RF Program Entrance Survey for Reentering Fathers.

Exit survey, with five versions: (1) HM Program Exit Survey for Adult-Focused Programs; (2) HM Program Exit Survey for Youth-Focused Programs; (3) RF Program Exit Survey for Community-Based Fathers; (4) RF Program Exit Survey for Community-Based Mothers; and (5) RF Program Exit Survey for Reentering Fathers.

The measures used by the 2015 grantees cohort were developed in 2014 after extensive review of the research literature and grantees’ past measures. The performance measures, data collection instruments, and data collection system were revised in 2020 based on a targeted analysis of existing measures, feedback from key stakeholders, and discussions with ACF staff and the 2015 cohort of grantees. ACF required the 2015 cohort of grantees to submit data on these standardized measures on a quarterly basis and proposes the same requirement for the 2020 cohort. In addition to the performance measures mentioned above, ACF proposes to repeat collection for these data submissions:

- **Semi-annual Performance Progress Report (PPR)**, with two versions: (1) Performance Progress Report for HM Programs, and (2) Performance Progress Report for RF Programs; and

**ANNUAL BURDEN ESTIMATES**

### DEPARTMENT OF HEALTH AND HUMAN SERVICES

**National Institutes of Health**

**Government-Owned Inventions; Availability for Licensing**

**AGENCY:** National Institutes of Health, HHS.

**ACTIONS:** Notice.

**SUMMARY:** The inventions listed below are owned by an agency of the U.S. Government and are available for licensing to achieve expeditious commercialization of results of federally-funded research and development.

**FOR FURTHER INFORMATION CONTACT:** Licensing information and copies of patent applications may be obtained by emailing Brian W. Bailey, Ph.D., bbailey@mail.nih.gov, the invention licensing contact at the National Heart, Lung, and Blood, Office of Technology Transfer and Development Office of Technology Transfer, 31 Center Drive, Room 4A29, MSC2479, Bethesda, MD 20892–2479; telephone: 301–402–5579. A signed Confidential Disclosure Agreement may be required to receive any unpublished information.

**SUPPLEMENTARY INFORMATION:**

**Use of Statins To Treat or Prevent Drug-Induced Hearing Loss**

**Description of Technology**

Available for licensing and commercial development are patent rights covering methods of using atorvastatin and related statin compounds and derivatives to reduce or prevent drug-induced hearing loss that is caused as a side effect by ototoxic drugs such as cisplatin, which is commonly used in cancer therapies. At present, permanent hearing loss occurs in approximately half of all patients treated with cisplatin; consequently, every year many thousands of individuals experience partial loss of hearing and associated quality of life issues as a result of medically necessary chemoradiation therapies to treat their cancers. This technology addresses a large unmet need to eliminate or reduce hearing loss in patients that must undergo therapies involving ototoxic drugs.

This technology is available for licensing for commercial development in accordance with 35 U.S.C. 209 and 37 CFR part 404.

**Potential Commercial Applications**

- Repurposing existing statins, including atorvastatin, to treat or protect against permanent hearing loss arising from chemoradiation therapy involving ototoxic drugs.
- Development of statin analogues or derivatives with enhanced abilities to treat or protect against hearing loss resulting from therapies involving cisplatin or other ototoxic drugs.
Competitive Advantages

- This invention addresses an urgent need to protect against permanent hearing loss resulting from therapies with commonly used but ototoxic drugs, including cisplatin.
- Statins are already extensively used therapeutically to lower blood cholesterol and have well understood drug profiles, making them ideal candidates for repurposing.

Development Stage: An observational clinical trial (NCT03225157) in patients with head and neck cancers has been completed.

Inventors: Lisa Lynn Cunningham (NIDCD), Nicole C. Schmitt (NIDCD), and Katharine Ann Fernandez (NIDCD).

Licensing Contact: Brian W. Bailey, Ph.D.; 301–594–4094; bbailey@mail.nih.gov.

Bruce D. Goldstein,
Director, National Heart, Lung, and Blood Institute, Office of Technology Transfer and Development, National Institutes of Health.

ADDRESS: Requests for copies of the patent applications, inquiries, and comments relating to the contemplated exclusive patent license should be directed to: Brian W. Bailey, Ph.D., Senior Technology Transfer Manager, NHLBI Office of Technology Transfer and Development, 31 Center Drive, Rm. 4A29, MSC 2479, Bethesda, MD 20892–2479 (for business mail), Telephone (301) 594–4094; Email: bbailey@mail.nih.gov.

The patent rights in these inventions have been assigned to the Government of the United States of America, Simon Fraser, and CNRS. The prospective patent license will be for the purpose of consolidating the patent rights to CNRS, one of the co-owners of said rights, for commercial development, and the purpose of consolidating the patent rights to CNRS and Simon Fraser for marketing. Consolidation of these co-owned rights is intended to expedite development of the invention, consistent with the goals of the Bayh-Dole Act codified as 35 U.S.C. 200–212.

The prospective patent license will be worldwide, exclusive, and may be limited to those fields of use commensurate in scope with the patent rights. It will be sublicensable, and any sublicenses granted by CNRS or Simon Fraser will be subject to the provisions of 37 CFR part 401 and 404.

This invention pertains to certain RNA aptamers with optimized fluorescent properties and fluorophore binding affinities as well as corresponding heterocyclic fluorophores. The technology consists of a suite of fluorescent RNA-fluorophore complexes within the “Mango” that have been optimized for live-cell imaging of RNA molecules without altering biological function, in a manner analogous to the way that fluorescently labeled proteins are used to study specific protein functions within cells. As such, this technology can be used as a powerful tool for live-cell study of RNA function and activity for research and diagnostic purposes. The prospective exclusive patent license will include terms for the sharing of royalty income with NHLBI from commercial sublicenses of the patent rights and may be granted unless within fifteen (15) days from the date of this published notice the NHLBI receives written evidence and argument that establishes that the grant of the license would not be consistent with the requirements of 35 U.S.C. 209 and 37 CFR part 404.

Complete applications for a license that are timely filed in response to this notice will be treated as objections to the grant of the contemplated exclusive patent license. In response to this Notice, the public may file comments or objections. Comments and objections, other than those in the form of a license application, will not be treated confidentially, and may be made publicly available.

License applications submitted in response to this Notice will be presumed to contain business confidential information and any release of information from these license applications will be made only as required and upon a request under the Freedom of Information Act, 5 U.S.C. 552.

Licensing information and copies of patent applications may be obtained by emailing Brian W. Bailey, Ph.D., bbailey@mail.nih.gov, the indicated licensing contact at the National Heart, Lung, and Blood, Office of Technology Transfer and Development Office of Technology Transfer, 31 Center Drive, Room 4A29, MSC2479, Bethesda, MD 20892–2479; telephone: 301–402–5579. A signed Confidential Disclosure Agreement may be required to receive any unpublished information.

Licensing Contact: Brian W. Bailey, Ph.D.; 301–594–4094; bbailey@mail.nih.gov.

Bruce D. Goldstein,
Director, Office of Technology Transfer and Development, National Heart, Lung, and Blood Institute, National Institutes of Health.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Government-Owned Inventions; Availability for Licensing

AGENCY: National Institutes of Health, HHS.

ACTION: Notice.

SUMMARY: The National Heart, Lung, and Blood Institute (NHLBI), National Institutes of Health, Department of Health and Human Services, is contemplating the grant of sublicensable patent licenses to Simon Fraser University (“Simon Fraser”), a non-profit university located in British Columbia, Canada, and Le Centre National de la Recherche Scientifique (“CNRS”), a public scientific and technological establishment located in France, its rights to the inventions and patents listed in the SUPPLEMENTARY INFORMATION section of this notice.

DATES: Only written comments and/or applications for a license which are received by the NHLBI Office of Technology Transfer and Development on or before March 16, 2021 will be considered.
