**SUPPLEMENTARY INFORMATION:** Section 103(h) of the Federal Mine Safety and Health Act of 1977 (Mine Act), 30 U.S.C. 813(h), authorizes MSHA to collect information necessary to carry out its duty in protecting the safety and health of miners. Further, section 101(a) of the Mine Act, 30 U.S.C. 811, authorizes the Secretary of Labor to develop, promulgate, and revise as may be appropriate, improved mandatory health or safety standards for the protection of life and prevention of injuries in coal or other mines. Title 30 CFR part 77, subpart C, sets forth standards for surface installations to prevent accidents and injuries to miners. More specifically, section 77.215 addresses refuse piles and section 77.216 addresses impoundments. Refuse piles are deposits of coal mine waste (other than overburden or spoil) that are removed during mining operations or separated from mined coal and deposited on the surface. Impoundments are structures that can impound water, sediment, or slurry or any combination of materials. The failure of these structures can have a devastating effect on mine employees, communities, and nearby areas. To avoid or minimize such failures, MSHA has promulgated standards for the design, construction, and maintenance of these structures; for annual certifications; for certification for hazardous refuse piles; for the frequency of inspections; and the methods of abandonment for impoundments and impounding structures. For additional substantive information about this ICR, see the related notice published in the **Federal Register** on October 6, 2020 (85 FR 63144).
