

and No. 2 diversions, as required by Article 405 of the project license. The licensee states that the projected runoff is extremely low, and current runoff in the Kaweah River and East Fork Kaweah River is at the lowest level in 20 years. Being that the licensee cannot accurately forecast long-term runoff during this extreme drought event, it is proactively requesting the temporary variance to allow it to balance available instream flow with its contractual water rights obligations, should it become necessary. Should drought conditions persist and the temporary variance is implemented, the licensee would deliver the minimum amount of water necessary through the respective diversion in order to meet its contractual water rights obligations; the licensee would not generate at the respective powerhouse(s) during implementation of the variance. The licensee would only implement the variance in the event that low inflow into the diversion dam(s) impairs the ability to meet both minimum instream flow releases and domestic water supply requirements. Additionally, the licensee proposes to monitor and report flow conditions to U.S. Fish and Wildlife Service and California Department of Fish and Wildlife during the temporary variance.
