenters regarding the limited time to gain familiarity with the new requirements, the phase-in policies will give ACOs additional time to set up their systems to report all payer data on the three eCQM/MIPS CQM measures under the APP. The phase-in will also allow ACOs additional time to become familiar with the new quality reporting requirements and gain experience reporting on the new measures under the APP before they are assessed under the increased quality performance standard beginning in performance year 2023. We note that the quality performance standard that we are adopting for performance years 2021 and 2022 is analogous to the current quality performance standard, under which ACOs are required to achieve the 30th percentile on one measure in each domain. Therefore, we believe that this approach to phasing in the new, higher quality performance standard is consistent with the statutory

requirement in section 1899(b)(3)(C) of the Act that we seek to increase the quality of care furnished by ACOs over time. We also note that ACOs will not be required to meet the 30th or 40th percentile (depending on the performance year) for all measures reported under the APP in order to meet the quality performance standard. If an ACO performs poorly on one measure under the APP, the ACO may still be able to meet the quality performance standard based on its performance across the remainder of the measures set. For commenters that expressed concern that ACOs would not have an indication prior to the start of the performance year of what standards would need to be met to be eligible to receive shared savings, we note that, as discussed in section IV.A.3.d.(1)b.ii. of this final rule, we are not finalizing the proposal to use performance period year benchmarks and instead will continue to use historical benchmarks for quality measures for the CY 2021 MIPS performance period.

Comment: We received several comments related to how the quality performance standard would be assessed and applied. One commenter expressed uncertainty about whether CMS would assess the quality performance standard based on the aggregate score on all quality measures or require a 40th percentile score on each individual measure. Other commenters noted that they were uncertain if the quality performance standard was meant to apply across all domains in the aggregate, or across each individual domain at the 40th percentile.

Response: Under the phase-in we are adopting in this final rule, an ACO's quality performance score must be equivalent to or higher than the 30th or 40th percentile (depending on the performance year) across all MIPS Quality performance category scores in order to meet the quality performance standard. ACOs will not be required to achieve a performance score that is equivalent to or higher than the 30th or the 40th percentile (depending on the performance year) on each individual measure in order to meet the quality performance standard. We are also clarifying that each ACO's quality performance score will be calculated using the ACO's performance on the measures reported under the APP, any applicable MIPS bonus points, and quality improvement points. Please refer to section IV.A.3.b. of this final rule for information on scoring under the APP. Unlike the scoring methodology currently used in the Shared Savings Program, there are no quality domains

under the APP; rather, each measure will be weighted equally.

In the CY 2021 PFS proposed rule (85 FR 50234 and 50235), we proposed to specify in a new section of the Shared Savings Program regulations at § 425.510, policies governing the application of the APP to Shared Savings Program ACOs for performance years beginning on or after January 1, 2021. As proposed, this new section would include a general provision specifying that CMS establishes quality performance measures to assess the quality of care furnished by the ACO. If the ACO demonstrates to CMS that it has satisfied the quality performance requirements, and meets all other applicable requirements, the ACO is eligible to receive shared savings. We proposed that this general provision would also indicate that CMS seeks to improve the quality of care furnished by ACOs over time by specifying higher standards, new measures, or both. In the proposed new section, we also specified the requirement that ACOs must report quality data via the APP established under § 414.1367 according to the method of submission established by CMS, and that CMS retains the right to audit and validate quality data reported by an ACO according to § 414.1390.

We did not receive any public comments on the proposed regulation at § 425.510. We are finalizing § 425.510 as proposed.

We also proposed to specify in a new section of the Shared Savings Program regulations at § 425.512 provisions for determining the ACO quality performance standard for performance years beginning on or after January 1, 2021. We proposed to specify that the quality performance standard is the overall standard the ACO must meet in order to be eligible to receive shared savings for a performance year, and that an ACO will not qualify to share in savings in any year it fails to meet the quality performance standard. Further, we proposed to specify that for all ACOs, CMS designates the quality performance standard as the ACO reporting quality data via the APP established under § 414.1367, according to the method of submission established by CMS and achieving a quality performance score that is equivalent to or higher than the 40th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring. In addition, we proposed to specify that if an ACO does not report any of the three measures ACOs are actively required to report and does not field a CAHPS survey, the ACO would not meet the quality performance standard.

We did not receive any public comments on the proposed regulation at § 425.512. However, as a result of our decision to modify our original proposal to provide for a phase-in of the new quality reporting requirements under the APP for Shared Savings Program ACOs, as described in section III.G.1.b.1. of this final rule, and the increase in the quality performance standard, as described earlier in this section, we are finalizing the proposed regulations at § 425.512 with modifications, as described below.

Revising § 425.512(a)(3) to provide that:

- For performance years 2021 and 2022. CMS designates the quality performance standard for all ACOs, with the exception of ACOs in the first performance year of their first agreement period, as the ACO reporting quality data via the APP established under § 414.1367, according to the method of submission established by CMS and achieving a quality performance score that is equivalent to or higher than the 30th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring.

- For performance year 2021. If an ACO does not report any of the ten CMS Web Interface measures or any of the three measures it is actively required to report and does not field a CAHPS for MIPS survey via the APP, the ACO will not meet the quality performance standard.

- For performance year 2022. If an ACO does not report any of the three measures it is actively required to report and does not field a CAHPS for MIPS survey via the APP the ACO will not meet the quality performance standard.

Adding a new provision at § 425.512(a)(4) to provide that for performance years 2023 and subsequent performances:

- CMS designates the quality performance standard for all ACOs, with the exception of ACOs in the first performance year of their first agreement period, as the ACO reporting quality data via the APP established under § 414.1367, according to the method of submission established by CMS and achieving a quality performance score that is equivalent to or higher than the 40th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring.

- If an ACO does not report any of the three measures it is actively required to report and does not field a CAHPS for MIPS survey via the APP the ACO will not meet the quality performance standard.

We are also revising § 425.512 to add a new language at § 425.512(a)(2) to provide that for performance year 2022 and subsequent performance years, for the first performance year of an ACO's first agreement period under the Shared Savings Program, if the ACO meets the data completeness requirement at § 414.1340 and case minimum requirement at § 414.1380 on the three measures it is actively required to report and fields a CAHPS for MIPS survey via the APP, the ACO will meet the quality performance standard. Finally, we are also revising the references to MIPS Quality performance category scores in § 425.512(a)(3) and (4) to make clear that entities/providers eligible for facility-based scoring are excluded.

In addition, we proposed to modify the existing Shared Savings Program regulation at § 425.508, on incorporating quality reporting requirements related to the Quality Payment Program. We proposed to add a provision applicable to 2021 and subsequent performance years, which would specify that ACOs must submit quality data via the APP established under § 414.1367 to satisfactorily report on behalf of the eligible clinicians who bill under the TIN of an ACO participant for purposes of the MIPS Quality performance category. We also proposed related technical and conforming modifications to § 425.508.

We did not receive any public comments on the proposed modifications, and related technical and conforming modifications to § 425.508. We are finalizing all of the modifications to § 425.508 as proposed.

d. Use of ACO Quality Performance in Determining Shared Savings and Shared Losses

In section III.G.1.d of the CY 2021 PFS proposed rule (85 FR 50235 and 50236), we proposed modifications to the Shared Savings Program regulations on the use of the ACO quality performance in determining shared savings and shared losses. We explained that section 1899(d)(1)(A) of the Act specifies an ACO is eligible to receive a shared savings payment for a portion of the savings generated for Medicare, provided that the ACO meets both the quality performance standards established by the Secretary and achieves the required level of savings against its historical benchmark. Section 1899(d)(2) of the Act provides the authority for the actual payments for shared savings under the Shared Savings Program. Specifically, if an ACO meets the quality performance standards established by the Secretary (according to section 1899(b)(3) of the

Act), and meets the savings requirements, a percent (as determined appropriate by the Secretary) of the difference between the estimated average per capita Medicare expenditures in the year, adjusted for beneficiary characteristics, and the benchmark for the ACO, may be paid to the ACO as shared savings and the remainder of the difference shall be retained by the Medicare program. The Secretary is required to establish limits on the total amount of shared savings paid to an ACO. We have also incorporated performance-based risk in the form of shared losses into certain financial models using the authority under section 1899(i)(3) of the Act to use other payment models.

The Shared Savings Program's one-sided shared savings only models, and two-sided shared savings and shared losses models are specified in subpart G of the Shared Savings Program regulations. For agreement periods beginning on July 1, 2019, and in subsequent years, eligible ACOs may participate under either: (1) The BASIC track, which includes a glide path consisting of five levels (Levels A through E) that allows eligible ACOs to begin under a one-sided model (Level A or Level B) and incrementally phases-in higher levels of risk and potential reward (Levels C, D, or E) (§ 425.605); or (2) the ENHANCED track, a two-sided model with the highest level of risk and potential reward (§ 425.610). Further, according to the May 8th COVID-19 IFC (85 FR 27574 and 27575), ACOs that entered a first or second agreement period with a start date of January 1, 2018, whose participation agreements expire December 31, 2020, may elect to extend their agreement period for an optional fourth performance year, spanning January 1, 2021, to December 31, 2021. This includes ACOs that entered agreement periods under Track 1 (a one-sided model), Track 2 (a two-sided model), and Track 3 (subsequently renamed the ENHANCED track).

Further, this option to elect a 12-month extension of the agreement period also applies to ACOs participating in the Track 1+ Model whose participation agreements expire December 31, 2020.

Under the Shared Savings Program regulations, for both one-sided models and two-sided models, CMS uses the ACO's quality performance to determine the ACO's eligibility to receive shared savings, and the rate at which ACOs share in these savings. We base the final shared savings rate on the ACO's quality performance. For ACOs meeting the quality performance standard, the final shared savings rate is equal to the product of the ACO's quality score and

the maximum sharing rate. The maximum sharing rate is specific to the ACO's track/level of participation as follows: 50 percent for ACOs participating in Track 1;⁵⁷ 60 percent for ACOs participating in Track 2;⁵⁸ 40 percent for ACOs participating in Level A or Level B of the BASIC track;⁵⁹ 50 percent for ACOs participating in Levels C, D, or E of the BASIC track;⁶⁰ and 75 percent for ACOs participating in the ENHANCED track.⁶¹ The upside of the Track 1+ Model is based on Shared Savings Program Track 1; therefore, a maximum sharing rate of 50 percent applies to Track 1+ Model ACOs.⁶²

Depending on the track, the ACO's quality performance may also be used to determine the amount of the ACO's shared losses, for ACOs under two-sided models. ACOs participating in the Track 1+ Model, and Level C, D, or E of the BASIC track are subject to a fixed shared loss rate (also referred to as the loss sharing rate) of 30 percent regardless of quality performance.⁶³ Under Track 2 and the ENHANCED track, the shared loss rate is calculated as one minus the ACO's final shared savings rate based on quality performance, up to a maximum of 60 percent or 75 percent, respectively, and the shared loss rate may not be less than 40 percent for both tracks.⁶⁴ For ENHANCED track ACOs, this 40 percent minimum shared loss rate is expressly stated in the current regulations, whereas for Track 2 ACOs, it is the implicit minimum shared loss rate as calculated based on the inverse of the maximum final shared savings rate for the track. Track 2 and ENHANCED track ACOs that do not meet the quality performance standard for the performance year will be accountable for shared losses based on the highest shared loss rate for their track.

In light of the proposed changes to the Shared Savings Program's quality performance standard, in the CY 2021 PFS proposed rule, we also proposed modifications to the regulations that

specify the circumstances under which an ACO will qualify for a shared savings payment based on its quality performance and the determination of the rate at which the ACO will share in savings based on its quality performance.

For all tracks, we proposed to specify, in revisions to the regulations, the requirements that must be met for an ACO to qualify for a shared savings payment for performance years beginning on or after January 1, 2021. We proposed that to qualify for shared savings, an ACO must meet the minimum savings rate requirements established for the track/level, meet the proposed quality performance standard described in section III.G.1.c. of the proposed rule, and otherwise maintain its eligibility to participate in the Shared Savings Program under part 425. We proposed to revise §§ 425.604(c) (Track 1), 425.605(c) (BASIC track), 425.606(c) (Track 2), and 425.610(c) (ENHANCED track) to reflect these requirements.

We also proposed revisions to the provisions establishing the final sharing rate for all tracks. We proposed that for performance years beginning on or after January 1, 2021, if an ACO that is otherwise eligible to share in savings meets the proposed quality performance standard as described in section III.G.1.c. of the proposed rule, the ACO will share in savings at the maximum sharing rate according to the applicable financial model, up to the performance payment limit. We proposed that if the ACO fails to meet the proposed quality performance standard, the ACO would be ineligible to share in savings. We proposed to specify these policies in revisions to the provisions governing Track 1 (§ 425.604(d)), the BASIC track (§ 425.605(d)(1)(i)(A) (Level A), (d)(1)(ii)(A) (Level B), (d)(1)(iii)(A) (Level C), (d)(1)(iv)(A) (Level D), (d)(1)(v)(A) (Level E)), Track 2 (§ 425.606(d)), and the ENHANCED track (§ 425.610(d)).

We also proposed modifications to the methodology for determining shared losses under Track 2 and the ENHANCED track, for performance years beginning on or after January 1, 2021, to account for the proposed revisions to the quality performance standard. If the ACO meets the quality performance standard, we proposed to determine the shared loss rate as follows:

- *Step 1:* Calculate the quotient of the MIPS Quality performance category points earned divided by the total MIPS Quality performance category points available.
- *Step 2:* Calculate the product of the quotient described in step 1 and the

⁵⁷ Refer to § 425.604(d).

⁵⁸ Refer to § 425.606(d).

⁵⁹ Refer to § 425.605(d)(1)(i)(A), (d)(1)(iii)(A).

⁶⁰ Refer to § 425.605(d)(1)(iii)(A), (d)(1)(iv)(A), (d)(1)(v)(A).

⁶¹ Refer to § 425.610(d).

⁶² Refer to the Track 1+ Model Participation Agreement, available at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/sharedsavingsprogram/Downloads/track-1plus-model-par-agreement.pdf>.

⁶³ Provisions specifying the shared loss rate for two-sided models of the BASIC track are specified in § 425.605(d)(1)(iii)(C), (d)(1)(iv)(C), (d)(1)(v)(C). The shared loss rate applicable to Track 1+ Model ACOs is specified in the Track 1+ Model Participation Agreement.

⁶⁴ Refer to §§ 425.606(f), 425.610(f).

sharing rate for the relevant track, either 60 percent for Track 2 or 75 percent for the ENHANCED track.

- *Step 3:* Calculate the shared loss rate as 1 minus the product determined in step 2. Consistent with the existing structure of the financial models: Under Track 2, the shared loss rate may not exceed 60 percent, and may not be less than 40 percent; under the ENHANCED track, the shared loss rate may not exceed 75 percent, and may not be less than 40 percent.

Under the proposed approach, for an ACO that meets the quality performance standard we would take into consideration the ACO's quality score when determining the ACO's share of losses. An ACO with a higher quality score would owe a lower amount of losses compared to an ACO with an equivalent amount of losses but a lower quality score, so long as the ACO's quality score results in a shared loss rate within the range between the minimum shared loss rate (40 percent) and the maximum shared loss rate (60 percent under Track 2, or 75 percent under the ENHANCED track). To the extent the ACO's quality score results in a shared loss rate outside these limits, the shared loss rate is set to the minimum or maximum rate (as applicable). We also proposed to revise the regulation at § 425.606(f) to expressly state both the minimum and maximum shared loss rates for Track 2.

In addition, we also proposed that if the ACO fails to meet the quality performance standard, the shared loss rate would be 60 percent under Track 2 or 75 percent under the ENHANCED track. We explained that we believed this approach would maintain symmetry with the proposed approach to determining shared savings under Track 2 and the ENHANCED track based on quality performance. Thus, an ACO that fails to meet the quality performance standard would be ineligible to share in savings and would owe the maximum amount of shared losses.

We proposed to specify these provisions for determining the shared loss rate under Track 2 and the ENHANCED track, for performance years beginning on or after January 1, 2021, through modifications to the regulations at §§ 425.606(f) and 425.610(f). We also proposed technical and conforming changes to these provisions for clarity, and to specify that the current policy would continue to apply for purposes of determining the shared loss rate for Track 2 ACOs and ENHANCED track ACOs for performance years (or a performance

period) beginning on or before January 1, 2020.

We received public comments on the proposed use of ACO quality performance in determining shared savings and shared losses. The following is a summary of the comments we received and our responses.

Comment: Some commenters expressed support for the proposed approach to determining the rate at which ACOs will share in savings based on quality performance, for performance years beginning on or after January 1, 2021. A few commenters expressed support for eliminating the sliding scale for determining shared savings based on quality performance, and allowing ACOs to earn savings at the maximum sharing rate according to the applicable financial model if the quality performance standard is met. One commenter expressed support for making an ACO ineligible to share in savings if it fails to meet the quality performance standard.

Several commenters explained that they supported the proposed approach because it provides a larger reward to ACOs for meeting CMS' increased quality performance standard. One commenter explained the proposed approach would simplify financial calculations.

Some commenters opposed the proposed approach to determining whether an ACO shares in savings at the maximum rate, or not at all, based on whether or not the ACO meets the proposed revised quality performance standard. Commenters suggested instead that CMS use a scoring approach that is more similar to the current domain-based scoring approach rather than an all-or-nothing approach as proposed. In particular, some commenters preferred an approach that differentiates higher quality performers and rewards quality improvement over time with a higher savings percentage.

Some commenters urged CMS to better reward high quality performers, as is done in the Medicare Advantage program by providing bonuses or higher shared savings rates to high quality performers or those that notably improve quality scores over time.

Some commenters suggested that the proposed approach would make it more challenging for ACOs to share in savings, and that may discourage program participation by ACOs. One commenter explained that the change from a quality multiplier on payment, to all-or-nothing savings, adds another significant dimension of risk to the program for ACOs that depend on shared savings to operate. A few commenters expressed concern that the

proposed approach may limit participation by ACOs that depend on shared savings to support their participation in the Shared Savings Program, such as to cover ongoing operational costs and infrastructure costs. One commenter suggested that this dynamic could ultimately discourage participation by physician-led ACOs or lead to consolidation of physician-led ACOs with larger entities to manage the ACO, ultimately stifling innovation.

Several commenters expressed concern about an approach that makes the ACO's ability to share in savings an all-or-nothing proposition, particularly as CMS also proposed to increase the quality performance standard for ACOs. One commenter expressed concerns about the proposed approach, suggesting it places the entirety of an ACO's shared savings payment at risk if one measure is missed. This commenter explained that an all-or-nothing approach to determining an ACO's eligibility to share in savings, in combination with higher standards and volatile measures, would negatively impact their decision about continuing their participation in the Shared Savings Program, including whether to enter into a new participation agreement under the Shared Savings Program or take on increased downside risk, and their overall investment in the program.

One commenter supported raising the quality performance standard and allowing ACOs that meet that standard to receive full shared savings, provided that this change accompanies a smaller program measure set and the standard is assessed as an average of the measures. The commenter noted that it would not support a 40th percentile standard applied to each measure given its concerns about several of the measures.

Response: We agree with the comments suggesting that the proposed approach will simplify program calculations going forward. Under the proposed approach, an ACO is eligible to share in the maximum amount of savings if it meets the quality performance standard, and is ineligible to share in savings if it fails to meet the quality performance standard, thereby removing the variation in sharing rates based on the ACO's quality performance score.

We believe a number of factors mitigate commenters' concerns about the determination of shared savings based on the revised quality performance standard for the Shared Savings Program. As discussed elsewhere in section III.G.1 of this final rule, in response to commenters' concerns about the transition to the APP

for Shared Savings Program ACOs, we are finalizing our proposal with certain modifications, including to allow for continued use of the Web Interface as a reporting mechanism for PY 2021, and to allow for a more gradual phase-in of the quality performance standard. We believe this phase-in will give ACOs additional time to prepare to transition to the APP, and thereby to prepare to meet the new quality reporting requirements and quality performance standard, and in turn to meet the requirements for sharing in savings. Further, under the APP (as described in section III.G.1.c of this final rule), we will determine whether the ACO has met the quality performance standard based on the ACO's quality performance score as compared to the relevant percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, that comprises the quality performance standard for the applicable performance year. Therefore, an ACO that performs poorly on one or several measures under the APP may still have the opportunity to share in savings at the maximum sharing rate, if it meets the quality performance standard based on its performance across the remainder of the measure set.

Additionally, we note that while our final policy will require ACOs to meet a higher quality performance standard starting in PY 2023, ACOs that achieve the quality performance standard maximize their upside potential. In contrast, under the existing approach, which is designed to differentiate between higher and lower quality performers, it is rare for ACOs to achieve the maximum sharing rate based on quality performance under the program's pay for performance standards that phase-in after the ACO's first performance year in the Shared Savings Program. Under the existing approach, in an ACO's first performance year in the program, the ACO will receive a quality score of 100 percent, and therefore the maximum sharing rate based on quality performance, if it completely and accurately reports all quality measures. For subsequent performance years, under a pay for performance standard, we multiply an ACO's quality score (as a percentage) by the maximum sharing rate for the track in which the ACO participates to determine the ACO's final sharing rate based on quality performance. Thus, ACOs are effectively limited from maximizing their upside potential since their quality scores are typically below 100 percent. We believe that allowing ACOs to maximize their upside

potential year after year, as provided under the policies we are finalizing in this rule, could further facilitate ACOs' participation in the Shared Savings Program and their investments in accountable care activities to meet the program's goals.

We appreciate commenters' concerns that this revised methodology for measuring quality performance and rewarding ACOs with savings based on their quality performance could have the effect of limiting participation by certain types of ACOs. However, we believe commenters' concerns are mitigated by the aforementioned factors, including the gradual phase-in of the quality performance standard and the potential for ACOs to more consistently share savings at the highest sharing rates under the revised approach. We anticipate monitoring to determine if the revised quality performance standard and the approach of determining an ACO's eligibility to share in savings at the maximum sharing rate based on their ability to meet the quality performance standard, disproportionately disadvantage certain ACOs based on composition and experience in the Shared Savings Program, among other factors, and will consider whether any adjustments may be warranted. Any changes to the policies we are adopting in this final rule would be made through notice and comment rulemaking.

In response to commenters' preference that CMS retain an approach that continues to reward quality improvement over time, we note that under the APP, the MIPS quality improvement scoring methodology, as specified under § 414.1370(g)(1)(iv), will be used in determining an ACO's quality performance score. Under this approach, we will consider the improvement in an ACO's quality performance category achievement percent score from the previous performance period in the determination of whether the ACO has met the quality performance standard, and therefore whether the ACO is eligible for sharing savings at the maximum sharing rate. In comparison, the Shared Savings Program's current quality improvement reward as specified in § 425.502(e)(4) rewards ACOs that demonstrate quality improvement with a higher quality score, and therefore a potentially greater share of savings, but the amount of shared savings still would not exceed the maximum sharing rate. Accordingly, given that quality improvement will be factored into determining an ACO's quality performance score under the APP and ACOs that meet the quality

performance standard will be eligible to share in savings at the maximum sharing rate for their track, we do not believe it is necessary to provide any additional adjustment to shared savings for ACOs that demonstrate improved quality performance over time.

Further, at this time, we decline commenters' suggestions that we adopt an approach for rewarding higher quality performance, and quality improvement, similar to the approach specified under Medicare Advantage. We note that the focus of the proposed changes was on aligning the Shared Savings Program's quality performance standard with the APP under the Quality Payment Program (as previously described elsewhere in section III.G.1 of this final rule). Further, we believe the approach we are finalizing will be effective in rewarding ACOs that perform well on quality measures and improve quality performance over time. As we have previously described, ACOs that meet the revised quality performance standard, which phases-in a higher performance standard over time, are eligible to share in savings at the maximum sharing rate, and we will factor quality improvement into determining an ACO's quality performance score under the APP.

After considering the comments and the modifications that we are making to phase-in the new quality reporting requirements and quality performance standard under the APP, we are finalizing as proposed our approach to determining an ACO's eligibility for shared savings based on quality performance, for performance years beginning on or after January 1, 2021.

Comment: The few commenters that discussed the proposed approach to determining shared losses based on quality performance were generally supportive of the proposed approach. In particular, commenters expressed support for the proposed approach under which an ACO's shared losses are based on its quality performance such that an ACO with a higher quality score would owe lower shared losses. One commenter supported the proposed modifications to the shared loss calculations for Track 2 and the ENHANCED track, which would still allow an ACO's quality score to be taken into consideration as long as the loss rate stays within the minimum and maximum range, because they would simplify financial calculations.

Response: We are finalizing as proposed the modifications to the methodology for determining shared losses under Track 2 and the ENHANCED track for performance years beginning on or after January 1, 2021, to

account for the revisions to the quality performance standard discussed elsewhere in this section III.G.1 of this final rule.

We did not receive comments on the revisions we proposed to make to the regulations to specify the requirements that must be met for an ACO to qualify for a shared savings payment for performance years beginning on or after January 1, 2021. We are finalizing as proposed the revisions to §§ 425.604(c) (Track 1), 425.605(c) (BASIC track), 425.606(c) (Track 2), and 425.610(c) (ENHANCED track) to reflect these requirements. Specifically, to qualify for shared savings, an ACO must meet the minimum savings rate requirements established for the track/level, meet the quality performance standard established under the new provision at § 425.512 as described in section III.G.1.c. of this final rule, and otherwise maintain its eligibility to participate in the Shared Savings Program under part 425.

After considering the public comments we received, we are finalizing as proposed revisions to the provisions establishing the final sharing rate for all tracks. For performance years beginning on or after January 1, 2021, if an ACO that is otherwise eligible to share in savings meets the quality performance standard established under § 425.512, the ACO will share in savings at the maximum sharing rate according to the applicable financial model, up to the performance payment limit. If the ACO fails to meet the quality performance standard, the ACO will be ineligible to share in savings. These final policies are specified in revisions to the provisions governing Track 1 (§ 425.604(d)), the BASIC track (§ 425.605(d)(1)(i)(A) (Level A), (d)(1)(ii)(A) (Level B), (d)(1)(iii)(A) (Level C), (d)(1)(iv)(A) (Level D), (d)(1)(v)(A) (Level E)), Track 2 (§ 425.606(d)), and the ENHANCED track (§ 425.610(d)).

After considering the public comments we received, we are also finalizing our proposals for determining the shared loss rate under Track 2 and the ENHANCED track, for performance years beginning on or after January 1, 2021, through modifications to the regulations at §§ 425.606(f) and 425.610(f). Specifically, we will determine the shared loss rate as follows:

- *Step 1:* Calculate the quotient of the MIPS Quality performance category points earned divided by the total MIPS Quality performance category points available.
- *Step 2:* Calculate the product of the quotient described in step 1 and the

sharing rate for the relevant track, either 60 percent for Track 2 or 75 percent for the ENHANCED track.

- *Step 3:* Calculate the shared loss rate as 1 minus the product determined in step 2. Consistent with the existing structure of the financial models: Under Track 2, the shared loss rate may not exceed 60 percent, and may not be less than 40 percent; under the ENHANCED track, the shared loss rate may not exceed 75 percent, and may not be less than 40 percent. If the ACO fails to meet the quality performance standard, the shared loss rate will be 60 percent under Track 2 or 75 percent under the ENHANCED track.

We received no comments on our proposed technical and conforming changes to §§ 425.606(f) and 425.610(f), for clarity. We are finalizing these changes as proposed in order to specify the policy that would apply for purposes of determining the shared loss rate for Track 2 ACOs and ENHANCED track ACOs for performance years (or a performance period) beginning on or before January 1, 2020. We are also finalizing our proposed revision to § 425.606(f) to expressly state both the minimum and maximum shared loss rates for Track 2.

e. Compliance With the Quality Performance Standard

(1) Background

As discussed in more detail in section III.G.1.c. of the CY 2021 PFS proposed rule (85 FR 50234), the quality performance standard is the minimum performance level ACOs must achieve in order to share in any savings earned, avoid maximum shared losses under certain payment tracks, and avoid quality-related compliance actions. Section 1899(d)(4) of the Act authorizes the Secretary to terminate an agreement with an ACO that does not meet the established quality performance standards. Through earlier rulemaking we established an approach to enforce ACO compliance with the quality performance standards, as specified in the Shared Savings Program regulations at § 425.316 (see 76 FR 67951, 80 FR 32818 and 32819, 81 FR 80492 through 80494).

To identify ACOs that do not meet the established quality performance standards, we review the ACO's quality data submission. Under our current policies, as specified in § 425.316(c), if an ACO does not meet quality performance standards or fails to report on one or more quality measures, in addition to actions set forth at §§ 425.216 and 425.218, we will take the following actions:

- The ACO may be given a warning for the first time it fails to meet the minimum attainment level on at least 70 percent of the measures, as determined under § 425.502, in one or more domains and may be subject to a corrective action plan (CAP). CMS may forgo the issuance of the warning letter depending on the nature and severity of the noncompliance and instead subject the ACO to actions set forth at § 425.216 or immediately terminate the ACO's participation agreement under § 425.218.

- The ACO's compliance with the quality performance standards will be re-evaluated the following year. If the ACO continues to fail to meet the quality performance standards in the following year, the agreement will be terminated.

- An ACO will not qualify to share in savings in any year it fails to report accurately, completely, and timely on the quality performance measures.

Further, according to § 425.224(b), in evaluating the eligibility of a renewing ACO or re-entering ACO to enter a new participation agreement with CMS for participation in the Shared Savings Program, we consider the ACO's history of noncompliance with the program's quality performance standard. For evaluating ACOs that entered into a participation agreement for a 3-year period, we consider whether the ACO failed to meet the quality performance standard during 1 of the first 2 performance years of the previous agreement period. For evaluating ACOs that entered into a participation agreement for a period longer than 3 years, we consider whether the ACO failed to meet the quality performance standard for 2 consecutive performance years and was terminated as specified in § 425.316(c)(2), or whether the ACO failed to meet the quality performance standard for 2 or more performance years of the previous agreement period, regardless of whether the years were consecutive.

The terms "renewing ACO" and "re-entering ACO" are defined in the regulations at § 425.20. We define renewing ACO to mean an ACO that continues its participation in the program for a consecutive agreement period, without a break in participation, because it is either: (1) An ACO whose participation agreement expired and that immediately enters a new agreement period to continue its participation in the program; or (2) an ACO that terminated its current participation agreement under § 425.220 and immediately enters a new agreement period to continue its participation in the program. We define

re-entering ACO to mean an ACO that does not meet the definition of a renewing ACO and meets either of the following conditions: (1) Is the same legal entity as an ACO that previously participated in the program and is applying to participate in the program after a break in participation, because the ACO's participation agreement expired without having been renewed, or the ACO's participation agreement was terminated under § 425.218 or § 425.220; or (2) is a new legal entity that has never participated in the Shared Savings Program and is applying to participate in the program and more than 50 percent of its ACO participants were included on the ACO participant list under § 425.118, of the same ACO in any of the 5 most recent performance years prior to the agreement start date.

(2) Revisions

In the CY 2021 PFS proposed rule (85 FR 50237), we explained that we had revisited the provisions of § 425.316(c) on monitoring compliance with quality reporting and performance requirements in light of our proposed modifications to the quality performance standard. We proposed to modify the introductory text at § 425.316(c) to state that we will review an ACO's submission of quality measurement data to identify ACOs that are not meeting the applicable quality performance standard under § 425.500 or § 425.512. As proposed, we would retain the discretion to request additional documentation from an ACO, ACO participants, or ACO providers/suppliers. Further, we noted our belief that in conjunction with the proposed changes to the quality performance standard, it would be appropriate to strengthen our policies for compliance with the quality performance standard by broadening the conditions under which CMS may terminate an ACO's participation agreement when the ACO demonstrates a pattern of failure to meet the quality performance standard.

As currently structured, the regulation at § 425.316 does not specify what actions CMS will take when an ACO fails to meet the quality performance standard for multiple, nonconsecutive performance years, or 2 consecutive performance years that span 2 agreement periods (that is, the last performance year of an agreement period and the first performance year of the subsequent agreement period). Accordingly, we proposed a new approach that CMS would follow to monitor for and address an ACO's continued noncompliance with the applicable quality performance standard for performance years beginning on or after January 1, 2021. Noncompliance

with the quality performance standard during earlier performance years would continue to be subject to the rules set forth at § 425.316(c)(1) through (3), which we proposed would be consolidated at § 425.316(c)(1). For performance years beginning on or after January 1, 2021, we proposed that when CMS determines an ACO fails to meet the quality performance standard (as described in section III.G.1.c. of the proposed rule), CMS may take the actions prior to termination set forth at § 425.216, and may terminate the ACO's participation agreement according to § 425.218. In addition to the actions set forth at §§ 425.216 and 425.218, we proposed to adopt a specific approach that CMS would follow to monitor for and address an ACO's continued noncompliance with the quality performance standard.

We proposed that ACOs exhibiting a pattern of failure to meet the quality performance standard would be terminated from the program. Specifically, we proposed to terminate an ACO's participation agreement when the ACO fails to meet the quality performance standard for 2 consecutive performance years within an agreement period or fails to meet the quality performance standard for any 3 performance years within an agreement period, regardless of whether the years are in consecutive order. We also proposed that we would terminate the participation agreement of a renewing ACO or a re-entering ACO if the ACO fails to meet the quality performance standard for 2 consecutive performance years across 2 agreement periods, specifically the last performance year of the ACO's previous agreement period and the first performance year of the ACO's new agreement period. In addition, we proposed that we would terminate the participation agreement of a renewing ACO or a re-entering ACO if the ACO fails to meet the quality performance standard for the last performance year of the ACO's previous agreement period and this occurrence was either the second consecutive performance year of failed quality performance or the third nonconsecutive performance year of failed quality performance during the previous agreement period. We proposed to amend § 425.316(c)(2) to reflect this new approach.

We explained that the proposal to terminate an ACO if it fails to meet the quality performance standard for 2 consecutive performance years within an agreement period would be consistent with the current approach. However, we also proposed to terminate an ACO's participation agreement if the

ACO fails to meet the quality performance standard for any 3 performance years within an agreement period, regardless of whether these years are in consecutive order. In the December 2018 final rule (83 FR 67831), we extended participation agreements from 3-years to 5-years. ACOs participating under a 5-year agreement period may show a pattern of failure to meet the quality performance standard in performance years that are not consecutive. Therefore, we noted that we believe it is important to continue to monitor ACOs throughout their 5-year agreement period and if an ACO fails to meet the quality performance standard for 3 nonconsecutive performance years we proposed to terminate their participation agreement.

Additionally, we noted that we were concerned that a renewing ACO's quality performance results for the last performance year of the current agreement period would not be available for us to consider in reviewing the ACO's application to renew its agreement, as currently provided in § 425.224(b)(1)(ii)(A). We noted that we had a similar concern with respect to some re-entering ACOs (particularly, an ACO that notifies CMS of its decision to terminate its participation agreement and subsequently submits an application to re-enter the program for the next start date following the effective date of its termination). To prevent these ACOs from remaining in the program, despite a pattern of noncompliance with the quality performance standard, we proposed that if we determine that the last performance year of the ACO's previous agreement period was either the second consecutive performance year of failed quality performance or the third nonconsecutive performance year of failed quality performance during the prior agreement period, CMS would terminate the ACO's new participation agreement. For example, if an ACO failed to meet the quality performance standard in the first, third and fifth performance years of a 5-year agreement period, or failed to meet the quality performance standard in the fourth and fifth performance years of a 5-year agreement period, results for the fifth performance year would not be available until after the ACO has renewed and entered a new agreement period. We explained that, in both examples, we would anticipate determining during the first performance year of the ACO's new agreement period that the ACO had failed to meet the quality performance standard for the last performance year of

its previous agreement period. Therefore, under the proposal, CMS would terminate the ACO's new participation agreement during the first performance year of that agreement period.

Furthermore, we expressed concern that an ACO could have a pattern of failing to meet the quality performance standard for consecutive years spanning 2 agreement periods. Therefore, if a renewing or re-entering ACO fails to meet the quality performance standard for 2 consecutive performance years across 2 agreement periods (the last performance year of the ACO's previous agreement period and the first performance year of the ACO's new agreement period), we proposed to terminate the ACO's participation agreement. We noted that we anticipated that quality performance results for the ACO's first performance year of its new agreement period would be available during the second performance year of the ACO's new agreement period. Therefore, CMS would terminate the ACO's new participation agreement during the second performance year of the new agreement period.

We recognized there would be additional complexity in the application of these policies to a new ACO that is identified as a re-entering ACO because of its ACO participants' prior participation in another Shared Savings Program ACO. Under the proposed approach, we would apply to the re-entering ACO the other ACO's quality performance for previous years (prior to the start of the re-entering ACO's agreement period) and would terminate the re-entering ACO if the other ACO is determined to have failed to meet the quality performance standard in 2 consecutive performance years within an agreement period, or if the other ACO is determined to have failed to meet the quality performance standard for 3 performance years (in nonconsecutive order) within an agreement period. We acknowledged that under the proposed approach, this could occur in circumstances when the other ACO's most recent performance year of failed quality performance is determined after the start of the new, re-entering ACO's agreement period. Further, under the proposed approach, we would also consider whether the other ACO failed to meet the quality performance standard in the most recent performance year prior to the start of the new, re-entering ACO's agreement period, and whether the new, re-entering ACO also fails to meet the quality performance standard for its first performance year. Under our proposal,

because these 2 performance years of failed quality performance would be consecutive, we would terminate the participation of the new, re-entering ACO.

We noted that because a significant percentage of the ACO participants in the new, re-entering ACO were previously participating in this other ACO, we believed it would be appropriate to hold the new, re-entering ACO accountable for the quality performance of the other ACO. According to the definition of re-entering ACO, more than 50 percent of the entity's ACO participants must have participated together in the same ACO within a 5-performance year lookback period. As a result, over half of the new, re-entering ACO's ACO participants can be considered to have contributed to the failed quality performance of this other ACO. We explained that if we were to disregard the recent failed quality performance of this other ACO, these ACO participants would be allowed to continue participation in the Shared Savings Program as part of the new, re-entering ACO, and potentially take advantage of program flexibilities, despite a pattern of noncompliance with the quality performance standard.

We proposed to implement these policies starting with performance year 2021 and subsequent years. We acknowledged that an ACO currently participating under a performance agreement spanning 5-years could fail the quality performance standard for a performance year starting in 2019 under § 425.502. The same ACO could then again fail the quality performance standard under the proposed new provision at § 425.512 in performance years 2021 and 2023. In this scenario, the ACO would have failed the quality performance standards for 3 nonconsecutive years under the same agreement period, but the ACO would not be terminated in this scenario because the proposed policies would apply starting with performance year 2021. However, we noted that if the ACO decides to apply as a renewing or re-entering ACO, we would review its history of noncompliance with the requirements of the Shared Savings Program as provided under § 425.224(b)(1) when determining whether to approve its application.

We also explained that under the current regulation at § 425.316(c)(3), an ACO will not qualify to share in savings in any year in which it fails to report accurately, completely, and timely on the quality performance measures. Consistent with the proposed revisions to the quality performance standard under the Shared Savings Program

discussed in section III.G.1.c. of the proposed rule, we proposed to specify in the proposed new provision at § 425.512 that, for performance years beginning on or after January 1, 2021, an ACO will not qualify to share in savings in any year it fails to meet the quality performance standard.

We noted that the termination of an ACO's participation agreement for failure to meet the quality performance standard under the proposed approach described in the proposed rule, would also make the ACO subject to the payment consequences of early termination as specified in § 425.221(b). Under § 425.221(b)(1)(ii), if the participation agreement is terminated at any time by CMS under § 425.218, the ACO is not eligible to receive shared savings for the performance year during which the termination becomes effective. Under § 425.221(b)(2)(ii)(B), an ACO participating under a two-sided model whose participation agreement is terminated by CMS under § 425.218 is liable for a pro-rated share of any shared losses determined for the performance year during which the termination becomes effective. These policies would apply whenever an ACO is terminated for non-compliance with the quality performance standard in accordance with § 425.316(c).

We proposed to revise § 425.316(c) to incorporate the proposed approach for monitoring ACO compliance with the quality performance standard for performance years beginning on or after January 1, 2021. We also proposed to make other technical and conforming changes to the regulations at § 425.316(c). In particular, we proposed to amend the existing provisions for monitoring ACO compliance with the quality performance standards to specify that those provisions are applicable to performance years (or a performance period) beginning on or before January 1, 2020.

We noted that we also continue to believe in the importance of considering an ACO's history of noncompliance with the quality performance standard in evaluating the eligibility of a renewing ACO or a re-entering ACO to enter a new agreement period under the Shared Savings Program. In light of our proposed changes to § 425.316(c), we proposed to make conforming changes to § 425.224(b)(1)(ii)(A), which authorizes CMS to approve or deny a renewing ACO's or re-entering ACO's application to participate in the Shared Savings Program based on an evaluation of the ACO's history of non-compliance with the quality performance standard. Specifically, we proposed to revise § 425.224(b)(1)(ii)(A) to state that as part

of its evaluation of a renewing or re-entering ACO's history of noncompliance with the requirements of the Shared Savings Program, we will evaluate whether the ACO demonstrated a pattern of failure to meet the quality performance standards or met any of the criteria for termination under § 425.316(c)(1)(ii) or (c)(2)(ii).

We received public comments on the proposals concerning monitoring compliance with the quality performance standard. The following is a summary of the comments we received and our responses.

Comment: We received a few comments supporting our proposals to modify our policies for monitoring ACOs for compliance with the quality performance standard. Two commenters suggested we modify the proposed approach to provide that an ACO's participation agreement will be terminated after 3 consecutive years of failing to meet the quality performance standard. One commenter noted this approach would align with policies used in Medicare Advantage where plans' contracts may be terminated after three consecutive years of failing to achieve an overall quality rating of at least 3 stars. One of the commenters further suggested we terminate an ACO's participation agreement for failure to meet the quality performance standard after 4 non-consecutive years of failing to meet the quality performance standard.

Response: We appreciate the additional suggestions for modifying our approach for monitoring and enforcing compliance with the quality performance standard. Since the beginning of the Shared Savings Program, we have terminated 3 ACOs for failure to report quality for two consecutive years. We decline to modify the proposed changes to our policies for monitoring compliance with the quality performance standard to provide for termination only after 3 consecutive years or 4 non-consecutive years of noncompliance. We believe the policies as proposed, under which an ACO will be terminated following 2 consecutive years or 3 non-consecutive years of noncompliance, provide ACOs enough time to implement processes and procedures that will allow them to meet the quality performance standard. If an ACO repeatedly fails to meet the quality performance standard the ACO should not continue participating in the Shared Savings Program. The Shared Savings Program seeks to both improve quality performance and reward high quality, while reducing the growth in Medicare spending. We believe these requirements for enforcing compliance

with the quality performance standard help to hold ACOs accountable for the quality of the care they furnish to their beneficiaries and further encourage ACOs to demonstrate consistently that they are providing high quality of care to their beneficiary populations year over year.

Comment: We received a few comments opposing our proposed policies for terminating an ACO's participation agreement for a pattern of failure to meet the quality performance standard. One commenter suggested we develop a compliance standard that includes educating ACOs and issuing corrective action plans. The commenter suggested that we should terminate an ACO's participation agreement only if the ACO's failure to meet the quality performance standard was due to "gross negligence."

Response: We appreciate the commenter's suggestions; however, we note that we already incorporate education and outreach activities and compliance activities into our management and operations of the Shared Savings Program. We encourage and support ACOs in sharing their best practices and lessons learned from their experiences participating in the Shared Savings Program. We have hosted in-person learning collaboratives where ACOs can meet one another and listen to case study presentations about their experiences. We have also hosted webinars where ACOs present case studies on providing value-based care, including sharing lessons learned and best practices in quality reporting. Recordings of these webinars and supporting materials remain available for ACOs participating in the Shared Savings Program to access. Additionally, as proposed, if the ACO fails to meet the quality performance standard, CMS may take one or more of the actions prior to termination specified in § 425.216, which may include requesting a corrective action plan from the ACO. Lastly, we disagree with the commenter's suggestion that CMS should not terminate an ACO's participation agreement unless the ACO's failure to meet the quality performance standard was due to "gross negligence." Section 1899(b)(3)(C) of the Act states that the Secretary shall establish quality performance standards to assess the quality of care furnished by ACOs and seek to improve the quality of care furnished by ACOs over time by specifying higher standards, new measures, or both. The gross negligence standard advocated by the commenter would set far too high a bar for enforcement of the quality performance requirements and thereby do little to

encourage improvement in quality of care over time. We believe it is important for ACOs to meet the quality performance standard and that ACOs that repeatedly fail to meet the quality performance standard should not be able to continue their participation in the program.

We did not receive comments concerning our proposal to make conforming changes to § 425.224(b)(1)(ii)(A). After considering the comments received, we are finalizing our proposed policies without modifications. We are revising § 425.316(c) to modify our approach for monitoring ACO compliance with the quality performance standard for performance years beginning on or after January 1, 2021. We are also making technical and conforming changes to amend the existing provisions on monitoring ACO compliance with the quality performance standards to specify that those provisions are applicable to performance years (or a performance period) beginning on or before January 1, 2020. Lastly, we are making conforming changes to § 425.224(b)(1)(ii)(A) to provide that as part of evaluating a renewing or re-entering ACO's application to participate in the Shared Savings Program, CMS will consider whether the ACO has demonstrated a pattern of failure to meet the quality performance standards or met any of the criteria for termination under § 425.316(c)(1)(ii) or (c)(2)(ii).

f. Updating the Process Used To Validate ACO Quality Data Reporting

In the CY 2017 PFS final rule, we finalized modifications to the quality measures validation audit process. These modifications changed the overall audit process from a 3-phased medical record review to an audit conducted in a single phase. Under our current process, if selected for an audit, an ACO must provide beneficiary medical records data to substantiate the quality data reported by the ACO. As part of the audit, CMS calculates an overall audit match rate, which is derived by dividing the total number of audited records that match the information reported in the CMS Web Interface by the total number of the medical records audited. For example: (1) If the ACO has an audit match rate of 90 percent or above it will pass the audit; (2) if the ACO has an audit match rate of less than 90 percent, but greater than 80 percent, the ACO may be required to submit a CAP under § 425.216 for CMS approval; (3) if the ACO has an audit match rate of less than 80 percent, absent unusual circumstances, we will adjust the ACO's

overall quality score proportional to the ACO's audit match rate, which may have implications for the ACO's financial reconciliation.

We stated in the CY 2021 PFS proposed rule (85 FR 50239) that under our proposal to align the quality reporting requirements under the Shared Savings Program with quality reporting under the APP, we believed it would be appropriate to also align with the MIPS Data Validation and Audit (DVA) process (§ 414.1390). Rather than continuing to validate ACO quality data reporting under the Shared Savings Program, we noted that we believed it would be more appropriate for MIPS to validate the data submitted by ACOs for the three measures in the APP, as ACOs will be able to select the submission method for these measures and the MIPS DVA is based on submission method. We also noted that we believed streamlining the approach to data validation and audit would minimize administrative burden associated with the audit for ACOs as they would only need to track to one validation process, and for ACOs in a track (or payment model within a track) that does not meet the definition of an Advanced APM, the results of the audit would be applicable for purposes of both the Shared Savings Program and MIPS.

We proposed to address the audit and validation of data used to determine the ACO's quality performance in a new provision we proposed to add to the Shared Savings Program regulations at § 425.510(c). Specifically, we proposed that CMS would retain the right to audit and validate the quality data reported by an ACO under § 425.510(b) according to § 414.1390.

We received public comments on the proposed updates to the process used to validate ACO quality data reporting. The following is a summary of the comments we received and our response.

Comment: We received comments that supported our proposal. One commenter indicated that the proposed approach would allow for the continued oversight of quality performance, while reducing administrative burden on ACOs as they ensure audit readiness.

Response: We are finalizing the updates to the process used to validate ACO quality data reporting and the conforming changes to § 425.510(c) as proposed. Specifically, we are finalizing that CMS retains the right to audit and validate quality data reported by an ACO via the APP according to the MIPS DVA process for performance years beginning on or after January 1, 2021. We believe that this updated process will reduce administrative burden on

ACOs by allowing them to track only one validation process that will be applicable for both the Shared Savings Program and MIPS. We note that in section III.G.1.e. of this final rule, we are finalizing our proposals related to ACOs' compliance with the quality performance standard, including the proposed approach to terminating ACOs that exhibit a pattern of failure to meet the quality performance standard.

g. Changes to the Extreme and Uncontrollable Circumstances Policy for Performance Year 2021 and Subsequent Performance Years

As discussed in section III.G.1.c. of the CY 2021 PFS proposed rule, we proposed to make changes to the quality performance standard for the Shared Savings Program for the performance year beginning on January 1, 2021, and subsequent performance years. We explained that we continue to believe it is appropriate to adjust the quality performance scores for ACOs affected by extreme and uncontrollable circumstances. Therefore, we proposed to update the extreme and uncontrollable circumstances policy under the Shared Savings Program consistent with the proposal to align the quality reporting requirements for the Shared Savings Program with the proposed APP. Specifically, for performance year (PY) 2021 and subsequent performance years, we proposed to set the minimum quality performance score for an ACO affected by an extreme and uncontrollable circumstance during the performance year, including the applicable quality data reporting period for the performance year, to equal the 40th percentile MIPS Quality performance category score. If the ACO is able to report quality data and meet the MIPS data completeness and case minimum requirements, we would use the higher of the ACO's MIPS Quality performance category score or the 40th percentile MIPS Quality performance category score. If an ACO is unable to report quality data and meet the MIPS Quality data completeness and case minimum requirements due to an extreme and uncontrollable circumstance, we would apply the 40th percentile MIPS Quality performance category score. We noted that we believed this approach would be appropriate as it aligns with the proposed threshold for meeting the quality performance standard allowing impacted ACOs to share in savings at their maximum sharing rate. We acknowledged that using the 40th percentile may not offer the same level of protection for ACOs incurring losses that would receive the higher of their

ACO quality score or the mean ACO score under the current policy. However, we noted that for ACOs in Track 2 and the ENHANCED track, under which shared losses are determined based in part on an ACO's quality performance, ACOs are also afforded relief from shared losses through the application of the extreme and uncontrollable circumstances policy under which shared losses are reduced based on the percentage of the year and percentage of assigned beneficiaries impacted by an extreme and uncontrollable circumstance.

In the CY 2021 PFS proposed rule (85 FR 50240), we explained that under the proposed revisions to the quality reporting requirements, we would no longer generate a CMS Web Interface quality reporting sample for ACOs because ACOs would no longer be reporting measures via the Web Interface; therefore, we proposed to determine the percentage of the ACO's performance year assigned beneficiary population that was affected by an extreme and uncontrollable circumstances based on the quarter four list of assigned beneficiaries, rather than the list of assigned beneficiaries used to generate the Web Interface quality reporting sample, which is currently used. We explained that using the quarter four list of assigned beneficiaries would be an appropriate alternative because the file is generated after the end of the fourth quarter and would offer a more complete representation of the population of assigned beneficiaries that reside in an area that is impacted by an extreme and uncontrollable circumstance during the performance year. Accordingly, we solicited comment on our proposed revisions to the extreme and uncontrollable circumstances policy for performance year 2021 and subsequent performance years.

We proposed to specify our proposed policies for addressing the effect of extreme and uncontrollable circumstances on ACO quality performance for performance year 2021 and subsequent performance years in the proposed new provision at § 425.512. In addition, we proposed to include policies that parallel the existing policies, as specified in § 425.502(f), for determining when an extreme and uncontrollable circumstance has occurred and identifying affected ACOs. In particular, we proposed to include a provision, similar to the current provision at § 425.502(f)(1), to establish our policies for determining whether an ACO has been affected by an extreme and uncontrollable circumstance. We also

proposed to include a provision, similar to the provision at § 425.502(f)(2), to establish the policies that would apply for calculating an affected ACO's quality performance score. Similar to the existing provision at § 425.502(f)(3), we proposed to specify that we would apply determinations made under the Quality Payment Program with respect to whether an extreme and uncontrollable circumstance has occurred, and the affected areas. Consistent with the existing policy under § 425.502(f)(4), this new provision would also specify that we have sole discretion to determine the time period during which an extreme and uncontrollable circumstance occurred, the percentage of the ACO's assigned beneficiaries residing in the affected areas, and the location of the ACO legal entity.

We received public comments on the proposed changes to the extreme and uncontrollable circumstances policy for PY 2021 and subsequent performance years. The following is a summary of the comments we received and our response.

Comment: Several commenters supported our proposal to set the minimum quality performance score for an ACO affected by an extreme and uncontrollable circumstance during the performance year, including the applicable quality data reporting period for the performance year, to equal the 40th percentile MIPS Quality performance category score in performance year 2021. Two commenters did not support the proposed changes to the extreme and uncontrollable policy for performance year 2021. One commenter explained that ACO participants tend to have higher MIPS Quality performance category scores than non-ACO participants; therefore, setting the minimum quality performance score for an ACO affected by an extreme and uncontrollable circumstance to equal the 40th percentile MIPS Quality performance would be lower than what the ACO may have earned. The other commenter stated that our proposal would effectively lower the protections for impacted ACOs and comes at a particularly tumultuous time due to the PHE for COVID-19. The commenter noted that they would support a similar policy if CMS maintained a baseline level of protection, such as the affected ACO's mean quality performance score, because this would maintain current levels of protection, which is particularly critical in the midst of the PHE for COVID-19, while also incentivizing ACOs to report data to improve their quality scores.

Several commenters encouraged CMS to apply the alternative extreme and uncontrollable circumstances policy discussed in the CY 2021 PFS proposed rule for performance year 2020 to performance year 2021. These commenters cited their concerns that the effects of the PHE for COVID-19 would extend into 2021 and urged CMS to extend this alternative policy to performance year 2021.

Other commenters urged us to refrain from making further changes to the extreme and uncontrollable circumstances policy for other performance years at this time, given that all ACOs are currently subject to the existing policy due to the PHE for COVID-19. These commenters explained that numerous changes to the extreme and uncontrollable circumstances policy were made in performance years 2019 and 2020, including additional modifications due to the PHE for COVID-19, and therefore CMS should refrain from making further changes to the policy at this time. Commenters noted that abrupt changes in policy, like changing the reporting requirements during the PHE for COVID-19, have been difficult for healthcare providers to adjust to and that these policy changes should take place only after the end of the PHE for COVID-19, once the totality of information and learnings can be assessed. The commenters suggested that we allow more time to examine the impacts of the PHE for COVID-19 and gather further stakeholder input before proceeding with any changes to the policy for performance year 2021 and subsequent years.

Response: We acknowledge that we have made multiple changes to the extreme and uncontrollable circumstances policy over the past few years in order to provide relief to ACOs impacted by extreme and uncontrollable circumstances. We also agree with the commenter that ACOs typically have higher MIPS Quality performance category scores than non-ACO MIPS participants, based on their performance on the measures reported via the CMS Web Interface and the CAHPS for ACOs; however, given that the APP measure set is smaller and includes a combination of eQMs/CQM MIPS measures, CAHPS for MIPS and 2 claims-based measures, we have no comparisons to determine how ACOs will perform in relation to non-ACO groups under the APP. Accordingly, we believe setting the minimum quality performance score for an ACO affected by an extreme and uncontrollable circumstance during the performance year to equal the MIPS Quality

performance category score that will satisfy the quality performance standard is appropriate and aligns with the policies regarding the quality performance standard as discussed in section III.G.1.b.(1) of this final rule.

We note that as discussed in section III.G.1.c. of this final rule, we are finalizing a gradual phase-in of the increase in the level of quality performance standard that would be required for all ACOs to meet the Shared Savings Program quality performance standard to allow time for ACOs to gain experience. For performance years 2021 and 2022, the threshold for the quality performance standard will be set at a quality performance score equivalent to or above the 30th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, and for performance year 2023 and subsequent performance years, the threshold for the quality performance standard will be set at a quality score equivalent to or above the 40th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring. This gradual phase-in is designed to allow ACOs to gain experience under the new standard. We agree that the extreme and uncontrollable circumstances policy should offer an appropriate level of protection for ACOs that are impacted by an extreme and uncontrollable circumstance while still incentivizing quality reporting. We believe that aligning the extreme and uncontrollable circumstances policy with the gradual phase in of the quality performance standard will offer protection for ACOs, while still incentivizing reporting. Moreover, this policy enables ACOs impacted by an extreme and uncontrollable circumstance to share in savings at their maximum sharing rate. We acknowledge that this policy change will potentially affect ACOs in Track 2 and the ENHANCED track, for whom shared losses are determined based in part on an ACO's quality performance. These ACOs, however, will have relief from shared losses through the application of the extreme and uncontrollable circumstances policy under which shared losses are reduced based on the percentage of the year and percentage of assigned beneficiaries impacted by an extreme and uncontrollable circumstance.

Although several commenters encouraged CMS to apply the alternative extreme and uncontrollable circumstances policy we sought comment on in the CY 2021 PFS

proposed rule for performance year 2020 to performance year 2021, we do not believe applying the same policy we sought comment on for performance year 2020, as described in section III.I.2 of this final rule would be appropriate for performance year 2021. We do not believe assigning the higher of an ACO's 2019 or 2021 quality score to determine an ACO's quality performance score for performance year 2021 would be an effective way to mitigate the concerns related to the PHE for COVID-19 because there would be a mismatch in the datasets and the scoring methodologies between the 2 years. One score would be based on a one to 100 scale while the other would be based on a percentile range. As a result, the scores for the 2 years would not be comparable across years. However, in this final rule, we are lowering the threshold for the quality performance standard to the 30th percentile from the initially proposed 40th percentile for performance years 2021 and 2022, and we believe this change will help to alleviate and mitigate the impact of COVID-19.

We received no comments on our proposal to determine the percentage of the ACO's performance year assigned beneficiary population that was affected by an extreme and uncontrollable circumstances based on the quarter four list of assigned beneficiaries.

For these reasons, we are finalizing our proposed changes to the extreme and uncontrollable circumstances policy for performance year 2021 and subsequent performance years with modifications and conforming changes as follows:

For PY 2021 and PY 2022, consistent with the modifications to the quality performance standard described in section III.G.1.b.(1). of this final rule, the minimum quality performance score for an ACO affected by an extreme and uncontrollable circumstance during the performance year, including the applicable quality data reporting period for the performance year, will be set equal to the 30th percentile MIPS Quality performance category score as determined under § 425.512(a)(3). If the ACO is able to report quality data and meets the MIPS data completeness and case minimum requirements, we will use the higher of the ACO's quality performance score or the 30th percentile MIPS Quality performance category score. If an ACO is unable to report quality data and meet the MIPS Quality data completeness and case minimum requirements due to an extreme and uncontrollable circumstance, we will apply the 30th percentile MIPS Quality performance category score.

For PY 2023, we will set the minimum quality performance score for an ACO affected by an extreme and uncontrollable circumstance during the performance year, including the applicable quality data reporting period for the performance year, to equal the 40th percentile MIPS Quality performance category score as determined under § 425.512(a)(4). If the ACO is able to report quality data and meets the MIPS data completeness and case minimum requirements, we will use the higher of the ACO's quality performance score or the 40th percentile MIPS Quality performance category score. If an ACO is unable to report quality data and meet the MIPS Quality data completeness and case minimum requirements due to an extreme and uncontrollable circumstance, we will apply the 40th percentile MIPS Quality performance category score.

For additional information, we refer readers to Table 39, in section III.G.1.b.(1) above, which shows the Shared Savings Program quality performance standard for PY 2021, PY 2022, and PY 2023.

We are finalizing our proposal to determine the percentage of the ACO's performance year assigned beneficiary population that was affected by an extreme and uncontrollable circumstances based on the quarter four list of assigned beneficiaries as proposed. We are also finalizing our proposal to specify the policies for addressing the effect of extreme and uncontrollable circumstances on ACO quality performance for performance year 2021 and subsequent performance years with the modifications and conforming changes described previously, in the new provision at § 425.512(b).

In the CY 2021 PFS proposed rule (85 FR 50240 and 50241), we also solicited comment on a potential alternative extreme and uncontrollable circumstances policy for PY 2022 and subsequent years that would continue to incentivize reporting but also acknowledge the challenges presented by extreme and uncontrollable circumstances. We explained that we were considering creating an extreme and uncontrollable circumstances methodology that would adjust the amount of shared savings determined for affected ACOs that complete quality reporting but do not meet the quality performance standard or that are unable to complete quality reporting. This methodology would be similar to the methodology currently used to adjust for extreme and uncontrollable circumstances when calculating the amount of shared losses for impacted

ACOs. Under this alternative approach, instead of determining that ACOs are affected by an extreme and uncontrollable circumstances if 20 percent of their beneficiaries or their legal entity are located in an area impacted by an extreme and uncontrollable circumstance and determining shared savings using the higher of the ACO's own quality score and the mean ACO quality score, we would determine shared savings for an affected ACO by multiplying the maximum possible shared savings the ACO would be eligible to receive based on its financial performance and track (or payment model within a track) by the percentage of the total months in the performance year affected by an extreme and uncontrollable circumstance, and the percentage of the ACO's assigned beneficiaries who reside in an area affected by an extreme and uncontrollable circumstance.

If an ACO impacted by an extreme and uncontrollable circumstance does not report quality or reports quality, but does not meet the quality performance standard of a quality performance score equivalent to a MIPS Quality performance category score at or above the 40th percentile and owes shared losses, we noted that the existing extreme and uncontrollable circumstances methodology that applies when calculating the amount of shared losses would help to mitigate those losses.

We received public comments on this potential alternative extreme and uncontrollable circumstances policy for PY 2022 and subsequent years. The following is a summary of the comments we received and our responses.

Comment: We received two comments in support of the potential alternative extreme and uncontrollable circumstances policy for performance year 2022 and subsequent years. One commenter noted that the proposed methodology to adjust the amount of shared savings determined for affected ACOs that complete quality reporting but do not meet the quality performance standard or that are unable to complete quality reporting would provide affected ACOs with flexibility in reporting. The commenter emphasized that this would help ACOs continue participating in the Shared Savings Program.

Several other commenters stated that they did not support CMS making additional changes to the extreme and uncontrollable circumstances policy at this time. These commenters urged CMS to refrain from making any significant changes to the extreme and uncontrollable policy at this time and to continue to assess the impact of the PHE

for COVID-19 before making any further changes to the established policy.

Response: As we plan for future updates and changes to the extreme and uncontrollable circumstances policy for performance year 2022 and subsequent years, we will consider this feedback in the development of our proposals.

h. Technical Changes To Incorporate References To Revised Quality Performance Standard

In section III.G.1.h of the CY 2021 PFS proposed rule (85 FR 50241), we proposed to make certain technical, conforming changes to provisions of the Shared Savings Program regulations to reflect the proposal to add new sections of the regulations at § 425.510 on the application of the APP to Shared Savings Program ACOs for performance years beginning on or after January 1, 2021, and § 425.512 on determining the ACO quality performance standard for performance years beginning on or after January 1, 2021. We did not receive comments directly addressing our proposed technical changes to incorporate references to the proposed new regulations. In this section, we specify the technical changes we are finalizing either as proposed, or with additional revisions to account for the modifications we are making to phase in the new quality performance standard for performance years beginning on or after January 1, 2021, as discussed elsewhere in section III.G.1 of this final rule.

- Under subpart A, which specifies general provisions governing the Shared Savings Program:

- ++ In § 425.100(b), the general description of ACOs that are eligible to receive payments for shared savings under the program, we are finalizing our proposed revisions for clarity and to add a reference to § 425.512. In the description of the quality performance standard that must be met for the ACO to be receive payment for shared savings, we are finalizing our proposal to specify that the quality performance standards established under § 425.500 are applicable for performance years (or a performance period) beginning on or before January 1, 2020, and that the quality performance standard under § 425.512 is applicable for performance years beginning on or after January 1, 2021.

- ++ In § 425.112(b)(2)(i), the provision specifying the ACO must have processes to promote patient engagement including to address compliance with patient experience of care survey requirements, we are finalizing our proposal to add a reference to § 425.510.

- Under subpart C, which governs application procedures and the participation agreement, we are finalizing our proposed addition of a reference to § 425.510 in the provision at § 425.200(d) specifying that ACOs must submit measures in the form and manner required by CMS.

- Under subpart D, which specifies program requirements and beneficiary protections, we are finalizing our proposed addition of a reference to § 425.510 in § 425.302(a)(1) specifying requirements for data submission and certification.

- Under subpart G, which specifies the program's financial models for determining shared savings and shared losses (as applicable), we proposed to revise the description of program requirements that phase-in over multiple agreement periods in § 425.600(f)(4). We are finalizing our proposal to revise this provision with modifications to account for the phase-in of the revised quality performance standard that we describe in section III.G.1.b and section III.G.1.c of this final rule with modifications. Specifically, we are revising this provision to account for the approach we are finalizing under § 425.512(a), which differentiates the quality performance standard applicable to ACOs in the first performance year of their first agreement period from the standard that is applicable to ACOs in subsequent years. This aspect of the phase-in of the quality performance standard applies to ACOs entering their first agreement period in the Shared Savings Program beginning on January 1, 2022, and in subsequent years, consistent with CMS' decision to forgo an application cycle for a January 1, 2021 agreement start date in the Shared Savings Program. Therefore, we are finalizing revisions to § 425.600(f)(4)(i) to add a reference to the quality performance standard as described in § 425.512(a), which will be applicable for the performance year starting on January 1, 2021, and subsequent performance years.

- Under subpart I, which governs the reconsideration review process, we are finalizing our proposed addition of references to § 425.510, § 425.512, or both to § 425.800(a)(1), (2), and (6).

2. Revisions to the Definition of Primary Care Services Used in Shared Savings Program Beneficiary Assignment

a. Healthcare Common Procedure Coding System (HCPCS) and Current Procedural Terminology (CPT) Codes Used in Assignment

(1) Background

Section 1899(c)(1) of the Act, as amended by the 21st Century Cures Act and the Bipartisan Budget Act of 2018, provides that for performance years beginning on or after January 1, 2019, the Secretary shall assign beneficiaries to an ACO based on their utilization of primary care services provided by a physician who is an ACO professional and all services furnished by Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs). However, the statute does not specify which kinds of services may be considered primary care services for purposes of beneficiary assignment.

In the November 2011 final rule (76 FR 67853), we established the initial list of services, identified by CPT and HCPCS codes, that we considered to be primary care services. In that final rule, we indicated that we intended to monitor CPT and HCPCS codes and would consider making changes to the definition of primary care services to add or delete codes used to identify primary care services, if there were sufficient evidence that revisions were warranted. We have updated the list of primary care service codes in subsequent rulemaking to reflect additions or modifications to the codes that have been recognized for payment under the Medicare PFS and to incorporate other changes to the definition of primary care services for purposes of the Shared Savings Program.

In the June 2015 final rule (80 FR 32746 through 32748), we expanded the definition of primary care services to include two transitional care management (TCM) codes (CPT codes 99495 and 99496), and one chronic care management (CCM) code (CPT 99490). As discussed in the final rule, the TCM codes were established to pay a patient's physician or practitioner to coordinate the patient's care in the 30 days following a hospital or SNF stay. Including these codes in the definition of primary care services reflects our belief that the work of community physicians and practitioners in managing a patient's care following discharge from a hospital or nursing facility (NF) to ensure better continuity of care for these patients and help

reduce avoidable readmissions is a key aspect of primary care.

In the CY 2016 PFS final rule (80 FR 71270 through 71273), we revised the definition of primary care services to exclude services billed under CPT codes 99304 through 99318, containing the place of service 31 modifier specifying that the service was furnished in a SNF. We also revised the definition of primary care services to include claims submitted by Electing Teaching Amendment (ETA) hospitals.

In the CY 2018 PFS final rule, we revised the definition of primary care services to include three additional CCM service codes, 99487, 99489, and G0506, and four behavioral health integration (BHI) service codes, G0502, G0503, G0504 and G0507 (82 FR 53212 and 53213). We further revised the definition of primary care services in the November 2018 final rule. In the November 2018 final rule, we added new codes to the definition of primary care services (CPT codes 99497, 99498, 96160, 96161, 99354, and 99355, and HCPCS codes G0444, G0442, and G0443), and revised how we determine whether services identified by CPT codes 99304 through 99318 were furnished in a SNF (83 FR 59964 through 59968).

For performance years beginning on January 1, 2019, and subsequent performance years, we defined primary care services in § 425.400(c)(1)(iv) for purposes of assigning beneficiaries to ACOs under § 425.402 as the set of services identified by the following HCPCS/CPT codes:

CPT codes:

(1) 99201 through 99215 (codes for office or other outpatient visit for the E/M of a patient).

(2) 99304 through 99318 (codes for professional services furnished in a NF; services identified by these codes furnished in a SNF are excluded).

(3) 99319 through 99340 (codes for patient domiciliary, rest home, or custodial care visit).

(4) 99341 through 99350 (codes for E/M services furnished in a patients' home for claims identified by place of service modifier 12).

(5) 99487, 99489 and 99490 (codes for chronic care management).

(6) 99495 and 99496 (codes for transitional care management services).

(7) 99497 and 99498 (codes for advance care planning).

(8) 96160 and 96161 (codes for administration of health risk assessment).

(9) 99354 and 99355 (add-on codes, for prolonged E/M or psychotherapy services beyond the typical service time of the primary procedure; when the base

code is also a primary care service code).

(10) 99484, 99492, 99493 and 99494 (codes for behavioral health integration services).

HCPCS codes:

(1) G0402 (the code for the Welcome to Medicare visit).

(2) G0438 and G0439 (codes for the annual wellness visits).

(3) G0463 (for services furnished in ETA hospitals).

(4) G0506 (code for chronic care management).

(5) G0444 (codes for annual depression screening service).

(6) G0442 (code for alcohol misuse screening service).

(7) G0443 (code for alcohol misuse counseling service).

In the May 8th COVID-19 IFC (85 FR 27582 through 27586), we revised the regulations to add § 425.400(c)(2), specifying the definition of primary care services for purposes of beneficiary assignment for the performance year starting on January 1, 2020, and for any subsequent performance year that starts during the PHE for COVID-19 defined in § 400.200, to include the foregoing codes specified in § 425.400(c)(1)(iv), as well as specified codes for remote evaluations, virtual check-ins, e-visits, and telephone E/M services. In section III.G.5.e of this final rule, we discuss the final policies regarding the definition of primary care services during the PHE for COVID-19.

(2) Revisions

Based on feedback from ACOs and our further review of the HCPCS and CPT codes currently recognized for payment under the PFS, we discussed in the CY 2021 PFS proposed rule (85 FR 50242 through 50248) our belief that it would be appropriate to amend the definition of primary care services used in the Shared Savings Program assignment methodology to include certain additional codes and make other technical changes to the definition of primary care services, for use in determining beneficiary assignment for the performance year starting on January 1, 2021, and subsequent performance years.

We proposed to revise the definition of primary care services in the Shared Savings Program regulations to include the following additions: (1) Online digital E/M CPT codes 99421, 99422, and 99423; (2) assessment of and care planning for patients with cognitive impairment CPT code 99483; (3) chronic care management code CPT code 99491; (4) non-complex chronic care management HCPCS code G2058 and its proposed replacement CPT code, if

finalized through the CY 2021 PFS rulemaking; (5) principal care management HCPCS codes G2064 and G2065; and (6) psychiatric collaborative care model HCPCS code GC011, if finalized through the CY 2021 PFS rulemaking.

The following provides additional information about the CPT and HCPCS codes that we proposed to add to the definition of primary care services used in assignment:

- *Online Digital Evaluation and Management Services (CPT codes 99421, 99422, and 99423):* In the CY 2020 PFS final rule (84 FR 62797), we finalized payment for new online digital assessment services, also referred to as "E-Visits," beginning in CY 2020 for practitioners billing under the PFS. These services are non-face-to-face, patient-initiated communications using online patient portals. These digital assessment services are for established patients who require a clinical decision that otherwise typically would have been provided in the office. Practitioners who may independently bill Medicare for E/M services (for instance, physicians and NPs) can bill the following codes:

++ 99421 (*Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 5–10 minutes.*)

++ 99422 (*Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 11–20 minutes.*)

++ 99423 (*Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 21 or more minutes.*)

In the May 8th COVID-19 IFC (85 FR 27583), we stated that we believe it is appropriate to include these CPT and HCPCS codes in the definition of primary care services used for assignment for PY 2020 and any subsequent performance year that starts during the PHE for COVID-19 because the services represented by these codes are being used in place of similar E/M services, the codes for which are already included in the list of codes used for assignment. We also explained our belief that it is important to include these services in our assignment methodology because we determine assignment to ACOs based upon where beneficiaries receive the plurality of their primary care services or whether they have designated an ACO professional as their primary clinician, responsible for their overall care, and hold ACOs accountable for the resulting

assigned beneficiary population. Subsequent to the publication of the May 8th COVID-19 IFC, we have determined, based on the justification above, that these codes should be included in the definition of primary care services under § 425.400(c) permanently for purposes of determining beneficiary assignment for the performance year starting on January 1, 2021, and subsequent performance years, and should not be linked to the duration of the PHE for COVID-19.

- *Assessment of and care planning for patients with cognitive impairment (CPT code 99483)*: In the CY 2017 PFS final rule (81 FR 80252–54), we finalized a G-code that would provide separate payment to recognize the work of a physician (or other appropriate billing practitioner) in assessing and creating a care plan for beneficiaries with cognitive impairment, such as from Alzheimer's disease or dementia, at any stage of impairment, G0505 (*Cognition and functional assessment using standardized instruments with development of recorded care plan for the patient with cognitive impairment, history obtained from patient and/or caregiver, in office or other outpatient setting or home or domiciliary or rest home*). In the CY 2018 PFS final rule (82 FR 53077), we deleted the interim HCPCS code G0505 and replaced it with CPT code 99483 (*Assessment of and care planning for a patient with cognitive impairment, requiring an independent historian, in the office or other outpatient, home or domiciliary or rest home, with all of the following required elements: Cognition-focused evaluation including a pertinent history and examination; Medical decision making of moderate or high complexity; Functional assessment (e.g., Basic and Instrumental Activities of Daily Living), including decision-making capacity; Use of standardized instruments for staging of dementia (e.g., Functional Assessment Staging Test [FAST], Clinical Dementia Rating [CDR]); Medication reconciliation and review for high-risk medications; Evaluation for neuropsychiatric and behavioral symptoms, including depression, including use of standardized screening instrument(s); Evaluation of safety (e.g., home), including motor vehicle operation; Identification of caregiver(s), caregiver knowledge, caregiver needs, social supports, and the willingness of caregiver to take on caregiving tasks; Development, updating or revision, or review of an Advance Care Plan; Creation of a written care plan, including initial plans to address any neuropsychiatric symptoms, neuro-*

cognitive symptoms, functional limitations, and referral to community resources as needed (e.g., rehabilitation services, adult day programs, support groups) shared with the patient and/or caregiver with initial education and support. Typically, 50 minutes are spent face-to-face with the patient and/or family caregiver).

CPT code 99483 includes the same elements included in the Level 5 E/M service CPT code 99215, such as, a comprehensive history, comprehensive exam, and high complexity medical decision-making. CPT code 99215 is included in the definition of primary care services used for assignment. Accordingly, we noted in the proposed rule that we believe it would be appropriate to also include CPT code 99483 in the definition of primary care services used for assignment under § 425.400(c) for the performance year starting on January 1, 2021, and subsequent performance years.

- *Chronic Care Management (CPT code 99491)*: In the CY 2019 PFS final rule (83 FR 59577), we finalized CPT code 99491 (*Chronic care management services, provided personally by a physician or other qualified healthcare professional, at least 30 minutes of physician or other qualified health care professional time, per calendar month, with the following required elements: Multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored*). This code requires two or more chronic conditions that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, and that a comprehensive care plan has been established, implemented, revised or monitored by the billing practitioner for such patient. In earlier rulemaking, we finalized the inclusion of CCM CPT codes 99487, 99489, and 99490 (codes for chronic care management) in the definition of primary care services for the Shared Savings Program. Refer to the June 2015 final rule (80 FR 32746 through 32748), and CY 2018 PFS final rule (82 FR 53212 through 53213). “Non-complex” CCM services (CPT codes 99490 and 99491), and “complex” CCM services (CPT codes 99487 and 99489) share a common set of service elements, including the following: (1) Initiating visit, (2) structured recording of patient information using certified electronic health record technology (EHR), (3) 24/7 access to physicians or

other qualified health care professionals or clinical staff and continuity of care, (4) comprehensive care management including systematic assessment of the patient's medical, functional, and psychosocial needs, (5) comprehensive care plan including a comprehensive care plan for all health issues with particular focus on the chronic conditions being managed, and (6) management of care transitions. They differ in the amount of clinical staff service time provided, the involvement and work of the billing practitioner, and the extent of care planning performed.⁶⁵ CPT code 99491 includes only time that is spent personally by the billing practitioner. Clinical staff time is not counted towards the required time threshold for reporting this code, whereas CPT codes 99487, 99489, and 99490 include time spent directly by the billing practitioner and by other clinical staff that counts toward the threshold clinical staff time required to be spent during a given month. Accordingly, CPT code 99491 cannot be reported for a beneficiary by a billing practitioner in the same month as CCM codes 99487, 99489, or 99490. Therefore, we noted in the proposed rule that we believe it would be appropriate to propose to include CCM CPT code 99491 in the definition of primary care services under § 425.400(c) for the performance year starting on January 1, 2021, and subsequent performance years, in order to capture these CCM services when attributing beneficiaries to an ACO.

- *Non-Complex CCM (HCPCS code G2058 and its proposed replacement CPT code)*: In the CY 2020 PFS final rule (84 FR 62690), we finalized the creation of HCPCS code G2058 (*Chronic care management services, each additional 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)*). (*Do not report G2058 for care management services of less than 20 minutes additional to the first 20 minutes of chronic care management services during a calendar month*). (*Use G2058 in conjunction with 99490*). (*Do not report 99490, G2058 in the same calendar month as 99487, 99489, 99491*)) for additional time spent beyond the initial 20 minutes included in the current coding for CCM services. As described in the CY 2021 PFS proposed rule, we proposed the

⁶⁵ Refer to CMS Medicare Learning Network, MLN Booklet “Chronic Care Management Services” (ICN MLN909188, July 2019); available at <https://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNProducts/Downloads/ChronicCareManagement.pdf>.

adoption of the permanent CPT code to replace HCPCS code G2058. As described in previous rulemaking, practitioners who choose to use G2058 can report the initial 20 minutes of non-complex CCM under CPT code 99490 and receive increased payment for their work under HCPCS code G2058 (84 FR 62690). Since CPT code 99490 is currently included in the Shared Savings Program's definition of primary care services under § 425.400(c)(1)(iv), we proposed to add G2058 to the definition, effective for performance years starting on or after January 1, 2021, because the services furnished during the additional time billed under HCPCS code G2058, would be expected to be substantially similar to the services furnished under CPT code 99490, and thus should also be considered for purposes of assignment under § 425.400 for the performance year starting on January 1, 2021, and subsequent performance years. In the CY 2021 PFS proposed rule, we stated that, if the proposal to adopt the permanent CPT code to replace HCPCS code G2058 is finalized, we would instead include that CPT code in the definition of primary care services used for purposes of assignment under § 425.400(c) for the performance year starting on January 1, 2021, and subsequent performance years. Elsewhere in this rule, we discuss the finalization of 99439 (*Chronic care management services, each additional 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month*) as the permanent CPT code to replace G2058.

- **Principal Care Management (HCPCS codes G2064 and G2065):** The CY 2020 PFS final rule (84 FR 62692 through 62697) introduced two new HCPCS codes (G2064 and G2065) for Principal Care Management (PCM) services. G2064 (*Comprehensive care management services for a single high-risk disease, e.g., principal care management, at least 30 minutes of physician or other qualified health care professional time per calendar month with the following elements: One complex chronic condition lasting at least 3 months, which is the focus of the care plan, the condition is of sufficient severity to place patient at risk of hospitalization or have been the cause of a recent hospitalization, the condition requires development or revision of disease-specific care plan, the condition requires frequent adjustments in the medication regimen, and/or the management of the condition is unusually complex due to*

comorbidities), for use by physicians and NPPs, and G2065 (*Comprehensive care management for a single high-risk disease services, e.g. principal care management, at least 30 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month with the following elements: One complex chronic condition lasting at least 3 months, which is the focus of the care plan, the condition is of sufficient severity to place patient at risk of hospitalization or have been cause of a recent hospitalization, the condition requires development or revision of disease-specific care plan, the condition requires frequent adjustments in the medication regimen, and/or the management of the condition is unusually complex due to comorbidities*), for use by clinical staff.

As discussed in the proposed rule, we expect that most services billed under these codes will be billed by specialists who are focused on managing patients with a single complex chronic condition requiring substantial care management. HCPCS code G2064 would be reported when, during the calendar month, at least 30 minutes of physician or other qualified health care professional time is spent on comprehensive care management for a single high-risk disease or complex chronic condition. HCPCS code G2065 would be reported when, during the calendar month, at least 30 minutes of clinical staff time is spent on comprehensive management for a single high-risk disease or complex chronic condition. Comprehensive care management codes require patients to have two or more chronic conditions and are primarily billed by practitioners who are managing a patient's total care over a month, including primary care practitioners and some specialists, such as cardiologists or nephrologists. By contrast, PCM services involve care management services for one serious chronic condition, typically expected to last between 3 months and a year, or until the death of the patient, that may have led to a recent hospitalization, and/or places the patient at significant risk of death, acute exacerbation/decompensation, or functional decline. Specifically, we stated in the CY 2020 PFS final rule (84 FR 62693 through 62697) that we agree that the relativity between CCM CPT codes 99490 and 99491 should be preserved in PCM HCPCS codes G2064 and G2065 and crosswalked the RVUs for G2064 and G2065 to 99491 and 99490, respectively. Due to the similarity between the description of the PCM and CCM services, both of which involve non-

face-to-face care management services, we finalized that the full CCM scope of service requirements apply to PCM, including documenting the patient's verbal consent in the medical record. CCM services billed under code 99490 are currently included in the Shared Savings Program's definition of primary care services under § 425.400(c)(1)(iv), and as discussed previously, we proposed to include CCM services billed under code 99491 for performance years starting on or after January 1, 2021; therefore, for the foregoing reasons, we also proposed to add G2064 and G2065 to the definition of primary care services for the performance year starting on January 1, 2021, and subsequent performance years.

- **Psychiatric collaborative care model HCPCS code GCOL1:** In the CY 2017 PFS final rule (81 FR 80230–36), we established G-codes used to bill for monthly services furnished using the Psychiatric Collaborative Care Model (CoCM), an evidence-based approach to behavioral health integration that enhances “usual” primary care by adding care management support and regular psychiatric inter-specialty consultation. These G-codes were replaced by CPT codes 99484, 99492, 99493, and 99494, which we established for payment under the PFS in the CY 2018 PFS final rule (82 FR 53077 and 53078).

As discussed in the proposed rule, we proposed to add a new HCPCS code GCOL1 (*Initial or subsequent psychiatric collaborative care management, first 30 minutes in a month of behavioral health care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified health care professional*) in response to stakeholders who have requested additional coding to capture shorter increments of time spent, for example, when a patient is seen for services, but is then hospitalized or referred for specialized care, and the number of minutes required to bill for services using the current coding is not met. Specifically, we proposed to establish a G-code to describe 30 minutes of behavioral health care manager time. This code would describe one-half of the time described by the existing code that describes subsequent months of CoCM services, CPT code 99493 (*Subsequent psychiatric collaborative care management, first 60 minutes in a subsequent month of behavioral health care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified*

health care professional, with the following required elements:

- Tracking patient follow-up and progress using the registry, with appropriate documentation; participation in weekly caseload consultation with the psychiatric consultant;
- Ongoing collaboration with and coordination of the patient's mental health care with the treating physician or other qualified health care professional and any other treating mental health providers;
- Additional review of progress and recommendations for changes in treatment, as indicated, including medications, based on recommendations provided by the psychiatric consultant;
- Provision of brief interventions using evidence-based techniques such as behavioral activation, motivational interviewing, and other focused treatment strategies;
- Monitoring of patient outcomes using validated rating scales; and
- Relapse prevention planning with patients as they achieve remission of symptoms and/or other treatment goals and are prepared for discharge from active treatment).

Because CPT code 99493 is currently included in the Shared Savings Program's definition of primary care services under § 425.400(c)(iv), we believe it is appropriate to add GCOL1 to the definition since the services furnished under the proposed new code would be expected to be substantially similar to the services furnished under CPT code 99493. Accordingly, contingent upon its finalization, we proposed to add HCPCS code GCOL1 to the definition of primary care services for purposes of assignment under § 425.400 for the performance year starting on January 1, 2021, and subsequent performance years. HCPCS code GCOL1 is being finalized as HCPCS code G2214 (*Initial or subsequent psychiatric collaborative care management, first 30 minutes in a month of behavioral health care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified health care professional*), as discussed elsewhere in this final rule.

In the May 8th COVID-19 IFC (85 FR 27583), we revised the definition of primary care services used in the Shared Savings Program assignment methodology for the performance year starting on January 1, 2020, and for any subsequent performance year that starts during the PHE for COVID-19, as defined in § 400.200, to include the following additions: (1) HCPCS code

G2010 (*remote evaluation of patient video/images*); (2) HCPCS code G2012 (*virtual check-in*); and (3) CPT codes 99441, 99442, and 99443 (*telephone evaluation and management services*).

We considered adding HCPCS codes G2010 (*Remote evaluation of recorded video and/or images submitted by an established patient (e.g., store and forward), including interpretation with follow-up with the patient within 24 business hours, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment*) and G2012 (*Brief communication technology-based service, e.g. virtual check-in, by a physician or other qualified health care professional who can report E/M services, provided to an established patient, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5–10 minutes of medical discussion*) to the definition of primary care services for purposes of assignment under § 425.400 for the performance year starting on January 1, 2021, and subsequent performance years; however, while we recognized the importance of the flexibility these HCPCS codes provide during the PHE for COVID-19, we explained in the proposed rule that we do not believe they should be added to definition of primary care services for purposes of assignment under § 425.400 on a permanent basis. In the context of the PHE for COVID-19, when brief communications with practitioners and other non-face-to-face services could mitigate the need for an in-person visit that could represent an exposure risk for vulnerable patients, healthcare providers, and individuals in the community, we concluded that it was appropriate to include HCPCS codes G2010 and G2012 in the definition of primary care services used in assignment. However, outside the context of the PHE for COVID-19, we expect that these monitoring/check-in services for established patients will no longer replace primary care services because these separately billable brief communication-technology based services describe a check-in directly with the billing practitioner to assess whether an office visit is needed. When the PHE for COVID-19 ends, these services would likely be replaced by an in-person primary care visit on which assignment would be based.

We sought comment on this issue and on the alternative approach of permanently including HCPCS codes G2010 and G2012 in the definition of

primary care services used in assignment. We noted that we would consider the comments received in developing the policies for the final rule.

We noted that we did not consider including CPT codes 99441, 99442, and 99443 in the definition of primary care services at § 425.400(c) on a permanent basis. Telephone E/M services CPT codes 99441 (*Telephone evaluation and management service by a physician or other qualified health care professional who may report evaluation and management services provided to an established patient, parent, or guardian not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5–10 minutes of medical discussion.*); 99442 (*Telephone evaluation and management service by a physician or other qualified health care professional who may report evaluation and management services provided to an established patient, parent, or guardian not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 11–20 minutes of medical discussion.*); and 99443 (*Telephone evaluation and management service by a physician or other qualified health care professional who may report evaluation and management services provided to an established patient, parent, or guardian not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 21–30 minutes of medical discussion.*) are non-covered services when not provided during the PHE for COVID-19, as defined in § 400.200, and so could not be included in the definition of primary care services for purposes of assignment outside the context of the PHE.

We also proposed to modify the definition of primary care services for purposes of assignment in the Shared Savings Program regulations to exclude advance care planning CPT code 99497 and the add-on code 99498 when billed in an inpatient care setting, for use in determining beneficiary assignment for the performance year starting on January 1, 2021, and subsequent performance years. In the November 2018 final rule (83 FR 59964 through 59968), we finalized the inclusion of CPT code 99497 and the add-on code 99498 in the definition of primary care services. We did not propose any exceptions to place of service or provider type because there

are no facility setting limitations or provider specialty limitations on these codes.⁶⁶ In the CY 2021 PFS proposed rule (85 FR 50245), we explained that since adding these codes to the definition of primary care services we have received feedback from an ACO that, by not restricting place of service when using advance care planning codes in assignment, our methodology may inappropriately assign beneficiaries. Specifically, we described our concern that the inclusion of these CPT codes when the services are provided in an inpatient care setting may result in beneficiaries being assigned based on inpatient care rather than based on primary care by their regular healthcare providers. Based on an initial analysis using calendar year 2019 claims data, we observed the following frequencies for occurrence of place of service code 21, which identifies the place of service as an inpatient hospital, with CPT codes 99497 and 99498 in Part B claims: Over 13 percent of approximately 1.6 million Part B claims for CPT code 99497 had place of service code 21; over 48 percent of approximately 43,000 Part B claims for CPT code 99498 had place of service code 21. We explained that operationally we would exclude advanced care planning services claims billed under CPT codes 99497 and 99498 from use in the assignment methodology when there is an inpatient facility claim in our claims files with dates of service that overlap with the date of service for the professional service billed under CPT code 99497 or add-on code 99498. A similar operational approach is currently used to exclude certain codes for professional services furnished in a SNF pursuant to § 425.400(c)(1)(iv)(A)(2), as described in the proposed rule.

We also sought comment on an alternative method for determining operationally whether advance care planning services are provided in an inpatient care setting. Specifically, we sought comment on whether to exclude advance care planning services identified by CPT code 99497 or add-on code 99498, or both, reported on claims with place of service code 21, which identifies the place of service as an inpatient hospital.⁶⁷ We explained that

based on initial analysis, we had determined that this alternative approach would capture slightly fewer claims for advance care planning, compared to the proposed approach. We noted that we would consider any comments received on this alternative approach in developing our policies for the final rule.

We proposed to specify a revised definition of primary care services in a new provision of the Shared Savings Program regulations at § 425.400(c)(1)(v) to include the list of HCPCS and CPT codes specified in § 425.400(c)(1)(iv) with the proposed additional CPT and HCPCS codes, and reflecting the proposal to exclude advance care planning codes when provided in an inpatient setting in the new provision at § 425.400(c)(1)(v)(A)(12). We also proposed that the new provision in § 425.400(c)(1)(v) would reflect technical modifications to the previously finalized descriptions of the CPT and HCPCS codes for consistency and clarity, including grammatical updates and ordering the codes sequentially. We proposed the new provision at § 425.400(c)(1)(v) would be applicable for use in determining beneficiary assignment for the performance year starting on January 1, 2021, and subsequent performance years. Further, we proposed technical modifications to the introductory text in § 425.400(c)(1)(iv) to specify the applicability of this provision for determining beneficiary assignment for performance years (or a performance period) during 2019 and performance year 2020.

We sought comment on the proposed changes to the definition of primary care services used for assigning beneficiaries to Shared Savings Program ACOs for the performance year starting on January 1, 2021, and subsequent performance years. We also sought comments on any other existing HCPCS or CPT codes, and new HCPCS or CPT codes proposed in the CY 2021 PFS proposed rule, that we should consider adding to the definition of primary care services for purposes of assignment in future rulemaking.

We noted that, under § 425.212, an ACO is subject to all regulatory changes that become effective during the agreement period, with the exception of the following program areas, unless otherwise required by statute: (1) Eligibility requirements concerning the structure and governance of ACOs; and (2) calculation of sharing rate. As we have explained in earlier rulemaking, consistent with our authority under section 1899(d)(1)(B)(ii) of the Act to adjust the benchmark for beneficiary characteristics and other factors as the

Secretary determines appropriate, CMS adjusts an ACO's historical benchmark to account for any regulatory changes affecting assignment during the agreement period (80 FR 32730 through 32732). Accordingly, we stated in the proposed rule that, if we finalized any of the proposed changes to the definition of primary care services discussed in section III.G.2. of the CY 2021 PFS proposed rule for purposes of beneficiary assignment applicable for the performance year starting on January 1, 2021, and subsequent performance years, we would adjust ACOs' historical benchmarks to account for these changes. Although it has been our historical practice to make these adjustments, the regulations establishing our benchmarking methodology do not explicitly describe these adjustments. Accordingly as discussed in the CY 2021 PFS proposed rule, we proposed conforming revisions to the regulations in §§ 425.601(a)(9), 425.602(a)(8), and 425.603(c)(8), to specify that CMS will adjust the ACO's historical benchmark to reflect any changes to the beneficiary assignment methodology specified in part 425, subpart E during an ACO's agreement period including revisions to the definition of primary care services in § 425.400(c). Further, in light of the proposed changes, we proposed to make certain other technical changes to §§ 425.601, 425.602, and 425.603 for clarity and internal consistency.

We received public comments on the proposed revisions to HCPCS and CPT codes used for purposes of assignment in the Shared Savings Program regulations. The following is a summary of the comments we received and our responses.

Comment: Most commenters were generally supportive of our proposals regarding the expansion of the definition of primary care services for purposes of assignment in the Shared Savings Program regulations. Many comments indicated that the PHE for COVID-19 has led healthcare providers to expand their provision of services via telehealth, which has allowed beneficiaries to access to many services that otherwise might have been foregone due to the PHE. Furthermore, some commenters suggested that increased delivery of services via telehealth is likely to continue after the PHE, as healthcare providers and patients are increasingly accustomed to this service delivery modality and have found it to be a convenient and appropriate means for delivery of certain healthcare services. A few commenters noted it is vital that ACOs are held responsible for the correct cohort of patients, and these

⁶⁶ Refer to CMS, Medicare Learning Network, "Advance Care Planning" (ICN MLN909289, August 2019); available at <https://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNProducts/Downloads/AdvanceCarePlanning.pdf>.

⁶⁷ See for example, CMS.gov, Place of Service Code Set (updated October 2019); available at https://www.cms.gov/Medicare/Coding/place-of-service-codes/Place_of_Service_Code_Set.

changes to the definition of primary care services would help to ‘move the needle’ in that direction. One commenter stated that it has increased its provision of telehealth services exponentially due to the PHE and expects that the volume of these types of visits will remain elevated even after the PHE ends. This commenter stated its belief that these changes will be necessary to accurately reflect the Medicare patient population’s health care utilization patterns going forward.

While most commenters supported the addition of Principal Care Management (PCM) codes G2064 and G2065 to the list of primary care services, a few commenters did not support adding the PCM codes. These commenters noted that these codes will primarily be used by specialists and while the scope and description of services for CCM and PCM may be similar, it does not necessarily follow that both services should be considered primary care services.

Response: We appreciate the commenters’ support for our proposal to revise the definition of primary care services used for assignment under the Shared Savings Program regulations to include the following additions: (1) Online digital E/M CPT codes 99421, 99422, and 99423; (2) assessment of and care planning for patients with cognitive impairment CPT code 99483; (3) chronic care management code CPT code 99491; (4) non-complex chronic care management HCPCS code G2058 and its replacement CPT code 99439; (5) principal care management services HCPCS codes G2064 and G2065; and (6) psychiatric collaborative care model HCPCS code G2214, which is being finalized as HCPCS code G2214, as discussed elsewhere in this final rule. We agree that expanding the definition of primary care services used for beneficiary assignment will allow for more accurate assignment. While we appreciate the concerns raised by commenters regarding the addition of PCM codes G2064 and G2065, due to the similarity between the description of the PCM and CCM services, we continue to believe that these codes are a valuable addition to the definition of primary care services used for beneficiary assignment, because the full CCM scope of service requirements apply to PCM, and the CCM services are included in the Shared Savings Program’s current definition of primary care services under § 425.400(c)(1)(iv). Additionally, consistent with our current methodology, if services billed under these codes are provided by specialists not used in the Shared Savings Program beneficiary assignment methodology,

then they will not be included in beneficiary assignment. Therefore, we are finalizing our proposal to incorporate the aforementioned codes into the definition of primary care services that will be used in determining beneficiary assignment for the performance year starting on January 1, 2021, and subsequent performance years. We are also finalizing our proposal to specify the updated definition of primary care services in a new provision of the regulations at § 425.400(c)(1)(v).

Comment: Several commenters supported the permanent addition of the remote evaluation of patient video/images (G2010) and virtual check-in (G2012) HCPCS codes to the Shared Savings Program definition of primary care services used for assignment, beginning with performance year 2021. These commenters indicated that virtual check-ins and remote evaluation of patient video/images are communications-based technology services that have proven their value across the disease spectrum and care continuum and should continue to be included in the definition of primary care services used for assignment after the PHE ends.

Response: We appreciate the comments in support of the permanent addition of the remote evaluation of patient video/images (G2010) and virtual check-in (G2012) HCPCS codes to the Shared Savings Program definition of primary care services used for assignment, beginning with performance year 2021. In the CY 2021 PFS proposed rule (85 FR 50245), we stated that, outside the context of the PHE for COVID–19, we did not expect these monitoring/check-in services for established patients to replace primary care services. This was because these separately billable brief communication-technology based services describe a check-in directly with the billing practitioner to assess whether an office visit is needed; and we believed that when the PHE for COVID–19 ends, these services would likely be replaced by an in-person primary care visit on which assignment would be based. However, based on comments received anticipating that healthcare providers will continue to provide the services identified by G2010 and G2012 and that there will continue to be an uptake of services identified by these codes in lieu of an in-person primary care visit by the beneficiary even following the end of the PHE for COVID–19, we are persuaded that including G2010 and G2012 in the Shared Savings Program definition of primary care services used for assignment, beginning with

performance year 2021, would result in more accurate assignment of beneficiaries based on where they receive the plurality of their primary care services. We are therefore adding HCPCS codes G2010 and G2012 to the definition of primary care services for purposes of beneficiary assignment in the Shared Savings Program for the performance year starting on January 1, 2021, and subsequent performance years, as specified in the regulations at § 425.400(c)(1)(v).

Comment: Several commenters supported our proposal to exclude advance care planning CPT code 99497 and the add-on code 99498 when billed in an inpatient care setting. These commenters appreciated the concern that codes billed in an inpatient setting in the beneficiary assignment methodology may result in beneficiaries being assigned to an ACO based on inpatient care, rather than on primary care. However, one commenter was concerned that removing these services from the definition of primary care services used for assignment may inadvertently discourage healthcare provider from furnishing these services in inpatient settings. This commenter stated that evidence shows that usage of these billing codes is low, even though most Americans do not have advance directives. Therefore, the commenter suggested that advance care planning should be promoted, not in any way discouraged. Commenters also appreciated CMS’ desire to ensure that beneficiaries are attributed to the ACOs from whom they receive their primary care services.

Response: We appreciate the support from commenters regarding our proposal to exclude advance care planning CPT code 99497 and the add-on code 99498 when billed in an inpatient care setting, for purposes of determining beneficiary assignment for the performance year starting on January 1, 2021, and subsequent performance years. Although we do not want to discourage the provision of advance care planning services or the appropriate use of the associated advance care planning codes, we do not believe that these services, when provided in an inpatient setting represent primary care services that should be used in assignment. In particular, we continue to have concerns that including these codes when billed in an inpatient setting may result in beneficiaries being assigned to an ACO based on inpatient care, rather than on primary care. By this, we mean that a beneficiary could be assigned to the ACO with which the physician providing inpatient care is associated,

which may be different from the ACO in which the physician from which the beneficiary typically receives primary care services in the community is participating, which could be disruptive to the beneficiary's overall care management. Therefore, we are finalizing our proposal to specify in § 425.400(c)(1)(v)(A)(12) that advance care planning services identified by CPT code 99497 and add-on code 99498 are excluded when furnished in an inpatient setting.

We did not receive comments regarding our proposal to exclude advanced care planning services claims billed under CPT codes 99497 and 99498 from use in the assignment methodology when there is an inpatient facility claim in our claims files with dates of service that overlap with the date of service for the professional service billed under CPT code 99497 or add-on code 99498. We also did not receive comments regarding the potential alternative method for determining whether advance care planning services are provided in an inpatient care setting. Specifically, we sought comment on whether to exclude advance care planning services identified by CPT code 99497 or add-on code 99498, or both, reported on claims with place of service code 21, which identifies the place of service as an inpatient hospital. Accordingly, we are finalizing as proposed the operational approach of excluding advanced care planning services claims billed under CPT codes 99497 and 99498 from use in the assignment methodology when there is an inpatient facility claim in our claims files with dates of service that overlap with the date of service for the professional service billed under CPT code 99497 or add-on code 99498. This operational approach is similar to the operational approach currently used to exclude certain codes for professional services furnished in a SNF under § 425.400(c)(1)(iv)(A)(2) and, as we discussed in the CY 2021 PFS proposed rule (85 FR 50246) captures slightly more claims than the alternative proposed approach. We believe this more inclusive approach is appropriate in order to ensure that beneficiaries are assigned based on primary care services, not inpatient care services.

Comment: We received a couple of comments suggesting that CMS add the Primary Care Add-on HCPCS Code GPC1X, which is being finalized as HCPCS code G2211, as discussed elsewhere in this final rule, and the new Prolonged Services Add-on CPT Code 99417 (when the base code is also a primary care service code) to the list of

primary care services used for assignment.

Response: We appreciate the feedback from commenters on our comment solicitation regarding any existing HCPCS or CPT codes and new HCPCS or CPT codes proposed in the CY 2021 PFS proposed rule that we should consider adding to the definition of primary care services for purposes of assignment in future rulemaking. HCPCS G2211 (*Visit complexity inherent to evaluation and management associated with medical care services that serve as the continuing focal point for all needed health care services and/or with medical care services that are part of ongoing care related to a patient's single, serious, or complex condition. (Add-on code, list separately in addition to office/outpatient evaluation and management visit, new or established)*) and prolonged visit add-on CPT code 99417 (*Prolonged office or other outpatient evaluation and management service(s) (beyond the total time of the primary procedure which has been selected using total time), requiring total time with or without direct patient contact beyond the usual service, on the date of the primary service; each additional 15 minutes (List separately in addition to CPT codes 99205, 99215 for office or other outpatient evaluation and management services)*) are used to report prolonged care provided to beneficiaries as an add-on to an E/M service. Under Medicare FFS payment policy, G2211 may be used in combination with certain E/M codes for new or established patients, including CPT codes 99201 through 99215, which are included within the definition of primary care services used for beneficiary assignment as specified under § 425.400(c).

Because we did not discuss adding add-on HCPCS Code G2211 and the prolonged services add-on CPT Code 99417, formerly CPT code 99XXX, to the list of primary care services used for assignment in the CY 2021 PFS proposed rule, we cannot finalize the inclusion of these codes in the definition of primary care services used for beneficiary assignment as specified under § 425.400(c), for the performance year beginning January 1, 2021, and subsequent performance years. We agree with commenters that G2211 and 99417 seem to fit within the definition of primary care services used for beneficiary assignment as specified under § 425.400(c). We will continue to evaluate and may consider the addition of these codes in future rulemaking.

In summary, after considering comments we received, we are finalizing the proposed definition of

primary care services for use in determining beneficiary assignment for the performance year starting on January 1, 2021, and subsequent performance years, with a modification to include G2010 and G2012 in the definition of primary care services used in assignment. We are finalizing this definition in a new provision of the regulations at § 425.400(c)(1)(v), which includes the HCPCS and CPT codes specified in § 425.400(c)(1)(iv), as well as the following additional codes, and limitations on the use of certain codes:

- Online digital E/M CPT codes 99421, 99422, and 99423;
- Assessment of and care planning for patients with cognitive impairment CPT code 99483;
- Chronic care management code CPT code 99491;
- Exclusion of advance care planning CPT code 99497 and the add-on code 99498 when billed in an inpatient care setting;
- Remote evaluation of patient video/images HCPCS codes G2010;
- Virtual check-in HCPCS code G2012;
- Non-complex chronic care management HCPCS code G2058 and its replacement CPT code 99439 as finalized elsewhere in this final rule;
- Principal care management HCPCS codes G2064 and G2065; and
- Psychiatric collaborative care model HCPCS code GCOL1, which is being finalized as HCPCS code G2214, as discussed elsewhere in this final rule.

We did not receive comments specifically addressing our proposals for technical modifications, which we are finalizing without modification. Specifically, we are finalizing as proposed the technical modifications to the introductory text in § 425.400(c)(1)(iv) to specify the applicability of this provision for determining beneficiary assignment for performance years (or a performance period) during 2019 and performance year 2020. We are also finalizing the proposal to include technical modifications to the previously finalized descriptions of the CPT and HCPCS codes for consistency and clarity, including grammatical updates and ordering the codes sequentially, in the new provision at § 425.400(c)(1)(v).

We did not receive comments on our proposed conforming revisions to the regulations at §§ 425.601(a)(9), 425.602(a)(8), and 425.603(c)(8), to specify that CMS will adjust the ACO's historical benchmark to reflect any changes to the beneficiary assignment methodology specified in part 425, subpart E during an ACO's agreement period including revisions to the

definition of primary care services in § 425.400(c). Further, we did not receive comments on our proposed technical changes to §§ 425.601, 425.602, and 425.603 for clarity and internal consistency. We are finalizing these proposals without modification.

b. Exclusion From Assignment of Certain Services Reported by FQHCs or RHCs When Furnished in Skilled Nursing Facilities (SNFs)

(1) Background

As we described in section III.G.2.a.(1) of the proposed rule, under the Shared Savings Program, we define primary care services in § 425.400(c)(1) and (2) for purposes of assigning beneficiaries to ACOs under § 425.402 as the set of services identified by the specified HCPCS and CPT codes. In the November 2018 final rule (83 FR 59965 through 59968), we finalized a policy, specified in the regulation at § 425.400(c)(1)(iv)(A)(2) and effective for performance years starting on January 1, 2019, and subsequent performance years, to exclude services billed under CPT codes 99304 through 99318 when such services are furnished in a SNF. As described in the earlier rulemaking, CPT codes 99304 through 99318 are used for reporting E/M services furnished by physicians and other practitioners in a SNF or NF (83 FR 59964).

In the November 2018 final rule, we explained our operational approach to excluding CPT codes 99304 through 99318 from use in the assignment methodology when such services are furnished in a SNF. We explained that we would exclude professional services claims billed under CPT codes 99304 through 99318 from use in the assignment methodology when there is a SNF facility claim in our claims files with dates of service that overlap with the date of service for the professional service (83 FR 59967). This exclusion methodology replaced the prior approach, established through earlier rulemaking (80 FR 71271 and 71272), which excluded from the definition of primary care services claims billed under CPT codes 99304 through 99318 when the claim included the place of service code 31 modifier, specifying that the service was furnished in a SNF.

In earlier rulemaking (see for example, 83 FR 59964 and 59965), we have explained our belief that excluding from assignment certain services rendered to beneficiaries during a SNF stay is appropriate because it helps to ensure that beneficiaries who receive care in a SNF are assigned to ACOs based on care received from primary care professionals in the community

(including nursing facilities), who are typically responsible for providing care to meet the primary care needs of these beneficiaries. We previously explained that SNF patients are shorter stay patients who are generally receiving continued acute medical care and rehabilitative services. Although their care may be coordinated during their time in the SNF, they are then transitioned back into the community to the primary care professionals who are typically responsible for providing care to meet their primary care needs.

Section 1899(c)(1) of the Act, as amended by the 21st Century Cures Act and the Bipartisan Budget Act of 2018, requires the Secretary to assign beneficiaries to ACOs participating in the Shared Savings Program based not only on their utilization of primary care services furnished by ACO professionals who are physicians but also on their utilization of services furnished by FQHCs and RHCs, effective for performance years beginning on or after January 1, 2019. The statute provides the Secretary with broad discretion to determine how to incorporate services provided by FQHCs and RHCs into the Shared Savings Program beneficiary assignment methodology.

In earlier rulemaking, we established and modified special assignment conditions for FQHCs and RHCs (see for example, 82 FR 53210 through 53212). According to § 425.404(b), for performance years starting on January 1, 2019, and subsequent performance years, under the assignment methodology in § 425.402, CMS treats a service reported on an FQHC or RHC claim as a primary care service performed by a primary care physician. Therefore, according to the Shared Savings Program's step-wise claims-based assignment methodology, as specified in § 425.402(b), all services furnished by an FQHC or RHC to a beneficiary eligible for assignment to an ACO are considered in the first step of the assignment methodology. As specified in § 425.402(b)(3), under this first step, a beneficiary eligible for assignment is assigned to an ACO if the allowed charges for primary care services furnished to the beneficiary by primary care physicians who are ACO professionals and non-physician ACO professionals in the ACO are greater than the allowed charges for primary care services furnished by primary care physicians, nurse practitioners, physician assistants, and clinical nurse specialists who are ACO professionals in any other ACO, or not affiliated with any ACO and identified by a Medicare-enrolled billing TIN.

Currently, the exclusion from beneficiary assignment of professional services claims with CPT codes 99304 through 99318, when there is an overlapping SNF stay, does not apply to services billed through FQHCs/RHCs. Because FQHC/RHC claims are submitted to CMS using institutional claim forms, we currently do not exclude these FQHC/RHC claims from assignment when a service billed under CPT codes 99304 through 99318 is provided concurrently with a SNF stay, as when claims for services billed under these codes are submitted by physicians and other practitioners. Rather, consistent with the requirement in § 425.404(b), we consider all FQHC/RHC claims for purposes of beneficiary assignment.

(2) Revisions

As discussed in the CY 2021 PFS proposed rule (85 FR 50247), an ACO has raised concerns that our methodology for excluding primary care services billed under CPT codes 99304 through 99318 from use in beneficiary assignment when provided during a beneficiary's stay in a SNF does not apply to these services when billed by FQHCs. The ACO described a circumstance where ACO professionals, billing through ACO participant FQHCs, submitted claims using CPT codes 99304 through 99318 for services provided to patients in SNFs. Specifically, the ACO participant FQHCs' physicians provided services billed under these codes to beneficiaries in community SNFs. Following discharge from the SNF, these beneficiaries returned to receiving care from their regular primary care physicians (outside the ACO). However, because the SNF exclusion for services billed under CPT codes 99304 through 99318 does not apply to services furnished by FQHCs/RHCs, these beneficiaries were assigned to the ACO in which the FQHC was an ACO participant based on the services rendered in the SNF. We believe this result is contrary to the original intention of our policy of excluding claims billed under CPT codes 99304 through 99318 for professional services furnished during a SNF stay from consideration in the assignment methodology, as described in the background for this section.

Section 1899(c)(1) of the Act provides discretion for the Secretary to determine the appropriate method to utilize services provided by FQHCs and RHCs in conducting assignment for performance years beginning on or after January 1, 2019. As discussed in the proposed rule, we believe it is important

to exclude claims for FQHC and RHC services that include CPT codes 99304 through 99318 from use in assignment when there is a SNF facility claim in our claims files with a date of service that overlaps with the date of FQHC or RHC services. Consistent with the previously established exclusion for claims billed under these codes when the services are provided to beneficiaries with an overlapping SNF stay, we believe it is important to exclude the same services from use in assignment when they are furnished by physicians and NPPs billing through an FQHC or RHC to beneficiaries in a SNF. As we explained in the CY 2021 PFS proposed rule, this approach would better recognize that beneficiaries who receive care from physicians and NPPs billing through an FQHC or RHC during a SNF stay are expected to return to receiving primary care from the health care professionals typically responsible for meeting their primary care needs when they transition back into the community.

Therefore, we proposed to revise the existing exclusion for professional services billed under CPT codes 99304 through 99318 that are furnished in a SNF to include services reported on an FQHC or RHC claim that includes CPT codes 99304 through 99318, when those services are furnished in a SNF. Operationally, the exclusion would occur when the following conditions are met:

- (1) Either a professional service is billed under CPT codes 99304 through 99318, or an FQHC/RHC submits a claim including a qualifier CPT code 99304 through 99318; and
- (2) A SNF facility claim is in our claims files with dates of service that overlap with the date of service for the professional service or FQHC/RHC service.

As discussed in section III.G.2.a.(2) of the proposed rule, we proposed to incorporate the revised definition of primary care services in a new provision of the Shared Savings Program regulations at § 425.400(c)(1)(v), applicable for use in determining beneficiary assignment for the performance year starting on January 1, 2021, and subsequent performance years. As part of this revised definition, we proposed to incorporate the proposed revisions to the exclusion for CPT codes 99304 through 99318 when services are furnished in a SNF at § 425.400(c)(1)(v)(A)(3) to extend the exclusion to services identified by these codes reported on an FQHC or RHC claim when furnished in a SNF. We proposed that this revision would also be applicable to determining assignment for the performance year starting on

January 1, 2021, and subsequent performance years.

As we explained in section III.G.2.a.(2) of the proposed rule, we adjust the ACO's historical benchmark for changes in the program's assignment methodology occurring during the ACO's agreement period. We stated in the proposed rule that, if we finalized the proposed exclusion from beneficiary assignment of services reported by FQHCs or RHCs on claims that include CPT codes 99304 through 99318, when furnished in a SNF, we would adjust ACOs' historical benchmarks to account for these changes.

Further, we noted that we believe the existing process is appropriately excluding from assignment professional services billed under CPT codes 99304 through 99318 when these services are provided to beneficiaries receiving SNF services in swing beds in Critical Access Hospitals (CAHs) or Electing Teaching Amendment (ETA) hospitals. Based on our operational experience:

- We exclude professional services billed under CPT codes 99304 through 99318 when such services are furnished for care of a beneficiary in a CAH swing bed; however, relatively few claims are identified for exclusion on this basis.
- We do not believe that ETA hospitals are billing for services furnished to beneficiaries in a SNF or swing bed setting by physicians and other practitioners that have reassigned their billing rights to ETA hospitals.

However, we solicited comment on whether additional exceptions are needed to ensure that all claims for services that include CPT codes 99304 through 99318 are excluded from assignment when those services are furnished to a beneficiary receiving SNF care, including when these professional services are billed by a Method II CAH or ETA hospital.

We received public comments on the proposed revisions to exclude from assignment certain services reported by FQHCs or RHCs when furnished in SNFs. We received no comments regarding additional exceptions that may be needed to ensure that all claims for services that include CPT codes 99304 through 99318 are excluded from assignment when those services are furnished to a beneficiary receiving SNF care, including when these professional services are billed by a Method II CAH or ETA hospital.

The following is a summary of the comments we received and our responses.

Comment: Commenters were overwhelmingly supportive of CMS' proposal to exclude professional services furnished by FQHCs or RHCs

when delivered in a SNF, for purposes of assignment. Several commenters stated that this policy would ensure parity between FQHC practitioners, including physicians, and practitioners who practice in other settings, with respect to this issue. One commenter stated that, because FQHCs do not use place of service codes or other indicators that would demonstrate that a claim is eligible for exclusion, their claims are always considered primary care claims under current policy, even when the services are furnished in a SNF. These claims are then used for ACO beneficiary attribution, to the disadvantage of ACOs that include FQHCs as participants. Commenters noted that the proposed change, while technical in nature, would result in more accurate beneficiary assignment lists for ACOs.

Response: We agree with commenters that this policy will allow for more accurate assignment of beneficiaries. Accordingly, we are finalizing our proposal to revise the existing exclusion for professional services billed under CPT codes 99304 through 99318 that are furnished in a SNF to include services reported on an FQHC or RHC claim that includes CPT codes 99304 through 99318, when those services are furnished in a SNF. By finalizing this policy, we will have a more consistent and accurate assignment approach. We are finalizing the definition of primary care services for use in beneficiary assignment for performance years starting on January 1, 2021, and subsequent performance years in the regulations at § 425.400(c)(1)(v), which includes the codes for professional services furnished in a nursing facility (CPT codes 99304 through 99318) at § 425.400(c)(1)(v)(A)(3). The provision at § 425.400(c)(1)(v)(A)(3) specifies that professional services or services reported on an FQHC or RHC claim identified by these codes are excluded from the definition of primary care services when furnished in a SNF.

3. Reducing the Amount of Repayment Mechanisms for Eligible ACOs

a. Background

An ACO that will participate in a two-sided model must demonstrate that it has established an adequate repayment mechanism to provide CMS assurance of its ability to repay shared losses for which the ACO may be liable upon reconciliation for each performance year. The requirements for an ACO to establish and maintain an adequate repayment mechanism are described in § 425.204(f), and we have provided additional program guidance on

repayment mechanism arrangements.⁶⁸ We established the repayment mechanism requirements through earlier rulemaking,⁶⁹ and recently modified the repayment mechanism requirements in the December 2018 final rule (83 FR 67928 through 67938).

According to § 425.204(f)(4)(iv), in the case of an ACO that has submitted a request to renew its participation agreement and wishes to use its existing repayment mechanism to establish its ability to repay any shared losses incurred for performance years in the new agreement period, the amount of the repayment mechanism must be equal to the greater of the following: (1) The amount calculated by CMS in accordance with § 425.204(f)(4)(ii) at the time of renewal application; or (2) the repayment mechanism amount that the ACO was required to maintain during the last performance year of the participation agreement it seeks to renew. This approach ensures that a renewing ACO would remain capable of repaying losses incurred under its old agreement period (83 FR 67931). Based on our operational experience with implementing these policies, of 55 renewing two-sided model ACOs for a July 1, 2019, or January 1, 2020 start date, 43 ACOs (or 78.2 percent) elected to continue use of their existing repayment mechanism, and 22 (or 51.2 percent) of these ACOs had a higher existing repayment mechanism amount compared to the amount calculated for the new agreement period (determined at the time of renewal application).

Alternatively, to meet the requirements of § 425.204(f), a renewing ACO could establish a new repayment mechanism arrangement to support its participation in its new agreement period, in addition to maintaining its existing repayment mechanism. This option allows an ACO to establish a repayment mechanism to support its new agreement period at a potentially different amount (determined according to § 425.204(f)(4)(ii)) than the amount of the existing arrangement. However, under this approach there is a period of time during which the ACO must maintain multiple repayment

mechanisms. The ACO must maintain the repayment mechanism established to support the ACO's previous agreement period until the term of the repayment mechanism arrangement expires, or conditions arise to allow for termination of the repayment mechanism according to § 425.204(f)(6)(iv) (see 83 FR 67933 through 67936). Once the repayment mechanism for the previous agreement period is closed, the ACO would be required to maintain only the repayment mechanism arrangement applicable to its current agreement period. An ACO could use this option to establish a repayment mechanism at a relatively lower amount (if applicable) for its current agreement period, while maintaining and eventually closing-out a repayment mechanism at a relatively higher amount needed for its previous agreement period.

As specified under § 425.204(f)(4)(iii), for agreement periods beginning on or after July 1, 2019, CMS recalculates the ACO's repayment mechanism amount before the second and each subsequent performance year in the agreement period based on the certified ACO participant list for the relevant performance year. We require an increase in the repayment mechanism amount if the recalculated repayment mechanism amount exceeds the existing repayment mechanism amount by at least 50 percent or \$1,000,000, whichever is the lesser value. Under § 425.204(f)(4)(iii), an ACO cannot decrease the amount of its repayment mechanism during its agreement period as a result of changes in its composition.

In implementing the revised repayment mechanism rules, we have discovered some unintended consequences. Specifically, under § 425.204(f)(4), a renewing ACO that chooses to retain its higher repayment mechanism for a new agreement period might never be able to reduce its repayment mechanism even after the ACO has paid any shared losses incurred for performance years in the previous agreement period. Moreover, the ACO would have to maintain the higher repayment mechanism amount in future agreement periods unless the ACO opts to establish a new repayment mechanism. We did not intend this result.

More generally, based on our operational experience, many ACOs fully repay shared losses without use of their repayment mechanism arrangement. For example, of the eleven ACOs that owed shared losses for performance year 2018, CMS used the repayment mechanism for one ACO to support recoupment. Considering this

experience, which suggests there may be low risk to the Shared Savings Program by allowing lower repayment mechanism amounts, and the potential reduction in burden on ACOs by lower repayment mechanism amounts, we revisited in the CY 2021 PFS proposed rule the policies requiring renewing ACOs to retain higher repayment mechanism amounts when these amounts may no longer be needed to support their continued participation.

b. Revisions

In the CY 2021 PFS proposed rule (85 FR 50248 through 50251), we proposed to establish two policies that would allow certain ACOs to benefit from a lower repayment mechanism amount than would otherwise be required under the current regulations. Under the first proposed policy, a renewing ACO that uses an existing repayment mechanism to establish its ability to repay any shared losses incurred for performance years in its new agreement period may reduce its existing repayment mechanism amount if the repayment mechanism amount calculated for the new agreement period is less than the amount of the existing repayment mechanism. The second proposed policy would permit certain ACOs whose agreement periods began July 1, 2019 or January 1, 2020 to elect to reduce the amount of their repayment mechanisms.

Under § 425.204(f)(4)(iv), a renewing ACO that wishes to use its existing repayment mechanism to establish its ability to repay any shared losses incurred for performance years in the new agreement period must maintain its existing repayment mechanism amount if it is higher than the repayment mechanism amount calculated for the new agreement period in accordance with § 425.204(f)(4)(ii). We proposed to discontinue this policy by revising the regulations to specify that we will determine the repayment mechanism amount for such a renewing ACO only according to the methodology currently specified in § 425.204(f)(4)(ii). Under the proposed approach, a renewing ACO that wishes to use its existing repayment mechanism to establish its ability to repay any shared losses incurred for performance years in the new agreement period would be required to have a repayment mechanism amount equal to the lesser of the following: (1) 1 percent of the total per capita Medicare Parts A and B FFS expenditures for the ACO's assigned beneficiaries, based on expenditures for the most recent calendar year for which 12 months of data are available; or (2) 2 percent of the total Medicare Parts A and B FFS

revenue of its ACO participants, based on revenue for the most recent calendar year for which 12 months of data are available.

As specified in the May 8th COVID-19 IFC (85 FR 27574 and 27575), we are forgoing the application cycle for the January 1, 2021 start date. Therefore, the proposed policy for determining the repayment mechanism amount for renewing ACOs would apply with the application cycle for an agreement period starting on January 1, 2022, and in subsequent years.

As discussed in the CY 2021 PFS proposed rule (85 FR 50249), a renewing ACO could still choose to establish a new repayment mechanism arrangement for the amount calculated at the time of the renewal application to support its participation in its new agreement period and maintain its existing repayment mechanism at the previously required amount. Once the conditions arise for termination of the repayment mechanism arrangement supporting the ACO's previous agreement period, according to § 425.204(f)(6)(iv), only the arrangement supporting the ACO's current agreement period would remain.

In the CY 2021 PFS proposed rule (85 FR 50249), we explained our belief that the proposed approach would reduce burden by allowing renewing ACOs that wish to continue use of their existing repayment mechanism to decrease their repayment mechanism amount if a higher amount is not needed to support their new agreement period. As discussed in the CY 2021 PFS proposed rule, the proposal would prevent a higher repayment mechanism amount from following the ACO from one agreement period to the next, as is the case with the current approach. Further, an ACO would no longer need to establish another repayment mechanism for the ACO's new agreement period to ultimately get relief from the higher amount of its existing repayment mechanism arrangement, which the ACO would need to maintain until the conditions arise allowing for termination.

As discussed in the CY 2021 PFS proposed rule, we recognize that the proposal would reduce the amount available to support repayment of shared losses. The typical timing of issuance to ACOs of financial reconciliation, which includes performance results and written notification from CMS of the amount of shared losses owed (if any), is in the summer following the conclusion of the performance year. Renewing ACOs permitted to reduce the amount of their existing repayment mechanism may be notified of shared losses owed for their

most recent prior performance year during the application review period and would be in the process of paying shared losses within 90 days of written notification from CMS of the amount owed (according to §§ 425.605(e)(3), 425.606(h)(3), 425.610(h)(3)). Further, at the time of renewal application, the ACO would be completing the last performance year of its existing agreement period, and financial reconciliation results for this performance year would likely be available during the summer of the ACO's first performance year of its new agreement period.

However, as discussed in the CY 2021 PFS proposed rule, we believe this risk to CMS noted above is mitigated for a number of reasons. The Shared Savings Program's existing policies require ACOs to pay shared losses, in full, within 90 days of written notification from CMS of the amount owed (according to §§ 425.605(e)(3), 425.606(h)(3), 425.610(h)(3)). ACOs have an interest in fully paying the amount of shared losses owed within the 90-day payment window to remain in compliance with the Shared Savings Program's requirements and avoid compliance actions including involuntary termination from the program. CMS may terminate an ACO's participation agreement for reasons including, but not limited to, non-compliance with requirements in part 425 (§ 425.218(b)(1)), such as failure to repay shared losses owed according to the program's regulations and may take pre-termination actions as described in § 425.216. Under § 425.221(b)(2)(ii)(B), an ACO under a two-sided model whose participation agreement is terminated by CMS under § 425.218 is liable for a pro-rated share of any shared losses determined for the performance year during which the termination becomes effective. ACOs must also repay shared losses owed to avoid accruing interest on any amount that remains unpaid after the 90-day payment window, and referral of an unpaid debt to the Department of Treasury for collection. Based on our operational experience, nearly all ACOs fully repay shared losses without use of their repayment mechanism arrangement.

Nevertheless, in the CY 2021 PFS proposed rule we considered finalizing a policy that would require a renewing ACO to maintain its existing, higher repayment mechanism amount until the ACO has fully repaid the amount of shared losses determined to be owed for the most recent performance year for which financial reconciliation results are available. Under this approach, for instance, § 425.204(f)(4)(iv) would

remain unchanged, and we would amend § 425.204(f)(4)(iii) to add a provision permitting a renewing ACO to reduce the amount of its repayment mechanism.

As discussed in the CY 2021 PFS proposed rule, the Shared Savings Program regulations do not address the opportunity for a re-entering ACO, defined according to § 425.20, to use a repayment mechanism arrangement established to support its participation in an earlier agreement period to also support its participation in a new agreement period. As defined at § 425.20, a "re-entering ACO" may or may not be the same legal entity that previously participated in the Shared Savings Program. Specifically, a "re-entering ACO" is defined to include the following: (1) An ACO that is the same legal entity as an ACO that previously participated in the program and is applying to participate in the program after a break in participation due to early termination of its participation agreement or the expiration and non-renewal of its participation agreement; and (2) a new legal entity that has never participated in the Shared Savings Program, provided that more than 50 percent of its ACO participants were included on the ACO participant list of the same ACO in any of the 5 most recent performance years prior to the agreement start date for the new legal entity.

In the CY 2021 PFS proposed rule, we stated that we were considering finalizing provisions specifying the conditions under which a re-entering ACO may use an existing repayment mechanism arrangement to support its participation in a subsequent agreement period in the Shared Savings Program. Specifically, because a repayment mechanism is valid only with respect to amounts owed by the legal entity to whom or on whose behalf it was issued, we stated that we were considering specifying in the final rule that a re-entering ACO may use its existing repayment mechanism only if it is the same legal entity as the ACO that previously participated in the program. We stated that this option for continued use of an existing repayment mechanism would not be feasible for (and therefore would not be applicable to) a re-entering ACO that is not the same legal entity as the ACO that previously participated in the program and is identified on the repayment mechanism documentation (that is, the proposed policy would not apply to an ACO identified as a re-entering ACO because more than 50 percent of its ACO participants were included on the ACO participant list for a single ACO in

any of the 5 most recent performance years prior to the agreement start date).

We also proposed to establish a second policy that would allow certain ACOs a one-time opportunity to decrease the amount of their repayment mechanisms. Under this proposal, an ACO that renewed its agreement period beginning on July 1, 2019, or January 1, 2020, may elect to decrease the amount of its repayment mechanism if (1) upon renewal, it elected to use an existing repayment mechanism to establish its ability to repay any shared losses incurred in its new agreement period and the amount of that repayment mechanism was greater than the repayment mechanism amount estimated for the ACO's new agreement period; and (2) the recalculated repayment mechanism amount for performance year 2021 is less than the existing repayment mechanism amount. We noted that the proposal would not be finalized if we finalized our alternate proposal described above to modify § 425.204(f)(4)(iii) to permit a renewing ACO to reduce the amount of its repayment mechanism after the ACO fully repaid the amount of shared losses determined to be owed for the final performance year of its prior agreement period. We explained that the purpose of this second proposal is to let any ACO that renewed for an agreement period beginning on July 1, 2019, or beginning on January 1, 2020, to decrease its repayment mechanism amount before it seeks to renew its current agreement under the first proposed policy, which if finalized, would otherwise be the earliest opportunity for the ACO to reduce its repayment mechanism amount.

To determine if an ACO that renewed for an agreement period beginning on July 1, 2019, or beginning on January 1, 2020, is eligible for the one-time opportunity to lower its repayment mechanism amount, we proposed to compare the recalculated amount of the ACO's repayment mechanism based on its certified ACO participant list for performance year 2021, calculated according to § 425.204(f)(4)(iii), to the ACO's existing repayment mechanism amount. If the recalculated repayment mechanism amount for performance year 2021 is less than the existing repayment mechanism amount, the ACO would be eligible to decrease the amount of its repayment mechanism to the recalculated amount. Under this approach, we would permit a decrease in the repayment mechanism amount even for relatively small differences in dollar amounts. However, an ACO may wish to maintain the existing amount of its repayment mechanism arrangement,

particularly if the cost to the ACO of amending the arrangement outweighs the potential benefit of a nominal decrease in the amount of the repayment mechanism.

We proposed that CMS would notify the ACO in writing that the ACO may elect to decrease the amount of its repayment mechanism. We explained that if we finalized our proposal to allow a one-time opportunity for a repayment mechanism decrease by eligible ACOs that renewed for an agreement period beginning on July 1, 2019, or beginning on January 1, 2020, we would notify an ACO that it may elect to reduce its repayment mechanism amount after the start of performance year 2021. We also proposed that an ACO must submit such election, together with revised repayment mechanism documentation, in a form and manner and by a deadline specified by CMS. CMS would review the revised repayment mechanism documentation and may reject the election if the repayment mechanism documentation does not comply with the requirements of § 425.204(f).

Regarding the timeframe for an ACO to elect to decrease the amount of its repayment mechanism, we indicated that we might require an ACO to submit its election, together with revised repayment mechanism documentation, within 30 days from the date of the written notice from CMS, particularly if prompt election is needed to ensure compliance with other program requirements. For instance, CMS may notify the ACO that it may elect to decrease the amount of its repayment mechanism after using the ACO's existing repayment mechanism to support repayment of shared losses. In this case, prompt notification by the ACO of its election to decrease the amount of its repayment mechanism may be necessary if the ACO seeks to replenish the amount of its repayment mechanism to the permitted lower amount within the 90-day replenishment period according to § 425.204(f)(5). However, we recognized that there may be circumstances that necessitate a longer timeframe.

We proposed to amend § 425.204(f)(4)(iv) by removing the introductory text and specifying in paragraph (f)(4)(iv)(A) the revised methodology for determining the repayment mechanism amount for renewing ACOs that seek to use their existing repayment mechanism to support their continued participation in their new agreement period. We proposed to revise § 425.204(f)(4)(iv)(B) to establish the policy and relevant procedure for allowing eligible ACOs

with July 1, 2019, or January 1, 2020 start dates to elect to lower the amount of their repayment mechanism arrangements.

We proposed to amend § 425.204(f)(5), which requires an ACO to replenish the amount of funds available through the repayment mechanism within 90 days of use of the arrangement to repay any portion of shared losses. Specifically, we proposed to specify that the resulting amount available through the repayment mechanism after replenishment must be at least the amount specified by CMS in accordance with § 425.204(f)(4). For example, these revisions would allow an eligible ACO, that renewed its agreement period beginning on July 1, 2019, or January 1, 2020, to replenish the repayment mechanism to the lower amount determined by CMS, according to the proposed approach described in the CY 2021 PFS proposed rule. As proposed, the revision may also be relevant to a renewing ACO that is seeking to use its existing repayment mechanism to support its participation in its new agreement period. Specifically, if the renewing ACO's existing repayment mechanism is used to support payment of shared losses, based on financial reconciliation results available at the time of renewal application, CMS may permit the renewing ACO to replenish the amount of its existing repayment mechanism to the lower amount determined to be applicable for the ACO's new agreement period.

We also proposed technical changes to § 425.204(f)(3)(iv) for clarity. This provision specifies that an ACO that has submitted a request to renew its participation agreement must submit as part of the renewal request documentation demonstrating the adequacy of the repayment mechanism that could be used to repay any shared losses incurred for performance years in the next agreement period, and describes the conditions under which an ACO may use its current repayment mechanism to apply to the new agreement period. For clarity, we proposed to specify under this provision that the duration of the existing repayment mechanism must be revised to comply with § 425.204(f)(6)(ii), and the amount of the repayment mechanism must comply with § 425.204(f)(4).

Further, we proposed that an ACO must demonstrate the adequacy of its repayment mechanism prior to any change in the terms and type of the repayment mechanism. Based on our operational experience, ACOs periodically request to close-out their

existing repayment mechanisms and establish new repayment mechanisms to support their continued participation under a two-sided model. We have typically permitted these requests, under the following circumstances: We first ensure the ACO's new repayment mechanism meets the program's requirements and is fully executed; and then we permit cancellation of the repayment mechanism arrangement(s) being replaced. Further, when reviewing requested modifications to repayment mechanism documentation it is our practice to ensure that all the terms of the repayment mechanism are compliant with the program's policies. Therefore, we proposed to revise the regulations in § 425.204(f)(3)(i) through (iii) to further specify that an ACO must demonstrate the adequacy of its repayment mechanism prior to any change in the terms and type of the repayment mechanism.

We received public comments on the proposals for reducing the amount of repayment mechanisms for eligible ACOs. The following is a summary of the comments we received and our responses.

Comment: Many commenters addressing the program's repayment mechanism policies expressed their support for CMS' proposal to eliminate the requirement that renewing ACOs that wish to continue use of their existing repayment mechanism maintain the higher repayment mechanism amount in their subsequent agreement period, when a lower amount is calculated at the time of renewal application.

One commenter commended CMS for addressing the unintended consequences of ACOs having to maintain a higher-than-required repayment mechanism as they transition to new agreement periods.

One commenter acknowledged CMS' consideration of an alternative that would require renewing ACOs to maintain existing, higher repayment mechanism amounts until they have fully repaid any shared losses owed for the most recent performance year. This commenter stated its belief that other enforcement mechanisms, such as possible pre-termination actions and accruing interest for not repaying shared losses, are sufficient to warrant timely repayment of shared losses.

Response: We are finalizing the proposed changes to determining the amount for repayment mechanisms for renewing ACOs that elect to continue use of their existing repayment mechanism to support their continued participation in a new agreement

period, to permit the amount of these arrangements to be reduced.

Under this final policy, specified in revisions to § 425.204(f)(4)(iv)(A), a renewing ACO that wishes to use its existing repayment mechanism to establish its ability to repay any shared losses incurred for performance years in the new agreement period will be required to have a repayment mechanism amount equal to the lesser of the following, as currently specified in § 425.204(f)(4)(ii): (1) 1 Percent of the total per capita Medicare Parts A and B FFS expenditures for the ACO's assigned beneficiaries, based on expenditures for the most recent calendar year for which 12 months of data are available; or (2) 2 percent of the total Medicare Parts A and B FFS revenue of its ACO participants, based on revenue for the most recent calendar year for which 12 months of data are available. As we described in the CY 2021 PFS proposed rule, and restated in this section of this final rule, these modifications apply to the application cycle for an agreement period starting on January 1, 2022, and in subsequent years.

We are not adopting the alternative we described in the CY 2021 PFS proposed rule, under which we would require a renewing ACO to maintain its existing, higher repayment mechanism amount until the ACO has fully repaid the amount of shared losses determined to be owed for the most recent performance year for which financial reconciliation results are available. Although the policy changes we are finalizing for determining the amount for repayment mechanisms for renewing ACOs may reduce the amount available to CMS to support repayment of shared losses in some cases, we believe the potential burden reduction for ACOs outweighs the risk to CMS. We continue to believe the risk to CMS of reduced repayment amounts for supporting repayment of shared losses is mitigated because the effect of other policies is to encourage compliance with the requirement that ACOs timely repay shared losses in full. As described in the proposed rule and reiterated in this section of the this final rule, ACOs have an interest in fully paying the amount of shared losses owed within the 90-day payment window (according to §§ 425.605(e)(3), 425.606(h)(3), 425.610(h)(3)); timely payment in full allows the ACO to remain in compliance with the Shared Savings Program's requirements and to avoid compliance actions, including involuntary termination from the program and related payment consequences of early termination. Also,

timely payment in full of shared losses allows an ACO to avoid accruing interest charges on any unpaid shared losses and referral of an unpaid debt to the Department of Treasury for collection.

Comment: One commenter generally supported the approach that CMS sought comment on for allowing a re-entering ACO identified as the same legal entity as an ACO that previously participated in the program to use that ACO's existing repayment mechanism to support its participation in a new agreement period.

Response: We appreciate the commenter's support for this consideration. We are finalizing this approach by amending § 425.204(f)(4)(iv)(A) to specify that the requirements regarding use of an existing repayment mechanism arrangement to support the ACO's participation in a new agreement period in the Shared Savings Program will apply to both a renewing ACO, and a re-entering ACO that is the same legal entity that previously participated in the Shared Savings Program (either an ACO whose participation agreement expired without having been renewed, or an ACO whose participation agreement was terminated under § 425.218 or § 425.220). Specifically, if a renewing ACO or re-entering ACO that is the same legal entity as an ACO that previously participated in the program wishes to use its existing repayment mechanism to establish its ability to repay any shared losses incurred for performance years in the new agreement period, the amount of the repayment mechanism must be equal to at least the amount calculated by CMS in accordance with § 425.204(f)(4)(ii), which is the lesser of the following: (1) 1 percent of the total per capita Medicare Parts A and B FFS expenditures for the ACO's assigned beneficiaries, based on expenditures for the most recent calendar year for which 12 months of data are available; or (2) 2 percent of the total Medicare Parts A and B FFS revenue of its ACO participants, based on revenue for the most recent calendar year for which 12 months of data are available.

Section 425.204(f)(3)(iv), as amended by this final rule, describes repayment mechanism documentation requirements, and specifies the condition under which a renewing ACO may use its existing repayment mechanism to support its continued participation under a new agreement period. To apply similar requirements to eligible, re-entering ACOs, we are revising the regulations to add a new paragraph (f)(3)(v) to § 425.204 to specify that an ACO that has submitted

an application to the program after a break in participation must submit as part of its application, documentation demonstrating the adequacy of the repayment mechanism that could be used to repay any shared losses incurred for performance years in the next agreement period. The repayment mechanism applicable to the new agreement period may be the same repayment mechanism currently used by the re-entering ACO, provided that the ACO is the same legal entity as an ACO that previously participated in the program, and the ACO submits documentation establishing that the duration of the existing repayment mechanism has been revised to comply with § 425.204(f)(6)(ii) and the amount of the repayment mechanism complies with § 425.204(f)(4).

We are revising § 425.204(f)(6)(ii), which specifies the required duration for repayment mechanisms for a renewing ACO that wishes to use its existing repayment mechanism to establish its ability to repay any shared losses incurred for performance years in the new agreement period. Specifically, we are revising paragraph (ii) to make it applicable to re-entering ACOs that are the same legal entity as an ACO that previously participated in the program. With these modifications, the provision specifies that a renewing ACO, or a re-entering ACO that is the same legal entity as an ACO that previously participated in the program, that wishes to use its existing repayment mechanism to establish its ability to repay any shared losses incurred for performance years in the new agreement period, must amend its existing repayment mechanism to meet either § 425.204(f)(6)(ii)(A) or (B). Respectively, these provisions specify the following:

- The duration of the existing repayment mechanism is extended by an amount of time that covers the duration of the new agreement period plus 12 months following the conclusion of the new agreement period.
- The duration of the existing repayment mechanism is extended, if necessary, to cover a term of at least the first two performance years of the new agreement period and provides for automatic, annual 12-month extensions of the repayment mechanism such that the repayment mechanism will eventually remain in effect for the duration of the new agreement period plus 12 months following the conclusion of the new agreement period.

Comment: Commenters expressed support for CMS' proposed approach

that provides a one-time opportunity for eligible ACOs that renewed their agreement periods beginning on July 1, 2019 or January 1, 2020, and elected to continue use of their existing repayment mechanism at a higher amount, to decrease their repayment mechanism amount if the recalculated amount for performance year 2021 is less than the existing amount.

Some commenters expressed support for an approach that would allow any ACO the option to decrease its repayment mechanism amount if the recalculated amount for the performance year is less than the current repayment mechanism amount and requested that CMS finalize this policy.

Response: We are finalizing the proposed policy at § 425.204(f)(4)(iv)(B), which grants a one-time opportunity for an ACO that renewed its agreement period beginning on July 1, 2019, or January 1, 2020, to elect to decrease the amount of its repayment mechanism if (1) upon renewal, it elected to use an existing repayment mechanism to establish its ability to repay any shared losses incurred in its new agreement period and the amount of that repayment mechanism was greater than the repayment mechanism amount estimated for the ACO's new agreement period; and (2) the recalculated repayment mechanism amount for performance year 2021 is less than the existing repayment mechanism amount.

At this time, we decline commenters' suggestions to establish a policy to allow for annual repayment mechanism decreases by all two-sided model ACOs, if the recalculated amount for the performance year is lower than their existing repayment mechanism amount. This alternative goes beyond the scope of the modifications we proposed to the program's repayment mechanism requirements. However, we will consider commenters' suggestions and we may revisit this issue in future notice and comment rulemaking.

Comment: One commenter addressing the proposed one-time opportunity for eligible renewing ACOs with a July 1, 2019 and January 1, 2020 start date, to elect to decrease their repayment mechanism amount, urged CMS to consider allowing these ACOs longer than 30 days to submit elections to reduce their repayment mechanism amounts, particularly given the circumstances of COVID-19. However, the commenter did not provide additional details on an alternative timeframe for this election.

Response: We proposed that such elections must be submitted "by a deadline specified by CMS" and noted

that the deadline might be 30 days from the date of CMS' written notification to the ACO, of its one-time opportunity to decrease its repayment mechanism amount. We appreciate the commenter's concern that an ACO may need more than 30 days to submit its election and the revised repayment mechanism documentation. We are not finalizing a 30-day deadline in regulation text, although such a deadline may ultimately be necessary depending on the circumstances. We continue to believe it is important for ACOs to promptly elect the option for a repayment mechanism decrease, particularly when prompt election is needed to ensure compliance with other program requirements. Consistent with our existing approach to supporting ACOs in meeting repayment mechanism requirements, we anticipate working closing with ACOs to ensure the documentation they provide is sufficient.

We are finalizing the proposed policy by revising § 425.204(f)(4)(iv)(B) to specify that CMS will notify an eligible ACO in writing if the ACO may elect to decrease the amount of its repayment mechanism. We are also finalizing as proposed the policy that the ACO must submit such election, together with revised repayment mechanism documentation, in a form and manner and by a deadline specified by CMS. CMS will review the revised repayment mechanism documentation and may reject the election if the repayment mechanism documentation does not comply with the requirements of § 425.204(f).

Comment: Some commenters explained that securing a repayment mechanism is a regulatory burden, which is time consuming and costly for ACOs. While some commenters expressed their appreciation for CMS' efforts to minimize burdens associated with the repayment mechanism through the changes proposed with the CY 2021 PFS proposed rule, they also urged CMS to take additional steps to minimize burdens on ACOs associated with repayment mechanism requirements.

Some commenters explained that many ACOs cite the burden and cost of securing a repayment mechanism as reasons not to move to a performance-based risk model. Commenters urged CMS to remove the repayment mechanism requirement when an ACO can prove that it has an investor or financial backer with a demonstrated high credit rating, instead of requiring the ACO to incur the costs of obtaining a repayment mechanism, and thereby direct the ACO's resources away from its core mission of improving patient

care. As suggested by the commenters, financial backers could include outside investors, insurers or hospitals or health systems that are aligned with the ACO and committed to providing financial support, which would be available should losses occur. These commenters noted that this assurance would protect the Medicare Trust Funds in the event the ACO has losses while avoiding the financial inefficiency and regulatory burden of involving outside financial institutions.

These commenters also noted that this alternative approach would also eliminate the need to have a 24-month “tail period”. Although not specifically stated, we believe commenters are referring to a requirement that ACOs maintain their repayment mechanism for a period of time following the conclusion of the ACO’s agreement period. Commenters explained that the additional burden of a 24-month tail period heightens concerns, and increases financial requirements for ACOs. Should CMS maintain requirements for a repayment mechanism, commenters requested that CMS minimize this regulatory and financial burden by removing the requirement for tail period coverage. Commenters indicated this was especially important considering longer agreement periods.

Response: We note that commenters’ alternative suggestions, for removing or significantly revising the repayment mechanism requirements, go beyond the scope of the proposals to revise the repayment mechanism requirements discussed in the CY 2021 PFS proposed rule. We decline the commenters’ suggestions, including to establish alternative pathways for ACOs to demonstrate their ability to repay shared losses or to shorten the duration for which a repayment mechanism must be available.

We are concerned that commenters’ references to a 24-month “tail period” requirement suggest a misunderstanding of the existing requirements for the duration of a repayment mechanism. Although in recent rulemaking (83 FR 67933 through 67937) we proposed requiring repayment mechanisms to be in effect for the duration of the ACO’s participation in a two-sided model plus 24 months after the conclusion of the agreement period, we ultimately finalized an approach (taking into consideration public comments on our proposals) that requires the repayment mechanism to be available for 12 months following the conclusion of the ACO’s agreement period. In brief, as specified under § 425.204(f)(6), the repayment mechanism must be in effect

for the duration of the ACO’s participation under a two-sided model plus 12 months following the conclusion of the agreement period, and this can be demonstrated by either of the following: (1) The repayment mechanism covers the entire duration of the ACO’s participation under a two-sided model plus 12 months following the conclusion of the agreement period; or (2) the repayment mechanism covers a term of at least the first 2 performance years in which the ACO is participating under a two-sided model and provides for automatic, annual 12-month extensions of the repayment mechanism such that the repayment mechanism will eventually remain in effect for the duration of the agreement period plus 12 months following the conclusion of the agreement period.

As we have explained in previous rulemaking (see for example, 83 FR 67933, and 80 FR 32783), this tail period must be sufficient to permit CMS to calculate the amount of any shared losses that may be owed by the ACO and to collect this amount from the ACO. This is necessary, in part, because financial reconciliation results are not available until the summer following the conclusion of the performance year, and ACOs have 90 days to make payment in full once they are notified of shared losses based on financial reconciliation (see §§ 425.605(e), 425.606(h), and 425.610(h)). Therefore, we continue to believe that a requirement that an ACO’s repayment mechanism be available for 12 months following the conclusion of its agreement period is critical to ensuring the availability of the repayment mechanism to support collection of shared losses that may be owed for the final performance year of the agreement period. As we explained in previous rulemaking, in allowing for a shorter tail period of 12-months, we believed the importance of reducing burden on ACOs outweighed the possible risk to the Trust Funds (83 FR 67934). We would also note that the program’s policies under § 425.204(f)(6)(iv) specify the conditions upon which we permit early termination of a repayment mechanism and release of the arrangement’s remaining funds to the ACO. This allows us to terminate repayment mechanism arrangements that are no longer needed to support ACOs’ participation in the Shared Savings Program, which may free up capital for ACOs.

We appreciate the continued engagement of ACOs and other program stakeholders in suggesting policy alternatives to reducing the burdens of the repayment mechanism requirements

on ACOs. We will consider commenters’ suggestions, and we may revisit this issue in future notice and comment rulemaking.

As a result of the comments received, we are amending § 425.204(f)(4)(iv) to specify in paragraph (f)(4)(iv)(A) that a renewing ACO or a re-entering ACO that is the same legal entity as an ACO that previously participated in the program may use its existing repayment mechanism to establish its ability to repay any shared losses incurred for performance years in the new agreements period. That provision also sets forth the revised methodology for determining the repayment mechanism amount for such ACOs. These modifications apply to the application cycle for an agreement period starting on January 1, 2022, and in subsequent years. We are also adding provisions in § 425.204(f)(4)(iv)(B) establishing policies and procedures that allow certain ACOs that renewed for an agreement period beginning on July 1, 2019, or January 1, 2020, to elect to decrease the amount of their existing repayment mechanisms.

We are adding new paragraph (f)(3)(v) to § 425.204 to allow a re-entering ACO to use its existing repayment mechanism to establish its ability to repay any shared losses incurred for performance years in the new agreement period, provided that the ACO is the same legal entity as an ACO that previously participated in the Shared Savings Program and the ACO submits documentation establishing that the duration of the existing repayment mechanism has been revised to comply with § 425.204(f)(6)(ii) and the amount of the repayment mechanism complies with § 425.204(f)(4). We are also revising § 425.204(f)(6)(ii) (describing the required duration of the repayment mechanism) to make it applicable to a renewing ACO or a re-entering ACO that is the same legal entity as an ACO that previously participated in the program, that wishes to use its existing repayment mechanism to support its participation in its new agreement period.

Additionally, we received no public comments on the following proposals, which we are finalizing as proposed:

We are amending § 425.204(f)(5) (regarding the replenishment of funds available through the repayment mechanism) to specify that the resulting amount available through the repayment mechanism after replenishment must be at least the amount specified by CMS in accordance with § 425.204(f)(4).

We are finalizing as proposed certain technical changes to § 425.204(f)(3)(iv). This provision specifies that an ACO that has submitted a request to renew its

participation agreement must submit as part of the renewal request documentation demonstrating the adequacy of the repayment mechanism that could be used to repay any shared losses incurred for performance years in the next agreement period, and describes the conditions under which an ACO may use its current repayment mechanism to apply to the new agreement period. For clarity, we are finalizing our proposed modification to specify under this provision that the duration of the existing repayment mechanism must be revised to comply with § 425.204(f)(6)(ii), and the amount of the repayment mechanism must comply with § 425.204(f)(4).

Lastly, we are finalizing the proposal to revise § 425.204(f)(3)(i) through (iii) to further specify that an ACO must demonstrate the adequacy of its repayment mechanism prior to any change in the terms and type of the repayment mechanism.

4. Applicability of Policies to Track 1+ Model ACOs

In the CY 2021 PFS proposed rule (85 FR 50251 and 50252), we provided a comprehensive discussion of the applicability of the proposed policies specified in section III.G and section III.I of the proposed rule to Track 1+ Model ACOs. We explained which of the proposed policies would become applicable to Track 1+ Model ACOs either through revisions to existing Shared Savings Program regulations that currently apply to Track 1+ Model ACOs or through the addition of new provisions that would apply to Track 1+ ACOs in the same way that they apply to ACOs in Track 1. However, we also explained the circumstances under which certain changes in policies would become applicable through an amendment to the ACO's Track 1+ Model Participation Agreement.

We received no public comments directly addressing the applicability of the policies proposed in the CY 2021 PFS proposed rule to Track 1+ Model ACOs. However, a few commenters expressed their support for applying the voluntary 1-year extension, for ACOs whose agreement periods would otherwise expire on December 31, 2020, to Track 1+ Model ACOs. Although this policy was established in the May 8th COVID-19 IFC (85 FR 27574 and 27575, see also 85 FR 27586 and 27587), we explained in the CY 2021 PFS proposed rule (85 FR 50251) that Track 1+ Model ACOs, among other ACOs whose agreement periods would otherwise expire on December 31, 2020, were eligible to voluntarily elect a 1-year extension of their agreement period for

a fourth performance year from January 1, 2021, to December 31, 2021.

However, we believe it would be helpful to summarize how the policies we are finalizing in sections III.G and III.I of this final rule apply to Track 1+ Model ACOs. Unless specified otherwise, the changes to the program's regulations finalized in this final rule that are applicable to Shared Savings Program ACOs within a current agreement period will apply to ACOs in the Track 1+ Model in the same way that they apply to ACOs in Track 1, so long as the applicable regulation has not been waived under the Track 1+ Model. Similarly, to the extent that certain requirements of the regulations that apply to ACOs under Track 2 or the ENHANCED track have been incorporated for ACOs in the Track 1+ Model under the terms of the Track 1+ Model Participation Agreement, any changes to those regulations that are finalized in this final rule will also apply to ACOs in the Track 1+ Model in the same way that they apply to ACOs in Track 2 or the ENHANCED track. For example, the following final policies will apply to Track 1+ Model ACOs:

- The application of the APP to determine the quality performance of Shared Savings Program ACOs (section III.G.1.c. of this final rule).
- The revisions to the Shared Savings Program quality performance standard. Specifically, under the modified approach we are finalizing, the quality performance standard for Track 1+ Model ACOs will be set at a quality score that is equivalent to or higher than the 30th percentile across all MIPS Quality performance category scores, for performance year 2021 (section III.G.1.c. of this final rule).
- The modifications to the regulations under § 425.604(c) specifying the circumstances under which a Track 1 ACO will qualify to receive a shared savings payment (section III.G.1.d. of this final rule).
- The modifications to the regulations under § 425.604(d) governing the determination of the final sharing rate for Track 1 ACOs (section III.G.1.d. of this final rule).
- The modifications to § 425.316 to allow CMS to identify ACOs that are not meeting the revised quality performance standard finalized in this final rule, and to require these ACOs to take actions to address their poor quality performance or face termination of their Shared Savings Program participation agreement (section III.G.1.e. of this final rule).
- The modifications to the policies governing the audit and validation of

data used to determine the ACO's quality performance. Specifically, under the new provision of the regulations at § 425.510(c), CMS retains the right to audit and validate the quality data reported by an ACO according to § 414.1390 (section III.G.1.f. of this final rule).

- The new provision of the regulations at § 425.512(b) to address the effect of extreme and uncontrollable circumstances on ACOs' quality performance for performance year 2021 and subsequent performance years (section III.G.1.g. of this final rule).

- The revisions to the definition of primary care services used in beneficiary assignment. The revised definition is applicable to Track 1+ Model ACOs for the performance year starting on January 1, 2021, and we will adjust the Track 1+ ACO's historical benchmark to reflect these policies (section III.G.2 of this final rule).

- The changes to the CAHPS for ACOs reporting requirements for performance year 2020 (section III.I.1 of this final rule).

5. Medicare Shared Savings Program Provisions From the May 8th COVID-19 IFC

In the May 8th COVID-19 IFC, we noted that, as of January 1, 2020, there were 517 Medicare Shared Savings Program (Shared Savings Program) Accountable Care Organizations (ACOs) serving approximately 11.2 million Medicare FFS beneficiaries across the country: 37 percent of ACOs (192 of 517) were participating under two-sided shared savings and shared losses models; and 160 ACOs had agreements ending December 31, 2020, and would be required to renew under the BASIC track or ENHANCED track to continue in the Shared Savings Program, including 20 ACOs participating in the Medicare ACO Track 1+ Model (Track 1+ Model).

In the May 8th COVID-19 IFC, we expressed our belief that the COVID-19 pandemic, and the resulting PHE as defined in § 400.200, have created a lack of predictability for many ACOs regarding the impact of expenditure and utilization changes on historical benchmarks and performance year expenditures, and for those under performance-based risk, the potential liability for shared losses, as well as disrupting population health activities, as clinicians, care coordinators and financial and other resources are diverted to address immediate acute care needs. We explained that ACOs and other program stakeholders have advocated for CMS to modify Shared Savings Program policies to address the

impact of the COVID-19 pandemic including to:

- Adjust the methodology for determining shared savings and shared losses, such as by: Reducing or eliminating liability for ACOs under performance-based risk for shared losses for PY 2020; not sharing savings or losses with ACOs for PY 2020; or adjusting program calculations to address the impact of COVID-19 on benchmark and PY expenditures, particularly for calendar year 2020.

- Eliminate or extend the deadline for ACOs to voluntarily terminate from the program without being financially reconciled for PY 2020, which under § 425.221(b)(2)(ii)(A) is June 30, 2020, with notification 30 days prior (no later than June 1).

- Maintain or “freeze” ACOs in their current participation options so that ACOs otherwise required to renew their participation for a new agreement period starting on January 1, 2021, to continue their participation in the Shared Savings Program, are not burdened with meeting application deadlines, and forgo the requirement that ACOs participating in the BASIC track’s glide path advance to the next level for PY 2021.

- Account for changes in billing and care patterns in determining beneficiary assignment.

In the May 8th COVID-19 IFC (85 FR 27574), we explained that ACOs and other program stakeholders had indicated that there was an urgent need to address these concerns because ACOs needed to make participation decisions for PY 2020 and PY 2021 and may choose to terminate their participation in the Shared Savings Program on or before June 30th, rather than face the potential of pro-rated losses for PY 2020 if the PHE for COVID-19 does not extend for the entire year or the program’s policies do not adequately mitigate liability for shared losses.

We expressed our belief that it is vital to the stability of the Shared Savings Program to encourage continued participation by ACOs by adjusting program policies as necessary to address the impact of the COVID-19 pandemic, including by offering certain flexibilities in program participation options to currently participating ACOs and addressing potential distortions in expenditures resulting from the pandemic to ensure that ACOs are treated equitably regardless of the degree to which their assigned beneficiary populations are affected by the pandemic. We explained that the changes we were making in the May 8th COVID-19 IFC would help to ensure a more equitable comparison between

ACOs’ expenditures for PY 2020 and ACOs’ updated historical benchmarks and that ACOs are not rewarded or penalized for having higher/lower COVID-19 spread in their patient populations which, in turn, would help to protect ACOs from owing excessive shared losses and the Medicare Trust Funds from paying out windfall shared savings. As described in the May 8th COVID-19 IFC (85 FR 27573 through 27587), we modified Shared Savings Program policies to: (1) Allow ACOs whose current agreement periods expire on December 31, 2020, the option to extend their existing agreement period by one year, and allow ACOs in the BASIC track’s glide path the option to elect to maintain their current level of participation for PY 2021; (2) clarify the applicability of the program’s extreme and uncontrollable circumstances policy to mitigate shared losses for the period of the PHE for COVID-19; (3) adjust program calculations to mitigate the impact of COVID-19 on ACOs; and (4) expand the definition of primary care services for purposes of determining beneficiary assignment to include telehealth codes for virtual check-ins, e-visits, and telephonic communication. We also addressed how these adjustments to program policies would apply to ACOs participating in the Track 1+ Model.

In response to the May 8th COVID-19 IFC, CMS received 57 timely pieces of correspondence addressing Shared Savings Program policies. We thank commenters for their thoughtful consideration of the modifications to and clarifications of Shared Savings Program policies included in the May 8th COVID-19 IFC. Within section III.G.5. of this final rule, we summarize and respond to public comments, and discuss our final policies after taking into consideration the public comments we received on the May 8th COVID-19 IFC. Some commenters’ suggestions for modifications to Shared Savings Program policies went beyond the scope of the policies addressed in the May 8th COVID-19 IFC, and will not be addressed in this section of this final rule.

Comment: Generally, some commenters expressed their appreciation for CMS’ call for a renewed national commitment to value-based care.⁷⁰ These commenters generally

⁷⁰ Although not specifically described in the May 8th COVID-19 IFC, CMS’ commitment to value-based care has been announced in recent publications. See for example, Verma S. New CMS Payment Model Flexibilities for COVID-19. *Health Affairs*. June 3, 2020. Available at <https://www.healthaffairs.org/doi/10.1377/hblog20200602.80889/full/>. See also, CMS Press Release, “Trump

underscored the importance of value-based healthcare as a stabilizing force during the COVID-19 pandemic. A few commenters explained that alternative payment models like the Shared Savings Program have enabled healthcare providers and ACOs to more effectively adapt to the challenges of delivering care during the PHE compared to their counterparts that are more reliant on reimbursement under traditional FFS. Another commenter described value-based healthcare initiatives, of which the Shared Savings Program is Medicare’s flagship program, as proving to be “a port in the storm during COVID-19” offering both infrastructure and expertise unavailable in traditional FFS and predictable revenue during unpredictable times. One commenter explained that ACOs represent a viable path for a further step away from volume-focused medicine and its problematic incentives.

Some commenters specifically described ACOs’ efforts to meet the Shared Savings Program’s goals and provide for the health and safety of their patients during the COVID-19 pandemic, as in any other performance year. Some commenters described ACOs’ agility in responding to disruptions in their routine monitoring of and care for patients, for example by rapidly deploying, or implementing, strategies to respond to the COVID-19 pandemic, including coordinating with local healthcare providers, expanding telehealth services, and diverting care coordinators to help manage patient outcomes. One commenter described ACOs’ efforts to “double down on existing risk targeting and care coordination efforts” which helped support vulnerable patients to shelter safely in their homes with needed medications, food and other essentials. As another commenter described, many program participants have transitioned care to virtual platforms and/or provided care on porches or in parking lots or other outdoor settings as appropriate. This commenter explained that program participants are also working to establish long-term plans for triaging and treating patients with chronic conditions who are currently not seeking care because of the COVID-19 pandemic.

Some commenters detailed the challenges ACOs face in implementing their business operations within the pandemic. As described by one

Administration Issues Call to Action Based on New Data Detailing COVID-19 Impacts on Medicare Beneficiaries” (June 22, 2020), available at <https://www.cms.gov/newsroom/press-releases/trump-administration-issues-call-action-based-new-data-detailing-covid-19-impacts-medicare>.

commenter, ACOs are procuring the personal protective equipment (PPE) needed to treat patients in person, applying for loans, keeping track of new guidance and policy changes, and making financial decisions related to their business. As another illustration, some commenters explained that while their commitment to value-based care was unwavering, the financial strains and uncertainty of the COVID-19 pandemic presents a difficult choice for ACOs' future.

Response: As we described in a recent publication,⁷¹ we recognize beneficiaries and healthcare providers have been facing unprecedented challenges due the COVID-19 pandemic. The pandemic has underscored the need for a resilient healthcare system where reimbursement is not tied to the volume of services provided, but rather to value-based incentives to keep patients healthy. The Shared Savings Program is one of the country's largest initiatives on value-based care, equipping healthcare providers with the flexibility to innovate and focus on health outcomes that can help them respond to the pandemic. We appreciate ACOs' continued commitment to meeting the goals of the Shared Savings Program while facing challenges in caring for Medicare FFS beneficiaries and operating their organizations during the COVID-19 pandemic.

a. Application Cycle for January 1, 2021 Start Date and Extension of Agreement Periods Expiring on December 31, 2020

As we explained in the May 8th COVID-19 IFC (85 FR 27574), a renewing ACO is defined as an ACO that continues its participation in the program for a consecutive agreement period, without a break in participation, because it is an ACO whose participation agreement expired and that immediately enters a new agreement period to continue its participation in the program, or an ACO that terminated its current participation agreement under § 425.220 and immediately enters a new agreement period to continue its participation in the program (see § 425.20). Section 425.224 specifies application procedures for a renewing ACO applying to enter a new participation agreement with CMS for participation in the Shared Savings Program. In the May 8th COVID-19 IFC, we explained that

we were seeking to reduce operational burden for ACOs and their healthcare providers while they respond to the serious health threats posed by the spread of the COVID-19. We described that we had received feedback from ACO stakeholders requesting that CMS delay the Shared Savings Program application cycle for a January 1, 2021 start date (occurring in CY 2020), since they had reassigned staff and care coordinators to respond to the current pandemic. Stakeholders expressed concern about focusing resources on applying to the Shared Savings Program rather than on patient care during the PHE for COVID-19. Additionally, stakeholders expressed uncertainty over their continued participation in the Shared Savings Program in 2021 given the lack of predictability of the impact of COVID-19 on the expenditures used to establish an ACO's historical benchmark.

In response to stakeholder feedback, in the May 8th COVID-19 IFC (85 FR 27574), we announced we were forgoing the application cycle for a January 1, 2021 start date (herein referred to as the 2021 application cycle). We explained our belief that it is appropriate to forgo the 2021 application cycle as the PHE for COVID-19 continues because this would allow ACOs and their ACO providers/suppliers currently participating in the Shared Savings Program to continue focusing on treating patients during the pandemic. We explained there were 160 Medicare Shared Savings Program ACO participation agreements that would end on December 31, 2020, including 20 ACOs participating in the Track 1+ Model. These ACOs would have been required to apply to renew their participation agreement to continue participating in the Shared Savings Program effective January 1, 2021. To reduce burden and allow these ACOs to continue participating in the program without a 2021 application cycle, we allowed ACOs that entered a first or second agreement period with a start date of January 1, 2018, the opportunity to elect to extend their agreement period for an optional fourth performance year. The fourth performance year would span 12 months from January 1, 2021, to December 31, 2021. This election to extend the agreement period would be voluntary and an ACO could choose not to make this election, and therefore, conclude its participation in the program with the expiration of its current agreement period on December 31, 2020. Under this approach, eligible ACOs would be able to remain under their existing historical benchmark for

an additional year, which would increase stability and predictability given the potential impact of the pandemic on beneficiary expenditures under FFS Medicare and help provide greater certainty for ACOs making determinations regarding their future participation in the Shared Savings Program.

Additionally, we explained that by forgoing the 2021 application cycle for new applicants, CY 2020 will not serve as benchmark year 3 for a cohort of ACOs that would otherwise be January 1, 2021 starters (85 FR 27574 and 27575). An ACO's historical benchmark is determined based on the 3 most recent years prior to the start of its agreement period. For ACOs in a first agreement period, benchmark year 3 is given the highest weight of the 3 benchmark years and, because we expected CY 2020 to be an anomalous year, we explained our belief that it could be disadvantageous to include CY 2020 expenditures as the third benchmark year for this cohort of ACOs. Cancelling the 2021 application cycle would provide us with additional time to consider and develop approaches to further mitigate the role of 2020 as a benchmark year given the unusual expenditure and utilization trends likely to result from the pandemic.

As established in the May 8th COVID-19 IFC (85 FR 27575), the ACO's voluntary election to extend its agreement period must be made in the form and manner and by a deadline established by CMS, and an ACO executive who has the authority to legally bind the ACO must certify the election. We noted that this optional 12-month agreement period extension was a one-time exception for all ACOs with agreements expiring on December 31, 2020; it would not be available to other ACOs or to future program entrants. Eligible ACOs were able to notify CMS of their decision to elect to extend their agreement starting June 18, 2020 and ending September 22, 2020.

We explained that under the existing provision at § 425.210(a), the ACO must provide a copy of its participation agreement with CMS to all ACO participants, ACO providers/suppliers, and other individuals and entities involved in ACO governance. In the case of an ACO that elects to extend its agreement period pursuant to the May 8th COVID-19 IFC, we indicated that we would consider the ACO to be in compliance with § 425.210(a) if it notifies these parties that it will continue to participate in the program for an additional year. Further, under § 425.210(b), all contracts or arrangements between or among the

⁷¹ Verma S. 2019 Medicare Shared Savings Program ACO Performance: Lower Costs And Promising Results Under 'Pathways To Success.' *Health Affairs*. September 14, 2020. Available at <https://www.healthaffairs.org/doi/10.1377/hblog20200914.598838/full/>.

ACO, ACO participants, ACO providers/suppliers, and other individuals or entities performing functions or services related to ACO activities must require compliance with the requirements and conditions of the program's regulations, including, but not limited to, those specified in the participation agreement with CMS (see also § 425.116(a)(3) (as to agreements with ACO participants) and (b)(3) (as to agreements with ACO providers/suppliers)). Thus, as we explained in the May 8th COVID-19 IFC (85 FR 27575), an ACO that elects to extend its participation agreement pursuant to the policy established by the IFC must require its ACO participants, ACO providers/suppliers, and other individuals or entities performing functions or services related to ACO activities during PY 2021 to comply with the program's requirements through December 31, 2021. We noted that to remain in compliance with § 425.116, an ACO may need to extend the duration of its agreements with ACO participants and ACO providers/suppliers.

We revised § 425.200(b)(3)(ii) to allow ACOs that entered a first or second agreement period with a start date of January 1, 2018, to elect to extend their agreement period for an optional fourth performance year (85 FR 27575). We explained that while we were forgoing the application cycle for ACOs to apply to enter an agreement period beginning on January 1, 2021, eligible, currently participating ACOs would be able to apply for a SNF 3-day rule waiver (§ 425.612(a)(1)(i)), apply to establish a beneficiary incentive program (§ 425.304(c)(2)), modify ACO participant (§ 425.118(b)) and/or SNF affiliate lists (§ 425.612(a)(1)(i)(B)), and elect to change their assignment methodology (§ 425.226(a)(1)) for PY 2021 (85 FR 27575). Also, an ACO participating under the BASIC track's glide path could still elect to transition to a higher level of risk and potential reward within the BASIC track's glide path other than the level of risk and potential reward that the ACO would be automatically transitioned to for PY 2021, absent the ACO's election to maintain its current participation level for one year as described in section I.L.2. of the May 8th COVID-19 IFC (85 FR 27575 and 27576). For example, an ACO participating in BASIC track Level B in PY 2020 could still elect to transition to BASIC track level D or E in PY 2021.

We received public comments on the approach we established in the May 8th COVID-19 IFC under which ACOs whose participation agreements were scheduled to expire on December 31,

2020, could elect to extend their agreement period for an optional fourth performance year. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported CMS' decision to allow ACOs that entered a first or second agreement period with a start date of January 1, 2018, the opportunity to extend their agreement period for an optional fourth performance year, spanning 12 months, from January 1, 2021, to December 31, 2021.

Response: We appreciate commenters' support for providing eligible ACOs the opportunity to extend their agreement period for an optional fourth performance year. Eligible ACOs had until September 22, 2020, to notify us of their election to extend their participation agreement. Of the Shared Savings Program ACOs with an agreement set to expire on December 31, 2020, 89 percent have elected to extend their agreement period for an additional performance year.

Comment: Most commenters urged CMS to reconsider its decision to forgo the Shared Savings Program 2021 application cycle, and a few commenters noted that the decision to cancel the application cycle would impede participation in Alternative Payment Models (APMs) during 2021. Several organizations commented on CMS' commitment to reducing administrative burdens on applicants, given the strain on resources as a result of the PHE for COVID-19, expressing appreciation for the added flexibility, but strongly believed that the decision whether it is too burdensome to apply to enter a new agreement period should be left up to the ACO. A number of commenters suggested that CMS reverse its decision to forgo a 2021 application cycle, and allow (for example) agreement period start dates of either April 1, 2021, or July 1, 2021. In urging CMS to allow for an agreement period start date in 2021, one commenter suggested an alternative approach to identifying the benchmark years, which included using 2017, 2018, and 2019 as benchmark years, and thereby avoiding the use of 2020 as a benchmark year.

A few commenters requested that CMS consider making opportunities available for Track 1 ACOs whose agreement periods expire on December 31, 2020, to elect to transition to a two-sided model for performance year 2021, or to enter a new agreement period under a two-sided model beginning on January 1, 2021, such as by allowing these ACOs to enter the ENHANCED track or the BASIC track's glide path.

Response: While we appreciate commenters' support for an agreement period start date in 2021, we decline at this time to establish such an option. At the time of this final rule, we do not believe that we have enough time to develop policies for a mid-year start date in 2021, because the program's rules and regulations are generally based on the calendar year from January 1 through December 31, and significant modifications would be needed to accommodate a start date other than January 1 during 2021. Such regulatory changes would require notice and comment rulemaking, and we would then require time to implement an application process. We would also need to allow ACOs enough time to review the regulation and apply for the program; allow for CMS' review of applications, including vetting of ACO participants through program integrity and law enforcement screening; allow for both parties to sign participation agreements; and allow time for CMS to deliver assignment list reports prior to the start date of the agreement period. Further, there would be complexities with establishing a mid-year start date in 2021, which would require additional analysis and policy development, followed by further consideration of those policies by prospective applicants and existing ACOs. These complexities, as described in previous rulemaking (see, for example, 83 FR 67944 through 67967), include policies for determining the ACO's assigned population, determining shared savings and shared losses, and quality reporting for a short performance year, among other factors. A further consideration would be the use of 2020 as benchmark year 3 in establishing historical benchmarks for agreement periods starting in 2021. While we appreciate the commenter's suggestion that we use alternative benchmark years in order to avoid using 2020 as a benchmark year, we decline at this time to make any additional modifications to the Shared Savings Program's benchmarking methodology. As discussed in section III.G.5.d.(2) of this final rule, we anticipate continuing to monitor and evaluate the impact of the PHE for COVID-19 on Medicare FFS expenditures and Shared Savings Program payment calculations, to help inform potential future policy modifications to the Shared Savings Program. We believe it is premature to undertake such policy modifications at the time of this final rule.

We appreciate commenters' support for APM participation through participation in a Shared Savings Program ACO. We note that existing

ACOs had the opportunity to make ACO participant list modifications that will be effective for performance year 2021, which we believe provided an opportunity for additional TINs, and thereby the providers and suppliers that have assigned their billing rights to these TINs, to begin participating in the Shared Savings Program, or for existing ACO participant TINs to participate under a different Shared Savings Program ACO.

We decline at this time to adopt the commenters' suggestions to allow ACOs that elect the 1-year extension of their participation agreement to also elect a different track of participation for performance year 2021 or to allow these ACOs to enter a new agreement period under a two-sided model, beginning on January 1, 2021, such as allowing Track 1 ACOs to elect to transition to performance-based risk on the BASIC track's glide path or to enter the ENHANCED track. The approach we established in the May 8th COVID-19 IFC contemplates an extension of the ACO's existing agreement period, not entry into a new agreement period, which would include (for instance) rebasing the ACO's historical benchmark. Such an approach would also raise the same concerns as allowing ACOs to enter the Shared Savings Program for a start date in 2021, in particular around the use of 2020 as a benchmark year. Similarly, the approach adopted in the May 8th COVID-19 IFC does not contemplate that ACOs would be permitted to elect to participate under a different track during the optional fourth performance year under their current participation agreement. We encourage ACOs interested in transitioning to performance-based risk, or entering higher levels of risk and potential reward, to apply to do so at the next opportunity, which will be the application cycle for an agreement period beginning on January 1, 2022.

After considering the comments received, we are finalizing without modification the revisions to the provision at § 425.200(b)(3)(ii) to allow ACOs that entered a first or second agreement period with a start date of January 1, 2018, to elect to extend their agreement period for an optional fourth performance year.

b. Allow BASIC Track ACOs To Elect To Maintain Their Participation Level for One Year

We finalized a redesign of Shared Savings Program's participation options in the final rule entitled "Medicare Program; Medicare Shared Savings Program; Accountable Care

Organizations—Pathways to Success and Extreme and Uncontrollable Circumstances Policies for Performance Year 2017", which appeared in the **Federal Register** on December 31, 2018 (83 FR 67816). We finalized the BASIC track, added as a new provision at § 425.605, which includes an option for eligible ACOs to begin participation under a one-sided model and incrementally phase-in risk (calculated based on ACO participant revenue and capped at a percentage of the ACO's updated benchmark) and potential reward over the course of a single agreement period, an approach referred to as the glide path (83 FR 67841). The glide path includes five levels: A one-sided model available only for the first 2 consecutive performance years of a 5-year agreement period, each year of which is identified as a separate level (Levels A and B); and three levels of progressively higher risk and potential reward in performance years 3 through 5 of the agreement period (Levels C, D, and E). ACOs are automatically advanced along the progression of risk/reward levels at the start of each participation year, over the course of a 5-year agreement period, unless the ACO elects to advance more quickly, until ACOs reach the BASIC track's maximum level of risk/reward (Level E) (83 FR 67844). For ACOs that entered the BASIC track's glide path for an agreement period beginning on July 1, 2019, the progression through the levels of risk and potential reward spans 6 performance years, including the ACO's first performance year from July 1, 2019, through December 31, 2019; these ACOs were not automatically advanced to the next risk/reward level at the start of PY 2020 (§ 425.200(b)(4)(ii), (c)(3); § 425.600(a)(4)(i)(B)(2)(i)).

As explained in the May 8th COVID-19 IFC (85 FR 27575 and 27576), stakeholders have expressed concerns that due to the unpredictable impact of COVID-19 during PY 2020, and the uncertainty as to their ability to secure a repayment mechanism for PY 2021, ACOs are uncertain they will continue participating in the program if they are automatically transitioned to downside risk or a higher level of downside risk in PY 2021. Specifically, stakeholders requested we "freeze," or forgo the automatic advancement of BASIC track ACOs and allow them to remain at their current level of participation for PY 2021. Additionally, per § 425.204(f)(3)(iii), an ACO entering an agreement period in Level A or Level B of the BASIC track must demonstrate the adequacy of its repayment mechanism prior to the start of any

performance year in which it either elects to participate in, or is automatically transitioned to a two-sided model of the BASIC track, including Level C, Level D, or Level E. We noted our concern whether some ACOs, particularly those that would automatically transition to Level C of the BASIC track, would be able to establish a repayment mechanism prior to the start of PY 2021 because the source of capital to cover potential losses may be uncertain for some ACOs given the resource intensity of responding to the pandemic. We noted that 136 ACOs participating under Level B of the BASIC track were scheduled to automatically advance to Level C on January 1, 2021. As discussed in the May 8th COVID-19 IFC (85 FR 27576), some stakeholders indicated that they may be unable to secure a letter of credit, while other stakeholders indicated that their discretionary funds were fully committed to responding to the PHE for COVID-19.

We also expressed concern that some of the care coordination processes ACOs have been developing may be interrupted by the pandemic. For example, ACOs may have reallocated funding and staff resources to respond to the PHE for COVID-19, thereby temporarily disrupting their ability to implement redesigned care processes that would support their transition to risk. We agreed with stakeholders that most ACOs did not know the impact that COVID-19 would have on their expenditures or beneficiary population and the potential for losses under risk arrangements. Therefore, we permitted ACOs participating in the BASIC track's glide path to elect to maintain their current level of participation under the BASIC track for PY 2021. During the summer of 2020, applicable ACOs were able to elect to remain in the same level of the BASIC track's glide path that the ACO entered for PY 2020. For PY 2022, an ACO that elected this advancement deferral option will be automatically advanced to the level of the BASIC track's glide path in which it would have participated during PY 2022 if it had advanced automatically to the next level for PY 2021 (unless the ACO elects to advance more quickly before the start of PY 2022). For example, if an ACO participating in the BASIC track, Level B, in PY 2020 elected to maintain its current level of participation for PY 2021, it will participate under Level B for PY 2021 and then will automatically advance to Level D for PY 2022, since the ACO would have moved automatically to Level C for PY 2021 under current program rules, absent this

change. The ACO could also elect to advance more quickly by opting to move to Level E instead of Level D for PY 2022, in which case the ACO would participate under Level E for the remainder of its agreement period.

In the May 8th COVID-19 IFC, we redesignated § 425.600(a)(4)(i)(B)(2)(iii) as § 425.600(a)(4)(i)(B)(2)(iv) and added a new § 425.600(a)(4)(i)(B)(2)(iii) to allow ACOs currently participating in the BASIC track's glide path to elect to maintain their current participation level for PY 2021.

We received public comments on the advancement deferral option we established in the May 8th COVID-19 IFC. The following is a summary of the comments we received and our responses.

Comment: Many commenters expressed support for CMS' decision to permit ACOs participating in the BASIC track's glide path the option to voluntarily elect to maintain their current participation level under the BASIC track for PY 2021.

Response: We appreciate commenters' support for allowing ACOs participating in the BASIC track the opportunity to elect to remain in the same level of the BASIC track's glide path for PY 2021 as they entered for PY 2020.

Comment: Several commenters urged CMS to reconsider its decision to move ACOs to the level of risk they would have been in for 2022, absent the freeze. Commenters noted that skipping a level would be challenging under normal circumstances. However, under the extenuating circumstances of the PHE for COVID-19, they believed this requirement would not allow them the opportunity to focus on recovering financially and would take attention away from providing the best patient care, serving only to drive ACOs from the Shared Savings Program. Some commenters suggested that CMS allow ACOs to freeze their current risk level as proposed, but then resume the glide path in performance year 2022 at the risk level they would have been automatically advanced to for performance year 2021, absent their election to freeze their participation level for that performance year.

Response: Of the BASIC track ACOs that participated in PY 2020, 77 percent of these ACOs began the agreement period that includes that performance year as renewing or re-entering ACOs, as defined at § 425.20. These ACOs all have prior experience participating in the Shared Savings Program; some of these ACOs have continuously participated in the program since 2012. We believe that entering an agreement period under the BASIC track's glide

path suggests that these ACOs should already have been taking steps to prepare to enter performance-based risk and to progress to higher levels of risk and potential reward in order to continue their participation in the Shared Savings Program. We believe that by enabling these ACOs to gain additional experience in meeting the Shared Savings Program's goals within the context of the PHE for COVID-19 by allowing them to maintain their current participation level for performance year 2021, these ACOs will be further prepared to progress to higher levels of risk and potential reward within the BASIC track's glide path in PY 2022. Additionally, we note that some ACOs are currently ready to take on increasing levels of performance-based risk, as 9 percent of the ACOs participating in the BASIC track's glide path in PY 2020 have elected to advance along the glide path more quickly than required. Therefore, at this time, we decline commenters' suggestions to further slow ACOs' progression along the BASIC track's glide path by allowing ACOs that have elected to maintain their position on the glide path for PY 2021 to resume their progression at the level they would have entered for PY 2021, absent the freeze.

Comment: Many commenters suggested that CMS allow additional participation options under which ACOs would be protected from shared losses (such as options to allow ACOs to select no downside risk), with some commenters suggesting that these alternatives include reduced (lower) shared savings rates. For example, commenters suggested that we allow ACOs to elect the level of risk/reward currently available under the one-sided models of the BASIC track, under which ACOs take on no downside risk and share in savings at a rate of up to 40 percent, based on quality performance. While some commenters suggested making this alternative available for PY 2020, other commenters' suggestions for such an option seemed to be more open-ended, without specifying which cohorts of ACOs should be eligible or for how long this option should continue to be available. A number of commenters conveyed their belief that, absent this protection, and given the uncertainty around the end date of the PHE for COVID-19, ACOs may choose to leave the program rather than be at risk for shared losses under a two-sided model. One commenter explained that, at a minimum, CMS should allow ACOs to opt for lower shared savings rates in exchange for reduced downside risk, given that, due to the PHE for COVID-

19, circumstances have drastically changed since ACOs performed their original cost-benefit calculations and signed their participation agreements. Another commenter explained that many clinicians are concerned about their ability to assume financial risk during this unprecedented time. Allowing ACOs the option to be protected from shared losses, along with existing policies in the Shared Savings Program to address extreme and uncontrollable circumstances, would support participants as they weigh continued participation in the program. Finally, some commenters conveyed their belief that it is very important to protect ACOs that are harmed by the PHE for COVID-19 from shared losses, and that it is also critical to allow eligible ACOs to still earn shared savings for PY 2020. These commenters explained that ACOs make significant investments to enhance quality, address chronic disease, and improve patient care, and shared savings are instrumental to continuing those initiatives.

Response: At this time, we do not believe it is necessary to provide alternative participation options for future performance years, and note that any new participation options would need to be established through additional notice and comment rulemaking. We believe a combination of policies will encourage continued participation by ACOs under the Shared Savings Program's existing financial models, in particular: The program's extreme and uncontrollable circumstances policies for mitigating shared losses, which will reduce ACOs' liability for losses for months covered by the PHE for COVID-19, including any applicable months within performance year 2021 (refer to section III.G.5.c of this final rule); the adjustment to program calculations for episodes of care for treatment of COVID-19, triggered by inpatient services (as discussed in section III.G.5.d.(2) of this final rule); and the policies to address the effect of extreme and uncontrollable circumstances on ACO quality performance (as discussed in section III.G.1.g and section III.I of this final rule).

At the time of this final rule, the PHE for COVID-19 has been renewed with an effective date of October 23, 2020, and, unless terminated early, will remain in effect for 90 days from the effective date. Under the Shared Savings Program's extreme and uncontrollable circumstances policies for mitigating shared losses (described in section III.G.5.c of this final rule), shared losses will be mitigated for all ACOs

participating in a performance-based risk track, including: Track 2, the ENHANCED track, Levels C, D and E of the BASIC track, and the Track 1+ Model, for the duration of the PHE for COVID-19 as specified in § 400.200, which started in January 2020. If the PHE covers the full year (January through December 2020) any shared losses an ACO incurs for performance year 2020 would be reduced completely, and the ACO would not owe any shared losses. Under the Shared Savings Program's existing policies, ACOs will continue to be eligible to share in savings if they meet the criteria for doing so, as specified in the regulations at §§ 425.604(c), 425.605(c), 425.606(c), 425.610(c). As described in section III.G.5.d. of this final rule, we will adjust certain Shared Savings Program calculations, including the determination of benchmark and performance year expenditures, to remove payment amounts for episodes of care for treatment of COVID-19, triggered by an inpatient service. These adjustments will help protect CMS and ACOs against distortions in expenditures resulting from the COVID-19 pandemic that could affect shared savings and shared losses calculations. We believe these policies mitigate commenters' concerns about the availability of shared savings and the risk of shared losses under the existing participation options.

After considering the comments received, we are finalizing without modification the redesignation of § 425.600(a)(4)(i)(B)(2)(iii) as § 425.600(a)(4)(i)(B)(2)(iv) and the addition of a new § 425.600(a)(4)(i)(B)(2)(iii) to allow ACOs currently participating in the BASIC track's glide path to elect to maintain their current participation level for PY 2021.

c. Applicability of Extreme and Uncontrollable Circumstances Policies to the PHE for COVID-19

In the May 8th COVID-19 IFC (85 FR 27576 and 27577), we clarified, for purposes of the Shared Savings Program, that the months affected by an extreme and uncontrollable circumstance would begin with January 2020, consistent with the PHE for COVID-19 determined to exist nationwide as of January 27, 2020, by the Secretary on January 31, 2020, and continue through the end of the PHE, as defined in § 400.200, which includes any subsequent renewals.

We explained in the May 8th COVID-19 IFC (85 FR 27577) that catastrophic events outside the ACO's control could also increase the difficulty of

coordinating care for patient populations, and due to the unpredictability of changes in utilization and cost of services furnished to beneficiaries, may have a significant impact on expenditures for the applicable performance year and the ACO's benchmark in the subsequent agreement period. We explained these factors could jeopardize the ACO's ability to succeed in the Shared Savings Program, and ACOs, especially those in performance-based risk tracks, may reconsider whether they are able to continue their participation in the program.

Therefore, as explained in the May 8th COVID-19 IFC (85 FR 27577), we believed it was important to make clear that, under the existing extreme and uncontrollable circumstances policies for the Shared Savings Program, the timeframe for the extreme and uncontrollable circumstance of the COVID-19 pandemic for purposes of mitigating shared losses will extend for the duration of the PHE for COVID-19 as specified in § 400.200, which begins in January 2020. We explained that if the PHE for COVID-19 extends through all of CY 2020, all shared losses for PY 2020 will be mitigated for all ACOs participating in a performance-based risk track: Including Track 2, the ENHANCED track, Levels C, D and E of the BASIC track, and the Track 1+ Model. At the time of the May 8th COVID-19 IFC, the PHE for COVID-19 had covered 4 months (January through April 2020) meaning any shared losses an ACO incurred for PY 2020 would be reduced by at least one-third. We explained that if the PHE for COVID-19 extends for a large portion, if not all of the year, the existing extreme and uncontrollable circumstances policy under the Shared Savings Program would mitigate a significant portion of, if not all, shared losses an ACO may owe for PY 2020. For example, if the PHE for COVID-19 were to cover 6 months (January through June 2020) any shared losses an ACO incurs for PY 2020 would be reduced by one-half; if the PHE for COVID-19 were to cover 9 months (January through September 2020) any shared losses an ACO incurs for PY 2020 would be reduced by three-fourths; and if the PHE for COVID-19 were to cover the full year (January through December 2020) any shared losses an ACO incurs for PY 2020 would be reduced completely, and the ACO would not owe any shared losses.

We received public comments on our clarification of the applicability of the extreme and uncontrollable circumstances policies to the COVID-19 pandemic for purposes of mitigating

shared losses under the Shared Savings Program. The following is a summary of the comments we received and our responses.

Comment: Commenters discussing this topic generally welcomed the clarification that the PHE for COVID-19 constituted an extreme and uncontrollable circumstance for purposes of mitigating shared losses, beginning in January 2020. While one commenter expressed support for the approach specified in the May 8th COVID-19 IFC, under which the extreme and uncontrollable circumstances policy would mitigate shared losses based on the duration of the PHE, many other commenters addressing this issue tended to express concern that mitigation of shared losses would cease with the end of the PHE. In particular, commenters expressed concern about the extent to which this approach would mitigate shared losses in light of the uncertainty over the length of the PHE (at the time of the comment period, which closed on July 7, 2020, the PHE was known to extend through July 25, 2020) and the potential for "early termination" of the PHE. Several commenters suggested that CMS extend the extreme and uncontrollable circumstances policy for mitigating shared losses for the duration of PY 2020. Several commenters suggested that CMS extend the policy to any performance year that starts during the PHE. One commenter questioned how CMS would adjust the methodology to account for variability in impact if the Secretary were to amend the PHE from a nationwide declaration to a regional one. More generally, one commenter explained the Shared Savings Program extreme and uncontrollable circumstances policy had previously been used to address natural phenomena (such as hurricanes or wildfires), which may be short-lived, and noted the COVID-19 global pandemic is different due to the uncertainty over when it may end.

One commenter, in expressing support for the approach to mitigating shared losses under the extreme and uncontrollable circumstances policy described in the May 8th COVID-19 IFC, also expressed their support for the continued ability of ACOs to share in savings generated from their diligent investments in the health and safety of their patient populations during the COVID-19 crisis. This echoed some other commenters' suggestions, underscoring the importance of shared savings payments in helping to address the financial strains placed on ACOs by COVID-19.

Response: We appreciate the commenters' support for the clarification regarding the duration of the PHE for COVID–19 and the applicability of the extreme and uncontrollable circumstances policy to mitigate shared losses for PY 2020.

In December 2017, we issued an interim final rule with comment period entitled “Medicare Program: Medicare Shared Savings Program: Extreme and Uncontrollable Circumstances Policies for Performance Year 2017” (hereinafter referred to as the “December 2017 IFC”), which appeared in the December 26, 2017 **Federal Register** (82 FR 60912 through 60919). In the December 2017 IFC (82 FR 60914), we aligned the extreme and uncontrollable circumstances policies under the Shared Savings Program with the policy established under the Quality Payment Program. Specifically, the Shared Savings Program extreme and uncontrollable circumstances policies apply when we determine that an event qualifies as an automatic triggering event under the Quality Payment Program. We use the determination of an extreme and uncontrollable circumstance under the Quality Payment Program, including the identification of affected geographic areas and applicable time periods, for purposes of determining the applicability of the extreme and uncontrollable circumstances policies with respect to both financial performance and quality reporting under the Shared Savings Program. We extended the extreme and uncontrollable circumstances policies finalized for PY 2017, including the alignment with the Quality Payment Program, to PY 2018 and subsequent years in the CY 2019 PFS final rule (83 FR 59969 through 59973). The Medicare Shared Savings Program and Quality Payment Program interact closely. All of the tracks of the Shared Savings Program are considered MIPS APMs, and Track 2, the ENHANCED track, and Level E of the BASIC track are also designated Advanced APMs. The two programs have several overlapping goals, including achieving better health for individuals, better population health, and lowering growth in expenditures. Because of these interactions and overlaps, we continue to believe that it is appropriate to use the same time periods and geographic areas as the Quality Payment Program when implementing the Shared Savings Program extreme and uncontrollable circumstances policies. We further clarify that if the PHE for COVID–19 transitions from a national PHE to a

regional PHE, the Shared Savings Program will continue to apply the extreme and uncontrollable circumstances policy in the impacted geographic areas. At the time of this final rule, the PHE for COVID–19 has been renewed for another 90 days, with an effective date of October 23, 2020. Unless the PHE for COVID–19 is terminated early, all shared losses for performance year 2020 would be mitigated.

d. Adjustments to Shared Savings Program Calculations To Address the COVID–19 Pandemic

(1) Background

Section 1899(d)(1)(B)(ii) of the Act addresses how ACO benchmarks are to be established and updated under the Shared Savings Program. This provision specifies that the Secretary shall estimate a benchmark for each agreement period for each ACO using the most recent available 3 years of per beneficiary expenditures for Parts A and B services for Medicare FFS beneficiaries assigned to the ACO. Such benchmark shall be adjusted for beneficiary characteristics and such other factors as the Secretary determines appropriate, and updated by the projected absolute amount of growth in national per capita expenditures for Parts A and B services. Section 1899(d)(1)(B)(i) of the Act specifies that, in each year of the agreement period, an ACO is eligible to receive payment for shared savings only if the estimated average per capita Medicare expenditures under the ACO for Medicare FFS beneficiaries for Parts A and B services, adjusted for beneficiary characteristics, is at least the percent specified by the Secretary below the applicable benchmark under section 1899(d)(1)(B)(ii) of the Act.

Section 1899(i)(3) of the Act grants the Secretary the authority to use other payment models if the Secretary determines that doing so would improve the quality and efficiency of items and services furnished under Title XVIII and the alternative methodology would result in program expenditures equal to or lower than those that would result under the statutory payment model. The authority under section 1899(i)(3) of the Act to use other payment models includes authority to adopt alternatives to the benchmarking methodology set forth in section 1899(d)(1)(B)(ii) of the Act, and alternatives to the methodology for determining expenditures for each performance year as set forth in section 1899(d)(1)(B)(i) of the Act. As discussed in earlier rulemaking, we have used our authority under section 1899(i)(3) of the

Act to adopt alternative policies to the provisions of section 1899(d)(1)(B) of the Act for updating the historical benchmark,⁷² and calculating performance year expenditures.⁷³ We have also used our authority under section 1899(i)(3) of the Act to establish the Shared Savings Program's two-sided payment models,⁷⁴ and to mitigate shared losses owed by ACOs affected by extreme and uncontrollable circumstances during PY 2017 and subsequent performance years.⁷⁵

Under the Shared Savings Program, providers and suppliers continue to bill for services furnished to Medicare beneficiaries and receive FFS payments under traditional Medicare. CMS uses payment amounts for Parts A and B FFS claims for a variety of Shared Savings Program operations, which include: Calculations under the benchmarking methodology; determining an ACO's eligibility for shared savings and liability for shared losses for each performance year under the program's financial models as specified in the regulations in subpart G; determining an ACO's eligibility for certain participation options as set forth in § 425.600(d); and calculating the amount of the repayment mechanism required for ACOs participating in a two-sided model according to § 425.204(f)(4). These operations typically require the determination of expenditures for Parts A and B services under the original Medicare FFS program for a specified population of Medicare FFS beneficiaries or the Medicare Parts A and B FFS revenue of ACO participants. We note that the Medicare FFS beneficiary population for which expenditures are determined may

⁷² Such as using only assignable beneficiaries instead of all Medicare FFS beneficiaries in calculating the benchmark update based on national FFS expenditures (81 FR 37986 through 37989), calculating the benchmark update using factors based on regional FFS expenditures (81 FR 37977 through 37981), and calculating the benchmark update using a blend of national and regional expenditure growth rates (83 FR 68027 through 68030).

⁷³ Such as excluding indirect medical education and disproportionate share hospital payments from ACO performance year expenditures (76 FR 67921 through 67922), and determining shared savings and shared losses for the 6-month performance years (or performance period) in 2019 using expenditures for the entire CY 2019 and then prorating these amounts to reflect the shorter performance year or performance period (83 FR 59949 through 59951, 83 FR 67950 through 67956).

⁷⁴ See earlier rulemaking establishing two-sided models: Track 2 (76 FR 67904 through 67909), Track 3 (subsequently renamed the ENHANCED track) (80 FR 32771 through 32772), and the BASIC track (83 FR 67834 through 67841).

⁷⁵ See earlier rulemaking establishing policies for mitigating shared losses owed by ACOs affected by extreme and uncontrollable circumstances (82 FR 60916 through 60917, 83 FR 59974 through 59977).

differ depending on the specific program operation being performed and may reflect expenditures for the ACO's assigned beneficiaries, assignable beneficiaries as defined in § 425.20, or all Medicare FFS beneficiaries. The applicable Medicare FFS beneficiary population is specified in the regulations governing each program operation.

(2) Removing Payment Amounts for Episodes of Care for Treatment of COVID-19 From Shared Savings Program Expenditure and Revenue Calculations

Section 3710 of the CARES Act amended section 1886(d)(4)(C) of the Act to specify that for discharges occurring during the emergency period described in section 1135(g)(1)(B) of the Act, in the case of a discharge of an individual diagnosed with COVID-19, the Secretary shall increase the weighting factor that would otherwise apply to the diagnosis-related group (DRG) to which the discharge is assigned by 20 percent. Further, the Secretary shall identify a discharge of such an individual through the use of diagnosis codes, condition codes, or other such means as may be necessary. In this section of this final rule, we refer to this increase in the weighting factor for DRGs as the "DRG adjustment."

In the May 8th COVID-19 IFC (85 FR 27578), we explained our expectation that the localized nature of infections (for example, rapid outbreaks in individual nursing facilities (NFs)) and the unanticipated increase in expenditures, along with the increased flexibilities that have been implemented to allow healthcare providers to identify and treat COVID-19 patients would affect the level of Medicare Parts A and B expenditures during 2020, both for the Medicare FFS beneficiaries assigned to ACOs and for the other populations of Medicare FFS beneficiaries whose expenditures are considered in performing calculations under the Shared Savings Program. The localized nature of outbreaks and the increased utilization of acute care occurring in PY 2020 and the associated higher costs are not reflected in ACOs' historical benchmarks, which are determined under § 425.601(b), § 425.602(b), or § 425.603(d), as applicable, based on Parts A and B expenditures for the beneficiaries who would have been assigned to that ACO during the three benchmark years. For some ACOs, the higher costs associated with COVID-19 may not be fully accounted for (or in other cases may be over-represented) by the retrospective application of the update factor to the benchmark at the

time of financial reconciliation. In addition, the prospective CMS-HCC risk scores, which are used to adjust the historical benchmark each performance year for changes in severity and case mix (refer to §§ 425.601(a)(10), 425.602(a)(9), and 425.603(c)(10); and §§ 425.604(a)(1), 425.605(a)(1), 425.606(a)(1), and 425.610(a)(1), (2)), would not be expected to meaningfully adjust for such variability because they are prospective, and therefore, use diagnoses from 2019 to predict costs in 2020.

Furthermore, including the increased expenditures related to treatment of COVID-19 in calculations of ACO benchmarks for which CY 2020 is a benchmark year could lead to higher than anticipated future historical benchmarks unnecessarily advantaging some ACOs once the prevalence of COVID-19 in the population begins to decrease, and the corresponding reduction in expenditures is reflected in performance year expenditures. In contrast, we explained our belief that the methodology used to update benchmarks would appropriately reflect any reduction in expenditures due to a cumulative yearlong decline in elective services and the deferral of other services as a result of regionally-uniform responses by beneficiaries and providers/suppliers to directives issued at federal, state, and local levels. Therefore, the retrospective application of the historical benchmark update (which for PY 2020 is either an update factor based on national growth rates, regional growth rates, or a blend of national and regional growth rates, depending on the start date of the ACO's agreement period) would be expected to reasonably account for lower utilization of services by non-COVID-19 patients and prevent windfall shared savings payments to ACOs for PY 2020.

In the May 8th COVID-19 IFC (85 FR 27579), we explained that including payment amounts for treatment of acute care for COVID-19 in calculations for which calendar year 2020 is used as a reference year could also distort repayment mechanism estimates and the identification of high and low revenue ACOs and influence ACO participation options. For example, ACOs could potentially be misclassified as either high revenue or low revenue, due to changes in expenditures arising from the COVID-19 pandemic, and either moved more quickly to higher levels of risk and reward if they are identified as high revenue ACOs or allowed additional time under a one-sided model (if eligible) or in relatively lower levels of performance-based risk if

they are identified as low revenue ACOs.

We explained our belief, at the time of the May 8th COVID-19 IFC, that ACOs currently participating in a performance-based risk track urgently needed to understand how we would address any distortions in expenditures resulting from the COVID-19 pandemic. Under the Shared Savings Program's regulations at § 425.221(b)(2)(ii)(A), an ACO under a two-sided model that voluntarily terminates its participation agreement with an effective date of termination after June 30th of the applicable performance year is liable for a pro-rated share of any shared losses determined for that performance year. Under § 425.220(a) of the regulations, ACOs are required to provide CMS at least 30 days' advance notice of their decision to voluntarily terminate from the program. As a result, ACOs participating under a two-sided model would need to provide notice to CMS no later than June 1, 2020, to avoid liability for a pro-rated share of any shared losses that may be determined for PY 2020. We explained that ACOs and other program stakeholders had expressed concern that ACOs would need to make participation decisions in advance of this June 1, 2020 deadline, and might choose to terminate their participation in the Shared Savings Program on or before June 30th, rather than risk owing pro-rated shared losses for PY 2020. We noted that the Shared Savings Program's extreme and uncontrollable circumstances policy would mitigate shared losses for these ACOs. However, given the uncertainty surrounding the duration of the PHE for COVID-19, at the time of the May 8th COVID-19 IFC, specifically, whether the PHE would cover the entire CY 2020, and absent information regarding the steps that CMS intended to take to address the high costs associated with COVID-19 patients, we acknowledged that many risk-based ACOs might elect to leave the program by June 30, 2020, to avoid the risk of owing shared losses.

We explained our belief that it was necessary to revise the policies governing Shared Savings Program financial calculations, as well as certain other program operations, to mitigate the impact of unanticipated increases in expenditures related to the treatment of COVID-19. Given that ACOs in two-sided models had very limited time (less than 2 months at the time of development of the May 8th COVID-19 IFC) to decide whether to continue their participation in the program or voluntarily terminate without being liable for shared losses, we identified an urgent need to establish policies to

address the impact of COVID-19 on Shared Savings Program financial calculations. More generally, we explained that ACOs engage in care coordination and population-based activities for Medicare FFS beneficiaries, as they work towards achieving the Shared Savings Program's goals of lowering growth in Medicare FFS expenditures and improving the quality of care furnished to Medicare beneficiaries. We noted the urgency in taking steps to avoid adversely impacting ACOs, many of which rapidly adapted to the circumstances of the PHE for COVID-19 in order to continue to coordinate care and deliver value-based care to Medicare FFS beneficiaries and meet program goals. We expressed our concern that, in the absence of policies that adjust certain program calculations to remove payment amounts for episodes of care for treatment of COVID-19, ACOs might elect to leave the Shared Savings Program, setting back progress made in transitioning the healthcare system from volume-based to value-based payment. Therefore, as described in the May 8th COVID-19 IFC, we found good cause to waive prior notice and comment rulemaking to establish policies to mitigate the impact of the COVID-19 pandemic on Shared Savings Program financial calculations.

We revised our policies under the Shared Savings Program to exclude from Shared Savings Program calculations all Parts A and B FFS payment amounts for an episode of care for treatment of COVID-19, triggered by an inpatient service during the PHE for COVID-19, and as specified on Parts A and B claims with dates of service during the episode. We relied on our authority under section 1899(d)(1)(B)(ii) of the Act to adjust benchmark expenditures for other factors in order to remove COVID-19-related expenditures from the determination of benchmark expenditures. We also exercised our authority under section 1899(i)(3) of the Act to apply this adjustment to certain other program calculations, including the determination of performance year expenditures.

We explained that an approach that makes the triggering event for this adjustment the beneficiary's receipt of inpatient care for COVID-19, would identify the most acutely ill patients and, as a result, those patients with the highest-costs associated with acute care treatment. In contrast, we explained our belief that treatment for COVID-19 that does not result in an inpatient admission does not raise the same level of concern in terms of generating unexpected performance year expenditures that are not appropriately

reflected in the benchmark calculations. As William Bleser and colleagues described,⁷⁶ citing a recent actuarial estimate of COVID-19 costs,⁷⁷ outpatient care was approximately 10 percent of the cost of hospital care, indicating that hospital costs are the dominant source of overall costs for treatment of COVID-19. We believed these findings supported an approach that bases the exclusion of expenditures on the triggering event of an inpatient admission for treatment of COVID-19. Furthermore, we explained that some outpatient care would occur close-in-time to an eventual inpatient admission and following discharge. Under the approach we established, where an episode of care includes the month of admission and the month following discharge, outpatient care occurring within the timeframe for an episode of care would also be excluded from financial calculations.

Accordingly, under the approach we adopted in the May 8th COVID-19 IFC, we indicated we would identify an episode of care triggered by an inpatient service for treatment of COVID-19, based on either: (1) Discharges for inpatient services eligible for the 20 percent DRG adjustment under section 1886(d)(4)(C) of the Act; or (2) discharges for acute care inpatient services for treatment of COVID-19 from facilities that are not paid under the IPPS, such as CAHs, when the date of admission occurs within the PHE for COVID-19 as defined in § 400.200.

For example, we indicated that we would identify discharges of an individual diagnosed with COVID-19 using the following ICD-10-CM codes:

- B97.29 (Other coronavirus as the cause of diseases classified elsewhere) for discharges occurring on or after January 27, 2020, and on or before March 31, 2020.
- U07.1 (COVID-19) for discharges occurring on or after April 1, 2020, through the duration of the PHE for COVID-19, as defined in § 400.200.⁷⁸

⁷⁸ See for example, MLN Matters, "New Waivers for Inpatient Prospective Payment System (IPPS) Hospitals, Long-Term Care Hospitals (LTCHs), and Inpatient Rehabilitation Facilities (IRFs) due to Provisions of the CARES Act" (April 15, 2020), available at <https://www.cms.gov/files/document/se20015.pdf>.

We explained that episodes of care for treatment of COVID-19 may be triggered by an inpatient admission for acute care either at an acute care hospital or other healthcare facility, which may include temporary expansion sites, Medicare-enrolled ASCs providing hospital services to help address the urgent need to increase hospital capacity to treat COVID-19 patients, CAHs, and potentially other types of providers.⁷⁹

We defined the episode of care as starting in the month in which the inpatient stay begins as identified by the admission date, all months during the inpatient stay, and the month following the end of the inpatient stay as indicated by the discharge date. We explained that this approach to measuring the length of the episode of care in units of months aligns with the Shared Savings Program's methodology for calculating benchmark year and performance year expenditures by performing separate calculations for each of four Medicare enrollment types (ESRD, disabled, aged/dual eligible for Medicare and Medicaid, and aged/non-dual eligible for Medicare and Medicaid). As described in the final rule entitled "Medicare Program; Medicare Shared Savings Program; Accountable Care Organizations—Revised Benchmark Rebased Methodology, Facilitating Transition to Performance-Based Risk, and Administrative Finality of Financial Calculations", which appeared in the June 10, 2016 **Federal Register** (81 FR 37950), we account for circumstances where a beneficiary is enrolled in a Medicare enrollment type for only a fraction of a year (see 81 FR 37981). Specifically, we determine the number of months that an assigned beneficiary is enrolled in each specific Medicare enrollment type and divide by 12. Summing these fractions across all assigned beneficiaries in each Medicare enrollment type results in total person years for the beneficiaries assigned to the ACO. Benchmark and performance year expenditures for each enrollment type are calculated on a per capita basis. The numerator of the per capita expenditure calculation for a particular enrollment type reflects the total Parts A and B expenditures incurred by all assigned beneficiaries in that enrollment type during the year, with adjustments made to exclude indirect medical education and disproportionate share hospital payments, to include individually beneficiary identifiable

⁷⁹ See CMS fact sheet, "Hospitals: CMS Flexibilities to Fight COVID-19", dated March 30, 2020, available at <https://www.cms.gov/files/document/covid-hospitals.pdf>, describing flexibilities CMS specified for hospitals for the provision of inpatient care to fight COVID-19.

final payments made under a demonstration, pilot or time limited program, and to truncate beneficiary expenditures to minimize variation from catastrophically large claims. The denominator reflects total person years for the enrollment type.

In addition to excluding Parts A and B payment amounts with dates of service in the months associated with an episode of care for treatment of COVID-19, we explained that we would also exclude the affected months from total person years used in per capita expenditure calculations. For example, if a beneficiary had an episode of care for COVID-19 that lasted for 2 months, but was otherwise enrolled as an aged/non-dual eligible beneficiary for the full calendar PY, we would exclude their Parts A and B expenditures for those 2 months and compute their fraction of the year enrolled in the aged/non-dual eligible population as 10/12. Adjusting both expenditures and person years ensures that both the numerator and denominator used to calculate per capita expenditures are based on the same number of months of beneficiary experience and allow ACOs to be treated equitably regardless of the degree to which their assigned beneficiary population is affected by the pandemic.

We expressed our belief that this approach would provide for a more equitable comparison between an ACO's performance year expenditures and its historical benchmark and help to ensure that ACOs are not rewarded or penalized for having higher/lower COVID-19 spread in their assigned beneficiary populations which, in turn, would help to protect CMS against paying out windfall shared savings and ACOs in two-sided models from owing excessive shared losses. Further, we described our belief that the retrospective application of the historical benchmark update, which is calculated based on factors that reflect actual expenditure and utilization changes nationally and regionally, other than expenditures for episodes of care for treatment of COVID-19, would also help to mitigate the potential for windfall savings due to potentially lower utilization of services not related to treatment for COVID-19.

In the May 8th COVID-19 IFC, we established an adjustment to the following Shared Savings Program calculations to exclude all Parts A and B FFS payment amounts for a beneficiary's episode of care for treatment of COVID-19:

- Calculation of Medicare Parts A and B FFS expenditures for an ACO's assigned beneficiaries for all purposes,

including the following: Establishing, adjusting, updating, and resetting the ACO's historical benchmark and determining performance year expenditures.

- Calculation of FFS expenditures for assignable beneficiaries as used in determining county-level FFS expenditures and national Medicare FFS expenditures, including the following calculations:

++ Determining average county FFS expenditures based on expenditures for the assignable population of beneficiaries in each county in the ACO's regional service area according to §§ 425.601(c) and 425.603(e) for purposes of calculating the ACO's regional FFS expenditures. For example, for ACOs in agreement periods beginning on July 1, 2019, and in subsequent years, we will use county FFS expenditures from which we exclude all Parts A and B FFS payment amounts for a beneficiary's episode of care for treatment of COVID-19 in determining the regional component of the blended national and regional growth rates used to (1) Trend forward benchmark year 1 and benchmark year 2 expenditures to benchmark year 3 according to § 425.601(a)(5)(iii), and (2) to update the benchmark according to § 425.601(b)(3). Further, we will use county expenditures from which we exclude all Parts A and B FFS payment amounts for a beneficiary's episode of care for treatment of COVID-19 to update the ACO's rebased historical benchmark, according to § 425.603(d) for ACOs in a second agreement period beginning on or before January 1, 2019, based on regional growth rates in Medicare FFS expenditures.

++ Determining the 99th percentile of national Medicare FFS expenditures for assignable beneficiaries for purposes of the following: (1) Truncating assigned beneficiary expenditures used in calculating benchmark expenditures (§§ 425.601(a)(4), 425.602(a)(4), 425.603(c)(4)), and performance year expenditures (§§ 425.604(a)(4), 425.605(a)(3), 425.606(a)(4), 425.610(a)(4)); and (2) truncating expenditures for assignable beneficiaries in each county for purposes of determining county FFS expenditures according to §§ 425.601(c)(3) and 425.603(e)(3).

++ Determining 5 percent of national per capita expenditures for Parts A and B services under the original Medicare FFS program for assignable beneficiaries for purposes of capping the regional adjustment to the ACO's historical benchmark according to § 425.601(a)(8)(ii)(C).

++ Determining the flat dollar equivalent of the projected absolute amount of growth in national per capita expenditures for Parts A and B services under the original Medicare FFS program for assignable beneficiaries, for purposes of updating the ACO's historical benchmark according to § 425.602(b)(2).

++ Determining national growth rates that are used as part of the blended growth rates used to trend forward benchmark year 1 and benchmark year 2 expenditures to benchmark year 3 according to § 425.601(a)(5)(ii) and as part of the blended growth rates used to update the benchmark according to § 425.601(b)(2).

- Calculation of Medicare Parts A and B FFS revenue of ACO participants for purposes of calculating the ACO's loss recoupment limit under the BASIC track as specified in § 425.605(d).

- Calculation of total Medicare Parts A and B FFS revenue of ACO participants and total Medicare Parts A and B FFS expenditures for the ACO's assigned beneficiaries for purposes of identifying whether an ACO is a high revenue ACO or low revenue ACO, as defined under § 425.20, and determining an ACO's eligibility for participation options according to § 425.600(d).

- Calculation or recalculation of the amount of the ACO's repayment mechanism arrangement according to § 425.204(f)(4).

We noted that there are certain payments related to the PHE for COVID-19 that fall outside of Medicare FFS Parts A and B claims, and by virtue of this fact, these payments would not be utilized under the Shared Savings Program methodology for determining beneficiary expenditures. For example, we would not account for recoupment of accelerated or advance payments,⁸⁰ which occurs outside of the FFS claims processing system. This is because the underlying Parts A and B claims used in Shared Savings Program expenditure calculations would continue to reflect the amount the providers/suppliers are eligible to be paid, although that payment may be subject to offset for repayment of accelerated or advance payments. Further, Shared Savings Program expenditure calculations also would not need to account for lump sum payments made to hospitals and other healthcare providers through the

⁸⁰ See CMS, "Fact Sheet: Expansion of the Accelerated and Advance Payments Program for Providers and Suppliers During COVID-19 Emergency," available at <https://www.cms.gov/files/document/accelerated-and-advanced-payments-fact-sheet.pdf>.

CARES Act Provider Relief Fund,⁸¹ that occur outside of Parts A and B claims. We explained that we would continue to capture Medicare FFS Parts A and B payments to providers/suppliers, including hospitals and other healthcare providers receiving these funds, in Shared Savings Program calculations.

We explained that it was necessary to use our authority under section 1899(i)(3) of the Act to remove payment amounts for episodes of care for treatment of COVID-19 from the following calculations: (1) Performance year expenditures; (2) updates to the historical benchmark; and (3) ACO participants' Medicare FFS revenue used to determine the loss sharing limit in the two-sided models of the BASIC track. To use our authority under section 1899(i)(3) of the Act to adopt an alternative payment methodology to remove payment amounts for episodes of care for treatment of COVID-19 from these calculations, we had to determine that the alternative payment methodology would improve the quality and efficiency of items and services furnished to Medicare beneficiaries, without resulting in additional program expenditures. We explained our belief that these adjustments, which remove payment amounts for episodes of care for treatment of COVID-19 from the specified Shared Savings Program calculations, would capture and remove from program calculations expenditures that are outside of an ACO's control, but that could significantly affect the ACO's performance under the program. In particular, we believed that failing to remove this spending would likely create highly variable savings and loss results for individual ACOs that happen to have over-representation or under-representation of COVID-19 hospitalizations in their assigned beneficiary populations.

Based on our assessment of the impacts of this policy for purposes of the May 8th COVID-19 IFC (85 FR 27615 and 27616), we did not believe excluding payment amounts for episodes of care for treatment of COVID-19 from the specified calculations would result in an increase in spending beyond the expenditures that would otherwise occur under the statutory payment methodology in section 1899(d) of the Act. Further, we believed these adjustments to our payment calculations to remove expenditures associated with treatment of COVID-19, in combination with the optional 1-year extension for ACOs

whose current agreement periods expire on December 31, 2020 (as discussed in section I.L.1. of the May 8th COVID-19 IFC, 85 FR 27574 and 27575), and the option for ACOs in the BASIC track's glide path to elect to maintain their current level of risk and reward for PY 2021 (as discussed in section I.L.2. of the May 8th COVID-19 IFC, 85 FR 27575 and 27576) would provide greater certainty for currently participating ACOs. As a result, we expected that these policies would support ACOs' continued participation in the Shared Savings Program in the face of significant uncertainty arising from the disruptions due to the COVID-19 pandemic and the resulting PHE. We believed that, in turn, these organizations would continue working towards meeting the Shared Savings Program's goals of lowering growth in Medicare FFS expenditures and improving the quality of care furnished to Medicare beneficiaries.

Based on these considerations, and our assessment of the impacts of these adjustments in the May 8th COVID-19 IFC (85 FR 27615 and 27616), we believed adjusting certain Shared Savings Program calculations to remove payment amounts for episodes of care for treatment of COVID-19 from the calculation of performance year expenditures, updates to the historical benchmark, and ACO participants' Medicare FFS revenue used to determine the loss sharing limit in the two-sided models of the BASIC track, would meet the requirements for use of our authority under section 1899(i)(3) of the Act.

In the May 8th COVID-19 IFC, we also acknowledged that some trends and longer lasting effects of the COVID-19 pandemic were challenging to anticipate at the time of development of the IFC, and we would continue to evaluate the ongoing impact of the COVID-19 pandemic to determine whether additional rulemaking would be necessary to further adjust Shared Savings Program policies. For example, we noted that it was unclear whether the COVID-19 pandemic may have longer-term effects into 2021, such as through rebounding elective procedure costs in 2021 following potentially sustained reductions in 2020 or to what extent the reduction in these procedures may persist. Further, we anticipated learning more about the potential longer-term implications of the COVID-19 pandemic on Medicare beneficiaries' health and the healthcare system.

We added a new provision at § 425.611 to describe the adjustments CMS makes to Shared Savings Program

calculations to address the impact of the COVID-19 pandemic.

We received comments on the approach to adjusting program calculations to mitigate the financial impact of the COVID-19 pandemic on ACOs that we established in the May 8th COVID-19 IFC. The following is a summary of the comments we received and our responses.

Comment: Many commenters that commented on the adjustments to Shared Savings Program calculations generally supported removal of Parts A and B FFS payment amounts for a beneficiary's episode of care for treatment COVID-19 from those calculations. Some commenters specified their support in particular for application of this adjustment to the determination of benchmark expenditures, truncation factors, and performance year expenditures. Some commenters specified their support for adjustments to remove Parts A and B FFS payment amounts associated with episodes of care for treatment of COVID-19 from revenue calculations used for purposes of determining loss recoupment limits, as well as identifying whether an ACO is a high revenue ACO or low revenue ACO, and determining the ACO's eligibility for certain participation options. One commenter also stated its support for adjustment of repayment mechanism amount calculations, or recalculations of these amounts, to remove episodes of care for treatment of COVID-19.

A few commenters agreed that these adjustments would lead to more equitable comparisons between ACOs' performance year expenditures and their benchmarks, and assist in ensuring ACOs are not rewarded or penalized for being more or less impacted by COVID-19. One commenter stated that these adjustments would address potential distortions in the determination of shared savings and shared losses for the months impacted by COVID-19. One commenter, addressing the adjustment to remove payment amounts for episodes of care from benchmark expenditures, indicated that the approach adopted in the May 8th COVID-19 IFC addressed uncertainty related to COVID-19. One commenter explained that this adjustment will help to protect ACOs from circumstances out of their control at a time of immense financial risk and will provide them with important protections that will allow them to continue participating in the Shared Savings Program.

Response: We appreciate the support of commenters for the approach we established in the May 8th COVID-19 IFC to adjust certain Shared Savings

⁸¹ See HHS website, CARES Act Provider Relief Fund, at <https://www.hhs.gov/provider-relief/index.html>.

Program calculations to exclude all Parts A and B FFS payment amounts for a beneficiary's episode of care for treatment of COVID-19, as described previously in this section of this final rule and specified in § 425.611.

Comment: A few commenters stated that the existing benchmarking methodology, and in particular the retrospective application of the benchmark update that reflects Medicare cost trends in the ACO's regional service area, was resilient to the impacts of COVID-19, suggesting that CMS' concern over windfall shared savings may be overstated. Some commenters indicated that the effects of the adjustment of benchmark and performance year expenditures for episodes of care are uncertain and could be either beneficial or disadvantageous to ACOs when they are compared to the national or regional expenditure trends that factor into their benchmarks.

One commenter explained that for ACOs in markets hard hit by COVID-19, the benchmark update will reflect those additional costs, and ACOs will be judged by whether they reduced costs relative to other healthcare providers that are subject to the same market conditions. Another commenter, describing concerns about the Shared Savings Program's blended national and regional growth rates used to trend and update the benchmark, explained that relying too heavily on a national trend (for ACOs whose assigned beneficiaries represent a large share of the assignable beneficiaries in their regional service area) is especially problematic during a pandemic with regional variation as it ignores important local market dynamics that differ across the country. This commenter explained that ACOs in COVID-19 hot spots will likely have higher costs than the overall nation. Therefore, according to this commenter, using the national trend as part of the benchmarking methodology would be detrimental and unfair to these ACOs as it is not reflective of the pandemic's effect on costs in their region.

Several commenters indicated that if COVID-19 causes Medicare costs to drop in a market, the benchmark update will reflect those lower costs, and ACOs in those markets would have to lower costs even more to generate shared savings. One commenter expressed concern over whether the retrospective application of the benchmark update would reasonably account for lower utilization of services by non-COVID-19 patients. Some commenters viewed this dynamic as potentially unfair for ACOs engaged in efforts to reduce inappropriate utilization or over

utilization compared to existing high spending ACOs.

A few commenters urged CMS to undertake further analysis of the impact of COVID-19 on ACO benchmarks. For example, commenters urged CMS to evaluate whether the factors based on regional FFS expenditures in program calculations sufficiently account for irregular distribution of COVID-19 impacts across different regions and even within regions, wide variation in expenses, divergent practice patterns, and the unprecedented change in beneficiary behavior.

Response: We continue to believe the adjustments to Shared Savings Program calculations for episodes of care for treatment of COVID-19 are an important and necessary safeguard to help to protect ACOs from owing excessive shared losses, and the Medicare Trust Funds from paying out windfall shared savings.

We believe one significant function of the adjustment for episodes of care for treatment of COVID-19 is to protect ACOs from higher-cost COVID-19 expenditures that may be variable and therefore hard to predict. At the time of this final rule, based on initial analysis of data through Q2 of 2020 used in developing Shared Savings Program reports, most ACOs appear to have experienced a relatively small impact from the adjustments that remove episodes of care for treatment of COVID-19 from performance year expenditures. We observed a 1 percent or less median difference between adjusted and non-adjusted Q2 2020 expenditure values for ACOs relative to non-adjusted Q1 2020 expenditure values. We also observed, for example, that ACOs with higher impacts as a result of removing episodes of care for treatment of COVID-19 also tended to have higher proportions of older beneficiaries and beneficiaries who are dually eligible for Medicare and Medicaid, which is consistent with observations about COVID-19 trends in the Medicare population.⁸²

⁸² These observations appear consistent with other recent observations about COVID-19 trends in the Medicare population. See for example, CMS Press Release, "Trump Administration Issues Call to Action Based on New Data Detailing COVID-19 Impacts on Medicare Beneficiaries" (June 22, 2020), available at <https://www.cms.gov/newsroom/press-releases/trump-administration-issues-call-action-based-new-data-detailing-covid-19-impacts-medicare> (Describing a snapshot of data on the Medicare population, for the period between January 1 and May 16, 2020. Observations included the following: Older Americans and those with chronic health conditions are at the highest risk for COVID-19; and dual eligible beneficiaries had the second highest rates of hospitalization among the Medicare population).

Currently, ACOs participating in the Shared Savings Program are subject to several different benchmarking methodologies that vary in the degree to which trends in national or regional FFS expenditures are used in calculating the annual update to the ACO's historical benchmark, which is applied retrospectively following the conclusion of the performance year. Depending on the ACO's agreement period start date, an ACO's benchmark will be updated for performance year 2020 according to one of the following approaches (as applicable): Blended national and regional expenditure growth rates (§ 425.601(b)); growth rates in risk-adjusted FFS expenditures among assignable beneficiaries in the ACO's regional service area (§ 425.603(d)); or the absolute amount of projected growth in national per capita expenditures for Parts A and B services under the original Medicare FFS program, for assignable beneficiaries (§ 425.602(b)).

As we have described in earlier rulemaking (see for example, 76 FR 67925 through 67927, 81 FR 38004, and 83 FR 68026), benchmark updates could have mixed effects on ACOs, depending on changes in utilization and expenditure patterns within the assignable beneficiary population used to calculate these factors in the performance year compared to benchmark year 3. We agree with commenters that significant changes in expenditures and utilization within the Medicare FFS population during a performance year, including as a result of COVID-19, have the potential to result in variances in the benchmark update.

Early analysis indicates that the adjustment to remove episodes of care for treatment of COVID-19 may mitigate commenters' concerns that ACOs may be disadvantaged by the benchmark update methodology under the circumstances of the pandemic. When modeling the impact of removing episodes of care for treatment of COVID-19 from trend factors for ACOs with the highest rates of COVID-19 diagnoses, these ACOs' regional trends appear lower than national trends, suggesting that ACOs in "hot spots" appear to benefit from the blend. Additionally, after removing episodes of care for treatment of COVID-19, the distribution of ACO expenditure trends and regional expenditure trends between Q1 and Q2 2020 are fairly similar. This suggests ACOs and their regions are likely experiencing the same localized effects as a result of the pandemic and that use of regional factors in updating ACOs' benchmarks should help to protect against windfall

savings without unduly disadvantaging ACOs.

However, at the time of this final rule, we believe it is still too soon to identify the full extent of the impact of COVID-19 on regional and national FFS expenditures. We anticipate better understanding these impacts as we analyze data for the remaining quarters of 2020 and the performance year 2020 results (determined after the conclusion of the performance year). We agree with the comments indicating the importance of ongoing evaluation of factors used in program calculations. We anticipate continuing to monitor the program's calculations, and in particular, the factors used to trend and update the benchmark, to understand the impact of any anomalies in Medicare FFS expenditures resulting from the costs of treating COVID-19, as well as changes in healthcare utilization by Medicare FFS beneficiaries resulting from the COVID-19 pandemic.

More generally, as described in the recently released results for performance years (or the performance period) in 2019, we are still gaining experience with the benchmarking methodology established in the Shared Savings Program December 2018 final rule (83 FR 68005 through 68030) and specified in § 425.601, which includes the use of blended national and regional trend and update factors. However, we believe the 2019 Shared Savings Program results are a promising indicator that this benchmarking methodology provides appropriate incentives for Shared Savings Program ACOs.⁸³

Comment: One commenter sought clarification of the retrospective application of the historical benchmark update discussed in the May 8th COVID-19 IFC.

Response: The Shared Savings Program's benchmarking methodology is specified in regulations in part 425, subpart G (titled Shared Savings and Losses), and in particular within §§ 425.601, 425.602, 425.603, and 425.611. For detailed information on how CMS calculates the financial benchmark that is used to assess annual financial performance, we also refer readers to the Shared Savings and Losses and Assignment Methodology Specifications, available on the Shared Savings Program "Program Guidance & Specifications" web page, available at <https://www.cms.gov/Medicare/>

Medicare-Fee-for-Service-Payment/sharedsavingsprogram/program-guidance-and-specifications.

At the time of financial reconciliation for each performance year, which follows the conclusion of the performance year, CMS calculates and applies an update to the ACO's historical benchmark to reflect the rate of growth in expenditures since benchmark year 3. The methodology for calculating the update to the benchmark is determined based on the ACO's agreement period start date as specified in the regulations at §§ 425.601(b), 425.603(d), and 425.602(b), as applicable.

The update to the benchmark is calculated and applied retrospectively after the conclusion of the performance year. CMS provides each ACO with the calculated updated benchmark amount in the financial reconciliation report for the performance year. ACOs reconciled for participation in performance year 2020 will receive a financial reconciliation report in the summer of 2021, which will include the ACO's updated historical benchmark, for which the update will have been determined after removing expenditures for episodes of care for treatment of COVID-19 as specified in § 425.611.

Comment: One commenter expressed its belief that removing spending for COVID-19 is unlikely to produce a reasonable estimate of what spending would have been without COVID-19. The commenter stated that this approach may, for example, underestimate the services patients with certain chronic conditions (who are disproportionately affected by COVID-19) would have used had they not been admitted for inpatient hospital services for COVID-19. The commenter indicated that the approach for adjusting expenditures for episodes of care for treatment of COVID-19 might increase the possibility that CMS will be rewarding ACOs for random variation rather than reductions in spending resulting from ACOs' care management. The commenter indicated there is uncertainty about how the adjustment to performance year expenditures to remove episodes of care for treatment of COVID-19 would affect the ACO when those expenditures are compared against the updated benchmark that reflects a regional and/or national trend.

Response: As discussed in the May 8th COVID-19 IFC, we adjust beneficiary person years to exclude months associated with episodes of care. The ACO's performance year expenditures, adjusted for episodes of care for treatment of COVID-19, will be weighted by person years calculated by

Medicare enrollment type (ESRD, disabled, aged/dual eligible for Medicare and Medicaid, and aged/non-dual eligible for Medicare and Medicaid) that are also adjusted to exclude months associated with an episode of care for treatment of COVID-19. To the extent that beneficiaries being hospitalized for treatment of COVID-19 tend to have chronic conditions, the removal of these beneficiaries' months of experience from expenditure calculations could shift more weight to expenditures among healthier beneficiaries. However, as described elsewhere in this section of this final rule, we will also exclude from program calculations beneficiaries' CMS-HCC risk scores from months associated with episodes of care for treatment of COVID-19, which would also cause weighted average risk scores to be similarly weighted towards healthier beneficiaries. We believe that this balanced approach to expenditures and risk scores may mitigate to some degree the commenter's concern about the potential for underrepresentation of beneficiaries' acuity in relation to adjusted expenditures within program calculations leading to windfall savings for ACOs.

Comment: A few commenters pointed to the program's existing policies to limit shared savings, specifically the shared savings rates (under which ACOs may share in a percentage of savings based on quality performance) and the cap on the amount of shared savings that will be paid to an ACO under each track (or payment level within a track), as built in protection against ACOs' receiving windfall shared savings.

Response: We agree with commenters that the sharing rates based on quality performance and the performance payment limits provide some built in protections against windfall shared savings. However, we believe that absent the adjustment for episodes of care for treatment of COVID-19, the Shared Savings Program financial calculations would not fully address the unique expenditure experience resulting from the PHE for COVID-19 and leave ACOs and CMS vulnerable to these variations in Medicare FFS expenditures.

Comment: A few commenters expressed concerns about the mid-year change to the methodology for determining the updated benchmark for performance year 2020 to remove Parts A and B FFS payment amounts for episodes of care for treatment of COVID-19, when the ACO agreed to participate based on the policy that existed prior to the May 8th COVID-19 IFC.

⁸³ Verma S. 2019 Medicare Shared Savings Program ACO Performance: Lower Costs And Promising Results Under 'Pathways To Success.' *Health Affairs*. September 14, 2020. Available at <https://www.healthaffairs.org/doi/10.1377/hblog20200914.598838/full/>.

Response: Under § 425.212, an ACO is subject to all regulatory changes that become effective during the agreement period, with the exception of the following program areas, unless otherwise required by statute: (1) Eligibility requirements concerning the structure and governance of ACOs; and (2) calculation of sharing rate. Typically, we would undertake notice and comment rulemaking to propose modifications to provisions of the program's financial methodology, including to the benchmarking methodology, and subsequently issue a final rule, reflecting any policies that we finalize taking into consideration public comments received on the proposals, prior to the start of any performance year during which such policies would apply. In establishing the adjustment for episodes of care for treatment of COVID-19 in the May 8th COVID-19 IFC, we explained the urgent need for Shared Savings Program ACOs to understand how we would address any distortions in expenditures resulting from the COVID-19 pandemic (85 FR 27579). We found good cause to waive notice and comment procedures for the regulatory changes made to the Shared Savings Program in the May 8th COVID-19 IFC (85 FR 27607 and 27608). In addition, section 1871(e)(1)(A)(ii) of the Act permits the Secretary to issue a rule for the Medicare program with retroactive effect if the failure to do so would be contrary to the public interest. In the May 8th COVID-19 IFC (85 FR 27609), we explained that we believed it would be contrary to the public interest not to implement certain Medicare provisions in the IFC as soon as we were authorized to do so under the authority of section 1871(e)(1)(A)(ii) of the Act, that is retroactively to either the start of the national emergency or the PHE for the COVID-19 pandemic, as applicable. In the case of the adjustment to remove expenditures associated with episodes of care for the treatment of COVID-19, we determined that it would be contrary to the public interest not to implement this adjustment retroactively to the start of the PHE for COVID-19 in January 2020 to ensure that all costs associated with episodes of care for treatment of COVID-19 could be removed from financial calculations for performance year 2020.

Comment: Some commenters expressed uncertainty around whether the full extent of the impact of COVID-19 on ACOs' benchmark and performance year expenditures, and revenue, will be accounted for in the adjustment to program calculations for

episodes of care for treatment of COVID-19 triggered by an inpatient service for a patient that has a COVID-19 diagnosis.

Commenters' uncertainty over the adequacy of the adjustment for episodes of care for treatment of COVID-19 often stemmed from the many unknown factors surrounding COVID-19 and the COVID-19 pandemic. For instance, the length and severity of the COVID-19 pandemic and its geographic distribution; the end date of the PHE for COVID-19; long term effects of the virus on patients' health; whether patients may experience worse health outcomes because of postponed or foregone care resulting from widespread delay or cancellation of elective or non-urgent procedures and/or preventive well visits or patients' avoidance of care, and in particular the potential for these circumstances to exacerbate chronic conditions; and the unknown impact of the COVID-19 pandemic on utilization and expenses, including the reduction in elective surgeries that impact revenue, and the potential for increased costs that result from "catch up" utilization and expenses for elective services and procedures, as well as the potential for unaccounted for variations in utilization in program calculations.

Some commenters suggested that alternative modifications were necessary in light of their concerns that CMS' approach for adjusting program calculations to remove episodes of care for treatment of COVID-19 triggered by an inpatient service may not be sufficient to address the impact of COVID-19 or the COVID-19 pandemic on ACOs. Commenters offered a variety of alternative approaches, including the following suggestions.

One commenter suggested that CMS disregard ACO financial and quality performance in 2020 to the extent possible, and instead implement an alternative incentive system for ACOs for COVID-19 specific activities, such as by compensating ACOs to focus on COVID-19 surveillance, data collection, and care management activities (particularly for beneficiaries with high risk chronic diseases). This commenter suggested that by disregarding 2020 performance, ACOs and their ACO participants would be allowed to respond to COVID-19 without considering the traditional cost and savings incentives of the Shared Savings Program.

Some commenters suggested modifications to how CMS determines benchmark or performance year expenditures. For example, one commenter suggested the benchmark may need to be increased to offset

increased utilization. Another commenter suggested that CMS cap actual performance year 2020 expenditures at an estimate of expected expenditures based on the Shared Savings Program and other benchmark-based population models, similar to the approach used by the Comprehensive Care for Joint Replacement (CJR) model in response to the PHE for COVID-19.

Some commenters suggested that CMS modify the program's payment models for purposes of determining shared savings and shared losses for performance year 2020, such as to: Increase the minimum loss rate corridor to further protect ACOs under two-sided models from shared losses; eliminate shared losses altogether but maintain shared savings; eliminate both shared losses and shared savings; reduce shared losses and reduce shared savings; or eliminate shared losses and reduce shared savings. For example, one commenter suggested that CMS avoid imposition of downside risk for 2020, and cap shared savings at 2 percent of benchmark for ACOs that are eligible to share in savings, and provide bonus payments to ACOs that are not eligible to share in savings but that are still participating in the Shared Savings Program in performance year 2021, such as bonus payment of 0.5 percent of benchmark. These suggestions reflected commenters' differing perspectives. While some commenters believed it was an appropriate trade-off to reduce or eliminate shared savings in combination with reducing or eliminating downside risk, some commenters strongly supported an approach that continued ACOs' ability to fully share in savings generated under the program's existing payment models while protecting ACOs from losses.

Some commenters more generally encouraged CMS to continue to work with ACOs and other program stakeholders, commit to ongoing monitoring or evaluation of the Shared Savings Program, and make adjustments as needed, such as to the participation options, financial methodology, including the benchmarking methodology, beneficiary assignment methodology, and quality measurement methodology.

Response: For the reasons discussed in the May 8th COVID-19 IFC and in this final rule, we believe the adjustment to Shared Savings Program calculations for episodes of care for treatment of COVID-19, which we are finalizing in this final rule, address the impact of COVID-19. We plan to continue to monitor for and consider the impact of the COVID-19 pandemic on ACOs and their ACO participants, and

we would address any additional modifications to Shared Savings Program policies in future notice and comment rulemaking. Therefore, we decline at this time to adopt commenters' suggestions for alternative payment models, alternative approaches to determining benchmark and performance year expenditures, and other modifications to the program's financial calculations. We note that elsewhere in this final rule, we address comments received in response to the May 8th COVID-19 IFC related to changes to the beneficiary assignment methodology (refer to section III.G.5.e of this final rule), and the quality performance requirements for performance year 2020 (refer to section III.I. of this final rule).

Comment: One commenter suggested that CMS consider applying the adjustment for episodes of care for treatment of COVID-19 on a case-by-case basis, for ACOs in areas with higher COVID-19 prevalence, rather than program-wide.

Response: We decline to revise the approach adopted in the May 8th COVID-19 IFC to apply the adjustment for episodes of care for treatment of COVID-19 on a case-by-case basis. Given that ACOs' assigned beneficiary populations are often dispersed across different regions, we believe it would be difficult to fairly and accurately apply the policies on an individual ACO basis when (as commenters point out) the impacts of COVID-19 are variable from region to region. We also believe that a program-wide approach is more reflective of the PHE for COVID-19, which is nationwide. Further, a program-wide approach allows for greater certainty, transparency, and less complexity, than an approach applied on a case-by-case basis when there are more than 500 ACOs actively participating in the program as of January 1, 2020.⁸⁴

Comment: A few commenters expressed their support for an approach that identifies episodes of care triggered by inpatient care for treatment of COVID-19. One commenter stated their belief that CMS struck the right balance of capturing the most variable COVID-19 costs in a well-defined episode.

One commenter explained that the effects of COVID-19 on patients vary greatly, providing as an example that patients who were previously healthy can require lengthy hospitalizations, intubation and mechanical ventilation,

and a host of other costly interventions. Consequently, according to this commenter, ACOs and their providers cannot be reasonably expected to manage costs for these patients during an inpatient episode of care. This commenter welcomed the decision by CMS to exclude from Shared Savings Program financial calculations all Parts A and B FFS payment amounts for an episode of care for treatment of COVID-19, triggered by an inpatient service.

Response: We appreciate commenters' support for the approach we adopted in the May 8th COVID-19 IFC, under which an episode of care for treatment of COVID-19 is triggered by an inpatient service.

Comment: A few commenters suggested that there was a lack of clarity around when an episode of care will be triggered by acute care inpatient services for treatment of COVID-19 from facilities not paid under the IPPS, including SNFs. Several commenters asked that CMS clarify that such services will trigger an episode of care when the date of admission occurs within the PHE for COVID-19.

Response: In the May 8th COVID-19 IFC, we adopted an approach to identifying inpatient services for the treatment of COVID-19 provided by non-IPPS providers at § 425.611(b)(1)(ii), which applies when the date of admission occurs within the PHE as defined in § 400.200. Since the issuance of the May 8th COVID-19 IFC, we have determined that this approach to identifying inpatient services for the treatment of COVID-19 provided by non-IPPS providers creates an unintended inconsistency with the approach in § 425.611(b)(1)(i) to identifying inpatient services for the treatment of COVID-19 furnished by IPPS providers eligible for the 20 percent DRG adjustment under section 1886(d)(4)(C) of the Act, which is based on discharges within the PHE for COVID-19. If the approaches are not synchronized, we may (for example) identify fewer inpatient services provided by non-IPPS providers occurring near the start of the PHE for COVID-19, since the admission date for these services would have needed to occur within the PHE, as opposed to the discharge date occurring with the PHE. Further, we may capture more inpatient services furnished by non-IPPS providers at the end of the PHE for COVID-19 because the admission occurs during the PHE, but the discharge does not. This discrepancy could cause a distortion in the effects of the adjustment within program calculations, depending on the type of facility that provides the inpatient

service that is the trigger for the episode of care for treatment of COVID-19.

To ensure greater consistency in the description of the policies used to identify inpatient services provided by IPPS and non-IPPS providers that trigger an episode of care for treatment of COVID-19, we are making a revision to the regulation at § 425.611(b)(1)(ii) that establishes the criteria for identifying an episode of care triggered by inpatient services furnished by a non-IPPS provider. We are revising the provision to specify that CMS identifies episodes of care for treatment of COVID-19 based on discharges for acute care inpatient services for treatment of COVID-19 from facilities that are not paid under the inpatient prospective payment system, such as CAHs, when the date of discharge occurs within the Public Health Emergency as defined in § 400.200. Furthermore, because the purpose of this revision is to avoid distorting the effects of the adjustment for episodes of care for the treatment of COVID-19 within program calculations, we believe it is in the public interest to use our authority under section 1871(e)(1)(A)(ii) of the Act to apply this change retroactively to the start of the PHE for COVID-19 on January 27, 2020. We note that this is consistent with the applicability date for the original provision, which was also retroactive to the start of the PHE in January 2020, and will help to ensure that adjustments under § 425.611 are made consistently regardless of the type of provider that furnished the inpatient services for COVID-19.

Further, we anticipate identifying inpatient claims that trigger an episode of care for treatment of COVID-19 using all of the following criteria, regardless of whether the claim is submitted by an IPPS or non-IPPS provider. Claims that do not meet these criteria will not trigger an episode of care for treatment of COVID-19.

- Inpatient claims identified by claim type 60.
- Facility type as identified by the character in the third position of the CMS Certification Number (CCN) equal to "T" (Rehabilitation Unit) or "R" (CAH Rehabilitation Unit), or by the last four digits of the CCN in any of the following ranges: 0001–0879, Short-term (General or Specialty) Hospital; 0880–0899, Hospital that participated in an Office of Research and Development demonstration project; 1300–1399, CAH; 2000–2299, Long-term Care Hospital; 3025–3099, Inpatient Rehabilitation Facility; 3300–3399, Children's Hospital.
- Admission date and discharge date both populated.

⁸⁴ CMS, "Shared Savings Program Fast Facts—As of January 1, 2020", available at <https://www.cms.gov/files/document/2020-shared-savings-program-fast-facts.pdf>.

- Discharge date between January 27, 2020, and March 31, 2020 (inclusive), and diagnosis code equal to B97.29, or discharge date between April 1, 2020, and expiration date of the PHE for COVID-19 specified in § 400.200 (if known, inclusive) and diagnosis code equal to U07.1. (The applicable diagnosis code may be present in any diagnosis code field based on established coding guidelines.)

We note that the aforementioned criteria were used in identifying episodes of care for treatment of COVID-19 in Q2 and Q3 2020 program reports provided to ACOs. Prior to preparing the Q4 2020 program reports we plan to incorporate an additional criterion that will ensure that expenditures related to treatment of COVID-19 are not excluded from program calculations when the IPPS provider is not eligible to receive the 20 percent DRG adjustment, for example because the provider has specified a billing note NTE02 “No Pos Test” on the electronic claim 837I, or a remark “No Pos Test” on a paper claim. This note or remark on the claim indicates that the beneficiary did not have a positive laboratory test result for COVID-19 documented in the beneficiary’s medical record. This is for consistency with CMS’ new requirement that there must be a positive laboratory test result for COVID-19 documented in the beneficiary’s medical record in order for an IPPS provider to receive the 20 percent DRG adjustment. This requirement was developed to address potential Medicare program integrity risks, and became effective with admissions occurring on or after September 1, 2020.⁸⁵

Comment: One commenter urged CMS to clarify that an inpatient COVID-19 stay (with proper ICD-10-CM codes and within the PHE for COVID-19) in a SNF, which the commenter indicated was an “other type of provider” as described in the May 8th COVID-19 IFC, will be considered a triggering inpatient admission for an episode of care for treatment of COVID-19. This commenter explained that many ACO beneficiaries that reside in long-term care facilities have been transferred from a long-term care bed to a dedicated Medicare-covered bed within the same facility when they were diagnosed with COVID-19, due to the waiver of the 3-day hospital stay in connection with the

PHE for COVID-19, as well as hospital capacity issues. These beneficiaries received Part A SNF services in the facility while they remained at that level of care. The commenter further explained that while many of these beneficiaries were never admitted to an acute inpatient hospital for their COVID-19 treatment, they still incurred inpatient COVID-19 related Part A and B costs. This commenter explained that exclusion of these beneficiaries’ costs for treatment of COVID-19 from Shared Savings Program calculations is needed to ensure ACOs with long-term care Medicare beneficiaries are not unfairly penalized for treating patients at the inpatient SNF level of care during the pandemic.

Response: Under § 425.611(b)(1)(ii), as modified by this final rule, a discharge for acute care inpatient services for treatment of COVID-19 from facilities that are not paid under the IPPS, which would include a SNF, will trigger an episode of care when the date of discharge occurs within the PHE as defined in § 400.200. Elsewhere in this section of this final rule, we have detailed the criteria we will use for identifying claims for inpatient services that trigger an episode of care, which include: Claim type 60, facility type identified based on certain CCNs, admission date and discharge date both populated, and discharge date within the PHE for COVID-19 with a diagnosis code equal to either B97.29 or U07.1 (for an inclusive range of dates). A claim for inpatient services provided in a SNF that meets these criteria would be identified as the trigger for an episode of care for treatment of COVID-19.

We discussed the related issue of services furnished by SNFs under arrangements with an acute care hospital in an FAQ.⁸⁶ Under flexibilities adopted in response to the COVID-19 pandemic, a SNF (for example) can work with hospitals under arrangement to be able to provide inpatient acute care to Medicare beneficiaries and these admissions would trigger an excluded COVID-19 episode of care.⁸⁷ If a SNF is working under arrangement with a hospital to provide inpatient acute care, we would expect these services to be billed by the hospital which would be one of the CCN types we use to identify

an inpatient claim that triggers an episode of care, as described elsewhere in this section of this final rule. However, if the beneficiary’s SNF admission is for post-acute services, this alone would not trigger an episode of care for treatment of COVID-19. It is important to note that if post-acute care, such as SNF care, follows a beneficiary’s discharge from a facility or unit where they were receiving inpatient services for treatment of COVID-19, payment amounts for post-acute care in the month of and the month following the discharge date (along with all other Parts A and B services) will also be excluded. As specified in § 425.611(b)(2), CMS defines an episode of care for the treatment of COVID-19 as starting in the month in which the inpatient stay begins, as identified by the admission date, all months during the inpatient stay, and the month following the end of the inpatient stay as indicated by the discharge date.

Comment: When the comment period for the May 8th COVID-19 IFC closed on July 7, 2020, the PHE for COVID-19 extended until July 25, 2020.⁸⁸ Some commenters suggested CMS use inpatient services provided after the end of the PHE for COVID-19 to identify episodes of care for treatment of COVID-19. Some commenters suggested that CMS extend the identification of episodes of care for treatment of COVID-19 through the remainder of 2020. One commenter believed this extension was necessary to provide more certainty to ACOs in the event that the PHE is not extended beyond July 25, 2020, expressing concern that there could be a “second wave” of infections and a non-continuous PHE scenario. Some commenters suggested that CMS reevaluate whether additional revisions may be necessary to allow the policy to extend into 2021. These commenters explained that these approaches were needed to further protect two-sided model ACOs against financial losses, or more generally to ensure the future success of Shared Savings Program ACOs.

A few commenters suggested CMS remove any end-point to the adjustment. One commenter explained that limiting

⁸⁸ Renewal of determination that a public health emergency existed, with an effective date of April 26, 2020, for the duration of the emergency or 90 days, unless extended by the Secretary. Refer to U.S. Department of Health & Human Services, Public Health Emergency web page, “April 21, 2020: Renewal of the Determination that a Public Health Emergency Exists as the Result of the Continued Consequences of Coronavirus Disease 2019 (COVID-19) (formerly called 2019 Novel Coronavirus (2019-nCoV))”, available at <https://www.phe.gov/emergency/news/healthactions/phe/Pages/covid19-21apr2020.aspx>.

⁸⁵ For more information, see CMS, MLN Matters, “New Waivers for Inpatient Prospective Payment Systems (IPPS) Hospitals, Long-Term Care Hospitals (LTCHs), and Inpatient Rehabilitation Facilities (IRFs) due to Provisions of the Cares Act” (revised September 11, 2020), available at <https://www.cms.gov/files/document/se20015.pdf>.

⁸⁶ CMS, “COVID-19 Frequently Asked Questions (FAQs) on Medicare Fee-For-Service (FFS) Billing”, available at <https://www.cms.gov/files/document/03092020-covid-19-faqs-508.pdf>. Refer to section U “Medicare Shared Savings Program—Accountable Care Organizations (ACO)” question 29.

⁸⁷ Refer to CMS, “Medicare 1135 Waivers & Two Interim Final Rules Enabling Health System Expansion”, available at <https://www.cms.gov/files/document/covid-19-regulations-waivers-enable-health-system-expansion.pdf>.

the adjustment to discharges within the PHE established an artificial cutoff point, which the commenter believed was unnecessary because the adjustment was already limited to a select group of ICD-10-CM diagnosis codes that were inherently tied to the treatment of COVID-19. Another commenter pointed to unknowns about the recovery time of infected individuals, suggesting it may take years to recover. This commenter further indicated that lifting the time limitation on the applicability of the adjustment would help ensure that ACOs are not penalized for having higher COVID-19 spread in their assigned beneficiary populations.

Response: At the time of this final rule, the PHE for COVID-19 has been renewed with an effective date of October 23, 2020, and, unless terminated early, will remain in effect for 90 days after the effective date. Under this extension, we would continue to identify episodes of care for treatment of COVID-19 until at least late-January 2021. Some commenters' suggestions, such as to extend the approach to identifying episodes of care to inpatient services for treatment of COVID-19 for the duration of the performance year 2020, or into 2021, are therefore addressed by the latest renewal of the PHE for COVID-19.

At this time, we decline to adopt the commenters' suggestions to use inpatient services with a discharge date after the end of the PHE for COVID-19 (as defined under § 400.200) to identify an episode of care for treatment of COVID-19 for purposes of adjusting Shared Savings Program calculations. Under the statutory requirements established in section 3710 of the CARES Act, with the conclusion of the PHE, IPPS providers will no longer receive the 20 percent DRG adjustment, which is one factor that the existing adjustment was designed to address.

We recognize that COVID-19 may continue to exist in communities even after the conclusion of the PHE for COVID-19 and that, as a result, some Medicare FFS beneficiaries will likely continue to require higher-cost care, including inpatient care, for the treatment of COVID-19. We believe a number of existing aspects of the Shared Savings Program payment methodology will help to mitigate the impact of these higher costs on ACOs, in the absence of the adjustment for episodes of care for treatment of COVID-19 following the conclusion of the PHE for COVID-19. For instance, as discussed elsewhere in this section of this final rule, the program's existing methodology for updating historical benchmarks,

reflecting regional and/or national FFS expenditure trends, will help to ensure that an ACO's benchmark remains comparable with the performance year expenditures, which may include higher costs of care for patients with COVID-19. Further, the program's methodology for truncating assigned beneficiary expenditures, used in calculating benchmark expenditures (§§ 425.601(a)(4), 425.602(a)(4), 425.603(c)(4)) and performance year expenditures (§§ 425.604(a)(4), 425.605(a)(3), 425.606(a)(4), 425.610(a)(4)), at the 99th percentile of national Medicare FFS expenditures for assignable beneficiaries, will continue to help minimize variation from catastrophically large claims.

We also note that the adjustments for episodes of care for the treatment of COVID-19, as applied for the duration of the PHE for COVID-19, will continue to be reflected in program calculations for the affected time period. In particular, 2020 serves as a performance year for currently participating ACOs, and will be a benchmark year for future program entrants with 2022 and 2023 start dates. In light of the shift to 5-year agreement periods, adjustments made to expenditures during benchmark year 2020 will continue to be reflected in benchmark calculations until the end of performance year 2027 (the final performance year for 2023 starters), under the program's existing policies.

However, we anticipate monitoring the program's calculations for the impact of any anomalies in Medicare FFS expenditures resulting from the costs of treating COVID-19, as well as changes in healthcare utilization by Medicare FFS beneficiaries resulting from the COVID-19 pandemic. We may revisit the need to extend or modify the adjustment to program calculations in future notice and comment rulemaking.

Comment: One commenter suggested that we exclude short term, CAH swing-bed costs from Shared Savings Program financial calculations during the PHE for COVID-19. This commenter explained that swing-beds in CAHs can be safer for patients in hard-hit COVID-19 areas needing post-acute care than SNFs, but they are paid at approximately 3 times the rate.

Response: CAH swing-bed services, for skilled nursing care, have a "Z" in third position of the CCN. Elsewhere in this section of this final rule, we detail the criteria we use for identifying claims for inpatient services that trigger an episode of care for treatment of COVID-19, which include: Claim type 60, facility type identified based on certain CCNs, admission date and discharge date both populated, and discharge date

within the PHE for COVID-19 with a diagnosis code equal to either B97.29 or U07.1 (for an inclusive range of dates). According to these criteria, we would not identify a CAH swing-bed service billed by a CCN with "Z" in the third position of the CCN, as a trigger for an episode of care for treatment of COVID-19.

However, a claim for inpatient services provided by a CAH may meet the criteria to be identified as the trigger for an episode of care for treatment of COVID-19. For example, if an inpatient service is provided by a CAH, and billed under a CCN identified by "R" (CAH Rehabilitation Unit) in the third position of the CCN or with the last four digits of the CCN in the range of 1300–1399 (CAH), this inpatient service would be the basis for an episode of care, if the other previously described criteria are also met. Further, CAH swing-bed services that fall within an episode of care for treatment of COVID-19, triggered by an inpatient admission identified according to the criteria in § 425.611, would also be excluded.

We decline to more broadly exclude all CAH swing-bed costs from the determination of ACO expenditures, which goes beyond the scope of the adjustment for episodes of care for treatment of COVID-19 that we adopted in the May 8th COVID-19 IFC. We believe the existing higher payments for care furnished in swing-beds in CAHs are presently reflected in ACOs' benchmark expenditures. Further adjustments to performance year expenditures to remove all such swing-bed costs would likely exclude expenditures associated with swing bed services that would have been rendered even in the absence of the PHE for COVID-19, creating asymmetry between benchmark and performance year calculations.

Comment: Some commenters suggested that CMS exclude as part of the adjustment for episodes of care for treatment of COVID-19, costs for outpatient services associated with a COVID-19 diagnosis regardless of whether the patient has an inpatient hospital admission. A few commenters explained that the long-term effects of COVID-19 are unknown, and patients may need ongoing care as they recover, and this care may not be provided in the inpatient setting. A few commenters explained that there is an increased cost of care for COVID-19 patients treated solely on an outpatient basis, including increased utilization of high-tech imaging and follow-up care. Pointing to the description in the May 8th COVID-19 IFC in which CMS explained that outpatient care was approximately 10

percent of the cost of hospital care for COVID-19, one commenter noted the costs of outpatient care for beneficiaries who do not have an inpatient admission for treatment of COVID-19 represents potentially sizeable COVID-19-related costs that would not be captured by episodes of care triggered by the receipt of inpatient services for the treatment of COVID-19, particularly for non-hospital-based ACOs.

One commenter, concerned about the impact of increased outpatient care costs of COVID-19 on ACO expenditures, suggested that CMS exclude all COVID-19 related payment amounts from performance year expenditures when these expenses are not reflected in the ACO's benchmark.

Further, a few commenters suggested that CMS monitor the long-term costs of outpatient care for recovered COVID-19 patients, to fully assess the total cost of care implications of the disease. One commenter suggested CMS do so before including these costs in Shared Savings Program benchmark calculations.

Another commenter noted it would not expect COVID-19 related outpatient costs to vary significantly within a region, but encouraged CMS to monitor COVID-19 costs outside an episode of care for treatment of COVID-19 as defined in the May 8th COVID-19 IFC.

Response: As one commenter asserted, we would not expect COVID-19 related outpatient costs to vary significantly within a region. Data from quarterly reports appears to support this; as noted elsewhere within this section of this final rule, the distribution of ACO expenditure trends and regional expenditure trends between Q1 and Q2 2020 after removing episodes of care for treatment of COVID-19 are fairly similar. As a result, we believe the program's existing methodology for updating historical benchmarks, which incorporates regional and/or national FFS expenditures trends, should adequately adjust an ACO's benchmark to be more comparable with performance year expenditures by reflecting the changes in outpatient utilization as a result of COVID-19 and the COVID-19 pandemic. For related reasons, we do not believe that changes in outpatient utilization will unfairly impact physician-led ACOs as these changes should also be reflected in the adjusted expenditure trends used to update these ACOs' benchmarks.

We also expect outpatient care for COVID-19 to taper off as a beneficiary's symptoms resolve. As a result, if we were to remove expenditures arising during months of outpatient care for individuals with a diagnosis for COVID-19 that are not already captured by the

definition of episode of care for treatment of COVID-19 in § 425.611(b), we could risk removing too many months of care for assigned beneficiaries from program calculations, which in turn could cause benchmarks to become less accurate and disrupt ACOs' shared savings potential.

We decline at this time to modify our approach to exclude all costs for outpatient care for treatment of COVID-19 or, more generally, all costs for treatment of COVID-19. As we have explained elsewhere in this section of this final rule, we believe it is too soon to identify the full extent of the impact of COVID-19 on FFS expenditures. We anticipate monitoring the program's calculations for the impact of any anomalies in Medicare FFS expenditures resulting from the costs of treating COVID-19, as well as changes in healthcare utilization by Medicare FFS beneficiaries resulting from the COVID-19 pandemic. We may revisit these considerations in future notice and comment rulemaking for the Shared Savings Program.

Comment: A few commenters urged CMS to clarify that an episode of care can be triggered when a COVID-19 diagnosis code is present on a claim and does not need to be the primary diagnosis code to trigger the episode of care. These commenters explained that this will be critical as there has been a large amount of variability in the manner in which COVID-19 diagnoses are listed on claims, due to the often "multi-system" nature of COVID-19 related illnesses.

More generally, several commenters cited concerns that inaccuracies in coding of COVID-19 diagnoses, or variations in coding, will affect the accuracy of CMS' adjustment for episodes of care for treatment of COVID-19.

One commenter encouraged CMS to evaluate the accuracy of the episode-based exclusion in capturing true COVID-19 impacts, such as by comparing the episode of care results to regional COVID-19 prevalence.

Response: As we explained in an FAQ,⁸⁹ we will identify claims for treatment of COVID-19, for use in identifying episodes of care, when the diagnosis code B97.29 or U07.1 is present in any diagnosis code field. Further, we believe some of the comments reflect a concern that our approach could under-identify episodes

of care for the treatment of COVID-19 in the event of inaccuracies in coding. We note that it is incumbent upon providers to accurately code diagnoses and to ensure the accuracy of information submitted on claims based on established coding guidelines. For additional information, refer to guidelines for providers for coding encounters related to COVID-19,⁹⁰ and CMS claims processing instructions.⁹¹

As previously described in this section of this final rule, following the issuance of the May 8th COVID-19 IFC, CMS announced additional requirements for a positive COVID-19 laboratory test documented in the patient's medical record, in order for inpatient services furnished by an IPPS hospital to qualify for the 20 percent DRG adjustment.⁹² For purposes of the adjustments to expenditures for episodes of care for the treatment of COVID-19 under the Shared Savings Program, this requirement could further ensure the accuracy of the adjustment for episodes of care for inpatient services identified based on discharges for inpatient services eligible for the 20 percent adjustment, according to § 425.611(b)(1)(i). This requirement would potentially rule out certain episodes of care that would otherwise trigger the adjustment under § 425.611 of the Shared Savings Program regulations.

We appreciate the commenter's suggestion that CMS evaluate the accuracy of the episode-based exclusion in capturing true COVID-19 impacts, and we anticipate continuing to monitor and evaluate the impact of COVID-19 on program calculations, to help inform potential future policy modifications to the Shared Savings Program.

Comment: One commenter expressed concern about how CMS defines an episode of care as ending with the month following the end of the inpatient stay as identified by the discharge date. The commenter explained that an increasing body of evidence suggests that COVID-19 infection may cause a host of lingering

⁹⁰ See for example, CDC, "ICD-10-CM Official Coding and Reporting Guidelines: April 1, 2020 through September 30, 2020", available at <https://www.cdc.gov/nchs/data/icd/COVID-19-guidelines-final.pdf>.

⁹¹ See for example, CMS, MLN Matters, "July 2020 Quarterly Update to the Inpatient Prospective Payment System (IPPS) Fiscal Year (FY) 2020 Pricer", available at <https://www.cms.gov/files/document/mm11764.pdf>.

⁹² Refer to CMS, MLN Matters, "New Waivers for Inpatient Prospective Payment Systems (IPPS) Hospitals, Long-Term Care Hospitals (LTCHs), and Inpatient Rehabilitation Facilities (IRFs) due to Provisions of the Cares Act" (revised September 11, 2020), available at <https://www.cms.gov/files/document/se20015.pdf>.

⁸⁹ CMS, "COVID-19 Frequently Asked Questions (FAQs) on Medicare Fee-For-Service (FFS) Billing", available at <https://www.cms.gov/files/document/03092020-covid-19-faqs-508.pdf>. Refer to section U "Medicare Shared Savings Program—Accountable Care Organizations (ACO)" question 31.

health effects including serious circulatory, respiratory, and neurologic conditions. The commenter also believes additional health issues associated with COVID-19 will likely be identified as more research is done on COVID-19 positive patients. Given the unknowns of this novel virus, the commenter asserts that neither it nor CMS can know that the one-month post discharge end date for a COVID-19 episode will fully address the increased resource demands required to treat these patients. The commenter requested that CMS evaluate and publicly report data on the impacts of COVID-19 on all service utilization for patients with and without an inpatient admission.

Response: We agree with the commenter, regarding the importance of ongoing monitoring of Shared Savings Program calculations for the impact of healthcare utilization resulting from COVID-19 as research helps us better understand the effects of the virus on the Medicare FFS beneficiary population. At this time, we believe that defining an episode of care for the treatment of COVID-19 as set forth in § 425.611(b)(2), as the month in which the inpatient stay begins as identified by the admission date, all months during the inpatient stay, and the month following the end of the inpatient stay as indicated by the discharge date, is sufficient to remove the higher costs of care surrounding an inpatient service for the treatment of COVID-19 with a discharge date within the PHE for COVID-19. Further, to the extent that a beneficiary is subsequently admitted for inpatient care for complications related to COVID-19, following their initial discharge for inpatient services, a claim associated with the new hospitalization would trigger a new episode of care for treatment of COVID-19 if it meets the criteria we described elsewhere in this section of this final rule for identifying inpatient services that trigger an episode of care for treatment of COVID-19, including a discharge date within the PHE for COVID-19.

Comment: One commenter stated its support for the exclusion of affected months associated with an episode of care from total person years used in per capita expenditure calculations.

Response: We appreciate the support for the approach we described in the May 8th COVID-19 IFC (85 FR 27580) of excluding affected months associated with an episode of care from total person years used in per capita expenditure calculations. For consistency within program calculations, we will exclude months associated with episodes of care for the treatment of COVID-19 from program

calculations that incorporate monthly data, including the following:

- Calculation of ACO, county, or national level weighted mean CMS-Hierarchical Condition Categories (HCC) prospective risk scores or demographic risk scores used in program risk adjustment calculations described in §§ 425.601, 425.602, 425.603, 425.604, 425.605, 425.606, and 425.610. CMS will exclude monthly prospective beneficiary CMS-HCC risk scores (based on diagnoses from the prior calendar year) from months associated with episodes of care for treatment of COVID-19. CMS will also exclude these months when computing person year values that are used to calculate weighted means of CMS-HCC and/or demographic risk scores across beneficiaries. Note, however, that CMS will continue to use diagnoses that meet risk adjustment criteria from claims submitted by FFS providers for items and services furnished during the months associated with episodes of care for treatment of COVID-19, when calculating final CMS-HCC risk scores for future years. For example, final CMS-HCC risk scores for 2021 will include risk adjustment eligible diagnoses from all eligible claims in 2020, including claims from months associated with episodes of care for treatment of COVID-19. CMS calculates risk scores for all Medicare beneficiaries and these risk scores are used in a variety of calculations across the Medicare Program; CMS does not calculate separate CMS-HCC risk scores for use in Shared Savings Program calculations.

- Calculation of assigned beneficiary person years used in determining the proportion of the ACO's assigned beneficiaries in each county by Medicare enrollment type (ESRD, disabled, aged/dual eligible, aged/non-dual eligible) used to weight risk-adjusted county FFS expenditures as described in §§ 425.601(d) and 425.603(f).

- Calculation of the weights applied to national and regional components of the blended growth rates used to trend forward benchmark year (BY) 1 and BY2 expenditures to BY3 according to § 425.601(a)(5) and to update the benchmark according to § 425.601(b).

- Calculation of assigned beneficiary enrollment proportions used to calculate the weighted average across the four Medicare enrollment types in order to obtain a single per capita updated benchmark and a single

performance year per capita expenditure value.⁹³

- Calculation of total person years used to calculate total benchmark expenditures and total performance year expenditures used in financial reconciliation calculations.⁹⁴

Comment: One commenter asked for clarification of how adjustments to program calculations would be reflected in Shared Savings Program reports provided to ACOs. Specifically, the commenter asked if CMS would provide amended aggregate expenditure/utilization reports for Quarter 1 2020, if payment amounts and beneficiary months associated with episodes of care for treatment of COVID-19 are removed from program calculations going back to January 2020.

Response: In response to the Shared Savings Program policy changes established in the May 8th COVID-19 IFC, CMS added several new report tables to the 2020 quarterly reports, and these modified reports were used to provide Q2 and Q3 2020 data to Shared Savings Program ACOs. Specifically these report changes reflect the adjustment for episodes of care for treatment of COVID-19, and changes to the definition of primary care services used in determining beneficiary assignment as specified in § 425.400(c)(2) and described in section III.G.5.e of this final rule. We anticipate specifying the effects of these policies in quarterly and annual aggregate reports to which they apply. Although we are not reproducing quarterly reports for Q1 2020 to include these updated report variables, we note that the report periods of the Q2, Q3, and Q4 2020 reports include the months of January through March 2020.

Comment: One commenter expressed support for the clarification CMS provided that lump sum payments made to hospitals and other healthcare providers through the CARES Act Provider Relief Fund, that occur outside of Parts A and B claims, will not adversely impact ACO expenditures.

Response: We appreciate the commenter's support for this clarification.

Comment: One commenter suggested that CMS should use the financial

⁹³ For example, refer to the description of the calculation in Sections 4.1.4 and 4.3.1 of the Shared Savings and Losses and Assignment Methodology Specifications, Version 8, available at <https://www.cms.gov/files/document/shared-savings-losses-assignment-spec-v8.pdf-0>.

⁹⁴ For example, refer to the description of the calculation in Section 4.3.1 of the Shared Savings and Losses and Assignment Methodology Specifications, Version 8, available at <https://www.cms.gov/files/document/shared-savings-losses-assignment-spec-v8.pdf-0>.

performance and quality data from 2020 to help stakeholders understand the impact of the global pandemic on ACOs' collective ability to deliver care under the modified coverage and payment policy rules implemented, as well as the impact of the stay-at-home and social distancing recommendations in place throughout the country. The commenter indicated that such data would greatly contribute to future work, including developing higher quality, more cost-efficient models of care after the current pandemic has been contained.

Response: We appreciate the commenter's recommendation that CMS make public data that can assist stakeholders in understanding the impact of COVID-19 and the COVID-19 pandemic on ACOs. CMS makes public certain Shared Savings Program data, such as ACO financial performance data included in annual Shared Savings Program ACO public-use files (PUFs). We anticipate releasing a Shared Savings Program ACO PUF, with ACO-level performance year 2020 financial and quality performance data, in the fall of 2021, following financial reconciliation for performance year 2020. Additional information on program data, including a description of and link to the Shared Savings Program ACO PUF, is available through the Shared Savings Program's "Program Data" web page, available at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/sharedsavingsprogram/program-data>. More generally, CMS' "Medicare COVID-19 Data Snapshot" resources provide data on COVID-19 cases, and hospitalizations for Medicare beneficiaries diagnosed with COVID-19.⁹⁵

Further, ACOs actively participating in the Shared Savings Program periodically receive data from CMS, which we believe supports their ability to detect and respond to developing trends. Under § 425.702, we provide ACOs with aggregate quarterly reports that identify prospectively and preliminarily prospectively assigned beneficiaries, provide aggregated metrics on the ACO's assigned beneficiary population, and utilization and expenditure data, including expenditure data for the national and regional assignable FFS populations. Under § 425.704, we provide ACOs with monthly claim and claim line feed files with beneficiary-identifiable data, which include Parts A, B, and D data for

prospectively and preliminarily prospectively assigned beneficiaries and other beneficiaries who receive primary care services from an ACO participant that submits claims for primary care services used in beneficiary assignment. We believe these program reports and data feeds will help ACOs in understanding the impact of COVID-19 on their assigned beneficiaries and the impact of the adjustment for episodes of care for treatment of COVID-19.

Comment: Many commenters commenting on the Shared Savings Program policies adopted in the May 8th COVID-19 IFC suggested it is critical that CMS extend the June 30 deadline for ACOs to voluntarily terminate to avoid financial losses to no earlier than October 31, 2020, with no more than 30-days advance notice of termination, as is currently required under § 425.220(a). The commenters asserted that ACOs need more time and data to make informed decisions about their participation. Commenters explained that absent this protection, ACOs in two-sided models may choose to leave the program given the uncertainty around the end date for the PHE for COVID-19, although the commenters were often unclear in indicating whether their concerns centered around the duration of the adjustment for episodes of care for treatment of COVID-19 or loss mitigation under the program's extreme and uncontrollable circumstances policy (as discussed in section III.G.5.c of this final rule), or both. In further explaining the need for ACOs to have additional time to determine whether to remain in the program, some commenters underscored the uncertainty around a resurgence of the virus in the fall of 2020. In addition, some commenters indicated this flexibility would provide ACOs with more time to focus on the pandemic, which would enable them to remain in the program.

Some commenters suggested that CMS provide two-sided model ACOs the opportunity to voluntarily terminate and avoid financial losses until 90 days following the effective date of the May 8th COVID-19 IFC (which would be approximately August 6, 2020, given the May 8, 2020 effective date of the IFC) to allow these ACOs time to consider the policies established with the IFC. One commenter requested that ACOs in two-sided models be given an opportunity to exit the Shared Savings Program without penalty once the rule is finalized. This commenter (an ACO) explained that the ACO faces a very difficult decision about its continued participation, without enough

information, and does not wish to act impulsively.

Response: At this time, we decline to make additional modifications to the Shared Savings Program's policy on payment consequences of early termination. At the time of this final rule, the PHE for COVID-19 has been renewed for a further 90 days, with an effective date of October 23, 2020. Unless the PHE for COVID-19 is terminated early, CMS anticipates mitigating shared losses for the duration of 2020 under the Shared Savings Program's extreme and uncontrollable circumstances policy. We believe this mitigation of shared losses addresses the concerns of ACOs and other program stakeholders regarding the payment consequences of early termination for the remainder of performance year 2020.

Further, we believe we struck an appropriate balance with the combination of policies we established in the May 8th COVID-19 IFC, which provide greater certainty to ACOs and thereby encourage their continued participation in the Shared Savings Program, in particular: Allowing eligible ACOs in the BASIC track's glide path to maintain their current level of participation for performance year 2021 (described in section III.G.5.b of this final rule); adjustments to program calculations for episodes of care for treatment of COVID-19 (described in this section of this final rule); and changes to the Shared Savings Program's assignment methodology (described in section III.G.5.e of this final rule). We believe the stabilizing effect of these policies, along with the application of the program's extreme and uncontrollable circumstances policy for mitigating shared losses beginning in January 2020 and for duration of the PHE for COVID-19 (described in section III.G.5.c of this final rule), is evidenced by the fact that only 4 ACOs (including only 2 ACOs under two-sided models) terminated with an effective termination date on or before June 30, 2020, and therefore, will not be reconciled for performance year 2020. Approximately 35 ACOs, including 12 two-sided model ACOs, have voluntarily terminated their participation, and have requested an end-of-year termination date, and therefore will be reconciled for their performance in the program in performance year 2020.

Comment: Commenters suggested modifications to the Shared Savings Program's benchmarking methodologies, which went beyond the modifications to the program's regulations established in the May 8th COVID-19 IFC.

⁹⁵ CMS.gov, Preliminary Medicare COVID-19 Data Snapshot, available at <https://www.cms.gov/research-statistics-data-systems/preliminary-medicare-covid-19-data-snapshot>.

Commenters' suggestions included the following:

Some commenters, concerned with anomalies in expenditures and revenue for 2020, suggested alternative approaches to how CMS could treat 2020 data when 2020 is used as a benchmark year in future benchmark calculations.

Some commenters suggested that CMS exclude all 2020 data from future benchmarking calculations, such as excluding 2020 as a benchmark year or excluding 2020 data from the calculation of adjustments to the benchmark. Some commenters suggested alternative approaches to identifying benchmark years, which would avoid reliance on 2020 data. For example, for ACOs entering agreement periods beginning on January 1, 2022, one commenter suggested CMS either use 2017, 2018, and 2019 as the benchmark years (instead of 2019, 2020 and 2021), or combine 2019 and 2021 data.

One commenter suggested that CMS consider changing benchmark year weighting, to limit the impact of 2020 data.

Instead of looking at performance over a single year, one commenter suggested that CMS collaborate with program stakeholders to develop a benchmarking and financial reconciliation methodology for ACOs that spans multiple years.

Some commenters suggested CMS revise the methodology for incorporating factors based on regional FFS expenditures into ACO benchmarks through future rulemaking. Some commenters noted their concern that the blended national and regional expenditure growth rates used to trend and update an ACO's historical benchmark (for agreement periods beginning on July 1, 2019, and in subsequent years) overemphasize the national trend component for ACOs that comprise a large market share in their ACO regional service area, and disadvantage these ACOs. Some commenters expressed concern that including an ACO's assigned beneficiaries in the population used to determine regional FFS expenditures will mean the ACO is compared to itself twice: Once using historical ACO spending and another time by including ACO spending in regional spending. Commenters suggested that CMS revise the program's benchmarking methodology to exclude the ACO's assigned beneficiaries from the population of assignable beneficiaries used to determine regional FFS expenditures, typically in combination with a suggestion that CMS replace the

blended national and regional expenditure growth rates with a fully regional trend.

Some commenters were concerned about the risk adjustment approach that applies to ACOs in agreement periods beginning on July 1, 2019, and in subsequent years, and suggested that CMS revise this methodology in future rulemaking. Under the current approach, CMS uses full CMS-HCC risk adjustment for all assigned beneficiaries between the benchmark period (benchmark year 3) and the performance year, subject to a cap of positive 3 percent for the agreement period, and CMS does not apply a cap on negative risk score changes. A few commenters stated that controlling for outliers in risk score increases and decreases is important, explaining this is necessary in the context of the COVID-19 pandemic because of the utilization disruptions and health implications that will affect risk scores. Commenters described the 3 percent cap on risk score increases as "unreasonably low" when applied across the agreement period, particularly in light of the higher acuity of beneficiaries resulting from COVID-19 and the other effects of the COVID-19 pandemic such as beneficiaries avoiding preventive services and screenings as well as routine primary care. Commenters explained that the absence of a floor on risk score decreases does not account for artificially low risk scores resulting from circumstances surrounding the COVID-19 pandemic. For example, commenters noted that the two new ICD-10-CM diagnosis codes for COVID-19, "U07.1 COVID-19, virus identified" and "U07.2, COVID-19, virus not identified," are not mapped to a Hierarchical Condition Code (HCC), and could therefore cause risk scores to look artificially low. Some commenters suggested that CMS revise the Shared Savings Program's risk adjustment methodology in future rulemaking, such as by increasing the 3 percent cap on risk score growth, such as to 4 percent or 5 percent or eliminating the cap altogether and implementing a floor for risk score decreases, such as between zero (which would prevent any risk score decreases from impacting the benchmark) and negative 5 percent.

Some commenters pointed to concerns that the 3 percent cap on risk score increases under in the risk adjustment methodology for ACOs in agreement periods beginning on July 1, 2019, and in subsequent years, is especially problematic for ACOs whose ACO regional service area includes a population of beneficiaries whose risk scores rise more than the cap. One

commenter encouraged CMS to adopt a policy of applying a cap on risk score growth after accounting for regional increase in risk scores.

Response: Although the commenters' suggested modifications to the Shared Savings Program's benchmarking methodologies went beyond the scope of the modifications to the program's regulations established in the May 8th COVID-19 IFC, we thank the commenters for their input. We believe it would be premature to specify additional modifications to the program's benchmarking methodology at this time. As we have described elsewhere in this section of this final rule, we believe it is important to continue to monitor the program's calculations and, in particular, the factors used to establish, trend and update the benchmark, to understand the impact of any anomalies in Medicare FFS expenditures resulting from the costs of treating COVID-19, as well as changes in healthcare utilization by Medicare FFS beneficiaries resulting from the COVID-19 pandemic. As we have also indicated elsewhere in this section of this final rule, it is important to gain additional experience with the benchmarking methodology, established in the Shared Savings Program December 2018 final rule (83 FR 68005 through 68030) and specified in § 425.601, which we believe provides for appropriate incentives for Shared Savings Program ACOs, before making further revisions to the benchmarking methodology. However, we will continue to monitor the impact of the benchmarking methodology and other program policies as part of our efforts to continue to improve and strengthen the program.

Following consideration of the comments received in response to the May 8th COVID-19 IFC on the adjustments to Shared Savings Program calculations to address the COVID-19 pandemic, we are finalizing the regulation at § 425.611, with a modification. As described previously in this section of this final rule, we are revising the regulation at § 425.611(b)(1)(ii) to specify that CMS identifies episodes of care for treatment of COVID-19 based on discharges for acute care inpatient services for treatment of COVID-19 from facilities that are not paid under the inpatient prospective payment system, such as CAHs, when the date of discharge occurs within the Public Health Emergency as defined in § 400.200. For the reasons discussed in this section, we are using our authority under section 1871(e)(1)(a)(ii) of the Act to apply this change retroactively to the start of the

PHE for COVID-19. Further, we anticipate monitoring program calculations for the impact of any anomalies in Medicare FFS expenditures resulting from the cost of treating COVID-19, as well as changes in healthcare utilization by Medicare FFS beneficiaries resulting from the COVID-19 pandemic. We may revisit, in future notice and comment rulemaking, the need to make other modifications to the program's financial methodology to address the impact of COVID-19 and the COVID-19 pandemic on ACOs.

e. Expansion of Codes Used in Beneficiary Assignment

(1) Background

Section 1899(c)(1) of the Act, as amended by the 21st Century Cures Act (Pub. L. 114–255, enacted December 13, 2016) and the Bipartisan Budget Act of 2018 (BBA 2018) (Pub. L. 115–123, enacted February 9, 2018), provides that for performance years beginning on or after January 1, 2019, the Secretary shall assign beneficiaries to an ACO based on their utilization of primary care services provided by physicians participating in the ACO and all services furnished by RHCs and Federally Qualified Health Centers (FQHCs) that are ACO participants. However, the statute does not specify which kinds of services may be considered primary care services for purposes of beneficiary assignment.

For performance years beginning on January 1, 2019, and subsequent performance years, we defined primary care services in § 425.400(c)(1)(iv) for purposes of assigning beneficiaries to ACOs under § 425.402 as the set of services identified by the following HCPCS/CPT codes:

CPT codes:

- 99201 through 99215 (*codes for office or other outpatient visit for the evaluation and management of a patient*).
- 99304 through 99318 (*codes for professional services furnished in a NF; services identified by these codes furnished in a SNF are excluded*).
- 99319 through 99340 (*codes for patient domiciliary, rest home, or custodial care visit*).
- 99341 through 99350 (*codes for evaluation and management services furnished in a patient's home for claims identified by place of service modifier 12*).
- 99487, 99489 and 99490 (*codes for chronic care management*).
- 99495 and 99496 (*codes for transitional care management services*).
- 99497 and 99498 (*codes for advance care planning*).

- 96160 and 96161 (*codes for administration of health risk assessment*).
 - 99354 and 99355 (*add-on codes, for prolonged evaluation and management or psychotherapy services beyond the typical service time of the primary procedure; when the base code is also a primary care service code*).
 - 99484, 99492, 99493 and 99494 (*codes for behavioral health integration services*).
- HCPCS codes:
- G0402 (*code for the Welcome to Medicare visit*).
 - G0438 and G0439 (*codes for the annual wellness visits*).
 - G0463 (*code for services furnished in ETA hospitals*).
 - G0506 (*code for chronic care management*).
 - G0444 (*code for annual depression screening service*).
 - G0442 (*code for alcohol misuse screening service*).
 - G0443 (*code for alcohol misuse counseling service*).

On March 17, 2020, we announced the expansion of payment for telehealth services on a temporary and emergency basis pursuant to waiver authority added under section 1135(b)(8) of the Act by the Coronavirus Preparedness and Response Supplemental Appropriations Act, 2020 such that Medicare can pay for telehealth services, including office, hospital, and other visits furnished by physicians and other practitioners to patients located anywhere in the country, including in a patient's place of residence, starting March 6, 2020. In the context of the PHE for COVID-19, we recognize that physicians and other healthcare professionals are faced with new challenges regarding potential exposure risks, including for Medicare beneficiaries, for healthcare providers, and for members of the community at large. For example, the CDC has urged healthcare professionals to make every effort to interview persons under investigation for COVID-19 infection by telephone, text messaging system, or video conference instead of in-person. In the March 31st COVID-19 IFC, to facilitate the use of telecommunications technology as a safe substitute for in-person services, we added, on an interim basis, many services to the list of eligible Medicare telehealth services, eliminated frequency limitations and other requirements associated with particular services furnished via telehealth, and clarified several payment rules that apply to other services that are furnished using telecommunications technologies that

can reduce exposure risks (85 FR 19232).

Section 1834(m) of the Act specifies the payment amounts and circumstances under which Medicare makes payment for a discrete set of services, all of which must ordinarily be furnished in-person, when they are instead furnished using interactive, real-time telecommunication technology. When furnished under the telehealth rules, many of these specified Medicare telehealth services are still reported using codes that describe “face-to-face” services but are furnished using audio/video, real-time communication technology instead of in-person. As such, the majority of the codes for primary care services included in the additional telehealth services added in the March 31st COVID-19 IFC on an interim basis for the duration of the PHE for COVID-19 are already included in the definition of primary care services for purposes of the Shared Savings Program assignment methodology in § 425.400(c)(1)(iv).

The March 31st COVID-19 IFC also established flexibilities for certain services that are furnished virtually using technologies but that are not considered Medicare telehealth services such as virtual check-ins and e-visits as well as telephone E/M services, for which payment has been authorized during the PHE for COVID-19. Prior to the PHE, the codes for these virtual services were not included in the definition of primary care services for purposes of the Shared Savings Program assignment methodology. We explained in the May 8th COVID-19 IFC (85 FR 27582) that we believe it is critical to include these additional codes in the definition of primary care services to ensure these services are included in our determination of where beneficiaries receive the plurality of their primary care for purposes of beneficiary assignment, so that the assignment methodology appropriately reflects the expanded use of technology that is helping people who need routine care during the PHE for COVID-19 and allowing vulnerable beneficiaries and beneficiaries with mild symptoms to remain in their homes, while maintaining access to the care they need. By including services provided virtually, either through telehealth, virtual check-ins, e-visits or telephone, in the definition of primary care services, we ensure that physicians and other practitioners can offer options to beneficiaries whom they treat, while also allowing this care to be included in our consideration of where beneficiaries receive the plurality of their primary care for purposes of assigning

beneficiaries to ACOs. As a result, revising the definition of primary care services used in assignment to include these services further allows for continuity and coordination of care. We also reiterated our policy defined at § 425.404(b) that, for performance years starting on January 1, 2019, and subsequent performance years, under the assignment methodology in § 425.402, CMS treats a service reported on an FQHC/RHC claim as a primary care service performed by a primary care physician.

(2) Use of Codes for Virtual Check-Ins, Remote Evaluation E-Visits, Telephone Evaluation and Management Services, and Telehealth in Beneficiary Assignment

As we described in the May 8th COVID-19 IFC (85 FR 27583 through 27586), based on feedback from ACOs and the expansion of payment, on an interim basis, for the virtual services discussed above, we revised the definition of primary care services used in the Shared Savings Program assignment methodology for the performance year starting on January 1, 2020, and for any subsequent performance year that starts during the PHE for COVID-19, as defined in § 400.200, to include the following additions: (1) HCPCS code G2010 (*remote evaluation of patient video/images*) and HCPCS code G2012 (*virtual check-in*); (2) CPT codes 99421, 99422 and 99423 (*online digital evaluation and management service (e-visit)*); and (3) CPT codes 99441, 99442, and 99443 (*telephone evaluation and management services*).

We explained that because the services are similar to and may replace an E/M service for a beneficiary, we believed it would be appropriate to include these CPT and HCPCS codes in the definition of primary care services used for assignment because the services represented by these codes are being used in place of similar E/M services, the codes for which are already included in the list of codes used for assignment. We explained our belief that it is important to include these services in our assignment methodology because we determine assignment to ACOs based upon where beneficiaries receive the plurality of their primary care services or whether they have designated an ACO professional as their primary clinician, responsible for their overall care, and hold ACOs accountable for the resulting assigned beneficiary population. Including these codes in the definition of primary care services used in assignment for performance years during the PHE for

COVID-19 results in a more accurate identification of where beneficiaries have received the plurality of their primary care services.

In the May 8th COVID-19 IFC (85 FR 27583), we also clarified that CPT codes 99304, 99305 and 99306, 99315 and 99316, 99327 and 99328, 99334 through 99337, 99341 through 99345, and 99347 through 99350 will be included in the assignment methodology when these services are furnished using telehealth, consistent with additions to the Medicare telehealth list for the duration of the PHE for COVID-19 as discussed in the March 31st COVID-19 IFC (85 FR 19235 through 19237). We use the assignment methodology described in §§ 425.402 and 425.404 for purposes of assigning beneficiaries to ACOs for a performance year or benchmark year based on preliminary prospective assignment with retrospective reconciliation (including quarterly updates) or prospective assignment.

We explained that with the emergence of the virus that causes COVID-19, there is an urgency to expand the use of technology to allow people who need routine care, vulnerable beneficiaries, and beneficiaries with mild symptoms to remain in their homes, while maintaining access to the care they need. Limiting community spread of the virus, as well as limiting beneficiaries' exposure to other patients and healthcare staff members, will slow viral spread. We explained that we anticipated that the patterns and types of care provided during the PHE for COVID-19 would be different, and that it was important to capture these changes in the methodology used to assign beneficiaries to ACOs as soon as possible. We explained this was particularly important for ACOs under preliminary prospective assignment with retrospective reconciliation for PY 2020, so that they can understand the beneficiary population for which they will be responsible during PY 2020.

As discussed in the March 31st COVID-19 IFC (85 FR 19244), in the CY 2019 PFS final rule, we finalized separate payment for a number of services that could be furnished via telecommunications technology, but that are not Medicare telehealth services. Specifically, beginning with CY 2019, we finalized separate payment for remote evaluation of video and/or images, HCPCS code G2010 (*Remote evaluation of recorded video and/or images submitted by an established patient (e.g., store and forward), including interpretation with follow-up with the patient within 24 business hours, not originating from a related E/M service provided within the previous*

7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment), and virtual check-in, HCPCS code G2012 (*Brief communication technology-based service, e.g. virtual check-in, by a physician or other qualified health care professional who can report E/M services, provided to an established patient, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5–10 minutes of medical discussion*).

These codes were finalized as part of the set of codes that is only reportable by the physicians and practitioners who can furnish E/M services. Per the March 31st COVID-19 IFC, on an interim basis for the PHE for COVID-19, we allow these codes to be used for new patients. In the March 31st COVID-19 IFC (85 FR 19244), we explained that, in the context of the PHE for COVID-19, when brief communications with practitioners and other non-face-to-face services might mitigate the need for an in-person visit that could represent an exposure risk for vulnerable patients, we believe that these services should be available to as large a population of Medicare beneficiaries as possible. In some cases, use of telecommunication technology could mitigate the exposure risk, and in such cases, the clinical benefit of using technology to furnish the service is self-apparent. This would be especially true should a significant increase in the number of people or healthcare professionals needing treatment or isolation occur in a way that would limit access to brief communications with established providers. Therefore, on an interim basis, during the PHE for COVID-19, we finalized that these services, which may only be reported if they do not result in a visit, including a telehealth visit, can be furnished to both new and established patients.

As discussed in the March 31st COVID-19 IFC (85 FR 19254), in the CY 2019 PFS final rule (83 FR 59452), we finalized payment for new online digital assessment services, also referred to as "E-Visits," beginning with CY 2020 for practitioners billing under the PFS. These are non-face-to-face, patient-initiated communications using online patient portals. These digital assessment services are for established patients who require a clinical decision that otherwise typically would have been provided in the office. Per the March 31st COVID-19 IFC (85 FR 19244), while the code descriptors for these e-visit codes refer to an "established patient", during the PHE for COVID-19, we are exercising enforcement

discretion on an interim basis to relax enforcement of this aspect of the code descriptors. Practitioners who may independently bill Medicare for E/M visits (for instance, physicians and NPs) can bill the following codes:

- 99421 (*Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 5–10 minutes.*)
- 99422 (*Online digital evaluation and management service, for an established patient, for up to 7 days cumulative time during the 7 days; 11–20 minutes.*)
- 99423 (*Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 21 or more minutes.*)

In the May 8th COVID–19 IFC (85 FR 27584), we explained that we also considered adding additional e-visit HCPCS codes that are used by clinicians who may not independently bill for E/M visits and who are not included in the definition of ACO professional in § 425.20 (for example, PTs, OTs, SLPs, CPs). However, because these services are not furnished by ACO professionals, we determined it was not necessary to include the following codes in our definition of primary care services for use in assignment:

- G2061 (*Qualified non-physician healthcare professional online assessment and management service, for an established patient, for up to seven days, cumulative time during the 7 days; 5–10 minutes.*)
- G2062 (*Qualified non-physician healthcare professional online assessment and management service, for an established patient, for up to seven days, cumulative time during the 7 days; 11–20 minutes.*)
- G2063 (*Qualified non-physician qualified healthcare professional assessment and management service, for an established patient, for up to seven days, cumulative time during the 7 days; 21 or more minutes.*)

As discussed in the March 31st COVID–19 IFC (85 FR 19264 through 19265) and in the May 8th COVID–19 IFC, CMS finalized, on an interim basis for the duration of the PHE for COVID–19, separate payment for CPT codes 99441 through 99443 and 98966 through 98968, which describe E/M and assessment and management services furnished via telephone. While the code descriptors for these services refer to an “established patient”, CMS has indicated in the COVID–19 Frequently Asked Questions (FAQs) on Medicare Fee-for-Service (FFS) Billing (<https://www.cms.gov/files/document/>

[03092020-covid-19-faqs-508.pdf](https://www.cms.gov/files/document/03092020-covid-19-faqs-508.pdf)) that during the PHE for COVID–19 we are exercising enforcement discretion on an interim basis to relax enforcement of this aspect of the code descriptors. Practitioners who may independently bill Medicare for E/M visits (for instance, physicians and NPs) can bill the following codes:

- 99441 (*Telephone evaluation and management service by a physician or other qualified health care professional who may report evaluation and management services provided to an established patient, parent, or guardian not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5–10 minutes of medical discussion.*)
- 99442 (*Telephone evaluation and management service by a physician or other qualified health care professional who may report evaluation and management services provided to an established patient, parent, or guardian not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 11–20 minutes of medical discussion.*)
- 99443 (*Telephone evaluation and management service by a physician or other qualified health care professional who may report evaluation and management services provided to an established patient, parent, or guardian not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 21–30 minutes of medical discussion.*)

In the May 8th COVID–19 IFC (85 FR 27584), we explained that we also considered adding the additional telephone assessment and management CPT codes that are used by clinicians who may not independently bill for E/M visits and who are not included in the definition of ACO professional in § 425.20 (for example, PTs, OTs, SLPs, CPs). However, because these services are not furnished by ACO professionals, we determined it was not necessary to include these codes in our definition of primary care services for use in assignment:

- 98966 (*Telephone assessment and management service provided by a qualified non-physician health care professional to an established patient, parent, or guardian not originating from a related assessment and management service provided within the previous 7 days nor leading to an assessment and management service or procedure*

within the next 24 hours or soonest available appointment; 5–10 minutes of medical discussion.)

- 98967 (*Telephone assessment and management service provided by a qualified non-physician health care professional to an established patient, parent, or guardian not originating from a related assessment and management service provided within the previous 7 days nor leading to an assessment and management service or procedure within the next 24 hours or soonest available appointment; 11–20 minutes of medical discussion.*)
- 98968 (*Telephone assessment and management service provided by a qualified non-physician health care professional to an established patient, parent, or guardian not originating from a related assessment and management service provided within the previous 7 days nor leading to an assessment and management service or procedure within the next 24 hours or soonest available appointment; 21–30 minutes of medical discussion.*)

We also explained that several codes, detailed below, that are included on the “Covered Telehealth Services for PHE for the COVID–19 pandemic, effective March 1, 2020” list available at <https://www.cms.gov/Medicare/Medicare-General-Information/Telehealth/Telehealth-Codes>, are already included in the definition of primary care services used in the Shared Savings Program assignment methodology:

- 99304 (*Initial nursing facility care, per day, for the evaluation and management of a patient, which requires these 3 key components: A detailed or comprehensive history; A detailed or comprehensive examination; and Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of low severity. Typically, 25 minutes are spent at the bedside and on the patient's facility floor or unit.*)

- 99305 (*Initial nursing facility care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or*

family's needs. Usually, the problem(s) requiring admission are of moderate severity. Typically, 35 minutes are spent at the bedside and on the patient's facility floor or unit.)

- 99306 (Initial nursing facility care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of high severity. Typically, 45 minutes are spent at the bedside and on the patient's facility floor or unit.)

- 99315 (Nursing facility discharge day management; 30 minutes or less.)

- 99316 (Nursing facility discharge day management; more than 30 minutes.)

- 99327 (Domiciliary or rest home visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of high severity. Typically, 60 minutes are spent with the patient and/or family or caregiver.)

- 99328 (Domiciliary or rest home visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is unstable or has developed a significant new problem requiring immediate physician attention. Typically, 75 minutes are spent with the patient and/or family or caregiver.)

- 99334 (Domiciliary or rest home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused interval history; A problem focused examination; Straightforward medical decision

making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self-limited or minor. Typically, 15 minutes are spent with the patient and/or family or caregiver.)

- 99335 (Domiciliary or rest home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused interval history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 25 minutes are spent with the patient and/or family or caregiver.)

- 99336 (Domiciliary or rest home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed interval history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 40 minutes are spent with the patient and/or family or caregiver.)

- 99337 (Domiciliary or rest home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive interval history; A comprehensive examination; Medical decision making of moderate to high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. The patient may be unstable or may have developed a significant new problem requiring immediate physician attention. Typically, 60 minutes are spent with the patient and/or family or caregiver.)

- 99341 (Home visit for the evaluation and management of a new patient, which requires these 3 key

components: A problem focused history; A problem focused examination; and Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low severity. Typically, 20 minutes are spent face-to-face with the patient and/or family.)

- 99342 (Home visit for the evaluation and management of a new patient, which requires these 3 key components: An expanded problem focused history; An expanded problem focused examination; and Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate severity. Typically, 30 minutes are spent face-to-face with the patient and/or family.)

- 99343 (Home visit for the evaluation and management of a new patient, which requires these 3 key components: A detailed history; A detailed examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 45 minutes are spent face-to-face with the patient and/or family.)

- 99344 (Home visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of high severity. Typically, 60 minutes are spent face-to-face with the patient and/or family.)

- 99345 (Home visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of high

complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is unstable or has developed a significant new problem requiring immediate physician attention. Typically, 75 minutes are spent face-to-face with the patient and/or family.)

- 99347 (Home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused interval history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self limited or minor. Typically, 15 minutes are spent face-to-face with the patient and/or family.)

- 99348 (Home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused interval history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 25 minutes are spent face-to-face with the patient and/or family.)

- 99349 (Home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed interval history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are moderate to high severity. Typically, 40 minutes are spent face-to-face with the patient and/or family.)

- 99350 (Home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive interval history; A

comprehensive examination; Medical decision making of moderate to high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. The patient may be unstable or may have developed a significant new problem requiring immediate physician attention. Typically, 60 minutes are spent face-to-face with the patient and/or family.)

We clarified that because these CPT codes are already included in the definition of primary care services used in the Shared Savings Program assignment methodology, these CPT codes would continue to be included in the definition of primary care services used for assignment, including when they are furnished via telehealth during the PHE for COVID-19, beginning March 1, 2020. We explained our belief that it is important to include these services in our assignment methodology, regardless of whether they are furnished in-person or via telehealth, because we determine assignment based upon where beneficiaries receive the plurality of their primary care services or whether they have designated an ACO professional as their primary clinician, responsible for their overall care, and hold ACOs accountable for the resulting assigned beneficiary population. We explained that including these codes in the definition of primary care services used in assignment during the PHE for COVID-19, even when services are furnished via telehealth, would result in a more accurate identification of where beneficiaries receive the plurality of their primary care services.

Accordingly, we added paragraph (c)(2) to our regulation at § 425.400, in which we specified additional primary care service codes that would be considered for purposes of beneficiary assignment for the performance year starting on January 1, 2020, and for any subsequent performance year that starts during the PHE for COVID-19, as defined in § 400.200. Under this provision the existing CPT codes and HCPCS codes included in the definition of primary care services at § 425.400(c)(1) continue to apply for purposes of determining beneficiary assignment under § 425.402.

We received public comments on the revisions to the definition of primary care services for purposes of assignment that we adopted in the May 8th COVID-19 IFC, including the alternative

considered with regard to adding codes used by non-ACO professionals. The following is a summary of the comments we received and our responses.

Comment: Commenters generally supported the addition of the telemedicine, e-visits, and virtual services to the list of primary care services used for purposes of beneficiary assignment during the PHE for COVID-19. Commenters noted that the expansion of the definition of primary care services will allow ACOs to continue managing their patient populations but also advised CMS to monitor closely for unintended consequences. Commenters also noted that the expanded definition will allow CMS to accurately identify where beneficiaries receive the plurality of their primary care services during the PHE, which is critical for the stability of ACOs and primary care physicians transitioning into value-based payment arrangements. The revised definition also protects ACOs from undue declines in their assigned beneficiary populations due to the transition to telehealth services. Other commenters supported the expanded definition of primary care services used for assignment, as telehealth has proven to be critical for many independent physicians and practices during the pandemic. More patients than ever are using telehealth as a routine part of their care, and more clinicians and hospitals are offering it. Incorporating these services into the assignment methodology ensures that ACOs are rewarded for their efforts to transform their practices from in-person to virtual to support social distancing, as necessary during the PHE for COVID-19. Another commenter supported this change and appreciated the Agency's recognition of the increased delivery of care through telehealth due to the pandemic and the clarification that services included in the existing definition of primary care services would be considered in assignment when furnished in accordance with the telehealth rules.

However, commenters cautioned against unintended consequences. One such unintended consequence could be assignment to ACOs of beneficiaries residing in states from which the ACO had not previously received assigned beneficiaries. One commenter encouraged CMS to develop clear guardrails for patient attribution that balance the expanded role of telehealth post-COVID-19 with the potential for healthcare providers to reach patients far outside their normal geographic region. Another commenter believed this expansion may result in a patient

being attributed to the ACO through a telehealth visit with an ACO professional, and that ACO subsequently becoming responsible for the cost and quality of care of that patient, who may not continue to see ACO professionals participating in that ACO once the pandemic ends. A few commenters expressed their belief that the expansion of virtual services provided during the PHE for COVID-19 will result in telemedicine continuing to be a significant mode of providing clinical services as the COVID-19 pandemic continues, and in the post-COVID-19 era.

Response: We appreciate the comment that the expansion of the definition of primary care services for the duration of the PHE for COVID-19 will allow ACOs to effectively manage their patient populations. We believe that the revised definition will allow ACOs and their ACO participants to make determinations regarding the appropriate and effective use of telehealth and in-person services based on the needs of the beneficiary balanced with safety considerations during the PHE for COVID-19. By expanding the definition, ACOs will not be penalized if they elect to furnish more services through telehealth and telemedicine during the PHE for COVID-19.

We have continued to monitor assignment data for anomalies. In the first quarter of 2020, we observed a significant drop in the utilization of HCPCS and CPT codes used in assignment; however, as of the third quarter of 2020, utilization of these codes, including the new codes added in the May 8th COVID-19 IFC, has rebounded to near typical utilization.

Further, as of the third quarter of 2020, we are seeing minimal decreases in assigned and assignable beneficiaries for ACOs participating under preliminary prospective assignment, similar to percentage decreases seen when comparing assignable and assigned beneficiaries in Q1 to assignable and assigned beneficiaries in Q3 of 2019. For 2019, the Q1 to Q3 average decrease in assigned beneficiaries was less than 1 percent. For 2020, the Q1 to Q3 average decrease in assigned beneficiaries is 3 percent. The average decrease in assignable beneficiaries from Q1 to Q3 of 2019 was less than one percent while the average decrease in assignable beneficiaries from Q1 to Q3 of 2020 is less than 5 percent. These minor average differences indicate that the PHE for COVID-19 is not having a large impact on beneficiary assignment for ACOs under preliminary prospective assignment.

We also continue to monitor rates of beneficiary churn, that is, the rate at which beneficiaries are assigned to an ACO and subsequently not assigned to that ACO; through the third quarter of 2020, rates of beneficiary churn remain consistent with rates seen prior to the PHE for COVID-19. The consistent rates of beneficiary churn indicate that the majority of beneficiaries continue to receive the plurality of their services from healthcare providers who participate in the ACO to which they were assigned at the start of the performance year. Our analyses also indicate that, on average, ACOs are losing fewer beneficiaries to competition with other ACOs and non-ACO affiliated healthcare providers during 2020 than were lost during 2019. Based on these findings, we believe that the PHE for COVID-19 is not having a significant impact on beneficiary retention.

With regard to comments that ACOs may have beneficiaries assigned to them based on telehealth visits, including beneficiaries that reside outside the ACO's normal geographic region, and those beneficiaries may not receive in-person services from ACO professionals after the PHE for COVID-19 ends, we do not believe that this is a concern for the Shared Savings Program because we continue to determine assignment based upon where beneficiaries receive the plurality of their primary care services and whether beneficiaries have designated an ACO professional as their primary clinician. Our analysis through the third quarter of 2020 indicates that the utilization of telehealth and telemedicine services is beginning to decrease, and in-person visits are beginning to rebound. To the extent that beneficiaries who had been receiving telehealth and telemedicine services from an ACO professional return to receiving in-person services from other healthcare providers (outside the ACO), assignment based on the plurality of primary care services will result in beneficiaries being assigned appropriately.

Finally, we agree with commenters that telemedicine will likely continue to be a significant mode of providing clinical services and we will continue to refine the definition of primary care services, as appropriate, in future rulemaking.

Comment: Several commenters requested that CMS clarify that the agency's existing policy has been to consider all codes listed in § 425.400(c)(1)(iv) when performing beneficiary assignment even when those services that are eligible for telehealth are delivered via telehealth. They

suggested that such a clarification would mitigate confusion and emphasize the importance of these services in assignment.

Response: We appreciate this request for clarification. CMS maintains a list of services that are payable under the Medicare Physician Fee Schedule when furnished via telehealth (<https://www.cms.gov/Medicare/Medicare-General-Information/Telehealth/Telehealth-Codes>). Several of the codes included on the List of Telehealth Services are also included in the Shared Savings Program definition of primary care services for purposes of assigning beneficiaries. Specifically, we clarify that those HCPCS and CPT codes included in the List of Telehealth Services that are also included in the Shared Savings Program definition of primary care services for purposes of assignment are used for assignment regardless of whether they are furnished in person or via telehealth, provided they are billable and payable under Medicare FFS payment policies and a specific place of service exclusion is not included for the codes in our assignment methodology.

Comment: One commenter expressed concern about the special assignment rules for services furnished in Electing Teaching Amendment (ETA) hospitals. Specifically, the commenter was concerned that only institutional claims (Part A claims) for services furnished in these hospitals are used in assignment calculations. The commenter expressed concern that beneficiaries who would have been assigned to an ACO in which an ETA hospital is participating based on in-person office visits at the ETA hospital will not be assigned to the ACO on the basis of telemedicine services, even if these services were provided by one of the physicians within its network, by which we assume the commenter means physicians that practice in the ETA hospital and bill through the ETA hospital's TIN that is included on the ACO's ACO participant list. This commenter urged CMS to examine the impact of this issue and to update the beneficiary assignment methodology immediately. This commenter also urged CMS to continue attributing Medicare beneficiaries to ACOs with Electing Teaching Hospitals (ETAs) as ACO participants through Institutional/Part A claims, but to include telehealth encounters billed under Institutional/Part A claims (that is, claims under HCPCS code Q3014).

Response: We appreciate the commenter's concern regarding the special assignment rules for ETA hospitals that rely on institutional claims. However, because we did not

include institutional claims billed under HCPCS code Q3014 as part of the revisions to the definition of “primary care services” in the May 8th COVID-19 IFC, or otherwise propose to add this code to the definition of primary care services used for assignment, we cannot finalize its inclusion as part of this final rule. We also note section 1899(c) of the Act, which governs the assignment process under the Shared Savings Program, and the implementing regulations at part 425 subpart E, make clear that assignment is based upon primary care services furnished by certain practitioners, and services reported on claims from FQHCs and RHCs, which are treated as primary care services performed by a primary care physician. Because HCPCS code Q3014 describes a telehealth originating facility site fee that is billable by the site hosting the patient rather than the distant site physician or practitioner who is furnishing the service and does not identify the actual service that was furnished during the telehealth visit, it does not represent a primary care service that may be considered in the assignment methodology under the Shared Savings Program.

Comment: Some commenters expressed concerns about anomalous CY 2020 utilization patterns impacting beneficiary assignment. For example, as one commenter detailed, the COVID-19 pandemic could cause an overall decrease in assigned beneficiaries, and change the demographics of the assigned population (including beneficiaries’ CMS-HCC risk profiles). Some commenters were especially concerned about the impact on ACOs under prospective assignment. For example, one commenter explained that these ACOs may experience a disproportionate increase in their average risk score, due to the loss of relatively healthy beneficiaries who were assigned to an ACO based on only 1–2 visits as beneficiaries’ care-seeking behaviors have changed as a result of the pandemic (for example, receiving care through telehealth outside the ACO, sheltering in a different geographic location and receiving services from healthcare providers there, and deferring or foregoing routine care). Some commenters suggested that CMS address the impact of atypical patterns of care on beneficiary assignment by adjusting the data used in determining assignment. For instance, a few commenters suggested that CMS disregard 2020 data when determining assignment for benchmark or performance years, but did not provide detailed suggestions for an alternative

approach. Some commenters suggested that CMS use an extended assignment window for determining PY 2021 prospective assignment, such as a 24-month or 18-month assignment window instead of a 12-month assignment window, which would include months during 2020. One commenter suggested that CMS carefully review the methodology to ensure that beneficiary assignment is fair and equitable.

Response: We continue to monitor assignment trends. To date, we have seen minimal decreases in the overall number of beneficiaries assigned to ACOs participating in the Shared Savings Program, with a slight decrease (– 3.0 percent) in the median number of beneficiaries assigned to individual ACOs between Q1 and Q3 2020. We interpret the comments suggesting that we disregard 2020 data in benchmark and performance year assignment to mean that CMS should not use fee-for-service claims with dates of service in 2020 to assign beneficiaries, and instead determine alternate assignment windows that do not include 2020. At this time, we are not adopting commenters’ suggestions to disregard 2020 data in benchmark year and performance year assignment, or to redefine the assignment window for PY 2021 prospective assignment to include additional months, as our analyses of assignment and utilization trends indicate such policy updates are not necessary. We will continue to monitor the impact of the PHE for COVID-19 on assignment and may consider proposing changes in future notice and comment rulemaking if warranted.

(3) Applicability of Expanded Definition of Primary Care Services

After further consideration of our existing beneficiary assignment methodology in part 425, subpart E, which includes the use of an assignment window to conduct beneficiary assignment for both benchmark and performance years, we have determined that it is necessary to modify § 425.400(c)(2) to better reflect the way in which we conduct assignment for the Shared Savings Program.

In the June 2015 final rule (80 FR 32699) we finalized the definition of “assignment window” under § 425.20 to mean the 12-month period used to assign beneficiaries to an ACO. As described in the December 2018 final rule, the assignment window for ACOs under prospective assignment is a 12-month period off-set from the calendar year, while for ACOs under preliminary prospective assignment with retrospective reconciliation, the assignment window is the 12-month

period based on the calendar year (83 FR 67861). Operationally, in determining beneficiary assignment for each performance year and benchmark year, we identify allowed charges for services billed under the HCPCS and CPT codes included in the applicable definition of primary care services under § 425.400(c), and according to the methodology specified in subpart E of the Shared Savings Program’s regulations, during all months of the 12-month period of the assignment window.

The new provision at § 425.400(c)(2) states that we will apply the expanded definition of primary care services, which includes codes for virtual check-ins, remote evaluation e-visits, telephone E/M services, and telehealth, to determine beneficiary assignment for the performance year starting on January 1, 2020, and for any subsequent performance year that starts during the PHE for COVID-19 as defined in § 400.200. We have determined it is necessary to modify the provision to make clear that the expanded definition of primary care services will apply not only to assignment for performance years during the PHE for COVID-19, but also to assignment for any benchmark years during the PHE.

To further clarify the applicability of the expanded definition of primary care services, we believe it is necessary to specify when a performance year’s or benchmark year’s assignment is affected by the PHE for COVID-19, because the assignment window for such years may span a period which includes months during or outside the PHE for COVID-19. For consistency with our operational approach, we believe it is necessary to apply the definition of primary care services consistently to all months of the assignment window. Further, because the HCPCS and CPT codes included in the expanded definition of primary care services in § 425.400(c)(2) capture the unique utilization patterns during the PHE for COVID-19, we believe that applying this expanded definition to all months of the assignment window will help ensure we are appropriately identifying the ACO’s assigned population that will be used in determining ACOs’ financial performance.

As discussed in section III.G.2.a of this final rule, we are finalizing the inclusion of online digital E/M services CPT codes (99421, 99422, and 99423) and HCPCS codes G2010 (code for the remote evaluation of patient video/images) and G2012 (code for virtual check-in) in the definition of primary care services under § 425.400(c)(1)(v), applicable for the performance year

starting on January 1, 2021, and subsequent performance years. The telephone E/M services CPT codes (99441, 99442, and 99443), included in the expanded definition of assignment under § 425.400(c)(2) but not under § 425.400(c)(1), are not payable under the Medicare Physician Fee Schedule payment rules outside of the PHE for COVID-19. We anticipate that applying the telephone E/M services CPT codes to months of the assignment window that occur outside of the PHE for COVID-19 will have a limited impact on assignment.

Therefore, we are revising § 425.400(c)(2) to make clear that we will use the expanded definition of primary care services to identify allowed charges used in beneficiary assignment when the assignment window for a benchmark or performance year includes any month(s) during the PHE for COVID-19, as defined in § 400.200. Furthermore, in determining beneficiary assignment, we will consider services billed under the additional primary care service codes specified in § 425.400(c)(2) during all months of the assignment window, including months that occur outside of the PHE for COVID-19.

The following example illustrates the applicability of the approach we are finalizing. For ACOs under prospective assignment, beneficiary assignment for PY 2021 will be based on the October 1, 2019, through September 30, 2020 assignment window, which includes months before the start of and during the PHE for COVID-19. Accordingly, we will consider any services billed under the additional primary care service codes specified in § 425.400(c)(2) during this assignment window when conducting beneficiary assignment for PY 2021. Further, we will use this same approach in determining prospective assignment for 2021 when it serves as a benchmark year.

We also wish to clarify that the expanded definition of primary care services specified in § 425.400(c)(2) does not apply for purposes of determining prospective assignment for PY 2020, or under prospective assignment for 2020 when it serves as a benchmark year, because the months in the assignment window were not during the PHE for COVID-19. Prospective assignment is completed before the start of the performance year, according to § 425.400(a)(3). Although we may make certain adjustments to remove beneficiaries from an ACO's prospective assignment list if they are no longer eligible for assignment according to § 425.401(b), we do not add beneficiaries to an ACO's prospective

assignment list after the start of the performance year, as described in earlier rulemaking (see for example, 80 FR 32774 and 32775). Prospective assignment for PY 2020 was completed prior to the start of the PHE for COVID-19, based on services furnished during the assignment window from October 1, 2018, through September 30, 2019. As a result, we do not believe it is either necessary to address the change in care patterns during the PHE for COVID-19 or consistent with the prospective assignment methodology in § 425.400(a)(3) to update PY 2020 beneficiary assignment for ACOs under prospective assignment to reflect utilization of the primary care services specified in § 425.400(c)(2) during the assignment window for the performance year.

Accordingly, for clarity and greater consistency with the beneficiary assignment methodology in part 425, subpart E, we are revising the text of the regulation at § 425.400(c)(2) to specify that the additional primary care service codes will be used in conducting beneficiary assignment when the assignment window (as defined in § 425.20) for a benchmark or performance year includes any month(s) during the PHE for COVID-19 defined in § 400.200. We are also adding a new provision at § 425.400(c)(2)(ii) to specify that we will apply the additional primary care service codes, specified in § 425.400(c)(2)(i) (as renumbered), to all months of the assignment window (as defined in § 425.20), when the assignment window includes any month(s) of the PHE for COVID-19 as defined in § 400.200. We are also making conforming revisions to renumber the existing provisions of the regulation at § 425.400(c)(2) to reflect this addition.

In the May 8th COVID-19 IFC (85 FR 27583), we determined that there was good cause to waive prior notice and comment rulemaking in order to implement the expanded definition of primary care services in § 425.400(c) immediately for purposes of determining beneficiary assignment for PY 2020. In addition, we also explained that we believed it would be contrary to the public interest not to implement certain Medicare provisions in the IFC as soon as we were authorized to do so under the authority of section 1871(e)(1)(A)(ii) of the Act, that is, retroactively to either the start of the national emergency or the PHE for the COVID-19 pandemic, as applicable (85 FR 27609). Because the revisions we are making to § 425.400(c)(2) in this final rule are intended to clarify the applicability of the expanded definition

of primary care services to the determination of beneficiary assignment, we believe it is in the public interest to use our authority under section 1871(e)(1)(A)(ii) of the Act to apply this change retroactively to ensure that it applies to the determination of beneficiary assignment under § 425.400(a)(2) for the performance year starting on January 1, 2020, for ACOs under preliminary prospective assignment with retrospective reconciliation. We note that this is consistent with the applicability date for the provision as originally adopted in the May 8th COVID-19 IFC (see 85 FR 27551, 27609).

We will apply this expanded definition of primary care services, as revised, to determine beneficiary assignment for ACOs under prospective assignment according to § 425.400(a)(3), and for ACOs under preliminary prospective assignment with retrospective reconciliation according to § 425.400(a)(2). The revised definition is also applicable for purposes of determining beneficiary assignment for Track 1+ Model ACOs in the same way in which it applies to Shared Savings Program ACOs under prospective assignment according to § 425.400(a)(3).⁹⁶ We also note that we will apply this revised definition consistently when performing beneficiary assignment in program operations, which includes (for example), determining the ACO's performance year assigned population, determining the assigned population for purposes of producing quarterly assignment list reports and quarterly aggregate reports for ACOs, and determining assignment for benchmark years.

In summary, following consideration of the comments received in response to the May 8th COVID-19 IFC, we are finalizing the regulation at § 425.400(c)(2) with modifications. We are finalizing the use of the following additional primary care codes in determining beneficiary assignment when the assignment window (as defined at § 425.20) for a benchmark or performance year includes any months during the PHE for COVID-19 defined in § 400.200: (1) HCPCS code G2010 (*remote evaluation of patient video/images*) and HCPCS code G2012 (*virtual check-in*); (2) CPT codes 99421, 99422 and 99423 (*online digital evaluation and management service (e-visit)*); and

⁹⁶ Refer to the terms of the Track 1+ Model Participation Agreement, available at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/sharedsavingsprogram/Downloads/track-1plus-model-par-agreement.pdf>.

(3) CPT codes 99441, 99442, and 99443 (*telephone evaluation and management services*). Additionally, in this final rule we are revising the regulation to add a new provision at § 425.400(c)(2)(ii) to specify that we will apply the additional primary care service codes, specified in § 425.400(c)(2)(i) (as renumbered), to all months of the assignment window (as defined in § 425.20), when the assignment window includes any month(s) during the PHE for COVID–19 defined in § 400.200.

f. Applicability of Policies to Track 1+ Model ACOs

In the May 8th COVID–19 IFC (85 FR 27586 and 27587), we provided a comprehensive discussion of the applicability of policies, either clarified or modified by the IFC, to Track 1+ Model ACOs. We explained which changes to Shared Savings Program regulations would apply to Track 1+ Model ACOs, and which changes in policies would become applicable to Track 1+ Model ACOs through an amendment to the ACO's Track 1+ Model Participation Agreement.⁹⁷

Generally, comments regarding the application of policies discussed in the May 8th COVID–19 IFC, to Track 1+ Model ACOs have been addressed as part of the discussion of those policies elsewhere in section III.G.5 of this final rule. Accordingly, rather than repeating comments related to the applicability of these policies to ACOs participating in the Track 1+ Model, we refer readers to the relevant discussion in section III.G.5. of this final rule.

H. Notification of Infusion Therapy Options Available Prior To Furnishing Home Infusion Therapy Services

Section 5012 of the 21st Century Cures Act (Cures Act) (Pub. L. 114–255; enacted December 13, 2016) created a separate Medicare Part B benefit under section 1861(s)(2)(GG) and section 1861(iii) of the Act to cover home infusion therapy-associated professional services for certain drugs and biologicals administered intravenously or subcutaneously through a pump that is an item of durable medical equipment, effective for January 1, 2021. Section 5012 of the Cures Act also added section 1834(u) to the Act, which establishes the payment and related requirements for home infusion therapy under this benefit. Section 1834(u)(6) of the Act requires that, prior to the furnishing of home infusion therapy to

an individual, the physician who establishes the plan of care described in section 1861(iii)(1) of the Act shall provide notification (in a form, manner, and frequency determined appropriate by the Secretary) of the options available (such as home, physician's office, HOPD) for the furnishing of infusion therapy under this part.

As discussed in the 2021 PFS proposed rule, (85 FR 50074), we recognize there are several possible forms, manners, and frequencies that physicians may use to notify patients of their infusion therapy treatment options. We solicited comments in the CY 2020 PFS proposed rule (84 FR 40716) and the CY 2020 HH PPS proposed rule (84 FR 34694), regarding the appropriate form, manner, and frequency that any physician must use to provide notification of the treatment options available to their patient for the furnishing of infusion therapy (home or otherwise) under Medicare Part B. We also invited comments on any additional interpretations of this notification requirement. We summarized the comments received in the CY 2020 PFS final rule (84 FR 62568) and the CY 2020 HH PPS final rule (84 FR 60478), and we stated we would take these comments into consideration as we continue developing future policy through notice-and-comment rulemaking.

Many commenters stated that physicians already routinely discuss the infusion therapy options with their patients and annotate these discussions in their patients' medical records. For home infusion therapy services effective beginning CY 2021, physicians are to continue with the current practice of discussing options available for furnishing infusion therapy under Part B and annotating these discussions in their patients' medical records prior to establishing a home infusion therapy plan of care. We did not propose to create a mandatory form nor did we propose to require a specific manner or frequency of notification of options available for infusion therapy under Part B prior to establishing a home infusion therapy plan of care, as we believe that current practice provides appropriate notification. However, we noted that if current practice is later found to be insufficient in providing appropriate notification to patients of the available infusion options under Part B, we may consider additional requirements regarding this notification in future rulemaking. We referred stakeholders to the CY 2020 HH PPS final rule (84 FR 60478) for further information regarding the policies on home infusion therapy

services beginning CY 2021 and for subsequent years.

In response to the 2021 PFS proposed rule, (85 FR 50252), we received 14 public comments, all in support of physicians continuing with the current practice of discussing options available for furnishing infusion therapy under Part B and annotating these discussions in their patients' medical records prior to establishing a home infusion therapy plan of care. Two of these commenters mentioned other issues that were discussed in the CY 2020 HH PPS final rule (84 FR 60478) regarding the general home infusion therapy services policy. After consideration of these comments, and since we did not propose any specific requirements, we are not adopting specific notification requirements in this final rule. Rather, as noted previously, if current practice is later found to be insufficient, we may consider additional requirements regarding this notification in future rulemaking. Stakeholders may refer to the CY 2020 HH PPS final rule (84 FR 60478) for further information regarding the policies on home infusion therapy services beginning CY 2021.

I. Modifications to Quality Reporting Requirements and Comment Solicitation on Modifications to the Extreme and Uncontrollable Circumstances Policy for Performance Year 2020

Following the hurricanes and wildfires during 2017, we issued an IFC, entitled "Medicare Shared Savings Program: Extreme and Uncontrollable Circumstances Policies for Performance Year 2017," which appeared in the December 26, 2017 **Federal Register** (82 FR 60912) (hereinafter referred to as the "December 2017 IFC"). The December 2017 IFC established a policy for determining quality performance scores for ACOs, when the ACO was impacted by extreme and uncontrollable circumstances such as hurricanes, wildfires, or other triggering events, in performance year 2017, including the applicable quality reporting period for the performance year if the quality reporting period was not extended. In the CY 2019 PFS final rule, we extended the policies finalized in 2017 to performance year 2018 and subsequent performance years. In the March 31st COVID–19 IFC (85 FR 19267 and 19268), we updated the extreme and uncontrollable circumstances policy to eliminate the restriction that the policy applies only if the quality reporting period is not extended.

We determine whether an ACO has been impacted by an extreme and

⁹⁷ See for example, the Medicare ACO Track 1+ Model Participation Agreement, available at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/sharedsavingsprogram/Downloads/track-1plus-model-par-agreement.pdf>.

uncontrollable circumstance using the following criteria:

- 20 percent or more of the ACO's assigned beneficiaries reside in an area identified under the Quality Payment Program as being affected by an extreme and uncontrollable circumstance (§ 425.502(f)(1)(i)).

- The ACO's legal entity is physically located in an area identified as being affected by an extreme and uncontrollable circumstance under the Quality Payment Program (§ 425.502(f)(1)(ii)).

Under the current regulation at § 425.502(f)(2), ACOs that meet one or both of the above criteria will have their quality performance score set to equal the mean quality performance score for all Shared Savings Program ACOs for the relevant performance year. However, if an ACO that meets one or both of the criteria above completely and accurately reports all quality measures, we use the higher of the ACO's quality performance score or the mean quality performance score for all Shared Savings Program ACOs to calculate the ACO's quality performance score.

The PHE for COVID-19 applies to all counties in the United States, and therefore, for performance year 2020 all ACOs are considered to be affected by an extreme and uncontrollable circumstance.

1. Changes to the CAHPS for ACOs Reporting Requirements for Performance Year 2020

In the CY 2021 PFS proposed rule, we explained that as part of the March 31st COVID-19 IFC, we made updates to the Part C and Part D Star Rating Systems for 2021 and 2022 based on concerns that the PHE for COVID-19 would pose significant challenges and safety concerns in successfully completing the CAHPS survey. In the March 31st COVID-19 IFC, we noted that many of the survey administration protocols could not be completed remotely, requiring staff to work in mail facilities and call centers where telephone interviewers assemble in close quarters to perform the telephone administration of the survey. Accordingly, to be in compliance with social distancing, travel bans, quarantine, and promoting health and safety of all involved in CAHPS data collection, we amended regulations in parts 417, 422, and 423 to eliminate requirements for collection of CAHPS data for performance year 2020 (85 FR 19271 and 19272).

In order to maintain consistency with the public safety determinations made in the March 31st COVID-19 IFC with respect to the CAHPS survey that is used in the Part C and Part D Star

Ratings Systems, as noted above, and to address concerns about the negative impacts of COVID-19 on sample size and performance scores, we proposed to modify our regulations to remove the requirement that ACOs field a CAHPS for ACOs survey for performance year 2020. Instead, we proposed that ACOs would automatically receive full credit for each of the CAHPS survey measures within the patient/caregiver experience domain for performance year 2020. We acknowledged that the proposal would be retroactive for performance year 2020. However, section 1871(e)(1)(A) of the Act allows for retroactive application of a substantive change when the failure to apply the change retroactively would be contrary to the public interest. Based on the concerns described in the proposed rule, we concluded it would be in the public interest not to require ACOs to field the CAHPS for ACOs survey. Accordingly, we proposed to amend § 425.500(d) to add language stating that for performance year 2020 we would waive the CAHPS for ACOs reporting requirement and would automatically give all ACOs full credit for the CAHPS for ACOs survey measures (85 FR 50252 through 50254).

We sought comment on the proposal to waive the CAHPS for ACOs reporting requirement and to give ACOs full credit for the CAHPS for ACOs survey measures for performance year 2020. The following is a summary of the comments we received and our response.

Comment: A majority of commenters supported our proposal to waive the CAHPS for ACOs reporting requirement for performance year 2020 and to provide ACOs automatically with full credit for each of the CAHPS survey measures. Commenters pointed to inadequate sample size, an inability to generalize results of the survey due to safety measures implemented during the PHE for COVID-19, reduction of burden on Medicare ACO beneficiaries, and concerns that paper surveys were not a sanitary choice for gathering feedback, as reasons why they supported our proposal. Only one commenter urged CMS to require ACOs to participate in the CAHPS for ACOs survey in a pay-for-reporting capacity for PY 2020 or to at least encourage interested ACOs to voluntarily participate in the survey. The commenter explained that without the CAHPS for ACOs survey, ACOs will be unable to capture the experience of patients during the PHE for COVID-19, as well as continue internal performance improvement efforts.

Response: We appreciate the support for our proposal to remove the CAHPS

for ACOs survey reporting requirement for performance year 2020 and to give ACOs automatic full credit for each of the CAHPS survey measures. We acknowledge the commenter's concern with regard to ACOs' inability to capture the experience of patients during the PHE for COVID-19; however, we note that outside of the Shared Savings Program requirements, each ACO is at liberty to determine if it wants to continue with the administration of the CAHPS for ACOs survey. Therefore, we are finalizing our proposal to waive the CAHPS for ACOs reporting requirement for performance year 2020 and to assign all ACOs automatic credit for each of the CAHPS survey measures within the patient/caregiver experience domain. We are adopting the proposed amendments to § 425.500(d) without modification.

2. Comment Solicitation on Modifications to the Extreme and Uncontrollable Circumstances Policy for Performance Year 2020

In the March 31st COVID-19 IFC (85 FR 19267-68), we noted that we would consider whether the current extreme and uncontrollable circumstances policy under which we assign an ACO the higher of the mean quality score across all ACOs and the ACO's own quality score, in the event the ACO is determined to be impacted by an extreme and uncontrollable circumstance would continue to be appropriate for PY 2020 and beyond. We explained that any change to that current policy would be made through future notice and comment rulemaking. While we did not propose any specific changes to the extreme and uncontrollable circumstances policy for PY 2020 in the March 31st COVID-19 IFC, we did receive public comments in response to both the March 31st COVID-19 IFC and the May 8th COVID-19 IFC regarding the impact of the PHE for COVID-19 on quality reporting and quality performance for PY 2020. The following is a summary of the comments we received in response to both the March 31st COVID-19 IFC and the May 8th COVID-19 IFC and our response.

Comment: Many commenters urged CMS to make all ACO quality measures pay-for-reporting for PY 2020. Several of the commenters who suggested this approach stated that the current extreme and uncontrollable circumstances policy was better suited for focal disasters, such as hurricanes or floods. The commenters explained that as a result of the PHE for COVID-19, ACO participants have faced, and will continue to face, numerous challenges during 2020, such as prioritizing care

for COVID-19 patients, canceling in-person preventative and chronic condition management visits to prevent the spread of the virus, and supplying personal protective equipment for the safety of healthcare providers and patients. Commenters stated that a move towards pay-for-reporting for 2020 would provide ACOs and their participating providers and suppliers the flexibility to respond to the PHE for COVID-19 while continuing to monitor and report these metrics. One commenter noted that the quality of care and patients' experience of care is as important as ever during these unprecedented times and encouraged CMS to continue to collect quality measure data as feasible and appropriate in 2020. The commenter explained that making quality measures pay-for-reporting in PY 2020 would ensure that an ACO's quality score does not adversely impact its financial performance due to factors outside of the ACO's control, such as COVID-19 related shifts in care delivery sites and staffing, deferred routine care, and increased telehealth utilization. The commenter stated that reverting quality scores to pay-for-reporting would also help to offset the anticipated deflationary impact of deferred care on the PY 2020 benchmark, which would lower the total amount of savings available to Shared Savings Program ACOs. Another commenter explained that pay-for-reporting for PY 2020 is warranted because, for the remainder of 2020, hospitals, group practices, and individual healthcare providers will be focused almost exclusively on urgent or emergent patients, as well as protecting themselves, their staff, and other patients from the coronavirus. One commenter stated that some measures would be difficult to satisfy if patients are not engaging with their healthcare providers in office or via telehealth and that, the restriction on elective procedures could make it difficult for patients to get their breast cancer, colon cancer, and various other screenings. The commenter noted that this problem could get worse if there is a resurgence of COVID-19 in the fall.

For various reasons, many commenters asserted that the current extreme and uncontrollable circumstances policy, which assigns an ACO the higher of the mean quality score across all ACOs and the ACO's own quality score, is insufficient for PY 2020 and beyond. One commenter explained that given the massive shifts in care delivery sites and staffing, increased telehealth utilization, data collection challenges and other COVID-
