DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 648
[Docket No.: 210630–0140]

RIN 0648–BK10

Fisheries of the Northeastern United States; Southern Red Hake Rebuilding Plan; Framework Adjustment 62 to the Small-Mesh Multispecies Fishery Management Plan

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Proposed rule; request for comments.

SUMMARY: NMFS proposes to approve and implement Framework Adjustment 62 for Whiting, Red Hake, and Offshore Hake to the Northeast Multispecies Fishery Management Plan. The purpose of this action is to establish a 10-year rebuilding plan and adjust management measures for the overfished southern red hake stock. This action is necessary to meet the statutory requirements for an overfished stock and rebuilding plan consistent with the Magnuson-Stevens Fishery Conservation and Management Act.

DATES: Comments must be received by July 27, 2021.

ADDRESSES: The New England Fishery Management Council has prepared a draft environmental assessment (EA) for this action that describes the proposed measures in Framework Adjustment 62, other considered alternatives, and analyzes the impacts of the proposed measures and alternatives. The Council submitted a draft of Framework 62 to NMFS that includes the draft EA, a description of the Council’s preferred alternatives, and the Council’s rationale for selecting each alternative. Copies of the draft Framework 62, the draft EA, and information on the economic impacts of this proposed rulemaking are available upon request from Thomas A. Nies, Executive Director, New England Fishery Management Council, 50 Water Street, Newburyport, MA 01950 and accessible via the internet in documents library/framework-62.html.

You may submit comments on this document, identified by NOAA–NMFS–2020–0166, by any of the following methods:

Electronic Submission: Submit all electronic public comments via the Federal e-Rulemaking Portal. Go to
https://www.regulations.gov and enter NOAA–NMFS–2020–0166 in the Search box. Click on the “Comment” icon, complete the required fields, and enter or attach your comments.

Instructions: Comments sent by any other method, to any other address or individual, or received after the end of the comment period, may not be considered by NMFS. All comments received are a part of the public record and will generally be posted for public viewing on www.regulations.gov without change. All personal identifying information (e.g., name, address, etc., confidential business information, or otherwise sensitive information) submitted voluntarily by the sender will be publicly accessible. NMFS will accept anonymous comments (enter “N/A” in the required fields if you wish to remain anonymous).

FOR FURTHER INFORMATION CONTACT: Laura Hansen, Fishery Management Specialist, 978–281–9225.

SUPPLEMENTARY INFORMATION:

Background

In January 2018, the southern red hake stock was declared overfished. To meet the Magnuson-Stevens Act requirements of an overfished stock, a rebuilding plan and associated management measure changes are necessary to prevent overfishing, ensure adequate rebuilding, and help achieve optimum yield in the fishery. The New England Fishery Management Council took final action on this framework at its June 2020 meeting and submitted the action to us in mid-August 2020.

Proposed Action

Framework 62 would establish a 10-year rebuilding schedule for southern red hake. The proposed rebuilding schedule is a range from a minimum associated with a similar increase in biomass that occurred during 2006–2011 to a longer duration that accounts for biological characteristics of red hake. Southern red hake are fully mature, on average, at age 3 and the maximum observed age is 10 years in 2011–2019 survey data. By applying the estimated maturation rate and using biomass at age as a guide, and making reasonable assumptions that fertility (increases by 5 percent per year after age 3) and egg viability (full viability at age 5) increase with age, the Whiting Plan Development Team estimated that 50 percent of lifetime egg production of an unfiled female occurs at 4.4 years. By definition, it would take 50 percent of a female’s egg production to exactly replace itself and its mate with offspring that would spawn a successive generation. It would

requires accomplishing the requirements of paragraph (g)(1) of this AD.

(8) The “Remarks” section of EASA AD 2021–0023 does not apply to this AD.

(i) No Reporting Requirement

Where the service information referenced in EASA AD 2021–0023 specifies to submit certain information to the manufacturer, this AD does not include that requirement.

(j) Alternative Methods of Compliance (AMOCs)

(1) The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the International Validation Branch, send it to the attention of the person identified in paragraph (k)(2) of this AD. Information may be emailed to: 9-ANM-LAACO-AMOC-REQUESTS@faa.gov.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(k) Related Information

(1) For EASA AD 2021–0023, contact the EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email ADs@easa.europa.eu; internet www.easa.europa.eu. You may find this EASA AD on the EASA website at https://ad.easa.europa.eu. For Airbus Helicopter service information identified in this AD, Airbus Helicopters, 2701 N. Forum Drive, Grand Prairie, TX 75052; telephone (972) 641–0000 or (800) 232–0323; fax (972) 641–3775; or at https://www.airbus.com/ helicopters/services/technical-support.html.

For Airbus Helicopter service information identified in this AD, contact Daniel Poblete, Aerospace Engineer, Systems & Equipment Section, Los Angeles ACO Branch, Compliance & Airworthiness Division, 3960 Paramount Blvd., Lakewood, CA 90712; telephone (562) 627–5335; email daniel.d.poblete@faa.gov.

Issued on July 2, 2021.

Gaetano A. Sciortino,
Deputy Director for Strategic Initiatives, Compliance & Airworthiness Division, Aircraft Certification Service.

[FR Doc. 2021–14692 Filed 7–9–21; 8:45 am]

BILLING CODE 4910–13–P
be reasonable to expect a higher level of confidence that southern red hake can rebuild in approximately two generations, which equates to 10 years. Under this rebuilding program, catch limits would be established by reducing the acceptable biological catch (ABC) to 75-percent of the fishing mortality rate at maximum sustainable yield (FMSY) for the duration of the rebuilding period or until the stock reaches its biomass target, whichever happens first. In past years, the ABC has been set at 90-percent or higher of the FMSY. In addition, it would decrease the trip possession limit from 5,000 pounds (lb) (2,268 kilograms (kg)) to a dual 1,000-lb/600-lb (453.6-kg/272.2-kg) possession limit based on the selectivity of the gear type or mesh size being used. The 600-lb (272.2 kg) possession limit would apply to standard small-mesh trawls (less than 5.5-inch (13.97-centimeters) square or diamond mesh), which are less selective, while the 1,000-lb (453.6-kg) possession limit would apply to large-mesh trawls and other more selective gear types. These small-mesh selective gear types include raised-footrope trawls, large-mesh belly panel trawls, and rope separator trawls. The reduced possession limits are intended to reduce landings and catch and to incentivize fishermen to use gear and gear configurations that reduce the catch of red hake. The in-season accountability measure will remain in place which would reduce the possession limit to 400 lb (181 kg) when the landings meet or exceed the total allowable landings (TAL) trigger at 40.4 percent of the ACL. The Regional Administrator may deem other gears as selective based on an evaluation of their ability to adequately reduce the catch of red hake and would be announced through issuance of a rule in the Federal Register. In addition, the 1,000-lb (453.6-kg) possession limit applies to vessels when using gears other than trawls.

Classification

Pursuant to section 304(b)(1)(A) of the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act), the NMFS Assistant Administrator has determined that this proposed rule is consistent with all applicable Fishery Management Plans that the Council manages, other provisions of the Magnuson-Stevens Act, and other applicable law, subject to further consideration after public comment.

This proposed rule has been determined to be not significant for purposes of Executive Order 12866. The low negative economic loss to small entities from this action are associated with the small decrease in the southern red hake possession limit. The suite of preferred alternatives will result in a slight loss in revenue from a slight decrease in southern red hake landings compared to taking no action, which would keep the southern red hake possession limit at 5,000 lb (2,268 kg) and allow higher overall catch limits (i.e., higher ABC). The proposed changes in management measures are not likely to dramatically change fishing behavior and or catch because 60 to 80 percent of southern red hake are currently discarded due to lack of marketability. The magnitude in economic loss is low because the stock is not typically targeted. Therefore, the Council concluded, and NMFS agrees, that this action would not have a significant adverse impact on a substantial number of small businesses.

This proposed rule contains no information collection requirements under the Paperwork Reduction Act of 1995.

List of Subjects in 50 CFR Part 648

Fisheries, Fishing, Recordkeeping and reporting requirements.

Dated: July 1, 2021.

Samuel D. Rauch III,
Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For the reasons set out in the preamble, 50 CFR part 648 is proposed to be amended as follows:

PART 648—FISHERIES OF THE NORTHEASTERN UNITED STATES

1. The authority citation for part 648 continues to read as follows:

Authority: 16 U.S.C. 1801 et seq.

2. In §648.86, add paragraph (d)(1)(v) to read as follows:

§ 648.86 NE Multispecies possession restrictions.

| * | * | * | * | *
|---|---|---|---|---|
| (d) | * | * | * | *
| (1) | * | * | * | *
| (v) Possession of southern red hake while under a rebuilding plan. When the southern red hake stock, defined as statistical areas 525–526, 533–534, 541–543, 537–539, 562, 611–616, 621–623, 625–628, 631–634, 635–638, is under a rebuilding plan, the year-round possession limit for southern red hake shall be the following:

(A) Vessels possessing on board or using nets of mesh size smaller than 5.5 in (13.97 cm). Owners and operators of vessels may possess and land no more than 1,000 lb (453.6 kg) of red hake per trip and 400 lb (181 kg) during the in-season accountability measure.
than 600 lb (272 kg) of southern red hake per trip when:

(1) Using trawls with diamond or square mesh size less than 5.5 in (13.97 cm); and/or

(2) A vessel is in possession of a net with mesh size smaller than 5.5 in (13.97 cm), unless it is properly stowed and not available for immediate use in accordance with § 648.2 and not used on that trip.

(B) Vessels using nets of mesh size greater than or equal to 5.5 in (13.97 cm), using small-mesh selective trawls, or gear other than trawl. Owners and operators may possess and land no more than 1,000 lb (453 kg) of southern red hake per trip when:

(1) Using trawls with diamond or square mesh size 5.5 in (13.97 cm) or larger;

(2) Using small-mesh selective gear, including raised-footrope trawls as defined in § 648.80(a)(9)(ii), large-mesh belly panel trawls as defined in § 648.84(f), rope separator trawls as defined in § 648.84(e), and other selective gears deemed by the Regional Administrator to adequately reduce the catch of red hake; or

(3) When using gears other than trawls.

3. In § 648.90, revise paragraphs (b)(2) introductory text and (b)(2)(i) to read as follows:

§ 648.90 NE multispecies assessment, framework procedures and specifications, and flexible area action system.

(b) * * *

(2) Process for specifying ABCs, ACLs, and TALs. The Whiting PDT shall calculate the OFL and ABC values for each small-mesh multispecies stock based on the control rules established in the FMP. These calculations shall be reviewed by the SSC and guided by terms of reference developed by the Council. The ACLs and TALs shall be calculated based on the SSC’s approved ABCs, as specified in paragraphs (a)(2)(i)(A) through (C), and (a)(2)(ii)(A) through (C) of this section.

(i) Red hake—(A) ABCs. (1) The Council’s SSC will recommend an ABC to the Council for both the northern and southern stocks of red hake. The red hake ABCs are reduced from the OFLs based on an adjustment for scientific uncertainty as specified in the FMP; the ABCs must be less than or equal to the OFL.

(2) While the southern red hake stock is under a rebuilding plan, the ABC for that stock shall be set to 75-percent of the OFL for the duration of the rebuilding period or until the stock reaches its biomass target, whichever occurs first.

(B) ACLs. The red hake ACLs are equal to 95 percent of the corresponding ABCs.

(C) TALs. (1) The red hake TALs are equal to the northern red hake and southern red hake ACLs minus a discard estimate based on the most recent 3 years of data and then reduced by 3 percent to account for silver hake and offshore hake landings that occur in state waters.

(2) If more than two-thirds of the southern red hake TAL is harvested in a single year, the Regional Administrator shall consult with the Council and will consider implementing quarterly TALs in the following fishing year, as prescribed in the FMP and in a manner consistent with the requirements of the Administrative Procedure Act.
