SUPPLEMENTARY INFORMATION:

I. Background

FDA is announcing the availability of a draft guidance for industry entitled “Oral Drug Products Administered Via Enteral Feeding Tube: In Vitro Testing and Labeling Recommendations.” This draft guidance provides recommendations regarding in vitro testing of oral drug products, other than solutions, administered via enteral feeding tube (hereinafter enteral tube) that are subject to: (1) New drug applications (original or supplemental) where applicants are seeking and/or revising enteral tube administration instructions and related information in labeling; (2) abbreviated new drug applications where the reference listed drug contains enteral tube administration instructions and related information in labeling; and (3) investigational new drug applications where the investigational drug product is administered or planned for administration via enteral tube. Specifically, the draft guidance provides recommendations for consistent in vitro testing of oral drug products to demonstrate their suitability to be administered via enteral tube. In addition, it supports the development of clear, product-specific enteral tube administration instructions in labeling for administration to patients unable to ingest oral drug products.

II. Paperwork Reduction Act of 1995

While this draft guidance contains no collection of information, it does refer to previously approved FDA collections of information. Therefore, clearance by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3521) is not required for this draft guidance. The previously approved collections of information are subject to review by OMB under the PRA. The collections of information in 21 CFR parts 312 and 314 have been approved under OMB control numbers 0910–0014 and 0910–0001, respectively. The collections of information in 21 CFR parts 201.57 have been approved under OMB control number 0910–0572.
