Abstract: The Hydrography Addressing Tool (HydroAdd Tool) is a website application under development by the USGS National Geospatial Program, National Geospatial Technical Operations Center (NGTOC) which will allow users to reference stream network-specific geographic locations, also known as addressing, of their own data to the National Hydrography Dataset (NHD). Users must make their geospatial data available as a web feature service. The HydroAdd Tool will ‘consume’ the user’s web feature service and will allow users to edit the geometry of their own data and update the user’s web feature service with attribute information of the coincident NHD features. Users cannot edit the NHD in this tool.

Anyone with the requisite technical knowledge can use HydroAdd tool. Users will register in the HydroAdd website and are assigned editing roles by the USGS application administrators. When registering, editors are required to fill out a profile that contains organizational contact information. This information is stored in the application database. A future iteration of the HydroAdd Tool may have reporting functions that are visible to all users. These reports could detail the edit submissions within specified date ranges. The user’s email and organization could be visible on these reports and could be viewed by all users
