

spacing; (2) a 600-foot-long, 78-inch-diameter underground steel penstock that trifurcates into three 48-inch-diameter sections measuring 20 feet, 30 feet, and 43 feet in length, respectively; (3) a 43-foot-long, 30-foot-wide powerhouse located on the east side of the Mad River that contains a 167-kW Francis turbine-generator unit; (4) two 236-kW submersible Flygt turbine-generator units located outside of the powerhouse; (5) an approximately 55-foot-long, 40-foot-wide tailrace; (6) a 200-foot-long transmission line and a 33.5-kilovolt transformer that connects the generators to the electric grid; (7) an Atlantic salmon smolt bypass facility consisting of an 85-foot-long, 20-inch diameter cast iron pipe that empties into an 3.5-foot-deep plunge pool approximately 15 feet downstream of the dam; and (8) appurtenant facilities. The project creates an approximately 600-foot-long bypassed reach of the Mad River.

MRPA currently has a Special Use Permit from the Forest Service for operation and maintenance of the Campton Project. MRPA voluntarily operates the project as a run-of-release facility. Each Flygt turbine unit has a minimum and maximum hydraulic capacity of 74 cubic feet per second (cfs) and 89 cfs, respectively, and the Francis turbine unit has a minimum and maximum hydraulic capacity of 23 cfs and 60 cfs, respectively. When generating electricity, water released from Campton Pond, is diverted through the intake structure and the penstock, to the turbines, where it is then discharged to the project tailrace and the Mad River.

The current license requires: (1) Inflow to be discharged over the spillway to the bypassed reach during periods of non-generation or when inflow is less than 25 cfs; (2) a minimum flow of 4.5 cfs through the smolt bypass facility during periods of generation or when inflow is greater than 25 cfs; and (3) operation of the smolt bypass facility from mid-April to mid-June. The average annual energy production of the project from 2007 through 2018 was 1,170 MWh.

MRPA proposes to: (1) Continue operating the project in a run-of-release mode; (2) replace one of the 236-kW Flygt turbine-generator units with a new 340-kW Flygt turbine-generator unit, for a total installed capacity of 743 kW at the project; (3) release a minimum flow of 29 cfs or inflow, whichever is less, over the dam to the bypassed reach; and (4) close the existing smolt bypass facility. MRPA estimates that the average annual generation of the

proposed project will be approximately 1,900 MWh.

#### o. Scoping Process.

Commission staff will prepare either an environmental assessment (EA) or an Environmental Impact Statement (EIS) that describes and evaluates the probable effects, if any, of the licensee's proposed action and alternatives. The EA or EIS will consider environmental impacts and reasonable alternatives to the proposed action. The Commission's scoping process will help determine the required level of analysis and satisfy the NEPA scoping requirements, irrespective of whether the Commission prepares an EA or an EIS. Due to concerns with large gatherings related to COVID-19, we do not intend to conduct a public scoping meeting and site visit in this case. Instead, we are soliciting written comments and suggestions on the preliminary list of issues and alternatives to be addressed in the NEPA document, as described in scoping document 1 (SD1), issued May 18, 2021.

Copies of the SD1 outlining the subject areas to be addressed in the NEPA document were distributed to the parties on the Commission's mailing list and the applicant's distribution list. Copies of SD1 may be viewed on the web at <http://www.ferc.gov> using the "eLibrary" link. Enter the docket number excluding the last three digits in the docket number field to access the document.
