

required for program monitoring and evaluation purposes, such as students' current enrollment or class standing (if applicable).

- Additional application requirements. Individuals wishing to apply for awards that run competitive applications will be able to use the ETAP to apply to multiple NSF awards through a fully operational electronic application. They will first complete the common registration form (described above), which collects basic demographic and contact information needed for analysis and tracking purposes. Next, they will proceed to the application form, through which they will submit additional information that competitive Sites require as part of their applications, such as resume, transcripts, and contact information for their references. PIs and other authorized staff will use the system to provide information needed by prospective applicants (such as the application deadline), retrieve applicant information, record application decisions and participation status among admitted applicants, and produce reports of data submitted by applicants to their Sites.

2. Gathering program experiences and satisfaction. After participating in the NSF program, participants will be administered an exit survey to capture program experiences and participants' attitudes and opinions.

3. Obtaining and integrating educational and employment information. Following a sample of students who had used the predecessor system (REU data system) to apply to the NSF award, this study will do the following:

- Obtain information on educational outcomes from administrative data (National Student Clearinghouse) that NSF can purchase at low cost to the government and no burden to students
- Administer a short survey to obtain information on employment outcomes
- Obtain information on research productivity outcomes (such as publications or patents) from Web of Science, Scopus, and the United States Patent and Trademark Office. (NSF already subscribes to these administrative databases, so they are accessible through NSF systems.)

4. Conducting usability testing and gathering user feedback. This testing will focus on new system enhancements or functionality and seeks to obtain in-depth feedback from users on the common registration form, additional application requirements, and data reports available.

Estimate of Burden: At present, most education and training opportunities

funded by NSF use applications that are submitted directly to each Site, if such applications are required as is the case with the REU Sites program. Sites might run competitive and noncompetitive applications to select their program participants. We estimate that individuals applying for noncompetitive Sites will spend 3.25 hours submitting information through the ETAP system; for competitive Sites, this estimate is 7 hours. We estimate that individuals writing letters of reference for students will spend 0.5 hours drafting a letter in support of a student's application to a competitive Site. We estimate that PIs (or their designated users) will spend 4.7 hours using the system to track and manage applications to their Site.

Respondents: Individuals.

Estimated Number of Respondents: 66,499.

Estimated Total Annual Burden on Respondents: 146,710 hours.

Frequency of Responses: Three rounds of data collection.

Dated: June 28, 2021.

Suzanne H. Plimpton,

Reports Clearance Officer, National Science Foundation.
