Several commenters addressed further aspects of the proposed harmonization of financial disclosure requirements. One commenter recommended harmonizing the Rule 502(b) disclosures with Regulation Crowdfunding.[317] Another commenter expressly opposed requiring issuers conducting Regulation D offerings above the Regulation A Tier 2 offering limit to comply with the financial information requirements applicable to smaller reporting companies under Article 8 of Regulation S–X.[318]

The 2020 Government-Business Forum on Small Business Capital Formation generally recommended that the Commission revise the disclosures required for non-accredited investors in offerings made under Rule 506(b).[319]

c. Final Amendments

We are adopting the amendments as proposed. By aligning the disclosure requirements in Rule 502(b) with those in Regulation A, additional issuers may be willing to include non-accredited investors in their offerings pursuant to Rule 506(b), which would expand investment opportunities for those investors. In addition, we continue to believe, as stated in comments received on the Concept Release, that many issuers view the current financial statement requirements of Rule 502(b) as overly burdensome.[320] We believe revising the disclosure requirements will help address those concerns, while continuing to provide investors with material information about the issuer. We acknowledge that there are differences in the terms and conditions of Regulation A and Rule 506(b) offerings involving non-accredited investors, in particular the fact that the financial statements provided pursuant to Rule 502(b) are not subject to staff review and qualification. We also note that staff review and qualification is not a guarantee that the disclosure is complete and accurate. Nevertheless, we have determined that the financial statement requirements of Regulation A provide adequate information to non-accredited investors in such offerings, and we believe that the same is true for non-accredited investors in the Rule 506(b) context.[321] Further, as noted in the Proposing Release, the information disclosed to investors will continue to be subject to the anti-fraud provisions of the Federal and State securities laws.

We are not persuaded by commenters who suggested that we harmonize the disclosure requirements in Rule 502(b) with those in Regulation Crowdfunding. We also do not believe harmonizing the disclosure requirements in Rule 502(b) with Regulation Crowdfunding for offerings below $5 million and with Regulation A for offerings above $5 million would alleviate any additional burdens on issuers. Instead, such a requirement would create additional complexity for issuers with offerings that could cross from below to above $5 million, by requiring them to

[310] As proposed, issuers need not comply with the other ongoing non-financial statement disclosure requirements in Tier 2 Regulation A offerings. Instead, the proposed requirement would be limited to harmonization of the financial statement disclosure requirements outlined in the offering circular.

[311] *See* Rules 502(b)(2)(i)(B)(*2*) and (*3*).

[312] The term ''foreign private issuer'' means any foreign issuer, other than a foreign government, except an issuer meeting the following conditions as of the last business day of its most recently completed second fiscal quarter: (i) More than 50 percent of the outstanding voting securities of such issuer are directly or indirectly owned of record by residents of the United States; and (ii) any of the following: (a) The majority of the executive officers or directors are United States citizens or residents; (b) more than 50 percent of the assets of the issuer are located in the United States; or (c) the business of the issuer is administered principally in the United States. *See* 17 CFR 230.405.

[313] *See* ABA Letter (suggesting that the disclosure requirements of Regulation A provide adequate information upon which a non-accredited investor can make an informed investment decision); CfPA Letter; SEC SBCFAC Letter; Geraci Law Letter; Letter from Carta, Inc. dated June 1, 2020 (''Carta Letter''); W. Hubbard Letter; CrowdCheck Letter; and IPA Letter.

[314] *See* J. Clarke Letter; NASAA Letter (opposing harmonization of the financial statement requirements with Regulation A because of the difference in the terms of the two exemptions); Better Markets Letter (expressing concern about a loss of investor protection because the proposal would allow companies, including foreign companies, to raise capital without providing audited financial statements); CFA Letter (expressing concern that the proposal would reduce transparency and weaken investor protections); and CFA Institute Letter (stating that harmonization with the Regulation A requirement is not appropriate because Rule 506(b) lacks investor protections that Regulation A Tier 1 (and Regulation Crowdfunding) provide to non-accredited investors).

[315] *See* NASAA Letter.

[316] *See* CFA Institute Letter.

[317] *See* J. Clarke Letter.

[318] *See* W. Hubbard Letter (stating that the current Reg A Tier 2 approach to financial statement disclosure requirements is understandable and straightforward and adding financial disclosure requirements for offerings above $50 million will not provide a commensurate benefit or protection to investors however will likely discourage issuers from using the exemption).

[319] *See* 2020 Forum Report.

[320] *See* Proposing Release, at text accompanying notes 195–198.

[321] Regulation A is available only to U.S. or Canadian issuers, and excludes, among others, blank check companies, registered investment companies, business development companies, and issuers of certain securities including asset-backed securities. These limitations do not apply to Regulation D; therefore, such issuers shall apply the Regulation A financial statement requirements as if they were eligible to do so under Regulation A. With respect to foreign private issuers, we are adopting as proposed a provision stating that a foreign private issuer that is not an Exchange Act reporting company would be permitted to provide financial statements prepared in accordance with U.S. GAAP or International Financial Reporting Standards as issued by the International Accounting Standards Board.

simultaneously consider the disclosure requirements of Regulation A and Regulation Crowdfunding.

2. Proposed Amendments To Simplify Compliance With Regulation A

In its review of the exempt offering framework, the Commission identified several areas where compliance with Regulation A is more complex or difficult than for registered offerings, including the rules regarding the redaction of confidential information in material contracts, making draft offering statements public on EDGAR, incorporation by reference, and the abandonment of a post-qualification amendment.

a. Redaction of Confidential Information in Certain Exhibits

In March 2019, the Commission amended several rules to permit registrants to file redacted material contracts and plans of acquisition, reorganization, arrangement, liquidation, or succession without applying for confidential treatment.[322] These rules require registrants to mark the exhibit index to indicate that portions of the exhibit or exhibits have been omitted, include a prominent statement on the first page of the redacted exhibit that certain identified information has been excluded from the exhibit because it is both not material and would be competitively harmful if publicly disclosed, and indicate with brackets where the information has been omitted from the filed version of the exhibit.[323] This process for filing redacted exhibits was not extended to Regulation A offerings at that time. As a result, Regulation A issuers are still compelled to submit an application for confidential treatment in order to redact immaterial confidential information from material contracts and plans of acquisition, reorganization, arrangement, liquidation, or succession.

i. Proposed Amendments

The Commission proposed to amend Item 17 of Form 1–A to provide issuers with the option to file redacted material contracts [324] and plans of acquisition, reorganization, arrangement, liquidation, or succession,[325] consistent with the recent amendments to Regulation S–K). Issuers would still have the option to file such exhibits pursuant to the existing confidential treatment application process, which would remain unchanged.

ii. Comments

Commenters that addressed the proposed amendments supported the proposal to apply the simplified confidential treatment process to Regulation A filers.[326]

iii. Final Amendments

We are adopting the amendments as proposed to add a new instruction to Item 17 of Form 1–A that applies to paragraphs 6 and 7 of that item and includes procedures similar to Items 601(b)(2) and (b)(10) of Regulation S–K for filing redacted material contracts or plans of acquisition, reorganization, arrangement, liquidation, or succession. We are making one change to the proposed instruction, to further harmonize the procedures for redacting information under Item 17 of Form 1–A with those in 17 CFR 229.601(a)(6) (''Item 601(a)(6)'' of Regulation S–K), by allowing issuers to redact information that ''would constitute a clearly unwarranted invasion of personal privacy'' in any of the exhibits listed in Item 17 of Form 1–A. As a matter of practice, the staff generally does not object where an issuer omits sensitive personally identifiable information, such as bank account numbers, social security numbers, home addresses, and similar information (''PII'') from exhibits without also submitting a confidential treatment request. As with the adoption of Item 601(a)(6) of Regulation S–K, codifying this staff practice in Item 17 of Form 1–A will alleviate the burden from issuers of having to provide an analysis in order to redact PII from exhibits, and will also better safeguard PII by limiting its dissemination.[327]

Commission staff will continue to review Forms 1–A filed in connection with Regulation A offerings and selectively assess whether redactions from exhibits appear to be limited to information that meets the appropriate standard.[328] Upon request, issuers will be expected to promptly provide supplemental materials to the staff similar to those currently required, including an unredacted copy of the exhibit and an analysis of why the redacted information is both not material and the type of information that the issuer both customarily and actually treats as private and confidential.[329] If the issuer's supplemental materials do not support its redactions, the staff may request that the issuer file an amendment that includes some, or all, of the previously redacted information, similar to the process the staff currently follows for confidential treatment requests in connection with Regulation A offerings.[330]

b. Amendment to Form 1–A Item 17.16(a) Requirement

Issuers that are conducting Regulation A offerings are permitted to submit non-public draft offering statements and amendments for review by the Commission staff if they have not previously sold securities pursuant to (i) a qualified offering statement under Regulation A or (ii) an effective Securities Act registration statement.[331] Such issuers also may submit related non-public correspondence to the Commission staff for review confidentially. Current rules require that these non-public offering statements, amendments and correspondence be filed as an exhibit to a publicly filed offering statement at least twenty-one calendar days prior to the qualification of the offering statement.[332] Similarly, an emerging growth company may, prior to its initial public offering date, submit a draft registration statement and amendments to the Commission for non-public review by the staff.[333] However, unlike issuers submitting Regulation A offering statements for non-public review, there is no corresponding Securities Act rule or item requiring registration statements and amendments confidentially submitted by emerging growth companies to be filed as an exhibit to a publicly filed registration statement.

[322] *See* FAST Act Modernization and Simplification of Regulation S–K, Release No. 33–10618 (Mar. 20, 2019) [84 FR 12674 (Apr. 2, 2019)] (''FAST Act Modernization Release'') at text accompanying notes 45–73 (amending 17 CFR 229.601(b)(2)(ii) and 17 CFR 229.601(b)(10)(iv)).

[323] *See* 17 CFR 229.601(b)(2) (''Item 601(b)(2)'' of Regulation S–K) and 17 CFR 229.601(b)(10)(iv) (''Item 601(b)(10)(iv)'' of Regulation S–K). Redacted exhibits are subject to compliance reviews by the staff.

[324] *See* Item 17.6 of Form 1–A.

[325] *See* Item 17.7 of Form 1–A.

[326] *See* Republic Letter; W. Hubbard Letter; M. Schonberger Letter; and CrowdCheck Letter.

[327] *See* FAST Act Modernization Release, at Section II.B.5.b.ii. (adopting Item 601(a)(6) of Regulation S–K).

[328] As discussed below, we are amending the standard for redaction of information under this streamlined process, which currently requires that the redactions from exhibits be limited to information that is not material and that would cause competitive harm if publicly disclosed. The amended standard is patterned on the Supreme Court's language set out in *Food Marketing Institute*. *See supra* note 301.

[329] Pursuant to 17 CFR 200.83, companies are permitted to request confidential treatment of this supplemental information while it is in the staff's possession.

[330] After completing its review of the supplemental materials, the Commission or its staff will return or destroy them at the request of the company, as applicable.

[331] *See* 17 CFR 230.252(d).

[332] *See* Item 17, paragraph 16(a) of Form 1–A and 17 CFR 230.252(d).

[333] *See* Section 6(e)(1) of the Securities Act.

Instead issuers satisfy their public filing requirement by logging into their EDGAR account, selecting materials previously submitted non-publicly, and releasing them for public dissemination.[334]

i. Proposed Amendments

The Commission proposed to amend Item 17.16(a) of Form 1–A to harmonize the procedures for publicly filing draft Regulation A offering statements with those for draft Securities Act registration statements. Instead of requiring documents previously submitted for non-public review by the staff and related, non-public correspondence to be filed as exhibits to a publicly filed offering statement, issuers conducting offerings exempt from registration pursuant to Regulation A would be able to make such documents available to the public via EDGAR to comply with the requirements of 17 CFR 230.252(d).

ii. Comments

Commenters that addressed the proposed amendment supported the proposal to amend Item 17.16(a) of Form 1–A to allow non-public draft offering statements, amendments and related non-public correspondence to be made publicly available through the use of the EDGAR system.[335]

iii. Final Amendments

We are adopting the amendments as proposed, with two changes to renumber the exhibit paragraphs for clarity. As adopted, we are renumbering paragraph 16 of Item 17 of Form 1–A so that it will be referred to as ''99. Additional Exhibits,'' and will be the last paragraph in Item 17, and former paragraph 16 will be designated as ''reserved.'' In addition, as proposed, we are deleting sub-paragraph (a) of that paragraph so that issuers no longer will be required to file the non-public offering statements and related amendments and correspondence as exhibits. Instead, Regulation A issuers will be able to make previously non-public documents available to the public on EDGAR using the same process as issuers conducting a registered offering. We believe that this change simplifies the process of moving from a draft offering statement to a publicly filed document for issuers conducting Regulation A offerings, saving both time and money for such issuers. In addition, because all previously submitted offering statements and related amendments and correspondence will be available to the public on EDGAR, rather than attached as exhibits to a given offering statement, this change should make it easier for investors to learn about the issuer and the Regulation A offering itself, furthering their ability to make informed investment decisions.

c. Incorporation by Reference of Previously Filed Financial Statements in Form 1–A for Regulation A Offerings

The ability to incorporate financial statements by reference to Exchange Act reports filed before the effective date of a registration statement is permitted on Form S–1, subject to certain conditions.[336] Specifically, General Instruction VII of Form S–1 permits registrants that meet certain eligibility standards[337] to incorporate by reference the information required by Item 11 of Form S–1, which includes information about the registrant, such as, among other things, financial statement information meeting the requirements of 17 CFR 210.1–01 through 12–29.[338] Regulation A issuers, however, are required to include the issuer's financial statements, prepared in accordance with the applicable requirements of Tier 1 or Tier 2 of Regulation A, in their Regulation A offering circular that is distributed to investors.[339]

i. Proposed Amendments

The Commission proposed to permit issuers to incorporate previously filed financial statements by reference into a Regulation A offering circular. The Commission proposed that an issuer must satisfy criteria similar to the requirement in connection with Form S–1. Specifically, issuers that have a reporting obligation under 17 CFR 230.257 (''Rule 257'') or the Exchange Act must be current in their reporting obligations. Issuers would be required to make incorporated financial statements readily available and accessible on a website maintained by or for the issuer and to disclose in the offering statement that such financial statements will be provided upon request.[340] Issuers conducting ongoing offerings would need to continue to file post-qualification amendments to Form 1–A annually to include the financial statements that would be required to be included in a Form 1–A as of such date.[341] These financial statements could be either filed with such post-qualification amendment or incorporated by reference to a previously filed periodic or current report. In addition, issuers would remain liable for such financial statements under Section 12(a)(2) of the Securities Act[342] to the same extent as if they had been filed rather than incorporated by reference.

ii. Comments

Commenters generally supported the proposal to permit incorporation by reference of an issuer's previously filed financial statements.[343] Some commenters additionally supported permitting forward incorporation by reference in Regulation A,[344] with some of these commenters further supporting the elimination of the requirement to file annual post-qualification amendments.[345]

iii. Final Amendments

We are adopting the amendments as proposed. We believe that allowing incorporation by reference of previously filed financial statements should decrease existing filing burdens on Regulation A issuers. We are not expanding Regulation A to allow for

[334] *See* Announcement by the Division of Corporation Finance, Draft Registration Statements to Be Submitted and Filed on EDGAR (Sep. 26, 2012), *available at https://www.sec.gov/divisions/corpfin/cfannouncements/drsfilingprocedures.htm.*

[337] These criteria include, but are not limited to, that the registrant: (i) Is subject to the reporting requirements of Section 13 or Section 15(d) of the Exchange Act, (ii) has filed all reports and other materials required to be filed by Sections 13(a), 14, or 15(d) of the Exchange Act during the preceding 12 months (or for such shorter period that the registrant was required to file such reports and materials), (iii) has filed an annual report required under Section 13(a) or Section 15(d) of the Exchange Act for its most recently completed fiscal year and (iv) is not, and during the past three years neither it nor any of its predecessors was: (a) A blank check company; (b) a shell company, other than a business combination related shell company; or (c) offering penny stock. The registrant must make its periodic and current reports filed pursuant to Section 13 or Section 15(d) of the Exchange Act that are incorporated by reference pursuant to Item 11A or Item 12 of Form S–1 readily available and accessible on a website maintained by or for the registrant and containing information about the registrant.

[338] *See* Item 12 to Form S–1.

[339] *See* General Rule (a) to Part F/S of Form 1–A.

[340] General Instruction III(b) of Form 1–A requires the inclusion of a hyperlink in the offering circular to material incorporated by reference, which would include an issuer's previously filed financial statements on EDGAR.

[345] *See* M. Schonberger Letter; and CrowdCheck Letter (supporting elimination of post-qualification amendments where the auditor's consent was included in the 17 CFR 239.91 (''Form 1–K'')). In contrast, one commenter supported continuing to require annual post-qualification amendments to ensure that filings remain subject to ongoing staff review. *See* W. Hubbard Letter.

forward incorporation by reference as recommended by some commenters, as we believe doing so could increase investor search costs and would eliminate the benefit of staff review of post-qualification amendments prior to their qualification.

d. Amendment to Abandonment Provision of Regulation A

Regulation A permits the Commission to declare an offering statement abandoned, but does not provide the same authority for post-qualification amendments.

i. Proposed Amendments

The Commission proposed to amend the abandonment provisions of Rule 259(b) to permit the Commission to declare a post-qualification amendment to an offering statement abandoned, consistent with 17 CFR 230.479, the rule applicable to registered offerings.

ii. Comments

Commenters who addressed the proposed amendment to the abandonment provisions of Rule 259(b) supported the proposal.[346]

iii. Final Amendments

We are adopting the amendments as proposed. We continue believe there are situations where it is appropriate for the Commission to be able to declare a specific post-qualification amendment abandoned, instead of the entire offering statement. For example, Commission staff has observed some issuers attempting to use post-qualification amendments for separate classes of securities that are not otherwise being offered under the offering statement. Under the final rules, if an issuer fails to qualify a post-qualification amendment for such a separate class, but otherwise is in compliance with all of its Regulation A obligations, the Commission will be able to declare that specific post-qualification amendment abandoned so as to avoid potential investor confusion arising from the presence of the unqualified post-qualification amendment on EDGAR.

3. Confidential Information Standard

The current requirements for registrants to file material contracts as exhibits to their disclosure documents permit registrants to redact provisions or terms of exhibits required to be filed if those provisions or terms are both (i) not material and (ii) would likely cause competitive harm to the registrant if publicly disclosed.[347] The ''competitive harm'' requirement was patterned on the standard then being used by the U.S. Circuit Court of Appeals for the District of Columbia [348] to define what information is confidential under Exemption 4 of the Freedom of Information Act, which protects ''trade secrets and commercial or financial information obtained from a person [if they are] privileged or confidential.'' [349] In June 2019, the Supreme Court rejected the Circuit Court's longstanding test for determining what information was confidential under Exemption 4 and adopted a new definition of ''confidential'' that does not include a competitive harm requirement.[350] The Supreme Court stated that ''[a]t least where commercial or financial information is both customarily and actually treated as private by its owner and provided to the government under an assurance of privacy, the information is 'confidential' within the meaning of Exemption 4.'' [351]

a. Proposed Amendments

The Commission proposed to adjust the exhibit filing requirements by removing the competitive harm requirement and replacing it with a standard more closely aligned with the Supreme Court's definition of ''confidential.'' Under the proposed amendments, information may be redacted from material contracts if it is the type of information that the issuer both customarily and actually treats as private and confidential and that is also not material.[352]

b. Comments

We received no comments on the proposed amendments to revise the confidential information standard, other than one comment expressing support for the proposed revisions in the context of variable product registration statement forms.[353] This commenter also suggested that we revise Form N–6 to expand the types of exhibits to which the standard would apply to include participation agreements and administrative contracts.[354] The commenter stated that this would provide greater consistency between Form N–4, which relates to variable annuities, and Form N–6, which relates to variable life insurance contracts.[355]

c. Final Amendments

We are adopting the amendments as proposed to adjust the exhibit filing requirements by removing the competitive harm requirement and replacing it with a standard that permits information to be redacted from material contracts if it is the type of information that the issuer both customarily and actually treats as private and confidential, and which is also not material.[356]

We did not propose to revise Form N–6 to modify the types of exhibits to which the confidential information standard applies and decline to do so here. Information contained in such exhibits is already disclosed to investors in other contexts and, in our staff's experience, these exhibits do not contain confidential or proprietary information. Further, as part of our adoption of updated disclosure requirements for variable annuity and variable life insurance products,[357] among other changes, the instructions to exhibits in Form N–6 and Form N–4 will be revised to eliminate discrepancies related to the categories of exhibits eligible for redaction.[358]

[355] *See id.*

[356] We did not propose, and are not adopting, changes to 17 CFR 229.402(b) (''Item 402(b)'' of Regulation S–K). Instruction 4 to Item 402(b) and Instruction 2 to 17 CFR 229.402(e) (''Item 402(e)(1)''), which reference a competitive harm standard that is the same as would apply under the current rules when a registrant requests confidential treatment of confidential trade secrets or confidential commercial or financial information pursuant to 17 CFR 230.406 and 17 CFR 240.24b–2. The changes we are adopting to the exhibit requirements do not alter the existing standard applicable to Items 402(b) and 402(e) of Regulation S–K.

[357] *See* Updated Disclosure Requirements and Summary Prospectus for Variable Annuity and Variable Life Insurance Contracts, Release No. IC–33814 (May 1, 2020) [FR 24964 (May 1, 2020)] (''VASP Release''). For purposes of this release, we refer to the versions of the relevant forms adopted by the VASP Release as the ''VASP amended'' versions of Forms N–3, N–4, and N–6 (*e.g.,* ''VASP amended Form N–3''). The changes to the exhibit filing requirements that we are adopting in this release, which replace the competitive harm standard, also apply to the parallel instruction in each of Item 32 of VASP amended Form N–3, Item 27 of VASP amended Form N–4, and Item 30 of VASP amended Form N–6.

[358] *See* Instruction 3 to Item 27 of VASP amended Form N–4 (allowing for the redaction of reinsurance contracts and other material contracts); *see also* Instruction 3 to Item 30 of amended Form N–6 (allowing for the redaction of reinsurance contracts

*E. Offering and Investment Limits*

Regulation A, Regulation Crowdfunding, and Rule 504 of Regulation D contain a variety of requirements and investor protections, including limits on the amount of securities that may be offered and sold under the exemptions. Regulation A and Regulation Crowdfunding also include limits on how much an individual may invest. The Commission has estimated that approximately $2.7 trillion of new capital was raised through exempt offering channels in 2019, of which approximately $1.3 billion (0.05 percent) was raised under Regulation A, Regulation Crowdfunding, and Rule 504 combined.[359]

1. Regulation A

Regulation A establishes two tiers of offerings: Tier 1, for offerings that do not exceed $20 million in a 12-month period; and Tier 2, for offerings that do not exceed $50 million in a 12-month period. The Commission is required by Section 3(b)(5) of the Securities Act to review the $50 million Tier 2 offering limit specified in Section 3(b)(2) of the Securities Act every two years, and the statute authorizes the Commission to increase the annual offering limit if the Commission determines that it would be appropriate to do so.

Earlier this year, the Divisions of Corporation Finance and Economic and Risk Analysis conducted a Regulation A Lookback Study and Offering Limit Review Analysis (''2020 Regulation A Review'') as required by the 2015 Regulation A Release.[360] The 2020 Regulation A Review found that from June 2015 to December 2019, $2.4 billion was reported raised by 183 issuers in ongoing and closed Regulation A offerings, including $230 million in Tier 1 and $2.2 billion in Tier 2 offerings.[361]

a. Proposed Amendments

Since adoption of the 2015 amendments, the Commission has continued to receive feedback on, and has considered further enhancements to, Regulation A.[362] This feedback and consideration informed our proposal to increase the maximum offering amount under Tier 2 of Regulation A from $50 million to $75 million. Consistent with the Commission's approach to limitations on secondary sales when adopting the Regulation A amendments, the Commission also proposed to increase the maximum offering amount for secondary sales under Tier 2 of Regulation A from $15 million to $22.5 million.

b. Comments

While most commenters that addressed the proposal supported raising the Tier 2 offering limits,[363] some opposed the increase.[364] Commenters supporting the increase suggested that an increase could encourage development of the smaller initial public offering market, encouraging more issuers to conduct offerings and providing more investment opportunities for investors.[365] Some of these commenters additionally suggested that the higher offering limits would improve the economics for issuers and broker dealers to participate in the Regulation A market.[366] A number of commenters supported raising the limit further to $100 million.[367] Several commenters also specifically supported raising the limit for secondary sales.[368] We additionally received many letters urging the Commission to provide Federal preemption for secondary sales of a Tier 2 Regulation A offering.[369]

Commenters opposed to the increase suggested that there is not compelling evidence supporting a need to raise the offering limit[370] and stated that issuers raising such large amounts of capital should be subject to the full disclosure and protections provided in the Securities Act.[371] One commenter expressed concern over the negative effects of increasing the use of Regulation A for unsophisticated non-accredited retail investors due to what it perceived as the lower quality of Regulation A issuers and increased risks

and other material contracts). Registrants must comply with these rule and form amendments by January 1, 2022. *See* VASP Release, at Section II.G.

[359] *See* Concept Release, at Section II. Preliminary estimates from 2019 similarly reflect limited capital raising under the rules, with $1.042 billion raised under Regulation A, $228 million under Rule 504, and $62 million under Regulation Crowdfunding.

[360] *See* Staff of the U.S. Securities and Exchange Commission, Report to the Commission, Regulation A Lookback Study and Offering Limit Review Analysis, 2020 (Mar. 4, 2020), *available at https://www.sec.gov/smallbusiness/exemptofferings/rega/2020Report.* The report includes a review of: The amount of capital raised under the amendments; the number of issuances and amount raised by both Tier 1 and Tier 2 offerings; the number of placement agents and brokers facilitating the Regulation A offerings; the number of Federal, State, or any other actions taken against issuers, placement agents, or brokers with respect to both Tier 1 and Tier 2 offerings; and whether any additional investor protections appear necessary for either Tier 1 or Tier 2.

[361] Over this time period issuers sought $11.2 billion across 487 Regulation A offerings, of which 382 were qualified offering statements seeking up to $9.1 billion. *See* 2020 Regulation A Review.

[362] While the Commission has received feedback from market participants and commenters seeking an increase in the Tier 2 offering limit, these commenters did not seek an increase in the Tier 1 limit. *See* 2017 Forum Report; 2018 Forum Report; and A Financial System That Creates Economic Opportunities—Capital Markets (Oct. 2017), *available at https://www.treasury.gov/press-center/press-releases/Documents/A-Financial-System-Capital-Markets-FINAL-FINAL.pdf* (''2017 Treasury Report'').

[363] *See, e.g.,* ABA Letter; Letter from Bruce D. Wertz, Sr. dated Mar. 10, 2020; B. Andrews, et al. Letter; SEC SBCFAC Letter; Geraci Law Letter (suggesting the increased offering limits will attract a more seasoned pool of investors as well as institutional investors); Carta Letter; SAF Letter; M. Schonberger Letter; D. Burton Letter; InnaMed, et al. Letter; CrowdCheck Letter; IPA Letter; Republic Letter; and Sen. Toomey Letter. Some of these commenters further supported indexing additional increases for inflation. *See, e.g.,* Carta Letter; IPA Letter; and Sen. Toomey Letter. Other commenters offered further suggestions to improve the offering process and raise effective offering limits. *See, e.g.,* M. Schonberger Letter (recommending Regulation A be amended to apply the 180-day selling extension for continuous offerings to certain post-qualification amendment filings). *See also* Annual Report for Fiscal Year 2019: Office of the Advocate for Small Business Capital Formation (''2019 OASB Annual Report''), *available at https://www.sec.gov/files/2019_OASB_Annual%20Report.pdf*, at 41 (recommending that the Commission tie offering limits to expressed marketplace needs for capital and provide flexibility for future review and adjustment).

[366] *See, e.g.,* Chamber of Digital Commerce Letter, IPA Letter; and Hubbard Letter.

[367] *See, e.g.,* J. Clarke Letter; Chamber of Digital Commerce Letter; Ketsal Letter; IPA Letter; Sen. Toomey Letter; Letter from Biotechnology Innovation Organization dated July 21, 2020; M. Schonberger Letter (suggesting higher offering limits reduce the burden on issuers by permitting them to raise more capital before having to file post qualification amendments or new offering statements); and CrowdCheck Letter. *See also* Carta Letter; and Sen. Toomey (additionally recommending indexing the limit for inflation). *But see* ABA Letter (supporting the Commission's proposed incremental approach and suggesting that precedent, prestige of the public offering process and customary use of investment bankers likely will mean that registered offerings will be more frequently used for relatively larger offerings).

[368] *See, e.g.,* Carta Letter; and IPA Letter.

[369] *See* Form Letter Type A; and Carta Letter.

[370] *See, e.g.,* CII Letter; CFA Letter; CFA Institute Letter (noting that issuers that have exhausted the Tier II offering limits have been almost exclusively real estate industry issuers, and that the real estate industry is one marked by significant volatility and risk); and Md. St. Bar Assoc. Letter (noting that the 2020 Regulation A Review found that only approximately 10% of issuers conducting Regulation A Tier 2 offerings have reached the $50 million offering limit).

[371] *See, e.g.,* Md. St. Bar Assoc. Letter; CFA Institute Letter (suggesting the expansion of exempt offerings undermines the traditional trade-off between the burdens of public disclosure and the benefits of the right to raise capital from the general public); and NASAA Letter. *See also* R. Rutkowski Letter (suggesting that the proposal would weaken private offering rules in way that would discourage public market offerings and the associated disclosure and governance protections).

of investor losses.[372] Another commenter suggested that the reason Regulation A Tier 2 is underutilized is not that the offering limits are too low, but rather that the issuers and investments involve greater risk.[373] Additionally, one commenter opposed to the increase and one commenter supporting the increase expressed concern relating to the Commission's use of its general exemptive authority under Section 28 of the Securities Act to increase the limit.[374]

Although many commenters were supportive of raising the Tier 2 offering limits, only one commenter recommended increasing the Tier 1 offering limit.[375] This commenter also recommended that the Commission reconsider whether ''covered securities'' status under Section 18 of the Securities Act should be extended to Tier 1 of Regulation A.[376] Other commenters that addressed Tier 1 offering limits, however, were generally opposed to increasing those limits.[377]

c. Final Amendments

In order to facilitate use of Tier 2 Regulation A offerings and having considered the comments on the Proposing Release, the 2020 Regulation A Review, feedback that the Commission received from the Small Business Forums [378] and in response to the Concept Release, we are increasing the maximum offering amount under Tier 2 of Regulation A from $50 million to $75 million as proposed. Section 3(b)(5) of the Securities Act expressly authorizes the Commission to review and raise the offering limit as appropriate.[379] Consistent with the Commission's approach to limitations on secondary sales when adopting the Regulation A amendments, we are also increasing the maximum offering amount for secondary sales under Tier 2 of Regulation A from $15 million to $22.5 million.[380]

While the 2015 amendments have stimulated the Regulation A offering market, aggregate Regulation A financing levels remain modest relative to traditional IPOs and the Regulation D market.[381] The 2020 Regulation A Review noted that these financing levels are likely related to a combination of factors, including: The pool of issuers and investors drawn to the market under existing conditions; the availability to issuers of attractive private placement alternatives without an offering limit; the availability to investors of attractive investment alternatives outside of Regulation A with a more diversified pool of issuers; limited intermediary participation and a lack of traditional underwriting; and a lack of secondary market liquidity.[382]

We are raising the Tier 2 offering limit in order to enhance the ability of Regulation A issuers that have exhausted existing offering limits to raise additional capital.[383] Further, public commentary since the 2015 amendments indicates that a higher offering limit may help attract a larger and potentially more seasoned pool of issuers and intermediaries or institutional investors to the Regulation A market.[384] In addition, a higher offering limit may make Regulation A offerings more attractive to more established Exchange Act reporting companies.[385] Although some commenters suggested raising the offering limit to $100 million, we believe it is more appropriate to pursue an incremental approach to increasing the threshold,[386] which will provide the Commission with a reasonable opportunity to assess the impact of the increased offering limit on the Regulation A market before considering further changes. In this regard, we note that the Commission is required by Section 3(b)(5) of the Securities Act to review and consider increasing the new $75 million Tier 2 offering limit every two years.[387] In addition, we believe that the issuer eligibility requirements, content, and filing requirements for offering statements and ongoing reporting requirements for issuers in Tier 2 Regulation A offerings continue to provide appropriate protections for investors at this higher offering limit. For these reasons, we believe that it is necessary and appropriate in the public interest and consistent with the protection of investors to raise the Tier 2 offering limit as proposed.[388]

We note that under the final amendments, Tier 2 offerings will continue to be preempted from State law registration and qualification requirements.[389] We believe this is

[372] *See* CFA Letter. *See also* CFA Institute Letter (expressing concerns with compliance by issuers in the exempt markets and its perception of the lower quality of issuers offering in the Regulation A market).

[373] *See, e.g.,* NASAA Letter (recommending strengthening corporate governance and disclosure obligations and rescinding preemption of State securities regulation to increase the regulatory oversight of these companies making them more attractive to and safer for investors).

[374] *See* Better Markets Letter (opposing the increase); and CrowdCheck Letter (supporting the increase).

[375] *See* Chamber of Digital Commerce Letter.

[376] *See id.*

[377] *See, e.g.,* CII Letter; NASAA Letter; and CrowdCheck Letter.

[378] *See* 2017 Forum Report; and 2018 Forum Report.

[379] We also believe that the Commission has general exemptive authority under Securities Act Section 28 to raise the Regulation A offering limit if it finds that raising the limit is necessary or appropriate in the public interest and consistent with the protection of investors.

[380] The Commission observed in connection with the 2014 amendments to Regulation A that selling security holder access to Regulation A has historically been an important part of the exemptive scheme. *See* Amendments for Small and Additional Issues Exemptions Under Section 3(b) of the Securities Act, Release No. 33–9497 (Dec. 18, 2013) [79 FR 3925 (Jan. 23, 2014)], at Section II.B.3; and 2015 Regulation A Adopting Release, at Section II.B.3.c. Consistent with existing and historical provisions of Regulation A, we are continuing to permit secondary sales under Regulation A up to 30 percent of the maximum offering amount permitted under the applicable tier.

[381] *See* 2020 Regulation A Review.

[382] *See id.*

[383] The 2020 Regulation A Review estimates that approximately 10 percent of issuers in Tier 2 offerings have reached the $50 million offering limit across completed and ongoing offerings. *See id.* at Table 4. As discussed in the 2020 Regulation A Review and noted by one commenter, these issuers have primarily been from the real estate industry. *See* CFA Institute Letter. While raising the offering limit will permit all issuers to raise additional capital, we believe that the disclosure requirements of Regulation A will help investors to evaluate the risk of such investments.

[384] *See, e.g.,* letter in response to the Concept Release from Committee on Securities Regulation of the Business Law Section of the New York State Bar Association dated Oct. 16, 2019.

[385] *See* 2020 Regulation A Review, at Section F.1. However, as noted in the 2020 Regulation A Review, the staff lacks data that would allow it to assess how a specific offering limit increase would affect the size and composition of the pool of prospective issuers, intermediaries, and investors in the Regulation A market. *See infra* Section IV.C.5.a.i.

[386] We note that adjusting the existing offering limit for inflation from 2015 to present would increase the Tier 2 offering limit by only $5.845 million. *See* 2020 Regulation A Review, at Table 7. Such a change likely would not attract additional institutional investors, intermediaries, or traditional underwriters to the Regulation A market.

[387] As noted above, because of the statutory obligation to review the limit every two years, we do not think it is necessary to index the offering limit for inflation, as some commenters suggested. *See* Carta Letter; and Sen. Toomey Letter.

[388] We did not propose and are not increasing the Tier 1 offering limit. While one commenter recommended an increase, we do not believe it is likely to result in the kinds of benefits discussed above that we expect may result from the increased Tier 2 offering limit, such as attracting a larger and more seasoned pool of issuers and intermediaries or institutional investors to the Regulation A market. As discussed in the 2020 Regulation A Review, while an increase in the Tier 1 offering limit could draw more issuers to Tier 1, Tier 2 may remain more attractive to issuers due to, for example, preemption of state review, an easier path to quotation on the upper tiers of the OTC market in the presence of periodic reports required by Tier 2, and the flexibility to raise more capital without having to undergo a re-qualification. *See* 2020 Regulation A Review at Section F.2. While we do not believe an increase is warranted at this time, we will continue to consider the Tier 1 offering limitation and the appropriate investor protections under Tier 1 when we conduct the Tier 2 offering limit review required by Section 3(b)(5) of the Securities Act.

[389] Many commenters recommended preempting State securities law regulation of secondary trading

appropriate because we expect that Tier 2 offerings will continue to be more national in nature. While issuers in Tier 2 offerings are required to qualify offerings with the Commission before sales can be made pursuant to Regulation A, they are not required to register or qualify their offerings with State securities regulators. Section 18 of the Securities Act generally provides for preemption of State law registration and qualification requirements for ''covered securities.'' [390] Section 18(b)(4)(D) of the Securities Act further provides that securities issued pursuant to Section 3(b)(2) of the Securities Act are covered securities if they are listed, or will be listed, on a national securities exchange or if they are offered or sold to a ''qualified purchaser,'' [391] which the Commission has defined to include any person to whom securities are offered or sold in a Tier 2 offering.[392] We are not extending ''covered securities'' status under Section 18 of the Securities Act to Tier 1, as suggested by one commenter. We continue to believe that, in light of concerns raised by state regulators and the generally more local nature of Tier 1 offerings, it is appropriate for the States to retain oversight over Tier 1 offerings.[393]

2. Rule 504

Rule 504 of Regulation D provides an exemption for eligible issuers [394] from registration under the Securities Act for the offer and sale of up to $5 million of securities in a 12-month period. In 2016, the Commission amended Rule 504 to raise the aggregate amount of securities an issuer may offer and sell in any 12-month period from $1 million to $5 million.[395] From 2009 through 2019, for issuers other than pooled investment funds, two percent of the capital raised in Regulation D offerings under $5 million was offered under Rule 504 (and under Rule 505, prior to its repeal), and 98 percent of the capital raised was offered under Rule 506.[396]

a. Proposed Amendments

The Commission proposed to use its general exemptive authority under Section 28 of the Securities Act to raise the maximum offering amount under Rule 504 from $5 million to $10 million.

b. Comments

We received mixed comments on the proposal to raise the Rule 504 maximum offering amount to $10 million with some commenters supporting [397] and others opposing [398] the proposal. Commenters who supported increasing the maximum offering amount stated that it would allow issuers to more easily raise capital,[399] make offerings more cost effective,[400] and encourage greater use of the exemption.[401] One of these commenters additionally suggested that because Rule 504 offerings will remain subject to applicable federal and state securities law requirements, including antifraud provisions, it is reasonable to expect that the increase ''will not meaningfully decrease investor protection or incentivize bad actors to enter the marketplace.'' [402] Commenters opposed to the increase stated that issuers do not use the full capacity under the existing limit and that an increase may not drive more regional multistate offerings.[403] Commenters also expressed concern that the Commission's analysis of the impact of raising the Rule 504 limit was insufficient,[404] and that increasing the limits may be detrimental to the public markets.[405] Other commenters questioned the Commission's statutory authority to increase the limit.[406]

c. Final Amendments

Based on our consideration of the available data and the feedback that we received on the Concept Release, on the Proposing Release, and from the Small Business Capital Formation Advisory Committee, and in order to facilitate use of Rule 504 for capital raising, we are amending the rules as proposed to raise the offering limit from $5 million to $10 million. We believe that increasing the offering limit in reliance on our general exemptive authority under Securities Act Section 28 [407] is appropriate in the public interest because permitting larger offerings under Rule 504 may encourage more issuers to use the exemption, could encourage more issuers to conduct regional multistate offerings and make use of State coordinated review programs, and could make the exemption a more efficient capital raising option for smaller issuers by lowering the offering costs per dollar raised. At the same time, we do not believe that raising the offering limit would expand the private markets at the expense of the public markets.[408]

---

of Regulation A securities issued in Tier 2 offerings. While such preemption could further advance the development of a national securities market by easing the compliance obligations of investors that trade in the secondary markets, we believe this recommendation merits careful consideration and an opportunity for market participants to receive notice and comment on a specific proposal. Accordingly, we are not adopting any changes to preemption of State securities laws for secondary trading at this time.

[390] *See* 15 U.S.C. 77r(c).

[391] *See* 15 U.S.C. 77r(b)(4)(D).

[392] *See* 17 CFR 230.256.

[393] *See* 2015 Regulation A Release, at Section II.H.3.

[394] Issuers that are required to file reports under Exchange Act Section 13(a) or 15(d), investment companies, blank check companies, and issuers that are disqualified under Rule 504's ''bad actor'' disqualification provisions are not eligible to use Rule 504.

[395] Five million dollars is the maximum amount statutorily allowed under Securities Act Section 3(b)(1). *See* Intrastate and Regional Offerings Release. In light of the increased offering threshold under Rule 504, the Commission repealed Rule 505. Most issuers previously using Rule 505 are able to conduct an offering up to $5 million under Rule 504.

[396] *See* Proposing Release, at note 263 and accompanying text.

[397] *See, e.g.,* ABA Letter; B. Andrews, et al. Letter; SEC SBCFAC Letter; Geraci Law Letter (further recommending that securities sold pursuant to Rule 504 be considered ''covered securities''); SAF Letter; Carta Letter; and Ketsal Letter. *See also* 2019 OASB Annual Report, at 41 (suggesting that the Commission ensure that dollar amount caps used in exemptions are ''tied to expressed marketplace needs for capital and provide flexibility for future review and adjustment'').

[398] *See, e.g.,* CII Letter; NASAA Letter; AFREF Letter; Better Markets Letter; CFA Letter; R. Rutkowski Letter; and CFA Institute Letter. Some of these commenters suggested that increased offering limits increase investor risk by creating more opportunities for high risk issuers to sell to unsophisticated investors. *See, e.g.,* CFA Letter and CFA Institute Letter.

[399] *See* ABA Letter.

[400] *See* Carta Letter.

[401] *See* Ketsal Letter. *See also* Carta Letter (stating that the increase would make the exemption more attractive to a broader group of issuers).

[402] *See* ABA Letter.

[403] *See, e.g.,* NASAA Letter (stating its belief that raising the threshold above $5 million would require issuers to comply with Securities Act Section 3(b)(2), which carries with it obligations including mandatory filing of audited financial statements with the Commission.); CFA Letter; and CrowdCheck Letter.

[404] *See, e.g.,* CFA Letter (stating that the Commission's analysis lacks data or a methodological approach to determine the impacts of raising the offering limit); CII Letter (stating that the Commission's analysis fails to adequately consider the potential impact on long-term investors and the capital markets from expanding the exempt offering framework); AFREF Letter (stating that the Commission's analysis does not adequately analyze the negative effects of the amendments); and R. Rutkowski Letter.

[405] *See, e.g.,* AFREF Letter; CFA Letter; R. Rutkowski Letter; and CFA Institute Letter.

[406] *See, e.g.,* Better Markets Letter; CFA Letter; and Public Interest Comment Letter from Andrew N. Vollmer and Brian R. Knight, Mercatus Center at George Mason University dated Oct. 30, 2020 (''Mercatus Center Letter''). *See infra* note 429.

[407] Securities Act Section 3(b)(1) currently sets the maximum offering amount for small issues exempted under that section at $5 million. *See* 15 U.S.C. 77c(b)(1). As explained above, we are relying on our general exemptive authority to raise the threshold in Rule 504 to $10 million. We therefore do not agree with the commenter who stated that raising the threshold above $5 million would require compliance with Securities Act Section 3(b)(2).

[408] As discussed in Section IV.A below, Rule 504, like Regulation Crowdfunding, currently represents a small segment of the private offering market, and issuers that raise capital pursuant to the exemption tend to be at a much earlier stage of development

Continued

Furthermore, we believe that increasing the offering limit is consistent with the protection of investors because the amendments would not alter the significant protections applicable under Rule 504, such as potential State review and prohibitions on ''bad actor'' participation.

3. Regulation Crowdfunding

Regulation Crowdfunding provides an exemption from registration for certain crowdfunding transactions including limits on the amount an issuer may raise; limits on the amount an individual may invest; and a requirement that the transactions be conducted through an intermediary that is registered as either a broker-dealer or a ''funding portal.''

The exemption from registration provided by Section 4(a)(6) is available provided that ''the aggregate amount sold to all investors by the issuer, including any amount sold in reliance on the exemption provided under [Section 4(a)(6)] during the 12-month period preceding the date of such transaction, is not more than $1,000,000.'' Under Securities Act Section 4A(h), the Commission is required to adjust the dollar amounts in Section 4(a)(6) ''not less frequently than once every five years, by notice published in the **Federal Register**, to reflect any change in the Consumer Price Index for All Urban Consumers published by the Bureau of Labor Statistics.'' [409] The Commission adjusted the maximum offering limit to $1.07 million ($1.0 million adjusted to reflect changes in the Consumer Price Index (''CPI'')) in 2017.[410]

In addition, Regulation Crowdfunding also limits the amount individual investors are allowed to invest across all Regulation Crowdfunding offerings over the course of a 12-month period. The limitation on how much an individual can invest during that period depends on his or her net worth and annual income and may not exceed $107,000. Individual investors are limited to:

- The greater of $2,200 or five percent of the lesser of the investor's annual income or net worth, if either of an investor's annual income or net worth is less than $107,000; or
- Ten percent of the lesser of his or her annual income or net worth, if both annual income and net worth are equal to or more than $107,000.[411]

Further, the offering statement for a Regulation Crowdfunding offering must include specified information, including a discussion of the issuer's financial condition and financial statements. Regulation Crowdfunding's financial statement requirements are based on the amount offered and sold in reliance on the exemption within the preceding twelve-month period, with progressively increasing requirements and involvement of outside accountants as offering size increases.[412] On May 4, 2020, the Commission adopted temporary final rules under Regulation Crowdfunding to facilitate capital formation for small businesses impacted by COVID–19, which include, among other things, an exemption from certain financial statement review requirements for issuers offering $250,000 or less of securities in reliance on Regulation Crowdfunding within a 12-month period.[413] These temporary final rules were subsequently extended and apply to offerings initiated under Regulation Crowdfunding between May 4, 2020, and February 28, 2021.[414]

In 2019, the Commission staff undertook a study of the available information on the capital formation and investor protection impacts of Regulation Crowdfunding. The resulting report to the Commission summarized quantitative information, where it was available to the staff, as well as qualitative observations of Commission staff and FINRA staff and input from market participants regarding their experience with Regulation Crowdfunding.[415] The study found that during the considered period, the number of offerings and the total amount of funding were relatively modest, with issuers raising $108 million under Regulation Crowdfunding from May 16, 2016, through December 31, 2018.[416] The study also found that the typical offering during the considered period was small and raised less than the 12-month offering limit.[417]

a. Proposed Amendments

The Commission proposed to use its general exemptive authority under Securities Act Section 28 to raise the offering limit in Regulation Crowdfunding from $1.07 million to $5 million. The Commission also proposed to increase the investment limits for investors in Regulation Crowdfunding offerings. First, the Commission proposed to no longer apply any investment limits to accredited investors. The proposed amendments would treat accredited investors under Regulation Crowdfunding in the same manner as other exempt offerings. Second, the Commission proposed to amend the Regulation Crowdfunding calculation method for the investment limits for non-accredited investors to allow them to rely on the greater of their annual income or net worth. The proposed amendment would conform this aspect of Regulation Crowdfunding with Tier 2 of Regulation A and would apply a consistent approach to limiting the potential losses investors may incur in offerings conducted in reliance on the two exemptions.[418] The Commission did not propose to adjust the financial statement requirements in Regulation Crowdfunding, although the economic analysis in the Proposing Release considered alternatives that would amend these disclosure requirements and solicited comment on them.

b. Comments

Commenters were broadly supportive of raising the Regulation Crowdfunding offering limit to $5 million.[419] Many

[416] *See id.*

[417] *See id.,* at Section I.

[418] Under Regulation A accredited investors are not limited in the amount of securities they may purchase and other investors are limited to purchasing in a Tier 2 offering no more than: (a) Ten percent of the greater of annual income or net worth (for natural persons); or (b) ten percent of the greater of annual revenue or net assets at fiscal year-end (for non-natural persons). *See* 17 CFR 230.251(d)(2)(i)(C). This limit does not, however, apply to purchases of securities that will be listed on a national securities exchange upon qualification.

[419] *See, e.g.,* B. Andrews, et al. Letter; CfPA Letter; SEC SBCFAC Letter; Geraci Law Letter; Letter from Crowdfund Capital Advisors dated May 29, 2020 (''CCA Letter'') (suggesting that increasing the offering limit will reduce the cost of capital and permit larger, more stable and lower risk issuers to use the exemption); Silicon Prairie Letter; Letter from Social Enterprise Investments, Inc. dated May 31, 2020 (''SEI Letter''); Netcapital Letter; Carta Letter; Republic Letter; NextSeed Letter; Chamber of Digital Commerce Letter; SAF Letter; Engine Letter; Raise Green & New Haven Comm. Solar Letter; InnaMed, et al. Letter; SeedInvest Letter; Crowdwise Letter; Letter from Mark Roderick dated May 31, 2020 (''M. Roderick Letter''); Letter from Representative Patrick McHenry dated June 8, 2020

commenters recommended raising the limit in light of economic concerns raised by COVID–19.[420] Some additionally supported raising the limit beyond $5 million.[421] Some commenters supportive of an increased offering limit also supported further action by the Commission to enhance compliance with Regulation Crowdfunding.[422] In particular, some commenters supported relaxing the disclosure and financial statement requirements for smaller Regulation Crowdfunding offerings.[423] Others supported Federal preemption of State securities law registration and qualification requirements for secondary sales.[424]

Some commenters expressed concern or opposition to increasing the offering limit.[425] A number of these commenters suggested that there is not compelling evidence of the need for an increase or that more information is needed to determine whether such an increase is appropriate.[426] Some of these commenters expressed concern that the proposals would expand the private markets at the expense of the public markets.[427] Other commenters expressed concern with compliance by issuers under Regulation Crowdfunding [428] and the Commission's authority to increase the limit.[429] One commenter recommended that if the Commission raises the threshold above the statutory limit, it should make clear the basis of its authority and the status of securities issued under the increased offering limit under State securities laws, such as whether those securities are ''covered securities'' under Section 18 of the Securities Act.[430]

Commenters that addressed the issue generally supported amending the rules to remove the investment limits for accredited investors [431] and to use the greater of annual income or net worth in calculating investment limits for non-accredited investors.[432] Some commenters, however, opposed removing the investment limits for accredited investors,[433] or increasing the investment limits for non-accredited

(''Rep. McHenry Letter''); and Sen. Toomey Letter. *See also* 2019 OASB Annual Report, at 41 (suggesting that the Commission ensure that dollar amount caps used in exemptions are ''tied to expressed marketplace needs for capital and provide flexibility for future review and adjustment'') and 47 (specifically supporting an increase offering cap for Regulation Crowdfunding offerings, stating an increase ''would allow companies to raise meaningful early-stage capital using crowdfunding rather than limiting companies' options to a narrower set of exemptions''); and AOIP Letter (suggesting the Commission immediately increase the Regulation Crowdfunding limit in response to the COVID–19 pandemic).

Campbell Letter (recommending eliminating the burden of ongoing reporting requirements for small crowdfunding offerings); Honeycomb Letter; Letter from MainVest, Inc. dated May 7, 2020 (recommending the requirement for reviewed financials not apply for offerings under $500,000); Raise Green & New Haven Comm. Solar Letter; M. Roderick Letter (supporting raising the threshold for reviewed financial statements to at least $350,000); CfPA Letter (recommending financial disclosures are only be required to be provided to the extent that they are ''material to an understanding of the issuer, its business and the securities being offered'') and Sen. Toomey Letter (supporting tailored auditing requirements). *See also* 2019 OASB Annual Report, at 48 (recommending the Commission reevaluate Regulation Crowdfunding's disclosure obligations, and specifically suggesting that ''reporting requirements could be simplified for companies raising under $250,000''). *But see* Better Markets Letter (expressing concern about the temporary Regulation Crowdfunding relief).

[424] *See* Form Letter Type A.

[425] *See, e.g.,* Letter from Bridget Richardson dated Mar. 31, 2020 (''B. Richardson Letter''); Letter from Jeffrey Marks, Alliance Legal Partners, Inc. dated Apr. 17, 2020 (''J. Marks Letter''); CII Letter; Md. St. Bar Assoc. Letter; AFREF Letter; Morningstar Letter (noting a lack of investment advice such as from a broker or investment adviser that investors might have access to with regard to an investment in a public company); Better Markets Letter; CFA Letter; R. Rutkowski Letter; CrowdCheck Letter (noting compliance failures and recommending any increase be coupled with a robust enforcement program); and CFA Institute Letter.

[426] *See, e.g.,* CII Letter; CFA Letter; CFA Institute Letter; B. Richardson Letter; and Md. St. Bar Assoc. Letter.

[427] *See, e.g.,* Better Markets Letter; CFA Letter; CFA Institute Letter; and R. Rutkowski Letter. *See also* J. Marks Letter (suggesting that larger offerings are appropriately subject to additional Commission oversight); CFA Letter; and CFA Institute Letter (suggesting that the amendments will be detrimental to retail investors by providing them greater access to the least attractive private offerings).

[428] *See, e.g.,* ABA Letter (suggesting that the Commission should be satisfied that the crowdfunding requirements are being complied with before increasing the limits); CFA Letter (contending that the Commission has a responsibility to examine non-compliance in crowdfunding markets and remedy those deficiencies before expanding the exemption); and CrowdCheck Letter.

[429] *See, e.g.,* Better Markets Letter; and CFA Letter. *See also* Mercatus Center Letter. Although the Mercatus Center Letter in particular was received one business day before the publicly-noticed open meeting at which the Commission would consider these amendments [Pub. L. 94–409] and long after the expiration of the comment period, the issues regarding our use of exemptive authority, including the questions raised in that letter, have been carefully considered. As noted above, Section 28 of the Securities Act gives the Commission broad authority to ''conditionally or unconditionally exempt any person . . . or any class or classes of persons . . . from any provision or provisions of'' the Securities Act and rules or regulations issued thereunder ''to the extent that such exemption is necessary or appropriate in the public interest, and is consistent with the protection of investors.'' 15 U.S.C. 77z–3. We believe that exempting additional classes of transactions above the statutory threshold in Section 4(a)(6) is in the public interest and consistent with the protection of investors for the reasons discussed below, and is thus consistent with the plain language of Section 28. In reaching this determination, we have been informed by the staff's experience administering Regulation Crowdfunding since 2015, the 2019 Regulation Crowdfunding Report, and the feedback of numerous market participants in recent years, including in response to the Concept Release. Section 28 was intended to provide flexibility to the Commission to respond to precisely these sorts of market developments. *See* Rule 701—Exempt Offerings Pursuant to Compensatory Arrangements, Release No. 33–7645 (Feb. 25, 1999) (noting that, in enacting the National Securities Markets Improvement Act of 1996, Congress expected the Commission to use its new authority under Section 28, among other things, to raise the offering limit for Rule 701 compensatory offerings beyond the statutorily prescribed limit of $5 million). We thus view these amendments as appropriate and well within our statutory authority.

[430] *See* ABA Letter.

[431] *See, e.g.,* ABA Letter; B. Andrews, et al. Letter; SEC SBCFAC Letter; SEI Letter; Netcapital Letter; Carta Letter; Republic Letter; NextSeed Letter; Chamber of Digital Commerce Letter; Engine Letter; Raise Green & New Haven Comm. Solar Letter; Morningstar Letter; InnaMed, et al. Letter; Crowdwise Letter; Rep. McHenry Letter; Honeycomb Letter; M. Roderick Letter; and Ketsal Letter. *See also* CrowdCheck Letter (supporting removing the limits if the investor protections in Regulation A are replicated in Regulation Crowdfunding); and AOIP Letter (suggesting the Commission immediately remove the investment limits for accredited investor in response to the COVID–19 pandemic). *See also* 2019 OASB Annual Report, at 48.

[432] *See, e.g.,* ABA Letter; Letter from Regulated Funding Portal Industry Association dated Mar. 6, 2020; B. Andrews, et al. Letter; SEC SBCFAC Letter; CCA Letter; Silicon Prairie Letter (recommending further simplification of the threshold and use of a ''certified investor'' designation); SEI Letter; Netcapital Letter; Carta Letter; Republic Letter; NextSeed Letter; Chamber of Digital Commerce Letter; Engine Letter; Raise Green & New Haven Comm. Solar Letter (recommending increasing the limit); InnaMed, et al. Letter.; Crowdwise Letter; CrowdCheck Letter; CfPA Letter (recommending all investors be permitted to invest $2,200 per transaction); and Ketsal Letter. Some of these commenters recommended applying the limits on a per offering basis. *See, e.g.,* Crowdwise Letter; InnaMed, et al. Letter; Silicon Prairie Letter; and Republic Letter. *See also* AOIP Letter (suggesting the Commission immediately use the greater of annual income or net worth in response to the COVID–19 pandemic, and also suggesting the limits be applicable on a per offering basis).

[433] *See, e.g.,* Letter from Jason Pampena dated May 22, 2020 (''J. Pampena Letter'') (expressing concern that removing the investment limits for accredited investors will reduce investment opportunities for non-accredited investors).

investors.[434] Some commenters supporting the amendment suggested requiring verification of accredited investor status,[435] while others were against verification standards.[436] One commenter supporting the amendments to the investment limits also expressly supported not adjusting or increasing Regulation Crowdfunding's financial statement requirements.[437]

c. Final Amendments

Based on our consideration of the available data, the staff's 2019 Regulation Crowdfunding Report, and the feedback that we received on the Concept Release, the Proposing Release and from Small Business Forums[438] and the Small Business Capital Formation Advisory Committee, and in order to facilitate use of Regulation Crowdfunding for capital raising, we are amending the rules as proposed: (1) To raise the issuer offering limits in Regulation Crowdfunding; and (2) to remove or increase the investment limits by no longer applying those limits to accredited investors and allowing investors to rely on the greater of their income or net worth in calculating their investment limit.[439] We are raising the offering limit in Regulation Crowdfunding from $1.07 million to $5 million and are adjusting the investment limits in reliance on the general exemptive authority under Securities Act Section 28.[440] We believe that reliance on Section 28 to raise the offering limit is an appropriate use of our exemptive authority because the amendments will extend the exemption under Section 4(a)(6) of the Securities Act to additional classes of transactions (*i.e.,* those that would cause the aggregate amount sold to all investors by the issuer in the 12 months preceding the transaction to be greater than $1 million,[441] but not more than $5 million, and those involving accredited investors who invest above the statutory investment limits).[442] We are also extending certain temporary rules relating to the financial statement requirements for Regulation Crowdfunding.

Currently, securities issued pursuant to the exemption under Section 4(a)(6) are deemed to be ''covered securities'' and thus the offer and sale of such securities by an issuer are not subject to State securities law registration and qualification requirements pursuant to Section 18 of the Securities Act. Nevertheless, in light of questions raised by commenters and in order to provide certainty with respect to the status of the exemption and the coverage of Section 18 of the Securities Act, we are adding new 17 CFR 227.504 to Regulation Crowdfunding to provide that for purposes of Section 18(b)(3) of the Securities Act, a ''qualified purchaser'' means any person to whom securities are offered or sold pursuant to an offering under Regulation Crowdfunding.[443] As securities offered and sold to qualified purchasers also are ''covered securities'' under Section 18 of the Securities Act, this amendment should remove any doubt that State securities law registration and qualification requirements do not apply to securities offered and sold under Regulation Crowdfunding, as amended.

While approximately 2,000 offerings were initiated pursuant to Regulation Crowdfunding in the approximately three and a half years from the time the exemption first became available through December 31, 2019, market participants have expressed concern that the vitality of the market and the number of offerings is being constrained by the $1.07 million offering limit.[444] As we noted in the Proposing Release, the current offering limits may not reflect current capital raising trends.[445] Commenters further suggested that start-ups and small businesses seeking to raise between $1 million and $5 million need to spend ''additional time and expense pursuing other exempt offering types'' in addition to Regulation Crowdfunding in order to meet their funding needs, as the existing offering limits in Regulation Crowdfunding are insufficient to meet those needs.[446] We believe that permitting larger offerings under Regulation Crowdfunding may encourage more issuers to use the exemption and could lower the offering costs per dollar raised,[447] which would make the exemption a more efficient capital raising option for smaller issuers. At the same time, we do not believe that raising the offering limit would expand the private market at the expense of the public market. As discussed in Section IV.A below, Regulation Crowdfunding represents a relatively small segment of the private offering market, and issuers that raise capital pursuant to the exemption tend to be at a much earlier stage of development than those that conduct a traditional initial public offering. Thus, we anticipate these offerings will have only a marginal impact on the number of registered offerings.

We also believe that existing Regulation Crowdfunding requirements, including the intermediary requirements and the eligibility, disclosure, and ongoing reporting requirements for issuers will continue to

[434] *See, e.g.,* CII Letter; and Morningstar Letter (recommending a cautious approach to changing the investment limit standards and expressing concern that there is limited investment advice for these investors). *See also* NASAA Letter; and CFA Letter (generally opposing the amendments).

[435] *See, e.g.,* J. Clarke Letter; and Raise Green & New Haven Comm. Solar Letter.

[436] *See, e.g.,* Honeycomb Letter (supporting self-verifications).

[437] *See* ABA Letter.

[438] *See* 2017 Forum Report; 2018 Forum Report; 2019 Forum Report; and 2020 Forum Report.

[439] We are not, as some commenters recommended, preempting State securities law regulation of secondary trading of securities issued in Regulation Crowdfunding offerings. We believe this recommendation merits careful consideration and an opportunity for market participants to receive notice and comment on a specific proposal.

[440] Securities Act Section 4(a)(6) currently sets the maximum offering limit at $1.07 million ($1.0 million adjusted to reflect changes in the CPI). *See* 15 U.S.C. 77d(a)(6) and 15 U.S.C. 77d–1(h). *See also* Rule 100(a)(1) of Regulation Crowdfunding.

[441] As adjusted for inflation pursuant to Section 4A(h) of the Securities Act [15 U.S.C. 77d–1(h)].

[442] In contrast, the change to permit non-accredited investors to base their investment limit on the ''greater of'' rather than the ''lesser of'' their income or net worth is a discretionary choice that we are making to carry out the statutory exemption. *See* Section 302(c) of the JOBS Act; Section 19(a) of the Securities Act [15 U.S.C. 77s(a)]. In the proposing and adopting releases for Regulation Crowdfunding, the Commission noted the statutory ambiguity in Section 4(a)(6)(B) of the Securities Act as to application of the investment limits. *See* Crowdfunding Adopting Release, at Section II.A.2. After considering the comments received, the Commission adopted a ''lesser of'' standard in Regulation Crowdfunding. In light of our experience with Regulation Crowdfunding since its adoption in 2015, and concerns raised that the existing limits may be hampering the utility of the exemption, however, the Commission proposed to apply a less restrictive approach by using the ''greater of'' standard instead of the ''lesser of'' standard. As discussed below, we are adopting the ''greater of'' standard.

[443] We believe it is appropriate to define ''qualified purchaser'' to include any person to whom securities are offered and sold pursuant to an offering under Regulation Crowdfunding. Defining qualified purchaser in this manner is consistent with the public interest because it would provide certainty as to the application of State securities law registration and qualification requirements. We also believe that offerings conducted pursuant to Regulation Crowdfunding, similar to Tier 2 offerings under Regulation A, are likely to be more national in nature. Furthermore, significant and appropriate investor protections would continue to apply, including intermediary requirements and the eligibility, disclosure, and ongoing reporting requirements for issuers, as discussed below. For similar reasons, we are also amending 17 CFR 240.12g–6 (''Rule 12g–6'') to provide clarity with respect to the continuing application of that rule's conditional exemption from Section 12(g) for securities issued pursuant to Regulation Crowdfunding.

[444] *See, e.g.,* InnaMed Letter; SeedInvest Letter; and Letter from J. Vinokur, dated May 1, 2020.

[445] *See* Proposing Release, at note 231 (*citing* to 2019 OASB Annual Report, which noted companies are seeking increased capital to fund early-stage operations finding that the average seed funding increased from $1.3 million in 2010 to $5.7 million in 2018).

[446] *See, e.g.,* SeedInvest Letter; and InnaMed Letter.

[447] *See, e.g.,* CCA Letter.

provide appropriate investor protections at this higher offering limit. We acknowledge the concerns raised by commenters about the increased offering limit in light of questions regarding issuer compliance with existing Regulation Crowdfunding requirements. As discussed in more detail in Section II.B.2 above, we remind issuers and intermediaries in Regulation Crowdfunding offerings of their obligation to comply with the terms of the exemption and the serious consequences that may result from a failure to do so. At this time, we do not believe additional disclosure or other requirements on issuers or intermediaries is appropriate, or would necessarily be effective in addressing these compliance concerns.[448] Commission staff will continue to work with FINRA to assess issuer and intermediary compliance with the requirements of Regulation Crowdfunding.

For these reasons, we continue to believe that it is necessary and appropriate in the public interest and consistent with the protection of investors to raise the Regulation Crowdfunding offering limit as proposed.

In response to commenters who recommended that we adjust the financial statement requirements or permanently adopt the temporary relief with respect to the financial statement review requirements,[449] we are extending certain provisions of the temporary final rules for an additional 18 months so that they will apply to offerings initiated under Regulation Crowdfunding between May 4, 2020, and August 28, 2022.[450]

Specifically, we are adopting new temporary Rule 201(bb) to extend the relief provided by existing temporary 17 CFR 227.201(z)(3), which applies to an eligible issuer in an offering or offerings that, together with all other amounts sold in Regulation Crowdfunding offerings within the preceding 12-month period, have, in the aggregate, a target offering amount of more than $107,000, but not more than $250,000. Such an issuer may provide financial statements of the issuer and certain information from the issuer's Federal income tax returns, both certified by the principal executive officer, in accordance with 17 CFR 227.201(t)(1) (''Rule 201(t)(1)''), instead of the financial statements reviewed by a public accountant that is independent of the issuer that would otherwise be required by 17 CFR 227.201(t)(2) (''Rule 201(t)(2)''). This temporary relief will apply only if reviewed or audited financial statements of the issuer are not otherwise available. In connection with the extension of this provision, we are also extending the disclosure requirement currently required by existing temporary 17 CFR 227.201(z)(1)(iii),[451] which requires an issuer relying on the temporary rule to provide prominent disclosure that financial information certified by the principal executive officer of the issuer has been provided instead of financial statements reviewed by a public accountant that is independent of the issuer.[452] We are also extending the enhanced eligibility requirements of temporary 17 CFR 227.100(b)(7)(i) and 17 CFR 227.100(b)(7)(ii).[453]

We believe that this extension of these portions of the temporary final rules is appropriate, particularly in light of the significant challenges for small businesses that COVID–19 continues to present. We continue to believe that a securities offering under Regulation Crowdfunding may be an attractive fundraising option for some small businesses at this time, particularly as a means of allowing an issuer to make use of the internet to reach out to its customers or members of its local community as potential investors as well as to existing investors. We understand that the temporary final rules have been well received to date and have proven effective for some issuers to raise capital under the current conditions, and we have received positive feedback from market participants with respect to the benefits of current temporary Rule 201(z)(3). The extension of these provisions of the temporary final rules also will provide us with the opportunity to analyze the use of the exemption and gather additional feedback from issuers, investors and other market participants as we consider its benefits and whether to adopt the provision on a permanent basis.

We are not adjusting, on either a temporary or permanent basis the financial statement requirements for offerings over $535,000. We have seen no evidence to indicate that investors should receive less information in offerings under Regulation Crowdfunding at this level, and continue to believe that the current requirements provide important information to investors. Offerings of more than $535,000 up to the increased $5 million offering limit will be subject to the financial statement requirements of 17 CFR 230.201(t)(3). We believe that this standard, which (1) requires the provision of audited financial statements similar to the requirements for other exempt offerings with higher

[448] We note, for example, that one commenter recommended we require a certification from an intermediary that it has reviewed a campaign for compliance prior to posting it on their platform. *See* CfPA Letter. However, intermediaries are already required to have a reasonable basis for believing that an issuer seeking to offer and sell securities through the intermediary's platform complies with requirements of Regulation Crowdfunding.

[449] *See, e.g.,* Silicon Prairie Letter (recommending relaxing the financial information requirements for offerings under $1 million); Nextseed Letter (highlighting the ability under the temporary relief to raise up to $250,000 without need for CPA-reviewed financials and recommending the Commission make the temporary relief provisions permanent as a micro-offering tier below $250,000); Honeycomb Letter (noting that the current financial statement thresholds and disclosure requirements impose additional costs on issuers without providing material benefit to investors—particularly for small businesses raising under $250,000.); Letter from MainVest, Inc. dated May 7, 2020 (recommending the requirement for reviewed financials not apply for offerings under $500,000); and Letter from Republic dated Aug. 22, 2020 (recommending that the Commission permanently adopt the temporary relief or extend the relief for at least 12 months). *See also* 2019 OASB Annual Report, at 48 (recommending the Commission reevaluate Regulation Crowdfunding's disclosure obligations, and specifically suggesting that ''reporting requirements could be simplified for companies raising under $250,000'').

[450] These amendments will be effective upon publication in the **Federal Register** and will expire on March 1, 2023. We find that there is good cause for the amendments to be effective immediately upon publication because a delay in implementation would substantially undermine the relief provided by the temporary rules and could exacerbate the existing challenges faced by many small businesses in need of capital to continue their operations. We also note that these temporary amendments grant an exemption or relieve a restriction. *See* 5 U.S.C. 553(d)(1) and (3).

[451] As part of these amendments, we have added a new provision to Rule 201 to be designated as Rule 201(z), therefore we are renumbering existing Rule 201(z) as Rule 201(aa). *See* Section II.B.2.b.

[452] We are temporarily amending the introductory paragraphs to the section of Form C entitled ''Optional Question & Answer Format for an Offering Statement'' to include a reminder to issuers relying on these temporary rules to review and tailor their responses to certain questions in the Form C appropriately.

[453] To rely on the temporary rules, issuers must meet the existing eligibility criteria and also cannot have been organized and cannot have been operating for less than six months prior to the commencement of the offering. In addition, an issuer that has sold securities in a Regulation Crowdfunding offering in the past must have complied with the requirements in 15 U.S.C. 77d–1(b) (''Section 4A(b)'') of the Securities Act and the related rules. In connection with the amendment to extend the eligibility criteria, we are making a related amendment to Rule 301, consistent with current temporary Rule 301(d), to require that an intermediary involved in an offering by an issuer that is relying on the temporary relief must have a reasonable basis for believing that the issuer has complied with the requirements of Section 4A(b) and the related requirements of Regulation Crowdfunding in prior offerings. For this requirement, the intermediary may reasonably rely on the representations of the issuer concerning compliance with these requirements unless the intermediary has reason to question the reliability of those representations.

offering limits, and (2) currently applies to issuers offering more than $535,000 of their securities, is sufficient for offerings subject to the increased $5 million offering limit.

We are amending the rules as proposed to remove or increase the investment limits for investors in Regulation Crowdfunding offerings.[454] First, we are amending the rules to no longer apply any investment limits to accredited investors. Commenters generally supported increasing the investment limits of accredited investors.[455] In addition, the 2018 Small Business Forum recommended that the Commission increase the investment limits for all investors,[456] and the 2017, 2018, and 2019 Small Business Forums, the SEC Small Business Capital Formation Advisory Committee, and the 2017 Treasury Report all recommended that the investment limits not apply to accredited investors, who face no such limits under other exemptions.[457]

When the Commission considered investment limits for Tier 2 Regulation A offerings, it determined that such limitations were unnecessary for accredited investors because these individuals satisfy certain criteria that suggest they are capable of protecting themselves in transactions that are exempt from registration under the Securities Act.[458] For similar reasons, we believe that investment limits for accredited investors under Regulation Crowdfunding are unnecessary.[459] Accordingly, we believe it is appropriate in the public interest and consistent with the protection of investors to treat accredited investors under Regulation Crowdfunding in the same manner as other exempt offerings.

Second, we are amending the Regulation Crowdfunding calculation method for the investment limits for non-accredited investors to allow them to rely on the greater of their annual income or net worth. Currently, Regulation Crowdfunding imposes a limit that is the lesser of a percentage of the investor's annual income or net worth subject to an absolute maximum of $107,000.[460] Some market participants recommended basing the limits on the greater of the investor's net worth or income, noting that the accredited investor definition only requires the investor to meet *either* the net worth *or* the income standard.[461] Commenters on the proposal also generally supported increasing these investment limits.[462]

When adopting Regulation Crowdfunding, the Commission considered whether to use a ''greater of'' or ''lesser of'' standard for the exemption's investment limits and determined to use the ''lesser of'' standard at that time due to concerns about investors incurring unaffordable losses.[463] By contrast, when the Commission considered investment limits for Tier 2 Regulation A offerings, it determined to permit investors to look to a percentage of the greater of their annual income or net worth.[464] At that time, the Commission indicated that limiting the amount of securities that a non-accredited investor can purchase in a particular Tier 2 offering should help to mitigate concerns that such investors may not be able to absorb the potential loss of the investment and that a limitation based on a percentage of the greater of such investor's net worth/net assets and annual income/revenue is generally consistent with similar maximum investment limitations placed on investors in Title III of the JOBS Act and would help set a loss limitation standard in such offerings.[465] The amendment conforms Regulation Crowdfunding with Tier 2 of Regulation A and applies a consistent approach to limiting potential losses investors may incur in offerings conducted in reliance on the two exemptions. In light of our experience with Regulation Crowdfunding since its adoption and the concerns that the existing investment limits may be hampering the utility of the exemption, we believe it is appropriate to use this less restrictive approach. Additionally, this change provides investors with more flexibility in making their investment decisions. Moreover, we are not aware of evidence since Regulation Crowdfunding's adoption to indicate this market requires a more stringent approach to investment limits than other exemptive regimes.[466]

### *F. Regulation Crowdfunding and Regulation A Eligibility*

The Commission's exempt offering framework includes specific eligibility restrictions excluding certain types of entities or activities by issuers that apply to both Regulation A[467] and

[454] Consistent with the current approach to investment limits, an issuer may rely on efforts that an intermediary is required to undertake in order to determine that the investor is an accredited investor, or that the aggregate amount of securities purchased by an investor does not cause the investor to exceed the investment limits, provided that the issuer does not have knowledge that the investor has exceeded, or will exceed, the investment limits as a result of purchasing securities in the issuer's offering. *See* Instruction 3 to 17 CFR 270.100(a)(2) of Regulation Crowdfunding.

[455] *See supra* note 431. Only one commenter expressed a specific concern regarding increasing the investment limits of accredited investors. *See* J. Pampena Letter. We believe, however, that rather than decreasing investment opportunities for non-accredited investors, permitting more investment by accredited investors may lead to a more robust market for offerings under Regulation Crowdfunding, which would provide more and better opportunities for non-accredited investors.

[456] *See* 2018 Forum Report.

[457] *See, e.g.,* 2017 Treasury Report, at 41; 2018 Forum Report; 2017 Forum Report, at 17; Recommendation of the SEC Small Business Capital Formation Advisory Committee regarding Regulation Crowdfunding (Dec. 13, 2019), *available at https://www.sec.gov/spotlight/sbcfac/recommendation-regulation-crowdfunding.pdf. See also* Final Report of the 2015 SEC Government-Business Forum on Small Business Capital Formation (Nov. 2015), *available at https://www.sec.gov/info/smallbus/gbfor34.pdf* (recommending increasing the investment limit for accredited investors). In conjunction with removing the investment limits for individual accredited investors, the 2018 Small Business Forum recommended verification of accredited investor status.

[458] *See* 2015 Regulation A Release, at note 145 and accompanying text.

[459] While a few commenters suggested that we add an accredited investor verification requirement, we believe that a verification requirement is unnecessary. *See, e.g.,* J. Clarke Letter; and Raise Green & New Haven Comm. Solar Letter. In making this determination, we note that there is no accredited investor verification requirement with respect to investors participating in Regulation A or other exempt offerings outside of offerings seeking to rely on Rule 506(c) and that Regulation Crowdfunding, like Regulation A, layers in additional protections for investors, such as required reporting and the use of intermediaries, that are not provided to investors in offerings relying on Rule 506(c).

[460] Rule 100(a)(2) of Regulation Crowdfunding is based on the requirement in Section 4(a)(6) that provides an exemption where the aggregate amount sold to an investor by an issuer does not exceed a given percentage of the annual income or net worth of such investor. The statutory language does not expressly provide that the investor use the lesser of annual income or net worth.

[461] *See supra* note 457.

[462] *See supra* note 432. While one commenter expressed concern about raising the investment limits for non-accredited investors and recommended that the Commission undertake any such changes cautiously, we believe that making this incremental change appropriately allows investors greater flexibility in making choices relating to their investments and risk tolerance choices, while still retaining substantial loss limitation standards through a consistent approach to investment limits across Regulation A and Regulation Crowdfunding. *See* Morningstar Letter.

[463] *See* Crowdfunding Adopting Release, at Section II.A.2.c.

[464] *See* 17 CFR 230.251(d)(2)(i)(C)(2); and 2015 Regulation A Release, at Section II.B.4.

[465] *See* Section 301 of the JOBS Act; and 2015 Regulation A Release, at notes 161 and 162 and accompanying text.

[466] *See* 2019 Regulation Crowdfunding Report, at Section III.C.3.

[467] *See* 17 CFR 230.251(b). Regulation A is not available to: Issuers that are organized in or have their principal place of business outside of the United States or Canada; investment companies registered or required to be registered under the Investment Company Act or business development companies; blank check companies; issuers of fractional undivided interests in oil or gas rights, or similar interests in other mineral rights; issuers that are required to, but that have not, filed with the Commission the ongoing reports required by the

Regulation Crowdfunding.[468] While Regulation Crowdfunding does not restrict the types of securities eligible to be sold under the exemption, the types of securities eligible for sale under Regulation A are limited to equity securities, debt securities, and securities convertible or exchangeable to equity interests, including any guarantees of such securities.[469] The Commission proposed to amend Regulation Crowdfunding:

• To permit the use of certain special purpose vehicles to facilitate investing in Regulation Crowdfunding issuers; and

• To limit the securities eligible to be sold under Regulation Crowdfunding.

The Commission additionally proposed to amend Regulation A to exclude Exchange Act registrants that are delinquent in their Exchange Act reporting obligations from relying on the exemption.

1. Regulation Crowdfunding Eligible Issuers

Section 4A(f)(3) of the Securities Act prohibits investment companies, as defined in the Investment Company Act (or companies that are excluded from the definition of an investment company under section 3(b) or 3(c) of the Investment Company Act), from using the Regulation Crowdfunding exemption. When adopting Regulation Crowdfunding, the Commission did not create, as suggested by some commenters, an exception to this statutory prohibition that would have allowed a single purpose fund organized to invest in, or lend money to, a single company, to use Regulation Crowdfunding.[470] As a result, issuers may not use special purpose vehicles that invest in a single company (''SPVs'') that are investment companies (or companies that are excluded from the definition of an investment company under section 3(b) or 3(c) of the Investment Company Act) to conduct Regulation Crowdfunding offerings. Investors purchasing securities in an offering under Regulation Crowdfunding thus must hold the securities in their own name, which can create certain practical impediments to issuers' use of Regulation Crowdfunding. For example, we understand that a large number of investors on an issuer's capitalization table can be unwieldy, creating administrative complexities and potentially impeding future financing.[471]

a. Proposed Amendments

The Commission proposed to add a new exclusion under the Investment Company Act for limited-purpose crowdfunding vehicles (''crowdfunding vehicles''). Proposed Rule 3a–9 under the Investment Company Act would exclude from the definition of ''investment company'' under that Act a crowdfunding vehicle that meets certain conditions designed to require that it function as a conduit for investors to invest in a business that seeks to raise capital through a crowdfunding vehicle.[472] As a result, Section 4A(f)(3) of the Securities Act would not preclude an SPV that meets this definition of a crowdfunding vehicle from relying on Regulation Crowdfunding.

In proposing this exclusion, the Commission expressed its belief that proposed Rule 3a–9 would be consistent with the intent of Section 4(a)(6) because it would not be aimed at allowing investment companies or similar issuers to raise capital, but rather, solely at facilitating crowdfunding offerings by eligible issuers, and under the proposed rule, a crowdfunding vehicle would serve merely as a conduit for investors to invest in a single underlying issuer and would not have a separate business purpose. The proposed crowdfunding vehicle was intended to allow investors in the vehicle to achieve the same economic exposure, voting power, and ability to assert State and Federal law rights, and receive the same disclosures under Regulation Crowdfunding, as if they had invested directly in the underlying issuer in an offering made under Regulation Crowdfunding. The proposed approach also would allow an eligible issuer (''crowdfunding issuer'') to maintain a simplified capitalization table and, by reducing the administrative complexities associated with a large and diffuse shareholder base, may encourage crowdfunding issuers to offer voting rights, or other terms not currently offered as frequently to investors.[473]

Proposed Rule 3a–9 defined a crowdfunding issuer as a company that seeks to raise capital as a co-issuer in an offering with a crowdfunding vehicle that complies with all of the requirements under Section 4(a)(6) of the Securities Act and Regulation Crowdfunding.[474] The Commission also proposed to define a crowdfunding vehicle as an issuer[475] formed by or on behalf of a crowdfunding issuer for the purpose of conducting an offering under Section 4(a)(6) of the Securities Act as a co-issuer with the crowdfunding issuer, which offering would be controlled by the crowdfunding issuer. The proposed limitations on the nature and scope of the crowdfunding vehicle's activities were designed to ensure that

rules under Regulation A during the two years immediately preceding the filing of a new offering statement (or for such shorter period that the issuer was required to file such reports); issuers that are or have been subject to an order by the Commission denying, suspending, or revoking the registration of a class of securities pursuant to Section 12(j) of the Exchange Act that was entered within five years before the filing of the offering statement; or issuers subject to ''bad actor'' disqualification under 15 CFR 230.262.

[468] Section 4A specifically excludes: Non-U.S. issuers; issuers that are required to file reports under Exchange Act Section 13(a) or 15(d); certain investment companies; and other issuers that the Commission, by rule or regulation, determines appropriate. *See* 15 U.S.C. 77d–1. Regulation Crowdfunding further excludes: Issuers disqualified under disqualification provisions that are substantially similar to those in 17 CFR 230.506(d) (''Rule 506(d)''); issuers that have failed to comply with the annual reporting requirements under Regulation Crowdfunding during the two years immediately preceding the filing of the offering statement; and blank check companies. *See* 17 CFR 227.100(b).

[469] *See* 17 CFR 230.261 (''Rule 261''). Regulation A also specifically excludes asset-backed securities. *See* Rule 251 (providing that only ''eligible securities'' can be offered or sold under Regulation A); and Rule 261 (defining ''eligible securities''). An asset-backed security generally means a security that is primarily serviced by the cash flows of a discrete pool of receivables or other financial assets, either fixed or revolving, that by their terms convert into cash within a finite time period, plus any rights or other assets designed to assure the servicing or timely distributions of proceeds to the security holders. *See* 17 CFR 229.1101(c).

[470] *See* Crowdfunding Adopting Release, at 71397. In explaining its decision, the Commission stated that the primary purpose of Section 4(a)(6) is to facilitate capital formation by early stage companies that might not otherwise have access to capital, and expressed its belief that investment companies did not constitute the type of issuer that Section 4(a)(6) and Regulation Crowdfunding were intended to benefit. *Id.*

[471] *See* Concept Release, at Section II.F.1.a. *See also* Proposing Release, at note 323 and accompanying text (noting that commenters on the Concept Release stated that it can be difficult to obtain consent or approval from hundreds of investors as it relates to governance issues, strategic decisions, and later financing rounds).

[472] *See* proposed Rule 3a–9(a). A crowdfunding vehicle complying with the proposed rule would not be an investment company as defined in the Investment Company Act or an entity that is excluded from the definition of investment company by section 3(b) or section 3(c) of that Act, and would therefore not be precluded from relying on Regulation Crowdfunding by Section 4A(f)(3) of the Securities Act. *See* 17 CFR 227.100(b)(3).

[473] *See* Proposing Release, at note 328.

[474] As co-issuers, the crowdfunding issuer and crowdfunding vehicle would be jointly relying on Regulation Crowdfunding for the combined offering of the crowdfunding issuer's securities and the crowdfunding vehicle's securities to the investors. *See, e.g.,* 17 CFR 230.140. The crowdfunding issuer would also rely on Regulation Crowdfunding, and the Form C filed in connection with the offering of the crowdfunding vehicle's securities, for the offering of its securities to the crowdfunding vehicle.

[475] Under the Investment Company Act, an issuer means every person who issues or proposes to issue any security, or has outstanding any security which it has issued. *See* 15 U.S.C. 80–2(a)(22).

the crowdfunding vehicle would function as a means for the crowdfunding issuer to raise capital rather than as an independent investment vehicle that would be subject to regulation under the Investment Company Act.

The proposed rule included several conditions for crowdfunding vehicles intended to address specific investor protection concerns raised by a vehicle that acts as a conduit for investments in a crowdfunding issuer.[476] Specifically, under the proposed rule, the crowdfunding vehicle:

- Must be organized and operated for the sole purpose of acquiring, holding, and disposing of securities issued by a single crowdfunding issuer and raising capital in one or more offerings made in compliance with Regulation Crowdfunding;
- Would not be permitted to borrow money and would be required to use the proceeds of the securities it sells solely to purchase a single class of securities of a single crowdfunding issuer;
- Would be permitted to issue only one class of securities in one or more offerings under Regulation Crowdfunding in which the crowdfunding vehicle and the crowdfunding issuer are deemed to be co-issuers under the Securities Act;
- Would be required to obtain a written undertaking from the crowdfunding issuer to fund or reimburse the expenses associated with the crowdfunding vehicle's formation, operation, or winding up, and the crowdfunding vehicle would not be permitted to receive other compensation, and any compensation paid to any person operating the vehicle would be required to be paid solely by the crowdfunding issuer;
- Would be required to maintain the same fiscal year end as the crowdfunding issuer, and maintain a one-to-one relationship between the number, denomination, type and rights of crowdfunding issuer securities it owns and the number, denomination, type and rights of its securities outstanding;
- Would be required to vote the crowdfunding issuer securities, and participate in tender or exchange offers or similar transactions, only in accordance with instructions from the investors in the crowdfunding vehicle;
- Would receive all of the disclosures and other information required under Regulation Crowdfunding from the crowdfunding issuer and would then be required promptly to provide such disclosures and information to the investors and potential investors in the crowdfunding vehicle's securities and to the relevant intermediary; and
- Would be required to provide to each investor the right to direct the crowdfunding vehicle to assert the rights under State and Federal law that the investor would have if he or she had invested directly in the crowdfunding issuer and provide each investor any information that it receives from the crowdfunding issuer as a shareholder of record of the crowdfunding issuer.

Under the proposal, the crowdfunding issuer and the crowdfunding vehicle would be co-issuers under the Securities Act, meaning each would be deemed to be the maker of any statements by the crowdfunding vehicle and any material misstatements or omissions with respect to the offering.[477] As co-issuers, the crowdfunding issuer and the crowdfunding vehicle would be required to jointly file a Form C, providing all of the required Form C disclosure with respect to (i) the offer and sale of the crowdfunding issuer's securities to the crowdfunding vehicle and (ii) the offer and sale of the crowdfunding vehicle's securities to investors.[478]

Finally, the Commission specifically considered, but did not propose, requiring that a registered investment adviser manage the crowdfunding vehicle. The Commission stated that it did not propose this requirement because of concerns that it could make the crowdfunding vehicle more than a conduit to hold the securities of the crowdfunding issuer and because of questions regarding economic feasibility.[479]

b. Comments

Commenters generally supported permitting crowdfunding issuers to use crowdfunding vehicles,[480] while a few commenters were opposed.[481] One commenter stated that crowdfunding vehicles would help issuers manage the large number of direct investors that can result from an offering under Regulation Crowdfunding and provide smaller investors with more leverage to negotiate better terms and protections.[482] Another commenter stated that SPVs may make crowdfunding safer and more profitable for investors, which could attract more capital and thereby offer more opportunities for startups.[483]

SPV Structure

Several commenters, while supportive of allowing crowdfunding issuers to use SPVs, questioned whether the proposed crowdfunding vehicle was structured appropriately.[484] Some commenters stated that the proposed structure was too prescriptive and costly, with little benefit to either investors or issuers.[485] For example, one commenter stated that investing through an SPV may have tax implications for certain investments and administrative burdens related to how the SPV is structured.[486]

Several commenters proposed alternative structures. One commenter suggested that an exempt reporting adviser (''ERA'') should be able to form SPVs.[487] This commenter also stated that an appropriately structured SPV should include a compensated lead investor associated with the ERA.[488]

[476] *See generally* proposed Rule 3a–9(a) for the proposed conditions.

[477] *See, e.g.,* 17 CFR 230.140. The crowdfunding vehicle's business would consist only of the purchase of securities of the crowdfunding issuer, and it would use the sale of its own securities to make such purchases of securities of the crowdfunding issuer.

[478] The Commission proposed to amend Rule 201 of Regulation Crowdfunding and Form C to require disclosure about the co-issuer in the offering statement. Because the crowdfunding vehicle would only be acting as a conduit for the crowdfunding issuer, we did not believe that the individual investment limitations under Regulation Crowdfunding should apply to transfer of the securities from the crowdfunding issuer to the crowdfunding vehicle. In addition, the amount of securities issued by the crowdfunding issuer to the crowdfunding vehicle would not reduce the amount of securities that could be offered and sold to the investors in the crowdfunding vehicle for purposes of the offering limit in Rule 100(a) of Regulation Crowdfunding.

Burton Letter; Rep. McHenry Letter; CrowdCheck Letter; and ABA Letter. *See also* 2019 OASB Annual Report, at 48.

[481] *See* CII Letter; and CFA Letter (stating that allowing the use of SPVs ''would further undermine transparency of private offerings and further erode incentives private companies have to become public companies once they have acquired a large and widely dispersed shareholder base.'').

[482] *See* ABA Letter. *See also* J. Clarke Letter (stating that the proposal would encourage issuers to offer voting rights to investors).

[483] *See* Engine Letter.

[484] *See e.g.,* Wefunder Letter; CrowdCheck Letter; Crowdwise Letter; and D. Burton Letter.

[485] *See* Wefunder Letter; D. Burton Letter; and CrowdCheck Letter.

[486] *See* Crowdwise Letter (stating that the proposed approach would create a Schedule K–1 burden for issuers with respect to SPVs organized as limited liability companies, and disadvantage investors by disqualifying them from certain preferential tax treatment).

[487] *See* Wefunder Letter. The commenter also requested guidance from the Commission that, in the absence of an ERA-advised SPV structure, an SPV would be permitted to hire a registered investment adviser that does not custody securities and that is permitted to charge performance fees to Regulation Crowdfunding investors, provided that certain conditions are met.

[488] An ERA is an investment adviser that qualifies for the exemption from registration under Section

Other commenters suggested that a crowdfunding vehicle should be managed by a registered investment adviser, ERA, or ''compensated administrator'' with a fiduciary duty to investors.[489] Some commenters stated that the Commission would need to address certain issues before a registered investment adviser would be interested in participating in this market, such as compliance with the Custody Rule.[490] Other commenters opposed requiring a registered investment adviser to manage the SPV,[491] with one commenter stating that the associated costs might deter small-medium enterprises, community groups, or women- and minority-owned businesses from utilizing an SPV.[492] One commenter suggested that a funding portal would be better situated to manage a crowdfunding vehicle due to the vehicle's small size.[493] Another commenter stated that many small investors do not want to spend time reading legal documents to authorize corporate actions and would rather authorize a lead investor to make such decisions.[494] Finally, one commenter suggested using an ''SEC-registered transfer agent'' as a custodian, with the ''portal entity'' paying all associated costs.[495]

SPV Conditions

Most commenters generally supported permitting crowdfunding issuers to use crowdfunding vehicles but suggested certain modifications to the proposed conditions.[496] For example, two commenters stated that they supported the proposed conditions and restrictions designed to require the crowdfunding vehicle act as a conduit for investors to invest in a single crowdfunding issuer.[497] One of these commenters also supported the required redemption of the crowdfunding vehicle's securities upon a liquidity event at the crowdfunding issuer level.[498] However, another commenter stated that the rule should not limit the number of issuers in which a crowdfunding vehicle can invest.[499] Similarly, several commenters stated that the rule should permit investment advisers to form funds for non-accredited investors that invest in multiple crowdfunding issuers.[500] Additionally, commenters suggested allowing crowdfunding vehicles to issue more than one class of securities.[501]

Commenters were generally supportive of the proposed conditions intended to provide investors in the crowdfunding vehicle the same economic exposure, voting power, and Regulation Crowdfunding disclosures as if the investors had invested directly in the crowdfunding issuers, but some suggested certain modifications.[502] Some commenters also supported deeming the crowdfunding vehicle and the crowdfunding issuer to be co-issuers for purposes of the Securities Act.[503] One commenter also suggested that over time the Commission should lessen the rule's restrictions.[504]

One commenter supported requiring crowdfunding vehicles to maintain a one-to-one relationship between the crowdfunding issuer securities it owns and the crowdfunding vehicle securities outstanding to provide investors in the crowdfunding vehicle the same economic exposure as they had invested directly in the crowdfunding issuer.[505] Other commenters opposed this one-to-one requirement.[506]

Commenters generally supported the proposal's requirement that the crowdfunding vehicle be required to seek instructions from its investors to vote the crowdfunding issuer securities it holds, and to participate in tender or exchange offers or similar transactions conducted by the crowdfunding issuer.[507] One commenter opposed this requirement, and asked the Commission to fully articulate what actions the SPV will take on behalf of its investors or, alternatively, to adopt a principles-based rule that would require the SPV to take all actions directed by its investors collectively.[508] One commenter suggested that the crowdfunding vehicle should automatically vote with the majority to simplify the voting process.[509] Other commenters stated that the rule should also address appraisal rights and allow for proxies.[510]

Commenters generally supported the proposed rule's disclosure requirements.[511] One commenter stated that the disclosures would improve compliance with ongoing reporting requirements under Regulation Crowdfunding by requiring the crowdfunding issuer to provide mandated information.[512] Another commenter stated that the proposed requirements would provide shareholders with the necessary information to determine whether to direct the crowdfunding vehicle to assert Federal and State rights for shareholders and would adequately pass through such rights.[513]

---

203(l) of the Advisers Act because it is an adviser solely to one or more venture capital funds, or under 17 CFR 275.203(m)–1 because it is an adviser solely to private funds and has assets under management in the United States of less than $150 million. *See* Exemptions for Advisers to Venture Capital Funds, Private Fund Advisers With Less Than $150 Million in Assets Under Management, and Foreign Private Advisers, Release No. IA–3222 (June 22, 2011) [76 FR 39646 (July 6, 2011)]. This commenter stated that the Commission should create a ''new class'' of ERAs that are exempt from registration for an ''investment adviser to one or more crowdfunding vehicles'' that would be able to receive incentive compensation (and share such compensation with a lead investor), and as such not be subject to the audit requirement under 17 CFR 275.206(4)–2 (the ''Custody Rule''), which would otherwise make the arrangement uneconomical. *See* Wefunder Letter.

[489] *See* CrowdCheck Letter; NextSeed Letter (stating that a registered investment adviser or ERA could ensure all legal, regulatory and tax requirements of operating the vehicle are fulfilled); and NASAA Letter (stating rule should require the SPV be managed by a registered investment adviser or another fiduciary manager).

Continued

Form C Filings

Commenters supported requiring crowdfunding issuers and crowdfunding vehicles to jointly file a Form C, and several commenters noted its simplicity and efficiency.[514] One commenter also stated that having both parties file the same Form C and the same Form C–AR would reduce market confusion, help investors access information more easily, and assist the administrator of the crowdfunding vehicle in enforcing the crowdfunding issuer's ongoing reporting obligations.[515]

Some commenters supported requiring a crowdfunding issuer to file its own Form C if it is separately offering securities through a crowdfunding vehicle and directly to investors.[516] The commenters were concerned a joint filing in these circumstances could lead to investor confusion. Other commenters opposed this approach, stating that a joint form in these circumstances is necessary to focus the investment on the venture, instead of the crowdfunding vehicle.[517]

Treatment Under Other Sections of the Securities Laws

The Commission stated in the Proposing Release that a crowdfunding vehicle may constitute a single record holder for purposes of Section 12(g) of the Exchange Act, rather than treating each of the crowdfunding vehicle's investors as record holders, which would be the case if they had invested in the crowdfunding issuer directly, and solicited comment on the appropriate treatment.[518] Commenters generally supported treating a crowdfunding vehicle as a single record holder for Section 12(g) purposes.[519] Some of these commenters stated that treating crowdfunding vehicles as a single record-holder for Section 12(g) eases record-keeping, capital structures, and entity development [520] and is consistent with what they believed to be the intent of Section 12(g).[521] Commenters opposing this treatment stated that they were concerned that it would allow private companies to avoid going public and therefore reduce market transparency.[522]

The Proposing Release requested comment on whether the Commission should further address the status of a crowdfunding vehicle and persons operating the vehicle for purposes of the definition of broker under Section 3(a)(4) of the Exchange Act or dealer under Section 3(a)(5) of the Exchange Act. Commenters addressing the issue agreed that further clarity would be helpful but suggested differing approaches.[523]

Finally, with respect to the proposed definition of ''crowdfunding issuer,'' one commenter stated that it was unclear in the proposed rule whether the offering or the crowdfunding vehicle would be required to comply with all of the requirements of Section 4(a)(6) of the Securities Act and Regulation Crowdfunding.[524]

c. Final Amendments

We are adopting Rule 3a–9 under the Investment Company Act, substantially as proposed, to exclude from the definition of ''investment company'' under that Act a crowdfunding vehicle that meets certain conditions designed to require that it function as a conduit for investors to invest in a business that seeks to raise capital through a crowdfunding vehicle. After considering the comments on the proposed structure and alternative structures commenters suggested, we believe that the ''conduit'' structure we proposed is consistent with the intent of Section 4(a)(6). We also continue to believe that this conduit structure would address concerns associated with managing the potentially large number of direct investors that could result from a crowdfunding offering.[525]

While some commenters suggested requiring a registered investment adviser or ERA to manage a crowdfunding vehicle, we do not believe this condition is necessary from an investor protection perspective given the conditions set forth in Rule 3a–9. For similar reasons, we do not believe it is necessary to create a new exemption from registration with the Commission for advisers to crowdfunding vehicles.[526] Collectively, the conditions in the rule require the crowdfunding vehicle to act solely as a conduit by limiting the scope of the activities in which the crowdfunding vehicle can engage, and restricting the compensation it can receive. In particular, Rule 3a–9's conditions are designed to limit the crowdfunding vehicle's activities to that of acting solely as a conduit to directly hold the securities of the crowdfunding issuer without the ability for independent investment decisions to be made on behalf of the crowdfunding vehicle.

Consistent with the concerns raised by commenters with respect to costs, we also continue to believe that it would not be economically feasible to require a registered investment adviser to manage the vehicle.[527] For example, we believe that compliance with the Custody Rule, coupled with the small size of the typical crowdfunding offering [528] and the fees and other expenses associated with operating a registered investment adviser, would

standpoint, a separate vehicle account with funds deemed sufficient for such purposes.'' *See id.*

[522] *See* CFA Letter; and AFREF letter.

[523] *See* J. Clarke Letter (requesting the Commission clarify that the portal platform is acting as the broker, since the SPV is not taking dealer inventory risk); W. Hubbard Letter (suggesting ''[a] regulatorily conclusive presumption at some point statutorily codified may be helpful.''); Raise Green & New Haven Comm. Solar Letter (stating a need for ''a safe harbor to assure a crowdfunded issuer and for the intermediary that neither would trigger registration as a broker under Section 15(a) of the Exchange Act.''); and CrowdCheck Letter (stating that ''a [registered investment adviser] operating a crowdfunding vehicle . . . would not be a broker-dealer and that it would be appropriate for the Commission to confirm that doing so would not result in the operator being required to register as either a broker or a dealer.'').

[524] *See* ABA Letter (suggesting that the rule text be revised to state ''a company that seeks to raise capital as a co-issuer with a crowdfunding vehicle in an offering that complies with all of the requirements under Section 4(a)(6) of the Securities Act and Regulation Crowdfunding'').

[525] In particular, the crowdfunding vehicle may be able to appear as a single entry on the crowdfunding issuer's capitalization table. Several commenters stated that the permitting crowdfunding vehicles would help solve the ''messy cap table'' issues. *See* CrowdCheck Letter; and W. Hubbard Letter.

[526] *See* Wefunder Letter.

[527] *See* Proposing Release, at text accompanying note 349.

[528] Between May 16, 2016, and December 31, 2018, the average Regulation Crowdfunding offering had a maximum offering amount of approximately $577,385 and raised approximately $208,300 (*see* 2019 Regulation Crowdfunding Report, at 4), with a maximum offering size of $1.07 million pursuant to Rule 100(a)(1) of Regulation Crowdfunding.

not make it economically feasible for a registered investment adviser to serve as the manager of a crowdfunding vehicle. As some commenters suggested, requiring an adviser to manage the crowdfunding vehicle, along with the associated costs, also could deter small to medium enterprises, or women- or minority-owned businesses, which may not have access to such investment advisory expertise, from using the crowdfunding vehicle.[529] It is also unlikely that a registered investment adviser could receive performance-based compensation for managing a crowdfunding vehicle, since the typical crowdfunding investor may not meet the threshold to qualify as a qualified client.[530] We similarly do not believe that it would be economically feasible to require an ERA to manage the vehicle. Given that one of our objectives is for an investor to achieve the same economic exposure as if he or she had invested directly in the crowdfunding issuer, we continue to believe that it is not appropriate for investors in the crowdfunding vehicle to bear directly the cost of any compensation paid to any person operating the vehicle, and we are not convinced that the issuer would be willing to bear the additional cost associated with hiring an investment adviser, whether registered or exempt from registration.

We also do not believe that we should expand the scope of the activities in which the crowdfunding vehicle can engage and allow a compensated lead investor to make decisions on behalf of all investors. We believe this approach would be inconsistent with the ''conduit'' structure we are using to ensure that there is no material difference between an investment in the crowdfunding issuer and the crowdfunding vehicle. We also are concerned that a compensated lead investor may not serve as an advocate for the interests of other investors in the vehicle, given the potential conflicts of interest that could arise between the lead investor and other investors in the vehicle. For similar reasons, a ''SEC-registered transfer agent'' structure is inconsistent with the ''conduit'' structure we are adopting in this release.[531]

We recognize that there are costs associated with organizing and maintaining the crowdfunding vehicle under Rule 3a–9. However, we believe these costs and burdens are necessary to provide investors in the crowdfunding vehicle the same economic exposure, voting power, and ability to assert State and Federal law rights, and receive the same disclosures under Regulation Crowdfunding, as if they had invested directly in the crowdfunding issuer. As discussed in Section IV.C.6 below, because the use of the crowdfunding vehicle structure will be voluntary, we expect issuers to use a crowdfunding vehicle only when an issuer determines that the benefits justify the costs. The balance of these tradeoffs is likely to vary depending on a number of factors, including the issuer's offering experience, potential for raising follow-on financing from a large investor, costs associated with the creation and administration of the crowdfunding vehicle, and the number of small investors participating in the crowdfunding offering.

Some commenters recommended that we permit advisers to form funds for non-accredited investors to invest in multiple crowdfunding issuers, effectively creating a ''private fund'' like structure for non-accredited investors. This ''fund'' structure is inconsistent with the ''conduit'' nature of the crowdfunding vehicle structure in Rule 3a–9, which underlies the limited exemption from Section 3(a) of the Investment Company Act that we are adopting. In addition, this conduit nature also protects investors by simply passing along the same exposures, rights and disclosures as if they had invested directly in the crowdfunding issuer in an offering made under Regulation Crowdfunding.[532]

In response to the commenter who stated that it was unclear whether the offering or the crowdfunding vehicle would be required to comply with applicable requirements, we are slightly modifying the definition of ''crowdfunding issuer'' from the proposal to clarify that the crowdfunding issuer is acting as a co-issuer with the crowdfunding vehicle and the combined offering of the crowdfunding issuer's securities and the crowdfunding vehicle's securities must comply with of Section 4(a)(6) of the Securities Act and Regulation Crowdfunding.

In order to clarify that we do not intend to permit a crowdfunding vehicle to invest in another crowdfunding vehicle, creating a multi-tier structure to invest in one crowdfunding issuer, we are slightly modifying proposed Rule 3a–9(a)(1) to specify that crowdfunding vehicles must be organized and operated for the sole purpose of *directly* acquiring, holding, and disposing of securities issued by a single crowdfunding issuer and raising capital in one or more offerings made in compliance with Regulation Crowdfunding. As discussed below, we believe this is appropriate given our treatment of the crowdfunding vehicle under Section 12(g) of the Exchange Act in order to prevent a multi-tier crowdfunding vehicle from further excluding investors from the Section 12(g) calculation.

In response to commenters who requested guidance on this point, we are clarifying that a crowdfunding vehicle and persons operating the vehicle will not implicate the broker-dealer registration requirements of Section 15(a) of the Exchange act so long as the crowdfunding vehicle and persons operating the vehicle limit their activities solely to those permitted by new Rule 3a–9. Under Rule 3a–9, the crowdfunding vehicle would be a co-issuer formed by or on behalf of the underlying crowdfunding issuer to serve merely as a conduit for investors to invest in the crowdfunding issuer and will not have a separate business purpose. Issuers generally are not considered to be ''brokers'' within the meaning of Section 3(a)(4) of the Exchange Act because they sell securities for their own accounts and not for the accounts of others; nor are issuers generally considered to be ''dealers'' within the meaning of Section 3(a)(5) of the Exchange Act because they do not buy and sell their securities for their own accounts as part of a regular business. Further, given the limited activities in which a crowdfunding vehicle may engage under Rule 3a–9 and, in particular, the limitations 17 CFR 270.3a–9(a)(4) places on the receipt of compensation by and the payment of compensation to the crowdfunding vehicle, the Commission similarly does not believe that a person operating the crowdfunding vehicle in accordance with Rule 3a–9 would be in the business of effecting securities transactions for the account of others, or in the business

[529] *See* Raise Green & New Haven Comm. Solar Letter.

[530] 17 CFR 275.205–3 permits registered investment advisers to receive performance-based compensation only when the client is a qualified client. The rule's definition of ''qualified client'' includes a natural person who, or a company that, immediately after entering into the investment contract has at least $1,000,000 under the management of the investment adviser, and a natural person who, or a company that, the investment adviser entering into the investment contract (and any person acting on his behalf) reasonably believes, immediately prior to entering into the contract, has a net worth (together, in the case of a natural person, with assets held jointly with a spouse) of more than $2,100,000 (exclude the value of a person's primary residence and certain associated debt).

[531] The commenter also requested guidance from the Commission on two additional issues that we believe are outside the scope of this rulemaking. *See supra* notes 493 and 517.

[532] *See* Raise Green & New Haven Comm. Solar Letter.

of buying and selling securities for the account of the crowdfunding vehicle.

We are adopting the conditions, as proposed, to address specific investor protection concerns raised by a vehicle that acts as a conduit for investments in a crowdfunding issuer.[533] While some commenters suggested modifications to these conditions to expand the crowdfunding vehicle's permissible investments, we believe these capabilities would make the crowdfunding vehicle more like a traditional investment fund, rather than merely a conduit entity for a single issuer consistent with its purpose. For the same reasons, we also do not believe that it is appropriate to permit the crowdfunding vehicle to issue different securities for different rounds of a Regulation Crowdfunding offering or to issue multiple classes of securities. Additionally, consistent with the crowdfunding vehicle's purpose as a conduit, the rule will require the crowdfunding vehicle to redeem or offer to repurchase its securities if there is a liquidity event at the crowdfunding issuer level since its reason for existence will cease on the occurrence of such liquidity event.

We disagree with one commenter's suggestion that we eliminate the requirement that the crowdfunding issuer pay the costs of the crowdfunding vehicle.[534] The crowdfunding vehicle provides direct benefits to the crowdfunding issuer, such as reducing capitalization table concerns and providing for greater efficiency for the administration of a large and diffuse investor base, and we believe that it is appropriate for the crowdfunding issuer itself to bear the direct costs of the crowdfunding vehicle. Additionally, requiring investors in the crowdfunding vehicle to bear directly the costs of the crowdfunding vehicle would be inconsistent with our goal of providing those investors with the same economic exposure as if they had invested directly in the crowdfunding issuer given the conduit nature of the SPV structure.

As one commenter pointed out, because investors are investing in the crowdfunding vehicle, and not directly in the crowdfunding issuer, there may be slight differences in the rights in the crowdfunding vehicle that investors receive.[535] However, we do not believe these slight differences in rights should in any way affect the ability of the crowdfunding vehicle to issue securities with rights that are materially indistinguishable from the rights a direct investor in the crowdfunding issuer would have. The rule as adopted will require a one-to-one relationship between the number, denomination, type and rights of crowdfunding issuer securities the crowdfunding vehicle owns and the number, denomination, type, and rights of its securities outstanding to ensure that there is no material difference in rights between investing in the crowdfunding vehicle and investing directly in the crowdfunding issuer. This requirement is designed to ensure that the crowdfunding vehicle maintains its character as a conduit to the crowdfunding issuer.

With respect to a commenter's concerns regarding voting, we do not believe that the rule is too narrow with respect to the specific actions the crowdfunding vehicle is required to take, nor do we think it is too ambiguous with respect to the assertion of investor rights.[536] The rule's voting conditions were designed to provide flexibility, knowing that it is impossible to anticipate every possible action that a crowdfunding vehicle will need to take in its lifespan. Furthermore, in response to one commenter's suggestion that we address appraisal rights,[537] we believe that the assertion of such rights is captured under the prong of the rule that provides each investor the right to direct the crowdfunding vehicle to assert the rights under State and Federal law that the investor would have if he or she had invested directly in the crowdfunding issuer.[538]

We recognize that permitting the crowdfunding vehicle to vote automatically with the majority or permitting the crowdfunding investors to otherwise delegate voting authority may simplify the voting process.[539] However, we do not believe the rule should permit either approach to voting because both would be inconsistent with the vehicle's purpose, which is to act merely as a conduit and not an independent investment entity like a fund or other similar investment vehicle. Furthermore, we do not believe that a registered investment adviser is necessary to assert rights attendant to an investment in the issuer as the ability to assert such rights (and the flow through of information related to thereto) will pass directly to investors as if they were direct investors in the crowdfunding issuer.[540]

We are adopting as proposed the requirement that crowdfunding vehicles jointly file a Form C with the crowdfunding issuer,[541] as opposed to requiring that each file a separate Form C or only requiring the crowdfunding vehicle to file a Form C. We continue to believe that by jointly filing a Form C describing both transactions and providing disclosure about both co-issuers, investors will be provided all information necessary to analyze both their direct investment in the crowdfunding vehicle and the terms of the crowdfunding vehicle's investment in the crowdfunding issuer.[542] This approach also will allow investors to review the entire business of the crowdfunding issuer and crowdfunding vehicle in one location (avoiding any confusion that could arise if the crowdfunding vehicle and crowdfunding issuer provided separate disclosure on the separate transactions, for example, on separate Forms C).

Additionally, we agree with commenters that supported requiring a crowdfunding issuer to file its own Form C if it is separately offering securities both through a crowdfunding vehicle and directly to investors, and are therefore clarifying this in Rule 203(a)(1). We believe that to do otherwise, as noted by commenters, would likely be confusing to investors and overcomplicate and unnecessarily burden the preparation, compliance, and related administrative responsibilities of both the crowdfunding issuer and the crowdfunding vehicle. We do not believe, as one opposing commenter suggested, that having two Form Cs in this context would only promote confusion, as each separate offering would have its own corresponding Form C.

As stated in the Proposing Release, we continue to believe that, because the crowdfunding vehicle is only acting as a conduit for the crowdfunding issuer, the individual investment limitations under Regulation Crowdfunding should not apply to transfer of the securities from the crowdfunding issuer to the

[533] *See* 17 CFR 270.3a–9(a) (''Rule 3a–9(a)'').

[534] *See* Raise Green & New Haven Comm. Solar Letter. A third-party (*e.g.,* a funding portal) could contribute to the issuer's coverage of these costs, as long as the crowdfunding issuer, and not the crowdfunding vehicle, ultimately bears the costs.

[535] *See* CrowdCheck Letter (stating that the exact replication of the rights attached to the securities of the crowdfunding issuer is impossible because of, for example, possible differences in legal structure and state of incorporation).

crowdfunding vehicle.[543] In addition, we do not believe that the amount of securities issued by the crowdfunding issuer to the crowdfunding vehicle should reduce the amount of securities that could be offered and sold to the investors in the crowdfunding vehicle for purposes of the offering limit in Rule 100(a) of Regulation Crowdfunding. To clarify this treatment of the transfer of securities from the crowdfunding issuer to the crowdfunding vehicle, we are amending 17 CFR 227.100(d) to state that a crowdfunding vehicle is not considered an investor for the purposes of Regulation Crowdfunding.

After considering comments, we have determined that a crowdfunding vehicle should constitute a single record holder in the crowdfunding issuer for purposes of Section 12(g) of the Exchange Act, but only to the extent that all investors in the crowdfunding vehicle are natural persons. As a result, we are adopting amendments to Exchange Act Rule 12g5–1. New Rule 12g5–1(a)(9) will specify that, for purposes of determining whether a crowdfunding issuer is required to register a class of equity securities with the Commission pursuant to Section 12(g)(1) of the Exchange Act, a crowdfunding issuer may exclude securities issued by a crowdfunding vehicle in accordance with Rule 3a–9 that are held by natural persons, but must include securities issued by a crowdfunding vehicle that are held by investors that are not natural persons.[544] The same provision will also apply to a crowdfunding vehicle, which is a separate legal entity from the crowdfunding issuer and itself is subject to Section 12(g). In connection with this new provision, we are also amending Rule 12g5–1(a)(2) to clarify that a crowdfunding issuer that makes use of Rule 3a–9 should look to new Rule 12g5–1(a)(9), even though the crowdfunding vehicle may otherwise have been considered a corporation, partnership, trust or other organization for purposes of Rule 12g5–1(a)(2). Regardless of the crowdfunding vehicle's Section 12(g) treatment, under the final rules, investors in the crowdfunding vehicle will have the same economic exposure, voting power, and ability to assert State and Federal law rights, and receive the same disclosures under Regulation Crowdfunding, as if they had invested directly in the crowdfunding issuer.

We believe that this treatment of natural person and non-natural person investors is appropriate in light of the novel crowdfunding issuer-crowdfunding vehicle structure we are adopting and the types of offerings the Crowdfunding exemption was intended to facilitate.[545] It recognizes that the crowdfunding vehicle is a separate organization, holding the crowdfunding issuer securities in its own name, but by counting non-natural persons differently reduces the risk that the structure is used by either the crowdfunding issuer or the crowdfunding vehicle to further exclude investors from the Section 12(g) calculation.

Although commenters expressed concern that treating the crowdfunding vehicle as a single entity for Section 12(g) purposes would allow crowdfunding issuers to delay having to register a class of equity securities under Section 12(g) and reduce transparency, we do not believe it is necessary to require a crowdfunding issuer to ''look through'' the crowdfunding vehicle to count all of the holders in the vehicle. While this may result in some crowdfunding issuers being able to delay Exchange Act registration, we note that, as is the case for any Regulation Crowdfunding issuer, if the crowdfunding issuer and crowdfunding vehicle both meet the terms of Rule 12g–6, they will be able to rely on that conditional exemption. As a result, only the largest issuers that sell securities under Regulation Crowdfunding are likely to trigger a Section 12(g) registration requirement at any time, regardless of the approach we are adopting. Further, we believe that concerns about transparency are mitigated by the existing ongoing reporting requirements of Regulation Crowdfunding, which are tailored to the types of issuers and offerings the exemption is intended to accommodate.[546] Finally, not counting natural persons holding through the crowdfunding vehicle as holders for Section 12(g) purposes also has no impact on the requirement that investors in the crowdfunding vehicle receive the same disclosures as if they had invested directly in the crowdfunding issuer, ensuring that the investors have the full transparency into the crowdfunding issuer required by Regulation Crowdfunding.

We also do not agree with the commenter that suggested that the proposed crowdfunding vehicle is a complex and costly way to have one record holder for the purposes of Section 12(g) without benefits to the issuer that still needs to communicate with possibly thousands of strangers to make corporate decisions. Rule 3a–9 allows issuers to shift the administrative burden to the crowdfunding vehicle, meaning the crowdfunding vehicle could engage a third party (such as a funding portal) to handle the burden of communicating with investors regarding votes and for other administrative matters.

2. Regulation Crowdfunding Eligible Securities

Unlike Regulation A, which limits the types of securities eligible for sale to equity securities, debt securities, and securities convertible or exchangeable to equity interests, including any guarantees of such securities,[547] Regulation Crowdfunding does not restrict the type of security that may be offered and sold in reliance on the exemption. As a result, issuers using Regulation Crowdfunding have offered and sold a number of non-traditional securities, such as Simple Agreements for Future Equity (''SAFEs''), Simple Agreements for Future Tokens, and certain revenue sharing agreements.

a. Proposed Amendments

The Commission proposed to amend Regulation Crowdfunding to harmonize the rule with Regulation A and limit the types of securities that may be offered under the exemption to correspond with the eligible securities provision of Regulation A. As proposed, the types of securities eligible for sale in an offering under Regulation Crowdfunding would be limited to equity securities, debt securities, and securities convertible or exchangeable to equity interests, including any guarantees of such securities.

b. Comments

Commenters were divided on whether to revise Regulation Crowdfunding to restrict the securities eligible under the exemption to those included in Regulation A's list of eligible securities. Some commenters generally supported harmonizing the eligible securities

[543] *See* Proposing Release, at note 333.

[544] For purposes of the crowdfunding vehicle's calculation of holders of record, such non-natural persons will be treated the same way they would be if they held the crowdfunding issuer's securities directly.

[545] *See* Crowdfunding Adopting Release, at note 2 and text accompanying note 2 (discussing the intent of the crowdfunding provisions of the JOBS Act to help provide startups and small businesses with capital by making relatively low dollar offerings of securities, featuring relatively low dollar investments by the ''crowd,'' less costly).

[546] *See, e.g.,* Crowdfunding Adopting Release, at Section II.B.1.a.(1)(b)(iii) (noting that issuers engaging in crowdfunding transactions may have businesses at various stages of development in different industries, and the need for flexibility for these issuers regarding what information they disclose about their businesses).

[547] *See* 17 CFR 230.261.

under the two exemptions,[548] while other commenters supported harmonizing the exemptions by citing concerns regarding the use of SAFEs.[549] One of the commenters who supported harmonizing the eligible securities under the two exemptions specifically stated that ''tokenized securities and other forms of digital assets should not be included as eligible securities under Regulation Crowdfunding'' as they pose particular risks to investors.[550] A number of commenters specifically opposed revising Regulation Crowdfunding to track the securities eligible under Regulation A.[551] Of these commenters, many recommended there be no restrictions on the types of securities that can be offered under Regulation Crowdfunding.[552]

Commenters were similarly divided on whether to permit SAFEs under Regulation Crowdfunding. A number of commenters generally opposed revising the Regulation Crowdfunding eligible securities to specifically prohibit the offering and selling of SAFEs.[553] These commenters suggested that prohibiting the use of SAFEs under Regulation Crowdfunding would limit the usefulness of the exemption for many issuers [554] and indicated that there was not significant evidence that SAFEs pose undue risks for investors.[555] Another commenter recommended the Commission require issuers and portals to disclose a list of ''potentially risky or problematic deal terms'' in lieu of prohibiting SAFEs.[556] In contrast, a number of commenters supported explicitly prohibiting the offering and selling of SAFEs under Regulation Crowdfunding.[557]

c. Final Amendments

We are not adopting the proposed amendments to harmonize the securities eligible under Regulation Crowdfunding with the securities eligible under Regulation A at this time in light of commenters' concerns that doing so would limit the utility of Regulation Crowdfunding. We are also not adopting rule changes that would specifically prohibit SAFEs under Regulation Crowdfunding. We recognize the concern that the offer and sale of non-traditional securities to retail investors in an exempt offering could result in harm to investors who may face challenges in analyzing and valuing such securities or who may be confused by the descriptions of such securities on the funding portals. However, we believe that many of these concerns can be addressed by providing adequate disclosure to investors. To this end, issuers assessing their compliance with Regulation Crowdfunding should carefully consider whether they are clearly describing the terms of the offered securities, especially in the case of non-traditional securities, such as SAFEs. 17 CFR 227.201(m) requires issuers to disclose the terms of the securities being offered whether or not such securities have voting rights, any limitations on such voting rights, how the terms of the securities being offered may be modified and a summary of the differences between such securities and each other class of security of the issuer, and how the rights of the securities being offered may be materially limited, diluted or qualified by the rights of any other class of security of the issuer. We remind issuers of non-traditional securities of the need to carefully consider their obligations under this rule.

3. Regulation A Eligibility Restrictions for Delinquent Exchange Act Filers

Regulation A includes an eligibility requirement that an issuer conducting a Regulation A offering must have filed with the Commission all reports required to be filed, if any, pursuant to Rule 257 during the two years before the filing of the offering statement (or for such shorter period that the issuer was required to file such reports).[558] However, because Exchange Act registrants are not required to file reports pursuant to Rule 257, the existing eligibility provision does not expressly require those registrants to have filed their Exchange Act reports in order to rely on Regulation A.

a. Proposed Amendments

The Commission proposed to amend Regulation A to require issuers that are subject to the reporting requirements of Section 13 or 15(d) of the Exchange Act to meet a similar eligibility requirement with respect to Exchange Act reports. As proposed, issuers that do not file all the reports required to have been filed by Sections 13 or 15(d) of the Exchange Act in the two-year period preceding the filing of an offering statement would be ineligible to conduct a Regulation A offering.[559]

b. Comments

Commenters that addressed the issue generally supported requiring Exchange Act reporting Regulation A issuers to be current in their Exchange Act reporting obligations.[560] Only one commenter opposed requiring applicable issuers to be current in their Exchange Act reporting obligations, arguing that because non-reporting companies can rely on Regulation A, there should be no requirement for reporting companies to be current in their reporting obligations.[561] Another commenter recommended that the Commission additionally make Regulation A available to business development companies as defined in Section 2(a)(48) of the Investment Company Act.[562]

c. Final Amendments

We are adopting the amendment as proposed. The amendment holds Exchange Act reporting companies to

[548] *See, e.g.,* ABA Letter; SEI Letter; SEC SBCFAC Letter; Wefunder Letter; and Letter from Y Combinator dated May 29, 2020 (''Y Combinator Letter''). Some of these commenters supported harmonization but indicated that SAFEs should be allowed under Regulation Crowdfunding. *See* Wefunder Letter; and Y Combinator Letter.

[561] *See* J. Clarke Letter.

[562] *See* ABA Letter.

the same standard as repeat Regulation A issuers. This requirement will benefit investors by assuring that they have access to historical financial and non-financial statement disclosure about Exchange Act reporting companies that are conducting Regulation A offerings and may facilitate the development of an efficient secondary market for the securities they purchase in Regulation A offerings. Furthermore, because they are already required to file such reports, the requirement does not increase the burden of making a Regulation A offering for Exchange Act reporting companies or issuers that were Exchange Act reporting companies within the two years prior to making a Regulation A offering. We are not persuaded by the commenter that suggested that because non-reporting companies can use Regulation A, reporting companies should not be required to be current in their reporting obligations. We believe Regulation A investors should be able to look to the Exchange Act filings of reporting company issuers for information supplemental to the issuers' Regulation A disclosures.[563]

We are not amending Regulation A as recommended by a commenter to make the exemption available to business development companies at this time. While we acknowledge that business development companies serve an important function in facilitating capital formation for small, developing and financially troubled companies, there are important considerations with respect to the application of Regulation A's requirements to such entities that we believe we should assess before expanding the eligibility criteria.

*G. Bad Actor Disqualification Provisions*

The Commission's exempt offering framework includes rules disqualifying certain covered persons, including felons and other ''bad actors,'' from relying on Regulation A, Regulation Crowdfunding, and Regulation D to offer and sell securities. While the disqualification provisions are substantially similar,[564] the lookback period for determining whether a covered person is disqualified differs between Regulation D and the other exemptions. For Regulation D, the lookback period is measured from the time of the sale of securities in the relevant offering. For 17 CFR 230.262(a) (''Rule 262(a)'' of Regulation A) and 17 CFR 227.503(a) (''Rule 503(a)'' of Regulation Crowdfunding), the lookback period is measured from the time the issuer files an offering statement.[565]

Under Regulation A, if a covered person triggers one of the disqualifying events in Rule 262, the Commission may suspend reliance on the Regulation A exemption through 17 CFR 230.258 (''Rule 258''), which requires a notice and hearing opportunity for the issuer prior to the suspension becoming permanent. Furthermore, if a covered person triggers one of the disqualifying events, the issuer may need to consider whether it must suspend the offering until it files a post-qualification amendment to reflect a fundamental change in the information set forth in the most recent offering statement or post-qualification amendment.[566] Regulation Crowdfunding, which similarly measures the lookback from the time of filing of the offering statement, does not have a suspension provision. Similar to Regulation A, it requires an issuer to amend the offering statement to disclose material changes, additions, or updates to information that it provides to investors for offerings that have not been completed or terminated.[567] Nevertheless, in certain circumstances, periods of time may exist during Regulation A and Regulation Crowdfunding offerings between the filing of the offering statement and the next required filing where an offering could continue despite an event that would have constituted a disqualifying event at the time of filing.

1. Proposed Amendments

The Commission proposed to harmonize the bad actor disqualification provisions in Rule 506(d) of Regulation D, Rule 262(a) of Regulation A and Rule 503(a) of Regulation Crowdfunding by adjusting the lookback requirements in Regulation A and Regulation Crowdfunding to include the time of sale in addition to the time of filing. Specifically, the Commission proposed to add ''or such sale'' to any lookback references that refer to the time of filing, such as the ''filing of the offerings statement,'' ''such filing,'' or ''the filing of the information required by Section 4A(b) of the Securities Act'' in Rule 262(a) and Rule 503(a).

In order to reflect the offering statement filing requirement before the first Regulation Crowdfunding sale, and more closely track the requirement in Rule 262(a) of Regulation A, the Commission proposed including ''any promoter connected with the issuer in any capacity at the time of filing, any offer after filing, or such sale'' in Rule 503(a).[568] The proposed amendments would not alter the availability of the existing reasonable care exception, an issuer's ability to seek a waiver from disqualification from the Commission, or the exception applicable when a court or regulatory authority advises in writing that disqualification should not arise.[569] Nonetheless, with respect to the latter provision, the Commission proposed to amend 17 CFR 230.262(b)(3) (''Rule 262(b)(3)'') and 17 CFR 227.503(b)(3) (''Rule 503(b)(3)''), which currently provide that a court's or regulatory authority's advice with respect to the disqualifying effect of an order, judgment or decree must occur before: (i) The time of ''the filing of the offering statement,'' in the case of Regulation A, or (ii) ''the filing of the information required by section 4A(b) of the Securities Act,'' in the case of Regulation Crowdfunding. The proposed amendments would conform the existing language in Rules 262(b)(3) and 503(b)(3) with the parallel lookback language in 17 CFR 230.506(d)(2)(iii) by adding the phrase ''before . . . [the relevant/such] sale.''

[563] *See, e.g.,* 2020 Regulation A Review (stating that the requirement for Regulation A reporting company issuers to be current in their reporting requirements ''would benefit investors by ensuring that they have access to historical financial and non-financial statement disclosure about Exchange Act reporting companies that are conducting Regulation A offerings and may facilitate the development of an efficient secondary market for the securities they purchase in Regulation A offerings''). *See also* NASAA Letter (''By helping to make clear that issuers are expected to behave as public companies once they enter the public markets, even through the means of exempt offerings, the Commission is at least partly addressing the concern that the current proposals will cause even substantial companies to remain in the private markets permanently.'')

[564] Section 3(b)(2)(G)(ii) of the Securities Act [15 U.S.C. 77c(b)(2)(G)(ii)] provides the Commission with authority to issue bad actor disqualification rules under Regulation A that are ''substantially similar'' to those adopted for securities offerings under Rule 506 of Regulation D pursuant to Section 926 of the Dodd-Frank Act. *See* 2015 Regulation A Release; Disqualification of Felons, Other ''Bad Actors'' from Rule 506 Offerings, Release No. 33–9414 (July 10, 2013) [78 FR 44729 (July 24, 2013)] (''Rule 506(d) Final Release''); and Crowdfunding Adopting Release.

[565] Rule 503(a) provides lookback language based on ''the filing of the offering statement'' or ''the filing of the information required by section 4A(b) of the Securities Act'' on Form C. *See* 17 CFR 227.503. While the disqualification events in Securities Act Rule 262 and Regulation Crowdfunding Rule 503 are generally tied to the filing of an offering statement, 17 CFR 230.262(a)(6); and 17 CFR 227.503(a)(6) are not.

[566] *See* 17 CFR 230.252(f)(2).

[567] *See* 17 CFR 230.203(a)(2).

[568] Rule 503(a) currently covers only promoters connected with the issuer in any capacity ''at the time of such sale,'' making it possible that a promoter that previously engaged in fraudulent activities or violated securities or other laws or regulations, could be involved in offering activities under Regulation Crowdfunding so long as such promoter is not connected with the issuer in any capacity at the time of sale.

[569] *See* 17 CFR 230.262(b)(3).

2. Comments

Commenters generally supported revising the bad actor lookback provisions in Regulation A and Regulation Crowdfunding as proposed.[570] One commenter recommended that the Commission provide guidance on how often bad actor checks should be performed, using the same timing for all bad actor lookback periods, and including 20% holders in the revised lookback provisions.[571] Another commenter suggested establishing a consistent standard for bad actor determinations in conjunction with FINRA and providing a centralized bad actor database.[572] Other commenters recommended permitting issuers to continue their offerings and provide investors with disclosure and an option to cancel their investment commitments after a disqualifying event first arises.[573] Commenters also generally supported revising the bad actor language in Rule 503(a) of Regulation D to include ''any promoter connected with the issuer in any capacity at the time of filing, any offer after filing, or such sale,'' to more closely track Rule 262(a) of Regulation A.[574]

One commenter opposed the revisions, suggesting the additional monitoring cost will prevent issuers from relying on Regulation Crowdfunding.[575] Another commenter, who was supportive of the revisions, also acknowledged the potential for significant monitoring costs, especially in Regulation Crowdfunding offerings.[576]

3. Final Amendments

We are adopting the amendments as proposed to further harmonize the disqualification provisions in Regulation A, Regulation Crowdfunding, and Regulation D by using the same disqualification lookback period. Although the amendments may, to some extent, increase the compliance costs associated with conducting an offering under Regulation A or Regulation Crowdfunding, for issuers that conduct offerings in reliance on more than one of these exemptions, using the same disqualification lookback period across exemptions may simplify compliance and due diligence for issuers.[577] In addition, the revised lookback period, which looks to both the time of filing of the offering document and the time of sale, will improve investor protections by further limiting the role of ''bad actors'' in exempt offerings and reducing the chance that investors may unknowingly participate in securities offerings involving offering participants who have engaged in fraudulent activities or violated securities or other laws or regulations.[578]

The disqualification provisions in Regulation A and Regulation Crowdfunding were intended to be ''substantially similar'' to those in Regulation D.[579] When the Commission adopted disqualification provisions under Regulation D, the Commission also adopted an exception from disqualification for offerings where the issuer establishes that it did not know and, in the exercise of reasonable care, could not have known that a disqualification existed. At that time, the Commission was cognizant of the monitoring costs associated with Rule 506(d)'s disqualification provisions, particularly the costs of monitoring beneficial owners of 20 percent or more of the issuer's outstanding voting securities.[580]

For Regulation A and Regulation Crowdfunding issuers, monitoring covered beneficial owners may pose different challenges than for issuers in Regulation D offerings because shares sold under Regulation A are potentially freely tradable immediately following an investor's initial purchase, and shares sold under Regulation Crowdfunding are generally freely tradable after a holding period. In recognition of the additional monitoring burdens associated with Regulation A and Regulation Crowdfunding offerings, and the potential for such burdens to discourage reliance on Regulation Crowdfunding, we are, as proposed, retaining the current lookback period applicable to covered beneficial owners in Regulation A and Regulation Crowdfunding rather than amending it to start at the time of sale. We do not believe that permitting issuers to continue their offerings and provide investors with disclosure and an option to cancel their investment commitments after a disqualifying event first arises would provide sufficient investor protections, as it would treat issuers with older disqualifying events differently from issuers with more recent disqualifying events, prohibiting the former from engaging in a Regulation A or Regulation Crowdfunding offering but permitting the latter to engage in the offering with only updated disclosure provided.[581]

## III. Other Matters

If any of the provisions of these rules, or the application thereof to any person or circumstance, is held to be invalid, such invalidity shall not affect other provisions or application of such provisions to other persons or circumstances that can be given effect without the invalid provision or application.

Pursuant to the Congressional Review Act,[582] the Office of Information and Regulatory Affairs has designated these rules a ''major rule,'' as defined by 5 U.S.C. 804(2).

## IV. Economic Analysis

We are mindful of the costs imposed by, and the benefits obtained from, our rules. Section 2(b) of the Securities Act,[583] Section 3(f) of the Exchange Act,[584] and Section 2(c) of the Investment Company Act[585] require us, when engaging in rulemaking that requires us to consider or determine whether an action is necessary or appropriate in (or, with respect to the

[571] *See* CrowdCheck Letter. In contrast, one commenter supported continuing to use the time of filing, rather than time of sale, for covered persons. *See* J. Clarke Letter.

[572] *See* IPA Letter.

[573] *See* Geraci Law Letter; J. Clarke Letter; NextSeed Letter; and W. Hubbard Letter. *But see* CrowdCheck Letter contending that permitting the offerings to continue would treat more recent disqualifying events as less serious than older ones.

[574] *See, e.g.,* Geraci Law Letter; Netcapital Letter; NASAA Letter; Md. St. Bar Assoc. Letter; and CrowdCheck Letter.

[575] *See* NextSeed Letter.

[576] *See* CrowdCheck Letter.

[577] *See* 2015 Regulation A Release, at Section II.G. In adopting the 2015 Regulation A amendments, the Commission stated that a uniform set of bad actor triggering events would simplify due diligence, particularly for issuers that may engage in different types of exempt offerings.

[578] This may be particularly true for regulating the conduct of promoters connected with an issuer throughout an ongoing offering.

[579] *See* 2015 Regulation A Release and Crowdfunding Adopting Release. Section 302(d) of the JOBS Act requires the Commission to establish disqualification provisions under which an issuer would not be eligible to offer securities pursuant to Section 4(a)(6) and an intermediary would not be eligible to effect or participate in transactions pursuant to Section 4(a)(6). Section 302(d)(2) specifies that the disqualification provisions must be ''substantially similar'' to the ''bad actor'' disqualification provisions contained in Rule 262 of Regulation A. As noted above, the disqualification provisions under Regulation A are required to be ''substantially similar'' to those adopted for securities offerings under Rule 506. *See supra* note 564.

[580] *See* Rule 506(d) Final Release, at Section II.B. The Commission clarified that, for ongoing offerings, the issuer's reasonable care duty to monitor covered persons generally ''includes updating the factual inquiry'' on a periodic basis. *Id.* at Section II.D.2.

[585] 15 U.S.C. 80a–2(c).

Investment Company Act, consistent with) the public interest, to consider, in addition to the protection of investors, whether the action will promote efficiency, competition, and capital formation. In addition, Section 23(a)(2) of the Exchange Act requires the Commission to consider the effects on competition of any rules the Commission adopts under the Exchange Act and prohibits the Commission from adopting any rule that would impose a burden on competition not necessary or appropriate in furtherance of the purposes of the Exchange Act.[586]

We have considered the economic effects of the final amendments, including their effects on competition, efficiency, and capital formation. Many of the effects discussed below cannot be quantified.[587] Consequently, while we have, wherever possible, attempted to quantify the expected economic effects, much of the discussion remains qualitative in nature.

*A. Broad Economic Considerations*

The final amendments will simplify, harmonize, and improve certain aspects of the Commission's exempt offering framework, including Regulation D, Regulation A, Regulation Crowdfunding, and other related rules. By providing a more streamlined and consistent exempt offering framework, these amendments are expected to incrementally facilitate capital formation through exempt offerings, expanding issuers' ability to pursue positive net present value (''NPV'') investment and growth opportunities. For example, the amendments to Regulation A and Regulation Crowdfunding that raise offering limits and incrementally facilitate compliance are expected to draw a larger and more diversified set of issuers, including issuers with high growth potential and associated high financing needs that might otherwise forgo these exemptions due to the costs of compliance combined with the existing, lower limits.[588] The final amendments may also address current uncertainties in the ability to use exempt offerings prior to, or concurrent with, registered offerings, which could ease the path to a registered offering for some private issuers.

We recognize that many of the issuers that rely on the amended exemptions likely would have relied on an exemption from registration without the final amendments.[589] For example, issuers using amended Regulation A, Regulation Crowdfunding, or Rule 504 might have relied on these exemptions in their current form, or, alternatively, relied on Rule 506 of Regulation D, which does not have an offering limit and does not require the filing of an offering statement or ongoing disclosures. The substitution between different offering methods is likely to limit the economic effects of the amendments. Nevertheless, the increased flexibility afforded by the amendments may enable some issuers to optimize their financing strategy and reduce their financing costs, helping them fund a broader range of investment projects and growth opportunities. Financing cost savings and enhanced ability to fund positive-NPV investment opportunities would in turn benefit shareholders through greater shareholder value.

The amendments may also provide incrementally greater choice of investment opportunities for investors. Importantly, the investor protections applicable to these exemptions will continue to provide significant safeguards against the risk of losses for non-accredited investors. The amendments we are adopting could expand non-accredited investor access to investment opportunities, such as through the following:

- Amendments to Regulation A, Regulation Crowdfunding, and Rule 504, which do not limit the number of non-accredited investors, may attract additional issuers or larger offerings.
- Amendments to Regulation Crowdfunding will increase investment limits for the subset of non-accredited investors whose annual income diverges from net worth, which may allow such investors to participate in more crowdfunding offerings.
- Amendments to Rule 506(b) may on the margin lead to additional offerings that permit non-accredited investors; however, the 35-person cap on the number of non-accredited purchasers in any Rule 506(b) offering in a 90-day period and the historically low proportion of Rule 506(b) offerings with non-accredited investors are expected to significantly limit this effect.

Greater flexibility under the amendments may enable non-accredited investors to optimize their capital allocation through incrementally greater access to exempt offering investment opportunities. The magnitude of the effect would depend on several factors, including:

- Whether issuers switch between offering methods that allow non-accredited investors, in which case the set of investment opportunities for non-accredited investors may change very little.
- Whether issuers prefer accredited investors due to their industry connections and expertise or due to the potential costs of having multiple non-accredited investors (*e.g.,* capitalization table concerns in light of subsequent financing plans[590] or Section 12(g) registration thresholds, costs of investor relations, or risks of proprietary information disclosure).
- Whether non-accredited investors choose not to invest in exempt offerings (*e.g.,* due to illiquidity; transaction, search, due diligence, and agency costs; or investment minimums).
- The efficiency of portfolio allocation of non-accredited investors. Such efficiency would depend on such investors' skill at obtaining and analyzing information about issuers that provide less disclosure compared to registered offerings.[591] Non-accredited investors may in some cases benefit from monitoring and screening by accredited investors, although the effect may be limited if the securities held by accredited investors offer different terms or payoffs.[592]

[586] 15 U.S.C. 78w(a)(2).

[587] For example, as discussed in the Proposing Release and noted by commenters (*see, e.g.,* Better Markets Letter; CFA Letter; Letter from Healthy Markets Association dated March 16, 2020 (''HMA Letter''); and NASAA Letter), scaled disclosures and a lack of secondary trading complicate the gathering of performance data on all exempt offerings. Where available, such data is not necessarily directly comparable to public market returns. *See* Proposing Release, at note 372. The analysis of available evidence on the performance of exempt offerings can be found in Report to Congress on Regulation A/Regulation D Performance. *See also* CCA Letter (discussing evidence on the performance of crowdfunding offerings) and Letter on the Concept Release from AngelList Venture dated September 14, 2020 (''AngelList Letter'') (discussing evidence on the performance of investments through their platform).

[588] The amended offering limits also may attract financial intermediaries that might presently opt out of this market segment because of fixed costs of due diligence and marketing or a small issuer pool.

[589] Aggregate conditions, such as a prolonged period of low interest rates, may also contribute to sustained reliance on exempt offerings. *See, e.g.,* Elisabeth de Fontenay, *The Deregulation of Private Capital and the Decline in the Public Company.* 68 Hastings L. J. 445 (2017), at footnote 7; McKinsey, *Private Markets Come of Age: McKinsey Global Private Markets Review* (2019), *https://www.mckinsey.com/~/media/mckinsey/industries/private%20equity%20and%20principal%20investors/our%20insights/private%20markets%20come%20of%20age/private-markets-come-of-age-mckinsey-global-private-markets-review-2019-vf.ashx* (noting the role of low interest rates in investor pursuit of high-yield investments, including in private capital markets).

[590] *See, e.g., supra* Section II.F.

[591] *See also* Proposing Release, at note 375.

[592] *See also* Proposing Release, at note 376. Differences in payoffs may be compensation for value added by the expertise, advice, governance, and network connections contributed by large investors.

Today non-accredited investors may invest in a wide range of financial assets with high risk or due diligence costs, both as part of the securities market (*e.g.,* leveraged investments in individual listed securities; short positions; holdings of registered securities of foreign, small-cap, and over-the-counter (OTC) issuers; and holdings of registered nontraded securities, including REITs and structured notes) and outside the securities market (*e.g.,* futures, foreign exchange, real estate, individual small businesses, peer-to-peer lending, and financial transactions that entail high risk or leverage). Thus, the incremental effects on non-accredited investors of potential additional investment in exempt offerings under the amendments should be assessed relative to the existing market conditions.

Some commenters expressed concerns that facilitating capital raising through exempt offerings may incrementally contribute to the ongoing decline in U.S. registered offerings, limiting the overall set of investment opportunities and information available to non-accredited investors.[593] While the aggregate trend of the decline in U.S. registered offerings, which dates back to the aftermath of the 2000 stock market crash, is an important element of the baseline, we expect the amendments being adopted in this release to have at most a marginal impact on this trend for the following reasons:

• Amendments to individual exemptions that have the greatest potential to result in the growth in capital raising pursuant to those exemptions relative to the baseline affect the market segments that are relatively small in absolute terms today (Regulation A, Regulation Crowdfunding, and Rule 504). While individual issuers may realize significant gains in the form of greater availability or decreased cost of capital, the aggregate effects of the amendments on the market as a whole are likely to be modest in absolute terms. Moreover, issuers that rely on Regulation A, Regulation Crowdfunding, and Rule 504 tend to be at a much earlier stage of development than a traditional IPO issuer.[594] While expanded offering limits may attract some additional issuers that are larger or more mature, the typical issuer relying on these exemptions—especially Regulation Crowdfunding—is unlikely to be able to conduct a traditional IPO at the issuer's present stage of development. This should mitigate concerns about increased substitution of traditional IPOs for Regulation Crowdfunding or Regulation A under the amendments.

• While changes to the disclosure requirements for sales to non-accredited investors under Rule 506(b) will reduce the cost to issuers of sales to such investors and may draw additional issuers to allow non-accredited investors in Rule 506(b) offerings, Rule 506(b) offerings with non-accredited investors currently comprise a relatively small portion of the market. Almost all such offerings report only having accredited investors.[595] Exempt offering integration amendments are most likely to affect issuers that rely on multiple exemptions, particularly ones involving non-accredited investors. We believe that the added flexibility and reduced cost of capital raising may be highly beneficial to the affected issuers—particularly for smaller issuers and issuers that lack an established network of angel investors or venture backing and thus rely on a combination of capital raising strategies to finance their growth. Nevertheless, for the majority of non-reporting issuers that raise financing from accredited investors without general solicitation (see Table 6 below), the integration amendments will likely have limited effects.

• Further, the integration amendments we are adopting include provisions intended to facilitate exempt and registered offerings occurring close in time and, as such, may make it easier for some issuers to attempt registered offerings. For some issuers looking to do bridge financing right before an IPO, the additional certainty provided by the new integration rule may allow them to accelerate the process of initiating the IPO (or at least provide additional certainty that the prior offering will not be integrated with the IPO).

To the extent that the amendments contribute to some substitution between registered and exempt offerings, it is important to consider any such substitution in the context of other economic channels through which the amendments affect capital allocation and the availability of investable opportunities:

• We do not expect the amendments to deter a significant proportion of the issuers that are large and mature enough to be on the cusp of going public from pursuing a public offering. Such issuers likely already have a developed network of angel investors and/or backing from venture capitalists on which they can rely to raise the necessary amount of financing today. Thus, such issuers' decision to go public is likely driven more by the benefits of being a reporting company (relative to the cost of a registered offering and being a reporting company).[596]

• Additional flexibility in access to capital can help existing issuers meet their financing needs at a lower cost and allocate capital to growth opportunities more efficiently, with the resulting benefits for economic growth, competition, and capital markets as a whole.

• The amendments might have the most significant effects on smaller growth issuers that presently lack sufficient access to financing that they require to develop their business model and gain scale. Such issuers may face significant financing constraints and lack an established network of angel investors or venture capital backing and may be too early in their lifecycle to be a candidate for a public offering. Thus, if the flexibility added by the amendments allows some of these small issuers to raise enough external financing to develop their business model and scale up to a point where they may become viable candidates for a public offering, the amendments might diversify the pool of prospective issuers that are able to conduct a registered

[593] *See, e.g.,* Better Markets Letter; Letter from Center for American Progress, et al. dated May 26, 2020 (''CAP, et al. Letter''); CFA Letter; and HMA Letter.

[594] *See infra* note 596.

[595] *See supra* note 127.

[596] One commenter stated that ''[w]hile we do not disagree with the statement that provisions of the Release would not be expected to 'deter a significant portion' of issuers from pursing a public offering, we believe . . . that the provisions of the Release would be expected to contribute to a lower (rather than higher) number of SEC-registered companies.'' *See* CII Letter. However, the data on IPO issuer age and size over time appears to support our view. *See, e.g.,* Jay R. Ritter, *Initial Public Offerings: Median Age of IPOs Through 2019,* (Jan. 14, 2020), *available at https://site.warrington.ufl.edu/ritter/files/2020/02/IPOs2019Age.pdf* (citing median IPO issuer age during 2001 through 2019 as ten years) and Jay R. Ritter, *Initial Public Offerings: Sales Statistics Through 2019,* (Mar. 10, 2020), *available at https://site.warrington.ufl.edu/ritter/files/IPOs2019_Sales.pdf* (citing in Table 12 median sales of IPO issuers, expressed in 2005 dollars, as approximately $47 million in 2019). By comparison, the age and size of Regulation A and Regulation Crowdfunding issuers is much smaller. The median Regulation Crowdfunding issuer had no revenues and had an age of approximately two years. *See* Table 9 below. The median Regulation A issuer had no revenues and had an age of approximately three years. *See* 2020 Regulation A Review, at Table 5. In Regulation D offerings, the median issuer age is two years; the median non-fund issuer size (revenues), where reported, is $1 million–$5 million; to the extent that the offering proceeds can serve as a proxy for issuer size and financing needs in offerings without an offering limit, the median Rule 506(b) reported proceeds were $1.5 million. *See* Table 7 below. Thus, we continue to believe that the amendments to offering limits and integration provisions will not result in significant substitution between new IPO activity and additional exempt offerings.

offering, which could result in a higher number of IPOs in the future.[597]

- Overall, expanded access to capital may draw new businesses to capital markets, which might have otherwise found a securities offering to be impractical or too costly. Without a securities offering, some of these businesses might not have been able to grow their operations (and in the process create value for their owners).

Some of the amendments affect the same offerings and issuers or have mutually reinforcing or partly offsetting effects, which makes it more difficult to draw conclusions about the net effects of the final amendments package as a whole. For example, it is difficult to predict how the amendments that expand, simplify, and increase the uniformity of integration safe harbors will affect issuer reliance on individual exemptions. Nevertheless, we expect that these integration amendments will overall facilitate capital formation by harmonizing requirements, reducing legal costs, and providing additional flexibility to issuers seeking an exemption from registration or transitioning to a registered offering. The amendments to offering limits for individual exemptions may lead to increased substitution between exemptions. On the other hand, Regulation Crowdfunding amendments relaxing investment limits and raising offering limits may result in mutually reinforcing benefits for capital formation.

Finally, we recognize that the amendments to exemptions that are relatively infrequently used today compared to Rule 506(b) of Regulation D (such as Regulation Crowdfunding, Regulation A, Rule 504, and Rule 506(c)) are likely to have limited aggregate economic effects on issuers and on investors in absolute terms, even if the percentage changes in the offering activity conducted under those exemptions are significant.

Recently, the Commission amended the accredited investor definition.[598] Those amendments may affect the economic effects of the amendments considered here. In particular, some of the economic effects of the amendments discussed here that facilitate exempt offerings to accredited investors (*e.g.,* expanded integration safe harbors, exemption of accredited investors from Regulation Crowdfunding investment limits) will be amplified to the extent that issuers can offer securities to an expanded pool of accredited investors. In turn, some of the effects of the amendments discussed here that facilitate exempt offerings to non-accredited investors (*e.g.,* expanded offering limits under Regulation A, Regulation Crowdfunding, and Rule 504, testing-the-waters and crowdfunding vehicle provisions of amended Regulation Crowdfunding, and amendments to non-accredited investor disclosure requirements under Rule 506(b)) may be smaller to the extent that issuers able to access an expanded accredited investor pool become less reliant on exempt offerings to non-accredited investors.

*B. Baseline*

We examine the economic effects of the final amendments relative to the baseline, which comprises the existing regulatory requirements (described in detail in Section I above) and market practices related to exempt offerings (described below).

Generally, the parties affected by the amendments include current and prospective issuers and investors in exempt offerings. To the extent that the amendments affect how issuers choose between registered and exempt offerings, the amendments also might affect issuers and investors in the registered offering market. In cases where intermediaries are involved in exempt offerings and either receive transaction-based compensation or perform some of the offering-related or compliance functions on behalf of issuers, intermediaries will also be affected by the amendments. In particular, Regulation Crowdfunding requires offerings to be conducted through an intermediary's online platform. Thus, to the extent that the amendments affect Regulation Crowdfunding offering activity, they are expected to have direct effects on all crowdfunding intermediaries. In other instances, the effects of the amendments on intermediaries might be more limited (*e.g.,* intermediaries might verify investor status for issuers under Rule 506(c), be authorized by some issuers to test the waters with investors prior to an offering, or be drawn to the Regulation A market if they find that the increase in the offering limit makes underwriting more cost-effective).

Below we present data on the recent state of the market affected by the amendments. In 2019, registered offerings accounted for $1.2 trillion (30.8 percent) of new capital, compared to approximately $2.7 trillion (69.2 percent) that we estimate was raised through exempt offerings.[599] Of the approximately $2.7 trillion estimated as raised in exempt offerings in 2019, the following table shows the amounts that we estimate were raised under each of the identified exemptions.[600]

[597] Private capital can provide a critical lifeline to startup and other small private firms to proceed from a development stage to implementing their business model, generating revenue, and growing in size. Larger firms, firms past the development stage, and firms that have venture capital backing (although private capital may also take other, non-venture capital forms) are more likely to achieve a successful IPO exit (as opposed to, for instance, being acquired by a larger competitor). *See, e.g.,* Annette B. Poulsen & Mike Stegemoller, *Moving from Private to Public Ownership: Selling out to Public Firms versus Initial Public Offerings,* 37 Fin. Mgmt. 81 (2008), at Table 7; James C. Brau, Bill Francis & Ninon Kohers, *The Choice of IPO versus Takeover: Empirical Evidence,* 76 J. Bus. 583 (2003), at 583; Onur Bayar & Thomas Chemmanur, *What Drives the Valuation Premium in IPOs versus Acquisitions*? *An Empirical Analysis,* 18 J. Corp. Fin. 451 (2012), at Table 3. *See also supra* note 596 (discussing the substantial size of a typical IPO issuer).

[598] *See* Amending the ''Accredited Investor'' Definition, Rel. No. 33–10824 (Aug. 26, 2020) [85 FR 63726 (Oct. 9, 2020)].

[599] Unless otherwise indicated, information in this release on Regulation D, Regulation A, and Regulation Crowdfunding offerings is based on analyses by staff in the Commission's Division of Economic Risk and Analysis of data collected from SEC filings.

[600] ''Other exempt offerings'' includes Section 4(a)(2), Regulation S, and Rule 144A offerings. The data used to estimate the amounts raised in 2019 for other exempt offerings includes: (1) Offerings under Section 4(a)(2) of the Securities Act that were collected from Thomson Financial's SDC Platinum, which uses information from underwriters, issuer websites, and issuer Commission filings to compile its Private Issues database; (2) offerings under Regulation S that were collected from Thomson Financial's SDC Platinum service; and (3) resale offerings under Rule 144A that were collected from Thomson Financial SDC New Issues database, Dealogic, the Mergent database, and the Asset-Backed Alert and Commercial Mortgage Alert publications, to further estimate the exempt offerings under Section 4(a)(2) and Regulation S. We include amounts sold in Rule 144A resale offerings because those securities are typically issued initially in a transaction under Section 4(a)(2) or Regulation S but generally are not included in the Section 4(a)(2) or Regulation S data identified above. These numbers are accurate only to the extent that these databases are able to collect such information and may understate the actual amount of capital raised under these offerings if issuers and underwriters do not make this data available. The data on Rule 144A debt offerings from Mergent is available only through the end of August 2019. We have extrapolated the data to obtain a full calendar year.

TABLE 5—OVERVIEW OF AMOUNTS RAISED IN THE EXEMPT MARKET IN 2019

| Exemption | Amounts reported or estimated as raised in 2019 (billion) |
|---|---|
| Rule 506(b) of Regulation D | $1,492 |
| Rule 506(c) of Regulation D | 66 |
| Regulation A: Tier 1 | 0.044 |
| Regulation A: Tier 2 | 0.998 |
| Rule 504 of Regulation D | 0.228 |
| Regulation Crowdfunding | 0.062 |
| Other exempt offerings | 1,167 |

The following table [601] summarizes recent data on the Regulation D market.

TABLE 6—OFFERINGS UNDER REGULATION D IN 2019

| | Rule 504 | Rule 506(b) | Rule 506(c) |
|---|---|---|---|
| Number of New Offerings | 476 | 24,636 | 2,269. |
| Amount Reported Raised | $0.2 billion | $1,491.9 billion | $66.3 billion. |

As can be seen from Table 6, Rule 506(b) dominates the market for exempt securities offerings. Amounts raised under Rule 506(b) also exceeded the amounts raised in the registered market, estimated to be $1.2 trillion in 2019.[602]

The table below presents summary statistics for Regulation D offering and issuer characteristics over 2009–2019.

TABLE 7—SUMMARY OF REGULATION D ISSUER AND OFFERING CHARACTERISTICS, 2009–2019 [603]

| | |
|---|---|
| Number of issuers | 173,697. |
| Number of Offerings | 242,070. |
| Amounts Reported Sold | $13,576 billion. |
| Mean Amount Sold (if reported) | $58 million. |
| Median Amount Sold (if reported) | $1.50 million. |
| Mean Offer Size (if reported) | $71 million. |
| Median Offer Size (if reported) | $2.25 million. |
| Median Years Since Incorporation | 2. |
| Median Issuer Size (if reported): | |
| Private Funds (Net Asset Value) | $25 million–$50 million. |
| Non-Fund Issuers (Revenue) | $1 million–$5 million. |
| Used Intermediary | 20%. |
| Total Investors: | |
| As reported in initial Form D filings | 3.4 million. |
| All filings, including amendments | 5.9 million. |
| Average Investors/Offering (if reported) | 10. |

The table below [604] summarizes amounts sought and reported raised in offerings under Regulation Crowdfunding since its inception.[605]

[601] This table includes offerings by pooled investment funds. Information on Regulation D offerings, including offerings under Rule 504 and Rule 506, is based on staff analysis of data from Form D filings on EDGAR. The amount raised is based on the amounts reported as ''Total amount sold'' in all Form D filings (new filings and amendments) on EDGAR. Subsequent amendments to a new filing were treated as incremental fundraising and recorded in the calendar year in which the amendment was filed. It is likely that the reported data on Regulation D offerings underestimates the actual amount raised through these offerings. First, Rule 503 of Regulation D requires issuers to file a Form D no later than 15 days after the first sale of securities, but a failure to file the notice does not invalidate the exemption. Accordingly, it is possible that some issuers do not file Form D for offerings relying on Regulation D. Second, underreporting could also occur because a Form D may be filed prior to completion of the offering, and our rules do not require issuers to amend a Form D to report the total amount sold on completion of the offering or to reflect additional amounts offered if the aggregate offering amount does not exceed the original offering size by more than 10 percent.

[602] *See also* Concept Release; and Scott Bauguess, Rachita Gullapalli, & Vladimir Ivanov, *Capital Raising in the U.S.: An Analysis of the Market for Unregistered Securities Offerings, 2009–2017* (U.S. Sec. and Exch. Comm'n, Division of Economic and Risk Analysis White Paper, Aug. 1, 2018), *available at https://www.sec.gov/dera/staff-papers/white-papers/dera_white_paper_regulation_d_082018.*

[603] *See also supra* note 601. The number of issuers is based on a unique Central Index Key (CIK) identifier. Number of offerings represents all new offerings initiated during the period 2009 through 2019, as represented by a Form D filing, and offerings initiated prior to 2009 but continuing into the period 2009 through 2019 (as represented by an amendment filed). Amounts Reported Sold is calculated as described above and includes amounts sold reported in initial Form D filings and incremental amounts sold reported in amendment filings. Total number of investors, as reported in Form D and Form D/A filings, is calculated similarly. Issuers are not required to file a Form D at the close of offering. Not all offerings report amounts raised sold in their initial Form D filing.

[604] *See supra* note 599. Issuers that have not raised the target amount or not filed a report on Form C–U are not included in the estimate of proceeds.

[605] For a discussion of the Regulation Crowdfunding market, *see also* 2019 Regulation Crowdfunding Report.

TABLE 8—REGULATION CROWDFUNDING OFFERING AMOUNTS AND REPORTED PROCEEDS, MAY 16, 2016–DECEMBER 31, 2019

| | Number | Average | Median | Aggregate (million) |
|---|---|---|---|---|
| Target amount sought in initiated offerings | 2,003 | $63,791 | $25,000 | $126.9 |
| Maximum amount sought in initiated offerings | 2,003 | 599,835 | 535,000 | 1,174.2 |
| Amounts reported as raised in completed offerings | 795 | 213,678 | 106,900 | 169.9 |

Given the offering limits, crowdfunding is used primarily by relatively small issuers. The table below[606] presents data on the characteristics of issuers in crowdfunding offerings.

TABLE 9—CHARACTERISTICS OF ISSUERS IN REGULATION CROWDFUNDING OFFERINGS, MAY 16, 2016–DECEMBER 31, 2019

| | Average | Median |
|---|---|---|
| Age in years | 2.9 | 1.8 |
| Number of employees | 5.3 | 3.0 |
| Total assets | $455,280 | $29,982 |
| Total revenues | $325,481 | $0 |

Based on information in new Form C filings, the median crowdfunding offering was by an issuer that was incorporated approximately two years prior to the offering and employed about three people. The median issuer had total assets of approximately $30,000 and no revenues (just over half of the offerings were by issuers with no revenues). Approximately ten percent of offerings were by issuers that had attained profitability in the most recent fiscal year prior to the offering.

The following table[607] summarizes amounts sought and reported raised in offerings under Regulation A since the effective date of the 2015 Regulation A amendments.

TABLE 10—REGULATION A OFFERING AMOUNTS AND REPORTED PROCEEDS IN $ MILLION, JUNE 19, 2015–DECEMBER 31, 2019

| | Tiers 1 & 2 | Tier 1 | Tier 2 |
|---|---|---|---|
| All Filed Offerings: | | | |
| Aggregate dollar amount sought | $11,170.2 million | $1,101.5 million | $10,068.6 million. |
| Number of offerings | 487 | 145 | 342. |
| Average dollar amount sought | $22.9 million | $7.6 million | $29.4 million. |
| Offerings Qualified by Commission Staff: | | | |
| Aggregate dollar amount sought | $9,094.8 million | $759.0 million | $8,335.8 million. |
| Number of offerings | 382 | 105 | 277. |
| Average dollar amount sought | $23.8 million | $7.2 million | $30.1 million. |
| Capital Reported Raised: | | | |
| Aggregate dollar amount reported raised | $2,445.9 million | $230.4 million | $2,215.6 million. |
| Number of issuers reporting proceeds | 183 | 39 | 144. |
| Average dollar amount reported raised | $13.4 million | $5.9 million | $15.4 million. |

As can be seen, Tier 2 accounted for the majority of Regulation A offerings (70 percent of filed and 73 percent of qualified offerings), amounts sought (90 percent of amounts sought in filed offerings and 9 percent of amounts sought in qualified offerings), and reported proceeds (91 percent) during this period.

Because reliance on integration safe harbors is not required to be disclosed, we lack a way to reliably quantify the pool of issuers and offerings that would be affected by the amended approach to integration. Nevertheless, some indication of the scope of issuers affected by integration provisions may come from indirect sources: In 2019, based on the analysis of Form D filings, we estimate that approximately 1,256 issuers other than pooled investment funds filed more than one Form D (excluding amendments) and an additional 258 issuers filed one new Form D and either had a registration statement declared effective, had a Regulation A offering statement qualified, or filed a new or amended Form C. Many private placements, however, rely on Section 4(a)(2) rather than on the Regulation D safe harbor. We lack data on Section 4(a)(2) offerings due to the absence of filing or disclosure requirements associated with this statutory exemption. Also, for issuers filing forms for multiple offerings, in most cases we cannot reliably determine if, and when, proceeds were raised or the offering closed, or whether the specific offerings were eventually subject to integration or not. For instance, a closeout filing on Form D is

[606] *See supra* note 599. The estimates are based on data from Form C or the latest amendment to it, excluding withdrawals. *See also* 2019 Regulation Crowdfunding Report.

[607] The estimates include post-qualification amendments and exclude abandoned or withdrawn offerings. *See also* 2020 Regulation A Review.

not required, making it difficult to know when the offering closed or how much was raised. Similarly, proceeds data for Regulation A and Regulation Crowdfunding can be lagged or incomplete.

Except where specified otherwise, the analysis is based on available data through the most recently completed calendar year (2019). Subsequent to the end of the period analyzed here, as of September 2020, the U.S. market has experienced significant macroeconomic and market dislocations related to the global effects of COVID–19 and the related response.[608] These factors are expected to have a negative market-wide impact on the levels of offering activity (including under Regulation A, Regulation D, and Regulation Crowdfunding).[609] Offering activity data through the second quarter of 2020 is likely not reflective of the full-year effects of this shock due to significant lags in the completion of offerings and reporting of proceeds data: For the twelve months ending June 2020, approximately $1.50 trillion in proceeds was reported under Regulation D (including $0.2 billion under Rule 504, $1,430.8 billion under Rule 506(b), and $68.6 billion under Rule 506(c)); $1.3 billion under Regulation A; and $88 million under Regulation Crowdfunding (compared to approximately $1.56 trillion in proceeds under Regulation D; $1 billion under Regulation A and approximately $62 million under Regulation Crowdfunding during calendar year 2019).[610] Irrespective of these short-term fluctuations, we believe that the economic analysis considerations discussed below generally continue to apply. Inherent cyclicality of offering activity, irrespective of the cause of the macroeconomic shock, is a part of the baseline and prior academic research.[611] While macroeconomic shocks generally reduce capital formation levels (due to both supply and demand factors), which in the short run will negatively affect offering activity incremental to the rule in absolute terms, the effects of the economic considerations we discuss below are likely to remain applicable over the medium- to long-run, which encompasses periods of sustained growth interspersed with market contractions.

Further, on May 4, 2020, the Commission adopted temporary final rules under Regulation Crowdfunding to facilitate capital formation for small businesses impacted by COVID–19, which include, among other things, an exemption from certain financial statement review requirements for issuers offering $250,000 or less of securities in reliance on Regulation Crowdfunding within a 12-month period.[612] These temporary final rules were subsequently extended and apply to offerings initiated under Regulation Crowdfunding between May 4, 2020, and February 28, 2021.[613]

### *C. Economic Effects of the Final Amendments*

#### 1. Integration

The final amendments will revise the framework for integration analysis. As discussed in greater detail in Section II.A, the amendments update and expand existing integration provisions to provide greater uniformity and flexibility to issuers regarding integration of offerings. Considered together, the final amendments are expected to facilitate compliance and reduce issuer costs through greater consistency and uniformity across exemptions, and thus promote the use of exemptions by issuers that undertake multiple offerings.

##### a. Benefits

The final amendments expand and simplify the integration framework, provide greater uniformity in integration tests applicable across offering types, and in many cases shorten the period of time that issuers must wait between offerings to rely on a safe harbor from integration. The amendments are expected to reduce the cost of compliance with the integration requirements for issuers, which was generally supported by commenters.[614] In particular, the reduction in certain safe harbor periods from six months to 30 days is expected to facilitate compliance for issuers that might need to adjust their financing strategy as a result of evolving business circumstances, growing financing needs, or an inability to attract sufficient capital through a single offering method. A six-month waiting period between consecutive offerings, or the need to assess whether consecutive offerings can be treated as separate offerings or whether they must be integrated, can significantly limit such issuers' ability to raise sufficient capital or react to dynamic business conditions. Similarly, expanding the bright-line safe harbors from integration to a broader set of offering types generally reduces the need for an issuer to conduct an in-depth facts-and-circumstances analysis, as Rule 152(b) states that ''[n]o integration analysis under paragraph (a) of this section is required, if any of the following non-exclusive safe harbors apply.'' This is expected to reduce the costs for issuers seeking to raise capital through multiple offering exemptions. Overall, greater emphasis in the integration analysis on whether a particular offering satisfies the registration requirements or conditions of the specific exemption is expected to reduce integration-specific compliance efforts. The amendments are expected to reduce the costs of compliance with the provisions of the exemptions for issuers that conducted an offering before, or close in time with, another offering. The resulting decrease in compliance costs may encourage additional issuers to pursue one or more exempt offerings or to pursue a private placement and a registered offering.

The amendments are expected to be particularly beneficial to young, financially constrained, or high-growth issuers whose capital needs, and thus preferred capital raising methods, may change more frequently. The flexibility may be especially valuable in cases where one or more of the exempt offerings conducted by an issuer is subject to offering limits, as well as in cases where an issuer conducts multiple offerings that are subject to different solicitation, disclosure, offering size, or investor requirements. Overall, this flexibility may promote capital formation and enable issuers to optimize their financing strategy so as to attain a lower overall cost of capital

[614] *See supra* notes 39–41 and accompanying text.

while raising the required amount of external financing. The described benefits also are expected to accrue to the shareholders of those issuers through enhanced shareholder value, particularly if the increased flexibility in accessing external financing enables issuers to more efficiently pursue high-growth investment opportunities.

The described benefits may be limited in cases of amendments that codify existing guidance, to the extent that the market has already developed similar practices. Further, if issuers in certain exempt offerings, such as offerings under Rule 506(c), Regulation A, or Regulation Crowdfunding, account for most of the use of the integration safe harbor amendments, the aggregate effects of the integration amendments are expected to be limited, given the relatively small market share of these exemptions, compared to the far more prevalent Rule 506(b) and Section 4(a)(2) offerings.[615] Because Rule 506(b) does not impose an offering limit, and most such offerings do not involve non-accredited investors,[616] many issuers are likely able to meet their financing needs without having to conduct multiple offerings, which may further limit the effects of the integration amendments.

b. Costs

The amendments could on the margin result in additional financing being raised from non-accredited investors without registration requirements.[617] The disclosure requirements of all of these exemptions are less extensive than the requirements associated with a registered offering, which could result in less public disclosure generally if companies that would have become reporting companies decide to remain non-reporting companies.

Another potential concern is that a decrease in the integration of multiple offerings might result in inadvertent overlaps in solicitation of investors for offerings with different communications provisions. For example, Rule 506(b) and Section 4(a)(2) offerings, which do not allow general solicitation, may be preceded by offerings relying on exemptions that allow general solicitation (such as Regulation Crowdfunding, Regulation A, or Rule 506(c)), which could condition the market for the subsequent private placement offering. This may marginally increase risks to non-accredited investors that may participate in the subsequent private placement offering to the extent such investors rely on the general solicitation, because private placement offerings incorporate fewer investor protections.[618] Several factors are expected to largely alleviate these potential risks to investors. Importantly, the amendments do not alter the substantive requirements, including investor protections, associated with individual offering methods. The amendments more closely align issuer efforts to comply with integration provisions and requirements of the respective exemptions, including, importantly, the investor protection provisions of each respective exemption. Moreover, nothing in the amendments eliminates the requirements of the respective exemption or, in the context of registered offerings, the registration and gun jumping provisions of the Securities Act. New Rule 152 specifies that the provisions of the rule will not have the effect of avoiding integration for any transaction or series of transactions that, although in technical compliance with the rule, is part of a plan or scheme to evade the registration requirements of the Securities Act. Further, issuers remain prohibited from using general solicitation in a Rule 506(b) offering, through any means, irrespective of the integration amendments.

The amendments contain several other specific safeguards that are expected to minimize potential costs and risks to investors. Rule 152(a)(1) requires that for an exempt offering prohibiting general solicitation, the issuer must have a reasonable belief, based on the facts and circumstances, with respect to each purchaser in the exempt offering prohibiting general solicitation, that the issuer (or any person acting on the issuer's behalf) either did not solicit such purchaser through the use of general solicitation, or established a substantive relationship with such purchaser prior to the commencement of the exempt offering prohibiting general solicitation. This provision is expected to minimize the effect on investors of possible solicitation overlaps in cases of multiple offerings. This provision further bolsters existing solicitation restrictions in the individual exemptions and, crucially, focuses the integration analysis on the requirement that the issuer comply with solicitation restrictions intended to protect investors.

Further, Rule 152(a)(2) provides that an issuer conducting two or more concurrent exempt offerings permitting general solicitation, in addition to satisfying the particular requirements of each exemption relied on, general solicitation offering materials for one offering that include information about the material terms of a concurrent offering under another exemption may constitute an offer of the securities in such other offering, and therefore the offer must comply with all the requirements for, and restrictions on, offers under the exemption being relied on for such other offering, including any legend requirements and communications restrictions. This requirement will strengthen investor protection by assuring that one exemption is not being improperly used to make offers under the second exemption, without being subject to the same offering restrictions. The legend requirement will provide notice to investors and thereby help minimize potential confusion about the offering methods, reducing the risk of uninformed investor decisions as a result of reliance on preliminary information contained in such solicitations.

[615] We recognize that other amendments we are adopting in this release, such as increased offering limits under Regulation A and Regulation Crowdfunding, increased investment limits under Regulation Crowdfunding, and additional optional means of verification of accredited investor status under Rule 506(c), might increase the use of Regulation A, Regulation Crowdfunding, and Rule 506(c).

[616] We recognize that the amendments to non-accredited investor disclosure requirements might increase the incidence of non-accredited investors in Rule 506(b) offerings.

[617] For example, conducting a Rule 506(b) offering and a Regulation A or Regulation Crowdfunding offering may enable an issuer to reach a broader non-accredited investor base and/or raise a greater amount of non-accredited investor capital. Certain exemptions (Regulation Crowdfunding, Regulation A Tier 2) also conditionally exempt securities offered under the respective exemption from the number of shareholders of record for purposes of Section 12(g). *See supra* note 52 and accompanying text (discussing commenters that opposed the integration amendments because they would allow an issuer to do indirectly what it cannot do directly). For example, one commenter stated that the amendments would allow issuers to "easily avoid registration requirements by dividing large financings into multiple smaller exempt offerings separated by only a brief period of time." *See* R. Rutkowski Letter. Another commenter stated that, under the proposed integration framework, "the original goal of preventing issuers from artificially separating related transactions into multiple offerings to avoid the registration requirement is gone under this approach." *See* CFA Letter. Requiring no integration so long as each individual offering satisfies a particular exemption, according to this commenter, "subverts the purpose of integration, which specifically looks at the totality of a financing scheme rather than different components in isolation." *Id.* This commenter stated that the proposal "would enshrine a framework that effectively allows concurrent and serial offerings that are clearly part of a single plan of financing to avoid integration." *Id.*

[618] For instance, Regulation A and Regulation Crowdfunding offerings are subject to more extensive substantive disclosure requirements. Rule 506(c) offerings do not incorporate disclosure requirements but require verification of accredited investor status, reducing the likelihood of inadvertent non-accredited investor participation, compared to a Rule 506(b) offering.

The amended non-exclusive safe harbors from integration are designed to minimize potential risks to investors. The 30-day period in the first safe harbor is expected to minimize inadvertent overlaps between offerings and investor solicitation for different offerings while providing issuers greater flexibility to adjust their financing strategy as a result of evolving circumstances. For an exempt offering for which general solicitation is not permitted that follows by 30 calendar days or more an offering that allows general solicitation, the provisions of Rule 152(a)(1) shall apply,[619] which is expected to further mitigate such concerns. In addition, if an issuer conducts more than one offering under Rule 506(b), the number of non-accredited investors purchasing in all such offerings within 90 calendar days of each other may not exceed 35. This requirement is expected to address concerns that failure to integrate multiple Rule 506(b) offerings could result in sales to a large number of non-accredited investors.

The second safe harbor involves offerings under Rule 701 or Regulation S. As discussed above, offers and sales pursuant to Rule 701 and employee benefit plans are limited to employees, consultants and advisors, with whom the issuer has written compensation plans or agreements. Given the relationship between these investors and the issuer, excluding such offerings from integration is not likely to raise meaningful investor protection concerns. The amendments also codify a long-standing Commission position with respect to integration of offshore transactions made in compliance with Regulation S with registered domestic offerings or domestic offerings that satisfy the requirements for an exemption from registration under the Securities Act.[620] When determining the availability of this safe harbor, it will still be necessary to assess each transaction separately for compliance with Regulation S or the other exemption. After considering commenter input, to avoid disruption to the existing Regulation S market practices, we are not adopting the proposed amendment to Regulation S that would have changed the definition of ''directed selling efforts'' in Rule 902 nor the proposed requirement that a Regulation S issuer that engages in general solicitation activity prohibit resales to U.S. persons of the Regulation S securities for a period of six months from the date of sale except to QIBs or IAIs. We recognize that general solicitation activity undertaken in connection with offers and sales under an exemption from registration concurrent with a Regulation S offering may raise concerns about flowback of the Regulation S securities to the United States. However, the Commission has previously addressed the risks related to abuse of Regulation S by imposing enhanced restrictions applicable to offshore sales of equity securities of domestic issuers[621] and we are of the view that these existing requirements will continue to be effective in addressing such concerns.

The third safe harbor concerns offerings for which a Securities Act registration statement has been filed following a completed or terminated offering. The third safe harbor provides that an offering for which a Securities Act registration statement has been filed will not be integrated if it is made subsequent to a terminated or completed offering for which general solicitation is not permitted. Because private placements would continue to restrict general solicitation, the impact on investors in the private placement, most of which are deemed to have the financial sophistication and ability to sustain the risk of loss of investment or fend for themselves, is likely to be minimal. In turn, because private placements do not permit general solicitation, and because the extensive registration requirements apply to the registered offering, it is unlikely to have any impact on investors in the registered offering. The third safe harbor also provides that a registered offering will not be integrated if made subsequent to a completed or terminated exempt offering for which general solicitation is permitted but that was either limited to QIBs and IAIs, or was terminated or completed more than 30 calendar days prior to commencement of the registered offering. This is similar to current Rule 147(h), Rule 147A(h), and Rule 255(e) of Regulation A. Because of the extensive protections built into the registration requirements and the 30-day waiting period that would apply if a solicitation involved investors other than QIBs or IAIs, this safe harbor is unlikely to have adverse impacts on investors in the registered offering. In cases where solicitation was limited to QIBs and IAIs, due to the sophistication of those investors, we do not believe that the lack of a 30-day waiting period in the integration safe harbor meaningfully affects investor protection. The amendment is also consistent with Securities Act Section 5(d) and Rule 163B, which allow solicitation of QIBs and IAIs at any time prior to a registered offering.

The fourth safe harbor extends the approach in Regulation A and Rules 147 and 147A and in the guidance regarding Regulation Crowdfunding to provide that offers and sales made in reliance on an exemption for which general solicitation is permitted will not be integrated if made subsequent to any prior terminated or completed offering. The disclosure and substantive requirements of these exemptions should minimize potential costs to investors from not integrating these offerings with prior offers and sales.

We believe these amendments appropriately calibrate the effort required on the part of issuers to address potential overlaps between multiple offerings by the same issuer that may raise investor protection concerns. Overall, because the amendments contain anti-evasion language and issuers must continue to meet the conditions of each exemption they are relying on, and because investor protection provisions of each exemption as well as general antifraud provisions continue to apply, the amendments are not expected to have significant adverse effects on investor protection.

We recognize that issuers seeking to rely on one or more of the integration provisions will incur costs of analyzing the facts and circumstances of the contemplated offerings and/or the respective integration safe harbors. While we believe that the amendments substantially simplify and streamline the integration safe harbors, we recognize that some issuers might find that navigating the amended integration framework requires additional time and effort. Because use of the integration safe harbors will remain voluntary, we expect that issuers will only rely on the safe harbors if such reliance might reduce their compliance costs.

c. Effects of Efficiency, Competition, and Capital Formation

The amended integration provisions are expected to improve capital formation by enabling issuers to combine financing under different

[619] The provision requires that the issuer must have a reasonable belief, based on the facts and circumstances, with respect to each purchaser in the exempt offering prohibiting general solicitation, that the issuer (or any person acting on the issuer's behalf) either: (i) Did not solicit such purchaser through the use of general solicitation, or (ii) established a substantive relationship with such purchaser prior to the commencement of the exempt offering prohibiting general solicitation.

[620] *See* Offshore Offers and Sales (Regulation S), Release No. 33–7505 (Feb. 17, 1998) [63 FR 9632 (Feb. 25, 1998)] (''Offshore Offers and Sales Release''), at Section III.C.1.

[621] *See* Offshore Offers and Sales Release.

exemptions and registered offerings more optimally as part of their financing strategy. However, the net capital formation benefits may be modest for issuers that do not need multiple offerings (*e.g.,* relying on a single Rule 506(b) offering with no, or few, non-accredited investors but seeking a larger amount of financing).

It is unclear how the integration amendments will affect competition for investor capital. To the extent the amendments reduce issuer compliance costs associated with accessing a broader range of offering exemptions, competition for investor capital in those market segments might increase. However, net effects on overall competition for investor capital may be limited to the extent that issuers reallocate between offering exemptions or additional investor capital is drawn to these markets under the amendments.

As discussed above, the amendments might offer the greatest benefits to smaller issuers that have varying financing needs or to issuers that need to rely on multiple offering exemptions to meet their financing needs (*e.g.,* because they lack an established accredited investor network to support financing exclusively through Rule 506(b) and need to rely on non-accredited investors or general solicitation).

By streamlining and harmonizing integration safe harbors, the amendments are expected to improve the efficiency and reduce the cost of an issuer's compliance efforts, particularly for issuers conducting multiple offerings.

d. Reasonable Alternatives

As an alternative, we could adopt a uniform safe harbor with a time period other than 30 days (*e.g.,* 15, 45, 60, 75, or 90 days). Compared to the final amendments, the alternative of a universal safe harbor with a shorter (longer) time period would reduce (increase) the likelihood that multiple offerings are integrated and, accordingly, reduce (increase) issuer costs of compliance. Compared to the final amendments, the alternative of a safe harbor with a shorter (longer) time period would provide issuers with greater (lower) flexibility in tailoring their capital raising strategy to changing financing needs and market conditions. Compared to the final amendments, such an alternative also might increase (reduce) the number of instances where issuers improperly divide a single plan of financing into multiple offerings.

As another alternative, we could replace the integration doctrine with general anti-evasion principles[622] or a disclosure requirement.[623] Compared to the amendments, this alternative would increase the likelihood that multiple offerings could be conducted consistent with Section 5 or the terms of any applicable exemptions and, accordingly, reduce costs of compliance for some issuers that seek to avoid or postpone registration. However, conducting an anti-evasion analysis or providing disclosures in cases of multiple offerings under this alternative could increase compliance costs for some issuers, compared to the amendments, depending on the nature of the disclosure requirement and issuer circumstances. Compared to the final amendments, this alternative would provide issuers with greater flexibility in tailoring their capital raising strategy to changing financing needs and market conditions. However, compared to the final amendments, such an alternative also would likely increase the number of instances where issuers improperly divide a single plan of financing into multiple offerings, even in the presence of general anti-evasion or disclosure requirements.

The amendments replace the five-factor test. As another alternative, we could codify the use of the five-factor test for all analyses of integration.[624] Compared to the final amendments, such an alternative could be more successful in identifying instances where issuers improperly divide what is economically a single offering into multiple offerings to avoid exemption limitations. However, it also would result in additional costs for issuers and reduced flexibility to combine multiple offering methods.

2. General Solicitation and Offering Communications

a. ''Demo Days'' and Similar Events

As discussed in greater detail in Section II.B.1 above, we are adding certain ''demo day'' communications to the list of communications that will not be deemed general solicitation. In a change from the proposal, in response to comments, we are expanding the types of entities that may sponsor an event in reliance on the exemption to include State governments and instrumentalities of State and local governments (in addition to local governments, as proposed). We are also revising the definition of ''angel investor group'' to specify that, such a group must have ''defined'' processes and procedures for making investment decisions, but that such processes and procedures do not necessarily need to be written. In response to commenters,[625] we are also revising the information that issuers may convey about an offering of securities during a ''demo day'' to add the unsubscribed amount in an offering. These changes may incrementally increase the reliance on the exemption, compared to the proposed provision. In addition, as discussed above, to address concerns raised by commenters with respect to the possibility of offering-related communications being made broadly to non-accredited investors, we are adopting certain limitations on the pool of investors that may virtually attend such events. This change may incrementally reduce reliance on the exemption, compared to the proposed provision.

i. Benefits

The amendments to Rule 148 specify that certain limited ''demo day'' activities would not be deemed general solicitation. These events are generally organized by a group or entity (such as a university, angel investors, an accelerator, or an incubator) that invites issuers to present their businesses to potential investors, with the aim of securing investment. These amendments are expected to benefit issuers by expanding the range of options for communicating about their business with prospective investors without incurring the cost of restrictions associated with general solicitation and by allowing them to more efficiently access potential investors, as supported by various commenters.[626] These benefits may be relatively more pronounced for small and emerging issuers that may not have a sufficient existing angel investor network to rely on in a Rule 506(b) or Section 4(a)(2) offering. The additional restrictions on the virtual participation of prospective

[622] *See* CrowdCheck Letter. In a comment on the Concept Release, this commenter explained its view that the ''integration doctrine should only be retained as an anti-avoidance mechanism where an issuer artificially divides an offering in order to comply with a number-of-investors or dollar offering limit.'' *See* CrowdCheck Concept Release Letter.

[623] *See* J. Clarke Letter (suggesting to replace the concept of integration with a form required by all issuers to file and keep current describing all historical and current exempt and registered offerings made by the issuer).

[624] *See* CFA Letter; and Md. St. Bar Assoc. Letter (suggesting that the five-factor test be retained).

[625] *See, e.g.,* IAA Letter; ACA Letter; Transcript of SEC Small Business Capital Formation Advisory Committee (May 8, 2020), *available at https://www.sec.gov/info/smallbus/acsec/sbcfac-transcript-050820.pdf,* at 70. An issuer would also be able to disclose at a ''demo day,'' as proposed, that (i) it is in the process of offering or planning to offer securities; (ii) the type and amount of securities being offered; and (iii) the intended use of the proceeds of the offering.

[626] *See supra* note 216.

investors in ''demo day'' events excluded from the definition of general solicitation are expected to reduce the likelihood of non-accredited investor participation, thus decreasing potential risk to investors.

ii. Costs

Several commenters expressed concern about the effect of the amendments on investors,[627] for example, because such expanded use of ''demo day'' activities could lead to an increase in instances of fraud.[628] Overall, we expect costs to investors from the ''demo day'' amendments to be modest because the amendments significantly restrict permissible activities of ''demo day'' sponsors. In particular, the sponsor of the seminar or meeting will not be allowed to: make investment recommendations or provide investment advice to attendees of the event; engage in any investment negotiations between the issuer and investors attending the event; charge attendees of the event any fees, other than reasonable administrative fees; receive any compensation for making introductions between event attendees and issuers or for investment negotiations between such parties; or receive any compensation with respect to the event that would require registration of the sponsor as a broker-dealer or an investment adviser. These restrictions are expected to mitigate the risk that investors would be improperly induced into an investment as a result of misleading information or sales pressure from financially incentivized ''demo day'' sponsors.

iii. Effects on Efficiency, Competition, and Capital Formation

The final amendments are expected to make it easier for issuers to participate in ''demo days'' without incurring the costs of restrictions associated with general solicitation. To the extent that the amendments encourage some additional issuers to participate in ''demo days,'' and such participation facilitates their efforts to raise capital, issuers might realize capital formation benefits. Overall, the effects of the amendments on efficiency, competition, and capital formation are expected to be modest because issuers may offer securities to the same individuals and groups other than through a ''demo day''.

iv. Reasonable Alternatives

As an alternative, we could limit the ''demo day'' exception under the amendments by prohibiting any form of control or affiliation with the issuer or group of issuers, prohibiting entities whose sole or primary purpose is to attract investors to private issuers, and limiting issuer's discussion to factual business information and prohibiting discussion of any potential securities offering, as suggested by one commenter.[629] This alternative would potentially reduce the risk of investors receiving biased information about the investment opportunity at the ''demo day''. However, the restrictions under this alternative could significantly reduce the flexibility for issuers to solicit prospective investors and raise capital.

As another alternative, we could adopt a definition of general solicitation that would either narrow or expand the scope of communications that constitute general solicitation. The alternative of narrowing (expanding) the scope of communications that constitute general solicitation, either through changes to the examples of communications that constitute general solicitation or through a definition of general solicitation, would provide greater (lower) flexibility to issuers with regard to the manner of communicating offers of securities and reaching prospective investors, potentially expanding (limiting) the ability of issuers that lack an established network of investors with whom they have a pre-existing relationship to raise capital through an exempt offering. Narrowing (expanding) the scope of communications that constitute general solicitation also could expose investors, including non-accredited investors, to more (fewer) offers of securities from prospective issuers. Additional offers of securities might reduce investor search costs for investors eligible and seeking to invest in the offerings of issuers that engage in solicitation, enabling investors to potentially make more informed decisions and allocate capital more efficiently to a broader range of investment opportunities, and vice versa. The alternative of providing a specific definition of general solicitation might incrementally reduce the compliance costs of issuers to determine whether communications that fall outside the list of provided examples constitute general solicitation. However, this alternative could decrease the flexibility for issuers to consider all relevant facts and circumstances in determining whether a particular communication constitutes general solicitation.

As another alternative, we could simplify the existing framework for all exempt offerings by deregulating offers, thus eliminating general solicitation restrictions and focusing on disclosure requirements for sales.[630] This alternative would significantly expand the options for pre-offering and offering-related communications, giving issuers greater flexibility and reducing costs compared to the final amendments, some of which expand pre-offering communications but impose additional conditions (such as filing and legending). However, by shifting the investor protections to requirements for sales and antifraud provisions, this alternative might result in investors that are used to relying on information in offers having to wait for the disclosures required in conjunction with a sale.

b. Solicitations of Interest and Other Offering Communications

As discussed in greater detail in Section II.B.2 above, we are adopting a generic test-the-waters exemption that would permit an issuer to use testing-the-waters materials for an offer of securities prior to making a determination as to the exemption under which the offering may be conducted. In connection with this exemption, we are requiring that the generic solicitation materials be made publicly available as an exhibit to, or with, the offering materials filed with the Commission, if the Regulation A or Regulation Crowdfunding offering is commenced within 30 days of the generic solicitation. Further, if the issuer sells securities under Rule 506(b) within 30 days of the generic solicitation to non-accredited investors, the issuer would be required to provide such investors with any written communication used under the generic testing-the-waters exemption. We are also expanding permissible offering communications under Regulation Crowdfunding by permitting testing the waters prior to filing a Form C with the Commission. Issuers will be required to use legends and to include any solicitation materials with the Form C that is filed with the Commission. The economic effects of the amendments will be limited if issuers are reluctant to test the waters, for example, as a result of the filing requirements or applicable State restrictions. Finally, as discussed in Section II.B.3 above, we are amending Rule 204 to expand communications permissible under Regulation Crowdfunding after the filing of Form C.

[627] *See supra* note 222.

[628] *See* Better Markets Letter.

[629] *See* NASAA Letter.

[630] *See* CrowdCheck Letter.

i. Benefits

In general, allowing issuers to gauge interest through expanded testing the waters is expected to reduce uncertainty about whether an offering could be completed successfully.[631] Allowing solicitation prior to conducting an offering will enable issuers to determine market interest in their securities before incurring the costs of preparing and conducting an offering. Testing the waters before filing can reduce the risk of a failed offering and the associated reputational costs. If, after testing the waters, the issuer is not confident that it would attract sufficient investor interest, the issuer could consider modifying offering plans or the target amount of the offering, reconsidering the contemplated offering structure and terms, postponing the offering, or exploring alternative methods of raising capital. This option might be useful for smaller issuers, especially early stage issuers, first-time issuers, issuers in lines of business characterized by a considerable degree of uncertainty, and other issuers with a high degree of information asymmetry. The ability to engage in testing-the-waters communications might attract certain issuers—those that may be uncertain about the prospects of raising investor capital—to consider using an exempt offering, thus potentially promoting competition for investor capital as well as capital formation. Importantly, the amendments could benefit issuers that find after testing the waters that their offering is unlikely to be successful and choose not to proceed with an offering, thus saving disclosure preparation and filing costs (including, where applicable, the cost of review or audit of financial statements by an independent accountant), lowering the risk of disclosure of potentially sensitive proprietary information to competitors and mitigating the reputational cost from a failed offering.

Enabling issuers to engage in generic testing-the-waters communications prior to determining the specific exemption type may provide additional flexibility to gauge market interest that is likely to be especially valuable for smaller, less well known issuers that may lack an accurate understanding of prospective investor demand for their securities. Similarly, permitting issuers to solicit investor interest, orally or in writing, in Regulation Crowdfunding offerings is expected to benefit issuers by enabling them to gauge investor interest in a prospective Regulation Crowdfunding offering before incurring the full costs of preparing and filing an offering circular.

The requirement to include legends is expected to provide notice to investors of the preliminary nature of these communications. Issuers that proceed with an offering under Regulation A or Regulation Crowdfunding after testing the waters will be required to include as exhibits to the offering statement any written materials used in a generic testing-the-waters communication within 30 days prior to the filing of a Regulation A or Regulation Crowdfunding offering statement. Issuers will also be required to include as exhibits any Regulation Crowdfunding testing-the-waters materials. Combined, these requirements are expected to provide informational benefits to investors and allow them to compare the solicitation materials with the offering statement disclosures, leading to potentially more informed investment decisions. The requirement to provide materials used for a generic testing-the-waters solicitation to any non-accredited investors in a Rule 506(b) offering that occurs within 30 days of such solicitation is expected to incrementally enhance the ability of investors in the offering to make informed decisions.

The amendments expanding communications permissible under Regulation Crowdfunding after the filing of Form C are expected to benefit issuers by allowing greater flexibility to communicate with prospective investors about the offering.[632] In addition to permitting oral communications, in response to comments received, we are expanding the information that an issuer may provide in accordance with Rule 204 to include a brief description of the use of proceeds of the offering and information on the progress of the offering toward its funding goals. We are also amending Rule 204 to clarify that an issuer may provide information about the terms of an offering under Regulation Crowdfunding in the offering materials for a concurrent offering (such as a Form 1–A for a concurrent Regulation A offering or a Securities Act registration statement). Being able to communicate with prospective investors outside the communications channels provided by the online crowdfunding platform is expected to facilitate the efforts of issuers to solicit prospective investors and advertise the offering, potentially resulting in a higher rate of offering success and more capital formation, particularly for lesser known, small issuers. Off-portal communications about the terms of the offering are also expected to incrementally improve the information available to investors and reduce costs of searching for information about offering terms for some prospective investors (*e.g.,* investors that may have prior knowledge of, or be customers of, the issuer) that would prefer to find out about offering terms without first reviewing the crowdfunding platform's website and communications channels. Should such prospective investors decide to invest in an offering, they would still have to do so through the portal and would have access therein to the filed offering materials, other offering information, and investor education materials required by Regulation Crowdfunding. Communications intended to drive traffic to the intermediary's website, and therefore to the issuer's offering, would continue to be governed by the Regulation Crowdfunding advertising restrictions.

ii. Costs

We recognize that there might also be potential costs associated with expanding the use of testing-the-waters communications in connection with a contemplated Regulation Crowdfunding offering or another exempt offering. If the contents of the offering circular differ substantively from the material distributed through testing-the-waters communications, and if investors rely on testing-the-waters materials when making investment decisions, this might lead investors to make less informed investment decisions.[633] For example, if the information conveyed through testing-the-waters communications is an incomplete representation of the risk of an offering, and if investors fail to read the subsequent offering circular before making the investment decision, they might make a less informed investment decision. These investor costs might be exacerbated to the extent that, currently, investors in Regulation Crowdfunding offerings are likely to be small and potentially limited in their capacity to process information contained in testing-the-waters communications. The removal of accredited investor investment limits under the Regulation Crowdfunding amendments is expected to increase the participation of accredited investors in such offerings

[631] *See supra* notes 233 (discussing commenter support for generic testing the waters) and 253 (discussing commenter support for testing the waters under Regulation Crowdfunding) and accompanying text.

[632] *See supra* note 269 (discussing commenters that supported expanded oral communications by Regulation Crowdfunding issuers).

[633] *See supra* notes 237 (discussing commenters that expressed concern about generic testing the waters) and 258 (discussing commenters that opposed testing the waters under Regulation Crowdfunding), and accompanying text.

and thus the average Regulation Crowdfunding investor's size and financial sophistication.

These potential investor protection concerns are expected to be alleviated by several factors:

- The application of the antifraud provisions of the Federal and State securities laws; [634]
- For issuers that proceed with a Regulation Crowdfunding offering:
  - The availability of an offering circular, allowing investors to review disclosures compliant with Regulation Crowdfunding prior to investing;
  - The requirement that written testing-the-waters materials be included with Form C, allowing the public and Commission staff to review written solicitation materials and compare them to the contents of the offering circular;
  - The availability of investor education materials required to be provided by crowdfunding intermediaries before investing; and
  - The continued application of other provisions of Regulation Crowdfunding, including ones expected to provide additional investor protection, such as investment limits for non-accredited investors, offering limits, crowdfunding intermediary requirements, periodic reporting requirements, and issuer eligibility restrictions; and
- The reputational incentives of issuers and intermediaries, as well as the risk of litigation (particularly for issuers and intermediaries that have assets and that engage in testing-the-waters communications).

Further, concerns about costs of expanding testing-the-waters communications to investors should be considered in the context of the baseline. Investors in Regulation Crowdfunding offerings today might perform an incomplete analysis of the offering risks if they base their investment decision on the promotional video or summary information from the crowdfunding platform's campaign page and fail to review the entire contents of the offering materials. Low investment minimums (many around $100, and some as low as $25) might make it optimal for investors to allocate a limited amount of time to due diligence regarding prospective crowdfunding investments. While some unscrupulous issuers might seek to disseminate misleading information through testing-the-waters communications, such issuers or intermediaries already could engage in misleading communications today, and such misleading offering communications would remain violations of the antifraud provisions of the Federal securities laws.

The amendments to Rule 204 of Regulation Crowdfunding expanding the ability to advertise the ongoing offering and discuss it in off-portal oral and written communications with prospective investors might similarly result in some investors receiving incomplete information about the offering from the issuer, and, if such investors fail to review the offering circular and other filed offering materials, potentially making less well informed investment decisions.[635]

Several factors are expected to mitigate potential costs to investors due to expanded off-portal communications:

- The availability of the offering circular containing disclosures compliant with Regulation Crowdfunding prior to investing, as well as the continued applicability of Rule 204 requirements, such as the requirement to include a link directing the potential investor to the intermediary's platform where the Form C disclosure document is available;
- The application of antifraud provisions of Federal and State securities laws;
- The availability of investor education materials required to be provided by funding portals;
- The other provisions of Regulation Crowdfunding, including ones expected to provide additional investor protection, such as investment limits, offering limits, crowdfunding intermediary requirements, periodic reporting requirements, and issuer eligibility restrictions, continue to apply; and
- The reputational incentives of issuers, as well as the risk of litigation (for issuers with assets).

The amendments that allow issuers to engage in testing the waters prior to determining the specific exemption type might lead to investor confusion with regard to the regulatory framework applicable to the contemplated offering, particularly for non-accredited investors that may be less sophisticated. However, for issuers that proceed with an exempt offering, the investor protections of the respective exemption would continue to apply. Importantly, because investors would be able to review the offering circular that clearly delineates the exemption relied on for issuers that proceed with a Regulation A or Regulation Crowdfunding offering, investors are expected to receive the disclosure necessary to reach an informed investment decision. Furthermore, should an issuer elect to proceed with a Regulation A or Regulation Crowdfunding offering within 30 days of a generic testing-the-waters communication, the testing-the-waters materials must be filed as an exhibit to, or with, the offering statement, enabling investors and the Commission staff to review testing-the-waters materials and compare them against the disclosures in the offering statement. In cases where an issuer decides to proceed with a Rule 506(c) offering after testing the waters, non-accredited investors that might have received solicitations would remain restricted from participation in a Rule 506(c) offering.

In cases of issuers that choose not to proceed with a Rule 506(c), Regulation A, or Regulation Crowdfunding offering following testing the waters for an exempt offering, but that choose instead to undertake an exempt offering under an exemption that does not permit general solicitation, the amendments are not expected to have significant effects on investors in such a private placement or registered offering. Restrictions specific to private placements, including a restriction on general solicitation for a Rule 506(b) or a Section 4(a)(2) offering would continue to apply in that case. In cases of issuers proceeding with a registered offering, gun jumping provisions of the Securities Act and other investor protections associated with registered offerings (including staff review, Section 11 liability, disclosure requirements in the registration statement, and Exchange Act reporting requirements) would continue to apply.

Because the use of testing-the-waters communications will remain voluntary, we anticipate that issuers will rely on testing-the-waters communications only if the benefits anticipated by issuers justify the expected costs. Issuers that elect to test the waters may incur costs, including direct costs of identifying prospective investors and developing testing-the-waters solicitation materials; indirect costs of potential disclosure of proprietary information to solicited investors; and in some instances, potential legal costs associated with liability arising from testing-the-waters communications with prospective investors. We note that issuers that proceed with an exempt offering without testing the waters similarly might incur costs of searching and soliciting investors, either on their own or through an intermediary.

[634] Testing-the-waters communications under Regulation Crowdfunding would be treated as offers of securities, similar to testing-the-waters communications under Regulation A, Section 5(d), and the recently adopted Rule 163B.

[635] *See supra* note 270 (discussing commenters that opposed expanded oral communications by Regulation Crowdfunding issuers).

iii. Effects of Efficiency, Competition, and Capital Formation

The expansion of permissible testing the waters prior to exempt offerings is expected to facilitate capital formation for small issuers by giving prospective issuers that might not otherwise consider an exempt offering a low-cost method of assessing investor interest in a potential offering and efficiently adjusting their financing strategy to reflect information about market demand. These effects are expected to be particularly significant for issuers contemplating Regulation Crowdfunding offerings that presently have to incur the compliance costs of preparing and filing Form C and the risk of disclosure of proprietary information to competitors, as well as the reputational risk of a failed offering, and do not have a cost-effective way of gauging investor demand. Similarly, the amendments to expand permissible issuer communications in Regulation Crowdfunding offerings might promote capital formation in the Regulation Crowdfunding market by allowing issuers to more effectively reach prospective investors as part of marketing the offering and to more efficiently structure the offering based on feedback from prospective investors. Combined, these amendments might make it easier for the smallest issuers with low investor recognition and limited or no securities offering experience to access the Regulation Crowdfunding market or issue securities pursuant to another offering exemption, resulting in potential positive effects on competition. To the extent that these amendments result in issuers switching between offering exemptions, the net effects on capital allocation might be modest. However, in that scenario some issuers might still benefit from a lower cost of capital if they are able to obtain preliminary information that helps them to identify the most cost-effective offering method and terms that are likely to attract sufficient investor demand.

iv. Reasonable Alternatives

The final amendments permit testing-the-waters communications about a contemplated exempt offering for issuers that have not yet narrowed their offering plans to a specific exemption, so long as the testing-the-waters materials contain required legends and, should an issuer proceed with an exempt offering under Regulation A or Regulation Crowdfunding within 30 days, that written testing-the-waters communications be filed. As an alternative, we could have permitted testing-the-waters communications in conjunction with a contemplated exempt offering that does not currently permit such communications, but required the issuer to have determined and to specify in a legend the offering exemption that would be used. Compared to the proposal, by informing solicited investors about the contours of the exempt offering that is being contemplated, this alternative could potentially increase the utility of the information in the solicitation to prospective investors (*e.g.,* whether the offering would be open to non-accredited investors, and if it is, whether investment limits or other requirements apply). However, because small and early stage issuers might be testing the waters to gauge their optimal offering strategy, including how much capital might in principle be raised (and thus, whether a Regulation A offering, or for instance, a Regulation Crowdfunding offering, is more cost-effective), such an alternative would significantly limit the flexibility of issuers to obtain valuable information from pre-offering communications. It also may not result in meaningful investor protection benefits compared to the final amendments in light of the legend requirements, antifraud provisions, and, for issuers that proceed with an offering, the exhibit filing requirements and other investor protections specific to the respective exemption the issuer uses.

The final amendments permit testing-the-waters communications in connection with Regulation Crowdfunding offerings prior to the filing of Form C. As an alternative, we could permit testing-the-waters communications both before and after the filing of Form C.[636] This alternative would provide greater flexibility to issuers compared to the final amendments, potentially increasing the likelihood that the issuer would raise the desired amount of capital. This option might be most useful for smaller and early stage issuers. This alternative might also require investors to expend additional effort to compare testing-the-waters communications after the filing of an offering statement with the filed offering statement disclosures. However, the incremental economic effects of this alternative on investors and issuers might be limited because of the advertising permitted under Rule 204 and because the incremental costs of filing testing-the-waters materials might discourage the use of testing the waters after the filing of Form C under this alternative.

As an alternative, we could require testing the waters to be conducted through a registered intermediary, as suggested by some commenters.[637] Including the registered intermediary in the testing-the-waters process under the alternative could provide an additional layer of investor protections, compared to the amendments, particularly, for non-accredited investors that could participate in a Regulation Crowdfunding offering if it is launched. However, such benefits may be attenuated by the other investor protections included in the amendments (such as the filing requirement and the availability of the offering circular containing disclosures compliant with Regulation Crowdfunding prior to investing), and in the event the offering is launched, by the general investor protections of Regulation Crowdfunding. Compared to the amendments, this alternative could result in additional costs for issuers that already incur various other costs to launch a small offering. By limiting the options for testing-the-waters communications to intermediary-facilitated communications, this alternative also could reduce issuer ability and flexibility to reach prospective investors.

Issuers that proceed with a Regulation Crowdfunding offering will be subject to a filing requirement with respect to written testing-the-waters communications, consistent with Rule 255 of Regulation A. As an alternative, we could allow testing-the-waters communications prior to a contemplated Regulation Crowdfunding offering but not impose a filing requirement. As another alternative, we could waive the filing requirement for testing-the-waters communications prior to any exempt offering, including a Regulation A offering. Issuers that have elected to use testing-the-waters communications have already incurred the cost of preparing the materials, so the incremental direct cost of the requirement to file the materials with the Commission would be relatively low. We recognize that this alternative could reduce the indirect costs of some

[636] Under Regulation A, testing the waters is permitted before and after the filing of Form 1–A before the qualification of Form 1–A. However, unlike Regulation Crowdfunding, Regulation A issuers are not able to accept investor commitments between the filing and the qualification of Form 1–A. Under Regulation Crowdfunding, issuers may accept investor commitments upon the filing of Form C because Commission qualification is not applicable to Form C. Thus, permitting testing-the-waters communications before the filing of Form C would be more consistent with the testing-the-waters communications permissible under Regulation A, before investor commitments may be accepted.

[637] *See* NextSeed Letter; and CrowdCheck Letter.

issuers by limiting the ability of the issuer's competitors to discover information about the issuer or the costs associated with requesting confidential treatment for the proprietary portions of the information. However, we note that this information may become available to competitors in any event through the solicitation process or as part of the offering materials (to the extent that the offering materials contain similar information). Furthermore, removing the requirement to publicly file the materials for issuers that proceed with an offering might result in adverse effects on the protection of investors to the extent that it may facilitate fraudulent statements by issuers to all or a selected group of investors that might fail to compare the statements in the solicitation materials against the offering circular. This consideration is especially salient because testing-the-waters communications under Rule 255 and under the amendments could be directed at any investor, including non-accredited investors. On balance, we believe that the requirements governing the use of testing-the-waters communications appropriately balance the goals of providing flexibility to issuers and protection to investors.

Amended Rule 204 allows oral communications with prospective investors once the Form C is filed, so long as the communications comply with the requirements of Rule 204, and moderately expands the information that an issuer may provide in accordance with that rule. As an alternative, we could expand Rule 204 further, broadening the range of terms an issuer may advertise or not restricting the scope of issues that may be addressed in offering advertisements, as suggested by some commenters.[638] Such an alternative would provide greater flexibility to issuers to advertise the offering to prospective investors, which might increase the likelihood of offering success and yield capital formation benefits. However, such an alternative might increase information processing challenges for investors—particularly less sophisticated investors—that might incur greater effort to compare the more extensive advertising content with the offering statement disclosure, or if they are unable to validate the extended advertising content against the offering statement disclosure, potentially be at risk of less informed investment decisions.

[638] *See supra* note 271.

3. Rule 506(c) Verification Requirements

As discussed in Section II.C above, to address some of the concerns about challenges and costs associated with accredited investor status verification in Rule 506(c) offerings, the amendments add a new item to the non-exclusive list in Rule 506(c) that allows an issuer (or those acting on its behalf) to establish that an investor remains an accredited investor as of the time of sale if the issuer (or those acting on its behalf) previously took reasonable steps to verify that investor as an accredited investor, the investor provides a written representation that the investor continues to qualify as an accredited investor to the issuer (or those acting on its behalf), and the issuer (or those acting on its behalf) is not aware of information to the contrary. After considering commenter input, we are adding a five-year limitation on the use of this verification method, after which the issuer must take reasonable steps to verify that the investor is an accredited investor.

a. Benefits

The addition to the non-exclusive list in Rule 506(c) concerning verification of investors for which the issuer previously took reasonable steps to verify accredited investor status is expected to reduce the cost of verification for issuers that may opt to engage in more than one Rule 506(c) offering over time with potential repeat investors.[639] This new method also may help reduce the risk of harm to investors from continually having to provide financially sensitive information to the issuer (or those acting on its behalf) when the additional investor protection benefits of doing so are limited given the pre-existing relationship between the issuer (or those acting on its behalf) and such investors.

b. Costs

Generally, because the amendment represents an incremental revision to the principles-based approach to verification in Rule 506(c), its costs are expected to be modest. However, we recognize that some previously verified investors that experience changes in financial circumstances and lose accredited investor status over time might provide written representations that they are accredited investors,[640] and if issuers are not aware of information to the contrary, such issuers might sell securities to those non-accredited investors under Rule 506(c). As noted above, we expect these risks would be mitigated by the pre-existing relationship between the issuer (or those acting on its behalf) and such investors. Further, consistent with some commenters' suggestions,[641] in a change from the proposal, we are adopting a time limit in conjunction with this additional means of verification of accredited investor status. We expect this time limit will further mitigate the likelihood of the costs to investors described above.

[639] *See supra* note 284 and accompanying text.

[640] *See supra* note 288.

c. Effects on Efficiency, Competition, and Capital Formation

Generally, because the final amendments represent an incremental revision to the principles-based approach to verification in Rule 506(c), we expect modest effects on efficiency, competition, and capital formation.

d. Reasonable Alternatives

We are adopting amendments to the existing non-exclusive list of verification methods. As an alternative, we could rescind the non-exclusive list. Compared to the final amendments, this alternative could reduce costs for some issuers that presently feel constrained to use one of the listed verification methods, even though other, less costly methods may be better suited for their particular facts and circumstances. However, the effects of eliminating the non-exclusive list might be limited if issuers that presently rely on the listed verification methods continue to do so under a more principles-based approach.

We are allowing issuers to establish that a previously verified investor remains accredited for up to a five-year period if the investor provides a representation to that effect and the issuer is not aware of information to the contrary. As an alternative, as proposed, we could allow issuers to make such a determination for an unlimited period of time. Compared to the final amendments, this alternative could reduce costs for issuers with repeat investors through less frequent verification of investor status. At the same time, this alternative could increase the likelihood of having investors that previously were accredited but subsequently exited accredited investor status (*e.g.,* due to a change in income or net worth) and thus may have a lower ability to incur the risks of a Rule 506(c) offering becoming purchasers in a Rule 506(c) offering.

As another alternative, we could adopt additional means of verification of accredited investor status (such as

[641] *See supra* note 290.

investment amounts[642] or self-certification[643]) as suggested by some commenters.[644] Compared to the final amendments, these alternatives would further reduce the costs of accredited investor status verification for issuers. However, they would result in a significantly higher likelihood of non-accredited investors becoming purchasers in an offering involving general solicitation under Rule 506(c). In particular, self-certification would be a significantly less rigorous means of verification that, in conjunction with general solicitation, could significantly increase risks to non-accredited investors. Relatedly, the alternative of basing verification on the amount invested would increase the likelihood that a non-accredited investor participates in an offering. Moreover, this alternative would increase risks to such non-accredited investors because they would be more likely to have an underdiversified position in the event they allocate a high investment amount to an investment opportunity under Rule 506(c) to meet the verification requirement, resulting in a greater risk of losses to such investors.

As another alternative, we could amend Rule 506(c) to add the fact that an offering is conducted through a registered intermediary to the optional means of accredited investor status verification, building on the suggestion of one commenter.[645] The benefit of this alternative compared to the amendments would be to reduce costs for issuers. As some commenters have stated, the requirement to take reasonable steps to verify accredited investor status has generally impacted issuers' willingness to use Rule 506(c).[646] However, because this alternative would not involve verifying each purchaser's accredited investor status, it could significantly increase the likelihood of non-accredited investors that learned about the offering through general solicitation under Rule 506(c) becoming purchasers in the offering, with the associated increase in risks to such investors.

[644] *See supra* note 290.

[645] *See, e.g.,* TIAA Letter (recommending not requiring verification for offerings involving a registered investment adviser, broker-dealer placement agent or other such intermediary).

[646] *See supra* note 285.

4. Disclosure Requirements

a. Required Disclosures to Non-Accredited Investors in Rule 506(b) Offerings

The amendments to Rule 502(b) generally align financial disclosure requirements for non-reporting companies that sell to non-accredited investors under Rule 506(b) with the disclosures required for offerings under Tier 1 and Tier 2 of Regulation A, which also allows sales to non-accredited investors.

i. Benefits

The amendments to the Rule 502(b) disclosure requirements for sales to non-accredited investors will lower the burden of preparing financial disclosures, particularly the costs of audited financial statements, for issuers in Rule 506(b) offerings up to $20 million that would no longer be subject to those requirements.[647] We do not have information on the costs of an audit in Rule 506(b) offerings involving sales to non-accredited investors. As a proxy, we consider audit costs reported by Regulation A Tier 2 issuers and smaller reporting company issuers. Based on Regulation A Tier 2 offerings qualified from June 2015 through December 2019, the average (median) audit cost, where reported, was $29,015 ($12,319). Based on information from Audit Analytics, the average (median) audit fees, where available, for reporting companies with market capitalization up to $75 million were $386,876 ($95,000) for fiscal years ending in 2018 or 2019.[648] We recognize that these costs may differ from the costs incurred by issuers in Rule 506(b) offerings to non-accredited investors. Overall, relatively few non-accredited investors participated in Rule 506(b) offerings affected by these amendments. We estimate that in 2019 among new Rule 506(b) offerings by non-reporting issuers other than pooled investment funds seeking up to $20 million, between approximately 4.6 percent and 9.5 percent had at least one non-accredited investor.[649]

Lowering costs of sales to non-accredited investors under Rule 506(b) may expand access to capital for some issuers that are not able to obtain sufficient external financing through other methods or through sales of securities to accredited investors only under Rule 506(b). Compliance cost savings in the offering process and expanded access to external financing are expected to enhance shareholder value and thus benefit the issuer's existing shareholders.

[647] *See supra* note 313.

[648] Estimates reflect data as recorded in Audit Analytics as of August 26, 2020, including the full set of filings due for fiscal year ending in 2019.

[649] *See supra* note 127. This estimate is based on the analysis of data in initial Form D filings with reported offer size, excluding pooled investment fund issuers and reporting issuers. Reporting issuers are identified based on 2019 filings of annual reports or amendments to them.

As a result of lower disclosure costs, some issuers in Rule 506(b) offerings that presently do not sell securities to non-accredited investors may be more willing to sell securities to non-accredited investors, which could increase the number of issuers subject to the amendments compared to the estimates above. If the amendments result in more issuers selling securities to non-accredited investors under Rule 506(b), those non-accredited investors could benefit from an expanded set of investment opportunities, which might allow them to allocate their capital more efficiently. These benefits might be attenuated if the increase in sales to non-accredited investors under Rule 506(b) is driven by issuers switching from Rule 504, Regulation A, or Regulation Crowdfunding offerings, which also accept non-accredited investors, to Rule 506(b), resulting in little change in the set of investment opportunities available to non-accredited investors. It is difficult to predict whether an increase in sales to non-accredited investors under Rule 506(b), if any, will be due to additional non-accredited investors in Rule 506(b) offerings or greater participation by existing non-accredited investors in other issuers' Rule 506(b) offerings. Due to the limited data disclosed about investors on Form D, we cannot estimate the number of unique non-accredited purchasers in such offerings because a single investor may be a purchaser in multiple Rule 506(b) offerings in a given year.

ii. Costs

Scaling Rule 502(b) disclosure requirements for sales to non-accredited investors—and particularly repealing the requirement to provide audited balance sheets in offerings up to $20 million—can result in less informed investor decisions by some non-accredited investors.[650] For instance, to the extent that audited financial statements are valuable for informed investment decisions,[651] scaled

[650] *See supra* note 314.

[651] *See, e.g.,* Erik Boyle & Melissa Lewis-Western, *The Value-Add of an Audit in a Post-SOX World* (Working Paper, Apr. 2018) (finding that an audit continues to be associated with reduced financial statement error at public companies post-SOX and that the size of the effect is economically

Continued

disclosures in offerings of up to $20 million might cause some non-accredited investors to incorrectly value the offered securities and to make less well informed investment decisions. Further, the elimination of audit requirements for disclosures to non-accredited investors in Rule 506(b) offerings of up to $20 million might encourage some issuers with relatively higher information risk to sell securities to non-accredited investors given the absence of investment limits in such offerings. Costs to investor protection from scaling the audit requirement in Rule 506(b) offerings with non-accredited purchasers may be higher than in Regulation A offerings because Rule 506(b) offerings do not undergo Commission review.[652] The requirement that non-accredited investors must satisfy the knowledge and experience standard of 17 CFR 230.506(b)(2)(ii) (''Rule 506(b)(2)(ii)'') in order to be eligible to participate in an offering under such rule is expected to mitigate some of these costs. Further, in the aggregate these costs to investors are expected to be limited by the cap on the number of non-accredited investors that can participate in a Rule 506(b) offering.

In evaluating the investor costs of the amendments, we consider the baseline, which includes similarly scaled requirements for financial disclosures required to be made to non-accredited investors in Regulation A Tier 1 and Regulation Crowdfunding offerings of the same size. However, those offering types are associated with certain additional provisions intended to protect non-accredited investors, which are not afforded to non-accredited purchasers in Rule 506(b) offerings (*e.g.,* Commission qualification and State registration of Regulation A Tier 1 offerings, offering statement disclosure requirements in Regulation A and Regulation Crowdfunding offerings, as well as investment limit, periodic disclosure, and funding portal requirements in Regulation Crowdfunding offerings). If non-accredited investors remain infrequently represented in Rule 506(b) offerings, the aggregate impacts on costs to investors may be limited. However, the aggregate impacts on investor protection could be amplified if the scaled requirements encourage additional issuers to accept non-accredited investors in Rule 506(b) offerings.

iii. Effects on Efficiency, Competition, and Capital Formation

If scaled financial statement disclosures lead to more non-accredited investor offerings under Rule 506(b), and if such investors contribute additional capital the issuers would not have otherwise raised from accredited investors, the amendments may incrementally promote capital formation through Rule 506(b). If non-accredited investor capital drawn to Rule 506(b) offerings is mostly reallocated from other offerings to non-accredited investors (*e.g.,* registered offerings or offerings under Regulation A, Regulation Crowdfunding, Rule 504, Rule 147/147A, etc.), the net effects on aggregate capital formation will be limited. However, in that instance, issuers may still benefit if they are able to obtain a lower cost of capital under the amendments (*e.g.,* because of lower compliance costs in Rule 506(b) offerings, even after providing disclosures to non-accredited investors, or because non-accredited investors in Rule 506(b) offerings provide better financing terms).

Streamlining disclosure requirements in Rule 506(b) offerings with non-accredited investors to be more aligned with those under Regulation A is expected to make compliance more efficient for those issuers that undertake these types of offerings along with Rule 506(b) offerings to non-accredited investors.

The amendments also may incrementally increase the availability of Rule 506(b) offerings that allow non-accredited investors, potentially enabling more efficient allocation of capital of non-accredited investors among investment alternatives that are otherwise unavailable to them. While non-accredited investors can participate in other exempt offerings, Rule 506(b) offerings account for the largest share of the exempt offerings market and draw issuers that typically do not participate in Regulation A or Regulation Crowdfunding offerings. The majority of Rule 506(b) offerings are by issuers that are not reporting companies. While non-accredited investors can invest in registered offerings, in most cases issuers in registered offerings have a different profile than issuers in private placements.[653] Expanding opportunities

significant); Petro Lisowsky & Michael Minnis, *The Silent Majority: Private U.S. Firms and Financial Reporting Choices* (Univ. of Chi. Booth Sch. of Bus., Research Paper No. 14–01, Apr. 12, 2018) (finding that ''[n]early two-thirds [of private firms] do not produce audited GAAP financial statements. Moreover, while firms with external capital are more likely to produce audited GAAP statements, we find that thousands of firms with external debt and dispersed ownership do not. Equity and trade credit are potentially more important factors than debt in affecting private firms' production of audited GAAP reports. Finally, young, high growth firms lacking tangible assets are significantly more likely to produce audited GAAP reports relative to established firms with physical assets, suggesting that audited financial reports play an important information role in capital allocation when business activity is less verifiable.''); Michael Minnis, *The Value of Financial Statement Verification in Debt Financing: Evidence from Private U.S. Firms,* 49 J. Acct. Res, 457 (2011) (showing the value of audited financial statements for private debt pricing); David W. Blackwell, Thomas R. Noland, & Drew B. Winters, *The Value of Auditor Assurance: Evidence from Loan Pricing,* 36 J. Acct. Res. 57 (1998) (finding cost of debt reductions in a small sample of small private firms with audited financial statements); and Jeong-Bon Kim et al., *Voluntary Audits and the Cost of Debt Capital for Privately Held Firms: Korean Evidence,* 28 Contemp. Acct. Res. 585 (2011) (confirming the result in a Korean sample). *See also* Ciao-Wei Chen, *The Disciplinary Role of Financial Statements: Evidence from Mergers and Acquisitions of Privately Held Targets,* 57 J. Acct. Res. 391 (2019) (examining ''whether requiring the disclosure of audited financial statements disciplines managers' mergers and acquisitions (M&As) decisions'' and finding that ''the disclosure of private targets' financial statements is associated with better acquisition decisions . . . [and] that this disciplining effect of disclosure is more pronounced when monitoring by outside capital providers is more difficult and costly'').

However, two studies using survey data from the Federal Reserve's Survey of Small Business Finances do not find that an audit is significantly associated with a lower interest rate in small privately held firms. *See* Kristian D. Allee & Teri Lombardi Yohn, *The Demand for Financial Statements in an Unregulated Environment: An Examination of the Production and Use of Financial Statements by Privately-Held Small Businesses,* 84 Acct. Rev. 1 (2009); and Gavin Cassar, Christopher D. Ittner, & Ken S. Cavalluzzo, *Alternative Information Sources and Information Asymmetry Reduction: Evidence from Small Business Debt,* 59 J. Acct. & Econ. 242 (2015).

[653] Investors in public firms can access more extensive disclosures and rely on the protections of the Securities Act registration and Exchange Act reporting regimes. Listed public firms are more likely to have analyst coverage, which may provide additional information to investors.

Past academic studies comparing private and publicly listed firms arrive at somewhat mixed conclusions about investment and innovation behavior of such firms. For example, one study finds that public firms' patents rely more on existing knowledge, are more exploitative, and are less likely in new technology classes, while private firms' patents are broader in scope and more exploratory. *See* Huasheng Gao, Po-Hsuan Hsu, & Kai Li, *Innovation Strategy of Private Firms,* 53 J. Fin. & Quantitative Analysis 1 (2018). *See also* Daniel Ferreira, Gustavo Manso, & André C. Silva, *Incentives to Innovate and the Decision to Go Public or Private,* 27 Rev. Fin. Stud. 256 (2014) (showing, in a theoretical model, that private ownership creates incentives for innovation). Another study shows that public firms in external finance dependent (but not in internal finance dependent) industries spend more on research and development and generate a better patent portfolio than their private counterparts. *See* Viral Acharya & Zhaoxia Xu, *Financial Dependence and Innovation: The Case of Public versus Private Firms,* 124 J. Fin. Econ. 223 (2017). A different U.S. study finds that listed firms invest less and are less responsive to changes in investment opportunities compared to observably similar, matched private firms, especially in industries in which stock prices are particularly sensitive to current earnings. *See* John Asker, Joan Farre-Mensa, & Alexander Ljungqvist, *Corporate Investment and Stock Market Listing: A Puzzle?,* 28 Rev. Fin. Stud. 342 (2015). *But see* Naomi E. Feldman et al., *The Long and the Short of It: Do Public and Private Firms Invest Differently?* (Working Paper, 2019) (finding that public firms invest more in long-term assets—

for investment in operating company and exempt investment fund offerings under Rule 506(b) might allow non-accredited investors to construct a more efficient portfolio.[654] However, as discussed above, the amendments also may in some cases result in less informed investment decisions, lowering the efficiency of capital allocation.

The incremental economic effects of the amendments to non-accredited investor disclosures in Rule 506(b) offerings discussed above might be modest, relative to the baseline, for several reasons: (i) While non-accredited investors are not subject to investment limits in Rule 506(b) offerings, their participation in Rule 506(b) offerings remains highly limited by the restriction that no more than 35 investors participate and that such investors must meet the knowledge and experience standard of the rule; (ii) non-accredited investors may be unwilling to participate in the majority of Rule 506(b) offerings because of the higher due diligence and transaction costs, potentially higher investment minimums that may be inconsistent with optimal diversification in their portfolio, and significantly lower liquidity involved in private placements due to transferability restrictions and a highly limited secondary market; (iii) issuers may be unwilling to accept non-accredited investors in Rule 506(b) offerings for reasons other than the cost of disclosures (*e.g.,* a preference to attract accredited investors that may be able to bring a larger amount of capital and business expertise, an unwillingness to expand the capitalization table that may make future angel investors or venture capital (''VC'') funding less interested in providing funding to the issuer, an unwillingness to increase the number of non-accredited investors that may draw the issuer incrementally closer to the Section 12(g) registration threshold, or concerns about investor relations and risk of litigation involving less informed investors); and (iv) even though required disclosures to non-accredited investors would be scaled under the amendments, the direct and indirect costs of such disclosures (such as risks of disclosure of proprietary information to a broader range of investors) may discourage issuers from selling to non-accredited investors in Rule 506(b) offerings.

iv. Reasonable Alternatives

We are repealing audit requirements for Rule 506(b) offerings of up to $20 million involving non-accredited investors. As an alternative, we could repeal audit requirements for all Rule 506(b) offerings, irrespective of offer size. As compared to the proposal, this alternative would result in additional compliance cost savings for issuers in Rule 506(b) offerings with sales to non-accredited investors and might induce additional Rule 506(b) issuers to accept non-accredited investors. However, the relative benefits of compliance cost savings under this alternative might have a more limited impact in larger offerings. Further, such an alternative could increase costs to non-accredited investors as a result of less well informed investment decisions, particularly if non-accredited investors, which are not subject to investment limits in Rule 506(b), invest significant amounts in large Rule 506(b) offerings without the benefit of audited financial statements. Limitations on the number and types of non-accredited investors that are eligible to participate in Rule 506(b) offerings (no more than 35 non-accredited investors are allowed to participate and such investors must possess sophistication) would limit the aggregate costs to non-accredited investors under this alternative. Such an alternative would also be inconsistent with the requirements applicable to other larger offerings available to non-accredited investors, including larger offerings under Regulation A Tier 2 and registered offerings, both of which require audited financial statements.

Under the final amendments, audited financial statement disclosures will not be required for sales to non-accredited investors in Rule 506(b) offerings of up to $20 million by non-reporting issuers, irrespective of how much capital is invested by non-accredited purchasers. As another alternative, we could require audited financial statement disclosures in Rule 506(b) offerings by non-reporting issuers that have up to $20 million in sales to non-accredited investors. On the one hand, this alternative would reduce costs for non-reporting issuers with limited sales to non-accredited investors under Rule 506(b). On the other hand, each non-accredited investor that is a purchaser in such an offering may incur a potentially significant loss of information and increase in due diligence costs, which do not depend on the amount of capital committed by other non-accredited investors to this offering.

As another alternative, rather than scale disclosure requirements in Rule 506(b) offerings by non-reporting issuers of up to $20 million with sales to non-accredited investors, we could waive the requirements for disclosures to non-accredited investors altogether. This alternative would result in significantly lower compliance costs for issuers and could encourage more issuers to sell securities to non-accredited investors under Rule 506(b). However, the loss of information to non-accredited investors could significantly reduce their ability to allocate capital in an informed manner, particularly because a lack of a secondary trading market in many cases precludes effective price discovery through other sources. Alternatively, we could require issuers to provide the same disclosures to non-accredited investors if they provide any disclosures, such as a private placement memorandum, to accredited investors. While such a provision could significantly lower non-accredited investor information risk and due diligence costs in some cases, without dramatically increasing issuer costs (because they already would have to incur many of the direct costs to provide the disclosure to accredited investors), non-accredited investors might suffer a significant loss of information in cases where the issuer's disclosures to accredited investors are limited. The existing requirement that the non-

particularly innovation—than private firms). *See also* Vojislav Maksimovic, Gordon M. Phillips, & Liu Yang, *Do Public Firms Respond to Investment Opportunities More than Private Firms? The Impact of Initial Firm Quality* (Nat'l Bureau of Econ. Research, Working Paper No. 24104, Dec. 2017) (finding that public firms respond more to demand shocks after their IPO and are more productive than their matched private counterparts, particularly in industries that are capital intensive and dependent on external financing); and Sandra Mortal & Natalia Reisel, *Capital Allocation by Public and Private Firms,* 48 J. & Quantitative Analysis 77 (2013) (a cross-country study showing that public listed firms take better advantage of growth opportunities than private firms, although the differential only exists in countries with well-developed stock markets).

Some studies also find that private and public firms differ in their financing, cash, and payout decisions, cost of capital, and other characteristics. *See, e.g.,* Kim P. Huynh, Teodora Paligorova, & Robert Petrunia, *Debt Financing in Private and Public Firms,* 14 Annals Fin. 465 (2018); Huasheng Gao, Jarrad Harford, & Kai Li, *Determinants of Corporate Cash Policy: Insights from Private Firms,* 109 J. Fin. Econ. 623 (2013); Sandra Mortal, Vikram Nanda, & Natalia Reisel, *Why Do Private Firms Hold Less Cash than Public Firms? International Evidence on Cash Holdings and Borrowing Costs,* 113 J. Banking & Fin. 1 (2020); Roni Michaely & Michael R. Roberts, *Corporate Dividend Policies: Lessons from Private Firms,* 25 Rev. Fin. Stud. 711 (2012); Menachem Abudy, Simon Benning, & Efrat Shust, *The Cost of Equity for Private Firms,* 37 J. Corp. Fin. 431 (2016); Ilan Cooper & Richard Priestley, *The Expected Returns and Valuations of Private and Public Firms,* 120 J. Fin. Econ. 41 (2016); and Serkan Akguc, Jongmoo Jay Choi, & Suk-Joong Kim, *Do Private Firms Perform Better than Public Firms?* (Working Paper, 2015).

[654] In portfolio theory, constraining the set of investment opportunities yields a potentially inferior optimal portfolio. However, the presence of information frictions due to a lack of investor sophistication might reverse this general prediction and result in lower portfolio risk-adjusted returns. *See supra* note 591.

accredited investor satisfy the knowledge and experience standard of Rule 506(b)(2)(ii), as well as the continued application of the antifraud provisions of the Federal securities laws, might mitigate some of the investor protection risks under this alternative.

We are extending the disclosure requirements of Regulation A Tier 2 for sales to non-accredited investors by non-reporting issuers under Rule 506(b), irrespective of the size of the Rule 506(b) offering above $20 million. As an alternative, we could extend the financial statement requirements of Regulation A Tier 2 to sales to non-accredited investors in offerings under Rule 506(b) up to $75 million (the amended Regulation A Tier 2 offer limit), and continue to apply the existing financial statement disclosure requirements (that are aligned with the financial statement disclosure requirements applicable to registration statements) to Rule 506(b) offerings exceeding $75 million that include sales to non-accredited investors. Compared to the final amendments, this alternative might increase compliance costs for non-reporting issuers seeking to raise over $75 million under Rule 506(b) and sell securities to non-accredited investors. At the same time, these financial statement disclosures may lower the risk of less informed investment decisions by non-accredited investors in such offerings compared to the proposal, particularly for small and pre-revenue issuers with large financing needs. However, the impact of this alternative may be modest because relatively few offerings would be affected by this alternative compared to the final amendments. We estimate that in 2019 there were approximately 383 offerings under Rule 506(b) by non-reporting issuers other than pooled investment funds with offer sizes in excess of $75 million (excluding undefined offer sizes), of which between 3.1 percent and 4.4 percent of offerings involved non-accredited investors.[655] This alternative might also decrease the willingness of non-reporting issuers to accept non-accredited investors in Rule 506(b) offerings exceeding $75 million, resulting in potentially fewer investment opportunities for non-accredited investors compared to the proposal.

As another alternative, we could extend Regulation Crowdfunding financial statement disclosure requirements to Rule 506(b) offerings with non-accredited purchasers, as suggested by one commenter.[656] Under such an alternative, issuers in offerings above $107,000 and up to $5 million (the amended Regulation Crowdfunding limit) would have to provide non-accredited purchasers with financial statements that have been either reviewed or audited by an independent accountant (depending on offering size). Compared to the amendments, which only require audited financial statements in offerings with non-accredited purchasers of above $20 million, this alternative could provide non-accredited purchasers in such offerings with additional certainty about financial statement disclosures. However, it also would introduce additional costs for such issuers to obtain an independent accountant review[657] or audit of its financial statements.

b. Simplification of Disclosure Requirements in Regulation A Offerings

The final amendments extend to Regulation A issuers certain accommodations presently available to reporting companies, namely: (1) The option to redact confidential information from material contracts and certain other agreements filed as exhibits without a need to submit a confidential treatment request; (2) the option to redact information that would constitute a clearly unwarranted invasion of personal privacy in any exhibit; and (3) the option of incorporating by reference financial statement information into Regulation A offering statements. The amendments also eliminate the requirement to file a draft offering statement as a separate exhibit with Form 1–A and instead enable automated public dissemination of the draft offering statement through EDGAR, similar to the framework in place for registered offerings. In addition, the amendments permit the Commission to declare an offering statement, or a post-qualification amendment to such offering statement, abandoned, consistent with the rule applicable to registered offerings.

i. Benefits

Extending to Regulation A issuers the option to redact confidential information from material contracts and certain other agreements filed as exhibits without a need to submit a confidential treatment request—provided that information is not material and is the type of information that the issuer both customarily and actually treats as private and confidential—is expected to reduce disclosure costs for Regulation A issuers and expedite the filing process by eliminating the need to file a confidential treatment application and the associated cost, which was supported by the commenters that addressed these amendments.[658] Similarly, extending to Regulation A issuers the option to redact information that would constitute a clearly unwarranted invasion of personal privacy in any exhibit is expected to reduce disclosure costs and expedite the filing process for affected Regulation A issuers. These accommodations are currently available to reporting companies. Submitting a confidential treatment request requires a filer to prepare a detailed application to the Commission that identifies the particular text for which confidential treatment is sought, a statement of the legal grounds for the exemption, and an explanation of why, based on the facts and circumstances of the particular case, disclosure of the information is unnecessary for the protection of investors. If the Commission staff issues comments on the application, the filer might need to revise and resubmit the application. These requirements impose direct compliance costs on filers, for instance, in the form of legal counsel costs. For filers not willing or not able to incur such costs, inclusion of confidential information of proprietary value in a material contract or similar exhibit that is filed publicly can result in significant indirect costs due to the disclosure of sensitive information to potential competitors. While under the amendments, filers would still need to determine whether information they are redacting is material, they will not need to follow the confidential treatment application process.

Based on EDGAR filings analysis, we have identified 11 issuers in qualified Regulation A offerings that have also filed confidential treatment applications as of December 2019. We lack data to determine how many of those filers had filed confidential treatment applications with regard to information that could be redacted under the amendments. In general, more than 90 percent of the confidential treatment requests granted by the Commission in fiscal year 2018

[655] *See supra* note 127. This estimate is based on the analysis of Form D data in initial Form D filings with reported offer size, excluding pooled investment fund issuers and reporting issuers. Reporting issuers are identified based on 2019 filings of annual reports or amendments to them.

[656] *See, e.g.,* J. Clarke Letter.

[657] In the Regulation Crowdfunding Adopting Release, the Commission estimated review costs to be approximately $1,500 to $18,000. *See* Regulation Crowdfunding Adopting Release, at 71499. Recent reports and commenters estimate such costs at between $1,500 and $6,000. *See* Temporary Amendments Adopting Release, at 27127.

[658] *See supra* note 326.

were made in reliance on the exemption concerning competitive harm. It is also difficult to gauge how many filers had proprietary information in material contracts or similar exhibits but opted not to file a confidential treatment request due to legal and other costs of preparing such a request. One commenter on the FAST Act Modernization Release estimated that legal fees for confidential treatment requests ranged from $35,000 to over $200,000,[659] while another commenter estimated that attorneys and paralegals at the company spend an average of 80 hours each quarter preparing redacted exhibits and related confidential treatment requests.[660] According to another commenter, the cost savings of streamlining the confidential treatment process are expected to be relatively more impactful for smaller filers because such issuers have a lower threshold for determining whether a contract is material and therefore required to be filed publicly, as well as for issuers in industries that are associated with more confidential treatment requests, such as biotechnology.[661] We generally expect similar cost savings from extending this accommodation to Regulation A issuers.

Similarly, extending to Regulation A issuers the option of incorporation by reference of previously filed financial statement information into the offering statement, consistent with the current rules applicable to registered securities offerings filed on Form S–1, is expected to incrementally reduce Form 1–A preparation costs.

Enabling automated dissemination of draft offering statements in lieu of the existing exhibit filing requirement, consistent with the process of dissemination of draft registration statements, is expected to incrementally reduce filer effort to prepare the offering statement and promote greater efficiency of the filing process and regulatory harmonization.

Similarly, permitting the Commission to declare an offering statement, or a post-qualification amendment to such offering statement, abandoned, consistent with the rule applicable to registered offerings, is expected to promote greater regulatory harmonization and to incrementally promote efficiency of the filing process in cases where only a post-qualification amendment, rather than the entire offering, is abandoned. The amendments are expected to benefit investors by reducing potential investor confusion arising from the presence of the unqualified post-qualification amendment on EDGAR.

ii. Costs

The extension of the option to redact confidential information from material contracts filed as exhibits to Regulation A filings is not expected to result in a significant loss of information to investors because of the condition that any information being omitted not be material. Filers electing to rely on this accommodation would still need to incur costs to determine that information meets the standard for redaction, as they do today when they file a confidential treatment request, but they would not incur the cost of preparing a confidential treatment application.[662] One potential cost of the final amendments to Regulation A investors is that information might be redacted by filers that would not otherwise be afforded confidential treatment by the staff. However, based on previous experience and a review of confidential treatment applications by reporting companies, we believe that such instances would be rare.[663]

Allowing Regulation A issuers to rely on incorporation by reference of financial statement information from previously filed periodic reports may marginally increase search time for potential investors. Instead of having all the information available in one location, investors may need to separately access the incorporated reports in order to price the offered security. However, the inclusion of hyperlinks should facilitate the retrieval of such information by investors. As a result, any increase in the costs to investors of assembling and assimilating necessary information is expected to be minimal. We do not have data to assess if, and to what extent, the Form 1–A revision would be burdensome to investors.

iii. Effects on Efficiency, Competition, and Capital Formation

Extending certain disclosure accommodations presently available to reporting companies to Regulation A issuers is expected to have an incremental beneficial effect on capital formation under Regulation A by reducing disclosure and compliance costs required to undertake a Regulation A offering. If lower compliance costs encourage new issuers, particularly smaller issuers with less compliance experience that might not have otherwise been able to access external financing, to raise capital under Regulation A, the amendments may, on the margin, promote competition. Compliance cost savings may have relatively greater benefits for smaller issuers to the extent that such costs have a fixed component.

If the amendments marginally reduce the amount of information available to investors such that the ability to make informed investment decisions is affected, they may result in less efficient capital allocation and, for Regulation A securities with a secondary market (*e.g.,* OTC-quoted Regulation A securities), less informationally efficient secondary market prices.

iv. Reasonable Alternatives

[659] *See* FAST Act Modernization Release, at note 341.

[660] *See* FAST Act Modernization Release, at note 342. Under the amendments, filers will still need to prepare redacted exhibits and in some cases filers will incur costs to respond to a staff request to demonstrate that redacted information was not material.

[661] *See* FAST Act Modernization Release, at note 343 and accompanying text.

[662] Filers may be asked by the Commission staff to provide on a supplemental basis an unredacted copy of the exhibit and provide an analysis of why the redactions are consistent with the redacted exhibit rules, which might result in incremental additional costs.

[663] *See* FAST Act Modernization Release, at Section VI.D.2.

The amendments will permit Regulation A issuers to incorporate previously filed financial statements by reference. As an alternative, we could also permit forward incorporation by reference on Form 1–A with the same conditions as the ones for forward incorporation by reference available to smaller reporting companies on Form S–1. Forward incorporation by reference allows an issuer to automatically incorporate by reference periodic and current reports filed subsequent to the qualification of the registration statement. This would result in compliance cost savings for Regulation A issuers and allow for greater regulatory harmonization and more uniformity in disclosure requirements applicable to different categories of offerings by small issuers. Forward incorporation by reference would eliminate the need for Regulation A issuers to update information in a qualified Form 1–A filing that has become stale or is incomplete and file post-qualification amendments solely related to updating information from periodic reports, thereby reducing compliance costs.[664] By avoiding the need to file certain post-qualification amendments, under this alternative Regulation A issuers might be able to move more quickly and at a lower cost to raise capital when favorable market conditions occur. Forward incorporation by reference, however, could increase investor search costs and eliminate the benefit of staff review of post-qualification amendments. Because issuers with a relatively higher level of information risk—for instance, issuers not current in their reports, blank check companies, shell companies (other than business combination related shell companies), and penny stock issuers, as well as issuers whose reports are not available on a website maintained by or for the issuer—would be ineligible for forward incorporation under this alternative, the increase in investor information gathering costs under this alternative might be small.

The disclosure simplification amendments will apply to all Regulation A issuers. As an alternative, we could extend the provisions only to Regulation A issuers that are reporting companies. This alternative would be generally consistent with the treatment of reporting companies in registered offerings. It would decrease the potential for loss of information available to Regulation A investors about material contracts and similar agreements and marginally reduce their costs of retrieving financial statement information from previously filed periodic reports that are incorporated by reference for issuers other than reporting companies. However, this alternative also would decrease the benefits of the rule, compared to the proposal.[665]

c. Confidential Information Standard

As discussed in Section II.D.3 above, the current requirements for registrants to file material contracts as exhibits to their disclosure documents permit registrants to redact provisions or terms of exhibits required to be filed if those provisions or terms are both (i) not material and (ii) would likely cause competitive harm to the registrant if publicly disclosed. We are adopting as proposed the amendments to the exhibit filing requirements by removing the competitive harm requirement and replacing it with a standard more closely aligned with the Supreme Court's definition of ''confidential'' that permits information to be redacted from material contracts if it is the type of information that the issuer both customarily and actually treats as private and confidential and that is also not material. These amendments are expected to benefit issuers through greater regulatory simplification and harmonization of the requirements governing confidential information in exhibits with the Supreme Court's definition, enabling more efficient compliance and greater flexibility to redact confidential information from exhibits. To the extent that the amendments makes the option to redact certain information from exhibits more attractive to issuers, it may result in a marginally decreased availability of information to investors.

As an alternative, as suggested by one commenter, we could have extended the amendments to include participation agreement and administrative contract exhibits to Form N–6.[666] This alternative would be unlikely to result in significant benefits to issuers because information contained in such exhibits is already disclosed to investors in other contexts and, in our staff's experience, these exhibits do not contain confidential or proprietary information.

5. Offering and Investment Limits

a. Offering and Investment Limits Under Regulation A, Regulation Crowdfunding, and Rule 504

As proposed, the final amendments increase the 12-month offering limit for Regulation Crowdfunding, presently set at $1.07 million, to $5 million; the 12-month offering limit for Regulation A Tier 2, presently set at $50 million, to $75 million with the associated revision of the 12-month offering limit for sales by existing affiliate security holders from $15 million to $22.5 million; and the 12-month offering limit for Rule 504, presently set at $5 million, to $10 million.

We can gain some insight into the likely capital formation benefits of a higher offering limit from repeat issuers that have raised multiple rounds of financing under the capped offering exemptions. Some of those issuers might have had to raise financing over multiple years because of the existing offering limits. The following table examines total proceeds per issuer reported raised during 2016 through 2019.

TABLE 11—CAPITAL RAISING DURING 2016–2019 BY REPEAT ISSUERS USING AFFECTED EXEMPTIONS

| | |
|---|---|
| Number of Regulation A issuers that raised at least $50 million | 14. |
| Average (median) amount reported raised | $13.4 million ($5.0 million). |
| Number of Regulation Crowdfunding issuers that raised at least $1.0 million ($1.07 million) | 51 (27). |
| Average (median) amount reported raised | $213,678 ($106,900). |
| Number of Rule 504 issuers other than pooled investment funds that raised at least $5 million | 7. |
| Average (median) amount reported raised | $384,200 ($100,000). |

[664] We lack data for a reliable estimate of the number of affected issuers because it is difficult to determine which of the post-qualification filings solely update information from periodic reports versus other information, such as offering price, amount sought, offering deadline, as well as financial information. Based on the analysis of EDGAR filings from June 2015 through December 2019, we estimate that the average (median) issuer in a qualified Regulation A offering has filed 1.7 (0) post-qualification amendments.

[665] The change to permit Exchange Act registrants to use Regulation A was adopted in December 2018 and approximately 17 Exchange Act registrants sought to use Regulation A to conduct an offering in 2019, of which 11 of those offerings were qualified.

[666] *See* Comm. of Annuity Insurers Letter.

Some of the existing issuers under the exemptions being amended have conducted other types of offerings that are not subject to offering limits. Information about offering sizes in Rule 506 can provide additional insights for the review of the offering limits for Regulation A, Regulation Crowdfunding, and Rule 504.[667] Generally, however, we do not know whether those issuers used Rule 506 because the offering limits of the exemptions being amended were too low for their needs or for other reasons. The table below shows the capital raising under Rule 506 in 2019 by issuers using offering exemptions being amended.[668]

TABLE 12—CAPITAL RAISING UNDER RULE 506 IN 2019 BY ISSUERS USING AFFECTED EXEMPTIONS

| | |
|---|---|
| Number of Regulation A issuers raising financing under Rule 506 | 34. |
| Average (median) amount reported raised under Rule 506 per Regulation A issuer | $5.8 million ($0.2 million). |
| Number of Regulation Crowdfunding issuers raising financing under Rule 506 | 139. |
| Average (median) amount reported raised under Rule 506 per Regulation Crowdfunding issuer | $2.4 million ($0.2 million). |
| Number of Rule 504 issuers raising financing under Rule 506 | 110. |
| Average (median) amount reported raised under Rule 506 per Rule 504 issuer | $1.4 million ($0.3 million). |

Evidence in Tables 11 and 12 suggests that most issuers that rely on Regulation A, Regulation Crowdfunding, and Rule 504 tend to raise amounts of financing, both under these exemptions and when they raise financing under Rule 506, which has no offering limit, that are below the existing offering limits. This observation is based on the pool of issuers attracted to these offering exemptions with the provisions that are in place today. It is likely that issuers with larger financing needs forgo the exemptions with offering limits that are too low for their financing needs. Expanding the offering limits is therefore expected to attract additional issuers to these exemptions.

It is difficult to predict how many new issuers will be drawn to Regulation Crowdfunding, Regulation A, and Rule 504 under the amended offering limits. Because of potential unobservable differences in issuer characteristics, comparisons presented below are intended as illustrative examples. The table below[669] examines the use of other securities offering methods by issuers that raised amounts above the existing limits but below the amended offering limit thresholds, some of which may consider using the amended exemptions. We consider (1) Rule 506 and registered offerings for purposes of analyzing the amended offering limit threshold under Regulation A; (2) Regulation A, Rule 504, and Rule 506 offerings for purposes of analyzing the amended offering limit threshold under Regulation Crowdfunding; and (3) Regulation A and Rule 506 offerings for purposes of analyzing the amended offering limit threshold under Rule 504.[670] Information on amounts raised under Section 4(a)(2), Section 3(a)(11), and Rules 147/147A is not available to us.

TABLE 13—EVALUATION OF OFFERING LIMIT AMENDMENTS BASED ON EVIDENCE FROM SELECT OTHER SECURITIES OFFERING METHODS IN 2019

| | |
|---|---|
| **Regulation A: Offering limit increase from $50 million to $75 million** | |
| Number of issuers in offerings that raised above $50 million and up to $75 million: | |
| Rule 506 [a] | 171 |
| Registered offerings [b] | 57 |
| **Regulation Crowdfunding: Offering limit increase from $1.07 million to $5 million** | |

| Number of issuers in offerings that raised above $5 million and up to $10 million: | |
| Regulation A [f] | 10 |

[667] We focus on Rule 506 offerings due to data limitations. First, reporting companies are ineligible under Rule 504. Additionally, we have identified only one Regulation Crowdfunding issuer that has undertaken a registered offering as of December 31, 2019. Further, very few Regulation A issuers have undertaken a registered offering during this period, resulting in a lack of reliable data on such issuers' registered offering proceeds. From June 19, 2015, through December 31, 2019, we identified 14 issuers in qualified Regulation A offerings that had a registration statement declared effective, based on the analysis of EDGAR filings. These were issuers that proceeded to list on an exchange after their Regulation A offering and then sought follow-on financing through a registered offering.

[668] For purposes of this table, Regulation A issuers are defined as issuers in qualified Regulation A offerings from June 2015 through December 2019; Rule 504 issuers are defined as issuers in new and amended Rule 504 offerings from 2016 through 2019; Regulation Crowdfunding issuers are issuers in Regulation Crowdfunding offerings from May 2016 through December 2019. Data on Rule 506 financing is based on total proceeds reported raised per issuer in new and amended Form D filings from 2019. Pooled investment funds are excluded.

[669] For purposes of this table, Regulation A issuers are defined as issuers in qualified Regulation A offerings from June 2015 through December 2019; Rule 504 issuers are defined as issuers in new and amended Rule 504 offerings from 2016 through 2019; Regulation Crowdfunding issuers are issuers in Regulation Crowdfunding offerings from May 2016 through December 2019. Data on Rule 506 financing is based on total proceeds reported raised per issuer in new and amended Form D filings from 2019. Pooled investment funds are excluded.

[670] For purposes of analyzing the amended offering limit thresholds under Regulation Crowdfunding and Rule 504, we do not consider registered offering activity, as registered offerings are not likely to be a cost-effective alternative at those offer sizes.

TABLE 13—EVALUATION OF OFFERING LIMIT AMENDMENTS BASED ON EVIDENCE FROM SELECT OTHER SECURITIES OFFERING METHODS IN 2019—Continued

| | |
|---|---|
| Rule 506 [g] | 1,618 |

[a] Regulation A eligibility criteria exclude investment companies and blank check companies and limit the exemption to U.S. and Canadian issuers, so for comparability pooled investment funds and issuers outside the U.S. and Canada are excluded from the Rule 506 proceeds used in this estimate. Reporting companies are eligible to rely on Regulation A under the 2018 amendments.

[b] Registered offering proceeds are based on gross proceeds reported in SDC Platinum for U.S. public offerings of equity, debt, and convertible securities with issue dates in 2019, excluding withdrawn, postponed, and rumored offerings, asset-backed securities offerings, blank check issuers, investment fund issuers, and issuers outside the U.S. and Canada.

[c] For purposes of this table, only incremental Regulation A proceeds reported in 2019 are considered, as opposed to cumulative proceeds reported from June 2015 through December 2019. Regulation Crowdfunding eligibility criteria limit the exemption to U.S. issuers and exclude Exchange Act reporting companies, so for comparability non-U.S. issuers and reporting companies are excluded from the Regulation A proceeds used in this estimate.

[d] Regulation Crowdfunding eligibility criteria exclude investment companies and Exchange Act reporting companies and limit the exemption to U.S. issuers, so for comparability pooled investment funds and non-U.S. issuers are excluded from Rule 504 proceeds used in this estimate. Reporting companies are ineligible under Rule 504.

[e] Regulation Crowdfunding eligibility criteria exclude investment companies and Exchange Act reporting companies and limit the exemption to U.S. issuers, so for comparability pooled investment funds, reporting companies, and non-U.S. issuers are excluded from Rule 506 proceeds used in this estimate. Reporting companies are identified based on annual reports or amendments to them filed in 2019.

[f] For purposes of this table, only incremental Regulation A proceeds reported in 2019 are considered, as opposed to cumulative proceeds reported from June 2015 through the end of the period. Rule 504 eligibility criteria exclude Exchange Act reporting companies, so for comparability reporting companies are excluded from the Regulation A proceeds used in this estimate.

[g] For comparability with other estimates in this table, we exclude reporting companies and pooled investment funds from Rule 506 proceeds used in this estimate. Reporting companies are identified based on annual reports or amendments to them filed in 2019.

Given the scale of Regulation A offering activity today, the number of Rule 506 and registered offerings in the $50 million to $75 million range suggests potential for a significant relative increase in Regulation A activity under the amended offering limit. As a crucial caveat, issuers choosing to rely on Rule 506 or registered offerings today may be inherently different from the types of issuers that might find Regulation A attractive under the amended limit. Further, the number of Rule 506 offerings in the $1.07 million to $5 million range significantly exceeds the absolute number of Regulation Crowdfunding offerings today, which thus may suggest potential for a significant relative increase in Regulation Crowdfunding activity under the amended offering limit. Similarly, the number of Rule 506 offerings in the $5 million to $10 million range significantly exceeds the absolute number of Rule 504 offerings today, which thus may suggest potential for a significant relative increase in Rule 504 activity under the amended offering limit. As a caveat, issuers choosing to rely on Rule 506 today may be inherently different from the types of issuers that might find Regulation Crowdfunding or Rule 504 attractive under the amended limits. Importantly, historical use of other offering methods may not fully represent potential future use of the exemptions being amended, particularly if the amendments facilitate offerings by issuers that may not currently rely on securities offerings. We lack data or a methodology to predict how many new issuers that would not have otherwise undertaken any securities offering will be drawn to Regulation Crowdfunding, Regulation A, and Rule 504 under the amendments.

As discussed above, in response to commenters, we also are extending for an additional 18 months the temporary relief from certain financial statement review requirements for eligible issuers offering up to $250,000 of securities in reliance on Regulation Crowdfunding in a 12-month period. The temporary final rules adopted on May 4, 2020, and subsequently extended on August 28, 2020, serve as the economic baseline against which the costs and benefits, as well as the impact on efficiency, competition, and capital formation, of these amendments are measured. Consistent with the existing temporary relief, the eligibility criteria exclude (1) issuers that were organized or had operations for less than six months prior to the commencement of the offering and (2) issuers that were not compliant with Regulation Crowdfunding requirements with regard to any prior offerings in which they sold securities. Historical data provides an indication of the potential share of offerings eligible for the extended relief among all offerings. From the inception of Regulation Crowdfunding through December 31, 2019, we estimate that 1,537 (approximately 77 percent of the total number of crowdfunding offerings during this period) were initiated by 1,407 issuers that were eligible or would have been eligible for the relief under the six-month eligibility criteria.[671] It is more difficult to estimate the percentage of prior Regulation Crowdfunding issuers that would not be eligible because they were not compliant with one or more of the requirements of Regulation Crowdfunding in a prior offering. From inception through December 31, 2019, we estimate that there were 149 repeat Regulation Crowdfunding issuers, including 116 such issuers that had reported successful completion of at least one Regulation Crowdfunding offering on Form C–U.[672] We are unable to predict precisely the number of issuers likely to rely on this provision among eligible issuers.[673] A review of new filings made on Form C on or after May 4, 2020, provides some information about issuer reliance on this provision under the existing temporary relief. As of September 30, 2020, we find that, of the 400 new offerings on Form C by eligible issuers (excluding filings withdrawn as of September 30, 2020, and duplicate filings, across offerings of all sizes), 53 offerings, or 13% provided certified

[671] For this estimate, eligibility was estimated approximately based on the issuer having been formed at least six months prior to the filing date of the offering as reported in the XML portion of Form C and having had (1) either positive assets, revenues, net income, debt, accounts receivable, cost of goods sold, taxes paid, or employees in the most recent fiscal year reported in the XML portion of Form C, or (2) a prior Regulation Crowdfunding offering. In addition, we recognize that many of the past Regulation Crowdfunding issuers may meet the six-month eligibility criterion as of the effective date of these amendments, should they wish to avail themselves of the relief for a follow-on offering under Regulation Crowdfunding.

[672] This figure likely provides a lower bound on the number of issuers that have initiated a follow-on offering after successfully completing a prior offering due to incomplete reporting of offering proceeds on Form C–U. Follow-on issuance activity may differ from historical data due to changes in the crowdfunding market as a result of confounding market factors and continued uptake of the relief under the temporary rules by past issuers. *See also* Temporary Amendments Adopting Release, at 27124.

[673] For a more detailed discussion, *see* Temporary Amendments Adopting Release, at 27124–5.

rather than reviewed financial statements.[674]

i. Benefits

The amended Regulation A Tier 2, Regulation Crowdfunding, and Rule 504 offering limits are expected to increase capital formation in those markets by enabling existing issuers that are approaching offering limits to raise larger amounts of financing, as well as by drawing new issuers that are deterred by relatively low offering limits today.[675]

We recognize that these benefits will be limited if issuers raise amounts below the limit. We note that some commenters suggested that there is not compelling evidence of the need for increased offering limits in Regulation A, Regulation Crowdfunding, or Rule 504 or that more information is needed to determine whether such an increase is appropriate.[676] While historical utilization rates for these exemptions have not reached offering limits for the average issuer, it is important to note that estimates from past data obtained under the existing limits are inevitably subject to selection bias—high-growth issuers or larger issuers with considerable financing needs may forgo these offering methods because it may not make sense for such issuers to incur the cost of an offering with a lower offering limit in addition to pursuing other financing options. Similarly, the high fixed cost of due diligence and marketing related to the kinds of small issuers and offerings represented in the market today may cause intermediaries to be unwilling to participate in the Regulation A market under the existing offering limits. As a result, if smaller issuers, issuers with a lower growth rate, or issuers without intermediaries are overrepresented in the Regulation A market today, they may account for relatively low average proceeds raised. Thus, historical utilization rates could fail to capture the potentially expanded pool of prospective issuers with larger financing needs that may consider these exemptions, and pursue larger offerings, under the amendments, as well as the potentially expanded pool of intermediaries and investors that are expected to be drawn to the Regulation A market under the amended offering limit. Similarly, startups whose financing needs may exceed the existing $1.07 million annual Regulation Crowdfunding limit or the existing $5 million Rule 504 limit—such as startups with a significant growth potential—may be reluctant to consider Regulation Crowdfunding or Rule 504 because even after they incur the cost of compliance and other offering costs, they would still have to resort to other financing to meet their remaining financing needs. Thus, the existing offering limits likely shape the composition of issuers, intermediaries, and investors attracted to these exemptions. While it is possible that low utilization will continue to be driven by factors other than the offering limit, significant caution is warranted with respect to any prediction of future utilization under an expanded offering limit extrapolated from historical data.

The effects on aggregate capital formation will also be limited if the issuers drawn to the amended exemptions are switching from other securities offering methods;[677] however, such issuers may still benefit from optimizing their financing strategy and lowering their cost of capital.

The amendments also may lead to changes in the composition of the pool of issuers relying on these exemptions by drawing a larger and more diversified set of issuers with high growth potential and financing needs in excess of the existing limits.[678] Today such startups may forgo an exemption with an offering limit in favor of a Rule 506 offering. A broader and more diversified range of investment opportunities may benefit investors in these market segments, particularly non-accredited investors that seek exposure to private companies but are constrained from participation in private placements. The amended offering limits also may make the exemptions more attractive to a broader range of intermediaries, some of which may be deterred from participating in these markets today by fixed costs (*e.g.,* due diligence, compliance, crowdfunding platform operation, etc.) in proportion to potential compensation.[679]

Under the existing rules, Regulation A Tier 2 offerings are not subject to State registration and qualification requirements. We are not making changes to this provision, which will continue to apply to Tier 2 offerings up to the amended offering limit. Under the existing rules, Regulation Crowdfunding offerings up to $1.07 million similarly are preempted from State registration and qualification requirements under Section 4(a)(6). The amendments we are adopting in this release extend the preemption of State registration and qualification requirements to Regulation Crowdfunding offerings in excess of $1.07 million and not exceeding the amended offering limit ($5 million). This provision will benefit prospective issuers seeking above $1.07 million in a 12-month period under Regulation Crowdfunding through lower costs of compliance and a more streamlined offering process than if the offering had been subject to State review. An additional benefit to our approach is that issuers and intermediaries will potentially incur lower legal costs due to greater certainty as to the application of preemption to Regulation Crowdfunding offerings above $1.07 million.[680] Rule 504 offerings will remain subject to State registration and qualification requirements. Because issuers in small offerings continue to have a choice of securities offering exemptions, issuers that seek to avail themselves of the State review regime

[674] *See supra* note 671 for the definition of eligible issuer used in this estimate. This estimate may represent a lower bound because reliance on the provisions is not disclosed in a structured data or in a standardized format and was evaluated based on manual review of filings for mention of the temporary rules. Of the issuers in the 53 offerings, we identified 48 as first-time issuers and five as repeat Regulation Crowdfunding issuers based on having made a prior filing on Form C. Each of the five repeat Regulation Crowdfunding issuers had made a filing on Form C–U and a filing on Form C–AR (annual report), however, our review did not examine the details of these filings for specific content. In addition to the issuers in the 53 offerings discussed above (which listed dates of organization that were six months or more prior to filing), we examined all issuers using reviewed financial statement relief between May 4, 2020, and September 30, 2020, and we identified four issuers (all of which were first-time issuers) in offerings seeking above $107,000 and up to $250,000 that listed a date of organization that was less than six months prior to filing. We could not confirm, based on the filings, whether the issuers may have been organized prior to the date listed, such as in a different corporate form (*e.g.,* a limited liability company instead of a corporation). Our review of the recent Regulation Crowdfunding filings focused on the use of the relief and the small sample size on which these estimates are based limits our ability to draw systematic inference about issuers relying on the relief.

[675] *See supra* notes 363 and 365 (noting commenters supporting the benefits of an increased Regulation A limit); *supra* note 419 (noting commenters supporting the benefits of an increased Regulation Crowdfunding limit); and *supra* note 397 (noting commenters supporting the benefits of an increased Rule 504 limit). Many individual commenters recommended raising the Regulation Crowdfunding limit in light of economic concerns raised by COVID–19.

[676] *See supra* notes 370, 425, and 398.

[677] *See supra* note 427 (discussing concerns of commenters about substitution between registered offering and exempt offering markets).

[678] *See, e.g., supra* note 365 (discussing comment letters that suggested that an increase in the Regulation A offering limit could encourage development of the smaller initial public offering market, encouraging more issuers to conduct offerings and providing more investment opportunities for investors).

[679] *See, e.g., supra* note 366 (discussing commenters that suggested that the higher offering limits would improve the economics for issuers and broker dealers to participate in the Regulation A market).

[680] *See supra* Section II.E.3.c.

may continue to do so through a Regulation A Tier 1 or a Rule 504 offering.

The temporary final rules currently in effect serve as the economic baseline against which the benefits of the amendments extending the relief from certain Regulation Crowdfunding financial statement review requirements are measured. Thus, we do not expect additional significant benefits to result from the extension. Extension of the temporary relief will allow small businesses to continue to avail themselves of the benefits of the relief as they do today under the baseline,[681] particularly in the face of significant challenges facing small businesses as a result of the COVID–19 crisis.[682] While the existing temporary rule specifies that it applies to issuers affected by COVID–19, the extension of this relief under the final rules does not include this condition. Given the broad scope of the direct and indirect impact that COVID–19 has had on small business issuers and the continuing challenges they face, we do not expect this change in conjunction with the 18-month extension to have a substantial economic impact.[683] We note that several commenters supported extending the temporary relief.[684]

ii. Costs

The amendments may increase aggregate potential investor losses.[685] Increased offering limits under Regulation A Tier 2, Regulation Crowdfunding, and Rule 504 may make it easier for smaller, higher-risk issuers to access capital through these exemptions.[686] The increased offering limits could also make the exemptions more attractive to issuers that cannot meet more restrictive requirements applicable to larger offerings today, resulting in potentially greater representation of such issuers among the issuers relying on the amended exemptions.[687] For example, some issuers seeking up to $5 million that are unable to meet State or Commission qualification requirements under Regulation A would instead be able to offer $5 million, rather than only $1.07 million, under Regulation Crowdfunding, which does not require State or Commission review prior to sales. As another example, some issuers seeking up to $75 million in an offering and also seeking to avoid the more extensive periodic reporting, beneficial ownership reporting, proxy disclosure, and 17 CFR 243.100 through 243.103 requirements associated with being a public reporting company would be able to forgo registration and offer up to $75 million, rather than $50 million, under Regulation A. Issuers seeking up to $75 million and seeking to avoid restrictions on testing the waters with individual investors, as well as unlisted issuers seeking to avoid State law restrictions on primary offers and sales, may find amended Regulation A Tier 2 to be increasingly attractive compared to a registered offering. To the extent that issuers under Regulation A Tier 2, Regulation Crowdfunding, and Rule 504 are subject to fewer rules and requirements or fail to comply with those rules and requirements, investors may be at an increased risk of loss.[688]

The increased offering limits for Regulation A Tier 2, as well as the increased offering limit for Regulation Crowdfunding (combined with the Regulation Crowdfunding qualified purchaser amendments) also will expand the scope of offerings that are not subject to State registration and qualification requirements, potentially increasing risk of investor losses to the

[681] The relief allows issuers to raise capital without incurring costs and delays involved in an independent accountant's review of their financial statements. This incrementally enhances the efficiency of conducting the offering and yields capital formation benefits for eligible issuers. *See also* Temporary Amendments Adopting Release, at 27127. The upfront costs of obtaining a review report may be nontrivial for small issuers, particularly issuers experiencing declines in internal cash flows as a result of the COVID–19 crisis. In the Crowdfunding Adopting Release, the Commission estimated review costs to be approximately $1,500–$18,000. *See Crowdfunding Adopting Release,* at 71499. More recent information about the costs of a review report is available from commenters and industry sources. For example, one industry source estimates the cost of a review as $2,000–$2,450 for a single-owner LLC/S-Corp/Sole Proprietor issuer that has not previously had a review or audit but is in possession of full financial records and $2,400–$2,950 for a single-owner issuer that has not previously had a review or audit and instead tracks financials in a spreadsheet format. These are estimates based on a hypothetical issuer. Costs may vary depending on the accountant and the issuer's circumstances. *See* CrowdfundCPA Crowdfunding Audit/Review Cost Calculator, available at: *http://crowdfundcpa.com/cost-estimate---calculator.html* (retrieved April 22, 2020). A commenter on the Concept Release stated that it has ''interviewed dozens of CPA firms and found that the average cost of reviewing a company that has two years of financial history is at least $6,000'' and that ''[f]or a company with no history, this quote (from many CPA firms) has been in the $1,500 to $2,500 range.'' *See* Letter from Mainvest (Sep. 24, 2019), *available at: https://www.sec.gov/comments/s7-08-19/s70819-6193357-192513.pdf.*

[682] *See infra* note 695.

[683] *See id.*

[684] *See supra* note 449.

[685] *See, e.g.,* CFA Letter (expressing concern about the negative effects of increasing the use of Regulation A for non-accredited investors and increased risks of investor losses); R. Rutkowski Letter (expressing concern about risk to non-accredited investors in Regulation A and Regulation Crowdfunding offerings); and Morningstar Letter (noting a lack of investment advice such as from a broker or investment adviser that investors might have access to with regard to an investment in a public company).

[686] *See, e.g.,* Md. St. Bar Assoc. Letter (expressing concern that Regulation Crowdfunding will draw non-accredited investors to issuers that accredited investors refused to fund and further stating that companies that require more than $50 million every 12 months should be raising capital through registered offerings rather than Regulation A); B. Richardson Letter (discussing uncertainty about Regulation Crowdfunding issuer outcomes); Better Markets Letter (stating that early-stage companies have a high risk of failure and that retail investors cannot adequately diversify among such firms due to the ''dearth of investable funds''); CFA Letter (stating that ''worse deals are sold to members of the general public subject to Reg. A, Reg. CF, and Rule 504''); CFA Institute Letter (stating that increased offering limits ''may attract other high-risk issuers''); AFREF Letter and R. Rutkowski Letter (expressing concern about risk to retail investors from the expansion of offering limits under Regulation A, Regulation Crowdfunding, and Rule 504). *See also* CFA Institute Letter (noting ''the outsized role played by a single industry—real estate—in Regulation A markets''). Real estate issuers have accounted for the majority of financing under Regulation A to date. *See* Report to Congress on Regulation A/Regulation D Performance, at p. 32. We recognize that unlisted REITs, including Regulation A REITs, may pose risks to some non-accredited investors. We note that such investors already may invest in unlisted REITs that are registered under Section 12(g). *See* Investor Bulletin: Non-traded REITs, *available at https://www.sec.gov/oiea/investor-alerts-bulletins/ib_nontradedreits.html.* Although Regulation A Tier 2 REIT offerings are eligible for certain additional relief relative to unlisted REITs registered under Section 12(g) (including testing the waters and semi-annual rather than quarterly reporting), Regulation A Tier 2 offerings are subject to non-accredited investor investment limits. The ability to access unlisted real estate offerings may offer benefits—as well as risks—to investors. Real estate is associated with considerable returns among private funds (to which non-accredited investors generally lack access). *See* Report to Congress on Regulation A/Regulation D Performance, at Table 14. Real estate also accounts for the largest share of non-fund Regulation D offerings (to which non-accredited investors also rarely have access today). *See id,* at Figure 9. Non-accredited investor access to real estate private equity through Regulation A could expand their investable opportunity set and potential for diversification, allowing them to potentially construct more efficient portfolios. *See, e.g.,* IPA Letter (supporting ''increased access to investment strategies with low correlation to the equity markets, including net asset value real estate investment trusts (''REITs''), lifecycle REITs, business development companies, interval funds and direct participation programs . . . individual investor access to a wide variety of asset classes that have historically been available only to institutional investors''). *See also supra* note 654.

[687] *See, e.g.,* CFA Institute Letter (expressing concern about risks to non-accredited investors from adverse selection in Regulation A and Regulation Crowdfunding offerings); and Md. St. Bar Assoc. Letter.

[688] *See, e.g.,* CII Letter (discussing concerns about Regulation A issuer compliance); NASAA Letter (recommending strengthening corporate governance and disclosure obligations and rescinding preemption of State securities regulation to increase the regulatory oversight of these companies making them more attractive to and safer for investors); and J. Marks Letter (expressing concern about Regulation Crowdfunding issuer compliance). *See also, e.g.,* Mercer Bullard, *Crowdfunding's Culture of Noncompliance: An Empirical Analysis,* 24 Lewis & Clark L. Rev. 899 (2020).

extent not mitigated by other investor protection provisions. Rule 504 offerings will remain subject to State registration and qualification requirements.

The investor costs described above are expected to be mitigated by the investor protection provisions of each exemption. In particular, Regulation A Tier 2 offerings will remain subject to offering statement and ongoing disclosure requirements, non-accredited investor investment limits, bad actor disqualification provisions, and issuer eligibility requirements, and will continue to be required to undergo Commission qualification before sales can be made. Regulation Crowdfunding offerings will remain subject to offering statement and periodic disclosure requirements, intermediary requirements, including investor education and measures to reduce the risk of fraud, as well as non-accredited investor investment limits, bad actor disqualification provisions, and issuer eligibility requirements. Moreover, costs to investors are expected to be further mitigated by the continued application of the antifraud provisions of Federal and State securities laws and the role of reputational incentives of issuers and, if applicable, intermediaries, in these offerings. Rule 504 offerings will remain subject to issuer eligibility requirements, bad actor disqualification provisions, and State registration and qualification requirements.

As discussed above, the temporary final rules currently in effect serve as the economic baseline against which the costs of the amendments extending the relief from certain Regulation Crowdfunding review requirements are measured. Thus, we do not expect additional significant costs to result from the extension. We recognize that costs to investors associated with the temporary final rules will continue to be incurred under the amendments extending the rules, similar to the baseline.[689] Importantly, several provisions of the temporary rules are expected to continue to mitigate potential risks to investors. Issuers relying on the temporary rules must still provide prominent disclosure that financial information certified by the principal executive officer of the issuer has been provided instead of financial statements reviewed by a public accountant that is independent of the issuer. Moreover, temporary relief from the review report requirement does not preclude liability in instances of materially misleading financial disclosures provided at the time of the offering, and general anti-fraud provisions and liability for offers under Regulation Crowdfunding will continue to apply. Finally, the remaining investor protections of Regulation Crowdfunding continue to provide significant safeguards for investors in offerings reliant on the temporary relief from the review report requirement.

iii. Effects on Efficiency, Competition, and Capital Formation

The amendments to the Regulation A, Regulation Crowdfunding, and Rule 504 offering limits are expected to increase capital formation in those markets and to provide issuers that cannot meet their financing needs under existing exemptions with a means of raising external financing and potentially lowering their cost of capital (*e.g.,* as a result of economies of scale and fixed cost of initiating an offering), resulting in more efficient allocation of capital to growth opportunities. The capital formation effects of the amendments are expected to be more limited if issuers raise amounts of financing below the amended offering limits or if some of the capital raised under the amended exemptions would have been otherwise raised through other securities offering methods. For example, raising the Regulation Crowdfunding offering limit may draw some of the issuers that would have otherwise sought between $1.07 and $5 million under Rule 504, Rule 506, or Regulation A. Similarly, raising the Rule 504 offering limit may draw some of the issuers that would have otherwise sought between $5 and $10 million under Rule 506 or Regulation A. Those scenarios entail the switching of issuers between offering methods rather than new capital formation.

As discussed above, these amendments may enable some issuers to delay or forgo a registered offering, thereby avoiding the associated costs of Exchange Act registration and being a public reporting company. For example, the higher offering limits for the discussed exemptions may allow more issuers to raise capital from non-accredited investors without registration. This could result in less disclosure and lower liquidity for some of these investors. However, this possibility must be considered in the context of the baseline, under which those issuers otherwise might have relied on Rule 506, which significantly limits non-accredited investor access and, for non-accredited investors that do invest, restricts resales as well as limits the ability to obtain current information about the issuer. Alternatively, issuers on the margin between a Regulation A Tier 2 offering and a registered offering might have registered their securities but not listed on an exchange in a traditional public offering (due to cost, small size, lack of underwriter or institutional investor interest, etc.). As a result, their securities would have no secondary market or be quoted over-the-counter, which affords only marginal

[689] Although a review report provides a more limited level of assurance compared to an audit report, reviewed financial statements confer valuable informational benefits to investors. *See, e.g.,* Brad A. Badertscher et al., *Verification Services and Financial Reporting Quality: Assessing the Potential of Review Procedures* (Simon Bus. Sch., Working Paper No. FR 17–17, July 2018) (''[B]oth reviews and audits yield significantly better reporting quality scores and lower cost of debt than zero-verification compilations. However, model-based reporting quality scores of reviews and audits are indistinguishable statistically, on average. Regarding broader economics, we find that relative to compilations, reviews yield more than half the added interest rate benefit associated with an audit, at considerably less than half the added cost. Overall, our results suggest reviews may provide a cost-effective verification alternative to audits, and the potential of analytical procedures warrants more attention by audit researchers and regulators.''); Evisa Bogdani, Monika Causholli & W. Robert Knechel, *The Role of Assurance in Equity Crowdfunding* (Working Paper, 2019) (finding that ''firms that provide either reviewed or audited financial statements are more likely to reach their target capital, attract a greater number of investors, and raise more capital relative to firms that only provide management-certified financial statements'' in equity crowdfunding). Thus, in cases of issuers temporarily exempted from the review report requirement, particularly in an environment of heightened market uncertainty, investors may have less information in making their investor decisions and may incur additional risks. Exemptive relief from the review report requirement also may continue to weaken the incentives of some issuers to provide compliant financial statement disclosures since they no longer would be required to undergo a review by an independent accountant and to provide such a report to investors, resulting in potentially less informative financial disclosures provided to investors in affected offerings. For example, some financial statement disclosures provided by issuers below the existing review report threshold are not prepared in a U.S. GAAP-compliant manner. *See, e.g.,* Letter from CrowdCheck (Oct. 30, 2019) commenting on the Concept Release, available at: *https://www.sec.gov/comments/s7-08-19/s70819-6368811-196431.pdf.* However, to the extent that issuer financial disclosures are historical in nature, such disclosures might be relatively less meaningful for purposes of assessing the current financial condition and growth prospects of an issuer that was financially sound but has experienced significant adverse effects as a result of the COVID–19 crisis. Further, historical financial disclosures may be incrementally less meaningful for evaluating the business of a recently formed or development-stage issuer. *See, e.g.,* Letter from Mainvest (stating that ''a company with no operating history simply does not have historical financial information that can be reviewed. Issuers on our platform unfortunately are required to get CPA reviews of a balance sheet with almost no zeros [*sic*]. This adds practically no value to investor protections and significantly increases up-front costs to companies.'').

benefits, if any, of liquidity and information availability compared to a Regulation A Tier 2 offering.

If the amended offering limits draw additional issuers to these exemptions, which accept an unlimited number of non-accredited investors, the amendments could expand the set and nature of investable opportunities for non-accredited investors seeking exposure to issuers that have not yet registered an offering. The effects on competition for investor capital will depend on how the additional investor capital drawn to the affected markets compares to the amount of additional financing sought by issuers in these markets. By promoting access to external financing for smaller issuers, the amendments may increase product market competition among small issuers and between small issuers and more established issuers.

As discussed above, the temporary final rules currently in effect serve as the economic baseline against which the economic effects of the amendments extending the relief from the review report requirements are measured. Thus, we do not expect additional significant effects on efficiency, competition, or capital formation to result from the extension.

iv. Reasonable Alternatives

As an alternative, we could have adopted different offering limits. For example, we could have adopted smaller increases to the offering limits, such as an adjustment to the existing offering limits to reflect the rate of inflation since the enactment of the JOBS Act in April 2012.[690] As another alternative, we could have adopted larger increases in the offering limits, as suggested by some commenters.[691] Compared to the final amendments, a higher (lower) offering limit could make an offering under the exemption more (less) cost-effective for issuers (and if applicable, intermediaries) facing fixed offering and due diligence costs, resulting in larger (smaller) capital formation benefits. Compared to the final amendments, a higher (lower) offering limit could draw a larger (smaller) pool of additional issuers to the respective segment of the exempt market and potentially expand investment opportunities for non-accredited investors seeking exposure to issuers that have not yet registered their securities. The net impacts of these alternatives on capital formation, investor protection, and competition could be limited if most of the incremental offering activity under these alternatives is due to issuers switching between various offering methods. Even if most of the additional issuers under these alternatives would have otherwise raised financing through another offering method, such issuers might still be able to benefit from a lower cost of capital under the alternative of increased offering limits. The net impacts of the alternative would be further attenuated to the extent that the majority of issuers continue to raise amounts below the offering limits.[692] As a caveat, similar to the discussion above, existing data on issuers approaching the offering limits may not be representative of the amounts that would be raised if a different pool of issuers or investors is drawn to the respective market segment under alternative offering limits.

It is difficult to predict how many new issuers that would not have otherwise engaged in a securities offering would be drawn to the respective exempt market segment under these alternatives, compared to the amended offering limits. The table below examines the use of alternative securities offering methods that are most likely to be relied on by issuers that raise amounts above existing offering limits but below several alternative offering limit thresholds to illustrate the potential number of additional issuers that presently utilize other offering methods that do not have a cap but that might see the amended exemption as an option under these alternatives. The caveats that accompany Table 12 continue to apply.

TABLE 14—EVALUATION OF ALTERNATIVES TO THE AMENDED OFFERING LIMITS USING EVIDENCE FROM CAPITAL RAISING IN 2019 THROUGH SELECT OTHER SECURITIES OFFERING METHODS

**Evaluation of Alternative Regulation A Offering Limits**

| Number of issuers that raised above $50 million and up to: | Number of issuers in offerings under Rule 506 [a] | Number of issuers in registered offerings [b] |
|---|---|---|
| $55.845 million (inflation adjustment) | 51 | 17 |
| $60 million | 85 | 29 |
| $70 million | 144 | 46 |
| $75 million (amended offering limit) | 171 | 57 |
| $80 million | 198 | 72 |
| $90 million | 231 | 90 |
| $100 million | 270 | 122 |
| $110 million | 298 | 143 |
| $120 million | 315 | 151 |
| $125 million | 325 | 162 |

[690] The Regulation A offering limit has not been adjusted for inflation since the enactment of the JOBS Act. Between April 2012, when the JOBS Act was enacted, and December 2019, the rate of CPI inflation was 11.7 percent according to Bureau of Labor Statistics (''BLS'') data. Adjusting for inflation would yield a Regulation A limit of $55.845 million ($50 million × 1.1169). The Regulation Crowdfunding offering limit was last adjusted for inflation in April 2017. Between April 2017 and December 2019, the rate of CPI inflation was 5.09 percent, according to BLS data. Adjusting for inflation would yield a Regulation Crowdfunding offering limit of $1.124 million ($1.07 million × 1.0509). The Rule 504 offering limit was raised to $5 million in October 2016. Between October 2016 and December 2019, the rate of CPI inflation was 6.31 percent. Adjusting for inflation would yield a Rule 504 offering limit of $5.316 million ($5 million × 1.0631).

[691] For instance, some commenters have suggested raising the Regulation A offering limit to $100 million. *See supra* note 367. Some commenters have suggested raising the Regulation Crowdfunding offering limit above $5 million. *See supra* note 421.

[692] For example, the average (median) Regulation Crowdfunding offering reported proceeds of $213,678 ($106,900) between the inception of Regulation Crowdfunding (May 16, 2016) through December 31, 2019; the average (median) Regulation A issuer reported raising $13.4 million ($5.0 million) between the effective date of 2015 Regulation A amendments (June 19, 2015) and December 31, 2019.

TABLE 14—EVALUATION OF ALTERNATIVES TO THE AMENDED OFFERING LIMITS USING EVIDENCE FROM CAPITAL RAISING IN 2019 THROUGH SELECT OTHER SECURITIES OFFERING METHODS—Continued

**Evaluation of Alternative Regulation Crowdfunding Offering Limits**

| Number of issuers that raised above $1.07 million and up to: | Number of issuers in offerings under Rule 504 [c] | Number of issuers in offerings under Rule 506 [d] | Number of issuers in offerings under Regulation A [e] |
|---|---|---|---|
| $1.124 million (inflation adjustment) | 2 | 104 | 0 |
| $2 million | 31 | 1,542 | 2 |
| $3 million | 44 | 2,662 | 7 |
| $4 million | 51 | 3,388 | 10 |
| $5 million (amended offering limit) | 55 | 4,004 | 13 |
| $6 million | | 4,454 | 15 |
| $7 million | | 4,813 | 17 |
| $8 million | | 5,127 | 20 |
| $9 million | | 5,333 | 21 |
| $10 million | | 5,567 | 23 |
| $15 million | | 6,233 | 29 |
| $20 million | | 6,604 | 31 |

**Evaluation of Alternative Rule 504 Offering Limits**

| Number of issuers that raised above $5 million and up to: | | Number of issuers in offerings under Rule 506 [f] | Number of issuers in offerings under Regulation A [g] |
|---|---|---|---|
| $5.316 million (inflation adjustment) | | 152 | 0 |
| $6 million | | 464 | 2 |
| $7 million | | 834 | 4 |
| $8 million | | 1,166 | 7 |
| $9 million | | 1,377 | 8 |
| $10 million (amended offering limit) | | 1,618 | 10 |
| $15 million | | 2,315 | 16 |
| $20 million | | 2,695 | 18 |
| $25 million | | 2,974 | 19 |

[a] Regulation A eligibility criteria exclude investment companies and blank check companies and limit the exemption to U.S. and Canadian issuers, so for comparability pooled investment funds and issuers outside the U.S. and Canada are excluded from the Rule 506 proceeds used in this estimate. Reporting companies are eligible to rely on Regulation A under the 2018 amendments.

[b] Registered offering proceeds are based on gross proceeds reported in SDC Platinum for U.S. public offerings of equity, debt, and convertible securities with issue dates in 2019, excluding withdrawn, postponed, and rumored offerings, asset-backed securities offerings, blank check issuers, investment fund issuers, and issuers outside the U.S. and Canada.

[c] For purposes of this table, only incremental Regulation A proceeds reported in 2019 are considered, as opposed to cumulative proceeds reported from June 2015 through December 2019. Regulation Crowdfunding eligibility criteria limit the exemption to U.S. issuers and exclude Exchange Act reporting companies, so for comparability non-U.S. issuers and reporting companies are excluded from the Regulation A proceeds used in this estimate.

[d] Regulation Crowdfunding eligibility criteria exclude investment companies and Exchange Act reporting companies and limit the exemption to U.S. issuers, so for comparability pooled investment funds and non-U.S. issuers are excluded from Rule 504 proceeds used in this estimate. Reporting companies are ineligible under Rule 504.

[e] Regulation Crowdfunding eligibility criteria exclude investment companies and Exchange Act reporting companies and limit the exemption to U.S. issuers, so for comparability pooled investment funds, reporting companies, and non-U.S. issuers are excluded from Rule 506 proceeds used in this estimate. Reporting companies are identified based on annual reports or amendments to them filed in 2019.

[f] For purposes of this table, only incremental Regulation A proceeds reported in 2019 are considered, as opposed to cumulative proceeds reported from June 2015 through the end of the period. Rule 504 eligibility criteria exclude Exchange Act reporting companies, so for comparability reporting companies are excluded from the Regulation A proceeds used in this estimate.

[g] For comparability with other estimates in this table, we exclude Exchange Act reporting companies and pooled investment funds from Rule 506 proceeds used in this estimate. Reporting companies are identified based on annual reports or amendments to them filed in 2019.

After considering these alternatives and public comment, we continue to believe that the amended offering limits are most likely to provide meaningful capital formation benefits and increased access to investment opportunities to investors while representing a balanced approach to expansion of the respective offering exemptions.

We are amending the Regulation A Tier 2 offering limit but not the Tier 1 offering limit. As an alternative, we could amend the Tier 1 offering limit, as suggested by one commenter.[693] For example, we could raise the Tier 1 offering limit proportionately to the increase in the Tier 2 offering limit, by 50 percent, from $20 million to $30 million. The economic effects of this alternative are similar to the ones considered above. A higher (lower) Tier 1 offering limit could draw more (fewer) issuers to Tier 1 of Regulation A. Some of the additional issuers drawn to Tier 1 under this alternative might be switching from Tier 2 or other exempt offering methods, which might limit the net impact on capital formation.[694] Even

[693] *See* Chamber of Digital Commerce Letter. *But see* CII Letter; NASAA Letter; and CrowdCheck Letter (opposing an increase in the Tier 1 offering limit).

[694] For example, from June 2015 through December 2019, we have identified seven Tier 2 issuers that reported raising between $20 million and $30 million in financing under Regulation A and that could become newly eligible to raise the same amount of financing under Tier 1, if it were amended under this alternative. However, they also
Continued

in that case, some issuers switching from Tier 2 or other offering methods might be able to decrease their cost of capital.

We are raising the Regulation Crowdfunding offering limit to $5 million, which may create redundancies between Regulation Crowdfunding and Rule 504. The amended Rule 504 offering limit also may create redundancies between Rule 504 and Regulation A. As an alternative, we could eliminate Rule 504. Such an alternative might contribute to regulatory simplification. However, it also might be disruptive for those issuers that rely on Rule 504 and find it to be cost-effective for their financing strategy (*e.g.,* due to a lack of the intermediary and periodic reporting requirements).

We are extending temporary relief from the review report requirement for eligible issuers in Regulation Crowdfunding offerings of up to $250,000 for an additional 18 months. As an alternative, we could have amended the Regulation Crowdfunding offering limit but not extended the temporary relief from certain review requirements for eligible issuers in offerings of up to $250,000. As a general matter, the flexibility to access limited amounts of capital under Regulation Crowdfunding on an expedited basis, without incurring the cost of an independent accountant's review report, facilitates capital formation and reduces some of the barriers to accessing capital markets for the smallest issuers, allowing some issuers to raise additional capital or to optimize their financing cost through a more efficient and streamlined offering process. By providing targeted relief in a market segment that primarily attracts small businesses, which are disproportionately affected by downturns, the amendments extending the temporary relief also serve to incrementally enhance competition between small businesses and larger businesses (which tend to be less financially constrained).[695] The alternative of not extending the relief would impose costs and reduce the flexibility for small issuers adversely affected by COVID–19 seeking to meet their financing needs through Regulation Crowdfunding. It also would create competitive disparities for otherwise similar issuers that initiate offerings of this size before and after the expiration of the existing relief (February 28, 2021).

We recognize that the alternative of allowing the temporary relief to expire could incrementally decrease concerns about investor protection compared to extending the relief.[696] Generally, however, the aggregate incremental effect of the temporary rules on retail investor protection is likely limited by various factors, including the tailoring of the relief (through the eligibility requirements and the narrow scope and time-limited nature of the relief) and the modest size of the Regulation Crowdfunding market compared to other market segments that draw retail investors.[697] Further, issuers are required to disclose reliance on the temporary relief to investors, enabling more informed decisions. In addition, several essential safeguards contained in the 2015 Regulation Crowdfunding rules continue to apply, such as offering and investment limits, the use of registered crowdfunding intermediaries to conduct Regulation Crowdfunding offerings, other disclosure requirements of Form C, and annual report obligations. While we recognize that there may be somewhat greater investor protection concerns with an extension of the temporary final rules compared to an alternative of allowing the temporary relief to expire, overall we do not believe the difference to be significant in light of the other features of these offerings.

We could also extend the relief from review report requirements for eligible issuers in offerings of up to $250,000 for a shorter or longer time period than specified in these amendments. The alternative of extending the relief for a shorter (longer) time period would lead to fewer (more) potential issuers being afforded the flexibility in capital raising under the temporary rules, compared to the amendments. Because of the severe and continuing economic impact of the COVID–19 crisis, we believe that the extension of the temporary rules is appropriate.

As another alternative, we could permanently raise the financial statement requirement thresholds, for instance, in proportion to the increase in the offering limit: $500,000 for reviewed financial statements (in lieu of $107,000); $2.5 million for audited financial statements for follow-on offerings (in lieu of $535,000); and $5 million for audited financial statements for initial offerings (in lieu of $1.07 million).[698] As another alternative, we could waive certain other disclosure requirements (*e.g.,* progress updates and/or annual reports) for the lower tier of crowdfunding offerings (*e.g.,* offerings up to $250,000 or $1 million) to make crowdfunding offerings more cost-effective for the smallest issuers, many of which have not yet begun generating revenue and might not have enough liquid assets or access to loans to cover the compliance costs of a Regulation Crowdfunding offering. Scaling disclosure requirements for Regulation Crowdfunding offerings under these alternatives could attract a larger set of early stage issuers that seek to raise small amounts of capital to Regulation Crowdfunding while providing a degree of independent verification of accounting quality for larger crowdfunding offerings in a more cost-

might not choose to switch to Tier 1 if they find Tier 2 to be more attractive (*e.g.,* due to preemption of State review or an easier path to quotation on the upper tiers of the OTC market in the presence of periodic reports required by Tier 2). For example, from June 2015 through December 2019, we estimate that 112 Tier 2 issuers reported raising up to $20 million in financing under Regulation A even though that amount would have made them eligible to use Tier 1 as well. Further, some issuers might still prefer Tier 2 because it allows issuers to undertake an offering with a higher maximum offering amount, which provides issuers with flexibility to raise more capital without having to undergo a re-qualification (*e.g.,* if market conditions improve) even if the average issuer's proceeds do not reach the amount sought.

[695] Research has related small size to financing constraints, and conversely, larger size to being less financially constrained. *See, e.g.,* Nathalie Moyen, *Investment—Cash Flow Sensitivities: Constrained versus Unconstrained Firms,* 59 J. FIN. 2061 (2004); Christopher Hennessy, Amnon Levy, & Toni Whited, *Testing Q Theory with Financing Frictions,* 83 J. FIN 691 (2007). Other studies also show that diversified firms can rely on internal capital markets to mitigate financing constraints. *See, e.g.,* Venkat Kuppuswamy & Belén Villalonga, *Does Diversification Create Value in the Presence of External Financing Constraints? Evidence from the 2007–2009 Financial Crisis,* 62 MGMT. SCI. 905 (2016) (showing that ''the value of corporate diversification increased during the 2007–2009 financial crisis'' and that ''conglomerates' access to internal capital markets became more valuable''). *See also, e.g.,* several recent working papers examining impacts of the COVID–19 crisis on small businesses: Alexander W. Bartik et al., *How Are Small Businesses Adjusting to COVID–19? Early Evidence from a Survey,* (Nat'l Bureau of Econ. Research, *Working Paper* No. 26989, 2020); Jose Maria Barrero, Nicholas Bloom, & Steven J. Davis, *COVID–19 Is Also a Reallocation Shock,* (Nat'l Bureau of Econ. Research, Working Paper No. 27137, 2020); John Eric Humphries, Christopher Neilson, & Gabriel Ulyssea, *The Evolving Impacts of COVID–19 on Small Businesses Since the CARES Act,* (Cowles Foundation, Discussion Paper No. 2230, 2020); Robert W. Fairlie, *The Impact of COVID-19 on Small Business Owners: Evidence from the First Three Months after Widespread Social-Distancing Restrictions,* 29 J. Econ. Mgmt. Strategy 727 (2020).

[696] *See also* Temporary Amendments Adopting Release, at 27122; Better Markets Letter.

[697] *See also* Temporary Amendments Extension, at 54489.

[698] *See, e.g.,* Wefunder Letter (recommending a $1 million threshold for reviewed financial statements and a $5 million threshold for audited financial statements); CCA Letter (recommending increasing the reviewed financial statements threshold to $500,000 and the audited financial statements threshold to $5 million for initial offerings).

effective manner than with an audit.[699] Scaling disclosure requirements under this alternative, however, would result in information loss to investors, potentially contributing to less well informed investment decisions, greater risk of investment losses, and less efficient allocation of capital. Moreover, this alternative could attract high-risk issuers to the lower crowdfunding tier, which could undermine future capital raising in that market tier.

b. Investment Limits Under Regulation Crowdfunding

The final amendments revise Regulation Crowdfunding investment limits.[700] As proposed, the amended limits will be based on the greater of, rather than the lower of, an investor's annual income or net worth. Further, as proposed, the amended limits will only apply to non-accredited investors.

i. Benefits

The amendments will increase the maximum amount that can be invested across all Regulation Crowdfunding offerings by the subset of non-accredited investors whose net worth and annual income diverge. This may benefit issuers by increasing the amount of capital formation and/or by lowering the overall costs of soliciting non-accredited investors. Relaxing the investment limitation may also benefit the affected subset of non-accredited investors by enabling them to achieve more efficient portfolio allocations and enhanced upside from investing in early-stage companies. Because crowdfunding issuers commonly set investment minimums, relaxing the investment limitation may allow the affected investors to invest in a larger number of crowdfunding issuers, holding invested amounts constant, which may result in greater diversification within the crowdfunding category of the investor's portfolio. However, a larger aggregate investment in the crowdfunding category may reduce the diversification of the investor's overall portfolio, holding portfolio size constant. The effect of the amendments on portfolio diversification will also depend on how much investors allocate to different crowdfunding securities, out of the allowable limit, relative to non-crowdfunding securities, and on the correlations between crowdfunding and non-crowdfunding securities chosen by investors for their portfolios.

The amendments will also remove the investment limitation for accredited investors in Regulation Crowdfunding, harmonizing the treatment of accredited investors across Regulation Crowdfunding, Regulation A, Regulation D, and private placements not reliant on Regulation D.[701] Accredited investors are expected to possess the capability to evaluate larger crowdfunding investments and the resulting financial risk. Removing the investment constraint may benefit such investors by allowing them to allocate their capital more efficiently within their overall investment portfolio. It may also create stronger incentives to perform due diligence, screen, and monitor crowdfunding issuers, which may have positive spillovers for non-accredited investors in Regulation Crowdfunding. It is possible that accredited investors will simply reallocate capital between exemptions (*e.g.,* in cases of side-by-side Regulation Crowdfunding/Rule 506(c) offerings). Accredited investors may also continue to favor private placements, which do not cap offering size and allow them to capitalize more fully on their due diligence, with fewer spillovers to the rest of the market (because information about investments is private, there is less free riding on large investors' due diligence) and more bargaining power to negotiate offering terms.

We lack the data to assess how many investors may be affected by the described amendments to investment limits because investor information generally is not available and is not required to be disclosed. Based on a subset of data made available by one crowdfunding intermediary,[702] among non-accredited investors with available information on annual income and net worth, revising the investment limits as described can increase the investment limit by 98 percent for the median non-accredited investor in that subset. In addition, approximately nine percent of investors in the examined subset of data were accredited and thus will no longer be subject to investment limits under the amendments. The economic effects of the amendments will be mitigated to the extent that investors may invest amounts below the investment limits.[703] We cannot determine whether these results are representative of the distribution of investors on other funding portals or during other time periods, or how that distribution may change under the amendments if new investors and issuers are drawn to Regulation Crowdfunding.

ii. Costs

The final amendments to Regulation Crowdfunding investment limits may increase the magnitude of investor losses, particularly if some investors inefficiently under-diversify their portfolios and take on too much risk from crowdfunding investments.[704] For example, relaxing investment limits may enable some non-accredited investors to make larger investments in crowdfunding offerings based on an incomplete assessment of information about the securities offered, with the resulting potential for increased investor losses that they may be less able to bear. However, other investor protection provisions of Regulation Crowdfunding, such as issuer disclosure requirements and investor education and other intermediary requirements, may partly mitigate these risks. The potential costs of the amendments should be considered in the context of the baseline, under which non-accredited investors are permitted to invest unlimited amounts in both listed and unlisted registered securities and in

[699] *See supra* note 689.

[700] *See supra* Section II.E.3.

[701] *See also supra* note 431 (discussing commenters that supported the amendments).

[702] *See* 2019 Regulation Crowdfunding Report, at notes 91–93 and accompanying text. Information on amounts invested by an average investor or the number of investors per offering is not available for the full sample of Regulation Crowdfunding offerings. Information on offerings from one intermediary from May 2016 through September 2018 provides some insight into the typical investment size, investor composition, and number of investors in crowdfunding offerings. For purposes of these estimates, we exclude investments redirected to a Rule 506(c) offering; offerings that were not funded (*i.e.,* were either canceled or ongoing) or had missing data; observations where an investor made but subsequently withdrew the commitments, yielding a cumulative investment of zero; and investor observations with missing accredited investor status.

[703] *See* 2019 Regulation Crowdfunding Report, at 40 (''For most investors with available data on annual income and net worth (approximately 30% of investors in offerings funded on the platform), cumulative amounts invested during the entire considered period (almost 2.5 years) through this intermediary's platform did not reach the investment limit, with fewer than 10% of investors on the platform investing amounts exceeding their 12-month investment limit over the entire 2.5-year period. According to information provided by another intermediary respondent to the lookback survey, the median (average) crowdfunding investment through its platform was $1,335 ($500), with investors making an average of 2.7 investments and approximately 40% of investors making two or more investments. According to information provided by a different intermediary respondent, the average investment was approximately $992, and investors made an average of 1.5 investments. Based on available data, we are unable to determine whether these investors also invested in crowdfunding offerings through other crowdfunding platforms; thus, these estimates are likely to represent a lower bound on average investment amounts.'').

[704] *See, e.g.,* CII Letter (opposing increasing investment limits for non-accredited investors); Morningstar Letter (opposing increasing investment limits for non-accredited investors due to a lack of investment advice and the difficulty of detected scams); NASAA Letter; and CFA Letter.

Regulation A Tier 1 securities,[705] as well as up to ten percent of the higher of income or net worth in each offering of Regulation A Tier 2 securities, and thus they already may be in a position of making investments which also may result in considerable risk to investor portfolios.

The final amendments removing investment limits for accredited investors in Regulation Crowdfunding offerings are not expected to result in a negative effect on investor protection given that accredited investors generally have the capacity to fend for themselves and greater ability to withstand financial losses. Because accredited investors are not subject to investment limitations in offerings under Regulation A, in offerings under Regulation D, in other private placements, or in registered offerings, they may simply reallocate capital between holdings of securities issued under other exemptions. It is also possible that accredited investors investing large amounts may continue to prefer private placements, as discussed above.

iii. Effects on Efficiency, Competition, and Capital Formation

The described amendments to Regulation Crowdfunding investment limits may incrementally promote capital formation through Regulation Crowdfunding, particularly for issuers that may attract accredited investors or non-accredited investors who have a greater disparity between income and net worth. The revised investment limits may allow some investors that were constrained by existing investment limits to attain a more efficient portfolio allocation. For other investors, relaxing investment limits may enable an inefficiently high exposure to crowdfunding investments, resulting in under-diversification. If the amendments increase accredited investor participation in Regulation Crowdfunding offerings, the average intensity of monitoring and screening of issuers by investors may increase, with potential positive spillovers for small investors that lack the expertise and incentives to engage in comparable monitoring and screening. This may lead to greater efficiency of capital allocation in the Regulation Crowdfunding market. Removing accredited investor investment limits may lead to a reallocation of investment opportunities in that market segment from non-accredited investors to accredited investors, as indicated by one commenter.[706]

Depending on how the additional investor capital drawn to Regulation Crowdfunding compares to the amount of additional financing sought by issuers in these markets after the amendments, the amendments may affect competition among issuers for investor capital.

The net impacts of the amendments may be attenuated if the additional capital is reallocated from other offerings that either do not have investment limits or that have less stringent investment limits (*e.g.,* Rule 506, other private placements, or Regulation A).

iv. Reasonable Alternatives

As an alternative, we could align Regulation Crowdfunding investment limits with those of Regulation A Tier 2—apply the ten-percent limit on a per-offering basis to all non-accredited investors—rather than apply a two-tier limit (five percent for non-accredited investors with a lower income and net worth and ten percent for other non-accredited investors) across all Regulation Crowdfunding offerings in a twelve-month period. Compared to the final amendments, this alternative would have expanded investment limits, particularly for non-accredited investors with lower income and net worth and for investors that participate in multiple Regulation Crowdfunding offerings, yielding potential increases in capital formation benefits and non-accredited investor access to startup investment opportunities. However, this alternative also might have increased investor losses per investor and decreased diversification for some non-accredited investors, compared to the final amendments.

As another alternative, we could have increased or lowered the numerical thresholds in investment limits under Regulation Crowdfunding. For example, we could scale up the $2,200 numerical threshold in the investment limit in proportion to the increase in the offering limit (from $2,200 to $11,000). This alternative would increase (decrease) capital formation benefits while increasing (decreasing) the magnitude of potential investor losses per non-accredited investor, particularly for non-accredited investors with lower income and net worth, compared to the final amendments.

As another alternative, we could require verification of accredited investor status under Regulation Crowdfunding, similar to Rule 506(c).[707] Under this alternative, the likelihood of non-accredited investors that could have been mistakenly identified as accredited investors without verification incurring losses from a large investment under Regulation Crowdfunding would be decreased compared to the amendments. However, issuers would incur additional costs of verification of investor status under this alternative (whether in the form of the cost passed along to the issuer by an intermediary, or the cost incurred by the issuer directly). While such additional costs would be smaller for issuers with a prior or concurrent Rule 506(c) offering, for the typical Regulation Crowdfunding issuer that is small, with limited internal cash flows and no prior offering experience, such costs may serve as a significant barrier to accepting accredited investors in a Regulation Crowdfunding offering.

6. Eligibility Requirements in Regulation Crowdfunding and Regulation A

a. Eligibility Requirements Under Regulation Crowdfunding

The final rules will allow crowdfunding issuers to raise capital through a crowdfunding vehicle, substantially as proposed. Such crowdfunding vehicles will be formed by or on behalf of the underlying crowdfunding issuer to serve merely as a conduit for investors to invest in the crowdfunding issuer and will not have a separate business purpose. This approach is designed to allow investors in the crowdfunding vehicle to achieve the same economic exposure, voting power, and ability to assert State and Federal law rights, and receive the same disclosures under Regulation Crowdfunding, as if they had invested directly in the underlying crowdfunding issuer in an offering made under Regulation Crowdfunding. As discussed in Section II.F.2 above, after considering public comment, we are not adopting the proposal to limit the types of securities that may be offered and sold in reliance on Regulation Crowdfunding.

i. Benefits

The final rules will benefit issuers by allowing them to reduce the

[705] In contrast to Regulation Crowdfunding securities, sales and offers of unlisted registered securities and Regulation A Tier 1 securities are subject to State registration requirements, including, in some states, merit review.

[706] *See* J. Pampena Letter (suggesting the change may eliminate investment opportunities for non-accredited investors). According to the commenter, if accredited investors are permitted to invest under Regulation Crowdfunding without an investment limit, investment from accredited investors will rapidly satisfy the offering limits of these mostly small offerings.

[707] *See, e.g.,* J. Clarke Letter; Raise Green & New Haven Comm. Solar Letter; and Honeycomb Letter (supporting self-verifications).

administrative complexities associated with a large and diffuse shareholder base.[708] Commenters generally supported permitting crowdfunding issuers to use crowdfunding vehicles.[709] As discussed in Section II.F.1.c above, under the final rules, natural person investors in the crowdfunding vehicle will be excluded from the number of holders of record for purposes of Section 12(g). We expect this provision to significantly increase the utility of the crowdfunding vehicle structure to issuers, especially in offerings that attract small investors, and potentially make it easier for Regulation Crowdfunding issuers to raise capital from venture capitalists and other large investors in the future. However, the effect on all except the largest crowdfunding issuers may be limited due to the availability of the conditional exemption in Exchange Act Rule 12g–6.

Currently, some early-stage issuers with high growth potential that have a chance of attracting VC funding in the future may avoid conducting an offering under Regulation Crowdfunding due to concerns about a large and unwieldy capitalization table. By potentially alleviating some of these concerns, the final rule may encourage additional issuers with high growth potential to consider pursuing an offering under Regulation Crowdfunding. Because these issuers might presently offer securities only to accredited investors or a few non-accredited investors through offerings under Rule 506 or through other private placement offerings, the final rule may benefit non-accredited investors by expanding their access to investment opportunities in startups with high growth potential that are early in their lifecycle.

As discussed in Section II.F.1 above, the use of a crowdfunding vehicle will be subject to certain conditions designed to ensure that investors achieve the same economic exposure, voting power, and ability to assert State and Federal law rights, and receive the same disclosures under Regulation Crowdfunding, as if they had invested directly in the crowdfunding issuer in an offering made under Regulation Crowdfunding, thereby minimizing any potential adverse effects for investors of investing in a crowdfunding issuer through such an offering structure. The crowdfunding vehicle and the crowdfunding issuer also will be co-issuers in the offering, with the resulting joint liability for offers and sales, and the offering must comply with Section 4(a)(6) of the Securities Act and Regulation Crowdfunding.

The required transparency and single-purpose nature of the crowdfunding vehicle, combined with the continued application of the substantive and disclosure requirements of Regulation Crowdfunding and the antifraud provisions of the Federal and State securities laws, are expected to provide significant investor protections for crowdfunding vehicle investors under the final rules.

ii. Costs

The use of crowdfunding vehicles may result in additional offering costs. The costs of forming and operating the crowdfunding vehicle will be incurred by the crowdfunding issuer, which may decrease the overall economic benefits of the offering for all investors in the crowdfunding issuer, including investors in the crowdfunding vehicle. However, to the extent that the crowdfunding vehicle yields benefits for the crowdfunding issuer, including expanded potential for future funding rounds due to the treatment of the crowdfunding vehicle under Section 12(g), reduced capitalization table concerns and greater efficiency of administration of a large and diffuse investor base, these economic benefits of a crowdfunding vehicle may offset the additional costs. The balance of these tradeoffs is likely to vary depending on the issuer's offering experience, potential for raising follow-on financing from a large investor, costs associated with the formation and operation of the crowdfunding vehicle, and the number of investors participating in the crowdfunding offering. Because the use of the crowdfunding vehicle structure will be voluntary, we expect issuers to use a crowdfunding vehicle only when the issuers determine that the benefits justify the costs.

If the crowdfunding vehicle is administered by an external entity on behalf of the issuer, the associated fees may depend on other business between the external administrator and the issuer. On the one hand, administration fees may be reduced in instances where an issuer obtains a bundle of other services related to the offering from the external administrator or where an administrator seeks future business of the issuer related to other offerings. On the other hand, administration fees may be increased to compensate for discounted fees for other services related to this or other offerings. Several factors are expected to mitigate concerns about administration fees. Competition among external service providers is expected to put downward pressure on such fees. The requirement that crowdfunding vehicle costs be incurred by the crowdfunding issuer rather than the crowdfunding vehicle will ensure a degree of alignment of interests of crowdfunding vehicle investors and the crowdfunding issuer with respect to crowdfunding vehicle costs. The highly limited scope of permissible activities of the crowdfunding vehicle will further limit potential discretion related to fees.

As discussed above, the conditions for the use of crowdfunding vehicles are expected to minimize any potential conflicts of interest incremental to a crowdfunding vehicle.[710] The crowdfunding vehicle structure is not expected to significantly affect information processing costs for investors, compared to a direct crowdfunding offering, because of the transparency and single-purpose nature of the crowdfunding vehicle, as well as the provisions designed to ensure that crowdfunding vehicle investors receive the same disclosures under Regulation Crowdfunding, as if they had invested directly in the crowdfunding issuer.

iii. Effects on Efficiency, Competition, and Capital Formation

The final rules are expected to enhance capital formation by making Regulation Crowdfunding more attractive to issuers. If the incremental financing is largely due to issuers switching from other offering methods to Regulation Crowdfunding, the net impact on capital formation may be minimal. However, if that is the case, the final rules may reduce the cost of capital. By giving crowdfunding issuers the flexibility to conduct a crowdfunding offering via a crowdfunding vehicle, the final rules may make crowdfunding offerings more attractive to a broader range of issuers, enabling such issuers to diversify their financing strategy at an early stage of their operation and in some cases potentially obtain a lower cost of capital or greater amounts of capital than they would otherwise. The final rules may be especially beneficial for crowdfunding issuers with high growth potential by helping them attract institutional investors or other large investors in the future, thus enabling a potentially more efficient financing and growth strategy.

Further, the ability to use a crowdfunding vehicle may expand investment opportunities available to non-accredited investors and, as a

[708] *See also* Proposing Release, at note 420.

[709] *See supra* note 480. *But see* CFA Letter and CII Letter.

[710] Small investors in a direct crowdfunding offering might face agency conflicts today. However, we do not expect the amendments to result in significant additional agency conflicts for investors in direct crowdfunding vehicle offerings.

result, potentially affect the efficiency of their capital allocation. If the final rules draw additional issuers to Regulation Crowdfunding, broader access to those investment opportunities may enable non-accredited investors to allocate their capital more efficiently.

The final rules may promote competition. By making Regulation Crowdfunding attractive to a broader subset of small issuers, they may incrementally broaden access to funding for small and early stage issuers, many of which have not participated in other securities offerings and are otherwise highly financially constrained. Expanding access to capital for small and early stage issuers may, on the margin, encourage new entry and promote competition between small issuers and more established competitors. The aggregate effects on competition for investor capital are difficult to predict and will depend on the relative effects of the final rules on issuer and investor willingness to participate in Regulation Crowdfunding.

iv. Reasonable Alternatives

As an alternative, we could require that a registered investment adviser or ERA manage the crowdfunding vehicle, as suggested by some commenters and the 2017 Treasury Report.[711] Under this alternative, investors in crowdfunding vehicles could benefit because an investment adviser is a fiduciary subject to the requirements of the Advisers Act and regulations thereunder. The final rule's conditions, however, are designed to limit the crowdfunding vehicle's activities to that of acting as a conduit to directly hold the securities of the crowdfunding issuer without the ability for independent investment decisions to be made on behalf of the crowdfunding vehicle. Moreover, investors in the crowdfunding vehicles remain protected by the provisions of Regulation Crowdfunding as well as the antifraud protections of the Federal securities laws more broadly. Any incremental benefits of this alternative to investors therefore could be limited. In addition, such a requirement would likely deter issuers, particularly small issuers, from using the crowdfunding vehicle structure. Given the relatively small amount of capital that can be raised through Regulation Crowdfunding, particularly in offerings by smaller issuers, it may not be economically feasible to require a registered investment adviser or an ERA to manage the crowdfunding vehicle.[712] Further, small issuers may lack access to investment advisory expertise.

As another alternative, we could remove some of the requirements in the final rule,[713] such as the restrictions on the permissible activities and other provisions intended to provide the investor with the same economic exposure, rights, and disclosures as they would have if they invested in a direct Regulation Crowdfunding offering or the requirement that crowdfunding vehicle costs be borne by the crowdfunding issuer. Removing these restrictions would increase the flexibility for issuers in structuring their crowdfunding offering and potentially make Regulation Crowdfunding more attractive as a capital raising option. However, it also could lead to agency conflicts and weaken investor protections for crowdfunding vehicle investors, compared to the final rule's conditions. Some of these additional costs to investors might be partly mitigated by the substantive and disclosure requirements of Regulation Crowdfunding.

Similarly, we could modify some of the conditions in the final rule so that an investor in a crowdfunding vehicle would still achieve the same economic exposure, and receive the same disclosures, as if he or she had invested in the crowdfunding issuer directly, while providing greater flexibility for crowdfunding vehicles and their investors to determine other aspects of the crowdfunding vehicle's operations. For example, rather than requiring a crowdfunding vehicle to vote and participate in tender or exchange offers or similar transactions only in accordance with the instructions it receives from its investors, we could allow a crowdfunding vehicle and its investors to determine these matters. A crowdfunding vehicle, for example, could disclose to its investors at the time of its initial offering that the vehicle will vote automatically with the majority of its security holders. Another example would be to permit a crowdfunding vehicle and its investors to determine how the crowdfunding vehicle will exercise any rights under State or Federal law, rather than providing each investor the ability to assert those rights.

These and similar modifications would provide additional flexibility for crowdfunding vehicles and the crowdfunding issuers using the vehicles to raise capital. If this greater flexibility would result in additional offerings under Regulation Crowdfunding, this could provide capital formation benefits to issuers and benefit investors by providing additional investment options. These and similar modifications could, however, result in offering terms that may be less advantageous for investors. The net benefits and costs to investors would therefore depend on the extent to which a more flexible approach would result in additional Regulation Crowdfunding offerings relative to the final rule and the terms of those offerings. However, these alternatives would go against the purpose of the crowdfunding vehicle, which is to act solely as a conduit.

As discussed above, under the final rules, natural persons investing in the crowdfunding vehicle will be excluded from the number of holders of record for purposes of Section 12(g). As an alternative, the final rules could treat all investors in the crowdfunding vehicle and investors in the crowdfunding issuer similarly for purposes of Section 12(g) by requiring all investors to be included in the number of holders of record. This alternative would increase the risk to Regulation Crowdfunding issuers of having to incur registration and Exchange Act reporting costs before they are ready to enter public markets. This alternative could make it harder for Regulation Crowdfunding issuers to raise capital from venture capitalists and other large investors in the future, compared to the final rules. This alternative would significantly decrease the utility of the crowdfunding vehicle structure to issuers, especially in offerings that attract small individual investors, compared to the final rules. However, this alternative could decrease the risk that crowdfunding issuers with a substantial number of individual investors through the crowdfunding vehicle structure would not exceed the thresholds in Section 12(g)(1) of the Exchange Act and become subject to the more extensive periodic reporting requirements under the Exchange Act, compared to the final rules. Nevertheless, the discussed effects could be mitigated for all except the largest Regulation Crowdfunding issuers, to the extent that such issuers may already avail themselves of the existing conditional exemption under Exchange Act Rule 12g–6.

We are not adopting the proposed changes to the types of securities eligible under Regulation Crowdfunding. As an alternative, we could narrow the eligible security types to those eligible under Regulation A

[711] *See supra* note 489. *See also* 2017 Treasury Report.

[712] *See also supra* notes 528, 530 and accompanying text.

[713] *See supra* note 484 and accompanying text (discussing commenters in favor of a less restrictive crowdfunding vehicle structure).

(debt, equity, and debt convertible or exchangeable into equity, including guarantees of such securities), as proposed,[714] which was supported by several commenters.[715] This alternative could strengthen investor protection in some instances, to the extent that Regulation Crowdfunding investors may lack resources to analyze novel security types with complex payoff structures.[716] This alternative could also make it easier for investors to compare different offerings under Regulation Crowdfunding and Regulation A, potentially facilitating better informed investment decisions. Such benefits would be limited to the extent that Regulation Crowdfunding disclosures already require a description of the terms of securities and the valuation method used, along with the continued application of other Regulation Crowdfunding investor protections (including other offering circular and periodic disclosure requirements, investment limits, investor education, and other crowdfunding intermediary requirements). At the same time, the alternative could impose costs on issuers by limiting the flexibility to offer the types of securities that are most compatible with their desired capital structure, financing needs, and assessment of market conditions.[717] A significant share of Regulation Crowdfunding issuers rely on security types other than debt and equity. From inception of Regulation Crowdfunding in May 2016 through December 2019,[718] we estimate that equity and debt accounted for 77 percent of the number of offerings and 74 percent of the aggregate target amount sought. The alternative could also impose costs on some investors that found securities with payoff structures other than equity or debt optimal for their investment strategy and relied on existing disclosures to accurately value such securities.

b. Excluding Delinquent Reporting Companies From Eligibility Under Regulation A

The final amendments exclude reporting companies that are not current in periodic reports required under Section 13 or 15(d) of the Exchange Act from using Regulation A, consistent with the existing exclusion of issuers that are not subject to Exchange Act reporting and that have not filed required Regulation A periodic reports for the last two years.

i. Benefits

The amendments are expected to promote investor protection and benefit investors by ensuring the availability of information about issuers required in periodic Exchange Act reports to Regulation A investors and thus enabling better informed investment decisions, which was supported by several commenters.[719] Excluding issuers that are subject to, but not current in, Exchange Act reporting obligations from eligibility under Regulation A may reduce the average level of information asymmetry about Regulation A issuers and to the extent investors did not already consider a reporting company's failure to remain current in its reporting obligations in assessing a Regulation A offering may incrementally increase investor confidence and interest in securities offered in this market.

As a caveat, the use of Regulation A by reporting companies has been modest to date,[720] which may attenuate the effects of changes to reporting company eligibility under Regulation A. By extending similar requirements regarding being current in periodic reports that presently apply in follow-on Regulation A offerings to reporting companies in initial Regulation A offerings, the amendments will increase uniformity in eligibility requirements across different categories of Regulation A issuers and may reduce potential for investor confusion.

ii. Costs

The amendments may lead to higher financing costs or reduced ability to raise the required financing under Regulation A for issuers that are not current in periodic reports required under Section 13 or 15(d) of the Exchange Act.

iii. Effects on Efficiency, Competition, and Capital Formation

The amendments may, on the margin, limit capital formation by affected issuers. At the same time, by ensuring more timely availability of information in periodic reports to prospective Regulation A investors, the amendments are expected to facilitate better informed decisions and more efficient allocation of investor capital in Regulation A offerings, and, for Regulation A securities with a secondary market, more informationally efficient security prices. In turn, if the amendments help alleviate investor concerns about adverse selection in the Regulation A market, they may promote greater investor interest in Regulation A securities, increasing aggregate capital formation in the Regulation A market. These effects on capital formation and efficiency of capital allocation may be modest if the amendments mainly result in a reallocation of delinquent reporting company issuers between Regulation A and other offering methods. We lack the ability to quantify the extent of such potential switching between offering methods as a result of the amendments.

iv. Reasonable Alternatives

As an alternative, we could have required filers to have filed in a timely manner all reports required to be filed during the prior 12 months, consistent with Form S–3 and F–3 requirements.[721] This alternative may

[714] For a discussion of the costs and benefits of other alternative security type eligibility criteria, *see* Proposing Release, at 18032.

[715] *See supra* notes 548 and 549.

Green & John F. Coyle, *Crowdfunding and the Not-So-Safe SAFE,* 102 Va. L. Rev. 168 (2016). *See also* U.S Securities and Exchange Commission, *Investor Bulletin: Be Cautious of SAFEs in Crowdfunding, available at https://www.sec.gov/oiea/investor-alerts-and-bulletins/ib_safes;* Andrew Stephenson, *Compliance with Reg CF: When Failure Becomes Fraud,* CrowdCheck Blog (Apr. 23, 2018), *available at https://www.crowdcheck.com/blog/compliance-reg-cf-when-failure-becomes-fraud;* and FINRA, *Be Safe—5 Things You Need to Know About SAFE Securities and Crowdfunding, available at http://www.finra.org/investors/highlights/5-things-you-need-know-about-safe-securities-and-crowdfunding. But see* Jack Wroldsen, *Crowdfunding Investment Contracts,* 11 Va. L. & Bus. Rev. 543 (2017).

[717] *See supra* notes 551 and 553 (opposing the restriction on security types eligible under Regulation Crowdfunding).

[718] These estimates are based on data from Form C or the latest amendment to it, excluding withdrawn offerings. Equity is comprised of common and preferred equity (including partnership/membership units and interests). Approximately a third of Regulation Crowdfunding offerings were by issuers organized as limited liability companies or as partnerships. Debt is comprised of straight and convertible debt. Analysis of XML data from Form C does not allow a granular breakdown of debt security types. Other security types include SAFEs and securities not elsewhere classified (*e.g.,* revenue participation agreements and miscellaneous tokens. Some of the revenue share agreements remaining in the ''other security type'' category may have quasi-debt features. SAFEs are identified by keyword from ''other security type description.'' Anecdotal review suggests that some equity and debt offerings were denoted as ''other'' in the form. Where detected, such instances were re-classified manually based on the ''other security type description'' field. Examples of ''other'' are, for instance, tokens, simple agreement for future tokens (''SAFTs''), and revenue participation agreements.

[719] *See supra* note 560. *But see* J. Clarke Letter.

[720] *See supra* note 667.

[721] *See* General Instruction I.A.3 to Form S–3; and General Instruction I.A.2 to Form F–3.

benefit investors by incentivizing reporting companies that use Regulation A to provide timely periodic disclosures. However, we continue to believe that this alternative might increase costs and decrease the ability of reporting companies that have failed to timely file Exchange Act reports during the lookback period to raise follow-on Regulation A Tier 2 financing.[722] Further, such conditions are not imposed on issuers that are not subject to Exchange Act reporting obligations and that seek to offer Regulation A securities. Overall, relative to the final amendments, we do not expect the effects of this alternative to be significant given the other incentives that reporting companies have to remain current in their Exchange Act reports (*e.g.,* greater secondary market liquidity, not being delisted from an exchange or losing quote eligibility in the OTC market, future eligibility for a streamlined registration process, reduced legal liability, and a reputation for transparency).

7. Bad Actor Disqualification Provisions

The disqualification provisions of Regulation A and Regulation Crowdfunding currently differ from the disqualification provisions in Rule 506(d) in defining the lookback period for the disqualification event through the time of the filing, rather than through the time of sale. As a result, in certain circumstances, periods of time may exist during Regulation A and Regulation Crowdfunding offerings where an offering continues despite an event that would have constituted a disqualifying event at the time of filing.[723] In order to harmonize the disqualification provisions of Regulation A and Regulation Crowdfunding with those of Rule 506(d) of Regulation D, the amendments specify that a disqualifying event that occurs at any time during an offering, not only prior to the filing, would disqualify the bad actor from further involvement in the offering. However, to reduce the cost for issuers of monitoring disqualification events that may affect beneficial owners during an ongoing offering, differently from the disqualification provision of Rule 506(d), we are retaining the disqualification lookback period through the time of filing, rather than through the time of sale, for disqualification events affecting beneficial owners.

a. Benefits

By providing greater uniformity in the bad actor disqualification provisions across Rule 506(d), Rule 262(a), and Rule 503(a), the amendments may facilitate compliance for issuers, particularly issuers that undertake different types of exempt offerings over time. The amendments may further benefit issuers by reducing or even eliminating the need to undergo a potentially lengthy and costly Rule 258 suspension process in the event of a disqualifying event occurring after the filing. By preserving the existing ''through date of filing'' lookback period provision with respect to disqualifying events involving beneficial owners, the amendments are expected to give issuers leeway to raise capital while managing disqualification monitoring costs.

The amendments are expected to strengthen investor protection in cases of disqualifying events occurring after the initiation of an offering.[724] This benefit is expected to be most salient for issuers in continuous offerings, which may span multiple months and years. For example, from June 2015 (when the 2015 Regulation A amendments raising the offering limit to $50 million took effect) through December 2019, based on the analysis of Form 1–A data, we estimate that approximately 80 percent of qualified Regulation A offerings were conducted on a continuous basis. Based on the analysis of Form C data from inception of Regulation Crowdfunding through December 2019, we estimate that the average (median) duration of a Regulation Crowdfunding offering was approximately four months (three months).

b. Costs

The amended disqualification provisions may impose costs on issuers and covered persons. The amendments may lead issuers to incur additional due diligence and monitoring costs and potentially modify their policies and procedures to reduce the odds of a disqualifying event during an ongoing offering (*e.g.,* replacing personnel or avoiding the participation of covered persons, other than beneficial owners, who are subject, or might become subject, to disqualifying events after filing).[725] These additional costs of monitoring disqualification events in ongoing offerings are expected to be somewhat mitigated by the carve-out for events affecting the beneficial owner category of covered persons, which will remain subject to the existing lookback period (defined based on the date of filing). In addition, issuers might incur costs related to seeking disqualification waivers from the Commission. Alternatively, issuers that are disqualified from an ongoing Regulation A or Regulation Crowdfunding offering as a result of a disqualification event occurring after filing might experience an increased cost of capital or a reduced availability of capital. By subjecting additional issuers to the potential for disqualification in the event of a disqualification event affecting a covered person (other than a beneficial owner) after the offering has commenced, the amendments may cause some issuers to discontinue an offering, resulting in a failure to raise the required capital after some costs of preparing an offering statement or marketing an offering have already been incurred.

c. Effects on Efficiency, Competition, and Capital Formation

As discussed above, the amendments may cause some issuers whose covered persons (other than beneficial owners) become subject to a disqualification event after filing to discontinue an offering, resulting in decreased capital formation for such issuers. Additional costs of monitoring disqualification events might incrementally increase the compliance costs associated with conducting an offering under Regulation A or Regulation Crowdfunding. For Regulation Crowdfunding issuers, intermediaries might incur incrementally higher due diligence costs as well, insofar as the monitoring of disqualification triggers is not already a part of the intermediary's measures to reduce the risk of fraud.

We expect the incrementally more stringent bad actor disqualification

[722] *See* 2018 Regulation A Release, at Section IV.B.c.2.

[723] As discussed in Section II.G above, under Regulation A, if a covered person triggers one of the disqualifying events in Rule 262, the Commission is able to suspend reliance on the Regulation A exemption through Rule 258, which requires a notice and hearing opportunity for the covered person. Furthermore, if a covered person triggers one of the disqualifying events, the issuer may need to consider whether it must suspend the offering until it files a post-qualification amendment to reflect a fundamental change in the information set forth in the most recent offering statement or post-qualification amendment. Regulation Crowdfunding, which similarly measures the lookback from the time of filing of the offering statement, does not have a suspension provision, similar to Regulation A, but similarly requires an issuer to amend the offering statement to disclose material changes, additions, or updates to information that it provides to investors for offerings that have not been completed or terminated.

[724] *See supra* note 570.

[725] *See* NextSeed Letter (stating that the additional monitoring cost will prevent issuers from relying on Regulation Crowdfunding) and CrowdCheck Letter (acknowledging the potential for significant monitoring costs, especially in Regulation Crowdfunding offerings).

provisions to lead most issuers to take additional steps to monitor disqualification events after filing and restrict the participation of covered persons (other than beneficial owners) in ongoing Regulation A and Regulation Crowdfunding offerings, which could incrementally help reduce the potential for fraud in these types of offerings and thus strengthen investor protection. To the extent that more stringent bad actor disqualification requirements increase investor interest in these offerings, on the margin, overall capital formation in the Regulation A and Regulation Crowdfunding markets may increase. If the amendments to the disqualification lookback period alleviate some of the concerns about adverse selection in the Regulation A and Regulation Crowdfunding markets and thus lower the risk premium associated with the risk of fraud due to the presence of bad actors in these markets, they may also reduce the cost of capital for issuers that rely on these offering exemptions.

d. Reasonable Alternatives

As an alternative, instead of disqualifying Regulation A or Regulation Crowdfunding issuers affected by disqualifying events during an ongoing offering, we could allow such issuers to continue the offering but require the disclosure of a disqualifying event and the option for investors to cancel their investment commitments and obtain a refund of invested funds.[726] This alternative might reduce costs for some issuers affected by a disqualification trigger in the course of an ongoing offering. However, it also might result in costs to investors if investors fail to review the disclosure of a disqualifying event occurring after commencement of an offering. This alternative also would not be consistent with the disqualification provisions in Rule 506(d), which might introduce confusion for issuers and investors that participate in multiple offerings conducted pursuant to different securities exemptions.

The amendments preserve the definition of the lookback period (using the time of filing as a basis) with respect to disqualification events affecting covered persons that are beneficial owners. As an alternative, we could extend the amended lookback period definition (continuing through the time of sale) with respect to disqualification events affecting all covered persons, including beneficial owners. Compared to the final amendments, this alternative might incrementally strengthen investor protection to the extent that the types of disqualification events that affect beneficial owners after filing in continuous Regulation A or Regulation Crowdfunding offerings pose conflicts of interest or other significant risks to investors. However, compared to the proposal, this alternative might result in the exclusion of some issuers whose beneficial owners become subject to a disqualification trigger after filing from eligibility to conduct an offering. To minimize this risk, issuers might incur increased costs of monitoring potential disqualification events affecting beneficial owners under this alternative. Issuers also might incur costs to restructure their share ownership to avoid beneficial ownership of 20 percent or more of the issuer's outstanding voting equity securities, calculated on the basis of voting power, by individuals that may become subject to disqualifying events after filing.

## V. Paperwork Reduction Act

### *A. Summary of the Collection of Information*

Certain provisions of our rules and forms affected by the amendments contain ''collection of information'' requirements within the meaning of the Paperwork Reduction Act of 1995 (''PRA'').[727] The Commission is submitting the amendments to the Office of Management and Budget (''OMB'') for review in accordance with the PRA.[728] The hours and costs associated with preparing and filing the forms constitute reporting and cost burdens imposed by each collection of information. An agency may not conduct or sponsor, and a person is not required to comply with, a collection of information unless it displays a currently valid OMB control number. Compliance with the information collections is mandatory. Responses to the information collections are not kept confidential and there is no mandatory retention period for the information disclosed. The titles for the affected collections of information are: [729]

- ''Regulation A (Form 1–A)'' (OMB Control No. 3235–0286);
- ''Regulation D'' (a new collection of information);
- ''Regulation D Rule 504(b)(3)—Felons and Other Bad Actors Disclosure Statement'' (OMB Control No. 3235–0746);
- ''Regulation D Rule 506(e) Felons and Other Bad Actors Disclosure Statement'' (OMB Control No. 3235–0704);
- ''Form D'' (OMB Control No. 3235–0076); and
- ''Form C'' (OMB Control No. 3235–0716).

We are combining the existing collections of information for 17 CFR 230.504(b)(3) (''Rule 504(b)(3)''), 17 CFR 230.506(e) (''Rule 506(e)''), and Form D in a new collection of information that covers all of the PRA compliance burdens for Regulation D. [730] The regulations and forms listed above were adopted under the Securities Act and set forth filing and disclosure requirements associated with exempt offerings. A description of the amendments, including the need for the information and its use, as well as a description of the likely respondents, can be found in Section II above, and a discussion of the economic effects of the amendments can be found in Section IV above.

### *B. Summary of the Effects on the Collections of Information*

PRA Table 1 [731] summarizes the estimated effects of the amendments on

[726] *See supra* note 573.

[727] *See* 44 U.S.C. 3501 *et seq.*

[728] 44 U.S.C. 3507(d); and 5 CFR 1320.11.

[729] As discussed in Section II.D.3 above, we are revising the confidential information standard used in our exhibit filing requirements to provide that information may be redacted if it is both not material and the type that the registrant treats as private or confidential. A number of collections of information could be affected by this amendment, including 17 CFR 249.310 (OMB Control No. 3235–0063), 17 CFR 249.308a (OMB Control No. 3235–0070), Form 8–K (OMB Control No. 3235–0060), Form S–1 (OMB Control No. 3235–0065), and 17 CFR 249.210 (OMB Control No. 3235–0064); as well as Form S–6 (OMB Control No. 3235–0184); Form N–14 (OMB Control No. 3235–0336); Form 20–F (OMB Control No. 3235–0288); 17 CFR 239.31 (OMB Control No. 3235–0258); Form N–1A (OMB Control No. 3235–0307); Form N–2 (OMB Control No. 3235–0026); Form N–3 (OMB Control No. 3235–0316); Form N–4 (OMB Control No. 3235–0318); Form N–5 (OMB Control. No. 3235–0169); Form N–6 (OMB Control No. 3235–0503); and Form N–8B–2 (OMB Control No. 3235–0186). We believe that the standard will not change the paperwork burden associated with these collections of information because the revised standard will be applied in similar circumstances and in a similar way as the current standard.

[730] Since the new collection of information for Regulation D will cover the existing compliance burdens, we are eliminating the separate collections of information for Rule 504(b)(3), Rule 506(e), and Form D.

[731] We do not believe that the amendments with respect to the use of general solicitation in exempt offerings, the integration framework, harmonization of bad actor disqualification provisions in Regulation A and Regulation Crowdfunding with those in Regulation D, excluding Exchange Act registrants that are delinquent filers from relying on Regulation A, revising the non-exclusive list of methods for verifying accredited investor status, permitting the use of crowdfunding vehicles (other than Form C disclosure when a crowdfunding vehicle is used), increasing the Rule 504 offering limit, or increasing the investment limits under Regulation Crowdfunding will substantially or materially modify the number of new filings or the burdens for those filings. In addition, as discussed in Section II.E.3 above, we are extending certain provisions of the Commission's temporary relief

Continued

the paperwork burdens associated with the affected collections of information listed in Section V.A.

the affected collections of information listed in Section V.A.

PRA TABLE 1—ESTIMATED PAPERWORK BURDEN EFFECTS OF THE AMENDMENTS

| Final amendments and effects | Affected collections of information | Estimated net effect |
|---|---|---|
| Regulation D: | | |
| • Provide a new collection of information to encompass disclosure required by Regulation D, including the following:<br>○ Financial statement and non-financial statement information and delivery requirements, including the proposed requirement to provide the purchaser with generic solicitation of interest materials (Rule 502(b)); and<br>○ Felon and bad actor disclosure requirements (Rules 504(b)(3)) and 506(e). | • Regulation D (including Form D, Rule 502(b), Rule 504(b)(3), and Rule 506(e)). | • 5 hour compliance burden per response to the new collection of information. |
| Regulation A: | | |
| • Requiring the filing of generic solicitation of interest materials. Estimated burden increase: 0.5 hours per form.<br>• Simplifying compliance with Regulation A by conforming certain requirements with similar requirements for registered offerings (including permitting the redaction of confidential information in certain exhibits; permitting incorporation by reference of financial statements in the offering circular; and simplifying the requirements for making non-public documents available to the public on EDGAR). Estimated burden decrease: 2.5 hours per form.<br>• We estimate that the increase in offering limit would increase the number of filings on Form 1–A by 25. | • Form 1–A | • 2 hour net decrease in compliance burden per form.<br>• 25 additional responses. |
| Regulation Crowdfunding: | | |
| • Requiring the filing of generic solicitation of interest materials and solicitations of interest under Rule 206; and requiring disclosure about a co-issuer on Form C when an SPV is used. Estimated burden increase: 1 hour per form.<br>• We believe that increasing the offering limits under Regulation Crowdfunding would not affect the burden estimate per form, but we estimate that the increase in the offering limit would increase the number of filings on Form C by 55. | • Form C | • 1 hour net increase in compliance burden per form.<br>• 55 additional responses. |

Although we estimate that the amendments to Regulation D that we are adopting will not have a net effect on the current burdens relating to Regulation D, we are changing how we allocate those burdens to an information collection for PRA purposes. In particular, as discussed above, we are establishing a new, single collection of information for Regulation D to encompass all of the associated paperwork burdens. The estimates for this new collection of information include the existing burdens associated with Form D, Rule 504(b)(3), and Rule 506(e), as well as other burdens resulting from the implementation of Regulation D. As a result, the new collection of information for Regulation D reflects an increase from the aggregated burdens for the existing Form D, Rule 504(b)(3) and Rule 506(e) collections of information. See PRA Table 6 below.

Although it is not possible to predict with certainty the increase in the number of Regulation A and Regulation Crowdfunding offerings following the amendments, we estimate for purposes of the PRA an approximate 20 percent increase in the number of new Regulation A offerings resulting in 25 additional respondents, and an approximate 10 percent increase in the number of new Regulation Crowdfunding offerings resulting in 55 additional respondents.[732] It is possible that the increase in the offering limit may also increase the number of Form 1–K, 17 CFR 239.92 (Form 1–SA), 17 CFR 239.93 (Form 1–U), and Form 1–Z filings. However, due to uncertainties regarding whether any increase in Tier 2 offerings would be conducted by Exchange Act reporting companies, we are not increasing in the number of responses for the associated collections of information at this time.

*C. Incremental and Aggregate Burden and Cost Estimates*

Below we estimate the incremental and aggregate changes in paperwork burden as a result of the amendments. These estimates represent the average burden for all issuers, both large and small. In deriving our estimates, we recognize that the burdens will likely vary among individual issuers based on a number of factors, including the nature of their business. We believe that the amendments will change the frequency of responses to the existing collections of information and the burden per response.

The burden estimates were calculated by adding the estimated additional responses to the existing estimated responses and multiplying the estimated number of responses by the estimated average amount of time it takes an issuer to prepare and review disclosure required under the amendments. For purposes of the PRA, the burden is to be allocated between internal burden

from certain financial information requirements of Regulation Crowdfunding. The temporary relief also requires issuers relying on the temporary relief to provide certain additional disclosures, the burden of which is expected to be minimal. As discussed in the Temporary Amendments Adopting Release, we believe that the net change in paperwork burden as a result of the temporary relief will be minimal and are not adjusting the burden or cost estimates for Form C.

[732] We derived these estimates based on 125 Regulation A offerings filed in 2019 and 552 Regulation Crowdfunding offerings conducted in the second full year since effectiveness of those rules.

hours and outside professional costs. PRA Table 2 [733] sets forth the percentage estimates we typically use for the burden allocation for each collection of information and the estimated burden allocation for the new collection of information for Regulation D. We also estimate that the average cost of retaining outside professionals is $400 per hour.[734]

PRA TABLE 2—ESTIMATED BURDEN ALLOCATION FOR SPECIFIED COLLECTIONS OF INFORMATION

| Collection of information | Internal (percent) | Outside professionals (percent) |
|---|---|---|
| Forms 1–A, C | 75 | 25 |
| Regulation D | 25 | 75 |

PRA Table 3 [735] below illustrates the incremental change to the total annual compliance burden of affected forms, in hours and in costs, as a result of the amendments' estimated effect on the paperwork burden per response. The number of estimated affected responses shown in PRA Table 3 is based on the number of responses in the Commission's current OMB PRA filing inventory plus the number of additional responses we estimate as a result of the amendments (25 responses for Form 1–A, and 55 responses for Form C).[736]

PRA TABLE 3—CALCULATION OF THE INCREMENTAL CHANGE IN BURDEN ESTIMATES OF CURRENT RESPONSES RESULTING FROM THE AMENDMENTS

| Collection of information | Number of estimated affected responses (A) | Burden hour affect per current affected response (B) | Change in burden hours for current affected responses (C) = (A) × (B) | Change in company hours for current affected responses (D) = (C) × 0.75 | Change in professional hours for current affected responses (E) = (C) × 0.25 | Change in professional costs for current affected responses (F) = (E) × $400 |
|---|---|---|---|---|---|---|
| Form 1–A | 204 | (2) | (408) | (306) | (102) | ($40,800) |
| Form C | 5,907 | 1 | 5907 | 4,430 | 1,477 | $590,800 |

The table below illustrates the incremental change to the total annual compliance burden of affected forms, in hours and in costs, as a result of the amendments' estimated effect on the number of responses.

PRA TABLE 4—CALCULATION OF THE CHANGE IN BURDEN ESTIMATES AS A RESULT OF CHANGE IN NUMBER OF RESPONSES RESULTING FROM THE AMENDMENTS

| Collection of information | Current burden | | | Program change | | |
|---|---|---|---|---|---|---|
| | Current annual responses (A) | Current burden hours (B) | Current cost burden (C) | Estimated additional responses (D) | Change in company hours (E) = ((B)/(A)) × (D) | Change in professional costs (F) = ((C)/(A)) × (D) |
| Form 1–A | 179 | 98,396 | $13,111,912 | 25 | 13,742 | $1,932,390 |
| Form C | 5,852 | 214,928 | 28,500,000 | 55 | 2,020 | 267,857 |

The following tables summarize the requested paperwork burden, including the estimated total reporting burdens and costs, under the amendments. To estimate the new burdens for Form 1–A and Form C resulting from the amendments, we add the estimated burden and cost changes in PRA Table 3 and PRA Table 4 and have incorporated them into PRA Table 5. For example, Column (E) of PRA Table 5 represents the sum of column (D) in PRA Table 3 and column (E) in PRA Table 4.

PRA TABLE 5—REQUESTED PAPERWORK BURDEN UNDER THE AMENDMENTS

| Collection of information | Current burden | | | Program change | | | Revised burden | | |
|---|---|---|---|---|---|---|---|---|---|
| | Current annual responses (A) | Current burden hours (B) | Current cost burden (C) | Number of affected responses (D) | Change in company hours (E) | Change in professional costs (F) | Annual responses (G) | Burden hours (H) = (B) + (E) | Cost burden (I) = (C) + (F) |
| Form 1–A | 179 | 98,396 | $13,111,912 | 204 | 13,436 | $1,891,590 | 204 | 111,832 | $15,003,502 |
| Form C | 5,852 | 214,928 | 28,500,000 | 5,907 | 6,450 | 858,657 | 5,907 | 221,378 | 29,358,657 |

PRA Table 6 summarizes the requested paperwork burden for the new Regulation D collection of information, including the estimated total reporting burdens and costs, under the amendments. The estimates for this

733 Here and in the tables below, we derived current estimated burdens and burden allocations for Regulation D using the estimates for Form D, Rule 504(b)(3), and Rule 506(e).

734 We recognize that the costs of retaining outside professionals may vary depending on the nature of the professional services, but for purposes of this PRA analysis, we estimate that such costs would be an average of $400 per hour. This estimate is based on consultations with several registrants, law firms, and other persons who regularly assist registrants in preparing and filing reports with the Commission.

735 The estimated reductions in Columns (C), (D), and (E) are rounded to the nearest whole number.

736 The OMB PRA filing inventory represents a three-year average.

new collection of information include the existing burden estimated for Form D, Rule 504(b)(3), and Rule 506(e), as well as other burdens resulting from the implementation of Regulation D. For purposes of the PRA, we estimate that the new Regulation D collection of information will entail a 5 hour compliance burden per response with 26,000 annual responses (derived from the current 26,000 annual responses for Form D).[737]

PRA TABLE 6—REQUESTED PAPERWORK BURDEN FOR THE NEW COLLECTION OF INFORMATION

| Collection of information | Requested paperwork burden | | |
|---|---|---|---|
| | Annual responses<br>(A) | Burden hours<br>(A) × 5 × (0.25) | Cost burden<br>(A) × 5 × (0.75) × $400 |
| Regulation D | 26,000 | 32,500 | $39,000,000 |

## VI. Final Regulatory Flexibility Analysis

The Regulatory Flexibility Act (''RFA'') [738] requires the Commission, in promulgating rules under Section 553 of the Administrative Procedure Act,[739] to consider the impact of those rules on small entities. We have prepared this Final Regulatory Flexibility Act Analysis (''FRFA'') in accordance with Section 604 of the RFA.[740] An Initial Regulatory Flexibility Analysis (''IRFA'') was prepared in accordance with the RFA and was included in the Proposing Release. This FRFA relates to the amendments or additions to the rules and forms described in Section II above.

### *A. Need for, and Objectives of, the Final Amendments*

The amendments to the exempt offering framework are intended to close gaps and reduce complexities that may impede access to capital for issuers and thereby limit investment opportunities, while preserving or enhancing important investor protections. The need for, and objectives of, the amendments are discussed in more detail in Sections II and IV above.

### *B. Significant Issues Raised by Public Comment*

In the Proposing Release, we requested comment on all aspects of the IRFA, including how the proposed amendments could further lower the burden on small entities, the number of small entities that would be affected by the proposed amendments, the existence or nature of the potential impact of the proposals on small entities discussed in the analysis, and how to quantify the impact of the proposed amendments. We did not receive any comments specifically addressing the IRFA. However, we received a number of comments on the proposed amendments generally,[741] and have considered these comments in developing the FRFA.

### *C. Small Entities Subject to the Final Amendments*

The final amendments will affect issuers that are small entities. The RFA defines ''small entity'' to mean ''small business,'' ''small organization,'' or ''small governmental jurisdiction.'' [742] For purposes of the RFA, under 17 CFR 230.157, an issuer, other than an investment company, is a ''small business'' or ''small organization'' if it had total assets of $5 million or less on the last day of its most recent fiscal year and is engaged or proposing to engage in an offering of securities not exceeding $5 million. Under 17 CFR 270.0–10, an investment company, including a business development company, is considered to be a small entity if it, together with other investment companies in the same group of related investment companies, has net assets of $50 million or less as of the end of its most recent fiscal year.

The amendments are expected to promote capital formation through exempt offerings and create additional flexibility for issuers. Because the amendments will affect all issuers conducting offerings exempt from registration under the Securities Act, which includes companies not subject to ongoing reporting obligations under the Exchange Act, Regulation A, or Regulation Crowdfunding, it is difficult to estimate the number of issuers that qualify as small entities that would be eligible to rely on the amendments.[743]

### *D. Projected Reporting, Recordkeeping and Other Compliance Requirements*

As noted above, the amendments to the exempt offering framework are intended to close gaps and reduce complexities that may impede access to capital for issuers. The final amendments apply to small entities to the same extent as other entities, irrespective of size, and we expect that the nature of any associated benefits and costs to be similar. Accordingly, we refer to the discussion of the economic effects on all affected parties, including small entities, in Section IV above.[744] Consistent with that discussion, we anticipate that the economic benefits and costs likely could vary widely among small entities based on a number of factors, such as the nature and conduct of their businesses, including their capital raising decisions, which makes it difficult to project the economic impact on small entities with precision. Compliance with the final amendments may require the use of professional skills, including accounting and legal skills.

Many of the final amendments are expected to be of greatest benefit to the

[737] We expect the amendments providing an additional method to verify an investor's accredited investor status and increasing the offering limit under Rule 504 could lead to additional Rule 506(c) or Rule 504 offerings. However, as discussed in Section IV above, some of these offerings may be conducted by issuers switching from other Regulation D exemptions. Additionally, some of the issuers conducting the additional Regulation A or Regulation Crowdfunding offerings may be switching from Regulation D offerings. Because it is difficult to predict the net impact of the proposed amendments on the overall number of Regulation D responses, we are not adjusting the current estimate of 26,000 responses at this time.

[738] 5 U.S.C. 601 *et seq.*

[739] 5 U.S.C. 553.

[740] 5 U.S.C. 604.

[741] *See* Section II above.

[742] 5 U.S.C. 601(6).

[743] In particular, as discussed in Section IV above, due to the large number of offerings in reliance on the offering exemptions in Regulation D relative to other offering exemptions affected by the amendments, most of which are conducted by issuers that are not subject to Exchange Act, Regulation A, or Regulation Crowdfunding reporting requirements, Regulation D issuers are likely to continue to comprise a significant share of the small entities affected by the amendments. However, we do not have information on the assets of such issuers, which is required for an estimate of small entities for purposes of the RFA definition, because this information is not required by Form D and because such issuers may not be subject to ongoing reporting requirements.

[744] We also discuss the estimated compliance burden associated with the proposed amendments for purposes of the PRA in Section V above.

capital raising efforts of small entities that may lack an existing network of angel and VC funders and appear to face the greatest constraints in obtaining external financing. Examples of this include: Amendments to integration principles that are intended to facilitate multiple offerings, including offerings with general solicitation; amendments expanding investment limits and issuer eligibility under Regulation Crowdfunding; amendments tailoring the requirements for non-accredited investor sales under Rule 506(b); and amendments expanding the offering limits for Regulation Crowdfunding, Rule 504, and Regulation A. In addition, certain of the rules that we are amending, such as Regulation Crowdfunding and Rule 504, have eligibility requirements and other restrictions that increase the likelihood that such rules will be relied on by small businesses that are seeking to raise relatively small amounts of capital without incurring the costs of conducting a registered offering.

Although many of the final amendments are expected to be of greatest benefit to the capital raising efforts of small entities, we acknowledge that any costs of the amendments borne by the affected entities, such as those related to compliance with the amendments, or the implementation or restructuring of internal systems needed to adjust to the amendments, could have a proportionally greater effect on small entities, as they may be less able to bear such costs relative to larger entities. For example, the final amendments to the bad actor disqualification provisions [745] could cause some small entities to incur additional due diligence costs or modify their offerings to reduce the possibility of a disqualifying event (*e.g.,* replacing personnel or avoiding the participation of covered persons, other than beneficial owners, who are subject, or might become subject, to disqualifying events after filing). Similarly, small entities electing to use the generic or Regulation Crowdfunding testing-the-waters provisions [746] might incur costs, such as those related to preparing the testing-the-waters materials. These potential costs would be borne equally by all issuers, regardless of size.

### *F. Agency Action To Minimize Effect on Small Entities*

The RFA directs us to consider alternatives that would accomplish our stated objectives, while minimizing any significant adverse impact on small entities. Accordingly, we considered the following alternatives:

- Establishing different compliance or reporting requirements that take into account the resources available to small entities;
- Clarifying, consolidating, or simplifying compliance and reporting requirements under the rules for small entities;
- Using performance rather than design standards; and
- Exempting small entities from all or part of the requirements.

The final amendments generally simplify, harmonize, and improve certain aspects of the exempt offering framework to promote capital formation, including for offering exemptions used by and designed primarily for small entities. Thus, we do not think it is necessary to exempt small entities from all or part of these requirements. As discussed in more detail in Sections II and IV above, commenters offered, and we considered, various alternatives to the final amendments.

Several of the offering exemptions that we are amending (*e.g.,* Regulation A and Regulation Crowdfunding) already contain different compliance or reporting requirements that take into account the resources of the smaller entities that are likely to use these exemptions. In addition, certain amendments clarify, consolidate, or simplify compliance and reporting requirements under our rules, which should benefit small entities in particular. For example, we are amending the financial statement information requirements in Regulation D to align them with the disclosure requirements in Regulation A. We are also amending Regulation A to simplify compliance, such as by providing for the redaction of confidential information in certain exhibits, harmonizing the procedures for publicly filing draft Regulation A offering statements with those for draft Securities Act registration statements, and permitting issuers to incorporate previously-filed financial statements by reference into a Regulation A offering statement. Finally, we are amending Regulation Crowdfunding and rules under the Investment Company Act to help reduce administrative complexities that some issuers may encounter under Regulation Crowdfunding.

With respect to using performance rather than design standards, we note that several of the amendments concern rules that use principles-based approaches that are more akin to performance standards. For example, we are adopting a general principle of integration that requires an issuer to consider the particular facts and circumstances of each offering, including whether the issuer can establish that each offering either complies with the registration requirements of the Securities Act, or that an exemption from registration is available for the particular offering.

## VII. Statutory Authority

The final amendments contained in this release are being adopted under the authority set forth in the Securities Act (15 U.S.C. 77a *et seq.*), particularly, Sections 3, 4, 4A, 19, and 28 thereof; the Exchange Act (15 U.S.C. 78a *et seq.*), particularly, Sections 3, 10(b), 12, 15, 17, 23(a), and 36 thereof; the Investment Company Act (15 U.S.C. 80a-1 *et seq.*), particularly Sections 6(c), 8, 24, 30, 38, and 45; and Pub. L. 112–106, secs. 301–305, 126 Stat. 306 (2012).

## List of Subjects

*17 CFR Part 227*

**Text of Rule Amendments**

In accordance with the foregoing, the Commission amends title 17, chapter II, of the Code of Federal Regulations as follows:

## PART 227—REGULATION CROWDFUNDING, GENERAL RULES AND REGULATIONS

■ 1. The authority citation for part 227 continues to read as follows:

**Authority:** 15 U.S.C. 77d, 77d-1, 77s, 77z-3, 78c, 78*o,* 78q, 78w, 78mm, and Pub. L. 112–106, secs. 301–305, 126 Stat. 306 (2012).

■ 2. Effective January 14, 2021, to March 1, 2023, amend § 227.201 by revising paragraph (b)(7) to read as follows:

### § 227.100 Crowdfunding exemption and requirements.

* * * * *

(b) * * *

(7) Seeks to rely on § 227.201(aa) to conduct an offering on an expedited basis due to circumstances relating to coronavirus disease 2019 (COVID–19), where such offering is initiated between May 4, 2020, and February 28, 2021, or seeks to rely on § 227.201(bb), where such offering is initiated between March 1, 2021, and August 28, 2022, and:

(i) Was organized and had operations less than six months prior to the commencement of the offering; or

(ii) Sold securities in reliance on section 4(a)(6) of the Securities Act and has not complied with the requirements in section 4A(b) of the Securities Act (15 U.S.C. 77d–1(b)) and the related requirements in this part.

* * * * *

■ 3. Effective March 15, 2021, further amend § 227.100 by:

■ a. Revising paragraphs (a)(1), (a)(2) introductory text, and paragraphs (a)(2)(i) and (ii);

■ b. Revising paragraph (d); and

■ c. Adding paragraph (e).

The revisions and additions read as follows:

### § 227.100 Crowdfunding exemption and requirements.

(a) * * *

(1) The aggregate amount of securities sold to all investors by the issuer in reliance on section 4(a)(6) of the Securities Act (15 U.S.C. 77d(a)(6)) during the 12-month period preceding the date of such offer or sale, including the securities offered in such transaction, shall not exceed $5,000,000;

(2) Where the purchaser is not an accredited investor (as defined in Rule 501 (§ 230.501 of this chapter)), the aggregate amount of securities sold to such an investor across all issuers in reliance on section 4(a)(6) of the Securities Act (15 U.S.C. 77d(a)(6)) during the 12-month period preceding the date of such transaction, including the securities sold to such investor in such transaction, shall not exceed:

(i) The greater of $2,200, or 5 percent of the greater of the investor's annual income or net worth, if either the investor's annual income or net worth is less than $107,000; or

(ii) Ten percent of the greater of the investor's annual income or net worth, not to exceed an amount sold of $107,000, if both the investor's annual income and net worth are equal to or more than $107,000;

* * * * *

(d) *Investor.* For purposes of this part, investor means any investor or any potential investor, as the context requires. A crowdfunding vehicle (as defined in § 270.3a–9 of this chapter) is not considered an investor for the purposes of this part.

(e) *Integration with other offerings.* To determine whether offers and sales should be integrated, see § 230.152 of this chapter.

■ 4. Effective January 14, 2021, to September 1, 2021, amend § 227.201 by:

■ a. Redesignating paragraph (z) as paragraph (aa) and revising it; and

■ b. Adding new reserved paragraph (z).

The revision reads as follows:

### § 227.201 Disclosure requirements.

* * * * *

(aa) Between May 4, 2020, and February 28, 2021, an issuer may initiate an offering intended to be conducted on an expedited basis due to circumstances relating to COVID–19. Such issuer:

(1) Must prominently provide the following information:

(i) A statement that the offering is being conducted on an expedited basis due to circumstances relating to COVID–19 and pursuant to the Commission's temporary regulatory COVID–19 relief set out in this part;

(ii) If the issuer is relying on paragraph (aa)(2) of this section to omit the information required by paragraph (t) of this section in the initial Form C: Offering Statement (Form C) (§ 239.900 of this chapter) filed with the Commission and provided to investors and the relevant intermediary in accordance with § 227.203(a)(1), a statement that:

(A) The financial information that has been omitted is not currently available and will be provided by an amendment to the offering materials;

(B) The investor should review the complete set of offering materials, including previously omitted financial information, prior to making an investment decision; and

(C) No investment commitments will be accepted until after such financial information has been provided; and

(iii) If the issuer is relying on paragraph (aa)(3) of this section to provide financial statement information required by paragraph (t)(1) of this section, a statement that financial information certified by the principal executive officer of the issuer has been provided instead of financial statements reviewed by a public accountant that is independent of the issuer; and

(iv) In lieu of the information required by paragraph (j) of this section, a description of the process to complete the transaction or cancel an investment commitment, including a statement that:

(A) Investors may cancel an investment commitment for any reason within 48 hours from the time of his or her investment commitment (or such later period as the issuer may designate);

(B) The intermediary will notify investors when the target offering amount has been met;

(C) The issuer may close the offering at any time after it has aggregate investment commitments for which the right to cancel pursuant to paragraph (aa)(1)(iv)(A) of this section has lapsed that equal or exceed the target offering amount (absent a material change that would require an extension of the offering and reconfirmation of the investment commitment); and

(D) If an investor does not cancel an investment commitment within 48 hours from the time of the initial investment commitment, the funds will be released to the issuer upon closing of the offering and the investor will receive securities in exchange for his or her investment;

(2) May omit the information required by paragraph (t) of this section in the initial Form C: Offering Statement (Form C) (§ 239.900 of this chapter) filed with the Commission and provided to investors and the relevant intermediary in accordance with § 227.203(a)(1) if such information is unavailable at the time of filing, but the intermediary may not accept any investment commitments until complete information required under paragraph (t) of this section is provided through an amendment to the Form C in accordance with § 227.203(a)(2); and

(3) May comply with the requirements of paragraph (t)(1) of this section instead of paragraph (t)(2) of this section for an offering or offerings that, together with all other amounts sold under section 4(a)(6) of the Securities Act (15 U.S.C.

77d(a)(6)) within the preceding 12-month period, have, in the aggregate, a target offering amount of more than $107,000, but not more than $250,000, and financial statements of the issuer that have either been reviewed or audited by a public accountant that is independent of the issuer are unavailable at the time of filing.

* * * * *

■ 5. Effective January 14, 2021, to March 1, 2023, further amend § 227.201 by adding paragraph (bb) to read as follows:

**§ 227.201 Disclosure requirements.**

* * * * *

(bb) Between March 1, 2021, and August 28, 2022, an issuer may comply with the requirements of paragraph (t)(1) of this section instead of paragraph (t)(2) of this section for an offering or offerings that, together with all other amounts sold under section 4(a)(6) of the Securities Act (15 U.S.C. 77d(a)(6)) within the preceding 12-month period, have, in the aggregate, a target offering amount of more than $107,000, but not more than $250,000, and financial statements of the issuer that have either been reviewed or audited by a public accountant that is independent of the issuer are unavailable at the time of filing. Such issuer must prominently provide a statement that financial information certified by the principal executive officer of the issuer has been provided instead of financial statements reviewed by a public accountant that is independent of the issuer.

* * * * *

■ 6. Effective March 15, 2021, further amend § 227.201 by:

■ a. Revising the introductory text;

■ b. Removing the word ''and'' from the end of paragraph (x);

■ c. Removing the period from the end of paragraph (y) and adding in its place ''; and'';

■ d. Removing the ''*Instruction to § 227.201*'' from where it appears after paragraph (y) and adding it to the end of the section; and

■ e. Adding paragraph (z).

The revisions and addition read as follows:

**§ 227.201 Disclosure requirements.**

An issuer offering or selling securities in reliance on section 4(a)(6) of the Securities Act (15 U.S.C. 77d(a)(6)) and in accordance with section 4A of the Securities Act (15 U.S.C. 77d–1) and this part, and any co-issuer jointly offering or selling securities with such an issuer in reliance on the same, must file with the Commission and provide to investors and the relevant intermediary the following information:

* * * * *

(z) Any written communication or broadcast script provided in accordance with § 227.206 or, if within 30 days of the initial filing of the offering statement, § 230.241 of this chapter.

(aa) Between May 4, 2020, and February 28, 2021, an issuer may initiate an offering intended to be conducted on an expedited basis due to circumstances relating to COVID–19. Such issuer:

(1) Must prominently provide the following information:

(i) A statement that the offering is being conducted on an expedited basis due to circumstances relating to COVID–19 and pursuant to the Commission's temporary regulatory COVID–19 relief set out in this part;

(ii) If the issuer is relying on paragraph (aa)(2) of this section to omit the information required by paragraph (t) of this section in the initial Form C: Offering Statement (Form C) (§ 239.900 of this chapter) filed with the Commission and provided to investors and the relevant intermediary in accordance with § 227.203(a)(1), a statement that:

(A) The financial information that has been omitted is not currently available and will be provided by an amendment to the offering materials;

(B) The investor should review the complete set of offering materials, including previously omitted financial information, prior to making an investment decision; and

(C) No investment commitments will be accepted until after such financial information has been provided; and

(iii) If the issuer is relying on paragraph (aa)(3) of this section to provide financial statement information required by paragraph (t)(1) of this section, a statement that financial information certified by the principal executive officer of the issuer has been provided instead of financial statements reviewed by a public accountant that is independent of the issuer; and

(iv) In lieu of the information required by paragraph (j) of this section, a description of the process to complete the transaction or cancel an investment commitment, including a statement that:

(A) Investors may cancel an investment commitment for any reason within 48 hours from the time of his or her investment commitment (or such later period as the issuer may designate);

(B) The intermediary will notify investors when the target offering amount has been met;

(C) The issuer may close the offering at any time after it has aggregate investment commitments for which the right to cancel pursuant to paragraph (aa)(1)(iv)(A) of this section has lapsed that equal or exceed the target offering amount (absent a material change that would require an extension of the offering and reconfirmation of the investment commitment); and

(D) If an investor does not cancel an investment commitment within 48 hours from the time of the initial investment commitment, the funds will be released to the issuer upon closing of the offering and the investor will receive securities in exchange for his or her investment;

(2) May omit the information required by paragraph (t) of this section in the initial Form C: Offering Statement (Form C) (§ 239.900 of this chapter) filed with the Commission and provided to investors and the relevant intermediary in accordance with § 227.203(a)(1) if such information is unavailable at the time of filing, but the intermediary may not accept any investment commitments until complete information required under paragraph (t) of this section is provided through an amendment to the Form C in accordance with § 227.203(a)(2); and

(3) May comply with the requirements of paragraph (t)(1) of this section instead of paragraph (t)(2) of this section for an offering or offerings that, together with all other amounts sold under section 4(a)(6) of the Securities Act (15 U.S.C. 77d(a)(6)) within the preceding 12-month period, have, in the aggregate, a target offering amount of more than $107,000, but not more than $250,000, and financial statements of the issuer that have either been reviewed or audited by a public accountant that is independent of the issuer are unavailable at the time of filing.

* * * * *

■ 7. Effective March 15, 2021, amend § 227.203 by revising paragraph (a)(1) to read as follows:

**§ 227.203 Filing requirements and form.**

(a) * * *

(1) *Offering statement.* Except as allowed by § 227.206, an issuer offering or selling securities in reliance on section 4(a)(6) of the Securities Act (15 U.S.C. 77d(a)(6)) and in accordance with section 4A of the Securities Act (15 U.S.C. 77d–1) and this part, and any co-issuer jointly offering or selling securities with such an issuer in reliance on the same, must file with the Commission and provide to investors and the relevant intermediary a Form C: Offering Statement (Form C) (§ 239.900

of this chapter) prior to the commencement of the offering of securities. An issuer that is both offering or selling securities with a co-issuer and separately offering or selling securities on its own must file with the Commission and provide to investors and the relevant intermediary a separate Form C for such offering. Every Form C must include the information required by § 227.201.

* * * * *

■ 8. Effective March 15, 2021, amend § 227.204 by:

■ a. Revising paragraphs (a) and (b)(1);

■ b. Adding paragraph (d); and

■ c. Redesignating the Instruction to § 227.204 as paragraph (e) and revising it.

The revisions and addition read as follows:

**§ 227.204 Advertising.**

(a)(1) An issuer may not, directly or indirectly, advertise the terms of an offering made in reliance on section 4(a)(6) of the Securities Act (15 U.S.C. 77d(a)(6)), except for oral or written communications that meet the requirements of paragraph (b) of this section or of § 227.206.

(2) *Instruction to paragraph (a).* For purposes of this paragraph (a), issuer includes persons acting on behalf of the issuer.

(b) * * *

(1) A statement that the issuer is conducting an offering pursuant to section 4(a)(6) of the Securities Act (15 U.S.C. 77d(a)(6)), the name of the intermediary through which the offering is being conducted, and information (including a link in any written communications) directing the potential investor to the intermediary's platform;

* * * * *

(d) Notwithstanding the requirement that a notice advertising any of the terms of an issuer's offering made in reliance on section 4(a)(6) of the Securities Act (15 U.S.C. 77d(a)(6)) include no more than the information specified in paragraph (b) of this section, an issuer conducting an offering in reliance on Regulation Crowdfunding concurrently with another offering that discloses the terms of the Regulation Crowdfunding offering in the disclosure document for the other offering will not be deemed to have exceeded these disclosure limitations if the disclosure document for the other offering satisfies all the other requirements of this section. If the disclosure document for the other offering is filed on the Commission's Electronic Data Gathering and Retrieval System (EDGAR), the link required by paragraph (b)(1) may not be a live hyperlink.

(e) *Instruction to § 227.204.* For purposes of this section, terms of the offering means the amount of securities offered, the nature of the securities, the price of the securities, the closing date of the offering period, the planned use of proceeds and the issuer's progress toward meeting its funding target.

■ 9. Effective March 15, 2021, add § 227.206 to subpart B to read as follows:

**§ 227.206 Solicitations of interest and other communications.**

(a) *Solicitation of interest.* At any time before the filing of an offering statement, an issuer may communicate orally or in writing to determine whether there is any interest in a contemplated securities offering. Such communications are deemed to be an offer of a security for sale for purposes of the antifraud provisions of the Federal securities laws. No solicitation or acceptance of money or other consideration, nor of any commitment, binding or otherwise, from any person is permitted until the offering statement is filed.

(b) *Conditions.* The communications must:

(1) State that no money or other consideration is being solicited, and if sent in response, will not be accepted;

(2) State that no offer to buy the securities can be accepted and no part of the purchase price can be received until the offering statement is filed and only through an intermediary's platform; and

(3) State that a person's indication of interest involves no obligation or commitment of any kind.

(c) *Indications of interest.* Any written communication under this section may include a means by which a person may indicate to the issuer that such person is interested in a potential offering. This issuer may require the name, address, telephone number, and/or email address in any response form included pursuant to this paragraph (c).

■ 10. Effective January 14, 2021, to March 1, 2023, add paragraph (e) to § 227.301 to read as follows:

**§ 227.301 Measures to reduce risk of fraud.**

* * * * *

(e) Have a reasonable basis for believing that an issuer seeking to initiate an offering of securities between March 1, 2021, and August 28, 2022, in reliance on section 4(a)(6) of the Securities Act through the intermediary's platform that is relying on § 227.201(bb) and that has previously sold securities in reliance on section 4(a)(6) of the Securities Act has complied with the requirements in section 4A(b) of the Act (15 U.S.C. 77d1(b)) and the related requirements in this part. In satisfying the requirement in this paragraph (e), an intermediary may rely on the representations of the issuer concerning compliance with the requirements in this paragraph (e) unless the intermediary has reason to question the reliability of those representations.

**§ 227.303 [Amended]**

■ 11. Effective January 14, 2021, until September 1, 2021, amend § 227.303 by:

■ a. Removing "§ 227.201(z)(1)" from paragraph (g)(1)(i) and adding in its place "§ 227.201(aa)(1)"; and

■ b. Removing "§ 227.201(z)(3)" from paragraph (g)(1)(iii) and adding in its place "§ 227.201(aa)(3)".

**§ 227.304 [Amended]**

■ 12. Effective January 14, 2021, until September 1, 2021, amend § 227.304 by removing "§ 227.201(z)" from paragraph (e)(2)(i) and adding in its place "§ 227.201(aa)".

■ 13. Effective March 15, 2021, amend § 227.503 by revising paragraphs (a), adding an Instruction to paragraph (a), and revising paragraph (b)(3) to read as follows:

**§ 227.503 Disqualification provisions.**

(a) *Disqualification events.* No exemption under section 4(a)(6) of the Securities Act (15 U.S.C. 77d(a)(6)) shall be available for a sale of securities if the issuer; any predecessor of the issuer; any affiliated issuer; any director, officer, general partner or managing member of the issuer; any beneficial owner of 20 percent or more of the issuer's outstanding voting equity securities, calculated on the basis of voting power; any promoter connected with the issuer in any capacity at the time of filing, any offer after filing, or such sale; any person that has been or will be paid (directly or indirectly) remuneration for solicitation of purchasers in connection with such sale of securities; or any general partner, director, officer or managing member of any such solicitor:

(1) Has been convicted, within 10 years before the filing of the offering statement or such sale (or five years, in the case of issuers, their predecessors and affiliated issuers), of any felony or misdemeanor:

(i) In connection with the purchase or sale of any security;

(ii) Involving the making of any false filing with the Commission; or

(iii) Arising out of the conduct of the business of an underwriter, broker, dealer, municipal securities dealer, investment adviser, funding portal or paid solicitor of purchasers of securities;

(2) Is subject to any order, judgment or decree of any court of competent jurisdiction, entered within five years before the filing of the information required by section 4A(b) of the Securities Act (15 U.S.C. 77d–1(b)) or such sale that, at the time of such filing or sale, restrains or enjoins such person from engaging or continuing to engage in any conduct or practice:

(i) In connection with the purchase or sale of any security;

(ii) Involving the making of any false filing with the Commission; or

(iii) Arising out of the conduct of the business of an underwriter, broker, dealer, municipal securities dealer, investment adviser, funding portal or paid solicitor of purchasers of securities;

(3) Is subject to a final order of a State securities commission (or an agency or officer of a State performing like functions); a State authority that supervises or examines banks, savings associations or credit unions; a State insurance commission (or an agency or officer of a state performing like functions); an appropriate Federal banking agency; the U.S. Commodity Futures Trading Commission; or the National Credit Union Administration that:

(i) At the time of the filing of the information required by section 4A(b) of the Securities Act (15 U.S.C. 77d–1(b)) or such sale, bars the person from:

(A) Association with an entity regulated by such commission, authority, agency or officer;

(B) Engaging in the business of securities, insurance or banking; or

(C) Engaging in savings association or credit union activities; or

(ii) Constitutes a final order based on a violation of any law or regulation that prohibits fraudulent, manipulative or deceptive conduct entered within ten years before such filing of the offering statement or such sale;

(iii) *Instruction to paragraph (a)(3). Final order* shall mean a written directive or declaratory statement issued by a Federal or State agency, described in this paragraph (a)(3), under applicable statutory authority that provides for notice and an opportunity for hearing, which constitutes a final disposition or action by that Federal or State agency.

(4) Is subject to an order of the Commission entered pursuant to section 15(b) or 15B(c) of the Exchange Act (15 U.S.C. 78*o*(b) or 78*o*–4(c)) or section 203(e) or (f) of the Investment Advisers Act of 1940 (15 U.S.C. 80b–3(e) or (f)) that, at the time of the filing of the information required by section 4A(b) of the Securities Act (15 U.S.C. 77d–1(b)) or such sale:

(i) Suspends or revokes such person's registration as a broker, dealer, municipal securities dealer, investment adviser or funding portal;

(ii) Places limitations on the activities, functions or operations of such person; or

(iii) Bars such person from being associated with any entity or from participating in the offering of any penny stock;

(5) Is subject to any order of the Commission entered within five years before the filing of the information required by section 4A(b) of the Securities Act (15 U.S.C. 77d–1(b)) or such sale that, at the time of such filing or sale, orders the person to cease and desist from committing or causing a violation or future violation of:

(i) Any scienter-based anti-fraud provision of the Federal securities laws, including without limitation section 17(a)(1) of the Securities Act (15 U.S.C. 77q(a)(1)), section 10(b) of the Exchange Act (15 U.S.C. 78j(b)) and 17 CFR 240.10b–5, section 15(c)(1) of the Exchange Act (15 U.S.C. 78*o*(c)(1)) and section 206(1) of the Investment Advisers Act of 1940 (15 U.S.C. 80b–6(1)) or any other rule or regulation thereunder; or

(ii) Section 5 of the Securities Act (15 U.S.C. 77e);

(6) Is suspended or expelled from membership in, or suspended or barred from association with a member of, a registered national securities exchange or a registered national or affiliated securities association for any act or omission to act constituting conduct inconsistent with just and equitable principles of trade;

(7) Has filed (as a registrant or issuer), or was or was named as an underwriter in, any registration statement or Regulation A (17 CFR 230.251 through 230.263) offering statement filed with the Commission that, within five years before the filing of the information required by section 4A(b) of the Securities Act (15 U.S.C. 77d–1(b)) or such sale, was the subject of a refusal order, stop order, or order suspending the Regulation A exemption, or is, at the time of such filing or sale, the subject of an investigation or proceeding to determine whether a stop order or suspension order should be issued; or

(8) Is subject to a United States Postal Service false representation order entered within five years before the filing of the information required by section 4A(b) of the Securities Act (15 U.S.C. 77d–1(b)) or such sale, or is, at the time of such filing or sale, subject to a temporary restraining order or preliminary injunction with respect to conduct alleged by the United States Postal Service to constitute a scheme or device for obtaining money or property through the mail by means of false representations.

*Instruction to paragraph (a):* With respect to any beneficial owner of 20 percent or more of the issuer's outstanding voting equity securities, calculated on the basis of voting power, the issuer is required to determine whether a disqualifying event has occurred only as of the time of filing of the offering statement and not from the time of such sale.

(b) * * *

(3) If, before the filing of the information required by section 4A(b) of the Securities Act (15 U.S.C. 77d–1(b)) or such sale, the court or regulatory authority that entered the relevant order, judgment or decree advises in writing (whether contained in the relevant judgment, order or decree or separately to the Commission or its staff) that disqualification under paragraph (a) of this section should not arise as a consequence of such order, judgment or decree; or

* * * * *

■ 14. Effective March 15, 2021, add § 227.504 to read as follows:

**§ 227.504 Definition of "qualified purchaser".**

For purposes of section 18(b)(3) of the Securities Act [15 U.S.C. 77r(b)(3)], a "qualified purchaser" means any person to whom securities are offered or sold pursuant to an offering under §§ 227.100 through 227.504 (Regulation Crowdfunding).

## PART 229—STANDARD INSTRUCTIONS FOR FILING FORMS UNDER SECURITIES ACT OF 1933, SECURITIES EXCHANGE ACT OF 1934 AND ENERGY POLICY AND CONSERVATION ACT OF 1975—REGULATION S–K

■ 15. The authority citation for part 229 continues to read in part as follows:

**Authority:** 15 U.S.C. 77e, 77f, 77g, 77h, 77j, 77k, 77s, 77z–2, 77z–3, 77aa(25), 77aa(26), 77ddd, 77eee, 77ggg, 77hhh, 77iii, 77jjj, 77nnn, 77sss, 78c, 78i, 78j, 78j–3, 78*l*, 78m, 78n, 78n–1, 78*o*, 78u–5, 78w, 78*ll*, 78mm, 80a–8, 80a–9, 80a–20, 80a–29, 80a–30, 80a–31(c), 80a–37, 80a–38(a), 80a–39, 80b–11 and 7201 *et seq.;* 18 U.S.C. 1350; sec. 953(b), Pub. L. 111–203, 124 Stat. 1904 (2010); and sec. 102(c), Pub. L. 112–106, 126 Stat. 310 (2012).

* * * * *

■ 16. Effective March 15, 2021, amend § 229.601 by revising paragraph (b)(2)(ii) and paragraph (b)(10)(iv), to read as follows:

**§ 229.601 (Item 601) Exhibits.**

* * * * *

(b) * * *

(2) * * *

(ii) The registrant may redact specific provisions or terms of exhibits required to be filed by paragraph (b)(2) of this section if the registrant customarily and actually treats that information as private or confidential and if the omitted information is not material. If it does so, the registrant should mark the exhibit index to indicate that portions of the exhibit or exhibits have been omitted and include a prominent statement on the first page of the redacted exhibit that certain identified information has been excluded from the exhibit because it is both not material and is the type that the registrant treats as private or confidential. The registrant also must include brackets indicating where the information is omitted from the filed version of the exhibit. If requested by the Commission or its staff, the registrant must promptly provide on a supplemental basis an unredacted copy of the exhibit and its materiality and privacy or confidentiality analyses. Upon evaluation of the registrant's supplemental materials, the Commission or its staff may require the registrant to amend its filing to include in the exhibit any previously redacted information that is not adequately supported by the registrant's analyses. The registrant may request confidential treatment of the supplemental material submitted under this paragraph (b)(2)(ii) pursuant to § 200.83 of this chapter while it is in the possession of the Commission or its staff. After completing its review of the supplemental information, the Commission or its staff will return or destroy it if the registrant complies with the procedures outlined in § 230.418 or 240.12b–4 of this chapter.

* * * * *

(10) * * *

(iv) The registrant may redact specific provisions or terms of exhibits required to be filed by this paragraph (b)(10) if the registrant customarily and actually treats that information as private or confidential and if the omitted information is not material. If it does so, the registrant should mark the exhibit index to indicate that portions of the exhibit or exhibits have been omitted and include a prominent statement on the first page of the redacted exhibit that certain identified information has been excluded from the exhibit because it is both not material and is the type that the registrant treats as private or confidential. The registrant also must include brackets indicating where the information is omitted from the filed version of the exhibit. If requested by the Commission or its staff, the registrant must promptly provide on a supplemental basis an unredacted copy of the exhibit and its materiality and privacy or confidentiality analyses. Upon evaluation of the registrant's supplemental materials, the Commission or its staff may require the registrant to amend its filing to include in the exhibit any previously redacted information that is not adequately supported by the registrant's analyses. The registrant may request confidential treatment of the supplemental material submitted under this paragraph (b)(10)(iv) pursuant to § 200.83 of this chapter while it is in the possession of the Commission or its staff. After completing its review of the supplemental information, the Commission or its staff will return or destroy it if the registrant complies with the procedures outlined in § 230.418 or 240.12b–4 of this chapter.

* * * * *

## PART 230—GENERAL RULES AND REGULATIONS, SECURITIES ACT OF 1933

■ 17. The authority citation for part 230 continues to read, in part, as follows:

**Authority:** 15 U.S.C. 77b, 77b note, 77c, 77d, 77f, 77g, 77h, 77j, 77r, 77s, 77z–3, 77sss, 78c, 78d, 78j, 78*l,* 78m, 78n, 78*o,* 78*o*–7 note, 78t, 78w, 78*ll*(d), 78mm, 80a–8, 80a–24, 80a–28, 80a–29, 80a–30, and 80a–37, and Pub. L. 112–106, sec. 201(a), sec. 401, 126 Stat. 313 (2012), unless otherwise noted.

* * * * *

Section 230.502 is also issued under 15 U.S.C. 80a–8, 80a–29, 80a–30.

* * * * *

■ 18. Effective March 15, 2021, amend § 230.147 by revising paragraph (g), removing the Instruction to paragraph (g), and removing paragraph (h).

The revisions read as follows:

**§ 230.147 Intrastate offers and sales.**

* * * * *

(g) *Integration with other offerings.* To determine whether offers and sales should be integrated, refer to § 230.152.

■ 19. Effective March 15, 2021, amend § 230.147A by revising paragraph (g), removing the Instruction to paragraph (g), and removing paragraph (h).

The revisions read as follows:

**§ 230.147A Intrastate sale exemption.**

* * * * *

(g) *Integration with other offerings.* To determine whether offers and sales should be integrated, refer to § 230.152.

■ 20. Effective March 15, 2021, add § 230.148 to read as follows:

**§ 230.148 Exemption from general solicitation or general advertising.**

(a) A communication will not be deemed to constitute general solicitation or general advertising if made in connection with a seminar or meeting in which more than one issuer participates that is sponsored by a college, university, or other institution of higher education, State or local government or instrumentality thereof, nonprofit organization, or angel investor group, incubator, or accelerator, provided that:

(1) No advertising for the seminar or meeting references a specific offering of securities by the issuer;

(2) The sponsor of the seminar or meeting does not:

(i) Make investment recommendations or provide investment advice to attendees of the event;

(ii) Engage in any investment negotiations between the issuer and investors attending the event;

(iii) Charge attendees of the event any fees, other than reasonable administrative fees;

(iv) Receive any compensation for making introductions between event attendees and issuers or for investment negotiations between such parties; and

(v) Receive any compensation with respect to the event that would require registration of the sponsor as a broker or a dealer under the Securities Exchange Act of 1934 (15 U.S.C. 78a *et seq.*) or an investment adviser under the Investment Advisers Act of 1940 (15 U.S.C. 80b–1 *et seq.*);

(3) The type of information regarding an offering of securities by the issuer that is communicated or distributed by or on behalf of the issuer in connection with the event is limited to a notification that the issuer is in the process of offering or planning to offer securities, the type and amount of securities being offered, the intended use of proceeds of the offering, and the unsubscribed amount in an offering; and

(4) If the event allows attendees to participate virtually, rather than in person, online participation in the event is limited to:

(i) Individuals who are members of, or otherwise associated with the sponsor organization;

(ii) Individuals that the sponsor reasonably believes are accredited investors; or

(iii) Individuals who have been invited to the event by the sponsor based on industry or investment-related experience reasonably selected by the sponsor in good faith and disclosed in the public communications about the event.

(5) For purposes of this paragraph, the term ''angel investor group'' means a group of accredited investors that holds regular meetings and has defined processes and procedures for making investment decisions, either individually or among the membership of the group as a whole, and is neither associated nor affiliated with brokers, dealers, or investment advisers.

(b) [Reserved]

■ 21. Effective March 15, 2021, revise § 230.152 to read as follows:

**§ 230.152 Integration.**

This section provides a general principle of integration and non-exclusive safe harbors from integration of registered and exempt offerings. Because of the objectives of this section and the policies underlying the Act, the provisions of this section will not have the effect of avoiding integration for any transaction or series of transactions that, although in technical compliance with the section, is part of a plan or scheme to evade the registration requirements of the Act.

(a) *General principle of integration.* If the safe harbors in paragraph (b) of this section do not apply, in determining whether two or more offerings are to be treated as one for the purpose of registration or qualifying for an exemption from registration under the Act, offers and sales will not be integrated if, based on the particular facts and circumstances, the issuer can establish that each offering either complies with the registration requirements of the Act, or that an exemption from registration is available for the particular offering. In making this determination:

(1) For an exempt offering prohibiting general solicitation, the issuer must have a reasonable belief, based on the facts and circumstances, with respect to each purchaser in the exempt offering prohibiting general solicitation, that the issuer (or any person acting on the issuer's behalf) either:

(i) Did not solicit such purchaser through the use of general solicitation; or

(ii) Established a substantive relationship with such purchaser prior to the commencement of the exempt offering prohibiting general solicitation; and

(2) For two or more concurrent exempt offerings permitting general solicitation, in addition to satisfying the requirements of the particular exemption relied on, general solicitation offering materials for one offering that includes information about the material terms of a concurrent offering under another exemption may constitute an offer of securities in such other offering, and therefore the offer must comply with all the requirements for, and restrictions on, offers under the exemption being relied on for such other offering, including any legend requirements and communications restrictions.

(b) *Safe harbors.* No integration analysis under paragraph (a) of this section is required, if any of the following non-exclusive safe harbors apply:

(1) Any offering made more than 30 calendar days before the commencement of any other offering, or more than 30 calendar days after the termination or completion of any other offering, will not be integrated with such other offering, *provided that* for an exempt offering for which general solicitation is not permitted that follows by 30 calendar days or more an offering that allows general solicitation, the provisions of § 230.152(a)(1) shall apply.

(2) Offers and sales made in compliance with § 230.701, pursuant to an employee benefit plan, or in compliance with §§ 230.901 through 230.905 (Regulation S) will not be integrated with other offerings;

(3) An offering for which a registration statement under the Act has been filed will not be integrated if it is made subsequent to:

(i) A terminated or completed offering for which general solicitation is not permitted;

(ii) A terminated or completed offering for which general solicitation is permitted made only to qualified institutional buyers and institutional accredited investors; or

(iii) An offering for which general solicitation is permitted that terminated or completed more than 30 calendar days prior to the commencement of the registered offering; or

(4) Offers and sales made in reliance on an exemption for which general solicitation is permitted will not be integrated if made subsequent to any terminated or completed offering.

(c) *Commencement of an offering.* For purposes of this section, an offering of securities will be deemed to be commenced at the time of the first offer of securities in the offering by the issuer or its agents. The following non-exclusive list of factors should be considered in determining when an offering is deemed to be commenced. Pursuant to the requirements for registered and exempt offerings, an issuer or its agents may commence an offering in reliance on:

(1) Section 230.241, on the date the issuer first made a generic offer soliciting interest in a contemplated securities offering for which the issuer had not yet determined the exemption under the Act under which the offering of securities would be conducted;

(2) Section 15 U.S.C. 77d(a)(2) (Section 4(a)(2)), §§ 230.501 through 230.508 (Regulation D), or § 230.147, or § 230.147A (Rules 147 or 147A), on the date the issuer first made an offer of its securities in reliance on these exemptions;

(3) Sections 230.251 through 230.263 (Regulation A), on the earlier of the date the issuer first made an offer soliciting interest in a contemplated securities offering in reliance on § 230.255, or the public filing of a Form 1–A offering statement;

(4) Sections 227.100 through 227.503 of this chapter (Regulation Crowdfunding), on the earlier of the date the issuer first made an offer soliciting interest in a contemplated securities offering in reliance on § 227.206 of this chapter, or the public filing of a Form C offering statement; and

(5) A registration statement filed under the Act, in the case of:

(i) A continuous offering that will commence promptly on the date of initial effectiveness, on the date the issuer first filed its registration statement for the offering with the Commission; or

(ii) A delayed offering, on the earliest date on which the issuer or its agents commenced public efforts to offer and sell the securities, which could be evidenced by the earlier of:

(A) The first filing of a prospectus supplement with the Commission describing the delayed offering; or

(B) The issuance of a widely disseminated public disclosure, such as a press release, confirming the commencement of the delayed offering.

**Note 1 to paragraph (c)(5):** Offers by the issuer, or persons acting on behalf of the issuer, limited exclusively to qualified institutional buyers and institutional accredited investors, including those that would qualify for the safe harbor in § 230.163B, will not be considered the commencement of a registered offering for purposes of this section.

(d) *Termination or completion of an offering.* For purposes of this section, the termination or completion of an offering is deemed to have occurred when the issuer and its agents cease efforts to make further offers to sell the issuer's securities under such offering. The following non-exclusive list of factors should be considered in determining when an offering is deemed to be terminated or completed including for offerings made in reliance on:

(1) Section 4(a)(2), Regulation D, or Rules 147 or 147A, on the later of the date:

(i) The issuer entered into a binding commitment to sell all securities to be sold under the offering (subject only to conditions outside of the investor's control); or

(ii) The issuer and its agents ceased efforts to make further offers to sell the issuer's securities under such offering;

(2) Regulation A, on:

(i) The withdrawal of an offering statement under § 230.259(a);

(ii) The filing of a § 239.94 of this chapter (Form 1–Z) with respect to a Tier I offering under § 230.257(a);

(iii) The declaration by the Commission that the offering statement has been abandoned under § 230.259(b); or

(iv) The date, after the third anniversary of the date the offering statement was initially qualified, on which § 230.251(d)(3)(i)(F) prohibits the issuer from continuing to sell securities using the offering statement, or any earlier date on which the offering terminates by its terms;

(3) Regulation Crowdfunding, on the deadline of the offering identified in the offering materials pursuant to § 227.201(g) of this chapter, or indicated by the Regulation Crowdfunding intermediary in any notice to investors delivered under § 227.304(b) of this chapter; and

(4) A registration statement filed under the Act:

(i) On the withdrawal of the registration statement after an application is granted or deemed granted under § 230.477;

(ii) On the filing of a prospectus supplement or amendment to the registration statement indicating that the offering, or particular delayed offering in the case of a shelf registration statement, has been terminated or completed;

(iii) On the entry of an order of the Commission declaring that the registration statement has been abandoned under § 230.479;

(iv) On the date, after the third anniversary of the initial effective date of the registration statement, on which § 230.415(a)(5) prohibits the issuer from continuing to sell securities using the registration statement, or any earlier date on which the offering terminates by its terms; or

(v) Any other factors that indicate that the issuer has abandoned or ceased its public selling efforts in furtherance of the offering, or particular delayed offering in the case of a shelf registration statement, which could be evidenced by:

(A) The filing of a Current Report on Form 8–K; or

(B) The issuance of a widely disseminated public disclosure by the issuer, or its agents, informing the market that the offering, or particular delayed offering, in the case of a shelf registration statement, has been terminated or completed.

**Note 2 to paragraph (d)(4):** A particular delayed offering may be deemed terminated or completed, even though the issuer's shelf registration statement may still have an aggregate amount of securities available to offer and sell in a later delayed offering.

**§ 230.155 [Removed and reserved]**

■ 22. Effective March 15, 2021, remove and reserve § 230.155.

■ 23. Effective March 15, 2021, add § 230.241 before the undesignated center heading ''Regulation A—Conditional Small Issues Exemption'' to read as follows:

**§ 230.241 Solicitations of interest.**

(a) *Solicitation of interest.* At any time before making a determination as to the exemption from registration under the Act under which an offering of securities will be conducted, an issuer or any person authorized to act on behalf of an issuer may communicate orally or in writing to determine whether there is any interest in a contemplated offering of securities exempt from registration under the Act. Such communications are deemed to be an offer of a security for sale for purposes of the antifraud provisions of the Federal securities laws. No solicitation or acceptance of money or other consideration, nor of any commitment, binding or otherwise, from any person is permitted until the issuer makes a determination as to the exemption to be relied on and the offering, meeting the requirements of the exemption, is commenced.

(b) *Conditions.* The communications must state that:

(1) The issuer is considering an offering of securities exempt from registration under the Act, but has not determined a specific exemption from registration the issuer intends to rely on for the subsequent offer and sale of the securities;

(2) No money or other consideration is being solicited, and if sent in response, will not be accepted;

(3) No offer to buy the securities can be accepted and no part of the purchase price can be received until the issuer determines the exemption under which the offering is intended to be conducted and, where applicable, the filing, disclosure, or qualification requirements of such exemption are met; and

(4) A person's indication of interest involves no obligation or commitment of any kind.

(c) *Indications of interest.* Any written communication under this section may include a means by which a person may indicate to the issuer that such person is interested in a potential offering. The issuer may require the name, address, telephone number, and/or email address in any response form included pursuant to this paragraph (c).

■ 24. Effective March 15, 2021, amend § 230.251 by revising paragraphs (a)(2), (b)(7), and (c), and removing the Instruction to paragraph (c) to read as follows:

**§ 230.251 Scope of exemption.**

* * * * *

(a) * * *

(2) *Tier 2.* Offerings pursuant to §§ 230.251 through 230.263 (Regulation A) in which the sum of the aggregate offering price and aggregate sales does not exceed $75,000,000, including not more than $22,500,000 offered by all selling securityholders that are affiliates of the issuer (''Tier 2 offerings'').

* * * * *

(b) * * *

(7) Has filed with the Commission all reports required to be filed, if any, pursuant to § 230.257 or pursuant to section 13 or 15(d) of the Exchange Act (15 U.S.C. 78m or 15 U.S.C. 78*o*) during the two years before the filing of the offering statement (or for such shorter period that the issuer was required to file such reports); and

* * * * *

(c) *Integration with other offerings.* To determine whether offers and sales should be integrated, see § 230.152.

* * * * *

**§ 230.255 [Amended]**

■ 25. Effective March 15, 2021, amend § 230.255 by removing paragraph (e).

■ 26. Effective March 15, 2021, amend § 230.259 by revising paragraph (b) to read as follows:

**§ 230.259 Withdrawal or abandonment of offering statements.**

* * * * *

(b) *Abandonment.* When an offering statement, or a post-qualification amendment to such statement, has been on file with the Commission for nine months without amendment and has not become qualified, the Commission may, in its discretion, declare the offering statement or post-qualification amendment abandoned. If the offering statement has been amended, or if the post-qualification amendment has been amended, the nine-month period shall be computed from the date of the latest amendment.

■ 27. Effective March 15, 2021, amend § 230.262 by revising paragraph (a), adding an Instruction to paragraph (a), and revising paragraph (b)(3) to read as follows:

**§ 230.262 Disqualification provisions.**

(a) *Disqualification events.* No exemption under §§ 230.251 through 230.263 (Regulation A) shall be available for a sale of securities if the issuer; any predecessor of the issuer; any affiliated issuer; any director, executive officer, other officer participating in the offering, general partner or managing member of the issuer; any beneficial owner of 20 percent or more of the issuer's outstanding voting equity securities, calculated on the basis of voting power; any promoter connected with the issuer in any capacity at the time of filing, any offer after qualification, or such sale; any person that has been or will be paid (directly or indirectly) remuneration for solicitation of purchasers in connection with such sale of securities; any general partner or managing member of any such solicitor; or any director, executive officer or other officer participating in the offering of any such solicitor or general partner or managing member of such solicitor:

(1) Has been convicted, within 10 years before the filing of the offering statement or such sale (or five years, in the case of issuers, their predecessors and affiliated issuers), of any felony or misdemeanor:

(i) In connection with the purchase or sale of any security;

(ii) Involving the making of any false filing with the Commission; or

(iii) Arising out of the conduct of the business of an underwriter, broker, dealer, municipal securities dealer, investment adviser or paid solicitor of purchasers of securities;

(2) Is subject to any order, judgment or decree of any court of competent jurisdiction, entered within five years before the filing of the offering statement or such sale that, at the time of such filing or such sale, restrains or enjoins such person from engaging or continuing to engage in any conduct or practice:

(i) In connection with the purchase or sale of any security;

(ii) Involving the making of any false filing with the Commission; or

(iii) Arising out of the conduct of the business of an underwriter, broker, dealer, municipal securities dealer, investment adviser or paid solicitor of purchasers of securities;

(3) Is subject to a final order (as defined in § 230.261) of a State securities commission (or an agency or officer of a State performing like functions); a State authority that supervises or examines banks, savings associations, or credit unions; a State insurance commission (or an agency or officer of a State performing like functions); an appropriate Federal banking agency; the U.S. Commodity Futures Trading Commission; or the National Credit Union Administration that:

(i) At the time of the filing of the offering statement or such sale, bars the person from:

(A) Association with an entity regulated by such commission, authority, agency, or officer;

(B) Engaging in the business of securities, insurance or banking; or

(C) Engaging in savings association or credit union activities; or

(ii) Constitutes a final order based on a violation of any law or regulation that prohibits fraudulent, manipulative, or deceptive conduct entered within ten years before such filing of the offering statement or such sale;

(4) Is subject to an order of the Commission entered pursuant to section 15(b) or 15B(c) of the Securities Exchange Act of 1934 (15 U.S.C. 78*o*(b) or 78*o*–4(c)) or section 203(e) or (f) of the Investment Advisers Act of 1940 (15 U.S.C. 80b–3(e) or (f)) that, at the time of the filing of the offering statement or such sale:

(i) Suspends or revokes such person's registration as a broker, dealer, municipal securities dealer or investment adviser;

(ii) Places limitations on the activities, functions or operations of such person; or

(iii) Bars such person from being associated with any entity or from participating in the offering of any penny stock;

(5) Is subject to any order of the Commission entered within five years before the filing of the offering statement or such sale that, at the time of such filing or sale, orders the person to cease and desist from committing or causing a violation or future violation of:

(i) Any scienter-based anti-fraud provision of the Federal securities laws, including without limitation section 17(a)(1) of the Securities Act of 1933 (15 U.S.C. 77q(a)(1)), section 10(b) of the Securities Exchange Act of 1934 (15 U.S.C. 78j(b)) and 17 CFR 240.10b–5, section 15(c)(1) of the Securities Exchange Act of 1934 (15 U.S.C. 78*o*(c)(1)) and section 206(1) of the Investment Advisers Act of 1940 (15 U.S.C. 80b–6(1)), or any other rule or regulation thereunder; or

(ii) Section 5 of the Securities Act of 1933 (15 U.S.C. 77e).

(6) Is suspended or expelled from membership in, or suspended or barred from association with a member of, a registered national securities exchange or a registered national or affiliated securities association for any act or omission to act constituting conduct inconsistent with just and equitable principles of trade;

(7) Has filed (as a registrant or issuer), or was or was named as an underwriter in, any registration statement or offering statement filed with the Commission that, within five years before the filing of the offering statement or such sale, was the subject of a refusal order, stop order, or order suspending the Regulation A exemption, or is, at the time of such filing or such sale, the subject of an investigation or proceeding to determine whether a stop order or suspension order should be issued; or

(8) Is subject to a United States Postal Service false representation order entered within five years before the filing of the offering statement or such sale, or is, at the time of such filing or such sale, subject to a temporary restraining order or preliminary injunction with respect to conduct alleged by the United States Postal Service to constitute a scheme or device for obtaining money or property through the mail by means of false representations.

*Instruction to paragraph (a):* With respect to any beneficial owner of 20 percent or more of the issuer's outstanding voting equity securities, calculated on the basis of voting power, the issuer is required to determine whether a disqualifying event has occurred only as of the time of filing of the offering statement and not from the time of such sale.

(b) * * *

(3) If, before the filing of the offering statement or the relevant sale, the court or regulatory authority that entered the relevant order, judgment or decree advises in writing (whether contained in the relevant judgment, order or decree or separately to the Commission or its staff) that disqualification under paragraph (a) of this section should not arise as a consequence of such order, judgment or decree; or

* * * * *

■ 28. Effective March 15, 2021, amend § 230.500 by revising paragraph (g) to read as follows:

**§ 230.500 Use of Regulation D.**

* * * * *

(g) Securities offered and sold outside the United States in accordance with §§ 230.901 through 230.905 (Regulation S) need not be registered under the Act. See Release No. 33–6863. Regulation S may be relied on for such offers and sales even if coincident offers and sales are made in accordance with Regulation D inside the United States. See § 230.152(b)(2). Thus, for example, persons who are offered and sold securities in accordance with Regulation S would not be counted in the calculation of the number of purchasers under Regulation D. Similarly, proceeds from such sales would not be included in the aggregate offering price. The provisions of this paragraph (g), however, do not apply if the issuer elects to rely solely on Regulation D for offers or sales to persons made outside the United States. See §§ 230.502(a) and 230.152.

■ 29. Effective March 15, 2021, amend § 230.502 by:
■ a. Revising paragraph (a);
■ b. Removing the Note following paragraph (a);
■ c. Revising paragraph (b)(2)(i)(B); and
■ d. Adding paragraph (b)(2)(viii).

The revisions and addition read as follows:

**§ 230.502 General conditions to be met.**

* * * * *

(a) *Integration.* To determine whether offers and sales should be integrated, see § 230.152.

(b) * * *

(2) * * *

(i) * * *

(B) *Financial statement information*—(*1*) *Offerings up to $20,000,000.* The financial statement information required by paragraph (b) of Part F/S of Form 1–A. Such financial statement information must be prepared in accordance with generally accepted accounting principles in the United States (US GAAP). If the issuer is a foreign private issuer, such financial statements must be prepared in accordance with either US GAAP or International Financial Reporting Standards (IFRS) as issued by the International Accounting Standards Board (IASB). If the financial statements comply with IFRS, such compliance must be explicitly and unreservedly stated in the notes to the financial statements and if the financial statements are audited, the auditor's report must include an opinion on whether the financial statements comply with IFRS as issued by the IASB.

(*2*) *Offerings over $20,000,000.* The financial statement information required by paragraph (c) of Part F/S of Form 1–A (referenced in § 239.90 of this chapter). If the issuer is a foreign private issuer, such financial statements must be prepared in accordance with either US GAAP or IFRS as issued by the IASB. If the financial statements comply with IFRS, such compliance must be explicitly and unreservedly stated in the notes to the financial statements and the auditor's report must include an opinion on whether the financial statements comply with IFRS as issued by the IASB.

* * * * *

(viii) At a reasonable time prior to the sale of securities to any purchaser that is not an accredited investor in a transaction under § 230.506(b), the issuer shall provide the purchaser with any written communication or broadcast script used under the authorization of § 230.241 within 30 days prior to such sale.

* * * * *

■ 30. Effective March 15, 2021, amend § 230.504 by:
■ a. Revising the section heading;
■ b. Revising paragraph (b)(2); and
■ c. Revising Instruction to paragraph (b)(2).

The revisions read as follows:

**§ 230.504 Exemption for limited offerings and sales of securities not exceeding $10,000,000.**

* * * * *

(b) * * *

(2) *Offering limit.* The aggregate offering price for an offering of securities under this § 230.504, as defined in § 230.501(c), shall not exceed $10,000,000, less the aggregate offering price for all securities sold within the 12 months before the start of and during the offering of securities under this § 230.504 or in violation of section 5(a) of the Securities Act.

*Instruction to paragraph (b)(2):* If a transaction under § 230.504 fails to meet the limitation on the aggregate offering price, it does not affect the availability of this § 230.504 for the other transactions considered in applying such limitation. For example, if an issuer sold $10,000,000 of its securities on June 1, 2021, under this § 230.504 and an additional $500,000 of its securities on December 1, 2021, this § 230.504 would not be available for the later sale, but would still be applicable to the June 1, 2021, sale.

* * * * *

■ 31. Effective March 15, 2021, amend § 230.506 by:
■ a. Revising paragraph (b)(2)(i) and republishing the note to paragraph (b)(2)(i);
■ b. Amending paragraph (c)(2)(ii)(B)(*2*) by removing the word ''or'' from the end of the paragraph;
■ c. Revising paragraph (c)(2)(ii)(C)(*4*) by removing the period from the end of paragraph and adding in its place a semicolon;
■ d. Revising paragraph (c)(2)(ii)(D) by removing the period from the end of the paragraph and adding ''; or'' in its place;
■ e. Adding paragraph (c)(2)(ii)(E) before the *Instructions to paragraph (c)(2)(ii)(A) through (D) of this section;* and
■ f. Removing the text ''(A) through (D) of this section'' from the heading to *Instructions to paragraph (c)(2)(ii)(A) through (D) of this section,* and republishing it.

The revisions and addition read as follows:

**§ 230.506 Exemption for limited offers and sales without regard to dollar amount of offering.**

* * * * *

(b) * * *

(2) * * *

(i) *Limitation on number of purchasers.* There are no more than, or the issuer reasonably believes that there are no more than, 35 purchasers of securities from the issuer in offerings under this section in any 90-calendar-day period.

**Note 1 to paragraph (b)(2)(i):** See § 230.501(e) for the calculation of the number of purchasers and § 230.502(a) for what may or may not constitute an offering under paragraph (b) of this section.

* * * * *

(c) * * *

(2) * * *

(ii) * * *

(E) In regard to any person that the issuer previously took reasonable steps to verify as an accredited investor in accordance with this paragraph (c)(2)(ii), so long as the issuer is not aware of information to the contrary, obtaining a written representation from such person at the time of sale that he or she qualifies as an accredited investor. A written representation under this method of verification will satisfy the issuer's obligation to verify the person's accredited investor status for a period of five years from the date the person was previously verified as an accredited investor.

*Instructions to paragraph (c)(2)(ii):* * * *

* * * * *

## PART 239—FORMS PRESCRIBED UNDER THE SECURITIES ACT OF 1933

■ 32. The authority citation for part 239 continues to read in part as follows:

**Authority:** 15 U.S.C. 77c, 77f, 77g, 77h, 77j, 77s, 77z–2, 77z–3, 77sss, 78c, 78*l*, 78m,78n, 78*o*(d), 78*o*–7 note, 78u–5, 78w(a), 78*ll*, 78mm, 80a–2(a), 80a–3, 80a–8, 80a–9, 80a–10, 80a–13, 80a–24, 80a–26, 80a–29, 80a–30, and 80a–37; and sec. 107, Pub. L. 112–106, 126 Stat. 312, unless otherwise noted.

* * * * *

■ 33. Amend Form S–6 (referenced in § 239.16) by revising Additional Instruction 3 of ''Instructions as to Exhibits'' to read as follows:

**Note:** The text of Form S–6 does not, and this amendment will not, appear in the Code of Federal Regulations.

## Form S–6

* * * * *

## Instructions as to Exhibits

* * * * *

*Additional Instructions:*

* * * * *

3. The registrant may redact specific provisions or terms of exhibits required to be filed by paragraph (9) of section IX of Form N–8B–2 (Exhibits) if the registrant customarily and actually treats that information as private or confidential and if the omitted information is not material. If it does so, the registrant should mark the exhibit index to indicate that portions of the exhibit have been omitted and include a prominent statement on the first page of the redacted exhibit that certain identified information has been excluded from the exhibit because it is both not material and the type that the registrant treats as private or confidential. The registrant also must include brackets indicating where the information is omitted from the filed version of the exhibit. If requested by the Commission or its staff, the registrant must promptly provide on a supplemental basis an unredacted copy of the exhibit and its materiality and privacy or confidentiality analyses. Upon evaluation of the registrant's supplemental materials, the Commission or its staff may require the registrant to amend its filing to include in the exhibit any previously redacted information that is not adequately supported by the registrant's analyses. The registrant may request confidential treatment of the supplemental material submitted under this Instruction 3 pursuant to Rule 83 of the Commission's Organizational Rules [17 CFR 200.83] while it is in the possession of the Commission or its staff. After completing its review of the supplemental information, the Commission or its staff will return or destroy it, if the registrant complies with the procedures outlined in Rule 418 under the Securities Act [17 CFR 230.418].

* * * * *

■ 34. Amend Form N–14 (referenced in § 239.23) by revising Instruction 3 to Item 16 to read as follows:

**Note:** The text of Form N–14 does not, and this amendment will not, appear in the Code of Federal Regulations.

## Form N–14

* * * * *

## Item 16. Exhibits

* * * * *

*Instructions:*

* * * * *

3. The registrant may redact specific provisions or terms of exhibits required to be filed by paragraph (13) of this Item if the registrant customarily and actually treats that information as private or confidential and if the omitted information is not material. If it does so, the registrant should mark the exhibit index to indicate that portions of the exhibit have been omitted and include a prominent statement on the first page of the redacted exhibit that certain identified information has been excluded from the exhibit because it is both not material and the type that the registrant treats as private or confidential. The registrant also must include brackets indicating where the information is omitted from the filed version of the exhibit. If requested by the Commission or its staff, the registrant must promptly provide on a supplemental basis an unredacted copy of the exhibit and its materiality and privacy or confidentiality analyses. Upon evaluation of the registrant's supplemental materials, the Commission or its staff may require the registrant to amend its filing to include in the exhibit any previously redacted information that is not adequately supported by the registrant's analyses. The registrant may request confidential treatment of the supplemental material submitted under this Instruction 3 pursuant to Rule 83 of the Commission's Organizational Rules [17 CFR 200.83] while it is in the possession of the Commission or its staff. After completing its review of the supplemental information, the Commission or its staff will return or destroy it, if the registrant complies with the procedures outlined in Rule 418 under the Securities Act [17 CFR 230.418].

* * * * *

■ 35. Amend Form 1–A (referenced in § 239.90) by:

■ a. Revising General Instruction I;

■ b. Revising General Instruction III(a);

■ c. Revising paragraph 13 of Part III, Item 17;

■ d. Removing and reserving paragraph 16 of Part III, Item 17;

■ e. Adding paragraph 99 of Part III, Item 17; and

■ f. Adding an instruction at the end of Part III, Item 17.

The revisions and additions read as follows:

**Note:** The text of Form 1–A does not, and this amendment will not, appear in the Code of Federal Regulations.

## Form 1–A

## Regulation A Offering Statement Under the Securities Act of 1933

## General Instructions

## I. Eligibility Requirements for Use of Form 1–A.

This Form is to be used for securities offerings made pursuant to Regulation A (17 CFR 230.251 *et seq.*). Careful attention should be directed to the terms, conditions and requirements of Regulation A, especially Rule 251, because the exemption is not available to all issuers or for every type of securities transaction. Further, the aggregate offering price and aggregate sales of securities in any 12-month period is strictly limited to $20 million for Tier 1 offerings and $75 million for Tier 2 offerings, including no more than $6 million offered by all selling securityholders that are affiliates of the issuer for Tier 1 offerings and $22.5 million by all selling securityholders that are affiliates of the issuer for Tier 2 offerings. Please refer to Rule 251 of Regulation A for more details.

* * * * *

## III. Incorporation by Reference and Cross-Referencing

* * * * *

(a) The use of incorporation by reference and cross-referencing in Part II of this Form:

(1) Is limited to the following items:

(A) Items 2–14 of Part II and Part F/S if following the Offering Circular format;

(B) Items 3–11 of Form S–1 if following the Part I of Form S–1 format; or

(C) Items 3–28, and 30 of Form S–11 if following the Part I of Form S–11 format;

(2) May only incorporate by reference previously submitted or filed financial statements if the issuer meets the following requirements:

(A) the issuer has filed with the Commission all reports and other materials required to be filed, if any, pursuant to Rule 257 (§ 230.257) or by Sections 13(a), 14 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the issuer was required to file such reports and other materials);

(B) the issuer makes the financial statement information that is incorporated by reference pursuant to this item readily available and accessible on a website maintained by or for the issuer; and

(C) the issuer must state that it will provide to each holder of securities, including any beneficial owner, a copy of the financial statement information that have been incorporated by reference in the offering statement upon written or oral request, at no cost to the requester, and provide the issuer's website address, including the uniform resource locator (URL) where the incorporated financial statements may be accessed.

* * * * *

**Part III—Exhibits**

* * * * *

**Item 17. Description of Exhibits**

* * * * *

13. ''*Testing-the-waters*'' *materials*—Any written communication or broadcast script used under the authorization of Rule 241 within 30 days of the initial filing of the offering statement, and any written communication or broadcast script used under the authorization of Rule 255. Materials used under the authorization of Rule 255 need not be filed if they are substantively the same as materials previously filed with the offering statement.

* * * * *

16. RESERVED

* * * * *

99. *Additional exhibits*—Any additional exhibits which the issuer may wish to file, which must be so marked as to indicate clearly the subject matters to which they refer.

* * * * *

*Instruction to Item 17:*

*The issuer may redact information from exhibits required to be filed by this Item if disclosure of such information would constitute a clearly unwarranted invasion of personal privacy (e.g., disclosure of bank account numbers, social security numbers, home addresses, and similar information). In addition, the issuer may redact specific provisions or terms of exhibits required to be filed by paragraph 6 or 7 of this Item, if the issuer customarily and actually treats that information as private or confidential and if the omitted information is not material. If it does so, the issuer should mark the exhibit index to indicate that portions of the exhibit have been omitted and include a prominent statement on the first page of the redacted exhibit that certain identified information has been excluded from the exhibit because it is both not material and is the type that the registrant treats as private or confidential. The issuer also must include brackets indicating where the information is omitted from the filed version of the exhibit. If requested by the Commission or its staff, the issuer must promptly provide on a supplemental basis an unredacted copy of the exhibit and its materiality and privacy or confidentiality analyses. Upon evaluation of the issuer's supplemental materials, the Commission or its staff may require the issuer to amend its filing to include in the exhibit any previously redacted information that is not adequately supported by the issuer's analyses. The issuer may request confidential treatment of the supplemental material submitted under paragraphs 6 or 7 pursuant to Rule 83 (§ 200.83 of this chapter) while it is in the possession of the Commission or its staff. After completing its review of the supplemental information, the Commission or its staff will return or destroy it if the registrant complies with the procedures outlined in Rule 418 (§ 230.418 of this chapter).*

* * * * *

■ 36. Amend Form C (referenced in § 239.900) by:

■ a. Adding items to the Cover Page after ''website of the Issuer,''

■ b. Revising General Instruction I;

■ c. Revising Instruction 1 to the Signature;

■ d. Revising the introductory paragraphs in the Optional Question and Answer Format for an Offering Statement; and

■ e. Revising Question 11 in the Optional Question and Answer Format for an Offering Statement.

The addition and revisions read as follows:

**Note:** The text of Form C does not, and this amendment will not, appear in the Code of Federal Regulations.

**Form C**

**Under the Securities Act of 1933**

* * * * *

Is there a co-issuer? ____ yes ____ no. If yes,
Name of co-issuer: ______
Legal status of co-issuer:
Form: ______
Jurisdiction of Incorporation/Organization: ______
Date of organization: ______
Physical address of co-issuer: ______
Website of co-issuer: ______

* * * * *

**General Instructions**

**I. Eligibility Requirements for Use of Form C**

This Form shall be used for the offering statement, and any related amendments and progress reports, required to be filed by any issuer offering or selling securities in reliance on the exemption in Securities Act Section 4(a)(6) and in accordance with Section 4A and Regulation Crowdfunding (§ 227.100 *et seq.*). The term ''issuer'' includes any co-issuer jointly offering or selling securities with an issuer in reliance on the exemption in Securities Act Section 4(a)(6) and in accordance with Securities Act Section 4A and Regulation Crowdfunding (§ 227.100 *et seq.*). This Form also shall be used for an annual report required pursuant to Rule 202 of Regulation Crowdfunding (§ 227.202) and for the termination of reporting required pursuant to Rule 203(b)(2) of Regulation Crowdfunding (§ 227.203(b)(2)). Careful attention should be directed to the terms, conditions and requirements of the exemption.

* * * * *

**Signatures**

* * * * *

*Instructions.* The form shall be signed by the issuer, its principal executive officer or officers, its principal financial officer, its controller or principal accounting officer and at least a majority of the board of directors or persons performing similar functions. If there is a co-issuer, the form shall also be signed by the co-issuer, its principal executive officer or officers, its principal financial officer, its controller or principal accounting officer and at least a majority of the board of directors or persons performing similar functions.

* * * * *

**Optional Question and Answer Format for an Offering Statement**

Respond to each question in each paragraph of this part. Set forth each question and any notes, but not any instructions thereto, in their entirety. If disclosure in response to any question is responsive to one or more other questions, it is not necessary to repeat the disclosure. If a question or series of questions is inapplicable or the response is available elsewhere in the Form, either State that it is inapplicable, include a cross-reference to the responsive disclosure, or omit the question or series of questions. The term ''issuer'' in these questions and answers includes any ''co-issuer'' jointly offering or selling securities with the issuer in reliance on the exemption in Securities

Act Section 4(a)(6) and in accordance with Securities Act Section 4A and Regulation Crowdfunding (§ 227.100 *et seq.*). Any information provided with respect to the issuer should also be separately provided with respect to any co-issuer. If you are seeking to rely on the Commission's temporary rules to initiate an offering between May 4, 2020, and February 28, 2021, intended to be conducted on an expedited basis due to circumstances relating to coronavirus disease 2019 (COVID–19), you will likely need to provide additional or different information than described in questions 2, 12, and 29. If you are seeking to rely on the Commission's temporary Rule 201(bb) for an offering initiated between March 1, 2021, and August 28, 2022, you will likely need to provide additional or different information than described in questions 2 and 29. When preparing responses to such questions, please carefully review temporary Rules 100(b)(7), 201(aa), 201(bb), and 304(e) and tailor your responses to those requirements as applicable.

Be very careful and precise in answering all questions. Give full and complete answers so that they are not misleading under the circumstances involved. Do not discuss any future performance or other anticipated event unless you have a reasonable basis to believe that it will actually occur within the foreseeable future. If any answer requiring significant information is materially inaccurate, incomplete or misleading, the Company, its management and principal shareholders may be liable to investors based on that information.

* * * * *

11. (a) Did the issuer make use of any written communication or broadcast script for testing the waters either (i) under the authorization of Rule 241 within 30 days of the initial filing of the offering statement, or (ii) under the authorization of Rule 206? If so, provide copies of the materials used.

(b) How will the issuer complete the transaction and deliver securities to the investors?

* * * * *

## PART 240—GENERAL RULES AND REGULATIONS, SECURITIES EXCHANGE ACT OF 1934

■ 37. The authority citation for part 240 continues to read in part as follows:

**Authority:** 15 U.S.C. 77c, 77d, 77g, 77j, 77s, 77z–2, 77z–3, 77eee, 77ggg, 77nnn, 77sss, 77ttt, 78c, 78c–3, 78c–5, 78d, 78e, 78f, 78g, 78i, 78j, 78j–1, 78k, 78k–1, 78*l*, 78m, 78n, 78n–1, 78*o*, 78*o*–4, 78*o*–10, 78p, 78q, 78q–1, 78s, 78u–5, 78w, 78x, 78*ll*, 78mm, 80a–20, 80a–23, 80a–29, 80a–37, 80b–3, 80b–4, 80b–11, 7201 *et seq.;* and 8302; 7 U.S.C. 2(c)(2)(E); 12 U.S.C. 5221(e)(3); 18 U.S.C. 1350; and Pub. L. 111–203, 939A, 124 Stat. 1376 (2010); and Pub. L. 112–106, secs. 503 and 602, 126 Stat. 326 (2012), unless otherwise noted.

* * * * *

■ 38. Effective March 15, 2021, amend § 240.12g–6 by

■ a. Revising the section heading; and

■ b. Revising paragraph (a) introductory text.

The revisions read as follows:

### § 240.12g–6 Exemption for securities issued pursuant to section 4(a)(6) of the Securities Act of 1933 or Regulation Crowdfunding.

(a) For purposes of determining whether an issuer is required to register a security with the Commission pursuant to section 12(g)(1) of the Act (15 U.S.C. 78l(g)(1)), the definition of held of record shall not include securities issued pursuant to the offering exemption under section 4(a)(6) of the Securities Act (15 U.S.C. 77d(a)(6)) or §§ 227.100 through 227.504 (Regulation Crowdfunding) by an issuer that:

* * * * *

■ 39. Effective March 15, 2021, amend § 240.12g5–1 by

■ a. Revising paragraph (a)(2); and

■ b. Adding paragraph (a)(9).

The revision and addition read as follows:

### § 240.12g5–1 Definition of securities "held of record".

(a) * * *

(2) Except as specified in paragraph (a)(9) of this section, securities identified as held of record by a corporation, a partnership, a trust whether or not the trustees are named, or other organization shall be included as so held by one person.

* * * * *

(9) For purposes of determining whether a crowdfunding issuer, as defined in § 270.3a–9(b)(1) of this chapter, or a crowdfunding vehicle, as defined in § 270.3a–9(b)(2) of this chapter, is required to register a class of equity securities with the Commission pursuant to section 12(g)(1) of the Act, both the crowdfunding issuer and the crowdfunding vehicle:

(i) May exclude securities issued by a crowdfunding vehicle, as defined in § 270.3a–9(b)(2) of this chapter, in an offering under §§ 227.100 through 227.504 (Regulation Crowdfunding) in which the crowdfunding vehicle and the crowdfunding issuer are deemed to be co-issuers under the Securities Act (15 U.S.C. 77a *et seq.*) and that are held by natural persons; and

(ii) Shall include securities issued by a crowdfunding vehicle, as defined in § 270.3a–9(b)(2) of this chapter, in an offering under Regulation Crowdfunding in which the crowdfunding vehicle and the crowdfunding issuer are deemed to be co-issuers under the Securities Act and that are held by investors that are not natural persons.

* * * * *

## PART 249—FORMS, SECURITIES EXCHANGE ACT OF 1934

■ 40. The authority citation for part 249 continues to read, in part, as follows:

**Authority:** 15 U.S.C. 78a *et seq.* and 7201 *et seq.;* 12 U.S.C. 5461 *et seq.;* 18 U.S.C. 1350; Sec. 953(b), Pub. L. 111–203, 124 Stat. 1904; Sec. 102(a)(3), Pub. L. 112–106, 126 Stat. 309 (2012); Sec. 107, Pub. L. 112–106, 126 Stat. 313 (2012), and Sec. 72001, Pub. L. 114–94, 129 Stat. 1312 (2015), unless otherwise noted.

Section 240.220f is also issued under secs. 3(a), 202, 208, 302, 306(a), 401(a), 401(b), 406 and 407, Pub. L. 107–204, 116 Stat. 745.

* * * * *

Section 249.308 is also issued under 15 U.S.C. 80a–29 and 80a–37.

* * * * *

■ 41. Amend Form 20–F (referenced in § 249.220f) by revising the second, third, and fourth paragraphs following instruction 4.(a)(ii) under "Instructions as to Exhibits," and prior to the note, to read as follows:

**Note:** The text of Form 20–F does not, and this amendment will not, appear in the Code of Federal Regulations.

**Form 20–F**

* * * * *

**Instructions as to Exhibits**

* * * * *

4. (a) * * *

(ii) completes a transaction that had the effect of causing it to cease being a public shell company.

The only contracts that must be filed are those to which the registrant or a subsidiary of the registrant is a party or has succeeded to a party by assumption or assignment or in which the registrant or such subsidiary has a beneficial interest.

The registrant may redact specific provisions or terms of exhibits required to be filed by this Form 20–F if the registrant customarily and actually treats that information as private or confidential and if the omitted information is not material. If it does so, the registrant should mark the exhibit index to indicate that portions of the exhibit or exhibits have been omitted and include a prominent statement on the first page of the redacted exhibit that certain identified information has been excluded from the exhibit because it is both not material and is the type that the registrant treats as private or confidential. The registrant also must include brackets indicating where the information is omitted from the filed version of the exhibit. If requested by the Commission or its staff, the registrant must promptly provide on a supplemental basis an unredacted copy of the exhibit and its materiality and privacy or confidentiality analyses. Upon evaluation of the registrant's supplemental materials, the Commission or its staff may require the registrant to amend its filing to include in the exhibit any previously redacted information that is not adequately supported by the registrant's analyses. The registrant may request confidential treatment of the supplemental material submitted under this instruction pursuant to Rule 83 (§ 200.83 of this chapter) while it is in the possession of the Commission or its staff. After completing its review of the supplemental information, the Commission or its staff will return or destroy it if the registrant complies with the procedures outlined in Rules 418 or 12b–4 (§ 230.418 or § 240.12b–4).

* * * * *

■ 42. Amend Form 8–K (referenced in § 249.308) by revising Instruction 6 under Item 1.01 to read as follows:

**Note:** The text of Form 8–K does not, and this amendment will not, appear in the Code of Federal Regulations.

**Form 8–K**

* * * * *

**Information To Be Included in the Report**

**Section 1—Registrant's Business and Operations**

**Item 1.01 Entry Into a Material Definitive Agreement**

* * * * *

*Instructions.*

* * * * *

6. To the extent a material definitive agreement is filed as an exhibit under this Item 1.01, the registrant may redact specific provisions or terms of the exhibit if the registrant customarily and actually treats that information as private or confidential and if the omitted information is not material, provided that the registrant intends to incorporate by reference this filing into its future periodic reports or registration statements, as applicable, in satisfaction of Item 601(b)(10) of Regulation S–K. If it does so, the registrant should mark the exhibit index to indicate that portions of the exhibit have been omitted and include a prominent statement on the first page of the redacted exhibit that certain identified information has been excluded from the exhibit because it is both not material and is the type that the registrant treats as private or confidential. The registrant also must include brackets indicating where the information is omitted from the filed version of the exhibit. If requested by the Commission or its staff, the registrant must promptly provide on a supplemental basis an unredacted copy of the exhibit and its materiality and privacy or confidentiality analyses. Upon evaluation of the registrant's supplemental materials, the Commission or its staff may require the registrant to amend its filing to include in the exhibit any previously redacted information that is not adequately supported by the registrant's analyses. The registrant may request confidential treatment of the supplemental material submitted under this instruction pursuant to Rule 83 (§ 200.83) while it is in the possession of the Commission or its staff. After completing its review of the supplemental information, the Commission or its staff will return or destroy it if the registrant complies with the procedures outlined in Rules 418 or 12b–4 (§ 230.418 or § 240.12b–4).

* * * * *

## PART 270—RULES AND REGULATIONS, INVESTMENT COMPANY ACT OF 1940

■ 43. The authority citation for part 270 continues to read in part as follows:

**Authority:** 15 U.S.C. 80a–1 *et seq.,* 80a–34(d), 80a–37, 80a–39, and Pub. L. 111–203, sec. 939A, 124 Stat. 1376 (2020), unless otherwise noted.

* * * * *

■ 44. Effective March 15, 2021, add § 270.3a–9 to read as follows:

**§ 270.3a–9 Crowdfunding vehicle.**

(a) Notwithstanding section 3(a) of the Act, a crowdfunding vehicle will be deemed not to be an investment company if the vehicle:

(1) Is organized and operated for the sole purpose of directly acquiring, holding, and disposing of securities issued by a single crowdfunding issuer and raising capital in one or more offerings made in compliance with §§ 227.100 through 227.504 (Regulation Crowdfunding);

(2) Does not borrow money and uses the proceeds from the sale of its securities solely to purchase a single class of securities of a single crowdfunding issuer;

(3) Issues only one class of securities in one or more offerings under Regulation Crowdfunding in which the crowdfunding vehicle and the crowdfunding issuer are deemed to be co-issuers under the Securities Act (15 U.S.C. 77a *et seq.*);

(4) Receives a written undertaking from the crowdfunding issuer to fund or reimburse the expenses associated with its formation, operation, or winding up, receives no other compensation, and any compensation paid to any person operating the vehicle is paid solely by the crowdfunding issuer;

(5) Maintains the same fiscal year-end as the crowdfunding issuer;

(6) Maintains a one-to-one relationship between the number, denomination, type and rights of crowdfunding issuer securities it owns and the number, denomination, type and rights of its securities outstanding;

(7) Seeks instructions from the holders of its securities with regard to:

(i) The voting of the crowdfunding issuer securities it holds and votes the crowdfunding issuer securities only in accordance with such instructions; and

(ii) Participating in tender or exchange offers or similar transactions conducted by the crowdfunding issuer and participates in such transactions only in accordance with such instructions;

(8) Receives, from the crowdfunding issuer, all disclosures and other information required under Regulation Crowdfunding and the crowdfunding vehicle promptly provides such disclosures and other information to the investors and potential investors in the crowdfunding vehicle's securities and to the relevant intermediary; and

(9) Provides to each investor the right to direct the crowdfunding vehicle to assert the rights under State and Federal law that the investor would have if he or she had invested directly in the crowdfunding issuer and provides to each investor any information that it receives from the crowdfunding issuer as a shareholder of record of the crowdfunding issuer.

(b) For purposes of this section:

(1) *Crowdfunding issuer* means a company that seeks to raise capital as a co-issuer with a crowdfunding vehicle in an offering that complies with all of the requirements under section 4(a)(6) of the Securities Act (15 U.S.C. 77d(a)(6)) and Regulation Crowdfunding.

(2) *Crowdfunding vehicle* means an issuer formed by or on behalf of a crowdfunding issuer for the purpose of conducting an offering under section 4(a)(6) of the Securities Act (15 U.S.C. 77d(a)(6)) as a co-issuer with the

crowdfunding issuer, which offering is controlled by the crowdfunding issuer.

(3) *Regulation Crowdfunding* means the regulations set forth in §§ 227.100 through 227.504 of this chapter.

## PART 274—FORMS PRESCRIBED UNDER THE INVESTMENT COMPANY ACT OF 1934

■ 45. The authority citation for part 274 continues to read in part as follows:

**Authority:** 15 U.S.C. 77f, 77g, 77h, 77j, 77s, 78c(b), 78*l*, 78m, 78n, 78*o*(d), 80a–8, 80a–24, 80a–26, 80a–29, and Pub. L. 111–203, sec. 939A, 124 Stat. 1376 (2010), unless otherwise noted.

* * * * *

■ 46. Amend Form N–5 (referenced in §§ 239.24 and 274.5) by revising Instruction 3 in ''Instructions as to Exhibits'' to read as follows:

**Note:** The text of Form N–5 does not, and this amendment will not, appear in the Code of Federal Regulations.

**Form N–5**

**Registration Statement of Small Business Investment Company Under the Securities Act of 1933 and the Investment Company Act of 1940 ***

**Instructions as to Exhibits**

* * * * *

*Instructions:*

* * * * *

3. The registrant may redact specific provisions or terms of exhibits required to be filed by paragraph 9 of this Item if the registrant customarily and actually treats that information as private or confidential and if the omitted information is not material. If it does so, the registrant should mark the exhibit index to indicate that portions of the exhibit have been omitted and include a prominent statement on the first page of the redacted exhibit that certain identified information has been excluded from the exhibit because it is both not material and the type that the registrant treats as private or confidential. The registrant also must include brackets indicating where the information is omitted from the filed version of the exhibit. If requested by the Commission or its staff, the registrant must promptly provide on a supplemental basis an unredacted copy of the exhibit and its materiality and privacy or confidentiality analyses. Upon evaluation of the registrant's supplemental materials, the Commission or its staff may require the registrant to amend its filing to include in the exhibit any previously redacted information that is not adequately supported by the registrant's analyses. The registrant may request confidential treatment of the supplemental material submitted under this Instruction 3 pursuant to Rule 83 of the Commission's Organizational Rules [17 CFR 200.83] while it is in the possession of the Commission or its staff. After completing its review of the supplemental information, the Commission or its staff will return or destroy it, if the registrant complies with the procedures outlined in Rule 418 under the Securities Act of 1933 [17 CFR 230.418].

* * * * *

■ 47. Amend Form N–1A (referenced in §§ 239.15A and 274.11A) by:

■ a. Amending the last sentence of Instruction 2 to Item 28 by removing ''registrant'' and adding in its place ''Registrant'';

■ b. Amending Instruction 3 to Item 28 by removing ''registrant'' and adding in its place ''Registrant''; and

■ c. Revising Instruction 4 to Item 28.

The revision reads as follows:

**Note:** The text of Form N–1A does not, and this amendment will not, appear in the Code of Federal Regulations.

**Form N–1A**

* * * * *

**Item 28. Exhibits**

* * * * *

**Instructions**

* * * * *

4. The Registrant may redact specific provisions or terms of exhibits required to be filed by paragraph (h) of this Item if the Registrant customarily and actually treats that information as private or confidential and if the omitted information is not material. If it does so, the Registrant should mark the exhibit index to indicate that portions of the exhibit have been omitted and include a prominent statement on the first page of the redacted exhibit that certain identified information has been excluded from the exhibit because it is both not material and the type that the Registrant treats as private or confidential. The Registrant also must include brackets indicating where the information is omitted from the filed version of the exhibit. If requested by the Commission or its staff, the Registrant must promptly provide on a supplemental basis an unredacted copy of the exhibit and its materiality and privacy or confidentiality analyses. Upon evaluation of the Registrant's supplemental materials, the Commission or its staff may require the registrant to amend its filing to include in the exhibit any previously redacted information that is not adequately supported by the Registrant's analyses. The Registrant may request confidential treatment of the supplemental material submitted under this Instruction 4 pursuant to Rule 83 of the Commission's Organizational Rules [17 CFR 200.83] while it is in the possession of the Commission or its staff. After completing its review of the supplemental information, the Commission or its staff will return or destroy it, if the Registrant complies with the procedures outlined in rule 418 under the Securities Act [17 CFR 230.418].

* * * * *

■ 48. Amend Form N–2 (referenced in §§ 239.14 and 274.11a–1) by:

■ a. Amending the last sentence of Instruction 4 to Item 25.2 by removing ''registrant'' and adding in its place ''Registrant'';

■ b. Amending Instruction 5 to Item 25.2 by removing ''registrant'' and adding in its place ''Registrant''; and

■ c. Revising Instruction 6 to Item 25.2.

The revision reads as follows:

**Note:** The text of Form N–2 does not, and this amendment will not, appear in the Code of Federal Regulations.

**Form N–2**

**Item 25. Financial Statements and Exhibits**

* * * * *

2. Exhibits:

* * * * *

**Instructions**

* * * * *

6. The Registrant may redact specific provisions or terms of exhibits required to be filed by paragraph k. of this Item if the Registrant customarily and actually treats that information as private or confidential and if the omitted information is not material. If it does so, the Registrant should mark the exhibit index to indicate that portions of the exhibit have been omitted and include a prominent statement on the first page of the redacted exhibit that certain identified information has been excluded from the exhibit because it is both not material and the type that the Registrant treats as private or confidential. The Registrant also must include brackets indicating where the information is omitted from the filed version of the exhibit. If requested by the Commission or its staff, the Registrant must promptly provide on a supplemental basis an unredacted copy of the exhibit and its materiality and

privacy or confidentiality analyses. Upon evaluation of the Registrant's supplemental materials, the Commission or its staff may require the Registrant to amend its filing to include in the exhibit any previously redacted information that is not adequately supported by the Registrant's analyses. The Registrant may request confidential treatment of the supplemental material submitted under this Instruction 6 pursuant to Rule 83 of the Commission's Organizational Rules [17 CFR 200.83] while it is in the possession of the Commission or its staff. After completing its review of the supplemental information, the Commission or its staff will return or destroy it, if the Registrant complies with the procedures outlined in Rule 418 under the Securities Act [17 CFR 230.418].

* * * * *

■ 49. Amend Form N–3 (referenced in §§ 239.17a and 274.11b) by revising Instruction 5 to Item 29(b) to read as follows:

**Note:** The text of Form N–3 does not, and this amendment will not, appear in the Code of Federal Regulations.

5. The Registrant may redact specific provisions or terms of exhibits required to be filed by paragraphs (9) and (11) of this Item if the Registrant customarily and actually treats that information as private or confidential and if the omitted information is not material. If it does so, the Registrant should mark the exhibit index to indicate that portions of the exhibit have been omitted and include a prominent statement on the first page of the redacted exhibit that certain identified information has been excluded from the exhibit because it is both not material and the type that the Registrant treats as private or confidential. The Registrant also must include brackets indicating where the information is omitted from the filed version of the exhibit. If requested by the Commission or its staff, the Registrant must promptly provide on a supplemental basis an unredacted copy of the exhibit and its materiality and privacy or confidentiality analyses. Upon evaluation of the Registrant's supplemental materials, the Commission or its staff may require the Registrant to amend its filing to include in the exhibit any previously redacted information that is not adequately supported by the Registrant's analyses. The Registrant may request confidential treatment of the supplemental material submitted under this Instruction 5 pursuant to Rule 83 of the Commission's Organizational Rules [17 CFR 200.83] while it is in the possession of the Commission or its staff. After completing its review of the supplemental information, the Commission or its staff will return or destroy it, if the Registrant complies with the procedures outlined in Rule 418 under the Securities Act [17 CFR 230.418].

* * * * *

■ 50. Amend Form N–4 (referenced in §§ 239.17b and 274.11c) by revising Instruction 5 to Item 24(b) to read as follows:

**Note:** The text of Form N–4 does not, and this amendment will not, appear in the Code of Federal Regulations.

**Form N–4**

5. The Registrant may redact specific provisions or terms of exhibits required to be filed by paragraphs (7) and (8) of this Item if the Registrant customarily and actually treats that information as private or confidential and if the omitted information is not material. If it does so, the Registrant should mark the exhibit index to indicate that portions of the exhibit or exhibits have been omitted and include a prominent statement on the first page of the redacted exhibit that certain identified information has been excluded from the exhibit because it is both not material and the type that the Registrant treats as private or confidential. The Registrant also must include brackets indicating where the information is omitted from the filed version of the exhibit. If requested by the Commission or its staff, the Registrant must promptly provide on a supplemental basis an unredacted copy of the exhibit and its materiality and privacy or confidentiality analyses. Upon evaluation of the Registrant's supplemental materials, the Commission or its staff may require the Registrant to amend its filing to include in the exhibit any previously redacted information that is not adequately supported by the Registrant's analyses. The Registrant may request confidential treatment of the supplemental material submitted under this Instruction 5 pursuant to Rule 83 of the Commission's Organizational Rules [17 CFR 200.83] while it is in the possession of the Commission or its staff. After completing its review of the supplemental information, the Commission or its staff will return or destroy it, if the Registrant complies with the procedures outlined in Rule 418 under the Securities Act [17 CFR 230.418].

Strengthening Wage Protections for the Temporary and Permanent Employment of Certain Aliens in the United States; Final Rule

**DEPARTMENT OF LABOR**

**Employment and Training Administration**

**20 CFR Parts 655 and 656**

**[DOL Docket No. ETA–2020–0006]**

**RIN 1205–AC00**

# Strengthening Wage Protections for the Temporary and Permanent Employment of Certain Aliens in the United States

**ACTION:** Final rule.

**SUMMARY:** In this final rule, the Department of Labor (the Department or DOL) adopts with changes an Interim Final Rule (IFR) that amended Employment and Training Administration (ETA) regulations governing the prevailing wages for employment opportunities that United States (U.S.) employers seek to fill with foreign workers on a permanent or temporary basis through certain employment-based immigrant visas or through H–1B, H–1B1, or E–3 nonimmigrant visas. Specifically, the IFR amended the Department's regulations governing permanent (PERM) labor certifications and Labor Condition Applications (LCAs) to incorporate changes to the computation of wage levels under the Department's four-tiered wage structure based on the Occupational Employment Statistics (OES) wage survey administered by the Bureau of Labor Statistics (BLS). The primary purpose of these changes is to update the computation of prevailing wage levels under the existing four-tier wage structure to better reflect the actual wages earned by U.S. workers similarly employed to foreign workers. This final rule will allow the Department to more effectively ensure the employment of immigrant and nonimmigrant workers admitted or otherwise provided status through the above-referenced programs does not adversely affect the wages and job opportunities of U.S. workers.

**DATES:** This final rule is effective March 15, 2021.

**FOR FURTHER INFORMATION CONTACT:** For further information, contact Brian D. Pasternak, Administrator, Office of Foreign Labor Certification, Employment and Training Administration, Department of Labor, 200 Constitution Avenue NW, Room N–5311, Washington, DC 20210, telephone: (202) 693–8200 (this is not a toll-free number). Individuals with hearing or speech impairments may access the telephone numbers above via TTY/TDD by calling the toll-free Federal Information Relay Service at 1 (877) 889–5627.

**SUPPLEMENTARY INFORMATION:**

## I. Background

The Immigration and Nationality Act (INA or Act), as amended, assigns responsibilities to the Secretary of Labor (Secretary) relating to the entry and employment of certain categories of immigrants and nonimmigrants.[1] This final rule concerns the calculation of the prevailing wage for job opportunities in the PERM, H–1B, H–1B1, and E–3 programs for which employers seek labor certification from the Secretary.[2]

### *A. Permanent Labor Certifications*

The INA prohibits the admission of certain employment-based immigrants unless the Secretary of Labor has determined and certified to the Secretary of State and the Attorney General that (1) there are not sufficient workers who are able, willing, qualified and available at the time of application for a visa and admission to the United States and at the place where the alien is to perform such skilled or unskilled labor, and (2) the employment of such alien will not adversely affect the wages and working conditions of workers in the United States similarly employed.[3]

This ''labor certification'' requirement does not apply to all employment-based immigrants. The INA provides for five ''preference'' categories or immigrant visa classes, only two of which—the second and third preference employment categories (commonly called the EB–2 and EB–3 immigrant visa classifications)—require a labor certification.[4] An employer seeking to sponsor a foreign worker for an immigrant visa under the EB–2 or EB–3 immigrant visa classifications generally must file a visa petition with the Department of Homeland Security (DHS) on the worker's behalf, which must include a labor certification from the Secretary of Labor.[5] Further, the Department of State (DOS) may not issue a visa unless the Secretary of Labor has issued a labor certification in conformity with the relevant provisions of the INA.[6] If the Secretary determines both that there are not sufficient able, willing, qualified, and available U.S. workers and that employment of the foreign worker will not adversely affect the wages and working conditions of similarly employed U.S. workers, the Secretary so certifies to DHS and DOS by issuing a permanent labor certification. If the Secretary cannot make one or both of the above findings, the application for permanent employment certification is denied.

Under the INA, the EB–2 classification applies to individuals who are ''members of the professions holding advanced degrees or their equivalent or who because of their exceptional ability in the sciences, arts, or business, will substantially benefit prospectively the national economy, cultural or educational interests, or welfare of the United States.'' [7] United States Citizenship and Immigration Services (USCIS) regulations, in turn, define an ''advanced degree'' as any United States academic or professional degree or a foreign equivalent degree above that of baccalaureate. A United States baccalaureate degree or a foreign equivalent degree followed by at least five years of progressive experience in the specialty shall be considered the equivalent of a master's degree. If a doctoral degree customarily is required by the specialty, the alien must have a United States doctorate or a foreign equivalent degree.[8] The regulation goes on to define ''exceptional ability'' as ''a

[1] There are two general categories of U.S. visas: Immigrant and nonimmigrant. Immigrant visas are issued to foreign nationals who intend to live permanently in the U.S. Nonimmigrant visas are for foreign nationals who enter the U.S. on a temporary basis—for tourism, medical treatment, business, temporary work, study, or other reasons.

[2] 8 U.S.C. 1101(a)(15)(E)(iii), (H)(i)(b), (H)(i)(b1).

[3] 8 U.S.C. 1182(a)(5)(A). Although this provision references the Attorney General, the authority to adjudicate immigrant visa petitions was transferred to the Director of the Bureau of Citizenship and Immigration Services (an agency within the Department of Homeland Security) by the Homeland Security Act of 2002, Public Law 107–296, 451(b) (codified at 6 U.S.C. 271(b)). Under 6 U.S.C. 557, references in federal law to any agency or officer whose functions have been transferred to the Department of Homeland Security shall be deemed to refer to the Secretary of Homeland Security or other official or component to which the functions were transferred.

[4] *See* 8 U.S.C. 1153(b)(2), (3), 1182(a)(5)(D). Section 1153(b)(2) governs the EB–2 classification of immigrant work visas granted to foreign workers who are either professionals holding advanced degrees (master's degree or above) or foreign equivalents of such degrees, or persons of ''exceptional ability'' in the sciences, arts, or business. To gain entry in this category, the foreign worker must have prearranged employment with a U.S. employer that meets the requirements of labor certification, unless the work he or she is seeking admission to perform is in the ''national interest,'' such as to qualify for a waiver of the job offer (and hence, the labor certification) requirement under 8 U.S.C. 1153(b)(2)(B). Section 1153(b)(3), governs the EB–3 classification of immigrant work visas granted to foreign workers who are either ''skilled workers,'' ''professionals,'' or ''other'' (unskilled) workers, as defined by the statute. To gain entry in this category, the foreign worker must have prearranged employment with a U.S. employer that meets the requirements of labor certification, without exception.

[5] 8 U.S.C. 1154(a)(1)(F), 1182(a)(5)(A) and (D).

[6] 8 U.S.C. 1153(b)(2), (b)(3)(C), 1201(g).

[7] 8 U.S.C. 1153(b)(2)(A).

[8] 8 CFR 204.5(k)(2).

degree of expertise significantly above that ordinarily encountered in the sciences, arts, or business.'' [9]

The EB–3 program consists of three discrete classifications: ''skilled workers,'' defined as aliens who are ''capable . . . of performing skilled labor (requiring at least two years training or experience), not of a temporary or seasonal nature, for which qualified workers are not available in the United States;'' ''professionals,'' defined as aliens ''who hold baccalaureate degrees and who are members of the professions;'' and ''other workers,'' defined as aliens who are ''capable . . . of performing unskilled labor, not of a temporary or seasonal nature, for which qualified workers are not available in the United States.'' [10]

*B. Labor Condition Applications*

The Secretary must certify an LCA filed by an U.S. employer before the employer may file a petition with DHS on behalf of a foreign worker for H–1B, H–1B1, or E–3 nonimmigrant classification.[11] The LCA contains various attestations from the employer about the wages and working conditions that it will provide for the foreign worker.[12] Most importantly, for the purposes of this final rule, the INA requires employers to pay H–1B workers the greater of ''the actual wage level paid by the employer to all other individuals with similar experience and qualifications for the specific employment in question,'' or the ''the prevailing wage level for the occupational classification in the area of employment.'' [13]

The H–1B program allows U.S. employers to employ foreign workers temporarily in specialty occupations. ''Specialty occupation'' is defined as an occupation that requires the theoretical and practical application of a body of ''highly specialized knowledge,'' and a bachelor's or higher degree in the specific specialty, or its equivalent, as a minimum for entry into the occupation in the U.S.[14] Similar to the H–1B visa classification, the H–1B1 and E–3 nonimmigrant visa classifications also allow U.S. employers to temporarily employ foreign workers in specialty occupations, except that these classifications specifically apply to the nationals of certain countries: The H–1B1 visa classification applies to foreign workers in specialty occupations from Chile and Singapore,[15] and the E–3 visa classification applies to foreign workers in specialty occupations from Australia.[16]

*C. The Permanent Labor Certification Process*

The Department's regulations at 20 CFR part 656 govern the labor certification process and set forth the responsibilities of employers who desire to employ, on a permanent basis, foreign nationals covered by the INA's labor certification requirement.[17] The Department processes labor certification applications for employers seeking to sponsor foreign workers for permanent employment under the EB–2 and EB–3 immigrant visa preference categories. Aliens seeking admission or adjustment of status under the EB–2 or EB–3 preference categories are inadmissible ''unless the Secretary of Labor has determined and certified . . . that—(I) there are not sufficient workers who are able, willing, qualified . . . and available at the time of application for a visa and admission to the United States and at the place where the alien is to perform such skilled or unskilled labor, and (II) the employment of such alien will not adversely affect the wages and working conditions of workers in the United States similarly employed.'' [18]

The Secretary makes this determination in the PERM programs by, among other things, requiring the foreign worker's sponsoring employer to recruit U.S. workers by offering a wage that equals or exceeds the prevailing wage and to assure that the employer will pay the foreign worker a wage equal to or exceeding the prevailing wage.[19] Prior to filing a labor certification application, the employer must obtain a Prevailing Wage Determination (PWD) for its job opportunity from the Office of Foreign Labor Certification's (OFLC) National Prevailing Wage Center (NPWC).[20] The standards and procedures governing the PWD process in connection with the permanent labor certification program are set forth in the Department's regulations at 20 CFR 656.40 and 656.41. If the job opportunity is covered by a collective bargaining agreement (CBA) that was negotiated at arms-length between a union and the employer, the wage rate set forth in the CBA agreement is considered the prevailing wage for labor certification purposes.[21] In the absence of a prevailing wage rate derived from an applicable CBA, the employer may elect to use an applicable wage determination under the Davis-Bacon Act (DBA) or McNamara-O'Hara Service Contract Act (SCA), or provide a wage survey that complies with the Department's standards governing employer-provided wage data.[22] In the absence of any of the above sources, the NPWC will use the BLS OES survey to determine the prevailing wage for the employer's job opportunity.[23] After reviewing the employer's application, the NPWC will determine the prevailing wage and specify the validity period, which may be no less than 90 days and no more than one year from the determination date. Employers must either file the labor certification application or begin the recruitment process, required by the regulation, within the validity period of the PWD issued by the NPWC.[24]

Once the U.S. employer has received a PWD, the process for obtaining a permanent labor certification generally begins with the U.S. employer filing an *Application for Permanent Employment Certification,* Form ETA–9089, with OFLC.[25] As part of the standard application process, the employer must describe, among other things, the labor or services it needs performed; the wage it is offering to pay for such labor or services and the actual minimum requirements of the job opportunity; the geographic location(s) where the work is expected to be performed; and the efforts it made to recruit qualified and available U.S. workers. Additionally, the employer must attest to the conditions listed in its labor certification application, including that

[16] 8 U.S.C. 1101(a)(15)(E)(iii).

[17] The current regulations were issued through a final rule implementing the streamlined permanent labor certification program through revisions to 20 CFR part 656. The final rule was published on December 27, 2004, and took effect on March 28, 2005. *See Labor Certification for the Permanent Employment of Aliens in the United States; Implementation of New System,* 69 FR 77326 (Dec. 27, 2004). The Department published a final rule on May 17, 2007, to enhance program integrity and reduce the incentives and opportunities for fraud and abuse related to permanent labor certification, commonly known as ''the fraud rule.'' *Labor Certification for the Permanent Employment of Aliens in the United States; Reducing the Incentives and Opportunities for Fraud and Abuse and Enhancing Program Integrity,* 72 FR 27904 (May 17, 2007).

[18] 8 U.S.C. 1182(a)(5)(A)(i).

[19] 20 CFR 656.10(c)(1).

[20] 20 CFR 656.15(b)(1), 656.40(a).

[21] *See* 20 CFR 656.40(b)(1).

[22] *See* 20 CFR 656.40(b), (g).

[23] *See* 20 CFR 656.40(b)(2).

[24] 20 CFR 656.40(c).

[25] Applications for Schedule A occupations are eligible to receive pre-certification and bypass the standard applications review process. In those cases, employers file the appropriate documentation directly with DHS. *See* 20 CFR 656.5, 656.15.

''[t]he offered wage equals or exceeds the prevailing wage determined pursuant to [20 CFR 656.40 and 656.41] and the wage the employer will pay to the alien to begin work will equal or exceed the prevailing wage that is applicable at the time the alien begins work or from the time the alien is admitted to take up the certified employment.'' [26]

Through the requisite test of the labor market, the employer also attests, at the time of filing the Form ETA–9089, that the job opportunity has been and is clearly open to any U.S. worker and that all U.S. workers who applied for the job opportunity were rejected for lawful, job-related reasons. OFLC performs a review of the Form ETA–9089 and may either grant or deny a permanent labor certification. Where OFLC grants a permanent labor certification, the employer must submit the certified Form ETA–9089 along with an *Immigrant Petition for Alien Worker* (Form I–140 petition) to DHS. A permanent labor certification is valid only for the job opportunity, employer, foreign worker, and area of intended employment named on the Form ETA–9089 and must be filed in support of a Form I–140 petition within 180 calendar days of the date on which OFLC granted the certification.[27]

### *D. The Temporary Labor Condition Application Process*

The Department's regulations at 20 CFR part 655, subpart H, govern the process for obtaining a certified LCA and set forth the responsibilities of employers who desire to temporarily employ foreign nationals in H–1B, H–1B1, and E–3 nonimmigrant classifications.

A prospective employer must attest on the LCA that (1) it is offering to and will pay the nonimmigrant, during the period of authorized employment, wages that are at least the actual wage level paid by the employer to all other employees with similar experience and qualifications for the specific employment in question, or the prevailing wage level for the occupational classification in the area of intended employment, whichever is greater (based on the best information available at the time of filing the attestation); (2) it will provide working conditions for the nonimmigrant worker that will not adversely affect working conditions for similarly employed U.S. workers; (3) there is no strike or lockout in the course of a labor dispute in the occupational classification at the worksite; and (4) it has provided notice of its filing of an LCA to its employee's bargaining representative for the occupational classification affected or, if there is no bargaining representative, it has provided notice to its employees in the affected occupational classification by posting the notice in a conspicuous location at the worksite or through other means such as electronic notification.[28]

As relevant here, the prevailing wage must be determined as of the time of the filing of the LCA.[29] In contrast to the permanent labor certification process, an employer is not required to obtain a PWD from the NPWC.[30] However, like the permanent labor certification process, if there is an applicable CBA that was negotiated at arms-length between a union and the employer that contains a wage rate applicable to the occupation, the CBA must be used to determine the prevailing wage.[31] In the absence of an applicable CBA, an employer may base the prevailing wage on one of several sources: A PWD from the NPWC; an independent authoritative source that satisfies the requirements in 20 CFR 655.731(b)(3)(iii)(B); or another legitimate source of wage data that satisfies the requirements in 20 CFR 655.731(b)(3)(iii)(C).[32]

An employer may not file an LCA more than six months prior to the beginning date of the period of intended employment. 20 CFR 655.730. Unless the LCA is incomplete or obviously inaccurate, the Secretary must certify it within seven working days of its filing.[33] Once an employer receives a certified LCA, it must file the *Petition for Nonimmigrant Worker,* Form I–129 (''Form I–129 Petition'') with DHS if seeking classification of the alien as an H–1B worker.[34] Upon petition, DHS then determines, among other things, whether the employer's position qualifies as a specialty occupation and, if so, whether the nonimmigrant worker is qualified for the position.

## II. Prevailing Wage Background

### *A. The Department's Prevailing Wage Determination Methodology*

The Department has long relied on BLS OES data to establish prevailing wage levels. The OES is a comprehensive, statistically valid survey that, in many respects, is the best source of wage data available for satisfying the Department's purposes in setting wages in most immigrant and nonimmigrant programs. The OES wage survey is among the largest continuous statistical survey programs of the Federal Government. BLS produces the survey materials and selects the nonfarm establishments to be surveyed using the list of establishments maintained by State Workforce Agencies (SWAs) for unemployment insurance purposes. The OES collects data from over one million establishments. Salary levels based on geographic areas are available at the national and State levels and for certain territories in which statistical validity can be ascertained, including the District of Columbia, Guam, Puerto Rico, and the U.S. Virgin Islands. Salary information is also made available at the metropolitan and nonmetropolitan area levels within a State. Wages for the OES survey are straight-time, gross pay, exclusive of premium pay. Base rate, cost-of-living allowances, guaranteed pay, hazardous duty pay, incentive pay including commissions and production bonuses, tips, and on-call pay are included. These features are unique to the OES survey, which make it a valuable source for use in many of the Department's foreign labor programs.[35]

The Department incorporated the wage component of the OES survey into its prevailing wage guidance in 1997.[36] At the time, the Department divided OES wage data into two skill levels: A Level I wage for ''beginning level employees'' and a Level II wage for ''fully competent employees.'' Because the OES survey does not provide data about skill differentials within Standard Occupational Classification (SOC) codes, the Department established the entry and experienced skill levels mathematically.[37] Specifically, under an Memorandum of Understanding (MOU), BLS computed a Level I wage calculated as the mean of the lowest paid one-third of workers in a given occupation (approximately the 17th percentile of the OES wage distribution) [38] and a

[36] *Prevailing Wage Policy for Nonagricultural Immigration Programs,* General Administration Letter No. 2–98 (GAL 2–98) (Oct. 31, 1997), *available at https://wdr.doleta.gov/directives/corr_doc.cfm?DOCN=942.*

[37] GAL 2–98 at 5.

[38] By way of clarification, the Department notes that, because the old wage methodology took the mean of a portion of the OES wage distribution, the precise wage it produced will not always fall at

Level IV wage calculated as the mean wage of the highest paid upper two-thirds of workers (approximately the 67th percentile).[39] This two-tier wage structure was based on the assumption that the mean wage of the lowest paid one-third of the workers surveyed in each occupation could provide a surrogate for the entry-level wage, but the Department did not previously conduct any meaningful economic analysis to test its validity, or otherwise explain how these levels were consistent with the INA's wage provisions.[40]

In order to implement the INA's four-tier prevailing wage provision, the Department published comprehensive Prevailing Wage Determination Policy Guidance for Nonagricultural Immigration Programs (2005 Guidance), which expanded the two-tier OES wage level system to provide four ''skill levels'': Level I ''entry level,'' Level II ''qualified,'' Level III ''experienced,'' and Level IV ''fully competent.''[41] The Department applied the formula in the INA to its two existing wage levels to set Levels I through IV, respectively, at approximately the 17th percentile, the 34th percentile, the 50th percentile, and the 67th percentile.[42] In 2010, the Department centralized the prevailing wage determination process for nonagricultural labor certification programs within OFLC's NPWC.[43] In preparation for this transition, the Department issued new Prevailing Wage Determination Policy Guidance for Nonagricultural Immigration Programs (2009 Guidance).[44] This guidance currently governs OFLC's PWD process for the PERM, H–1B, H–1B1, and E–3 visa programs and will continue to govern OFLC's PWD process for these programs. No rulemaking to codify the old wage levels was ever undertaken, nor the public given an opportunity to comment on them.

When assigning a prevailing wage using OES data, the NPWC examines the nature of the job offer, the area of intended employment, and job duties for workers that are similarly employed.[45] In particular, the NPWC uses the SOC taxonomy to classify the employer's job opportunity into an occupation by comparing the employer's job description, title, and requirements to occupational information provided in sources like the Department's Occupational Information Network (O*Net).[46] Once the NPWC identifies the applicable SOC code, it determines the appropriate wage level for the job opportunity by comparing the employer's job description, title, and requirements to those normally required for the occupation, as reported in sources like O*Net. This determination involves a step-by-step process in which each job opportunity begins at Level I (entry level) and may progress to Level II (experienced), Level III (qualified), or Level IV (fully competent) based on the NPWC's comparison of the job opportunity to occupational requirements, including the education, training, experience, skills, knowledge, and tasks required in the occupation.[47] After determining the prevailing wage level, the NPWC issues a PWD to the employer using the OES wage for that level in the occupation and area of intended employment.

### *B. The Interim Final Rule*

On October 8, 2020, the Department published an Interim Final Rule (IFR) in the **Federal Register**, 85 FR 63872, revising the methodology the Department uses to determine prevailing wage levels for the H–1B, H–1B1, E–3, and PERM programs. As explained in the IFR, the Department concluded the existing wage levels were not consistent with the relevant statutory requirement that a government survey employed to determine the prevailing wage provide four wage levels commensurate with experience, education, and level of supervision.[48] The Department also determined that the existing wage levels were artificially low and provided an opportunity for employers to hire and retain foreign workers at wages well below what their U.S. counterparts earn, creating an incentive to prefer foreign workers to U.S. workers, an incentive that is at odds with the statutory scheme and causes downward pressure on the wages of the domestic workforce. Therefore, the Department revised wage provisions at 20 CFR 655.731 and 656.40 to adjust the existing wage levels to ensure the wage levels reflect the wages paid to U.S. workers with similar experience, education, and responsibility to those possessed by similarly employed foreign workers.

In particular, the IFR amended paragraphs (a), (b)(2), and (b)(3) of 20 CFR 656.40, codifying the four-tier wage practice and revising the wage level computation methodology. A new § 656.40(b)(2)(i) specified the four new levels (Levels I through IV) to be applied. Paragraph (b)(2)(i)(A) explained the Level I wage would be calculated as the mean of the fifth decile of the wage distribution for the most specific occupation and geographic area available, rather than calculated as the mean of the bottom third of the OES wage distribution, as was the case prior to the IFR. Paragraph (b)(2)(i)(D) provided that the Level IV wage would be calculated as the mean of the upper decile of the wage distribution for the most specific occupation and geographic area available, rather than using the mean of the upper two-thirds of the distribution. As a result of these changes, the wage levels were increased, respectively, from approximately the 17th, 34th, 50th, and 67th percentiles to approximately the 45th, 62nd, 78th, and 95th percentiles. The IFR also made minor technical and clarifying amendments to sections 656.40 and 655.731, which the Department has adopted in this final rule with only a minor change to the location of one of the amended provisions, as explained further in section IV below.

17th percentile. Rather, the 17th percentile is the midpoint or median of the distribution for which a mean was produced, and is therefore only an approximation for what the actual wage rates would be. The same is true of the old wage methodology for calculating the Level IV wage, which used the mean of the upper two thirds of the OES distribution, the midpoint of which is the 67th percentile.

[48] *See* 8 U.S.C. 1182(p)(4).

The Administrative Procedure Act (APA), 5 U.S.C. 551 *et seq.,* authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' [49] The good cause exception for forgoing notice and comment rulemaking ''excuses notice and comment in emergency situations, or where delay could result in serious harm.'' [50] The Department published the IFR with an immediate effective date, bypassing notice and comment due to exigent circumstances created by the coronavirus public health emergency that threatened immediate harm to the wages and job prospects of U.S. workers, as well as the need to avoid evasion by employers of the new wage rates.[51] However, the Department requested public input on all aspects of the IFR during a post-promulgation 30-day public comment period and explained it would review and consider these comments before issuing a final rule. The public comment period ended on November 9, 2020, and resulted in receipt of more than two thousand comments. Most of the comments were not relevant and/or not substantive, but 148 relevant and substantive comments were received and are discussed further below.

*C. Litigation*

Four groups of plaintiffs separately challenged the Department's IFR. These groups of plaintiffs, which included academic institutions, businesses, and trade associations, claimed the Department lacked good cause to issue the IFR without undergoing notice and comment procedures under the APA and that the IFR was arbitrary and capricious and in violation of the INA. These plaintiffs further requested that the IFR be enjoined and the Department prevented from implementing it. In three of the four cases, the district court approved the parties' stipulation to convert plaintiffs' preliminary injunction motion to a motion for partial summary judgment on the notice and comment claim. In *Chamber of Commerce,* the district court issued a decision on December 1, 2020, granting plaintiffs' motion for partial summary judgment on their notice and comment claim and setting aside the Department's IFR.[52] In *Purdue University* and *Stellar IT* (which were consolidated), the district court issued a decision on December 14, 2020, granting partial summary judgment to the plaintiffs on the basis that the Department lacked good cause to issue the IFR, and ordered the Department to re-issue prevailing wage determinations issued under the IFR on a mutually agreeable schedule.[53] In the fourth case, *ITServe Alliance,* the district court issued a preliminary injunction on December 3, 2020, prohibiting the Department from enforcing the IFR against the plaintiffs in that case.[54] In discussing plaintiffs' likelihood of success on the merits in that case, the court limited its analysis to plaintiffs' claim that the Department lacked good cause to forgo advance notice and comment.[55] Following the district court's decisions in *Chamber of Commerce* and *ITServe Alliance,* OFLC took immediate action to comply with the courts' directives, including issuing a public announcement on its website on December 3, 2020, outlining the steps it was taking in response to the courts' orders.

Notwithstanding the district courts' orders to set aside the IFR on procedural grounds, the U.S. Supreme Court has acknowledged and affirmed the proposition that a procedurally flawed IFR does not taint a final rule relying upon an IFR as a proposed rule.[56] The Department is satisfied that it meets the APA's objective requirements necessary for the promulgation of a final rule in this case. Specifically, the Department's IFR provided sufficient notice to the public by allowing for a 30 day comment period; [57] ''gave interested persons an opportunity to participate in the rule making through submission of written data, views or arguments''; [58] the rule contained a ''concise general statement of their basis and purpose''; [59] and the rule will be published more than 30 days before it becomes effective.[60] Accordingly, the Department maintains the legal authority to pursue this final rule based upon its compliance with the APA's procedural requirements satisfied in the IFR.

## III. Discussion of Final Rule, Comments, and Responses

*A. Overview*

The IFR provided for the submission of public comments during a prescribed 30-day public comment period that closed on November 9, 2020. During this time, the Department received 2,340 comments. The Department received input from a broad range of commenters, including labor unions; employers; law firms; academic and research institutions; healthcare providers; public policy organizations; professional and trade associations; a federal agency; foreign workers, students, attorneys, and other individuals; and a significant number of anonymous commenters. Some commenters supported the new wage level computation methodology in the IFR generally or in concept as a necessary change to prevent abuse of the H–1B program, particularly its four-tier wage level system, by employers seeking to hire foreign workers at below market wages. However, the overwhelming majority of commenters opposed the new wage level computation methodology. Notably, however, commenters generally did not offer justifications or data to support the continued use of the old wage methodology.

Commenters opposed to the substantive changes in the IFR generally asserted that the revised wage levels do not correspond with wages paid to U.S. workers with similar qualifications or those employed in job opportunities with similar requirements, that the IFR wages do not reflect market wages as evidenced by comparisons to private wage surveys and wage data on various websites, and that the wage increases are arbitrary and unsustainable for most employers, especially given the immediate effective date of the IFR. Commenters expressed concern that the IFR would negatively impact the economy broadly by reducing labor demand, reducing American competitiveness in innovative industries, and encouraging outsourcing. A number of commenters asserted the IFR would disproportionately impact small businesses and start-ups; nonprofits; and academic, research, and healthcare institutions. Many commenters claimed that there is no need to raise wages to protect U.S. workers, asserting that foreign workers are not underpaid and employment of foreign workers creates,

rather than reduces, employment opportunities for U.S. workers and benefits the economy broadly. Many commenters also expressed concern the IFR would harm currently employed foreign workers and their families, especially foreign workers with significant ties to the U.S. and for whom immigrant visa petitions have been filed but for whom visas are unavailable due to per country visa caps.

After careful and thorough consideration of the comments, the Department has adopted a number of modifications in this final rule to the wage methodology established by the IFR. In particular, the Department has adjusted the Level I wage and the Level IV wage downward to the 35th percentile and 90th percentile, respectively. The Department is also implementing in this rule a number of changes to how it uses data from BLS in the H–1B and PERM programs that will further reduce the incidence of inappropriately inflated wages identified by commenters. Finally, the Department is adopting a phase-in approach to how the new wage levels will be applied to give employers and workers time to adapt to the change. In combination, the Department believes these measures appropriately address commenters' concerns and will ensure that, going forward, the prevailing wage rates provided by the Department fully protect the wages and job opportunities of U.S. workers.

As the Department explained in the IFR, a primary purpose of the restrictions on immigration created by the INA, both numerical and otherwise, is ''to preserve jobs for American workers.'' [61] Safeguards for American labor, and the Department's role in administering them, have been a foundational element of the statutory scheme since the INA was enacted in 1952.[62] For the reasons set forth below, the Department has determined that the way it previously regulated the wages of certain immigrant and nonimmigrant workers in the H–1B, H–1B1, E–3, and PERM programs is inconsistent with the text of the INA. A substantial body of evidence examined by the Department, and discussed at length in the IFR, also suggests that the existing prevailing wage rates used by the Department in these foreign labor programs are causing adverse effects on the wages and job opportunities of U.S. workers and are therefore at odds with the purpose of the INA's labor safeguards. The current wage levels were also promulgated through guidance, without providing the public with any notice or an opportunity to comment, and without any meaningful economic justification. Accordingly, the Department is acting to adjust the wage levels to ensure they are codified and consistent with the factors the INA dictates must govern the calculation of foreign workers' wages. In so doing, the Department expects to reduce the dangers posed by the existing levels to U.S. workers' wages and job opportunities and thereby advance a primary purpose of the statute. While some commenters disagreed with the Department's conclusions about the effects of the old wage levels on U.S. workers, the Department continues to believe that the reasoning put forward in the IFR on this point is sound.

The modern H–1B program was created by the enactment of the Immigration Act of 1990 (IMMACT 90). Among other reforms, IMMACT 90 established ''various labor protections for domestic workers'' in the program.[63] These protections were primarily designed ''to prevent displacement of the American workforce'' by foreign labor.[64] In general, the purpose of the H–1B program is to ''allow[ ] an employer to reach outside of the U.S. to fill a temporary position because of a special need, presumably one that cannot be easily fulfilled within the U.S.'' [65] Using a foreign worker as a substitute for a U.S. worker who is already working in or could work in a given job is therefore inconsistent with the broad aims of the program. Congress has recognized that repeatedly, both in enacting IMMACT 90 and in making subsequent changes to the H–1B program.[66]

Wage requirements are central to the H–1B program's protections for U.S. workers.[67] Under the INA, employers must pay H–1B workers the greater of ''the actual wage level paid by the employer to all other individuals with similar experience and qualifications for the specific employment in question'' or the ''the prevailing wage level for the occupational classification in the area of employment.'' [68] By ensuring that H–1B workers are offered and paid wages that are no less than what U.S. workers similarly employed in the occupation are being paid, the wage requirements are meant to guard against both wage suppression and the replacement of U.S. workers by lower-cost foreign labor.[69]

The OES prevailing wage levels that the Department uses in the H–1B program—as well as the related H–1B1 and E–3 ''specialty occupation'' programs for foreign workers from Chile, Singapore, and Australia—are the same as those it uses in its PERM program. Through the PERM program, the Department processes labor certification applications for employers seeking to sponsor foreign workers for permanent employment under the EB–2 and EB–3 immigrant visa preference categories. Aliens seeking admission or adjustment of status under the EB–2 or EB–3 preference categories are inadmissible ''unless the Secretary of Labor has determined and certified . . . that—(I) there are not sufficient workers who are able, willing, qualified . . . and available at the time of application for

a visa and admission to the United States and at the place where the alien is to perform such skilled or unskilled labor, and (II) the employment of such alien will not adversely affect the wages and working conditions of workers in the United States similarly employed.'' [70]

The Secretary makes this determination in the PERM program by, among other things, requiring the foreign worker's sponsoring employer to recruit U.S. workers by offering a wage that equals or exceeds the prevailing wage and to assure that the employer will pay the foreign worker a wage equal to or exceeding the prevailing wage.[71] In this way, similar to its role in the H–1B program, the prevailing wage requirement in the PERM program furthers the statute's purpose of protecting the interests of, and preserving job opportunities for, American workers.[72] Effectuating this purpose is the principle objective of the Department's regulatory scheme in the PERM program.[73]

While the prevailing wage levels the Department sets in the H–1B, H–1B1, E–3, and PERM programs are meant to protect against the adverse effects the entry of immigrant and nonimmigrant workers can have on U.S. workers, they do not accomplish that goal—and have not for some time. For starters, the Department has never offered any explanation or economic justification for the way it currently calculates the prevailing wage levels it uses in these foreign labor programs.[74] The INA requires that a government survey employed to determine the prevailing wage provide wage levels commensurate with experience, education, and level of supervision.[75] However, it is clear that the Department's current wage levels are not sufficiently set in accordance with the relevant statutory factors. In setting the wage levels, the Department did not engage in an effort to tether them to the statutory factors, identify sources of wage data that would inform an analysis of how the levels should be calibrated so as to protect U.S. workers' wages and job opportunities, or otherwise articulate an analytical framework to guide and explain how the levels were established. It also set the levels outside the rulemaking process, instead promulgating them solely through a memorandum of understanding between departmental components.

Further, the Department's analysis of the likely effects of H–1B and PERM workers on U.S. workers' wages and job opportunities shows that the existing wage levels are not advancing the purposes of the INA's wage provisions. As explained below, under the existing wage levels, artificially low prevailing wages provide an opportunity for employers to hire and retain foreign workers at wages well below what their U.S. counterparts—meaning U.S. workers in the same labor market, performing similar jobs, and possessing similar levels of education, experience, and responsibility—make, creating an incentive—entirely at odds with the statutory scheme—to prefer foreign workers to U.S. workers, and causing downward pressure on the wages of the domestic workforce. The Department is therefore acting to adjust the existing wage levels to ensure the levels reflect the wages paid to U.S. workers with levels of experience, education, and responsibility comparable to those possessed by similarly employed foreign workers.

To accomplish this, the Department articulated an analytical framework in the IFR to govern how it adjusted the prevailing wage levels. In doing so, the Department considered, among other things, the statutory context in which the INA's prevailing wage provisions are found. In particular, because the prevailing wage levels are used primarily for high-skilled workers, most of whom are H–1B workers, the Department took into account the INA's definition of ''specialty occupation,'' which establishes the baseline minimum qualification requirements that foreign workers must possess to obtain an H–1B visa, and also looked to the qualification requirements for obtaining an EB–2 visa. From its review of these qualification requirements, the Department drew a number of conclusions about the least-skilled, or entry-level workers employed in the PERM and H–1B programs. Specifically, the Department determined that such workers often possess greater skills than many of the least qualified workers in the most common occupational classifications in which H–1B and PERM workers are found. For that reason, the Department concluded that the lower end of the wage distribution reported by the OES survey for those classifications should be discounted in setting an entry-level wage. Because wages for H–1B and PERM workers are, under the INA, to be based on the wages paid to U.S. workers with comparable education, experience, and responsibility, looking to the wage data of workers at the lowest points of the wage distributions for these occupations who likely would not be considered as working in a ''specialty occupation'' would therefore be inconsistent with the statute. Because the old wage methodology made such wage data a central element of the prevailing wage calculation, it did not, in the Department's judgment, comport with the INA.

The Department's review of the INA's qualification requirements for H–1B and EB–2 workers, in combination with an analysis of the demographic characteristics of workers in the H–1B program, led the Department to determine that, for purposes of identifying an entry-level wage, it should look to the wages paid to U.S. workers who possess a master's degree and limited work experience. Using such workers as wage comparators for entry-level H–1B and PERM workers, in the Department's judgment, is an appropriate way of determining what U.S. workers similarly employed and with comparable education and experience to such H–1B and PERM workers are paid. In analyzing wage data on such workers, the Department also determined that it was appropriate

App'x 292, 294–95 (5th Cir. 2015) (unpublished) (''Viewed in the proper context, the challenged regulation serves purposes in accord with the statutory duty to grant immigrant status only where the interests of American workers will not be harmed; showing the employer's ongoing ability to pay the prevailing wage is one reasonable way to fulfill this goal.'').

[74] *See Wage Methodology for the Temporary Non-Agricultural Employment H–2B Program, Part 2,* 78 FR 24047, 24051 (Apr. 24, 2013) (''Since the OES survey captures no information about actual skills or responsibilities of the workers whose wages are being reported, the two-tier wage structure introduced in 1998 was based on the assumption that the mean wage of the lowest paid one-third of the workers surveyed in each occupation could provide a reasonable proxy for the entry-level wage. DOL did not conduct any meaningful economic analysis to test the validity of that assumption . . .'').

[75] 8 U.S.C. 1182(p)(4).

to focus its analysis on those occupations that account for one percent or more of all H–1B workers. As the Department acknowledged in the IFR, using a single wage structure across multiple programs, hundreds of different occupations, and for hundreds of thousands of different workers necessarily means that prevailing wage rates will not be perfectly tailored to every single job opportunity. While still giving due weight to other occupations in its analysis, the Department has determined that paying special attention to those occupations where foreign workers are most heavily concentrated, and where the risk to U.S. workers' wages and job opportunities from the employment of foreign labor is therefore most acute, is the optimal way of advancing the purpose of the INA's wage protections while accounting for the breadth of the programs and occupations covered by the four-tier structure. As discussed further below, while several commenters disagreed with various aspects of this analytical framework and the Department's interpretation of the INA, the Department, after considering those comments, continues to believe that its approach is appropriate.

Having determined how it would analyze the question of how to set prevailing wage levels, the Department proceeded to review data from various, credible government sources, specifically the surveys from the National Science Foundation (NSF) and the Current Population Survey (CPS), about the wages paid to master's degree holders with limited work experience employed in occupations that account for the vast majority of workers covered by the prevailing wage levels. Based on its analysis of this data, the Department concluded in the IFR that the range within the OES distribution where workers similarly employed and with levels of education and experience comparable to entry-level H–1B and PERM workers fall is between the 32nd and 49th percentiles of the distribution. The Department continues to believe that this conclusion is largely accurate, and that it is highly relevant to how it will set the entry-level wage in this final rule.

In the IFR, the Department relied on a number of qualitative considerations, including the relative strengths and weaknesses of the data it relied on to identify the entry-level wage range as well as the purpose of the INA's wage protections, to conclude that the entry-level wage should be placed higher up within the identified range at approximately the 45th percentile. Based on private wage data and other considerations provided by commenters, which are addressed below, the Department has reassessed this conclusion, and has now determined that the entry-level wage for the H–1B and PERM programs is more appropriate at the 35th percentile. In particular, data provided by commenters indicate that the lower end of the range may in fact provide a more accurate representation of what U.S. workers similarly employed to entry-level H–1B and PERM workers are paid. Concerns from commenters about how a potentially inflated entry-level wage would affect employers' ability to access the program, and how the IFR's reasoning was weighted too heavily to certain occupations and geographic areas, are also compelling reasons, in the Department's judgment, to favor a lower point in the range. Importantly, the Department believes that by staying within the range identified in the IFR, the entry-level wage it has selected will provide robust protection for U.S. workers.

The Department acknowledges commenters' reliance interests on the current wage methodology and understands that immediate changes to wage rates could cause some economic uncertainty for both employers and foreign workers. Thus, the Department is also adopting a series of transition provisions in this final rule to make it easier for employers and workers to adapt to the changed wage levels, thus avoiding disruption and striking a proper balance between stakeholders' reliance interests and the Department's obligation to comply with the INA and pursue a policy that is protective of U.S. workers. For many job opportunities, the new wage rates will phase in through two steps over a year and a half period. For job opportunities that will be filled by workers on track to become lawful permanent residents, and who therefore have greater reliance interests in the old wage methodology, the new wage rates will phase in through four steps over a three and a half year period. The Department also reduced the Level IV wage from approximately the 95th percentile to the 90th percentile, and made a number of other technical modifications to how it uses BLS data to produce prevailing wage rates. These changes, too, address commenters' concerns that wages under the IFR were inappropriately high.

*B. Discussion*

1. The Need for Rulemaking

Summary of Comments

The Department received a number of comments in support of the IFR, including one commenter that believed the IFR ''makes important strides to bring wage requirements for the H–1B program closer to real prevailing wages in relevant industries.'' These commenters agreed with the Department that the prior wage levels resulted in adverse effects on U.S. workers' wages and job opportunities. Some of these commenters noted that the Level I and II wages under the prior wage level methodology (approximately the 17th and 34th percentiles) were well below the median for the occupation and that 60 percent of H–1B positions were certified at one of these wage levels. One of these commenters expressed concern that the prior wage level methodology permitted H–1B employers to ''engage in de facto wage arbitrage schemes.'' A public policy organization noted that many employers ''pay H–1B workers the lowest wages legally allowed, and outsource their H–1B employees to third-party firms.'' The commenter asserted that employers opposed to the revised wage level methodology and increased wages claim ''that employers will only hire H–1B workers if they are underpaid relative to similarly-situated U.S. workers,'' which creates a wage ''race to the bottom.'' The commenter further stated that ''other reliable sources of wage data'' demonstrate that the wage results generated by the Department in the IFR are in fact too low. The commenter cited data from both the Department and NSF to draw the comparison and substantiate this claim, and it requested that the Department conduct a ''systematic review'' of major H–1B occupations to ensure that updates to the wage structure are in line with credible sources of salary data, such as the NSF's survey of recent college graduates. Another commenter believed the IFR would ''prevent employers that seek specialized workers from being crowded out of the H–1B program by employers using the program to pay below market wages.'' Some of these commenters believed the Level I wage should be set closer to the median for the occupation and one of the commenters stated that the Level I wage was the only wage level that mattered because the Department ''has no adjudicative power over employer skill level claims.''

By contrast, the majority of comments received on the IFR expressed strong opposition to the rule and a number of commenters questioned whether adjustments to the prevailing wage level methodology are necessary. Many commenters believed there was no need to raise wages to protect U.S. workers, citing the Department's statement that many frequent H–1B program users pay wages above the required prevailing wage rates, as well as other external sources finding that foreign workers are paid as much or more than similarly employed U.S. workers and that foreign workers create jobs for U.S. workers or otherwise benefit U.S. workers and the economy broadly. Many commenters pointed to unemployment statistics and forecasted job growth in certain fields as evidence that the IFR changes are not necessary to protect U.S. workers. Three commenters stated that it is more expensive to hire foreign workers due to costs related to the visa process and that employers prefer to hire U.S. workers due to concern about the ''instability of H–1B lottery systems.'' Some commenters believed the regulatory requirement that H–1B employers must pay the highest of the actual or prevailing wage provides sufficient protection to U.S. workers because the employer must pay the actual wage in cases where the Department's PWD rate is lower. One commenter asserted the annual visa caps provide sufficient protection for U.S. workers and a second commenter asserted the recruitment requirements in the permanent labor certification regulations offer sufficient protection.

Several commenters claimed it was improper for the Department to cite higher actual wages paid by large H–1B employers as an indication that the prevailing wage levels were insufficient to protect U.S. workers. For example, an university commenter noted the Department's acknowledgment that many large ''program users pay well in excess of the prevailing wage'' and the commenter asserted this was an acknowledgment ''that the issue it is trying to resolve . . . is non-existent.'' This commenter stated that employers paying more than the prevailing wage might simply indicate these employers pay a higher actual wage ''due to legitimate business factors.'' Similarly, a public policy organization and a professional association stated that the fact that a group of H–1B employers pays more than the prevailing wage indicates only that some employers voluntarily increase wages for competitive reasons. Another commenter stated that pay differences are reflective of the ''free market at work'' and that ''high profile tech companies . . . are in heavy competition . . . and have large enough profit margins'' to pay higher wages. A group of associations stated that payment of higher wages by these employers may be due to geography and ''intensity of the work'' such that these employers must ''pay a premium to attract both domestic talent and foreign-born talent . . .'' By intensity of the work, the commenters referred to areas in which at least one percent of workers are employed in a particular occupation. The commenters stated that the OES ''identifies for each SOC . . . [areas where] the number of employed individuals per each 1,000 employed persons in that particular occupation . . .'' and that the Department should look to this as ''a useful proxy for the intensity of activity in that particular occupation in a particular geography,'' in addition to analyzing available LCA data to determine how often wages in excess of prevailing wages ''are primarily for such high intensity jobs and locations.''

Many commenters asserted the Department failed to consider or ''insufficiently weighted'' a wide range of relevant and readily available studies and reports that indicate a revision to the wage level methodology is unnecessary. These commenters stated that the Department ignored ample evidence that H–1B workers are paid at least as much as their U.S. counterparts and that employment of H–1B workers may increase the wages earned by U.S. workers. A few commenters cited a GAO report finding H–1B workers earn the same or more than similar U.S. workers and an analysis by the website Glassdoor finding that across ''10 cities and roughly 100 jobs'' it examined, salaries for H–1B workers were ''about 2.8 percent higher than comparable U.S. salaries . . . .'' Similarly, several commenters cited a report published by the Partnership for a New American Economy, a research and advocacy organization dedicated to ''mak[ing] the economic case for immigration,'' [76] finding that denials of H–1B petitions from 2007 to 2008 slowed job and wage growth for U.S. workers and that every one-percentage-point increase in the ''foreign STEM share of a city's total employment . . . made possible by the H–1B visa program'' increased wage growth by three to seven percentage points for U.S. workers. Other cited sources included:

- A Cato Institute report indicating roughly 80 percent of H–1B employers pay H–1B workers ''above average market wages'';
- A working paper from the National Bureau of Economic Research finding that ''complete elimination'' of the H–1B program would have virtually no effect on the wages of ''high-skilled Americans in year one and a slight reduction . . . by year three'';
- A National Foundation for American Policy (NFAP) report finding ''on average, H–1B workers reduce overall unemployment and increase earnings growth within the fields they are employed by increasing firm productivity'';
- An NFAP report finding that each 1 percent increase in H–1B workers in science, engineering, technology, and mathematics (STEM) occupations ''increased local wages of college educated Americans by 7–8 percent and non-college educated Americans by 3–4 percent'';
- A journal article concluding that ''after controlling for human capital attributes, foreign I.T. professionals'' earn more than their U.S. counterparts; and
- A National Survey of College Graduates comparative analysis finding that ''controlling for socioeconomic and demographic characteristics, workers who hold a temporary work visa earn about thirty percent more than comparable'' U.S. workers.

Commenters also cited a variety of studies and reports that conclude that the employment of foreign workers has little or no effect on employment rates for similarly employed U.S. workers. For example, a group comment cited a 2016 *Journal of Economic Perspectives* study on ''Global Talent Flows'' that the commenter said indicated ''very little displacement of U.S.-born innovators and high-skilled professionals by high-skilled immigrants.'' Another commenter stated ''key fields such as software development and data science . . . are facing undeniable workforce supply shortages'' and asserted this ''undermin[ed] the argument that an influx in cheaper labor supply will result in lower possible earnings'' for U.S. workers. In support, the commenter cited a *Wall Street Journal* article noting ''tech job postings in the U.S. rose 32%'' in the first half of 2019 and a 2018 BLS report projecting higher than average employment growth in high-tech services.

Some commenters also expressed concerns about the sources the Department did cite in the IFR in support of the need to revise wage levels. Citing an analysis of the IFR by labor economist and professor Dr. Madeline Zavodny, a trade association asserted the Department relied on ''outdated, incorrect, or limited empirical data'' and relied on sources that did not ''include an analysis of the wages of H–1B workers in direct comparison with other workers having the same level of education, experience,

[76] *See* New American Economy, ''About,'' *https://www.newamericaneconomy.org/about.*

or responsibility.'' The commenter stated that the Associated Press analysis cited at footnote 122 provides ''an incomplete picture'' because it is not based on ''actual workers in the U.S. who hold an H–1B visa'' but instead is based on LCA data, which includes ''applications that are denied (often because the wage is too low).'' The commenter also stated that the analysis ''does not control for any differences between applicants for an H–1B visa and U.S. workers, such as differences in age and education.'' An anonymous commenter stated that the Associated Press article indicated that 58 percent of H–1B workers are paid more than their U.S. counterparts and asserted the article can only be used to support statements regarding wages paid to workers in computer occupations.

The trade association stated that the citations at footnote 121 in the IFR that the Department relied on to support its statement that H–1B IT workers earn roughly 25–33 percent less than U.S. workers failed to provide ''a clear analysis of the wages of workers who hold an H–1B visa compared with other workers;'' failed to include H–1B workers in the analysis; and failed to provide sufficient details of the wage analysis to determine the reason for the wage differentials. The anonymous commenter stated that the CRISIL Research citation in this footnote failed to cite evidence or provide data to support the statement that H–1B workers earn 25 percent less than U.S. workers and failed to provide a source for the claim that ''local hires . . . cost 25–30% more.'' The anonymous commenter stated that the third citation in this footnote is outdated, analyzing ''only immigrant trends in the 1990s'' and does not ''specifically reference computer occupations.'' The commenter also noted that the report recognizes that ''the lower earnings of recent immigrants may reflect unobserved differences in the quality and type of education among immigrant cohorts'' and the report ''offers alternative factors that weigh into the wage trends of H–1B workers that [DOL] has not accounted for in this rule.''

An immigration law firm stated that the IFR misconstrued the CRISIL report, which the commenter asserted ''actually shows that as a result of recent H–1B policy changes, it is harder to obtain H–1Bs for employees that are contracted to work at third-party worksites forcing U.S. employers to instead hire full-time employees to fill these roles'' and ''the increase in costs is attributed to the costs of full time employees'' compared to the cost of ''contract employees.'' The commenter also asserted that the Department misconstrued Economic Policy Institute research when it claimed the research showed that only one of every two STEM graduates get a job in the field. The commenter stated that the researchers ''found that half of students that do not enter the STEM industry found jobs in other industries.''

The anonymous commenter also asserted that the congressional testimony cited in this footnote provides no evidence to ''establish the median wage as the appropriate compensation for any specific [H–1B] positions'' and fails to consider that ''that a Level 1 wage does not necessarily represent a position that requires less skill, but rather may have fewer experience requirements or supervisory duties.'' The commenter also asserted that the journal article cited in this footnote is ''outdated in its data'' and ''refers to computer occupations'' so it ''cannot be applied to any other occupational codes.''

Finally, a trade association noted that the Department cited findings by George Borjas regarding the impact of foreign workers on the wages of low-skill workers but failed to acknowledge Borjas's contribution to a 2016 National Academies of Sciences, Engineering, and Medicine (NASEM) literature review in which he stated ''wage impacts from immigrants on U.S.-born college-educated workforce is minor (an increase for U.S. professionals of one-half of one percent in wage rates as a result of high-skilled immigration).'' The commenter added that the NASEM review found that there is a ''broad consensus with respect to high-skilled immigration that any impacts on U.S. wages by high-skilled, college-educated foreign-born professionals are close to negligible.''

Response to Comments

First, as the Department explained in the IFR, a primary and independently sufficient reason for reforming the manner in which it sets prevailing wage levels in the H–1B and PERM programs is that the old wage levels were never justified through an economic analysis, nor codified in rulemaking through notice and comment, and, on closer inspection, are in substantial tension with the statutory framework. Notably, commenters have also not provided data or analysis demonstrating that the wage rates under the old wage methodology produces wage rates commensurate with the wages paid to U.S. workers similarly employed and with comparable education, experience, and responsibility to H–1B and PERM workers, as required by statute. While some commenters urged the Department to preserve the old wage methodology, they provided no evidence for why that would be appropriate or consistent with the INA. Moreover, the Department notes that criticism of the way in which the wage levels are currently set is longstanding and exists across the political spectrum.[77] Put simply, the old wage methodology is an outmoded method for calculating prevailing wage rates that is neither supported economic analysis, nor defended by commenters, and has never tied to the relevant statutory factors.

The Level I wage under the old methodology is set by calculating the mean of the bottom third of the OES wage distribution. That means the wages for many H–1B workers are set based on a calculation that takes into account wages paid to workers who, as explained in the IFR and below, almost certainly would not qualify to work in a ''specialty occupation,'' as defined by the INA. The Department has noted previously that ''workers in occupations that require sophisticated skills and training receive higher wages based on those skills.'' [78] As a worker's education and skills increase, his wages are expected to increase as well.[79] For that reason, it is likely that workers at the lowest end of an occupation's wage distribution generally have the lowest levels of education, experience, and responsibility in the occupation. In consequence, if the occupation by definition includes workers who do not have the level of specialized knowledge required of H–1B workers, as is the case with some of the most common occupations in which H–1B workers are employed, the very bottom of the wage distribution should be discounted in determining the appropriate point in the OES wage distribution at which to establish the entry-level wage under the four-tiered wage structure because workers at the bottom end are not similarly employed to H–1B workers. Yet the old wage structure made such workers a central component of that calculation.[80] Similarly, the current

[80] For example, the occupation of Software Developers, which accounts for a large number of H–1B workers, does not require the same degree of specialized knowledge as a baseline entry requirement as does the INA's definition of ''specialty occupation.'' Yet approximately 10

Continued

Level IV wage is set by calculating the mean of the upper two-thirds of the wage distribution. That means that the wage level provided for the most experienced and highly educated H–1B workers is determined, in part, by taking into account a sizeable number of workers who do not even make more than the median wage of the occupation. Given the correlation between wages and skills, this calculation also would appear inconsistent with the statutory and regulatory framework. Common sense dictates that workers making less than the median wage of the occupation cannot be regarded as being similarly qualified to the most competent and experienced members of that occupation. That puts the old methodology in substantial tension with the governing statute and is in and of itself a sufficient reason for reassessing and revising the prior methodology in order to bring it more closely in line with the INA's wage provisions.[81]

The Department also based its conclusion in the IFR that regulatory reform of H–1B and PERM prevailing wages was needed, in part, on a review of the academic literature on the subject, congressional testimony and media accounts of the practical consequences of the prior prevailing wage levels, and data on the actual wages that major users of the H–1B and PERM programs pay their foreign workers. As discussed at length in the preamble to the IFR, the Department considered numerous studies finding that H–1B workers are paid less than their U.S. counterparts.[82] Other studies found this disparity to be especially true of H–1B employees working in computer science and information technology, fields in which two thirds of H–1B workers are employed.[83] The Department's justification also took into account the fact that economic literature suggests that the introduction of low-cost foreign labor into a labor market suppresses wages in proportion to the number of foreign workers present in that labor market.[84] Studies involving computer science workers confirm this general finding.[85] Its review of this information led the Department to conclude that the old wage methodology resulted in adverse effects on both U.S. workers' wages as well as their job opportunities. After reviewing comments and the studies and information they provided, the Department continues to believe that, at least in some cases, the old prevailing wage methodology resulted in harm to U.S. workers and therefore should be revised.

The Department recognized, as did some commenters, the limitations of some of the wage studies it relied on in the IFR, noting that many of them compare H–1B and U.S. workers in the same occupation but do not directly compare workers in those occupations with the same levels of education, experience, and responsibility.[86] However, in the IFR, the Department explained why these studies nonetheless allow for an instructive wage comparison: ''[B]ecause H–1B workers are required to possess specialized knowledge and expertise that often exceeds the level of education and experience necessary to enter a given occupation generally, and greater skills are associated with higher earnings, the median H–1B workers should earn a wage that is at least the same, if not more, than the median wage paid to U.S. workers in the occupation. But a variety of studies show that the opposite is occurring.'' [87] Put another way, while the Department acknowledges that there is an inherent limitation in comparing median earnings of groups of workers, since doing so does not account for different levels of experience and education, the distortion in the data that results from such a limitation would be expected to show higher earnings for H–1B workers at the median given that a result of the INA's specialty occupation requirement for H–1B workers is that H–1B workers must possess more advanced education and experience than what is typically required to enter some of the most common occupations in which H–1B workers are employed. Yet the median earning of H–1B workers, according to these studies, are in fact skewed lower than the median U.S. worker in these occupations. Accordingly, the Department continues to believe this is a compelling data point demonstrating that H–1B workers in many cases make wages below those of similarly employed U.S. workers.

Further, the Department disagrees with commenters that other aspects of the methodology and reasoning relied on in the various studies that support the Department's position are flawed. These are, in many cases, studies from credible sources that are commonly cited in reporting and literature about the effects of the H–1B program on U.S. workers. Moreover, to the extent these

percent of all LCAs filed with the Department for software developer positions classify those positions as entry-level, meaning that under the current wage levels the wages paid to such specialty occupation workers are calculated based, at least in part, on the wages paid to some workers who do not have comparable specialized knowledge and expertise. This outcome contravenes the INA's requirement that H–1B workers be paid wages based on the wages paid to U.S. workers with similar levels of education, experience, and responsibility.

[87] *Id.*

studies focus on computer science and IT occupations, the Department believes that focus is appropriate. As explained at greater length below, the Department's analytic framework gives special attention to these occupations because they are where the largest concentration of H–1B and PERM workers are found, and therefore the places where the risks to U.S. workers that the Department is trying to guard against are most acute.

In addition, the Department considered testimony before the Senate Judiciary Committee [88] as well as news reports about the displacement of U.S. workers by H–1B workers.[89] As noted, some commenters criticized these sources as anecdotal and insufficient. But they were not the only sources on which the Department relied. The information from those sources supplemented the information the Department derived from studies and academic articles. Standing alone such information may (or may not) be insufficient to demonstrate systematic, adverse effects on U.S. workers, but, viewed in combination with other available evidence, it provides vital insight into the Department's understanding of the effects of the old wage methodology. The Department also views evidence about the real-world consequences of its wage methodology on U.S. workers, as shown in news reports, as important information that should not be ignored.

As detailed above, some commenters also claimed that the Department ignored or unfairly discounted studies showing that some H–1B workers earn more than U.S. workers. Far from ignoring or discounting such studies, the Department acknowledged their findings and addressed them in the IFR.[90] While the Department did not discuss in the IFR every study of that kind that the commenters cite, it has reviewed the studies provided by commenters and notes that it did consider many sources with similar information, analysis, and conclusions to these studies.[91] In addition, while some studies cited by commenters which were not directly addressed in the IFR offer additional analysis, they do not overwhelm the conclusions of other studies originally cited in the IFR. For example, reports that find that H–1B workers' wages exceed market wages often ignore that the prevailing wage level is fixed for the H–1B worker for three years, meaning that even if the H–1B worker is paid in excess of the market wage for an entry-level worker in year 1, this may not be the case in year 3 because the H–1B workers' wages should no longer be compared to entry-level workers. Other reports cited by critical commenters acknowledged that the research on employment of American workers in the presence of H–1B workers remains inconclusive or that the existing studies present mixed results on whether H–1B workers crowd out American workers. Some of these studies then focused on one segment of the American worker and H–1B market (*e.g.,* recent college graduates) to obtain specific results which in many cases cannot be extrapolated to other workers cohorts. Others of these studies relied on data gathered only during recent economic recessions, which make it difficult to draw proper conclusions about the effect of H–1B workers on compensation and employment for competing workers under other (and more typical) economic conditions. The Department examined these studies concluding that some H–1B workers in some circumstances are better paid than U.S. workers, weighed them against other studies reaching the opposite conclusion, and, in its expert judgment, determined that there was reason to conclude that, at least in some instances, prevailing wage levels are set too low. An agency's choice of studies on which to rely is entitled to substantial deference.[92] The Supreme Court has held that ''[w]hen specialists express conflicting views, an agency must have discretion to rely on the reasonable opinions of its own qualified experts even if, as an original matter, a court might find contrary views more persuasive.'' [93] The studies cited by commenters rest on the same kinds of analyses and reach similar conclusions to those studies reviewed by the Department in development of the IFR. The Department has reviewed these studies and has concluded that they do not discredit, or even necessarily contradict, other sources of information that demonstrate that H–1B workers do, in some instances, adversely affect U.S. workers' wages and job opportunities, even if that is not true in all cases, as explained throughout. Accordingly, based on its review of these studies the Department continues to believe that some modification to the wage levels is necessary.

Contrary to the commenters' assertions, the Department considered studies showing that H–1B workers benefit U.S. workers. In the IFR, the Department acknowledged that in some instances the employment of H–1B workers fuels economic growth and job creation,[94] as well as the fact that paying foreign workers at wages lower than U.S. workers may increase firms'

profitability.[95] Indeed, in the IFR the Department discussed studies that suggest the employment of H–1B workers has positive effects on the wages and job opportunities of U.S. workers and expressed a qualified agreement with them, specifically noting that ''[w]hile the Department agrees that this is true in some instances, it is also clear that the current prevailing wage levels often result in adverse effects, and that adjustments to the wage levels are needed to ensure that the positive effects of the program will be enjoyed more widely.'' [96] In other words, the Department anticipates that bringing the wages of foreign workers in line with what similarly employed U.S. workers actually make will enhance the benefits resulting from the employment of such workers, which studies considered in the IFR as well offered by commenters show exist in some cases. The Department did not dispute in the IFR ''that allowing firms to access skilled foreign workers can lead to overall increases in innovation and economic activity, which can, in turn, benefit U.S. workers,'' but did conclude ''H–1B workers' earnings data and other research indicate that, in many cases, the existing wage levels do not lead to these outcomes.'' [97] At no point in the IFR did the Department suggest that H–1B workers either always harm U.S. workers or always benefits U.S. workers and the firms that employ them. Rather, the Department concluded, and continues to conclude, that the positive benefits of the program, while real, are not as widespread as they might otherwise be, and that this is likely due to the fact that H–1B workers in some instances are paid wages below that paid to their U.S. counterparts.

One argument along these lines that the Department addressed in the IFR was made by the general counsel of a major user of the H–1B program in testimony before the Senate Judiciary Committee. In his testimony, he contended that H–1B workers raise the income of U.S. workers because they alleviate labor shortages, particularly in STEM and computer science. Importing workers to fill needs that would otherwise go unmet, he argued, allows companies to innovate and grow, creating more employment opportunities and higher-paying jobs for U.S. workers.[98] The Department rejects the premise of the general counsel's argument that STEM jobs are going unfilled because there are no qualified American workers willing to take them, and therefore U.S. gross domestic product (GDP) would be smaller without importing foreign STEM workers. The Department notes that for every two students who graduate from a U.S. university with a STEM degree, only one obtains a STEM job.[99] In the case of computer science occupations, another study cited by the Department challenges the notion that H–1B workers are filling needs unmet by U.S. workers. The study contains findings that foreign computer science workers have suppressed wages for U.S. computer science workers along with findings that ''imply that for every 100 foreign [computer science] workers that enter the US, between 33 to 61 native [computer science] workers are crowded out from computer science to other college graduate occupations.'' [100] Further, while some commenters argued that the Department misconstrued the study showing that only half of U.S. STEM graduates go on to work in STEM fields on the grounds that many of these students find employment in other industries, the Department disagrees that the study is not relevant here. In fields where a graduate's degree signals certain skills to potential employers, such as computer science or many STEM fields, it is reasonable to assume that students who major in a particular field typically intend to find employment in that field. The fact that many of these particular students are able to find employment in other industries does not undercut the conclusion—indeed, it bolsters it—that at least some of their job opportunities in the fields for which they trained are limited by the presence of lower-paid foreign workers in some instances.

The Department also acknowledges commenters' point that in some circumstances H–1B workers contribute to innovation. Those contributions notwithstanding, ''such outcomes are not the immediate objectives of the of the INA's wage protections.'' [101] Further, this rulemaking does not alter the number of H–1B workers permitted to work and it is unclear how the current wage levels promote greater innovation than the wages which will exist under this rule. The PERM program permits employers to hire aliens to work at permanent jobs where the Secretary of Labor has certified to the Secretary of State and the Secretary of Homeland Security that the employment of an alien seeking to enter the United States to perform skilled or unskilled labor ''will not adversely affect the wages and working conditions of workers in the United States similarly employed.'' [102] In the case of H–1B workers, employers must file LCAs stating that the employer will offer wages that are, at a minimum, ''the actual wage level paid by the employer to all other individuals with similar experience and qualifications for the specific employment in question,'' or ''the prevailing wage level for the occupational classification in the area of employment, whichever is greater.'' [103] In rulemaking, an agency is not required ''to accord greater weight to aspects of a policy question than the agency's enabling statute itself assigns to those considerations.'' [104] In consequence, to the extent some comments and the studies cited therein criticized the Department's conclusion that the prevailing wage levels are set too low on the grounds that H–1B workers fuel innovation and economic growth, the Department affords them less weight. Such considerations are secondary to the Department's more immediate concern of fulfilling its statutory mandate to ensure that the presence of foreign workers does not adversely affect U.S. workers.

The Department also reemphasizes that while commenters preferred some studies and sources over others cited by the Department, they and their studies offered no affirmative argument in support of the old wage levels, nor did they explain how the prior wage levels reflect actual market wages. Rather, these commenters presented studies which the Department has already reviewed and which the Department does not believe align with the weight of the evidence which the Department continues to rely upon. The evidence amassed in the IFR provides a reasonable basis for increasing the wage rates, the Department stands by its determination that the old methodology did not adequately protect U.S. workers. The Department also notes that a number of commenters agreed with its conclusion that current wage levels often do not reflect prevailing wages and are set too low. For example, one commenter noted that, in some cases where H–1B workers are used to replace

U.S. workers, ''the H–1B workers have been hired with annual wages of around $30,000 to $40,000 less than the workers they have replaced.'' These comments corroborate the Department's position that it weighted the conflicting evidence in a reasonable way and reached an appropriate conclusion that H–1B workers can and in many cases are used as low-cost alternatives to U.S. workers, and thereby undercut U.S. workers' wages and job opportunities.

The Department also acknowledges the comments it received (and studies cited therein) that argue that pointing to the higher actual wages that some employers pay H–1B and PERM workers to show that prevailing wage rates were too low is flawed reasoning because there may be other business factors beyond a worker's qualifications that explain why some employers pay a premium on the prevailing wage. The Department agrees that there may, in some instances, be legitimate business factors that explain why actual wages paid to H–1B workers would be higher than the prevailing wage rate. For example, a firm that faces a sudden increase in demand for its product relative to its competitors might be willing to pay premiums to both domestic and H–1B workers relative to its competitors. However, factors such as these are typically specific to a particular firm, employee, or geographic area, as some commenters acknowledged in their discussion of high-intensity occupation areas, and do not reflect the wages paid by the typical employer in a given labor market. In consequence, while the actual wages paid to H–1B workers might very well exceed the prevailing wage rate for legitimate reasons in some cases, such incidents should not be the norm across all employers, occupations, and locales. If the actual wage is consistently higher across the board than the prevailing wage rate, this suggests that the prevailing wage is not actually reflective of the market wage rate on offer in the labor market. As the data presented in the IFR shows, actual wages paid to H–1B workers not only exceed the prevailing wage rate, but do so consistently and substantially, on average, across many different employers. This suggests that legitimate business factors alone do not account for the extreme differences between the actual wages paid to H–1B workers and prevailing wage rates. Rather, it suggests that the prevailing wage rate is out of line with the market wage.

For similar reasons, the Department also rejects some commenters' contention (including as purportedly supported by the studies cited) that the fact that actual wages often exceeds the prevailing wage rate shows that there is no wage problem in the H–1B and PERM programs. One shortcoming such studies failed to acknowledge is that because the prevailing wage is in place for 3 years for H–1B workers, even if they are paid more than the prevailing wage in their first year, there is a distinct possibility that the prevailing wage will be low compared to the market for more experienced workers in the subsequent years. As the Department explained in the IFR, the INA takes a belt-and-suspenders approach to protecting U.S. workers' wages. Employers must pay the higher of the actual wage they pay to similarly employed workers or the prevailing wage rate set by the Department. Both rates generally should approximate the market wage for workers with similar qualifications and performing the same types of job duties in a given labor market as H–1B workers. It is therefore a reasonable assumption that, if both of the INA's wage safeguards were working properly, the wage rates they produce would, at least in many cases, be similar. Where the Department's otherwise applicable wage rate is significantly below the rates actually being paid by employers in a given labor market, it gives rise to an inference that the Department's current wage rates, based on statistical data and assumptions about the skill levels of U.S. workers, are not reflective of the types of wages that workers similarly employed to H–1B workers can and likely do command in the actual labor market. There is a mismatch between what the Department's prevailing wage structure says the relevant cohort of U.S. workers are or should be making and what employers are likely actually paying such workers, as demonstrated by the actual wage they are paying H–1B workers. Put another way, when many of the heaviest users of the H–1B program consistently pay wages well above the prevailing wage, it suggests that the prevailing wages are too low, and thus can be abused by other firms to replace U.S. workers with lower-wage foreign workers in cases where those firms do not have similarly employed workers on their jobsites whose actual wages would be used to set the wage for H–1B workers.[105]

The Department also believes that looking to the pay practices of some of the most frequent users of the H–1B program is appropriate in determining whether the prevailing wage rates are set too low. Because the risk of harm to U.S. workers is most acute by employers in labor markets with heavy concentrations of H–1B workers, data on the actual wage rates at those employers and in those areas are entitled to special weight in the Department's analysis. Further, to the extent some commenters argue that looking at such firms unduly minimizes the Department's consideration of wage effects in rural areas or at smaller employers, the Department notes that, like its use of anecdotal evidence, the wage data it looked to from the heaviest users of the program is just one piece of various types of evidence on which it bases its conclusions about the effects of the old wage levels—no single piece of which is given dispositive weight. Rather, when considered in combination, this evidence provides a sound basis, in the Department's judgment, for concluding that the old wage methodology resulted in inappropriately low wages in a variety of circumstances.

The Department also disagrees that other safeguards in the INA are sufficient to protect U.S. workers and that updates to the prevailing wage levels are therefore unnecessary. Congress chose to enact multiple forms of protection for U.S. workers in these foreign labor programs. The Department must operationalize those protections entrusted to its administration as it sees best for the discharge of its legal responsibilities under the INA and its policy of more fully ensuring the protection of U.S. workers, including by updating the prevailing wage levels.[106]

[105] *See* 63872 FR 63885–87.

[106] The Department also notes that the need for this rulemaking is undiminished by the possibility, recently proposed by DHS, that the limited visas available under the H–1B cap may be allocated based on how high the wage level is at which an employer plans to compensate its foreign workers. *See Modification of Registration Requirement for Petitioners Seeking To File Cap-Subject H–1B Petitions,* 85 FR 69236 (November 2, 2020). The Department's wage structure applies to programs other than the H–1B program, meaning that even if there are other means of preventing adverse wage effects in the H–1B program, the benefits of updating the Department's prevailing wage methodology extend more broadly. Relatedly, even within the H–1B program, not all visas are subject to the annual cap, and would thus not be affected by a new method of allocating capped visas. Even more critically, the INA directs the Department to set wage levels that will ensure foreign workers will be compensated at rates comparable to U.S. workers similarly employed with similar levels of education, experience, and responsibility. As explained throughout, the Department has determined that adjustments are needed for all four wage levels to ensure they protect similarly employed U.S. workers from wage suppression and dangers to their job opportunities. Thus, even under a visas allocation system that prioritizes workers placed at higher wage levels, the Department's wage methodology must still protect workers similarly employed to workers at those wage levels from adverse employment effects. Put another way, the purpose of the INA's wage provisions is to protect individual U.S. workers from having to compete

Continued

As explained in the IFR, the Department has determined that the conclusions it reached about adverse wage effects with respect to the H–1B program can also be extrapolated to the PERM program, about which the economic literature is far scanter. Critically, the PERM programs and the H–1B program are closely linked in both how they are regulated and used by employers. Unlike most nonimmigrant visas, H–1B visas are unusual in that they are ''dual intent'' visas, meaning under the INA, H–1B workers can enter the U.S. on a temporary status while also seeking to adjust status to that of lawful permanent residents.[107] One of the most common pathways by which H–1B visa holders obtain lawful permanent resident status is through employment-based green cards, and in particular EB–2 and EB–3 visas.[108] USCIS has estimated that over 80 percent of all H–1B visa holders who adjust to lawful permanent resident status do so through an employment-based green card.[109] This is reflected in data on the PERM programs. In recent years, more than 80 percent of all individuals granted lawful permanent residence in the EB–2 and EB–3 classifications have been aliens adjusting status, meaning they were already present in the U.S. on some kind of nonimmigrant status.[110] Given that the H–1B program is the largest temporary visa program in the U.S. and is one of the few that allows for dual intent, it is a reasonable assumption that the vast majority of the EB–2 and EB–3 adjustment-of-status cases are for H–1B workers. This is corroborated by the Department's own data, which shows that, in recent years, approximately 70 percent of all PERM labor certification applications filed with the Department have been for H–1B nonimmigrants.[111]

Because of how many H–1B visa holders apply for EB–2 and EB–3 classifications, Congress has repeatedly amended the INA to account for the close connection between the programs. For example, while H–1B nonimmigrants are generally required to depart the U.S. after a maximum of six years of temporary employment, Congress has exempted from that requirement H–1B nonimmigrants who are beneficiaries of PERM labor certification applications with the Department, or who are beneficiaries of petitions for an employment-based immigrant visa with DHS that have been pending for longer than a year, if certain other requirements are met.[112] Similarly, as noted above, Congress established the INA's prevailing wage requirements in section 212(p) with specific reference to the fact that they would apply in both the H–1B and PERM programs.[113]

The various features of the statutory framework governing the programs, working in combination, have further tightened the relationship between them. In particular, because H–1B workers can have dual intent and, if they have a pending petition for an employment-based green card, can remain in the U.S. beyond the 6-year period of authorized stay limitation, many workers for whom an employer has filed a PERM labor certification application are already working for that same employer on an H–1B status.[114] And because the method by which employment-based green cards are allocated can result in significant delays between when an alien is approved for a green card and when the green card is actually issued, the period during which a worker can, in some sense, have one foot in each program, is often protracted.[115]

This system results in significant overlap in the principal uses of the H–1B and PERM programs. H–1B petitions approved in FY 2019,[116] and the vast majority of individuals waiting for adjudication of EB–2- and EB–3-based adjustment of status applications, are concentrated in the same countries of origin.[117] Relatedly, LCAs and applications for PERM labor certifications often are for job opportunities in the same occupations. Data from the Department's OFLC shows that of the ten most common occupations in which H–1B workers are employed, seven are also among the ten most common occupations in which PERM workers are employed. And PERM workers' wages are set based on the same methodology used for H–1B workers.

Given the evidence that these two programs are used similarly by employers, and employ in many instances the same or at least similarly situated foreign workers, the Department believes that it should treat the H–1B and PERM programs similarly. The upshot is that the H–1B and PERM programs are, in a variety of ways, inextricably conjoined. The rules governing the programs and how employers use them mean that, in many instances, workers in the PERM programs and workers in the H–1B program are often the exact same workers doing the same jobs in the same occupations for the same employers. And given the evidence of similarity, the Department can reasonably infer that the current wage levels under the four-tier structure—which result in inappropriately low wage rates in some instances for H–1B workers—also result in inappropriately low wage rates in some instances for the PERM programs. This is also borne out by the fact that, as noted in the IFR, the significant disparities between actual wages paid by heavy users of the programs and prevailing wage rates discussed above in connection with the H–1B program are also found in the PERM program.

## 2. Wage Level Methodology and Analytical Framework

### Summary of Comments

Many commenters disagreed with the methodology and analytical framework the Department used to determine the

with low-cost foreign labor, something that can only be accomplished by setting appropriate wage levels even if all H–1B workers granted work authorization are at the highest skill level since such workers will necessarily be competing with U.S. workers with comparable qualifications.

[117] Congressional Research Service, The Employment-Based Immigration Backlog (2020).

appropriate prevailing wage rate, often asserting that the Department inappropriately relied on wage data from a limited pool of employers in the H–1B program and a pool of workers based on educational attainment limited to workers in information technology jobs, rather than basing the prevailing wage on market wages paid to workers in the applicable occupational classification based on the requirements of the occupation or employer's job opportunity. Several commenters also expressed concern about the chosen percentiles, asserting that an entry-level wage near the median for the occupation does not reflect real pay structures.

Some commenters asserted the Department inappropriately conflated the ''actual'' with the ''prevailing'' wage provisions in the INA and the Department's regulations at 20 CFR 655.731(a)(1) and (a)(2). A professional association stated it was improper to base prevailing wages on the ''accomplishments, education or training of the employee'' because that is the focus of the actual wage provision, whereas the prevailing wage is, ''by regulation, based on the requirements for the position.'' A university commenter noted that the prevailing wage is the wage paid to similarly employed workers, defined as ''positions that have substantially comparable duties'' in the occupation and area of employment and thus in prevailing wage determinations ''the requirements of the position matters, not the skills that the individual worker brings to the table.'' The commenter also asserted the IFR incorrectly states that the new methodology does not change the current wage determination process because the Department's 2009 PWD guidance indicates PWDs begin at entry level and ''progress . . . only after considering the experience, education, and skill requirements of an employer's job description (opportunity).''

Related to these comments, many commenters believed it was improper for the Department to rely solely on wages paid to workers that possess a master's degree. A university commenter stated that the fact many H–1B workers possess a master's degree or higher is ''attributed to the fact that USCIS favors beneficiaries with more advanced degrees.'' Some commenters asserted that determining prevailing wage levels based only on wages paid to master's degree holders violates the INA because Congress did not include a master's degree requirement as a prerequisite for the employment-based visa programs. An association noted the statute defines ''specialty occupation'' as ''an occupation requiring a bachelor's degree as the minimum qualification for entry.'' Similarly, an immigration law firm believed that exclusion of wage data from workers possessing less than a master's degree is ''baseless'' because ''attainment of a U.S. Bachelor's degree, or its equivalent, is sufficient for H–1B eligibility provided the petitioner can show a sufficient nexus between the degree earned and the offered position'' and ''the nexus of the degree specialty is a separate inquiry from prevailing wage requirements.'' Noting that DHS regulations at 8 CFR 204.5(k)(2) ''equate[ ] a master's degree to a bachelor's degree plus 5 years of progressively responsible work experience,'' the commenter asked how the same Level I wage can represent both a position requiring a master's degree for entry and ''entry level H–1B occupations that require a bachelor's degree in a specific specialty.''

Some commenters noted that a large number of occupations require at least a master's degree for entry and that it is improper for the Department to exclude the bottom third of wage data when determining the Level I prevailing wage in these occupations. For example, a university commenter stated that even if one accepts the prevailing wage was set too low for IT occupations ''it is arbitrary to extrapolate from that very limited data set that the prevailing wage data set for other occupations is also lacking, especially for occupations where the normal educational requirement is an advanced degree.'' Similarly, a professional association noted that at least 99 occupations require an advanced degree for entry according to DOL sources, including many that require a Ph.D., and that the bottom third of wages in these occupations ''capture qualified and eligible H–1B individuals.'' The commenter asserted the Department improperly excluded from consideration ''one-third of the wages of individuals who are 'similarly employed' '' and ''essentially sets a minimum education level for entry as those with at least a master's degree in most professions.'' One commenter from academia stated that many H–1B occupations that require a bachelor's degree are nonetheless specialized and thus the Department should consider all wage data for the occupation.

Several commenters also asserted that reliance on only wages paid to workers possessing a master's degree is particularly inappropriate for determining prevailing wages in the permanent labor certification context because many job opportunities in that program are in occupations that require no more than a bachelor's degree for entry. A group of associations asserted the Department ignored the fact that ''about an equal number of individuals in H–1B status with advanced degrees and Bachelor's degrees are sponsored for green card status.'' An immigration law firm stated the Department's reasoning focused centrally on wages paid to H–1B workers and asked the Department to explain how the ''prior wage levels as applied in the PERM program negatively impact the wages of U.S. workers.'' The commenter noted the PERM program differs from H–1B in relevant respects, including the labor market test requirement and the fact that employers file PERM petitions to fill ''a future permanent position'' that is ''not necessarily the current position of the H–1B employee.'' Noting the Department's acknowledgment that ''not all SOC [occupations] qualify as a 'specialty occupation,' '' this commenter asserted the IFR methodology ''would arbitrarily raise salary requirements for occupations that are not used in the H–1B program but are used in the PERM program.'' This commenter also noted that the Department acknowledged the new wage level methodology would create a ''premium'' on the wages of EB–3 workers and the commenter asserted the Department failed to cite authority to ''require EB–3 petitioners to pay an additional fee, above what would be required to ensure the wages of U.S. workers are not negatively affected.''

Some commenters asserted that reliance on education alone when considering relevant wage data was inappropriate because many other factors can determine a worker's wage level. One commenter stated the Department provided no evidence that workers with a bachelor's degree ''necessarily . . . make up a lower paid cohort of employees'' and noted the Department's acknowledgment that ''H–1B workers with master's degrees tend to be younger and less highly compensated than H–1B workers with bachelor's degrees.'' The commenter noted that employers will accept equivalent credentials like experience and training and may base worker compensation on factors like ''experience, special skills, history with the company or industry . . . [and] highly specialized knowledge.'' Another commenter noted that someone with a bachelor's degree and 10 years of experience might be paid more for the same job opportunity than someone with a master's degree and 2 years of experience, whereas a bachelor's degree holder with 2 years of experience may be paid less. The prevailing wage in this case would be based on the requirements for the position, whereas the actual wage would be the wage paid to the worker employed in the position and may depend on the worker's education and experience.

A number of commenters asserted it was improper for the Department to rely only on wage data from workers in a limited set of information technology occupations as the relevant benchmark for determining the appropriate wage level. An anonymous commenter asserted that the Department's reasoning focused solely on ''computer occupations'' and the prevailing wage methodology based on that reasoning ''can therefore only be applied to computer occupations.'' A university commenter noted that many common occupations in the H–1B and PERM programs fall outside of this occupation set, including many occupations in the education sector, such as post-secondary teachers, several of which may require a Ph.D. for entry. The commenter added that even if one assumes wages are too low in the IT sector, ''it is arbitrary to extrapolate from that very limited data set that the prevailing wage'' is too low in other sectors.

Based on these concerns, some commenters urged the Department to reconsider its decision in the IFR to use a uniform wage structure across all occupations and programs. For example, a university commenter suggested the Department should apply the pre-IFR wage level methodology to occupations that normally require an advanced degree for entry, according to O*Net, rather than discounting the first one-third of occupational wage data for these occupations. One commenter suggested the Department should apply the revised wage level methodology to large IT employers and H–1B dependent employers, while applying the ''PWD data from 07/01/2020–10/06/2020'' to occupations in ''medicine and health [070–079] and education [090–099].'' Similarly, some commenters urged the Department to exempt specific positions in the medical field from revised wage methodology or exempt all ACWIA-eligible employers.

Many commenters also took issue with the reasoning behind setting the Level I wage for entry-level workers at approximately the 45th percentile. A public policy organization stated that placing entry level workers close to the median wage in the occupation ''departs from the English language definition of median'' and stated that, by definition, ''[e]ntry level workers cannot be both at the bottom quarter of the wage scale and at almost the median of the wage scale.'' A trade association stated that no employer sets compensation above the occupational median wage for all entry-level workers ''completing graduate or professional degrees with little professional experience.'' The commenter asserted the Department provided no evidence indicating a near-median wage is ''the most reasonable and closest proxy'' for the market wage paid to entry-level workers. A human resources professional association stated that it is ''particularly important to reflect the lower and higher range'' of an occupational wage distribution when using the SOC system because the SOC occupations are ''hopelessly broad'' and the commenter stated that SOC 11–9033 encompasses 126 distinct jobs in higher education.

Response to Comments

As noted, some commenters asserted that the Department misinterpreted the INA in the IFR, specifically disagreeing with the notion that the prevailing wage rate and the actual wage provided for by the INA should approximate one another, and similarly contending that the Department should not consider the accomplishments, education, or training of the employee as those are considerations associated with the actual wage requirement; rather, the Department should focus on the requirements for the position. This argument, however, misreads the statute, and also fails to understand a fundamental premise of the IFR. The Department is not ignoring its regulations or guidance on how prevailing wages rates are assigned; rather, the Department in this rulemaking is doing something different. It is making an assessment of how the four wage levels required by 8 U.S.C. 1182(p)(4) are to be established.

To begin with, as the IFR discussed in detail, the INA requires employers to pay H–1B workers the greater ''of the actual wage level paid by the employer to all other individuals with similar experience and qualifications for the specific employment in question,'' or the ''prevailing wage level for the occupational classification in the area of employment.'' [118] The statute further provides that, when a government survey is used to establish the wage levels, ''such survey shall provide at least 4 levels of wages commensurate with experience, education, and the level of supervision.'' [119] If an existing government survey produces only two levels, the statute provides a formula to calculate two intermediate levels.[120] Thus, like the statute's actual wage clause, the prevailing wage requirement, when calculated based on a government survey, makes the qualifications possessed by workers, namely education, experience, and responsibility, an important part of the wage calculation.

Put slightly different, both clauses yield wage calculations that in similar fashions are designed to approximate the rate at which workers in the U.S. are being compensated, taking into account the area in which they work, the types of work they perform, and the qualifications they possess. The statute requires employers to pay the rate of whichever calculation yields the higher wage. In this way, the statutory scheme is meant to ''protect U.S. workers' wages and eliminate any economic incentive or advantage in hiring temporary foreign workers.'' [121] If employers are required to pay H–1B workers approximately the same wage paid to U.S. workers doing the same type of work in the same geographic area and with similar levels of education, experience, and responsibility as the H–1B workers, employers will have significantly diminished incentives to prefer H–1B workers over U.S. workers, and U.S. workers' wages will not be suppressed by the presence of foreign workers in the relevant labor market.

The Department therefore disagrees with commenters' contention that the INA's actual wage clause and prevailing wage clause are not to be understood and operationalized in similar fashions. Moreover, the Department notes that, while commenters are correct that Department guidance and regulations discuss the ''prevailing wage'' as something that is assigned based on the requirements of a job opportunity, rather than the qualifications of the specific worker who will fill the position, the manner in which the ''prevailing wage'' for a specific job is assigned is different from the manner in which the Department establishes the four ''prevailing wage levels'' required by § 1182(p)(4). For one thing, a prevailing wage for a specific job opportunity is often assigned before the identity and actual qualifications of the worker who will fill the position are known. As a practical matter, it is therefore unavoidable that this would be done by reference to job requirements as

[118] 8 U.S.C. 1182(n)(1)(A).

[119] 8 U.S.C. 1182(p)(4).

[120] *Id.*

[121] *Labor Condition Applications and Requirements for Employers Using Nonimmigrants on H–1B Visas in Specialty Occupations and as Fashion Models; Labor Certification Process for Permanent Employment of Aliens in the United States,* 65 FR 80110, 80110 (Dec. 20, 2000).

opposed to the qualifications of an unknown worker. By contrast, the Department sets the four wage levels that are used to calculate specific prevailing wage rates by reviewing statistical data. The review of statistical data necessarily occurs at a more general level given that the four wage levels apply to broad swaths of workers and occupations and therefore relies on information from surveys, which often collect information about the skills possessed by particular workers rather than the job requirements of specific jobs.[122] It is thus reasonable for the Department to consider the qualifications possessed by actual workers in operationalizing section 1182(p)(4).

In addition, the Department notes that it is a reasonable inference that, in many cases, the skills possessed by an actual worker will likely align with the qualification requirements of the job opportunity such worker fills. Looking to the skills possessed by actual workers thus should serve as a reasonable proxy in many cases for the requirements of the job opportunities in which they work. Moreover, to the extent the qualifications possessed by workers are different from the requirements of the jobs they fill, the Department believes that taking workers' actual skills and qualifications into account furthers the purpose of the statute. As explained throughout, the INA's wage provisions are designed to protect U.S. workers. In the labor market, workers compete with other workers based on the skills and qualifications those workers bring to the job—not based on what qualifications an employer lists in a job opening. Giving some weight to the actual characteristics of entry-level workers in the foreign labor programs thus takes into account important factors that determine how workers compete against one another over wages and job opportunities. Ignoring workers' actual qualifications in setting the wage levels would thus potentially weaken protections for U.S. workers insofar as it would mean the Department was leaving out of its analysis an important factor that influences employment outcomes.

Further, because, as noted, the actual wage clause and the prevailing wage clause of the INA are designed to achieve similar outcomes, serving as a form of belt-and-suspenders protection for U.S. workers, and given that the actual wage clause does take into account the specific qualifications possessed by actual workers, the Department believes it is reasonable to similarly take into account the actual qualifications of the workers when assessing survey data to set prevailing wage levels.

Finally, the Department also notes that, to the extent commenters suggest that the method by which the Department is setting the four wage levels pursuant to section 1182(p)(4) contradicts the previous method by which the Department set the wage levels, they are also mistaken. As noted, the Department has never previously set the wage levels through regulation. or has it ever explained its analysis or provided an economic justification for why the wage levels are set as they are. Rather, the old wage levels were set through a memorandum of understanding between DOL components, which offered no explanation for why the specific levels used were selected or how they comported with the statute. This rulemaking is therefore the first time the Department has undertaken to justify, and tether to the relevant statutory factors the manner in which the wage levels are established. There is no prior analytical framework to contradict because none was ever used. Again, the distinction between assigning a prevailing wage rate and setting prevailing wage levels pursuant to section 1182(p)(4) is key. While the Department has longstanding regulations on the former, this rulemaking is its first attempt to do the latter in a meaningful way.

Based, in part, on similar reasoning related to the actual demographics of workers in the H–1B program, the Department also concluded in the IFR, and continues to believe, that using master's degree holders with limited work experience as a proxy for entry-level workers in analyzing survey data to determine the entry-level wage for its H–1B and PERM programs is appropriate.[123] In particular, in the IFR the Department examined the demographic characteristics of H–1B workers and concluded that many entry-level workers in the program are master's degree holders with limited work experience. In particular, a review of data from USCIS about the characteristics of individuals granted H–1B visas in fiscal years 2017, 2018, and 2019 indicates that H–1B workers with master's degrees tend to be younger and less highly compensated than H–1B workers with bachelor's degrees. On average, individuals with master's degrees in the program are approximately 30 years old, whereas bachelor's degree holders are, on average, 32 years old. This suggests that, while possessing a more advanced degree, master's degree holders in the program are likely to have less relevant work experience than their bachelor's degree counterparts.[124] Relatedly, H–1B master's degree holders make, based on a simple average, $86,927, whereas bachelor's degree holders make on average $88,565.[125] Given that differences in skills and experience often explain differences in wages, this gap in average earnings and age suggests that, while possessing a more advanced degree, master's degree holders in the H–1B program tend to be less skilled and experienced—and are therefore more likely to enter the program as entry-level workers—than are bachelor's degree holders.[126]

This conclusion is further bolstered by the fact that master's degree holders have, in recent years, been the largest educational cohort within the program. In FY2019, for instance, 54 percent of the beneficiaries of approved H–1B petitions had a master's degree—whereas only 36 percent of beneficiaries had only a bachelor's degree.[127] These facts, in combination with the age and earnings profiles of master's degree holders in the program, strongly suggest that a significant number of entry-level H–1B workers are individuals with a master's degree and very limited work experience. Because, as explained above, the Department has determined

[122] For example, both the NSF and CPS surveys the Department used in the IFR survey individual workers about the wages they make and the skills they possess, not the qualification requirements of the jobs they fill.

[123] Contrary to some commenters' contentions, the Department did not look exclusively at educational attainment in assessing where the entry-level wage should be placed. It also took into account work experience. While commenters are correct that in some cases factors other than education and work experience may influence wages, these are the factors the INA requires the Department to consider. Further, as explained in the IFR, education and experience are often key determinants of levels of compensation, and therefore allow for a reasonable differentiation among workers.

[124] Age is a common proxy for potential work experience. *See, e.g.,* Rebecca Chenevert & Danial Litwok, *Acquiring Work Experience with age,* United States Census Bureau, (2013) *available at https://www.census.gov/newsroom/blogs/random-samplings/2013/02/acquiring-work-experience-with-age.html.*

[125] This analysis is based on data from U.S. Citizenship and Immigration Services about the demographic characteristics of H–1B workers.

[126] Elka Torpey, Same occupation, different pay: How wages vary, Bureau of Labor Statistics (2015), *available at https://www.bls.gov/careeroutlook/2015/article/wage-differences.htm.*

[127] U.S. Citizenship and Immigration Services, Characteristics of H–1B Specialty Occupation Workers Fiscal Year 2019 Annual Report to Congress October 1, 2018–September 30, 2019, (2020), *available at https://www.uscis.gov/sites/default/files/document/reports/Characteristics_of_Specialty_Occupation_Workers_H-1B_Fiscal_Year_2019.pdf.*

that the qualifications of actual workers are highly relevant to establishing prevailing wage levels pursuant to section 1182(p)(4), this analysis of the demographic characteristics of H–1B workers adds critical weight to the Department's conclusion to use master's degree holders as an analytical proxy for entry-level workers.

To further address commenters' concerns that master's degree holders with limited work experience are an inappropriate proxy for entry-level H–1B workers, the Department notes that, contrary to some commenters' contentions, this approach is consistent with the baseline qualification requirements in the INA for the H–1B program, as well as for EB–2 visas. For one thing, the statutory criteria for who can qualify as an EB–2 worker provide a clear, analytically useable definition of the minimum qualifications workers within that classification must possess. Even the least experienced individuals within the EB–2 classification are likely to have at least a master's degree or its equivalent.[128] Possession of an advanced degree is thus a meaningful baseline with which to describe entry-level workers in the EB–2 classification.

As noted in the IFR, the baseline qualifications needed to obtain entry as an H–1B worker are different. An individual with a bachelor's degree in a specific specialty, or its equivalent, may qualify for an H–1B visa; a master's degree is not a prerequisite.[129] However, the bachelor's degree or equivalent must be in a specific specialty. A generalized bachelor's degree is insufficient to satisfy the requirement that H–1B workers possess highly specialized knowledge.[130] Further, the statute requires that the individual be working in a job that requires the application of ''highly specialized knowledge.''[131] Again, this means, contrary to some commenters' assertions, that for the H–1B program the possession of any kind of bachelor's degree is not the baseline qualification criterion for admission. Something more is needed. The ultimate inquiry rests also on whether the individual can and will be performing work requiring highly specialized knowledge.

As with aliens in the EB–2 classification, looking to the earnings of individuals with a master's degree provides an appropriate and analytically useable proxy for purposes of analyzing the wages of typical, entry-level workers within the H–1B program. For one thing, master's degree programs are, generally speaking, more specialized courses of study than bachelor's degree programs. Thus, while the fact that an individual possesses a bachelor's degree does not necessarily suggest one way or another whether the individual possesses the kind of specialized knowledge required of H–1B workers, the possession of a master's degree is significantly more likely to indicate some form of specialization. Although a master's degree alone does not automatically mean an individual will qualify for an H–1B visa, possession of a master's degree—something that is surveyed for in a variety of wage surveys—is thus a better proxy for specialized knowledge than is possession of a bachelor's degree for purposes of the Department's analysis. While possession of a bachelor's degree is also commonly surveyed for, mere possession of a bachelor's degree is not nearly as reliable an indicator that the degree holder possesses specialized knowledge.

Importantly, the Department is not claiming that all entry-level workers in the H–1B program possess a master's degree, or that possession of a bachelor's degree in a specific specialty such as would demonstrate specialized knowledge is in all cases the equivalent of having a master's degree. To reiterate, the Department is using master's degree holders with limited work experience as a proxy for entry-level workers purely for analytical purposes. As more fully explained below, because the OES survey does not capture data on workers' education and experience—the factors that the INA requires the Department to take into account in establishing wage levels—the Department sought in the IFR to identify where within the OES wage distribution the entry-level wage should fall by consulting other survey sources that do gather information on education and experience. Doing so necessarily requires the Department to identify an appropriate wage comparator or group of comparators for entry-level H–1B and PERM workers within those survey sources to ensure that the wage level for entry-level workers set based on that data reflects what workers with similar qualifications to entry-level H–1B and PERM workers are paid. For the reasons given above the Department, in its discretion, has determined that using master's degree holders as an analytical proxy for entry-level workers in these high-skilled programs is a reasonable method of assessing wage data for purposes of establishing the entry-level wage.

As noted, commenters also criticized the conclusion the Department reached about where to place the entry-level wage in the IFR based on its analysis of wage data about master's degree holders, arguing that placing the entry-level wage at approximately the 45th percentile is axiomatically in error given that entry-level workers do not, by definition, start out making more than almost half of all workers in an occupation. Although for the reasons given below the Department has decided to adjust the entry-level wage downward to the 35th percentile, the Department disagrees with commenters that setting the entry-level wage closer to the median of the OES distribution is inappropriate. As explained in the IFR, the interplay between the statutory framework governing the prevailing wage and the OES survey data demonstrate that, for the top H–1B and PERM occupations, workers at the lower end of the OES distribution in the most common H–1B occupations likely would not qualify as working in a ''specialty occupation,'' as that term is defined in the INA, and thus do not have education and experience comparable to even the least qualified H–1B worker—a contention generally not disputed by commenters—meaning their wage data must be discounted in setting wages for entry-level H–1B workers. In consequence, while a wage close to the median does not represent what all entry-level workers in a given occupation generally make, it is entirely reasonable that the wage for the vast run of entry-level workers covered by the four-tier wage structure, many of whom are required to possess more specialized skills, would fall closer to the median.

As explained above, the Department interprets the INA's wage provisions to require it to take into account the education, experience, and responsibility of workers in setting wage levels for the H–1B program. It is therefore necessary to identify what types of U.S. workers in a given occupation have comparable levels of education, experience, and responsibility to H–1B workers. The Department did so by looking to wage data about master's degree holders with limited work experience in occupations in which H–1B workers are commonly employed. While the INA makes clear that the prevailing wage levels must be set commensurate with education, experience, and level of supervision, it leaves assessment of those factors to the Department's discretion. How the

[131] 8 U.S.C. 1184(i).

Department exercises that discretion is informed by the legislative context in which the four-tier wage structure was enacted, which indicates that the wage levels are primarily designed for use in the Department's high-skilled and PERM foreign labor programs.[132] Other provisions in the INA relating to the education and experience requirements of those programs—and in particular the statutory definition of ''specialty occupation''—therefore serve as critical guides for how wage levels based on experience, education, and level of supervision should be formulated.

Under the INA, H–1B visas can, in most cases, only be granted to aliens entering the U.S. to perform services ''in a specialty occupation.'' [133] The statute defines ''specialty occupation'' as an occupation that requires theoretical and practical application of a body of ''highly specialized knowledge'' and the ''attainment of a bachelor's or higher degree in the specific specialty (or its equivalent) as a minimum for entry into the occupation in the United States.'' [134] An alien may be classified as an H–1B specialty occupation worker if the alien possesses ''full state licensure to practice in the occupation, if such licensure is required to practice in the occupation,'' ''completion of [a bachelor's or higher degree in the specific specialty (or its equivalent)],'' or ''(i) experience in the specialty equivalent to the completion of such degree, and (ii) recognition of expertise in the specialty through progressively responsible positions relating to the specialty.'' [135] DHS regulations further clarify the requirements for establishing that the position is a specialty occupation and that the beneficiary of an H–1B petition must be qualified for a specialty occupation.[136] The Department's regulations restate the statute's definition of specialty occupation essentially verbatim.[137]

A few features of the definition bear emphasizing. First, the statute sets the attainment of a bachelor's degree in a specific specialty, or experience that would give an individual expertise equivalent to that associated with a bachelor's degree in the specific specialty, as the baseline, minimum requirement for an alien to qualify for the classification. Of even greater importance, having any bachelor's degree as a job requirement is not sufficient to qualify a job as a specialty occupation position—the bachelor's degree or equivalent experience required to perform the job must be ''in the specific specialty.'' In other words, the bachelor's degree required, or equivalent experience, must be specialized to the particular needs of the job, and impart a level of expertise greater than that associated with a general bachelor's degree, meaning a bachelor's degree not in some way tailored to a given field.[138] These aspects of the definition play an important role in how the Department uses data from the BLS OES survey to set appropriate prevailing wage levels.

The OES survey categorizes workers into occupational groups defined by the SOC system, a federal statistical standard used by federal agencies to classify workers into occupational categories for the purpose of collecting, calculating, or disseminating data.[139] An informative source on the duties and educational requirements of a wide variety of occupations, including those in the SOC system, is the Department's Occupational Outlook Handbook (OOH), which, among other things, details for various occupations the baseline qualifications needed to work in each occupation. A review of the OOH shows that only a portion of the workers covered by many of the occupational classifications used in the OES survey likely have levels of education and experience similar to those of H–1B workers in the same occupation. Some share of workers in these classifications likely do not have the education or experience qualifications necessary to be considered similarly employed to specialty occupation workers. Because the INA requires the prevailing wage levels for H–1B workers to be set based on the wages of U.S. workers with levels of experience and education similar to those of H–1B workers, the Department must take this into account when using OES data to determine prevailing wages.

For example, a common occupational classification in which H–1B nonimmigrants work is Computer Programmers.[140] In some cases, the work of a computer programmer may involve writing basic computer code and testing it.[141] The OOH's entry for Computer Programmers describes the educational requirements for the occupation as follows: ''Most computer programmers have a bachelor's degree; however, some employers hire workers with an associate's degree.'' [142] In other words, while common, a bachelor's degree-level education, or its equivalent, is not a prerequisite for working in the occupation. USCIS and at least one court have reasoned from this that the mere fact that an individual is working as a Computer Programmer does not establish that the individual is working in a ''specialty occupation.'' [143] Because a person without a specialized bachelor's degree can still be classified as a Computer Programmer, some portion of Computer Programmers captured by the OES survey are not similarly employed to H–1B workers because the baseline qualifications to enter the occupation do not match the statutory requirements.[144]

[144] As noted throughout, under the INA a bachelor's degree is not an absolute prerequisite for obtaining an H–1B visa. Work experience imparting comparable levels of expertise will also suffice. Indeed, as the President has noted in other contexts, focusing on possession of a degree to the exclusion of work experience ignores important considerations about how merit and qualifications should be assessed. *See* Exec. Order No. 13932, 85 FR 39457 (2020). The Department's focus on the OOH's description of degree requirements here is not meant to suggest otherwise, but rather simply accounts for the fact that, within the H–1B program, nearly all nonimmigrants hold a degree. *See* U.S. Citizenship and Immigration Services, Characteristics of H–1B Specialty Occupation Workers Fiscal Year 2019 Annual Report to Congress October 1, 2018–September 30, 2019, (2020), *available at https://www.uscis.gov/sites/default/files/document/reports/Characteristics_of_Specialty_Occupation_Workers_H-1B_Fiscal_Year_2019.pdf.* Further, under the INA, EB–2 and EB–3 immigrants are, in many cases, required to possess a degree. And, in any event, the Department's assessment of the OOH's descriptions of education requirements and how they demonstrate that, for the most common H–1B occupations, there is some portion of workers who would not qualify as working in a specialty occupation holds true for the OOH's description of various occupations' experience requirements. The mere fact that OOH describes many workers in an occupation as having several years of experience in or skills relevant to their respective fields does not necessarily mean

Continued

The same is true for other occupational classifications in which H–1B workers are often employed. For example, the Medical and Health Services Manager occupation, as described by the OOH, does not in all cases require a bachelor's degree as a minimum requirement for entry.[145] USCIS has therefore concluded that the fact that an individual works in that occupational classification does not necessarily mean that the individual is working in a ''specialty occupation.''[146] USCIS and its predecessor agency, the Immigration and Naturalization Service, have long emphasized that the term ''specialty occupation'' does not ''include those occupations which [do] not *require* a bachelor's degree in the specific specialty.''[147] In other words, if not all jobs in an occupational classification require a specialized bachelor's degree or equivalent experience, under the INA other evidence is needed to show that a worker will be performing duties in a specialty occupation beyond whether the job opportunity falls within a particular SOC classification.[148]

A review of the OOH entries for the occupations in which H–1B nonimmigrants most commonly work demonstrates that most H–1B workers fall within SOC classifications that include some number of workers who would not qualify for employment in a specialty occupation. For instance, the OOH entries for Software Developers—an occupation accounting for over 40 percent of all certified LCAs[149]—provides that such workers ''*usually* have a bachelor's degree in computer science and strong computer programming skills.''[150] For Computer Systems Analysts, which make up approximately 8.8 percent of all certified LCAs,[151] ''a bachelor's degree in a computer or information science field is common, although not always a requirement. Some firms hire analysts with business or liberal arts degrees who have skills in information technology or computer programming.''[152] Similarly, the O*Net database, which surveys employers on the types of qualifications they seek in workers for various occupations, shows that, on average, over 13 percent of all jobs in the occupations that H–1B workers are most likely to work in do not require workers to have even a bachelor's degree.[153] Moreover, the O*Net does not differentiate between jobs that require bachelor's degrees in specific specialties and job for which a general bachelor's degree will suffice. It is therefore a reasonable inference that the percentage of jobs in these occupations that would not qualify as specialty occupation positions for purposes of the INA is almost certainly even higher.

Simply put, the universe of workers surveyed by the OES for some of the most common occupational classifications in which H–1B workers are employed is larger than the pool of workers who can be said to have levels of education and experience comparable to those of even the least skilled H–1B workers performing work in a specialty occupation. Because the statutory scheme requires the Department to set the prevailing wage levels based on what workers similarly employed to foreign workers make, taking into account workers' qualifications and, as noted, the large majority of foreign workers are H–1B workers, it would be inappropriate to consider the wages of the least educated and experienced workers in these occupational classifications in setting the prevailing wage levels. To conclude otherwise would place the Department at odds with one of the purposes of the INA's wage protections: to ensure that foreign workers earn wages comparable to the wages of their U.S. counterparts.

As a result, it is entirely reasonable that the entry-level wage for H–1B workers would fall closer to the median of the OES distribution. The OES survey is not specifically designed to serve the Department's foreign labor programs. It does not survey for education and experience—the factors the INA requires the Department to consider in setting prevailing wage levels—which is why the Department looks to other survey sources, like the NSF and CPS, to make assessments about where within the OES distribution workers with particular education and experience levels are likely to fall. So too, as demonstrated by the above analysis of the OOH, its occupational classifications are not delineated so as to exclude workers who could not be regarded as working in a specialty occupation, meaning only a portion of the OES distribution for many occupations is actually relevant to how the Department sets wages for the H–1B program. As a result, the median of the OES distribution is not necessarily the

that they possess ''highly specialized knowledge,'' or that all workers in the occupation have such experience. *See Royal Siam Corp.* v. *Chertoff,* 484 F.3d 139, 147 (1st Cir. 2007). *See also* Bureau of Labor Statistics, Occupational Outlook Handbook, Computer Systems Analysts, available at *https://www.bls.gov/ooh/computer-and-information-technology/computer-systems-analysts.htm;* Bureau of Labor Statistics, Occupational Outlook Handbook, Food Service Managers, *available at https://www.bls.gov/ooh/management/food-service-managers.htm.* Whether discussing education or experience requirements, the fact remains that OOH's description of the occupational classifications used in the BLS OES are, in most cases, not limited to workers who would qualify as working in a specialty occupation.

[145] *See Ajit Healthcare Inc.* v. *U.S. Dep't of Homeland Sec.,* 2014 WL 11412671, at 4 (C.D. Cal. Feb. 7, 2014); *see also* Bureau of Labor Statistics, Occupational Outlook Handbook, Medical and Health Services Managers, available at *https://www.bls.gov/ooh/computer-and-information-technology/computer-programmers.htm.* The Department notes that some courts and USCIS have concluded that the fact that an occupation does not in all cases require a bachelor's degree as a minimum qualification does not necessarily preclude the occupational classification from serving as evidence that a particular job qualifies as a ''specialty occupation.'' *See, e.g., Taylor Made Software, Inc.* v. *Cuccinelli,* 2020 WL 1536306, at 6 (D.D.C. Mar. 31, 2020); *see also* 8 CFR 214.2(h)(4)(iii). That said the INA ultimately does not admit of any exceptions to the rule that a job must require a bachelor's degree in a specific specialty, or its equivalent, to qualify as a specialty occupation, meaning, whatever its relevance to determining whether a particular job is in a ''specialty occupation,'' the fact that many SOC classifications contain workers that would not meet the statutory definition is highly relevant to how OES data for an entire occupational classification is used in setting prevailing wage levels. Put another way, as the court in *Taylor Made* acknowledged, the fact that a bachelor's degree is not required in all cases for a given occupation means that some number of workers within the occupation are not performing work in a specialty occupation. *Id.* Because such workers are almost certainly captured within OES data, and the Department calculates prevailing wages by taking into account the actual wages reported for broad swaths of workers in the OES data, the presence of these workers in the survey data directly relates to how prevailing wage levels are set, even if it does not have a great deal of significance for how a single, specific job in an occupation is determined to be or not to be in a ''specialty occupation.''

median of the distribution of workers who have qualifications comparable to H–1B workers. The median of that distribution will likely in many cases fall above the median of the overall OES distribution since lower skilled, and therefore less highly compensated workers will be excluded.

On this last point, commenters also argued that the IFR's analysis improperly focused on only certain occupations, and that, for other occupations, most particularly those requiring an advanced degree, the above reasoning about how SOC classifications should be assessed in light of the statutory framework is inapposite. Relatedly, a number of commenters faulted the Department for focusing much of its analysis on the H–1B program, claiming the Department did not take adequate account of the array of occupations for which labor certification is sought in the PERM program. Despite these comments, for the reasons discussed above, the Department continues to believe that focusing its analysis on those programs and occupations that account for the largest share of workers covered by the four-tier wage structure is appropriate and consistent with the approach the Department has taken in setting wages in other foreign labor programs. Doing so is, in the Department's judgment, the most appropriate way to ensure U.S. workers are protected to the greatest extent possible in light of the fact that the Department's wage structure applies to a large and varied class of workers and occupations. Further, the Department acknowledges that PERM workers and advanced degree occupations are entitled to some weight in the Department's decision over how to set wage levels. As discussed at greater length below, taking into account these aspects of the issue addressed by this rule played an important part in the Department's decision to reduce the entry-level wage from the 45th percentile to the 35th percentile.

To explain its focus on H–1B workers, the Department notes that the H–1B program accounts, by order of magnitude, for the largest share of foreign workers covered by the Department's four-tier wage structure. Upwards of 80 percent of all workers admitted or otherwise authorized to work under the programs covered by the wage structure are H–1B workers.[154] This, in combination with the fact that, as explained in an earlier section, the risk of adverse effects to U.S. workers posed by the presence of foreign workers is most acute where there are high concentrations of such workers, supports the Department's determination to pay special attention to the H–1B program in how it sets wages. Because the wage structure governs wages for hundreds of thousands of workers across five different foreign labor programs and hundreds of different occupations, no wage methodology will be perfectly tailored to the unique circumstances of every job opportunity.[155] Advancing the INA's purpose of guarding against displacement and adverse wage effects against this statutory backdrop therefore means, in the Department's judgment, that particular weight should be given in the Department's analysis to those aspects of the problem this rule addresses where there is the greatest danger to U.S. workers' wages—hence the added focus on the H–1B program.

Relatedly, the Department notes that the H–1B program is linked closely to the PERM programs that are also covered by the Department's wage structure. For one thing, there is significant overlap in the types of occupations in which H–1B and PERM workers are employed.[156] For example, the top ten most common H–1B occupations include seven of the ten most common PERM occupations. Through the third quarter of FY 2020, 80 percent of PERM cases were for jobs in Job Zones 4 and 5 [157]—the most highly skilled job categories, which also account for 94 percent of all H–1B cases.[158] Moreover, it is also clear that H–1B status often serves as a pathway to employment-based green card status for many foreign workers and that a very substantial majority of workers covered by PERM labor certification applications are already working in the U.S. as H–1B nonimmigrants.[159] In FY 2019, 68.2 percent of all PERM applications were for aliens that at the time the applications were filed were already working in the U.S. on H–1B visas.[160] For these reasons, giving particular attention to the H–1B program in determining how to adjust the wage levels is entirely consistent with also ensuring that how the wage levels are applied in the PERM programs is properly accounted for in the Department's analysis.

Similarly, the Department has concluded, in its discretion, that the Level I wage should be established based on the wages paid to workers in those occupations that make up a substantial majority of the applications filed in the H–1B, H–1B1, E–3, and PERM programs. This also ensures that the Department appropriately takes into account the size and breadth of the programs covered by the four-tier wage structure by giving special attention to those areas where the risk to U.S. workers' wages and job opportunities is most severe by virtue of having high concentrations of H–1B and PERM workers. Commenters are incorrect that the Department's decision to take this focus means it only looked at computer occupations. Rather, the Department looked at all occupations that account for one percent or more of the total H–1B population. While many of these occupations are computer-related, some are not. Further, while commenters are correct that there are as many as 99 occupations that require advanced degrees, the Department notes that this is out of a total of over 550 occupations covered by the OOH. Further, those 99 occupations account for an even smaller share of the actual workers who are employed under the Department's four-tier wage structure. While this does not

mean that due attention should not be given to how the wage levels affect workers in advanced degree occupations, it does guide the relative weight these occupations are given in the Department's analysis.

Despite their disagreement with the methodology employed by the Department, commenters generally did not offer alternative ways to balance using a single wage structure across all five programs and hundreds of different occupations with varying skill requirements against the need to protect U.S. workers as fully as possible. Some commenters suggested as an alternative that different occupations or groups of occupations should be subject to a separate analysis and different wage structure. The Department has considered this option and believes that the utility of preserving a uniform wage structure across all programs and occupations outweighs any benefits that might be achieved by promulgating multiple, occupation or program-specific wage structures. The Department continues to believe that its method of doing so is the best available option as it is consistent with the approach the Department has taken in other foreign labor programs and focuses the Department's analysis on those areas where the risk to U.S. workers is greatest.

As for treating the PERM programs differently than the H–1B program, the Department notes that its analysis of highly skilled workers with advanced degrees and/or specialized knowledge—namely the EB–2 immigrant classification and the H–1B, E–3, and H–1B1 nonimmigrant programs—already takes into full account a large portion of the PERM program. With respect to the EB–3 classification, it is also noteworthy that many H–1B workers adjust status to that of lawful permanent residents through EB–3 classification, and the manner in which the programs operate means that, in many cases, foreign workers can, in some sense, have one foot in each program simultaneously for extended periods of time. Using different wage methodologies in the programs would therefore result in the incongruous possibility of a worker doing the same job for the same employer suddenly receiving a different wage upon adjusting status. Similarly, while having somewhat different eligibility criteria, the EB–2 and EB–3 classifications are not mutually exclusive: many workers that satisfy the eligibility criteria for one would also do so for the other.[161] Applying the same wage methodology in both classifications is therefore important to ensure consistent treatment of similarly situated workers and prevent the creation of incentives for employers to prefer one classification over the other because different wage methodologies yield different wages.[162] Thus, it is key in the Department's judgment that the EB–3 classification be treated the same as the EB–2 classification and H–1B program. More generally, continuing to employ the same wage structure across both the H–1B and PERM programs advances the Department's interest in administrative consistency and efficiency. Because there is significant overlap between the H–1B and PERM programs, they have long been regulated in connection with one another. Moreover, to the extent commenters assert that the IFR's wage levels resulted in inappropriately high wages for certain workers in advanced degree occupations, the Department notes that its decision to reduce the entry-level wage should, to some degree, ameliorate this concern.

For several reasons, the Department has also determined that occupation-specific wage structures are undesirable. For starters, calculating multiple different wage structures based on occupation would be a substantial and costly administrative undertaking for multiple components within the Department. There are over 800 different occupations in the SOC classification system used in the OES survey. The analysis needed to tailor different wage structures to each occupation would be an enormous undertaking, even assuming it were possible to conduct a meaningful, occupation-by-occupation analysis. Further, the burden on BLS to produce hundreds of different wage levels every year across various occupations would simply be unsustainable.

In addition, treating different occupations differently would create an opportunity and incentive, in some cases, for employers to misclassify workers in order to take advantage of lower wage rates. This is something that the Department already encounters by virtue of having different wage methodologies for different nonimmigrant programs that cover different types of jobs. Introducing the possibility of securing a different wage methodology within the H–1B and PERM programs would similarly allow employers ability to seek lower wages even if such wages are not the right wage for the job opportunity in question and result in adverse effects on U.S. workers. Again, this also means that, barring a compelling reason to introduce this kind of disuniformity into the H–1B and PERM programs, a single wage structure should be preserved. And the Department does not believe that there is such a compelling reason to disaggregate the wage methodology by occupation. While certain advanced degree occupations present somewhat different considerations in terms of how wage rates should be provided as compared to the top H–1B and PERM occupations the Department focused on in its analysis in the IFR, the Department reiterates that, as explained more fully below, the effects of the new wage methodology on advanced degree occupations have been given significant weight in the Department's analysis of where to set the entry-level wage. The Department therefore believes that adjusting the IFR's entry-level wage down to the 35th percentile—together with other features of the system, discussed below—adequately accounts for the interests of workers and employers in advanced degree occupations and will more consistently supply wage rates that are appropriate across a broader range of occupations. Moreover, other changes made in this final rule, including eliminating the use of the default wage of $208,000 per year for all four wage levels in cases where BLS cannot supply a Level IV wage (an issue that was of particular concern for commenters that discussed how the IFR affected employers of workers in advanced degree occupations), will also reduce the incidence of job opportunities requiring an advanced degree being assigned inflated wage rates.

Moreover, the Department notes that the use of a single wage structure has been its practice ever since it began using leveled wages in the H–1B and PERM programs. Twenty years of experience shows that using a single wage structure across all occupations is not unmanageable for employers. Indeed, given that the previous wage levels were selected with no analysis or explanation, the Department anticipates that its revised levels will in fact produce more appropriate outcomes in a larger number of cases across different occupations. For the first time the Department has undertaken a meaningful analysis of what wage levels

[161] *See Musunuru* v. *Lynch,* 831 F.3d 880, 885 (7th Cir. 2016) (describing a person applying for both EB–2 and EB–3 status).

[162] *See Comite' De Apoyo A Los Trabajadores Agricolas* v. *Perez,* 774 F.3d 173, 185 (3d Cir. 2014) (noting loopholes that can be created if employers are able to use different methodologies to calculate wages for the same types of workers).

will yield prevailing wage rates in the largest number of cases possible that are consistent with the wages paid to U.S. workers similarly employed and with comparable levels of education, experience, and responsibility to H–1B and PERM workers. In consequence, preserving a single wage structure should, if anything, be even more feasible and reasonable now than it was when the old wage levels were operative.

Further, the INA allows an employer to use the best available information at the time of filing an LCA in setting the wages in the H–1B program.[163] If an employer does not believe the OES wage provided by the Department is the best available information at the time of filing, the employer may utilize an alternative prevailing wage survey provided by an independent authoritative source or another legitimate source of wage information.[164] Such alternative sources of wage information are, in the Department's experience, widely available, and provide a backstop for employers, thereby reducing any need to create multiple, precisely tailored wage structures for different occupations.

The Department defines a prevailing wage survey published by independent authoritative source as ''a prevailing wage survey for the occupation in the area of intended employment published . . . in a book, newspaper, periodical, loose-leaf service, newsletter, or other similar medium, within the 24–month period immediately preceding the filing of the employer's application.'' [165] The independent authoritative source should: (1) Reflect the average wage paid to workers similarly employed in the area of intended employment; (2) Reflect the median wage of workers similarly employed in the area of intended employment if the survey provides such a median and does not provide a weighted average wage of workers similarly employed in the area of intended employment; (3) be based upon recently collected data; and (4) represent the latest published prevailing wage finding by the authoritative source for the occupation in the area of intended employment.[166]

In utilizing an independent authoritative source, the Department requires employers to follow the Department guidance, which explains the standards contained in the Department's regulations.[167] Employers following the 2009 Guidance should ensure wage data collected is for similarly employed workers, meaning having substantially similar levels of skills. The survey should contain a representative sample of wages within the occupation that comports with recognized statistical standards and principals in producing prevailing wages. It is important to note that the nature of the employer, such as whether the employer is public or private, for profit or nonprofit, large or small, charitable, a religious institution, a job contractor, or a struggling or prosperous firm, do not bear in a significant way on the skills and knowledge levels required and should not limit the universe of employers surveyed. The relevant factors are the job, the geographic locality of the job, and the level of skill required to perform independently on the job. The Department provides a set of minimum survey standards in Appendix E of the 2009 Guidance, and encourages employers to reference these standards when seeking to use an independent authoritative source as the prevailing wage. Written documentation on the methodology used to conduct the survey and the validity of the methodology used in computing the occupational wage data covering the area of intended employment must be kept in the employer's data file and made available in the event of an investigation.

In addition, the Department allows employers to rely upon other legitimate sources of wage information if they do not have access to a published independent authoritative source.[168] The only difference between a published independent authoritative source and another legitimate source of wage information is that the other legitimate source of wage information simply has to be ''reasonable and consistent with recognized standards and principals in producing a prevailing wage'' and does not need to be published.[169] As with independent authoritative sources, the Department encourages employers to ensure the other legitimate source of wage information follows the Department's 2009 Guidance to ensure it is reasonable and consistent with recognized standards and principals in producing a prevailing wage.

The Department notes that since the IFR, employers have availed themselves of the ability to use independent authoritative sources and other legitimate sources of wage information at rates 274 percent greater than the same timeframe in 2019. In fact, since publication of the IFR, the Department has received 14,153 LCAs supported by an independent authoritative source or other legitimate source of wage information for 153 unique occupations, compared to 19,509 representing 216 unique occupations for the entirety of FY 2020. This increased use of private surveys is consistent with the Department's experience that alternative wage surveys are readily available across many different regions and industries.

This widespread use and availability of alternative age sources extends to advanced degree occupations. Since the IFR publication, employers filing 523 LCAs representing 950 positions for occupations requiring advanced degrees used an independent authoritative source or other legitimate source of wage information. Since the IFR, there have been 4,973 PWDs requested for occupations requiring an advanced degree using a survey as the wage source; this is 1,780 more PWDs relying on a survey as the wage source than for similar PWDs in FY 2020.

For the PERM program, too, employers are required to obtain a PWD from the Department; they have the option of providing an alternate wage source to the OES survey in this process as well. There are well-established standards of acceptance of alternative wage sources. In the weeks since the publication of the IFR, the Department has received more than 6,900 prevailing wage requests supported by private wage surveys in the PERM program, which is a 335% increase over the same timeframe in 2019. Again, this increase confirms that such sources of wage data are readily available for use in seeking a PWD not based on the OES survey if employers believe in anomalous cases that the OES survey does not produce an accurate wage. This obviates any need, in the Department's view, to create a complicated, administratively burdensome scheme of occupation-specific wage structures.

3. The IFR Wages and Market Wage Rates

Summary of Comments

The most common concern raised by commenters on this subject was that prevailing wages under the IFR's

[169] 20 CFR 655.731 (b)(3)(iii)(C)(4).

methodology do not reflect actual market rates and in many cases are unrealistically high such that they will require employers to lay off currently employed foreign workers, will make it ''difficult if not impossible, to hire for highly specialized and hard-to-recruit for positions,'' and will ''frustrate equal pay principles for U.S. workers, and create an endless upward spiral of wage obligations that bear no relation to market dynamics.'' A professional association asserted that the wage level methodology in the IFR produced ''artificially high'' prevailing wages and circumvented congressional intent by making it ''virtually impossible for employers to use the H–1B visa program.'' The commenter asserted the Department violated section 212(n) of the INA by ''incorrectly setting the way data is leveled'' and ''prevent[ing] employers from obtaining'' from the Department's Online Wage Library ''a wage that is in fact the prevailing wage for the'' occupation and Area of Intended Employment or a wage that represents ''the best information available as of the time of filing the application.'' An employer asserted the IFR would create spiraling wages because ''the next collection of BLS data will be distorted by these new wage requirements, yielding new and even higher prevailing wage requirements, in a pattern that will repeat and multiply'' over time. A public policy organization said the IFR would lead to inflated wages because employers must post at the worksite the H–1B worker's salary, which will compel employers to pay the increased IFR wage to similarly employed U.S. workers.

Commenters cited numerous general and specific examples of substantial wage increases for combinations of occupations and areas of employment that do not reflect, according to commenters, market wages. Several commenters cited an NFAP analysis that compared wages under the IFR to private survey wages and pre-IFR OES wages and found that for all occupations and geographic locations the new wages are ''on average, 39% higher for Level 1 positions, 41% higher for Level 2, 43% higher for Level 3 and 45% higher for Level 4.'' Examples included a 99.5 percent increase for Level I petroleum engineers and for electrical engineers, computer network architects, computer systems analysts, mechanical engineers, and database administrators at all wage levels. The most dramatic examples included a Level I wage increase of more than 206 percent for a computer and information systems manager in East Stroudsburg, Pennsylvania, and more than 177 percent for a pediatrician in Wichita, Kansas. Referencing an American Action Forum report, a trade association cited average IFR wage increases for several occupations, including ''an 83 percent increase for Level 1 Computer and Information Systems Managers'' and ''a 44 percent increase for Level 2 Software Developers.'' Several commenters asserted the required prevailing wages for some information technology occupations would exceed the salary cap implemented by some big tech employers, such as Level II and Level IV wages in Silicon Valley and Seattle that exceed a $160,000 salary maximum at Amazon.

Many commenters stated the wages produced under the IFR did not reflect data on prevailing wages found on websites like Payscale, Glassdoor, Indeed, or Levels.fyi. Examples cited include Level I software developer wages in Santa Clara and Level I engineer wages in Seattle that are lower than the 45th percentile, according to Levels.fyi, and a median salary for software developers in Cincinnati that is $20,000 per year lower than the entry level wage under the IFR, based on Payscale data. One commenter also stated that the Level IV IFR wage for electrical engineers in Seattle exceeded $168,820, the highest wage listed for the occupation in O*Net.

A few commenters expressed concern that the IFR wages are not consistent with prevailing wage determinations produced by private wage surveys. A public policy organization compared wages under the IFR to surveys conducted by Willis Towers Watson and found a divergence in wage determinations between the two, including IFR wages 63 percent higher for Level IV programmers in Chicago, three times higher for all levels of financial analysts in New York City, and 62 percent higher for Level I software developers in Los Angeles. This commenter noted that many private surveys use ''precise methodologies and a wide range of data gathering to ensure that the surveys'' are accurate and they are ''used by employers for company-wide salary benchmarking.'' Similarly, a trade association stated that private wage surveys ''commonly collect compensation information reflecting education, experience, and responsibility,'' and a professional association stated these surveys often ''gather real market data for what companies are paying employees at different levels,'' in contrast to the OES, which gathers ''general data without regard to experience levels.''

In addition to arguing that the IFR's wage rates were too high, a number of commenters highlighted what can be described as second and third order consequences of prevailing wage rates being out-of-step with market wages. For instance, comments primarily from academic and research institutions and related organizations and individuals expressed concern that if wages are untethered from market rates, particularly for post-doctoral research positions, clinical faculty, administrative positions, and teaching assistants, and the prevailing wage requirement would be untenable for institutions reliant on grant funding, especially those reliant on government funding. As a result, commenters believed the IFR would produce a shortage of qualified faculty and diminish the quality of education students receive; reduce already declining foreign student enrollment and tuition revenue; and derail critical research projects in science, healthcare, and technology.

Most of these commenters asserted wages under the IFR often are significantly higher than prevailing wages in the higher education or research sectors, and several commenters cited specific examples, like a Level I wage increase for post-doctoral researchers that would raise the wage higher than the salary of many experienced tenure track faculty. Several commenters asserted the increased wages would be especially burdensome for employers reliant on grant funding that may be subject to statutory or other limits on the funding amounts and the ways the employer can expend the funds. For example, a university stated that federal research organizations lack adequate funding to pay the IFR wages for work on research projects funded by federal awards and will need to reduce the size of those project groups or attempt to avoid employing H–1B workers on any of those projects. Other commenters noted more specifically that grants like those awarded by the National Institute of Health (NIH) are subject to rules limiting the amount that can be used for ''administrative costs, including salaries,'' and one commenter stated that the IFR prevailing wage for biological scientists would exceed the NIH salary cap by as much as 79 percent in some areas.

Commenters expressed concern the wage increases would diminish the quality of education universities provide by making it difficult or impossible to retain or hire qualified faculty, researchers, and workers in other jobs like administrative positions.

A leading teaching and medical research hospital stated that the inability to retain researchers at the IFR wage levels would jeopardize critical research projects and the jobs in which U.S. workers are employed in ''assistant, tech and coordinator roles.'' Commenters also believed the wage increases would reduce post-graduation career opportunities significantly for international students and would reduce already declining foreign student enrollment, which in turn would contribute to a shortage of skilled labor in higher education and research and in the United States broadly. For example, some commenters asserted the IFR would reduce the number of available and qualified graduate teaching assistants, tutors, post-doctoral researchers, and similar workers because international students constitute a substantial portion of this labor force. An employer expressed concern about the impact of the IFR on the STEM and engineering labor force, noting that foreign graduates account for more than 70 percent of workers possessing a master's degree or Ph.D. in electronics engineering or related fields, according to a referenced 2018 National Center for Education Statistics Integrated Postsecondary Education Data System survey. Several of the commenters also stated the enrollment decline would reduce not only tuition revenue but also tax revenue and consumer spending.

Citing budget constraints and the importance of its work, a research organization reliant on NIH grant funding urged the Department to provide an exemption from the wage rule for ACWIA-eligible employers, which would encompass institutions of higher education and related or affiliated nonprofit entities, as well as nonprofit and governmental research organizations. The commenter added that the Department should continue to work to ''update the ACWIA wage library.''

Comments primarily from healthcare providers and academic institutions expressed concerns similar to concerns of higher education commenters. The commenters asserted the new wage rates would exceed market rates, particularly for physicians subject to a $208,000 wage in many areas and for resident physicians. Two commenters asserted university clinical programs and medical research programs did not have adequate funds to pay the increased wages and asserted this would set back important ''biomedical research during a pandemic'' and curtail their ability ''to care for and treat those afflicted.'' A professional association stated that resident physicians are physicians in training and asserted that use of the OES to determine the prevailing wage for these job opportunities would produce wages higher than the actual prevailing wage for residents.

Most of these commenters asserted the increased wages would lead to a shortage of healthcare workers, including bilingual workers and mental health professionals and would reduce the quality of and access to healthcare and the quality of care available. Several commenters expressed concern this would have a particularly significant impact on providers in rural areas that have difficulty recruiting, cannot afford to pay the same wages as employers in larger areas, and often rely on foreign workers allocated to underserved areas through the Conrad-30 waiver program. One commenter also asserted the increased wages under the IFR ''may cause elimination of the Conrad-30 waiver program'' altogether.

Several commenters expressed concern the IFR would adversely impact small employers, start-ups, and nonprofits in particular because many these employers cannot afford competitive base wages due to limited resources and instead compete based on intangibles or use incentives like stock options. One commenter asserted that ''incremental compliance costs'' for small employers would be as much as three percent of revenue in 2020–21 and that these employers would effectively ''be shut out of the H–1B visa program for new workers.'' Some commenters asserted these employers are more likely to rely on DOL issued wages than private wage surveys, either due to inability to afford the survey or because they operate in small or nonmetropolitan areas and ''private wage surveys are based on metropolitan area wages and do not cover many small market areas or less commonly utilized occupations because of data limitations.''

Many commenters expressed concern that the IFR would require employers to pay foreign workers more than the wage paid to U.S. workers or foreign workers hired prior to the IFR effective date and this would require employers to increase wages across the board due to the potential for worker resentment or decreased morale or because federal and state laws prohibiting discrimination require equal pay. For example, a professional association expressed concern that the IFR would require employers to pay the IFR wage to similarly employed workers to avoid potential pay equity claims under federal and state laws prohibiting discrimination, including Title VII of the Civil Rights Act of 1964 and a New York state law requiring equal pay for ''equal or substantially similar work.'' Similarly, some higher education commenters were concerned that they would need to pay the IFR wage to a broad range of U.S. workers due to ''pay equity demands'' or an ''actual wage analysis'' requiring payment of the higher wage to ''all comparable workers.'' Several commenters expressed general concern that the IFR would produce entry-level wages higher than wages paid to mid-career professionals or even the managers or supervisors of those workers.

By contrast, a number of commenters suggested that IFR's entry-level wage was set too low, that the entry-level wage should be placed no lower than the median of the OES distribution, and that some place even higher up within the distribution may be appropriate. A public policy organization asserted that wages ''close to and above the median . . . will ensure H–1B workers are not being sought out simply because employers can save on labor costs.'' A second public policy organization expressed concern that the pre-IFR wage level methodology that set rates below the median in the occupation ''failed to require that firms pay market wages to H–1B workers.'' A third public policy organization supported the increased wages under the IFR but expressed concern that setting the Level I wage ''just below the local median wage'' would ''permit employers to pay H–1B workers at below market wage rates.'' Similarly, a labor union and a commenter from academia supported the Department's decision to increase the Level I wage closer to the median, which the labor union asserted ''is reflective of the minimum market rate that should be paid to an H–1B worker in order to safeguard U.S. wage standards and ensure that migrant workers in H–1B status are compensated fairly.'' Another public policy organization and an academic commenter suggested the Department should increase the Level I wage to the 75th percentile and require that all H–1B job opportunities be certified ''at a wage that is no lower than the national median wage for the occupation.''

Other suggestions about how to set the wage levels included one from an anonymous commenter, who urged the Department to set the prevailing wage at the highest prevailing wage in the country for the occupation, such as requiring all employers to pay the prevailing wage for physicians in New York City if that is the highest wage among all areas in the country. The commenter believed this would ''equalize the cost to [all] employers'' and would incentivize employers to recruit in other regions of the United States before hiring foreign workers. Another anonymous commenter suggested the Department should set the wage levels at the average of the IFR and pre-IFR levels, stating this would result in wage levels at the 31st, 48th or 50th, 64th or 66th, and 81st or 83rd percentiles for Levels I through IV, respectively.

Response to Comments

At the outset, the Department notes that commenters generally did not offer data or economic justifications purporting to show that the old wage level methodology produced wages across many different occupations and geographic areas that reflect the wages paid to U.S. workers similarly employed to H–1B and PERM workers. Further, as explained above, the Department has reasonably concluded that the old wage methodology, in many instances, is a source of harm to U.S. workers' wages and job opportunities. This fact, on its own, in the Department's view, gives rise to a clear inference that the old wage levels were not set in a manner that yielded prevailing wage rates on par with market wages. Whatever merits some commenters might see in the old methodology, it is clear it did not advance the purpose of the INA's wage provisions to protect U.S. workers. Of equal importance, and a reason independently sufficient for concluding that adjustments to the old wage methodology are needed, is the fact that the old methodology, as noted previously, is in tension with the governing statute.

The need for this rulemaking clear, the question then turns to how the wage levels should be adjusted. Notably, a number of commenters agreed with the foundational premise of the IFR that the Department should set prevailing wage levels based on an assessment of what workers with similar levels of education and experience to the foreign workers covered by the four-tier wage structure are paid. As one commenter said, ''DOL reasonably claims that a well-functioning system for prevailing wages determinations would find that the wages that need to be paid for foreign national workers subject to these requirements 'generally should approximate the going wage for workers with similar qualifications and performing the same types of job duties in a given labor market.' '' This commenter, and others, therefore did not disagree with the aim of the IFR, but rather simply claimed that the Department had overshot the mark and adjusted the wage levels so high that they do not reflect actual market wages.

The Department agrees with these commenters, and the reasoning in the IFR, that prevailing wage rates produced by the four-tier wage structure should approximate actual market wages to the greatest extent possible. The Department also takes seriously commenters' concerns that the IFR's wage levels may yield prevailing wage rates that do not meet that goal. It has therefore taken into account data and analysis provided by commenters to supplement and inform the analysis used in the IFR. Based on this reassessment of the conclusions it reached in the IFR, the Department has determined that it is appropriate to reduce the entry-level wage from the mean of the fifth decile, or the 45th percentile, to the 35th percentile. Doing so will, in the Department's expert judgment, and based on a review of the relevant data sources, including those provided by commenters, result in entry-level prevailing wage rates that approximate the wages paid to U.S. workers similarly employed to H–1B and PERM workers.

While the Department believes that data and analysis provided by commenters warrants a reassessment of the IFR's wage levels, the Department, as discussed in detail above, has determined that the analytical framework relied on in the IFR remains the appropriate lens through which to understand how the levels should be set.

While the INA provides the relevant factors and general framework by which the wage levels are to be set, it leaves the precise manner in which this is accomplished, including the types of data and evidence to be used and how such data and evidence are weighed, to the Department's discretion and expert judgment. In exercising that discretion, the Department's decision on how to adjust the wage levels is informed by the statute's purpose of protecting the wages and job opportunities of U.S. workers. This means the Department has focused its analysis on those areas where the risk to U.S. workers is most acute, taken into account how the foreign labor programs are actually used by employers, and, where appropriate, resolved doubts in favor of refining the wage calculations so as to eliminate to the greatest extent reasonably possible adverse effects on U.S. workers caused by the employment of foreign workers, while also ensuring that the program is still accessible to employers.

As explained in the IFR, to determine the wages typically made by individuals having comparable levels of education, experience, and responsibility to the prototypical entry-level H–1B and EB–2 workers and working in the most common H–1B and PERM occupations, the Department consulted a variety of data sources, most importantly wage data on individuals with master's degrees or higher and limited years of work experience—the type of worker the Department determined to be an appropriate wage comparator for entry-level H–1B and EB–2 workers—from the 2016, 2017, and 2018 CPS [170] conducted by the U.S. Census Bureau, and data on the salaries of recent graduates of master's degree programs in STEM occupations garnered from surveys conducted by the NSF in 2015 and 2017. Both of these surveys represent the highest standards of data collection and analysis performed by the federal government. Both surveys have large sample sizes that have been methodically collected and are consistently used not just across the federal government for purposes of analysis and policymaking but by academia and the broader public as well.

In the case of the CPS survey, the Department used a wage prediction model to identify the wages an individual with a master's degree or higher and little-to-no work experience (based on age) would be expected to make and matched the predicted wage with the corresponding point on the OES wage distribution. Using the NSF surveys, the Department calculated the average wage of individuals who recently graduated from STEM master's degree programs and matched the average wage against the corresponding point on the OES distribution.

These analyses located three points within the OES wage distribution at which the wages of U.S. workers with similar levels of education and experience to the prototypical entry-level workers in specialty occupations and the EB–2 program are likely to fall. In particular, the 2015 NSF survey data indicate that workers in some of the most common H–1B and PERM occupations with a master's degree and little-to-no relevant work experience are likely to make wages at or near the 49th percentile of the OES distribution.[171]

[170] The CPS, sponsored jointly by the U.S. Census Bureau and BLS, is the primary source of labor force statistics for the population of the U.S. *See* United States Census Bureau, Current Population Survey, available at *https://www.census.gov/programs-surveys/cps.html.*

[171] For the CPS data, the Department looked at the wages of workers in all occupations that account for 1 percent or more of the total H–1B population. These occupations also account for the majority of PERM workers. For the NSF data the Department examined the wages of workers in 11 of the most common (in the top 17) occupational codes for H–

The 2017 NSF survey suggests that these workers are likely to make wages at or near the 46th percentile of the OES distribution. On the low end, the CPS data suggest that such individuals make wages at or near the 32nd percentile.

The Department thus identified a range within the OES data wherein fall the wages of workers who, while being relatively junior within their occupations, clearly possess the kinds of specialized education and/or experience that the vast majority of foreign workers covered by the Department's wage structure are, at a minimum, required to have.[172] Put another way, through an assessment of the experience and education generally possessed by some of the least skilled and least experienced H–1B and EB–2 workers—workers who are likely entry-level workers within their respective programs—the Department determined what U.S. workers with similar levels of education and experience are likely paid. Accordingly, it is appropriate for the wages paid to such U.S. workers to govern the entry-level prevailing wage paid under the Department's wage structure.[173]

In the IFR, the Department explained that translating the identified range into an entry-level wage for the Department's use in the H–1B and PERM programs could be accomplished in a number of ways. One option would be to simply calculate the average wage of all workers that fall within the range, meaning those workers whose reported wage falls between the 32nd and 49th percentiles, which would place the entry-level wage at approximately just above the 40th percentile. An alternative would be to identify a subset of wages within the range—either on the lower end or the higher end of the range—and calculate the average wage paid to workers within such subset. Because of the greater suitability of the NSF data for the Department's purposes, likely distortions in the wage data of both surveys caused by the presence of lower-paid foreign workers in the relevant labor markets, and the purposes of the INA's wage protections, the Department determined in the IFR that the most appropriate course was to set the entry-level wage by calculating the average of a subset of the data located at the higher end of the identified wage range. This resulted in the entry-level wage being placed at approximately the 45th percentile. Notably, commenters did not dispute these three qualitative considerations the Department offered for why it favored the higher end of the range.

The Department therefore continues to believe that the reasoning that led it to set the entry-level wage at the higher end of the identified range remains relevant to its decision in this rule. For one thing, as between the two data sources and the manner in which they were analyzed, the NSF data are better tailored to the Department's purposes in identifying an entry-level wage for the H–1B program. The NSF surveys provide data on the wages of individuals with degrees directly relevant to the specialized occupations in which they are working, namely degrees in STEM fields. By contrast, the CPS data only show whether a person does or does not have a master's degree and does not identify what field the master's degree or the individual's undergraduate course of study was in. It is therefore likely that some of the wage data relied on in generating the CPS estimate were based on the earnings of individuals who possess degrees not directly related to the occupation in which they work. Given that the CPS data used only accounted for persons with little-to-no experience, such individuals would therefore be unlikely to have the qualifications needed to work in a ''specialty occupation,'' as that term is defined in the INA. Having neither a specialized degree nor experience, and therefore lacking in specialized skills or expertise, at least with respect to the occupations in which they work, such individuals would not qualify as similarly employed to even the least skilled H–1B workers and are thus not appropriate comparators for identifying an entry-level wage in the H–1B program. Because of these workers' relative lack of skill and expertise, they are likely to command lower wages, and thus decrease the predicted wage below what would be an appropriate entry-level wage for the Department's foreign labor programs.

Relatedly, the Department's method for approximating experience in the CPS data is also not as closely tailored to the goal of determining what U.S. workers similarly employed to the prototypical entry-level H–1B and EB–2 workers are paid as is the NSF data. The CPS analysis relied on potential experience as a proxy for actual experience, which was calculated using a standard formula of subtracting from individuals' ages their years of education and six, based on the common assumption that most individuals start their education at the age of six.[174] While a standard measure for potential experience, this method of approximation is imprecise because it shows each individual of the same age and education level as having the same level of work experience. In reality, such individuals may vary significantly in their levels of experience.

For starters, the approximation does not take into account the possibility of a worker temporarily exiting the workforce, and would count the time spent outside the workforce as work experience. It also does not account for gaps between when a person received his or her bachelor's degree and when he or she enrolled in a master's degree program. In such cases, the work experience captured by the proxy of potential experience may thus not be directly relevant to the work a person performs after he or she graduates from a master's degree program since in some cases the work experience in question was likely acquired before the individual enrolled in a master's degree program. In consequence, the sample used in the CPS analysis almost certainly includes some individuals who have no relevant experience in the specialized occupations in which they are working, which likely decreases the wage estimate calculated using the CPS data and makes it a less precise and reliable estimation of the wages of U.S. workers with similar levels of education and experience to the prototypical, entry-level H–1B and EB–2 workers. In other words, the CPS data allows for

1B workers that were convertible to the occupational code convention of the NSF, which account for approximately 63 percent of all H–1B workers, according to data from USCIS.

[172] The Department notes again by way of clarification that it is not suggesting that possession of a master's degree is required to work in a specialty occupation. Rather, as explained above, possession of a master's degree by someone with little-to-no relevant work experience is being employed as a useable proxy, for analytical purposes, of the level of education and experience that approximates the baseline level of specialized knowledge needed to work in the H–1B and EB–2 programs and that many entry-level workers in those programs actually possess. Again, the Department notes that master's degree holders have, in recent years, been the largest educational cohort within the H–1B program, accounting in FY2019 for over fifty percent of new H–1B workers. *See* U.S. Citizenship and Immigration Services, Characteristics of H–1B Specialty Occupation Workers Fiscal Year 2019 Annual Report to Congress October 1, 2018—September 30, 2019, (2020), *available at https://www.uscis.gov/sites/default/files/document/reports/Characteristics_of_Specialty_Occupation_Workers_H-1B_Fiscal_Year_2019.pdf.*

[173] *See* 8 U.S.C. 1182(a)(5)(A) (requiring the Secretary to certify that the employment of immigrants seeking EB–2 classification ''will not adversely affect the *wages* and working conditions *of workers in the United States similarly employed*) (emphasis added); 8 U.S.C. 1182(n)(1)(A)(i) (requiring prospective H–1B employers to offer and pay at least the actual wage level or ''the prevailing wage level for the occupational classification in the area of employment'').

[174] For example, under this metric, a 30 year old individual with 18 years' worth of education would be counted as having six years of work experience.

only a rough approximation of experience—a key factor the Department must take into account in adjusting the prevailing wage levels. This, in combination with the fact that some workers contained within the CPS dataset likely also lack specialized education relevant to the occupations in which they work, means that CPS data is, in some degree, distorted by wage earners who should be discounted in identifying the appropriate entry-level wage because they likely possess neither the type of specialized experience nor the education in their field that is comparable to that possessed by entry-level H–1B and EB–2 workers.

The NSF survey data, by contrast, are uniquely suited to the Department's purposes. The NSF surveys in 2015 and 2017 capture wage data about exactly the sort of workers the Department has determined serve as the appropriate comparators for entry-level H–1B and EB–2 workers. They surveyed individuals with master's degrees in STEM fields who are working in STEM occupations, including some of the most common H–1B and PERM occupations, and who are approximately three years or less out of their master's degree programs. In other words, the NSF surveys report wage data for individuals with specialized knowledge and expertise working in the occupations in which H–1B and PERM workers are most often employed and who are relatively junior within their respective occupations. The NSF data therefore provide a more accurate wage profile of workers similarly employed to entry-level H–1B and EB–2 workers. While both data sources are useful in helping determine a wage range for entry-level H–1B and PERM workers, of the two, the NSF surveys provide information more relevant to the Department's assessment of what is the appropriate entry-level wage. Therefore, the Department's analysis relies more on the NSF surveys. This weighs in favor of placing the entry-level wage higher up in the identified wage range given that is where the NSF survey results fall.

Beyond the relative weight of each data source, the Department also takes into account in identifying the appropriate entry-level wage the fact that both sources are likely distorted to some degree by the presence, in both the surveyed population and the labor market as a whole, of the very foreign workers the Department has determined are, in some instances, paid wages below the market rate. As noted above, various studies and data demonstrate that some H–1B workers are paid wages substantially below the wages paid to their U.S. counterparts, and that this has a suppressive effect on the wages of U.S. workers. Further, these adverse effects are most likely to occur and be severe in occupations with higher concentrations of foreign workers. It is therefore relevant to how the Department weighs the data that many of the occupations examined in the analyses of the NSF and CPS datasets have very high concentrations of H–1B workers. H–1B nonimmigrants make up about 10 percent of the total IT labor force in the U.S.[175] In certain fields, including software developers, applications (22 percent); statisticians (22 percent); computer occupations, all other (18 percent); and computer systems analysts (12 percent), H–1B workers likely make up an even higher percentage of the overall workforce.[176]

From this, the Department draws two conclusions. First, the respondents reporting wages in the CPS and NSF surveys are likely in some cases H–1B or PERM workers, given that both surveys contain responses from both U.S. citizens and noncitizens and the surveyed occupations have high concentrations of such foreign workers. The reported wages are thus in some instances likely not the market wage paid to U.S. workers similarly employed to H–1B and PERM workers, but rather the wages of the foreign workers themselves, which, as discussed previously, will be likely lower than the wages of U.S. workers in some cases. Second, even the reported wages of respondents who are not H–1B and PERM workers are likely not perfectly accurate reflections of what the market rate would be absent wage suppression given that high concentrations of lower-paid foreign workers likely decrease the overall average wage paid in the relevant labor market, as detailed above.

The need to account for these distortions also weighs in favor of setting the entry-level wage at the higher end of the identified wage range. To discount this consideration would mean that, far from ensuring that the adjusted wage levels guard against adverse effects on U.S. workers caused by the presence and availability of lower-cost foreign labor, the Department would, to some degree, be basing its regulations on a preexisting distortion caused by the old, flawed wage methodology.[177]

Finally, the purpose of the relevant INA authorities, particularly the prevailing wage requirement, also weighs in favor of adjusting the entry-level wage higher up within the identified wage range. As emphasized throughout, the guiding purpose of the INA's prevailing wage requirements is to ''protect U.S. workers' wages and eliminate any economic incentive or advantage in hiring temporary foreign workers.'' [178] Giving due weight to the purpose of the statutory scheme suggests, in the Department's judgment, that uncertainties should, to some extent, be resolved so as to eliminate the risk of adverse effects on U.S. workers' wages and job opportunities. That also countenances in favor of placing the entry-level wage at the higher end of the wage range.

However, in response to the IFR commenters provided the Department with additional data and considerations, which have led the Department to modify the wage levels established in the IFR. As noted, the principal concern commenters expressed about the IFR was that the wages it produces are significantly higher than the actual market wages employers pay their workers. To substantiate this criticism, various commenters offered wage figures from private and public wage surveys, and, in some instances, reported what specific employers pay their workers. The wage data from commenters analyzed by the

[175] The Department estimated the share of H–1B workers in the IT sector by tallying the total number of computer occupation workers in the U.S., subtracting those workers that fill positions for which H–1B workers are generally ineligible, and dividing the total by the total number of H–1B workers likely working in computer occupations, based on data and reports issued by USCIS. *See* Bureau of Labor Statistics, Employment by Detailed Occupation, *https://www.bls.gov/emp/tables/emp-by-detailed-occupation.htm;* United States Citizenship and Immigration Services, H–1B Authorized-to-Work Population Estimate, (2020), *available at https://www.uscis.gov/sites/default/files/document/reports/USCIS%20H-1B%20Authorized%20to%20Work%20Report.pdf;* United States Citizenship and Immigration Services, Characteristics of H–1B Specialty Occupation Workers: Fiscal Year 2019 Annual Report to Congress October 1, 2018–September 30, 2019, (2020), *available at https://www.uscis.gov/sites/default/files/document/reports/Characteristics_of_Specialty_Occupation_Workers_H-1B_Fiscal_Year_2019.pdf.*

[176] These findings come from data provided by USCIS and the 2017 Occupational Employment Statistics survey from the Bureau of Labor Statistics. They are based the total number of H–1B workers according the FY19 USCIS tracker data within a SOC code divided by the 2017 OES estimate of total workers in a SOC code.

[178] *Labor Condition Applications and Requirements for Employers Using Nonimmigrants on H–1B Visas in Specialty Occupations and as Fashion Models; Labor Certification Process for Permanent Employment of Aliens in the United States,* 65 FR 80,110 (Dec. 20, 2000).

Department generally dealt with wages paid to what commenters represented to be starting or entry-level positions.

To allow for a meaningful comparison with the wage figures used in the IFR, the Department selected a cross section of the wage data provided by commenters and used the same mode of analysis it used in the IFR to match those figures with percentiles in the OES. In particular, it compared annual wage data offered for specific jobs in specific metropolitan areas with OES data for the occupation in which the job falls in the same metropolitan area. OES data provides annual wage data for the 10th, 25th, 50th, 75th, and 90th percentiles for occupations at national, state, and metropolitan area levels. Using these data, the Department interpolated annual wages data provided by commenters at each of the missing percentiles between the 10th and the 25th, the 25th and the 50th, the 50th and the 75th, and the 75th and the 90th percentiles. This allowed the Department to approximate the specific percentile at which the wages offered by employers fall.

In general, the Department found that the annual wage data for specific jobs in specific metropolitan areas offered by commenters were clustered around percentiles in the 30s. Some annual wage data offered by commenters fell in lower percentiles, and a few fell higher in the distribution.

A number of commenters cited annual wage data based on salary offers for L3 software developers with no relevant work experience from major employers that are significant users of H–1B workers in the Seattle-Tacoma-Bellevue, WA Metropolitan Statistical Area (MSA) and San Jose-Sunnyvale-Santa Clara, CA. These offers ranged between the 25th percentile and 42nd percentile of the OES distribution. Excluding the lowest offer and the highest offer, most offers were clustered between the 32nd percentile and 41st percentile.

One commenter cited annual wage data from Glassdoor for entry-level tax managers at public accounting firms in the New York-Newark-Jersey City, NY-NJ-PA MSA. The Department found that the annual wage was between 33rd percentile and the 34th percentile. Another commenter offered Indeed and Payscale annual wage data for accountants in the Dallas-Fort Worth-Arlington, TX MSA. Using the higher annual wages from the two surveys, annual wages were between the 19th percentile and the 20th percentile.

One comment cited Glassdoor, Payscale, and ZipRecruiter data for minimum and maximum annual wages for statisticians in the New York-Newark-Jersey City, NY-NJ-PA MSA. Review of this data showed the minimum annual wages were less than the 10th percentile. Another comment cited Glassdoor average annual wage data for financial analysts with no experience in in the Dallas-Fort Worth-Arlington, TX MSA, which showed that the average annual wages were between the 31st percentile and 32nd percentile.

A commenter cited annual wages offered by a major university in the Bloomington, IN MSA. Because of data limitations in the OES, the Department could only compare the annual wages for the computer system analyst position provided by the commenter. The Department found that the annual wages for this position were between the 68th percentile and 69th percentile.

A commenter cited the annual wages of an assistant professor of clinical pediatrics/physician surgeon at a major university in the Chicago-Naperville-Elgin, IL-IN-WI MSA. The Department found the annual wages were between the 44th percentile and the 45th percentile.

One commenter cited the annual wages of four employees of a major university in the Salt Lake City, UT MSA: (1) A computer and information research scientist, (2) a database architect, (3) a foreign language instructor, and (4) a pediatric endocrinologist. The Department found that these annual wages were (1) between the 36th percentile and the 37th percentile, (2) between the 32 percentile and the 33rd percentile, (3) between the 12th percentile and 13th percentile, and (4) between the 34th percentile and the 35th percentile, respectively.

Another commenter cited Glassdoor annual wage data for a structural engineer with four to six years of experience in the Boston-Cambridge-Nashua, MA-NH MSA. The Department found that the annual wages were between the 24th percentile and the 25th percentile.

One commenter cited Willis Tower Watson private wage survey data for eight jobs in different metropolitan area that compare with Level 1 and Level 4 OES. The Department focused on the Level 1 data and found the following:

| Job | OES code | Metro | Percentile below | Percentile above |
|---|---|---|---|---|
| Electrical Engineer | 17–2017 | San Jose-Sunnyvale-Santa Clara, CA | Less than 10 | |
| Computer Programmer | 15–1251 | Chicago-Naperville-Elgin, IL-IN-WI MSA | 32 | 33 |
| Financial Analyst | 13–2098 | New York-Newark-Jersey City, NY-NJ-PA MSA. | 10 | 11 |
| Software Developer | 15–1256 | New York-Newark-Jersey City, NY-NJ-PA MSA. | 14 | 15 |
| Information Security Analyst | 15–1212 | Chicago-Naperville-Elgin, IL-IN-WI MSA | 16 | 17 |
| Software Developer | 15–1256 | Los Angeles-Long Beach-Anaheim, CA | 11 | 12 |
| Electrical Engineer | 17–2071 | Los Angeles-Long Beach-Anaheim, CA | 21 | 22 |

In sum, most of the wage data offered by commenters was for salaries paid by employers to entry-level workers in positions typically filled by H–1B workers. While there are outliers, most of these wage observations fell between the 30th and 40th percentiles of the OES distribution. Importantly, wage data about entry-level software developers employed by some of the largest users of the H–1B program fell between the 32nd and 41st percentiles. This is noteworthy given that such data may allow for the closest comparison to the IFR's data of all the private wage data submitted by commenters. This is because, as noted above, the IFR's analysis also focused on software developers and other occupations in the IT sector to account for the fact that such occupations comprise the largest share of the relevant programs.

It is also notable, in the Department's judgment, that, while the wage data submitted by commenters tends to be lower on the OES distribution than the IFR's 45th percentile entry-level wage, it still generally falls within the wage range between the 32nd and 49th percentiles identified by the IFR as the portion of the OES distribution where U.S. workers similarly employed to entry-level H–1B workers are likely to be found. From this, the Department draws two conclusions. First, the IFR's determination that wages paid to workers similarly employed to entry-level H–1B and PERM workers likely fall in this range seems to be largely accurate. While there are outliers in the wage data provided by commenters that fall both well above and well below the range, the data from commenters does not give the Department reason to abandon its conclusion in the IFR that some point within that range will serve as the appropriate entry-level wage.

Second, while consistent with the IFR's wage range, the commenters' data suggests, contrary to the IFR's reasoning, that the lower half, as opposed to the upper half of the range, would be a more appropriate place to set the entry-level wage. While the IFR offered a variety of reasons for why the NSF data, which falls at the higher end of the range, were likely better suited as compared to the CPS data for informing the Department's decision about where to set the entry-level wage, and the Department still views those considerations as relevant, the commenters' data suggests otherwise. As noted, the CPS data suggest that a point closer to the 32nd percentile would be the appropriate place to set the entry-level wage, which many data from commenters would seem to confirm.

As was the case in the IFR, the Department does not evaluate the data from either the government sources it analyzed or the private wage data submitted by commenters in a vacuum. Various qualitative considerations, including key points raised by commenters, shape the Department's assessment of what conclusions to derive from this data.

First, DOL regulations and guidance establish quality standards for the use of private wage sources in setting prevailing wage rates.[179] Some of the private wage sources provided by commenters—particularly the comments that offer a single example of a wage paid by one employer in one geographic area—would almost certainly not satisfy these standards if an employer sought to use them to establish a wage rate for its H–1B workers. These data are therefore arguably entitled to less weight than the data relied on in the IFR. Similarly, even as to the private wage survey sources offered by commenters that may satisfy DOL's standards, the NSF and CPS data are, in the Department's judgment, of higher quality. These are highly credible government surveys administered by agencies with extensive experience in gathering wage data. This too suggests that the data provided by commenters is entitled to less weight in the Department's analysis than the data used in the IFR.

Similarly, as explained above, the analysis used in the IFR controlled for characteristics relevant to setting a wage rate under the INA's framework. Because the Department is seeking to set an appropriate wage primarily for workers in specialty occupations—not for workers generally—the IFR took, among other things, the INA's minimum qualification requirements for working in a specialty occupation into account in deciding what data to use. It is at best unclear whether some of the surveys offered by commenters are also limited to workers who could be described as working in a specialty occupation, and therefore similarly employed to H–1B workers. For example, while data from one commenter suggest that an entry-level computer programmer working in the Chicago area makes wages that fall between the 32nd and 33rd percentiles of the OES distribution, computer programmers will likely not in all cases be properly regarded as working in a specialty occupation. For example, in some cases, the job of a computer programmer may involve writing basic computer code and testing it.[180] As explained previously, because a person without a specialized bachelor's degree can still be classified as a Computer Programmer, some portion of Computer Programmers captured by the OES survey are not similarly employed to H–1B workers because the baseline qualifications to enter the occupation do not match the statutory requirements. It is therefore possible that the computer programmer described as an entry-level worker by the commenter may not in fact have the same level of qualifications as an entry-level H–1B computer programmer. In such cases, the wage data provided by commenters, being based on the wages paid to workers who lack the specialized knowledge required of H–1B workers, is likely below the level that would be an appropriate entry-level wage for the Department's foreign labor programs. This, in turn, suggests that the data provided by commenters are entitled to less weight than the IFR's analysis, which controlled for the INA's specialty occupation requirement, and may also explain some of the extreme outliers at the lower end of the OES distribution found among commenters' data.

Relatedly, some of the commenters' private wage surveys report the bare minimum wage paid to workers in the occupation as the entry-level wage. Given that entry-level workers typically fall within a range of the wage data, as opposed to falling only at the very low end of the distribution, some of the private wage data arguably does not represent what would count as a reasonable entry-level wage, even if some portion of entry-level workers do in fact make wages at the bottom end of the distribution. Indeed, as the Department explained above, the purpose of the INA's wage provisions to protect U.S. workers suggests that uncertainty over how to read available wage data should be resolved in favor of placing the entry-level wage higher up within the distribution to eliminate as much as possible risks to U.S. workers from the employment of foreign labor. Yet these private wage sources do just the opposite, offering what is the absolute bare minimum wage that an entry-level worker might be expected to make. This too likely accounts for some of the outliers in the commenters' data that fall below the IFR's identified wage range, and suggests a wage higher up within the range should be selected.

On the other side of the equation, and in addition to the data they provided, commenters have provided the Department with various considerations that pull in the direction of favoring the lower end of the IFR's wage range. As explained previously, commenters detailed various second and third order consequences that would result if prevailing wage rates do not approximate actual market wages. These consequences include limiting healthcare providers', universities', and small businesses' ability to use the H–1B program, which would, in turn, disrupt research and impede access to healthcare, particularly in rural areas. Commenters also expressed concerns about the effect overly inflated prevailing wages would have on their ability to comply with pay equity laws. The Department takes these concerns seriously, and has determined that they weigh in favor of placing the entry-level wage at the lower end of the range identified by the IFR.

To begin with, the Department notes that many if not all of these problems are eliminated if prevailing wages rates are set in line with actual market wages. Each of these issues arises principally because, according to commenters, the IFR's wages do not approximate market wages. Setting an appropriate entry-level wage based on available data and

[179] *See* 20 CFR 655.731(b)(3)(iii)(B) and (C); § 656.40(g).

[180] Bureau of Labor Statistics, Occupational Outlook Handbook, Computer Programmers, *available at https://www.bls.gov/ooh/computer-and-information-technology/computer-programmers.htm.*

other relevant considerations is thus the appropriate way to address these concerns.

As explained previously, the Department continues to believe that the range identified by the IFR accurately reflects the portion of the OES distribution where workers with levels of education, experience, and responsibility similar to the vast run of entry-level H–1B and PERM workers likely fall—something that commenters' wage data largely confirms. However, as the Department has also acknowledged, there is some level of indeterminacy about the exact point in that range at which placing the entry-level wage will yield optimal outcomes in the largest number of cases given that different data sources point toward somewhat different conclusions. In the IFR, the Department reasoned that the purpose of the INA's wage provisions to protect U.S. workers warranted resolving such indeterminacy in favor of placing the wage higher up within the range. However, the Department also recognizes that a purpose of the H–1B program more generally is to ensure that employers can access needed high-skilled labor to supplement their workforces.[181] Given that prevailing wage rates that are substantially above actual market wages can impede employers' access to the program, and cause various problematic, secondary consequences, the importance of avoiding such outcomes weighs in favor of resolving indeterminacy in favor of the lower end of the identified range. While the INA's wage provisions must be implemented in a way that fully protects U.S. workers' wages, raising wages to such a degree that the program becomes unusable for many employers defeats the entire reason Congress created the program. Placing the entry-level wage at a lower point within the range is one way to ensure that does not occur.

Relatedly, because the four-tier wage structure covers hundreds of thousands of workers employed across hundreds of different occupations by a wide variety of different employers, there is some level of variability as between different workers and what would constitute an appropriate entry-level wage for each of them. As explained above, in establishing the identified range, the Department focused its analysis on those occupations that account for the largest number of workers covered by the four-tier wage structure. The Department continues to believe this is appropriate given that occupations with large numbers of foreign workers are where U.S. workers are most at risk of experiencing adverse wage effects due to competition from foreign labor. However, the Department also acknowledges that some occupations, such as physicians, that account for a smaller share of H–1B and PERM workers and are therefore given less weight in how the Department identified the entry-level wage range, may have entry-level market wages that are somewhat lower within the OES distribution than the top H–1B occupations. This is because, as commenters explained, occupations like physicians typically require all workers in them to possess an advanced degree, meaning that, while in the top H–1B occupations the INA's specialty occupation requirement will generally mean that wages paid to H–1B workers should be placed higher up within the OES distribution, that is less true of advanced degree occupations. Workers in such occupations with qualifications similar to the least skilled H–1B worker might be found closer to the lower end of the OES distribution.

In consequence, while the analysis used to identify the entry-level wage range largely focused on top H–1B occupations, the decision of where within that range the entry-level wage should be set should give additional weight to occupations that account for a smaller number of workers within the program, particularly the advanced degree occupations about which commenters raised concerns. This suggests that the lower end of the entry-level range would be a more appropriate point to place the first wage level. Indeed, the Department notes that data from at least one commenter about the starting salary of a pediatric endocrinologist—which falls between the 34th and the 35th percentiles of the OES distribution—suggest that the lower end of the range may yield an appropriate entry-level wage for some positions in advanced degree occupations. Further, as discussed previously, some commenters suggested that the bottom third of the distribution for advanced degree occupations consists of entry-level workers similarly employed to H–1B workers. If commenters are correct, that means that the lowest points within the entry-level range identified by the Department does in fact cover the highest paid entry-level workers in such occupations.

Accounting for small businesses and rural employers that use the H–1B and PERM programs in selecting a point within the entry-level range identified by the Department also weighs in favor of the lower part of the range. As commenters note, large employers are able in some cases pay higher wages than small businesses. Further, wages in metropolitan areas may be higher to the extent that these are high-intensity occupational areas. The Department notes that some of these differences are already accounted for by other aspects of the regulatory framework governing prevailing wage rates. In particular, the Department issues wages based not only on the occupation a worker is in, but also on the geographic area in which the worker is employed. Thus, for example, while the wage data described above from large tech companies fall between the 32nd and 41st percentiles of the wage data gathered for the metropolitan areas in which those firms operate, such data fall well above the 60th percentile of the national OES wage distribution. By taking geographic area into account in analyzing what the appropriate entry-level wage is, the Department has thus, to some degree, already accounted for the differences between employers about which some commenters expressed concern. However, the Department also recognizes that higher wages may still be less manageable for small businesses and rural employers, which suggests that the lower part of the entry-level range would be appropriate.

Moreover, the Department acknowledges that placing the entry-level wage at any place within the identified range—even the lowest point—will result in significant wage increases for employers that may, in some cases, be difficult to adapt to given how long the old wage methodology has been in place. As detailed at greater length below, the Department is addressing this concern by phasing in the new wage rates over a period of time. However, the Department also believes that, even with a phased-in approach, the ability of employers to adapt to a significant change is relevant to the decision of where to set the entry-level wage. Insofar as a smaller increase—albeit one that is still substantial—will be more manageable for employers, the Department considers that also to be a reason to favor the lower end of the range.

On balance, the Department has determined that the factors pointing to the lower end of the identified range carry greater weight than the reasoning relied on in the IFR to select the higher end of the range. Accounting for advanced degree occupations, employers' ability to access the program and adapt to the change effected by this rule, and private wage data are all compelling considerations put forward by commenters that, in the Department's judgment, warrant a reassessment of its

[181] *See* 144 Cong. Rec. S12741–04, 144 Cong. Rec. S12741–04, S12749, 1998 WL 734046.

decision in the IFR. Thus, while in the IFR the Department chose to set the entry-level wage at approximately the 45th percentile, which fell at approximately the midpoint of the upper half of the entry-level range, the Department is now adjusting the level downward to approximately the midpoint of the lower half of the range, which is the 35th percentile.

Importantly, setting the wage at the 35th percentile will, in the Department's view, still provide the full protection to U.S. workers contemplated by the INA. The 35th percentile falls within the range identified in the IFR as the portion of the OES distribution where workers with qualifications comparable to entry-level H–1B and PERM workers are likely to fall. The manner in which the Department identified that range, as recounted above, relied on a variety of considerations, including the INA's specialty occupation requirement and how that interplays with the OES data, to ensure that the interests of U.S. workers are fully and properly accounted for in how the wage levels are set. As a result, while lower than the level set in the IFR, the 35th percentile will still achieve the purpose of the INA's wage provisions. While a point higher up within the range may also be reasonable, and the Department may reassess how to set the entry-level wage as it gains experience administering the entry-level at the 35th percentile, the Department believes that the 35th percentile strikes the right balance between fully protecting workers' wages and job opportunities while also preserving employers' ability to access the program.

By favoring the lower end of the range, the Department is confident the second and third order consequences identified by commenters as a product of prevailing wage rates that are inflated above actual market wages will be reduced if not eliminated by the downward adjustment in the entry-level wage. The Department notes that the downward adjustment is substantial. To compare the effects of the final rule on prevailing wages with the effects on prevailing wages produced by the IFR, the Department calculated the prevailing wages for two common occupations for H–1B workers (web develops and electrical engineers) in five metropolitan area (Atlanta-Sandy Springs-Roswell, GA; Austin-Round Rock, TX; Chicago-Naperville-Elgin, IL-IN-WI; San Jose-Sunnyvale-Santa Clara, CA; and Seattle-Tacoma-Bellevue, WA) under the IFR and the final rule. The Department then analyzed the differences. Comparing the prevailing wages under the final rule and interim final rule, the Department found that the prevailing wages are significantly lower under the final rule for both occupations in all five metropolitan areas at all four levels expect for the prevailing wage for level 4 web developers in Seattle, which is $7,322 or 3.8% higher (see table below).

| MSA | Occupation | Level 1 | | Level 2 | | Level 3 | | Level 4 | |
|---|---|---|---|---|---|---|---|---|---|
| Atlanta-Sandy Springs-Roswell, GA | Web Developer | −$11,648 | −13.1% | −$12,370 | −11.6% | −$13,114 | −10.6% | −$13,836 | −9.8% |
| Atlanta-Sandy Springs-Roswell, GA | Electrical Engineer | −11,635 | −12.6% | −13,743 | −11.6% | −15,851 | −11.0% | −17,960 | −10.6% |
| Austin-Round Rock, TX | Web Developer | −4,235 | −5.9% | −7,805 | −8.2% | −11,355 | −9.5% | −14,926 | −10.5% |
| Austin-Round Rock, TX | Electrical Engineer | −2,732 | −3.0% | −9,165 | −7.6% | −15,576 | −10.5% | −22,009 | −12.4% |
| Chicago-Naperville-Elgin, IL-IN-WI | Web Developer | −27,280 | −29.6% | −29,138 | −25.6% | −30,974 | −22.9% | −32,831 | −20.9% |
| Chicago-Naperville-Elgin, IL-IN-WI | Electrical Engineer | −9,720 | −10.5% | −15,301 | −13.2% | −20,881 | −15.1% | −26,462 | −16.4% |
| San Jose-Sunnyvale-Santa Clara, CA | Web Developer | −9,157 | −10.2% | −11,963 | −10.0% | −14,769 | −9.9% | −17,576 | −9.9% |
| San Jose-Sunnyvale-Santa Clara, CA | Electrical Engineer | −5,420 | −4.5% | −18,039 | −11.1% | −30,680 | −15.0% | −43,299 | −17.6% |
| Seattle-Tacoma-Bellevue, WA | Web Developer | −20,876 | −14.6% | −11,477 | −7.2% | −2,078 | −1.2% | 7,322 | 3.8% |
| Seattle-Tacoma-Bellevue, WA | Electrical Engineer | −16,485 | −14.1% | −21,561 | −14.8% | −26,617 | −15.2% | −31,693 | −15.4% |

Further, the Department notes that many of commenters' concerns are also addressed by other measures the Department is taking in this final rule. For example, commenters' complaints about overly inflated wages for physicians, particularly in rural areas, focused in many cases on the fact that the IFR resulted in a default wage of $208,000 a year for all four levels in a number of different locations. As detailed more fully below, the Department is eliminating the influence of outliers on the upper level wage, reducing the upper level wage, and providing a default rule for cases where BLS is unable to calculate the upper level wage to ensure that the Department provides leveled wages wherever possible. These measures will further alleviate complications healthcare providers and other employers in rural areas encountered under the IFR.

The Department disagrees with comments that suggested that the median of the OES distribution should be the absolute minimum for the entry-level wage, and that some point even higher up in the distribution might be appropriate. The purpose of having a four-tier wage structure is to provide gradually increasing wages as workers skill levels increase. The entry-level wage should therefore be set not based on what the median wage is of all workers, but rather based on an assessment of what other entry-level workers with qualifications comparable to H–1B and PERM workers possess. As detailed at length above, the Department's review of the relevant data and other considerations indicates that a point below the median is the right place to set the entry-level wage.

The Department also rejects other alternatives suggested by commenters. For example, the recommendation that the Department set wages by averaging the IFR's wage levels with the old wage levels is flawed because, as noted, the old wage levels were selected arbitrarily, and therefore should not be a significant factor in how the Department determines the new wage levels, except insofar as the Department takes into account employers' and workers' reliance interests in the prior methodology. The Department also disagrees with the commenter that suggested that the prevailing wage should be the highest prevailing wage in the nation for any given occupation. Doing so would ignore the importance variations in labor markets by geographic area have long played in how prevailing wage rates are provided, as well as the statutory requirement that prevailing wage rates be based in part on geographic area.

4. Reliance Interests

Summary of Comments

Many commenters expressed concern about the IFR's negative impact on current H–1B visa holders in the United States, especially those with families and strong ties in the United States and those with pending or approved I–140 Immigrant Petitions for Alien Workers or pending I–485 Applications to Register Permanent Residence or Adjust Status (''green cards''). Several commenters discussed the impact on foreign workers who had expected to continue working in the United States and for some, obtain lawful permanent status through their employer. Commenters expressed concern that employers would terminate H–1B visa holders and ''potential green-card recipients'' would have to leave the country. An individual commenter asserted that the IFR would inhibit job opportunities for international graduates of U.S. universities, regardless of their capabilities, and contended that the new wage levels would disincentivize legal immigration. Similarly, another individual commenter described the rule as ''eliminating legal immigration paths'' and warned that it will cause foreign workers who have contributed greatly to the U.S. tax base to go out of status.

Commenters stated that since some employers will not be able to afford the wage increases and will terminate foreign workers, the IFR would have devastating effects on the lives of foreign workers with families, property, and ties to a community. One lobbying organization stated the IFR would mean that ''many talented foreign nationals [would be] forced to leave the U.S. because these new wage requirements make it impractical to continue employing them in our country.'' Based on polls of their membership conducted by some of the signatories, a group of professional associations and advocacy organizations asserted that as many as 70 percent of H–1B workers who are making progress toward obtaining a green card, and in many cases have ''developed permanent ties to the United States'' through home ownership or U.S.-born children, may have to abandon the process. The commenter also stated that the IFR ''understates or ignores altogether the reliance interests'' of the nearly 600,000 H–1B workers currently employed in the United States. This professional association warned that H–1B workers whose status is threatened by the IFR will need to leave the country abruptly, impacting not only the workers, but also their spouses and children, and it expressed concern about COVID–19 complicating further their ability to relocate. The commenter maintained that suddenly changing the longstanding rules that have before now allowed workers to buy homes, raise children, and otherwise create ties to the United States over time is unfair and unreasonable. Meanwhile, an attorney claimed that the IFR's economic and social impacts will be acute for Indian nationals in particular because they often face long delays while waiting for green cards, which the commenter said results in many purchasing houses and having children here. One public policy organization that supported the IFR opposed immediate implementation, asserting the abrupt wage increase would put currently employed workers in a ''precarious position'' and ''may cause churn if employers [are] unwilling to pay real market wages [and] decline to renew their workers' H–1B visas or initiate petitions for permanence.''

One commenter also expressed concern that an employer may violate DOL regulations at § 655.731(a) if it pays the IFR wage to workers hired after the IFR effective date, but continues to pay a current H–1B worker the lower wage issued prior to the IFR, because the employer will be paying less than the actual wage to the first employee. The commenter suggested that this would result in additional disruption to employers' operations as the new wage levels would result in increases in the wages owed to new H–1B workers, but would result in immediate changes to the wages owed to workers already employed.

Many commenters expressed concern that immediate implementation of the IFR dramatically increased prevailing wages too abruptly, jeopardizing operations by disrupting long-term budget and other planning, interfering with contractual obligations, and preventing employers from adapting to the wage increases by adjusting operations and hiring and training new workers.

A professional association expressed concern that the immediate implementation of the IFR would increase costs for ''human resources and compensation staff to bring their companies into compliance with the rule'' and asserted the Department failed to consider staffing changes that may be necessary for employers that cannot ''support'' wages at levels produced by the IFR methodology. A trade association expressed concern that the IFR may cause ''material disruption'' to employers' ''operations or delivery models . . . because of long-term contractual commitments . . .'' and that these employers may be ''forced to operate at a loss'' because they are unable to re-negotiate contracts entered into prior to the IFR effective date. Another trade association stated that the IFR forced employers to put ''talent acquisition and workforce development decisions on hold'' and required them to ''reconsider work schedules, cost increases, and performance metrics that impact their entire workforce.'' The commenter expressed concern that immediate implementation of the IFR created operational disruptions because employers relied on the published July 2020 OES wages ''to create plans, develop strategies and hiring, and consider talent retention and immigration programs.'' A third trade association asserted the IFR may cause long-term damage to employers and disrupt U.S. worker hiring processes because employers ''plan and budget their hiring months and often years in advance.''

A higher education policy organization noted that colleges and universities have planned budgets and salaries and signed employment contracts in reliance on wages produced by the Department's wage surveys and expressed concern the IFR would require these employers to ''re-visit all of those plans, in the midst of a pandemic and in the middle of an academic year.'' The commenter also stated the Department's wage rules are complex and that universities have ''spent years developing the methodology according to DOL requirements'' and ''invested significant resources over the years to train international offices on DOL prevailing wage methodology.'' A higher education professional association noted hiring cycles at academic institutions ''often run over a year'' and that employers have already made offers to foreign workers ''based on the ability to sponsor H–1B status and/or green cards.'' A university submitted a similar comment and expressed concern that immediate implementation of the IFR would require the employer to renegotiate employment offers ''in some cases . . . just days before the expiration of the beneficiary's current status.''

Several commenters, including some that expressed support for the IFR, urged the Department to provide for a transition period or to phase in the wages over time to permit employers to adjust to the wage increases. A commenter from academia suggested the Department should phase in the new wage levels over no more than a two-year period, which the commenter believed would be sufficient time for employers to adjust to the new wage levels while also preventing employer ''exploitation of artificially low wage rules.'' A public policy organization that supported a phase-in period also suggested the Department should work with DHS to ''create positive incentives for employers who match the new wage requirements for their existing workforce.'' A public policy organization also suggested the Department should apply the revised wage level methodology only to ''new workers in . . . temporary work visa programs with [LCAs] submitted after the IFR took effect'' to avoid ''discourag[ing] renewals and petitions for lawful permanent residence by employers unwilling to pay market wage rates.'' The commenter stated this would protect workers who were ''contracted under one set of rules and expectations'' by avoiding an unreasonable change to those terms and conditions of employment.

Response to Comments

While the Department believes that adjusting the wage levels in the IFR to a level that more closely approximates the actual wage typically paid to U.S. workers similarly employed to H–1B workers will address many if not most of the concerns raised by commenters about the impact of the new wage methodology, it also recognizes that implementing such an immediate and significant change may cause disruption to employers' and foreign workers' reliance interests in the old methodology. While such reliance interests are difficult to quantify, the Department has sought to account for these interests and ensure that the new wage levels are implemented in a way that appropriately balances the need to protect U.S. workers with the Department's obligation to consider reliance interests engendered by its prior methodology, the Department has decided to adopt a series of measures to ease the transition to the new wage structure.

In particular, the Department is including in the final rule a delayed implementation period under which adjustments to the new wage levels will not begin until July 1, 2021. Further, once adjustments begin, they will be made in a phased approach, with most job opportunities not becoming subject to the full increase to the new levels until July 1, 2022. For workers who are on track to receive lawful permanent resident (LPR) status, as indicated by their being the beneficiaries of approved employment-based green card petitions, or otherwise eligible to extend their H–1B status beyond the six-year limit, the Department has determined that a more gradual phase-in occurring in four steps that results in job opportunities filled by such workers being placed at the new wage levels beginning on July 1, 2024, is appropriate. Finally, to the extent that employers' actual wage obligations under the INA may result in more immediate changes to the wages they must pay workers who have already received work authorization on a previously approved LCA, the Department will take this into account in exercising the discretion afforded it by the INA when enforcing such obligations.

In effecting an adjustment to the wage levels previously used to set the prevailing wage in the H–1B and PERM programs, the Department is obligated to consider whether ''its prior policy has engendered serious reliance interests.'' [182] In the IFR, the Department recognized that the old wage levels ''have been in place for over 20 years, and that many employers likely have longstanding practices of paying their foreign workers at the rates produced by the current levels.'' [183] The Department further acknowledged that making significant adjustments to the wage levels ''may result in some employers modifying their use of the H–1B and PERM programs,'' and ''will also likely result in higher personnel costs for some employers.'' [184] Despite these considerations, the Department concluded that ''to the extent employers have reliance interests in the existing levels . . . setting the wage levels in a manner that is consistent with the text of the INA and that advances the statute's purpose of protecting U.S. workers outweighs such interests and justifies such increased costs.'' [185]

As explained above, the Department continues to believe that the old wage levels are the source, in many cases, of serious, adverse effects on U.S. workers' wages and job opportunities. Adjusting the levels to bring them in line with the wages paid to U.S. workers with levels of education, experience, and responsibility comparable to H–1B workers—and thereby reducing the danger posed to U.S. workers by the employment of foreign workers—remains the principal aim of this rulemaking. Ensuring that the Department's wage structure is set in accordance with the relevant statutory factors is also necessarily a controlling objective in the Department's assessment of how best to reform the prevailing wage levels. The old levels have never been justified by economic analysis, and, as detailed above, are in tension with the statutory scheme insofar as they are based, in many instances, on data about the earnings of workers who cannot be regarded as similarly employed to workers in specialty occupations. Effecting a significant adjustment to the wage levels, and doing so as expeditiously as is reasonably possible, is therefore of paramount importance in the Department's judgment.

That said, concerns raised by commenters about disruptions to business operations, fairness to foreign workers, and the feasibility of adapting to significant changes to the wage levels in a short period of time are also entitled to weight in how the Department implements adjustments to the levels. The old levels were set far too low, which means that the adjustment necessary to bring them in line with what similarly employed U.S. workers make, and therefore be consistent with the statutory scheme, is substantial. The Department notes that shifting the entry-level wage from approximately the 45th percentile provided for by the IFR to the 35th percentile means the adjustment employers will have to make to accommodate themselves to the new levels is less dramatic. But it is still significant. Indeed, approximately 60 percent of all LCAs in recent years have been for job opportunities at the first and second wage levels, which are at roughly the 17th and 34th percentiles of the OES distribution. Setting the lowest wage level at the 35th percentile thus means that the prevailing wage for all H–1B workers going forward will likely be higher—and in many cases substantially so—than the prevailing wage for as much as 60 percent of the current H–1B population. The Level III and Level IV wages will also now be, in many cases, higher than the highest wage required under the old Level IV wage. Considerations brought to the Department's attention by commenters about the effects of an adjustment of this magnitude have provided the Department with greater insight into how to implement such a substantial change.

For that reason, the Department has reassessed how it balanced in the IFR reliance interests in the old wage levels with the need to adjust the wage levels. To begin with, the Department reiterates that setting wages so as to protect U.S. workers is the central purpose of the INA's wage requirements.[186] To the extent commenters suggest that business practices have evolved around and been shaped by the old wage levels, and that the old levels, or something close to them, should therefore be maintained indefinitely or for extended periods of time to prevent disruption to employers' operations, the Department disagrees. The fact that some employers have long benefited from inappropriately low

[185] *Id.*

[186] *See Labor Condition Applications and Requirements for Employers Using Nonimmigrants on H–1B Visas in Specialty Occupations and as Fashion Models,* 59 FR 65,646, 65,655 (Dec. 20, 1994) (describing the ''Congressional purposes of protecting the wages of U.S. workers'' in the H–1B program); H.R. Rep. 106–692, 12 (*quoting* Office of Inspector General, U.S. Department of Labor, Final Report: The Department of Labor's Foreign Labor Certification Programs: The System is Broken and Needs to Be Fixed 21 (May 22, 1996) (''The employer's attestation to . . . pay the prevailing wage is the only safeguard against the erosion of U.S. worker's [sic.] wages.'').

wage rates cannot justify the continued perpetuation of the harms to U.S. workers that result from foreign workers earning wages that do not reflect what similarly employed U.S. workers are paid.

However, in light of the comments it received, the Department has determined that a wage increase that is both dramatic and immediate is also undesirable, and indeed may be counterproductive to the aims of this rule. For one thing, as some commenters noted, immediate disruptions to business operations, such as might lead to the termination of contracts or the shuttering of offices, may in fact threaten U.S. workers with job losses or reductions in work. Adopting a rule that eliminates workers' jobs in order to protect their wages advances neither the interests of workers nor the purposes of the INA.

Similarly, the Department acknowledges that, while the aim of the INA's wage requirements is to protect U.S. workers, one purpose of the H–1B program more generally is to ensure that employers can access needed high-skilled labor to supplement their workforces.[187] Although permitting employers to access temporary foreign labor must be accomplished in a way that works no harm on the wages and job opportunities of U.S. workers, it is also important to ensure that reforms to the prevailing wage do not unnecessarily limit employers' use of the program. Helping employers bring the wages they pay their H–1B workers in line with the requirements of the INA while avoiding the kind of abrupt change that might make it unreasonably difficult for employers to adapt is therefore consistent with the broader goals of the H–1B program.

For those reasons, the Department has determined that a gradual transition to the new wage levels is needed to account for employers' reliance interests on the prior system while still ensuring that U.S. workers' wages and job opportunities are fully protected. Such an approach is a reasonable method of effecting a regulatory change that results in increased costs on regulated entities.[188] Modifying the existing system over a period of time, even where the prior system is inconsistent with the governing statute, can assist affected parties in ''reorder[ing] their affairs.'' [189] The Department's decision to implement the new wage rates through a transition rather than through an immediate adjustment is also consistent with the notice the IFR gave to the public of the intended policy change.[190]

Modifying the prevailing wage levels through a delayed or graduated transition matches how Congress and other agencies have instituted similar changes to employers' wage obligations in other contexts. For example, all increases in the Federal minimum wage that Congress enacted over the last 60 years were phased in over two or more years.[191] Only two of the ten minimum wage adjustments since the enactment of the Fair Labor Standards Act have been made fully effective immediately. The three most recent amendments to the Federal minimum wage were implemented over two or three year periods.[192] In so doing, Congress has sought to minimize any loss of jobs or other economic disruptions that an immediate, one-step increase in the Federal minimum wage might cause to labor markets. Changes to minimum wage laws at the state level are also often made through incremental adjustments.[193] Similarly, the Department has employed comparable transition provisions when implementing wage changes in other foreign labor programs.[194]

Similarly, the Wage and Hour Division has typically implemented changes to employers' obligations to provide overtime pay through delayed effective periods. The most recent change to overtime rules was made effective more than 90 days after the final rule was published—more time than is required by either the Administrative Procedure Act or the Congressional Review Act.[195] The 2016 overtime rule (later enjoined) was made effective more than five months after publication.[196] The 2004 overtime rule was made effective 120 days after publication.[197] In both cases, the Department determined that a delayed effective date would ''provide employers ample time to make any changes necessary to ensure compliance with the final regulations.'' [198]

The Department notes that changes to the minimum wage or overtime obligations are different in important respects from the adjustments the Department is making to the prevailing wage levels. For one thing, changes to the minimum wage and overtime requirements are often made in light of gradual changes in economic conditions that make it necessary to reassess a prior policy determination. By contrast, in undertaking a change to the prevailing wage levels, the Department is giving meaningful consideration to what employers' wage obligations should be based on available economic data for the first time since the Department began using a multi-level wage structure in its foreign labor programs. Similarly, while Congress's decision to adjust the minimum wage is driven entirely by competing policy considerations, the Department's discretion to adjust the wage levels is to some degree confined by the INA. As explained above, the Department is adjusting the manner in which it sets prevailing wage rates not only because the existing wage levels are the source, in some cases, of harm to U.S. workers' wages and job opportunities, but also because they are inconsistent with the governing statute. In consequence, the reform the Department is undertaking in this rulemaking is long overdue and of greater significance than similar kinds of changes to employers' wage obligations in other contexts. Finally, as explained further below, the adjustments to the prevailing wage levels will not have the same kind of immediate impact on employers' wage obligations with respect to all workers currently on their payroll as changes to the minimum wage do. Employers will be able to pay H–1B workers currently employed in many cases at the current wage levels for the duration of the validity period of their current LCAs. Increases in the wage levels will generally have an immediate impact only on new workers or where the employer seeks to renew a current worker for a new period of employment. In consequence, immediate changes to the wage levels are likely to be less disruptive than immediate increases in the minimum wage. In combination, these considerations weigh in favor of keeping the transition period to the new wage levels of short duration, even if that means employers will still be required to adapt quickly to a significant increase in the wage levels.

The Department has therefore decided to implement the adjustments to the prevailing wage levels through a combination of a delayed effective period and multi-step adjustments occurring over approximately a year and

half period. The first adjustment to employers' prevailing wage obligation will not occur until July 1, 2021. This delay from publication of this rule until the first wage increase will give employers time to plan for the adjustment. Adjusting the wage levels on July 1st is also consistent with historical practice at the Department, which has typically published the new annual wage rates for the H–1B and PERM programs each year at the beginning of July. Employers are thus accustomed to modifications being made at that time of the year.

On July 1st, the entry-level wage will increase from roughly the 17th percentile to 90 percent of the 35th percentile wage, as provided by BLS—a point approximately halfway between the current Level I wage and the 35th percentile, which, as explained above, is the point in the OES distribution that the Department has determined is appropriate for setting entry-level wage rates. Similarly, at the same time the Level IV wage will increase from roughly the 67th percentile to 90 percent of the 90th percentile wage. The following year, on July 1, 2022, the wage levels will again increase, and be placed at the 35th percentile for the entry-level wage and the 90th percentile for the uppermost level, at which point the transition to the new wage structure will be complete.

The Department determined the appropriate step up in wages by analyzing national wage data for the top ten occupations in which H–1B workers are employed. In particular, the Department averaged the wages estimated to fall at various percentile in the OES distribution using linear interpolation, and weighted that average by the share of H–1B workers in each occupation relative to the total number of H–1B workers in the top ten occupations. In so doing, the Department relied on the same basic methodology it used to determine the appropriate entry-level wage. As explained elsewhere, the Department's interest in maintaining a single, uniform wage methodology for the H–1B and PERM programs means that the wage provided will not be perfectly tailored to every job opportunity or geographic location. Providing wages that are closely tailored to the unique circumstances of as many job opportunities as possible while still using a single wage structure necessarily means that the Department must focus on nationwide data and those occupations that account for the largest share of the affected programs.

An analysis of national data for the top ten H–1B occupations indicates that 90 percent of the average wage at the 35th percentile falls approximately at the midpoint between wages at the 17th percentile—a rough proxy for the wages yielded by the old wage methodology—and wages at the 35th percentile. Similarly, 90 percent of the average wage at the 90th percentile is approximately the midpoint between wages at the 67th percentile—a rough proxy for the Level IV wages yielded by the old methodology—and the 90th percentile. Requiring employers to pay wages that are 90 percent of the 35th percentile for entry-level workers and 90 percent for Level IV workers in the first stage of the two-step implantation of this rule will thus ensure an even and gradual adjustment over the period of time the Department has determined is appropriate to allow employers to adapt to the new wage rates.

The Department recognizes that, even under this incremental approach, wage rates will still increase significantly in a relatively short period. An analysis of wage rates based on current OES data suggests that an increase in the entry-level wage from roughly the 17th percentile to 90 percent of the 35th percentile may equate in many cases to a real dollar increase of approximately 14 percent in the annual wages employers will be required to pay their foreign workers. However, for the reasons given above, the Department believes that a transition consisting of both a delayed effective period and a gradual increase to the new wage levels occurring over a year and a half period is the appropriate way to balance the need to ensure U.S. workers are not harmed by the presence of foreign workers in the labor market while giving employers time to adapt to the new wage system. Further delay in adjusting to the new levels would, absent some other compelling consideration, entail too great a risk to U.S. workers' wages and job opportunities, in the Department's judgment.

Beyond employers' general reliance on the old wage levels, the Department notes that some employers also have reliance interests in a specific worker or group of workers currently working who were hired on the understanding that they would be employed at wages based on the prior prevailing wage methodology. Immediate changes to the wages employers are required to pay could change the expectations employers had about the cost of employing such workers when they invested in sponsoring them for a visa. Such concern would only pertain to visa workers who have already been approved and who are already working. It is unlikely that this kind of immediate change to employers' wage obligations to current workers will occur, however, to the extent it does the Department possesses some enforcement discretion to mitigate against any such potential impact on visa workers hired under the prior prevailing wage methodology.[199]

As some commenters noted, there is a possibility that employers' wage obligations as to current workers will be immediately affected by significant adjustments to the prevailing wage levels, even though the Department has already approved LCAs for these workers, which contain prevailing wage rates that will remain valid for the duration of the LCA's validity period.[200] This may occur through operation of employers' actual wage obligation under the INA and the Department's regulations, which is to say their obligation to pay the higher of the actual wage or the prevailing wage to their H–1B workers.[201] As the Department's regulations note, ''employers are cautioned that the actual wage component to the required wage may, as a practical matter, eliminate any wage-payment differentiation among H–1B employees based on different prevailing wage rates stated in applicable LCAs.'' [202] While new prevailing wage rates based on this rule's revised methodology will not immediately change the prevailing wage for H–1B workers with already-approved LCAs, the arrival of new H–1B workers at the same worksite that is subject to a higher prevailing wage under the new methodology could potentially modify employers' actual wage obligations with respect to current H–1B workers and result in the employer having to pay a higher wage.

While acknowledging this issue, the Department believes, as a practical matter, it is unlikely that the introduction of new H–1B workers at a worksite will result in immediate and

[199] It should be noted that this is a finite issue that exists only until current workers' visas expire.

[200] *See* 20 CFR 655.731(a)(2)(viii) (''Where new nonimmigrants are employed pursuant to a new LCA, that new LCA prescribes the employer's obligations as to those new nonimmigrants. The prevailing wage determination on the later/subsequent LCA does not ''relate back'' to operate as an ''update'' of the prevailing wage for the previously-filed LCA for the same occupational classification in the same area of employment.

[201] *See* 8 U.S.C. 1182(n)(1).

[202] 20 CFR 655.731(a)(2)(viii); *see also* Labor Condition Applications and Requirements for Employers Using Nonimmigrants on H–1B Visas in Specialty Occupations and as Fashion Models; Labor Certification Process for Permanent Employment of Aliens in the United States, 65 FR 80,110–01 (''The Department's interpretation of an employer's actual wage obligation as an ongoing, dynamic obligation has been the Department's position since the inception of the H–1B program.'').

significant increases in the wages an employer is required to pay current H–1B workers who have already been approved to work at prevailing wage rates based on the prior wage methodology. First, the Department's Wage and Hour Division has never brought a case in which an employer was deemed to have violated its actual wage obligations as a result of a different H–1B worker being paid a higher prevailing wage rate. This is so for a few reasons. For instance, for the wage paid to a new H–1B worker to be relevant to the employer's actual wage obligation to a current worker, the new worker would not only have to be stationed at the same specific worksite, but also possessed of similar qualifications and experience as the current worker and be performing the same set of duties and responsibilities.[203] Thus, the wages paid to many new H–1B workers will likely simply not be relevant to employers' actual wage obligations to current workers.

Second, the actual wage ''reflects the application of an employer's actual pay system.'' [204] Employers are therefore permitted to establish the actual wage they pay H–1B workers by taking into account ''Experience, qualifications, education, job responsibility and function, specialized knowledge, and other legitimate business factors.'' [205] In consequence, even as between H–1B workers with similar qualifications and experience performing the same duties and responsibilities, an employer may have other legitimate reasons for paying these workers different wages. The fact that one worker has a significantly higher prevailing wage rate will, in many cases, be only one of many relevant factors governing the employers' actual wage obligation.

In those instances where the employer has not documented and cannot reconstruct its actual wage system, the Department may base the actual wage on averaging the wages paid to all similarly employed workers.[206] In those instances, the introduction of a new H–1B worker at the worksite will not necessarily cause the actual wage owed to current H–1B workers to immediately increase to whatever the new workers' prevailing wage rate is. Rather, a more modest increase may be required based on an average of what the new worker is being paid as compared to what similarly employed current workers are making.

Finally, although the Department does not believe that employers' actual wage obligations to current H–1B workers are likely to change immediately as a result of adjustments to the prevailing wage levels, the Wage and Hour Division will, where appropriate, take the above factors into consideration in enforcement actions. In some cases, the Department has discretion over whether to launch an investigation into potential violations of the INA's wage requirements.[207] Similarly, even in those cases where the Department is obligated by statute to initiate an investigation and make a determination as to whether a violation has occurred, the assessment of civil money penalties, where such penalties are applicable at all, is sufficiently flexible to take all of the facts and circumstances into account.[208]

In the unlikely event that violations of this kind arise the Department will evaluate them on a case-by-case basis, and, in choosing whether to bring an enforcement action or impose civil monetary penalties, the cause of the violation will be taken into account.

Once a currently employed worker's LCA expires, the employer will, except as explained below, be required to pay the worker a prevailing wage rate based on the new methodology if the employer seeks a new labor certification. As noted above, some commenters suggested that this will result in certain employers being unable to renew their workers for a new period of employment as it will be too costly to do so, and that this will be disruptive to business operations. While this may be the case in some instances, the Department emphasizes that H–1B visas provide only temporary work authorization. Neither employers nor guest workers on H–1B visas can claim a permanent interest in a temporary employment relationship.[209] Further, requiring employers to file new LCAs periodically to continue employing H–1B workers gives teeth to the INA's wage protections by ensuring that the prevailing wage an employer must pay is not based on out-of-date information.[210] Allowing all current H–1B workers to continue working at the prevailing wage rates below the level the Department has determined is appropriate after the LCAs associated with their positions have expired and their employers have filed new LCAs would undermine the Department's determination that significant adjustments are needed to the wage levels to adequately protect U.S. workers.

In consequence, when an employer files a new LCA as part of the process of renewing an H–1B worker for a new period of employment, the Department has concluded that it is appropriate that the new prevailing wage rates should, except as noted below, apply. To the extent employers may have had expectations that current workers could be renewed at rates based on the old wage levels, such expectations are naturally circumscribed by the fact that H–1B visas are inherently temporary in nature and there is no legal guarantee that work authorizations will be renewed on the terms that they were previously granted. Further, any such expectations are, in the Department's view, outweighed by the need to guard against adverse effects on U.S. workers' wages and job opportunities.

Beyond concerns about being able to renew current H–1B workers generally, some commenters also noted that employers' and guest workers' reliance interests in the old wage methodology are particularly weighty in cases where the employer has sponsored the H–1B worker for LPR status. As one commenter noted, H–1B workers who are on the path to obtaining LPR status ''often have purchased a home, developed permanent ties to the United States, or made a decision to have children here, counting on obtaining Lawful Permanent Resident status.'' That commenter also suggested that an immediate and abrupt change in the wage rates could mean that ''65%–70% of all individuals being sponsored for green card status through a Permanent Employment Certification may be unable to continue in the process'' as their employers will be unable to pay the increased wage rates. Relatedly, employers of such workers have undertaken additional investments in the workers beyond what would ordinarily be expended on sponsoring an H–1B worker as part of the permanent labor certification process.

The Department agrees with commenters that H–1B workers who are on the path to becoming employment-based lawful permanent residents present unique considerations for how the Department transitions current H–1B workers to wage rates produced by the new wage methodology. These

individuals, in many cases, have spent extended periods of time in the United States, during which they have developed greater connections to this country than the typical temporary visa holder. What's more, they have done so under a legal regime established by Congress that permits and, indeed, encourages them to develop strong ties to the United States. In other words, not only have these individuals built lives in the United States in reliance on the prior wage methodology, which set the terms of their employment, but their expectation of being able to remain in the country indefinitely has been fostered by congressional enactments specifically designed to treat this group of individuals differently than other H–1B visa holders. For that reason, the Department has concluded that accelerated, significant increases in the wages employers owe these workers, insofar as it may result in large numbers of these workers losing their current employment, and therefore potentially being required to depart the country, would work a unique hardship and unfairness on both the workers themselves as well as the employers that have made greater investments in retaining these workers. In consequence, the Department has determined that a more gradual transition to the new wage rates for these workers is appropriate.

As the Department noted in the IFR, unlike most nonimmigrant visas, H–1B visas are unusual in that they are ''dual intent'' visas, meaning under the INA H–1B workers can enter the U.S. on a temporary status while also seeking to adjust status to that of lawful permanent residents.[211] One of the most common pathways by which H–1B visa holders obtain lawful permanent resident status is through employment-based green cards, and in particular EB–2 and EB–3 visas.[212] USCIS has estimated that over 80 percent of all H–1B visa holders who adjust to lawful permanent resident status do so through an employment-based green card.[213] This is reflected in data on the PERM programs. In recent years, more than 80 percent of all individuals granted lawful permanent residence in the EB–2 and EB–3 classifications have been aliens adjusting status, meaning they were already present in the U.S. on some kind of nonimmigrant status.[214] Given that the H–1B program is the largest temporary visa program in the U.S. and is one of the few that allows for dual intent, it is a reasonable assumption that the vast majority of the EB–2 and EB–3 adjustment of status cases are for H–1B workers. This is corroborated by the Department's own data, which shows that, in recent years, approximately 70 percent of all PERM labor certification applications filed with the Department have been for H–1B nonimmigrants.[215]

Because of how many H–1B visa holders apply for EB–2 and EB–3 classifications, Congress has repeatedly adapted the INA to account for the close connection between the programs. For example, while H–1B nonimmigrants are generally required to depart the U.S. after a maximum of six years of temporary employment, Congress has created an exception that allows H–1B nonimmigrants for whom PERM labor certification applications have been filed with the Department or petitions for employment-based immigrant visas have been filed with DHS that have been pending for longer than a year to be exempt from the six year period of authorized admission limitation if certain requirements are met.[216] In such cases, the workers are able to renew their H–1B status in one-year increments indefinitely until the process by which they can obtain lawful permanent resident status is resolved.[217] Similarly, aliens who are the beneficiaries of an approved petition for an EB–1, EB–2, or EB–3 green card and who are eligible to be granted LPR status but for application of the per country limitations are permitted to extend their stay beyond the usual six year limit in three year increments.

Congress created these exceptions to the temporary limits of H–1B status in recognition of the fact that the method by which employment-based green cards are allocated—namely through the operation of caps on the number of visas that can be allocated to nationals of a given country in any given year—can result in significant delays between when an alien is approved for a green card and when the green card is actually issued.[218] Put another way, the system for allocating employment-based green cards often results in protracted periods during which a worker can, in some sense, have one foot in the temporary H–1B program and another in the PERM program as they progress to LPR status. These workers, while not yet possessed of LPR status, have made substantial, formal steps toward acquiring such status, and, in so doing, acquired more permanent ties to the United States than does the typical temporary worker. Congress recognized as much and singled out this group for a special accommodation that allows their temporary status to continue indefinitely.[219] In so doing, Congress further increased the degree to which such workers can reasonably expect to be permitted eventually to remain in the country on a permanent basis.

Congress's creation of exceptions to the six-year limit on H–1B status was also undertaken in recognition of the fact that requiring workers on track to receive LPR status to leave the United States after six years before they receive a green card would be disruptive to the employers of such workers. As noted above, employers that have sponsored H–1B workers for an employment-based green card have undertaken investments in retaining such workers beyond what would ordinarily be required to continue renewing such workers' H–1B status. Similarly, in many cases these workers will likely have been with their employer for longer than the typical H–1B worker, meaning the employer may have developed a greater reliance on the services of these particular workers. Absent these workers being able to extend their stays indefinitely, they ''would otherwise be forced to return home at the conclusion of their allotted time in H–1B status, disrupting projects and American workers.'' [220] As a result, Congress chose to allow ''these individuals to remain in H–1B status until they are able to receive an immigrant visa and adjust their status

[220] S. Rep. 106–260, 22.

within the United States, thus limiting the disruption to American businesses.'' [221]

In sum, H–1B workers whose employers have taken substantial, formal steps toward obtaining an employment-based green card are uniquely situated as compared to other H–1B visa holders subject to the Department's prevailing wage methodology such that applying a sudden and significant change in wages would work a special hardship to such workers and their employers to the extent it might result in some workers losing their H–1B status. Not only have many of these workers spent extended periods of time in the United States, and begun building lives here, but they have done so with a guarantee from Congress that they legally may remain here beyond the six year limit that usually applies to H–1B visa holders until their application for LPR status is resolved. And because such workers are seeking employment-based green cards, their employers in many cases also have substantial reliance interests on such workers' continued presence in the country beyond what would normally be the case for other H–1B workers. The special status of workers who are the beneficiaries of an approved employment-based green card petition, or who are otherwise eligible to extend their status beyond the six-year limit, has also been recognized by the Department of Homeland Security in a separate rulemaking that singled this group out for unique treatment for many of the same reasons outlined above.[222]

Consequently, as suggested by some commenters, the Department is adopting a phase-in approach to how it applies the new wage methodology to job opportunities that will be filled by workers who are on track to obtaining employment-based green cards. While, for the reasons given above, the Department believes that a two-step transition is appropriate with respect to new H–1B workers and many other workers for whom their employer seeks renewed status, the Department has concluded that the unique circumstances of workers who are on track to receive LPR status warrant a longer transition period. These workers and their employers have more substantial expectations of their being able to remain employed in the United States that have been engendered by congressionally created exceptions to the six year limit on H–1B status.

The Department is also cognizant of its obligation to ensure that U.S. workers' wage and job opportunities are protected. That consideration, as elaborated previously, means that any transition to the new wage structure should be kept as short as reasonably possible while still accommodating the reliance interests identified by commenters. The Department believes that a delayed implementation period followed by a four-step adjustment occurring over a three and a half year period for job opportunities filled by workers on track to receive LPR status appropriately balances these competing considerations.

By making the phase-in nearly twice as long for these workers, and stretching it out over a period of more than three years, the Department has taken into account the fact that most LCAs are approved for a three year period, meaning that all employers seeking to renew the status of H–1B workers on track to receive LPR status will be able to do so at least once at wage levels below the new levels set by this rule and that in many cases will be closer to the prevailing wage rates that would have obtained if the prior methodology had been left in place. This allows for a more gradual transition than would be achieved if these job opportunities were subject to the two-step phase-in occurring over a year and a half. Gradually increasing the wage rates that will be available for these job opportunities over a period of time also takes into account the need to protect U.S. workers by not allowing the current, inappropriately low wage levels to remain in place beyond the initial, delayed effective period, as well as the fact that wage increases that occur further out in time from the date this rule is published will be more manageable for both employers and workers to plan for. Moreover, the Department notes that, because employers have undertaken significant investments in the long-term employment of these workers, a longer transition period is also unnecessary insofar as such employers can be expected to have an incentive to undertake the additional expenditures needed to retain the workers at the new prevailing wage levels by the time the transition is complete.

The Department recognizes that many H–1B workers on track to receive LPR status will still be on H–1B status and have their green card petitions pending at the time the transition to the new wage rates is complete. Workers in the green card backlog as of October 2020 may not be able to obtain an employment-based green card for a decade or more.[223] However, in the Department's judgment, delaying full implementation of the new wage rates for what amounts to a significant share of the current H–1B population [224] until all workers on track to receive LPR status have had their green card petitions resolved would result in far too lengthy of a delay that would result in ongoing harm to U.S. workers' wages and job opportunities. A three and a half year, graduated transition gives these workers adequate time to adjust to the new wage rates, whether by allowing their employers sufficient time to adapt or, in some cases, allowing such workers additional time to find a new employer that is able to pay the higher wage rates.[225]

Using the same methodology and data it used to set the wage rate at the intermediate step of the two-step transition, the Department has concluded that the wage rates for the three and a half year transition will be 85 percent of the wage rates produced by the 35th and 90th percentiles beginning in July, 2021; 90 percent of such wage rates beginning in July, 2022; and 95 percent of such rates beginning in July, 2023. For the reasons given with respect to the year and a half transition, these rates allow for a gradual, even adjustment to the wage levels the Department has determined are appropriate. Beginning in July 2024, the wage rates provided for any job opportunity filled by an alien on track to receive LPR status will be the same as the wage rates provided for all H–1B job opportunities.

Finally, the Department has decided that the job opportunities that should be eligible for these special transition wage rates are those that will be filled by any H–1B workers who, as of October 8, 2020, were the beneficiaries of approved employment-based green card petitions, or who were otherwise eligible to extend their temporary status beyond the six year limit under the American Competiveness in the 21st Century Act. October 8th is the date the Department published the IFR and thereby gave notice to employers and workers that it would be increasing wage rates. It thus provides a clear, administrable delineation of the class of workers who can benefit from the three and a half year transition period, and takes into account the fact that workers whose expectation of being able to remain in the country indefinitely became settled

before such notice was provided have the most compelling reliance interests in the prior wage methodology.

5. Wage Data and Sources

a. OES

Summary of Comments

Some commenters expressed concern about the Department's exclusive reliance on the OES to determine prevailing wages. Citing an NFAP policy brief, a public policy organization commented the ''fundamental problem'' with prevailing wage determinations is that the ''process requires statistical precision that simply is not available'' because ''no government survey [ ] collects data within occupations with detailed wage levels, much less a survey that seeks to assemble data to calculate wage levels based on experience, education or level of supervision.'' The commenter further stated that the OES produces ''two average wage figures, neither of which is based on the collection of data connecting compensation to education, experience or supervision.'' The commenter expressed concern that this method is less reliable than ''asking employers directly what they pay employees at different levels of education, experience, or supervision'' and that ''a government agency can adjust the formula in a way that makes the required wages far higher than the market rate.'' An employer expressed concern the OES ''does not measure workers' skills or duties or ''reflect what workers in the survey are paid'' and instead ''simply records [the] set of DOL-established pay bands'' within which a worker can be classified.

Several commenters also expressed concern that the OES fails to consider total compensation, including stock options and bonuses, for example, resulting in an underestimation of the total earnings of U.S. and foreign workers. An individual commenter noted that many workers, particularly those in information technology occupations, earn much more than their base salary when accounting for total compensation and asserted that the IFR unfairly advantages ''companies with a cash-heavy pay structure'' and harms small start-ups that are more likely to compete by providing ''equity and stock options.'' A trade association asserted the IFR ignores an ''important evolution'' in the compensation of professionals ''whereby many employers add to annual salaries with variable compensation tied to productivity, performance, or other specific goals'' and may ''incentivize employers to abandon variable compensation schemes altogether, in order to use available resources in an attempt to meet the new required wages.'' Citing a Society for Human Resources Management article stating ''85% of employers use variable pay. . .'' an employer asserted that consideration of fixed pay exclusively is outdated because an increasingly important component of compensation packages is variable pay, including ''incentive plans, bonuses, profit-sharing plans, performance-sharing plans, and equity.''

Many commenters expressed concern that the Department would issue a prevailing wage of ''exactly $100 an hour, or $208,000 a year, for any occupation and geographic area'' for which the Department lacks sufficient OES wage data to determine a prevailing wage for each wage level. Many commenters cited a finding by a public policy organization that this $208,000 wage requirement would apply to at least 18,000 combinations of occupations and geographic locations. A university stated that assigning a ''default wage rate of $100'' per hour ''for each of the four wage levels . . . artificially inflates the wage data for each of the wage levels for affected occupations.'' A trade association expressed concern that OES wage data is ''skewed toward employers in large metro areas'' and that the failure to collect sufficient wage data would result in many non-metropolitan employers receiving a ''default'' prevailing wage of $208,000 under the IFR. A professional association believed the lack of BLS data and resulting ''default'' wage of $208,000 was due to the Department's decision to use data for a limited ''pool of workers who use the H–1B . . . and PERM programs,'' rather than using a ''prevailing wage data pool [ ] based on all wage data within the occupation, regardless of the number of years of education, experience, and level of responsibility.'' A second professional association asserted assignment of a $208,000 wage in this context violates the INA, 8 U.S.C. 1182(p)(4), because the Department provides only one wage level, despite the four levels of wages required by Congress, and that it is contrary to a 1990 Congressional directive that BLS must ''make determinations on prevailing wages'' and make this information ''readily available to employers and workers.'' Many of these commenters provided examples of prevailing wages far exceeding the market wage, such as a prevailing wage of $208,000 for an entry-level software developer in California, despite a private wage survey determination that the prevailing wage is approximately $70,600 per year.

A public policy organization and an academic commenter that supported the IFR wage increases urged the Department to clarify an employer's wage obligation in these cases, expressing concern that the policy created confusion that threatens necessary wage reform efforts. Specifically, one of the commenters requested clarification of whether the employer must pay the $208,000 salary, must ''use an alternative method to the OFLC-generated OES wage rates in these cases,'' or may choose either option.

Response to Comments

The Department received many comments regarding the prevalence of the use of the OES footnote wage to set prevailing wage rates under the IFR's wage levels. This issue arises when BLS cannot provide a wage estimate for a Level IV wage. BLS is unable, at times, to produce a wage estimate when the survey results at the upper end of the wage distribution exceed the highest wage interval BLS uses, which is $100 an hour or $208,800 annually. In such cases, BLS reports a default wage, or footnote wage, of $208,000 for the Level IV wage to OFLC as that is the highest wage value available. Currently, BLS collects actual wage data from employers and then converts the actual wage data into wage intervals, which range from under $9.25 an hour to $100.00 an hour and over.[226] In situations when BLS reports a footnote wage for the Level IV wage to the Department, the Department's standard practice has been to note that leveled prevailing wages for an occupation and/or geographic area was unavailable and only to provide the OES footnote wage for all four levels.

Under the Department's proposal in the IFR, the mean of the upper decile produced an OES footnote wage for more than 18,000 occupations, up from roughly 6,000 occupations under the old prevailing wage methodology. The higher prevalence of the use of the footnote wage under the IFR's methodology resulted in the default wage of $208,000 per year being used for a number of occupations where its use was likely not appropriate, as some commenters noted. The Department has therefore determined that it a change to its standard practice of not providing leveled wages in these situations is warranted.

Upon the effective date of this final rule, when BLS is able to report a Level

[226] *https://www.bls.gov/oes/2016/may/methods_statement.pdf* (accessed December 4, 2020).

I wage, the Department will utilize the OES footnote only as the Level IV wage estimate in cases where the 90th percentile wage value exceeds the highest wage interval value used by BLS. This change will allow the Department to provide leveled wages even where the footnote wage must be used for the Level IV wage and ensure that entry-level wages are not improperly inflated. In making this change, the Department expects there will be far fewer instances of the Department being unable to provide leveled wages than was the case under the IFR, or even the old wage methodology.

This change to how the Department handles situations where the footnote wage is used for the Level IV wage will ensure that leveled wages and an entry-level wage appropriately set at the 35th percentile will be provided wherever possible. This change will largely eliminate those incidents commenters expressed concern about, such as in healthcare occupations, where even an entry-level wage under the IFR was set at $208,000 per year, and is thereby inflated well above both the previous entry-level wage as well as what the Department has determined is an appropriate entry-level wage. Like its decision to move the entry-level wage to the 35th percentile, this change will ensure that prevailing wage rates more accurately reflect actual market wages and are more manageable for employers. Further, as discussed in more detail below, the changes the Department is making to how it calculates the Level IV wage—namely by using the 90th percentile as the Level IV wage instead of the mean of the upper decile—will eliminate the influence of extreme outlier at the upper end of the distribution, thereby reducing the reported Level IV rate to a level that is not inflated by anomalous data, and thus potentially reducing the frequency with which the footnote wage is used even for Level IV wage.

The Department acknowledges that there will continue to be instances, as there are currently, where BLS will report to OFLC an OES footnote wage for all levels in an occupation because the survey results received by BLS at and above the 35th percentile are all in the wage interval of $100.00 an hour and over. This will occur in a few very highly compensated occupations. Importantly, in such cases the use of the footnote wage will actually result in a lower prevailing wage rate than would otherwise be the case if actual wage data were available because BLS only reports up to the maximum interval of $100.00 an hour and in these situations the actual wages are at or over $100.00 an hour. Put another way, the use of the footnote wage in these cases, unlike its use under the IFR, will not result in wages that are inflated beyond what the actual market wage would be if actual wage data were available. Until BLS moves away from collecting all wage data in intervals this will continue to occur. But the Department believes that as BLS expands its collection of actual wage data this issue will cease to occur even in those few very highly compensated occupations. The Department anticipates that this change to its standard procedures will allow the Department to report leveled wages in more occupations and/or geographic areas than has historically been the case.

Relatedly, many commenters expressed concern that because the Department raised the Level IV wage to the mean of the upper decile, it caused more physician occupations, in particular, to default to the OES footnote wage of $100.00 an hour, or $208,000 annually at an especially high rate. As discussed above, the Department's changes to its standard procedures to use the OES footnote wage only as the Level IV wage estimate when a Level I wage is also reported from BLS will allow the Department to report leveled wages in these instances, thus reducing, if not altogether eliminating this concern.

Similarly, many commenters suggested that the failure of the Department to provide leveled wages would disproportionately harm employers outside of large urban areas and cause rural communities to lose access to healthcare. Many of these commenters suggested that under the IFR the Department is unable to provide leveled wage estimates for physicians and researchers in rural areas who would therefore be provided the OES footnote that is significantly higher than what some of those employees' supervisors are paid, which would be unsustainable and potentially result, among other things, in undermining the Conrad-30 program in certain areas. However, as previously stated, the Department has reviewed the commenters concerns and determined it is appropriate to make changes to the standard procedures of not providing leveled wage estimates in these situations. Instead, upon the effective date of this Final Rule the Department will use the OES footnote wage only as the Level IV wage estimate, allowing the Department to provide leveled wage estimates, except in those cases where the wage at the 35th percentile is also above the highest OES wage interval value. This will reduce if not eliminate the incidents of inappropriately high wages being provided for these specific occupations and areas.

The Department also acknowledges commenters' concerns with flaws in the OES collection of wage data from employers that result from BLS collecting data in 12 wage intervals as opposed to reporting actual wages. Though the OES survey does collect most wage data in wage intervals, BLS does collect actual wage data from employers in some instances and is exploring the ability to collect and report actual wage data from employers on a more consistent basis. As BLS phases in the collection of actual wage data from employers, wage estimates reported to the Department will become even more accurate and all instances of the OES footnote wage being used to set prevailing wage rates, which is a product of the current practice of using wage intervals, should cease. Further, even if BLS ultimately does not convert all wage data collection from employers to actual wages, this methodology of using wage intervals has been in place since the inception of the OES survey and has in most cases produced accurate wage estimates at the levels defined by the Department. Given the low incidence of the footnote wage being used; the modifications made by the Department to how it provides default wages that both further reduce the use of the footnote wage and eliminate its use in cases where it would result in an inappropriately inflated wage; and the other strengths of the OES data discussed below, the Department continues to believe that the OES survey serves as the best possible source of wage data for use in various foreign labor programs and that its reliance on wage intervals does not warrant the Department abandoning its longstanding practice of using the OES.

As noted above, the Department received several more general comments regarding the suitability of the BLS OES data for setting wages in the foreign labor certification programs. Some of the comments cited the fact that the OES data uses broad occupational classifications that encompass a wide range of different positions, some of which only fall at the lower end of the pay scale. Others commented that the OES data does not survey for education and experience, making it a poor fit for use in setting H–1B wage levels.

As the Department stated in the IFR, the Department reviewed the statutory framework of the INA and its interplay with the BLS OES survey data that the Department uses to calculate prevailing wages. This review demonstrated that, while the OES survey is the best source of wage data available for use in the Department's foreign labor certification programs, it is not specifically designed for such programs, and therefore does not account for the requirement that workers in the H–1B program possess highly specialized knowledge in how it gathers data about U.S. workers' wages. This fact necessarily shapes how the Department integrates the OES survey into its foreign labor programs.

The Department has long relied on OES data to establish prevailing wage levels. That is because it is a comprehensive, statistically valid survey that is the best source of wage data available for satisfying the Department's purposes in setting wages in most immigrant and nonimmigrant programs. As the Department has previously noted, the OES wage survey is among the largest continuous statistical survey programs of the federal government. BLS produces the survey materials and selects the nonfarm establishments to be surveyed using the list of establishments maintained by State Workforce Agencies (SWAs) for unemployment insurance purposes. The OES collects data from over one million establishments. Salary levels based on geographic areas are available at the national and State levels and for certain territories in which statistical validity can be ascertained, including the District of Columbia, Guam, Puerto Rico, and the U.S. Virgin Islands. Salary information is also made available at the metropolitan and nonmetropolitan area levels within a State. Wages for the OES survey are straight-time, gross pay, exclusive of premium pay. Base rate, cost-of-living allowances, guaranteed pay, hazardous duty pay, incentive pay including commissions and production bonuses, tips, and on-call pay are included. The features described above are unique to the OES survey, which is a comprehensive, statistically valid, and useable wage reference.[227] The OES survey's quality and characteristics have made it, and continue to make it, a useful tool for setting prevailing wage levels in the Department's foreign labor programs. There are no consistently and readily available alternative surveys or sources of wage data that would provide DOL with wage information at the same level of granularity needed to properly administer the H–1B and PERM programs. For these reasons, the Department continues to believe that the OES survey is the best possible source of wage data for use in various foreign labor programs.

The Department also notes that the OES survey is what is currently used to set prevailing wage rates in the H–1B and PERM programs. As a result, even if the modifications to the prevailing wage levels in this final rule were not adopted, the OES would continue to be the source used to produce prevailing wage rates by the Department. As explained, the Department believes that continuing to use the OES is the best way to advance the policy aims of the INA's wage protections. However, even if reconsideration of the Department's use of the OES were warranted, the Department believes that the more immediate goal of correcting how the wage levels are set is the appropriate focus of this rule.[228]

However, as noted, the OES survey is not specifically designed to serve these programs. For one thing, ''the OES survey captures no information about differences within the [occupational] groupings based on skills, training, experience or responsibility levels of the workers whose wages are being reported'' [229]—the factors the INA requires the Department to rely on in setting prevailing wage levels.[230] Relatedly, ''there are factors in addition to skill level that can account for OES wage variation for the same occupation and location.'' [231] Further, the geographic areas used by BLS to calculate local wages do not always match up exactly with the ''area of employment'' for which wage rates are set, as that term is defined by the INA for purposes of the H–1B program.[232] So while the OES survey is the best available source of wage data for the Department's purposes, it is not a perfect tool for providing wages in the H–1B, H–1B1, E–3, and PERM programs—a fact that the Department must take into consideration in how it uses the OES data.

The Department also acknowledged in the IFR that the universe of workers surveyed by the OES for some of the most common occupational classifications in which H–1B workers are employed is larger than the pool of workers who can be said to have levels of education and experience comparable to those of even the least skilled H–1B workers performing work in a specialty occupation. Commenters are therefore correct that BLS's occupational classifications are not delineated with the H–1B and PERM programs in mind. But, as explained in the IFR, the Department took steps to account for this potential mismatch. In particular, because the statutory scheme requires the Department to set the prevailing wage levels based on what workers similarly employed to foreign workers make, taking into account workers' qualifications and, as noted, the large majority of foreign workers are H–1B workers, the Department determined it would be inappropriate to consider the wages of the least educated and experienced workers in these common H–1B occupational classifications in setting the prevailing wage levels.

To address the fact that the OES survey does not itself contain information about experience and education, the Department sought to determine the wages typically earned by individuals having comparable levels of education, experience, and responsibility to the prototypical entry-level H–1B and EB–2 workers working in the most common H–1B and PERM occupations by looking to other credible government surveys that do gather such information and comparing their data to the OES data. In particular, the Department consulted a variety of data sources, most importantly wage data on individuals with master's degrees or higher and limited years of work experience from the 2016, 2017, and 2018 CPS [233] conducted by the U.S. Census Bureau, and data on the salaries of recent graduates of master's degree programs in STEM occupations garnered from surveys conducted by the NSF in 2015 and 2017. Both of these surveys represent the highest standards of data collection and analysis performed by the federal government. Both surveys have large sample sizes that have been methodically collected and are consistently used not just across the federal government for purposes of analysis and policymaking, but by academia and the broader public as well. Comparing their data to OES wage distributions thus allowed the Department to take into account education and experience in determining how to use OES data. Further, though the CPS and NSF surveys provide a good approximation

of where U.S. workers with similar skills to entry-level H–1B and EB–2 workers, fall within the OES distribution; they are not conducted on a regular basis with enough granularity as the OES survey to produce wage estimates at the occupational and geographic levels, nor are the produced frequently enough to provide the up to date wage data necessary to ensure accurate prevailing wages. They thus are useful for assessing how the OES data should be used in the Department's foreign labor programs, but could not be used as a substitute for the OES, which, as noted above, has unique attributes that make it, in the Department's judgment, the best possible source of wage data even though it does not survey for education and experience. The Department is therefore confident that its use of the OES continues to be appropriate in the H–1B and PERM programs, and that the IFR's methodology properly accounted for the fact that the OES does not survey for education and experience.

As noted, some commenters suggested that the BLS OES survey is flawed because it is a voluntary survey and some smaller or more rural employers are less likely to respond to the survey, which in turn means, according to commenters, that such employers will be given inappropriately high wages because they will be grouped in with establishments in metropolitan statistical areas with higher labor costs due to a lack of survey responses. The Department recognizes that the BLS OES survey is voluntary. However, BLS sends the OES survey to over 1 million establishments and those establishments are encouraged to respond to the survey. The survey is recognized as a statistically valid, comprehensive source of wages nationwide. As the Department has discussed, the OES survey is not the perfect tool for setting wages in the foreign labor certification programs, but it is the largest and best single source of wage data available for setting wages across hundreds of occupational classifications in hundreds of geographical areas. The Department endeavors to produce as many statistically valid wage estimates as possible and therefore will move to the next geographic area until it can report a statistically valid wage. While it may be the case that in some instances wage rates provided for areas of the country with fewer establishments responding to the survey will result in those areas being grouped in with adjacent regions, the Department believes, as elaborated on previously, that the value in having a single, uniform survey that produces consistent and reliable results for its foreign labor programs outweighs any benefits that might result from using different sources of wage data for specific areas of employment. Moreover, the fact that the Department permits employers to use alternative sources of wage data to set prevailing wage rates gives employers some recourse if they believe, in certain instances, that the OES prevailing wage rate is not accurate.

Some commenters suggested that the Department should use a separate survey for certain occupations, such as physicians, because there are better surveys for those specific occupations. The Department declines to make this change. As explained throughout, the Department has determined that the OES survey is the largest and best available survey to rely upon for setting wages in the foreign labor certification programs. The Department understands the shortfalls that a survey the size of the OES survey has, and, as discussed above, has taken various steps to account for the fact that the OES survey is not specifically designed for use in the Department's foreign labor programs. For administrative uniformity the Department believes that providing one set of data, from a government conducted survey, has more benefits than using on potentially less reliable surveys conducted by private organizations that could be discontinued or have changes to their methodology made without the Department's input. Further, as noted previously, employers already have a method for utilizing a survey other than the BLS OES survey. If employers believe there are better surveys for their occupations than the BLS OES survey, they may rely upon those surveys, either through the Prevailing Wage Determination process or listing a valid wage survey as the source of the prevailing wage when submitting an LCA in the FLAG system.[234] Indeed, the Department notes that the AAMC survey itself is often used by employers as the source of the prevailing wage on their LCAs and PWD applications.

6. The Upper and Intermediate Wage Levels

Summary of Comments

Several commenters expressed concern that use of the mean of the top decile of the OES distribution to approximate the prevailing wage for Level IV workers produces a Level IV wage above the 95th percentile due to outlier wages at the top of the distribution and that this, in turn, skews the intermediate wage levels because they are ''set by statute by interpolating the data for levels'' I and IV. Some commenters cited a Cato Institute finding that ''extreme outliers'' in the data used to determine the level IV wage resulted, in some cases, in Level II and III wage determinations ''up to 26 percent higher than predicted in'' the IFR. A university commenter and an anonymous commenter stated that this methodology resulted in situations where the Level II wage increases to the 78th percentile and the Level III wage increases to the 90th percentile. An employer stated that the IFR methodology would produce clearly inaccurate prevailing wages in industries with bi-modal salary distributions. An individual commenter stated that the 95th percentile represents workers ''nearing the end of their career, with decades of experience.''

Similarly, a few commenters expressed concern about specific errors or discrepancies in prevailing wages produced by the IFR at the intermediate levels. An individual commenter asserted that of ''437,593 Area Code-SOC Code combinations'' there are prevailing wage ''discrepancies in 228,836.'' As an example, the commenter noted that the Level II wage for SOC 15–2031 in ''[a]rea code 37980'' based on what the Department estimated would be at the 62nd percentile is higher than the pre-IFR Level IV wage, which the Department estimated to be at the 67th percentile. Similarly, a trade association stated that its members reported that the Level II 62nd percentile wage is higher in many cases than the pre-IFR Level IV 67th percentile wage. In these cases, commenters noted that the wage increases effected by the IFR appeared to be even greater than the Department anticipated or intended. By contrast, two commenters asserted that prevailing wages published in the Department's Online Wage Library clearly were too low in some cases, citing examples like a level I wage of $22,000 for Electrical Engineers in College Station, Texas, much lower than entry-level wages indicated in a NSF survey.

Response to Comments

To begin, the Department agrees with commenters that setting the top wage at the mean of the upper decile skews the wages of the intermediate wage levels by including, sometimes extreme, outliers. For the reasons given below, the Department continues to believe that the Level IV wage should be placed at the uppermost end of the OES

[234] 20 CFR 655.731(a)(2)(ii)(B) and (C).

distribution. However, to avoid the statistical issues that resulted in overly inflated wages at both the upper and intermediate wage levels under the IFR, the Department has adjusted the manner in which BLS will provide data for the Level IV wage.

As the Department explained in the IFR, the highest wage level should be commensurate with the wages paid to the most highly compensated workers in any given occupation because such workers are also generally the workers with the most advanced skills and competence in the occupation, and therefore the type of workers who are similarly employed to the most highly qualified H–1B and PERM workers.[235] Again, it is generally the case that, as a worker's education and experience increase, so too do his wages. Further, while the INA places baseline, minimum skills-based qualifications on who can obtain an H–1B or EB–2 visa, it does not place any limit on how highly skilled a worker can be within these programs. Thus, while the Department necessarily discounted the lower end of the OES wage distribution in determining the entry-level wage, full consideration must be given to the uppermost portion of the distribution in adjusting the Level IV wage.

H–1B workers can be, and at least in some cases already are among the most highly paid, and therefore likely among the most highly skilled workers within their respective occupations.[236] This is demonstrated by a review of the highest salaries paid to H–1B workers in the most common occupations in which H–1B workers are employed. In Fiscal Year (FY) 2019, for example, the most highly compensated H–1B nonimmigrants employed as Computer Systems Analysts commanded annual wages as high as $450,000. That figure was $357,006 for H–1B workers in other Computer Occupations. The wages of workers at the 90th percentile of the OES distribution for these occupations, by contrast, are significantly lower. Computer Systems Analysts at the 90th percentile in the OES distribution make approximately $142,220. That figure is $144,820 for workers in other computer occupations. In other words, H–1B workers in some instances make wages far in excess of those earned by 90 percent of all U.S. workers in the same occupation. Indeed, a review of the wages of the top five percent highest earners among H–1B nonimmigrants, and therefore the earners likely to have the highest levels of education, experience, and responsibility, in the 16 occupational classifications that account for one percent or more of all approved H–1B petitions in FY2019 shows that such workers make wages that are, on average, at least 20 percent higher than those made by workers at the 90th percentile in the OES wage distribution.

Further demonstrating that H–1B workers can be and sometimes are among the most skilled and competent workers in their occupations, an examination of the top end of the wage distribution within the H–1B program shows that, for H–1B nonimmigrants with graduate and bachelor's degrees, the association between education and income level begins to break down to some extent. Among the most highly compensated H–1B workers, the higher the income level, the more likely the foreign worker beneficiary only has a bachelor's degree.[237] This strongly suggests that individuals at the fourth wage level truly possess the most advanced skills and competence—the only remaining parameters that can reasonably account for significant wage differentials—within their occupations, as additional years of education are largely irrelevant in explaining wages among top earners. The U.S. workers who are similarly employed to the most highly qualified H–1B workers are, therefore, also likely to be among the most highly skilled, and, therefore, the most highly compensated workers within the OES wage distribution.

The high levels of pay that the most skilled H–1B workers can command is also shown by the fact that, due to their advanced skills, diversified knowledge, and competence, workers placed at the fourth wage level are likely to be far more productive than their less experienced and educated peers. Whereas experience itself generally increases on a linear basis, as a function of age and time spent in an occupation, productivity and an individual's supervisory responsibilities, as a function of experience and skills, do not. For example, the nature of senior management or supervisory roles, in particular, means workers who serve as productivity multipliers are more likely to fill such positions, which in turn translates to higher wages. Perhaps even more relevant to the Department's assessment of the wages paid to H–1B workers is the nature of the work these individuals do, which is highly specialized and typically occurs in computer or engineering-related fields. In such occupations, experience and abilities can result in exponentially divergent levels of productivity, which in turn means that workers with the most advanced skills and competence can command wages far above what other workers in those occupations do.[238]

All of these considerations strongly indicate that U.S. workers similarly employed to the H–1B and PERM workers with the most advanced skills and competence are themselves among the most highly skilled workers in any given occupation, and therefore the most highly compensated. Thus, because the INA requires wages for H–1B and PERM workers to be set based on the wages paid to similarly employed U.S. workers, taking into account education, experience, and responsibility, and the Level IV wage is used for job opportunities filled by the most highly skilled workers, the Level IV wage should, in the Department's judgment be placed at the uppermost end of the OES distribution.

Importantly, commenters by and large did not dispute the Department's conclusion that H–1B workers in some cases are among the most skilled and educated workers in an occupation, and therefore should be compensated at rates that reflect what the most skilled and educated U.S. workers in those occupations make. Rather, as noted, commenters' primary concern was with the statistical methodology the Department used to calculate the Level IV wage. Because the Department agrees with commenters that the methodology contained certain unforeseen flaws, it has decided to take a new approach in the final rule that, while still resulting in wage rates that reflect what some of the most highly skilled, and therefore the most highly compensated individuals in a given occupation, make will eliminate the influence of outliers on prevailing wage rates that result in anomalous and overly inflated rates at both the upper and intermediate wage levels. In consequence, the Department has determined that the Level IV should be calculated as the 90th percentile of the OES distribution, as opposed to the mean of the upper decile used in the IFR. This change will reduce

[236] Data on the actual wages paid to H–1B workers shows that in some cases such workers are paid at or near the very top of the OES wage distribution.

[237] This analysis is based on data provided by U.S. Citizenship and Immigration Services and 2019 OFLC Disclosure Data.

[238] Andy Oram & Greg Wilson, Making Software: What Really Works, and Why We Believe It (2010).

significantly, if not eliminate, the influence of outliers on wage rates because outlier data at the very upper end of the distribution will no longer be a significant factor in how the Level IV wage is calculated.

In particular, as commenters noted, the extremely high wages paid to a few ''superstar'' outliers in an occupation in a geographic area may raise the mean of the upper decile of workers in that occupation and geographic area far above the median of the upper decile, which is the 95th percentile. Thus, using the mean of the upper decile to calculate Level IV wages and derive Level II and III wages may boost Level II, III, and IV wages higher than the Department anticipated or intended in the IFR. Changing to the 90th percentile to calculate the Level IV wages and derive Level II and III wages means the Level IV wages will more accurately reflect the wages paid to workers with levels of education, experience, and responsibility comparable to the typical U.S. worker at the high end of the distribution, rather than workers with abnormally high levels of compensation even for that part of the distribution. For example, a ''superstar'' senior software designer (OES code 15–1256) that makes over $750,000 per year working in San Jose, California in 2019 would affect the mean of the top decile, but would not affect the 90th percentile wage figure of software engineers in San Jose, California, which was $207,200 in 2019, according to OES statistics. Thus, using the mean of the top decile to calculate Level IV wages and derive Levels II and III wages allows the presence of a few ''superstar'' outliers in an occupation in a geographic area to inflate Level II, III, and IV wages for an occupation in a geographic area.

In addition, there are other considerations weighing against using the mean of the upper decile to calculate Level IV wages and derive Levels II and III wages. The extremely high wages that employers pay to ''superstar'' outliers in an occupation in a geographic area of course do not necessarily mean that employers also pay high wages to other workers in the same occupation in the same geographic area. Thus, using the mean of the top decile to calculate Level IV wages and derive Levels II and III wages not only inflate Level II, III and IV wages so that they do not accurately reflect the overall wage distribution for an occupation in a geographic area, but also introduces the potential for significant unpredictability in wages from year to year that is not based on any systemic change to the labor market. Consider the same ''superstar'' senior software designer that makes over $750,000 per year working in San Jose, California in 2019 and suppose his employer agreed to let him work remotely in 2020, and he moved to Salt Lake City, Utah. That decision would affect the mean of the top decile, reducing it in San Jose and increasing it in Salt Lake City, but would not affect the respective 90th percentiles of $207,200 in San Jose and $157,290 in Salt Lake City. Changing the work location for one ''superstar'' outlier would not affect the distribution of wages for 80 percent of software developers earning between the 10th and 90th percentiles in either San Jose or Salt Lake City. Software developers would still make more on average at the every level in San Jose than in Salt Lake City. Moreover, because the OES survey does not necessarily capture the same workers year-over-year, the unpredictability in wages that can result from the presence and then absence of an outlier in the wage data can occur even if that same worker has not changed locations. The weakening of the linkage between supply and demand factors affecting wages for most workers in an occupation and the Level II, III, and IV wages was not the Department's intention in the IFR, and is not consistent with the INA's wage provisions. Using the 90th percentile instead to calculate the Level IV wages and derive Level II and III wages for an occupation in a geographic area eliminates the distortions and minimizes the excessive and unintended variability in Levels II, III, and IV wages arising from the inclusion of a few ''superstar'' outliers in the mean of top decile.

Finally, the Department has decided to use a percentile calculation instead of a mean calculation because the Department can produce such data more efficiently. In addition, experience with the IFR's methodology has demonstrated that taking the mean of a small portion of the OES distribution, such as of a decile, can in some cases result in exceedingly small sample sizes being used to produce the wage figure, which make the figure produced potentially less reliable.

Based on its review of the comments received, the Department also believes that a percentile calculation will be easier for employers, workers, and the public to understand than a mean calculation. As noted above, some commenters challenged the wage figures provided under the IFR as being incorrect because some wages the Department estimated as falling at the 62nd percentile wage were significantly higher than what the Department had described as the 67th percentile wage under the old methodology. While, for the reasons given above, it is likely that this occurred in some cases due to the presence of outliers in the data used to calculate the Level IV wage, there is also another explanation. Specifically, describing the wage figures produced under the old methodology and the IFR's methodology as percentiles was, as explained in the IFR, simply a shorthand way of describing a rough approximation of what a mean calculation yields. For example, under the old methodology, the Level IV wage was provided as the mean of the upper two-thirds of the OES distribution, meaning the average of the wage data falling between the 33rd and 100th percentiles. The midpoint of that portion of the distribution is the 67th percentile, but its mean will not necessarily be the 67th percentile. Put more simply, the average of a set of numbers does not always fall at the median of those numbers. As a result, discussing two different means calculated based on different portions of the distributions by describing them as percentiles gives a false sense of comparability, as demonstrated by some of the discrepancies raised by commenters.

To avoid confusion about how it describes the wages it provides going forward, the Department will speak more clearly about the kinds of data it is providing and will consequently report the wage based on a percentile calculation. This means that the Department will no longer take the average of portion of the wage distribution, but instead will provide a wage that falls at a particular predetermined point within the distribution.

As to the precise values of the intermediate levels, the Department notes that it will continue to calculate the two intermediate wage levels in accordance with 8 U.S.C. 1182(p)(4), which provides that, in establishing a four-tier wage structure, ''[w]here an existing government survey has only 2 levels, 2 intermediate levels may be created by dividing by 3, the difference between the 2 levels offered, adding the quotient thus obtained to the first level and subtracting that quotient from the second level.'' [239] The BLS OES survey is, as provided in the statute, an existing survey that has long provided two wage levels for Department's use in setting the prevailing wage rates.[240]

[239] 8 U.S.C. 1182(p)(4).

[240] BLS also produces data for the public from the OES survey that is divided into five different wage levels. However, the public data BLS produces is

Continued

The Department will apply the statutory formula as follows: the difference between the two levels provided by the OES survey data is 55 percentiles. Dividing this by three yields a quotient of 18.33. This quotient, added to the value of the Level I wage at the 35th percentile, yields a Level II wage at approximately the 53rd percentile. When subtracted from the value of the Level IV wage at the 90th percentile, the quotient yields a Level III wage at approximately the 72nd percentile of the OES distribution.

Finally, while eliminating the influence of outliers on how the upper level wage is calculated and moving to percentile calculations will reduce unpredictability in the data, prevent the inflation of wages beyond the levels the Department has determined appropriate, and make the wage structure easier to understand for the public, it is possible that there will continue to be anomalies as the Department moves from a mean-based to a percentile-based methodology. However, the Department does not expect these will be common.

*7. Other Suggested Alternatives and Additional Comments*

One public policy organization suggested the Department should require use of a government survey to determine prevailing wages, stating the INA does not require the Department to permit use of other sources and expressing concern that employers ''have routinely relied on LCA prevailing wage sources that do not fit the 'independent authoritative source' or 'another legitimate source of wage information.''

The Department believes that allowing employers the flexibility of choosing to use an independent authoritative source or another legitimate source of wage data provides a backstop for cases in which OES data on an occupation in a given region is insufficient or the OES data provides an anomalous result. This flexibility serves the goal of ensuring that the wage requirement actually reflects the market wage for the job.

Another public policy organization stated it is unclear how independent authoritative and other non-OES sources ''compare to OFLC-generated OES prevailing wage'' and urged the Department to conduct a study comparing OES-based wages and wages produced by private surveys and non-OES sources ''to identify whether there are any systematic biases'' in non-OES sources.

The quality of independent wage surveys is an important subject to which OFLC pays attention and will continue to pay attention. Although private surveys are conducted independently of the Department, the Department in its regulations and guidance has set standards that private surveys must attain. As discussed above, the regulations restrict independent authoritative sources to publications within 24 months of the application and require them to use recent and valid data.[241] Independent sources must be ''reasonable and consistent with recognized standards and principals in producing a prevailing wage.'' [242]

Guidance that the Department issued in 2009 requires that wage data collected by an independent authoritative source is for similarly employed workers, meaning workers having substantially similar levels of skills. The survey should contain a representative sample of wages within the occupation that comports with recognized statistical standards and principles in producing prevailing wages. The Department provides a set of minimum survey standards in Appendix E of the 2009 Guidance and encourages employers to reference these standards when seeking to use an independent authoritative source as the prevailing wage. Written documentation on the methodology used to conduct the survey and the validity of the methodology used in computing the occupational wage data covering the area of intended employment must be kept in the employer's data file and made available in the event of an investigation. Two commenters suggested the Department should combine data collected by the OES survey with ''certain data from private, independently published compensation surveys'' to produce prevailing wages that would more accurately reflect skill, education, and experience levels than wages determined using OES pay band data alone. One of these commenters suggested BLS could ''layer'' the private survey data ''over the OES data'' and asserted this would not be difficult because H–1B workers are heavily concentrated in IT occupations that are included in private surveys, though the commenter acknowledged private surveys are not available for all occupations and localities. Other general suggestions included applying a higher wage to ''tech companies'' or applying a higher wage as ''the number of visas grow for an employer.''

The Department does not believe that combining or layering data from studies that may not be measuring quite the same occupations in the same regions would yield more accurate results. OES data is comprehensive and reliable. As the commenter acknowledged, private survey data is not available for some occupations and localities. An advantage of the OES survey is that it allows uniformity in the Department's methodology. That advantage would be lost if the Department adopted the commenters' proposal. The system the Department has adopted allows for cases where private survey data may be more accurate. As discussed, using other authoritative or legitimate sources is an option available to employers.

Various commenters asserted increased wages under the IFR methodology would have negative macroeconomic impacts, including: Brain drain and loss of American competitiveness in a global economy, stifling innovation in areas like artificial intelligence and manufacturing 4.0; increased prices for or elimination of products and services; elimination or increased outsourcing of jobs and a general reduction in labor demand; and reduced revenues, including local, State, and Federal tax revenue and reduced consumer spending from foreign workers and students. Many commenters also expressed concern that the higher IFR wages would result in increased outsourcing of jobs, rather than increased opportunities for U.S. workers. One of these commenters noted that U.S. employers can hire workers through foreign affiliates and cited a Wharton School of Business study finding H–1B restrictions ''caused foreign affiliate employment increases at the intensive and extensive margins.''

The Department does not anticipate that the harms the commenters envisage will be the consequences of more accurately calculating prevailing wages of H–1B and PERM workers. Some of the consequences are possible, but in setting wage requirements, Congress accepted that there would be costs resulting from its chosen means of protecting U.S. workers. The Department has not been assigned the function of reconsidering Congress's decision. Rather, the Department's obligation under the INA is to match as closely as possible workers' pay with their occupations and qualifications.

Two public policy organizations believed the Department must address employer misclassification of job opportunities by reviewing ''the qualifications of individual workers

not broken down with the level of granularity by area of employment needed to administer the Department's immigrant and nonimmigrant programs, which is why BLS has also long produced a separate dataset with two wage levels for the Department's use.

[241] 20 CFR 655.731 (b)(3)(iii).

[242] *Id.* at 655.731 (b)(3)(iii)(C)(4).

before DHS petitions are approved to ensure that wage levels match up with age, education, and experience'' to ensure the employer is paying an accurate prevailing wage. One of these commenters asserted some employer petitions contain the same prevailing wage for different job opportunities, such as listing the same wage for a software engineer and a senior software engineer.

These comments propose actions that may be undertaken by DHS but not by the Department. The Department cannot review DHS petitions before DHS approves them.

Some commenters suggested new definitions of the terms 'employer' and 'employment,' enhanced regulation of foreign labor recruiters, a ban of staffing companies from the H–1B program, and enhanced wage protections in the H–2A program. Other commenters expressed concerns related to DHS regulations and recent rulemaking either unrelated or not directly related to this rulemaking, including a DHS IFR regarding specialty occupation determinations.

These comments express concerns or provide suggestions that exceed the scope of this rulemaking. Accordingly, they need not be addressed in this preamble.

## IV. Amendments to the Computation of Prevailing Wage Levels Created by the Final Rule

In light of the foregoing, this final rule amends the Department's regulations at part 20, sections 656.40 and 655.731 to reflect the wage level computations the Department will use to determine prevailing wages in the H–1B, H–1B1, E–3, EB–2, and EB–3 classifications. These amendments are in accordance with the President's Executive Order (E.O.) 13788, ''Buy American and Hire American,'' which instructed the Department to ''propose new rules and issue new guidance, to supersede or revise previous rules and guidance if appropriate, to protect the interests of United States workers in the administration of our immigration system.'' [243] Additionally, the Department has determined that the existing prevailing wage levels were artificially low and provided an opportunity for employers to hire and retain foreign workers at wages well below what their U.S. counterparts earn, creating an incentive to prefer foreign workers to U.S. workers, an incentive that is at odds with the statutory scheme and causes downward pressure on the wages of the domestic workforce. Therefore, the amendments discussed below revising the wage provisions at 20 CFR 655.731 and 656.40 will ensure the prevailing wage levels reflect the wages paid to U.S. workers with similar experience, education, and responsibility to those possessed by similarly employed foreign workers.

### *1. Prevailing Wage Levels Based on the OES in the Permanent Labor Certification Program (20 CFR 656.40)*

The IFR amended this section to codify the practice of using four prevailing wage levels and to specify the manner in which the wages levels are calculated. Additionally, the IFR incorporated minor technical amendments to clarify the prevailing wage process and to codify the Department's practice of having the OFLC Administrator announce, via a notice of implementation, annual updates to OES wage data. After a careful review of the comments and as discussed above, this final rule adopts a revised wage level computation methodology and other clarifying and technical amendments to § 656.40.

Paragraph (b)(2)(ii)(A) describes the computation of the Level I Wage following implementation of transition wage rates specified under paragraph (b)(2)(iii). This first wage level—calculated as the mean of the fifth decile of the OES wage distribution under the IFR—will now be calculated as the 35th percentile of the wage distribution for the most specific occupation and geographic area available. Roughly speaking, this means that the Level I Wage will be adjusted downward from the approximate 45th percentile under the IFR to the exact 35th percentile of the relevant OES wage distribution in this final rule.

Next, paragraph (b)(2)(ii)(D) provides that the Level IV Wage—calculated as the mean of the upper decile of the OES wage distribution—will now be calculated as the exact 90th percentile of the wage distribution for the most specific occupation and geographic area available. This means the Level IV Wage will decrease approximately from the 95th percentile under the IFR to exactly the 90th percentile of the relevant OES wage distribution. Further, where the Department is unable to compute a Level IV Wage for an occupation and geographic area due to wage values exceeding the uppermost interval of the OES wage interval methodology, the Level IV Wage will be the highest of: (1) The current hourly wage rate applicable to the highest OES wage interval for the specific occupation and geographic area (also known as the footnote wage), or (2) the mean of the wages of all workers for the most specific occupation and geographic area available.

For the two intermediate levels, II and III, the Department will continue to rely on the mathematical formula Congress provided in the INA.[244] Thus, new paragraph (b)(2)(ii)(B) states that the Level II Wage shall be determined by first dividing the difference between Levels I and IV by three and then adding the quotient to the computed value for Level I. The Level III Wage is defined in new paragraph (b)(2)(ii)(C) as a level determined by first dividing the difference between Levels I and IV by three and then subtracting the quotient from the computed value for Level IV. This yields second and third wage levels at approximately the 53rd and 72nd percentiles, respectively, under this final rule as compared to the computations under the IFR, which placed Level II Wage at approximately the 62nd percentile and Level III Wage at approximately the 78th percentile.

Section 656.40(b)(2)(ii) in the IFR explained that the OFLC Administrator will publish the prevailing wage rates at least once in each calendar year, on a date to be determined by the Administrator, codifying the Department's current practice of announcing updates to OES wage data via a notice of implementation, rather than publishing multiple prevailing wage rates in the **Federal Register**. The Department has adopted the language of the provision without change, but has made a minor technical change moving the provision to paragraph (b)(2)(iv) in order to accommodate revisions to the wage level computation provisions in this final rule.

The Department is adopting without change revisions to § 656.40(b)(2) that provide greater precision in the language used by changing the term ''DOL'' to ''BLS'' when describing which entity administers the OES survey and eliminate redundancy by deleting the language ''except as provided in (b)(3) of this section.'' Because the Department is now specifying within the regulation exactly how the prevailing wage levels are calculated, the revised text also removes the existing reference to how the levels are calculated—namely the reference to the ''arithmetic mean''—and will instead read: ''If the job opportunity is not covered by a CBA, the prevailing wage for labor certification purposes shall be based on the wages of workers

[243] *See* Exec. Order 13788, 82 FR 18,837 (Apr. 18, 2017).

[244] *See* 8 U.S.C. 1182(p)(4) (''Where an existing government survey has only 2 levels, 2 intermediate levels may be created by dividing by 3, the difference between the 2 levels offered, adding the quotient thus obtained to the first level and subtracting that quotient from the second level.'').

similarly employed using the wage component of the OES survey, in accordance with subparagraph (b)(2)(i), unless the employer provides an acceptable survey under paragraphs (b)(3) and (g) of this section or elects to utilize a wage permitted under paragraph (b)(4) of this section.'' The Department also is adopting without change the revisions to paragraph (a) that remove an out-of-date reference to the role of the SWAs in the prevailing wage determination process and an unnecessary reference to ''arithmetic mean'' that is specified in other paragraphs.

*2. Amending the Wage Requirement for LCAs in the H–1B, H–1B1, and E–3 Visa Classifications (20 CFR 655.731)*

The IFR made minor technical amendments to this section to remove out-of-date references, clarify use of the BLS's OES survey and other permissible wage sources to determine prevailing wages, and specify that these determinations will be made in a manner consistent with the amended section 656.40(b)(2). After a careful review of the comments and as discussed above, this final rule adopts, without change, these clarifying and technical amendments to § 656.731.

This final rule adopts amendments to paragraph (a)(2)(ii)(A) that removes an out-of-date reference to SWAs' role in the prevailing wage determination process to reflect current practice and to provide for operational flexibilities in the future with respect to where PWD requests are processed. Non-agricultural PWD requests are no longer processed by SWAs; since 2010 they have solely been processed by the Department at a National Processing Center (NPC). PWD requests are primarily adjudicated by the NPWC, located in Washington, DC, but through interoperability, they may be processed by any NPC. The regulatory text is amended to reflect current DOL practice and to provide maximum flexibility for DOL to ensure PWDs are issued in a timely manner.

The Department also adopts without change revised language in § 655.731 that more clearly explains the Department will use BLS's OES survey to determine the prevailing wages under this paragraph, as well as an additional sentence that specifies these determinations will be made in a manner consistent with amended § 656.40(b)(2). The revised language in paragraphs (a)(2)(ii), (a)(2)(ii)(A), and (a)(2)(ii)(A)(2) also includes technical and clarifying revisions regarding other permissible wage sources (*i.e.,* applicable wage determinations under the Davis-Bacon Act or McNamara-O'Hara Service Contract Act), as well as other independent authoritative or legitimate sources of wage data in accordance with paragraph (a)(2)(ii)(B) or (C).

This final rule adopts without change language that removed the reference to ''arithmetic mean'' in paragraph (a)(2)(ii) and now states ''. . . the prevailing wage shall be based on the wages of workers similarly employed as determined by the OES survey in accordance with 20 CFR. 656.40(b)(2)(i) . . .'' The revisions also correct an error referencing ''H–2B nonimmigrant(s)'' by changing the reference to ''H–1B nonimmigrant(s)'' in paragraph (a)(2)(ii)(A)(2). The revisions further provide that an NPC will continue to determine whether a job is covered by a collective bargaining agreement that was negotiated at arms-length, but in the event the occupation is not covered by such agreement, an NPC will determine the wages of workers similarly employed using the wage component of the BLS OES, unless the employer provides an acceptable wage survey. An NPC will determine the prevailing wage in accordance with sections 212(n) and 212(t) of the INA and in a manner consistent with the newly revised 20 CFR 656.40(b)(2).

*3. Transition Wage Rates for Implementing Changes Created by the Final Rule*

As stated in the IFR, the Department applied the new regulations to applications for prevailing wage determination pending with the NPWC as of the effective date of the regulation; applications for prevailing wage determinations filed with the NPWC on or after the effective date of the regulation; and LCAs filed with the Department on or after the effective date of the regulation where the OES survey data is the prevailing wage source, and where the employer did not obtain the PWD from the NPWC prior to the effective date of the regulation. However, the Department received a number of comments expressing concerns that immediate implementation of the revised wage levels may have a significant negative impact on the economy, and that a phased implementation of the revised wage levels is appropriate to allow employers to adjust to the new computation methodology and plan payroll, budget, and contractual obligations accordingly.

To address these concerns and support an orderly and seamless transition between the rules, the Department is adding paragraph (b)(2)(iii) to this section to provide a phased implementation period to the new prevailing wage levels. A short transition period also allows the Department to implement necessary changes to program operations, OES wage databases, and technology systems, and to provide training and technical assistance to the NPC, employers, and other stakeholders in order to familiarize them with changes required by this final rule. The wage level computations contained in this section will only apply to applications for prevailing wage determination pending with the NPWC on or during the effective date(s) of each transition period; applications for prevailing wage determinations filed with the NPWC on or during the effective date(s) of each transition period; and LCAs filed with the Department on or during the effective date(s) of each transition period where the OES survey data is the prevailing wage source, and where the employer did not obtain the PWD from the NPWC prior to the effective date(s) of each transition period.

Accordingly, paragraph (b)(2)(iii)(A) describes the computations of the wage levels for the period beginning on the effective date of this final rule through June 30, 2021. The Level I Wage will continue to be calculated as the mean of the lower one-third of the wage distribution for the most specific occupation and geographic area available, which roughly approximates the 17th percentile of the wage distribution. The Level IV Wage will continue to be calculated as the mean of the upper two-thirds of the wage distribution for the most specific occupation and geographic area available, which roughly approximates the 67th percentile of the wage distribution. For the two intermediate levels, II and III, the Department will continue to rely on the mathematical formula Congress provided in the INA.

Paragraph (b)(2)(iii)(B) describes the computations of the wage levels for the period beginning on July 1, 2021, through June 30, 2022. The Level I Wage will be set as either (1) 90 percent of the wage value calculated at the 35th percentile of the wage distribution under paragraph (b)(2)(ii)(A), or (2) the mean of the lower one-third of the wage distribution under paragraph (b)(2)(iii)(A)(1), whichever is highest. The Level IV Wage will be set as either (1) 90 percent of the wage value calculated at the 90th percentile of the wage distribution under paragraph (b)(2)(ii)(D), or (2) the mean of the upper two-thirds of the wage distribution under paragraph (b)(2)(iii)(A)(2), whichever is highest. For the two intermediate levels, II and III, the

Department will continue to rely on the mathematical formula Congress provided in the INA based on the wage levels derived under this paragraph.

Paragraph (b)(2)(iii)(C) describes transition wage rates that will apply only to LCAs and, as applicable, applications for prevailing wage determinations submitted by employers seeking to employ a H–1B nonimmigrant worker in job opportunity where such H–1B nonimmigrant worker was, as of October 8, 2020, the beneficiary of an approved I–140 Petition or eligible for an extension of his or her H–1B visa status under AC21, and eligible to be granted immigrant status but for application of the per country visa limitations or remains eligible for an extension of his or her H–1B visa status at the time the LCA is filed.

Where these requirements pertaining to job opportunities for which LCAs are filed are met, paragraph (b)(2)(iii)(C)(1) describes the computations of the wage levels for the period beginning on July 1, 2021, through June 30, 2022. The Level I Wage will be set as either (1) 85 percent of the wage value calculated at the 35th percentile of the wage distribution under paragraph (b)(2)(ii)(A), or (2) the mean of the lower one-third of the wage distribution under paragraph (b)(2)(iii)(A)(1), whichever is highest. The Level IV Wage will be set as either (1) 85 percent of the wage value calculated at the 90th percentile of the wage distribution under paragraph (b)(2)(ii)(D), or (2) the mean of the upper two-thirds of the wage distribution under paragraph (b)(2)(iii)(A)(2), whichever is highest. For the two intermediate levels, II and III, the Department will continue to rely on the mathematical formula Congress provided in the INA based on the wage levels derived under this paragraph.

Paragraph (b)(2)(iii)(C)(2) describes the computations of the wage levels for the period beginning on July 1, 2022, through June 30, 2023. The Level I Wage will be set as either (1) 90 percent of the wage value calculated at the 35th percentile of the wage distribution under paragraph (b)(2)(ii)(A), or (2) the wage value provided from the calculation specified under paragraph (b)(2)(iii)(C)(1)(i), whichever is highest. The Level IV Wage will be set as either (1) 90 percent of the wage value calculated at the 90th percentile of the wage distribution under paragraph (b)(2)(ii)(D), or (2) the wage value provided from the calculation specified under paragraph (b)(2)(iii)(C)(1)(ii), whichever is highest. For the two intermediate levels, II and III, the Department will continue to rely on the mathematical formula Congress provided in the INA based on the wage levels derived under this paragraph.

Paragraph (b)(2)(iii)(C)(3) describes the computations of the wage levels for the period beginning on July 1, 2023, through June 30, 2024. The Level I Wage will be set as either (1) 95 percent of the wage value calculated at the 35th percentile of the wage distribution under paragraph (b)(2)(ii)(A), or (2) the wage value provided from the calculation specified under paragraph (b)(2)(iii)(C)(2)(i), whichever is highest. The Level IV Wage will be set as either (1) 95 percent of the wage value calculated at the 90th percentile of the wage distribution under paragraph (b)(2)(ii)(D), or (2) the wage value provided from the calculation specified under paragraph (b)(2)(iii)(C)(2)(ii), whichever is highest. For the two intermediate levels, II and III, the Department will continue to rely on the mathematical formula Congress provided in the INA based on the wage levels derived under this paragraph.

Following this transition period and beginning on July 1, 2024, paragraph (b)(2)(iii)(C)(4) requires that all prevailing wage calculations for job opportunities for which LCAs are filed shall be provided by the OFLC Administrator as specified under paragraph (b)(2)(ii) of this section. Where the Department is unable to compute a Level IV Wage under paragraph (b)(2)(iii) for an occupation and geographic area due to wage values exceeding the uppermost interval of the OES wage interval methodology, paragraph (b)(2)(iii)(D) specifies that the OFLC Administrator shall determine the Level IV Wage as the highest of: (1) The current hourly wage rate applicable to the highest OES wage interval for the specific occupation and geographic area, or (2) the mean of the wages of all workers for the most specific occupation and geographic area available.

## V. Statutory and Regulatory Requirements

### *A. Executive Orders 12866 (Regulatory Planning and Review), Executive Order 13563 (Improving Regulation and Regulatory Review), and Executive Order 13771 (Reducing Regulation and Controlling Regulatory Costs)*

Under E.O. 12866, the OMB's Office of Information and Regulatory Affairs (OIRA) determines whether a regulatory action is significant and, therefore, subject to the requirements of the E.O. and review by OMB. 58 FR 51735. Section 3(f) of E.O. 12866 defines a ''significant regulatory action'' as an action that is likely to result in a rule that: (1) Has an annual effect on the economy of $100 million or more, or adversely affects in a material way a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities (also referred to as economically significant); (2) creates serious inconsistency or otherwise interferes with an action taken or planned by another agency; (3) materially alters the budgetary impacts of entitlement grants, user fees, or loan programs, or the rights and obligations of recipients thereof; or (4) raises novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the E.O. *Id.* Pursuant to E.O. 12866, OIRA has determined that this is an economically significant regulatory action. However, OIRA has waived review of this regulation under E.O. 12866, section 6(a)(3)(A). Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), OIRA has designated that this rule is a ''major rule,'' as defined by 5 U.S.C. 804(2).

E.O. 13563 directs agencies to propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs; the regulation is tailored to impose the least burden on society, consistent with achieving the regulatory objectives; and in choosing among alternative regulatory approaches, the agency has selected those approaches that maximize net benefits. E.O. 13563 recognizes that some benefits are difficult to quantify and provides that, where appropriate and permitted by law, agencies may consider and qualitatively discuss values that are difficult or impossible to quantify, including equity, human dignity, fairness, and distributive impacts.

#### Outline of the Analysis

Section III.B.1 describes the need for the final rule, and section III.B.2 describes the process used to estimate the costs of the rule and the general inputs used to reach these estimates, such as wages and number of affected entities. Section III.B.3 explains how the provisions of the final rule will result in costs and transfer payments and presents the calculations the Department used to reach the cost and transfer payment estimates. In addition, this section describes the qualitative transfer payments and benefits of the changes contained in this final rule. Section III.B.4 summarizes the estimated first-year and 10-year total and annualized costs, perpetuated costs, and transfer payments of the final rule. Finally, section III.B.5 describes the regulatory alternatives that were considered during the development of the final rule.

Summary of the Analysis

The Department expects that the final rule will result in costs and transfer payments. As shown in Exhibit 1, the final rule will have an annualized cost of $2.90 million and a total 10-year cost of $20.34 million at a discount rate of 7 percent in 2019 dollars.[245] The final rule will result in annualized transfer payments of $14.97 billion and total 10-year transfer payments of $105.16 billion at a discount rate of 7 percent in 2019 dollars.[246] When the Department uses a perpetual time horizon to allow for cost comparisons under E.O. 13771, the annualized cost of this final rule is $1.86 million at a discount rate of 7 percent in 2016 dollars.[247]

EXHIBIT 1—ESTIMATED MONETIZED COSTS AND TRANSFER PAYMENTS OF THE FINAL RULE

[2019 $ millions]

| | Costs | Transfer payments |
|---|---|---|
| 10-Year Total with a Discount Rate of 3% | $23.47 | $130,830 |
| 10-Year Total with a Discount Rate of 7% | 20.34 | 105,157 |
| Annualized at a Discount Rate of 3% | 2.75 | 15,337 |
| Annualized at a Discount Rate of 7% | 2.90 | 14,972 |
| Perpetuated Costs* with a Discount Rate of 7% (2016 $ Millions) | | 1.86 |

The total cost associated with the final rule includes only rule familiarization. The rule is not expected to result in any cost savings. Transfer payments are the result of changes to the computation of prevailing wage rates for employment opportunities that U.S. employers seek to fill with foreign workers on a temporary basis through H–1B, H–1B1, and E–3 nonimmigrant visas.[248] See the costs and transfer payments subsections of section III.B.3 (Subject-by-Subject Analysis) below for a detailed explanation.

The Department was unable to quantify some transfer payments and benefits of the final rule. The Department describes them qualitatively in section III.B.3 (Subject-by-Subject Analysis).

1. Need for Regulation

The Department has determined that this rulemaking is needed to update the computation of prevailing wage levels under the existing four-tier wage structure to better reflect the actual wages earned by U.S. workers similarly employed to foreign workers, eliminate economic incentive or advantage in hiring foreign workers on a permanent or temporary basis in the United States, and further the goals of E.O. 13788, Buy American and Hire American. *See* 82 FR 18837. The "Hire American" directive of the E.O. articulates the executive branch policy to rigorously enforce and administer the laws governing entry of nonimmigrant workers into the United States in order to create higher wages and employment rates for U.S. workers and to protect their economic interests. *Id.* sec. 2(b). It directs Federal agencies, including the Department, to propose new rules and issue new guidance to prevent fraud and abuse in nonimmigrant visa programs, thereby protecting U.S. workers. *Id.* sec. 5.

The Department is therefore amending its regulations at Sections 656.40 and 655.731 to update the methodology it will use to determine prevailing wages using wage data from the BLS OES survey for job opportunities in the H–1B, H–1B1, E–3, and permanent labor certification programs. The reports discussed and analyses provided in the preamble above explain how application of the current wage methodology for the four-tier OES wage structure fails to produce prevailing wages at a level consistent with the actual wages earned by U.S. workers similarly employed to foreign workers and, therefore, has a suppressive effect on the wages of U.S. workers similarly employed. The Department has a statutory mandate to protect the wages and working conditions of U.S. workers similarly employed from adverse effects caused by the employment of foreign workers in the United States on a permanent or temporary basis.

2. Analysis Considerations

The Department estimated the costs and transfer payments of the final rule relative to the baseline (the regulations governing permanent labor certifications at 20 CFR part 656 and labor condition applications at 20 CFR part 655, subpart H).

In accordance with the regulatory analysis guidance articulated in OMB's Circular A–4 and consistent with the Department's practices in previous rulemakings, this regulatory analysis focuses on the likely consequences of the final rule (*i.e.,* costs and transfer payments that accrue to entities affected). The analysis covers 10 years (from 2021 through 2030) to ensure it captures major costs and transfer payments that accrue over time. The Department expresses all quantifiable impacts in 2019 dollars and uses discount rates of 3 and 7 percent, pursuant to Circular A–4.

Exhibit 2 presents the number of entities affected by the final rule. The number of affected entities is calculated using OFLC performance data from fiscal years (FY) 2018, 2019, and 2020. The Department uses them throughout this analysis to estimate the costs and transfer payments of the final rule.

[245] The final rule will have an annualized net cost of $2.75 million and a total 10-year cost of $23.47 million at a discount rate of 3 percent in 2019 dollars.

[246] The final rule will result in annualized transfer payments of $15.34 billion and total 10-year transfer payments of $130.83 billion at a discount rate of 3 percent in 2019 dollars.

[247] To comply with E.O. 13771 accounting, the Department multiplied the initial and then constant rule familiarization costs (initial cost of $4,077,113; constant costs of $2,316,661 in 2019$) by the GDP deflator (0.94242) to convert the cost to 2016 dollars (initial cost of $4,077,113; constant costs of $2,316,661 in 2019$). The Department used this result to determine the perpetual annualized cost ($2,431,831) at a discount rate of 7 percent in 2016 dollars. Assuming the rule takes effect in 2020, the Department divided $2,431,831 by $1.07^4$, which equals $1,855,232. This amount reflects implementation of the rule in 2020.

[248] As explained, *infra,* the Department did not quantify transfer payments associated with new certifications under the Permanent Labor Certification Program (*e.g.,* EB–2 and EB–3 classifications) because they are expected to be *de minimis.*

EXHIBIT 2—NUMBER OF AFFECTED ENTITIES BY TYPE
[FY 2018–2020 average]

| Entity type | Number |
|---|---|
| Unique H–1B Program Certified Employers [249] | 58,750 |
| H–1B Program Certified Worker Positions with Prevailing Wage Set by OES [250] | 904,445 |
| Unique PERM Employers [251] | 24,563 |

Estimated Number of Workers and Change in Hours

The Department presents the estimated average number of foreign worker applicants and the change in burden hours required for rule familiarization in section III.B.3 (Subject-by-Subject Analysis).

Compensation Rates

In section III.B.3 (Subject-by-Subject Analysis), the Department presents the costs, including labor, associated with implementation of the provisions contained in this final rule. Exhibit 3 presents the hourly compensation rates for the occupational categories expected to experience a change in the number of hours necessary to comply with the final rule. The Department used the BLS mean hourly wage rate for private sector human resources specialists.[252] Wage rates were adjusted to reflect total compensation, which includes non-wage factors such as overhead and fringe benefits (*e.g.,* health and retirement benefits). We used an overhead rate of 17 percent [253] and a fringe benefits rate based on the ratio of average total compensation to average wages and salaries in 2019. For the private sector employees, we used a fringe benefits rate of 42 percent.[254]

The Department received one comment on the adjustment of wage rates to reflect total compensation. One commenter said the Department had underestimated the cost of the program because fringe and overhead were included in calculations of costs and transfers. In response to the commenter's concern, the wage transfer calculations in the IFR and the final rule do not include overhead or fringe benefits; they are raw wages. Overhead and fringe benefits were only applied to staffing wages in the cost section. The commenter's calculation of fringe and overhead application was incorrect when suggesting how they were applied. The 17 percent overhead rate is not applied after calculating the fringe rate; instead, the fringe rate and the overhead rates are applied simultaneously to wages as shown in Exhibit 3.

The fringe wage rate is based on Employer Costs for Employee Compensation data which includes paid leave; supplemental pay (*i.e.,* overtime and premium, shift differentials, and nonproduction bonuses); insurance (*i.e.,* life, health, short-term disability, and long-term disability); retirement and savings; and legally required benefits (*i.e.,* Social Security, Medicare, federal unemployment insurance, state unemployment insurance, and workers' compensation). As wages increase the costs associated with paid leave, retirement savings, and supplemental pay will also increase.

The Department used the hourly compensation rates presented in Exhibit 3 to estimate the labor costs.

EXHIBIT 3—COMPENSATION RATES
[2019 dollars] [255]

| Position | Base hourly wage rate<br>(a) | Fringe rate<br>(b) | Overhead costs<br>(c) | Hourly compensation rate<br>d = a + b + c |
|---|---|---|---|---|
| HR Specialist | $32.58 | $13.81 ($32.58 × 0.42) | $5.54 ($32.58 × 0.17) | $51.93 |

3. Subject-by-Subject Analysis

The Department's analysis below covers the estimated costs and transfer payments of the final rule. In accordance with Circular A–4, the Department considers transfer payments as payments from one group to another that do not affect total resources available to society. The regulatory impact analysis focuses on the costs and transfer payments that can be attributed exclusively to the new requirements in the final rule.

Costs

The following section describes the costs of the final rule.

Rule Familiarization

When the final rule takes effect, existing employers of foreign workers with H–1B, H–1B1, E–3 visas, and those employers sponsoring foreign workers for permanent employment, will need to familiarize themselves with the new regulations. Consequently, this imposes a one-time cost for existing employers in the temporary and permanent visa programs in the first year. Each year, there are new employers that participate in the temporary and permanent visa programs. Therefore, in each year subsequent to the first year, new employers will need to familiarize themselves with the new regulations.

To estimate the first-year cost of rule familiarization, the Department calculated the average (83,312) number of unique employers requesting H–1B certifications and PERM

[249] The total unique LCA employers in 2018, 2019, and 2020 were 57,682, 63,027, and 55,540, respectively.

[250] The total number of worker positions associated with LCA certifications that use OES prevailing wages in 2018, 2019, and 2020 were 1,022,908, 907,732, and 782,696, respectively.

[251] The unique employers in 2018, 2019, and 2020 were 28,856, 23,596, and 21,236, respectively.

[252] Bureau of Labor Statistics. (2019). May 2019 National Occupational Employment and Wage Estimates: 13–1071—Human Resources Specialist. Retrieved from: *https://www.bls.gov/oes/current/oes131071.htm.*

[254] BLS. (2019). ''2019 Employer Costs for Employee Compensation.'' Retrieved from: *https://www.bls.gov/news.release/ecec.toc.htm.* Ratio of total compensation to wages and salaries for all private industry workers.

[255] Numbers may slightly differ due to rounding.

certifications.[256] The average number of unique H–1B and PERM employers (83,312) was multiplied by the estimated amount of time required to review the rule (1 hour).[257] This number was then multiplied by the hourly, fully loaded compensation rate of Human Resources Specialists ($51.93 per hour). This calculation results in an initial cost of $4.33 million in the first year after the final rule takes effect. Each year after the first year the same calculation is done for the average number of new unique employers requesting H–1B and PERM certifications in FY 2019 and FY 2020 (47,339).[258] This calculation results in a continuing annual undiscounted cost of $2.46 million in years 2–10 of the analysis. The one-time and continuing cost yields a total average annual undiscounted cost of $2.65 million. The annualized cost over the 10-year period is $2.75 million and $2.90 million at discount rates of 3 and 7 percent, respectively.

Transfer Payments

Quantifiable Transfer Payments

This section discusses the quantifiable transfer payments related to changes to the computation of the prevailing wage levels.

As discussed in the preamble, the Department determined that current wage level methodology results in prevailing wage rates for temporary and permanent workers that are far below what their U.S. counterparts are likely paid, which has a suppressive effect on the wages of similarly employed U.S. workers. While allowing employers to access higher-skilled H–1B workers to fill specialized positions can help U.S. workers' job opportunities in some instances, the benefits of this policy diminish or disappear when the prevailing wage levels do not accurately reflect the wages paid to similarly employed workers in the U.S. labor market. The distortions resulting from a poor calculation of the prevailing wage allow some firms to replace qualified U.S. workers with lower-cost foreign workers.

Under this final rule, the Department will compute the Level I Wage for PERM labor certifications and LCAs as the 35th percentile of the OES wage distribution for the most specific occupation and geographic area available, rather than the mean of the fifth decile used in the IFR. Roughly speaking, this means that the first wage level will be decreased from the 45th percentile to the 35th percentile. The Department will compute the Level IV Wage as the 90th percentile of the OES wage distribution for the most specific occupation and geographic area available, rather than the arithmetic mean of the upper decile used in the IFR. This means the fourth wage level will decrease approximately from the 95th percentile to the 90th percentile.

Consistent with the formula provided in the INA, the Level II Wage will be calculated by dividing by three, the difference between Levels I and IV, and adding the quotient to the computed value for Level I. The Level III Wage will be calculated by dividing by three the difference between Levels I and IV, and subtracting the quotient from the computed value for Level IV. This yields a Level II Wage at approximately the 53rd percentile and a Level III Wage at approximately the 72nd percentile, as compared to the current computation, which places Level II at approximately the 34th percentile and Level III at approximately the 50th percentile.

This final rule also provides for a transition period from the current wage methodology to the wage methodology contained in this final rule to give foreign workers and their employers time to adapt to the new wage rates. For most job opportunities, the transition will occur in two steps, following a short delayed implementation period, and conclude on July 1, 2022. For job opportunities that will be filled by workers who are the beneficiary of an approved Immigrant Petition for Alien Worker, or successor form, or is eligible for an extension of his or her H–1B status under sections 106(a) and (b) of the American Competitiveness in the Twenty-first Century Act of 2000 (AC21), Public Law 106–313, as amended by the 21st Century Department of Justice Appropriations Authorization Act, Public Law 107–273 (2002), the transition will occur in four steps, following a short delayed implementation period, and conclude on July 1, 2024.

For the two-step transition the current wage levels will be in effect from January 1, 2021 through June 30, 2021. From July 1, 2021 through June 30, 2022, the prevailing wage will be 90 percent of the final wage level. From July 1, 2022 and onward the prevailing wage will be the final wage levels. For the three and a half year transition the current wage levels will be in effect from January 1, 2021 through June 30, 2021. From July 1, 2021 through June 30, 2022 the prevailing wage will be 85 percent of the final wage levels; from July 1, 2022 through June 30, 2023 the prevailing wage will be 90 percent of the final wage levels; from July 1, 2023 through June 30 2024 the prevailing wage will be 95 percent of the final wage levels; and from July 1, 2024 onwards the prevailing wage will be the final wage levels.

Finally, the Department is revising § 655.731 to explain that it will use the BLS's OES survey wage data to establish the prevailing wages in the H–1B, H–1B1, and E–3 visa classifications. The Department added a sentence to explain that these determinations will be made by the OFLC NPC in a manner consistent with § 656.40(b)(2).

The Department calculated the impact on wages that will occur from implementation of the prevailing wage computation changes contained in the final rule. It is expected that the increase in prevailing wages under the final rule will incentivize some employers to employ U.S. workers instead of foreign workers from the H–1B program, but nonetheless, the Department still expects that the same number of H–1B visas will be granted under the annual caps. For many years, the Department has observed that the number of petitions exceeds the numerical cap, as the annual H–1B cap was reached within the first five business days each year from FY 2014 through FY 2020, and higher prevailing wage levels do not necessarily mean that demand for temporary foreign labor will fall below the available supply of visas. Under existing prevailing wage levels, which the Department has shown are too low and do not accurately reflect the wages paid to similarly employed U.S. workers, demand for temporary foreign labor far exceeds the statutory limits on supply. Usually prices rise in a market when demand exceeds supply. However, given the statutory framework of the H–1B system, along with the lower wages for comparable work in many other countries and the non-pecuniary benefits of participating the H–1B program, prices for temporary foreign labor under the H–1B program have stayed too low to depress overall employer demand.

Under the final rule, wage transfers will still occur in cases where U.S. workers are employed instead of H–1B workers; therefore, no adjustments to the wage estimates are necessary due to this effect. However, it is possible that prevailing wage increases will induce some employers to train and provide

[256] The total number of unique employers requesting H–1B certifications and PERM certifications in FY18 (57,682 + 28,856 = 86,538), FY19 (63,027 + 23,596 = 86,623), and FY20 (55,540 + 21,236 = 76,776).

[257] This final rule amends parts of an existing regulation. Therefore, the Department estimates 1-hour to review the rule assuming a high number of readers familiar with the existing regulation.

[258] The total number of new employers in FY19 was 51,289 (35,790 H1B + 15,499 PERM), and in FY20 was 43,389 (29,051 H1B + 14,338 PERM).

more working hours to incumbent workers, resulting in no increase in employment but an increase in earnings. It is also possible that prevailing wage increases will induce some employers to not hire a worker at all (either a U.S. worker or a worker from the H–1B program that is subject to the annual cap or not subject to the annual cap), resulting in a decrease in employment of guest workers. However, given that participation in temporary labor certification programs is voluntary, and there exists an alternative labor market of U.S. workers who are not being prevented from accepting work offered at potentially lower market-based wages, there is some reason to doubt whether an increase in prevailing wages will lead to an efficiency loss from decreased labor demand. Due to data limitations on the expected change in labor demand and supply of U.S. workers, the Department cannot accurately measure the efficiency gains or losses to the U.S. labor market created by the new prevailing wage system. The Department discusses this potential impact qualitatively; the Department invited comment on how to estimate changes to efficiency from the new prevailing wage levels, but did not receive any such comment.

The Department received two comments suggesting that the transfers of the rule were underestimated.

One commenter suggests that the analysis in the IFR underestimates the transfer payments of the IFR. They cite a 2020 Cato Institute study that found the wage increases, using interpolated wages from the publicly available BLS OES dataset resulted in underestimates of the wage impacts of the IFR. In addition, they suggested that the use of the 90th percentile as a proxy for the 95th percentile significantly underestimated wages.

In response to the commenter's concern, the IFR estimate of wages was based on BLS OES data publicly available at the time of publication. Therefore, the estimated wage impacts in the IFR were conservative, particularly for workers with wages set at the 95th percentile where wage impacts were calculated based on the publicly available 90th percentile. In this final rule the Department revises its wage tier methodology, including setting the Level IV percentile at the 90th percentile. The change in methodology will result in wage tiers that are set at percentiles that are lower than those presented in the IFR and that will be phased in over a period of 2 years for applicants that are new to the H–1B program, and three and a half years for applicants on track for lawful permanent residency (LPR).

Another commentator suggested the transfers were underestimated and they calculated that the IFR was based on wage increases of $4,825 to $9,651 per worker based on Exhibit 5 and Exhibit 6 of the IFR.

In response to the commenter's concern, Exhibit 5 and Exhibit 6 of the IFR contained illustrative wage data for a particular SOC-code and area in BLS OES and do not reflect the average impact of the IFR. They instead serve the purpose of illustrating the Department's wage impact calculations. Wage increases vary by SOC code and geographic area and therefore can be higher than these examples. The analysis for the IFR estimated that workers facing a wage increase (*i.e.,* those that were offered less under the baseline than required by the IFR) had an average increase of $27,000.

Under this final rule the Department revises the wage level percentiles of the IFR with some modifications to account for the two-step and three and a half year transition periods that are new to the final rule. Therefore, the final rule wage impact estimation follows four main steps: Step 1—simulate wage impacts with the revised percentiles for each transition wage level using historical certification data and adjust wage impacts for USCIS approval rates. Step 2—project 10-year series wage impacts incorporating the transition schedule. Step 3—during the transition period adjust the population of workers eligible for the two-step transition versus the three and a half year transition. Step 4—Estimate total transfers by combining adjusted two-step and three and a half year transition total wage impacts. This methodology is described in more detail below.

*Step 1—simulate wage impacts with the revised percentiles for each transition wage level and adjusted based on USCIS approval rates.*[259] For each H–1B certification in FY 2018, FY 2019, and FY 2020, the Department used the difference between the estimated prevailing wage level under the final rule and the wage offered under the current baseline to establish the wage impact of the prevailing wage computation changes in each calendar year of the certification's employment period. Under the H–1B visa classification, employment periods for certifications can last for up to three years in length and generally begin up to six months after a certification is issued by the Department. Therefore, a given fiscal year can have wage impacts that start in that calendar year and last up to three years, or wage impacts that could start in the following calendar year and have an end-date up to four calendar years past the fiscal year. For example, an employment start date in March of 2019 may be associated with an H–1B application certified by the Department during FY 2018 and, if that certified application contains a three-year employment period, the wage impacts on the employer will extend through March of 2022. This final rule does not retroactively impact certified wages, so there will be new H–1B applications certified by the Department during FY 2020 that may extend well into the analysis period. Therefore, the first year of the rule will only impact new certifications, in the second year new and continuing certifications from year 1 will be impacted, and in the third year and beyond both new and continuing certifications from years 1 and 2 will be impacted.

To account for this pattern of wage impacts, we classify certifications into three length cohorts and calculate annual wage impacts for each length cohort based on FY 2018 through FY 2020 data. The length cohorts are: Certifications lasting less than 1 year, certifications lasting 1–2 years, and certifications lasting 2–3 years. For each length cohort we calculate wage impacts for their first calendar year (''new''), their second calendar year (''ongoing''), and third or more calendar year (''ongoing +'')

H–1B, H–1B1, or E–3 applications certified by the Department do not necessarily result in employer wage obligations. After obtaining a certification, employers applying under the H–1B and H–1B1 programs, and in certain situations, the E–3 program must then submit a Form I–129, Petition for a Nonimmigrant Worker for approval by U.S. Citizenship and Immigration Services (USCIS). USCIS may approve or deny the H–1B visa petition. USCIS approval data represents approvals of petitions based on both certifications issued by the Department that used OES data for the prevailing wage, or certifications that were based on other approved sources to determine the prevailing wage (*e.g.,* Collective Bargaining Agreements, employer-provided surveys). Exhibit 4 summarizes FY 2018 and FY 2019 data on H–1B, H–1B1, and E–3 certifications with their prevailing wage based on the OES survey, adjusted USCIS approvals,

[259] Not all E–3 applicants need to file an I–129 with USCIS.

and approval rate.[260] To account for approval rates that may differ by geographic location and whether a certification is new or continuing, we adjust each certification's wage impact by the approval rate of the State of intended employment for the employer's certification and whether it is a new or continuing application.[261]

EXHIBIT 4—LCA AND I–129 H–1B, H–1B1, AND E–3 APPROVALS AND DENIALS

| | FY 2018 | | | FY 2019 | | | Average percent approved |
|---|---|---|---|---|---|---|---|
| | LCA certified | USCIS approved + | Percent approved | LCA certified | USCIS approved + | Percent approved | |
| Total | 1,023,552 | 308,147 | 30 | 908,218 | 368,811 | 41 | 35 |
| New | 423,174 | 80,855 | 19 | 378,175 | 132,965 | 35 | 27 |
| Continuing * | 600,378 | 227,292 | 38 | 530,043 | 235,846 | 44 | 41 |

* Includes: ''Continued Employment'', ''Change Previous Employment'', ''Change Employer'', ''Amended Petition'', ''New Concurrent Employment''.
+ Approval numbers adjusted by 92% to account for approvals with prevailing wages set by sources other than OES.

To estimate the wage impacts of new percentiles contained in this final rule, the Department used publicly available BLS OES data that reports the 10th, 25th, 50th, 75th, and 90th percentile wages by SOC code and metropolitan or non-metropolitan area.[262] In order to estimate wages for the new final rule levels of 35th, 53rd, 72nd, and 90th percentiles, the Department linearly interpolated between relevant percentiles for reported wages at each SOC code and geographic area combination.[263] For each certification from FY 2018 through FY 2020 the new wage was estimated for the final rule wage levels as well as all transition periods (*i.e.,* 90 percent for the two-step transition; 85 percent, 90 percent, and 95 percent for the three and a half year transition).

An illustrative example of calculations used to calculate wage impacts under the final rule is provided in Exhibit 5 and Exhibit 6 below. In Exhibit 5, to calculate projected wage impacts under the final rule, the Department first multiplied the number of certified workers by the number of hours worked in each calendar year (2,080 hours) and the new prevailing wage for the level the workers were certified at for their particular SOC and the geographic area combination. The examples in Exhibit 5 set forth how the Department calculated the final rule wage impact for an individual case of each length cohort.

EXHIBIT 5—PREVAILING WAGE UNDER THE FINAL RULE
[Example cases]

| Length cohort | Number of certified workers | Prevailing wage (hour) | Number of hours worked in 2018 | Number of hours worked in 2019 | Number of hours worked in 2020 | Total wages 2018 | Total wages 2019 | Total wages 2020 | Total wages 2018–2020 | USCIS approval rate | Adjusted total wages |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | (a) | (b) | (c) | (d) | (e) | (a*b*c) = (f) | (a*b*d) = (g) | (a*b*e) = (h) | (f+g+h) = (i) | (j) | (i*j) |
| <1 Year | 100 | $44.27 | 648 | 1,032 | 0 | $2,868,437 | $4,568,251 | $0 | $7,436,688 | 33% | $2,444,080 |
| 1–2 Years | 100 | 34.76 | 0 | 2,080 | 2,080 | 0 | 7,230,496 | 7,230,496 | 14,460,992 | 49 | 7,097,181 |
| 2–3 Years | 100 | 27.37 | 528 | 2,080 | 2,080 | 1,445,030 | 5,692,544 | 5,692,544 | 12,830,118 | 31 | 4,002,637 |

After the total wages for the final rule was determined, the Department calculated the baseline wage. The baseline wage is always equal to or greater than the baseline prevailing wage because some certifications offer a wage higher than the prevailing wage. The methodology is the same as that used to estimate the projected wages under the final rule: Number of certified workers is multiplied by the number of hours worked in each calendar year (based on 2,080 hours in a full year) of certified employment and the actual offered wage for the certified workers (Exhibit 6 provides an example of the calculation of the baseline wages for the same case as in Exhibit 5).

EXHIBIT 6—CURRENT PREVAILING WAGE
[Example cases]

| Length cohort | Number of certified workers | Prevailing wage (year) | Prevailing wage | Number of hours worked in 2018 | Number of hours worked in 2019 | Number of hours worked in 2020 | Total wages 2018 | Total wages 2019 | Total wages 2020 | Total wages 2018–2020 | USCIS approval rate | Adjusted total wages |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | (a) | (b) | (b/2080) = (c) | (d) | (e) | (f) | (a*c*d) = (g) | (a*c*e) = (h) | (a*c*f) = (i) | (g+h+i) = (j) | (k) | (j*k) |
| <1 Year | 100 | $77,459 | $37.24 | 648 | 1,032 | 0 | $2,413,146 | $3,843,158 | $0 | $6,256,304 | 33% | $2,056,144 |
| 1–2 Years | 100 | 41,163 | 19.79 | 0 | 2,080 | 2,080 | 0 | 4,116,300 | 4,116,300 | 8,232,600 | 49 | 4,040,404 |
| 2–3 Years | 100 | 43,846 | 21.08 | 528 | 2,080 | 2,080 | 1,113,014 | 4,384,600 | 4,384,600 | 9,882,214 | 31 | 3,082,973 |

Once the baseline offered wage was obtained, the Department estimated the wage impact of the final rule prevailing wage levels by subtracting the baseline offered wage for each calendar year from the final rule prevailing wage. The total

[260] Form I–129 data for H–1B is obtained from the USCIS H–1B data hub. Retrieved from: *https://www.uscis.gov/tools/reports-and-studies/h-1b-employer-data-hub.*

[261] Both USCIS H–1B data and LCA data indicate the state for which the work is to be completed. Therefore, approval rates are calculated separately for each state and used in the analysis.

[262] BLS OES data for Metropolitan and Nonmetropolitan Areas acquired for each year required for the analysis: May 2016-May 2019. Retrieved from *https://www.bls.gov/oes/current/oessrcma.htm*

[263] For example, if OES reports a wage of $30 per hour at the 25th25th percentile and $40 per hour at the 50th50th percentile then the 35th35th percentile is interpolated as $30 + ($40 − $30)*((35 − 25)/(50 − 35)) = $36.66 per hour.

wage impact was then multiplied by the average USCIS petition beneficiary approval rate for the State of intended employment. Here, the Department presents the wage impacts for the examples in Exhibits 5 and 6, above. For the length cohort less than 1 year, the impact in 2018 was $149,632 (($2,868,437 − $2,413,146) * 0.33) and $238,303 in 2019 (($4,568,251 − $3,843,158) * 0.33). For the length cohort of 1–2 years, the impact in 2019 was $1,528,388 (($7,230,496 − $4,116,300) * 0.49), and in 2020 was $1,528,388 (($7,230,496 − $4,116,300) * 0.49). The example for length cohort 2–3 years had wage impacts in 2018, 2019, and 2020. In the 2018 the wage impact was $103,580 (($1,445,030 − $1,113,014) * 0.31), $408,042 in 2019 (($5,692,544 − $4,384,600) * 0.31), and $2,947,905 in 2020 (($5,692,544 − $4,384,600) * 0.31).

Existing prevailing wage data from the Foreign Labor Certification (FLC) Data Center, accessible at *http://www.flcdatacenter.com,* contains wage data for each SOC code and geographic area combination that are not readily available in the public OES data used to estimate new prevailing wage levels. For example, when an OES wage is not releasable for a geographic area, the prevailing wage available through the FLC Data Center may be computed by BLS for the geographic area plus its contiguous areas. Additionally, in publicly available OES data, some percentiles are missing for certain combinations of SOC codes and geographic areas. These two factors result in a small number of certifications having no match with a new prevailing wage level.[264] To estimate wage impacts for workers associated with these certifications, the average wage impact per worker, for the given cohort and fiscal year the certification is associated with, is calculated and then applied to an adjusted number of workers associated with the certification that does not match. It is unlikely that all unmatched certifications will have a wage impact so the calculated wage impact per worker is applied to 85 percent of workers associated with unmatched certifications.[265] This produces a series of estimated wage impacts for workers that are not matched with new prevailing wages in the public OES data for each calendar year for which they have employment. These imputed wage impacts are then added to the calculated wage impact to produce a final total wage impact for each length cohort and percentile group in each calendar year.

Exhibit 7 summarizes the wage impacts of each length cohort for all percentile groups involved in the two wage transitions based on FY 2018 through FY 2020 certification data. The result of this analysis is an annual average wage impact for each length cohort and percentile group that is used in following steps to construct projected 10-year wage impacts. In Exhibit 7 some calendar years do not have values because the cohort, based on FY 2018 through FY 2020 data, does not have a full year of data for those years. For example, calendar year 2021 does have new entries from FY 2020 data but it is not a complete year of data as FY 2021 would also have new entries, and therefore it is not included.

EXHIBIT 7—WAGE TRANSFERS BY PERCENTILE GROUP AND LENGTH COHORT

[2019$ millions]

| Wage level transition group | Length cohort | | CY18 | CY19 | CY20 | CY21 | CY22 | Annual average |

*Step 3—project 10-year series of wage impacts incorporating transition schedule.* To project 10-year wage transfers the average annual values from Exhibit 7 are used to construct a 10-year series that incorporates the transition schedule and change in worker population eligible for the two-step transition or three and a half year transition. Based on data provided by USCIS there are approximately 266,500 workers in backlog for a Green Card that

[264] In FY 2018, 7 percent of certifications do not match, in FY 2019 9 percent, and FY 2020 21 percent.

[265] Approximately 85 percent of matched workers in FY 2019 certification data have wage impacts.

are on continuing H–1B visas and are therefore eligible for the three and a half year transition. On average from FY 2018 to FY 2020 316,845 workers were approved annually by USCIS.[266] Therefore, approximately 84 percent of applications are currently eligible for the three and a half year transition and the remaining 16 percent will use the two-step transition.[267] Over time USCIS estimates that 30,000 workers would be processed through the backlog every year resulting in a declining population of workers eligible in each subsequent year for wages under the three and a half year transition. The Department assumes that the total population of applicants will not change, therefore the percent of applicants applying to the H–1B visa program for two-step transition wages (or the final wage level after the transition) will grow over time and the population of workers eligible for wages under the three and a half year transition will decline. A summary of this population transition as well as the wage transition for each group is presented in Exhibit 8.

EXHIBIT 8—WAGE AND POPULATION TRANSITION FOR THE TWO APPLICATION GROUPS

| Year | Months | Wage transition | | Population transition | |
|---|---|---|---|---|---|
| | | Two-step | Three and a half year | Two-step (%) | Three and a half year (%) |
| 2021 | Jan–Jun | *Baseline* | *Baseline* | 16% | 84% |
| | Jul–Dec | 90% | 85% | 16 | 84 |
| 2022 | Jan–Jun | 90% | 85% | 25 | 75 |
| | Jul–Dec | *Final Wage Level* | 90% | 25 | 75 |
| 2023 | Jan–Jun | *Final Wage Level* | 90% | 35 | 65 |
| | Jul–Dec | *Final Wage Level* | 95% | 35 | 65 |
| 2024 | Jan–Jun | *Final Wage Level* | 95% | 44 | 56 |
| | Jul–Dec | *Final Wage Level* | *Final Wage Level* | * NA | * NA |
| 2025–2030 | | *Final Wage Level* | *Final Wage Level* | * NA | * NA |

* Beginning July 1, 2024, the transitions are both complete and all workers are at the final wage level.

To illustrate the application of the wage and population transitions to the average annual wages provided above in Exhibit 7 we describe an example of this calculation for new applications in 2021. Exhibit 9, below, provides an example calculation for new applicants in 2021 under the two-step transition wage (90 percent of final wage levels).

EXHIBIT 9—WAGE IMPACTS FOR TWO-STEP TRANSITION APPLICANTS IN 2021

| Length Cohort: | Annual average wage impact * | | | Adjustments | | Projected wage impact | | | |
|---|---|---|---|---|---|---|---|---|---|
| | <1 Year | 1–2 Years | 2–3 Years | Transition | Population | <1 Year | 1–2 Years | 2–3 Years | Total |
| | (a) | (b) | (c) | (d) | (e) | (f) = (a * d * e) | (g) = (b * d * e) | (h) = (c * d * e) | (f + g + h) |
| **Length Cohort: New** | | | | | | | | | |
| 2021 | $13.16 | $47 | $1,552 | 50.60% | 16% | $1.07 | $3.82 | $125.62 | $130.51 |
| **Length Cohort: Ongoing** | | | | | | | | | |
| 2022 | $7.42 | $104 | $3,110 | 50.60% | 16% | $0.60 | $8.39 | $251.82 | $260.81 |
| **Length Cohort: Ongoing +** | | | | | | | | | |
| 2023 | NA | NA | $4,586 | 50.60% | 16% | NA | NA | $371.25 | $371.25 |

* Average annual wage impacts from Exhibit 7 for 90 percent wage level transition group.

Average annual wage impacts for each length cohort represent a full year of wage impacts, however the wage transition does not begin until July 1, 2021. Therefore, the proportion of working days in July 1, 2021 through December 31, 2021 (50.6%) is used to adjust each length cohort's average annual wage impact. A second adjustment is made to account for the population transition (16% of the total applicant population faces wages under the two-step transition in 2021).[268] Ongoing wages from new applications in 2021 occur in 2022 and 2023. Therefore, the estimates of ongoing wages from Exhibit 7 are included in 2022 and 2023 and also adjusted by 2021 transition and population adjustments (because these ongoing wages are associated with the 2021 new applicants).

This process was repeated for each year of 2021–2024 to account for each new year of applicants (*i.e.,* in 2022, under the two-step transition, half of applicants have impacts at 90 percent of final wage levels and half at the final wage levels). In addition, the population of applicants under the two-step transition increases from 16 percent in 2021 to 25 percent in 2022. From 2025 onwards all new applicants are subject to the final wage levels.

*Step 4—estimate total transfer payments.* The Department determined

[266] Based on applying the average approval rate of USCIS LCA and I–129 H–1B, H–1B1, and E–3 applications (35%) to the average of annual certifications by DOL (905,271).

[267] 84 percent derived from 266,500 workers divided by 316,845 total workers approved annually.

[268] See Exhibit 8 transition schedule.

the total impact of the final rule by summing wage impacts from new applicants in each year and ongoing wage impacts from new applicants in prior years. The results of this is presented below in Exhibit 10.

EXHIBIT 10—TOTAL TRANSFER PAYMENTS OF THE FINAL RULE
[2019$ millions]

| Cohort | <1 | | 1–2 Years | | 2–3 Years | | | Total |
|---|---|---|---|---|---|---|---|---|
| | New | Ongoing | New | Ongoing | New | Ongoing | Ongoing + | |
| 2021 | $4 | $0 | $13 | $0 | $398 | $0 | $0 | $416 |
| 2022 | 13 | 2 | 46 | 29 | 1,495 | 782 | 0 | 2,368 |
| 2023 | 20 | 7 | 79 | 103 | 2,674 | 2,992 | 1,150 | 7,026 |
| 2024 | 26 | 11 | 101 | 178 | 3,451 | 5,356 | 4,419 | 13,542 |
| 2025 | 28 | 14 | 111 | 226 | 3,772 | 6,911 | 7,903 | 18,964 |
| 2026 | 28 | 15 | 111 | 244 | 3,772 | 7,553 | 10,201 | 21,924 |
| 2027 | 28 | 15 | 111 | 244 | 3,772 | 7,553 | 11,150 | 22,872 |
| 2028 | 28 | 15 | 111 | 244 | 3,772 | 7,553 | 11,150 | 22,872 |
| 2029 | 28 | 15 | 111 | 244 | 3,772 | 7,553 | 11,150 | 22,872 |
| 2030 | 28 | 15 | 111 | 244 | 3,772 | 7,553 | 11,150 | 22,872 |
| 10-year Total | 230 | 113 | 904 | 1,756 | 30,652 | 53,803 | 68,272 | 155,730 |

The changes in prevailing wage rates constitute a transfer payment from employers to employees. The Department estimates the total transfer over the 10-year period is $130.83 billion and $105.16 billion at discount rates of 3 and 7 percent, respectively. The annualized transfer over the 10-year period is $15.34 billion and $14.97 billion at discount rates of 3 and 7 percent, respectively.

With the increases in prevailing wage levels under the final rule, some employers may decide not to hire a U.S. worker or a foreign worker on a temporary or permanent basis. The prevailing wage increase may mitigate labor arbitrage and induce some employers to train and provide more working hours to incumbent workers, resulting in no increase in employment. The Department is unable to quantify the extent to which these two factors will occur and therefore discusses them qualitatively.

The labor economics literature has a significant volume of research on the impact of wages on demand for labor. Of interest in the context of the H–1B program is the long-run own-wage elasticity of labor demand that describes how firms demand labor in response to marginal changes in wages. There is significant heterogeneity in estimates of labor demand elasticities that can depend on industry, skill-level, region, and more.[269] A commonly cited value of average long-run own-wage elasticity of labor demand is $-0.3$.[270] This would mean that a one percent increase in wage would reduce demand for labor by 0.3 percent. The average annual increase in wage transfers is anan 18.8 percent increase in wage payments,[271] which would imply a potential reduction in labor demand by 5.64 percent (18.8 * .3). It is likely that U.S. employers will pay higher wages to H–1B workers or replace them with U.S. workers to the extent that is possible. However, we can approximate that, if U.S. employers were limited in the ability to pay higher wages and did reduce demand for workers in these roles, it would reduce the transfer payment by approximately 5.64 percent. The annual average undiscounted wage transfer estimate of $15.57 billion would therefore be reduced to $14.69 billion.

Non-Quantifiable Transfer Payments

This section discusses the non-quantifiable transfer payments related to changes to the computation of the prevailing wage levels. Specifically, the Department did not quantify transfer payments associated with new certifications under the Permanent Labor Certification Program because they are expected to be *de minimis.*

The PERM programs have a large proportion of certifications issued annually to foreign beneficiaries that are working in the U.S. at the time of certification and would have changes to wages under the final rule prevailing wage. Prior to the PERM certification, these beneficiaries are typically working under H–1B, H–1B1, and E–3 temporary visas and wage transfers for these PERM certifications are therefore already factored into our wage transfer calculations for H–1B, H–1B1, and E–3 temporary visas. Below, Exhibit 11 illustrates the percentage of PERM certifications that are on H–1B, H–1B1, or E–3 temporary visas, the percent that are not on a temporary visa and/or are not currently in the U.S. and would therefore enter on an EB–2 or EB–3 visa, and all other visa classes.

EXHIBIT 11—PERM CERTIFICATIONS BY CLASS OF ADMISSION, FY18–FY20

| Category | FY18 | FY19 | FY20 | Average percent of total |
|---|---|---|---|---|
| Not on a temporary visa/not currently residing in the United States | 10,047 | 9,841 | 9,166 | 10.1% |
| H–1B visa | 74,454 | 63,976 | 58,390 | 68.0% |
| H–1B1 visa | 109 | 81 | 83 | 0.1% |
| E–3 visa | 471 | 280 | 280 | 0.4% |

[269] For a full discussion of labor demand elasticity heterogeneity see Lichter, A., Peichl, A., & Siegloch, S. (2015). The own-wage elasticity of labor demand: A meta-regression analysis. European Economic Review, 94–119: Retrieved from: *https://www.econstor.eu/bitstream/10419/93299/1/dp7958.pdf.*

[270] This value is the best-guess in seminal work by Hamermesh, D. H. (1993). Labor Demand. Princeton University Press. Values around –0.3 have been further estimated by additional studies including in meta-analysis studies as cited in footnote 10.

[271] The average unadjusted total wages paid to employees impacted by the final rule in the FY18–FY20 datasets is $225.5 billion. The average unadjusted total wages paid to those same employees in the baseline in the FY18–FY20 datasets is $189.8 billion. This represents an 18.8 percent increase in wages. Not all of these wages are paid due to USCIS approval rates, but the wages would adjust proportionally (*i.e.,* the percentage increase would remain the same).

EXHIBIT 11—PERM CERTIFICATIONS BY CLASS OF ADMISSION, FY18–FY20—Continued

| Category | FY18 | FY19 | FY20 | Average percent of total |
|---|---|---|---|---|
| All other visa classifications* | 24,469 | 12,907 | 18,128 | 21.5% |
| Total | 109,550 | 87,085 | 86,047 | 100% |

Other visa classes include: A1/A2, L–1, F–1, A–3, B–1, C–1, TN, C–3, E–2, B–2, D–1, D–2, H–4, O–1, E–1, EWI, J–1, TPS, F–2, L–2, G–4, H–2A, G–1, G–5, H–1A, Parolee, P–1, J–2, H–3, I, M–1, R–1, O–2, M–2, P–3, O–3, VWT, TD, P–2, P–4, Q, VWB, R–2, N, S–6, T–1, V–2, T–2, K–4, U–1.

Approximately 10 percent of PERM certifications are issued annually by OFLC to foreign beneficiaries who do not currently reside in the U.S. and would enter on immigrant visas in the EB–2 or EB–3 preference category. Employment-based immigrant visa availability and corresponding wait times change regularly for different preference categories and countries. Foreign workers from countries with significant visa demand consistently experience delays, at times over a decade. Therefore, employers would not have wage obligations until, at the earliest, the very end of the 10-year analysis period, and the number of relevant certifications is a relatively small percent of all PERM certifications; the Department therefore has not included associated wage transfers in the analysis.

Benefits Discussion

This section discusses the non-quantifiable benefits related to changes to the computation of the prevailing wage levels.

The Department's increase in the prevailing wages for the four wage levels is expected to result in multiple benefits that the Department is unable to quantify but discusses qualitatively. One benefit of the final rule's increase in prevailing wages is the economic incentive to increase employee retention, training, and productivity which will increase benefits to both employers and U.S. workers. The increase in prevailing wages is expected to induce employers—particularly those using the permanent and temporary visa programs—to fill critical skill shortages, to minimize labor costs by implementing retention initiatives to reduce employee turnover, and/or to increase the number of work hours offered to similarly employed U.S. workers. Furthermore, for employers in the technology and health care sectors, this could mean using higher wages to attract and hire the industry's most productive U.S. workers and to provide them with the most advanced equipment and technologies to perform their work in the most efficient manner.

This high-wage, high-skill approach to minimizing labor costs is commonly referred to as the ''efficiency wage'' theory in labor economics—a well-established strategy that allows companies employing high-wage workers to minimize labor costs and effectively compete with companies employing low-wage workers. The efficiency wage theory supports the idea that increasing wages can lead to increased labor productivity because workers feel more motivated to work at higher wage levels. Where these jobs offer wages that are significantly higher than the wages and working conditions of alternative jobs, workers will have a greater incentive to be loyal to the company, impress their supervisors with the quality of their work, and exert an effort that involves no shirking. Thus, if employers increase wages, some, or even all, of the higher wage costs can be recouped through increased staff retention, lower costs of supervision, and higher labor productivity.

Strengthening prevailing wages will also help promote and protect jobs for American workers. By ensuring that the employment of any foreign worker is commensurate with the wages paid to similarly employed U.S. workers, the Department will be protecting the types of white-collar, middle-class jobs that are critical to ensuring the economic viability of communities throughout the country.

There is some evidence that the existing prevailing wage levels offer opportunities to use lower-cost alternatives to U.S. workers doing similar jobs by offering at the two wage levels below the median wage. For example, in FY 2019, 60 percent of H–1B workers were placed at either the first or second wage level, meaning a substantial majority of workers in the program could be paid wages well below the median wage for their occupational classification.[272] By setting the Level I wage level at the 35th percentile, employers using the H–1B and PERM programs will have less of an incentive to replace U.S. workers doing similar jobs at lower wage rates when there are available U.S. workers. This will increase earnings and standards of living for U.S. workers. It also will level the playing field by reducing incentives to replace similarly employed U.S. workers with a low-cost foreign alternative.

In addition, because workers with greater skills tend to be more productive, and as a result can command higher wages, raising the prevailing wage levels will lead to the limited number of H–1B visas going to higher-skilled foreign workers, which will likely increase the spillover economic benefits associated with high-skilled immigration.

Finally, ensuring that skilled occupations are not performed at below-market wage rates by foreign workers will provide greater incentives for firms to expand education and job training programs. These programs can attract and develop the skills of a younger generation of U.S. workers to enter occupations that currently rely on elevated levels of foreign workers.

4. Summary of the Analysis

Exhibit 12 below summarizes the costs and transfer payments of the final rule. The Department estimates the annualized cost of the final rule at $2.90 million and the annualized transfer payments (from H–1B, H–1B1, and E–3 employers to workers) at $14.97 billion, at a discount rate of 7 percent.[273] The Department did not estimate any cost savings. For the purpose of E.O. 13771, the annualized cost, when perpetuated, is $1.86 million at a discount rate of 7 percent in 2016 dollars.

[272] Costa and Hira (2020), H–1B Visas and Prevailing Wage Levels, Economic Policy Institute: Retrieved August 12, 2020 from *https://files.epi.org/pdf/186895.pdf.*

[273] The reduction of the transfer payments in this final rule compared to the IFR is likely understated due to the fact that the Department used the 90th percentile instead of the 95th percentile wage for the Level IV in analyzing the economic impact of the IFR. This resulted in underestimation of the transfer payment in the IFR.

EXHIBIT 12—ESTIMATED MONETIZED COSTS AND TRANSFER PAYMENTS OF THE FINAL RULE
[2019$ millions]

| Year | Costs | Transfer payments |
| --- | --- | --- |
| 2021 | $4.33 | $416 |
| 2022 | 2.46 | 2,368 |
| 2023 | 2.46 | 7,026 |
| 2024 | 2.46 | 13,542 |
| 2025 | 2.46 | 18,964 |
| 2026 | 2.46 | 21,924 |
| 2027 | 2.46 | 22,872 |
| 2028 | 2.46 | 22,872 |
| 2029 | 2.46 | 22,872 |
| 2030 | 2.46 | 22,872 |
| Undiscounted Total | 26.45 | 155,730 |
| 10-Year Total with a Discount Rate of 3% | 23.47 | 130,830 |
| 10-Year Total with a Discount Rate of 7% | 20.34 | 105,157 |
| 10-Year Average | 2.65 | 15,573 |
| Annualized with a Discount Rate of 3% | 2.75 | 15,337 |
| Annualized with a Discount Rate of 7% | 2.90 | 14,972 |
| Perpetuated Net Costs with a Discount Rate of 7% (2016$ Millions) | | 1.86 |

5. Regulatory Alternatives

The Department considered two alternatives to the chosen approach of establishing the prevailing wage for Levels I through IV, respectively, at approximately 35th percentile, the 45nd percentile, the 72nd percentile, and the 90th percentile with a transition period.

First, the Department considered an alternative that would modify the number of wage tiers from four levels to three levels. Under this alternative, prevailing wages would be set for Levels I through III at the 35th, 72nd, and 90th percentile, respectively. Modifying the number of wage tiers to three levels would allow for more manageable wage assignments that would be easier for employers and employees to understand due to decreased complexity to matching wage tiers with position experience. A three-tiered prevailing wage structure would maintain the minimum entry-level and fully competent experience levels and simplify the intermediate level of experience by combining the current qualified and experienced distinctions. The Department prefers the chosen methodology over this alternative because the chosen four-tiered prevailing wage structure is likely to produce more accurate prevailing wages than a three-tiered structure due to the ability to have two intermediate wage levels. In addition, creating a three-tiered prevailing wage structure would require a statutory change.

The Department considered a second alternative that would modify the geographic levels for assigning prevailing wages for the SOC code within the current four-tiered prevailing wage structure, which ranges from local MSA or BOS areas to national, to a two-tiered geographic area structure containing only statewide or national area estimates. By assigning prevailing wages at a statewide or, where statewide averages cannot be reported by the BLS, national geographic area, this second alternative would again simplify the prevailing wage determination process by reducing the number of distinct wage computations reported by the BLS and provide employers with greater certainty regarding their wage obligations, especially where the job opportunity requires work to be performed in a number of different worksite locations within a state or regional area. This process would also reduce variability in prevailing wages within a state for the same occupations across time, making prevailing wages more consistent and uniform. However, this method would not account for wage variability that may occur within states and that can account for within-state differences in labor market dynamics, industry competitiveness, or cost of living.

The Department prefers the chosen methodology because it preserves important differences in county and regional level prevailing wages and better aligns with the statutory requirement that the prevailing wage be the wage paid in the area of employment.

The Department received one comment on the regulatory alternatives considered in the IFR. One commenter representing 23 organizations suggested that the Department consider an alternative where data from private sector compensation surveys is layered on top of BLS OES data to provide more accurate prevailing wage data for certain occupations and localities where private sector compensation surveys may have coverage.

Supplementing BLS OES data from private sector compensation surveys may result in an increased ability to quantitatively connect education, experience, or employee responsibility with wages for certain occupations and localities. However, this introduction of fidelity in certain locales and not others could lead to inconsistent treatment of wages in the same occupation in different geographic areas depending on whether prevailing wages are based on BLS OES or the private sector compensation survey. In addition, such an approach would reduce transparency of prevailing wages by introducing additional complexity in the wage determination as well as non-public data sources.

*B. Regulatory Flexibility Act*

The Regulatory Flexibility Act of 1980 (RFA), 5 U.S.C. 601 *et seq.,* as amended by the Small Business Regulatory Enforcement Fairness Act of 1996, Public Law 104–121 (March 29, 1996), hereafter jointly referred to as the RFA, requires that an agency prepare an initial regulatory flexibility analysis (IRFA) when proposing, and a final regulatory flexibility analysis (FRFA) when issuing, regulations that will have a significant economic impact on a substantial number of small entities. The agency is also required to respond to public comment.[274] The Chief Counsel for Advocacy of the Small Business Administration submitted

[274] See 5 U.S.C. 604.

public comment on the Initial Regulatory Flexibility Analysis (IRFA) which is addressed below.

The Department believes that this final rule will have a significant economic impact on a substantial number of small entities and therefore the Department publishes this FRFA.

1. Objectives of and Legal Basis for the Final Rule

The Department has determined that new rulemaking is needed to better protect the wages and job opportunities of U.S. workers, minimize incentives to hire foreign workers over U.S. workers on a permanent or temporary basis in the United States under the H–1B, H–1B1, and E–3 visa programs and the PERM program, and further the goals of Executive Order 13788, Buy American and Hire American. Accordingly, this final rule revises the computation of wage levels under the Department's four-tiered wage structure based on the OES wage survey administered by the BLS to ensure that wages paid to immigrant and nonimmigrant workers are commensurate with the wages of U.S. workers with comparable levels of education, experience, and levels of supervision in the occupation and area of employment.

The Department is amending its regulations at Sections 656.40 and 655.731 to reflect the methodology the Department will use to determine prevailing wages based on the BLS's OES survey for job opportunities in the H–1B and PERM programs. The revised methodology will establish the prevailing wage for Levels I through IV, respectively, at approximately the 35th percentile, the 53rd percentile, the 72nd percentile, and the 90th percentile. In addition, the final rule allows for a transition period by setting an interim year of wages at 90 percent of the above wage levels for new H–1B visas, and a three and a half year transition period of 85 percent, 90 percent, 95 percent of the above wage levels for workers on track for lawful permanent residency (LPR).

The INA assigns responsibilities to the Secretary relating to the entry and employment of certain categories of employment-based immigrants and nonimmigrants. This rule relates to the labor certifications that the Secretary issues for certain employment-based immigrants and to the LCAs that the Secretary certifies in connection with the temporary employment of foreign workers under the H–1B, H–1B1, and E–3 visa classifications.[275] The Department has a statutory mandate to protect the wages and working conditions of similarly employed U.S. workers from adverse effects caused by the employment of foreign workers in the U.S. on a permanent or temporary basis.

2. The Agency's Response to Public Comments

The Department did not receive public comment on the IRFA.

3. Response to Comments by the Chief Counsel for Advocacy of the Small Business Administration

The Department received a comment on the IRFA by the Chief Counsel for Advocacy of the Small Business Administration that suggested the Department underestimated the economic impacts of the IFR, and therefore underestimated the significant impacts on small entities. The comment suggested that the IFR underestimated impacts based on IFR RIA Exhibits 5 and 6 which indicated a wage increase of $4,825 to $9,651 per worker and the comment provided examples from the Department's online wage library showing examples of higher wage increases.

IFR RIA Exhibit 5 and Exhibit 6 contain illustrative wage data for a particular SOC-code and area in BLS OES and do not reflect the average impact of the IFR. They instead serve the purpose of illustrating the Department's wage impact calculations. Wage increases vary by SOC code and geographic area and therefore can be higher than these examples. The analysis for the IFR estimated that workers facing a wage increase (*i.e.,* those that were offered less under the baseline than required by the IFR) had an average increase of approximately $27,000.

Under the final rule the Department revises its wage tier estimates so that wages will be transitioned over a period of two to three and a half years reducing impacts in some years. In addition, the final wage levels (after transition) will be set at lower percentiles than the IFR resulting in reduced wage obligations from the IFR, therefore reducing impacts on small businesses. Finally, Department wage estimates are based on DOL H–1B disclosure data. However, USCIS does not approve all certifications contained in the disclosure data. As a result, the estimated wage obligations for some small entities may be overestimated, and the overall number of impacted small entities at all levels of impact may be overestimated.

4. Description of the Number of Small Entities to Which the Final Rule Will Apply

i. Definition of Small Entity

The RFA defines a ''small entity'' as a (1) small not-for-profit organization, (2) small governmental jurisdiction, or (3) small business. The Department used the entity size standards defined by SBA, in effect as of August 19, 2019, to classify entities as small.[276] SBA establishes separate standards for individual 6-digit NAICS industry codes, and standard cutoffs are typically based on either the average number of employees, or the average annual receipts. For example, small businesses are generally defined as having fewer than 500, 1,000, or 1,250 employees in manufacturing industries and less than $7.5 million in average annual receipts for nonmanufacturing industries. However, some exceptions do exist, the most notable being that depository institutions (including credit unions, commercial banks, and non-commercial banks) are classified by total assets (small defined as less than $550 million in assets). Small governmental jurisdictions are another noteworthy exception. They are defined as the governments of cities, counties, towns, townships, villages, school districts, or special districts with populations of less than 50,000 people.[277]

ii. Number of Small Entities

[275] *See* 8 U.S.C. 1101(a)(5), 1101(a)(15)(E)(iii), 1101(a)(15)(H)(i)(b), 1101(a)(15)(H)(i)(b1), 1182(n), 1182(t)(1), 1184(c).

[276] Small Business Administration *Table of Small Business Size Standards Matched to North American Industry Classification System Codes.* (Aug. 2019), *https://www.sba.gov/document/support--table-size-standards.*

[277] See *http://www.sba.gov/advocacy/regulatoryflexibility-act* for details.

The Department collected employment and annual revenue data from the business information provider Data Axle and merged those data into the H–1B, H–1B1, and E–3 visa program disclosure data (H–1B disclosure data) for FY 2019.[278] This process allowed the Department to identify the number and type of small entities using the H–1B program and their annual revenues. A single employer can apply for H–1B workers multiple times; therefore, unique employers were identified. The Department was able to obtain data matches for 34,203 unique H–1B employers. Next, the Department used the SBA size standards to classify 26,354 of these employers (or 77.1 percent) as small.[279] These unique small employers had an average of 75 employees and average annual revenue of approximately $18.61 million. Of these unique employers, 22,430 of them had revenue data available from Data Axle. The Department's analysis of the impact of this final rule on small entities is based on the number of small unique employers (22,430 with revenue data).

To provide clarity on the types of industries impacted by this regulation, Exhibit 13 shows the number of unique H–1B small entity employers with certifications in FY 2019 within the top 10 most prevalent industries at the 6-digit and 4-digit NAICS code level. Depending on when their employment period starts and the length of the employment period (up to 3 years), small entities with certifications in FY 2019 can have wage obligations in calendar years 2018 through 2023.

EXHIBIT 13—NUMBER OF H–1B AND PERM SMALL EMPLOYERS BY NAICS CODE

| | Description | Number of employers | | | | | |
|---|---|---|---|---|---|---|---|
| | | 2018 | 2019 | 2020 | 2021 | 2022 | 2023 |

| 5412 | Accounting, Tax Preparation, Bookkeeping, and Payroll Services. | 41 (1%) | 595 (2%) | 598 (2%) | 585 (2%) | 551 (2%) | 12 (1%) |
| Other NAICS | | 1,652 (47%) | 15,247 (59%) | 15,287 (59%) | 14,885 (59%) | 13,464 (58%) | 418 (48%) |

iii. Projected Impacts to Affected Small Entities

The Department has considered the incremental costs for small entities from the baseline (the regulations governing permanent labor certifications at 20 CFR part 656 and labor condition applications at 20 CFR part 655, subpart H) to this final rule. We estimated the cost of (a) the time to read and review the final rule and (b) wage costs. These estimates are consistent with those presented in the E.O. 12866 section.

The Department estimates that small entities using the H–1B program, 22,430 unique employers would incur a one-time cost of $51.93 to familiarize themselves with the rule.[280] [281]

In addition to the total first-year cost above, each small entity using the H–1B program may have an increase in annual wage costs due to the revisions to the wage structure if they currently offer a wage lower than the final rule's prevailing wage levels. For each small entity, we calculated the likely annual wage cost as the sum of the total final

[278] The PERM program has a large proportion of certifications issued annually to foreign beneficiaries that are working in the U.S. at the time of certification. Prior to the PERM certification, these beneficiaries are typically working under H–1B, H–1B1, and E–3 temporary visas. Therefore, the Department has not included estimates for PERM employers in the IRFA, consistent with the analysis and estimates contained in the E.O. 12866 section. The Department considered PERM employers for purposes of calculating one-time costs in the E.O. 12866 section but did not consider these employers for purposes of cost transfers.

[279] Small Business Administration, *Table of Small Business Size Standards Matched to North American Industry Classification System Codes.* (Aug. 2019), *https://www.sba.gov/document/support--table-size-standards.*

[280] $51.93 = 1 hour × $51.93, where $51.93 = $32.58 + ($32.58 × 42%) + ($32.58 × 17%).

[281] The Department considered PERM employers for purposes of calculating one-time costs in the E.O. 12866 section.

rule wage minus the total baseline wage for each small entity identified from the H–1B disclosure data in FY 2019. We added this change in the wage costs to the total first-year costs to measure the total impact of the final rule on the small entity. Small entities with certifications in FY 2019 can have wage obligations in calendar years 2018 through 2023, depending on when their employment period starts and the length of the employment period (up to 3 years). Because USCIS does not approve all certifications, the estimated wage obligations for some small entities may be overestimated. The Department is unable to determine which small entities had certifications approved or not approved by USCIS and therefore estimates the total wage obligation with no adjustment for USCIS approval rates. As a result, estimates of the total cost to small entities are likely to be inflated. The Department sought public comments on how to best estimate which small entities had certifications approved by USCIS but did not receive any comments that discussed a method for estimating certification approval by USCIS. Exhibit 14 presents the number of small entities with a wage impact in each year, as well as the average wage impact per small entity in each year.

EXHIBIT 14—WAGE IMPACTS ON H–1B PROGRAM SMALL ENTITIES

| Proportion of revenue impacted | 2018 | 2019 | 2020 | 2021 | 2022 | 2023 |
|---|---|---|---|---|---|---|
| Number of H–1B Small Entities with Wage Impacts | 2,577 | 19,948 | 20,036 | 19,679 | 18,293 | 635 |
| Average Wage Impact per Entity | $14,178 | $96,828 | $183,463 | $179,455 | $92,531 | $19,464 |

The Department determined the proportion of each small entity's total revenue affected by the costs of the final rule to determine if the final rule would have a significant and substantial impact on small entities. The cost impacts included estimated first-year costs and the wage costs introduced by the final rule. Wage costs are based on the final wage levels as these represent the largest annual impacts a small entity would face (as opposed to wage impacts during the transition to the final wage levels). The Department used a total cost estimate of 3 percent of revenue as the threshold for a significant individual impact and set a total of 15 percent of small entities incurring a significant impact as the threshold for a substantial impact on small entities.

The Department has used a threshold of three percent of revenues in prior rulemakings for the definition of significant economic impact.[282] This threshold is also consistent with that sometimes used by other agencies.[283] The Department also maintains that 15 percent of small entities experiencing a significant impact represents an appropriate threshold to determine whether the rule has a substantial impact on small entities generally. The Department has used the same threshold in prior rulemakings for the definition of substantial number of small entities.[284]

Of the 22,430 unique small employers with revenue data, up to 13 percent of employers would have more than 3 percent of their total revenue affected in 2019, up to 22 percent in 2020 and 2021, and up to 16 percent in 2022. Exhibit 15 provides a breakdown of small employers by the proportion of revenue affected by the costs of the final rule.

EXHIBIT 15—COST IMPACTS AS A PROPORTION OF TOTAL REVENUE FOR SMALL ENTITIES

| Proportion of revenue impacted | 2018 | 2019 | 2020 | 2021 | 2022 | 2023 |
|---|---|---|---|---|---|---|
| <1% | 2,689 (88%) | 16,418 (75%) | 13,286 (61%) | 13,286 (61%) | 13,705 (69%) | 699 (95%) |
| 1%–2% | 168 (6%) | 1,884 (9%) | 2,349 (11%) | 2,349 (11%) | 2,013 (10%) | 23 (3%) |
| 2%–3% | 70 (2%) | 847 (4%) | 1314 (6%) | 1314 (6%) | 1036 (5%) | 5 (1%) |
| 3%–4% | 22 (1%) | 503 (2%) | 794 (4%) | 794 (4%) | 567 (3%) | 1 (0%) |
| 4%–5% | 24 (1%) | 325 (1%) | 549 (3%) | 549 (3%) | 372 (2%) | 2 (0%) |
| >5% | 69 (2%) | 2,036 (9%) | 3,352 (15%) | 3,352 (15%) | 2,172 (11%) | 7 (1%) |
| Total >3% | 115 (4%) | 2,864 (13%) | 4,695 (22%) | 4,695 (22%) | 3,111 (16%) | 10 (1%) |

5. Projected Reporting, Recordkeeping, and Other Compliance Requirements of the Final Rule

The final rule does not have any reporting, recordkeeping, or other compliance requirements impacting small entities.

6. Steps the Agency Has Taken To Minimize the Significant Economic Impact on Small Entities

The RFA directs agencies to assess the effects that various regulatory alternatives would have on small entities and to consider ways to minimize those effects. Accordingly, the Department considered two regulatory alternatives to the chosen approach of establishing the prevailing wage for Levels I through IV, respectively, at approximately the 35th percentile, the 53rd percentile, the 72nd percentile, and the 90th percentile with a transition period.

First, the Department considered an alternative that would modify the number of wage tiers from four levels to three levels. Under this alternative, the Department attempted to set the prevailing wages for Levels I through III,

[282] *See, e.g.,* 79 FR 60634 (October 7, 2014, Establishing a Minimum Wage for Contractors), 81 FR 39108 (June 15, 2016, Discrimination on the Basis of Sex), and 84 FR 36178 (July 26, 2019, Proposed Rule for Temporary Agricultural Employment of H–2A Nonimmigrants in the United States).

[283] *See, e.g.,* 79 FR 27106 (May 12, 2014, Department of Health and Human Services rule stating that under its agency guidelines for conducting regulatory flexibility analyses, actions that do not negatively affect costs or revenues by more than three percent annually are not economically significant).

[284] *See, e.g.,* 79 FR 60633 (October 7, 2014, Establishing a Minimum Wage for Contractors) and 84 FR 36178 (July 26, 2019, Proposed Rule for Temporary Agricultural Employment of H–2A Nonimmigrants in the United States).

respectively, at the 35th, 72nd, and 90th percentile. Modifying the number of wage tiers to three levels would allow for more manageable wage assignments that would be easier for small entities and their employees to understand due to decreased complexity to matching wage tiers with position experience. The Department decided not to pursue this alternative because the chosen four-tiered wage methodology is likely to be more accurate than the three-tiered wage level because it has two intermediate wage levels. In addition, creating a three-tiered wage level would require a statutory change. Although the Department recognizes that legal limitations prevent this alternative from being actionable, the Department nonetheless presents it as a regulatory alternative in accord with OMB guidance.[285]

The Department considered a second alternative that attempted to modify the geographic levels for assigning prevailing wages for the occupation from the current four-tiered structure, which ranges from local MSA or BOS areas to national, to a two-tiered structure containing statewide or national levels. By assigning prevailing wages at a statewide or national level (depending on whether statewide averages can be reported by BLS), this second alternative attempted to simplify the prevailing wage determination process by reducing the number of distinct wage computations reported by the BLS. It would also provide small entities with greater certainty regarding their wage obligations, especially where the job opportunity requires work to be performed in a number of different worksite locations within a State or regional area. The Department decided not to pursue this alternative because the chosen methodology preserves important differences in county and regional level prevailing wages, and because it would require a statutory change.

*C. Unfunded Mandates Reform Act*

The Unfunded Mandates Reform Act of 1995 (UMRA) is intended, among other things, to curb the practice of imposing unfunded Federal mandates on State, local, and tribal governments. Title II of UMRA requires each Federal agency to prepare a written statement assessing the effects of any Federal mandate in a proposed or final agency rule that may result in a $100 million or more expenditure (adjusted annually for inflation) in any one year by State, local, and tribal governments, in the aggregate, or by the private sector. The inflation-adjusted value equivalent of $100 million in 1995 adjusted for inflation to 2019 levels by the Consumer Price Index for All Urban Consumers (CPI–U) is approximately $168 million based on the Consumer Price Index for All Urban Consumers.[286]

While this final rule may result in the expenditure of more than $100 million by the private sector annually, the rulemaking is not a ''Federal mandate'' as defined for UMRA purposes.[287] The cost of obtaining prevailing wages, preparing labor condition and certification applications (including all required evidence) and the payment of wages by employers is, to the extent it could be termed an enforceable duty, one that arises from participation in a voluntary Federal program, applying for immigration status in the United States.[288] This final rule does not contain such a mandate. The requirements of Title II of UMRA, therefore, do not apply, and DOL has not prepared a statement under UMRA. Therefore, no actions were deemed necessary under the provisions of the UMRA.

*D. Congressional Review Act*

The Office of Information and Regulatory Affairs, of the Office of Management and Budget, has determined that this final rule is a major rule as defined by 5 U.S.C. 804, also known as the ''Congressional Review Act,'' as enacted in section 251 of the Small Business Regulatory Enforcement Fairness Act of 1996, Public Law 104–121, 110 Stat. 847, 868, *et seq.*

*E. Executive Order 13132 (Federalism)*

This final rule would not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with section 6 of Executive Order 13132, it is determined that this final rule does not have sufficient federalism implications to warrant the preparation of a federalism summary impact statement.

*F. Executive Order 12988 (Civil Justice Reform)*

This final rule meets the applicable standards set forth in sections 3(a) and 3(b)(2) of Executive Order 12988.

*G. Regulatory Flexibility Executive Order 13175 (Consultation and Coordination With Indian Tribal Governments)*

This final rule does not have ''tribal implications'' because it does not have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. Accordingly, E.O. 13175, Consultation and Coordination with Indian Tribal Governments, requires no further agency action or analysis.

*H. Paperwork Reduction Act*

The Paperwork Reduction Act of 1995 (PRA), 44 U.S.C. 3501, *et seq.,* and its attendant regulations, 5 CFR part 1320, require the Department to consider the agency's need for its information collections and their practical utility, the impact of paperwork and other information collection burdens imposed on the public, and how to minimize those burdens. This final rule does not require a collection of information subject to approval by OMB under the PRA, or affect any existing collections of information.

**List of Subjects**

*20 CFR Part 655*

Administrative practice and procedure, Australia, Chile, Employment, Employment and training, Immigration, Labor, Migrant labor, Wages.

*20 CFR Part 656*

Administrative practice and procedure, Employment, Foreign workers, Labor, Wages.

[285] OMB Circular A–4 advises that agencies ''should discuss the statutory requirements that affect the selection of regulatory Approach. If legal constraints prevent the selection of a regulatory action that best satisfies the philosophy and principles of Executive Order 12866, [agencies] should identify these constraints and estimate their opportunity cost. Such information may be useful to Congress under the Regulatory Right-to-Know Act.''

[286] *See* U.S. Bureau of Labor Statistics, *Historical Consumer Price Index for All Urban Consumers (CPI–U): U.S. City Average, All Items, available at https://www.bls.gov/cpi/tables/supplemental-files/historical-cpi-u-202003.pdf (last visited June 2, 2020).*

Calculation of inflation: (1) Calculate the average monthly CPI–U for the reference year (1995) and the current year (2019); (2) Subtract reference year CPI–U from current year CPI–U; (3) Divide the difference of the reference year CPI–U and current year CPI–U by the reference year CPI–U; (4) Multiply by 100 = [(Average monthly CPI–U for 2019 − Average monthly CPI–U for 1995)/(Average monthly CPI–U for 1995)] * 100 = [(255.657 − 152.383)/152.383] * 100 = (103.274/152.383) * 100 = 0.6777 * 100 = 67.77 percent = 68 percent (rounded).

Calculation of inflation-adjusted value: $100 million in 1995 dollars * 1.68 = $168 million in 2019 dollars.

[287] *See* 2 U.S.C. 658(6).

[288] *See* 2 U.S.C. 658(7)(A)(ii).

**DEPARTMENT OF LABOR**

Accordingly, for the reasons stated in the preamble, the Department of Labor amends parts 655 and 656 of Chapter V, Title 20, Code of Federal Regulations, as follows:

## PART 655—TEMPORARY EMPLOYMENT OF FOREIGN WORKERS IN THE UNITED STATES

■ 1. The authority citation for part 655 is revised to read as follows:

**Authority:** Section 655.0 issued under 8 U.S.C. 1101(a)(15)(E)(iii), 1101(a)(15)(H)(i) and (ii), 8 U.S.C. 1103(a)(6), 1182(m), (n), (p), and (t), 1184(c), (g), and (j), 1188, and 1288(c) and (d); sec. 3(c)(1), Pub. L. 101–238, 103 Stat. 2099, 2102 (8 U.S.C. 1182 note); sec. 221(a), Pub. L. 101–649, 104 Stat. 4978, 5027 (8 U.S.C. 1184 note); sec. 303(a)(8), Pub. L. 102–232, 105 Stat. 1733, 1748 (8 U.S.C. 1101 note); sec. 323(c), Pub. L. 103–206, 107 Stat. 2428; sec. 412(e), Pub. L. 105–277, 112 Stat. 2681 (8 U.S.C. 1182 note); sec. 2(d), Pub. L. 106–95, 113 Stat. 1312, 1316 (8 U.S.C. 1182 note); 29 U.S.C. 49k; Pub. L. 107–296, 116 Stat. 2135, as amended; Pub. L. 109–423, 120 Stat. 2900; 8 CFR 214.2(h)(4)(i); 8 CFR 214.2(h)(6)(iii); and sec. 6, Pub. L. 115–218, 132 Stat. 1547 (48 U.S.C. 1806).

Subpart A issued under 8 CFR 214.2(h).

Subpart B issued under 8 U.S.C. 1101(a)(15)(H)(ii)(a), 1184(c), and 1188; and 8 CFR 214.2(h).

Subpart E issued under 48 U.S.C. 1806.

Subparts F and G issued under 8 U.S.C. 1288(c) and (d); sec. 323(c), Public Law 103–206, 107 Stat. 2428; and 28 U.S.C. 2461 note, Public Law 114–74 at section 701.

Subparts H and I issued under 8 U.S.C. 1101(a)(15)(H)(i)(b) and (b)(1), 1182(n), (p), and (t), and 1184(g) and (j); sec. 303(a)(8), Public Law 102–232, 105 Stat. 1733, 1748 (8 U.S.C. 1101 note); sec. 412(e), Public Law 105–277, 112 Stat. 2681; 8 CFR 214.2(h); and 28 U.S.C. 2461 note, Public Law 114–74 at section 701.

Subparts L and M issued under 8 U.S.C. 1101(a)(15)(H)(i)(c) and 1182(m); sec. 2(d), Public Law 106–95, 113 Stat. 1312, 1316 (8 U.S.C. 1182 note); Public Law 109–423, 120 Stat. 2900; and 8 CFR 214.2(h).

■ 2. Amend § 655.731 by revising paragraphs (a)(2)(ii) introductory text, (a)(2)(ii)(A) introductory text, and (a)(2)(ii)(A)(*2*) to read as follows:

### § 655.731 What is the first LCA requirement, regarding wages?

* * * * *

(a) * * *

(2) * * *

(ii) If the job opportunity is not covered by paragraph (a)(2)(i) of this section, the prevailing wage shall be based on the wages of workers similarly employed as determined by the wage component of the Bureau of Labor Statistics (BLS) Occupational Employment Statistics Survey (OES) in accordance with 20 CFR 656.40(b)(2)(i); a current wage as determined in the area under the Davis-Bacon Act, 40 U.S.C. 276a *et seq.* (see 29 CFR part 1), or the McNamara-O'Hara Service Contract Act, 41 U.S.C. 351 *et seq.* (see 29 CFR part 4); an independent authoritative source in accordance with paragraph (a)(2)(ii)(B) of this section; or another legitimate source of wage data in accordance with paragraph (a)(2)(ii)(C) of this section. If an employer uses an independent authoritative source or other legitimate source of wage data, the prevailing wage shall be the arithmetic mean of the wages of workers similarly employed, except that the prevailing wage shall be the median when provided by paragraphs (a)(2)(ii)(A), (b)(3)(iii)(B)(*2*), and (b)(3)(iii)(C)(*2*) of this section. The prevailing wage rate shall be based on the best information available. The following prevailing wage sources may be used:

(A) *OFLC National Processing Center (NPC) determination.* The NPC shall receive and process prevailing wage determination requests in accordance with these regulations and Department guidance. Upon receipt of a written request for a PWD, the NPC will determine whether the occupation is covered by a collective bargaining agreement which was negotiated at arm's length, and, if not, determine the wages of workers similarly employed using the wage component of the BLS OES and selecting an appropriate wage level in accordance with 20 CFR 656.40(b)(2)(i), unless the employer provides an acceptable survey. The NPC shall determine the wage in accordance with secs. 212(n), 212(p), and 212(t) of the INA and in a manner consistent with 20 CFR 656.40(b)(2). If an acceptable employer-provided wage survey provides an arithmetic mean then that wage shall be the prevailing wage; if an acceptable employer-provided wage survey provides a median and does not provide an arithmetic mean, the median shall be the prevailing wage applicable to the employer's job opportunity. In making a PWD, the NPC will follow 20 CFR 656.40 and other administrative guidelines or regulations issued by ETA. The NPC shall specify the validity period of the PWD, which in no event shall be for less than 90 days or more than 1 year from the date of the determination.

* * * * *

(*2*) If the employer is unable to wait for the NPC to produce the requested prevailing wage for the occupation in question, or for the CO and/or the BALCA to issue a decision, the employer may rely on other legitimate sources of available wage information as set forth in paragraphs (a)(2)(ii)(B) and (C) of this section. If the employer later discovers, upon receipt of the PWD from the NPC, that the information relied upon produced a wage below the final PWD and the employer was not paying the NPC-determined wage, no wage violation will be found if the employer retroactively compensates the H–1B nonimmigrant(s) for the difference between the wage paid and the prevailing wage, within 30 days of the employer's receipt of the PWD.

* * * * *

## PART 656—LABOR CERTIFICATION PROCESS FOR PERMANENT EMPLOYMENT OF ALIENS IN THE UNITED STATES

■ 3. The authority citation for part 656 is revised to read as follows:

**Authority:** 8 U.S.C. 1182(a)(5)(A), 1182(p); sec.122, Pub. L. 101–649, 109 Stat. 4978; and Title IV, Pub. L. 105–277, 112 Stat. 2681.

■ 4. Amend § 656.40 by revising paragraphs (a) and (b)(2) and (3) to read as follows:

### § 656.40 Determination of prevailing wage for labor certification purposes.

(a) *Application process.* The employer must request a PWD from the NPC, on a form or in a manner prescribed by OFLC. The NPC shall receive and process prevailing wage determination requests in accordance with these regulations and with Department guidance. The NPC will provide the employer with an appropriate prevailing wage rate. The NPC shall determine the wage in accordance with sec. 212(p) of the INA. Unless the employer chooses to appeal the center's PWD under § 656.41(a) of this part, it files the Application for Permanent Employment Certification either electronically or by mail with the processing center of jurisdiction and maintains the PWD in its files. The determination shall be submitted to the CO, if requested.

(b) * * *

(2) If the job opportunity is not covered by a CBA, the prevailing wage for labor certification purposes shall be based on the wages of workers similarly employed using the wage component of the Bureau of Labor Statistics (BLS) Occupational Employment Statistics Survey (OES) in accordance with subparagraph (b)(2)(i), unless the employer provides an acceptable survey under paragraphs (b)(3) and (g) of this section or elects to utilize a wage permitted under paragraph (b)(4) of this section.

(i) The BLS shall provide the OFLC Administrator with the OES wage data by occupational classification and geographic area, which is computed and assigned at levels set commensurate with the education, experience, and level of supervision of similarly employed workers, as determined by the Department.

(ii) Except as provided under paragraph (b)(2)(iii) of this section, the prevailing wage shall be provided by the OFLC Administrator at the following four levels:

(A) The Level I Wage shall be computed as the 35th percentile of the OES wage distribution and assigned for the most specific occupation and geographic area available.

(B) The Level II Wage shall be determined by first dividing the difference between Levels I and IV by three and then adding the quotient to the computed value for Level I and assigned for the most specific occupation and geographic area available.

(C) The Level III Wage shall be determined by first dividing the difference between Levels I and IV by three and then subtracting the quotient from the computed value for Level IV and assigned for the most specific occupation and geographic area available.

(D) The Level IV Wage shall be computed as the 90th percentile of the OES wage distribution and assigned for the most specific occupation and geographic area available. Where the Level IV Wage cannot be computed due to wage values exceeding the uppermost interval of the OES wage interval methodology, the OFLC Administrator shall determine the Level IV Wage using the current hourly wage rate applicable to the highest OES wage interval for the specific occupation and geographic area, or the arithmetic mean of the wages of all workers for the most specific occupation and geographic area available, whichever is highest.

(iii) Transition Wage Rates:

(A) For the period from the effective date of this rule through June 30, 2021, the prevailing wage shall be provided by the OFLC Administrator at the following four levels:

(*1*) The Level I Wage shall be computed as the arithmetic mean of the lower one-third of the OES wage distribution and assigned for the most specific occupation and geographic area available.

(*2*) The Level IV Wage shall be computed as the arithmetic mean of the upper two-thirds of the OES wage distribution and assigned for the most specific occupation and geographic area available.

(*3*) The Level II Wage and Level III Wage shall be determined by applying the formulae provided in paragraphs (b)(2)(ii)(B) and (C) of this section to the Level I and Level IV values in paragraphs (b)(2)(iii)(A)(*1*) and (*2*) of this section.

(B) For the period from July 1, 2021, through June 30, 2022, the prevailing wage shall be provided by the OFLC Administrator at the following four levels:

(*1*) The Level I Wage shall be 90 percent of the wage provided under paragraph (b)(2)(ii)(A) of this section, or the wage provided under paragraph (b)(2)(iii)(A)(*1*) of this section, whichever is higher.

(*2*) The Level IV Wage shall be 90 percent of the wage provided under paragraph (b)(2)(ii)(D) of this section, or the wage provided under paragraph (b)(2)(iii)(A)(*2*) of this section, whichever is higher.

(*3*) The Level II Wage and Level III Wage shall be determined by applying the formulae provided in paragraphs (b)(2)(ii)(B) and (C) of this section to the wages established under paragraphs (b)(2)(iii)(B)(*1*) and (*3*) of this section.

(C) Notwithstanding any other provision of this section, if the employer submitting the Form ETA–9035/9035E, *Labor Condition Application for Nonimmigrant Workers* and, as applicable, the Form ETA–9141, *Application for Prevailing Wage Determination,* will employ an H–1B nonimmigrant in the job opportunity subject to the *Labor Condition Application for Nonimmigrant Workers* who was, as of October 8, 2020, the beneficiary of an approved Immigrant Petition for Alien Worker, or successor form, or is eligible for an extension of his or her H–1B status under sections 106(a) and (b) of the American Competitiveness in the Twenty-first Century Act of 2000 (AC21), Public Law 106–313, as amended by the 21st Century Department of Justice Appropriations Authorization Act, Public Law 107–273 (2002), and the H–1B nonimmigrant is eligible to be granted immigrant status but for application of the per country limitations applicable to immigrants under paragraphs 203(b)(1), (2), and (3) of the INA, or remains eligible for an extension of the H–1B status at the time the *Labor Condition Application for Nonimmigrant Workers* is filed:

(*1*) For the period from July 1, 2021, through June 30, 2022, the prevailing wage shall be provided by the OFLC Administrator at the following four levels:

(*i*) The Level I Wage shall be 85 percent of the wage provided under paragraph (b)(2)(ii)(A) of this section, or the wage provided under paragraph (b)(2)(iii)(A)(*1*) of this section, whichever is higher.

(*ii*) The Level IV Wage shall be 85 percent of the wage provided under paragraph (b)(2)(ii)(D) of this section, or the wage provided under paragraph (b)(2)(iii)(A)(*2*) of this section, whichever is higher.

(*iii*) The Level II Wage and Level III Wage shall be determined by applying the formulae provided in paragraphs (b)(2)(ii)(B) and (C) of this section to the wages established under paragraphs (b)(2)(iii)(C)(*1*)(*i*) and (*ii*) of this section.

(*2*) For the period from July 1, 2022, through June 30, 2023, the prevailing wage shall be provided by the OFLC Administrator at the following four levels:

(*i*) The Level I Wage shall be 90 percent of the wage provided under paragraph (b)(2)(ii)(A) of this section, or the wage provided under paragraph (b)(2)(iii)(C)(*1*)(*i*) of this section, whichever is higher.

(*ii*) The Level IV Wage shall be 90 percent of the wage established under paragraph (b)(2)(ii)(D) of this section, or the wage established under paragraph (b)(2)(iii)(C)(*1*)(*ii*) of this section, whichever is higher.

(*iii*) The Level II Wage and Level III Wage shall be determined by applying the formulae provided in paragraphs (b)(2)(ii)(B) and (C) of this section to the wages established under paragraphs (b)(2)(iii)(C)(*2*)(*i*) and (*ii*) of this section.

(*3*) For the period from July 1, 2023, through June 30, 2024, the prevailing wage shall be provided by the OFLC Administrator at the following four levels:

(*i*) The Level I Wage shall be 95 percent of the wage provided under paragraph (b)(2)(ii)(A) of this section, or the wage provided under paragraph (b)(2)(iii)(C)(*2*)(*i*) of this section, whichever is higher.

(*ii*) The Level IV Wage shall be 95 percent of the wage provided under paragraph (b)(2)(ii)(D) of this section, or the wage provided under paragraph (b)(2)(iii)(C)(*2*)(*ii*) of this section, whichever is higher.

(*iii*) The Level II Wage and III Wage shall be determined by applying the formulae provided in paragraphs (b)(2)(ii)(B) and (C) of this section to the wages established under paragraphs (b)(2)(iii)(C)(3)(*i*) and (*ii*) of this section.

(*4*) Beginning July 1, 2024, the prevailing wage shall be provided by the OFLC Administrator in accordance with the computations under paragraph (b)(2)(ii) of this section.

(*5*) Where the Level I Wage or Level IV Wage provided under paragraphs (b)(2)(iii)(C)(*1*) through (*3*) of this section exceeds the Level I Wage or Level IV Wage provided under paragraph (b)(2)(ii) of this section in a given period, the Level I Wage or Level IV Wage for that period shall be the wage provided under paragraph (b)(2)(ii), and the Level II Wage and Level III Wage for that period shall be adjusted by applying the formulae provided in paragraphs (b)(2)(ii)(B) and (C) of this section.

(D) Where a Level IV Wage provided under paragraph (b)(2)(iii) of this section cannot be computed due to wage values exceeding the uppermost interval of the OES wage interval methodology, the OFLC Administrator shall determine the Level IV Wage using the current hourly wage rate applicable to the highest OES wage interval for the specific occupation and geographic area or the arithmetic mean of the wages of all workers for the most specific occupation and geographic area available, whichever is highest.

(iv) The OFLC Administrator will publish, at least once in each calendar year, on a date to be determined by the OFLC Administrator, the prevailing wage levels under paragraphs (b)(2)(ii) and (iii) of this section as a notice posted on the OFLC website.

(3) If the employer provides a survey acceptable under paragraph (g) of this section, the prevailing wage for labor certification purposes shall be the arithmetic mean of the wages of workers similarly employed in the area of intended employment. If an otherwise acceptable survey provides a median and does not provide an arithmetic mean, the prevailing wage applicable to the employer's job opportunity shall be the median of the wages of workers similarly employed in the area of intended employment.

**48 CFR Chapter 1**

**[Docket No. FAR–2020–0051, Sequence No. 8]**

## Federal Acquisition Regulation; Federal Acquisition Circular 2021–03; Introduction

**AGENCY:** Department of Defense (DoD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA).

**ACTION:** Summary presentation of final rules.

**SUMMARY:** This document summarizes the Federal Acquisition Regulation (FAR) rules agreed to by the Civilian Agency Acquisition Council and the Defense Acquisition Regulations Council (Councils) in this Federal Acquisition Circular (FAC) 2021–03. A companion document, the *Small Entity Compliance Guide* (SECG), follows this FAC.

**DATES:** For effective dates see the separate documents, which follow.

**FOR FURTHER INFORMATION CONTACT:** The analyst whose name appears in the table below in relation to the FAR case. For information pertaining to status or publication schedules, contact the Regulatory Secretariat Division at 202–501–4755 or *GSARegSec@gsa.gov.*

RULES LISTED IN FAC 2021–03

| Item | Subject | FAR case | Analyst |
|---|---|---|---|
| I | Violations of Arms Control Treaties or Agreements with the United States | 2017–018 | Jackson. |
| II | Lowest Price Technically Acceptable Source Selection Process | 2018–016 | Jackson. |
| III | Individual Sureties | 2017–003 | Delgado. |
| IV | Technical Amendments. | | |

**ADDRESSES:** The FAC, including the SECG, is available via the internet at *https://www.regulations.gov.*

**SUPPLEMENTARY INFORMATION:** Summaries for each FAR rule follow. For the actual revisions and/or amendments made by these FAR rules, refer to the specific item numbers and subjects set forth in the documents following these item summaries. FAC 2021–03 amends the FAR as follows:

### Item I—Violations of Arms Control Treaties or Agreements With the United States (FAR Case 2017–018)

This final rule adopts as final with changes, an interim rule published on June 15, 2018. The interim rule amended the FAR to implement 22 U.S.C. 2593e, as added by section 1290 of the National Defense Authorization Act for Fiscal Year 2017 (Pub. L. 114–328). The final rule makes technical edits clarifying the suspension and debarment remedies for determination of a false certification pursuant to 22 U.S.C. 2593e, and other minor edits.

### Item II—Lowest Price Technically Acceptable Source Selection Process (FAR Case 2018–016)

This final rule amends the FAR to implement section 880 of the John S. McCain National Defense Authorization Act for Fiscal Year 2019. Specifically, this rule amends: (1) FAR part 15 to specify the criteria that must be met in order to include lowest price technically acceptable (LPTA) source selection criteria in a solicitation, and require solicitations predominantly for the acquisition of certain services and supplies to avoid the use of LPTA source selection criteria, to the maximum extent practicable; and (2) FAR parts 12, 13, 16, and 37 to point to the text in FAR part 15, as applicable.

### Item III—Individual Sureties (FAR Case 2017–003)

This final rule changes the kind of assets that an individual surety must pledge as security for an individual surety bond. A pledge of assets must consist only of eligible obligations, *i.e.,* public debt obligations of the United States Government. The rule implements section 874 of the National Defense Authorization Act for Fiscal Year 2016 (Pub. L. 114–92), codified at 31 U.S.C. 9310, Individual Sureties.

This final rule will not have a significant economic impact on a substantial number of small entities.

### Item IV—Technical Amendments

Editorial changes are made at FAR 2.101, 15.209, 17.502–1, 37.103, 52.212–3, 52.212–5, 52.213–4, 52.222–18, 52.223–3, 52.225–2, 52.225–4, 52.225–6, 52.225–9, 52.225–13, and 52.229–12.

## Federal Acquisition Regulation: Violations of Arms Control Treaties or Agreements With the United States

**AGENCY:** Department of Defense (DoD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA).

**ACTION:** Final rule.

**SUMMARY:** DoD, GSA, and NASA are adopting as final, with changes, an interim rule amending the Federal Acquisition Regulation (FAR) to implement a section of the National Defense Authorization Act for Fiscal Year 2017 that addresses measures against persons involved in activities that violate arms control treaties or agreements with the United States.

**DATES:** *Effective:* February 16, 2021.

**FOR FURTHER INFORMATION CONTACT:** Mr. Michael O. Jackson, Procurement Analyst, at 202–208–4949 or *michaelo.jackson@gsa.gov* for clarification of content. For information pertaining to status or publication schedules, contact the Regulatory Secretariat Division at 202–501–4755 or *GSARegSec@gsa.gov.* Please cite FAC 2021–03, FAR Case 2017–018.

**SUPPLEMENTARY INFORMATION:**

### I. Background

DoD, GSA, and NASA issued an interim rule at 83 FR 28145 on June 15, 2018, to implement 22 U.S.C. 2593e, as added by section 1290 of the National Defense Authorization Act for Fiscal Year 2017 (Pub. L. 114–328). 22 U.S.C. 2593e addresses measures against persons involved in activities that violate arms control treaties or agreements with the United States and applicable remedies for determining that a person has submitted a false certification regarding such activities. One respondent submitted comments on the interim rule.

### II. Discussion and Analysis

The Civilian Agency Acquisition Council and the Defense Acquisition Regulations Council (the Councils) reviewed the public comments in the development of the final rule. A discussion of the comments and the changes to the rule as a result of those comments are provided as follows:

*A. Summary of Changes*

The final rule:

1. Clarifies, at FAR 9.405, the effect of an ineligibility determination under 22 U.S.C. 2593e. Conforming changes are made at FAR 9.400(b) and 9.405–2(a).

2. Enumerates causes of suspension and debarment at FAR 9.406–2(b)(1)(vii) and 9.407–2(a)(9).

3. Clarifies at FAR 9.406–4(a)(1)(iii) that the minimum period of debarment of not less than two years, as statutorily mandated by 22 U.S.C. 2593e, for violation of arms control treaties or agreements with the United States is inclusive of any suspension period, if suspension precedes the debarment per FAR 9.406–4(a)(2). A conforming change is also made at FAR 9.109–4(d).

4. Corrects the threshold at FAR 52.209–13 regarding application of the certification requirement.

*B. Analysis of Public Comments*

1. Causes for suspension and debarment.

*Comment:* The respondent recommended addition of new causes to the lists of causes for debarment and suspension at FAR 9.406–2 and 9.407–2, respectively, to include determination of a false certification regarding violations of arms control treaties or agreements with the United States under FAR 52.209–13.

*Response:* The Councils have added the causes at FAR 9.406–2(b)(1)(vii) and 9.407–2(a)(9), as recommended. This change is in line with FAR 9.109–4(d) and reflects statutory remedies under 22 U.S.C. 2593e.

2. Period of debarment.

*Comment:* The respondent recommended that FAR 9.406–4(a)(1)(iii) should also specify that the statutory requirement for the 2-year minimum debarment period is inclusive of a suspension period, if suspension precedes a debarment. This is consistent with FAR 9.406–4(a)(2), which states that if suspension precedes a debarment, the suspension period shall be considered in determining the debarment period.

The respondent also recommended changing the reference in this paragraph from ''9.109–4(d)'' to the newly proposed ''9.406–2(b)(1)(vii)'', because any suspension or debarment resulting from determination of a false certification under FAR 52.209–13 will be pursued under FAR subpart 9.4.

*Response:* The Councils are making the changes to FAR 9.406–4(a)(1)(iii) as recommended by the respondent. Suspension as a remedy for determination of a false certification under FAR 52.209–13 continues to follow FAR 9.407–4(b), which limits the maximum period of suspension to 18 months.

3. Certification by the offeror.

*Comment:* The respondent recommended an edit to FAR 9.109–4(d) to refer more broadly to FAR subpart 9.4, rather than specifying ''subject to procedures set forth in subpart 9.4 (including 9.406–1 and 9.407–1)''. The respondent was concerned that the reference to ''procedures'' set forth in FAR subpart 9.4 might be too narrowly interpreted as only applying to the ''Procedures'' subheading titles of FAR 9.406–3 and 9.407–3.

*Response:* The Councils are removing ''the procedures'' language to have FAR 9.109–4(d) refer generally to subpart 9.4.

4. Effect of listing.

*Comment:* The respondent commented that the change to FAR 9.405(b) in the interim rule was unnecessary, because FAR 9.405(b) already states that contractors included in System for Award Management (SAM) exclusions as being ineligible on the basis of statutory procedures are excluded under the conditions and period set forth in the regulation. Specific statutory prohibitions that are not issued under FAR subpart 9.4 procedures to date have not been incorporated into FAR subpart 9.4, and the scope of those debarments are not specifically addressed in FAR section 9.405. The respondent further recommended that if the interim rule revisions to FAR 9.405 are retained, then the provisions should be edited to mirror the statutory language, which also prohibits agencies from entering into and renewing contracts with these entities.

*Response:* The Councils decided to retain the language at FAR 9.405 and adopted the respondent's change by adding ''enter into'' and ''renew''. Also, the Councils adopted the respondent's recommendation to break out the paragraph by adding a new paragraph (c).

### III. Applicability to Contracts at or Below the Simplified Acquisition Threshold (SAT) and for Commercial Items, Including Commercially Available Off-the-Shelf (COTS) Items

Consistent with 41 U.S.C. 1905—1907, the interim rule did not apply the certification required by 22 U.S.C. 2593e to contracts at or below the simplified acquisition threshold (SAT), or to contracts for the acquisition of commercial items, including commercially available off-the-shelf (COTS) items. However, when acquiring products or services, the Government is still prohibited from contracting with entities listed as excluded in the SAM. Similarly, this final rule does not affect the applicability of the certification required by 22 U.S.C. 2593e, as implemented in FAR 52.209–13, to contracts at or below the SAT, or to contracts for the acquisition of commercial items, including COTS items.

**IV. Executive Orders 12866 and 13563**

Executive Orders (E.O.s) 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This is not a significant regulatory action and, therefore, was not subject to review under section 6(b) of E.O. 12866, Regulatory Planning and Review, dated September 30, 1993. This rule is not a major rule under 5 U.S.C. 804.

**V. Executive Order 13771**

This rule is not subject to E.O. 13771, Reducing Regulation and Controlling Regulatory Costs, because this rule is not a significant regulatory action under E.O. 12866.

**VI. Regulatory Flexibility Act**

DoD, GSA, and NASA have prepared a Final Regulatory Flexibility Analysis (FRFA) consistent with the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.* The FRFA is summarized as follows:

This final rule is necessary to implement changes to the interim rule published at 83 FR 28145. The interim rule amended the FAR to implement section 1290 of the National Defense Authorization Act for Fiscal Year 2017 (Pub. L. 114–328). The objective of this rule is to provide a response to public comments on the interim rule by clarifying the suspension and debarment remedies for determination of a false certification under 22 U.S.C. 2593e. In addition to the aforementioned, this final rule makes some other technical corrections to the interim rule.

DoD, GSA, and NASA do not expect this rule to have a significant economic impact on a substantial number of small entities within the meaning of the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.* This final rule makes changes to the interim rule published at 83 FR 28145 on June 15, 2018. The objective of this rule is to provide a response to public comments on the interim rule by clarifying the suspension and debarment remedies for determination of a false certification under 22 U.S.C. 2593e, specifically those related to suspension and debarment under FAR subpart 9.4. No significant issues were raised by public comments in response to the initial regulatory flexibility analysis.

Using FPDS data for FY 2017, 2018, and 2019, this rule applies to 19,511 small entities. Of this number, an average of 6,504 small entities annually are required to fill out the certification.

This final rule requires certification from each offeror that submits an offer in response to a Government solicitation that exceeds the simplified acquisition threshold and is not for the acquisition of a commercial item, including COTS items.

Estimated burden hours are 11,106 hours per year for the first certification by an average of 6,504 small entities. The final rule adds determination of a false certification under FAR 52.209–13 as an enumerated cause for both suspension and debarment. It was clear from the interim rule that cause for suspension and debarment was part of the remedy for determination of a false certification, however, the cause was not enumerated under FAR 9.407–2 and 9.406–2, respectively. This revision has no impact (or low impact) on small business entities as it provides additional clarifications without adding a new burden.

The rule does not duplicate, overlap, or conflict with any other Federal rules.

DoD, GSA, and NASA considered whether to apply the certification provision to contracts at or below the SAT and to the acquisition of commercial items, including COTS items, or to exempt such acquisitions in accordance with 41 U.S.C. 1905—1907. The FAR Council and the Administrator for Federal Procurement Policy did not sign determinations that the provision should apply to contracts at or below the SAT and to the acquisition of commercial items, including COTS items, thus minimizing the impact on small business to the extent permitted by law.

Interested parties may obtain a copy of the FRFA from the Regulatory Secretariat Division. The Regulatory Secretariat Division has submitted a copy of the FRFA to the Chief Counsel for Advocacy of the Small Business Administration.

**VII. Paperwork Reduction Act**

The Paperwork Reduction Act (44 U.S.C. chapter 35) does apply; however, these changes to the FAR do not impose additional information collection requirements to the paperwork burden previously approved under OMB Control Number 9000–0198, titled: Violations of Arms Control Treaties or Agreements.

**List of Subjects in 48 CFR Parts 9 and 52**

Government procurement.

**William F. Clark,**

*Director, Office of Government-wide Acquisition Policy, Office of Acquisition Policy, Office of Government-wide Policy.*

Therefore, DoD, GSA, and NASA adopt the interim rule published June 15, 2018, as final with amendments to 48 CFR parts 9 and 52 as set forth below:

■ 1. The authority citation for 48 CFR parts 9 and 52 continues to read as follows:

**Authority:** 40 U.S.C. 121(c); 10 U.S.C. chapter 137; and 51 U.S.C. 20113.

## PART 9—CONTRACTOR QUALIFICATIONS

■ 2. Amend section 9.109–4 by—

■ a. Removing from the last sentence in paragraph (a)(1)(i) ''via the internet at'' and adding ''at'' in its place; and

■ b. Revising paragraph (d).

The revision reads as follows:

**9.109–4 Certification by the offeror.**

* * * * *

(d) Upon the determination of a false certification under 52.209–13, an offeror will be subject to such remedies as suspension or debarment under subpart 9.4, or termination of any contract resulting from the false certification. Debarments pursued as a remedy under subpart 9.4 shall be for a period of not less than 2 years, inclusive of any suspension period, if suspension precedes a debarment (see 9.406–4(a)(1)(iii) and (a)(2)).

* * * * *

**9.400 [Amended]**

■ 3. Amend section 9.400 by removing from paragraph (b) ''(9.405(b))'' and adding ''(9.405)'' in its place.

■ 4. Amend section 9.405 by—

■ a. Removing the last sentence from paragraph (b);

■ b. Redesignating paragraphs (c) and (d) as paragraphs (d) and (e); and

■ c. Adding a new paragraph (c) to read as follows:

**9.405 Effect of listing.**

* * * * *

(c) Agencies shall not enter into, renew, or extend contracts with contractors that have been declared ineligible pursuant to 22 U.S.C. 2593e.

* * * * *

**9.405–2 [Amended]**

■ 5. Amend section 9.405–2 by removing from paragraph (a) ''9.405(b)'' and adding ''9.405'' in its place.

■ 6. Amend section 9.406–2 by adding paragraph (b)(1)(vii) to read as follows:

**9.406–2 Causes for debarment.**

* * * * *

(b) * * *

(1) * * *

(vii) Determination of a false certification under 52.209–13, Violation of Arms Control Treaties or Agreements-Certification.

* * * * *

■ 7. Amend section 9.406–4 by revising paragraph (a)(1)(iii) to read as follows:

**9.406–4 Period of debarment.**

(a) * * *

(1) * * *

(iii) Debarments under 9.406–2(b)(1)(vii) shall be for a period of not less than 2 years, inclusive of any suspension period, if suspension precedes a debarment (see paragraph (a)(2) of this section).

* * * * *

■ 8. Amend section 9.407–2 by—

■ a. Redesignating paragraph (a)(9) as (a)(10); and

■ b. Adding a new paragraph (a)(9) to read as follows:

**9.407–2 Causes for suspension.**

(a) * * *

(9) Determination of a false certification under 52.209–13, Violation of Arms Control Treaties or Agreements-Certification.

* * * * *

## PART 52—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

■ 9. Amend section 52.209–13 by—

■ a. Revising the date of the provision;

■ b. Removing from paragraph (a) ''acquisitions below'' and adding ''acquisitions at or below'' in its place;

■ c. Removing from paragraph (b)(1)(i) ''available via the internet at'' and adding ''available at'' in its place; and

■ d. Removing from paragraph (b)(1)(ii) ''available via the internet at'' and adding ''available at'' in its place.

The revision reads as follows:

**52.209–13 Violation of Arms Control Treaties or Agreements-Certification.**

* * * * *

**Violation of Arms Control Treaties or Agreements—Certification (Feb 2021)**

* * * * *

## Federal Acquisition Regulation: Lowest Price Technically Acceptable Source Selection Process

**AGENCY:** Department of Defense (DoD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA).

**ACTION:** Final rule.

**SUMMARY:** DoD, GSA, and NASA are issuing a final rule amending the Federal Acquisition Regulation (FAR) to implement a section of the John S. McCain National Defense Authorization Act for Fiscal Year 2019 that applies criteria for and limitations on the use of the lowest price technically acceptable source selection criteria in solicitations.

**DATES:** *Effective:* February 16, 2021.

**FOR FURTHER INFORMATION CONTACT:** Mr. Michael O. Jackson, Procurement Analyst, at 202–208–4949 or *Michaelo.jackson@gsa.gov* for clarification of content. For information pertaining to status or publication schedules, contact the Regulatory Secretariat Division at (202) 501–4755 or *GSARegSec@gsa.gov.* Please cite FAC 2021–03, FAR Case 2018–016.

**SUPPLEMENTARY INFORMATION:**

### I. Background

DoD, GSA, and NASA published a proposed rule at 84 FR 52425 on October 2, 2019, to implement section 880 of the John S. McCain National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2019 (Pub. L. 115–232, 41 U.S.C. 3701 Note). Section 880 specifies the criteria that must be met in order to include lowest price technically acceptable (LPTA) source selection criteria in a solicitation; and requires solicitations predominantly for the acquisition of certain services and supplies to avoid the use of LPTA source selection criteria, to the maximum extent practicable. Nine respondents submitted public comments in response to the proposed rule.

### II. Discussion and Analysis

The Civilian Agency Acquisition Council and the Defense Acquisition Regulations Council (the Councils) reviewed the public comments in the development of the final rule.

*A. Summary of Significant Changes From the Proposed Rule*

No changes were made to the final rule as a result of public comments. Minor edits were made to the final rule to account for baseline updates and to add the full name of the applicable statute. A discussion of the comments is provided as follows:

*B. Analysis of Public Comments*

*Comment:* Respondents expressed support for the rule and advised that the rule is beneficial to the small business community and provides them with a greater opportunity to compete in the Federal marketplace.

*Response:* The Councils acknowledge support for the rule.

*Comment:* Respondents expressed support for using the LPTA source selection process, when its use is appropriate and the selection criteria can be well-defined.

*Response:* The Councils agree that use of the LPTA source selection process is a valuable part of the best value continuum and an acceptable and appropriate source selection approach for many acquisitions.

*Comment:* Respondents expressed concern that the rule will be considered a complete ban on the use of the LPTA source selection process. A respondent is specifically concerned that the use of the LPTA source selection process is prohibited for a significant number of information technology (IT) supplies and services that can be appropriately purchased using the process. As a result, the respondent recommends that the rule not be implemented, or be revised to narrow the scope of IT products and services to which the rule applies, because the rule, as proposed, will result in increased acquisition lead times and higher prices without a corresponding increase in quality of services.

*Response:* It is not the intent of the rule to prohibit the use of the LPTA source selection process. Instead, the intent of the rule is to implement the statutory language, which aims to identify circumstances that must exist for an acquisition to use the LPTA source selection process and certain types of requirements that will regularly benefit from the use of tradeoff source selection procedures. Specifically, section 880 requires use of the LPTA source selection process to be avoided, to the maximum extent practicable, in acquisitions for various services and/or supplies, including acquisitions for ''information technology services'' or ''telecommunications devices and services.'' The statute does not further define or narrow these categories; as such, the rule implements the law, as written. With the exception of telecommunications devices, the rule does not preclude buying IT supplies on an LPTA basis.

*Comment:* Respondents recommended that sections 813, 822, and 880, to the maximum extent practicable, be harmonized in the FAR and the DoD-unique requirements be addressed in the Defense Federal Acquisition Regulation Supplement (DFARS). Another respondent recommended revising the proposed FAR rule text to add cross-references to the DFARS, when DoD-unique requirements exist, in order to avoid confusion for individuals that are unaware of the DFARS requirements.

*Response:* The intent of this rule is to implement section 880 of the NDAA for FY 2019 in the FAR. Sections 813 of the NDAA for FY 2017 and 822 of the NDAA for FY 2018, which prescribe limitations on the use of the LPTA source selection process for DoD, are implemented in the DFARS. These statutes, as codified, are similar, but not identical, in text. As such, the statutes are implemented separately, and in their entirety, in the FAR and DFARS, respectively, in order to provide contracting officers with a single, complete, clear, and uniform policy on the use of the LPTA source selection process, as it applies to their agency. Contracting officers are responsible for being aware of and complying with acquisition policies and procedures, including the FAR and other applicable agency regulations; therefore, it is not necessary to make cross-references to agency supplements in the FAR.

*Comment:* Respondents asserted that section 880(c) applies to DoD because the term ''executive agencies'' does not appear in that paragraph of the statute; as such, the DoD should also be excluded from using the LPTA source selection process to acquire health care services and records and telecommunications devices and services, as directed in section 880(c). Respondents advised that because section 813, as amended by section 822, existed at the time section 880 was written, it is the intent of section 880 to clarify and/or add to the limitations of section 813, which apply only to DoD.

*Response:* Section 813 (Pub. L. 114–328, enacted December 23, 2016) and section 822 (Pub. L. 115–91, enacted December 12, 2017) apply to DoD and are codified at 10 U.S.C. 2305 note. Section 880 (Pub. L. 115–132, enacted August 13, 2018) applies to executive agencies, other than DoD, and is codified at 41 U.S.C. 3701 note. The text of sections 813 and 822 are implemented in the DFARS as they currently appear in law. 10 U.S.C. 2305 note has not been revised, via subsequent legislation, to amend the list of procurements for which the use of LPTA should be avoided to the maximum extent practicable.

*Comment:* A respondent suggested that future Federal acquisition guidance emphasize the importance of effectively conveying clear technical and performance requirements.

*Response:* The Councils agree that it is important to clearly identify and communicate the functional, performance, and physical requirements of a supply or service being acquired by an agency. To facilitate this goal, guidance, tools, and training are available to acquisition personnel on a variety of acquisition topics (*e.g.,* market research techniques, describing agency needs, and encouraging competition) to support the requirements outlined in the FAR. Additionally, agencies have internal controls and procedures to monitor and evaluate contract performance and compliance.

*Comment:* A respondent advised on the importance of robust oversight of contract performance when services are provided on a contract awarded using the LPTA source selection process.

*Response:* The Councils agree that it is essential to exercise appropriate and adequate oversight of contractor performance on all contracts. Contracting officers are responsible for ensuring compliance with the terms of the contract, while safeguarding the interests of the United States in its contractual relationships. In addition, agencies are required to establish effective management practices to monitor and evaluate contract performance and compliance, and prevent fraud, waste, and abuse in service contracting.

*Comment:* A respondent recommended establishing adequate monitoring systems to ensure LPTA is applied appropriately and only when the requirements of a contract meet the rule's criteria. The respondent also suggested that public accountability should be established, possibly through the System for Award Management (SAM) at SAM.gov contract opportunities notice, when a contracting officer uses the LPTA source selection process.

*Response:* Contracting officers are responsible for ensuring that the requirements of this rule are met when issuing a solicitation that includes the LPTA source selection process. Agencies have internal controls and procedures to monitor and evaluate their compliance with acquisition rules, regulations, and policies. To maintain public accountability, the respondent suggests that agencies publish the LPTA determination in the SAM.gov contract opportunities notice. However, section 880 does not require public notice or publication of the documented determination to use LPTA source selection criteria, and the Councils do not believe additional oversight protocols are required at this time.

*Comment:* A respondent expressed concern that the rule is not being applied to the GSA Federal Supply Schedules (FSS) Program and recommends aligning the Program with the rule to avoid inconsistent application and use of LTPA source selection criteria across the Federal and contractor communities when placing orders under FSS contracts.

*Response:* GSA will separately address, outside of this rule, the applicability of section 880 to the GSA FSS Program.

*Comment:* A respondent advised against using LPTA source selection criteria in solicitations for multiple award IT supply contracts that require contractors to bid on a notional supply list. The respondent advised that this approach leads to unrealistically low-priced offers for the items on the initial supply list, but substantially higher-priced offers for supplies added to the contracts or refreshed after contract award. As a result, the Government does not realize the cost savings that is implied during the initial contract award.

*Response:* Contracting officers are responsible for ensuring that the requirements of this rule are met when issuing a solicitation that includes the LPTA source selection process. Section 880 does not prohibit the use of the LPTA source selection process when issuing multiple-award indefinite-delivery, indefinite-quantity contracts. Section 880 does require contracting officers to avoid, to the maximum extent practicable, using the LPTA source selection process in the case of a procurement that is predominantly for the acquisition of telecommunications devices and services. The rule reflects this statutory requirement.

In addition, contracting officers consider price or cost when issuing or modifying multiple-award indefinite-delivery indefinite-quantity supply contracts, or placing orders under these contracts in accordance with FAR subpart 16.5. When issuing or modifying these contracts, contracting officers must evaluate the reasonableness of the offered prices, in accordance with the procedures of FAR part 13 or 15, as applicable. When placing orders under these contracts, FAR subpart 16.5 requires contracting officers to consider price or cost as part of their selection decision for each order. These procedures help to ensure that the contracted price and the price paid under each order is fair and reasonable to the Government.

*Comment:* One respondent recommended that the DoD budget be reduced by 30%.

*Response:* This comment is outside the scope of this rule.

## III. Applicability to Contracts at or Below the Simplified Acquisition Threshold (SAT) and for Commercial Items, Including Commercially Available Off-the-Shelf (COTS) Items

This final rule does not create any new provisions or clauses, nor does it change the applicability or burden of any existing provisions or clauses included in solicitations and contracts valued at or below the SAT, or for commercial items, including COTS items.

## IV. Executive Orders 12866 and 13563

Executive Orders (E.O.s) 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This is not a significant regulatory action and, therefore, was not subject to review under section 6(b) of E.O. 12866, Regulatory Planning and Review, dated September 30, 1993. This rule is not a major rule under 5 U.S.C. 804.

## V. Executive Order 13771

This rule is not subject to E.O. 13771, because this rule is not a significant regulatory action under E.O. 12866.

## VI. Regulatory Flexibility Act

DoD, GSA, and NASA have prepared a Final Regulatory Flexibility Analysis (FRFA) consistent with the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.* The FRFA is summarized as follows:

This rule is necessary to implement section 880 of the John S. McCain National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2019 (Pub. L. 115–232). The objective of this rule is to avoid the use of lowest price technically acceptable (LPTA) source selection criteria in circumstances that would deny the Government the benefits of cost and technical tradeoffs in the source selection process. No public comments were received in response to the initial regulatory flexibility analysis.

DoD, GSA, and NASA do not expect this rule to have a significant economic impact on a substantial number of small entities within the meaning of the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.* The rule primarily affects internal Government requirements determination decisions, acquisition strategy decisions, and contract file documentation requirements. The Government does not collect data on the total number of solicitations issued on an annual basis that do or do not specify the use of the LPTA source selection process. However, the Federal Procurement Data System (FPDS) provides the following information for FY 2018:

• Federal competitive contracts and orders awarded using FAR parts 13, 15, or subpart 16.5 procedures. In FY 2018, the Federal Government, excluding DoD, awarded approximately 82,337 new contracts and orders using the competitive procedures of FAR parts 13, 15, or subpart 16.5. This data excludes acquisitions for the supply/service categories identified in section 880(c) of the NDAA for FY 2019. Of the 82,337 contracts and orders, approximately 69 percent (or 56,622 contracts and orders) were awarded to approximately 27,029 unique small businesses. It is important to note that FPDS does not collect data on solicitations. FPDS can identify contracts that are awarded using competitive procedures, but did not begin collecting data on the source selection process used to award those contracts until 2020. Therefore, the data described above represents all competitively awarded contracts, including those using other than the LPTA source selection process.

• Federal competitive contracts and orders awarded for specific services and supplies. In FY 2018, the Federal Government, excluding DoD, awarded approximately 22,581 new contracts and orders potentially for the supplies and services identified in section 880(c) of the NDAA for FY 2019 using the competitive procedures of FAR parts 13, 15, and subpart 16.5, of which approximately 63 percent (or 14,285 contracts and orders) were awarded to approximately 10,129 unique small businesses.

This rule does not include any new reporting, recordkeeping, or other compliance requirements on any small entities.

There are no known significant alternative approaches to the rule that would meet the stated objectives of the applicable statute.

Interested parties may obtain a copy of the FRFA from the Regulatory Secretariat Division. The Regulatory Secretariat Division has submitted a copy of the FRFA to the Chief Counsel for Advocacy of the Small Business Administration.

## VII. Paperwork Reduction Act

The rule does not contain any information collection requirements that require the approval of the Office of Management and Budget under the Paperwork Reduction Act (44 U.S.C. chapter 35).

## List of Subjects in 48 CFR Parts 12, 13, 15, 16, and 37

Government procurement.

**William F. Clark,**

*Director, Office of Government-wide Acquisition Policy, Office of Acquisition Policy, Office of Government-wide Policy.*

Therefore, DoD, GSA, and NASA amend 48 CFR parts 12, 13, 15, 16 and 37 as set forth below:

■ 1. The authority citation for 48 CFR parts 12, 13, 15, 16 and 37 continues to read as follows:

**Authority:** 40 U.S.C. 121(c); 10 U.S.C. chapter 137; and 51 U.S.C. 20113.

## PART 12—ACQUISITION OF COMMERCIAL ITEMS

■ 2. Revise section 12.203 by redesignating the text as paragraph (a) and adding paragraph (b) to read as follows:

### 12.203 Procedures for solicitation, evaluation, and award.

* * * * *

(b) Contracting officers shall ensure the criteria at 15.101–2(c) are met when using the lowest price technically acceptable source selection process.

## PART 13—SIMPLIFIED ACQUISITION PROCEDURES

■ 3. Amend section 13.106–1 by adding paragraphs (a)(2)(v) and (a)(2)(vi) to read as follows:

### 13.106–1 Soliciting competition.

(a) * * *

(2) * * *

(v) Except for DoD, contracting officers shall ensure the criteria at 15.101–2(c)(1)–(5) are met when using the lowest price technically acceptable source selection process.

(vi) Except for DoD, avoid using the lowest price technically acceptable source selection process to acquire certain supplies and services in accordance with 15.101–2(d).

* * * * *

■ 4. Amend section 13.106–3 by—

■ a. In paragraph (b)(3) introductory text, removing ''statements—'' and adding ''statements, when applicable— '' in its place;

■ b. In paragraph (b)(3)(i), removing ''; or'' and adding '';'' in its place;
■ c. In paragraph (b)(3)(ii), removing ''supplier.'' and adding ''supplier; and''
■ d. Adding paragraph (b)(3)(iii).

The addition reads as follows:

**13.106–3 Award and documentation.**

* * * * *

(b) * * *

(3) * * *

(iii) Except for DoD, when using lowest price technically acceptable source selection process, justifying the use of such process.

* * * * *

## PART 15—CONTRACTING BY NEGOTIATION

■ 5. Amend section 15.101–2 by adding paragraphs (c) and (d) to read as follows:

**15.101–2 Lowest price technically acceptable source selection process.**

* * * * *

(c) Except for DoD, in accordance with section 880 of the John S. McCain National Defense Authorization Act for Fiscal Year 2019 (Pub. L. 115–232, 41 U.S.C. 3701 Note), the lowest price technically acceptable source selection process shall only be used when—

(1) The agency can comprehensively and clearly describe the minimum requirements in terms of performance objectives, measures, and standards that will be used to determine the acceptability of offers;

(2) The agency would realize no, or minimal, value from a proposal that exceeds the minimum technical or performance requirements;

(3) The agency believes the technical proposals will require no, or minimal, subjective judgment by the source selection authority as to the desirability of one offeror's proposal versus a competing proposal;

(4) The agency has a high degree of confidence that reviewing the technical proposals of all offerors would not result in the identification of characteristics that could provide value or benefit to the agency;

(5) The agency determined that the lowest price reflects the total cost, including operation and support, of the product(s) or service(s) being acquired; and

(6) The contracting officer documents the contract file describing the circumstances that justify the use of the lowest price technically acceptable source selection process.

(d) Except for DoD, in accordance with section 880 of the John S. McCain National Defense Authorization Act for Fiscal Year 2019 (Pub. L. 115–232, 41 U.S.C. 3701 Note), contracting officers shall avoid, to the maximum extent practicable, using the lowest price technically acceptable source selection process in the case of a procurement that is predominantly for the acquisition of—

(1) Information technology services, cybersecurity services, systems engineering and technical assistance services, advanced electronic testing, audit or audit readiness services, health care services and records, telecommunications devices and services, or other knowledge-based professional services;

(2) Personal protective equipment; or

(3) Knowledge-based training or logistics services in contingency operations or other operations outside the United States, including in Afghanistan or Iraq.

## PART 16—TYPES OF CONTRACTS

■ 6. Amend section 16.505 by—
■ a. Removing from the end of paragraph (b)(1)(ii) ''must—'' adding ''shall—'' in its place;
■ b. Removing from paragraph (b)(1)(ii)(D) ''contract; and'' and adding ''contract;'' in its place;
■ c. Removing from paragraph (b)(1)(ii)(E) ''decision.'' and adding ''decision;'' in its place;
■ d. Adding paragraphs (b)(1)(ii)(F) and (b)(1)(ii)(G); and
■ e. Adding paragraph (b)(7)(iii).

The additions read as follows:

**16.505 Ordering.**

* * * * *

(b) * * *

(1) * * *

(ii) * * *

(F) Except for DoD, ensure the criteria at 15.101–2(c)(1)–(5) are met when using the lowest price technically acceptable source selection process; and

(G) Except for DoD, avoid using the lowest price technically acceptable source selection process to acquire certain supplies and services in accordance with 15.101–2(d).

* * * * *

(7) * * *

(iii) Except for DoD, the contracting officer shall document in the contract file a justification for use of the lowest price technically acceptable source selection process, when applicable.

* * * * *

## PART 37—SERVICE CONTRACTING

■ 7. Amend section 37.102 by adding paragraph (j) to read as follows:

**37.102 Policy.**

* * * * *

(j) Except for DoD, see 15.101–2(d) for limitations on the use of the lowest price technically acceptable source selection process to acquire certain services.

## Federal Acquisition Regulation: Individual Sureties

**AGENCY:** Department of Defense (DoD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA).

**ACTION:** Final rule.

**SUMMARY:** DoD, GSA, and NASA are issuing a final rule amending the Federal Acquisition Regulation (FAR) to implement a section of the National Defense Authorization Act for Fiscal Year 2016 to change the kinds of assets that individual sureties must pledge as security for their bonds.

**DATES:** *Effective:* February 16, 2021.

**FOR FURTHER INFORMATION CONTACT:** Ms. Zenaida Delgado, Procurement Analyst, at 202–969–7207 or *zenaida.delgado@gsa.gov* for clarification of content. For information pertaining to status or publication schedules, contact the Regulatory Secretariat Division at 202–501–4755 or *GSARegSec@gsa.gov*. Please cite FAC 2021–03, FAR Case 2017–003.

**SUPPLEMENTARY INFORMATION:**

### I. Background

DoD, GSA, and NASA published a proposed rule at 85 FR 7910 on February 12, 2020, to implement section 874 of the National Defense Authorization Act for Fiscal Year 2016 (Pub. L. 114–92), codified at 31 U.S.C. 9310, Individual Sureties.

FAR subpart 28.2 requires agencies to obtain adequate security for bonds when bonds are used with a contract. A corporate or individual surety is an acceptable form of security for a bond. Corporate sureties are vetted by the Department of the Treasury to ensure they are sufficiently capitalized and are listed on Department of the Treasury's Listing of Approved Sureties (Treasury Department Circular 570). Individual sureties are not listed on Treasury Department Circular 570; currently contracting officers determine if an individual surety is acceptable.

Under 31 U.S.C. 9310, when Federal law permits acceptance of a surety bond from a surety not subject to 31 U.S.C. 9305 and 9306 (*i.e.,* an individual surety that is not a corporate surety), the individual surety must pledge assets that are eligible obligations. Eligible obligations are public debt obligations of the United States Government whose principal and interest are unconditionally guaranteed by the United States Government. The requirements of 31 U.S.C. 9310 are intended to strengthen the assets pledged by individual sureties, thereby mitigating risk to the Government.

This rule requires individual sureties to support their bond obligations with stable U.S.-backed securities as specified in 31 CFR part 225 and requires the Department of the Treasury, Bureau of the Fiscal Service to review those assets to ensure they meet established eligibility requirements. This rule is expected to provide some benefit to subcontractors (adequate security in case of default), and contracting officers (easier to determine value of assets pledged), to the extent that individual surety bonds are used, but there was some concern as to whether small businesses would have a more difficult time obtaining surety bonds if fewer individual sureties were providing bonds. DoD, GSA, and NASA requested public input, specifically from subcontractors, prime contractors, and individual sureties to more fully understand the impact of this regulation on affected parties. Individual sureties and prime contractors (including small businesses) did not provide input and did not indicate any concerns with the rule. One respondent representing subcontractors and suppliers in the construction industry had positive comments about the rule (see section II.B.1. of this preamble), confirming the anticipated benefits. Several respondents expressed the view that the rule will not negatively impact the availability of bonding for small construction businesses, noting the bonding assistance of the Small Business Administration and that the standard surety market has significantly expanded in recent years, providing many and varied avenues for small businesses to obtain bonding.

Therefore, based on public comments received, DoD, GSA, and NASA have concluded that the initial assessment is correct that there is very limited use of individual sureties on Federal construction contracts and the impact of this rule is not significant, and any impact is predominantly positive.

Six respondents submitted comments on the proposed rule.

## II. Discussion and Analysis

The Civilian Agency Acquisition Council and the Defense Acquisition Regulations Council (the Councils) reviewed the public comments in the development of the final rule.

### *A. Summary of Significant Changes From the Proposed Rule*

There are no significant changes made to the rule as a result of the public comments. One website reference has been corrected.

### *B. Analysis of Public Comments*

Of the six responses received, most strongly supported the rule, and none provided negative comments on the rule. One respondent noted a nonfunctioning link to a website, and one provided comments of a political nature that did not address the rule.

1. Strong support for the rule.

*Comment:* Many respondents strongly supported the proposed rule. These respondents noted positive factors regarding this rule as follows:

- Protects the Government from fraud.
- Eliminates the gamesmanship by unlicensed persons acting as sureties.
- Ensures a level playing field for small businesses.
- Ensures adequate and reliable security is in place to guarantee payment to subcontractors and suppliers on Federal construction projects and protect them against default.
- Eliminates the burden on contracting officers in determining the true value of proposed assets, streamlining the procurement process.

Several respondents noted that the rule will not negatively impact the availability of bonding for small construction businesses, noting the bonding assistance of the Small Business Administration and that the standard surety market has significantly expanded in recent years, providing many and varied avenues for small businesses to obtain bonding. The rule does not eliminate individual surety bonds as an option; it just ensures that the bonds will be backed by stable and secure assets in the control of the Federal Government.

*Response:* Noted.

2. Treasury website for list of acceptable assets.

*Comment:* One respondent stated that the link to the website provided at FAR 28.203–1(a) for the Treasury list of acceptable assets entitled ''Acceptable Collateral for 31 CFR part 225'' does not work.

*Response:* The directions for accessing the website have been amended as follows: ''A list of acceptable assets entitled ''Acceptable Collateral for 31 CFR part 225'' may be accessed by going to *https://www.treasurydirect.gov/instit/statreg/collateral/collateral.htm* and clicking on ''Acceptable Collateral for 31 CFR part 225''.

## III. Applicability to Contracts at or Below the Simplified Acquisition Threshold (SAT) and for Commercial Items, Including Commercially Available Off-the-Shelf (COTS) Items

Although applicability of this rule to acquisitions below the SAT will be rare, DoD, GSA, and NASA do intend to apply the requirements of this rule to solicitations for contracts valued at or below the SAT. FAR 28.102–1(b) gives an example of when a bond could be required for an acquisition under the SAT. As noted in FAR 28.102–1(b), 40 U.S.C. 3132 requires the contracting officer to select two or more payment protections for construction contracts greater than $35,000, but not greater than $150,000, one of the possible protections being a payment bond. Individual sureties may provide security for a payment bond in this situation. The FAR Council has determined that it is not in the best interest of the Government to waive the applicability of section 874 below the SAT, because the new requirement will create greater certainty of payment for subcontractors. Applying the rule below the SAT will continue the FAR uniformity in the type of assets allowed to be pledged, whether the acquisition is above or below the SAT.

Although applicability of this rule to acquisitions of commercial items will be rare, DoD, GSA, and NASA do intend to apply the requirements of this rule to solicitations for the acquisition of commercial items. FAR 28.103–1(a) states that ''Generally, agencies shall not require performance and payment bonds for other than construction contracts.'' However, performance and payment bonds may be used for other than construction contracts as permitted in FAR 28.103–2 and 28.103–3.

The FAR Council has determined that it is not in the best interest of the Government to waive the applicability of section 874 to acquisitions of commercial items because the new requirement will create greater certainty of payment for subcontractors. Applying the rule to the acquisition of commercial items will continue the FAR uniformity in the type of assets allowed to be pledged, whether the acquisition is for the acquisition of commercial or other than commercial items.

**IV. Executive Orders 12866 and 13563**

Executive Orders (E.O.s) 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This rule is a not a significant regulatory action and therefore, this rule was not subject to the review of the Office of Information and Regulatory Affairs under section 6(b) of E.O. 12866. This rule is not a major rule under 5 U.S.C. 804.

**V. Executive Order 13771**

This rule is not subject to E.O. 13771, because this rule is not significant under E.O. 12866.

**VI. Regulatory Flexibility Act**

DoD, GSA, and NASA have prepared a Final Regulatory Flexibility Analysis (FRFA) consistent with the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.* The FRFA is summarized as follows:

This FAR rule changes the kinds of assets that individual sureties must pledge as security for their individual surety bonds. The objective of the FAR rule is to implement section 874 of the National Defense Authorization Act (NDAA) for Fiscal Year 2016 (FY 2016) (Pub. L. 114–92), which adds 31 U.S.C. 9310, Individual sureties, and limits the security for an individual surety bond to eligible obligations, *i.e.,* cash and/or Government obligations. This section was intended to strengthen coverage for individual sureties, thereby mitigating risk to the Government.

There were no significant issues raised by the public comments in response to the initial regulatory flexibility analysis.

DoD, GSA, and NASA do not expect this rule to have a significant economic impact on a substantial number of small entities within the meaning of the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.* The final rule applies to all offerors and contractors who wish to use an individual surety as security for bonds required under a solicitation or contract for supplies or services (including construction). The number of solicitations and contracts requiring the submission of bid guarantees, performance bonds, or payment bonds, correlates roughly to the number of contract awards containing FAR clause 52.228–11, Pledge of Assets. Based on FY 2017 data contained in the Electronic Document Access system (DoD official contract file system), 8,603 DoD contract awards, containing FAR clause 52.228–11 with an obligated amount of over $35,000, were made to 1,990 unique vendors; of these 1,672 were small business entities. These contractors could be using corporate sureties under 28.202, individual sureties under 28.203, or pledging the contractor's own assets under 28.204; this FAR case only covers individual sureties under 28.203. Therefore, based on contracting officers' experience in the field DoD, GSA, and NASA estimate that less than 0.1 percent of contractors are using individual sureties to meet the required bonding under contracts.

This final rule does not include additional reporting or recordkeeping requirements. Although the rule creates a new provision to distinguish instructions to offerors from instructions to a contractor by relocating the ''offeror'' language from the existing FAR clause at 52.228–11, Pledge of Assets, the net effect of projected reporting and recordkeeping is unchanged. The use of Standard Form (SF) 28, Affidavit of Individual Surety, an existing reporting requirement under 52.228–11, is covered under the Office of Management and Budget (OMB) Control No. 9000–0001. The SF 28 is revised as a result of this rule. However, this will have a negligible impact on offerors, contractors, and respondents.

The effect on small business is that individual sureties will no longer be able to pledge real property, corporate stocks, corporate bonds, or irrevocable letters of credit. DoD, GSA, and NASA anticipate that some individual sureties may not want to transform their assets into the kind that qualify under the new legislation, and so there will be fewer individual sureties available to meet the needs of small business offerors and contractors. This may mean that some small businesses that have been using individual sureties will have their costs change, as they go to a different individual surety, or to a corporate surety.

There are no available alternatives to the rule to accomplish the desired objective of the statute.

DoD, GSA, and NASA do not expect this rule to have a significant economic impact on a substantial number of small entities because this only applies to (1) offerors and contractors who are using an individual surety as security for bonds required under a solicitation or contract for supplies or services (including construction), and (2) individual sureties, a small number of whom may not want to transform their assets into the kind that qualify under the new legislation.

Interested parties may obtain a copy of the FRFA from the Regulatory Secretariat Division. The Regulatory Secretariat Division has submitted a copy of the FRFA to the Chief Counsel for Advocacy of the Small Business Administration.

**VII. Paperwork Reduction Act**

The Paperwork Reduction Act (44 U.S.C. Chapter 35) does apply; however, the changes to the FAR do not impose additional information collection requirements. This rule modifies the SF 28, which is used by all executive agencies to obtain information from individuals wishing to serve as sureties to Government bonds. However, the modification merely updates the language in the form to be consistent with the changes to the FAR text; it will have no impact on offerors or contractors.

The modification of the SF 28 does not impose additional information collection requirements to the paperwork burden previously approved under OMB Control Number 9000–0001, Standard Form 28, Affidavit of Individual Surety.

**List of Subjects in 48 CFR Parts 19, 28, 32, 52, and 53**

Government procurement.

**William F. Clark,**

*Director, Office of Government-wide Acquisition Policy, Office of Acquisition Policy, Office of Government-wide Policy.*

Therefore, DoD, GSA, and NASA amend 48 CFR parts 19, 28, 32, 52, and 53 as set forth below:

■ 1. The authority citation for 48 CFR parts 19, 28, 32, 52, and 53 continues to read as follows:

**Authority:** 40 U.S.C. 121(c); 10 U.S.C. chapter 137; and 51 U.S.C. 20113.

## PART 19—SMALL BUSINESS PROGRAMS

**19.602–1 [Amended]**

■ 2. Amend section 19.602–1 by removing from paragraph (a) ''and 28.203(c))'' and adding ''and 28.203–1(e))'' in its place.

## PART 28—BONDS AND INSURANCE

**28.102–2 [Amended]**

■ 3. Amend section 28.102–2 by removing from paragraph (e) ''of 28.203–5(c)'' and adding ''of 28.203–3(c)'' in its place.

■ 4. Amend section 28.106–1 by removing paragraph (o); redesignating paragraph (p) as paragraph (o); and revising the new redesignated paragraph (o) to read as follows.

**28.106–1 Bonds and bond related forms.**

* * * * *

(o) OF 91, Release of Personal Property from Escrow (see 28.203–3).

■ 5. Amend section 28.202 by—

■ a. Revising paragraph (a)(1);

■ b. Revising the first sentence of paragraph (a)(2);
■ c. Removing from paragraph (a)(3) ''Department of the Treasury regulations'' and adding ''Department of the Treasury (Treasury) regulations'' in its place;
■ d. Removing from paragraph (a)(4) ''Standard Form 273'', ''Standard Form 274'' and ''Standard Form 275'' and adding ''Standard Form (SF) 273'', ''SF 274'', and ''SF 275'' in their places, respectively;
■ e. Revising the first sentence of paragraph (c); and
■ f. Revising paragraph (d).

The revisions read as follows:

**28.202 Acceptability of corporate sureties.**

(a)(1) Corporate sureties offered for bonds furnished with contracts performed in the United States or its outlying areas must appear on the list contained in the Department of the Treasury's Listing of Approved Sureties (Treasury Department Circular 570), ''Companies Holding Certificates of Authority as Acceptable Sureties on Federal Bonds and as Acceptable Reinsuring Companies.''

(2) The penal amount of the bond should not exceed the surety's underwriting limit stated in the Treasury Department Circular 570. * * *

* * * * *

(c) Treasury issues supplements to Treasury Department Circular 570, notifying all Federal agencies of new approved corporate surety companies and the termination of the authority of any specific corporate surety to qualify as a surety on Federal bonds. * * *

(d) Treasury Department Circular 570 may be obtained from the U.S. Department of the Treasury, Bureau of the Fiscal Service, Surety Bond Branch, 3201 Pennsy Drive, Building E, Landover, MD 20785 or at *https://www.fiscal.treasury.gov/fsreports/ref/suretyBnd/c570.htm.*

■ 6. Revise section 28.203 to read as follows:

**28.203 Individual sureties.**

**28.203–1 Acceptability of individual sureties.**

(a) An individual surety is acceptable for all types of bonds except position schedule bonds. Assets pledged by an individual surety shall meet the eligibility requirements of Treasury's Bureau of the Fiscal Service. Per 31 U.S.C. 9310, individual sureties must pledge eligible obligations, which Treasury refers to as acceptable collateral or eligible collateral. A list of acceptable assets, entitled ''Acceptable Collateral for 31 CFR part 225,'' may be accessed by going to *https://www.treasurydirect.gov/instit/statreg/collateral/collateral.htm* and clicking on ''Acceptable Collateral for 31 CFR part 225''.

(b)(1) An individual surety shall execute the bond (*e.g.,* bid bond (SF 24), performance bond (SF 25), payment bond (SF 25A)).

(2) The net adjusted value of unencumbered assets is their market value minus the margin. The margin tables are available at *www.treasurydirect.gov.* The net adjusted value of unencumbered assets pledged by the individual surety must equal or exceed the penal amount (*i.e.,* face value) of each bond.

(3) The individual surety shall execute the SF 28, Affidavit of Individual Surety, and provide a security interest. One individual surety is adequate support for a bond, provided the net adjusted value of unencumbered assets pledged by that individual surety equals or exceeds the amount of the bond.

(4) An offeror or contractor may submit up to three individual sureties for each bond, in which case the net adjusted value of the pledged unencumbered assets, when combined, must equal or exceed the penal amount of the bond. Each individual surety is jointly and severally liable to the extent of the penal amount of the bond.

(c) Using the information from the SF 28 submitted by the offeror or contractor, the contracting officer shall notify the Treasury's collateral operations support team by email at *BMT@fiscal.treasury.gov* or by phone at 888–568–7343, of the individual surety, the assets to be pledged, and the amount necessary to cover the individual surety bond, *i.e.,* the required amount to be collateralized. Treasury will advise the contracting officer whether the assets are eligible to be pledged, consistent with 28.203–1(a), and of the valuation of the assets offered to be pledged, consistent with the valuation standards in 28.203–1(b)(2). If after 3 business days the contracting officer has not received a response from Treasury, the contracting officer may seek assistance from the Director, Bank Policy and Oversight, at 202–504–3502. The contracting officer shall determine whether the individual surety bond is acceptable as to the amount necessary to cover the individual surety bond based on the asset eligibility and valuation assessment from Treasury. The contracting officer shall notify both the offeror or contractor and the individual surety of this determination.

(d) If the contracting officer determines the individual surety is acceptable, the contracting officer shall request the Treasury's collateral operations support team set up the necessary individual surety pledged asset collateral account.

(e) If the contracting officer determines that no individual surety in support of a bid guarantee is acceptable, the offeror utilizing the individual surety shall be rejected as nonresponsible, except as provided in 28.101–4. A finding of nonresponsibility based on unacceptability of an individual surety, need not be referred to the Small Business Administration for a Certificate of Competency. (See 19.602–1(a) and 61 Comp. Gen. 456 (1982).)

(f) If a contractor submits an unacceptable individual surety, or one that Treasury could not assess the asset eligibility and valuation within a reasonable time, then the contracting officer may permit the contractor to substitute an acceptable surety within a reasonable time.

(g) Evidence of possible criminal or fraudulent activities by an individual surety shall be referred to the appropriate agency official in accordance with agency procedures.

**28.203–2 Substitution of assets.**

An individual surety may request the Government to accept a substitute asset for that currently pledged by submitting a written request, including a revised SF 28, to the responsible contracting officer. Following the requirements set forth in 28.203–1, the contracting officer may agree to the substitution of assets upon determining that the substitute assets to be pledged are adequate to protect the outstanding bond or guarantee obligations.

**28.203–3 Release of security interest.**

(a) After consultation with legal counsel, the contracting officer shall release the security interest on the individual surety's assets using the Optional Form 91, Release of Personal Property from Escrow, or a similar release as soon as possible consistent with the conditions in subparagraphs (a)(1) and (2) of this section. A surety's assets pledged in support of a payment bond may be released to a subcontractor or supplier upon Government receipt of a Federal district court judgment, or a sworn statement by the subcontractor or supplier that the claim is correct along with a notarized authorization of the release by the surety stating that it approves of such release.

(1) *Contracts subject to the Bonds statute.* See section 1.110 and section

28.102–1, paragraph (a). The security interest shall be maintained for the later of—

(i) 1 year following final payment;

(ii) Until completion of any warranty period (applicable only to performance bonds); or

(iii) Pending resolution of all claims filed against the payment bond during the 1 year period following final payment.

(2) *Contracts subject to alternative payment protection.* See section 28.102–1, paragraph (b)(1). The security interest shall be maintained for the full contract performance period plus 1 year.

(3) *Other contracts not subject to the Bonds statute.* The security interest shall be maintained for 90 days following final payment or until completion of any warranty period (applicable only to performance bonds), whichever is later.

(b) Upon written request by the individual surety, the contracting officer may release the security interest on the individual surety's assets in support of a bid guarantee based upon evidence that the offer supported by the individual surety will not result in contract award.

(c) Upon written request by the individual surety, the contracting officer may release a portion of the security interest on the individual surety's assets based upon substantial performance of the contractor's obligations under its performance bond. Release of the security interest in support of a payment bond must comply with the subparagraphs (a)(1) through (3) of this section. In making this determination, the contracting officer will give consideration as to whether the unreleased portion of the security is sufficient to cover the remaining contract obligations, including payments to subcontractors and other potential liabilities. The individual surety shall, as a condition of the partial release, furnish an affidavit agreeing that the release of such assets does not relieve the individual surety of its obligations under the bond(s).

### 28.203–4 Solicitation provision and contract clause.

(a) Insert the provision at 52.228–17, Individual Surety—Pledge of Assets (Bid Guarantee), in solicitations that require the submission of a bid guarantee.

(b) Insert the clause at 52.228–11, Individual Surety—Pledge of Assets, in solicitations and contracts that require the submission of performance or payment bonds.

### 28.203–5 Exclusion of individual sureties.

(a) An individual may be excluded from acting as a surety on bonds submitted by offerors on procurement by the executive branch of the Federal Government, by the acquiring agency's head or designee utilizing the procedures in subpart 9.4. The exclusion shall be for the purpose of protecting the Government.

(b) An individual may be excluded for any of the following causes:

(1) Failure to fulfill the obligations under any bond.

(2) Failure to disclose all bond obligations.

(3) Misrepresentation of the value of available assets or outstanding liabilities.

(4) Any false or misleading statement, signature or representation on a bond or affidavit of individual suretyship.

(5) Any other cause affecting responsibility as a surety of such serious and compelling nature as may be determined to warrant exclusion.

(c) An individual surety excluded pursuant to this section shall be entered as an exclusion in the System for Award Management (see 9.404).

(d) Contracting officers shall not accept the bonds of individual sureties whose names appear in an active exclusion record in the System for Award Management (see 9.404) unless the acquiring agency's head or a designee states in writing the compelling reasons justifying acceptance.

(e) An exclusion of an individual surety under this section will also preclude such party from acting as a contractor in accordance with subpart 9.4.

### 28.204 [Amended]

■ 7. Amend section 28.404 by removing from paragraph (b) ''lien in 28.203–5(c)'' and adding ''security in 28.203–3(c)'' in its place.

### 28.204–1 [Amended]

■ 8. Amend section 28.204–1 by removing from the first sentence of the text ''dated July 1, 1978''.

## PART 32—CONTRACT FINANCING

### 32.202–4 [Amended]

■ 9. Amend section 32.202–4 by removing from paragraph (c) ''28.203–2, 28.203–3, and'' and adding ''28.203 and'' in its place.

## PART 52—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

■ 10. Revise section 52.228–11 to read as follows:

### 52.228–11 Individual Surety—Pledge of Assets.

As prescribed in 28.203–4(b), insert the following clause:

**Individual Surety—Pledge of Assets (Feb 2021)**

(a) The Contractor shall obtain from each person acting as an individual surety on a performance bond or a payment bond—

(1) A pledge of assets that meets the eligibility, valuation, and security requirements described in the Federal Acquisition Regulation (FAR) 28.203–1; and

(2) Standard Form 28, Affidavit of Individual Surety.

(b) The Contracting Officer may release a portion of the security interest on the individual surety's assets based upon substantial performance of the Contractor's obligations under its performance bond. The security interest in support of a performance bond shall be maintained—

(1) *Contracts for the construction, alteration, or repair of any public building or public work of the Federal Government exceeding $150,000 (40 U.S.C. 3131).* Until completion of any warranty period, or for 1 year following final payment, whichever is later.

(2) *Contracts subject to alternative payment protection (see FAR 28.102–1(b)(1)).* For the full contract performance period plus 1 year.

(3) *Other contracts not subject to the requirements of paragraph (b)(1) of this clause.* Until completion of any warranty period, or for 90 days following final payment, whichever is later.

(c) A surety's assets pledged in support of a payment bond may be released to a subcontractor or supplier upon Government receipt of a Federal district court judgment, or a sworn statement by the subcontractor or supplier that the claim is correct along with a notarized authorization of the release by the surety stating that it approves of such release. The security interest on the individual surety's assets in support of a payment bond shall be maintained—

(1) *Contracts for the construction, alteration, or repair of any public building or public work of the Federal Government exceeding $150,000 which require performance and payment bonds (40 U.S.C. 3131).* For 1 year following final payment, or until resolution of all pending claims filed against the payment bond during the 1-year period following final payment, whichever is later.

(2) *Contracts subject to alternative payment protection (see FAR 28.102–1(b)(1)).* For the full contract performance period plus 1 year.

(3) *Other contracts not subject to the requirements of paragraph (c)(1) of this clause.* For 90 days following final payment.

(d) The Contracting Officer may allow the Contractor to substitute an individual surety, for a performance or payment bond, after contract award. The Contractor shall comply with the requirements of paragraph (a) of this clause within the timeframe established by the Contracting Officer.

(End of clause)

■ 11. Add section 52.228–17 to read as follows:

#### 52.228–17 Individual Surety—Pledge of Assets (Bid Guarantee).

As prescribed in 28.203–4(a), insert the following provision:

**Individual Surety—Pledge of Assets (Bid Guarantee) (Feb 2021)**

(a) Offerors shall obtain from each person acting as an individual surety on a bid guarantee—

(1) A pledge of assets that meets the eligibility, valuation, and security requirements described in the Federal Acquisition Regulation (FAR) 28.203–1; and

(2) Standard Form 28, Affidavit of Individual Surety.

(b) The Offeror shall include with its offer the information required at paragraph (a) of this provision within the timeframe specified in the provision at FAR 52.228–1, Bid Guarantee, or as otherwise established by the Contracting Officer.

(c) The Contracting Officer may release the security interest on the individual surety's assets in support of a bid guarantee based upon evidence that the offer supported by the individual surety will not result in contract award.

(End of provision)

### PART 53—FORMS

#### 53.228 [Amended]

■ 12. Amend section 53.228 by—

■ a. Removing from paragraph (e) ''(Rev. 6/2003)'' and ''28.203(b).)'' and adding ''''(Rev. Feb 2021)'' and ''28.203–1(b)(3).)'' in their places, respectively;

■ b. Removing paragraph (o);

■ c. Redesignating paragraph (p) as paragraph (o); and

■ d. Removing from the newly redesignated paragraph (o) ''(See 28.106–1(p) and 28.203–5(a).)'' and adding ''(See 28.106–1(o) and 28.203–3(a).)'' in its place.

#### 53.300 [Amended]

■ 13. Amend section 53.300 by removing from the table 53–1 in paragraph (a) ''OF 90 Release of Lien on Real Property.''

## DEPARTMENT OF DEFENSE

## GENERAL SERVICES ADMINISTRATION

## NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

## 48 CFR Parts 2, 15, 17, 37 and 52

[FAC 2021–03; Item IV; Docket No. FAR–2020–0052; Sequence No. 4]

## Federal Acquisition Regulation; Technical Amendments

**AGENCY:** Department of Defense (DoD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA).

**ACTION:** Final rule.

**SUMMARY:** This document makes amendments to the Federal Acquisition Regulation (FAR) in order to make needed editorial changes.

**DATES:** *Effective:* February 16, 2021.

**FOR FURTHER INFORMATION CONTACT:** Ms. Lois Mandell, Regulatory Secretariat Division (MVCB), at 202–501–4755 or *GSARegSec@gsa.gov.* Please cite FAC 2021–03, Technical Amendments.

**SUPPLEMENTARY INFORMATION:** In order to update certain elements in 48 CFR parts 2, 15, 17, 37, and 52 this document makes editorial changes to the FAR.

**List of Subjects in 48 CFR Parts 2, 15, 17, 37 and 52**

Government procurement.

**William F. Clark,**

*Director, Office of Government-Wide Acquisition Policy, Office of Acquisition Policy, Office of Government-Wide Policy.*

Therefore, DoD, GSA, and NASA amend 48 CFR parts 2, 15, 17, 37, and 52 as set forth below:

■ 1. The authority citation for 48 CFR parts 2, 15, 17, 37, and 52 continues to read as follows:

**Authority:** 40 U.S.C. 121(c); 10 U.S.C. chapter 137; and 51 U.S.C. 20113.

### PART 2—DEFINITIONS OF WORDS AND TERMS

#### 2.101 [Amended]

■ 2. Amend section 2.101, in paragraph (b), in the definition ''*Ineligible*'' by removing from paragraph (4) ''$15,000'' and adding ''$10,000'' in its place.

### PART 15—CONTRACTING BY NEGOTIATION

■ 3. Amend section 15.209 by adding paragraph (e) to read as follows:

#### 15.209 Solicitation provisions and contract clauses.

* * * * *

(e) The contracting officer shall insert the provision at 52.215–5, Facsimile Proposals, in solicitations if facsimile proposals are authorized (see 15.203(d)).

* * * * *

### PART 17—SPECIAL CONTRACTING METHODS

#### 17.502 1 [Amended]

■ 4. Amend section 17.502–1 by—

■ a. Removing from the sixth sentence of paragraph (a)(1)(i) ''Policy'' and ''__acq/iac____'' adding ''Policy (OFPP)'' and ''__acq/iac__'' in their place; respectively; and

■ b. Removing from paragraph (b) introductory text ''Office of Federal Procurement Policy (OFPP)'' and adding ''OFPP'' in its place.

### PART 37—SERVICE CONTRACTING

#### 37.103 [Amended]

■ 5. Amend section 37.103 in paragraph (d) by removing ''42 U.S.C. 13041, as amended,'' and adding ''34 U.S.C. 20351'' in its place.

### PART 52—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

■ 6. Amend section 52.212–3 by—

■ a. Revising the date of the provision; and

■ b. Revising paragraph (f)(2);

■ c. Revising the table in paragraph (g)(1)(ii), and the undesignated tables in (g)(1)(iii), (g)(2), and (g)(3);

■ d. Revising the tables in (g)(4) and (g)(5)(ii); and

■ e. Revising the paragraph (i)(1).

The revisions read as follows:

#### 52.212–3 Offeror Representations and Certifications—Commercial Items.

## Federal Acquisition Regulation; Federal Acquisition Circular 2021–03; Small Entity Compliance Guide

**AGENCY:** Department of Defense (DoD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA).

**ACTION:** Small Entity Compliance Guide.

**SUMMARY:** This document is issued under the joint authority of DOD, GSA, and NASA. This *Small Entity Compliance Guide* has been prepared in accordance with section 212 of the Small Business Regulatory Enforcement Fairness Act of 1996. It consists of a summary of the rules appearing in Federal Acquisition Circular (FAC) 2021–03, which amends the Federal Acquisition Regulation (FAR). Interested parties may obtain further information regarding these rules by referring to FAC 2021–03, which precedes this document.

**DATES:** January 14, 2021.

**ADDRESSES:** The FAC, including the SECG, is available via the internet at *https://www.regulations.gov.*

**FOR FURTHER INFORMATION CONTACT:** For clarification of content, contact the analyst whose name appears in the table below. Please cite FAC 2021–03 and the FAR Case number. For information pertaining to status or publication schedules, contact the Regulatory Secretariat Division at 202–501–4755 or *GSARegSec@gsa.gov.* An asterisk (*) next to a rule indicates that a regulatory flexibility analysis has been prepared.

RULES LISTED IN FAC 2021–03

| Item | Subject | FAR case | Analyst |
|---|---|---|---|
| * I | Violations of Arms Control Treaties or Agreements with the United States | 2017–018 | Jackson. |
| * II | Lowest Price Technically Acceptable Source Selection Process | 2018–016 | Jackson. |
| * III | Individual Sureties | 2017–003 | Delgado. |
| IV | Technical Amendments. | | |

**SUPPLEMENTARY INFORMATION:**
Summaries for each FAR rule follow. For the actual revisions and/or amendments made by these FAR rules, refer to the specific item numbers and subjects set forth in the documents following these item summaries. FAC 2021–03 amends the FAR as follows:

## Item I—Violations of Arms Control Treaties or Agreements With the United States (FAR Case 2017–018)

This final rule adopts as final with changes, an interim rule published on June 15, 2018. The interim rule amended the FAR to implement 22 U.S.C. 2593e, as added by section 1290 of the National Defense Authorization Act for Fiscal Year 2017 (Pub. L. 114–328). The final rule makes technical edits clarifying the suspension and debarment remedies for determination of a false certification pursuant to 22 U.S.C. 2593e, and other minor edits.

## Item II—Lowest Price Technically Acceptable Source Selection Process (FAR Case 2018–016)

This final rule amends the FAR to implement section 880 of the John S. McCain National Defense Authorization Act for Fiscal Year 2019. Specifically, this rule amends: (1) FAR part 15 to specify the criteria that must be met in order to include lowest price technically acceptable (LPTA) source selection criteria in a solicitation, and require solicitations predominantly for the acquisition of certain services and supplies to avoid the use of LPTA source selection criteria, to the maximum extent practicable; and (2) FAR parts 12, 13, 16, and 37 to point to the text in FAR part 15, as applicable.

## Item III—Individual Sureties (FAR Case 2017–003)

This final rule changes the kind of assets that an individual surety must pledge as security for an individual surety bond. A pledge of assets must consist only of eligible obligations, *i.e.,* public debt obligations of the United States Government. The rule implements section 874 of the National Defense Authorization Act for Fiscal Year 2016 (Pub. L. 114–92), codified at 31 U.S.C. 9310, Individual Sureties.

This final rule will not have a significant economic impact on a substantial number of small entities.

## Item IV—Technical Amendments

Editorial changes are made at FAR 2.101, 15.209, 17.502–1, 37.103, 52.212–3, 52.212–5, 52.213–4, 52.222–18, 52.223–3, 52.225–2, 52.225–4, 52.225–6, 52,225–9, 52.225–13, and 52.229–12.

**RIN 3245–AH62**

**DEPARTMENT OF THE TREASURY**

**RIN 1505–AC74**

# Business Loan Program Temporary Changes; Paycheck Protection Program as Amended by Economic Aid Act

**AGENCY:** U.S. Small Business Administration; Department of the Treasury.

**ACTION:** Interim final rule.

**SUMMARY:** On April 2, 2020, the U.S. Small Business Administration (SBA) posted an interim final rule announcing the implementation of sections 1102 and 1106 of the Coronavirus Aid, Relief, and Economic Security Act (CARES Act). Section 1102 of the CARES Act temporarily adds a new program, titled the ''Paycheck Protection Program,'' to the SBA's 7(a) Loan Program. Section 1106 of the CARES Act provides for forgiveness of up to the full principal amount of qualifying loans guaranteed under the Paycheck Protection Program (PPP). The PPP is intended to provide economic relief to small businesses nationwide adversely impacted by the Coronavirus Disease 2019 (COVID–19). Subsequently, SBA published twenty-three interim final rules providing additional guidance on the PPP (some of which were jointly issued with the Department of the Treasury) and Treasury published one interim final rule. On December 27, 2020, the Economic Aid to Hard-Hit Small Businesses, Nonprofits, and Venues Act (Economic Aid Act) became law. The Economic Aid Act extends the authority to make PPP loans through March 31, 2021 and revises certain PPP requirements. This interim final rule incorporates the Economic Aid Act amendments required to be implemented by regulation within 10 days of enactment. For ease of borrower and lender reference, this interim final rule also consolidates the interim final rules (and important guidance) issued to date governing borrower eligibility, lender eligibility, and PPP application and origination requirements for new PPP loans, as well as provides general rules relating to loan increases and loan forgiveness. This rule is not intended to substantively alter or affect PPP rules that were not amended by the Economic Aid Act. Additional rules related to second draw PPP loans will be published separately, and SBA intends to issue a consolidated rule governing all aspects of loan forgiveness and the loan review process as well. This interim final rule is intended to govern new PPP loans made under the Economic Aid Act, as well as applications for loan forgiveness on existing PPP loans where the loan forgiveness payment has not been remitted, and should not be construed to alter or affect the requirements applicable to PPP loans closed prior to its enactment, unless the provisions apply retroactively consistent with specific applicability provisions of the Economic Aid Act as identified in this rule. In addition, in this interim final rule, Treasury exercises its authority under section 1109 of the CARES Act to allow borrowers of first draw PPP loans to use 2019 or 2020 to calculate their maximum loan amount.

**DATES:**

*Effective date:* Unless otherwise specified in this interim final rule, the provisions of this interim final rule are effective January 12, 2021.

*Applicability date:* This interim final rule applies to loan applications, including requests for increases, and applications for loan forgiveness submitted under the Paycheck Protection Program following enactment of the Economic Aid Act. This interim final rule also applies to loan forgiveness applications submitted under the Paycheck Protection Program before enactment of the Economic Aid Act where SBA has not remitted the forgiveness payment.

*Comment date:* Comments must be received on or before February 16, 2021.

**ADDRESSES:** You may submit comments, identified by number SBA–2021–0001 through the Federal eRulemaking Portal: *http://www.regulations.gov.* Follow the instructions for submitting comments.

SBA will post all comments on *www.regulations.gov.* If you wish to submit confidential business information (CBI) as defined in the User Notice at *www.regulations.gov,* please send an email to *ppp-ifr@sba.gov.* All other comments must be submitted through the Federal eRulemaking Portal described above. Highlight the information that you consider to be CBI and explain why you believe SBA should hold this information as confidential. SBA will review the information and make the final determination whether it will publish the information.

**FOR FURTHER INFORMATION CONTACT:** Call Center Representative at 833–572–0502, or the local SBA Field Office; the list of offices can be found at *https://www.sba.gov/tools/local-assistance/districtoffices.*

**SUPPLEMENTARY INFORMATION:**

## I. Background Information

On March 13, 2020, President Trump declared the ongoing Coronavirus Disease 2019 (COVID–19) pandemic of sufficient severity and magnitude to warrant an emergency declaration for all states, territories, and the District of Columbia. With the COVID–19 emergency, many small businesses nationwide continue to experience economic hardship as a direct result of the Federal, State, and local public health measures that continue to be taken to minimize the public's exposure to the virus. In addition, based on the advice of public health officials, other voluntary measures continue to be observed, resulting in a decrease in economic activity as the public avoids malls, retail stores, and other businesses.

On March 27, 2020, the President signed the Coronavirus Aid, Relief, and Economic Security Act (the CARES Act or the Act) (Pub. L. 116–136) to provide emergency assistance and health care response for individuals, families, and businesses affected by the coronavirus pandemic. The Small Business Administration (SBA) received funding and authority through the Act to modify existing loan programs and establish a new loan program to assist small businesses nationwide adversely impacted by the COVID–19 emergency.

Section 1102 of the CARES Act temporarily permitted SBA to guarantee 100 percent of 7(a) loans under a new program titled the ''Paycheck Protection Program,'' pursuant to section 7(a)(36) of the Small Business Act (15 U.S.C. 636(a)(36)). Section 1106 of the CARES Act provided for forgiveness of up to the full principal amount of qualifying loans guaranteed under the Paycheck Protection Program. A more detailed discussion of sections 1102 and 1106 of the Act is found in section III.

On April 24, 2020, the President signed the Paycheck Protection Program and Health Care Enhancement Act (Pub. L. 116–139), which provided additional funding and authority for the PPP. On June 5, 2020, the President signed the Paycheck Protection Program Flexibility Act of 2020 (Flexibility Act) (Pub. L. 116–142), which changed key provisions of the Paycheck Protection Program, including provisions relating to the maturity of PPP loans, the deferral of PPP loan payments, and the forgiveness of PPP loans. Section 3(d) of the Flexibility Act provided that the amendments relating to PPP loan forgiveness and extension of the deferral period for PPP loans were effective as if included in the CARES Act, which meant that they were retroactive to March 27, 2020. Section 2 of the Flexibility Act provided that the amendment relating to the extension of the maturity date for PPP loans became effective on the date of enactment (June 5, 2020). Under the Flexibility Act, the extension of the maturity date for PPP loans was applicable to PPP loans made on or after that date, and lenders and borrowers were able to mutually agree to modify PPP loans made before such date to reflect the longer maturity. On July 4, 2020, Public Law 116–147 extended the authority for SBA to guarantee PPP loans to August 8, 2020. On December 27, 2020, the Economic Aid to Hard-Hit Small Businesses, Nonprofits, and Venues Act (Economic Aid Act) (Pub. L. 116–260) was enacted, which reauthorizes lending under the PPP through March 31, 2021, and among other things, modifies provisions related to making PPP loans and forgiveness of PPP loans, and authorizes second draw PPP loans under new section 7(a)(37) of the Small Business Act for PPP borrowers that previously received a PPP loan (rules for second draw loans will be published separately). The Economic Aid Act also redesignates section 1106 of the CARES Act as section 7A and transfers that section to the Small Business Act, to appear after section 7 of the Small Business Act.[1]

In addition to incorporating the changes to PPP requirements made by the Economic Aid Act, this interim final rule consolidates and restates the following interim final rules: 85 FR 20811 (posted on April 2, 2020 and published in the **Federal Register** on April 15, 2020); 85 FR 20817 (posted on April 3, 2020 and published on April 15, 2020); 85 FR 21747 (posted on April 14, 2020 and published on April 20, 2020); 85 FR 23450 (posted on April 24, 2020 and published on April 28, 2020); 85 FR 23917 (posted on April 27, 2020 and published on April 30, 2020); 85 FR 26321 (posted on April 28, 2020 and published on May 4, 2020); 85 FR 26324 (posted on April 30, 2020 and published on May 4, 2020); 85 FR 27827 (posted on May 5, 2020 and published on May 8, 2020); 85 FR 29845 (posted on May 8, 2020 and published on May 19, 2020); 85 FR 29842 (posted on May 13, 2020 and published on May 19, 2020); 85 FR 29847 (posted on May 14, 2020 and published on May 19, 2020); 85 FR 30835 (posted on May 18, 2020 and published on May 21, 2020); 85 FR 31357 (posted on May 20, 2020 and published on May 26, 2020); 85 FR 35550 (posted on June 5, 2020 and published on June 11, 2020); 85 FR 36308 (posted on June 11, 2020 and published on June 16, 2020); 85 FR 36717 (posted on June 12, 2020 and published on June 18, 2020); 85 FR 36997 (posted on June 17, 2020 and published on June 19, 2020); 85 FR 38301 (posted on June 24, 2020 and published on June 26, 2020); and 85 FR 39066 (posted on June 25, 2020 and published on June 30, 2020). This rule should be interpreted consistently with the sets of Frequently Asked Questions (FAQs) regarding the PPP that are posted on SBA's and Treasury's websites and the interim final rules posted separately providing guidance on second draw PPP loans and the consolidated guidance on loan forgiveness and the loan review process; however, the Economic Aid Act overrides any conflicting guidance in the FAQs, and SBA will be revising the FAQs to fully conform to the Economic Aid Act as quickly as feasible.

Most of this document restates existing regulatory provisions to provide lenders and new PPP borrowers a single regulation to consult on borrower eligibility, lender eligibility, and loan application and origination requirements, as well as general rules on increases and loan forgiveness for PPP loans. To enhance the readability of this document, SBA has not reproduced the policy and legal justifications for existing regulatory provisions restated here, except to the extent that those justifications may be helpful to the borrower or lender. However, those justifications from the original interim final rules are incorporated by reference here.

In addition, section 1109(b) of the CARES Act authorizes Treasury to establish criteria for certain other lenders to participate in the PPP. The SBA is required to administer the program that Treasury establishes under section 1109 of the Act, with guidance from Treasury. The CARES Act authorizes Treasury to issue regulations and guidance to implement section 1109, including regulations that establish ''terms and conditions'' for PPP loans. *See* section 1109(d)(2). The terms and conditions established by Treasury under section 1109 are not required to be identical to those provided elsewhere. Rather, the CARES Act allows Treasury to set terms and conditions pertaining to certain criteria—the maximum interest rate, maximum loan amount, and other specified terms—that are ''consistent,'' to ''the maximum extent practicable,'' with comparable terms in paragraph 36 of section 7(a) of the Small Business Act (15 U.S.C. 636(a)). *See* section 1109(d)(2).

In this rulemaking, Treasury is addressing the needs of new PPP borrowers by allowing all new borrowers to use 2019 or 2020 for purposes of calculating their maximum loan amount. Section 1102 of the CARES Act states that borrowers are to calculate their maximum loan amount by using ''payroll costs incurred during the 1-year period before the date on which the loan is made . . . .'' For PPP loans made in 2020, most borrowers used 2019. The Economic Aid Act did not change this language for borrowers that are not farmers and ranchers and would require most new PPP borrowers who obtain a loan in 2021 to use 2020 as their base period. Using authority granted by section 1109 of the CARES Act, this rulemaking allows new borrowers to choose 2019 or 2020 as the base period, thereby ensuring that they are able to obtain funding on terms commensurate with existing PPP borrowers. Separately, section 313 of the Economic Aid Act states that farmers and ranchers are to calculate their maximum loan amount using 2019 as their base period. This rulemaking allows farmers and ranchers to elect either 2019 or 2020 as their base period, in order to ensure that they can obtain funding on terms commensurate with those available to other new PPP borrowers.

As required by section 1109(d)(2)(B) of the CARES Act, Treasury has determined that providing new PPP borrowers with flexibility in choosing a base period is consistent, to the ''maximum extent practicable,'' with the terms applicable to existing PPP borrowers. This enhanced flexibility will help ensure that new PPP borrowers are treated even-handedly and do not see their permissible loan amounts reduced due to financial distress experienced in 2020. Other than these adjustments, the terms and requirements applicable to PPP loans under this rule are identical to the terms and requirements applicable to all other PPP loans. As a result, a PPP borrower that elects to use the flexibility in selecting a base period under this interim final rule may follow the same processes and procedures applicable to other PPP loans.

[1] Because section 1106 of the CARES Act is now codified as section 7A of the Small Business Act, any reference to section 1106 of the CARES Act in the rules that are being restated herein will refer to section 7A.

## II. Comments and Immediate Effective Date

This interim final rule is being issued without advance notice and public comment because section 303 of the Economic Aid Act authorizes SBA to issue regulations to implement the Economic Aid Act without regard to notice requirements. In addition, this rule is being issued to allow for immediate implementation of this program. The intent of both the CARES Act and the Economic Aid Act is that SBA provides relief to America's small businesses expeditiously. Congress reauthorized PPP because of the current economic conditions affecting small businesses and intended for the loans to be made quickly. The last day to apply for and receive a PPP loan is March 31, 2021. Given the short duration of this program, and the urgent need to issue loans quickly, the Administrator in consultation with the Secretary has determined that it is impractical and not in the public interest to provide a 30-day delayed effective date. An immediate effective date will give small businesses the maximum amount of time to apply for loans and lenders the maximum amount of time to process applications before the program ends. This good cause justification also supports waiver of the 60-day delayed effective date for major rules under the Congressional Review Act at 5 U.S.C. 808(2). Although this interim final rule is effective immediately, comments are solicited from interested members of the public on all aspects of the interim final rule, including section III. These comments must be submitted on or before February 16, 2021. The SBA will consider these comments and the need for making any revisions as a result of these comments.

## III. Paycheck Protection Program as Amended by Economic Aid Act

*Overview*

The CARES Act was enacted to provide immediate assistance to individuals, families, and businesses affected by the COVID–19 emergency. Among the provisions contained in the CARES Act are provisions authorizing SBA to temporarily guarantee loans under a new 7(a) loan program titled the ''Paycheck Protection Program.'' Loans guaranteed under the Paycheck Protection Program (PPP) will be 100 percent guaranteed by SBA, and the full principal amount of the loans may qualify for loan forgiveness. The Economic Aid Act reauthorizes lending under the PPP through March 31, 2021, and revises certain PPP requirements. The following outlines the key provisions of the PPP related to eligibility of applicants for PPP loans, which lenders are authorized to make PPP loans, the process for making PPP loans, loan increases, and loan forgiveness, as revised by the Economic Aid Act. Additional rules related to second draw PPP loans will be published separately. While this interim final rule fully implements the Economic Aid Act's changes to loan forgiveness, SBA also intends to issue a consolidated rule governing all aspects of loan forgiveness and loan review as well to provide a single reference point for lenders and borrowers.

4. I Have Determined That I Am Eligible. How much can I borrow?
5. What is the interest rate on a PPP loan?
6. What will be the maturity date on a PPP loan?
7. Can I apply for more than one First Draw PPP Loan?
8. Can I use e-signatures or e-consents if a borrower has multiple owners?
9. When will I have to begin paying principal and interest on my PPP loan?
10. What forms do I need and how do I submit an application for a PPP loan?
11. How can PPP loans be used?
12. What certifications need to be made?
13. Limited Safe Harbor With Respect to Certification Concerning Need for PPP Loan Request
14. Can my PPP loan be forgiven in whole or in part?
15. Do independent contractors count as employees for purposes of PPP loan forgiveness?
16. For loans made prior to December 27, 2020, what additional documentation must a borrower submit when the President of the United States, Vice President of the United States, the head of an Executive department, or a Member of Congress, or the spouse of any of the preceding, directly or indirectly holds a controlling interest in the borrower?
C. What do lenders need to know and do?
1. Who is eligible to make PPP loans?
2. Do lenders have to register in *SAM.gov* to make PPP loans?
3. What do lenders have to do in terms of loan underwriting?
4. Can lenders rely on borrower documentation for loan forgiveness?
5. What fees will lenders be paid?
6. Can PPP loans be sold into the secondary market?
7. Do the requirements for loan pledges under 13 CFR 120.434 apply to PPP loans pledged for borrowings from a Federal Reserve Bank (FRB) or advances by a Federal Home Loan Bank (FHLB)?
8. Are lenders required to use a promissory note provided by SBA or may they use their own?
9. Are lenders required to use a separate SBA Authorization document to issue PPP loans?
10. By when must a lender electronically submit an SBA Form 1502 indicating that PPP loan funds have been disbursed?
11. How do lenders report disbursements on PPP loans that are approved for loan increases due to the Economic Aid Act?
D. What do both borrowers and lenders need to know and do?
1. What are the loan terms and conditions?
2. Do lenders have to apply the ''credit elsewhere test''?
3. Are there any fee waivers?
4. Who pays the fee to an agent who provides assistance in connection with a PPP loan?
5. Can a borrower take multiple draws from a PPP loan and thereby delay the start of the covered period?
6. If a partnership received a PPP loan that did not include any compensation for its partners, can the loan amount be increased to include partner compensation?
7. If a seasonal employer received a PPP loan before December 27, 2020, can the loan amount be increased based on a revised calculation of the maximum loan amount?
8. Which other PPP borrowers can reapply or request an increase in their PPP loan amount?
9. If a borrower's PPP loan has already been fully disbursed, can the lender make an additional disbursement for the increased loan proceeds?
10. Are recipients of PPP loans entitled to exemptions on the grounds provided in Federal nondiscrimination laws for sex-specific admissions practices, sex-specific domestic violence shelters, coreligionist housing, or Indian tribal preferences in connection with adoption or foster care practices?

## A. General

SBA is authorized to guarantee loans under the PPP through March 31, 2021. Congress has authorized a total program level of $806,450,000,000 to provide guaranteed loans under this temporary 7(a) program under sections 7(a)(36) (PPP loans or First Draw PPP Loans) and 7(a)(37) (Second Draw PPP Loans) of the Small Business Act, a portion of which is available for new First Draw and Second Draw PPP Loans. Lenders have delegated authority to make PPP loans. SBA will allow lenders to rely on certifications of the borrower in order to determine eligibility of the borrower and use of loan proceeds and to rely on specified documents provided by the borrower to determine qualifying loan amount and eligibility for loan forgiveness. Lenders must comply with the applicable lender obligations set forth in this interim final rule, but will be held harmless for borrowers' failure to comply with program criteria and will not be subject to any enforcement action or penalty relating to loan origination or forgiveness of the PPP loan if the lender acts in good faith relating to the origination or forgiveness of the PPP loan and satisfies all other applicable Federal, State, local, and other statutory or regulatory requirements (as provided in section 7A(h) of the Small Business Act, as amended). Remedies for violations of PPP requirements or fraud are separately addressed in this interim final rule. The program requirements of the PPP identified in this rule temporarily supersede any conflicting Loan Program Requirement (as defined in 13 CFR 120.10).

**B. What do borrowers need to know and do?**

*1. What businesses, organizations, and individuals are eligible?*

*a. Am I eligible?* [2] [3]

You are eligible for a PPP loan if:

i. You, together with any affiliates (if applicable),[4] are:

• A small business concern under the applicable revenue-based size standard established by SBA in 13 CFR 121.201 for your industry or under the SBA alternative size standard; [5]

• an independent contractor, eligible self-employed individual, or sole proprietor;

• a business concern, a tax-exempt nonprofit organization described in section 501(c)(3) of the Internal Revenue Code (IRC), a tax-exempt veterans organization described in section 501(c)(19) of the IRC, a Tribal business concern described in section 31(b)(2)(C) of the Small Business Act, and you employ no more than the greater of 500 employees or, if applicable, the size standard in number of employees established by SBA in 13 CFR 121.201;

• a housing cooperative, an eligible section 501(c)(6) organization, or an eligible destination marketing organization,[6] that employs no more than 300 employees;

• a news organization that is majority owned or controlled by a NAICS code 511110 or 5151 business or a nonprofit public broadcasting entity with a trade or business under NAICS 511110 or 5151, that employs no more than 500 employees (or, if applicable, the size standard in number of employees established by SBA in 13 CFR 121.201 for your industry) per location; or

• another type of entity specifically provided for by PPP rules (as described below); and

ii. you were in operation on February 15, 2020, and either had employees for whom you paid salaries and payroll taxes or paid independent contractors, as reported on a Form 1099–MISC or you were an eligible self-employed individual, independent contractor, or sole proprietorship with no employees.

You must submit documentation sufficient to establish eligibility and to demonstrate the qualifying payroll amount, which may include, as applicable, payroll records, payroll tax filings, Form 1099–MISC, Schedule C or F, income and expenses from a sole proprietorship, or bank records.

*b. Are employees of foreign affiliates included for purposes of determining whether a PPP borrower has more than 500 employees (or 300 employees, if applicable)?* [7]

Yes. SBA's affiliation regulations provide that to determine a concern's size, employees of the concern "and all of its domestic and foreign affiliates" are included. 13 CFR 121.301(f). Therefore, to calculate the number of employees of an entity for purposes of determining eligibility for the PPP, an entity must include all employees of its domestic and foreign affiliates, except in those limited circumstances where the affiliation rules expressly do not apply to the entity.[8] Any entity that, together with its domestic and foreign affiliates, does not meet the 500-employee, 300-employee,[9] or other applicable PPP size standard is therefore ineligible for a PPP loan. Under no circumstances may PPP funds be used to support non-U.S. workers or operations.

*c. I have income from self-employment and file a Form 1040, Schedule C. Am I eligible for a PPP Loan?* [10]

You are eligible for a PPP loan if: (i) You were in operation on February 15, 2020; (ii) you are an individual with self-employment income (such as an independent contractor or a sole proprietor); (iii) your principal place of residence is in the United States; and (iv) you filed or will file a Form 1040 Schedule C for 2019 or meet the requirements below. However, if you are a partner in a partnership, you may not submit a separate PPP loan application for yourself as a self-employed individual. Instead, the self-employment income of general active partners may be reported as a payroll cost, up to $100,000 on an annualized basis, as prorated for the period during which the payments are made or the obligation to make the payments is incurred on a PPP loan application filed by or on behalf of the partnership. Partnerships are eligible for PPP loans under the CARES Act, as amended by the Economic Aid Act, and the Administrator has determined, in consultation with the Secretary of the

[2] *See* interim final rule on Second Draw PPP Loans for eligibility criteria for Second Draw PPP Loans, which is being published separately.

[3] This subsection was originally published at 85 FR 20811, subsection III.2.a. (April 15, 2020), as amended by 85 FR 36308 (June 16, 2020), 85 FR 36717 (June 18, 2020), and 85 FR 38301 (June 26, 2020), and has been modified to reflect subsequent rules or guidance and the Economic Aid Act.

[4] See section 3 regarding the applicability of affiliation rules at 13 CFR 121.103 and 121.301 to PPP loans.

[5] Under SBA's alternative size standard, a business concern may qualify as a small business concern if it, together with any affiliates: (1) Has a maximum tangible net worth of not more than $15 million; and (2) the average net income after Federal income taxes (excluding any carry-over losses) for the two full fiscal years before the date of application is not more than $5 million.

[6] *See* subsections 1.j., 1.k., and 1.m. for additional information on the eligibility of housing cooperatives, section 501(c)(6) organizations, and destination marketing organizations. The applicable size standard for these entities is not more than 300 employees.

[7] This subsection was originally published at 85 FR 30835, section III.1. (May 21, 2020) and has been modified for readability. Housing cooperatives, section 501(c)(6) organizations, and destination marketing organizations, added by the Economic Aid Act, must have no more than 300 employees to be eligible for PPP loans.

[8] Paragraph 7(a)(36)(D)(iv) of the Small Business Act (15 U.S.C. 636(a)(36)(D)(iv)), as added by the CARES Act and amended by the Economic Aid Act, waives SBA's affiliation rules for (1) any business concern with not more than 500 employees that, as of the date on which the loan is disbursed, is assigned a North American Industry Classification System code beginning with 72; (2) any business concern operating as a franchise that is assigned a franchise identifier code by the Administration; (3) any business concern that receives financial assistance from a company licensed under section 301 of the Small Business Investment Act of 1958 (15 U.S.C. 681); and (4)(a) any business concern (including any station which broadcasts pursuant to a license granted by the Federal Communications Commission under title III of the Communications Act of 1934 (47 U.S.C. 301 *et seq.*) without regard for whether such a station is a concern as defined in section 121.105 of title 13, Code of Federal Regulations, or any successor thereto) that employs not more than 500 employees, or the size standard established by the Administrator for the North American Industry Classification System code applicable to the business concern, per physical location of such business concern and is majority owned or controlled by a business concern that is assigned a North American Industry Classification System code beginning with 511110 or 5151; or (b) any nonprofit organization that is assigned a North American Industry Classification System code beginning with 5151. SBA also applies affiliation exceptions to certain categories of entities. 13 CFR 121.103(b).

[9] For housing cooperatives, section 501(c)(6) organizations, and destination marketing organizations, the applicable size standard is not more than 300 employees. *See* subsections 1.j. and 1.m. For the applicable size standard for entities eligible to apply for Second Draw PPP Loans, see the interim final rule on Second Draw PPP Loans that is being published separately.

[10] This subsection was originally published at 85 FR 21747, subsection III.1.a. (April 20, 2020) and has been modified to reflect subsequent interim final rules or guidance and the Economic Aid Act.

Treasury (Secretary), that limiting a partnership and its partners (and an LLC filing taxes as a partnership) to one PPP loan is necessary to help ensure that as many eligible borrowers as possible obtain PPP loans before the statutory deadline of March 31, 2021. This limitation will allow lenders to more quickly process applications and lower the burdens of applying for partnerships/partners. The Administrator has further determined that permitting partners to apply as self-employed individuals would create unnecessary confusion regarding which entity, the partner or the partnership, applies for partner and LLC member income, and would generate loan proceeds use coordination and allocation issues. Rent, mortgage interest, utilities, other debt service, operations expenditures, property damage costs, supplier costs, and worker protection expenditures are generally incurred at the partnership level, not partner level, so it is most natural to provide the funds for these expenses to the partnership, not individual partners. In addition, you should be aware that participation in the PPP may affect your eligibility for state-administered unemployment compensation or unemployment assistance programs, including the programs authorized by Title II, Subtitle A of the CARES Act, or CARES Act Employee Retention Credits. On June 26, 2020, SBA issued additional guidance for those individuals with self-employment income who: (i) Were not in operation in 2019 but who were in operation on February 15, 2020, and (ii) filed a Form 1040 Schedule C for 2020. See ''How To Calculate Maximum Loan Amounts—By Business Type,'' Question 10 posted on SBA's website.[11]

*d. Are eligible businesses owned by directors or shareholders of a PPP lender permitted to apply for a PPP loan through the lender with which they are associated?*[12]

SBA regulations (including 13 CFR 120.110 and 120.140) shall not apply to prohibit an otherwise eligible business owned (in whole or part) by an outside director or holder of a less than 30 percent equity interest in a PPP lender from obtaining a PPP loan from the PPP lender on whose board the director serves or in which the equity owner holds an interest, provided that the eligible business owned by the director or equity holder follows the same process as any similarly situated customer or account holder of the lender. Favoritism by the lender in processing time or prioritization of the director's or equity holder's PPP application is prohibited. Lenders should comply with all other applicable state and federal regulations concerning loans to associates of the lender. Lenders should also consult their own internal policies concerning lending to individuals or entities associated with the lender.

The foregoing paragraph does not apply to a director or owner who is also an officer or key employee of the PPP Lender. Officers and key employees of a PPP Lender may obtain a PPP Loan from a different lender, but not from the PPP Lender with which they are associated. SBA also reminds Lenders that the ''Authorized Lender Official'' for each PPP Loan is subject to the limitations described in the PPP Lender Application Form (SBA Form 2484), which states in relevant part: ''Neither the undersigned Authorized Lender Official, nor such individual's spouse or children, has a financial interest in the Applicant [Borrower].''

*e. If a seasonal business was dormant or not fully operating as of February 15, 2020, is it still eligible?*[13]

Yes, in evaluating eligibility, a seasonal business will be considered to have been in operation as of February 15, 2020, if the business was in operation for any 12-week period between February 15, 2019 and February 15, 2020. This approach aligns the eligibility criteria for seasonal businesses being in operation with the time period for calculation of a seasonal employer's maximum loan amount from section 336 of the Economic Aid Act and makes PPP loans available to seasonal businesses that operate outside of the original, more limited time frame.

*f. How does the 500 employee limit apply to news organizations with more than one physical location?*[14]

A business concern, or any station which broadcasts pursuant to a license granted by the Federal Communications Commission under title III of the Communications Act of 1934 (47 U.S.C. 301 *et seq.*), with more than one physical location that employs not more than 500 employees (or the size standard established by the Administrator for the NAICS code applicable to the business concern) per physical location, is eligible for a PPP loan if it: (1) Is majority owned or controlled by a business concern that is assigned a NAICS code beginning with 511110 or 5151 or, with respect to a public broadcasting entity (as defined in section 397(11) of the Communications Act of 1934 (47 U.S.C. 397(11))), has a trade or business that falls under such a code; and (2) makes a good faith certification that proceeds of the loan will be used to support expenses at the component of the organization that produces or distributes locally focused or emergency information. See section 3 for the applicability of SBA's affiliation rules to news organizations.

*g. Industry-Specific Eligibility Issues*

*i. Is a hospital owned by governmental entities eligible for a PPP loan?*[15]

Notwithstanding 13 CFR 120.110(j), a hospital that is otherwise eligible to receive a PPP loan as a business concern or nonprofit organization (described in section 501(c)(3) of the Internal Revenue Code of 1986 and exempt from taxation under section 501(a) of such Code) shall not be rendered ineligible for a PPP loan due to ownership by a state or local government if the hospital receives less than 50% of its funding from state or local government sources, exclusive of Medicaid.

*ii. Are businesses that receive revenue from legal gaming eligible for a PPP Loan?*[16]

A business that is otherwise eligible for a PPP Loan is not rendered ineligible due to its receipt of legal gaming revenues, and 13 CFR 120.110(g) is inapplicable to PPP loans. Businesses that received illegal gaming revenue remain categorically ineligible.

*iii. Are electric cooperatives that are exempt from Federal income taxation under section 501(c)(12) of the Internal Revenue Code eligible for a PPP loan?*[17]

Yes. An electric cooperative that is exempt from Federal income taxation under section 501(c)(12) of the Internal Revenue Code will be considered to be ''a business entity organized for profit'' for purposes of 13 CFR 121.105(a)(1). As a result, such entities are eligible PPP borrowers, as long as other eligibility requirements are met. To be eligible, an electric cooperative must satisfy the employee-based size standard established in the CARES Act, SBA's employee-based size standard

corresponding to its primary industry, if higher, or both tests in SBA's ''alternative size standard.'' [18]

*iv. Are telephone cooperatives that are exempt from federal income taxation under section 501(c)(12) of the Internal Revenue Code eligible for a PPP loan?* [19]

Yes. A telephone cooperative that is exempt from federal income taxation under section 501(c)(12) of the Internal Revenue Code will be considered to be ''a business entity organized for profit'' for purposes of 13 CFR 121.105(a)(1). As a result, such entities are eligible PPP borrowers, as long as other eligibility requirements are met. To be eligible, a telephone cooperative must satisfy the employee-based size standard established in the CARES Act, SBA's employee-based size standard corresponding to its primary industry, if higher, or both tests in SBA's ''alternative size standard.'' [20]

*v. Are housing cooperatives as defined in section 216(b) of the Internal Revenue Code eligible for PPP loans?* [21]

Yes. Housing cooperatives (as defined in section 216(b) of the Internal Revenue Code of 1986) that employ not more than 300 employees are eligible to apply for PPP loans as long as other eligibility requirements are met. In addition, the provisions applicable to affiliation, described in section 3, apply to housing cooperatives in the same manner as with respect to a small business concern.

*vi. Are nonprofit and tax-exempt news organizations eligible for PPP loans?* [22]

Yes. A public broadcasting entity (as defined in section 397(11) of the Communications Act of 1934 (47 U.S.C. 397(11)) that is a nonprofit organization or any organization otherwise subject to section 511(a)(2)(B) of the Internal Revenue Code of 1986, and employs no more than 500 employees (or, if applicable, the size standard in number of employees established by SBA in 13 CFR 121.201 for the entity's industry) per location is eligible for a PPP loan if the organization has a trade or business that is assigned a NAICS code beginning with 511110 or 5151, and makes a good faith certification that proceeds of the loan will be used to support expenses at the component of the organization that produces or distributes locally focused or emergency information.[23] See subsection B.1.f. for information on how the 500 employee limit applies to news organizations with more than one physical location. See section 3 for the applicability of SBA's affiliation rules to news organizations.

*vii. Are destination marketing organizations eligible for PPP loans?* [24]

Yes. Under the Economic Aid Act, any destination marketing organization [25] is eligible to receive a PPP loan as long as other eligibility requirements are met and if: (1) The destination marketing organization does not receive more than 15 percent of its receipts from lobbying activities; (2) the lobbying activities of the destination marketing organization do not comprise more than 15 percent of the total activities of the organization; (3) the cost of the lobbying activities of the destination marketing organization did not exceed $1,000,000 during the most recent tax year of the destination marketing organization that ended prior to February 15, 2020; (4) the destination marketing organization employs not more than 300 employees; and (5) the destination marketing organization: (a) Is described in section 501(c) of the Internal Revenue Code and is exempt from taxation under section 501(a) of such Code; or (b) is a quasi-governmental entity or is a political subdivision of a State or local government, including any instrumentality of those entities.[26]

*viii. Are 501(c)(6) organizations eligible for PPP loans?* [27]

Yes. Any organization that is described in section 501(c)(6) of the Internal Revenue Code and that is exempt from taxation under section 501(a) of such Code (excluding professional sports leagues and organizations with the purpose of promoting or participating in a political campaign or other activity) shall be eligible to receive a PPP loan as long as other eligibility requirements are met and if: (1) The organization does not receive more than 15 percent of its receipts from lobbying activities; (2) the lobbying activities of the organization do not comprise more than 15 percent of the total activities of the organization; (3) the cost of the lobbying activities of the organization did not exceed $1,000,000 during the most recent tax year of the organization that ended prior to February 15, 2020; and (4) the organization employs not more than 300 employees.

*2. What businesses, organizations, and individuals are ineligible?*

*a. Could I be ineligible even if I meet the eligibility requirements in section 1?* [28]

[18] Under the alternative size standard, a business concern, including an electric cooperative, can qualify for the PPP as a small business concern if, as of March 27, 2020: (1) The maximum tangible net worth of the business was not more than $15 million; and (2) the average net income after Federal income taxes (excluding any carry-over losses) of the business for the two full fiscal years before the date of the application is not more than $5 million. For an electric cooperative that does not have net income, the cooperative's savings distributed to its owner-members will be considered its net income.

[19] This subsection was originally published at 85 FR 35550, subsection III.1. (June 11, 2020) and has been modified for readability.

[20] Under the alternative size standard, a business concern, including a telephone cooperative, can qualify for the PPP as a small business concern if, as of March 27, 2020: (1) The maximum tangible net worth of the business was not more than $15 million; and (2) the average net income after Federal income taxes (excluding any carry-over losses) of the business for the two full fiscal years before the date of the application is not more than $5 million. For a telephone cooperative that does not have net income, the telephone cooperative's capital credits distributed to its owner-members will be considered its net income.

[21] This subsection has been added to conform to section 316 of the Economic Aid Act.

[22] This subsection has been added to conform to section 317 of the Economic Aid Act.

[23] This subsection provides that an eligible nonprofit news organization under section 317 of the Economic Aid Act must have no more than 500 employees. (For those nonprofit news organizations with more than one physical location, they must have no more than 500 employees per location.) This will make PPP loans available to nonprofit news organizations, regardless of whether the organization would be a business concern under SBA regulations, if the nonprofit news organization satisfies the same general size standard applicable under the PPP rules to other borrowers that are nonprofit or tax-exempt organizations. The Administrator, in consultation with the Secretary, has determined this requirement appropriately implements section 317 of the Economic Aid Act by making PPP loans available to nonprofit news organizations on the same terms as other nonprofit organizations that have been made eligible for PPP loans.

[24] This subsection has been added to conform to section 318 of the Economic Aid Act.

[25] Section 318 of the Economic Aid Act added the following definition to paragraph 7(a)(36)(A) of the Small Business Act (15 U.S.C. 636(a)(36)(A)): ''(xv) the term 'destination marketing organization' means a nonprofit entity that is—(I) an organization described in section 501(c) of the Internal Revenue Code of 1986 and exempt from tax under section 501(a) of such Code; or (II) a State, or a political subdivision of a State (including any instrumentality of such entities)—(aa) engaged in marketing and promoting communities and facilities to businesses and leisure travelers through a range of activities, including—(AA) assisting with the location of meeting and convention sites; (BB) providing travel information on area attractions, lodging accommodations, and restaurants; (CC) providing maps; and (DD) organizing group tours of local historical, recreational, and cultural attractions; or (bb) that is engaged in, and derives the majority of the operating budget of the entity from revenue attributable to, providing live events.

[26] A destination marketing organization that is a quasi-governmental entity or is a political subdivision of a State or local government, including any instrumentality of those entities, is eligible for a PPP loan notwithstanding the SBA regulation at 13 CFR 120.110(j), which states that government-owned entities (except for businesses owned or controlled by a Native American tribe) are not eligible for SBA financial assistance.

[27] This subsection has been added to conform to section 318 of the Economic Aid Act.

[28] This subsection was originally published at 85 FR 20811, subsection III.2.a. (April 15, 2020), as

Continued

You are ineligible for a PPP loan if, for example:

i. You are engaged in any activity that is illegal under Federal, state, or local law;

ii. You are a household employer (individuals who employ household employees such as nannies or housekeepers);

iii. An owner of 20 percent or more of the equity of the applicant is presently incarcerated or, for any felony, presently subject to an indictment, criminal information, arraignment, or other means by which formal criminal charges are brought in any jurisdiction; or has been convicted of, pleaded guilty or nolo contendere to, or commenced any form of parole or probation (including probation before judgment) for, a felony involving fraud, bribery, embezzlement, or a false statement in a loan application or an application for federal financial assistance within the last five years or any other felony within the last year;

iv. You, or any business owned or controlled by you or any of your owners, has ever obtained a direct or guaranteed loan from SBA or any other Federal agency that is currently delinquent or has defaulted within the last seven years and caused a loss to the government;

v. Your business or organization was not in operation on February 15, 2020;[29]

vi. You or your business received or will receive a grant under the Shuttered Venue Operator Grant program under section 324 of the Economic Aid Act;[30]

vii. The President, the Vice President, the head of an Executive Department, or a Member of Congress, or the spouse of such person as determined under applicable common law, directly or indirectly holds a controlling interest in your business;[31]

viii. Your business is an issuer, the securities of which are listed on an exchange registered as a national securities exchange under section 6 of the Securities Exchange Act of 1934 (15 U.S.C. 78f)[32] (SBA will not consider whether a news organization that is eligible under the conditions described in subsection 1.f. and 1.g.vi. is affiliated with an entity, which includes any entity that owns or controls such news organization, that is an issuer[33]); or

ix. Your business has permanently closed.[34]

*b. Are businesses that are generally ineligible for 7(a) loans under 13 CFR 120.110 eligible for a PPP loan?*[35]

Paragraphs (a), (g), and (k), of 13 CFR 120.110 do not apply to PPP loans. For PPP loans, the ineligibility restriction in 13 CFR 120.110(n) is superseded by subsection B.2.a.iii. of this interim final rule. Otherwise, a business is not eligible for a PPP loan if it is a type of business concern (or would be, if the entity were a business concern) described in 13 CFR 120.110, except as permitted by subsections B.1.d and B.1.g of this rule or otherwise permitted by PPP rules. Businesses that are not generally eligible for a 7(a) loan under 13 CFR 120.110 are described further in SBA's Standard Operating Procedure (SOP) 50 10 6, Part 2, Section A, Chapter 3.[36]

*c. Will I be approved for a PPP loan if my business is in bankruptcy?*[37]

No. If the applicant or the owner of the applicant is the debtor in a bankruptcy proceeding, either at the time it submits the application or at any time before the loan is disbursed, the applicant is ineligible to receive a PPP loan. If the applicant or the owner of the applicant becomes the debtor in a bankruptcy proceeding after submitting a PPP application but before the loan is disbursed, it is the applicant's obligation to notify the lender and request cancellation of the application. Failure by the applicant to do so will be regarded as a use of PPP funds for unauthorized purposes.

The Borrower Application Form for PPP loans (SBA Form 2483), which reflects this restriction in the form of a borrower certification, is a loan program requirement. Lenders may rely on an applicant's representation concerning the applicant's or an owner of the applicant's involvement in a bankruptcy proceeding.

*d. Is a hedge fund or private equity firm eligible for a PPP loan?*[38]

No. Hedge funds and private equity firms are primarily engaged in investment or speculation, and such businesses are therefore ineligible to receive a PPP loan.

### *3. Affiliation Rules Generally*

*a. Are affiliates considered together for purposes of determining eligibility?*[39]

In most cases, a borrower will be considered together with its affiliates for purposes of determining eligibility for the PPP.[40] Under SBA rules, entities

---

amended by 85 FR 36308 (June 16, 2020), 85 FR 36717 (June 18, 2020), and 85 FR 38301 (June 26, 2020), and has been modified to conform to subsequent interim final rules or guidance and the Economic Aid Act and for readability.

[29] Added to conform to section 310 of the Economic Aid Act. This provision is effective as if included in the CARES Act and applies to any loan made pursuant to section 7(a)(36) of the Small Business Act before, on, or after December 27, 2020, including forgiveness of such a loan.

[30] Added to conform to section 310 of the Economic Aid Act. This provision applies to PPP loans made on or after December 27, 2020.

[31] Added to conform to section 322 of the Economic Aid Act. This provision applies to any loan made on or after December 27, 2020. For any loan made under section 7(a)(36) to a covered entity before December 27, 2020, *see* subsection B.16 of this interim final rule.

[32] Added to conform to section 342 of the Economic Aid Act, which also added the following definitions to paragraph 7(a)(36)(A) of the Small Business Act (15 U.S.C. 636(a)(36)(A)): ''(xvi) the terms 'exchange', 'issuer', and 'security' have the meanings given those terms in section 3(a) of the Securities Exchange Act of 1934 (15 U.S.C. 78c(a)).'' This provision applies to loans made on or after December 27, 2020.

[33] *See* section 317 of the Economic Aid Act.

[34] This provision prohibits an entity that has gone out of business and has no intention of reopening from receiving a PPP loan. The Administrator, in consultation with the Secretary, has determined this provision is necessary to maintain program integrity, prevent abuse, and prevent PPP loans being made to businesses that have permanently closed. Preserving funds for businesses in operation is necessary because only businesses that are still in operation will retain employees, which is a primary purposes of the PPP. PPP was not intended to support businesses that have permanently closed. A borrower that has temporarily closed or temporarily suspended its business but intends to reopen remains eligible for a PPP loan.

[35] This subsection replaces the subsection originally published at 85 FR 20811, subsection III.2.c. (''*How do I determine if I am ineligible*'') (April 15, 2020) and modified to conform to the Economic Aid Act.

[36] SOP 50 10 6 can be found at *https://www.sba.gov/document/sop-50-10-lender-development-company-loan-programs-0.* For PPP loans approved before December 27, 2020, see SOP 50 10 5(K), Subpart B, Chapter 2 for ineligible types of businesses. SOP 50 10 5(K) can be found at *https://www.sba.gov/document/sop-50-10-5-lender-development-company-loan-programs.*

[37] This subsection was originally published at 85 FR 23450, subsection III.4. (April 28, 2020) and has been modified for readability.

[38] This subsection was originally published at 85 FR 23450, subsection III.2.a. (April 28, 2020) and has been modified for readability.

[39] The text of this subsection was originally published at 85 FR 20817 (April 15, 2020).

[40] Paragraph 7(a)(36)(D)(iv) of the Small Business Act (15 U.S.C. 636(a)(36)(D)(iv), as added by the CARES Act and amended by the Economic Aid Act, waives the affiliation rules contained in § 121.103 for (1) any business concern with not more than 500 employees that, as of the date on which the loan is disbursed, is assigned a North American Industry Classification System code beginning with 72; (2) any business concern operating as a franchise that is assigned a franchise identifier code by the Administration; (3) any business concern that receives financial assistance from a company licensed under section 301 of the Small Business Investment Act of 1958 (15 U.S.C. 681); and (4)(a) any business concern (including any station which broadcasts pursuant to a license granted by the Federal Communications Commission under title III of the Communications Act of 1934 (47 U.S.C. 301 *et seq.*) without regard for whether such a station is a concern as defined in section 121.105 of title 13, Code of Federal Regulations, or any successor thereto) that employs not more than 500 employees, or the size standard established by the Administrator for the North American Industry Classification System code applicable to the business concern, per physical location of such business concern and is majority owned or controlled by a business concern that is assigned a

may be considered affiliates based on factors including but not limited to stock ownership, overlapping management,[41] and identity of interest. See 13 CFR 121.301(f).

*b. How do SBA's affiliation rules affect my eligibility and apply to me under the PPP?*[42]

An entity generally is eligible for the PPP if it, combined with its affiliates, (i) is a small business as defined in section 3 of the Small Business Act (15 U.S.C. 632), (ii)(1) has 500 or fewer employees[43] or is a business that operates in a certain industry and meets applicable SBA employee-based size standards for that industry, if higher, and (2) is a tax-exempt nonprofit organization described in section 501(c)(3) of the Internal Revenue Code (IRC), a housing cooperative, a tax-exempt veterans organization described in section 501(c)(19) of the IRC, a Tribal business concern described in section 31(b)(2)(C) of the Small Business Act, a section 501(c)(6) organization, a destination marketing organization, or any other business concern, or (iii) has 500 or fewer employees per location (or an applicable SBA employee-based size standard for that industry, if higher) and is either majority owned or controlled by a NAICS code 511110 or 5151 business or is a nonprofit public broadcasting entity with a trade or business under NAICS code 511110 or 5151. Prior to the CARES Act, the nonprofit organizations listed above were not eligible for SBA Business Loan Programs under section 7(a) of the Small Business Act; only for-profit small business concerns were eligible. The CARES Act made such nonprofit organizations not only eligible for the PPP, but also subjected them to SBA's affiliation rules. As amended, section 7(a) of the Small Business Act (15 U.S.C. 636(a)) now provides that the provisions applicable to affiliations under 13 CFR 121.103 apply with respect to nonprofit organizations, housing cooperatives, and veterans organizations in the same manner as with respect to small business concerns. However, the detailed affiliation standards contained in § 121.103 currently do not apply to PPP borrowers, because § 121.103(a)(8) provides that applicants in SBA's Business Loan Programs (which include the PPP) are subject to the affiliation rules contained in 13 CFR 121.301.

*c. Faith-Based Organizations*[44]

This rule exempts otherwise qualified faith-based organizations from the SBA's affiliation rules, including those set forth in 13 CFR part 121, where the application of the affiliation rules would substantially burden those organizations' religious exercise. For the reasons described in 85 FR 20817, the SBA's affiliation rules, including those set forth in 13 CFR part 121, do not apply to the relationship of any church, convention or association of churches, or other faith-based organization or entity to any other person, group, organization, or entity that is based on a sincere religious teaching or belief or otherwise constitutes a part of the exercise of religion. This includes any relationship to a parent or subsidiary and other applicable aspects of organizational structure or form. A faith-based organization seeking loans under this program may rely on a reasonable, good faith interpretation in determining whether its relationship to any other person, group, organization, or entity is exempt from the affiliation rules under this provision, and SBA will not assess, and will not require participating lenders to assess, the reasonableness of the faith-based organization's determination.

*d. Do the SBA affiliation rules prohibit a portfolio company of a private equity fund from being eligible for a PPP loan?*[45]

Borrowers must apply the affiliation rules that appear in 13 CFR 121.301(f), as set forth in the Second PPP Interim Final Rule (85 FR 20817). The affiliation rules apply to private equity-owned businesses in the same manner as any other business subject to outside ownership or control.[46] However, in addition to applying any applicable affiliation rules, all borrowers should carefully review the required certification on the Paycheck Protection Program Borrower Application Form (SBA Form 2483) stating that ''[c]urrent economic uncertainty makes this loan request necessary to support the ongoing operations of the Applicant.''

*e. Does participation in an employee stock ownership plan (ESOP) trigger application of the affiliation rules?*[47]

No. For purposes of the PPP, a business's participation in an ESOP (as defined in 15 U.S.C. 632(q)(6)) does not result in an affiliation between the business and the ESOP.

### *4. I Have Determined That I Am Eligible. How much can I borrow?*[48]

Under the PPP, the maximum loan amount for First Draw PPP Loans is the lesser of $10 million or an amount that you will calculate using a payroll-based formula authorized by the Act, as explained below.[49] PPP loans approved in 2020 used 2019 or the 1-year before the date on which the loan is made to calculate payroll costs for purposes of calculating the maximum loan amount. Borrowers who apply for PPP loans 2021 and who are not self-employed (including sole proprietorships and independent contractors) are also permitted to use the precise 1-year period before the date on which the loan is made to calculate payroll costs if they choose not to use 2019 or 2020. Since most borrowers will use 2019 or 2020 the rule text refers only to 2019 or 2020 for simplicity and readability.

---

North American Industry Classification System code beginning with 511110 or 5151; or (b) any nonprofit organization that is assigned a North American Industry Classification System code beginning with 5151. This interim final rule has no effect on these statutory waivers, which remain in full force and effect. As a result, the affiliation rules contained in section 121.301 also do not apply to these types of entities. In addition, paragraph 7(a)(36)(D) of the Small Business Act (15 U.S.C. 636(a)(36)(D)), as amended by section 342 of the Economic Aid Act states that, with respect to a business concern made eligible under paragraph 7(a)(36)(D)(iii)(II) or (iv)(IV) (certain news organizations), the Administrator shall not consider whether any affiliated entity, which for purposes of this subclause shall include any entity that owns or controls such business concern, is an issuer.

[41] In order to help potential borrowers identify other businesses with which they may be deemed to be affiliated under the common management standard, the Borrower Application Form, SBA Form 2483, released on April 2, 2020, requires applicants to list other businesses with which they have common management (including under a management agreement). The information supplied by the applicant in response to that information request should be used by applicants as they assess whether they have affiliates that should be included in their number of employees reported on SBA Form 2483.

[42] The text of this subsection was originally published at 85 FR 20817 (April 15, 2020) and has been modified to conform to the Economic Aid Act.

[43] For housing cooperatives, section 501(c)(6) organizations, and destination marketing organizations, the applicable size standard is not more than 300 employees.

[44] The text of this subsection was originally published at 85 FR 20817 (April 15, 2020) and has been modified for readability.

[45] This subsection was originally published at 85 FR 23450, subsection III.2.b. (April 28, 2020).

[46] However, the CARES Act waives the affiliation rules if the borrower receives financial assistance from an SBA-licensed Small Business Investment Company (SBIC) in any amount. This includes any type of financing listed in 13 CFR 107.50, such as loans, debt with equity features, equity, and guarantees. Affiliation is waived even if the borrower has investment from other non-SBIC investors.

[47] This subsection was originally published at 85 FR 23450, section III.3. (April 28, 2020) and has been modified for readability.

[48] This subsection was originally published at 85 FR 20811, subsection III.2.d. (April 15, 2020) and has been modified to conform to additional interim final rules or guidance and the Economic Aid Act.

[49] *See* subsection 4.d. for maximum loan amount applicable to certain farmers and ranchers. For the maximum loan amount for Second Draw PPP Loans, *see* the the interim final rule on Second Draw PPP Loans that is being published separately.

*a. How do I calculate the maximum amount I can borrow?* [50]

The following methodology, which is one of the methodologies authorized by the Act, will be most useful for many applicants.

i. *Step 1:* Aggregate payroll costs (defined in detail below in subsections 4.g. and 4.h.) from 2019 or 2020 for employees whose principal place of residence is the United States.

ii. *Step 2:* Subtract any compensation paid to an employee in excess of $100,000 on an annualized basis, as prorated for the period during which the payments are made or the obligation to make the payments is incurred.[51]

iii. *Step 3:* Calculate average monthly payroll costs (divide the amount from Step 2 by 12).

iv. *Step 4:* Multiply the average monthly payroll costs from Step 3 by 2.5.

v. *Step 5:* Add the outstanding amount of an Economic Injury Disaster Loan (EIDL) made between January 31, 2020 and April 3, 2020 that you seek to refinance. Do not include the amount of any ''advance'' under an EIDL COVID–19 loan (because it does not have to be repaid).

The examples below illustrate this methodology.

i. Example 1—No employees make more than $100,000
Annual payroll: $120,000
Average monthly payroll: $10,000
Multiply by 2.5 = $25,000
Maximum loan amount is $25,000

ii. Example 2—Some employees make more than $100,000
Annual payroll: $1,500,000
Subtract compensation amounts in excess of an annual salary of $100,000: $1,200,000
Average monthly qualifying payroll: $100,000
Multiply by 2.5 = $250,000
Maximum loan amount is $250,000

iii. Example 3—No employees make more than $100,000, outstanding EIDL loan of $10,000.
Annual payroll: $120,000
Average monthly payroll: $10,000
Multiply by 2.5 = $25,000
Add EIDL loan of $10,000 = $35,000
Maximum loan amount is $35,000

iv. Example 4—Some employees make more than $100,000, outstanding EIDL loan of $10,000
Annual payroll: $1,500,000
Subtract compensation amounts in excess of an annual salary of $100,000: $1,200,000
Average monthly qualifying payroll: $100,000
Multiply by 2.5 = $250,000
Add EIDL loan of $10,000 = $260,000
Maximum loan amount is $260,000

You must provide your Form 941 (or other tax forms containing similar information) and state quarterly wage unemployment insurance tax reporting forms from each quarter in 2019 or 2020 (whichever you used to calculate loan amount), or equivalent payroll processor records, along with evidence of any retirement and health insurance contributions. A payroll statement or similar documentation from the pay period that covered February 15, 2020 must be provided to establish you were in operation on February 15, 2020.[52]

b. I have income from self-employment and file a Form 1040, Schedule C, how do I calculate the maximum amount I can borrow and what documentation is required?[53]

How you calculate your maximum loan amount depends upon whether or not you employ other individuals. If you have no employees, the following methodology should be used to calculate your maximum loan amount:

i. *Step 1:* Find your 2019 or 2020 IRS Form 1040 Schedule C line 31 net profit amount (if you are using 2020 to calculate payroll costs and have not yet filed a 2020 return, fill it out and compute the value). If this amount is over $100,000, reduce it to $100,000. If this amount is zero or less, you are not eligible for a PPP loan.

ii. *Step 2:* Calculate the average monthly net profit amount (divide the amount from Step 1 by 12).

iii. *Step 3:* Multiply the average monthly net profit amount from Step 2 by 2.5.

iv. *Step 4:* Add the outstanding amount of any Economic Injury Disaster Loan (EIDL) made between January 31, 2020 and April 3, 2020 that you seek to refinance. Do not include the amount of any advance under an EIDL COVID–19 loan (because it does not have to be repaid).

You must provide the 2019 or 2020 (whichever you used to calculate loan amount) Form 1040 Schedule C with your PPP loan application to substantiate the applied-for PPP loan amount and a 2019 or 2020 (whichever you used to calculate loan amount) IRS Form 1099–MISC detailing nonemployee compensation received (box 7), invoice, bank statement, or book of record that establishes you are self-employed. If using 2020 to calculate loan amount, this is required regardless of whether you have filed a 2020 tax return with the IRS. You must provide a 2020 invoice, bank statement, or book of record to establish you were in operation on or around February 15, 2020.

If you have employees, the following methodology should be used to calculate your maximum loan amount:

i. *Step 1:* Compute 2019 or 2020 payroll (using the same year for all items) by adding the following:

a. Your 2019 or 2020 Form 1040 Schedule C line 31 net profit amount (if you are using 2020 and have not yet filed a 2020 return, fill it out and compute the value), up to $100,000 on an annualized basis, as prorated for the period during which the payments are made or the obligation to make the payments is incurred, if this amount is over $100,000, reduce it to $100,000, if this amount is less than zero, set this amount at zero;

b. 2019 or 2020 gross wages and tips paid to your employees whose principal place of residence is in the United States computed using 2019 or 2020 IRS Form 941 Taxable Medicare wages & tips (line 5c—column 1) from each quarter plus any pre-tax employee contributions for health insurance or other fringe benefits excluded from Taxable Medicare wages & tips; subtract any amounts paid to any individual employee in excess of $100,000 on an annualized basis, as prorated for the period during which the payments are made or the obligation to make the payments is incurred and any amounts paid to any employee whose principal place of residence is outside the United States; and

c. 2019 or 2020 employer contributions to employee group health, life, disability, vision and dental insurance (portion of IRS Form 1040 Schedule C line 14 attributable to those contributions); retirement contributions (Form 1040 Schedule C line 19), and state and local taxes assessed on employee compensation (primarily under state laws commonly referred to as the State Unemployment Tax Act or SUTA from state quarterly wage reporting forms).

ii. *Step 2:* Calculate the average monthly amount (divide the amount from Step 1 by 12).

[50] This subsection was originally published at 85 FR 20811, subsection III.2.d. (April 15, 2020) and has been modified to conform to additional rules or guidance and the Economic Aid Act.

[51] *See* subsection 4.j for treatment of amounts paid to independent contractors.

[52] This subsection clarifies the documentation that must be submitted with an applicant's loan application to substantiate the borrower's payroll costs. This requirement applies to loans made after December 27, 2020. For documentation requirements for PPP loans made before December 27, 2020, *see* 85 FR 20811, subsection III.1.e. (April 15, 2020).

[53] This subsection was originally published at 85 FR 21747, subsection III.1.b. (April 20, 2020) and has been modified to conform to additional rules or guidance and the Economic Aid Act.

iii. *Step 3:* Multiply the average monthly amount from Step 2 by 2.5.

iv. *Step 4:* Add the outstanding amount of any EIDL made between January 31, 2020 and April 3, 2020 that you seek to refinance. Do not include the amount of any advance under an EIDL COVID–19 loan (because it does not have to be repaid).

You must supply your 2019 or 2020 (whichever you used to calculate loan amount) Form 1040 Schedule C, Form 941 (or other tax forms or equivalent payroll processor records containing similar information) and state quarterly wage unemployment insurance tax reporting forms from each quarter in 2019 or 2020 (whichever you used to calculate loan amount) or equivalent payroll processor records, along with evidence of any retirement and health insurance contributions, if applicable. A payroll statement or similar documentation from the pay period that covered February 15, 2020 must be provided to establish you were in operation on February 15, 2020.

*c. How does a seasonal employer calculate the maximum PPP loan amount?* [54]

As defined by section 315 of the Economic Aid Act, a borrower is a seasonal employer if it does not operate for more than 7 months in any calendar year or, during the preceding calendar year, it had gross receipts for any 6 months of that year that were not more than 33.33 percent of the gross receipts for the other 6 months of that year. Under section 336 of the Economic Aid Act, a seasonal employer must determine its maximum loan amount for purposes of the PPP by using the employer's average total monthly payments for payroll for any 12-week period selected by the seasonal employer beginning February 15, 2019, and ending February 15, 2020.

*d. How do farmers and ranchers calculate the maximum PPP loan amount?* [55]

How you calculate your maximum loan amount depends upon whether you employ other individuals. If you have no employees, the following methodology should be used to calculate your maximum loan amount:

i. *Step 1:* Find your 2019 or 2020 IRS Form 1040 Schedule F line 9 gross income (if you are using 2020 and you have not yet filed a 2020 return, fill it out and compute the value). If this amount is over $100,000, reduce it to $100,000. If this amount is zero or less, you are not eligible for a PPP loan.

ii. *Step 2:* Divide the amount from Step 1 by 12.

iii. *Step 3:* Multiply the average monthly gross income amount from Step 2 by 2.5.

iv. *Step 4:* Add the outstanding amount of any Economic Injury Disaster Loan (EIDL) made between January 31, 2020 and ending on April 3, 2020 that you seek to refinance. Do not include the amount of any advance under an EIDL COVID–19 loan (because it does not have to be repaid).

You must provide the 2019 or 2020 (whichever you used to calculate loan amount) Form 1040 Schedule F with your PPP loan application to substantiate the applied-for PPP loan amount and a 2019 or 2020 (whichever you used to calculate loan amount) IRS Form 1099–MISC detailing nonemployee compensation received (box 7), invoice, bank statement, or book of record that establishes you are self-employed. You must provide a 2020 invoice, bank statement, or book of record to establish you were in operation on or around February 15, 2020.

If you have employees, the following methodology should be used to calculate your maximum loan amount:

i. *Step 1:* Compute 2019 or 2020 payroll (using the same year for all items) by adding the following:

a. The difference between your 2019 or 2020 Form 1040 Schedule F line 9 gross income amount (if you are using 2020 and you have not yet filed a 2020 return, fill it out and compute the value), and the sum of Schedule F lines 15, 22 and 23, up to $100,000 on an annualized basis, as prorated for the period during which the payments are made or the obligation to make the payments is incurred, if this amount is over $100,000, reduce it to $100,000, if this amount is less than zero, set this amount at zero; [56]

b. 2019 or 2020 gross wages and tips paid to your employees whose principal place of residence is in the United States computed using 2019 or 2020 IRS Form 941 Taxable Medicare wages & tips (line 5c—column 1) from each quarter plus any pre-tax employee contributions for health insurance or other fringe benefits excluded from Taxable Medicare wages & tips; subtract any amounts paid to any individual employee in excess of $100,000 on an annualized basis, as prorated for the period during which the payments are made or the obligation to make the payments is incurred and any amounts paid to any employee whose principal place of residence is outside the United States; and

c. 2019 or 2020 employer contributions for employee group health, life, disability, vision and dental insurance (portion of IRS Form 1040 Schedule F line 15 attributable to those contributions), employer contributions for employee retirement contributions (Form 1040 Schedule F line 23, and state and local taxes assessed on employers for employee compensation (primarily under state laws commonly referred to as the State Unemployment Tax Act or SUTA from state quarterly wage reporting forms).

ii. *Step 2:* Calculate the average monthly amount (divide the amount from Step 1 by 12).

iii. *Step 3:* Multiply the average monthly amount from Step 2 by 2.5.

iv. *Step 4:* Add the outstanding amount of any EIDL made between January 31, 2020 and April 3, 2020 that you seek to refinance. Do not include the amount of any advance under an EIDL COVID–19 loan (because it does not have to be repaid).

You must supply your 2019 or 2020 (whichever you used to calculate loan amount) Form 1040 Schedule F, Form 941 (or other tax forms or equivalent payroll processor records containing similar information) and state quarterly wage unemployment insurance tax reporting forms from each quarter in 2019 or 2020 (whichever you used to calculate loan amount) or equivalent

[54] This subsection has been added to conform to section 336 of the Economic Aid Act. Except for loans made pursuant to section 7(a)(36) of the Small Business Act for which SBA has remitted a loan forgiveness payment to the lender before December 27, 2020, it is effective as if included in the CARES Act and applies to any loan made before, on, or after December 27, 2020, including forgiveness of such a loan. Previous guidance issued for seasonal employers stated as follows: ''Under section 1102 of the CARES Act, a seasonal employer may determine its maximum loan amount for purposes of the PPP by reference to the employer' average total monthly payments for payroll 'the 12-week period beginning February 15, 2019, or at the election of the eligible [borrower], March 1, 2019, and ending June 30, 2019.' Under this interim final rule issued pursuant to section 1109 of the Act, a seasonal employer may alternatively elect to determine its maximum loan amount as the average total monthly payments for payroll during any consecutive 12-week period between May 1, 2019 and September 15, 2019.'' 85 FR 23917 (April 30, 2020).

[55] This subsection has been added to conform to section 313 of the Economic Aid Act. This provision applies to a farmer or rancher who (1) operates as a sole proprietorship, an independent contractor, or is an eligible self-employed individual; (2) reports farm income or expenses on a Schedule F (or any equivalent successor schedule); and (3) was in business as of February 15, 2020. This provision is effective as if included in the CARES Act and applies to any loan made before, on, or after December 27, 2020, unless SBA has remitted a loan forgiveness payment to the lender on the PPP loan.

[56] Any employee payroll costs should be subtracted from the farmer's or rancher's gross income to avoid double-counting amounts that represent pay to the employees of the farmer or rancher.

payroll processor records, along with evidence of any retirement and health insurance contributions, if applicable. A payroll statement or similar documentation from the pay period that covered February 15, 2020 must be provided to establish you were in operation on February 15, 2020.

A farmer or rancher who received a PPP loan before December 27, 2020 may request a recalculation of the maximum loan amount based on the formula described above regarding gross income, if doing so would result in a larger covered loan amount and may receive an increase in its PPP loan based on the recalculation.

*e. How do partnerships calculate the maximum loan amount?*

The following methodology should be used to calculate the maximum amount that partnerships can borrow:

(i) *Step 1:* Compute 2019 or 2020 payroll (using the same year for all items) by adding (1) net earnings from self-employment of individual general partners in 2019 or 2020, as reported on IRS Form 1065 K–1, reduced by section 179 expense deduction claimed, unreimbursed partnership expenses claimed, and depletion claimed on oil and gas properties, multiplied by 0.9235,[57] that is not more than $100,000 per partner; (2) 2019 or 2020 gross wages and tips paid to your employees whose principal place of residence is in the United States, if any, which can be computed using 2019 or 2020 IRS Form 941 Taxable Medicare wages and tips (line 5c—column 1) from each quarter plus any pre-tax employee contributions for health insurance or other fringe benefits excluded from Taxable Medicare wages and tips, subtracting any amounts paid to any individual employee in excess of $100,000 and any amounts paid to any employee whose principal place of residence is outside the U.S.; (3) 2019 or 2020 employer contributions for employee group health, life, disability, vision and dental insurance, if any (portion of IRS Form 1065 line 19 attributable to those contributions); (4) 2019 or 2020 employer contributions to employee retirement plans, if any (IRS Form 1065 line 18); and (5) 2019 or 2020 employer state and local taxes assessed on employee compensation, primarily state unemployment insurance tax (from state quarterly wage reporting forms), if any.

(ii) *Step 2:* Calculate the average monthly payroll costs (divide the amount from Step 1 by 12).

(iii) *Step 3:* Multiply the average monthly payroll costs from Step 2 by 2.5.

(iv) *Step 4:* Add any outstanding amount of any EIDL made between January 31, 2020 and April 3, 2020 that you seek to refinance. Do not include the amount of any advance under an EIDL COVID–19 loan (because it does not have to be repaid).

You must supply 2019 or 2020 (whichever you used to calculate loan amount) IRS Form 1065 (including K–1s) and other relevant supporting documentation if the partnership has employees, including the 2019 or 2020 (whichever you used to calculate loan amount) IRS Form 941 and state quarterly wage unemployment insurance tax reporting form from each quarter (or equivalent payroll processor records or IRS Wage and Tax Statements) along with records of any retirement or health insurance contributions. If the partnership has employees, a payroll statement or similar documentation from the pay period that covered February 15, 2020 must be provided to establish the partnership was in operation and had employees on that date. If the partnership has no employees, an invoice, bank statement, or book of record establishing the partnership was in operation on February 15, 2020 must instead be provided.

*f. Can a single corporate group receive unlimited PPP loans?* [58]

No. To preserve the limited resources available to the PPP program, and in light of the previous lapse of PPP appropriations and the high demand for PPP loans, businesses that are part of a single corporate group shall in no event receive more than $20,000,000 of PPP loans in the aggregate.[59] For purposes of this limit, businesses are part of a single corporate group if they are majority owned, directly or indirectly, by a common parent.

It is the responsibility of an applicant for a PPP loan to notify the lender if the applicant has applied for or received PPP loans in excess of the amount permitted by this interim final rule and withdraw or request cancellation of any pending PPP loan application or approved PPP loan not in compliance with the limitation set forth in this rule. Failure by the applicant to do so will be regarded as a use of PPP funds for unauthorized purposes, and the loan will not be eligible for forgiveness. A lender may rely on an applicant's representation concerning the applicant's compliance with this limitation.

The Administrator, in consultation with the Secretary, determined that limiting the amount of PPP loans that a single corporate group may receive will promote the availability of PPP loans to the largest possible number of borrowers, consistent with the CARES Act. The Administrator has concluded that a limitation of $20,000,000 strikes an appropriate balance between broad availability of PPP loans and program resource constraints.

SBA's affiliation rules, which relate to an applicant's eligibility for PPP loans, and any waiver of those rules under the CARES Act, continue to apply independent of this limitation. Businesses are subject to this limitation even if the businesses are eligible for the waiver-of-affiliation provision under the CARES Act or are otherwise not considered to be affiliates under SBA's affiliation rules.[60]

This rule has no effect on lender obligations required to obtain an SBA guarantee for PPP loans.

*g. What qualifies as ''payroll costs?''* [61]

Payroll costs consist of compensation to employees (whose principal place of residence is the United States) in the form of salary, wages, commissions, or similar compensation; cash tips or the equivalent (based on employer records of past tips or, in the absence of such records, a reasonable, good-faith employer estimate of such tips); payment for vacation, parental, family, medical, or sick leave; allowance for separation or dismissal; payment for the provision of employee benefits consisting of group health care or group life, disability, vision, or dental

[57] This treatment follows the computation of self-employment tax from IRS Form 1040 Schedule SE Section A line 4 and removes the ''employer'' share of self-employment tax, consistent with how payroll costs for employees in the partnership are determined.

[58] This subsection was originally published at 85 FR 26324, subsection III.1. (May 4, 2020).

[59] The Administrator has authority to issue ''such rules and regulations as [the Administrator] deems necessary to carry out the authority vested in [her] by or pursuant to'' 15 U.S.C. Chapter 14A, including authorities established under section 1102 of the CARES Act. Section 1102 provides that the Administrator ''may'' guarantee loans under the terms and conditions set forth in section 7(a) of the Small Business Act, and those conditions specify a ''maximum''—but not a minimum—loan amount. *See* 15 U.S.C. 636(a)(36)(B), (E); *see also* CARES Act section 1106(k) (authorizing SBA to issue regulations to govern loan forgiveness). To preserve finite appropriations for PPP loans and ensure broad access for eligible borrowers, the Administrator, in consultation with the Secretary, has determined that an aggregate limitation on loans to a single corporate group is necessary and appropriate.

[60] *See* Section 7(a)(36)(D)(iv) of the Small Business Act (15 U.S.C. 636(a)(36)(D)(iv), as added by the CARES Act; 13 CFR 121.103(b).

[61] This subsection was originally published at 85 FR 20811, subsection III.2.f. (April 15, 2020) and has been modified to conform to the Economic Aid Act.

insurance,[62] including insurance premiums, and retirement; payment of state and local taxes assessed on compensation of employees; and for an independent contractor or sole proprietor, wages, commissions, income, or net earnings from self-employment, or similar compensation.

*h. Is there anything that is expressly excluded from the definition of payroll costs?* [63]

Yes. The Act expressly excludes the following:

i. Any compensation of an employee whose principal place of residence is outside of the United States;

ii. The compensation of an individual employee in excess of $100,000 on an annualized basis, as prorated for the period during which the payments are made or the obligation to make the payments is incurred;

iii. Federal employment taxes imposed or withheld during the applicable period, including the employee's and employer's share of FICA (Federal Insurance Contributions Act) and Railroad Retirement Act taxes, and income taxes required to be withheld from employees; and

iv. Qualified sick and family leave wages for which a credit is allowed under sections 7001 and 7003 of the Families First Coronavirus Response Act (Pub. L. 116–127).

*i. May fishing boat owners include payroll costs in their PPP loan applications that are attributable to crewmembers described in section 3121(b)(20) of the Internal Revenue Code?* [64]

Yes. A fishing boat owner may include compensation reported on Box 5 of IRS Form 1099–MISC and paid to a crewmember described in section 3121(b)(20) of the Code, up to $100,000 on an annualized basis, as prorated for the period during which the payments are made or the obligation to make the payments is incurred, as a payroll cost in its PPP loan application.

*j. Do independent contractors count as employees for purposes of PPP loan calculations?* [65]

No, independent contractors have the ability to apply for a PPP loan on their own so they do not count for purposes of a borrower's PPP loan calculation.[66]

*k. Do student workers count when determining the number of employees for PPP loan eligibility?* [67]

Yes. Student workers generally count as employees, unless (a) the applicant is an institution of higher education, as defined in the Department of Education's Federal Work-Study regulations, 34 CFR 675.2, and (b) the student worker's services are performed as part of a Federal Work-Study Program (as defined in those regulations [68]) or a substantially similar program of a State or political subdivision thereof. Institutions of higher education must exclude work study students when determining the number of employees for PPP loan eligibility, and must also exclude payroll costs for work study students from the calculation of payroll costs used to determine their PPP loan amount.

*5. What is the interest rate on a PPP loan?* [69]

The interest rate will be 100 basis points or one percent, calculated on a non-compounding, non-adjustable basis.[70]

*6. What will be the maturity date on a PPP loan?* [71]

The maturity is five years.

*7. Can I apply for more than one First Draw PPP Loan?* [72]

No. Except as set forth in subsection D.8, the Administrator, in consultation with the Secretary, determined that no eligible borrower may receive more than one First Draw PPP Loan. This means that if you apply for a PPP loan you should consider applying for the maximum amount. Any borrower who received a PPP loan in 2020 received a First Draw PPP Loan and is not eligible to receive another First Draw PPP Loan, but may be eligible for a second draw PPP loan.[73]

*8. Can I use e-signatures or e-consents if a borrower has multiple owners?* [74]

Yes, e-signature or e-consents can be used regardless of the number of owners.

*9. When will I have to begin paying principal and interest on my PPP loan?* [75]

If you submit to your lender a loan forgiveness application within 10 months after the end of your loan forgiveness covered period, you will not have to make any payments of principal or interest on your loan before the date on which SBA remits the loan forgiveness amount on your loan to your lender (or notifies your lender that no loan forgiveness is allowed).

Your ''loan forgiveness covered period'' is the period beginning on the date the lender disburses the PPP loan and ending on any date selected by the borrower that occurs during the period (i) beginning on the date that is 8 weeks after the date of disbursement and (ii) ending on the date that is 24 weeks after the date of disbursement. Your lender must notify you of remittance by SBA of the loan forgiveness amount (or notify you that SBA determined that no loan forgiveness is allowed) and the date your first payment is due. Interest continues to accrue during the deferment period.

If you do not submit to your lender a loan forgiveness application within 10

---

[62] This provision has been modified to conform to section 308 of the Economic Aid Act. This revision is effective as if included in the CARES Act and applies to any loan made before, on, or after December 27, 2020, including forgiveness of such a loan.

[63] This subsection was originally published at 85 FR 20811, subsection III.2.g. (April 15, 2020) and has been modified to conform to section 344 the Economic Aid Act.

[64] This subsection was originally published at 85 FR 39066, subsection III.1. (June 30, 2020) and has been modified to conform to section 344 the Economic Aid Act and for readability.

[65] This subsection was originally published at 85 FR 20811, subsection III.2.h. (April 15, 2020).

[66] *See* subsection 4.i. regarding fishing boat owners including payroll costs for their crewmembers in the calculation of the PPP loan amount.

[67] This subsection was originally published at 85 FR 27287, section III.2. (May 8, 2020) and has been modified for readability.

[68] The Department of Education's Federal Work-Study Programs described at 34 CFR part 675 are (1) the Federal Work-Study Program, (2) the Job Location and Development Program, and (3) Work Colleges Program.

[69] This subsection was originally published at 85 FR 20811, subsection III.2.i. (April 15, 2020) and has been modified to conform to additional interim final rules or guidance and the Economic Aid Act.

[70] Revised to conform to section 339 of the Economic Aid Act. The revision applies to PPP loans made on or after December 27, 2020, but may apply with respect to a PPP loan made before that date upon the mutual agreement of the lender and the borrower. A one percent interest rate provides low cost funds to borrowers to meet eligible payroll costs and other eligible expenses during this temporary period of economic dislocation caused by the coronavirus. Second, for lenders, the 100 basis points offers an attractive interest rate relative to the cost of funding for comparable maturities.

[71] This subsection was originally published at 85 FR 36308, subsection III.1.b. (June 16, 2020) and has been modified for readability.

[72] This subsection was originally published at 85 FR 20811, subsection III.2.i. (''*Can I apply for more than one PPP loan?*'') (April 15, 2020) and has been modified to conform to the Economic Aid Act and for readability. PPP borrowers may be eligible for a loan under section 7(a)(37) of the Small Business Act, ''Paycheck Protection Program Second Draw Loans,'' *see* interim final rule on Second Draw PPP Loans that is being published separately.

[73] *See* interim final rule on Second Draw PPP Loans for eligibility criteria for Second Draw PPP Loans, which is being published separately.

[74] This subsection was originally published at 85 FR 20811, subsection III.2.l. (April 15, 2020).

[75] This subsection was originally published at 85 FR 20811, subsection III.2.n. (April 15, 2020), as amended by 85 FR 36038 (June 16, 2020), and has been modified to conform to the Economic Aid Act.

months after the end of your loan forgiveness covered period, you must begin paying principal and interest after that period. For example, if a borrower's PPP loan is disbursed on January 25, 2021, the 24-week period ends on July 12, 2021. If the borrower does not submit a loan forgiveness application to its lender by May 12, 2022, the borrower must begin making payments on or after May 12, 2022.

*10. What forms do I need and how do I submit an application for a PPP loan?* [76]

The applicant must submit Paycheck Protection Program Borrower Application Form (SBA Form 2483), or lender's equivalent form, and payroll documentation, as described above. The lender must submit SBA Form 2484, Paycheck Protection Program Lender's Application for 7(a) Loan Guaranty, electronically in accordance with program requirements and maintain the forms and supporting documentation in its files.

*11. How can PPP loans be used?* [77]

a. The proceeds of a PPP loan are to be used for:

i. Payroll costs (as defined in the CARES Act, Economic Aid Act and this interim final rule);

ii. costs related to the continuation of group health care, life, disability, vision, or dental benefits during periods of paid sick, medical, or family leave, and group health care, life, disability, vision, or dental insurance premiums;

iii. mortgage interest payments (but not mortgage prepayments or principal payments);

iv. rent payments;

v. utility payments;

vi. interest payments on any other debt obligations that were incurred before February 15, 2020;

vii. refinancing an SBA EIDL loan made between January 31, 2020 and April 3, 2020; [78]

viii. covered operations expenditures (payments for any business software or cloud computing service that facilitates business operations, product or service delivery, the processing, payment, or tracking of payroll expenses, human resources, sales and billing functions, or accounting or tracking of supplies, inventory, records and expenses); [79]

ix. covered property damage costs (costs related to property damage and vandalism or looting due to public disturbances that occurred during 2020 that was not covered by insurance or other compensation);

x. covered supplier costs (expenditures made by a borrower to a supplier of goods for the supply of goods that—(A) are essential to the operations of the borrower at the time at which the expenditure is made; and (B) is made pursuant to a contract, order, or purchase order—(i) in effect at any time before the covered period with respect to the applicable covered loan; or (ii) with respect to perishable goods, in effect before or at any time during the covered period with respect to the applicable covered loan); and

xi. covered worker protection expenditures ((A) operating or a capital expenditures to facilitate the adaptation of the business activities of an entity to comply with requirements established or guidance issued by the Department of Health and Human Services, the Centers for Disease Control, or the Occupational Safety and Health Administration, or any equivalent requirements established or guidance issued by a State or local government, during the period beginning on March 1, 2020 and ending the date on which the national emergency with respect to the COVID–19 expires related to the maintenance of standards for sanitation, social distancing, or any other worker or customer safety requirement related to COVID–19; (B) such expenditures may include—(i) the purchase, maintenance, or renovation of assets that create or expand—(I) a drive-through window facility; (II) an indoor, outdoor, or combined air or air pressure ventilation or filtration system; (III) a physical barrier such as a sneeze guard; (IV) an expansion of additional indoor, outdoor, or combined business space; (V) an onsite or offsite health screening capability; or (VI) other assets relating to the compliance with the requirements or guidance described in subparagraph (A), as determined by the Administrator in consultation with the Secretary of Health and Human Services and the Secretary of Labor; and (ii) the purchase of—(I) covered materials described in section 328.103(a) of title 44, Code of Federal Regulations, or any successor regulation; (II) particulate filtering facepiece respirators approved by the National Institute for Occupational Safety and Health, including those approved only for emergency use authorization; or (III) other kinds of personal protective equipment, as determined by the Administrator in consultation with the Secretary of Health and Human Services and the Secretary of Labor; and (C) such expenditures do not include residential real property or intangible property).

At least 60 percent of the PPP loan proceeds shall be used for payroll costs. For purposes of determining the percentage of use of proceeds for payroll costs, the amount of any EIDL refinanced will be included. For purposes of loan forgiveness, however, the borrower will have to document the proceeds used for payroll costs in order to determine the amount of forgiveness. While the Act provides that PPP loan proceeds may be used for the purposes listed above and for other allowable uses described in section 7(a) of the Small Business Act (15 U.S.C. 636(a)), the Administrator believes that finite appropriations and the structure of the Act warrant a requirement that borrowers use a substantial portion of the loan proceeds for payroll costs, consistent with Congress' overarching goal of keeping workers paid and employed. This percentage is consistent with the limitation on the forgiveness amount set forth in the Flexibility Act. This limitation on use of the loan funds will help to ensure that the finite appropriations available for these loans are directed toward payroll protection, as each loan that is issued depletes the appropriation, regardless of whether portions of the loan are later forgiven.

*b. How can PPP loans be used by individuals with income from self-employment who file a Form 1040, Schedule C?* [80]

The proceeds of a PPP loan are to be used for the following.

i. Owner compensation replacement, calculated based on 2019 or 2020 (using the same year that was used to calculate the loan amount) net profit as described in subsection 4.b.

ii. Employee payroll costs (as defined in this interim final rule) for employees whose principal place of residence is in

[76] This subsection was originally published at 85 FR 20811, subsection III.2.q. (April 15, 2020).

[77] This subsection was originally published at 85 FR 20811, subsection III.2.r. (April 15, 2020), as amended by 85 FR 36308 (June 16, 2020) and has been modified to conform to the Economic Aid Act.

[78] Under paragraph 7(a)(36)(Q) of the Small Business Act, as amended by section 341 of the Economic Aid Act, an EIDL loan used for purposes other than paying payroll costs and other eligible PPP expenditures is not considered a duplication of the assistance available under the PPP.

[79] Items viii. through xi. were added to conform to section 304 of the Economic Aid Act. These provisions are effective as if included in the CARES Act and apply to any loan made before, on, or after December 27, 2020, including forgiveness of such loan, unless SBA has remitted a loan forgiveness payment to the lender on the PPP loan. Section 1106 of the CARES Act (15 U.S.C. 9005) was redesignated as section 7A, transferred to the Small Business Act (15 U.S.C. 631 *et seq.*), and inserted so as to appear after section 7 of the Small Business Act (15 U.S.C. 636) in section 304(b) of the Economic Aid Act.

[80] This subsection was originally published at 85 FR 21747, subsection III.1.d. (April 20, 2020) and has been modified to conform to the Economic Aid Act.

the United States, if you have employees.

iii. Mortgage interest payments (but not mortgage prepayments or principal payments) on any business mortgage obligation on real or personal property (*e.g.,* the interest on your mortgage for the warehouse you purchased to store business equipment or the interest on an auto loan for a vehicle you use to perform your business), business rent payments (*e.g.,* the warehouse where you store business equipment or the vehicle you use to perform your business), and business utility payments (*e.g.,* the cost of electricity in the warehouse you rent or gas you use driving your business vehicle). You must have claimed or be entitled to claim a deduction for such expenses on your 2019 or 2020 (whichever you used to calculate loan amount) Form 1040 Schedule C for them to be a permissible use. For example, if you did not claim or are not entitled to claim utilities expenses on your 2019 or 2020 Form 1040 Schedule C, you cannot use the proceeds for utilities.

iv. Interest payments on any other debt obligations that were incurred before February 15, 2020 (such amounts are not eligible for PPP loan forgiveness).

v. Refinancing an SBA EIDL loan made between January 31, 2020 and April 3, 2020 (maturity will be reset to PPP's maturity of two years for PPP loans made before June 5, 2020 unless the borrower and lender mutually agree to extend the maturity of such loans to five years, or PPP's maturity of five years for PPP loans made on or after June 5).[81]

vi. Covered operations expenditures, as defined in section 7A(a) of the Small Business Act, to the extent they is deductible on Form 1040 Schedule C.

vii. Covered property damage costs, as defined in section 7A(a) of the Small Business Act, to the extent they is deductible on Form 1040 Schedule C.

viii. Covered supplier costs, as defined in section 7A(a) of the Small Business Act, to the extent they is deductible on Form 1040 Schedule C.

ix. Covered worker protection expenditures, as defined in section 7A(a) of the Small Business Act, to the extent they is deductible on Form 1040 Schedule C.[82]

The Administrator, in consultation with the Secretary, determined that it is appropriate to limit self-employed individuals' (who file a Form 1040 Schedule C) use of loan proceeds to those types of allowable uses for which the borrower made expenditures in 2019 or 2020 or that were used on covered property damage, as defined in section 7A(a). The Administrator has determined that this limitation on self-employed individuals who file a Form 1040 Schedule C is consistent with the borrower certification required by the Act; specifically, that the PPP loan is necessary ''to support the ongoing operations'' of the borrower. The Administrator and the Secretary thus believe that this limitation is consistent with the structure of the Act to maintain existing operations and payroll and not for business expansion. This limitation on the use of PPP loan proceeds will also help to ensure that the finite appropriations available for these loans are directed toward maintaining existing operations and payroll, as each loan that is made depletes the appropriation.

*c. Can PPP proceeds be used for lobbying activities or expenditures?*[83]

No. None of the proceeds of a PPP loan may be used for (1) lobbying activities, as defined in section 3 of the Lobbying Disclosure Act of 1995 (2 U.S.C. 1602); (2) lobbying expenditures related to a State or local election; or (3) expenditures designed to influence the enactment of legislation, appropriations, regulation, administrative action, or Executive order proposed or pending before Congress or any State government, State legislature, or local legislature or legislative body.

*d. What happens if PPP loan funds are misused?*[84]

If you use PPP funds for unauthorized purposes, SBA will direct you to repay those amounts. If you knowingly use the funds for unauthorized purposes, you will be subject to additional liability such as charges for fraud. If one of your shareholders, members, or partners uses PPP funds for unauthorized purposes, SBA will have recourse against the shareholder, member, or partner for the unauthorized use.

*12. What certifications need to be made?*[85]

On the PPP borrower application, an authorized representative of the applicant must certify in good faith to all of the below:[86]

i. The Applicant was in operation on February 15, 2020, has not permanently closed, and was either an eligible self-employed individual, independent contractor, or sole proprietorship with no employees, or had employees for whom it paid salaries and payroll taxes or paid independent contractors, as reported on a Form 1099–MISC.

ii. Current economic uncertainty makes this loan request necessary to support the ongoing operations of the applicant.

iii. The funds will be used to retain workers and maintain payroll; or make payments for mortgage interest, rent, utilities, covered operations expenditures, covered property damage costs, covered supplier costs, and covered worker protection expenditures as specified under the Paycheck Protection Program Rules; I understand that if the funds are knowingly used for unauthorized purposes, the federal government may hold me legally liable such as for charges of fraud. (As explained above, not more than 40 percent of loan proceeds may be used for nonpayroll costs.)

iv. I understand that loan forgiveness will be provided for the sum of documented payroll costs, covered mortgage interest payments, covered rent payments, covered utilities, covered operations expenditures, covered property damage costs, covered supplier costs, and covered worker protection expenditures, and not more than 40% of the forgiven amount may be for non-payroll costs. If required, the Applicant will provide to the Lender and/or SBA documentation verifying the number of full-time equivalent employees on the Applicant's payroll as well as the dollar amounts of eligible expenses for the covered period following this loan.

v. The Applicant has not and will not receive another loan under the Paycheck Protection Program, section 7(a)(36) of the Small Business Act (15 U.S.C.

[81] Under section 7(a)(36)(Q) of the Small Business Act, as amended by section 341 of the Economic Aid Act, an EIDL loan used for purposes other than paying payroll costs and other eligible PPP expenditures is not considered a duplication of the assistance available under the PPP.

[82] Items vi. through ix. were added to conform to section 304 of the Economic Aid Act. These provisions are effective as if included in the CARES Act and apply to any loan made before, on, or after December 27, 2020, including forgiveness of such loan, unless SBA has remitted a loan forgiveness payment to the lender on the PPP loan.

[83] This subsection has been added to conform to section 319 of the Economic Aid Act.

[84] This subsection was originally published at 85 FR 20811, subsection III.2.s. (April 15, 2020).

[85] This subsection was originally published at 85 FR 20811, subsection III.2.s. (April 15, 2020), as amended by 85 FR 36308 (June 16, 2020) and has been modified to conform to the Economic Aid Act and the revised PPP Borrower Application Form (SBA Form 2483).

[86] A representative of the applicant can certify for the business as a whole if the representative is legally authorized to do so. The certifications have been revised to conform to the Economic Aid Act and the revised PPP Borrower Application Form (SBA Form 2483).

636(a)(36)) (this does not include Paycheck Protection Program second draw loans, section 7(a)(37) of the Small Business Act (15 U.S.C. 636(a)(37)).

vi. The Applicant has not and will not receive a Shuttered Venue Operator grant from SBA.

vii. The President, the Vice President, the head of an Executive department, or a Member of Congress, or the spouse of such person as determined under applicable common law, does not directly or indirectly hold a controlling interest in the Applicant, with such terms having the meanings provided in section 322 of the Economic Aid to Hard-Hit Small Businesses, Nonprofits, and Venues Act.

viii. The Applicant is not an issuer, the securities of which are listed on an exchange registered as a national securities exchange under section 6 of the Securities Exchange Act of 1934 (15 U.S.C. 78f).

ix. I further certify that the information provided in this application and the information provided in all supporting documents and forms is true and accurate in all material respects. I understand that knowingly making a false statement to obtain a guaranteed loan from SBA is punishable under the law, including under 18 U.S.C. 1001 and 3571 by imprisonment of not more than five years and/or a fine of up to $250,000; under 15 U.S.C. 645 by imprisonment of not more than two years and/or a fine of not more than $5,000; and, if submitted to a federally insured institution, under 18 U.S.C. 1014 by imprisonment of not more than thirty years and/or a fine of not more than $1,000,000.

x. I acknowledge that the Lender will confirm the eligible loan amount using required documents submitted. I understand, acknowledge, and agree that the Lender can share the tax information with SBA's authorized representatives, including authorized representatives of the SBA Office of Inspector General, for the purpose of compliance with SBA Loan Program Requirements and all SBA reviews.

*13. Limited Safe Harbor With Respect to Certification Concerning Need for PPP Loan Request* [87]

The CARES Act requires each applicant applying for a PPP loan to certify in good faith ''that the uncertainty of current economic conditions makes necessary the loan request to support the ongoing obligations'' of the applicant. SBA, in consultation with the Department of the Treasury, issued additional guidance on May 13, 2020 concerning how SBA will review the required good-faith certification. *See* FAQ 46 (posted May 13, 2020). This guidance included a safe harbor providing that any PPP borrower, together with its affiliates, that received PPP loans with an original principal amount of less than $2 million will be deemed to have made the required certification concerning the necessity of the loan request in good faith.

*14. Can my PPP loan be forgiven in whole or in part?* [88]

Yes. The amount of loan forgiveness can be up to the full principal amount of the loan and any accrued interest. An eligible borrower will not be responsible for any loan payment if the borrower uses all of the loan proceeds for forgivable purposes and employee and compensation levels are maintained or, if not, an applicable safe harbor or exemption applies. The actual amount of loan forgiveness will depend, in part, on the total amount of payroll costs (including employer contributions for group health, life, disability, vision and dental insurance), payments of interest on mortgage obligations incurred before February 15, 2020, rent payments on leases dated before February 15, 2020, utility payments for service that began before February 15, 2020, covered operations expenditures, covered property damage costs, covered supplier costs, and covered worker protection expenditures over the loan forgiveness covered period.[89] Payroll costs that are qualified wages taken into account in determining the Employer Retention Credit are not eligible for loan forgiveness. The ''loan forgiveness covered period'' is the period beginning on the date the lender disburses the PPP loan and ending on any date selected by the borrower that occurs during the period (i) beginning on the date that is 8 weeks after the date of disbursement and (ii) ending on the date that is 24 weeks after the date of disbursement.

To receive full loan forgiveness, a borrower must use at least 60 percent of the PPP loan for payroll costs, and not more than 40 percent of the loan forgiveness amount may be attributable to nonpayroll costs. For example, if a borrower uses 59 percent of its PPP loan for payroll costs, it will not receive the full amount of loan forgiveness it might otherwise be eligible to receive. Instead, the borrower will receive partial loan forgiveness, based on the requirement that 60 percent of the forgiveness amount must be attributable to payroll costs. For example, if a borrower receives a $100,000 PPP loan, and during the covered period the borrower spends $54,000 (or 54 percent) of its loan on payroll costs, then because the borrower used less than 60 percent of its loan on payroll costs, the maximum amount of loan forgiveness the borrower may receive is $90,000 (with $54,000 in payroll costs constituting 60 percent of the forgiveness amount and $36,000 in nonpayroll costs constituting 40 percent of the forgiveness amount). Because the Economic Aid Act changed the loan forgiveness covered period from either an 8- or 24-week period to a covered period between 8 and 24 weeks at the election of the borrower, SBA is eliminating the ''alternative covered period'' as defined in the interim final rule published at 85 FR 33004, 33006 (June 1, 2020), as amended.

Additionally, an eligible borrower that received a loan of $150,000 or less shall not, at the time of its application for loan forgiveness, be required to submit any application or documentation in addition to the certification and information required by paragraph 7A(l)(1)(A) of the Small Business Act. Such borrowers must retain records relevant to the form that prove compliance with the PPP requirements—with respect to employment records, for the 4-year period following submission of the loan forgiveness application, and with respect to other records, for the 3-year period following submission of the loan forgiveness application. All other borrowers must follow the existing requirements for loan forgiveness applications and records retention. SBA may review and audit PPP loans of $150,000 or less and access any records the borrower is required to retain. All borrowers with loans of any size must provide documentation independently to a lender to satisfy relevant Federal, State, local or other statutory or regulatory requirements or in connection with an SBA loan review.

The Economic Aid Act repealed the CARES Act provision requiring SBA to deduct EIDL Advance Amounts received by borrowers from the forgiveness payment amounts remitted

[87] This subsection has been added to codify the safe harbor contained in FAQ 46 (posted May 13, 2020).

[88] This subsection replaces the rule originally published at 85 FR 20811, subsection III.2.o (April 15, 2020), as amended by 85 FR 36308 (June 16, 2020) and has been modified to conform to the Economic Aid Act.

[89] Covered operations expenditures, covered property damage costs, covered supplier costs, and covered worker protection expenditures were added as eligible expenses in section 304 of the Economic Aid Act. Except for loans made pursuant to section 7(a)(36) of the Small Business Act for which SBA has remitted a loan forgiveness payment to the lender before December 27, 2020, these eligible expenses apply to any loan made before, on, or after December 27, 2020, including forgiveness of such a loan.

by SBA to the lender. The EIDL Advance Amount received by the borrower will not reduce the amount of forgiveness to which the borrower is entitled and will not be deducted from the forgiveness payment amount that SBA remits to the lender. Any EIDL Advance Amounts previously deducted from a borrower's forgiveness amount will be remitted to the lender, together with interest to the remittance date.

*15. Do independent contractors count as employees for purposes of PPP loan forgiveness?* [90]

No, independent contractors have the ability to apply for a PPP loan on their own so they do not count for purposes of a borrower's PPP loan forgiveness.

*16. For loans made prior to December 27, 2020, what additional documentation must a borrower submit when the President of the United States, Vice President of the United States, the head of an Executive department, or a Member of Congress, or the spouse of any of the preceding, directly or indirectly holds a controlling interest in the borrower?*

For PPP loans made before December 27, 2020, if the President of the United States, Vice President of the United States, the head of an Executive department, or a Member of Congress, or the spouse of such person as determined under applicable common law, directly or indirectly holds a controlling interest in the borrower, the principal executive officer, or individual performing a similar function, of the borrower must disclose that information to SBA. Such disclosure must be made not later than January 26, 2021, if the borrower submitted an application for forgiveness before December 27, 2020, or not later than 30 days after submitting an application for forgiveness.

**C. What do lenders need to know and do?**

*1. Who is eligible to make PPP loans?* [91]

a. All SBA 7(a) lenders are automatically approved to make PPP loans on a delegated basis.

b. The Act provides that the authority to make PPP loans can be extended to additional lenders determined by the Administrator and the Secretary to have the necessary qualifications to process, close, disburse, and service loans made with the SBA guarantee. Since SBA is authorized to make PPP loans (and loans under section 7(a)(37) of the Small Business Act) up to $806.45 billion by March 31, 2021, the Adminstrator and the Secretary have jointly determined that authorizing additional lenders is necessary to achieve the purpose of allowing as many eligible borrowers as possible to receive loans by the March 31, 2021 deadline.

c. The following types of lenders have been determined to meet the criteria and are eligible to make PPP loans unless they currently are designated in Troubled Condition by their primary Federal regulator or are subject to a formal enforcement action with their primary Federal regulator that addresses unsafe or unsound lending practices:

i. Any federally insured depository institution or any federally insured credit union;

ii. Any Farm Credit System institution [92] (other than the Federal Agricultural Mortgage Corporation) as defined in 12 U.S.C. 2002(a) that applies the requirements under the Bank Secrecy Act and its implementing regulations (collectively, BSA) as a federally regulated financial institution, or functionally equivalent requirements that are not altered by this rule; and

iii. Any depository or non-depository financing provider that originates, maintains, and services business loans or other commercial financial receivables and participation interests; has a formalized compliance program; applies the requirements under the BSA as a federally regulated financial institution, or the BSA requirements of an equivalent federally regulated financial institution; has been operating since at least February 15, 2019, and has originated, maintained, or serviced more than $50 million in business loans or other commercial financial receivables during a consecutive 12 month period in the past 36 months, or is a service provider to any insured depository institution that has a contract to support such institution's lending activities in accordance with 12 U.S.C. 1867(c) and is in good standing with the appropriate Federal banking agency.[93]

d. Qualified institutions described in 1.c.i. and ii. will be automatically qualified under delegated authority by the SBA upon transmission of CARES Act Section 1102 Lender Agreement (SBA Form 3506) unless they currently are designated in Troubled Condition by their primary Federal regulator or are subject to a formal enforcement action by their primary Federal regulator that addresses unsafe or unsound lending practices.

e. A non-bank lender may be approved to make PPP loans if it has originated, maintained, or serviced more than $10 million in business loans or other commercial financial receivables during a 12-month period in the past 36 months, if the non-bank lender is (1) a community development financial institution (other than a federally insured bank or federally insured credit union) or (2) a majority minority-, women-, or veteran/military-owned lender.[94]

*2. Do lenders have to register in SAM.gov to make PPP loans?* [95]

Yes. Given the exigent circumstances in which small businesses and lenders currently find themselves due to the COVID–19 pandemic, PPP lenders will have thirty (30) days from the date of the first PPP loan disbursement made by them after December 27, 2020 to complete SAM registration and provide SBA with the lender's unique entity identifier.

*3. What do lenders have to do in terms of loan underwriting?* [96]

Each lender shall:

a. Confirm receipt of borrower certifications contained in Paycheck Protection Program Borrower Application Form (SBA Form 2483) issued by the Administration or lender's equivalent form;

b. Confirm receipt of information demonstrating that a borrower was either an eligible self-employed individual, independent contractor, or

[90] This subsection was originally published at 85 FR 20811, subsection III.2.p. (April 15, 2020).

[91] This subsection was originally published at 85 FR 20811, subsection III.3.a. (April 15, 2020) and has been modified to conform to additional interim final rules or guidance and sections 323 and 343 of the Economic Aid Act.

[92] Section 314 of the Economic Aid Act contains the following information related to Farm Credit System Institutions: ''(1) APPLICABLE RULES.—Solely with respect to loans under paragraphs (36) and (37) of section 7(a) of the Small Business Act (15 U.S.C. 636(a)), Farm Credit Administration regulations and guidance issued as of July 14, 2020, and compliance with such regulations and guidance, shall be deemed functionally equivalent to requirements referenced in section 3(a)(iii)(II) of the interim final rule of the Administration entitled 'Business Loan Program Temporary Changes; Paycheck Protection Program' (85 FR 20811 (April 15, 2020)) or any similar requirement referenced in that interim final rule in implementing such paragraph (37).''

[93] This subsection c.iii. was modified to implement the rule originally published at 85 FR 26324, subsection III.2.a. (May 4, 2020).

[94] Lenders described in this subsection (e.) should follow the special instructions in footnote 1 of the 1102 Lender Agreement—Non-Bank and Non-Insured Depository Institution Lenders (SBA Form 3507). This subsection (e.) was adapted from the rule originally published at 85 FR 26324, subsection III.2.b. (May 4, 2020).

[95] This subsection adds a new requirement that all PPP lenders must register in *SAM.gov. See* 2 CFR 25.110(c)(2)(iii).

[96] This subsection was originally published at 85 FR 20811, subsection III.3.b. (April 15, 2020) and has been modified to conform to additional rules or guidance and the Economic Aid Act.

sole proprietorship with no employees or had employees for whom the borrower paid salaries and payroll taxes on or around February 15, 2020;

c. Confirm the dollar amount of average monthly payroll costs for 2019 or 2020 by reviewing the payroll documentation submitted with the borrower's application;[97] and

d. Follow applicable BSA requirements:

i. Federally insured depository institutions and federally insured credit unions should continue to follow their existing BSA protocols when making PPP loans to either new or existing customers who are eligible borrowers under the PPP. PPP loans for existing customers will not require re-verification under applicable BSA requirements, unless otherwise indicated by the institution's risk-based approach to BSA compliance.

ii. Entities that are not presently subject to the requirements of the BSA, should, prior to engaging in PPP lending activities, including making PPP loans to either new or existing customers who are eligible borrowers under the PPP, establish an anti-money laundering (AML) compliance program equivalent to that of a comparable federally regulated institution. Depending upon the comparable federally regulated institution, such a program may include a customer identification program (CIP), which includes identifying and verifying their PPP borrowers' identities (including *e.g.,* date of birth, address, and taxpayer identification number), and, if that PPP borrower is a company, following any applicable beneficial ownership information collection requirements. Alternatively, if available, entities may rely on the CIP of a federally insured depository institution or federally insured credit union with an established CIP as part of its AML program. In either instance, entities should also understand the nature and purpose of their PPP customer relationships to develop customer risk profiles. Such entities will also generally have to identify and report certain suspicious activity to the U.S. Department of the Treasury's Financial Crimes Enforcement Network (FinCEN). If such entities have questions with regard to meeting these requirements, they should contact the FinCEN Regulatory Support Section at *FRC@fincen.gov.* In addition, FinCEN has created a COVID–19-specific contact channel, via a specific drop-down category, for entities to communicate to FinCEN COVID–19-related concerns while adhering to their BSA obligations. Entities that wish to communicate such COVID–19-related concerns to FinCEN should go to *www.FinCEN.gov,* click on ''Need Assistance,'' and select ''COVID19'' in the subject drop-down list.

Each lender's underwriting obligation under the PPP is limited to the items above and reviewing the ''Paycheck Protection Borrower Application Form.'' Borrowers must submit such documentation as is necessary to establish eligibility such as payroll records, payroll tax filings, or Form 1099–MISC, Schedule C or F, income and expenses from a sole proprietorship, or bank records. For borrowers that do not have any such documentation, the borrower must provide other supporting documentation, such as bank records, sufficient to demonstrate the qualifying payroll amount.

A lender may rely on any certification or documentation submitted by an applicant for a PPP loan or an eligible recipient or eligible entity that (A) is submitted pursuant to all applicable statutory requirements, regulations, and guidance related to a PPP loan, including under paragraph 7(a)(36) of the Small Business Act (15 U.S.C. 636(a)(36)); and (B) attests that the applicant, eligible recipient, or eligible entity, as applicable, has accurately provided the certification or documentation to the lender in accordance with the statutory requirements, regulations, and guidance related to PPP loans. With respect to a lender that relies on such a certification or documentation related to a PPP loan, an enforcement action may not be taken against the lender, and the lender shall not be subject to any penalties relating to loan origination or forgiveness of the PPP loan, if—(A) the lender acts in good faith relating to loan origination or forgiveness of the PPP loan based on that reliance; and (B) all other relevant Federal, State, local, and other statutory and regulatory requirements applicable to the lender are satisfied with respect to the PPP loan.[98]

*4. Can lenders rely on borrower documentation for loan forgiveness?*[99]

Yes. The lender does not need to independently verify the borrower's reported information if the borrower submits documentation supporting its request for loan forgiveness and attests that it accurately verified the payments for eligible costs.

*5. What fees will lenders be paid?*[100]

For PPP loans made on or after December 27, 2020, SBA will pay lenders fees, based on the balance of the financing outstanding at the time of disbursement of the loan, for processing PPP loans in the following amounts:

i. For loans of not more than $50,000, an amount equal to the lesser of fifty (50) percent or $2,500;

ii. Five (5) percent for loans of more than $50,000 and not more than $350,000;

iii. Three (3) percent for loans of more than $350,000 and less than $2,000,000; and

iv. One (1) percent for loans of at least $2,000,000.

SBA will pay the fee not later than 5 days after the reported disbursement of the PPP loan and, as required by the Economic Aid Act, may not require the fee to be repaid by the lender unless the lender is found guilty of an act of fraud in connection with the PPP loan.

*6. Can PPP loans be sold into the secondary market?*[101]

Yes. A PPP loan may be sold on the secondary market after the loan is fully disbursed. A PPP loan may be sold on the secondary market at a premium or a discount to par value.

*7. Do the requirements for loan pledges under 13 CFR 120.434 apply to PPP loans pledged for borrowings from a Federal Reserve Bank (FRB) or advances by a Federal Home Loan Bank (FHLB)?*[102]

No. Pursuant to SBA regulations at 13 CFR 120.435(d) and (e), a pledge of 7(a) loans to a FRB or FHLB does not require SBA's prior written consent or notice to SBA. SBA, in consultation with Treasury, has determined that for purposes of loans made under the PPP, the additional requirements set forth in 120.434 shall also not apply. This would mean, for example, that SBA would not have to approve loan

[97] *See* PPP FAQ 1 (April 3, 2020) for further information on this step.

[98] This paragraph was added to conform to section 305 of the Economic Aid Act. This shall be effective as if included in the CARES Act and shall apply to any loan made before, on, or after December 27, 2020, including forgiveness of such a loan.

[99] This subsection was originally published at 85 FR 20811, subsection III.3.c. (April 15, 2020) and has been modified for readability. SBA also intends to issue a consolidated interim final rule governing all aspects of loan forgiveness and the loan review process.

[100] This subsection was originally published at 85 FR 20811, subsection III.3.d. (April 15, 2020) and has been modified to conform to section 340 of the Economic Aid Act.

[101] This subsection was originally published at 85 FR 20811, subsection III.4.d (April 15, 2020) and modified to reflect that advance purchases are not available.

[102] This subsection was originally published at 85 FR 21747, subsection III.3. (April 20, 2020).

documents or require a multi-party agreement among SBA, the lender, and others.

*8. Are lenders required to use a promissory note provided by SBA or may they use their own?* [103]

Lenders may use their own promissory note or an SBA form of promissory note.

*9. Are lenders required to use a separate SBA Authorization document to issue PPP loans?* [104]

No. A lender does not need a separate SBA Authorization for SBA to guarantee a PPP loan. However, lenders must have executed SBA Form 2484 (the Lender Application Form—Paycheck Protection Program Loan Guaranty) [105] to issue PPP loans and receive a loan number for each originated PPP loan. Lenders may include in their promissory notes for PPP loans any terms and conditions, including relating to amortization and disclosure, that are not inconsistent with section 1102 of the CARES Act and section 7A of the Small Business Act, the PPP Interim Final Rules and guidance, and SBA Form 2484. *See* FAQ 21 (posted April 13, 2020). The decision not to require a separate SBA Authorization in order to ensure that critical PPP loans are disbursed as efficiently as practicable.

*10. By when must a lender electronically submit an SBA Form 1502 indicating that PPP loan funds have been disbursed?* [106]

SBA has made available a specific SBA Form 1502 reporting process through which PPP lenders report on PPP loans and collect the processing fee on fully disbursed loans to which they are entitled. Lenders must electronically upload SBA Form 1502 information within 20 calendar days after a PPP loan is approved. The lender must report on SBA Form 1502 whether it has fully disbursed PPP loan proceeds. A lender will not receive a processing fee: (1) Prior to full disbursement of the PPP loan; (2) if the PPP loan is cancelled before disbursement; or (3) if the PPP loan is cancelled or voluntarily terminated and repaid after disbursement (including if a borrower repays the PPP loan proceeds to conform to the borrower's certification regarding the necessity of the PPP loan request). If the lender has received a processing fee on a loan that was cancelled or voluntarily terminated and repaid after disbursement (including if a borrower repaid the PPP loan proceeds to conform to the borrower's certification regarding the necessity of the PPP loan request), SBA will not require the lender to repay the processing fee unless the lender is found guilty of an act of fraud in connection with the PPP loan. In addition to providing ACH credit information to direct payment of the requested processing fee, lenders will be required to confirm that all PPP loans for which the lender is requesting a processing fee have been fully disbursed on the disbursement dates and in the loan amounts reported. A lender must report through either E-Tran Servicing or the SBA Form 1502 report any PPP loans that have been cancelled before disbursement or that have been cancelled or voluntarily terminated and repaid after disbursement.

*11. How do lenders report disbursements on PPP loans that are approved for loan increases due to the Economic Aid Act?* [107]

Lenders must submit the SBA Form 1502 information within 20 calendar days after a PPP loan increase is approved following the SBA Form 1502 reporting process. See subsection C.10. for more information.

**D. What do both borrowers and lenders need to know and do?**

*1. What are the loan terms and conditions?* [108]

Loans will be guaranteed under the PPP under the same terms, conditions and processes as other 7(a) loans, with certain changes including but not limited to:

a. The guarantee percentage is 100 percent.

b. No collateral will be required.

c. No personal guarantees will be required.

d. The interest rate will be 100 basis points or one percent, calculated on a non-compounding, non-adjustable basis.[109]

e. All loans will be processed by all lenders under delegated authority and lenders will be permitted to rely on certifications of the borrower in order to determine eligibility of the borrower and the use of loan proceeds.

*2. Do lenders have to apply the ''credit elsewhere test''?* [110]

No. When evaluating an applicant's eligibility lenders will not be required to apply the ''credit elsewhere test'' (as set forth in section 7(a)(1)(A) of the Small Business Act (15 U.S.C. 636) and SBA regulations at 13 CFR 120.101).

*3. Are there any fee waivers?* [111]

a. There will be no up-front guarantee fee payable to SBA by the borrower;

b. There will be no lender's annual service fee (''on-going guaranty fee'') payable to SBA;

c. There will be no subsidy recoupment fee; and

d. There will be no fee payable to SBA for any guarantee sold into the secondary market.

*4. Who pays the fee to an agent who provides assistance in connection with a PPP loan?* [112]

Agent fees may not be paid out of the proceeds of a PPP loan. If a borrower has knowingly retained an agent, such fees will be paid by the borrower. A lender is only responsible for paying fees to an agent for services for which the lender directly contracts with the agent. The total amount that an agent may collect from the lender for assistance in preparing an application for a PPP loan (including referral to the lender) may not exceed:

a. One (1) percent for loans of not more than $350,000;

b. 0.50 percent for loans of more than $350,000 and less than $2 million; and

c. 0.25 percent for loans of at least $2 million.

The Act authorizes the Administrator to establish limits on agent fees. The Administrator, in consultation with the Secretary, determined that the agent fee limits set forth above are reasonable based upon the application

[103] This subsection was originally published at 85 FR 23450, subsection III.1.a. (April 28, 2020).

[104] This subsection was originally published at 85 FR 23450, subsection III.1.b. (April 28, 2020) and has been modified to conform to the Economic Aid Act.

[105] This requirement is satisfied by a lender when the lender completes the process of submitting a loan through the E-Tran system; no transmission or retention of a physical copy of Form 2484 is required.

[106] This subsection was originally published at 85 FR 26321, subsection III.1.b. (May 4, 2020) and has been modified to conform to the Economic Aid Act and for readability.

[107] This subsection was added to conform to the Economic Aid Act.

[108] This subsection was originally published at 85 FR 20811, subsection III.4.a. (April 15, 2020) and modified to conform to the Economic Aid Act.

[109] This subsection (d) was revised to conform to section 339 of the Economic Aid Act. The revision applies to PPP loans made on or after December 27, 2020, but may apply with respect to a PPP loan made before that date upon the mutual agreement of the lender and the borrower.

[110] This subsection was originally published at 85 FR 20811, subsection III.3.e. (April 15, 2020).

[111] This subsection was originally published at 85 FR 20811, subsection III.4.a. (April 15, 2020).

[112] This subsection was originally published at 85 FR 20811, subsection III.4.c. (April 15, 2020) and modified to conform to section 340 of the Economic Aid Act. This revision is effective as if included in the CARES Act and applies to PPP loans made before, on, or after December 27, 2020, including forgiveness of such a loan.

requirements and the fees that lenders receive for making PPP loans.

*5. Can a borrower take multiple draws from a PPP loan and thereby delay the start of the covered period?* [113]

No. The lender must make a one-time, full disbursement of the PPP loan within ten calendar days of loan approval; for the purposes of this rule, a loan is considered approved when the loan is assigned a loan number by SBA.[114]

Notwithstanding this limitation, lenders are not responsible for delays in disbursement attributable to a borrower's failure to timely provide required loan documentation, including a signed promissory note. Loans for which funds have not been disbursed because a borrower has not submitted required loan documentation within 20 calendar days of loan approval shall be cancelled by the lender. When disbursing loans, lenders must send any amount of loan proceeds designated for the refinance of an EIDL loan directly to SBA and not to the borrower.

*6. If a partnership received a PPP loan that did not include any compensation for its partners, can the loan amount be increased to include partner compensation?* [115]

Yes. If a partnership received a PPP loan that only included amounts necessary for payroll costs of the partnership's employees and other eligible operating expenses, but did not include any amount for partner compensation,[116] the lender may electronically submit a request through SBA's E-Tran Servicing site to increase the PPP loan amount to include appropriate partner compensation, even if the loan has been fully disbursed and even if the lender's first SBA Form 1502 report to SBA on the PPP loan has already been submitted. In no event can the increased loan amount exceed the maximum loan amount allowed under the PPP Program, which is $10 million for an individual borrower or $20 million for a corporate group. Additionally, the borrower must provide the lender with required documentation to support the calculation of the increase. Any request for an increase must be submitted electronically in E-Tran on or before March 31, 2021, and is subject to the availability of funds.

As described in subsection B.1.c., partnerships, rather than individual partners, are eligible for a PPP loan. As described in subsection B.4.e., self-employment income of general active partners could be reported as a payroll cost, up to $100,000 on an annualized basis, as prorated for the period during which the payments are made or the obligation to make the payments is incurred, on a PPP loan application filed by or on behalf of the partnership. For guidance describing how to calculate partnership PPP loan amounts and defining the self-employment income of partners, *see* How to Calculate Maximum Loan Amounts, Question 4 at *https://www.sba.gov/sites/default/files/2020-04/How-to-Calculate-Loan-Amounts.pdf* (April 20, 2020).

*7. If a seasonal employer received a PPP loan before December 27, 2020, can the loan amount be increased based on a revised calculation of the maximum loan amount?* [117]

Yes. If a seasonal employer received a PPP loan before December 27, 2020, and such employer would be eligible for a higher maximum loan amount under section 336 of the Economic Aid Act, as described in subsection B.4.c., the lender may electronically submit a request through SBA's E-Tran Servicing site to increase the PPP loan amount, even if the loan has been fully disbursed and even if the lender's first SBA Form 1502 report to SBA on the PPP loan has already been submitted. In no event can the increased loan amount exceed the maximum PPP loan amount ($10 million for an individual borrower or $20 million for a corporate group). Additionally, the borrower must provide the lender with required documentation to support the calculation of the increase. Any request for an increase must be submitted electronically in E-Tran on or before March 31, 2021, and is subject to the availability of funds.

*8. Which other PPP borrowers can reapply or request an increase in their PPP loan amount?* [118]

The following borrowers can reapply or request an increase in their PPP loan amount:

a. If a borrower returned all of a PPP loan, the borrower may reapply for a PPP loan in an amount the borrower is eligible for under current PPP rules.

b. If a borrower returned part of a PPP loan, the borrower may reapply for an amount equal to the difference between the amount retained and the amount previously approved.

c. If a borrower did not accept the full amount of a PPP loan for which it was approved, the borrower may request an increase in the amount of the PPP loan up to the amount previously approved.

Any request for an increase must be submitted electronically in E-Tran on or before March 31, 2021, and is subject to the availability of funds. SBA will issue additional guidance on the process to reapply or request a loan increase under subsections D.6, D.7, and D.8.

*9. If a borrower's PPP loan has already been fully disbursed, can the lender make an additional disbursement for the increased loan proceeds?* [119]

Yes. Notwithstanding the requirement set forth in paragraph 1.a. of the interim final rule on disbursements posted on April 28, 2020, *i.e.,* that lenders make a one-time, full disbursement of the PPP loan within ten calendar days of loan approval, if a PPP loan is increased under subsections D.6., D.7., or D.8., the lender may make a single additional disbursement of the increased loan proceeds.

*10. Are recipients of PPP loans entitled to exemptions on the grounds provided in Federal nondiscrimination laws for sex-specific admissions practices, sex-specific domestic violence shelters, coreligionist housing, or Indian tribal preferences in connection with adoption or foster care practices?* [120]

Yes. With respect to any loan or loan forgiveness under the PPP, the nondiscrimination provisions in the applicable SBA regulations incorporate the limitations and exemptions provided in corresponding Federal statutory or regulatory

[113] This subsection was originally published at 85 FR 26321, subsection III.1.a. (May 4, 2020), as amended by 85 FR 26321 (June 19, 2020), and has been modified for readability.

[114] If the tenth calendar day is a Saturday, Sunday, or legal holiday, the period continues to run until the end of the next business day.

[115] This subsection was originally published at 85 FR 29842, subsection III.1.a. (May 19, 2020) and has been revised to conform to sections 312 and 344 of the Economic Aid Act.

[116] A partner in a partnership may not submit a separate PPP loan application as a self-employed individual. Instead, the self-employment income of general active partners may be reported as a payroll cost, up to $100,000 on an annualized basis, as prorated for the period during which the payments are made or the obligation to make the payments is incurred, on a PPP loan application filed by or on behalf of the partnership.

[117] This subsection was originally published at 85 FR 29842, subsection III.1.b. (May 19, 2020) and has been revised to conform to sections 312 and 336 of the Economic Aid Act.

[118] This subsection was added to conform to section 312 of the Economic Aid Act. *See also* recalculation available under subsection B.4.d. above for farmers and ranchers.

[119] This subsection was originally published at 85 FR 29842, subsection III.2.a. (May 19, 2020) and revised to conform to section 312 of the Economic Aid Act.

[120] This subsection was originally published at 85 FR 27287, section III.1. (May 8, 2020).

nondiscrimination provisions for sex-specific admissions practices at preschools, non-vocational elementary or secondary schools, and private undergraduate higher education institutions under Title IX of the Education Amendments of 1972 (20 U.S.C. 1681 *et seq.*), for sex-specific emergency shelters and coreligionist housing under the Fair Housing Act of 1968 (42 U.S.C. 3601 *et seq.*), and for adoption or foster care practices giving child placement preferences to Indian tribes under the Indian Child Welfare Act of 1978 (25 U.S.C. 1901 *et seq.*).

In addition, for purposes of the PPP, SBA regulations do not bar a religious nonprofit entity from making decisions with respect to the membership or the employment of individuals of a particular religion to perform work connected with the carrying on by such nonprofit of its activities.

**E. Additional Information**

All loans guaranteed by the SBA pursuant to the CARES Act and the Economic Aid Act will be made consistent with constitutional, statutory, and regulatory protections for religious liberty, including the First Amendment to the Constitution, the Religious Freedom Restoration Act, 42 U.S.C. 2000bb–1 and bb–3, and SBA regulation at 13 CFR 113.3–1h, which provides that nothing in SBA nondiscrimination regulations shall apply to a religious corporation, association, educational institution or society with respect to the membership or the employment of individuals of a particular religion to perform work connected with the carrying on by such corporation, association, educational institution or society of its religious activities.

SBA may provide further guidance, if needed, through SBA notices and a program guide which will be posted on SBA's website at *www.sba.gov.*

Questions on the Paycheck Protection Program 7(a) Loans may be directed to the Lender Relations Specialist in the local SBA Field Office. The local SBA Field Office may be found at *https://www.sba.gov/tools/local-assistance/districtoffices.*

**Compliance With Executive Orders 12866, 12988, 13132, 13563, and 13771, the Paperwork Reduction Act (44 U.S.C. Ch. 35), and the Regulatory Flexibility Act (5 U.S.C. 601–612)**

*Executive Orders 12866, 13563, and 13771*

This interim final rule is economically significant for the purposes of Executive Orders 12866 and 13563, and the Office of Management and Budget's Office of Information and Regulatory Affairs (OIRA) has determined that this is a major rule under the Congressional Review Act (5 U.S.C. 804(2)). SBA, however, is proceeding under the emergency provision at Executive Order 12866 section 6(a)(3)(D) based on the need to move expeditiously to mitigate the current economic conditions arising from the COVID–19 emergency. This rule's designation under Executive Order 13771 will be informed by public comment.

This rule is necessary to implement the Economic Aid Act in order to provide economic relief to small businesses nationwide adversely impacted under the COVID–19 Emergency Declaration. We anticipate that this rule will result in substantial benefits to small businesses, their employees, and the communities they serve. However, we lack data to estimate the effects of this rule.

The Administrator of OIRA has determined that this is a major rule for purposes of the Congressional Review Act (5 U.S.C. 801 *et seq.*) (CRA). Under section 801(3) of the CRA, a major rule takes effect 60 days after the rule is published in the **Federal Register**.

Notwithstanding this requirement, section 808(2) of the CRA allows agencies to dispense with the requirements of section 801 when the agency for good cause finds that such procedure would be impracticable, unnecessary, or contrary to the public interest and the rule shall take effect at such time as the agency promulgating the rule determines. Pursuant to section 808(2) of the CRA, SBA finds, for good cause, that a 60-day delay in the effective date is unnecessary and contrary to the public interest.

As discussed elsewhere in this interim final rule, the last day to apply for and receive a PPP loan is March 31, 2021. Given the short duration of this program, and the urgent need to issue loans quickly, the Administrator in consultation with the Secretary has determined that it is impractical and not in the public interest to provide a delayed effective date. An immediate effective date will give small businesses the maximum amount of time to apply for loans and lenders the maximum amount of time to process applications before the program ends.

*Executive Order 12988*

SBA has drafted this rule, to the extent practicable, in accordance with the standards set forth in section 3(a) and 3(b)(2) of Executive Order 12988, to minimize litigation, eliminate ambiguity, and reduce burden. The rule has no preemptive effect but does have some retroactive effect consistent with specific applicability provisions of the Economic Aid Act (such provisions are identified in the footnotes).

*Executive Order 13132*

SBA has determined that this rule will not have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various layers of government. Therefore, SBA has determined that this rule has no federalism implications warranting preparation of a federalism assessment.

*Paperwork Reduction Act, 44 U.S.C. Chapter 35*

SBA has determined that this rule requires revisions to existing recordkeeping or reporting requirements of the Paycheck Protection Program (PPP) information collection (OMB Control Number 3245–0407) as a result of amendments made to the PPP by the Economic Aid Act and implemented in this interim final rule. The revisions will affect the PPP Borrower Application Form (SBA Form 2483), the PPP Lender Application Form (SBA Form 2484), the Lender Application Form for Federally Insured Depository Institutions, Federally Insured Credit Unions, and Farm Credit System Institutions (SBA Form 3506), and the Lender Application Form for Non-Bank and Non-Insured Depository Institution Lenders (SBA Form 3507).

SBA Form 2483 has been revised to add housing cooperatives, section 501(c)(6) organizations, destination marketing organizations, and certain news organizations to the categories of eligible entities; to collect the NAICS code of the applicant; to add additional eligible use of proceeds; and to add or revise the certifications to incorporate the Economic Aid Act amendments. Changes were made to SBA Form 2484 to conform to the changes made to SBA Form 2483. SBA Forms 3506 and 3507 were revised to extend the term through March 31, 2021; restate the way interest rate is calculated; and make clarifying changes for consistency with program requirements.

SBA is developing a process to collect the information necessary for eligible borrowers to reapply or request an increase in their PPP loan amount as described in this interim final rule.

SBA has requested emergency approval of the revisions to this PPP information collection to enable the Agency to resume the reauthorized PPP as quickly as possible. Without such emergency approval, the authority for the program would expire before the procedural steps, including the comment periods generally required by the Paperwork Reduction Act, could be completed.

*Regulatory Flexibility Act (RFA)*

The Regulatory Flexibility Act (RFA) generally requires that when an agency issues a proposed rule, or a final rule pursuant to section 553(b) of the APA or another law, the agency must prepare a regulatory flexibility analysis that meets the requirements of the RFA and publish such analysis in the **Federal Register**. 5 U.S.C. 603, 604. Specifically, the RFA normally requires agencies to describe the impact of a rulemaking on small entities by providing a regulatory impact analysis. Such analysis must address the consideration of regulatory options that would lessen the economic effect of the rule on small entities. The RFA defines a ''small entity'' as (1) a proprietary firm meeting the size standards of the Small Business Administration (SBA); (2) a nonprofit organization that is not dominant in its field; or (3) a small government jurisdiction with a population of less than 50,000. 5 U.S.C. 601(3)–(6). Except for small government jurisdictions with a population of less than 50,000, neither State nor local governments are ''small entities.''

The requirement to conduct a regulatory impact analysis does not apply if the head of the agency ''certifies that the rule will not, if promulgated, have a significant economic impact on a substantial number of small entities.'' 5 U.S.C. 605(b). The agency must, however, publish the certification in the **Federal Register** at the time of publication of the rule, ''along with a statement providing the factual basis for such certification.'' If the agency head has not waived the requirements for a regulatory flexibility analysis in accordance with the RFA's waiver provision, and no other RFA exception applies, the agency must prepare the regulatory flexibility analysis and publish it in the **Federal Register** at the time of promulgation or, if the rule is promulgated in response to an emergency that makes timely compliance impracticable, within 180 days of publication of the final rule. 5 U.S.C. 604(a), 608(b).

Rules that are exempt from notice and comment are also exempt from the RFA requirements, including conducting a regulatory flexibility analysis, when among other things the agency for good cause finds that notice and public procedure are impracticable, unnecessary, or contrary to the public interest. Small Business Administration's Office of Advocacy guide: *How to Comply with the Regulatory Flexibility Ac. Ch.1. p.9.* Since this rule is exempt from notice and comment, SBA is not required to conduct a regulatory flexibility analysis.

## Business Loan Program Temporary Changes; Paycheck Protection Program Second Draw Loans

**AGENCY:** U.S. Small Business Administration.

**ACTION:** Interim final rule.

**SUMMARY:** This interim final rule announces the implementation of section 311 of the Economic Aid to Hard-Hit Small Businesses, Nonprofits, and Venues Act (the Economic Aid Act). The Economic Aid Act authorizes the U.S. Small Business Administration to guarantee additional loans under the temporary Paycheck Protection Program, which was originally established under the Coronavirus Aid, Relief, and Economic Security Act to provide economic relief to small businesses nationwide adversely impacted under the Coronavirus Disease 2019 (COVID–19) Emergency Declaration (COVID–19 Emergency Declaration) issued by President Trump on March 13, 2020. Section 311 of the Economic Aid Act adds a second temporary program to SBA's 7(a) Loan Program titled, ''Paycheck Protection Program Second Draw Loans.'' This interim final rule implements the key provisions of section 311 of the Economic Aid Act and requests public comment.

**DATES:**

*Effective Date:* This interim final rule is effective January 12, 2021.

*Applicability Date:* This interim final rule applies to loan applications and applications for loan forgiveness submitted for Paycheck Protection Program Second Draw Loans.

*Comment Date:* Comments must be received on or before February 16, 2021.

**ADDRESSES:** You may submit comments, identified by number SBA–2021–0002 through the Federal eRulemaking Portal: *http://www.regulations.gov.* Follow the instructions for submitting comments.

SBA will post all comments on *www.regulations.gov.* If you wish to submit confidential business information (CBI) as defined in the User Notice at *www.regulations.gov,* please send an email to *ppp-ifr@sba.gov.* All other comments must be submitted through the Federal eRulemaking Portal described above. Highlight the information that you consider to be CBI and explain why you believe SBA should hold this information as confidential. SBA will review the information and make the final determination whether it will publish the information.

**FOR FURTHER INFORMATION CONTACT:** Call Center Representative at 833–572–0502, or the local SBA Field Office; the list of offices can be found at *https://www.sba.gov/tools/local-assistance/districtoffices.*

**SUPPLEMENTARY INFORMATION:**

### I. Background Information

On December 27, 2020, President Trump signed the Economic Aid to Hard-Hit Small Businesses, Nonprofits, and Venues Act (the Economic Aid Act) (Pub. L. 116–260) into law to provide continued assistance to individuals and businesses that have been financially impacted by the ongoing coronavirus pandemic. Section 311 of the Economic Aid Act added a new temporary section 7(a)(37) to the Small Business Act (15 U.S.C. 636(a)(37)). This new section authorizes the U.S. Small Business Administration (SBA or the Administration) to guarantee Paycheck Protection Program Second Draw Loans (PPP Second Draw Program), under generally the same terms and conditions available under the Paycheck Protection Program (PPP) established under section 7(a)(36) of the Small Business Act (15 U.S.C. 636(a)(36)). Under section 311, SBA may guarantee loans under the PPP Second Draw Program through March 31, 2021 (''Second Draw PPP Loans'') to borrowers that previously received a PPP loan under section 7(a)(36) of the Small Business Act (''First Draw PPP Loans'') and have used or will use the full amount of the initial PPP loan for authorized purposes on or before the expected date of disbursement of the Second Draw PPP Loan.

Like First Draw PPP Loans, Second Draw PPP Loans are intended to provide expeditious relief to America's small businesses. Second Draw PPP Loans generally are guaranteed by SBA under the same terms, conditions, and processes as First Draw PPP Loans. SBA guarantees 100 percent of Second Draw PPP Loans and SBA may forgive up to the full principal loan amount. Second Draw PPP Loans are subject to SBA's and the Department of the Treasury's (Treasury's) consolidated interim final rules implementing updates to the Paycheck Protection Program for First Draw PPP Loans (''Consolidated First Draw PPP IFR'') issued concurrently with this interim final rule (IFR) [1] and all PPP loan program requirements, except as specified in this IFR. The key differences between First Draw PPP Loans and Second Draw PPP Loans are described in this IFR, which explains the loan terms, eligibility requirements, and application process for Second Draw PPP Loans.

## II. Comments and Immediate Effective Date

This interim final rule is being issued without advance notice and public comment because section 303 of the Economic Aid Act authorizes SBA to issue regulations to implement the Economic Aid Act without regard to notice requirements. In addition, this rule is being issued to allow for immediate implementation of this program. The intent of the Economic Aid Act is that SBA provide relief to America's small businesses expeditiously. The last day to apply for and receive a PPP loan is March 31, 2021. Given the short duration of this program, and the urgent need to issue loans quickly, the Administrator in consultation with the Secretary has determined that it is impractical and not in the public interest to provide a 30-day delayed effective date. An immediate effective date will give small businesses the maximum amount of time to apply for loans and lenders the maximum amount of time to process applications before the program ends. This good cause justification also supports waiver of the 60-day delayed effective date for major rules under the Congressional Review Act at 5 U.S.C. 808(2). Although this IFR is effective immediately, comments are solicited from interested members of the public on all aspects of the interim final rule. These comments must be submitted on or before February 16, 2021. SBA will consider these comments and the need for making any revisions as a result of these comments.

## III. Summary of Key Terms of PPP Second Draw Loans

The rules applicable to Second Draw PPP Loans are published in section IV of this IFR. This summary provides additional information and explains the key terms in the IFR. All references to subsections refer to section IV.

Second Draw PPP Loans are generally subject to the same terms, conditions and requirements as First Draw PPP Loans. These include, but are not limited to the following terms:

- The guarantee percentage is 100 percent.
- No collateral will be required.
- No personal guarantees will be required.
- The interest rate will be 100 basis points or one percent, calculated on a non-compounding, non-adjustable basis.[2]
- The maturity is five years.
- All loans will be processed by all lenders under delegated authority and lenders will be permitted to rely on certifications of the borrower to determine the borrower's eligibility and use of loan proceeds.

Subsection (b) of this IFR confirms that these terms apply to Second Draw PPP Loans. Subsection (b) also confirms that SBA's Consolidated First Draw PPP IFR, Frequently Asked Questions (FAQs), and other guidance about PPP loans under section 7(a)(36) of the Small Business Act (15 U.S.C. 636(a)(36)) apply to Second Draw PPP Loans, except as specified in this IFR.[3]

The Economic Aid Act includes terms and conditions, including but not limited to terms relating to eligibility and a borrower's maximum loan amount, that apply only to Second Draw PPP Loans and do not apply to First Draw PPP Loans, regardless of when the First Draw PPP Loan is made. These terms and conditions specific to Second Draw PPP Loans are summarized below.

### *A. Eligibility Requirements*

#### 1. General Eligibility Requirements

In general, the Economic Aid Act made the eligibility requirements for Second Draw PPP Loans narrower than the eligibility requirements for First Draw PPP Loans. The Economic Aid Act generally provides that a borrower is eligible for a Second Draw PPP Loan only if it has 300 or fewer employees and experienced a revenue reduction in 2020 relative to 2019 (described further below).[4] In addition, the Economic Aid Act provides that a Second Draw PPP Loan may only be made to an eligible borrower that (i) has received a First Draw PPP Loan, and (ii) has used, or will use, the full amount of the First Draw PPP Loan on or before the expected date on which the Second Draw PPP Loan is disbursed to the borrower.[5] Accordingly, subsections (c)(1)(i) through (c)(1)(iv) of this IFR implement these criteria. Subsection (c)(1)(ii) of the IFR clarifies that ''the full amount'' of the borrower's First Draw PPP Loan includes the amount of any increase on such First Draw PPP Loan made pursuant to the Economic Aid Act. In addition, subsection (c)(1)(ii) of the IFR clarifies that the borrower must have spent the full amount of its First Draw PPP Loan on eligible expenses under the PPP rules to be eligible for a Second Draw PPP Loan. This clarification will help ensure program integrity by preventing a borrower from receiving a Second Draw PPP Loan if the borrower has not complied with PPP loan program requirements.[6]

#### 2. Revenue Reduction Requirement

The Economic Aid Act provides that, to be eligible for a Second Draw PPP Loan, the borrower must have experienced a revenue reduction of 25% or greater in 2020 relative to 2019.[7] A borrower must calculate this revenue reduction by comparing the borrower's quarterly gross receipts for one quarter in 2020 with the borrower's gross receipts for the corresponding quarter of 2019. For example, a borrower with gross receipts of $50,000 in the second quarter of 2019 and gross receipts of $30,000 in the second quarter of 2020 has experienced a revenue reduction of 40 percent between the quarters, and is therefore eligible for a Second Draw PPP loan (assuming all other eligibility criteria are met). Subsection (c)(1)(iv)(A) of the IFR reflects this methodology. Subsection (c)(1)(iv)(B) of the IFR provides that a borrower that was in operation in all four quarters of 2019 is deemed to have experienced the required revenue reduction if it

[1] The Consolidated First Draw PPP IFR titled ''Business Loan Program Temporary Changes: Extension of and Changes to Paycheck Protection Program'' restates existing regulatory provisions to provide lenders and new PPP borrowers a single regulation to consult on borrower eligibility, lender eligibility, and loan application and origination requirements issues for new First Draw PPP loans, as well as general rules relating to First Draw PPP Loan increases and loan forgiveness.

[2] Section 339 of the Economic Aid Act added ''calculated on a non-compounding, non-adjustable basis'' to the maximum interest rate for a PPP loan.

[3] SBA will be revising the FAQs to conform to the Economic Aid Act as quickly as feasible.

[4] See paragraph 7(a)(37)(A)(iv) of the Small Business Act.

[5] See paragraph 7(a)(37)(O) of the Small Business Act.

[6] Subsection (B)(11) of the Consolidated First Draw PPP IFR specifies that the proceeds of a PPP loan may be spent only on certain eligible expenses.

[7] See paragraph 7(a)(37)(A)(iv) of the Small Business Act.

experienced a reduction in annual receipts of 25 percent or greater in 2020 compared to 2019 and the borrower submits copies of its annual tax forms substantiating the revenue decline. This provision will allow a borrower to provide annual tax return forms to substantiate its revenue reduction. The Administrator, in consultation with the Secretary of the Treasury (Secretary), has determined that this is necessary to improve administrability of Second Draw PPP Loans by providing borrowers an additional verifiable method for substantiating their revenue reduction. This method will be particularly important for small borrowers that may not have quarterly revenue information readily available. Moreover, this approach is appropriate because, if annual filings show a 25 percent revenue reduction, then at least one quarter in 2020 would have had at least a 25 percent revenue reduction. A borrower that did not experience a 25 percent annual decline in revenues, or that was not in operation in all four quarters of 2019, may still meet the revenue reduction requirement under one of the quarterly measurements described above.

The Economic Aid Act does not include a general definition of gross receipts for purposes of determining a borrower's revenue reduction.[8] Subsection (c)(2) of the IFR defines gross receipts consistent with the definition of receipts in 13 CFR 121.104 of SBA's size regulations because this definition appropriately captures the type of income that is typically included in a small business's gross receipts.[9] Moreover, this definition will enhance the administrability of Second Draw PPP Loans because it is a definition already used by the Administration and many small businesses.

The IFR specifies that any forgiveness amount of a First Draw PPP Loan that a borrower received in calendar year 2020 is excluded from a borrower's gross receipts. Excluding the forgiveness amount from a borrower's gross receipts is consistent with section 7A(i) of the Small Business Act, which expressly excludes PPP forgiveness amounts from being taxed as income.[10] This clarification ensures the effectiveness of the second draw loan program by ensuring that a borrower is not disqualified from receiving a Second Draw PPP Loan because it received forgiveness on a First Draw PPP Loan. This furthers the purpose of the second draw loan provisions, which is to deliver additional aid to small businesses that previously received a First Draw PPP Loan.

3. Business Concerns With More Than One Physical Location

Under the CARES Act, any single business entity that is assigned a NAICS code beginning with 72 (including hotels and restaurants) and employs not more than 500 employees per physical location is eligible to receive a First Draw PPP Loan.[11] In addition, as discussed below, under the Consolidated First Draw PPP IFR, SBA's affiliation rules (13 CFR 121.301) do not apply to any business entity that is assigned a NAICS code beginning with 72 and that employs not more than a total of 500 employees.[12] As a result, if each hotel or restaurant location owned by a parent business is a separate legal business entity and employs not more than 500 employees, each hotel or restaurant location is permitted to apply for a separate PPP loan provided it uses its unique EIN.

Section 317 of the Economic Aid Act modified this provision for Second Draw PPP Loans by reducing the limit on employees per physical location to 300. Accordingly, a single business entity that is assigned a NAICS code beginning with 72 is eligible to receive a Second Draw PPP Loan if it employs no more than 300 employees per physical location and meets the revenue reduction requirements and otherwise satisfies the eligibility criteria described in this IFR.[13] Under section 317 of the Economic Aid Act, the same standard applies to certain news organizations.[14] Subsections (c)(3) and (c)(4) of the IFR implement these statutory provisions. Borrowers may consult PPP Frequently Asked Question (FAQ) 24 [15] for guidance on these standards for business concerns with more than one physical location, except that, for Second Draw PPP Loans, the number of employees per physical location is limited to 300 rather than 500.

*B. Affiliation Rules*

The same affiliation rules that apply to First Draw PPP Loans apply to Second Draw PPP Loans, except as provided in this IFR. As with First Draw PPP Loans, in most cases, a borrower is considered together with its affiliates to determine eligibility for the PPP.[16] However, the CARES Act waived the affiliation rules for certain categories of borrowers.[17] Paragraph 7(a)(37)(E) of the Small Business Act, as amended by the Economic Aid Act, applies the same

[8] For an eligible nonprofit organization, a veterans organization, an eligible nonprofit news organization, eligible 501(c) organization, or eligible destination marketing organization, gross receipts has the meaning in section 6033 of the Internal Revenue Code of 1986. See paragraph 7(a)(37)(I)(ii) of the Small Business Act. Subsection (c)(2) of the IFR clarifies that this definition, which generally relates to eligible nonprofit organizations, applies only to eligible nonprofit news organizations rather than to all eligible news organizations.

[9] Subsection (c)(2) of the IFR generally defines gross receipts to include all revenue in whatever form received or accrued (in accordance with the entity's accounting method) from whatever source, including from the sales of products or services, interest, dividends, rents, royalties, fees, or commissions, reduced by returns and allowances. Generally, receipts are considered ''total income'' (or in the case of a sole proprietorship, independent contractor, or self-employed individual ''gross income'') plus ''cost of goods sold,'' and excludes net capital gains or losses as these terms are defined and reported on IRS tax return forms. Gross receipts do not include the following: Taxes collected for and remitted to a taxing authority if included in gross or total income (such as sales or other taxes collected from customers and excluding taxes levied on the concern or its employees); proceeds from transactions between a concern and its domestic or foreign affiliates; and amounts collected for another by a travel agent, real estate agent, advertising agent, conference management service provider, freight forwarder or customs broker. All other items, such as subcontractor costs, reimbursements for purchases a contractor makes at a customer's request, investment income, and employee-based costs such as payroll taxes, may not be excluded from gross receipts. Subsection (c)(2) also adapts the methodology for calculating affiliate receipts from 13 CFR 121.104.

[10] Section 1106 of the CARES Act (15 U.S.C. 9005) was redesignated as section 7A, transferred to the Small Business Act (15 U.S.C. 631 *et seq.*), and inserted so as to appear after section 7 of the Small Business Act (15 U.S.C. 636) in section 304(b) of the Economic Aid Act.

[11] Paragraph 7(a)(36)(D)(iii)(I) of the Small Business Act.

[12] Paragraph 7(a)(36)(D)(iv) of the Small Business Act.

[13] Paragraph 7(a)(37)(D) of the Small Business Act.

[14] Paragraph 7(a)(36)(D)(iii)(II) of the Small Business Act.

[15] *See* PPP FAQ #24 (posted April 13, 2020), available at *https://www.sba.gov/sites/default/files/2020-12/Final%20PPP%20FAQs%20%28December%209%202020%29-508.pdf.*

[16] Paragraph 7(a)(36)(D)(iv) of the Small Business Act (15 U.S.C. 636(a)(36)(D)(iv), as added by the CARES Act and amended by the Economic Aid Act, waived the affiliation rules contained in § 121.103 for (1) any business concern with not more than 500 employees that, as of the date on which the loan is disbursed, is assigned a NAICS code beginning with 72; (2) any business concern operating as a franchise that is assigned a franchise identifier code by SBA; (3) any business concern that receives financial assistance from a company licensed under section 301 of the Small Business Investment Act of 1958 (15 U.S.C. 681); and (4)(a) any business concern (including any station which broadcasts pursuant to a license granted by the Federal Communications Commission under title III of the Communications Act of 1934 (47 U.S.C. 301 *et seq.*) without regard for whether such a station is a concern as defined in 13 CFR 121.105, or any successor thereto) that employs not more than 500 employees, or the size standard established by the Administrator for the NAICS code applicable to the business concern, per physical location of such business concern and is majority owned or controlled by a business concern that is assigned a NAICS code beginning with 511110 or 5151; or (b) any nonprofit organization that is assigned a NAICS code beginning with 5151.

[17] Paragraph 7(a)(36)(D)(iv) of the Small Business Act.

waivers to Second Draw PPP Loans, adds a waiver for certain eligible news organizations, and makes adjustments to reflect the reduced size requirement for Second Draw PPP Loans. Specifically, business concerns with a NAICS code beginning with 72 qualify for the affiliation waiver for Second Draw PPP Loans if they employ 300 or fewer employees. Eligible news organizations with a NAICS code beginning with 511110 or 5151 (or majority-owned or controlled by a business concern with those NAICS codes) may qualify for the affiliation waiver for Second Draw PPP Loans only if they employ 300 or fewer employees per physical location.[18] Subsection (d)(2) implements these revised affiliation waivers. SBA also adopted a religious exemption to the affiliation rules by regulation,[19] which applies to Second Draw PPP loans.

*C. Excluded Entities*

An entity that is ineligible to receive a First Draw PPP Loan under the CARES Act or Consolidated First Draw PPP IFR is also ineligible for a Second Draw PPP Loan.[20] Subsection (e)(1) of the IFR implements this restriction. Subsection (e)(1) ensures that a borrower that received a First Draw PPP Loan despite being ineligible to receive the loan is not eligible to receive a Second Draw PPP Loan.

The Economic Aid Act also prohibits several additional categories of borrowers from receiving a Second Draw PPP Loan under section 7(a)(37) of the Small Business Act. These categories of prohibited borrowers are listed in subsection (e) of the IFR:

- A business concern or entity primarily engaged in political activities or lobbying activities, including any entity that is organized for research or for engaging in advocacy in areas such as public policy or political strategy or that describes itself as a think tank in any public documents;[21]
- certain entities organized under the laws of the People's Republic of China or the Special Administrative Region of Hong Kong, or with other specified ties to the People's Republic of China or the Special Administrative Region of Hong Kong;[22]
- any person required to submit a registration statement under section 2 of the Foreign Agents Registration Act of 1938 (22 U.S.C. 612);[23]
- a person or entity that receives a grant for shuttered venue operators under section 324 of the Economic Aid Act;[24]
- entities in which the President, the Vice President, the head of an Executive department, or a Member of Congress, or the spouse of such person owns, controls, or holds at least 20 percent of any class of equity;[25] or
- a publicly traded company, defined as an issuer, the securities of which are listed on an exchange registered as a national securities exchange under section 6 of the Securities Exchange Act of 1934 (15 U.S.C. 78f).[26]

In addition, subsection (e)(9) of this IFR provides that an entity that has previously received a Second Draw PPP Loan may not receive another Second Draw PPP Loan, as required by the Economic Aid Act.[27] Subsection (e)(9) also prohibits an entity that has permanently closed from receiving a Second Draw PPP Loan because paragraph 7(a)(37)(A)(iv) of the Small Business Act is best understood to describe existing businesses. The Administrator, in consultation with the Secretary, has determined this provision is also necessary to maintain program integrity, prevent abuse, and preserve the availability of Second Draw PPP Loan funds for businesses still in operation. Preserving funds for such businesses is necessary because only businesses that are still in operation will retain employees, which is a primary purpose of the PPP. A borrower that has temporarily closed or temporarily suspended its business remains eligible for a Second Draw PPP Loan.

*D. Payroll Cost Calculation*

In general, section 307 of the Economic Aid Act provides that the maximum loan amount for a Second Draw PPP Loan is equal to the lesser of two and half months of the borrower's average monthly payroll costs or $2 million. Relative to First Draw PPP loans, the Economic Aid Act adjusted the methodology for calculating a borrower's payroll costs. Unlike First Draw PPP Loans, the Economic Aid Act provides that the relevant time period for calculating a borrower's payroll costs for a Second Draw PPP Loan is either the twelve-month period prior to when the loan is made or calendar year 2019. The Act also provided tailored methodologies for certain categories of borrowers. These calculations are reflected in subsection (f) of this IFR. Subsection (f) of the IFR uses "calendar year 2020" to refer to "the twelve-month period prior to when the loan is made." Calculating payroll costs based on calendar year 2020 rather than the twelve months preceding the date the loan is made will simplify the calculations and documentation requirements for borrowers because payroll records are more commonly created and retained on a calendar-year basis. Allowing borrowers to calculate payroll costs based on calendar year 2020 is also not expected to result in a significant difference in payroll costs compared to the twelve months preceding the date the loan is made because all Second Draw PPP Loans will be made in the first quarter of 2021. However, the rule notes that Second Draw PPP Loan borrowers who are not self-employed (including sole proprietorships and independent contractors) are also permitted to use the precise 1-year period before the date on which the loan is made to calculate payroll costs if they choose not to use 2019 or 2020 to calculate payroll costs.

Consistent with the Economic Aid Act, subsections (f)(3) and (f)(4) of the IFR include tailored calculation methodologies for seasonal businesses, new entities that did not exist for the full twelve-month period preceding the Second Draw PPP Loan, and borrowers assigned a NAICS code beginning with 72 at the time of disbursement. For borrowers assigned a NAICS code beginning with 72 at the time of disbursement, the Economic Aid Act provides that the maximum loan amount is equal to three-and-a-half (3.5) months of payroll costs rather than two-and-a-half (2.5) months.[28] These subsections also provide that, for a borrower with a NAICS code beginning with 72 that would fall into more than one category listed in subsection (f) (for example, a business with a NAICS code beginning with 72 that is also a seasonal business or is also a new entity without 12 months of payroll costs), the borrower may calculate its average monthly payroll costs based on the methodology that applies to the entity but may use the 3.5 multiplier

[27] Paragraph 7(a)(37)(F) of the Small Business Act.

[28] Paragraph 7(a)(37)(C)(iv) of the Small Business Act.

applicable to businesses with a NAICS code beginning with 72. The Administrator, in consultation with the Secretary, has determined that this methodology is necessary to provide small businesses in the accommodation and food services sector the full amount of relief provided in the Economic Aid Act while allowing these borrowers to calculate their average monthly payroll costs accurately.

The Economic Aid Act included a new payroll cost calculation for farmers and ranchers receiving First Draw PPP Loans. However, it did not specify how payroll costs should be calculated for Second Draw PPP Loans to farmers and ranchers. This IFR clarifies that the same general calculation for farmers and ranchers applicable to First Draw PPP Loans applies to Second Draw PPP Loans, with adjustments that (i) eliminate the provision for refinancing of an Economic Injury Disaster Loan (EIDL), which does not apply to Second Draw PPP Loans, and (ii) apply the choice of time period for calculating a farmer's or rancher's payroll costs for Second Draw PPP Loans, consistent with other Second Draw PPP Loans. This IFR also specifies that, in calculating a farmer's or rancher's maximum loan amount, any employee payroll costs should be subtracted from the farmer's or rancher's gross income to avoid double-counting amounts that represent pay to the employees of the farmer or rancher.

Subsections (f)(7) and (f)(8) of the IFR include tailored calculation methodologies for self-employed individuals and partnerships. These methodologies are based on the corresponding methodologies for self-employed individuals and partnerships that are used for First Draw PPP Loans.[29] These methodologies have been adjusted to eliminate the provision for refinancing of an EIDL loan, which does not apply to Second Draw PPP loans and to apply the choice of time period for calculating payroll costs, consistent with other Second Draw PPP loans.

Finally, subsection (f)(9) provides that businesses that are part of a single corporate group shall in no event receive more than $4,000,000 of Second Draw PPP Loans in the aggregate. The Administrator, in consultation with the Secretary, determined that limiting the amount of Second Draw PPP Loans that a single corporate group may receive will promote the availability of PPP loans to the largest possible number of borrowers, consistent with the CARES and Economic Aid Act. The Administrator has concluded that a limitation of $4,000,000 is appropriate because it is proportional to the $20,000,000 maximum amount for corporate groups that is provided under the Consolidated First Draw PPP IFR when the maximum loan amount for a single PPP loan is $10,000,000.

### *E. Second Draw PPP Loan Application and Documentation Requirements*

Subsection (g) of this IFR includes the application and documentation requirements for Second Draw PPP Loans. The documentation required to substantiate an applicant's payroll cost calculations is generally the same as documentation required for First Draw PPP Loans. However, no additional documentation to substantiate payroll costs will be required if the applicant (i) used calendar year 2019 figures to determine its First Draw PPP Loan amount, (ii) used calendar year 2019 figures to determine its Second Draw PPP Loan amount (instead of calendar year 2020), and (iii) the lender for the applicant's Second Draw PPP Loan is the same as the lender that made the applicant's First Draw PPP Loan. In such cases, additional documentation is not required because the lender already has the relevant documentation supporting the borrower's payroll costs. The lender may request additional documentation, however, if on further review the lender concludes that it would be useful in conducting the lender's good-faith review of the borrower's loan amount calculation.

For loans with a principal amount greater than $150,000, the applicant must also submit documentation adequate to establish that the applicant experienced a revenue reduction of 25% or greater in 2020 relative to 2019. (The revenue reduction requirement is addressed in subsection (c)(1)(iv) of this IFR.) Such documentation may include relevant tax forms, including annual tax forms, or, if relevant tax forms are not available, quarterly financial statements or bank statements. For loans with a principal amount of $150,000 or less, such documentation is not required at the time the borrower submits its application for a loan, but must be submitted on or before the date the borrower applies for loan forgiveness, as required under the Economic Aid Act.[30] If a borrower does not submit an application for loan forgiveness, such documentation must be provided upon SBA's request.

### *F. Lender Requirements*

Subsection (g) of this IFR contains the provisions specific to lenders for Second Draw PPP Loans. Paragraph 7(a)(37)(K) of the Small Business Act, added by the Economic Aid Act, states that a lender approved to make First Draw PPP loans may make Second Draw PPP Loans under the same terms and conditions as new First Draw PPP Loans. Subsection (g)(2) of this IFR provides that lenders are subject to the same requirements when making Second Draw PPP Loans as when they are making First Draw PPP Loans. These provisions allow a lender approved to make Second Draw PPP Loans to use existing program guidance and standard operating procedures to the maximum extent practicable.[31] The requirements applicable to PPP lenders are in sections (C) and (D) of the Consolidated First Draw PPP IFR. If a borrower has not submitted new payroll documentation with its Second Draw PPP Loan application because it previously submitted 2019 payroll information to the same lender when it applied for its First Draw PPP Loan, then the lender must confirm the borrower's average monthly payroll costs based on that prior documentation.

In addition, for a Second Draw PPP Loan greater than $150,000, the lender must confirm the dollar amount and percentage of the borrower's revenue reduction by performing a good faith review, in a reasonable time, of the borrower's calculations and supporting documents concerning the borrower's revenue reduction. If the lender identifies errors in the borrower's calculation or a material lack of substantiation in the borrower's supporting documents, the lender should work with the borrower to remedy the issue.

### *G. Loans to Borrowers With Unresolved First Draw PPP Loans*

As described in SBA's interim final rule on SBA Loan Review Procedures and Related Borrower and Lender Responsibilities, SBA may review any PPP loan, as the Administrator deems appropriate.[32] Subsection (i) of the IFR establishes procedures relating to the handling of a Second Draw PPP Loan application by a borrower whose First Draw PPP Loan is under review by SBA (''unresolved borrower''). If a borrower's First Draw PPP loan is under review by SBA and/or information in SBA's possession indicates that the borrower may have been ineligible for the First

[29] See subsections (B)(4)(b) and (B)(4)(e) of the Consolidated First Draw PPP IFR.

[30] See paragraph 7(a)(37)(I)(i) of the Small Business Act.

[31] Paragraph 7(a)(37)(N) of the Small Business Act.

[32] 85 FR 33010, 33012.

Draw PPP Loan it received or for the loan amount it received, the lender will receive notification from SBA when the lender submits an application for a guaranty of a Second Draw PPP Loan and will not receive an SBA loan number until the issue related to the unresolved borrower's First Draw PPP Loan is resolved. SBA will resolve issues related to unresolved borrowers expeditiously. These procedures are designed to promote compliance with the eligibility requirements for Second Draw PPP Loans by preventing additional loans from being made to borrowers that were not eligible for a First Draw PPP Loan or received an impermissible loan amount. At the same time, these procedures do not disqualify an eligible unresolved borrower from receiving a Second Draw PPP Loan, in recognition that many flags will be resolved in the borrower's favor. The Administrator, in consultation with the Secretary, has determined that these procedures strike an appropriate balance between promoting program integrity and preventing abuse, while making Second Draw PPP Loans available to all eligible borrowers as expeditiously as possible. SBA will set aside available appropriations to fund Second Draw PPP Loans applied for by unresolved borrowers in the event they are approved.

*H. Loan Forgiveness*

Loan forgiveness of Second Draw PPP Loans and the loan review process for Second Draw PPP Loans are generally subject to the interim final rules regarding Loan Forgiveness and SBA Loan Review Procedures and Related Borrower and Lender Responsibilities, as modified to conform to the Economic Aid Act by the Consolidated First Draw PPP IFR, which is being published concurrently with this IFR. Subsection (j) contains forgiveness provisions specific to Second Draw PPP loans.

## IV. Paycheck Protection Program Second Draw Loans

*(a) Second Draw PPP Loan Program*

Under section 7(a)(37) of the Small Business Act (15 U.S.C. 636(a)(37)), SBA is authorized to guarantee Paycheck Protection Program Second Draw Loans (''Second Draw PPP Loans'').

*(b) What requirements apply to Second Draw PPP Loans?*

(1) Second Draw PPP Loans are subject to SBA's and the Department of the Treasury's (''Treasury's'') consolidated interim final rule implementing the Paycheck Protection Program (''Consolidated First Draw PPP IFR'') and all PPP loan program requirements, except as otherwise provided in this section, including but not limited to the following terms:

(i) The guarantee percentage is 100 percent.

(ii) No collateral will be required.

(iii) No personal guarantees will be required.

(iv) The interest rate will be 100 basis points or one percent, calculated on a non-compounding, non-adjustable basis.

(v) The maturity is five years.

(vi) All loans will be processed by all lenders under delegated authority and lenders will be permitted to rely on certifications of the borrower in order to determine eligibility of the borrower and the use of loan proceeds.

(2) Frequently Asked Questions and other guidance issued by SBA or by SBA in consultation with the Department of the Treasury with respect to PPP loans under section 7(a)(36) of the Small Business Act (15 U.S.C. 636(a)(36)) (''First Draw PPP Loans'') apply to Second Draw PPP Loans, except as otherwise provided in this section.

*(c) Who is eligible for a Second Draw PPP Loan?*

Subject to subsection (e) of this section, below, the following applicants are eligible for Second Draw PPP Loans:

(1) An applicant is eligible for a Second Draw PPP Loan if it is a business concern, independent contractor, eligible self-employed individual, sole proprietor, nonprofit organization eligible for a First Draw PPP Loan, veterans organization, Tribal business concern, housing cooperative, small agricultural cooperative, eligible 501(c)(6) organization or destination marketing organization, or an eligible nonprofit news organization [33] that:

(i) Previously received a First Draw PPP loan in accordance with the eligibility criteria in the Consolidated First Draw PPP IFR;

(ii) has used, or will use, the full amount of its First Draw PPP Loan (including *the amount of* any increase on such First Draw PPP Loan) on authorized uses under subsection (B)(11) of the Consolidated First Draw PPP IFR on or before the expected date on which the Second Draw PPP Loan will be disbursed; [34]

(iii) employs not more than 300 employees, unless it satisfies the alternative criteria for businesses with a North American Industry Classification System (''NAICS'') code beginning with 72 and eligible news organizations with more than one physical location described in subsection (c)(3) or (c)(4) of this section; and

(iv) (A) experienced a reduction in revenue in calendar year 2020, measured as follows:

(*1*) the applicant had gross receipts during the first, second, third, or fourth quarter in 2020 that demonstrate at least a 25 percent reduction from the applicant's gross receipts during the same quarter in 2019 (for example, an applicant that had gross receipts of $50,000 in the second quarter of 2019 and had gross receipts of $30,000 in the second quarter of 2020 experienced a 40 percent revenue reduction between these two quarters);

(*2*) if the applicant was not in business during the first or second quarter of 2019, but was in business during the third and fourth quarters of 2019, the applicant had gross receipts during the first, second, third, or fourth quarter of 2020 that demonstrate at least a 25 percent reduction from the applicant's gross receipts during the third or fourth quarter of 2019 (for example, an applicant that had gross receipts of $50,000 in the third quarter of 2019 and had gross receipts of $30,000 in the third quarter of 2020– demonstrating a reduction of 40 percent from the applicant's gross receipts during the third quarter in 2019);

(*3*) if the applicant was not in business during the first, second, or third quarter of 2019, but was in business during the fourth quarter of 2019, the applicant had gross receipts

[33] All terms in this subsection have the same definitions as in sections 7(a)(36) and (37) of the Small Business Act and the Consolidated First Draw PPP IFR, as applicable.

[34] A lender must make disbursement of the loan within ten calendar days of loan approval. *See* subsection (D)(7) of the Consolidated First Draw PPP IFR.

during the first, second, third, or fourth quarter of 2020 that demonstrate at least a 25 percent reduction from the fourth quarter of 2019 (for example, an applicant that had gross receipts of $50,000 in the fourth quarter of 2019 and had gross receipts of $30,000 in the fourth quarter of 2020–demonstrating a reduction of 40 percent from the applicant's gross receipts during the fourth quarter in 2019); or

(*4*) if the applicant was not in business during 2019, but was in operation on February 15, 2020, the applicant had gross receipts during the second, third, or fourth quarter of 2020 that demonstrate at least a 25 percent reduction from the gross receipts of the entity during the first quarter of 2020 (for example, an applicant that had gross receipts of $50,000 in the first quarter of 2020 and had gross receipts of $30,000 in the fourth quarter of 2020—demonstrating a reduction of 40 percent from the applicant's gross receipts during the first quarter in 2020).

(B) An applicant that was in operation in all four quarters of 2019 is deemed to have experienced the revenue reduction in subsection (c)(1)(iv)(A)(*1*) if it experienced a reduction in annual receipts of 25 percent or greater in 2020 compared to 2019 and the borrower submits copies of its annual tax forms substantiating the revenue decline.

(2)(i) Gross receipts includes all revenue in whatever form received or accrued (in accordance with the entity's accounting method) from whatever source, including from the sales of products or services, interest, dividends, rents, royalties, fees, or commissions, reduced by returns and allowances. Generally, receipts are considered ''total income'' (or in the case of a sole proprietorship, independent contractor, or self-employed individual ''gross income'') plus ''cost of goods sold,'' and excludes net capital gains or losses as these terms are defined and reported on IRS tax return forms. Gross receipts do not include the following: Taxes collected for and remitted to a taxing authority if included in gross or total income (such as sales or other taxes collected from customers and excluding taxes levied on the concern or its employees); proceeds from transactions between a concern and its domestic or foreign affiliates; and amounts collected for another by a travel agent, real estate agent, advertising agent, conference management service provider, freight forwarder or customs broker. All other items, such as subcontractor costs, reimbursements for purchases a contractor makes at a customer's request, investment income, and employee-based costs such as payroll taxes, may not be excluded from gross receipts.

(ii) Gross receipts of affiliates are calculated as follows:

(A) Gross receipts of a borrower with affiliates is calculated by adding the gross receipts of the business concern with the gross receipts of each affiliate.

(B) If a borrower has acquired an affiliate or been acquired as an affiliate during 2020, gross receipts includes the receipts of the acquired or acquiring concern. This aggregation applies for the entire period of measurement, not just the period after the affiliation arose. However, if a concern acquired a segregable division of another business concern during 2020, gross receipts do not include the receipts of the acquired division prior to the acquisition.

(C) The gross receipts of a former affiliate are not included. This exclusion of gross receipts of such former affiliate applies during the entire period of measurement, rather than only for the period after which affiliation ceased. However, if a borrower sold a segregable division during 2020, the gross receipts will continue to include the receipts of the division that was sold.

(D) All terms in this subsection shall have the meaning attributed to them by the IRS.

(iii) For an eligible nonprofit organization, a veterans organization, an eligible nonprofit news organization, an eligible 501(c)(6) organization, or eligible destination marketing organization, gross receipts means gross receipts within the meaning of section 6033 of the Internal Revenue Code of 1986.

(iv) The amount of any forgiven First Draw PPP Loan shall not be included toward any borrower's gross receipts.

(3) Any business concern that has more than one physical location and that employs not more than 300 employees per physical location is eligible to receive a Second Draw PPP Loan if it is assigned a NAICS code beginning with 72 at the time of loan disbursement and otherwise meets the eligibility criteria in subsection (c)(1).

(4) Any business concern, or any station which broadcasts pursuant to a license granted by the Federal Communications Commission under title III of the Communications Act of 1934 (47 U.S.C. 301 *et seq.*), that has more than one physical location and that employs not more than 300 employees per physical location is eligible to receive a Second Draw PPP Loan if it meets the eligibility criteria in subsection (c)(1) and: (1) Is majority owned or controlled by a business concern that is assigned a NAICS code beginning with 511110 or 5151 or, with respect to a public broadcasting entity (as defined in section 397(11) of the Communications Act of 1934 (47 U.S.C. 397(11))), has a trade or business that falls under such a code; and (2) makes a good faith certification that proceeds of the loan will be used to support expenses at the component of the organization that produces or distributes locally focused or emergency information.

*(d) How do SBA's affiliation rules affect an applicant's eligibility for a Second Draw PPP Loan?*

(1) Eligibility for Second Draw PPP Loans is governed by the same affiliations rules (and waivers) as First Draw PPP Loans, except as described in subsection (d)(2).

(2) The affiliation rules under 13 CFR 121.301(f) are waived with respect to eligibility for a Second Draw PPP Loan for:

(i) Any business concern with not more than 300 employees that, as of the date on which the covered loan is disbursed, is assigned a NAICS code beginning with 72; and

(ii) (A) any business concern (including any station which broadcasts pursuant to a license granted by the Federal Communications Commission under title III of the Communications Act of 1934 (47 U.S.C. 301 *et seq.*) without regard for whether such a station is a concern as defined in 13 CFR 121.105, or any successor thereto) that employs not more than 300 employees, per physical location of such business concern and is majority owned or controlled by a business concern that is assigned a NAICS code beginning with 511110 or 5151; or

(B) any nonprofit organization that is assigned a NAICS code beginning with 5151.

*(e) Who is not eligible for a Second Draw PPP Loan?*

An applicant is not eligible for a Second Draw PPP Loan, even if it meets the eligibility requirements of subsection (c) of this section, if the applicant is:

(1) Excluded from eligibility under the Consolidated First Draw PPP IFR;[35]

(2) a business concern or entity primarily engaged in political activities or lobbying activities, as defined in section 3 of the Lobbying Disclosure Act of 1995 (2 U.S.C. 1602), including any entity that is organized for research or for engaging in advocacy in areas such as public policy or political strategy or

[35] *See generally* section (B)(2) of the Consolidated First Draw PPP IFR.

otherwise describes itself as a think tank in any public documents;

(3) any business concern or entity:

(i) For which an entity created in or organized under the laws of the People's Republic of China or the Special Administrative Region of Hong Kong, or that has significant operations in the People's Republic of China or the Special Administrative Region of Hong Kong, owns or holds, directly or indirectly, not less than 20 percent of the economic interest of the business concern or entity, including as equity shares or a capital or profit interest in a limited liability company or partnership; or

(ii) that retains, as a member of the board of directors of the business concern, a person who is a resident of the People's Republic of China;

(4) any person required to submit a registration statement under section 2 of the Foreign Agents Registration Act of 1938 (22 U.S.C. 612);

(5) any person or entity that receives a grant for shuttered venue operators under section 324 of the Economic Aid to Hard-Hit Small Businesses, Nonprofits, and Venues Act;

(6) any entity in which the President, the Vice President, the head of an Executive department, or a Member of Congress, or the spouse of such person as determined under applicable common law, directly or indirectly holds a controlling interest in the entity, where:

(i) ''controlling interest'' means owning, controlling, or holding not less than 20 percent, by vote or value, of the outstanding amount of any class of equity interest in an entity;

(ii) ''equity interest'' means:

(A) A share in an entity, without regard to whether the share is transferable or classified as stock or anything similar;

(B) a capital or profit interest in a limited liability company or partnership; or

(C) a warrant or right, other than a right to convert, to purchase, sell, or subscribe to a share or interest described in (A) or (B), respectively;

(iii) ''Executive department'' has the meaning given the term in section 101 of title 5, United States Code;

(iv) ''Member of Congress'' means a Member of the Senate or House of Representatives, a Delegate to the House of Representatives, and the Resident Commissioner from Puerto Rico; and

(v) For the purpose of determining whether a person has a controlling interest in the entity, the securities owned, controlled, or held by the President, the Vice President, the head of an Executive department, or a Member of Congress, shall be aggregated with the securities held by his or her spouse as determined under applicable common law;

(7) any issuer, the securities of which are listed on an exchange registered as a national securities exchange under section 6 of the Securities Exchange Act of 1934 (15 U.S.C. 78f), where the terms ''exchange,'' ''issuer,'' and ''security'' have the meanings given those terms in section 3(a) of the Securities Exchange Act of 1934 (15 U.S.C. 78c(a)) (except SBA will not consider whether a news organization that is eligible under subsection (c)(4) is affiliated with an entity, which includes any entity that owns or controls such news organization, that is an issuer);

(8) an entity that has previously received a Second Draw PPP Loan; or

(9) an entity that has permanently closed.

*(f) What is the maximum loan amount for a Second Draw PPP Loan?*

(1) In general, the maximum loan amount for a Second Draw PPP Loan is equal to the lesser of two and half months of the borrower's average monthly payroll costs or $2 million, except as otherwise specified in this subsection (e). A borrower's average monthly payroll costs may be based on calendar year 2020, calendar year 2019,[36] or as otherwise specified in subsections (f)(2) through (f)(9) of this section. ''Payroll costs'' has the same meaning as in subsections (B)(4)(g) and (B)(4)(h) of the Consolidated First Draw PPP IFR and is calculated in the same manner. In calculating a borrower's payroll costs, the borrower must subtract any compensation paid to an employee in excess of $100,000 on an annualized basis, as prorated for the time period during which the payments are made or the obligation to make the payments is incurred.

(2) Except as otherwise provided in subsection (f)(3) through (f)(7), the maximum amount of a Second Draw PPP Loan is calculated as the lesser of:

(i) The product obtained by multiplying:

(A) The average total monthly payment for payroll costs incurred or paid by the borrower during 2019 or 2020 (at the election of the borrower); by

(B) 2.5; or

(ii) $2,000,000.

[36] Second Draw PPP Loan borrowers who are not self-employed, sole proprietorships, or independent contractors are also permitted to use the precise 1-year period before the date on which the loan is made to calculate payroll costs if they choose not to use 2019 or 2020. Since most borrowers will use 2019 or 2020 the rule text refers only to 2019 or 2020 for simplicity and readability.

(3) The maximum amount of a Second Draw PPP Loan to a borrower that is a seasonal employer (meaning an employer that does not operate for more than 7 months in any calendar year or that during the preceding calendar year, had gross receipts for any 6 months of that year that were not more than 33.33 percent of the gross receipts of the employer for the other 6 months of that year) is calculated as the lesser of:

(i) The product obtained by multiplying:

(A) At the election of the borrower, the average total monthly payments for payroll costs incurred or paid by the borrower for any 12-week period between February 15, 2019 and February 15, 2020; by

(B) 2.5 (or, only for a borrower assigned a NAICS code beginning with 72 at the time of disbursement as defined in subsection (f)(10), 3.5); or

(ii) $2,000,000.

(4) The maximum amount of a Second Draw PPP Loan to a borrower that did not exist during the 1-year period preceding February 15, 2020, but was in operation on February 15, 2020 (''new entity''), is calculated as the lesser of:

(i) The product obtained by multiplying:

(A) The quotient obtained by dividing:

(*1*) The sum of the total monthly payments by the borrower for payroll costs paid or incurred by the borrower as of the date on which the borrower applies for the Second Draw PPP Loan; by

(*2*) the number of months in which those payroll costs were paid or incurred; by

(B) 2.5 (or, only for a borrower assigned a NAICS code beginning with 72 at the time of disbursement as defined in subsection (f)(10), 3.5); or

(ii) $2,000,000.

(5) The maximum amount of a Second Draw PPP Loan made to a borrower assigned a NAICS code beginning with 72 at the time of disbursement as defined in subsection (f)(10) (that is not a seasonal employer or new entity addressed in subsection (f)(3) or (f)(4) or a borrower with self-employment income or a partnership addressed in subsection (f)(7) or (f)(8) of this section) is calculated as the lesser of:

(i) The product obtained by multiplying:

(A) The average total monthly payment for payroll costs incurred or paid by the borrower during either 2019 or 2020 (at the borrower's election) by

(B) 3.5; or

(ii) $2,000,000.

(6) (i) The maximum amount of a Second Draw PPP Loan to a farmer or rancher that:

(A) Operates as a sole proprietorship or as an independent contractor, or is an eligible self-employed individual;

(B) reports farm income or expenses on a Schedule F (IRS Form 1040); and

(C) was in business as of February 15, 2020; is calculated according to (ii) or (iii) of this subsection(e)(6), depending on whether the borrower has employees.

(ii) If a borrower meeting the criteria in subsection (6)(i) of this section does not have any employees, the maximum loan amount is the product obtained by multiplying:

(A) The gross income of the borrower in 2019 or 2020, as reported on a Schedule F (IRS Form 1040), that is not more than $100,000, divided by 12; and

(B) 2.5.

(iii) If a borrower meeting the criteria in subsection (6)(i) of this section has employees, the maximum loan amount is calculated as the lesser of:

(A) The product obtained by multiplying:

(*1*) The sum of (*i*) the difference between gross income and employee payroll costs of the borrower in 2019 or 2020 (at the election of the borrower), as reported on a Schedule F (IRS Form 1040), that is not more than $100,000, divided by 12, and (*ii*) the average total monthly payment for employee payroll costs incurred or paid by the borrower during the same year elected by the borrower; by

(*2*) 2.5; or

(B) $2,000,000.

(7) The maximum amount of a Second Draw PPP Loan to a borrower that has income from self-employment and files a Form 1040, Schedule C, is calculated as follows, depending on whether the borrower has employees:

(i) For a borrower that has income from self-employment and does not have any employees, the maximum loan amount is the lesser of:

(A) The product obtained by multiplying:

(*1*) The net profit of the borrower in 2019 or 2020, as reported on IRS Form 1040 Schedule C, that is not more than $100,000, divided by 12; and

(*2*) 2.5 (or, only for a borrower assigned a NAICS code beginning with 72 as defined in subsection (f)(10) at the time of disbursement, 3.5).

(ii) For a borrower that has income from self-employment and has employees, the maximum loan amount is the lesser of:

(A) The product obtained by multiplying:

(*1*) The sum of (*i*) the net profit of the borrower in 2019 or 2020 (at the election of the borrower), as reported on IRS Form 1040 Schedule C, that is not more than $100,000, divided by 12; (*ii*) the average total monthly payment for employee payroll costs incurred or paid by the borrower during the same year elected by the borrower; by

(*2*) 2.5 (or, only for a borrower assigned a NAICS code beginning with 72 at the time of disbursement as defined in subsection (f)(10), 3.5); or

(B) $2,000,000.

(8) The maximum amount of a Second Draw PPP Loan to a borrower that files taxes as a partnership is calculated as the lesser of:

(i) The product obtained by multiplying:

(A) The sum of (*1*) net earnings from self-employment of individual general partners in 2019 or 2020 (at the election of the borrower), as reported on IRS Form 1065 K–1, reduced by section 179 expense deduction claimed, unreimbursed partnership expenses claimed, and depletion claimed on oil and gas properties, multiplied by 0.9235,[37] that is not more than $100,000, divided by 12; (*2*) the average total monthly payment for employee payroll costs incurred or paid by the borrower during the same year elected by the borrower; by

(B) 2.5 (or, only for a borrower assigned a NAICS code beginning with 72 as defined in subsection (f)(10) at the time of disbursal, 3.5); or

(ii) $2,000,000.

(9) Businesses that are part of a single corporate group shall in no event receive more than $4,000,000 of Second Draw PPP Loans in the aggregate. Corporate group has the same meaning as in subsection (B)(4)(f) of the Consolidated First Draw PPP IFR.

(10) For purposes of calculating a borrower's maximum payroll costs, a borrower may multiply its average monthly payroll costs by 3.5 only if the borrower is in the Accommodation and Food Services sector and has reported a NAICS code beginning with 72 as its business activity code on its most recent IRS income tax return.

*(g) How do I submit an application for a Second Draw PPP Loan and what documentation must I provide to demonstrate eligibility?*

(1) The applicant must submit to the lender SBA Form 2483–SD (Paycheck Protection Program Second Draw Borrower Application Form) or the lender's equivalent form including the required certifications and the documentation in subsection (g)(2).

(2) At the time an applicant submits its loan application form, it must submit the following unless the documentation was submitted to the lender for the First Draw PPP Loan (*i.e.,* the applicant used calendar year 2019 figures to determine both its First Draw PPP Loan amount and its Second Draw PPP Loan amount, and the lender for the applicant's Second Draw PPP Loan is the same as the lender that made the applicant's First Draw PPP Loan):

(i) If the applicant is not self-employed, the applicant's Form 941 (or other tax forms containing similar information) and state quarterly wage unemployment insurance tax reporting forms from each quarter in 2019 or 2020 (whichever was used to calculate payroll), as applicable, or equivalent payroll processor records, along with evidence of any retirement and employee group health, life, disability, vision and dental insurance contributions, must be provided. A partnership must also include its IRS Form 1065 K–1s.

(ii) If the applicant is self-employed and has employees, the applicant's 2019 or 2020 (whichever was used to calculate loan amount) IRS Form 1040 Schedule C, Form 941 (or other tax forms or equivalent payroll processor records containing similar information) and state quarterly wage unemployment insurance tax reporting forms from each quarter in 2019 or 2020 (whichever was used to calculate loan amount), as applicable, or equivalent payroll processor records, along with evidence of any retirement and employee group health, life, disability, vision and dental insurance contributions, if applicable, must be provided. A payroll statement or similar documentation from the pay period that covered February 15, 2020 must be provided to establish the applicant was in operation on February 15, 2020.

(iii) If the applicant is self-employed and does not have employees, the applicant must provide (a) its 2019 or 2020 (whichever was used to calculate loan amount) Form 1040 Schedule C, (b) a 2019 or 2020 (whichever was used to calculate loan amount) IRS Form 1099–MISC detailing nonemployee compensation received (box 7), invoice, bank statement, or book of record that establishes that the applicant is self-employed; and (c) a 2020 invoice, bank statement, or book of record to establish that the applicant was in operation on or around February 15, 2020.

(iv) For loans with a principal amount greater than $150,000, documentation sufficient to establish that the applicant experienced a reduction in revenue, as provided in subsection(c)(1)(iv), must be

[37] This treatment follows the computation of self-employment tax from IRS Form 1040 Schedule SE Section A line 4 and removes the ''employer'' share of self-employment tax, consistent with how payroll costs for employees in the partnership are determined.

provided at the time of application, which may include relevant tax forms, including annual tax forms, or, if relevant tax forms are not available, a copy of the applicant's quarterly income statements or bank statements.

(v) For loans with a principal amount of $150,000 or less, the applicant must submit documentation sufficient to establish that the applicant experienced a reduction in revenue as provided in subsection (c)(1)(i) of this section at the time of application, on or before the date the borrower submits an application for loan forgiveness, or, if the borrower does not apply for loan forgiveness, at SBA's request. Such documentation may include relevant tax forms, including annual tax forms, or, if relevant tax forms are not available, a copy of the applicant's quarterly income statements or bank statements.

(3) On the Second Draw PPP Loan borrower application, an authorized representative of the applicant [38] must make the certifications listed in subsection (B)(12) of the Consolidated First Draw PPP IFR, except:

(i) Instead of the certification in subsection (B)(12)(v) of the Consolidated First Draw PPP IFR, the applicant must certify that the applicant has not and will not receive another Second Draw Paycheck Protection Program Loan; and

(ii) an authorized representative of the applicant must also certify:

(A) The Applicant has realized a reduction in gross receipts in excess of 25% relative to the relevant comparison time period. For loans greater than $150,000, Applicant has provided documentation to the lender substantiating the decline in gross receipts. For loans of $150,000 or less, Applicant will provide documentation substantiating the decline in gross receipts upon or before seeking loan forgiveness for the Second Draw Paycheck Protection Program Loan or upon SBA request.

(B) The Applicant received a First Draw Paycheck Protection Program Loan and, before the Second Draw Paycheck Protection Program Loan is disbursed, will have used the full loan amount (including any increase) of the First Draw Paycheck Protection Program Loan only for eligible expenses.

(C) The Applicant is not a business concern or entity (a) for which an entity created in or organized under the laws of the People's Republic of China or the Special Administrative Region of Hong Kong, or that has significant operations in the People's Republic of China or the Special Administrative Region of Hong Kong, owns or holds, directly or indirectly, not less than 20 percent of the economic interest of the business concern or entity, including as equity shares or a capital or profit interest in a limited liability company or partnership; or (b) that retains, as a member of the board of directors of the business concern, a person who is a resident of the People's Republic of China.

(D) The Applicant is not required to submit a registration statement under section 2 of the Foreign Agents Registration Act of 1938 (22 U.S.C. 612).

(E) The Applicant is not a business concern or entity primarily engaged in political or lobbying activities, including any entity that is organized for research or for engaging in advocacy in areas such as public policy or political strategy or otherwise describes itself as a think tank in any public documents.

(4) A lender must submit SBA Form 2484–SD (Paycheck Protection Program Lender's Application—Second Draw Loan Guaranty) electronically in accordance with program requirements and maintain the forms and supporting documentation in its files.

*(h) What do lenders need to know and do?*

(1) A lender approved to make First Draw PPP Loans may make Second Draw PPP Loans under the same terms and conditions applicable to First Draw PPP Loans, including all requirements under sections (C) and (D) of the Consolidated First Draw PPP IFR, except as otherwise provided in this section.

(2) What do lenders have to do in terms of loan underwriting?

(i) Each lender shall:

(A) Confirm receipt of borrower certifications contained in Paycheck Protection Program Second Draw Borrower Application Form (SBA Form 2483–SD) or lender's equivalent;

(B) Confirm receipt of information demonstrating that a borrower was either an eligible self-employed individual, independent contractor, or sole proprietorship with no employees or had employees for whom the borrower paid salaries and payroll taxes on or around February 15, 2020;

(C) Confirm the dollar amount of average monthly payroll costs for 2019 or 2020 (whichever was used to calculate loan amount) by reviewing the payroll documentation submitted with the borrower's application;

(D) For a Second Draw PPP Loan greater than $150,000 or a loan of $150,000 or less where the borrower provides documentation of revenue reduction, confirm the dollar amount and percentage of the borrower's revenue reduction by performing a good faith review, in a reasonable time, of the borrower's calculations and supporting documents concerning the borrower's revenue reduction. For a loan of $150,000 or less where the borrower does not provide documentation of revenue reduction with its application, the lender shall perform this review when the borrower provides such documentation. If the lender identifies errors in the borrower's calculation or material lack of substantiation in the borrower's supporting documents, the lender should work with the borrower to remedy the issue.

(E) Follow applicable BSA requirements (listed in subsection (C)(3)(d) of the Consolidated First Draw PPP IFR); and

(ii) Each lender's underwriting obligation under the Second Draw PPP is limited to the items above and reviewing the ''Paycheck Protection Program Second Draw Borrower Application Form'' (SBA Form 2483–SD) or lender's equivalent form.

(iii) A lender may rely on any certification or documentation submitted by an applicant for a PPP loan or an eligible recipient or eligible entity that (A) is submitted pursuant to all applicable statutory requirements, regulations, and guidance related to a PPP loan, including under sections 7(a)(36) or (37) of the Small Business Act (15 U.S.C. 636(a)(36) and (37)); and (B) attests that the applicant, eligible recipient, or eligible entity, as applicable, has accurately provided the certification or documentation to the lender in accordance with the statutory requirements, regulations, and guidance related to PPP loans. With respect to a lender that relies on such a certification or documentation related to a Second Draw PPP Loan, an enforcement action may not be taken against the lender, and the lender shall not be subject to any penalties relating to loan origination or forgiveness of the Second Draw PPP Loan, if—(A) the lender acts in good faith relating to loan origination or forgiveness of the Second Draw PPP Loan based on that reliance; and (B) all other relevant Federal, State, local, and other statutory and regulatory requirements applicable to the lender are satisfied with respect to the Second Draw PPP Loan.

(3) SBA will pay lenders fees for processing Second Draw PPP Loans in the following amounts:

[38] A representative of the applicant can certify for the business as a whole if the representative is legally authorized to do so.

(i) for a Second Draw PPP Loan of up to (and including) $50,000, in an amount equal to the lesser of:

(A) 50 percent of the balance of the financing outstanding at the time of disbursement of the loan; or

(B) $2,500; and

(ii) for a Second Draw PPP Loan of more than $50,000, in an amount that is:

(A) 5 percent of the balance of the financing outstanding at the time of disbursement of the loan for a loan up to (and including) $350,000; and

(B) 3 percent of the balance of the financing outstanding at the time of disbursement of the loan for a loan above $350,000.

*(i) Will an applicant's Second Draw PPP Loan application be affected if there are unresolved issues regarding the applicant's First Draw PPP Loan?*

(1) If a First Draw PPP Loan is under review pursuant to PPP rules and/or information in SBA's possession indicates that the borrower may have been ineligible for the First Draw PPP Loan it received or for the loan amount received by the borrower, the lender will receive notification from SBA when the lender submits an application for guaranty of a Second Draw PPP Loan (''unresolved borrower'').

(2) If the lender receives notification that the Applicant for a Second Draw PPP Loan is an unresolved borrower, the lender will not receive an SBA loan number. SBA will resolve the issue related to the unresolved borrower expeditiously and will notify the lender of the process to obtain an SBA loan number for the Second Draw PPP Loan, if appropriate.

*(j) Are Second Draw PPP Loans eligible for loan forgiveness?*

Second Draw PPP Loans are eligible for loan forgiveness on the same terms and conditions as First Draw PPP Loans, except that Second Draw PPP Loan borrowers with a principal amount of $150,000 or less are required to provide documentation of revenue reduction if such documentation was not provided at the time of the loan application as specified in subsections (g)(2)(iv) and (v) of this section.

**V. Additional Information**

SBA may provide further guidance, if needed, through SBA notices and a program guide which will be posted on SBA's website at *www.sba.gov.*

Questions on the Paycheck Protection Program 7(a) Loans (First Draw PPP Loans and Second Draw PPP Loans) may be directed to the Lender Relations Specialist in the local SBA Field Office. The local SBA Field Office may be found at *https://www.sba.gov/tools/local-assistance/districtoffices.*

*Compliance With Executive Orders 12866, 12988, 13132, 13563, and 13771, the Paperwork Reduction Act (44 U.S.C. Ch. 35), and the Regulatory Flexibility Act (5 U.S.C. 601–612)*

Executive Orders 12866, 13563, and 13771

This interim final rule is economically significant for the purposes of Executive Orders 12866 and 13563, and the Office of Management and Budget's Office of Information and Regulatory Affairs (OIRA) had determined that this is a major rule under the Congressional Review Act (5 U.S.C. 804(2)). SBA, however, is proceeding under the emergency provision at Executive Order 12866 section 6(a)(3)(D) based on the need to move expeditiously to mitigate the current economic conditions arising from the COVID–19 emergency. This rule's designation under Executive Order 13771 will be informed by public comment.

This rule is necessary to implement the Economic Aid Act in order to provide economic relief to small businesses nationwide adversely impacted under the COVID–19 Emergency Declaration. We anticipate that this rule will result in substantial benefits to small businesses, their employees, and the communities they serve. However, we lack data to estimate the effects of this rule.

The Administrator of OIRA has determined that this is a major rule for purposes of the Congressional Review Act (5 U.S.C. 801 *et seq.*) (CRA). Under section 801(3) of the CRA, a major rule takes effect 60 days after the rule is published in the **Federal Register**.

Notwithstanding this requirement, section 808(2) of the CRA allows agencies to dispense with the requirements of section 801 when the agency for good cause finds that such procedure would be impracticable, unnecessary, or contrary to the public interest and the rule shall take effect at such time as the agency promulgating the rule determines. Pursuant to section 808(2) of the CRA, SBA finds, for good cause, that a 60-day delay in the effective date is unnecessary and contrary to the public interest.

As discussed elsewhere in this interim final rule, the last day to apply for and receive a PPP loan is March 31, 2021. Given the short duration of this program, and the urgent need to issue loans quickly, the Administrator in consultation with the Secretary has determined that it is impractical and not in the public interest to provide a delayed effective date. An immediate effective date will give small businesses the maximum amount of time to apply for loans and lenders the maximum amount of time to process applications before the program ends.

Executive Order 12988

SBA has drafted this rule, to the extent practicable, in accordance with the standards set forth in section 3(a) and 3(b)(2) of Executive Order 12988, to minimize litigation, eliminate ambiguity, and reduce burden. The rule has no preemptive or retroactive effect.

Executive Order 13132

SBA has determined that this rule will not have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various layers of government. Therefore, SBA has determined that this rule has no federalism implications warranting preparation of a federalism assessment.

Paperwork Reduction Act, 44 U.S.C. Chapter 35

SBA has determined that this rule will impose new recordkeeping or reporting requirements under the Paperwork Reduction Act (''PRA''). This information collection (IC) consists of SBA Form 2483–SD (Paycheck Protection Program Second Draw Application Form) and SBA Form 2484–SD (Paycheck Protection Program Lender's Application—Second Draw Loan Guaranty. SBA has requested emergency approval for the IC required to implement the Second Draw PPP Program described above.

Regulatory Flexibility Act (RFA)

The Regulatory Flexibility Act (RFA) generally requires that when an agency issues a proposed rule, or a final rule pursuant to section 553(b) of the APA or another law, the agency must prepare a regulatory flexibility analysis that meets the requirements of the RFA and publish such analysis in the **Federal Register**. 5 U.S.C. 603, 604. Specifically, the RFA normally requires agencies to describe the impact of a rulemaking on small entities by providing a regulatory impact analysis. Such analysis must address the consideration of regulatory options that would lessen the economic effect of the rule on small entities. The RFA defines a ''small entity'' as (1) a proprietary firm meeting the size standards of the Small Business Administration (SBA); (2) a nonprofit organization that is not dominant in its field; or (3) a small government jurisdiction with a population of less than 50,000. 5 U.S.C. 601(3)–(6). Except for small government jurisdictions with a population of less than 50,000, neither State nor local governments are ''small entities.''

The requirement to conduct a regulatory impact analysis does not apply if the head of the agency ''certifies that the rule will not, if promulgated, have a significant economic impact on a substantial number of small entities.'' 5 U.S.C. 605(b). The agency must, however, publish the certification in the **Federal Register** at the time of publication of the rule, ''along with a statement providing the factual basis for such certification.'' If the agency head has not waived the requirements for a regulatory flexibility analysis in accordance with the RFA's waiver provision, and no other RFA exception applies, the agency must prepare the regulatory flexibility analysis and publish it in the **Federal Register** at the time of promulgation or, if the rule is promulgated in response to an emergency that makes timely compliance impracticable, within 180 days of publication of the final rule. 5 U.S.C. 604(a), 608(b).

Rules that are exempt from notice and comment are also exempt from the RFA requirements, including conducting a regulatory flexibility analysis, when among other things the agency for good cause finds that notice and public procedure are impracticable, unnecessary, or contrary to the public interest. Small Business Administration's Office of Advocacy guide: *How to Comply with the Regulatory Flexibility Ac. Ch.1. p.9.* Since this rule is exempt from notice and comment, SBA is not required to conduct a regulatory flexibility analysis.

**Title 3—**

## The President

**Executive Order 13972 of January 5, 2021**

## Promoting Small Modular Reactors for National Defense and Space Exploration

By the authority vested in me as President by the Constitution and the laws of the United States of America, it is hereby ordered as follows:

**Section 1**. *Purpose.* Nuclear energy is critical to United States national security. That is why I have taken a series of actions to promote its development and facilitate its use. On June 29, 2017, I announced an initiative to revive and expand the nuclear energy sector and directed a complete review of United States nuclear energy policy to help find new ways to revitalize this crucial energy resource. On July 12, 2019, I signed a Presidential Memorandum entitled ''The Effect of Uranium Imports on the National Security and Establishment of the United States Nuclear Fuel Working Group,'' with the goal of examining the current state of domestic nuclear fuel production and reinvigorating the nuclear fuel supply chain, consistent with United States national security and nonproliferation goals. On August 20, 2019, I signed National Security Presidential Memorandum–20, entitled ''Launch of Spacecraft Containing Space Nuclear Systems,'' calling for development and use of space nuclear systems to enable or enhance space exploration and operational capabilities.

The purpose of this order is to take an important additional step to revitalize the United States nuclear energy sector, reinvigorate America's space exploration program, and develop diverse energy options for national defense needs. Under this action, the United States Government will coordinate its nuclear activities to apply the benefits of nuclear energy most effectively toward American technology supremacy, including the use of small modular reactors for national defense and space exploration. This work is critical to advancing my Administration's priorities for the United States to lead in research, technology, invention, innovation, and advanced technology development; its mission to promote and protect the United States national security innovation base; its drive to secure energy dominance; and its commitment to achieving all of these goals in a manner consistent with the highest nuclear nonproliferation standards.

The United States was the first nation to invent and develop the technology to harness nuclear energy. Since the 1950s, the United States Navy has been operating and advancing transportable nuclear reactors, resulting in powerfully enhanced marine propulsion for its aircraft carriers and allowing nuclear-powered submarines to remain submerged for extended periods of time.

The United States must sustain its ability to meet the energy requirements for its national defense and space exploration initiatives. The ability to use small modular reactors will help maintain and advance United States dominance and strategic leadership across the space and terrestrial domains.

**Sec. 2**. *Policy.* It is the policy of the United States to promote advanced reactor technologies, including small modular reactors, to support defense installation energy flexibility and energy security, and for use in space exploration, guided by the following principles:

(a) A healthy and robust nuclear energy industry is critical to the national security, energy security, and economic prosperity of the United States;

(b) The United States should maintain technology supremacy for nuclear research and development, manufacturing proficiency, and security and safety; and

(c) The United States Government should bolster national defense and space exploration capabilities and enable private-sector innovation of advanced reactor technologies.

**Sec. 3**. *Demonstration of Commercial Reactors to Enhance Energy Flexibility at a Defense Installation.* (a) Micro-reactors have the potential to enhance energy flexibility and energy security at domestic military installations in remote locations. Accordingly, the Secretary of Defense shall, within 180 days of the date of this order, establish and implement a plan to demonstrate the energy flexibility capability and cost effectiveness of a Nuclear Regulatory Commission-licensed micro-reactor at a domestic military installation.

(b) If the demonstration is successful, the Secretary of Defense shall identify opportunities at domestic military installations where this capability could enhance or supplement the fulfillment of installation energy requirements. In identifying these opportunities, the Secretary of Defense shall take into account considerations that are unique to national defense needs and requirements that may not be relevant in the private sector, such as:

(i) the ability to provide resilient, independent energy delivery to installations in the event that connections to an electrical grid are compromised;

(ii) the ability to operate for an extended period of time without refueling;

(iii) system resistance to disruption from an electro-magnetic pulse event; and

(iv) system cybersecurity requirements.

**Sec. 4**. *Defense Capabilities.* (a) The Department of Defense is one of the largest consumers of energy in the world, using more than 10 million gallons of fuel per day and 30,000 gigawatt-hours of electricity per year, nearly all of which is provided through civilian electrical grids. Fuel demands for a modern United States military have dramatically grown since World War II and are anticipated to continue to increase in order to support high-energy-usage military systems. In this context, nuclear power could significantly enhance national defense power capabilities.

(b) The Secretary of Defense shall, in consultation with the Secretary of State, the Secretary of Commerce, the Secretary of Energy, and the Administrator of the National Aeronautics and Space Administration (NASA Administrator):

(i) determine whether advanced nuclear reactors can be made to benefit Department of Defense future space power needs;

(ii) pilot a transportable micro-reactor prototype;

(iii) direct an analysis of alternatives for personnel, regulatory, and technical requirements to inform future decisions with respect to nuclear power usage; and

(iv) direct an analysis of United States military uses for space nuclear power and propulsion technologies and an analysis of foreign adversaries' space power and propulsion programs.

**Sec. 5**. *Space Exploration.* (a) Nuclear power sources that use uranium fuel or plutonium heat sources are essential to deep space exploration and in areas where solar power is not practical. NASA uses radioisotope power systems, such as radioisotope thermoelectric generators and radioisotope heater units, to provide power and heat for deep space robotic missions. Nuclear power sources in the kilowatt range may be needed for demonstrating In-situ Resource Utilization (ISRU) and robotic exploration of permanently shadowed craters on the Moon that contain frozen water. Nuclear reactors up to 100 kilowatts may be needed to support human habitats, ISRU, other facilities, and rovers on both the Moon and Mars. Power sources in the megawatt range would be necessary for efficient, long-duration deep space propulsion. Affordable, lightweight nuclear power sources in space would enable new opportunities for scientific discovery. The sustainable exploration of the Moon, Mars, and other locations will be enhanced if small modular reactors can be deployed and operated remotely from Earth.

(b) Within 180 days of the date of this order, the NASA Administrator, in consultation with heads of other executive departments and agencies (agencies), as appropriate, shall define requirements for NASA utilization of nuclear energy systems for human and robotic exploration missions through 2040 and analyze the costs and benefits of such requirements. In defining these requirements, the NASA Administrator shall take into account considerations unique to the utilization of nuclear energy systems in space, such as:

(i) transportability of a reactor prior to and after deployment;

(ii) thermal management in a reduced- or zero-gravity environment in a vacuum or near-vacuum;

(iii) fluid transfer within reactor systems in a reduced or zero-gravity environment;

(iv) reactor size and mass that can be launched from Earth and assembled in space;

(v) cooling of nuclear reactors in space;

(vi) electric power requirements;

(vii) space safety rating to enable operations as part of human space exploration missions;

(viii) period of time for which a reactor can operate without refueling; and

(ix) conditioning of reactor components for use in the space environment.

**Sec. 6**. *Domestic Fuel Supply.* (a) A thriving and secure domestic nuclear fuel supply chain is critical to the national interests of the United States. A viable domestic nuclear fuel supply chain not only supports defense and national security activities, but also enables the success of the commercial nuclear industry. Many advanced reactor concepts, however, will require high-assay, low-enriched uranium (HALEU), for which no domestic commercial enrichment capability currently exists. The United States must take steps to ensure a viable United States-origin HALEU supply.

(b) The Secretary of Energy shall complete the Department of Energy's ongoing 3-year, $115 million demonstration of a United States-origin enrichment technology capable of producing HALEU for use in defense-related advanced reactor applications. Within funding available for the demonstration project, the Secretary of Energy should develop a plan to promote successful transition of this technology to the private sector for commercial adoption.

(c) The Secretary of Energy shall consult with the Secretary of Defense, the Director of the Office of Management and Budget, and the NASA Administrator regarding how advanced fuels and related technologies can best support implementation of sections 3, 4, and 5 of this order.

**Sec. 7**. *Common Technology Roadmap.* (a) The Secretary of State, the Secretary of Defense, the Secretary of Commerce, the Secretary of Energy, and the NASA Administrator shall develop a common technology roadmap through 2030 that describes potential development programs and that coordinates, to the extent practicable, terrestrial-based advanced nuclear reactor and space-based nuclear power and propulsion efforts. Agencies shall remain responsible for funding their respective mission-unique requirements. The roadmap shall also include, at a minimum:

(i) assessments of foreign nations' space nuclear power and propulsion technological capabilities;

(ii) pathways for transitioning technologies developed through Federally supported programs to private-sector activities; and

(iii) other applications supporting the goals provided in section 1 of this order.

(b) The roadmap shall be submitted to the President by the Director of the Office of Management and Budget, the Assistant to the President for Domestic Policy, the Director of the Office of Science and Technology Policy, the Assistant to the President for National Security Affairs, the Assistant to the President for Economic Policy, and the Executive Secretary of the National Space Council before submissions of budget proposals by the Secretary of State, the Secretary of Commerce, the Secretary of Energy, and the NASA Administrator.

**Sec. 8**. *Definitions.* For purposes of this order:

(a) The term ''small modular reactor'' refers to an advanced nuclear reactor of electric generation capacity less than 300 megawatt-electric. Because of the smaller size, small modular reactors can generally be designed for factory fabrication and modular construction to take advantage of economies of serial production and shorter construction times.

(b) The term ''micro-reactor'' refers to a nuclear reactor of electric generation capacity less than 10 megawatt-electric that can be deployed remotely. Micro-reactors are a subset of small modular reactors and are also known as ''very small modular reactors.''

(c) The term ''transportable micro-reactor'' refers to a micro-reactor that can be moved by truck, ship, or large military transport aircraft and is capable of both rapid deployment and teardown or removal, typically with safe teardown or removal less than 1 week after 1 year of full-power operation.

(d) The term ''space exploration'' refers to in-space scientific and resource exploration, in-space economic and industrial development, and development of associated in-space logistical infrastructure.

(e) The term ''national defense'' refers to the protection of the United States and its interests from foreign attack or other natural danger, including phenomena occurring on Earth and in space.

**Sec. 9**. *General Provisions.* (a) Nothing in this order shall be construed to impair or otherwise affect:

(i) the authority granted by law to an executive department or agency, or the head thereof; or

(ii) the functions of the Director of the Office of Management and Budget relating to budgetary, administrative, or legislative proposals.

(b) This order shall be implemented consistent with applicable law and subject to the availability of appropriations.

(c) This order is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity by any party against the United States, its departments, agencies, or entities, its officers, employees, or agents, or any other person.

THE WHITE HOUSE,
*January 5, 2021.*

## LIST OF PUBLIC LAWS

**Note:** No public bills which have become law were received by the Office of the Federal Register for inclusion in today's **List of Public Laws**.

**Last List January 12, 2021**

## Public Laws Electronic Notification Service (PENS)

**PENS** is a free email notification service of newly enacted public laws. To subscribe, go to *https://listserv.gsa.gov/cgi-bin/wa.exe?SUBED1=PUBLAWS-L&A=1*

**Note:** This service is strictly for email notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
