Abstract: On January 17, 2017, EPA issued final revisions to the NESHAP for Radon Emissions from Operating Mill Tailings, codified at 40 CFR part 61, subpart W. These revisions were promulgated as part of a review of pre-1990 NESHAPs pursuant to Clean Air Act Section 112(q)(1). Included in the final revisions was a requirement that owners and operators of uranium recovery facilities maintain specific records pertaining to the design, construction and operation of the uranium tailings impoundments, both conventional and non-conventional, and heap leach piles. These records are to be retained at the facility and contain information regarding the approved design of the impoundments and/or

heap leach pile, including but not limited to, all tests performed that prove the liner is compatible with the material(s) being placed on the liner. For non-conventional impoundments this requirement also includes written and digital photographic records showing compliance with the requirement to maintain liquid in the impoundment such that any solid materials in the impoundment are not visible above the liquid level. Both the retention of design documents required for all impoundments and the records generated during inspections to meet the liquid retention requirement for non-conventional impoundments were new requirements for collection of information that is not covered under the already existing ICR for radionuclide NESHAPs, EPA Number 1100.16, OMB Number 2060-0191.

Information collected is used by EPA to ensure that public health continues to be protected from the hazards of airborne radionuclides by compliance with these standards. Compliance is demonstrated through inspection. All facilities are required to maintain their records for the operational lifetime of the facility. In some cases, they also report their results to EPA.

Form Numbers: None.

Respondents/affected entities: The North American Industry Classification System (NAICS) codes of facilities associated with the activity of the respondents are: Uranium-Radium-Vanadium Ore Mining—212291.

Respondent's obligation to respond: Mandatory (CAA, Sec. 112; 40 CFR part 61).

Estimated number of respondents: 9 (total).

Frequency of response: Reporting (submission of digital photographs) at least monthly; more frequent or one-time collection of records, depending on activity.

Total estimated burden: 1,806 hours (per year). Burden is defined at 5 CFR 1320.03(b).

Total estimated cost: \$115,812 (per year), includes \$0 annualized capital or operation & maintenance costs.

Changes in the Estimates: There is a decrease of 5,347 hours in the total estimated respondent burden compared with the ICR currently approved by OMB. This decrease is mainly attributable to a reduction in the number of estimated respondents. The initial ICR identified a larger universe of respondents that could potentially be subject to the newly defined requirements, many of which were (and remain) in the process of licensing and development. It is estimated that no additional facilities will become subject

to these requirements in the next few years. The Agency has also made a minor adjustment, based on consultations and public comments received, in the estimated number of hours to read and become familiar with the requirements resulting from the transition of the SWIPR system from a start-up to an operations-and-maintenance mode.
