

Question 2

How does your tribe use data from the Demographic Profiles and Demographic and Housing Characteristics data products? Please be specific as to the use, variable(s), and level(s) of geography.

Example: Our native village uses average household size and race/ethnicity composition at the block group level to apply for state administered housing grants, which accounted for 27% of our annual housing assistance budget in 2019.

Question 3

With the understanding that protecting the privacy of Census respondents requires that some uncertainty/noise be added to the data (as it has been in prior Censuses), which of the use cases that you identified in question #1 are most important to your tribe?

Question 4

With the understanding that protecting the privacy of Census respondents requires that some uncertainty/noise be added to the data (as it has been in prior Censuses), at what level of statistical uncertainty would the tabulations included in the redistricting (Pub. L. 94–171), Demographic Profiles, or Demographic and Housing Characteristics files no longer be usable for the use cases that you identified in question #1.

Example: If total population at the Census tract level differed from the enumerated count by more than $\pm 3\%$, our tribe would be obligated to rely on other data sources as evidence to support our grant applications.” Or “If the AIAN Alone or in Combination population of our county differed from the enumerated count by more than 10 persons, we would be unable to rely upon the data for our tribe’s demographic projections because they would be less accurate than the data we collect ourselves.

SUPPLEMENTARY INFORMATION:**I. Abstract**

Upon request, BIS will initiate an investigation to determine the effects of imports of specific commodities on the national security and will make the findings known to the President for possible adjustments to imports through tariffs. The findings are made publicly available and are reported to Congress. The purpose of this collection is to account for the public burden associated with the surveys distributed to determine the impact on national security.

These surveys are designed to gather information so that BIS can evaluate the impact of foreign imports of strategic commodities on the national security of the United States. Each Section 232 study is for a specific commodity or technology that is required for national security reasons (*e.g.*, precision bearings, microprocessors, machine tools, etc). These surveys attempt to determine the size of the domestic U.S. industry, how the domestic U.S. industry has been effected by foreign imports, demand for the commodity during peacetime, demand during wartime, the ability of the U.S. domestic industry to meet a surge in demand during wartime, and the potential impact on U.S. national security if wartime demand cannot be met by domestic U.S. suppliers.

II. Method of Collection

BIS custom-designs unique instruments for each Section 232 survey. The method of collection could be via paper or electronic.
