This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents.

**NUCLEAR REGULATORY COMMISSION**

**10 CFR Part 50**

[NRC–2020–0253]

**Advanced Manufacturing Technologies Subtask 2A**

**AGENCY:** Nuclear Regulatory Commission.

**ACTION:** Final report; issuance.

**SUMMARY:** The U.S. Nuclear Regulatory Commission (NRC) is issuing the final report entitled, “Implementation of Quality Assurance Criteria and 10 CFR 50.59 for Nuclear Power Plant Components Produced Using Advanced Manufacturing Technologies.”

**DATES:** This final report is available on July 23, 2021.

**ADDRESSES:** Please refer to Docket ID NRC–2020–0253 when contacting the NRC about the availability of information regarding this document. You may obtain publicly available information related to this document using any of the following methods:

- **Federal Rulemaking Website:** Go to https://www.regulations.gov and search for Docket ID NRC–2020–0253. Address questions about Docket IDs in Regulations.gov to Stacy Schumann; telephone: 301–415–0624; email: Stacy.Schumann@nrc.gov. For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.

- **Attention:** The PDR, where you may examine and order copies of public documents, is currently closed. You may submit your request to the PDR via email at pdr.resource@nrc.gov or call 1–800–397–4209 or 301–415–4737, between 8:00 a.m. and 4:00 p.m. (ET), Monday through Friday, except Federal holidays.

**SUPPLEMENTARY INFORMATION:**

**I. Background**

The NRC considers Advanced Manufacturing Technologies (AMTs) to consist of material processing and component fabrication methods that have not been traditionally used in the U.S. nuclear industry and have not yet received NRC approval through NRC-endorced codes and standards or the approval of an industry submittal. There are several regulatory paths available to a licensee for utilizing an AMT in a nuclear application, including: (1) Development of a code or standard that can be incorporated by reference in § 50.55a of chapter I of title 10 of the Code of Federal Regulations (10 CFR); (2) selection of an unregulated in service application; (3) submission of generic technical reports or plant-specific submittals for NRC approval; or (4) implementation of the 10 CFR 50.59, “Changes, tests and experiments,” 10 CFR 70.72, “Facility changes and change process,” or 10 CFR 72.48, “Changes, tests, and experiments” processes. The document addresses the processes, consistent with the QA requirements in appendix B to 10 CFR part 50 and in accordance with 10 CFR 50.59, in order to support the staff’s performance of potential inspections of a licensee’s implementation of these requirements for AMT-fabricated components.

**II. Congressional Review Act**

This action is a rule as defined in the Congressional Review Act (5 U.S.C. 801–808). However, the Office of Management and Budget has not found it to be a major rule as defined in the Congressional Review Act.

**III. Implementation**

The staff has added Appendix A, “Disposition of Public Comments,” to the final document to inform the reader how public comments were dispositioned. The Division of New and Renewed Licenses of the Office of Nuclear Reactor Regulation will transmit the final version of the document (ADAMS Accession Number ML21155A043) to each of the NRC Regional Offices via a memo to be issued concurrently with publication of this Federal Register notification.

Dated: July 19, 2021.

For the Nuclear Regulatory Commission.

Anna H. Bradford,
Director, Division of New and Renewed Licenses, Office of Nuclear Reactor Regulation.

[FR Doc. 2021–15658 Filed 7–22–21; 8:45 am] BILING CODE 7590–01–P

**FEDERAL RESERVE SYSTEM**

**12 CFR Part 204**

[Docket No. R–1753]

**RIN 7100–AG17**

**Regulation D: Reserve Requirements of Depository Institutions**

**AGENCY:** Board of Governors of the Federal Reserve System.

**ACTION:** Final rule.

**SUMMARY:** The Board of Governors of the Federal Reserve System ("Board") is amending Regulation D, Reserve Requirements of Depository Institutions to revise the rate of interest paid on balances maintained to satisfy reserve balance requirements ("IORR") and the rate of interest paid on excess balances ("IOER") maintained at Federal Reserve Banks by or on behalf of eligible institutions. The final amendments specify that IOER is 0.15 percent and IORR is 0.15 percent, a 0.05 percentage point increase from their prior levels. The amendments are intended to enhance the role of IORR and IOER in maintaining the Federal funds rate in the target range established by the Federal Open Market Committee ("FOMC" or "Committee").
The Board is amending §204.10(b)(5) of Regulation D to specify that IORR is 0.15 percent and IOER is 0.15 percent. The amendments represent a 0.05 percentage point increase in IORR and IOER. This decision was announced on June 16, 2021, with an effective date of June 17, 2021, in the Federal Reserve Implementation Note that accompanied the FOMC’s statement on June 16, 2021. The FOMC statement stated that the Committee decided to maintain the target range for the federal funds rate at 0 to 1/4 percent.

A Federal Reserve Implementation note stated:

The Board of Governors of the Federal Reserve System voted unanimously to set the interest rate paid on required and excess reserve balances at 0.15 percent, effective June 17, 2021. Setting the interest rate paid on required and excess reserve balances 15 basis points above the bottom of the target range for the federal funds rate is intended to foster trading in the federal funds market at rates well within the Federal Open Market Committee’s target range and to support the smooth functioning of short-term funding markets.

As a result, the Board is amending §204.10(b)(5) of Regulation D to reduce IORR to 0.15 percent and IOER to 0.15 percent.

III. Administrative Procedure Act

In general, the Administrative Procedure Act (“APA”) imposes three principal requirements when an agency promulgates legislative rules (rules made pursuant to Congressionally-delegated authority): (1) Publication with adequate notice of a proposed rule; (2) followed by a meaningful opportunity for the public to comment on the rule’s content; and (3) publication of the final rule not less than 30 days before its effective date. The APA provides that notice and comment procedures do not apply if the agency finds them to be unnecessary, impracticable, or contrary to the public interest. Section 553(d) of the APA also provides that publication at least 30 days prior to a rule’s effective date is not required for (1) a substantive rule which grants or recognizes an exemption or relieves a restriction; (2) interpretive rules and statements of policy; or (3) a rule for which the agency finds good cause for shortened notice and publishes its reasoning with the rule. The Board has determined that good cause exists for finding that the notice, public comment, and delayed effective date provisions of the APA are unnecessary, impracticable, or contrary to the public interest with respect to these final amendments to Regulation D. The rate changes for IORR and IOER that are reflected in the final amendments to Regulation D were made with a view towards accommodating commerce and business and with regard to their bearing upon the general credit situation of the country. Notice and public comment would prevent the Board’s action from being effective as promptly as necessary in the public interest and would not otherwise serve any useful purpose. Notice, public comment, and a delayed effective date would create uncertainty about the finality and effectiveness of the Board’s action and undermine the effectiveness of that action. Accordingly, the Board has determined that good cause exists to dispense with the notice, public comment, and delayed effective date procedures of the APA with respect to these final amendments to Regulation D.

IV. Regulatory Flexibility Analysis

The Regulatory Flexibility Act (“RFA”) does not apply to a rulemaking where a general notice of proposed rulemaking is not required. As noted previously, the Board has determined that it is unnecessary and contrary to the public interest to publish a general notice of proposed rulemaking for this final rule. Accordingly, the RFA’s requirements relating to an initial and final regulatory flexibility analysis do not apply.

V. Paperwork Reduction Act

In accordance with the Paperwork Reduction Act (“PRA”) of 1995, the Board reviewed the final rule under the authority delegated to the Board by the Office of Management and Budget. The final rule contains no requirements subject to the PRA.

List of Subjects in 12 CFR Part 204

Banks, Banking, Reporting and recordkeeping requirements.

Authority and Issuance

For the reasons set forth in the preamble, the Board amends 12 CFR part 204 as follows:

PART 204—RESERVE REQUIREMENTS OF DEPOSITORY INSTITUTIONS (REGULATION D)

1. The authority citation for part 204 continues to read as follows:

Authority: 12 U.S.C. 248(a), 248(c), 461, 601, 611, and 3105.

2. Section 204.10 is amended by revising paragraph (b)(5) to read as follows:

§204.10 Payment of interest on balances.

BILLING CODE 6210–01–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

RIN 2120–AA64

Airworthiness Directives; Bell Textron Canada Limited (Type Certificate Previously Held by Bell Helicopter Textron Canada Limited)

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for certain Bell Helicopter Textron Canada Limited (now Bell Textron Canada Limited) Model 206A, 206B, 206L, 206L–1, 206L–3, and 206L–4 helicopters. This AD was prompted by a report that a certain tail rotor disc assembly, sold as an alternate part, does not conform to the approved configuration. This AD requires determining if an affected part is installed (by doing a maintenance records check or inspection), and if an affected part is found, replacement with a non-affected part. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective August 27, 2021.

The Director of the Federal Register approved the incorporation by reference of certain documents listed in this AD as of August 27, 2021.

ADDRESSES: For service information identified in this final rule, contact Bell Helicopter Textron Canada Limited, 12,800 Rue de l’Avenir, Mirabel, Quebec J7T1R4; phone: 450–437–2862 or 800–363–8023; fax: (450) 433–0272; internet: https://www.bellcustomer.com. You may view the referenced service information at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Pkwy., Room 6N–321, Fort Worth, TX 76177. Service information that is incorporated by reference is also available at https://www.regulations.gov by searching for and locating Docket No. FAA–2010–0865.

EXAMINING THE AD DOCKET

You may examine the AD docket at https://www.regulations.gov by searching for and locating Docket No. FAA–2010–0865; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the Transport Canada AD, any comments received, and other information. The street address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT: Kathleen Arrigotti, Program Manager, Large Aircraft Section, International Validation Branch, Compliance & Airworthiness Division, FAA, 2200 South 21st St., Des Moines, WA 50318; phone and fax: (206) 231–3218; email: kathleen.arrigotti@faa.gov.

SUPPLEMENTARY INFORMATION:

Background

The FAA issued a supplemental notice of proposed rulemaking (SNPRM) to amend 14 CFR part 39 by adding an AD that would apply to certain Bell Textron Canada Limited Model 206A, 206B, 206L, 206L–1, 206L–3, and 206L–4 helicopters. The SNPRM published in the Federal Register on May 7, 2021 (86 FR 24560). The SNPRM proposed to require determining if an affected part is installed (by doing a maintenance records check or inspection), and if an affected part is found, replacement with a non-affected part. The SNPRM also revised the format, rearranged certain paragraphs, converted a certain table to paragraph format, and removed certain language. The SNPRM was prompted by a significant amount of time elapsing since the notice of proposed rulemaking (NPRM) (75 FR 52914, August 30, 2010) was issued, requiring the FAA to reopen the comment period to allow the public a chance to comment on the proposed actions.

Transport Canada Civil Aviation (TCCA), which is the aviation authority for Canada, issued Canadian AD CF–2010–07, dated February 24, 2010 (Canadian AD CF–2010–07), to correct an unsafe condition for certain Bell Helicopter Textron Canada Limited (now Bell Textron Canada Limited) Model 206A, 206B, 206L, 206L–1, 206L–3, and 206L–4 helicopters. TCCA advises that a certain tail rotor disc assembly, sold through Bell Helicopter Spares beginning March 2009, as an alternate, does not conform to the approved configuration. TCCA stated operating a helicopter with the affected tail rotor disc assembly could result in loss of control of the helicopter. Accordingly, the Canadian AD requires determining if an affected part is installed, and if an affected part is found, replacement with a non-affected part.

DISCUSSION OF FINAL AIRWORTHINESS DIRECTIVE COMMENTS

The FAA received a comment from one commenter, Bell Textron Canada Limited. The following presents the comment received on the SNPRM and the FAA’s response to the comment.

REQUEST TO ADD A STATEMENT FOR OPERATORS THAT ALREADY COMPLIED WITH THE ACTIONS

Bell Textron Canada Limited requested that the FAA add a statement to the effect that if the actions in Bell Helicopter Alert Service Bulletin 206–09–123, Revision A, dated June 10, 2009; or Bell Helicopter Alert Service Bulletin 206L–09–157, Revision A, dated June 10, 2009; have already been accomplished then the intent of the AD is met and no further action is required. The commenter stated that many operators will have already complied with the intent of the proposed AD since the service information was released in 2009.

The FAA acknowledges the commenter’s request and agrees to clarify. Paragraph (g) of this AD requires accomplishing actions using Bell Helicopter Alert Service Bulletin 206–09–123, Revision A, dated June 10, 2009; or Bell Helicopter Alert Service Bulletin 206L–09–157, Revision A, dated June 10, 2009. Paragraph (f) of this AD states to accomplish the required actions within the compliance times specified, “unless already done.” Therefore, if operators have accomplished the actions required for compliance with this AD before the effective date of this AD, no further action is necessary. The FAA has not revised this AD in this regard.

CONCLUSION

These helicopters have been approved by the aviation authority of Canada and
are approved for operation in the United States. Pursuant to the FAA’s bilateral agreement with Canada, TCCA, its technical representative, has notified the FAA of the unsafe condition described in its AD. The FAA reviewed the relevant data, considered the comment received, and determined that air safety requires adopting this AD as proposed. Accordingly, the FAA is issuing this AD to address the unsafe condition on these helicopters.

**Related Service Information Under 1 CFR Part 51**

The FAA reviewed the following service information. This service information specifies procedures to determine if an affected part is installed, and if an affected part is found, replacement with a non-affected part. These documents are distinct since they apply to different helicopter models.

**List of Subjects in 14 CFR Part 39**

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

**The Amendment**

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

**PART 39—AIRWORTHINESS DIRECTIVES**

1. The authority citation for part 39 continues to read as follows:

   **Authority:** 49 U.S.C. 106(g), 40113, 44701.

   §39.13 [Amended]

2. The FAA amends §39.13 by adding the following new airworthiness directive:

   **2021–15–06 Bell Textron Canada Limited**
   
   **(Type Certificate Previously Held by Bell Helicopter Textron Canada Limited):**
   

   **(a) Effective Date**
   
   This airworthiness directive (AD) is effective August 27, 2021.

   **(b) Affected ADs**
   
   None.

   **(c) Applicability**
   
   This AD applies to the following Bell Textron Canada Limited (type certificate previously held by Bell Helicopter Textron Canada Limited) helicopters, certificated in any category:
   
   (1) Model 206A, serial numbers 004 through 660 inclusive, and 672 through 715 inclusive;
   
   (2) Model 206B, all serial numbers, including those converted from Model 206A;
   
   (3) Model 206L, serial numbers 45004 through 45153 inclusive, and 46601 through 46617 inclusive;
   
   (4) Model 206L–1, serial numbers 45154 through 45790 inclusive;
   
   (5) Model 206L–2, serial numbers 51001 through 51612 inclusive; and
   
   (6) Model 206L–4, all serial numbers.

   **(d) Subject**
   
   Joint Aircraft Service Component (JASC) Code: 65, Tail Rotor Drive.

   **(e) Unsafe Condition**
   
   This AD was prompted by a report that a certain tail rotor disc assembly, sold as an alternate part, does not conform to the approved configuration. The FAA is issuing this AD to address helicopters operating with a certain tail rotor disc assembly, sold as an alternate part, that does not conform to the approved configuration, which could result in loss of control of the helicopter.

   **(f) Compliance**
   
   Comply with this AD within the compliance times specified, unless already done.

   **(g) Required Actions**
   
   Do the actions specified in paragraphs (g)(1) through (4) of this AD, in accordance with Bell Helicopter Alert Service Bulletin 206L–09–123, Revision A, dated June 10, 2009; or Bell Helicopter Alert Service Bulletin 206L–09–157, Revision A, dated June 10, 2009, as applicable.

   (1) Within 30 days or 100 hours time-in-service (TIS) after the effective date of this AD, whichever occurs first, review the helicopter maintenance records to determine if a disc assembly, part number P/N 101584–1 or –2, is installed.

   (2) If, during the maintenance records review required by paragraph (g)(1) of this AD, you cannot positively determine that disc assembly P/N 101584–1 or –2 is not installed, within 30 days or 100 hours TIS after the effective date of this AD, whichever occurs first, inspect the tail rotor driveshaft system to determine if disc assembly P/N 101584–1 or –2 is installed.
The FAA is adopting a new airworthiness directive (AD) for certain Airbus Helicopters Model SA–365N, SA–365N1, AS–365N2, and AS 365 N3 helicopters. This AD was prompted by a report that damage (scorch marks) was found on an internal life raft installation that contained a half rescue kit. This AD requires identifying the part number and serial number of each half rescue kit located in the internal life raft installation and, depending on the findings, inspecting the life raft for damage, inspecting the condition of the flashlight battery, testing the flashlight battery, and replacing the life raft or flashlight battery (including the leak test) as applicable, as specified in a European Aviation Safety Agency (now European Union Aviation Safety Agency) (EASA) AD, which is incorporated by reference. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective August 27, 2021.

The Director of the Federal Register approved the incorporation by reference of certain publications listed in this AD as of August 27, 2021.

ADDRESSES: For EASA material incorporated by reference (IBR) in this AD, contact the EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email ADs@easa.europa.eu; internet: www.easa.europa.eu. You may find this material on the EASA website at https://ad.easa.europa.eu. For Zodiac Aerospace service information identified in this final rule, contact Safran Aerosystems—Plaisir, 61 rue Pierre Curie CS20001, 78373 Plaisir Cedex, France; telephone (33) 1 61 34 23 23; fax (33) 1 61 34 24 41; or at https://www.safran-aerosystems.com. You may view this material at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Pkwy., Room 6N–321, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call 817–222–5110. It is also available in the AD docket on the internet at https://www.regulations.gov by searching for and locating Docket No. FAA–2021–0188.

Examining the AD Docket

You may examine the AD docket on the internet at https://www.regulations.gov by searching for and locating Docket No. FAA–2021–0188; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT:
Kathleen Arrigotti, Program Manager, Large Aircraft Section, International Validation Branch, Compliance & Airworthiness Division, FAA, 2200 South 216th St., Des Moines, WA 98198; telephone and fax: (206) 231–3218; email: kathleen.arrigotti@faa.gov.

SUPPLEMENTARY INFORMATION:

Background

The EASA, which is the Technical Agent for the Member States of the European Union, has issued EASA AD 2016–0028, dated February 15, 2016 (EASA AD 2016–0028) (also referred to as the Mandatory Continuing Airworthiness Information, or the MCAI), to correct an unsafe condition for certain Airbus Helicopters Model

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to certain Model SA–365N, SA–365N1, AS–365N2, and AS 365 N3 helicopters. The NPRM published in the Federal Register on March 23, 2021 (86 FR 15431). The NPRM was prompted by a report that damage (scorch marks) was found on an internal life raft installation that contained a half rescue kit. Investigation revealed that the damage was caused by an unsuitable folding process for the life raft, which led to compression of the flashlight battery in the half rescue kit. This compression caused an electrolyte leakage, followed by a short-circuit that damaged the internal life raft. The NPRM proposed to require identifying the part number and serial number of each half rescue kit located in the internal life raft installation and, depending on the findings, inspecting the life raft for damage, inspecting the condition of the flashlight battery, testing the flashlight battery, and replacing the life raft or flashlight battery (including the leak test) as applicable, as specified in an EASA AD.

The FAA is issuing this AD to address leakage of the flashlight battery in a half rescue kit, which could result in damage to the internal life raft, and subsequent failure of the internal life raft to deploy (for example after a ditching), which could impede or prevent safe evacuation of the occupants from the helicopter. See the MCAI for additional background information.

Discussion of Final Airworthiness Directive

Comments

The FAA gave the public the opportunity to participate in developing this final rule. The FAA received no comments on the NPRM or on the determination of the cost to the public.

Costs of Compliance Update

The NPRM did not include the kit cost for the on-condition action specified in paragraph (2) of EASA AD 2016–0028. The FAA has received this cost data and has updated the costs of compliance accordingly.

Conclusion

The FAA reviewed the relevant data and determined that air safety and the public interest require adopting this final rule as proposed, except for minor changes. In the NPRM, the FAA proposed to require actions specified in EASA AD 2016–0028 through incorporation by reference, except for certain differences. The FAA has obtained approval to use this process from certain manufacturers, including Airbus Helicopters; however, the FAA has not worked with Zodiac Aerospace (which has been merged into Safran Aerosystems) for approval of this process. EASA AD 2016–0028 specifies using Zodiac Aerospace Service Bulletin SB 025–64–13, Revision 0, dated November 23, 2015 (SB 025–64–13 Rev 0) or Revision 1, dated January 19, 2016 (SB 025–64–13 Rev 1), to accomplish a certain action. In light of this, an exception has been added into this final rule to directly use SB 025–64–13 Rev 0 or SB 025–64–13 Rev 1, instead of using SB 025–64–13 Rev 0 or SB 025–64–13 Rev 1 through incorporation by reference of EASA AD 2016–0028.

The FAA has determined that these minor changes:

• Are consistent with the intent that was proposed in the NPRM for addressing the unsafe condition; and
• Do not add any additional burden upon the public than was already identified in the NPRM.

Related Service Information Under 1 CFR Part 51

EASA AD 2016–0028 specifies identifying the part number and serial number of each half rescue kit located in the internal life raft installation, inspecting the life raft for damage (scorch marks), inspecting the condition of the flashlight battery (including cracks, impacts, swelling, damage, distorted case, and the connecting wire), testing the flashlight battery (turning on the flashlight), and replacing the life raft or flashlight battery (including the leak test).

The FAA reviewed SB 025–64–13 Rev 0, which specifies procedures to visually inspect the condition of the life raft and battery, and test the battery. The FAA also reviewed SB 025–64–13 Rev 1, which specifies the same procedures as SB 025–64–13 Rev 0, except SB 025–64–13 Rev 1 corrects the serial numbers identified in the effectiveness.

This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the ADDRESSES section.

Differences Between This AD and the MCAI

Although the service information referenced in EASA AD 2016–0028 specifies to return damaged life rafts to the manufacturer, this AD does not include that requirement.

Where EASA AD 2016–0028 refers to its effective date or to January 7, 2016 (the effective date of EASA AD 2015–0242), this AD requires compliance within 3 months after the effective date of this AD.

Although the service information referenced in EASA AD 2016–0028 specifies that trained and authorized Zodiac Aerospace personnel must do the inspection of the half rescue kit, this AD does not require that Zodiac Aerospace personnel do the inspection.

Costs of Compliance

The FAA estimates that this AD affects 30 helicopters of U.S. registry. The FAA estimates the following costs to comply with this AD:

<table>
<thead>
<tr>
<th>ESTIMATED COSTS FOR REQUIRED ACTIONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Labor cost</td>
</tr>
<tr>
<td>1 work-hour × $85 per hour = $85</td>
</tr>
</tbody>
</table>

The FAA estimates the following costs to do any necessary on-condition actions that would be required based on the results of any required actions. The FAA has no way of determining the number of helicopters that might need these on-condition actions:
According to Zodiac Aerospace, some or all of the costs of this AD may be covered under warranty, thereby reducing the cost impact on affected operators. The FAA does not control warranty coverage for affected operators. As a result, the FAA has included all known costs in the cost estimate.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency’s authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a “significant regulatory action” under Executive Order 12866, (2) Will not affect intrastate aviation in Alaska, and (3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. The FAA amends § 39.13 by adding the following new airworthiness directive:

(a) Effective Date

This airworthiness directive (AD) is effective August 27, 2021.

(b) Affected ADs

None.

(c) Applicability

(d) Subject

(e) Reason

This AD was prompted by a report that damage (scorch marks) was found on an internal life raft installation that contained a half rescue kit. Investigation revealed that the damage was caused by an unsuitable folding process for the life raft, which led to compression of the flashlight battery in the half rescue kit. The FAA is issuing this AD to address leakage of the flashlight battery in a half rescue kit, which could result in damage to the internal life raft, and subsequent failure of the internal life raft to deploy (for example after a ditching), which could impede or prevent safe evacuation of the occupants from the helicopter.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Requirements

Except as specified in paragraph (b) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, EASA AD 2016–0028.

(b) Exceptions to EASA AD 2016–0028

(1) Where EASA AD 2016–0028 refers to its effective date or to January 7, 2016 (the effective date of EASA AD 2015–0242), this AD requires compliance within 3 months after the effective date of this AD.

(2) The “Remarks” section of EASA AD 2016–0028 does not apply to this AD.

(4) Although the service information referenced in EASA AD 2016–0028 specifies to return certain parts, this AD does not include that requirement.

(5) Although the service information referenced in EASA AD 2016–0028 specifies that trained and authorized Zodiac Aerospace personnel must do the inspection of the half rescue kit, this AD does not require that Zodiac Aerospace personnel do the inspection.

(i) Alternative Methods of Compliance (AMOCs)

(1) The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the International Validation Branch, send it to the attention of the person identified in paragraph (j) of this AD.

Information may be emailed to: 9-AVS-AIR-730-AMOC@faa.gov.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/ certificate holding district office.

(j) Related Information

For more information about this AD, contact Kathleen Arrigotti, Program Manager, Large Aircraft Section, International Validation Branch, Compliance & Airworthiness Division, FAA, 2200 South 216th St., Des Moines, WA 98198; telephone and fax (206) 231–5218; email kathleen.arrigotti@faa.gov.

(k) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference

AGENCY: Federal Aviation Administration

14 CFR Part 39

RIN 2120–AA64

Airworthiness Directives; General Electric Company Turboprop Engines

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for certain General Electric Company (GE) CF6–80A and CF6–80C2 model turbofan engines. This AD was prompted by an inspection by the manufacturer that revealed cracking of the high-pressure turbine (HPT) rotor stage 1 disk. This AD requires visual inspection and fluorescent penetrant inspection (FPI) of the HPT thermal shield and, if cracking is detected, removal from service of the HPT thermal shield, HPT rotor stage 1 disk and HPT rotor stage 2 disk. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective August 27, 2021.

ADDRESSES: For service information identified in this final rule, contact General Electric Company, 1 Neumann Way, Cincinnati, OH 45215; phone: (513) 552–3272; aviation.fleetsupport@ae.ge.com; website: www.ge.com. You may view this service information at https://www.ge.com.

You may find this EASA AD on the EASA website at https://ad.easa.europa.eu. For Zodiac Aerospace service information, contact Safran Aerosystems—Plaisir, 61 rue Pierre Curie CS20001, 78373 Plaisir Cedex, France; telephone (33) 1 61 34 23 23; fax (33) 1 61 34 24 41; or at https://www.safran-aerosystmes.com.

You may view this service information at the FAA, Office of the Regional Counsel, Southwestern Region, 10101 Hillwood Pkwy., Room 6N–321, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call 817–222–5110. This material may be found in the AD docket on the internet at https://www.regulations.gov by searching for and locating Docket No. FAA–2020–1179; or in person at Docket Operations,Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590. Information on the availability of this material at NARA, email fdsys@gpo.gov, or go to https://www.archives.gov/federal-register/cfr/ibr-locations.html.

Issued on June 10, 2021.

Ross Landes,
Deputy Director for Regulatory Operations, Compliance & Airworthiness Division, Aircraft Certification Service.

SUPPLEMENTARY INFORMATION:

Background

Discussion of Final Airworthiness Directive

Comments

The FAA received comments from five commenters. The commenters were Atlas Air, Boeing Commercial Airplanes (Boeing), Delta Air Lines (Delta), United Airlines (United) and the Air Line Pilots Association, International (ALPA). The following presents the comments received on the NPRM and the FAA’s response to each comment.

Request To Update Shop Manual

Atlas Air requested that the FAA revise GE CF6–80C2, ESM 72–53–05, High Pressure Turbine (HPT) Rotor Thermal Shield—Inspection to add the proposed requirement to remove from service the HPT thermal shield, the HPT rotor stage 1 disk, and the HPT rotor stage 2 disk from service if a crack is found, since the thermal shield can be sent to different vendors outside the engine shop. Delta also suggested that the technical data within the Engine Shop Manual (ESM) should be updated to ensure inspection requirements are equivalent across all tasks within the ESM.

The FAA disagrees. Requiring updates to the ESM is unnecessary to correct the unsafe condition identified in this AD. The visual and FPI inspections in the required actions of this AD are the equivalent across all tasks within the ESM.
Request To Revise References to Engine Manual

Boeing requested that the FAA update reference to the service information in the Related Service Information section of the NPRM by referencing Revision 90 of the GE CF6–80A Engine Manual and Revision 91 of the CF6–80C2 Engine Manual. These revisions of the respective manuals include updated procedures regarding HPT rotor Stage 1 and Stage 2 disk serviceability for these model engines with respect to HPT thermal shield inspection findings.

The FAA disagrees. Operators may use any approved method to perform the visual and FPI inspections required by this AD.

Request To Clarify Engine Applicability

United requested that the FAA remove CF6–80C2B8F model turbofan engines from the applicability of this AD. United commented that two HPT thermal shield configurations exist, part number (P/N) 2797M85P01 and P/N 9315M41P20. Neither of these configurations are applicable to the R88DT HPT rotor installed on CF6–80C2B8F model turbofan engines. United requested that if the FAA considers the CF6–80C2B8F turbofan engine model affected by this AD, then the applicable engine manual should be updated to reflect the inspections required by this AD.

The FAA agrees. This AD is not applicable to the R88DT HPT rotor installed on CF6–80C2B8F model turbofan engines because that rotor configuration does not have an affected thermal shield. The FAA added the applicable part numbers for HPT thermal shields installed on CF6–80A and CF6–80C2 model turbofan engines to the applicability paragraph of this AD.

Support for the NPRM

ALPA supported the NPRM without change.

Conclusion

The FAA reviewed the relevant data, considered any comments received, and determined that air safety requires adopting this AD as proposed. Accordingly, the FAA is issuing this AD to address the unsafe condition on these products. Except for minor editorial changes and any other changes described previously, this AD is adopted as proposed in the NPRM. None of the changes will increase the economic burden on any operator.

Related Service Information

Costs of Compliance

The FAA estimates that this AD affects 1,084 engines installed on airplanes of U.S. registry.

The FAA estimates the following costs to comply with this AD:

### ESTIMATED COSTS

<table>
<thead>
<tr>
<th>Action</th>
<th>Labor cost</th>
<th>Parts cost</th>
<th>Cost per product</th>
<th>Cost on U.S. operators</th>
</tr>
</thead>
<tbody>
<tr>
<td>Perform FPI and visual inspection of HPT thermal shield</td>
<td>2 work-hours × $85 per hour = $170</td>
<td>$0</td>
<td>$170</td>
<td>$184,280</td>
</tr>
</tbody>
</table>

The FAA estimates the following costs to do any necessary replacements that would be required based on the results of the inspection. The agency has no way of determining the number of aircraft that might need these replacements.

### ON-CONDITION COSTS

<table>
<thead>
<tr>
<th>Action</th>
<th>Labor cost</th>
<th>Parts cost</th>
<th>Cost per product</th>
</tr>
</thead>
<tbody>
<tr>
<td>Replace HPT thermal shield</td>
<td>2 work-hours × $85 per hour = $170</td>
<td>$209,600</td>
<td>$209,770</td>
</tr>
<tr>
<td>Replace HPT rotor stage 1 disk</td>
<td>2 work-hours × $85 per hour = $170</td>
<td>799,700</td>
<td>799,870</td>
</tr>
<tr>
<td>Replace HPT rotor stage 2 disk</td>
<td>2 work-hours × $85 per hour = $170</td>
<td>364,600</td>
<td>364,770</td>
</tr>
</tbody>
</table>

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency’s authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.
Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:
(1) Is not a “significant regulatory action” under Executive Order 12866,
(2) Will not affect intrastate aviation in Alaska, and
(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

§ 39.13 [Amended]

1. The authority citation for part 39 continues to read as follows:
Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. The FAA amends § 39.13 by adding the following new airworthiness directive:

2021–14–11 General Electric Company:
Amendment 39–21638; Docket No. FAA–2020–1179; Project Identifier AD–2020–00818–E.

(a) Effective Date

This airworthiness directive (AD) is effective August 27, 2021.

(b) Affected ADs

None.

(c) Applicability

(d) Subject

Joint Aircraft System Component (JASC) Code 7250, Turbine Section.

(e) Unsafe Condition

This AD was prompted by an inspection by the manufacturer that revealed cracking of the high-pressure turbine (HPT) rotor stage 1 disk, caused by initial flange-to-flange cracking on the HPT thermal shield between the HPT rotor stage 1 disk and the HPT rotor stage 2 disk. The FAA is issuing this AD to prevent failure of the HPT rotor stage 1 disk and the HPT rotor stage 2 disk. The unsafe condition, if not addressed, could result in uncontained release of the HPT rotor stage 1 and stage 2 disks, damage to the engine, and damage to the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

(1) After the effective date of this AD, at every piece-part exposure of the HPT rotor stage 1 disk, HPT rotor stage 2 disk, or the HPT thermal shield, perform a visual inspection and a fluorescent penetrant inspection of the HPT thermal shield.
(2) During any inspection required by paragraph (g)(1) of this AD, if a crack extending through either the forward or aft flange of the HPT thermal shield is detected, remove the HPT thermal shield, the HPT rotor stage 1 disk, and the HPT rotor stage 2 disk from service.

(h) Installation Prohibition

Do not install onto any engine an HPT rotor stage 1 disk or HPT rotor stage 2 disk that was removed from service due to the requirements of paragraph (g)(2) of this AD.

(i) Definition

For the purpose of this AD, “piece-part exposure” is when the HPT rotor stage 1 disk, HPT rotor stage 2 disk, or HPT thermal shield is separated from their mating rotor parts within the HPT rotor module.

(j) Alternative Methods of Compliance (AMOCs)

(1) The Manager, ECO Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the ECO Branch, send it to the attention of the person identified in Related Information. You may email your request to: ANE-AD-AMOC@faa.gov.
(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/ certificate holding district office.

(k) Related Information

For more information about this AD, contact Kevin M. Clark, Aviation Safety Engineer, ECO Branch, FAA, 1200 District Avenue, Burlington, MA 01803; phone: (781) 238–7088; fax: (781) 238–7199; email: Kevin.M.Clark@faa.gov.

(l) Material Incorporated by Reference

None.

Issued on June 25, 2021.

Lance T. Gant,
Director, Compliance & Airworthiness Division, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

RIN 2120–AA64

Airworthiness Directives; Leonardo S.p.a. Helicopters

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for certain Leonardo S.p.a. Model AB139 and AW139 helicopters. This AD was prompted by two events of uncommanded emergency flotation system (EFS) deployment during flight. This AD requires replacing certain part-numbered EFS control panels and prohibits installing them. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective August 27, 2021.

ADDRESSES: For service information identified in this final rule, contact Leonardo S.p.A. Helicopters, Emanuele Bufano, Head of Airworthiness, Viale G.Augusta 520, 21017 C.Costa di Samarate (Va) Italy; telephone +39–0331–225074; fax +39–0331–229046; or at https://www.leonardocompany.com/en/home. You may view the referenced service information at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Pkwy., Room 6N–321, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call (817) 222–5110.

Examining the AD Docket

You may examine the AD docket at https://www.regulations.gov by
searching for and locating Docket No. FAA–2021–0375; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the European Aviation Safety Agency (now European Union Aviation Safety Agency) (EASA) AD, any comments received, and other information. The street address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT:
Ronnea Derby, Aerospace Engineer, Denver ACO Branch, Compliance & Airworthiness Division, FAA, 26805 E 68th Ave., Mail Stop Room 214; Denver, CO 80249; telephone (303) 342–1093; email Ronnea.Derby@faa.gov.

SUPPLEMENTARY INFORMATION:

Background

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to Leonardo S.p.a. Model AB139 and AW139 helicopters with an EFS control panel part number (P/N) 3G9560V00556 (for use with night vision goggle) or 3G9560V00557 (standard) installed. The NPRM published in the Federal Register on May 25, 2021 (86 FR 28040). In the NPRM, the FAA proposed to require replacing EFS control panel P/Ns 3G9560V00556 and 3G9560V00557 with EFS control panel P/Ns 3G9560V00559 and 3G9560V00558, respectively. The NPRM also proposed to prohibit installing EFS control panel P/Ns 3G9560V00556 and 3G9560V00557 on any helicopter. The NPRM was prompted by EASA AD 2015–0172, dated July 6, 2015. This service information specifies procedures for replacing EFS control panel P/Ns 3G9560V00556 and 3G9560V00557 with EFS control panel P/Ns 3G9560V00559 and 3G9560V00558, respectively. This service information also notes that EFS control panel P/Ns 3G9560V00556 and 3G9560V00557 can be upgraded by following Sirio Panel Service Bulletins 6WS–Mi100135 Ed.01 and 6WS–Mi100134 Ed.01.

Differences Between This AD and the EASA AD

EASA AD 2015–0172 applies to Model AB139 and AW139 helicopters with an EFS installed, whereas this AD applies to those model helicopters with EFS control panel P/N 3G9560V00556 (for use with night vision goggle) or 3G9560V00557 (standard) installed instead. EASA advises of two events of uncommanded EFS deployment during flight. Subsequent investigation revealed that these conditions had been caused by improper design of EFS control panel P/Ns 3G9560V00556 (for use with night vision goggle) and 3G9560V0057 (standard). This condition, if not addressed, could result in reduced control of the helicopter.

Discussed of Final Airworthiness Directive

Comments

The FAA received no comments on the NPRM or on the determination of the costs.

Conclusion

These helicopters have been approved by EASA and are approved for operation in the United States. Pursuant to the FAA’s bilateral agreement with the European Union, EASA has notified the FAA about the unsafe condition described in its AD. The FAA reviewed the relevant data and determined that air safety requires adopting this AD as proposed. Accordingly, the FAA is issuing this AD to address the unsafe condition on these helicopters.

Related Service Information

The FAA reviewed AgustaWestland Bollettino Tecnico No. 139–374, dated June 7, 2015. This service information specifies procedures for replacing EFS control panel P/Ns 3G9560V00556 and 3G9560V00557 with EFS control panel P/Ns 3G9560V00559 and 3G9560V00558, respectively. This service information also notes that EFS control panel P/Ns 3G9560V00556 and 3G9560V00557 can be upgraded by following Sirio Panel Service Bulletins 6WS–Mi100135 Ed.01 and 6WS–Mi100134 Ed.01.

Costs of Compliance

The FAA estimates that this AD affects 133 helicopters of U.S. Registry. Labor rates are estimated at $85 per work-hour. Based on these numbers, the FAA estimates the following costs to comply with this AD.

Replacing an EFS control panel takes about 1 work-hour and parts cost about $12,342 for an estimated cost of $12,427 per helicopter and up to $1,652,791 for the U.S. fleet.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency’s authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on helicopters identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. For the reasons discussed above, I certify that this AD:

(1) Is not a “significant regulatory action” under Executive Order 12866,
(2) Will not affect intrastate aviation in Alaska, and
(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator,
the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. The FAA amends § 39.13 by adding the following new airworthiness directive:

(a) Effective Date

This airworthiness directive (AD) is effective August 27, 2021.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Leonardo S.p.a. Model AB139 and AW139 helicopters, certified in any category, with an emergency flotation system (EFS) control panel part number (P/N) 3G9560V00556 (for use with night vision goggles) or 3G9560V00557 (standard) installed.

(d) Subject

Joint Aircraft Service Component (JASC) Code: 3212, Emergency Flotation Section.

(e) Unsafe Condition

This AD was prompted by two events of uncommanded EFS deployment during flight. The FAA is issuing this AD to address improper design of certain EFS control panels. The unsafe condition, if not addressed, could result in reduced control of the helicopter.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

1. At the following compliance time, replace EFS control panel P/N 3G9560V00556 or 3G9560V00557 with EFS control panel P/N 3G9560V00559 or 3G9560V00558, respectively:

   (i) For helicopters with EFS P/N 3G9560F00111 or 3G9560F00113, with Aeroserkur floats with “pyrotechnical” inflation system P/N 3G9560V01051 installed, within 94 hours time-in-service (TIS) or 3 months after the effective date of this AD, whichever occurs first.

   (ii) For helicopters with EFS P/N 3G9560F00111 or 3G9560F00113, with Aeroserkur floats with “SMA” inflation system P/N 3G9560V01052 installed, within 377 hours TIS or 12 months after the effective date of this AD, whichever occurs first.

   (iii) For helicopters with EFS P/N 3G9560F00212 with Aeroserkur floats with “fuse disk” inflation system P/N 3G9560V02051 installed, within 565 hours TIS or 18 months after the effective date of this AD, whichever occurs first.

   (2) As of the effective date of this AD, do not install EFS control panel P/N 3G9560V00556 or 3G9560V00557 on any helicopter.

(h) Alternative Methods of Compliance (AMOCs)

1. The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the International Validation Branch, send it to the attention of the person identified in paragraph (ii)(1) of this AD. Information may be emailed to: 9-AVS-AIR-730-AMOCs@faa.gov.

2. Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(i) Related Information

1. For more information about this AD, contact Ronnea Derby, Aerospace Engineer, Denver ACO Branch, Compliance & Airworthiness Division, FAA, 26805 E 68th Ave., Mail Stop: Room 214; Denver, CO 80249; telephone (303) 342–1093; email Ronnea.L.Derby@faa.gov.

   Issued on July 15, 2021.

   Lance T. Gant,
   Director, Compliance & Airworthiness Division, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

RIN 2120–AA66

Amendment of Class D and E Airspace and Revocation of Class E Airspace; Cape Girardeau, MO

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This action amends the Class D and Class E airspace and revoked Class E airspace at Cape Girardeau Regional Airport, Cape Girardeau, MO. The FAA is making this action as the result of an airspace review caused by the decommissioning of the Marion very high frequency (VHF) omnidirectional range (VOR) navigation aid as part of the VOR Minimum Operational Network (MON) Program. The name of the localizer is also updated to coincide with the FAA’s aeronautical database. Controlled airspace is necessary for the safety and management of instrument flight rules (IFR) operations in the area.

DATES: Effective 0901 UTC, October 7, 2021. The Director of the Federal Register approves this incorporation by reference action under 1 CFR part 51, subject to the annual revision of FAA Order 7400.11 and publication of conforming amendments.

ADDRESSES: FAA Order 7400.11E, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at http://www.faa.gov/air_traffic/publications/. For further information, you can contact the Airspace Policy Group, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; Telephone: (202) 267–8783. The Order is also available for inspection at the National Archives and Records Administration (NARA). For information on the availability of FAA Order 7400.11E at NARA, email fedreg_legal@nara.gov or go to https://www.archives.gov/federal-register/cfr/ibr-locations.html.

FOR FURTHER INFORMATION CONTACT: John Fornito, Operations Support Group, Eastern Service Center, Federal Aviation Administration, 1701 Columbia Ave., College Park, GA 30337; Telephone (404) 305–6364.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA’s authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency’s authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it amends the Class D airspace; amends the Class E surface airspace; amends the Class E airspace extending upward from 700 feet above the surface; and revokes the Class E airspace area designated as an extension to Class D and Class E surface

Issued on July 15, 2021.

Lance T. Gant,
Director, Compliance & Airworthiness Division, Aircraft Certification Service.
airspace at Cape Girardeau Regional Airport, Cape Girardeau, MO, to support IFR operations at this airport.

**History**

The FAA published a notice of proposed rulemaking in the *Federal Register* (86 FR 22368, April 28, 2021) for Docket No. FAA—2021–0003 to amend Class D airspace, Class E surface airspace, and Class E airspace extending upward from 700 feet above the surface at Cape Girardeau Regional Airport, Cape Girardeau, MO, to accommodate area navigation (RNAV) global positioning system (GPS) standard instrument approach procedures (SIAPs) serving this airport. Also, the FAA is removing the Class E airspace area designated as an extension to Class D and Class E surface areas at Cape Girardeau Regional Airport, as it is no longer required.

Interested parties were invited to participate in this rulemaking effort by submitting written comments on the proposal to the FAA. No comments were received.

Class D and Class E airspace designations are published in Paragraphs 5000, 6002, 6004, and 6005, respectively, of FAA Order 7400.11E, dated July 21, 2020, and effective September 15, 2020, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designations listed in this document will be published subsequently in the Order.

**Availability and Summary of Documents for Incorporation by Reference**

This document amends FAA Order 7400.11E, Airspace Designations and Reporting Points, dated July 21, 2020, and effective September 15, 2020. FAA Order 7400.11E is publicly available as listed in the **ADDRESSES** section of this document. FAA Order 7400.11E lists Class A, B, C, D, and E airspace areas, air traffic routes, and reporting points.

**The Rule**

The FAA is amending 14 CFR part 71 by: Amending the Class D airspace at Cape Girardeau Regional Airport, Cape Girardeau, MO, by adding an extension 1 mile each side of the 021° bearing from the airport extending from the 4.1-mile radius to 4.4 miles north of the airport; and adding an extension 1 mile each side of the 106° bearing from the Cape Girardeau RGNL: RWY 10–LOC extending from the 4.1-mile radius of the airport to 4.4 miles east of the Cape Girardeau RGNL: RWY 10–LOC; Amending the Class E surface airspace at Cape Girardeau Regional Airport by removing the vertical limit on the airspace as it is not required; adding an extension 1 mile each side of the 021° bearing from the airport extending from the 4.1-mile radius to 4.4 miles north of the airport; and adding an extension 1 mile each side of the 106° bearing from the Cape Girardeau RGNL: RWY 10–LOC extending from the 4.1-mile radius of the airport to 4.4 miles east of the Cape Girardeau RGNL: RWY 10–LOC;

Removing the Class E airspace area designated as an extension to Class D and Class E surface area at Cape Girardeau Regional Airport as it is no longer required;

And amending the Class E airspace extending upward from 700 feet above the surface at Cape Girardeau Regional Airport by removing the Cape Girardeau VOR/DME and associated extension from the airspace legal description; updating the bearing of the north extension to 021° (previously 023°); updating the bearing of the east extension to 106° (previously 108°) and changing the reference of the extension to the Cape Girardeau RGNL: RWY 10–LOC (previously the airport); updating the bearing of the south extension to 201° (previously 203°); and updating the bearing of the west extension to 286° (previously 280°); and updating the name of the Cape Girardeau RGNL: RWY 10–LOC (previously Cape Girard Regional Localizer) to coincide with the FAA’s aeronautical database.

This action is necessary due to an airspace review caused by the decommissioning of the Marion VOR, which provided navigation information for the instrument procedures this airport, as part of the VOR MON Program.

FAA Order 7400.11, Airspace Designations and Reporting Points, is published yearly and effective on September 15.

**Regulatory Notices and Analyses**

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It therefore: (1) Is not a “significant regulatory action” under Executive Order 12866; (2) is not a “significant rule” under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is minimal. Since this is a routine matter that only affects air traffic procedures an air navigation, it is certified that this rule, when promulgated, does not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

**Environmental Review**

The FAA has determined that this action qualifies for categorical exclusion under the National Environmental Policy Act in accordance with FAA Order 1050.1F, “Environmental Impacts: Policies and Procedures,” paragraph 5–6.5a. This airspace action is not expected to cause any potentially significant environmental impacts, and no extraordinary circumstances exist that warrant preparation of an environmental assessment.

**Lists of Subjects in 14 CFR Part 71**

Airspace, Incorporation by reference, Navigation (air).

**Adoption of the Amendment**

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 71 as follows:

**PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS**

1. The authority citation for part 71 continues to read as follows:

§ 71.1 [Amended]

2. The incorporation by reference in 14 CFR 71.1 of FAA Order 7400.11E, Airspace Designations and Reporting Points, dated July 21, 2020, and effective September 15, 2020, is amended as follows:

**Paragraph 5000 Class D Airspace.**

* * * * * * *

ACE MO D Cape Girardeau, MO [Amended]

Cape Girardeau Regional Airport, MO (Lat. 37°13'31"N, long. 89°34'15"W)

Cape Girardeau RGNL: RWY 10–LOC (Lat. 37°13'18"N, long. 89°33'25"W)

That airspace extending upward from the surface to and including 2,600 feet within a 4.1-mile radius of Cape Girardeau Regional Airport, and within 1 mile each side of the 021° bearing from the airport extending from the 4.1-mile radius of the airport to 4.4 miles north of the airport, and within 1 mile each side of the 106° bearing from the Cape Girardeau RGNL: RWY 10–LOC extending from the 4.1-mile radius of the airport to 4.4 miles east of the Cape Girardeau RGNL: RWY 10–LOC. This Class D airspace area is effective during the specific dates and times established in advance by a Notice to Airmen. The effective date and time will thereafter be continuously published in the Chart Supplement.
**DEPARTMENT OF TRANSPORTATION**

**Federal Aviation Administration**

14 CFR Part 71

[Docket No. FAA–2020–1208; Airspace Docket No. 20–AAL–46]

RIN 2120–AA66

**Establishment of Class E Airspace; Wilder Runway LLC, AK**

**AGENCY:** Federal Aviation Administration (FAA), DOT.

**ACTION:** Final rule.

**SUMMARY:** This action establishes Class E airspace extending upward from 700 feet above the surface of the earth at Wilder Runway LLC Airport, Port Als worth, AK. This action will accommodate new area navigation (RNAV) procedures and ensure the safety and management of instrument flight rule (IFR) operations within the National Airspace System. This action will also correct an error in the airport name to match the FAA’s database.

**DATES:** Effective 0901 UTC, October 7, 2021. The Director of the Federal Register approves this incorporation by reference action under 1 CFR part 51, subject to the annual revision of FAA Order 7400.11 and publication of conforming amendments.

**ADDRESSES:** FAA Order 7400.11E, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at https://www.faa.gov/air_traffic/publications/. For further information, you can contact the Airspace Policy Group, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; telephone: (202) 267–8783. The Order is also available for inspection at the National Archives and Records Administration (NARA). For information on the availability of FAA Order 7400.11E at NARA, email fedreg.legal@nara.gov or go to https://www.archives.gov/federal-register/cfr/ibr-locations.html.

**FOR FURTHER INFORMATION CONTACT:** Richard Roberts, Federal Aviation Administration, Western Service Center, Operations Support Group, 2200 S 216th Street, Des Moines, WA 98198; telephone (206) 231–2245.

**SUPPLEMENTARY INFORMATION:**

**Authority for This Rulemaking**

The FAA’s authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency’s authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it will establish Class E airspace extending upward from 700 feet above the surface of the earth to support IFR operations at Wilder Runway LLC Airport.

**History**

The FAA published a notice of proposed rulemaking in the Federal Register (86 FR 10505; February 22, 2021) for Docket No. FAA–2020–1208 to establish Class E airspace at Wilder Runway LLC Airport, Port Als worth, AK. Interested parties were invited to participate in this rulemaking effort by submitting written comments on the proposal to the FAA, none were received.

Class E5 airspace designations are published in paragraph 6005 of FAA Order 7400.11E, dated July 21, 2020, and effective September 15, 2020, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designation listed in this document will be published subsequently in the Order.

**Availability and Summary of Documents for Incorporation by Reference**

This document amends FAA Order 7400.11E, Airspace Designations and Reporting Points, dated July 21, 2020, and effective September 15, 2020. FAA Order 7400.11E is publicly available as listed in the ADDRESSES section of this document. FAA Order 7400.11E lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

**The Rule**

This amendment to 14 CFR part 71 establishes Class E airspace, extending upward from 700 feet above the surface, at Wilder Runway LLC Airport. The Class E airspace is established within a 2.5-mile radius of the airport beginning at the point the 306° bearing from the airport intersects the 2.5-mile radius clockwise to the point the 79° bearing from the airport intersects the 2.5-mile radius. This area accommodates circling north of runway 6/24. In addition, this area includes that airspace within a 7.3-mile radius of the airport beginning at the point the 230° bearing from the airport intersects the 7.3-mile radius clockwise to the point the 271° bearing
from the airport intersects the 7.3-mile radius. This area protects aircraft using the RNAV approach to runway 6 and departures until reaching 1,200 feet AGL. In addition, the FAA identified that the airport name, contained in the NPRM, was not consistent with the National Airspace System Resource (NASR) database. This action will update the airport name to match NASR.

FAA Order 7400.11. Airspace Designations and Reporting Points, is published yearly and effective on September 15.

**Regulatory Notices and Analyses**

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current, is non-controversial, and unlikely to result in adverse or negative comments. It, therefore: (1) Is not a “significant regulatory action” under Executive Order 12866; (2) is not a “significant rule” under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule, when promulgated, would not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

**Environmental Review**

The FAA has determined that this action qualifies for categorical exclusion under the National Environmental Policy Act in accordance with FAA Order 1050.1F, “Environmental Impacts: Policies and Procedures,” paragraph 5–6.5a. This airspace action is not expected to cause any potentially significant environmental impacts, and no extraordinary circumstances exist that warrant the preparation of an environmental assessment.

**List of Subjects in 14 CFR Part 71**

Airspace, Incorporation by reference, Navigation (air).

**Adoption of the Amendment**

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 71 as follows:

**PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS**

1. The authority citation for 14 CFR part 71 continues to read as follows:

2. The incorporation by reference in 14 CFR 71.1 of FAA Order 7400.11E, Airspace Designations and Reporting Points, dated July 21, 2020, and effective September 15, 2020, is amended as follows:

**Paragraph 6005 Class E Airspace Areas Extending Upward From 700 Feet or More Above the Surface of the Earth.**

**AAI AK E5 Port Alsworth, AK [NEW]**

Wilder Runway LLC Airport, AK
(Lat. 60°11′55″ N, long. 154°19′23″ W)

That airspace extending upward from 700 feet above the surface within 7.3 mile radius of Wilder Runway LLC Airport beginning at the point the 230° bearing from the airport intersects the 7.3-mile radius clockwise along the 7.3-mile radius to the point the 271° bearing intersects the 7.3-mile radius, thence east to the point the 308° bearing from the airport intersects an arc within a 2.5-mile radius of the airport, thence clockwise along the 2.5-mile arc to the point the 79° bearing intersects the 2.5-mile arc thence southwest to the point of beginning.

Issued in Des Moines, Washington, on July 15, 2021.

**SUPPLEMENTARY INFORMATION:**

**Authority for This Rulemaking**

The FAA’s authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency’s authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it establishes Class E airspace extending upward from 700 feet above the surface of the earth to support IFR operations at Crooked Creek Airport.

**History**

The FAA published a notice of proposed rulemaking in the Federal Register (86 FR 10882; February 23, 2021) for Docket No. FAA–2021–0004 to establish Class E airspace at Crooked Creek Airport, Crooked Creek, AK. Interested parties were invited to...
participate in this rulemaking effort by submitting written comments on the proposal to the FAA, none were received.

Class E5 airspace designations are published in paragraph 6005 of FAA Order 7400.11E, dated July 21, 2020, and effective September 15, 2020, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designation listed in this document will be published subsequently in the Order.

Availability and Summary of Documents for Incorporation by Reference

This document amends FAA Order 7400.11E, Airspace Designations and Reporting Points, dated July 21, 2020, and effective September 15, 2020. FAA Order 7400.11E is publicly available as listed in the ADDRESSES section of this document. FAA Order 7400.11E lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Rule

This amendment to 14 CFR part 71 establishes Class E airspace, extending upward from 700 feet above the surface, at Crooked Creek Airport. The Class E airspace is established within a 2 mile radius of the airport, excluding that area within the Stony B Military Operations Area, and that airspace within 2 miles each side of the 332° bearing extending from the 2-mile radius to 8.5 miles northwest of the airport. This airspace protects aircraft using the RNAV approach to runway 14 and departure until reaching 1,200 feet AGL.

FAA Order 7400.11, Airspace Designations and Reporting Points, is published yearly and effective on September 15.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current, is non-controversial, and unlikely to result in adverse or negative comments. If, therefore: (1) Is not a “significant regulatory action” under Executive Order 12866; (2) is not a “significant rule” under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule, when promulgated, would not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

The FAA has determined that this action qualifies for categorical exclusion under the National Environmental Policy Act in accordance with FAA Order 1050.1F, “Environmental Impacts: Policies and Procedures,” paragraph 5–6.5a. This airspace action is not expected to cause any potentially significant environmental impacts, and no extraordinary circumstances exist that warrant the preparation of an environmental assessment.

[Docket No. SSA–2021–0010]

RIN 0960–AI64

Flexibility in Evaluating “Close Proximity of Time” Due to COVID–19 Related Barriers to Healthcare

AGENCY: Social Security Administration.

ACTION: Temporary final rule with request for comments.

SUMMARY: Since the outset of the COVID–19 national public health emergency, many individuals have experienced barriers that prevent them from timely accessing healthcare. In response to those barriers, we are issuing this rule to temporarily revise our requirement in the Listing of Impairments (listings) that, for purposes of applying several of our musculoskeletal disorder listings, all relevant medical criteria be present simultaneously or “within a close proximity of time,” which we define as being “within a consecutive 4-month period.” While this rule is in effect, we will find that the evidence of a musculoskeletal disorder is present “within a close proximity of time” if the available evidence establishes such a condition within a consecutive 12-month period. We expect that this temporary change to our rules will allow us to make findings of disability in appropriate cases in which individuals have experienced barriers to access to healthcare because of the COVID–19 national public health emergency.

DATES:

Effective date: This temporary final rule is effective on July 23, 2021. For more information, see SUPPLEMENTARY INFORMATION.

Comment date: We invite written comments. Comments must be submitted on or before September 21, 2021.

Expiration date: Unless we extend the expiration date by a final rule published in the Federal Register, this temporary final rule will cease to be effective 6 months after the effective date of a determination by the Secretary of Health and Human Services under section 319 of the Public Health Service Act, 42 U.S.C. 247d, that the COVID–19 national public health emergency no longer exists. We will publish a document in the Federal Register announcing the expiration date. For more information, see SUPPLEMENTARY INFORMATION.

We invite written comments. Comments must be submitted on or before September 21, 2021.

Expiration date: Unless we extend the expiration date by a final rule published in the Federal Register, this temporary final rule will cease to be effective 6 months after the effective date of a determination by the Secretary of Health and Human Services under section 319 of the Public Health Service Act, 42 U.S.C. 247d, that the COVID–19 national public health emergency no longer exists. We will publish a document in the Federal Register announcing the expiration date. For more information, see SUPPLEMENTARY INFORMATION.
ADDRESSES: You may submit comments by any one of three methods—internet, fax, or mail. Do not submit the same comments multiple times or by more than one method. Regardless of which method you choose, please state that your comments refer to Docket No. SSA–2021–0010 so that we may associate your comments with the correct rule.

Caution: You should be careful to include in your comments only information that you wish to make publicly available. We strongly urge you not to include in your comments any personal information, such as Social Security numbers or medical information.

1. Internet: We strongly recommend that you submit your comments via the internet. Please visit the Federal eRulemaking portal at http://www.regulations.gov. Use the search function to find docket number SSA–2021–0010. The system will issue a tracking number to confirm your submission. You will not be able to view your comment immediately because we must post each comment manually. It may take up to a week for your comments to be viewable.

2. Fax: Fax comments to (410) 966–2830.

3. Mail: Mail your comments to the Office of Regulations and Reports Clearance, Social Security Administration, 3100 West High Rise Building, 6401 Security Boulevard, Baltimore, Maryland 21235–6401.

Comments are available for public viewing on the Federal eRulemaking portal at http://www.regulations.gov or in person, during regular business hours, by arranging with the contact person identified in FOR FURTHER INFORMATION CONTACT.

FOR FURTHER INFORMATION CONTACT:

For information on eligibility or filing for benefits, call our national toll-free number, 1–800–772–1213 or TTY 1–800–325–0778, or visit our internet site, Social Security Online, at http://www.socialsecurity.gov.

SUPPLEMENTARY INFORMATION: The Secretary of Health and Human Services issued a determination under section 319 of the Public Health Service Act on January 31, 2020 that a national public health emergency exists as of January 27, 2020 because of the COVID–19 pandemic.1 The Secretary has renewed his determination several times since then, most recently on July 19, 2021 (effective July 20, 2021).2 We are issuing this temporary final rule to address the ongoing effects of the COVID–19 national public health emergency. The effective date of this temporary final rule will help us ensure that we provide affected claimants with the benefit of the flexibilities offered by this rule. On April 1, 2021, we instructed our adjudicators to temporarily hold claims in which all elements of musculoskeletal disorders listings 1.15, 1.16, 1.17, 1.18, 1.20C, 1.20D, 1.22, 1.23, 101.15, 101.16, 101.17, 101.18, 101.20C, 101.20D, 101.22, or 101.23 were present within a consecutive 12-month period, but not within a consecutive 4-month period, and it was not possible to process a fully favorable determination or decision in some other way. By holding claims that would benefit from the flexibilities in this rule, we will process claims affected by this rule on or after the effective date of this rule. As we explain in more detail below, we will continue to apply this rule until 6 months after effective date of a determination by the Secretary of Health and Human Services under section 319 of the Public Health Service Act that the national public health emergency related to the COVID–19 pandemic no longer exists.

Background
On December 3, 2020, we published the final rule, Revising Medical Criteria for Evaluating Musculoskeletal Disorders, which became effective on April 2, 2021, revising the criteria in the listings that we use to evaluate disability claims involving musculoskeletal disorders in adults and children at the third step of our sequential evaluation process under titles II and XVI of the Social Security Act (Act).3 The final rule, among other things, revised the listings in response to the decision in Rudford v. Colvin, 734 F.3d 288 (4th Cir. 2013). The final rule required that, for the purposes of applying certain listings, all of the required medical criteria must be present simultaneously, or within a close proximity of time, to satisfy the level of severity needed to meet the listing.4 We defined the phrase “within a close proximity of time” to mean “that all of the relevant criteria must appear in the medical record within a consecutive 4-month period” (emphasis in original).5 We also provided that “[w]hen the criterion is imaging, we mean that we could reasonably expect the findings on imaging to have been present at the date of impairment or date of onset.”6

We established the consecutive 4-month period as a criterion to meet the level of severity in the listings based on our extensive research of relevant medical literature and clinical guidelines. In our notice of proposed rulemaking, we also specifically asked interested members of the public to comment on this issue and provide us with any studies and data that supported their comments;6 however, no studies or data were submitted. In the final rule, we concluded that the consecutive 4-month period is consistent with instructions providers receive for scheduling patients,9 the general standard of care,10 and the frequency of healthcare visits by individuals with musculoskeletal conditions.11 At the same time, the consecutive 4-month period in the rules provides some leeway for the claimant, because the standard for patient revisits is once every 3 months.12 Our rules recognize that one visit alone may not ensure all necessary criteria required for a medical listing will be appropriately documented; however, the consecutive 4-month time period provides a sufficient period to ensure the criteria are present within a close proximity of time and that the claimant’s

4 See 85 FR 78144 (2020).
6 See 20 CFR appendix 1 to subpart P of part 404 1.00C7b and 1.00C7b.
7 See 20 CFR 404.1500 through 404.1596, 404.1600 through 404.1696, and 404.1700 through 404.1796.
8 83 FR 20646, 20647 (May 7, 2018).
musculoskeletal disorder meets the requisite severity for the listing.

Our use of the consecutive 4-month proximity of time requirement is also consistent with the standard recognized by the Veterans Health Administration (VHA) and Department of Defense (DoD), as set out in their clinical practice guidelines. For example, the VHA and DoD’s Clinical Practice Guideline for the Management of Medically Unexplained Symptoms: Chronic Pain and Fatigue directs initial revisits at 2 to 3 week intervals, with visits every 3 to 4 months once the patient is doing well. Similarly, the VHA’s and DoD’s Clinical Practice Guideline for Diagnosis and Treatment of Low Back Pain describes the duration of time for intervention, based on a systematic review, as requiring a minimum follow-up for effectiveness of 12 weeks and recommends monthly reassessment after initiation of therapy if low back pain continues and no serious specific underlying cause of low back pain is found.

**Rationale for This Rule**

As noted above, on January 31, 2020, the Secretary of Health and Human Services declared COVID–19 a national public health emergency. The COVID–19 national public health emergency has dramatically changed the provision of, and access to, healthcare services throughout the country. Individuals with musculoskeletal impairments who, before the national public health emergency, would seek and receive healthcare at a frequency consistent with the standards cited above, now might be unable or choose not to seek care in the same manner and frequency. This is due in part to healthcare organizations and government agencies such as the Centers for Medicare & Medicaid Services (CMS) prioritizing the most urgent services and encouraging patients to delay other procedures during the pandemic. For example, the North American Spine Society (NASS) provided guidance for delaying non-emergent procedures for people with chronic spinal conditions.

Likewise, many individuals have deferred or delayed important treatment due to closures of medical offices, fears of contracting COVID–19 infection (including having a high risk individual in the household), and other challenges created or exacerbated by the pandemic, such as difficulty accessing transportation. According to one source, among the general U.S. population reporting delayed care for serious problems during the pandemic, 69% cited nonfinancial access barriers, such as being unable to get an appointment, find a physician who would see them, or access the care location. Additionally, the National Center for Health Statistics estimated that 41% of U.S. adults had delayed or avoided medical care, including urgent or emergency care (12%) and routine care (32%) because of concerns about COVID–19.

We are also temporarily changing the consecutive 4-month close proximity of time rule to a consecutive 12-month rule because the manner of care provided changed throughout the COVID–19 national public health emergency. To be responsive to this change in the manner of care, we instructed our adjudicators to temporarily hold claims that would benefit from the flexibilities in this rule, so we will pay claims affected by this rule on or after the effective date of this rule. Due to safety concerns, many healthcare providers shifted to emphasizing or exclusively scheduling telehealth or virtual visits. The optimization of telehealth is consistent with the guidance issued by many specialist organizations, such as NASS, the American College of Surgeons (ACS), the American Academy of Orthopedic Surgeons (AAOS), and the American College of Rheumatology (ACR).

Although many individuals access telehealth visits successfully, the clinical signs and findings required by some of the listings may not be present in the telehealth record due to the limitations of telemedicine. While testing by the patient is possible through telehealth, there are limits in provocative testing (that is, testing that manipulates the areas where you have pain in order to reproduce the pain), discrete palpation (that is, a technique that uses targeted pressure to identify and quantify the abnormalities of the musculoskeletal system, such as warmth, swelling, pain, tenderness, and trigger points), and strength or stability testing. During the beginning of the COVID–19 pandemic, orthopedists created guidelines for virtual examinations of patients through telemedicine, and found that while the patient could perform many tests, there are inherent limitations to testing in this manner. For example, the authors recommend using another person to hold the camera during gait examination to get a better view of the patient’s gait mechanics, which is not always possible. Further, the VHA has found that although patients appreciate telehealth, many are unable to complete exams that require precise measurements, such as range of motion or reflexes.

Consequently, disability claimants with musculoskeletal disorders of the severity required by the listings who would have been able to provide evidence that their musculoskeletal disorder met the consecutive 4-month close proximity of time requirement would have been unable to do so due to the unprecedented and rapid changes in the healthcare system during the COVID–19 pandemic.

19 Reduced Access to Care: Household Pulse Survey (National Center for Health Statistics) (https://www.cdc.gov/nchs/covid19/pulse/reduced-access-to-care.htm).
20 The American College of Surgeons (ACS), the American Academy of Orthopedic Surgeons (AAOS), and the American College of Rheumatology (ACR).
26 Baus, Shanna, PA–C. Telehealth & Disability Items: Veterans Health Administration. Presentation to the Standing Committee of the National Academies of Science and Medicine Health and Medicine Division, on December 1, 2020.
before the COVID–19 national public health emergency may now have more difficulty producing evidence to meet the standard. It is possible that, in light of the pandemic and the temporary changes in healthcare described above, claimants have scheduled fewer clinical visits or have been afforded fewer appointments that would allow them to provide the necessary evidence. Because such a claimant would lack the necessary documentation to meet the listing in the absence of this temporary change, we would not find the claimant disabled under the listings, although we could make a finding of disability at later steps of our sequential evaluation process in appropriate cases.

In recognition of the economic and social services crisis caused by the COVID–19 national public health emergency, the President published Executive Order 14002 Economic Relief Related to the COVID–19 Pandemic, which directed Federal agencies to consider actions to improve access to and reduce unnecessary barriers to Federally-funded programs. We are issuing this rule in furtherance of the goals in the Executive Order.

This rule will remain in effect until 6 months after the effective date of a determination by the Secretary of Health and Human Services under section 319 of the Public Health Service Act, 42 U.S.C. 247d, that the national public health emergency resulting from the COVID–19 pandemic no longer exists. Redesignated and revised sections 1.00C7c and 1.00C7c provide that, for purposes of listings 1.15, 1.16, 1.17, 1.18, 1.20C, 1.2D, 1.22, 1.23, 101.15, 101.16, 101.17, 101.18, 101.20C, 101.20D, 101.22, and 101.23, the phrase “within a close proximity of time” means that all of the relevant criteria must appear in the medical record within a consecutive 4-month period, except for claims determined or decided during the pandemic period. For claims that we determine or decide during the pandemic period, we provide that all of the relevant criteria must appear in the medical record within a consecutive 12-month period.

Related to the COVID–19 Pandemic, Executive Order 14002, and the public, update our materials and the public, update our materials that reference the consecutive 12-month period, and process claims where the medical care was received prior to the end of the COVID–19 national public health emergency.

Summary of the Changes

This rule adds a new section 1.00C7a and 101.00C7a to the musculoskeletal disorders listings. The rule also redesignates current sections 1.00C7a and 1.00C7b as 1.00C7b and 1.00C7c, respectively, and 101.00C7a and 101.00C7b as 101.00C7b and 101.00C7c, respectively. New sections 1.00C7a and 101.00C7a define the term “pandemic period” to mean “the period beginning on April 2, 2021 and ending on the date that is 6 months after the effective date of a determination by the Secretary of Health and Human Services under section 319 of the Public Health Service Act, 42 U.S.C. 247d, that the national public health emergency resulting from the COVID–19 pandemic no longer exists.”

Regulatory Procedures

Justification for Issuing a Rule Without Notice and Comment

We follow the Administrative Procedure Act’s (APA) rulemaking procedures specified in 5 U.S.C. 553 when we develop regulations. Generally, the APA requires that an agency provide prior notice and opportunity for public comment before issuing a final rule. The APA provides exceptions to its notice and public comment procedures when an agency finds that there is good cause for dispensing with such procedures because they are impracticable, unnecessary, or contrary to the public interest (5 U.S.C. 553(b)(B)).

We find that there is good cause under 5 U.S.C. 553(b)(B) to issue this rule without prior public comment because prior public comment is impracticable and contrary to public interest.

We find that public comment is impracticable because the delay associated with the public comment process would impede our ability to provide this flexibility to claimants affected by the changed nature of healthcare. The delay associated with the public comment process would also affect our ability to operate efficiently and provide appropriate public service because it would require us to hold or readjudicate cases affected by this change, possibly delaying benefits to disabled individuals. People eligible for disability benefits are, by definition, not able to engage in substantial gainful activity. Therefore, many applicants may experience immediate and severe financial hardship, placing them at risk of losing their homes, means of transportation, access to health care, and other important resources, in addition to experiencing increased stress as they await the outcome of their case and their award of benefits. This is particularly true for the population that is eligible for Supplemental Security Income (SSI) benefits, which has, by definition, severely limited income and financial resources. An unnecessary delay during this vulnerable period, particularly in the context of the economic and other hardships caused by the pandemic, would cause significant harm and detract substantially from the effectiveness of the disability program in providing meaningful economic relief for disabled

28 42 U.S.C. 223(d)(1) and 101.00(a)(3)(A), 20 CFR 404.1505, 404.1572, 416.905, 416.972.

29 See Bailey, Michelle Stegman and Jeffrey Hemmeter, Characteristics of Noninstitutionalized DI and SSI Program Participants, 2013 Update, Research and Statistics Note No. 2013–01, Washington, DC: Office of Research, Evaluation, and Statistics, Office of Retirement and Disability Policy, Social Security Administration, September 2015, https://www.ssa.gov/policy/docs/rn2015-02.html, which shows that 51 percent of DI beneficiaries and 63 percent of SSI beneficiaries have household incomes below the poverty level, excluding their DI and SSI payments. The study also found that DI payments represented an 85 percent reduction in the poverty gap and SSI payments represented a 68 percent reduction in the poverty gap for beneficiaries. See also [SSA] Social Security Administration, National Beneficiary Survey: Disability Statistics, 2015, SSA Publication No. 13–11829, Washington, DC: https://www.ssa.gov/policy/docs/statcomps/nbs/2015/nbs-statistics2015.pdf, which shows that over 45 percent of disability beneficiaries have a household income lower than the poverty level. Additionally, see Mathews v. Eldridge, 424 U.S. 319, 342 (1976) (“in view of . . . the typically modest resources of the family unit of the physically disabled worker, the hardship imposed upon the erroneously terminated disability recipient may be significant.”); White v. Mathews, 559 F.2d 852 (2d Cir. 1977) (“The disability insurance program is designed to alleviate the immediate and often severe hardships that result from a wage-earner’s disability. In that context, delays . . . detract seriously from the effectiveness of the program.”).
individuals. Even if they receive the same benefits at a later date, these individuals may suffer from long term or permanent consequences of the lost income during the period of delay. We also find that delaying immediate implementation of this temporary final rule to obtain public comment would be contrary to the public interest because it would prolong the time it would take to adjudicate claims and provide benefits to claimants. This rule is intended to provide us with flexibility to determine that an individual’s musculoskeletal disorder meets the requirements of the listings, considering the emerging evidence regarding changes in healthcare delivery that have resulted from the COVID–19 national public health emergency. It also provides for claimants to receive needed benefits at a time when they are financially and medically vulnerable due to onset of disability and the COVID–19 pandemic, based on the evidence that is likely to be in their file during the pandemic. Providing the opportunity for public comment prior to implementation of this rule would prevent us from acting within a meaningful timeframe to account for current access-to-care limitations that prevent claimants who may meet the listing from establishing requisite evidence to show it, because the pandemic-related barriers to access of care that this rule attempts to alleviate would continue to occur. Providing opportunity for prior public comment could also result in the rule taking effect only after the proposed expiration date, when applicants have returned to pre-pandemic norms, which would negate the need for the rule. Consequently, if we offered the opportunity for public comment prior to immediate temporary implementation, we would be unable to offer relief to affected claimants in a timely manner, and we would be required to delay our adjudications of certain disability claims impacted by this temporary final rule and be unable to pay needed benefits to affected individuals in a timely manner. The delay associated with a public comment period would also be contrary to the public interest because it would reduce the effectiveness of the rule and the more flexible timeframe we are establishing. Prior public comment would therefore defeat the purpose of this rule, which is to provide effective and timely relief and ensure economic security to individuals affected by the changed nature of healthcare delivery.

In addition, for the reasons cited above, we find good cause for dispensing with the 30-day delay in the date of this rule provided for in 5 U.S.C. 553(d)(3). So, we are making this temporary final rule effective upon publication.

We are delegating this temporary final rule effective on the date of publication. However, we invite public comment on all aspects of the temporary final rule as they may apply after the effective date, including: The definition of the “pandemic period” during which we will apply expanded flexibility in the “close proximity of time” standard; the appropriate standard for “close proximity of time” to account for barriers to access to care; information about barriers to access to care and disproportionate burdens faced by any subset of the population; and the expiration date of this rule. Please share any supporting information that you might have. We will consider any substantive comments we receive within 60 days of the publication of this temporary final rule and will issue a revised final rule if necessary after we consider the public comments. We will also study the application of this temporary final rule in our program.

**Executive Order 12866, as Supplemented by Executive Order 13563**

We consulted with the Office of Management and Budget (OMB) and determined that this temporary final rule meets the criteria for a significant regulatory action under Executive Order 12866 and is subject to OMB review.

**Executive Order 13132 (Federalism)**

We analyzed this rule under the principles and criteria established by Executive Order 13132 and determined that the rule will not have sufficient Federalism implications to warrant the preparation of a Federalism assessment. We also determined that this rule will not preempt any State law or State regulation or affect the States’ abilities to discharge traditional State governmental functions.

**Regulatory Flexibility Act**

We certify that this rule will not have a significant economic impact on a substantial number of small entities, because it affects only individuals.

Therefore, a Regulatory Flexibility Act, as amended, does not require us to prepare a regulatory flexibility analysis.

**Anticipated Costs to Our Programs:** Our Office of the Chief Actuary (OCACT) was not able to provide a specific cost estimate for this temporary final rule, as it does not have any reliable information on which to base program cost estimates. Additionally, this temporary final rule is to be in effect until 6 months after the Secretary of Health and Human Services determines the COVID–19 national public health emergency no longer exists, and it is unknown how long it will be until such declaration is made.

**Anticipated Administrative Costs to SSA:** Our Office of Budget, Finance, and Management notes the unknown magnitude on allowance rates and ambiguity in the effective time period for this temporary final rule, but expects this change will have a minimal administrative effect on the agency.

**Paperwork Reduction Act**

This rule does not create any new or affect any existing collections and, therefore, does not require Office of Management and Budget approval under the Paperwork Reduction Act. (Catalog of Federal Domestic Assistance Program Nos. 96.001, Social Security—Disability Insurance; 96.002, Social Security—Retirement Insurance; 96.004, Social Security—Survivors Insurance; and 96.006, Supplemental Security Income)

The Acting Commissioner of Social Security, Kilolo Kijakazi, having reviewed and approved this document, is delegating the authority to electronically sign this document to...
Faye I. Lipsky, who is the primary Federal Register Liaison for the Social Security Administration, for purposes of publication in the Federal Register.

Faye I. Lipsky,
Federal Register Liaison, Office of Legislation and Congressional Affairs, Social Security Administration.

For the reasons stated in the preamble, we are amending subpart P of part 404 of chapter III of title 20 of the Code of Federal Regulations as set forth below:

PART 404—FEDERAL OLD-AGE, SURVIVORS AND DISABILITY INSURANCE (1950– )

Subpart P—Determining Disability and Blindness

1. The authority citation for subpart P of part 404 continues to read as follows:

Authority: Secs. 202, 205(a)–(b) and (d)–(h), 216(i), 221(a) and (b)–(j), 222(c), 223, 225, and 702(a)(5) of the Social Security Act (42 U.S.C. 402, 405(a)–(b) and (d)–(h), 416(i), 421(a) and (b)–(j), 422(c), 423, 425, and 902(a)(5)); sec. 211(b), Pub. L. 104–193, 110 Stat. 2105, 2189; sec. 202, Pub. L. 106–169, 114 Stat. 138–191, 114 Stat. 209–203, 118 Stat. 509 (42 U.S.C. 902 note).

2. In appendix 1 to subpart P of part 404:

a. In part A, amend section 1.00C7 by redesignating paragraphs a. and b. as b. and c., by adding a new paragraph a., and by revising newly redesignated paragraph c.; and

b. In part B, amend section 101.00C7 by redesignating paragraphs a. and b. as b. and c., by adding a new paragraph a., and by revising newly redesignated paragraph c.

The additions and revisions read as follows:

Appendix 1 to Subpart P of Part 404—Listing of Impairments

* * * * *

Part A

* * * * *

1.00 Musculoskeletal Disorders.

* * * * *

C. * * *

7. * * *

a. The term pandemic period as used in 1.00C7c means the period beginning on April 2, 2021, and ending on the date that is 6 months after the effective date of a determination by the Secretary of Health and Human Services under section 319 of the Public Health Service Act, 42 U.S.C. 247d, that the national public health emergency resulting from the COVID–19 pandemic no longer exists.

b. For 101.15, 101.16, 101.17, 101.18, 101.20C, 101.20D, 101.22, and 101.23, all of the required criteria must be present simultaneously, or within a close proximity of time, to satisfy the level of severity needed to meet the listing. The phrase “within a close proximity of time” means that all of the relevant criteria must appear in the medical record within a consecutive 4-month period, except for claims determined or decided during the pandemic period. For claims determined or decided during the pandemic period, all of the relevant criteria must appear in the medical record within a consecutive 12-month period. When the criterion is imaging, we mean that we could reasonably expect the findings on imaging to have been present at the date of impairment or date of onset. For listings that use the word “and” to link the elements of the required criteria, the medical record must establish the simultaneous presence, or presence within a close proximity of time, of all the required medical criteria. Once this level of severity is established, the medical record must also show that this level of severity has continued, or is expected to continue, for a continuous period of at least 12 months.

* * * * *

Part B

* * * * *

101.00 Musculoskeletal Disorders.

* * * * *

C. * * *

7. * * *

c. For 101.15, 101.16, 101.17, 101.18, 101.20C, 101.20D, 101.22, and 101.23, all of the required criteria must be present simultaneously, or within a close proximity of time, to satisfy the level of severity needed to meet the listing. The phrase “within a close proximity of time” means that all of the relevant criteria must appear in the medical record within a consecutive 4-month period, except for claims determined or decided during the pandemic period. For claims determined or decided during the pandemic period, all of the relevant criteria must appear in the medical record within a consecutive 12-month period. When the criterion is imaging, we mean that we could reasonably expect the findings on imaging to have been present at the date of impairment or date of onset. For listings that use the word “and” to link the elements of the required criteria, the medical record must establish the simultaneous presence, or presence within a close proximity of time, of all the required medical criteria. Once this level of severity is established, the medical record must also show that this level of severity has continued, or is expected to continue, for a continuous period of at least 12 months.

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket Number: USC–2021–0381]

Safety Zone; Recurring Events in Captain of the Port Duluth Zone—Pointe to La Pointe Swim, Bayfield, WI

AGENCY: Coast Guard, Department of Homeland Security (DHS).

ACTION: Notice of enforcement of regulation.

SUMMARY: The Coast Guard will enforce the safety zone for the Pointe to La Pointe Swim event in Bayfield, WI, from 7 a.m. through 11 a.m. on August 7, 2021. This action is necessary to protect participants and spectators during the event. During the enforcement period, entry into, transiting, or anchoring within the safety zone is prohibited unless authorized by the Captain of the Port Duluth or a designated on-scene representative.

DATES: The regulations in 33 CFR 165.943(a) will be enforced for the location listed in Table 1 to § 165.943, entry (9), from 7 a.m. through 11 a.m. on August 7, 2021.

FOR FURTHER INFORMATION CONTACT: If you have questions about this notice of enforcement, call or email MST2 Jeremy Davis, telephone (218)725–3818, email DuluthWWAM@uscg.mil.

SUPPLEMENTARY INFORMATION: The Coast Guard will enforce special local regulations in 33 CFR 165.943(a) for the location listed in Table 1 to § 165.943, entry (9), for the annual Pointe to La Pointe Swim event from 7 a.m. through 11 a.m. on August 7, 2021 on all waters between Bayfield, WI, and Madeline Island, WI, within an imaginary line created by the following coordinates: 46°48′27.55″ N, 090°48′56″ W, moving southeast to 46°48′21.2″ N, 090°48′59.9″ W, moving south to 46°47′19.91″ N, 090°49′46.18″ W, moving east 46°47′21.18″ N, 090°49′02.39″ W, then moving north to 46°48′21.2″ N, 090°48′56″ W and finally running back to the starting point. Pursuant to 33 CFR 165.33 and 165.943(a), entry into, transiting, or anchoring within the safety zone is prohibited unless authorized by the
Captain of the Port Duluth or a designated on-scene representative. Vessels and personnel granted permission to enter the safety zone shall obey the directions of the Captain of the Port Duluth, their designated representative, or any Official Patrol displaying a Coast Guard Ensign. This notice of enforcement is issued under authority of 33 CFR 165.905(a) and 5 U.S.C. 552 (a). In addition to this publication in the Federal Register, the Coast Guard will provide the maritime community with advance notification of the enforcement of this enforcement period via Broadcast Notice to Mariner or other suitable means. The Captain of the Port Duluth may be contacted via Channel 16, VFH–FM or at (218) 428–9357.

Dated: July 19, 2021.

F. M. Smith, Commander, U.S. Coast Guard, Captain of the Port.

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket No. USCG–2021–0573]

Safety Zone; Spirit Lake Dredging

AGENCY: Coast Guard, Department of Homeland Security (DHS).

ACTION: Notice of enforcement of regulation.

SUMMARY: The Coast Guard will enforce the USX Superfund Site Safety Zones: St. Louis River, and this notice of enforcement serves as a reminder to mariners this is still an enforced safety zone under Coast Guard regulations. Our regulation for safety zones within the Ninth Coast Guard District identifies this area is a regulated area within Spirit Lake Duluth, MN. In addition to this notice of enforcement in the Federal Register, the Coast Guard plans to provide notification of this enforcement period via the Local Notice to Mariners and marine information broadcasts.

Dated: July 19, 2021.

Frances M. Smith, CDR, U.S. Coast Guard, Captain of the Port MSU Duluth.

Coast Guard

33 CFR Part 165

[Docket Number USCG–2021–0248]

RIN 1625–AA00

Safety Zone; Cumberland River, Nashville, TN

AGENCY: Coast Guard, Department of Homeland Security (DHS).

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone from mile marker 190.5 to 191.5 of the Cumberland River. The safety zone is needed to protect life and the marine environment from potential hazards created by Music City Grand Prix fireworks display. This rule prohibits persons and vessels from being in the safety zone unless authorized by the Captain of the Port Sector Ohio Valley or a designated representative.

DATES: This rule is effective from 9 p.m. until 10:30 p.m. on August 7, 2021.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to https://www.regulations.gov, type USCG–2021–0248 in the search box and click “Search.” Next, in the Document Type column, select “Supporting & Related Material.”

FOR FURTHER INFORMATION CONTACT: If you have questions about this rule, call or email Petty Officer Third Class Benjamin Gardner and Marine Safety Detachment Nashville, U.S. Coast Guard; telephone 615–736–5421, email Benjamin.t.gardner@uscg.mil.

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section

II. Background Information and Regulatory History

The Coast Guard is issuing this temporary rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are “impracticable, unnecessary, or contrary to the public interest.” Under 5 U.S.C. 553(b)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because it is impracticable. The Coast Guard was notified of the event without ample time for the NPRM process. We must establish this safety zone by August 7, 2021, and lack sufficient time to provide a reasonable comment period and then consider those comments before issuing this rule.

Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the Federal Register. Delaying the effective date of this rule would be contrary to public interest because immediate action is needed to ensure the safety of the participants and vessels during the Music City Grand Prix Fireworks Display on August 7, 2021.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 46 U.S.C. 70034 (previously 33 U.S.C. 1231). The
Captain of the Port Sector Ohio Valley (COTP) has determined that potential hazards associated with the Music City Grand Prix Fireworks Display on August 7, 2021, will be a safety concern for anyone within a 1.0 mile radius of the fireworks barge. This rule is needed to protect personnel, vessels, and the marine environment in the navigable waters within the safety zone while the Music City Grand Prix Fireworks display is occurring.

IV. Discussion of the Rule

This rule establishes a temporary safety zone on the Cumberland River, starting at mile marker 190.5 and ending at 191.5, extending from bank to bank within the river. The safety zone will be enforced from 9 p.m. to 10:30 p.m. on August 7, 2021. The duration of the zone is intended to protect personnel, vessels, and the marine environment in these navigable waters while the Music City Grand Prix Fireworks Display is taking place. No vessel or person will be permitted to enter the safety zone without obtaining permission from the COTP or a designated representative.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This rule has not been designated a “significant regulatory action,” under Executive Order 12866. Accordingly, this rule has not been reviewed by the Office of Management and Budget (OMB).

This regulatory action determination is based on the size, location, duration, and time-of-day of the safety zone. Vessel traffic will be able to safely transit around this safety zone which would impact a small designated area of the Cumberland River before or after the time of the events on each day. Moreover, the Coast Guard would issue a Broadcast Notice to Mariners via VHF–FM marine channel 16 about the zone, and the rule would allow vessels to seek permission to enter the zone.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term “small entities” comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section V.A above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the FOR FURTHER INFORMATION CONTACT section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and you have questions concerning its provisions or options for compliance, please call or email the person listed in the FOR FURTHER INFORMATION CONTACT section.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132. Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves a safety zone lasting 1.5 hours spread over the course of 1 day that would prohibit entry within 1 mile of the fireworks barge. It is categorically excluded from further review under paragraph L60(a) of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the ADDRESSES section of this preamble.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protestors. Protesters are asked to call or email the person listed in the FOR FURTHER INFORMATION CONTACT section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places or vessels.
List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

1. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034, 70051; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 0170.1.

2. Add §165.T08–0248 to read as follows:

§165.T08–0248 Safety Zone; Cumberland River, Nashville, TN.

(a) Location. The following area is a safety zone: All navigable waters of the Cumberland River from mile marker 190.5 to mile marker 191.5.

(b) Definition. As used in this section, designated representative means a Coast Guard Patrol Commander, including a Coast Guard coxswain, petty officer, or other officer operating a Coast Guard vessel and a Federal, State, and local officer designated by or assisting the Captain of the Port Sector Ohio Valley (COTP) in the enforcement of the safety zone.

(c) Regulations. (1) Under the general safety zone regulations in subpart C of this part, you may not enter the safety zone described in paragraph (a) of this section unless authorized by the COTP or the COTP's designated representative.

(2) To seek permission to enter, contact the COTP or the COTP's representative by VHF–FM radio channel 16 or phone at 1–800–253–7465. Those in the safety zone must comply with all lawful orders or directions given to them by the COTP or the COTP's designated representative.

(d) Enforcement periods. This section will be enforced from 9 p.m. until 10:30 p.m. on August 7, 2021.

Dated: July 14, 2021.
A.M. Beach,
Captain, U.S. Coast Guard; Captain of the Port Sector Ohio Valley.

[FR Doc. 2021–15767 Filed 7–22–21; 8:45 am]
BILLING CODE 9110–04–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

Finding of Failure To Submit a State Implementation Plan To Meet the 1987 24-Hour PM10 Standard; Moderate Area Requirements; West Pinal County; Arizona

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is making a finding that Arizona has not submitted a required revision to the Arizona State Implementation Plan (SIP) for the West Pinal County nonattainment area addressing Clean Air Act (CAA) requirements for a Moderate area attainment plan, related rules, and other analyses needed to attain the 1987 24-hour particulate matter (PM10) National Ambient Air Quality Standard (NAAQS) by December 31, 2018. Under the CAA, Arizona was required to submit a moderate area PM10 attainment plan for West Pinal County no later than January 2, 2014, and so on December 21, 2015. On May 17, 2021, Arizona withdrew its Moderate area attainment plan submission. This finding establishes a deadline for EPA to promulgate a Federal Implementation Plan (FIP) to address these CAA requirements 24 months from the effective date of this finding. The CAA also provides for the imposition of sanctions if Arizona does not submit the required attainment plan within timeframes specified by the CAA.

DATES: This finding is effective on August 23, 2021.

ADDRESSES: The EPA has established a docket for this action identified by the following identification number, EPA–R09–OAR–2021–0373. Generally, documents in the docket for this action are available electronically at the www.regulations.gov website. Although listed in the index, some information is not publicly available, e.g., Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available through https://www.regulations.gov; or please contact the person identified in the FOR FURTHER INFORMATION CONTACT section for additional availability information.

You need assistance in a language other than English or if you are a person with disabilities who needs a reasonable accommodation at no cost to you, please contact the person identified in the FOR FURTHER INFORMATION CONTACT section.

FOR FURTHER INFORMATION CONTACT: Jerry Wamsley, EPA Region IX, (415) 947–4111, wamsley.jerry@epa.gov.

SUPPLEMENTARY INFORMATION: Section 553 of the Administrative Procedure Act (APA), 5 U.S.C. 553(b)(B), provides that an agency may issue a rule without providing notice and an opportunity for public comment when that agency finds for good cause that notice and public procedure are impracticable, unnecessary, or contrary to the public interest. The EPA has determined that there is good cause for issuing this finding without prior proposal and opportunity for comment because there is little or no judgment involved for the EPA to make a finding of failure to submit SIPs or elements of SIPs required by the CAA, where states have not submitted a required SIP revision by the date specified by statute, made incomplete submissions, or, as in this case, withdrawn an existing submission. In such circumstances, EPA finds that notice and public procedures are unnecessary and that this constitutes good cause under 5 U.S.C. 553(b)(B).

Throughout this document, “we,” “us,” and “our” refer to the EPA.

I. Background and Statutory Requirements
   A. The PM10 NAAQS and the EPA’s Nonattainment Redesignation of West Pinal County

The EPA sets the NAAQS for certain ambient air pollutants at levels required to protect public health and welfare. Particulate matter with an aerodynamic diameter less than or equal to a nominal ten micrometers, or PM10, is one of the ambient air pollutants for which the EPA has established health-based standards. The EPA revised the NAAQS (or “standards”) for particulate matter on July 1, 1987, replacing the standards for total suspended particulates (TSP
less than 30 microns in diameter) with new standards applying only to particulate matter up to 10 microns in diameter. An area attains the 24-hour PM\textsubscript{10} standard of 150 micrograms per cubic meter (\mu g/m\textsuperscript{3}) when the expected number of days per calendar year, averaged over a three year period, with a 24-hour concentration exceeding the standard (referred to as an exceedance), is equal to or less than one.\textsuperscript{2} On January 13, 2013, the EPA announced that it was again retaining the 24-hour PM\textsubscript{10} NAAQS as a 24-hour standard of 150 \mu g/m\textsuperscript{3}.\textsuperscript{3}

On October 14, 2009, consistent with Section 107(d)(3)(A) of the CAA, the EPA notified the Governor of Arizona and the leaders of four Tribes with areas of Indian country either entirely or partly within Pinal County that the designation for Pinal County and nearby areas contributing to monitored violations of the PM\textsubscript{10} NAAQS should be revised.\textsuperscript{4} The EPA’s initiation of the redesignation process for Pinal County was based upon our review of 2006–2008 ambient PM\textsubscript{10}\textsubscript{+} monitoring data from monitoring stations within the county showing widespread, frequent, and, in some cases, severe violations of the PM\textsubscript{10} NAAQS.

On May 31, 2012, EPA redesignated part of Pinal County from unclassifiable to nonattainment for the 24-hour PM\textsubscript{10} NAAQS, creating the West Pinal County PM\textsubscript{10} nonattainment area.\textsuperscript{5} The EPA’s nonattainment redesignation of West Pinal County was based on ambient PM\textsubscript{10} data collected from 2007 to 2009.\textsuperscript{6} Our redesignation of West Pinal County to nonattainment for the PM\textsubscript{10} NAAQS was effective on July 2, 2012. Consequently, under section 188(c)(1) of the CAA, Arizona was required to submit an implementation plan providing for West Pinal County’s attainment of the PM\textsubscript{10} NAAQS as expeditiously as practicable, but no later than the close of the sixth calendar year after redesignation, or December 31, 2018. As specified in our May 31, 2012 rulemaking, the Moderate area PM\textsubscript{10} attainment plan for West Pinal County was due on January 2, 2014, 18 months after the effective date of the redesignation, as required by section 199(a)(2)(B) of the CAA.

On December 21, 2015, Arizona submitted “The 2015 West Pinal Moderate PM\textsubscript{10} Nonattainment Area SIP” (Moderate Area Plan) with related rules and analyses for West Pinal County.\textsuperscript{7} The submission included rules regulating PM\textsubscript{10} emissions from construction sites, crop operations, animal operations, irrigation districts, and general fugitive dust. On May 1, 2017, the EPA approved the submitted rules regulating PM\textsubscript{10} emissions from construction sites, crop operations, irrigation districts, and general fugitive dust, but did not act on the remainder of the submission.\textsuperscript{8}

On June 24, 2020, the EPA determined that the West Pinal County nonattainment area had not attained the 1987 24-hour PM\textsubscript{10} NAAQS by the latest permissible December 31, 2018 attainment date and reclassified the area from Moderate to Serious.\textsuperscript{9} The EPA’s finding of failure to attain the NAAQS by the required date and concomitant reclassification established an 18-month deadline for Arizona to submit a Serious area attainment plan for the West Pinal County PM\textsubscript{10} nonattainment area by January 24, 2022.

On January 8, 2021, the EPA proposed a partial approval and partial disapproval of the Moderate Area Plan, proposing to disapprove all elements of the attainment plan, except the emissions inventories.\textsuperscript{10} Subsequently, on February 26, 2021, we proposed a limited approval and limited disapproval of statutory provisions and rules that govern particulate matter emissions from agricultural activity that Arizona submitted with the plan.\textsuperscript{11}

On May 17, 2021, ADEQ withdrew all submitted portions of the Moderate Area Plan that the EPA had not approved previously into the SIP.\textsuperscript{12} In addition to the required attainment plan, Arizona’s withdrawal action included the agricultural dust regulations that the EPA had not already approved into the SIP. Because Arizona has withdrawn the submission, the State has failed to meet its obligation to submit an attainment plan for the Moderate area attainment plan requirements for the West Pinal County PM\textsubscript{10} nonattainment area, providing the basis for this finding.

### B. CAA Moderate PM\textsubscript{10} Nonattainment Area Requirements for West Pinal County

Areas redesignated as nonattainment are subject to the applicable requirements of part D, title I of the CAA and are classified as Moderate by operation of law, consistent with section 188(a) of the CAA. Within 18 months of the effective date of the redesignation, i.e., by January 2, 2014, Arizona was required to submit an attainment plan to the EPA providing for how the State will meet the PM\textsubscript{10} NAAQS within the West Pinal County nonattainment area no later than December 31, 2018. Among other things, this Moderate area attainment plan must contain statutorily mandated elements and, according to the CAA and EPA guidance, address the following requirements: (1) An approved permit program for construction of new and modified major stationary sources;\textsuperscript{13} (2) a demonstration that the plan provides for attainment by no later than the applicable Moderate area attainment date or a demonstration that attainment by that date is impracticable;\textsuperscript{14} (3) provisions for the implementation of reasonably available control measures (RACM) and reasonably available control technology (RACT);\textsuperscript{15} (4) quantifiable milestones that will be used to evaluate compliance with the requirement to demonstrate reasonable further progress (RFP);\textsuperscript{16} (5) evaluation and regulation of PM\textsubscript{10} precursors;\textsuperscript{17} (6) a description of the expected annual incremental reductions in emissions that will demonstrate RFP;\textsuperscript{18} (7) emissions inventories, as necessary;\textsuperscript{19} (8) other control measures besides RACM and RACT as may be needed for

\textsuperscript{1} 53 FR 24634 (July 1, 1987). The 1987 PM\textsubscript{10} standards included a 24-hour (150 micrograms per cubic meter (\mu g/m\textsuperscript{3})) and an annual standard (50 \mu g/m\textsuperscript{3}). In 2006, the EPA revoked the annual standard; see 71 FR 61144 (October 17, 2006) and 40 CFR 50.6.

\textsuperscript{2} An exceedance is defined as a daily value that is above the level of the 24-hour standard, 150 \mu g/m\textsuperscript{3}, after rounding to the nearest 10 \mu g/m\textsuperscript{3} (i.e., values ending in five or greater are to be rounded up). Consequently, a recorded value of 154 \mu g/m\textsuperscript{3} would not be an exceedance because it would be rounded to 150 \mu g/m\textsuperscript{3}; whereas, a recorded value of 155 \mu g/m\textsuperscript{3} would be an exceedance because it would be rounded to 160 \mu g/m\textsuperscript{3}. See 40 CFR part 50, appendix K, section 1.6.

\textsuperscript{3} 76 FR 3806 (January 13, 2013).

\textsuperscript{4} Letter from Laura Yoshii, Acting Regional Administrator, to Governor of Arizona Jan Brewer dated October 14, 2009. By letters dated December 30, 2009, the EPA notified the tribal leaders of the Ak-Chin Indian Community, Gila River Indian Community, and San Carlos Apache Tribe. The EPA notified Tohono O’odham Nation by letter dated September 21, 2010.

\textsuperscript{5} For the boundaries of the West Pinal County PM\textsubscript{10} nonattainment area, see 40 CFR 81.303. Also, for a detailed discussion of these boundaries, see our final rule at 77 FR 32024 (May 31, 2012) and proposed rule at 75 FR 60680 (October 1, 2010). No areas of Indian country are located in the West Pinal PM\textsubscript{10} nonattainment area.

\textsuperscript{18} CAA section 172(c)(3).
attainment; 29 (9) contingency measures; 21 and (10) a motor vehicle emissions budget for the purpose of determining the conformity of transportation programs and plans developed by state transportation agencies. 22 With Arizona’s May 17, 2021 withdrawal action, the State has failed to meet its obligation to submit nine of the ten required Moderate area attainment plan elements; today’s action does not affect ADEQ’s permit program governing the construction and operation of new and modified major stationary sources of PM₁₀ within the West Pinal County nonattainment area. 23

By this action, the EPA is finding that Arizona failed to submit the nine required PM₁₀ Moderate Area attainment plan elements for the West Pinal County PM₁₀ nonattainment area listed above. As noted, Arizona has submitted a major source PM₁₀ permitting program including West Pinal County and that element is not a subject of this finding.

C. Consequences of This Finding That Arizona Failed To Submit a PM₁₀ Implementation Plan for West Pinal County

The EPA is finding that Arizona has failed to make a required Moderate area attainment plan submission for the 1987 PM₁₀ NAAQS for the West Pinal County area, except for the permit program required under section 189(a)(1)(A).

With this finding, section 179 of the CAA starts a sanctions clock and a FIP clock. Section 179(a) of the CAA specifies the consequences for a state if the EPA finds that a state has failed to make a required SIP submission, if the EPA has determined that a submitted SIP is incomplete, or if the EPA has disapproved a SIP submission. If the EPA has not affirmatively determined that Arizona has made complete submissions of the required nonattainment SIP elements within 18 months of the effective date of this action, then the offset sanction identified in section 179(b)(2) will apply to West Pinal County, pursuant to section 179(a) and (b) and 40 CFR 52.31. If the EPA has not affirmatively determined that Arizona has made a complete SIP submission for West Pinal County within six months after imposition of this offset sanction, then the highway funding sanction will be imposed, as required under section 179(b)(1) of the CAA and 40 CFR 52.31.

Arizona may avoid these sanctions by taking timely action to remedy this finding. The 18-month clock governing the Act’s imposition of sanctions on Arizona will stop and sanctions will not take effect if the EPA finds that the State has made a complete SIP submission for the Moderate area attainment plan requirements for the West Pinal County area within 18 months of the date of this finding. Similarly, the EPA is not required to promulgate a FIP if Arizona makes the required SIP submission and the EPA takes final action to approve the submission within two years of the finding of failure to submit a required SIP. In sum, the CAA does not require sanctions or a FIP if the State and the EPA take timely action to remedy this finding.

As discussed previously, the EPA determined that West Pinal County did not meet the PM₁₀ NAAQS by December 31, 2018, causing West Pinal County to be reclassified, by operation of law, from a Moderate to a Serious PM₁₀ nonattainment area. With this reclassification of West Pinal County to Serious, Arizona is required to submit, by January 24, 2022, a nonattainment plan SIP revision that complies with the statutory and regulatory requirements for Serious PM₁₀ nonattainment plans and that demonstrates attainment of the PM₁₀ NAAQS as expeditiously as practicable, but no later than December 31, 2022. Although reclassification of West Pinal County from Moderate to Serious does not eliminate Arizona’s obligation to meet Moderate area nonattainment plan requirements, the EPA anticipates that Arizona’s submission of an approvable Serious area nonattainment plan would also satisfy the State’s Moderate area nonattainment plan obligations. 24 Therefore, should Arizona submit a complete Serious area attainment plan for the West Pinal County PM₁₀ nonattainment area, the sanction clocks associated with this finding of failure to submit would stop. Similarly, should Arizona submit, and the EPA subsequently approve, a Serious area attainment plan for the West Pinal County PM₁₀ nonattainment area, such a final approval action would stop the FIP clock associated with this finding of failure to submit the Moderate area implementation plan elements.

20 CAA section 172(c)(6).
21 CAA section 172(c)(9).
22 40 CFR 93.102(b)(1).
23 For a discussion of our action on Arizona’s submittal to meet CAA section 189(a)(1)(A), see 80 FR 67319 (November 2, 2015).

III. Statutory and Executive Order Reviews

Additional information about these statutes and Executive orders can be found at http://www.epa.gov/laws-regulations/laws-and-executive-orders.

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

This action is not a significant regulatory action and was therefore not submitted to the Office of Management and Budget (OMB) for review.

B. Paperwork Reduction Act (PRA)

This action does not impose an information collection burden under the PRA because this action does not impose additional requirements beyond those imposed by state law.

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA. This action will not impose any requirements on small entities beyond those imposed by state law.
D. Unfunded Mandates Reform Act (UMRA)

This action does not contain any unfunded mandate as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. This action does not impose additional requirements beyond those imposed by state law. Accordingly, no additional costs to State, local, or tribal governments, or to the private sector, will result from this action.

E. Executive Order 13132: Federalism

This action does not have federalism implications. It will not have substantial direct effects on the states, on the relationship between the National Government and the states, or on the distribution of power and responsibilities among the various levels of government.

F. Executive Order 13175: Coordination With Indian Tribal Governments

This action does not have tribal implications, as specified in Executive Order 13175, because this action does apply on any Indian reservation land or in any other area where the EPA or an Indian tribe has demonstrated that a tribe has jurisdiction, and will not impose substantial direct costs on tribal governments or preempt tribal law. There are no areas of Indian country located in the West Pinal PM10 nonattainment area. Thus, Executive Order 13175 does not apply to this action.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

The EPA interprets Executive Order 13045 as applying only to those regulatory actions that concern environmental health or safety risks that the EPA has reason to believe may disproportionately affect children, per the definition of “covered regulatory action” in section 2–202 of the Executive Order. This action is not subject to Executive Order 13045 because it does not impose additional requirements beyond those imposed by state law.

H. Executive Order 13211: Actions That Significantly Affect Energy Supply, Distribution, or Use

This action is not subject to Executive Order 13211, because it is not a significant regulatory action under Executive Order 12866.

I. National Technology Transfer and Advancement Act (NTTAA)

Section 12(d) of the NTTAA directs the EPA to use voluntary consensus standards in its regulatory activities unless to do so would be inconsistent with applicable law or otherwise impractical. The EPA believes that this action is not subject to the requirements of section 12(d) of the NTTAA because application of those requirements would be inconsistent with the CAA.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

The EPA lacks the discretionary authority to address environmental justice in this action.

K. Congressional Review Act (CRA)

This action is subject to the CRA, and the EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This action is not a “major rule” as defined by 5 U.S.C. 804(2).

L. Petitions for Judicial Review

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by September 21, 2021. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this rule for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements (see section 307(b)(2)).

List of Subjects in 40 CFR Part 52

Environmental protection, Administrative practice and procedure, Air pollution control, Incorporation by reference, Intergovernmental relations, Particulate matter, Reporting and recordkeeping requirements.

Authority: 42 U.S.C. 7401 et seq.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

Air Plan Approval; Tennessee; Knoxville Area Limited Maintenance Plan for the 1997 8-Hour Ozone NAAQS

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is taking final action to approve a state implementation plan (SIP) revision submitted by the State of Tennessee, through the Tennessee Department of Environment and Conservation (TDEC), Air Pollution Control Division, via a letter dated January 23, 2020. The SIP revision includes the 1997 8-hour ozone national ambient air quality standards (NAAQS) Limited Maintenance Plan (LMP) for the Knoxville, Tennessee Area (hereinafter referred to as the “Knoxville Area” or “Area”). The Knoxville Area, as defined in this action, is comprised of Jefferson, Loudon, and Sevier Counties in their entirety, the portion of Cocke County that falls within the boundary of the Great Smoky Mountains National Park, and a portion of Anderson County that excludes the area surrounding Tennessee Valley Authority (TVA) Bull Run Fossil Plant. EPA is approving the Knoxville Area LMP because it provides for the maintenance of the 1997 8-hour ozone NAAQS within the Knoxville Area through the end of the second 10-year portion of the maintenance period. The effect of this action is to make certain commitments related to maintenance of the 1997 8-hour ozone NAAQS in the Knoxville Area federally enforceable as part of the Tennessee SIP.

DATES: This rule is effective August 23, 2021.

ADDRESSES: EPA has established a docket for this action under Docket ID No. EPA–R04–OAR–2020–0221. All documents in the docket are listed on the www.regulations.gov website. Although listed in the index, some information is not publicly available, i.e., Confidential Business Information or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials can either be retrieved electronically via www.regulations.gov or in hard copy at the Air Regulatory
Management Section, Air Planning and Implementation Branch, Air and Radiation Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street SW, Atlanta, Georgia 30303–8960. EPA requests that if at all possible, you contact the person listed in the FOR FURTHER INFORMATION CONTACT section to schedule your inspection. The Regional Office’s official hours of business are Monday through Friday 8:30 a.m. to 4:30 p.m., excluding Federal holidays.

FOR FURTHER INFORMATION CONTACT:
Sarah LaRocca, Air Regulatory Management Section, Air Planning and Implementation Branch, Air and Radiation Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street SW, Atlanta, Georgia 30303–8960. The telephone number is (404) 562–8994. Ms. LaRocca can also be reached via electronic mail at larocca.sara@epa.gov.

SUPPLEMENTARY INFORMATION:
I. Background

In 1979, under section 109 of the Clean Air Act (CAA or Act), EPA established primary and secondary NAAQS for ozone at 0.12 parts per million (ppm), averaged over a 1-hour period. See 44 FR 8202 (February 8, 1979). On July 18, 1997, EPA revised the primary and secondary NAAQS for ozone to set the acceptable level of ozone in the ambient air at 0.08 ppm, averaged over an 8-hour period. See 62 FR 38856 (July 18, 1997).1 EPA set the 8-hour ozone NAAQS based on scientific evidence demonstrating that ozone causes adverse health effects at lower concentrations and over longer periods of time than was understood when the pre-existing 1-hour ozone NAAQS was set. EPA determined that the 8-hour ozone NAAQS would be more protective of human health, especially children and adults who are active outdoors, and individuals with a pre-existing respiratory disease, such as asthma.

Following promulgation of a new or revised NAAQS, EPA is required by the CAA to designate areas throughout the nation as attaining or not attaining the NAAQS. On April 15, 2004, EPA designated the Knoxville 1997 NAAQS Area, which is comprised of Anderson, Blount, Knox, Jefferson, Loudon, and Sevier Counties in their entireties, and the portion of Cocke County that falls within the boundary of the Great Smoky Mountains National Park, as nonattainment for the 1997 8-hour ozone NAAQS, and the designation became effective on June 15, 2004. See 69 FR 23858 (April 30, 2004). Similarly, on May 21, 2012, EPA designated areas as unclassifiable/attainment or nonattainment for the 2008 8-hour ozone NAAQS. EPA designated Blount and Knox Counties and the portion of Anderson County surrounding the TVA Bull Run Fossil Plant as nonattainment for the 2008 8-hour ozone NAAQS and classified as a marginal nonattainment area (hereinafter referred to as the “Knoxville 2008 NAAQS Area”). This designation became effective on July 20, 2012.2 In addition, on November 16, 2017, areas were designated for the 2015 8-hour ozone NAAQS. The Knoxville 1997 NAAQS Area3 was designated attainment/unclassifiable for the 2015 8-hour ozone NAAQS, with an effective date of January 16, 2018.4

A state may submit a request to redesignate a nonattainment area that is attaining a NAAQS to attainment, and, if the area has met other required criteria described in section 107(d)(3)(E) of the CAA, EPA may approve the redesignation request.5 One of the criteria for redesignation is to have an approved maintenance plan under CAA section 175A. The maintenance plan must demonstrate that the area will continue to maintain the NAAQS for the period extending ten years after redesignation, and it must contain such additional measures as necessary to ensure maintenance and such contingency provisions as necessary to assure that violations of the NAAQS will be promptly corrected. Eight years after the effective date of redesignation, the state must also submit a second maintenance plan to ensure ongoing maintenance of the NAAQS for an additional ten years pursuant to CAA section 175A(b) (i.e., ensuring maintenance for 20 years after redesignation).

EPA has published long-standing guidance for states on developing maintenance plans.6 The Calcagni memo provides that states may generally demonstrate maintenance by either performing air quality modeling to show that the future mix of sources and emission rates will not cause a violation of the NAAQS or by showing that projected future emissions of a pollutant and its precursors will not exceed the level of emissions during a year when the area was attaining the NAAQS (i.e., attainment year inventory). See Calcagni memo at page 9. EPA clarified in three subsequent guidance memos that certain areas could meet the CAA section 175A requirement to provide for maintenance by showing that the area was unlikely to violate the NAAQS in the future, using information such as the area’s design value 7 being significantly below the standard and the area having a historically stable design value.8 EPA refers to a maintenance plan containing this streamlined demonstration as an LMP.

EPA has interpreted CAA section 175A as permitting the LMP option because section 175A of the Act does not define how areas may demonstrate maintenance, and in EPA’s experience implementing the various NAAQS, areas that qualify for an LMP and have approved LMPs have rarely, if ever, experienced subsequent violations of the NAAQS. As noted in the LMP guidance memoranda, states seeking an LMP must still submit the other maintenance plan elements outlined in the Calcagni memo, including: an attainment emissions inventory, provisions for the continued operation of the ambient air quality monitoring network, verification of continued attainment, and a contingency plan in the event of a future violation of the NAAQS. Moreover, a state seeking an LMP must still submit its section 175A maintenance plan as a revision to its SIP, with all attendant notice and comment procedures. While the LMP section 175A of the Act does not define how areas may demonstrate maintenance, and in EPA’s experience implementing the various NAAQS, areas that qualify for an LMP and have approved LMPs have rarely, if ever, experienced subsequent violations of the NAAQS. As noted in the LMP guidance memoranda, states seeking an LMP must still submit the other maintenance plan elements outlined in the Calcagni memo, including: an attainment emissions inventory, provisions for the continued operation of the ambient air quality monitoring network, verification of continued attainment, and a contingency plan in the event of a future violation of the NAAQS. Moreover, a state seeking an LMP must still submit its section 175A maintenance plan as a revision to its SIP, with all attendant notice and comment procedures. While the LMP...
guidance memoranda were originally written with respect to certain NAAQS. EPA has extended the LMP interpretation of section 175A to other NAAQS and pollutants not specifically covered by the previous guidance memos.10

In a notice of proposed rulemaking (NPRM) published on June 11, 2021 (86 FR 31218), EPA proposed to approve Tennessee’s LMP because the State made a showing, consistent with EPA’s prior LMP guidance, that the Area’s ozone concentrations are well below the 1997 8-hour ozone NAAQS and have been historically stable and that it met the other maintenance plan requirements. The details of Tennessee’s submission and the rationale for EPA’s action are explained in the proposed rulemaking. Comments on the June 11, 2021, NPRM were due on or before July 12, 2021. EPA did not receive any comments on the June 11, 2021, NPRM.

II. Final Action

EPA is taking final action to approve the Knoxville Area LMP for the 1997 8-hour ozone NAAQS, submitted by TDEC on January 23, 2021, as a revision to the Tennessee SIP. EPA is approving the Knoxville Area LMP because it includes a sufficient update of the various elements of the 1997 8-hour ozone NAAQS Maintenance Plan approved by EPA for the first 10-year portion of the maintenance period (including emissions inventory, assurance of adequate monitoring and verification of continued attainment, and contingency provisions) and retains the relevant provisions of the SIP under sections 110(k) and 175A of the CAA.

EPA also finds that the Knoxville Area qualifies for the LMP option and that the Knoxville Area LMP is sufficient to provide for maintenance of the 1997 8-hour ozone NAAQS in the Knoxville Area over the second 10-year maintenance period (i.e., through 2031).

III. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable Federal regulations. See 42 U.S.C. 7410(k): 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA’s role is to approve state choices, provided that they meet the criteria of the CAA. This action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:
- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 et seq.);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 et seq.);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and
- Does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

The SIP is not approved to apply on any Indian reservation land or in any other area where EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), nor will it impose substantial direct costs on tribal governments or preempt tribal law.

The Congressional Review Act, 5 U.S.C. 801 et seq., as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this action and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the Federal Register. A major rule cannot take effect until 60 days after it is published in the Federal Register. This action is not a “major rule” as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the CAA, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by September 21, 2021. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. See section 307(b)(2).

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Nitrogen oxides, Ozone, Reporting and recordkeeping requirements, Volatile organic compounds.

Dated: July 15, 2021.

John Blevins,
Acting Regional Administrator, Region 4.

For the reasons stated in the preamble, EPA amends 40 CFR part 52 as follows:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 et seq.

2. In §52.2220, amend the table in paragraph (e) by adding, at the end of the table, the entry “1997 8-Hour Ozone Second 10-Year Limited Maintenance Plan for the Knoxville, Tennessee Area” to read as follows:

§52.2220 Identification of plan.

**List of Subjects in 47 CFR Part 73**

Television.
SUPPLEMENTARY INFORMATION: The proposed rule was published at 86 FR 22929 on April 30, 2021. The Petitioner filed comments in support of the petition reaffirming its commitment to apply for channel 20. No other comments were filed. The Petitioner states that VHF channels have certain propagation characteristics which may cause reception issues for some viewers. In addition, KECI–TV has received numerous complaints from viewers unable to receive the Station’s over-the-air signal, despite being able to receive signals from other stations. While the proposed channel 20 noise limited contour does not completely encompass the relevant channel 13 noise limited contour, Petitioner demonstrated there would be a loss of service to only 65 people, a number the Commission considers de minimis. In addition, KECI–TV’s proposed channel 20 facility is predicted to serve a total of 252,689 persons, a net gain of 38,879 potential viewers over the existing KECI–TV channel 13 facility. As the Bureau explained in the NPRM, it used the technical parameters of KECI–TV’s original post-transition digital channel 13 facility (File No. BPCDT–20080327AFR) in determining any predicted loss which may occur. This is a synopsis of the Commission’s Report and Order, MB Docket No. 21–176; RM–11903; DA 21–846, adopted July 15, 2021, and released July 16, 2021. The full text of this document is available for download at https://www.fcc.gov/edocms. To request materials in accessible formats for people with disabilities (braille, large print, electronic files, audio format), send an email to fcc504@fcc.gov or call the Consumer & Governmental Affairs Bureau at 202–418–0530 (voice), 202–418–0432 (tty).

The Commission will send a copy of this Report and Order in a report to be sent to Congress and the Government Accountability Office pursuant to the Congressional Review Act, see 5 U.S.C. 801(a)(1).[A].

BILLING CODE 6712–01–P

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 73

[MB Docket No. 21–219; RM–11907; DA 21–844; FR ID 39360]

Television Broadcasting Services

Quincy, Illinois

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: On May 17, 2021, the Media Bureau, Video Division (Bureau) issued a Notice of Proposed Rulemaking (NPRM) in response to a petition for rulemaking filed by WGEM License, LLC (Petitioner), the licensee of WGEM–TV, channel 10 (NBC), Quincy, Illinois, requesting the substitution of channel 19 for channel 10 at Quincy in the DTV Table of Allotments. For the reasons set forth in the Report and Order referenced below, the Bureau amends FCC regulations to substitute channel 19 for channel 10 at Quincy.

FOR FURTHER INFORMATION CONTACT:

Joyce Bernstein, Media Bureau, at (202) 418–1647 or Joyce.Bernstein@fcc.gov.

SUPPLEMENTARY INFORMATION: The proposed rule was published at 86 FR 28523 on May 27, 2021. The Petitioner filed comments in support of the petition reaffirming its commitment to apply for channel 19, and Gray Television, Inc. filed comments in support. The Petitioner states that VHF channels have certain propagation characteristics which may cause reception issues for some viewers. In addition, WGEM–TV has received numerous complaints from viewers unable to receive the Station’s over-the-air signal. In addition, the Petitioner demonstrated that while the proposed channel 19 facility will result in a slight reduction in WGEM–TV’s noise limited contour, use of the Longley–Rice propagation model indicates that the proposed channel 19 facility will have an extended terrain-limited service throughout the gap area, and thus, there will be no loss of service.

This is a synopsis of the Commission’s Report and Order, MB Docket No. 21–176; RM–11903; DA 21–846; FR ID 39244]
2. In §73.622(i), amend the Post-

COMMISSION
47 CFR Part 73
[MB Docket No. 21–177; RM–11904; DA 21–
848; FR ID 39235]

Television Broadcasting Services
Redding, California

AGENCY: Federal Communications
Commission.

ACTION: Final rule.

SUMMARY: On April 21, 2021, the Media
Bureau, Video Division (Bureau) issued a
Notice of Proposed Rulemaking (NPRM) in
response to a petition for
rulemaking filed by Sinclair Media
Licensee, LLC (Petitioner), the licensee
of KRCR–TV, channel 7 (ABC), Redding,
California, requesting the substitution of
channel 15 for channel 7 at Redding.

FOR FURTHER INFORMATION CONTACT:
Joyce Bernstein, Media Bureau, at (202)
418–1647 or Joyce.Bernstein@fcc.gov.

SUPPLEMENTARY INFORMATION: The
proposed rule was published at 86 FR
25978 on May 12, 2021. The Petitioner
filed comments in support of the
petition reaffirming its commitment to
apply for channel 15. No other
comments were filed. The Petitioner
states that VHF channels have certain
propagation characteristics which may
cause reception issues for some viewers.
In addition, KRCR has received
numerous complaints from viewers
unable to receive the Station’s over-the-
air signal, despite being able to receive
signals from other stations. The
Petitioner also submitted an analysis,
using the Commission’s TVStudy
software analysis program,
demonstrating that the proposed
channel change from channel 7 to
canal 15 would result in a substantial
increase in signal receivability for
KRCR’s core viewers, with a minimal
loss of service to only 299 people, a
number the Commission considers de
minimis.

This is a synopsis of the
Commission’s Report and Order. MB
Docket No. 21–177; RM–11904; DA 21–
848, adopted July 15, 2021, and released
July 16, 2021. The full text of this
document is available for download at

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 73

[MB Docket No. 21–185; RM–11906; DA 21–847; FR ID 39219]

Television Broadcasting Services

Butte, Montana

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: On April 26, 2021, the Media Bureau, Video Division (Bureau) issued a Notice of Proposed Rulemaking (NPRM) in response to a petition for rulemaking filed by Sinclair Media Licensee, LLC (Petitioner), the licensee of KTVM–TV (NBC), channel 6, Butte, Montana, requesting the substitution of channel 20 for channel 6 at Butte in the DTV Table of Allotments. For the reasons set forth in the Report and Order referenced below, the Bureau amends FCC regulations to substitute channel 20 for channel 6 at Butte.

FOR FURTHER INFORMATION CONTACT: Joyce Bernstein, Media Bureau, at (202) 418–1647 or Joyce.Bernstein@fcc.gov.

SUPPLEMENTARY INFORMATION: The proposed rule was published at 88 FR 24837 on May 10, 2021. The Petitioner filed comments in support of the petition reaffirming its commitment to apply for channel 20. REC Networks also filed comments. The Petitioner states that VHF channels have certain propagation characteristics which may cause reception issues for some viewers. In addition, KTVM–TV has received numerous complaints from viewers unable to receive the Station’s over-the-air signal, despite being able to receive signals from other stations. While the proposed channel 20 noise limited contour does not completely encompass the relevant channel 6 noise limited contour, KTVM–TV is an NBC affiliate and there are two other NBC affiliated stations that serve some portion of the loss area. In addition, the Petitioner submitted an analysis, using the Commission’s TVStudy software analysis program, demonstrating that, after taking into account service provided by other NBC stations, all of the population located within KTVM–TV’s original post-DTV transition channel 6 noise limited contour will continue to receive NBC service, except for 66 people, a number the Commission considers de minimis. As the Bureau explained in the NPRM, it used the technical parameters of KTVM–TV’s original post-transition digital channel 6 facility (File Nos. BPCDT–20080314ADF; BLCDT–20090622ADT) in determining any predicted loss which may occur.

This is a synopsis of the Commission’s Report and Order, MB Docket No. 21–185; RM–11906; DA 21–847 adopted July 15, 2021 and released July 16, 2021. The full text of this document is available for download at https://www.fcc.gov/edocs. DEPARTMENT OF TRANSPORTATION

Federal Motor Carrier Safety Administration

49 CFR Part 384

[Docket No. FMCSA–2020–0198]

RIN 2126–AC36

Commercial Driver’s License Standards, Requirements and Penalties; Exclusively Electronic Exchange of Driver History Record Information

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), Department of Transportation (DOT).

ACTION: Final rule.

SUMMARY: FMCSA codifies the statutory requirement that State driver licensing agencies (SDLAs) implement a system and practices for the exclusively electronic exchange of driver history record (DHR) information through the Commercial Driver’s License Information System (CDLIS), including the posting of convictions, withdrawals, and disqualifications. The rule aligns FMCSA’s regulations with existing statutory requirements set forth in the Moving Ahead for Progress in the 21st Century Act (MAP–21). The rule also establishes a date by which States must be in substantial compliance with this final rule.

DATES: Effective Date: This final rule is effective August 23, 2021.
Compliance Date: Compliance with the final rule is required August 22, 2024.

Petitions for Reconsideration:
Petitions for reconsideration of this final rule must be submitted to the FMCSA Administrator no later than August 23, 2021.

FOR FURTHER INFORMATION CONTACT: Mr. Joshua Jones, Commercial Driver’s License Division, Federal Motor Carrier Safety Administration, 1200 New Jersey Avenue SE, Washington, DC 20590–0001, (202) 366–7332, cdlicompliance@dot.gov. If you have questions on viewing or submitting material to the docket, contact Dockets Operations, (202) 366–9826.

SUPPLEMENTARY INFORMATION:

I. Availability of Rulemaking Documents

For access to docket FMCSA–2020–0198 to read background documents, go to https://www.regulations.gov/docket/FMCSA-2020-0198/document at any time, or to Dockets Operations at U.S. Department of Transportation, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590–0001, between 9:00 a.m. and 5:00 p.m., Monday through Friday, except Federal holidays.

II. Executive Summary

This rule revises 49 CFR 384.208, Notification of disqualification, and 384.209, Notification of traffic violations, to require that States implement a system and practices for the exclusively electronic exchange of DHR information through CDLIS, including the posting of convictions, withdrawals, and disqualifications. The requirements are mandated by sections 32305(a)(1) and 32305(b)(1)(B) of MAP–21 (Pub. L. 112–140, 1200 New Jersey Avenue SE, Washington, DC 20590–0001, between 9:00 a.m. and 5:00 p.m., Monday through Friday, except Federal holidays.

As noted above, this final rule derives from the specific authority of sections 32305(a)(1) and 32305(b)(1)(B) of MAP–21. Those provisions require, respectively, that States use CDLIS to receive and submit driver conviction and disqualification data, and that, to avoid having apportionments from the Highway Trust Fund under 23 U.S.C. 104(b)(1) and (b)(2) withheld, States must implement procedures for the exclusively electronic exchange of DHR information on CDLIS, including the posting of convictions, withdrawals, and disqualifications. This final rule incorporates those requirements into the Code of Federal Regulations (CFR).

The Administrative Procedure Act (APA) provides that notice and comment are not required when the agency finds “good cause” to dispense with such procedures, and incorporates the finding, and a brief statement of reasons supporting the finding, in the rule issued. Good cause exists when the agency determines that notice and public comment procedures “are impracticable, unnecessary, or contrary to the public interest” (5 U.S.C. 553(b)(B)). In this case, Congress did not vest any discretion in the Secretary for carrying out the statutory provisions cited above; these requirements are already in effect and enforceable, regardless of whether they are incorporated in the CFR. The Agency therefore finds that notice and public comment are unnecessary because FMCSA is not authorized to make any changes in these requirements in response to public comments. This final rule simply codifies an existing statutory requirement, thereby aligning the statute and CFR.

The requirements pertaining to public participation in rulemaking, as set forth in 49 U.S.C. 31136(g) and 49 CFR 389.13(b), do not apply here because this final rule is not a major rule.

Finally, the FMCSA Administrator is delegated authority under 49 CFR 1.87(e)(1) to carry out the functions vested in the Secretary by 49 U.S.C. chapter 313, relating to commercial motor vehicle operators.

IV. Discussion of Final Rule

As noted above, MAP–21 amended 49 U.S.C. 31311(a) by adding the requirement that States implement a system and practices for the exclusively electronic exchange of driver history record information on the system the Secretary maintains under section 31309 (i.e., CDLIS), including the posting of convictions, withdrawals, and disqualifications. This final rule codifies those requirements.

In March 2020, FMCSA held an information listening session during its regular “Roundtable” discussion with the American Association of Motor Vehicle Administrators (AAMVA), SDLAs, and other stakeholders affected by the electronic exchange requirements. While all States currently have the technical capability to transmit the DHR information through CDLIS, some SDLAs are unable to do so when the driver information (e.g., driver’s CDL number, date of birth, or State of record), required for CDLIS to validate and accept the electronic record, is incorrect or missing. Under those circumstances, States must rely on alternative methods of transmission, such as the U.S. mail. Some States also noted the need for specific authorization by their State legislatures to incorporate...
the exclusively electronic exchange requirements into State law.

In recognition of these issues, the final rule provides that States should achieve substantial compliance as soon as possible, but not later than 3 years from the effective date of this rule. This period provides sufficient time for those SDLAs required to obtain authorization from their State legislatures to do so. In addition, FMCSA will work closely with AAMVA and the States to address current systemic impediments to transmitting DHR information through CDLIS, and to provide related regulatory guidance responding to SDLAs’ questions and concerns. The Agency acknowledges that some SDLAs believe CDLIS is not the most efficient electronic means of transmitting driver conviction information. As discussed above, however, FMCSA must adhere to the statutory requirements codified by this final rule, which specify that CDLIS be used to transmit the information.

V. Section-by-Section Analysis

The words “via CDLIS” are added to the end of paragraph (a) of §384.208. The phrase “and must be transmitted through CDLIS” is added to the end of paragraph (c) of §384.209.

This final rule also adds new paragraph (n) to §384.301, requiring States to come into substantial compliance with the changes made by this final rule within 3 years of its effective date.

VI. Regulatory Analyses

A. Executive Order (E.O.) 12866 (Regulatory Planning and Review), E.O. 13563 (Improving Regulation and Regulatory Review), and DOT Regulatory Policies and Procedures

FMCSA has considered the impact of this final rule under E.O. 12866 (58 FR 51735, Oct. 4, 1993), Regulatory Planning and Review, E.O. 13563 (76 FR 3821, Jan. 21, 2011), Improving Regulation and Regulatory Review, and DOT’s regulatory policies and procedures. OIRA determined that this final rule is not a significant regulatory action under section 3(f) of E.O. 12866, as supplemented by E.O. 13563, and does not require an assessment of potential costs and benefits under section 6(a)(3) of that order. Accordingly, OMB has not reviewed it under these orders.

This rulemaking codifies a mandate imposed by MAP–21, as set forth in 49 U.S.C. 31309(e)(4)(A)(ii) and 31311(e)(2). Those provisions require, respectively, that States use CDLIS to receive and submit driver conviction and disqualification data, and that, to avoid having apportionments from the Highway Trust Fund under 23 U.S.C. 104(b)(1) and (b)(2) withheld. States must implement procedures for the exclusively electronic exchange of DHR information on CDLIS, including the posting of convictions, withdrawals, and disqualifications.

While all States currently have the technical capability to comply with the MAP–21 requirements by electronically transmitting DHR information through CDLIS, some States must rely on non-electronic means (e.g., mail) to transfer the DHR information on those occasions when they do not have sufficient information for CDLIS to validate and accept transmission (e.g., when there is a missing or incorrect date of birth or incorrect CDL number). As discussed above, FMCSA will work with AAMVA and the States to address the CDLIS constraints on submitting electronic DHR information, which should minimize the extent to which the initiating State is unable to complete the transmission due to deficient information, and to streamline further the exchange of DHR information through CDLIS. CDLIS costs may result, however, if AAMVA determines that software updates are necessary at the State level to accomplish this change. At this time, the existence or extent of potential CDLIS update costs is unknown. If such costs are incurred, States are eligible to apply for Commercial Driver License Program Implementation grants.

Further, FMCSA is aware that at least one State believes exclusively electronically exchange of DHR information would result in a cost savings. Some States currently employ people and/or pay overtime to process paper convictions; the more efficient electronic submission of DHR information will allow those resources to be used for other purposes. FMCSA does not know the extent of these cost savings in any given State, or the number of States that would experience a cost savings.

B. Congressional Review Act

This rule is not a major rule as defined under the Congressional Review Act (5 U.S.C. 801, et seq.).

C. Regulatory Flexibility Act

The Regulatory Flexibility Act of 1980 (5 U.S.C. 601, et seq.) applies to any rule subject to notice and comment rulemaking under section 553(b) of the APA and requires Federal agencies to consider the effects of the regulatory action on small business and other small entities and to minimize any significant economic impact. FMCSA is not required to complete a regulatory flexibility analysis, because, as discussed earlier in the Legal Basis section, this action is not subject to notice and comment under section 553(b) of the APA.

D. Assistance for Small Entities

In accordance with section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996,2 FMCSA wants to assist small entities in understanding this final rule so they can better evaluate its effects on themselves and participate in the rulemaking initiative. If the final rule will affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance; please consult the person listed under FOR FURTHER INFORMATION CONTACT.

Small businesses may send comments on the actions of Federal employees who enforce or otherwise determine compliance with Federal regulations to the Small Business Administration’s Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency’s responsiveness to small business. If you wish to comment on actions by employees of FMCSA, call 1–888–REG–FAIR (1–888–734–3247). DOT has a policy regarding the rights of small entities to regulatory enforcement fairness and an explicit policy against retaliation for exercising these rights.

E. Unfunded Mandates Reform Act of 1995

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000, or equivalent of $100,000,000 in 1995, adjusted for inflation to 2019 levels) or more in any one year. Though this final rule will not result in such an expenditure, the Agency does discuss the effects of this rule elsewhere in this preamble.

F. Paperwork Reduction Act

This final rule contains no new information collection requirements under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

G. E.O. 13132 (Federalism)

A rule has implications for federalism under Section 1(a) of Executive Order 13132 if it has “substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.” This rule amends the CDL regulations in 49 CFR part 384 to align regulatory requirements with existing statutory requirements on States. Because this rule makes conforming, and not substantive, changes to requirements already imposed on States in the CDL program, FMCSA has determined that it does not have substantial direct effects on the States, on the relationship between the Federal and State governments, or on the distribution of power and responsibilities among the various levels of government. Therefore, this rule does not have sufficient federalism implications to warrant the preparation of a Federalism Impact Statement.

H. Privacy Impact Assessment

The Consolidated Appropriations Act, 2005, (Pub. L. 108–447, 118 Stat. 2809, 3268, 5 U.S.C. 552a note), requires the Agency to conduct a privacy impact assessment (PIA) of a regulation that will affect the privacy of individuals. Because this rule does not require the collection of personally identifiable information, the Agency is not required to conduct a PIA.

The Privacy Act (5 U.S.C. 552a) applies only to Federal agencies and any non-Federal agency that receives records contained in a system of records from a Federal agency for use in a matching program.

2. Amend § 384.208 by revising paragraph (a) to read as follows:

§ 384.208 Notification of disqualification.

(a) No later than 10 days after disqualifying a CLP or CDL holder licensed by another State, or disqualifying an out-of-State CLP or CDL holder’s privilege to operate a commercial motor vehicle for at least 60 days, the State must notify the State that issued the license of the disqualification via CDLIS.

3. Amend § 384.209 by revising paragraph (c) to read as follows:

§ 384.209 Notification of traffic violations.

(c) Required timing of notification. Notification of traffic violations must be made within 10 days of the conviction and must be transmitted through CDLIS.

4. Amend § 384.301 by adding paragraph (n) to read as follows:

§ 384.301 Substantial compliance-general requirements.

(n) A State must come into substantial compliance with each of the statutory requirements of 49 U.S.C. 31131(a). The content in this rule is covered by this CE and the final action does not have any effect on the quality of the environment.
DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

RIN 2120–AA64

Airworthiness Directives; Pratt & Whitney Division Turbofan Engines

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to supersede Airworthiness Directive (AD) 2021–05–16, which applies to certain Pratt & Whitney Division (PW) PW4164, PW4164–1D, PW4168, PW4168–1D, PW4168A, PW4168A–1D, and PW4170 model turbofan engines. AD 2021–05–16 requires initial and repetitive replacements of the low-pressure turbine (LPT) 4th-stage air sealing ring segment assemblies with parts eligible for installation. AD 2021–05–16 also requires initial and repetitive dimensional inspections of the LPT case for bulging and, depending on the results of the dimensional inspections, repair or replacement of the LPT case. Since the FAA issued AD 2021–05–16, the FAA was notified of an inadvertent omission in the LPT 4th-stage air sealing ring segment assembly part numbers. This proposed AD would correct this omission. The FAA is proposing this AD to address the unsafe condition on these products.

DATES: The FAA must receive comments on this proposed AD by September 7, 2021.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

• Federal eRulemaking Portal: Go to https://www.regulations.gov. Follow the instructions for submitting comments.

• Hand Delivery: Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this NPRM, contact Pratt & Whitney, 400 Main Street, East Hartford, CT 06118; phone: (800) 565–0140; email: help24@prattwhitney.com; website: https://prattwhitney.com. You may view this service information at the Airworthiness Products Section, Operational Safety Branch, FAA, 1200 District Avenue, Burlington, MA 01803. For information on the availability of this material at the FAA, call (781) 238–7759.

Examing the AD Docket

You may examine the AD docket at https://www.regulations.gov by searching for and locating Docket No. FAA–2021–0577; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, any comments received, and other information. The street address for Docket Operations is listed above.

FOR FURTHER INFORMATION CONTACT: Carol Nguyen, Aviation Safety Engineer, ECO Branch, FAA, 1200 District Avenue, Burlington, MA 01803; phone: (781) 238–7655; fax: (781) 238–7199; email: carol.nguyen@faa.gov.

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under ADDRESSES. Include “Docket No. FAA–2021–0577; Project Identifier AD–2021–00470–E” at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend the proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to https://www.regulations.gov, including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact the FAA receives about this proposed AD.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as “PROPIN.” The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to Carol Nguyen, Aviation Safety Engineer, ECO Branch, FAA, 1200 District Avenue, Burlington, MA 01803. Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Background

The FAA issued AD 2021–05–16, Amendment 39–21459 (86 FR 17287, April 2, 2021), (AD 2021–05–16), for certain PW PW4164, PW4164–1D, PW4168, PW4168–1D, PW4168A, PW4168A–1D, and PW4170 model turbofan engines with LPT 4th-stage air sealing ring segment assemblies, part number (P/N) 50N463–01 or P/N 50N526–01, installed. AD 2021–05–16 was prompted by six reports from the manufacturer concerning LPT 4th-stage vane cluster assemblies leaning back and notching into rotating LPT 4th-stage blades, causing some blades to fracture and release. These incidents resulted in an aborted takeoff, air turnbacks, engine surges, high vibrations, and unplanned engine removals. The incidents were attributed to the LPT 4th-stage air sealing ring segment assemblies moving into the LPT 4th-stage blades knife edge seals, resulting in damage to the ring...
segment assemblies. AD 2021–05–16 requires initial and repetitive replacements of the LPT 4th-stage air sealing ring segment assemblies with parts eligible for installation. AD 2021–05–16 also requires initial and repetitive dimensional inspections of the LPT case for bulging and, depending on the results of the dimensional inspections, repair or replacement of the LPT case. The agency issued AD 2021–05–16 to prevent damage to the LPT 4th-stage air sealing ring segment assemblies, the LPT case, and the LPT 4th-stage blades. The unsafe condition, if not addressed, could result in uncontained release of the LPT 4th-stage blades, damage to the engine, and damage to the airplane.

Actions Since AD 2021–05–16 Was Issued

Since the FAA issued AD 2021–05–16, the FAA was notified by a manufacturer of parts manufacturer approval (PMA) parts and that paragraphs (c), (g), and (h) of the AD should include affected PMA part numbers because the unsafe condition also applies to those parts. The FAA added FAA-approved equivalent part numbers to paragraphs (c), (g), and (h) of this AD to include PMA part numbers.

FAA’s Determination

The FAA is issuing this NPRM after determining that the unsafe condition described previously is likely to exist or develop on other products of the same type design.

Related Service Information Under 1 CFR Part 51

The FAA reviewed Pratt & Whitney Alert Service Bulletin No. PW4G–100–A72–262, Revision No. 1, dated September 3, 2020 (the ASB). The ASB specifies procedures for replacing the LPT 4th-stage air sealing ring segment assemblies and inspecting the LPT case for bulging. The Director of the Federal Register approved the ASB for incorporation by reference as of May 7, 2021 (86 FR 17287, April 2, 2021). This service information is reasonably available because the interested parties have access to it through their normal business or by the means identified in ADDRESSES.

ESTIMATED COSTS

<table>
<thead>
<tr>
<th>Action</th>
<th>Labor cost</th>
<th>Parts cost</th>
<th>Cost per product</th>
<th>Cost on U.S. operators</th>
</tr>
</thead>
<tbody>
<tr>
<td>Inspect the LPT case for bulging</td>
<td>2 work-hours × $85 per hour = $170 ..........</td>
<td>$0</td>
<td>$170</td>
<td>$16,830</td>
</tr>
<tr>
<td>Replace the LPT 4th-stage air sealing ring segment assemblies.</td>
<td>50 work-hours × $85 per hour = $4,250 .........</td>
<td>64,592</td>
<td>68,842</td>
<td>6,815,358</td>
</tr>
</tbody>
</table>

The FAA estimates the following costs to do any necessary repair or replacement that would be required based on the results of the proposed inspection. The agency has no way of determining the number of aircraft that might need these repairs or replacements.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, Section 106, describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the Agency’s authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701, General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that the proposed regulation:
(1) Is not a “significant regulatory action” under Executive Order 12866,
(2) Would not affect intrastate aviation in Alaska, and
(3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.
List of Subjects in 14 CFR Part 39
Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment
Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

§ 39.13 [Amended]

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. The FAA amends § 39.13 by:

(a) Removing Airworthiness Directive AD 2021–05–16, Amendment 39–21459 (86 FR 17287, April 2, 2021); and

(b) Adding the following new airworthiness directive:

(a) Comments Due Date

The FAA must receive comments on this airworthiness directive (AD) action by September 7, 2021.

(b) Affected ADs

This AD replaces AD 2021–05–16, Amendment 39–21459 (86 FR 17287, April 2, 2021).

(c) Applicability

This AD applies to Pratt & Whitney Division (PW) PW4164, PW4164–1D, PW4168, PW4168–1D, PW4168A, PW4168A–1D, and PW4170 model turbofan engines with low-pressure turbine (LPT) 4th-stage air sealing ring segment assemblies, part number (P/N) 50N463–01, P/N 50N526–01, or FAA-approved equivalent part numbers, installed.

(d) Subject

Joint Aircraft System Component (JASC) Code 7250, Turbine Section.

(e) Unsafe Condition

This AD was prompted by several reports from the manufacturer concerning LPT 4th-stage vane cluster assemblies leaning back and pulling into the rotating LPT 4th-stage blades, causing some blades to fracture and release. A manufacturer investigation into those reports determined that the leaning back of the LPT 4th-stage vane cluster assemblies was caused by damage to the LPT 4th-stage air sealing ring segment assemblies. The FAA is issuing this AD to prevent damage to the LPT 4th-stage air sealing ring segment assemblies, the LPT case, and the LPT 4th-stage blades. The unsafe condition, if not addressed, could result in uncontained release of the LPT 4th-stage blades, damage to the engine, and damage to the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

(1) For affected engines that have either the Talon IIA outer combustion chamber assembly, P/N 51J100 or P/N 51J382, or the Talon IIB outer combustion chamber assembly, P/N 51J381 or P/N 51J500, installed, at the next engine shop visit after the effective date of this AD, remove from service the LPT 4th-stage air sealing ring segment assemblies, P/N 50N463–01, P/N 50N526–01, or FAA-approved equivalent part numbers, and replace with parts eligible for installation.

(2) For affected engines not referenced in paragraph (g)(1) of this AD, at the next LPT overhaul after the effective date of this AD, remove from service the LPT 4th-stage air sealing ring segment assemblies, P/N 50N463–01, P/N 50N526–01, or FAA-approved equivalent part numbers, and replace with parts eligible for installation.

(h) Definitions

For the purpose of this AD:

(1) An “engine shop visit” is the induction of an engine into the shop for maintenance involving the separation of pairs of major mating engine flanges H through P. The separation of engine flanges solely for the purpose of transportation without subsequent engine maintenance does not constitute an engine shop visit.

(2) “LPT overhaul” is when the LPT rotor is removed from the engine, all four disks are removed from the LPT rotor, and all blades are removed from the disks.

(i) Credit for Previous Actions

You may take credit for the dimensional inspection of the LPT case for bulging required by paragraph (g)(4) of this AD if the inspection was performed before the effective date of this AD using PW ASB No. PW4G–100–A72–262 Original Issue, dated October 22, 2019.

(j) Alternative Methods of Compliance (AMOCs)

(1) The Manager, ECO Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the certification office, send it to the attention of the person identified in Related Information. Information may be emailed to: ANE-AD-AMOCs@faa.gov.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local Flight Standards district office/certificate holding district office.

(k) Related Information

(1) For more information about this AD, contact Carol Nguyen, Aviation Safety Engineer, ECO Branch, FAA, 1200 District Avenue, Burlington, MA 01803; phone: (781) 238–7655; fax: (781) 238–7199; email: carol.nguyen@faa.gov.

(2) For service information identified in this AD, contact Pratt & Whitney, 400 Main Street, East Hartford, CT 06118; phone: (800) 565–0140; email: help24@prattwhitney.com; website: https://prattwhitney.com. You may view this referenced service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 1200 District Avenue, Burlington, MA 01803. For information on the availability of this material at the FAA, call (781) 238–7759.

Issued on July 16, 2021.

Lance T. Gant,
Director, Compliance & Airworthiness Division, Aircraft Certification Service.

14 CFR Part 39

RIN 2120–AA64

Airworthiness Directives; Hélicoptères Guimbal Helicopters

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to adopt a new airworthiness directive (AD) for certain Hélicoptères Guimbal Model CABRI G2 helicopters. This proposed AD was prompted by a report that,
during scheduled maintenance on two helicopters, cracks were found on a certain main rotor (MR) non-rotating scissor link. This proposed AD would require replacing an affected MR non-rotating scissor link with a serviceable part. The FAA is proposing this AD to address the unsafe condition on these products.

DATES: The FAA must receive comments on this proposed AD by August 23, 2021.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- Federal eRulemaking Portal: Go to https://www.regulations.gov. Follow the instructions for submitting comments.
- Fax: (202) 493–2251.
- Hand Delivery: Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this NPRM, contact Hélicoptères Guimbal, 1070, rue du Lieutenant Parayre, Aérodrome d’Aix-en-Provence, 13290 Les Milles, France; telephone 33–04–42–39–10–88; email support@guimbal.com; or at https://www.guimbal.com. You may view this service information at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Pkwy., Room 6N–321, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call (817) 222–5110. Service information that is incorporated by reference is also available at https://www.regulations.gov by searching for and locating Docket No. FAA–2021–0574.

Examining the AD Docket
You may examine the AD docket at https://www.regulations.gov by searching for and locating Docket No. FAA–2021–0574; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, the European Union Aviation Safety Agency (EASA) AD, any comments received, and other information. The street address for Docket Operations is listed above.

FOR FURTHER INFORMATION CONTACT:
Darren Gassetto, Aerospace Engineer, COS Program Management Section, Operational Safety Branch, Compliance & Airworthiness Division, FAA, 1600 Stewart Ave., Suite 410, Westbury, NY 11590; telephone (516) 228–7323; email Darren.Gassetto@faa.gov.

SUPPLEMENTARY INFORMATION:

Comments Invited
The FAA invites you to send any written data, views, or arguments about this proposal. Send your comments to an address listed under ADDRESSES. Include “Docket No. FAA–2021–0574; Project Identifier 2019–SW–073–AD” at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to https://www.regulations.gov, including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this NPRM.

Confidential Business Information
CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as “PROPIN.” The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this AD. Submissions containing CBI should be sent to Darren Gassetto, Aerospace Engineer, COS Program Management Section, Operational Safety Branch, Compliance & Airworthiness Division, FAA, 1600 Stewart Ave., Suite 410, Westbury, NY 11590; telephone (516) 228–7323; email Darren.Gassetto@faa.gov. Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Background
EASA, which is the Technical Agent for the Member States of the European Union, has issued EASA AD 2019–0186, dated July 30, 2019 (EASA AD 2019–0186), to correct an unsafe condition for Hélicoptères Guimbal Model CABRI G2 helicopters, all manufacturer serial numbers. EASA advises that, during scheduled maintenance on two helicopters, cracks were found on the MR non-rotating scissor link, part number (P/N) G41–10–200. The suspected root cause for the cracking is corrosion due to stress induced by the mounting of the metal bushings inside the lug hole. To address this issue the manufacturer modified the design of the MR non-rotating scissor link to reinforce the lugs and replace the metal bushings with plastic bushings. Cracking of a MR non-rotating scissor link, if not addressed, could result in failure of that scissor link, resulting in reduced control of the helicopter.

Accordingly, EASA AD 2019–0186 requires replacement of affected MR non-rotating scissor links with serviceable parts.

FAA’s Determination
These helicopters have been approved by EASA and are approved for operation in the United States. Pursuant to the FAA’s bilateral agreement with the European Union, EASA has notified the FAA about the unsafe condition described in its AD. The FAA is issuing this AD after evaluating all known relevant information and determining that the unsafe condition described previously is likely to exist or develop on other helicopters of the same type design.

Related Service Information Under 1 CFR Part 51
The FAA reviewed Guimbal Service Bulletin SB 15–015, Revision C, dated August 27, 2019. This service information specifies procedures for, among other actions, modifying the helicopter by replacing the MR non-rotating scissor link, P/N G41–10–200, with a serviceable part, P/N G41–10–201 (by installing scissor link assembly, P/N G41–12–100, which includes MR non-rotating scissor link, P/N G41–10–201) and torquing the bolts. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the ADDRESSES section.

Other Related Service Information
The FAA also reviewed Guimbal Service Bulletin SB 15–015, Revision A, dated July 20, 2015 (SB 15–015, Revision A); and SB 15–015, Revision B, dated July 12, 2019 (SB 15–015, Revision B), describes procedures for replacing a MR
non-rotating scissor link, P/N G41–10–200, with P/N G41–12–100, which has a new, improved design. Service Bulletin SB 15–015, Revision B, describes the same procedures as SB 15–015, Revision A, and includes a revised compliance time, an updated Situation section, and added an action.

Proposed AD Requirements in This NPRM

This proposed AD would require accomplishing the actions specified in the service information already described.

Costs of Compliance

The FAA estimates that this AD, if adopted as proposed, would affect 32 helicopters of U.S. registry. The FAA estimates the following costs to comply with this proposed AD:

<table>
<thead>
<tr>
<th>Action</th>
<th>Labor cost</th>
<th>Parts cost</th>
<th>Cost per product</th>
<th>Cost on U.S. operators</th>
</tr>
</thead>
<tbody>
<tr>
<td>Replacement</td>
<td>1 work-hour × $85 per hour = $85 .................</td>
<td>$323</td>
<td>$408</td>
<td>$13,056</td>
</tr>
</tbody>
</table>

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency’s authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed, I certify that this proposed regulation:

(1) Is not a “significant regulatory action” under Executive Order 12866, and
(2) Would not affect intrastate aviation in Alaska.
(3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

§ 39.13 [Amended]

(2) The FAA amends § 39.13 by adding the following new airworthiness directive:

(a) Comments Due Date

The FAA must receive comments on this airworthiness directive (AD) by August 23, 2021.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Hélicoptères Guimbal Model CABRI G2 helicopters, certificated in any category, with main rotor (MR) non-rotating scissor links, part number (P/N) G41–10–200 installed.

(d) Subject

Joint Aircraft Service Component (JASC) Code: 6700, Rotorcraft Flight Control.

(e) Unsafe Condition

This AD was prompted by a report that during scheduled maintenance on two helicopters, cracks were found on the MR non-rotating scissor link with part number (P/N) G41–10–200. The FAA is issuing this AD to address cracking of a MR non-rotating scissor link. Cracking of a MR non-rotating scissor link, if not addressed, could result in failure of that scissor link, resulting in reduced control of the helicopter.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

(1) Within 50 hours time-in-service or 2 months after the effective date of this AD, whichever occurs first, modify the helicopter by replacing the MR non-rotating scissor link, P/N G41–10–200, with a serviceable scissor link assembly, P/N G41–12–100, in accordance with the Required Actions, IPC 4.1–2 (a) through (d) inclusive, of Guimbal Service Bulletin SB 15–015, Revision C, dated August 27, 2019.

(2) As of the effective date of this AD, do not install a MR non-rotating scissor link, P/N G41–10–200, on any helicopter.

(b) Credit for Previous Actions

This paragraph provides credit for actions required by paragraph (g)(1) of this AD, if those actions were performed before the effective date of this AD using the service information specified in paragraph (h)(1) or (2) of this AD.

(i) Special Flight Permits

Special flight permits, as described in 14 CFR 21.197 and 21.199, are prohibited.

(j) Alternative Methods of Compliance (AMOCs)

(1) The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the International Validation Branch, send it to the attention of the person identified in paragraph (k)(1) of this AD. Information may be emailed to: 9-AVS-AIR-730-AMOC@faa.gov.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local Flight Standards District Office or certificate holding District Office.
certain helicopters, this proposed AD would also require repetitive inspections and, depending on the findings, applicable corrective actions. This proposed AD would also provide a terminating action for the repetitive inspections. The FAA is proposing this AD to address the unsafe condition on these products.

DATES: The FAA must receive comments on this proposed AD September 7, 2021.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- Federal eRulemaking Portal: Go to https://www.regulations.gov. Follow the instructions for submitting comments.
- Fax: (202) 493–2251.
- Hand Delivery: Deliver to Mail address between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this NPRM, contact Bell Textron Canada Limited, 12.800 Rue de l’Avenir, Mirabel, Quebec J7J 1R4, Canada; telephone 1–450–437–2862 or 1–800–363–8023; fax 1–450–433–0272; email productsupport@bellflight.com; or at https://www.bellflight.com/support/contact-support. You may view this service information at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Pkwy., Room 6N–321, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call (817) 222–5110.

Issued on July 14, 2021.

Lance T. Gant,
Director, Compliance & Airworthiness Division, Aircraft Certification Service.

DEPARTMENT OF TRANSPORTATION
Federal Aviation Administration

14 CFR Part 39

RIN 2120–AA64

Airworthiness Directives; Bell Textron Canada Limited (Type Certificate Previously Held by Bell Helicopter Textron Canada Limited) Helicopters

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to adopt a new airworthiness directive (AD) for certain Bell Textron Canada Limited (type certificate previously held by Bell Helicopter Textron Canada Limited) (Bell) Model 429 helicopters. This proposed AD was prompted by reports of incorrectly staked spherical bearings in the directional control bellcrank assembly. This proposed AD would require a one-time inspection of the lower surface of the spherical bearing in the directional control bellcrank assembly to determine if it is properly staked and, depending on the findings, applicable corrective actions. For
condition for Bell Textron Canada Limited (Bell) Model 429 helicopters, serial numbers 57001 through 57210, 57212 through 57344, 57346 through 57371, 57374 through 57377, and 57380.

Transport Canada advises that there are reports of incorrectly staked spherical bearings in the directional control bellcrank assembly. This condition, if not addressed, could result in wear or elongation of the bore in the bellcrank, which could result in reduced helicopter directional control.

Accordingly, Transport Canada AD CF–2020–11 requires a one-time inspection to determine if a spherical bearing is properly staked in the directional control bellcrank assembly, and, depending on the findings, replacement of the spherical bearing with a new spherical bearing, repair of an affected bellcrank assembly and repetitive inspections of that repaired bellcrank assembly, or replacement of the affected bellcrank assembly with a serviceable part. Transport Canada AD CF–2020–11 also provides terminating actions for the requirements of the Canadian AD.

FAA’s Determination

These helicopters have been approved by the aviation authority of Canada and are approved for operation in the United States. Pursuant to the FAA’s bilateral agreement with Canada, Transport Canada, its technical representative, has notified the FAA of the unsafe condition described in its AD. The FAA is proposing this AD after evaluating all known relevant information and determining that the unsafe condition described previously is likely to exist or develop on other helicopters of the same type design.

Related Service Information Under 1 CFR Part 51

The FAA reviewed Bell Alert Service Bulletin 429–19–50, Revision B, dated December 19, 2019. This service information specifies procedures for an initial inspection of the lower surface of the spherical bearing in the directional control bellcrank assembly to determine if it is properly staked, additional inspections, and corrective actions. The corrective actions include installation of a new spherical bearing, repair (including re-identification of the bellcrank assembly part number), and replacement of the bellcrank assembly. The additional inspections include an inspection of the upper surface of the spherical bearing in the directional control bellcrank assembly to determine if it is properly staked, an inspection of the bore in the bellcrank assembly for excessive wear (including mechanical or corrosion damage that exceed 0.001 inch (0.03 millimeter) maximum depth for ¼ of the circumference, and any cracking); and, for any helicopter with a bellcrank assembly that is repaired, repetitive inspections of the lower surface of the spherical bearing to determine if it has moved.

This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the ADDRESSES section.

Other Related Service Information

The FAA also reviewed Bell Alert Service Bulletin 429–19–50, dated November 27, 2019; and Revision A, dated December 2, 2019. Bell Alert Service Bulletin 429–19–50, Revision A, dated December 2, 2019, specifies procedures for an initial inspection of the spherical bearing in the directional control bellcrank assembly to determine if it is properly staked and replacement of the spherical bearing with a new spherical bearing if it is determined that the spherical bearing was not properly staked.

Bell Alert Service Bulletin 429–19–50, Revision A, dated December 2, 2019, specifies procedures for an initial inspection of the lower surface of the spherical bearing in the directional control bellcrank assembly to determine if it is properly staked, additional inspections, and corrective actions. The corrective actions include installation of a new spherical bearing. The additional inspections include an inspection of the upper surface of the spherical bearing in the directional control bellcrank assembly to determine if it is properly staked, and an inspection of the bore in the bellcrank assembly for excessive wear.

Proposed AD Requirements in This NPRM

This proposed AD would require accomplishing the actions specified in the service information already described.

Costs of Compliance

The FAA estimates that this AD, if adopted as proposed, would affect 120 helicopters of U.S. registry. The FAA estimates the following costs to comply with this proposed AD:

<table>
<thead>
<tr>
<th>Action</th>
<th>Labor Cost</th>
<th>Parts Cost</th>
<th>Cost per Product</th>
<th>Cost on U.S. Operators</th>
</tr>
</thead>
<tbody>
<tr>
<td>Inspection</td>
<td>$85 per inspection cycle</td>
<td>$0</td>
<td>$85</td>
<td>$10,200</td>
</tr>
</tbody>
</table>

The FAA estimates the following costs to do any necessary actions that would be required based on the results of the proposed inspection. The agency has no way of determining the number of helicopters that might need these actions:

<table>
<thead>
<tr>
<th>Action</th>
<th>Labor Cost</th>
<th>Parts Cost</th>
<th>Cost per Product</th>
</tr>
</thead>
<tbody>
<tr>
<td>Replacement Spherical Bearing</td>
<td>7 work-hours x $85 per hour = $595</td>
<td>$56</td>
<td>$651.</td>
</tr>
<tr>
<td>Repair/replacement Bellcrank</td>
<td>4 work-hours x $85 per hour = $340</td>
<td>2,856</td>
<td>3,196.</td>
</tr>
<tr>
<td>Repetitive Inspections</td>
<td>1 work-hour x $85 per hour = $85</td>
<td>0</td>
<td>85 per inspection cycle.</td>
</tr>
</tbody>
</table>

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency’s authority.
The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed, I certify this proposed regulation:

(1) Is not a “significant regulatory action” under Executive Order 12866.
(2) Would not affect intrastate aviation in Alaska, and
(3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

§ 39.13 [Amended]

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. The FAA amends § 39.13 by adding the following new airworthiness directive:

Bell Textron Canada Limited (Type Certificate Previously Held by Bell Helicopter Textron Canada Limited):

(a) Comments Due Date
The FAA must receive comments on this airworthiness directive (AD) by September 7, 2021.

(b) Affected ADs
None.

(c) Applicability
This AD applies to Bell Textron Canada Limited (type certificate previously held by Bell Helicopter Textron Canada Limited) Model 429 helicopters, certificated in any category, serial numbers 57001 through 57210 inclusive, 57212 through 57344 inclusive, 57346 through 57371 inclusive, 57374 through 57377 inclusive, and 57380.

(d) Subject
Joint Aircraft Service Component (JASC) Code: 6700, Rotorcraft Flight Control.

(e) Unsafe Condition
This AD was prompted by reports of incorrectly staked spherical bearings in the directional control bellcrank assembly. The FAA is issuing this AD to address incorrectly staked spherical bearings in the directional control bellcrank assembly. This condition, if not addressed, could result in wear or elongation of the bore in the bellcrank, which could result in reduced helicopter directional control.

(f) Compliance
Comply with this AD within the compliance times specified, unless already done.

(g) Required Inspection and Corrective Actions
Within 25 hours time-in-service (TIS) or 90 days, whichever occurs first after the effective date of this AD: Inspect the lower surface of the spherical bearing on the directional control bellcrank assembly to determine if it is properly staked, in accordance with the Accomplishment Instructions, Part I, step 7., of Bell Alert Service Bulletin 429–19–50, Revision B, dated December 19, 2019 (BASB 429–19–50, Revision B). After the inspection, before further flight, do the applicable action required by paragraph (g)(1) or (2) of this AD.

(1) If the lower surface of the spherical bearing is improperly staked (any discrepancy is found e.g., the witness marks are not present and intact or the staked lip is not uniform along the chamfer): Inspect the bore in the bellcrank assembly for excessive wear (including mechanical or corrosion damage that exceed 0.001 inch (0.03 millimeter) maximum depth for ¼ of the circumference, and any cracking), in accordance with the Accomplishment Instructions, Part I, steps 10. through 11., of BASB 429–19–50, Revision B, and depending on the findings, do the applicable actions required by paragraph (g)(2)(i) or (ii) of this AD before further flight.

(i) If the spherical bearing is properly staked: No further action is required by this AD.

(ii) If the spherical bearing is not properly staked (any discrepancy is found e.g., the witness marks are not present and intact or the staked lip is not uniform along the chamfer): Inspect the bore in the bellcrank assembly for excessive wear (including mechanical or corrosion damage that exceed 0.001 inch (0.03 millimeter) maximum depth for ¼ of the circumference, and any cracking), in accordance with the Accomplishment Instructions, Part I, steps 10. through 11., of BASB 429–19–50, Revision B, and depending on the findings, do the applicable actions required by paragraph (g)(2)(ii)(A) or (B) of this AD before further flight.

(A) If the bore in the bellcrank assembly shows signs of excessive wear: Repair the bellcrank, including re-identifying the bellcrank assembly part number, in accordance with the Accomplishment Instruction, Part II, steps 1. through 13., of BASB 429–19–50, Revision B.

(B) If the bore diameter is within 0.001 inch (0.03 millimeter) maximum depth for ¼ of the circumference: Install a new spherical bearing, in accordance with the Accomplishment Instructions, Part II, steps 4. through 12., of BASB 429–19–50, Revision B.

(h) Required Post Repair Inspections
For any helicopter on which the bellcrank has been repaired as required by paragraphs (g)(1)(i) or (g)(2)(ii)(A) of this AD: Within 100 hours TIS after the repair, and thereafter at intervals not to exceed 100 hours TIS, inspect the lower surface of the spherical bearing to determine if it has moved, in accordance with the Accomplishment Instructions, Part III, step 7., of BASB 429–19–50, Revision B.

If the spherical bearing has moved (is loose): Before further flight, inspect the bore in the bellcrank assembly to determine if the diameter exceeds 0.6283 inch (15.9588 millimeters), in accordance with the Accomplishment Instructions, Part III, steps 8. through 11., of BASB 429–19–50, Revision B.

(1) If the diameter of the bore in the bellcrank assembly exceeds 0.6283 inch (15.9588 millimeters): Before further flight replace the bellcrank assembly.

(2) If the diameter of the bore in the bellcrank assembly does not exceed 0.6283 inch (15.9588 millimeters): Before further flight install a new spherical bearing in
accordance with the Accomplishment Instructions, Part II, steps 4, through 12., of BASB 429–19–50, Revision B.

(i) Terminating Action

Replacement of a bellcrank assembly with a new part (never installed on a helicopter or has accumulated zero hours TIS) is terminating action for the requirements of this AD for that helicopter only.

(j) Credit for Previous Actions

This paragraph provides credit for actions required by paragraph (g) of this AD, if those actions were performed before the effective date of this AD using the service information identified in paragraph (j)(1) or (2) of this AD.

(k) Alternative Methods of Compliance (AMOCs)

(1) The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the International Validation Branch, send it to the attention of the person identified in paragraph (l)(1) of this AD. Information may be emailed to: 9-AVS-AIR-730-AMOCs@faa.gov.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/ certificate holding district office.

(l) Related Information

(1) For more information about this AD, contact Andrea Jimenez, Aerospace Engineer, COS Program Management Section, Operational Safety Branch, Compliance & Airworthiness Division, FAA, 1600 Stewart Ave., Suite 410, Westbury, NY 11590; telephone (516) 228–7330; email andrea.jimenez@faa.gov.

(2) For service information identified in this AD, contact Bell Textron Canada Limited, 12,800 Rue de l’Avenir, Mirabel, Quebec J7R 1R4, Canada; telephone 1–450–437–2862 or 1–800–363–8023; fax 1–450–433–0272; email productsupport@bellflight.com; or at https://www.bellflight.com/support/contact-support. You may view this referenced service information at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Pkwy., Room 6N–321, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call (817) 222–5110.

Issued on July 15, 2021.

Ross Landes,
Deputy Director for Regulatory Operations, Compliance & Airworthiness Division, Aircraft Certification Service.

DEPARTMENT OF TRANSPORTATION
Federal Aviation Administration

14 CFR Part 39

RIN 2120–AA64

Airworthiness Directives; Gulfstream Aerospace Corporation Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Proposed rule; withdrawal.

SUMMARY: The FAA is withdrawing a notice of proposed rulemaking (NPRM) that proposed to adopt a new airworthiness directive (AD) for certain Gulfstream Aerospace Corporation (Gulfstream) Model GVII–G500 airplanes. The NPRM was prompted by a report of a fuel quantity disparity between the overhead panel touch screens and the touch screen controllers. The NPRM proposed to require incorporating operating limitations into the airplane flight manual (AFM) until the fuel quantity management system (FQMS) software is updated. Since issuance of the NPRM, the FAA has determined that there is not an unsafe condition because all affected airplanes have updated software. Accordingly, the NPRM is withdrawn.

DATES: As of July 23, 2021, the proposed rule, which published in the Federal Register on July 28, 2020 (85 FR 45345), is withdrawn.

ADDRESSES:

Examining the AD Docket

You may examine the AD docket at https://www.regulations.gov by searching for and locating Docket No. FAA–2020–0713; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this AD action, any comments received, and other information. The street address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT:
Jared Meyer, Aviation Safety Engineer, Atlanta ACO Branch, FAA, 1701 Columbia Avenue, College Park, GA 30337; phone: (404) 474–5534; fax: (404) 474–5605; email: jared.meyer@faa.gov.

SUPPLEMENTARY INFORMATION:

Background

The FAA issued an NPRM that proposed to amend 14 CFR part 39 by adding an AD that would apply to certain serial-numbered Gulfstream Model GVII–G500 airplanes. The NPRM published in the Federal Register on July 28, 2020 (85 FR 45345). The NPRM was prompted by a report of the affected airplanes exhibiting a disparity between the fuel quantities displayed on the overhead panel touch screens and the fuel quantities displayed on the touch screen controllers. An investigation revealed two known failure conditions that the Model GVII–G500 FQMS does not properly detect and report to the crew. These failure conditions are fuel quantity probe drift and an FQMS overcurrent condition, which could result in erroneous and misleading fuel quantity indications and could also result in erroneous and misleading fuel imbalance indications. These conditions could cause a false annunciation of a fuel imbalance, a failure to annunciate an actual fuel imbalance, and a condition where the actual fuel quantity is less than or greater than the indicated fuel quantity. The FQMS software logic does not properly detect or compensate for these failure conditions. This condition, if not corrected, could result in fuel starvation during flight, performance impacts of the airplane having more fuel than indicated, and a roll moment due to a fuel imbalance.

The NPRM proposed to require incorporating operating limitations into the AFM until the fuel quantity management system (FQMS) software is updated. Actions Since the NPRM Was Issued

After issuance of the NPRM, the FAA determined that all Gulfstream Model GVII–G500 airplanes are in compliance with the proposed software update, and the unsafe condition has been removed from the fleet. In addition, since Gulfstream controls the software, it is unlikely the unsafe condition will be reintroduced.

Based on the above information, the FAA has determined that AD action is not warranted and the proposal should be withdrawn.
Comments
The FAA received comments from Gulfstream and an individual commenter.

Requests
Gulfstream requested that the FAA change the credit for previous actions. The individual commenter requested the FAA clarify the correct revision of the service information to reference.

The FAA acknowledges these comments. However, because the NPRM is being withdrawn, the commenters’ requests are no longer necessary.

Withdrawal of the NPRM constitutes only such action and does not preclude the FAA from further rulemaking on this issue, nor does it commit the FAA to any course of action in the future.

Regulatory Findings
Since this action only withdraws an NPRM, it is neither a proposed AD nor a final rule. This action, therefore, is not covered under Executive Order 12866 or the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39
Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Withdrawal
Accordingly, the notice of proposed rulemaking, which published in the Federal Register on July 28, 2020 (85 FR 45345), is withdrawn.

Issued on July 15, 2021.

Ross Landes,
Deputy Director for Regulatory Operations, Compliance & Airworthiness Division, Aircraft Certification Service.

SUPPLEMENTARY INFORMATION:
Comments Invited
The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under ADDRESSES. Include “Docket No. FAA–2021–0578; Project Identifier 2018–SW–084–AD” at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to https://www.regulations.gov, including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this NPRM.

Confidential Business Information
CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as “PROPIN.” The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to Darren Gassetto, Aerospace Engineer, COS Program Management Section, Operational Safety Branch, Compliance & Airworthiness Division, FAA, 1600 Stewart Ave., Suite 410, Westbury, NY 11590; telephone (516) 228–7323; email Darren.Gassetto@faa.gov. Any commentary that the FAA receives that is not specifically designated as CBI will
be placed in the public docket for this rulemaking.

Background

This proposed AD was prompted by reports of in-flight pilot collective stick oscillation. Based on the investigation results, it was determined that this was likely due to an incorrect adjustment on the collective stick fixed friction during helicopter assembly, or during a maintenance action. Incorrect adjustment of the collective friction of the flight control system could lead to a reduction in the safety margins of controllability of an affected helicopter. To address this issue, EASA issued AD 2017–0137, dated August 1, 2017, to require a one-time measurement of the collective stick fixed friction value. After that EASA AD was issued an additional event was reported involving a helicopter that was not affected by EASA AD 2017–0137. EASA AD 2018–0203 supersedes EASA AD 2017–0137.

The FAA is proposing this AD to address incorrect adjustment of the pilot collective stick fixed friction. The unsafe condition, if not addressed, could result in reduced controllability of the helicopter, and subsequent damage to the helicopter and injury to occupants. See EASA AD 2018–0203 for additional background information.

Related Service Information Under 1 CFR Part 51

EASA AD 2018–0203 requires a one-time measurement of the friction of the pilot collective stick assembly to verify that it is within the allowable range specified in the service information (collective up and collective down directions 9.00/18.00N (Newton) or 2.02/4.05 lbf (pound force)) and, depending on the findings, accomplishment of the corrective action. The corrective action is making an adjustment to the pilot collective stick assembly to restore the acceptable level of friction. EASA AD 2018–0203 also specifies that after installation of an affected part, or following maintenance of an affected part that involves removal from the helicopter and re-installation, before the next flight after the part installation, the collective fixed friction must be measured and, depending on the findings, the corrective action must be accomplished.

This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the ADDRESSES section.

FAA’s Determination and Requirements of This Proposed AD

These helicopters have been approved by EASA and are approved for operation in the United States. Pursuant to the FAA’s bilateral agreement with the European Union, EASA has notified the FAA about the unsafe condition described in its AD. The FAA is proposing this AD after evaluating all known relevant information and determining that the unsafe condition described previously is likely to exist or develop on other helicopters of the same type design.

Proposed AD Requirements in This NPRM

This proposed AD would require accomplishing the actions specified in EASA AD 2018–0203, described previously, as incorporated by reference, except for any differences identified as exceptions in the regulatory text of this proposed AD.

Explanation of Required Compliance Information

In the FAA’s ongoing efforts to improve the efficiency of the AD process, the FAA developed a process to use certain civil aviation authority (CAA) ADs as the primary source of information for compliance with requirements for corresponding FAA ADs. The FAA has been coordinating this process with manufacturers and CAA. As a result, EASA AD 2018–0203 will be incorporated by reference in the FAA final rule. This proposed AD would, therefore, require compliance with EASA AD 2018–0203 in its entirety, through that incorporation, except for any differences identified as exceptions in the regulatory text of this proposed AD. Using common terms that are the same as the heading of a particular section in EASA AD 2018–0203 does not mean that operators need comply only with that section. For example, where the AD requirement refers to “all required actions and compliance times,” compliance with this AD requirement is not limited to the section titled “Required Action(s) and Compliance Time(s)” in EASA AD 2018–0203. Service information specified in EASA AD 2018–0203 that is required for compliance with it will be available at https://www.regulations.gov by searching for and locating Docket No. FAA–2021–0578 after the FAA final rule is published.

Costs of Compliance

The FAA estimates that this AD, if adopted as proposed, would affect 6 helicopters of U.S. registry. The FAA estimates the following costs to comply with this proposed AD:

<table>
<thead>
<tr>
<th>Action</th>
<th>Labor cost</th>
<th>Parts cost</th>
<th>Cost per product</th>
<th>Cost on U.S. operators</th>
</tr>
</thead>
<tbody>
<tr>
<td>Functional check—friction measurement</td>
<td>2 work-hours × $85 per hour = $170</td>
<td>$0</td>
<td>$170</td>
<td>$1,020</td>
</tr>
</tbody>
</table>

The FAA estimates the following costs to do any necessary adjustment that would be required based on the results of the proposed inspection. The agency has no way of determining the number of helicopters that might need this adjustment:
Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency’s authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

(1) Is not a “significant regulatory action” under Executive Order 12866,
(2) Would not affect intrastate aviation in Alaska, and
(3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

§ 39.13 [Amended]

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. The FAA amends § 39.13 by adding the following new airworthiness directive:

(a) Comments Due Date

The FAA must receive comments on this airworthiness directive (AD) by September 7, 2021.

(b) Affected ADs

None.

(c) Applicability

(d) Subject

Joint Aircraft Service Component (JASC) Codes: 6700, Rotorcraft Flight Control; 6710, Main Rotor Control.

(e) Unsafe Condition

This AD was prompted by reports of in-flight pilot collective stick oscillation. The FAA is issuing this AD address incorrect adjustment of the pilot collective stick fixed friction. The unsafe condition, if not addressed, could result in reduced controllability of the helicopter, and subsequent damage to the helicopter and injury to occupants.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Requirements

Except as specified in paragraph (b) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, EASA AD 2018–0203.

(h) Exceptions to EASA AD 2018–0203

(1) Where EASA AD 2018–0203 refers to flight hours (FH), this AD requires using hours time-in-service.

(2) Where EASA AD 2018–0203 refers to its effective date, this AD requires using the effective date of this AD.

(3) The “Remarks” section of EASA AD 2018–0203 does not apply to this AD.

(i) No Reporting Requirement

Although the service information referenced in EASA AD 2018–0203 specifies to submit certain information to the manufacturer, this AD does not include that requirement.

(j) Alternative Methods of Compliance (AMOCs)

(1) The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the International Validation Branch, send it to the attention of the person identified in paragraph (k)(2) of this AD.

Information may be emailed to: 9-AVS-AIR-730-AMOCs@faa.gov.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/ certificate holding district office.

(k) Related Information

(1) For EASA AD 2018–0203, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email ADs@easa.europa.eu; internet www.easa.europa.eu. You may view this material at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Pkwy., Room 6N–321, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call (817) 222–5110. This material may be found in the AD docket at https://www.regulations.gov by searching for and locating Docket No. FAA–2021–0578.

(2) For more information about this AD, contact Darren Gassetto, Aerospace Engineer, COS Program Management Section, Operational Safety Branch, Compliance & Airworthiness Division, FAA, 1600 Stewart Ave., Suite 410, Westbury, NY 11590; telephone (516) 228–7323; email Darren.Gassetto@faa.gov.

Issued on July 16, 2021.

Lance T. Gant,
Director, Compliance & Airworthiness Division, Aircraft Certification Service.

[Docket No. FAA–2021–0554; Airspace Docket No. 21–AGL–26]

RIN 2120–AA66

Proposed Amendment of Class E Airspace; Galesburg, IL

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This action proposes to amend the Class E airspace at Galesburg Municipal Airport, Galesburg, IL. The FAA is proposing this action as the result of airspace reviews caused by the decommissioning of the Galesburg very high frequency (VHF) omnidirectional range (VOR) as part of the VOR Minimal Operational Network (MON) Program.

DATES: Comments must be received on or before September 7, 2021.

ADDRESSES: Send comments on this proposal to the U.S. Department of Transportation, Docket Operations, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590; telephone (202) 366–9826, or (800) 647–5527. You must identify FAA Docket No. FAA–2021–0554/Airspace Docket No. 21–AGL–26 at the beginning of your comments. You may also submit comments through the internet at https://www.regulations.gov. You may review the public docket containing the proposal, any comments received, and any final disposition in the Dockets Office between 9:00 a.m. and 5:00 p.m., Monday through Friday, except federal holidays. An informal docket may also be examined during normal business hours at the Federal Aviation Administration, Air Traffic Organization, Central Service Center, Operations Support Group, 10101 Hillwood Parkway, Fort Worth, TX 76177. An electronic copy of this document may be downloaded through the internet at https://www.regulations.gov. Recently published rulemaking documents can also be accessed through the FAA’s web page at https://www.faa.gov/air_traffic/publications/airspace_amendments/. You may review the public docket containing the proposal, any comments received, and any final disposition in person in the Dockets Office (see the ADDRESSES section for the address and phone number) between 9:00 a.m. and 5:00 p.m., Monday through Friday, except federal holidays. An informal docket may also be examined during normal business hours at the Federal Aviation Administration, Air Traffic Organization, Central Service Center, Operations Support Group, 10101 Hillwood Parkway, Fort Worth, TX 76177.

Availiability and Summary of Documents for Incorporation by Reference

This document proposes to amend FAA Order 7400.11E, Airspace Designations and Reporting Points, dated July 21, 2020, and effective September 15, 2020. FAA Order 7400.11E is publicly available as listed in the ADDRESSES section of this document. FAA Order 7400.11E lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Proposal

The FAA is proposing an amendment to 14 CFR 71 by:

Amending the Class E surface area at Galesburg Municipal Airport, Galesburg, IL, by removing the Galesburg VOR/DME and associated extensions from the airspace legal description; and updating the outdated term “Airport/Facility Directory” with “Chart Supplement”;

And amending the Class E airspace extending upward from 700 feet above the surface to within a 6.5-mile [decreased from a 7-mile] radius of Galesburg Municipal Airport.

This action is due to an airspace review caused by the decommissioning of the Galesburg VOR, which provided navigation information for the instrument procedures this airport, as part of the VOR MON Program.

Class E airspace designations are published in paragraph 6002 and 6005, respectively, of FAA Order 7400.11E, dated July 21, 2020, and effective September 15, 2020, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designations...
listed in this document will be published subsequently in the Order. FAA Order 7400.11, Airspace Designations and Reporting Points, is published yearly and effective on September 15.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current, is non-controversial and unlikely to result in adverse or negative comments. It, therefore: (1) Is not a “significant regulatory action” under Executive Order 12866; (2) is not a “significant rule” under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule, when promulgated, would not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

This proposal will be subject to an environmental analysis in accordance with FAA Order 1050.1F. “Environmental Impacts: Policies and Procedures” prior to any FAA final regulatory action.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me, the Federal Aviation Administration proposes to amend 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

1. The authority citation for 14 CFR part 71 continues to read as follows:

§ 71.1 [Amended]

2. The incorporation by reference in 14 CFR 71.1 of FAA Order 7400.11E, Airspace Designations and Reporting Points, dated July 21, 2020, and effective September 15, 2020, is amended as follows:

Table: Class E Airspace Areas Designated as Surface Areas.

<table>
<thead>
<tr>
<th>Paragraph</th>
<th>Area</th>
<th>Location</th>
</tr>
</thead>
<tbody>
<tr>
<td>§ 6002</td>
<td>Class E Airspace Areas Extending Upward From 700 Feet or More Above the Surface of the Earth.</td>
<td></td>
</tr>
</tbody>
</table>

AGL II E2 Galesburg, IL [Amended]
Galesburg Municipal Airport, IL (Lat. 40°56′17″ N, long. 90°25′52″ W)

Within a 4-mile radius of the Galesburg Municipal Airport. This Class E airspace area is effective during the specific dates and times established in advance by a Notice to Airmen. The effective date and time will thereafter be continuously published in the Chart Supplement.

AGL II E5 Galesburg, IL [Amended]
Galesburg Municipal Airport, IL (Lat. 40°56′17″ N, long. 90°25′52″ W)

Monmouth Municipal Airport, IL (Lat. 40°55′47″ N, long. 90°37′52″ W)

That airspace extending upward from 700 feet above the surface within a 6.5-mile radius of the Galesburg Municipal Airport, and within a 6.8-mile radius of the Monmouth Municipal Airport.

Issued in Fort Worth, Texas, on July 19, 2021.

Martin A. Skinner.
Acting Manager, Operations Support Group.
ATO Central Service Center.

FOR FURTHER INFORMATION CONTACT:
Jeffrey Claypool, Federal Aviation Administration, Operations Support Group, Central Service Center, 10101 Hillwood Parkway, Fort Worth, TX 76177; telephone (817) 222–5711.

SUPPLEMENTARY INFORMATION:
Authority for This Rulemaking

The FAA’s authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency’s authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it would amend the Class E airspace extending upward from 700 feet above the surface at Salem Memorial Airport, Salem, MO.

For information on the availability of FAA Order 7400.11E at NARA, email: fedreg.legal@nara.gov or go to https://www.archives.gov/federal-register/cfr/ibr-locations.html.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

[Docket No. FAA–2021–0555; Airspace Docket No. 21–ACE–18]

RIN 2120–AA66

Proposed Amendment of Class E Airspace; Salem, MO

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This action proposes to amend the Class E airspace extending upward from 700 feet above the surface at Salem Memorial Airport, Salem, MO. The FAA is proposing this action as the result of an airspace review caused by the decommissioning of the Maples very high frequency (VHF) omnidirectional range (VOR) as part of the VOR Minimal Operational Network (MON) Program.

DATES: Comments must be received on or before September 7, 2021.

ADDRESSES: Send comments on this proposal to the U.S. Department of Transportation, Docket Operations, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590; telephone (202) 366–9826, or (800) 647–5527. You must identify FAA Docket No. FAA–2021–0555/Airspace Docket No. 21–ACE–18 at the beginning of your comments. You may also submit comments through the internet at https://www.regulations.gov. You may review the public docket containing the proposal, any comments received, and any final disposition in person in the Dockets Office between 9:00 a.m. and 5:00 p.m. Monday through Friday, except federal holidays.

Frequently and routine amendments are made, and subsequent amendments can be viewed online at https://www.faa.gov/air_traffic/publications/. For further information, you can contact the Airspace Policy Group, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; telephone: (202) 267–8783. The Order is also available for inspection at the National Archives and Records Administration (NARA). For information on the availability of FAA Order 7400.11E at NARA, email: fedreg.legal@nara.gov or go to https://www.archives.gov/federal-register/cfr/ibr-locations.html.

Interested parties are invited to participate in this proposed rulemaking
by submitting such written data, views, or arguments, as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal. Communications should identify both docket numbers and be submitted in triplicate to the address listed above. Comments wishing the FAA to acknowledge receipt of their comments on this notice must submit with their comments a self-addressed, stamped postcard on which the following statement is made: “Comments to Docket No. FAA–2021–0555/Airspace Docket No. 21–ACE–16.” The postcard will be date/time stamped and returned to the commenter.

All communications received before the specified closing date for comments will be considered before taking action on the proposed rule. The proposal contained in this notice may be changed in light of the comments received. A report summarizing each substantive public contact with FAA personnel concerned with this rulemaking will be filed in the docket.

Availability of NPRMs

An electronic copy of this document may be downloaded through the internet at https://www.regulations.gov. Recently published rulemaking documents can also be accessed through the FAA’s web page at https://www.faa.gov/air_traffic/publications/airspace_amendments/.

You may review the public docket containing the proposal, any comments received, and any final disposition in person in the Dockets Office (see the ADDRESSES section of this document). FAA Order 7400.11E lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Proposal

The FAA is proposing an amendment to 14 CFR part 71 by amending the Class E airspace extending upward from 700 feet above the surface at the Salem Memorial Airport, Salem, MO, by removing the Maples VORTAC and associated extension from the airspace legal description.

This action is necessary due to an airspace review caused by the decommissioning of the Maples VOR, which provided navigation information for the instrument procedures this airport, as part of the VOR MON Program.

Class E airspace designations are published in paragraph 6005 of FAA Order 7400.11E, dated July 21, 2020, and effective September 15, 2020, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designation listed in this document will be published subsequently in the Order.

FAA Order 7400.11, Airspace Designations and Reporting Points, is published yearly and effective on September 15.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current, is non-controversial and unlikely to result in adverse or negative comments. It, therefore: (1) Is not a “significant regulatory action” under Executive Order 12866; (2) is not a “significant rule” under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule, when promulgated, would not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

This proposal will be subject to an environmental analysis in accordance with FAA Order 1050.1F, “Environmental Impacts: Policies and Procedures” prior to any FAA final regulatory action.

List of Subjects in 14 CFR Part 71
Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me, the Federal Aviation Administration proposes to amend 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES, AND REPORTING POINTS

1. The authority citation for 14 CFR part 71 continues to read as follows:

§ 71.1 [Amended]

2. The incorporation by reference in 14 CFR 71.1 of FAA Order 7400.11E, Airspace Designations and Reporting Points, dated July 21, 2020, and effective September 15, 2020, is amended as follows:

Paragraph 6005 Class E Airspace Areas Extending Upward From 700 Feet or More Above the Surface of the Earth.

ACE MO E5 Salem, MO [Amended]

[Sa]meme Memorial Airport, MO (Lat. 37°36’55” N, long. 91°36’16” W)

That airspace extending upward from 700 feet above the surface within a 6.3-mile radius of Salem Memorial Airport.

Issued in Fort Worth, Texas, on July 19, 2021.

Martin A. Skinner,
Acting Manager, Operations Support Group, ATO Central Service Center,

BILLING CODE 4910–13–P

DEPARTMENT OF JUSTICE

28 CFR Part 16

[CPCLO Order No. 005–2020]

Privacy Act of 1974; Implementation

AGENCY: Office of Legal Policy, United States Department of Justice.

ACTION: Notice of proposed rulemaking.

SUMMARY: On July 14, 2021, the Office of Legal Policy (OLP), a component within the United States Department of Justice (DOJ or Department), published in the Federal Register a notice of a modified system of records for the OLP system of records, Judicial Nominations Files, JUSTICE/OLP–002. In this notice of proposed rulemaking, OLP proposes to modify the exemptions from certain
provisions of the Privacy Act claimed for this system of records, as well as other administrative modifications. For the reasons provided below, the Department proposes to amend its Privacy Act regulations. Public comments are invited.

DATES: Comments must be received by August 23, 2021.

ADDRESSES: You may send comments by any of the following methods:

- Email: privacy.compliance@usdoj.gov. To ensure proper handling, please reference the CPCLO Order No. in the subject line of the message.
- Fax: 202–307–0693.
- Mail: United States Department of Justice, Office of Privacy and Civil Liberties, ATTN: Privacy Analyst, Two Constitution Square (2Con), 145 N Street NE, Suite BW–300, Washington, DC 20530. All comments sent via regular or express mail will be considered timely if postmarked on the day the comment period closes. To ensure proper handling, please reference the CPCLO Order No. in your correspondence.
- Federal eRulemaking Portal: http://www.regulations.gov. When submitting comments electronically, you must include the CPCLO Order No. in the subject box. Please note that the Department is requesting that electronic comments be submitted before midnight Eastern Daylight Savings Time on the day the comment period closes because http://www.regulations.gov terminates the public’s ability to submit comments at that time. Commenters in time zones other than Eastern Time may want to consider this to ensure that their electronic comments are received.

Posting of Public Comments: Please note that all comments received are considered part of the public record and made available for public inspection online at http://www.regulations.gov and in the Department’s public docket. Such information includes personally identifying information (such as your name, address, etc.) voluntarily submitted by the commenter. If you want to submit personally identifying information (such as your name, address, etc.) as part of your comment, but do not want it to be posted online or made available in the public docket, you must include the phrase “PERSONALLY IDENTIFYING INFORMATION” in the first paragraph of your comment. You must also prominently identify confidential business information that it cannot be effectively redacted, all or part of that comment may not be posted online or made available in the public docket.

If you want to submit confidential business information as part of your comment, but do not want it to be posted online or made available in the public docket, you must include the phrase “CONFIDENTIAL BUSINESS INFORMATION” in the first paragraph of your comment. You must also prominently identify confidential business information to be redacted within the comment. If a comment has so much confidential business information that it cannot be effectively redacted, all or part of that comment may not be posted online or made available in the public docket.

Personally identifying information and confidential business information identified and located as set forth above will be redacted and the comment, in redacted form, may be posted online and placed in the Department’s public docket file. Please note that the Freedom of Information Act applies to all comments received. If you wish to inspect the agency’s public docket file in person by appointment, please see the FOR FURTHER INFORMATION CONTACT paragraph, below.

FOR FURTHER INFORMATION CONTACT:
Matrina Matthews, Executive Officer, Office of Legal Policy, U.S. Department of Justice, 950 Pennsylvania Avenue NW, Room 4274, Washington, DC 20530–0001; telephone: (202) 616–0040; email: matrina.matthews@usdoj.gov.

SUPPLEMENTARY INFORMATION:
The Assistant Attorney General, OLP, is responsible for assisting the Attorney General in, inter alia, advising and assisting in the selection and appointment of Federal judges. OLP is comprised of attorneys and other DOJ personnel responsible for assisting the Assistant Attorney General in executing the responsibilities of the office. DOJ established the recently renamed system of records, “Judicial Nominations Files,” JUSTICE/OLP–002, to maintain records primarily needed to assist the Assistant Attorney General, OLP, and the personnel within OLP, in assessing candidates for potential nomination to be a Federal judge and securing a judicial nominee’s confirmation and appointment.

OLP updated the system of records notice for JUSTICE/OLP–002, 86 FR 37192 (July 14, 2021), to account for a number of organizational, procedural, and technological changes that have modernized the information and information system used to collect, maintain, and disseminate these records. The Department determined that these updates to the system of records notice were necessary to accurately describe the Department’s organizational, procedural, and technological changes.

As part of the existing process for reviewing an individual’s potential nomination to a Federal judgeship or other related Executive Branch position, and securing confirmation, individuals agree to a number of evaluations, including but not limited to, a full background investigation. As disclosed in JUSTICE/OLP–002, OLP will maintain records relating to these investigations in its system of records. Given the law enforcement and national security information maintained in these records, as well as the examination materials used to assess a potential nominee, the Department has determined that it is appropriate to claim additional exemptions from certain Privacy Act provisions for these records.

Specifically, certain classified information may be maintained in JUSTICE/OLP–002, including but not limited to, records related to a potential nominee that maintained a previous or current position with access to classified information and/or assigned to a national security sensitive position. Given the law enforcement information that may be discovered as part of the nomination investigation and/or evaluations, certain investigatory materials for law enforcement purposes may be maintained in this system of records. Investigatory material may also be used in determining suitability, eligibility, or qualification decisions, and such information may require exemption to the extent that the disclosure of such material would reveal the identity of a source who furnished information to the Department under an express promise that the identity of the source would be held in confidence. The Department also utilizes various examination materials to determine individual qualifications for appointment, which if disclosed, could compromise the objectivity or fairness of the Department’s examination and vetting process.

Finally, as an administrative matter, the Department proposes to modify 28 CFR 16.73 as a result of the rescindment of JUSTICE/OLP–001, “Freedom of Information and Privacy Appeals Index,” and JUSTICE/OLP–004, “Declassification Review System.” See 66 FR 29994 (June 6, 2001). Specifically, the administrative edits proposed in this rule would: (1) Remove the current paragraphs (g), and (h); and (2) revise 28 CFR 16.73(a), (b), (c), and (d), to account for OLP’s two remaining systems of records that claim Privacy Act exemptions—JUSTICE/OLP–002 and the

Executive Orders 12866 and 13563—Regulatory Review

In accordance with 5 U.S.C. 552a(j) and 552a(k), this proposed action is subject to formal rulemaking procedures by giving interested persons an opportunity to participate in the rulemaking process “through submission of written data, views, or arguments,” pursuant to 5 U.S.C. 553. The Department has determined that this proposed rule is not a “significant regulatory action” under Executive Order 12866, section 3(f), and accordingly this proposed rule has not been reviewed by the Office of Information and Regulatory Affairs within the Office of Management and Budget pursuant to Executive Order 12866.

Regulatory Flexibility Act

This proposed rule will only impact Privacy Act-protected records, which are personal and generally do not apply to an individual’s entrepreneurial capacity, subject to limited exceptions. Accordingly, the Chief Privacy and Civil Liberties Officer, in accordance with the Regulatory Flexibility Act (5 U.S.C. 605(b)), has reviewed this regulation and by approving it certifies that this regulation will not have a significant economic impact on a substantial number of small entities.

Small Business Regulatory Enforcement Fairness Act of 1996 (Subtitle E–Congressional Review Act)

The Small Business Regulatory Enforcement Fairness Act (SBREFA) of 1996, 5 U.S.C. 801 et seq., requires the Department to comply with small entity requests for information and advice about compliance with statutes and regulations within the Department’s jurisdiction. Any small entity that has a question regarding this document may contact the person listed in the FOR FURTHER INFORMATION CONTACT paragraph, above. Persons can obtain further information regarding SBREFA on the Small Business Administration’s web page at https://www.sba.gov/advocacy. This proposed rule is not a major rule as defined by 5 U.S.C. 804 of the Congressional Review Act.

Executive Order 13132—Federalism

This proposed rule will not have substantial direct effects on the States, on the relationship between the national government and the States, or on distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 13132, it is determined that this proposed rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

Executive Order 12988—Civil Justice Reform

This proposed regulation meets the applicable standards set forth in sections 3(a) and 3(b)(2) of Executive Order 12988 to eliminate drafting errors and ambiguity, minimize litigation, provide a clear legal standard for affected conduct, and promote simplification and burden reduction.

Executive Order 13175—Consultation and Coordination With Indian Tribal Governments

This proposed rule will have no implications for Indian Tribal governments. More specifically, it does not have substantial direct effects on one or more Indian tribes, on the relationship between the Federal government and Indian tribes, or on the distribution of power and responsibilities between the Federal government and Indian tribes. Therefore, the consultation requirements of Executive Order 13175 do not apply.

Unfunded Mandates Reform Act of 1995

This proposed rule will not result in the expenditure by State, local and tribal governments, in the aggregate, or by the private sector, of $100,000,000, as adjusted for inflation, or more in any one year, and it will not significantly or uniquely affect small governments. Therefore, no actions were deemed necessary under the provisions of the Unfunded Mandates Reform Act of 1995.

Paperwork Reduction Act

The Paperwork Reduction Act of 1995, 44 U.S.C. 3507(d), requires the Department to consider the impact of paperwork and other information collection burdens imposed on the public. There are no current or new information collection requirements associated with this proposed rule.

List of Subjects in 28 CFR Part 16

Pursuant to the authority vested in the Attorney General by 5 U.S.C. 552a and delegated to me by Attorney General Order 2940–2008, the Department of Justice proposes to amend 28 CFR part 16 as follows:

PART 16—PRODUCTION OR DISCLOSURE OF MATERIAL OR INFORMATION

1. The authority citation for part 16 continues to read as follows:

Subpart E—Exemption of Records Systems Under the Privacy Act

2. Revise §16.73 to read as follows:

§16.73 Exemption of Office of Legal Policy Systems.

(a) The Judicial Nominations Files (JUSTICE/OLP–002) system of records is exempt from subsections (c)(3); (d); (e)(1), (e)(4)(G), (H), and (I); and (f) of the Privacy Act, pursuant to 5 U.S.C. 552a(k)(1), (k)(2), (k)(5), and (k)(6). These exemptions apply only to the extent that information in this system of records is subject to an exemption, pursuant to 5 U.S.C. 552a(k). Where compliance would not appear to interfere with or adversely affect OLP’s processes, OLP may waive the applicable exemption.

(b) Exemptions from the particular subsections are justified for the following reasons:

(1) From subsection (c)(3), the requirement that an accounting be made available to the named subject of a record, because release of disclosure accountings could alert the subject of an investigation and/or evaluation to the extent of an investigation and/or evaluation. Such a disclosure could also reveal investigative interests by not only OLP, but also other recipient agencies or components. Since release of such information to the subjects of an investigation would provide them with significant information concerning the nature of the investigation and/or evaluation, release could result in the destruction of documentary evidence, improper influencing of witnesses, endangerment of the physical safety of confidential sources, witnesses, and law enforcement personnel, the fabrication of testimony, and other activities that could impede or compromise the investigation and/or evaluation. In addition, providing the individual an accounting for each disclosure could result in the release of properly classified information which would compromise the national defense or disrupt foreign policy.

(2) From subsection (d), the access and amendment provisions, because many persons are contacted who, without an assurance of anonymity, refuse to provide information concerning the subject of an
investigation and/or evaluation. Access could reveal the identity of the source of the information and constitute a breach of the promised confidentiality on the part of the Department. Such breaches ultimately would restrict the free flow of information vital to the determination of a candidate’s qualifications and suitability, among other determinations. The Department also relies on certain examination materials to assess and evaluate an individual’s qualifications for an applicable position. Access and/or amendment to such material could reveal information about the examination and vetting process and could compromise its objectivity and/or fairness. Access and/or amendment to such material could also inappropriately advantage future candidates with knowledge of the examination materials. Finally, providing the individual access or amendment rights could result in the release of properly classified information which would compromise the national defense or disrupt foreign policy.

(3) From subsection (e)(1), because in the collection of information for investigative and evaluative purposes, it is impossible to determine in advance what exact information may be of assistance in determining the qualifications and suitability of the subject of an investigation and/or evaluation. Information which may seem irrelevant, when combined with other seemingly irrelevant information, can on occasion provide a composite picture of a candidate which assists in determining whether that candidate should be nominated for appointment. Relevance and necessity are questions of judgment and timing, and it is only after the information is evaluated that the relevance and necessity of such information can be established. In interviewing individuals or obtaining other forms of information during OLP processes, information may be supplied to OLP which relates to matters incidental to the primary purpose of OLP’s processes, but also relates to matters under the investigative jurisdiction of another agency. Such information cannot readily be segregated.

(4) From subsections (e)(4)(G) and (H), and subsection (f), because this system is exempt from the access and amendment provisions of subsection (d).

(c) The General Files System of the Office of Legal Policy (JUSTICE/OLP–003) system of records is exempt from subsection 552a(k)(2), (k)(3), (k)(5); and (g) of the Privacy Act, pursuant to 5 U.S.C. 552a((j)(2), (k)(1), (k)(2) and (k)(5). These exemptions apply only to the extent that information in this system is subject to exemption pursuant to 5 U.S.C. 552((j), (k). Where compliance would not appear to interfere with or adversely affect OLP’s processes, the applicable exemption may be waived by OLP.

(d) Exemptions from the particular subsections are justified for the following reasons:

(1) From subsection (c)(3) because making available to a record subject the accounting of disclosures from records concerning him/her would reveal investigatory interest on the part of the Department as well as the recipient agency. This would permit record subjects to impede the investigation, e.g., destroy evidence, intimidate potential witnesses, or flee the area to avoid inquiries or apprehension by law enforcement personnel.

(2) From subsection (c)(4) because this system is exempt from the access provisions of subsection (d) pursuant to subsections (j) and (k) of the Privacy Act.

(3) From subsection (d) because the records contained in this system relate to official Federal investigations. Individual access to these records might compromise ongoing investigations, reveal confidential informants, or constitute unwarranted invasions of the personal privacy of third parties who are involved in a certain investigation. Amendment of records would interfere with ongoing criminal law enforcement proceedings and impose an impossible administrative burden by requiring criminal investigations to be continuously reinvestigated.

(4) From subsections (e)(1) and (5) because in the course of law enforcement investigations, information may occasionally be obtained or introduced, the accuracy of which is unclear or which is not strictly relevant or necessary to a specific investigation. In the interests of effective law enforcement, it is appropriate to retain all information since it may aid in establishing patterns of criminal activity. Moreover, it would impede the specific investigation process if it were necessary to assure the relevance, accuracy, timeliness and completeness of all information obtained.

(5) From subsections (e)(2) because in a law enforcement investigation the requirement that information be collected to the greatest extent possible from the subject individual would present a serious impediment to law enforcement. The subject of the investigation would be informed of the existence of the investigation and would therefore be able to avoid detection, apprehension, or legal obligations and duties.

(6) From subsection (e)(3) because to comply with the requirements of this subsection during the course of an investigation could impede the information gathering process, thus hampering the investigation.

(7) From subsections (e)(4)(G) and (H) because this system is exempt from the access provisions of subsection (d) pursuant to subsections (j) and (k) of the Privacy Act.

(8) From subsection (g) because this system is exempt from the access and amendment provisions of subsection (d) pursuant to subsections (j) and (k) of the Privacy Act.

Dated: July 1, 2021.

Peter A. Winn, Acting Chief Privacy and Civil Liberties Officer, United States Department of Justice.

BILLING CODE 4410–CW–P

DEPARTMENT OF VETERANS AFFAIRS

38 CFR Part 1

RIN 2900–AR20

Threshold for Reporting VA Debts to Consumer Reporting Agencies

AGENCY: Department of Veterans Affairs.

ACTION: Proposed rule.

SUMMARY: The Department of Veterans Affairs (VA) proposes to amend its regulations around the conditions by which VA benefits debts or medical debts are reported to consumer reporting agencies (CRA). The Johnny Isakson and David P. Roe, M.D. Veterans Health Care and Benefits Improvement Act of 2020 provides the Secretary authority to prescribe regulations that establish the minimum amount of a benefits or medical debt that the Secretary will report to the CRA. This proposed change will establish the methodology for determining a minimum threshold for debts reported to CRA.

DATES: Comments must be received on or before September 21, 2021.

ADDRESSES: Comments may be submitted through www.regulations.gov or mailed to Debt Management Center, Office of Management, 189, 1 Federal Drive, Suite 4500, Fort Snelling, MN 55111. Comments should indicate that they are submitted in response to “RIN 2900–AR20—Threshold for Reporting VA Debts to Consumer Reporting Agencies. Comments received will be
available at regulations.gov for public viewing, inspection, or copies.

FOR FURTHER INFORMATION CONTACT:
Jason Hoge, Director of Operations, Debt Management Center, Office of Management, 189, 1 Federal Drive, Suite 4500, Fort Snelling, MN 55111, (612) 725–4337. (This is not a toll-free telephone number.)

SUPPLEMENTARY INFORMATION:

Summary of Proposed Regulatory Changes

We propose to amend VA’s regulation that governs reporting of delinquent debts to CRA. This rulemaking would update the regulation to comply with section 2007 of Public Law 116–315, the Johnny Isakson and David P. Roe, M.D. Veterans Health Care and Benefits Improvement Act of 2020. Section 2007 amends chapter 53 of title 38, United States Code by adding section 5320 as follows: “The Secretary shall prescribe regulations that establish the minimum amount of a claim or debt, arising from a benefit administered by the Under Secretary for Benefits or Under Secretary for Health, that the Secretary will report to a consumer reporting agency under section 3711 of title 31.”

This proposed amendment will establish the methodology for determining the minimum threshold for reporting certain VA debts to CRA. It will also exclude from the minimum threshold those debts in which there is an indication of fraud, misrepresentation, or bad faith on the part of the debtor.

Background on Governing Statutes

The Debt Collection Improvement Act of 1996 (DCIA), in part, mandated agencies to report delinquent debts to CRA. 31 U.S.C. 3711(e); Sec. 31001(k).

The purpose of the DCIA includes maximizing collection of delinquent debts by ensuring quick action to recover debts, use of appropriate collection tools, and minimizing the costs of debt collection. Sec. 31001(b), Public Law 104–134.

Section 5320 of title 38, United States Code, authorizes VA to “establish the minimum amount of a claim or debt, arising from a benefit administered by the Under Secretary for Benefits or Under Secretary for Health, that the Secretary will report to a consumer reporting agency under section 3711 of title 31.” The intent of section 5320 is to lessen negative impact of CRA reports on Veterans.

Introduction to Proposed Regulatory Changes

As explained in more detail below, we propose to amend 38 CFR 1.916 to comply with 38 U.S.C. 5320, to establish a minimum threshold for reporting debts to CRA.

In accordance with 31 U.S.C. 3711(e), the VA Debt Management Center (DMC) is responsible for reporting delinquent debts to CRA. Prior to January 5, 2021, DMC reported an average of 5,000 delinquent Veteran accounts monthly. DMC regularly receives complaints from Veterans whose accounts have been reported to CRA. Common complaints from Veterans include: Loss of security clearance, inability to obtain approval for home loans or home refinancing, and difficulty securing rental housing.

This proposed amendment recognizes that the debts described in 38 U.S.C. 5320 are fundamentally different from consumer debt. Debts arising from a benefit administered by the Under Secretary for Benefits or the Under Secretary for Health may result from a variety of scenarios, including overpayments that are not the fault of the Veteran.

Section 5320 authorizes the Secretary to establish a minimum threshold that will ultimately reduce the number of debts that will be reported to CRA. This will, in turn, decrease the number of Veterans negatively impacted by these reports. The VA’s mission is to “care for those who shall have borne the battle and for their families and survivors.” Negative credit reports may cause housing insecurity or job loss, and this result is inconsistent with VA’s mission.

38 CFR 1.916—Disclosure of Debt Information to Consumer Reporting Agencies (CRA)

We propose to amend 38 CFR 1.916, which sets forth the requirements for reporting delinquent debts to CRA, by inserting subparagraphs (c)(1) through (3) to provide the methodology used by the Secretary to establish the minimum threshold. This section would also clarify that the minimum threshold applies only to a debt of an individual that arises from a benefit administered by the Under Secretary for Benefits or Under Secretary for Health.

We propose subparagraphs (c)(1) through (3) state:

1. The Secretary has established a minimum threshold for a debt, arising from a benefit administered by the Under Secretary for Benefits or Under Secretary for Health, that the Secretary will report to a consumer reporting agency under section 3711 of title 31.

2. VA will only report those debts that meet the following standards:

(i) The debt is classified as currently not collectible. For purposes of this paragraph, the debt is currently not collectible if VA has exhausted available collection efforts, including, as appropriate, referrals for administrative offset and enforced collection;

(ii) The debt is not owed by an individual who is determined by VA to be catastrophically disabled or has reported to VA a gross household income below the applicable geographically adjusted income limits that would entitle a VA beneficiary to cost-free health care, medications and/or beneficiary travel; and

(iii) The outstanding debt amount is over $25, or such higher amount VA may from time to time prescribe, in accordance with section 1.921 of this part.

3. The minimum threshold set forth in this paragraph will not apply if there is an indication of fraud, misrepresentation, or bad faith on the part of the individual in connection with the debt.

Executive Orders 12866 and 13563

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, and other advantages; distributive impacts; and equity).

Executive Order 13563 (Improving Regulation and Regulatory Review) emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility. The Office of Information and Regulatory Affairs has determined that this rule is not a significant regulatory action under Executive Order 12866. The Regulatory Impact Analysis associated with this rulemaking can be found as a supporting document at www.regulations.gov.

Regulatory Flexibility Act

The Secretary hereby certifies that this proposed rule will not have a significant economic impact on a substantial number of small entities as they are defined in the Regulatory Flexibility Act (5 U.S.C. 601–612). The regulations established by this rulemaking do not impose burdens or otherwise regulate the activities of any small entities outside of VA. Therefore, pursuant to 5 U.S.C. 605(b), the initial and final regulatory flexibility analysis requirements of 5 U.S.C. 603 and 604 do not apply.
Unfunded Mandates

The Unfunded Mandates Reform Act of 1995 requires, at 2 U.S.C. 1532, that agencies prepare an assessment of anticipated costs and benefits before issuing any rule that may result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of $100 million or more (adjusted annually for inflation) in any one year. This proposed rule will have no such effect on State, local, and tribal governments, or on the private sector.

Paperwork Reduction Act

This proposed rule contains no provisions constituting a collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3521).

Catalog of Federal Domestic Assistance

There are no Catalog of Federal Domestic Assistance numbers and titles for this rule.

List of Subjects in 38 CFR Part 1

Signing Authority

Denis McDonough, Secretary of Veterans Affairs approved this document on June 23, 2021 and authorized the undersigned to sign and submit the document to the Office of the Federal Register for publication electronically as an official document of the Department of Veterans Affairs.

Luvenia Potts,
Regulations Development Coordinator, Office of Regulation Policy & Management, Office of the Secretary, Department of Veterans Affairs.

For the reasons stated in the preamble, the Department of Veterans Affairs proposes to amend 38 CFR part 1 as set forth below:

PART 1—GENERAL PROVISIONS

§ 1.916 [Amended]

2. Amend § 1.916 by revising paragraph (c) to read as follows:

(c) Subject to the conditions set forth in this paragraph and paragraph (d) of this section, information concerning individuals may be disclosed to consumer reporting agencies for inclusion in consumer reports pertaining to the individual, or for the purpose of locating the individual. Disclosure of the fact of indebtedness will be made if the individual fails to respond in accordance with written demands for repayment, or refuses to repay a debt to the United States. In making any disclosure under this section, VA will provide consumer reporting agencies with sufficient information to identify the individual, including the individual’s name, address, if known, date of birth, VA file number, and Social Security number.

(1) The Secretary has established a minimum threshold for a debt, arising from a benefit administered by the Under Secretary for Benefits or Under Secretary for Health, that the Secretary will report to a consumer reporting agency under section 3711 of title 31.

(2) VA will only report those debts that meet the following standards:

(i) The debt is classified as currently not collectible. For purposes of this paragraph, the debt is currently not collectible if VA has exhausted available collection efforts, including, as appropriate, referrals for administrative offset and enforced collection;

(ii) The debt is not owed by an individual who is determined by VA to be catastrophically disabled or has income below the applicable geographically adjusted income limits that would entitle a VA beneficiary to cost-free health care, medications and/or beneficiary travel; and

(iii) The outstanding debt amount is over $25, or such higher amount VA may from time to time prescribe, in accordance with section 1.921 of this part.

3. The minimum threshold set forth in this paragraph will not apply if there is an indication of fraud, misrepresentation, or bad faith on the part of the individual in connection with the debt.

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

RIN 3037–AA13

Provisions Relating to Public Contracts

AGENCY: Committee for Purchase From People Who Are Blind or Severely Disabled.

ACTION: Proposed rule with request for comments.

SUMMARY: This proposed rule would amend the Committee for Purchase From People Who Are Blind or Severely Disabled’s (Committee) regulations to addoutsaged information and proposes correction and clarifications within the chapter or with the Javits-Wagner-O’Day Act or the AbilityOne Program. This regulation was originally published in 1991 and changes in Committee practices and concepts have occurred which requires updates to the CFR. These updates merely are administrative in nature.

DATES: Comments should be submitted on or before August 23, 2021.

ADDRESSES: You may submit your comments, identified by “RIN 3037–AA13” by any of the following methods:

• Federal eRulemaking Portal: http://www.regulations.gov. Follow the instructions for submitting comments.

Comments received will be posted without change to www.regulations.gov including any personal information provided. To confirm receipt of your comment(s) please check www.regulations.gov approximately two to three days after submission to verify posting (except allow for 30 days for posting of comments submitted by mail).

FOR FURTHER INFORMATION CONTACT:

Shelly Hammond, shammond@abilityone.gov, [571] 457–9468.

SUPPLEMENTARY INFORMATION:

I. Background

The Committee’s last rule making administrative changes was published in the Federal Register at June 2, 2000, at 65 FR 35286.

The Committee seeks to provide the following administrative changes based on changes to the Office of the Federal Register’s language and processes. The Commission seeks to remove mailing address and add email address for the Committee and Central Nonprofit Agencies.
This proposed rule would update the Committee’s regulations in 41 CFR chapter 51–1.1—51–10.101 to reflect those statutory changes.

II. Changes Proposed by the Committee in This Rulemaking

This proposed rule amends the Committee’s regulations to include the following administrative changes:

III. Expected Impact of the Proposed Rule

This rulemaking is not expected to have a significant impact on small businesses.

IV. Regulatory Procedures

Executive Order 12866—Regulatory Planning and Review and Executive Order 13563—Improving Regulation and Regulatory Review

This proposed rule is not a significant regulatory action, under E.O. 12866.

Executive Order 13771—Reducing Regulations and Controlling Regulatory Costs

This proposed rule is not expected to be an E.O. 13771 deregulatory action.

Regulatory Flexibility Act

It has been certified that this proposed rule is not subject to the Regulatory Flexibility Act (5 U.S.C. 601) because it would not, if promulgated, have a significant economic impact on a substantial number of small entities.

Paperwork Reduction Act

This proposed rule does not contain an information collection requirement subject to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 et seq.).

Unfunded Mandates Reform Act of 1995

This proposed rule will not result in the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector, of $100,000,000 or more in any one year, and it will not significantly or uniquely affect small governments.

List of Subjects

41 CFR Part 51–1

Government procurement, Individuals with disabilities.

41 CFR Part 51–2

Government procurement, Individuals with disabilities, Organization and functions (Government agencies).

41 CFR Part 51–3

Government procurement, Individuals with disabilities.

41 CFR Parts 51–5 and 51–6

Government procurement, Individuals with disabilities.

41 CFR Part 51–7

Environmental impact statements.

41 CFR Part 51–8

Administrative practice and procedure, Archives and records, Confidential business information, Freedom of information, Privacy Act.

41 CFR Part 51–9

Privacy Act Rules.

41 CFR Part 51–10

Administrative practice and procedure, Civil rights, Equal employment opportunity, Federal buildings and facilities, Individuals with disabilities.

For reasons set forth in the preamble, the Committee proposes to amend 41 CFR parts 51–1 through 51–10 as follows:

1. The authority citation for parts 51–1, 51–2, 51–3, 51–4, 51–5, 51–6, 51–7, 51–8, 51–9, and 51–10 continues to read as follows:

PART 51–1—GENERAL

2. Revise § 51–1.1 to read as follows:

§ 51–1.1 Policy.

(a) It is the policy of the Government to increase employment and training opportunities for persons who are blind or have other severe disabilities through the purchase of products and services from qualified nonprofit agencies employing persons who are blind or have other severe disabilities. The Committee for Purchase from People Who Are Blind or Severely Disabled (hereinafter the JWOD Act) was established by the Javits-Wagner-O’Day Act, Public Law [111–350, section 3, Jan. 4, 2011, 124 Stat. 3837], as amended and recodified, 41 U.S.C. 8501–8506 (hereinafter the JWOD Act). The Committee is responsible for implementation of a comprehensive program designed to enforce this policy.

(b) It is the policy of the Committee to encourage all Federal entities and employees to provide the necessary support to ensure that the JWOD Act is implemented in an effective manner. This support includes purchase of products and services published on the Committee’s Procurement List through appropriate channels from nonprofit agencies employing persons who are blind or have other severe disabilities designated by the Committee; recommendations to the Committee of new products and services suitable for addition to the Procurement List; and cooperation with the Committee and the central nonprofit agencies in the provision of such data as the Committee may decide is necessary to determine suitability for addition to the Procurement List.

3. Revise § 51–1.2 to read as follows:

§ 51–1.2 Mandatory source priorities.

(a) The JWOD Act mandates that products or services on the Procurement List required by Government entities be procured, as prescribed in this regulation, from a nonprofit agency employing persons who are blind or have other severe disabilities, at a price established by the Committee, if that product or service is available within the normal period required by that Government entity. Except as provided in paragraph (b) of this section, the JWOD Act has priority, under the provisions of 41 U.S.C. 8504, over any other supplier of the Government’s requirements for products and services on the Committee’s Procurement List.

(b) Federal Prison Industries, Inc. has priority, under the provisions of 18 U.S.C. 4124 and 41 U.S.C. 9504(b), over nonprofit agencies employing persons who are blind or have other severe disabilities in furnishing products for sale to the Government. All or a portion of the Government’s requirement for a product for which Federal Prison Industries, Inc. has exercised its priority may be added to the Procurement List.

However, such addition is made with the understanding that procurement under the JWOD Act shall be limited to that portion of the Government’s requirement for the product which is not available or not required to be procured from Federal Prison Industries, Inc.

(c) The JWOD Act requires the Committee to prescribe regulations providing that, in the purchase by the Government of products produced and offered for sale by qualified nonprofit agencies employing persons who are blind and nonprofit agencies employing persons who have other severe disabilities, priority shall be accorded to products produced and offered for sale by qualified nonprofit agencies for the blind. Nonprofit agencies for the blind and nonprofit agencies employing persons with severe disabilities in furnishing products for sale to the Government. All or a portion of the Government’s requirement for a product for which Federal Prison Industries, Inc. has exercised its priority may be added to the Procurement List.
disabilities have equal priority for services.

4. Amend § 51–1.3 by:
   b. Adding in alphabetical order a definition for “Qualified nonprofit agency for other severely disabled”;
   c. Removing the definition of “Qualified nonprofit agency for other severely handicapped”;
   d. Revising the definition of “Qualified nonprofit agency for the blind”.

The revisions and addition read as follows:

§ 51–1.3 Definitions.

AbilityOne Program means the program authorized by the JWOD Act to increase employment and training opportunities for persons who are blind or have other severe disabilities through Government purchasing of products and services from nonprofit agencies employing these persons.

Central nonprofit agency means an agency organized under the laws of the United States or of any State, operated in the interest of the blind or persons with other severe disabilities, the net income of which does not inure in whole or in part to the benefit of any shareholder or other individual, and designated by the Committee to facilitate the distribution (by direct allocation, subcontract, or any other means) of orders of the Government for products and services on the Procurement List among nonprofit agencies employing persons who are blind or have other severe disabilities, to provide information required by the Committee to implement the JWOD Program, and to otherwise assist the Committee in administering these regulations as set forth herein by the Committee.

Committee means the Committee for Purchase from People Who Are Blind or Severely Disabled.

Contracting activity means any element of an entity of the Government that has responsibility for identifying and/or procuring Government requirements for products or services.

Components of a contracting activity, such as a contracting office and an ordering office, are incorporated in this definition, which includes all offices within the definitions of “contracting activity,” “contracting office,” and “contract administration office” contained in the Federal Acquisition Regulation, 48 CFR 2.101.

Direct labor means all work required for preparation, processing, and packing of a product or work directly related to the performance of a service, but not supervision, administration, inspection or shipping.

Interested person means an individual or legal entity affected by a proposed addition of a product or service to the Procurement List or a deletion from it.

Military resale products means products on the Procurement List sold for the private, individual use of authorized patrons of Armed Forces commissaries and exchanges, or like activities of other Government departments and agencies.

Nonprofit agency (formerly workshop) means a nonprofit agency serving people who are blind or a nonprofit agency employing persons with severe disabilities, as appropriate.

Participating nonprofit agency (formerly participating workshop) means any nonprofit agency which has been authorized by the Committee to furnish a product or service to the Government under the JWOD Act.

Procurement List means a list of products (including military resale products) and services which the Committee has determined to be suitable to be furnished to the Government by nonprofit agencies for the blind or nonprofit agencies employing persons with severe disabilities pursuant to the JWOD Act and these regulations.

Qualified nonprofit agency for other severely disabled (formerly workshop for other severely handicapped) means an agency organized under the laws of the United States or any State, operated in the interests of persons with severe disabilities who are not blind, and the net income of which does not inure in whole or in part to the benefit of any shareholder or other individual; which complies with applicable occupational health and safety standards prescribed by the Secretary of Labor; and which in furnishing products and services (whether or not the products or services are procured under these regulations) during the fiscal year employs persons with severe disabilities (including blind) for not less than 75 percent of the work-hours of direct labor required to furnish such products or services.

Qualified nonprofit agency for the blind (hereinafter nonprofit agency for the blind) (formerly workshop for the blind) means an agency organized under the laws of the United States or of any State, operated in the interest of blind individuals, and the net income of which does not inure in whole or in part to the benefit of any shareholder or other individual; which complies with applicable occupational health and safety standards prescribed by the Secretary of Labor; and which in furnishing products and services (whether or not the products or services are procured under these regulations) during the fiscal year employs blind individuals for not less than 75 percent of the work-hours of direct labor required to furnish such products or services.

PART 51–2—COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

5. Revise § 51–2.2 to read as follows:

§ 51–2.2 Powers and responsibilities.

The Committee is responsible for carrying out the following functions in support of its mission of providing employment and training opportunities for persons who are blind or have other severe disabilities and, whenever possible, preparing those individuals to engage in competitive employment:

(a) Establish rules, regulations, and policies to assure effective implementation of the JWOD Act.

(b) Determine which product and services procured by the Federal Government are suitable to be furnished by qualified nonprofit agencies employing persons who are blind or have other severe disabilities and add those items to the Committee’s Procurement List. Publish notices of addition to the Procurement List in the Federal Register. Disseminate information on Procurement List items to Federal agencies. Delete items no longer suitable to be furnished by nonprofit agencies. Authorize and deauthorize central nonprofit agencies and nonprofit agencies to accept orders from contracting activities for the furnishing of specific products and services on the Procurement List.

(c) Determine fair market prices for items added to the Procurement List and revise those prices in accordance with changing market conditions to assure that the prices established are reflective of the market.

(d) Monitor nonprofit agency compliance with Committee regulations and procedures.

(e) Inform Federal agencies about the AbilityOne Program and the statutory mandate that items on the Procurement List...
List be purchased from qualified nonprofit agencies, and encourage and assist entities of the Federal Government to identify additional products and services that can be purchased from qualified nonprofit agencies. To the extent possible, monitor Federal agencies’ compliance with JWOD requirements.

(i) Designate, set appropriate ceilings on fee paid to these central nonprofit agencies by nonprofit agencies selling items under the AbilityOne Program, and provide guidance to central nonprofit agencies engaged in facilitating the distribution of Government orders and helping State and private nonprofit agencies participate in the AbilityOne Program.

(g) Conduct a continuing study and evaluation of its activities under the JWOD Act for the purpose of assuring effective and efficient administration of the JWOD Act. The Committee may study, independently, or in cooperation with other public or nonprofit private agencies, problems relating to:

(1) The employment of the blind or individuals with other severe disabilities,

(2) The development and adaptation of production methods which would enable a greater utilization of these individuals.

(h) Provide technical assistance to the central nonprofit agencies and the nonprofit agencies to contribute to the successful implementation of the JWOD Act.

(i) Assure that nonprofit agencies employing persons who are blind will have priority over nonprofit agencies employing persons with severe disabilities in furnishing products.

6. Revise §51–2.3 to read as follows:

§51–2.3 Notice of proposed addition or deletion.

At least 30 days prior to the Committee’s consideration of the addition or deletion of a product or service to or from the Procurement List, the Committee publishes a notice in the Federal Register announcing the proposed addition or deletion and providing interested persons an opportunity to submit written data or comments on the proposal. Interested persons submitting comments in bound form should also submit an unbound copy that is capable of being legibly photocopied.

7. Revise §51–2.4 to read as follows:

§51–2.4 Determination of suitability.

(a) For a product or service to be suitable for addition to the Procurement List, each of the following criteria must be satisfied:

(1) Employment potential. The proposed addition must demonstrate a potential to generate employment for persons who are blind or have other severe disabilities.

(2) Nonprofit agency qualifications. The nonprofit agency (or agencies) proposing to furnish the item must qualify as a nonprofit agency serving persons who are blind or have other severe disabilities, as set forth in part 51–4 of this chapter.

(3) Capability. The nonprofit agency (or agencies) desiring to furnish a product or service under the JWOD Program must satisfy the Committee as to the extent of the labor operations to be performed and that it will have the capability to meet Government quality standards and delivery schedules by the time it assumes responsibility for supplying the Government.

(4) Level of impact on the current contractor for the product or service. (i) In deciding whether or not a proposed addition to the Procurement List is likely to have a severe adverse impact on the current contractor for the specific product or service, the Committee gives particular attention to:

(A) The possible impact on the contractor’s total sales, including the sales of affiliated companies and parent corporations. In addition, the Committee considers the effects of previous Committee actions.

(B) Whether that contractor has been a continuous supplier to the Government of the specific product or service proposed for addition and is, therefore, more dependent on the income from such sales to the Government.

(ii) If there is not a current contract for the product or service being proposed for addition to the Procurement List, the Committee may consider the most recent contractor to furnish the item to the Government as the current contractor for the purpose of determining the level of impact.

(b) In determining the suitability of a product or service for addition to the Procurement List, the Committee also considers other information it deems pertinent, including comments on a proposal published in the Federal Register to add the product or service to the Procurement List and information submitted by Government personnel and interested persons. Because the Committee’s authority to establish fair market prices is separate from its authority to determine the suitability of a product or service for addition to the Procurement List, the Committee does not consider comments on proposed fair market prices for products and services proposed for addition to the Procurement List to be pertinent to a suitability determination.

8. Revise §51–2.5 to read as follows:

§51–2.5 Committee decision.

The Committee considers the particular facts and circumstances in each case in determining if a product or service is suitable for addition to the Procurement List. When the Committee determines that a proposed addition is likely to have a severe adverse impact on a current contractor, it takes this fact into consideration in deciding not to add the product or service to the Procurement List, or to add only a portion of the Government requirement for the item. If the Committee decides to add a product or service in whole or in part to the Procurement List, that decision is announced in the Federal Register with a notice that includes information on the effective date of the addition.

9. Amend §51–2.7 by revising paragraphs (a) and (c) to read as follows:

§51–2.7 Fair market price.

(a) The Committee is responsible for determining fair market prices, and changes thereto, for products and services on the Procurement List. The Committee establishes an initial fair market price at the time a product or service is added to the Procurement List. This initial price is based on Committee procedures, which permit negotiations between the contracting activity and the nonprofit agency which will produce or provide the product or service to the Government, assisted by the appropriate central nonprofit agency. If agreed to by the negotiating parties, the initial price may be developed using other methodologies specified in Committee pricing procedures.

(c) Recommendations for initial fair market prices, or changes thereto, shall be submitted jointly by the contracting activities and nonprofit agencies concerned to the appropriate central nonprofit agency. After review and analysis, the central nonprofit agency shall submit the recommended prices and methods by which prices shall be changed to the Committee, along with the information required by Committee pricing procedures to support each recommendation. The Committee will review the recommendations, revise the recommended prices where appropriate, and establish a fair market price, or change thereto, for each product or service which is the subject of a recommendation.
§ 51–3.2 Responsibilities under the AbilityOne Program.

(c) Obtain from Federal contracting activities such procurement information as is required by the Committee to:

(1) Determine the suitability of a product or service being recommended to the Committee for addition to the Procurement List; and

(2) Establish an initial fair market price for a product or service or make changes in the fair market price.

(d) Recommend to the Committee, with the supporting information required by Committee policy or procedures, suitable products or services for procurement from its nonprofit agencies.

(e) Recommend to the Committee, with the supporting information required by Committee policy or procedures, initial fair market prices for products or services proposed for addition to the Procurement List.

(h) Oversee and assist its nonprofit agencies to ensure contract compliance in furnishing a product or a service.

(i) As market conditions change, recommend price changes with appropriate justification for assigned products or services on the Procurement List.

(k) When authorized by the Committee, enter into contracts with Federal contracting activities for the furnishing of products or services provided by its nonprofit agencies.

(l) At the time designated by the Committee, submit a completed, original copy of the appropriate Initial Representations and Certification(s) for the nonprofit agency concerned. This requirement does not apply to a nonprofit agency that is already authorized to furnish a product or service under the JWOD Act.

§ 51–3.3 Assignment of product or service.

(a) The central nonprofit agencies shall determine by mutual agreement the assignment to one of them of a product or service for the purpose of evaluating its potential for possible future addition to the Procurement List, except that the Committee shall initially assign a product to a central nonprofit agency for the blind when a central nonprofit agency for other severely disabled has expressed an interest in the product and a central nonprofit agency for the blind has exercised the blind priority.

(b) Central nonprofit agencies for other severely disabled shall provide a central nonprofit agency for the blind with procurement information necessary for a decision to exercise or waive the blind priority when it requests a decision. A central nonprofit agency for the blind shall normally notify an interested central nonprofit agency of its decision within 30 days, but not later than 60 days after receipt of the procurement information, unless the central nonprofit agencies agree to an extension of time for the decision. Disagreements on extensions shall be referred to the Committee for resolution.

(c) If a central nonprofit agency for the blind exercises the blind priority for a product, it shall immediately notify the Committee and any other central nonprofit agency and shall submit to the Committee a proposal to add the product to the Procurement List within nine months of the notification, unless the Committee extends the assignment period because of delays beyond the control of the central nonprofit agency for the blind. Upon expiration of the assignment period, the Committee shall reassign the product to another central nonprofit agency.

(d) The central nonprofit agency assigned a product shall, consistent with 41 U.S.C. 8504(b) and 41 CFR 51–6.2(d), confirm that the contracting activity obtain a decision from Federal Prison Industries on the exercise or waiver of its priority, including submitting the procurement information required by Federal Prison Industries when it requests the decision. Federal Prison Industries shall normally notify the contracting activity of its decision within 30 days, but not later than 60 days after receipt of the procurement information, unless it agrees with the contracting activity on an extension of time for the decision. The contracting activity shall notify the central nonprofit agency of any disagreements with Federal Prison Industries and the central nonprofit agency shall refer a disagreement over an extension to the Committee for resolution with Federal Prison Industries.

(e) The central nonprofit agency shall provide the Committee the decision of Federal Prison Industries on the waiver or exercise of its priority when it requests the addition of the product to the Procurement List. The central nonprofit agency shall also provide the decision of a central nonprofit agency for the blind waiving its priority.

PART 51–4—NONPROFIT AGENCIES

§ 51–4.3 Maintaining qualification.

(a) To maintain its qualification under the JWOD Act, each nonprofit agency authorized to furnish a product or a service shall continue to comply with the requirements of a “nonprofit agency for other severely disabled” or a “nonprofit agency for the blind” as defined in § 51–1.3 of this chapter. In
PART 51–5—CONTRACTING REQUIREMENTS

§ 51–5.1 General.
(a) Contracting activities are encouraged to assist the Committee and the central nonprofit agencies in identifying suitable products and services to be furnished by nonprofit agencies employing persons who are blind or have other severe disabilities so that the Committee can attain its objective of increasing employment and training opportunities for individuals who are blind or have other severe disabilities. For items which appear to be suitable to be furnished by nonprofit agencies, the contracting activity should refer the candidate products and services to the Committee or a central nonprofit agency. If a contracting activity decides to procure one or more products which are similar to a product or products on the Procurement List, the contracting activity should refer the products it intends to procure to the Committee or a central nonprofit agency.

(b) Contracting activities shall provide the Committee and designated central nonprofit agencies with information needed to enable the Committee to determine whether a product or service is suitable to be furnished by a nonprofit agency. For products, information such as the latest solicitation and amendments, bid abstracts, procurement history, estimated annual usage quantities, and anticipated date of next solicitation issuance and opening may be needed. For services, similar information including the statement of work and applicable wage determination may be required. In order to assist in evaluating the suitability of an Office of Management and Budget Circular No. A–76 conversion, contracting activities should provide a copy of the draft statement of work and applicable wage determination to the central nonprofit agency upon its request.

§ 51–5.2 Mandatory source requirement.
(a) As provided in 41 U.S.C. 8504, entities of the Federal Government intending to procure products or services on the Procurement List shall procure such products and services from nonprofit agencies authorized by the Committee. The only exception to this mandatory requirement is for products available from the Federal Prison Industries, Inc., which has a purchase priority over products on the Procurement List.

(b) Purchases of products on the Procurement List by entities of the Government shall be made from sources authorized by the Committee. These sources may include nonprofit agencies, central nonprofit agencies when approved by the Committee, Government central supply agencies such as the Defense Logistics Agency and the General Services Administration, and certain commercial distributors. As noted in § 51–6.2 of this chapter, identification of the authorized sources for a particular product may be obtained from the central nonprofit agencies indicated on the Procurement List which is found at www.abilityone.gov.

(c) Contracting activities shall require other persons providing products which are on the Procurement List to entities of the Government by contract to order these products from the sources authorized by the Committee.

(d) Procedures for obtaining military resale products are contained in § 51–6.4 of this chapter.

§ 51–5.3 Scope of requirement.
(a) When a product is included on the Procurement List, the mandatory source requirement covers the National Stock Number or item designation listed and products that are essentially the same as the listed item. In some instances, only a portion of the Government requirement for a National Stock Number or item designation is specified by the Procurement List. Where geographic areas, quantities, percentages or specific supply locations for a product are listed, the mandatory provisions of the JWOD Act apply only to the portion or portions of the product indicated by the Procurement List.

§ 51–5.4 Purchase exceptions.
(a) * * *
(1) The central nonprofit agency or its nonprofit agency(ies) cannot furnish a product or service within the period specified, and
(2) The product or service is available from commercial sources in the quantities needed and significantly sooner than it will be available from the nonprofit agency(ies).
*
*
*
*
* 21. Amend § 51–5.5 by revising paragraphs (a), (b), (c), and (e) to read as follows:

§ 51–5.5 Prices.

(a) The prices for items on the Procurement List at fair market prices established by the Committee under authority of the Javits-Wagner-O’Day Act (41 U.S.C. 8503(b)).
(b) Prices for products include applicable packaging, packing, and marking. Prices include transportation to point of delivery as specified in § 51–5.6.
(c) Price changes for products and services shall usually apply to orders received by the nonprofit agency or after the effective date of the change. In special cases, after considering the views of the contracting activity, the Committee may make price changes applicable to orders received by the nonprofit agency prior to the effective date of the change.
*
*
*
*
(e) If a contracting activity desires packing, packaging, or marking of products other than the standard pack or as provided in the Procurement List, any difference in cost shall be negotiated with the nonprofit agency.
* 22. Revise § 51–5.6 to read as follows:

§ 51–5.6 Shipping.

(a) Except as provided in paragraph (b) of this section, products are sold to the Government on an “F.O.B. destination” basis, with delivery being accomplished when the shipment reaches the facility designated by the contracting activity. Time of delivery is when the shipment is released to and accepted by the initial carrier. In this delivery method, the nonprofit agency will normally use Government bills of lading, and responsibility for loss or damage to the goods while in transit passes to the Government at the time the initial carrier accepts a shipment. If the contracting activity fails to furnish a Government bill of lading promptly, such failure shall be considered an excusable delay in delivery.
* 23. Revise § 51–5.7 to read as follows:

§ 51–5.7 Payments.

Payments for products or services of persons who are blind or have other severe disabilities shall be made within 30 days after shipment or receipt of a proper invoice or voucher.

PART 51–6—PROCUREMENT PROCEDURES

* 24. Amend § 51–6.1 by revising paragraphs (a) and (c) to read as follows:

§ 51–6.1 Direct order process.

(a) Once a product or service is added to the Procurement List, the central nonprofit agency may authorize the contracting activity to issue orders directly to a nonprofit agency without requesting an allocation for each order. This procedure is known as the direct order process.
*
*
*
*
(c) An order for products or services shall provide leadtime sufficient for purchase of materials, production or preparation, and delivery or completion.
*
*
*
*
* 25. Amend § 51–6.2 by revising paragraphs (a), (b) introductory text, [b](1), (c), (d), (g), (i), and (k) to read as follows:

§ 51–6.2 Allocation process.

(a) In those cases where a direct order authorization has not been issued as described in § 51–6.1, the contracting activity shall submit written requests for allocation to the appropriate central nonprofit agency indicated by the Procurement List which is found at the Committee’s website: https://www.abilityone.gov.
(b) Requests for allocations shall contain, as a minimum:
(1) For products. Name, stock number, latest specification, quantity, unit price, and place and time of delivery.
*
*
*
*
(c) Contracting activities shall request allocations in sufficient time for the central nonprofit agency to reply, for the order(s) to be placed, and for the nonprofit agencies to furnish the product or service (see paragraph (i) of this section).
* 26. Revise § 51–6.3 to read as follows:

§ 51–6.3 Long-term procurements.

(a) Contracting activities are encouraged to investigate long-term ordering agreements for products listed on the Procurement List to level off demand, thereby helping ensure stability of employment and development of job skills for persons who are blind or have other severe disabilities.

(b) Contracting activities are encouraged to use the longest contract term available by law to their agencies for contracts for products and services under the AbilityOne Program, in order to minimize the time and expense devoted to formation and renewal of these contracts.
* 27. Revise § 51–6.4 to read as follows:

§ 51–6.4 Military resale products.

(a) Purchase procedures for ordering military resale products are available from the central nonprofit agencies. Authorized resale outlets (military commissary stores, Armed Forces exchanges and like activities of other Government departments and agencies) shall request the central nonprofit agency responsible for the military resale product being ordered to designate the nonprofit agency or its agent to which the outlets shall forward orders for this purpose.
(b) Authorized resale outlets shall stock military resale products in as
§51–6.6 Request for waiver of specification requirement.

(a) Nonprofit agencies and central nonprofit agencies are encouraged to recommend changes to specification requirements or request waivers where there are opportunities to provide equal or improved products at a lower cost to the Government.

(b) The Committee may delete an item from the Procurement List without a request from a central nonprofit agency if the Committee determines that none of the nonprofit agencies participating in the AbilityOne Program are capable and desirous of furnishing the product or service to the Government, or if the Committee determines that the product or service is no longer suitable for procurement from nonprofit agencies employing people who are blind or have other severe disabilities. In considering such an action, the Committee will consult with the appropriate central nonprofit agency, the nonprofit agency or agencies involved, and the contracting activity.

§51–6.7 Orders in excess of nonprofit agency capability.

(a) Nonprofit agencies are expected to furnish products on the Procurement List within the time frames specified by the Government. The nonprofit agency must have the necessary production facilities to meet normal fluctuations in demand.

(b) Nonprofit agencies shall take those actions necessary to ensure that they can ship products within the time frames specified by the Government. In instances where the nonprofit agency determines that it cannot ship the product in the quantities specified by the required shipping date, it shall notify the central nonprofit agency and the contracting activity. The central nonprofit agency shall request a revision of the shipping schedule which the contracting activity should grant, if feasible, or the central nonprofit agency shall issue a purchase exception authorizing procurement from commercial sources as provided in §51–5.4 of this chapter.

§51–6.8 Deletion of items from the Procurement List.

(a) When a central nonprofit agency decides to request that the Committee delete a product or service from the Procurement List, it shall notify the Committee staff immediately. Before reaching a decision to request a deletion of an item from the Procurement List, the central nonprofit agency shall determine that none of its nonprofit agencies is capable and desirous of furnishing the product or service involved.

(b) Except in cases where the Government is no longer procuring the item in question, the Committee shall, prior to deleting an item from the Procurement List, determine that none of the nonprofit agencies of any other central nonprofit agency is desirous and capable of furnishing the product or service involved.

(c) Nonprofit agencies will normally be required to complete production of any orders for products on hand regardless of the decision to delete the item. Nonprofit agencies shall obtain concurrence of the contracting activity and the Committee prior to returning a purchase order to the contracting activity.

§51–6.9 Correspondence and inquiries.

Routine contracting activity correspondence or inquiries concerning deliveries of products being shipped from or performance of services by nonprofit agencies employing persons who are blind or have other severe disabilities shall be with the nonprofit agency involved. Major problems shall be referred to the appropriate central nonprofit agency. In those instances, where the problem cannot be resolved by the central nonprofit agency and the contracting activity involved, the contracting activity or central nonprofit agency shall notify the Committee of the problem so that action can be taken by the Committee to resolve it.

§51–6.10 Quality of merchandise.

(a) Products furnished under Government specification by nonprofit agencies employing persons who are blind or have other severe disabilities shall be manufactured in strict compliance with such specifications. Where no specifications exist, products furnished shall be of a quality equal to or higher than similar items available on the commercial market. Products shall be inspected utilizing nationally recognized test methods and procedures for sampling and inspection.

§51–6.11 Quality complaints.

(a) When the quality of a product received is not considered satisfactory
by the using activity, the activity shall take the following actions as appropriate:

(1) For products received from Defense Logistics Agency supply centers, General Services Administration supply distribution facilities, Department of Veterans Affairs distribution division or other central stockage depots, or specifically authorized supply source, notify the supplying agency in writing in accordance with that agency’s procedures. The supplying agency shall, in turn, provide copies of the notice to the nonprofit agency involved and its central nonprofit agency.

(2) For products received directly from nonprofit agencies employing persons who are blind or have other severe disabilities, address complaints to the nonprofit agency involved with a copy to the central nonprofit agency with which it is affiliated.

* * * * *

34. Amend § 51–6.12 by revising paragraphs (a), (b), and (e) to read as follows:

§ 51–6.12 Specification changes and similar actions.

(a) Contracting activities shall notify the nonprofit agency or agencies authorized to furnish a product on the Procurement List and the central nonprofit agency concerned of any changes to the specification or other description of the product.

(b) When a government entity is changing the specification or description of a product on the Procurement List, including a change that involves the assignment of a new national stock number or item designation, the office assigned responsibility for the action shall obtain the comments of the Committee and the central nonprofit agency concerning on the proposed change and shall notify the nonprofit agency and the central nonprofit agency concerned at least 90 days prior to placing an order for a product covered by the new specification or description.

* * * * *

(e) Nonprofit agencies shall recommend changes in specifications, item descriptions, and statements of work that will improve the product or service being provided, reduce costs, or improve overall value to the Government. Contracting activities shall respond promptly to these recommendations and work with the nonprofit agencies to implement them when appropriate.

* * * * *

35. Revise § 51–6.13 to read as follows:

§ 51–6.13 Replacement and similar products.

(a) When a product on the Procurement List is replaced by another product which has not been recently procured, and a nonprofit agency can furnish the replacement product in accordance with the Government’s quality standards and delivery schedules, the replacement product is automatically considered to be on the Procurement List and shall be procured from the nonprofit agency designated by the Committee at the fair market price. The Committee has set for the replacement product. The product being replaced shall continue to be included on the Procurement List until there is no longer a Government requirement for that product.

(b) If contracting activities desire to procure additional sizes, colors, or other variations of a product after the product is added to the Procurement List, and these similar products have not recently been procured, these products are also automatically considered to be on the Procurement List.

(c) In accordance with § 51–5.3 of this chapter, contracting activities are not permitted to purchase commercial items that are essentially the same as products on the Procurement List.

PART 51–7—PROCEDURES FOR ENVIRONMENTAL ANALYSIS

36. Amend § 51–7.1 by revising paragraph (b) to read as follows:

§ 51–7.1 Purpose and scope.

(b) Scope. This part applies to all actions of the Committee for Purchase from Persons Who Are Blind or Severely Disabled which may affect environmental quality in the United States.

37. Amend § 51–7.2 by revising paragraph (a) to read as follows:

§ 51–7.2 Early involvement in private, State, and local activities requiring Federal approval.

(a) 40 CFR 1501.2(d) requires agencies to provide for early involvement in actions which, while planned by private applicants or other non-Federal entities, require some sort of Federal approval. Pursuant to the JWOD Act (41 U.S.C. 8501–8506), the Committee for Purchase from People Who Are Blind or Severely Disabled makes the determination as to which qualified nonprofit agency serving persons who are blind or have other severe disabilities will furnish designated products and services to the Government.

* * * * *

PART 51–8—PUBLIC AVAILABILITY OF AGENCY MATERIALS

38. Amend § 51–8.4 by revising the section heading and adding paragraph (g) to read as follows:

§ 51–8.4 Responsibility for responding to requests.

* * * * *

(g) Appointments. Material described in 5 U.S.C. 552(a)(2) shall be available for inspection during normal business hours at the Committee’s offices. An individual who intends to visit the Committee offices to inspect this material shall make an appointment with the Executive Director at least one week in advance, except when the Committee has provided notification to the individual that the material is available for inspection in the Committee offices, in which case an appointment must be made at least 24 hours in advance. Appointments can be requested at the Committee’s email address: info@abilityone.gov.

39. Amend § 51–8.5 by adding paragraph (a) introductory text and revising paragraph (a)(1) to read as follows:

§ 51–8.5 Timing of Responses to Requests.

(a) In general. Requests to obtain copies of any material maintained by the Committee must be submitted to the Executive Director at the Committee’s offices, email address: info@abilityone.gov. The requester may in his or her petition ask for a fee waiver if there is likely to be a charge for the requested information. All requests for records shall be deemed to have been made pursuant to the FOIA, regardless of whether the Act is specifically mentioned. Failure to submit a request in accordance with these procedures may delay the processing of the request.

(1) The Committee ordinarily will respond to requests according to their order of receipt. The time limits prescribed in the FOIA will begin only after the Committee identifies a request as being made under the FOIA and deemed received by the Committee.

* * * * *

PART 51–9—PRIVACY ACT RULES

40. Revise § 51–9.301 to read as follows:

§ 51–9.301 Notification.

Any individual who wishes to determine if a system of records maintained by the Committee contains a record pertaining to him should direct a request to the Executive Director at the address indicated in the public notice or
§ 51–9.303–1 Form of requests. * * * *

(b) A written request should be directed to the Executive Director as listed in the public notice describing the system of records or at the Committee’s email address: info@abilityone.gov. The individual should display clearly on the face of the request letter and on the face of the envelope the legend “Privacy Act Request”, and include the complete name and identifying number of the system as published in the Federal Register; the full name, address, and telephone number of the subject individual; a brief description of the nature, time, place and circumstances of the individual’s association with the Committee and any other information which the individual believes would facilitate the Executive Director’s determination whether the individual’s name is included in the system of records. The Executive Director shall answer or acknowledge the request within ten working days.

■ 41. Amend § 51–9.301–1 by revising paragraphs (b) and (c) to read as follows:

§ 51–9.301–1 Form of payment.
Payment shall be by check or money order payable to the Committee for Purchase from People Who Are Blind or Severely Disabled and shall be addressed to the Executive Director.
■ 43. Amend § 51–9.401 by revising paragraph (a) to read as follows:

§ 51–9.401 Submission of requests to amend records.
(a) An individual who desires to amend any record or information pertaining to him should direct a written request to the Executive Director, Committee for Purchase From People Who Are Blind or Severely Disabled at the Committee’s email address: info@abilityone.gov.

* * * *

■ 44. Amend § 51–9.405 by revising paragraph (a) to read as follows:

§ 51–9.405 Request of review of refusal to amend a record.
(a) An individual who disagrees with the refusal to amend may appeal that refusal with the Committee. An individual should address a request for review of a refusal to amend any record, exclusive of a personnel record of a current Committee employee to the Chairperson, Committee for Purchase from People Who Are Blind or Severely Disabled at the Committee’s email address: info@abilityone.gov.

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 15
[ET Docket Nos. 20–36; Report No. 3178; FRS 37546]

Petition for Reconsideration of Action in Rulemaking Proceeding

AGENCY: Federal Communications Commission.

ACTION: Petition for reconsideration.

SUMMARY: Petition for Reconsideration (Petition) has been filed in the Commission’s rulemaking proceeding by Catherine Wang, on behalf of Shure Incorporated.

DATES: Oppositions to the Petition must be filed on or before August 9, 2021. Replies to an opposition must be filed on or before August 17, 2021.

ADDRESSES: Federal Communications Commission, 45 L Street NE, Washington, DC 20554.

FOR FURTHER INFORMATION CONTACT: Hugh VanTuyl, Office of Engineering and Technology Bureau, (202) 418–7506 or Hugh.VanTuyl@fcc.gov.

SUPPLEMENTARY INFORMATION: This is a summary of the Commission’s document, Report No. 3178, released July 7, 2021. The full text of the Petition can be accessed online via the Commission’s Electronic Comment Filing System at: http://apps.fcc.gov/ecfs/. The Commission will not send a Congressional Review Act (CRA) submission to Congress or the Government Accountability Office pursuant to the CRA, 5 U.S.C. 801(a)(1)(A), because no rules are being adopted by the Commission.

Number of Petitions Filed: 1.

Federal Communications Commission.

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Agricultural Research Service

Notice of Intent To Renew an Information Collection

AGENCY: Agricultural Research Service, USDA.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, this notice announces the Agricultural Research Service’s (ARS) intention to request an extension of a currently approved information collection, Form AD–761, USDA Patent License Application for Government Invention that expires October 31, 2022.

DATES: Comments must be received on or before September 21, 2021.

ADDRESSES: Comments may be sent to Diana D. Halsey, USDA, ARS, Office of Technology Transfer, 301–504–6905, diana.halsey@usda.gov.

FOR FURTHER INFORMATION CONTACT: Diana D. Halsey, USDA, ARS, Office of Technology Transfer, 301–504–6905, diana.halsey@usda.gov.

SUPPLEMENTARY INFORMATION:

Title: USDA Patent License Application.
OMB Number: 0518–0003.
Expiration Date of Approval: October 31, 2022.
Type of Request: To extend a currently approved information collection.
Abstract: The USDA patent licensing program grants patent licenses to qualified businesses and individuals who wish to commercialize inventions arising from federally supported research. The objective of the program is to use the patent system to promote the utilization of inventions arising from such research. The licensing of federally owned inventions must be done in accordance with the terms, conditions and procedures prescribed under 37 CFR part 404. Application for a license must be addressed to the Federal agency having custody of the invention. Licenses may be granted only if the license applicant has supplied the Federal agency with a satisfactory plan for the development and marketing of the invention and with information about the applicant’s capability to fulfill the plan. 37 CFR 404.8 sets forth the information which must be provided by a license applicant. For the convenience of the applicant, USDA has itemized the information needed on Form AD–761, and instructions for completing the form are provided to the applicant. The information submitted is used to determine whether the applicant has both a complete and sufficient plan for developing and marketing the invention and the necessary manufacturing, marketing, technical and financial resources to carry out the submitted plan.

Estimate of Burden: Public reporting burden for this collection of information is estimated to average 3 hours per response.

Description of Respondents: Businesses or other for profit individuals.

Estimated Number of Respondents: 75.

Frequency of Responses: One time per invention.

Estimated Total Annual Burden on Respondents: 225 hours.

This data will be collected under the authority of 44 U.S.C. 3506(c)(2)(A). Copies of this information collection and related instructions can be obtained without charge from Diana D. Halsey, USDA, ARS, Office of Technology Transfer by calling 301–504–6905.

Comments are invited on (a) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency’s estimate of the burden of the proposed collection of information including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on those who are to respond, such as through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses. Comments may be sent to diana.halsey@usda.gov.

All responses to this notice will be summarized and included in the request for OMB approval. All comments will also become a matter of public record.

Brian T. Nakanishi,
Acting Deputy Assistant Administrator.

PUBLIC NOTICE; NOTICES

DEPARTMENT OF AGRICULTURE

Farm Service Agency

[DOCKET ID CCC–2021–0008]

Notice of Funds Availability (NOFA); Pandemic Assistance for Timber Harvesters and Haulers Program (PATHH)

AGENCY: Farm Service Agency, Department of Agriculture (USDA).

ACTION: Notification of funding availability.

SUMMARY: The Farm Service Agency (FSA) is announcing the availability of assistance for timber harvesting and timber hauling businesses impacted by the effects of the COVID–19 outbreak through PATHH. Timber harvesting and hauling businesses are also commonly referred to as loggers and truckers. This NOFA establishes provisions for FSA to provide direct payments to eligible applicants who have suffered a gross revenue loss of at least 10 percent for the period of January 1, 2019, through December 1, 2020, comparing the period of January 1, 2020, through December 1, 2020, compared to the period of January 1, 2019, through December 1, 2019. The eligibility requirements, payment calculation, and application procedure for PATHH are included in this NOFA.

FOR FURTHER INFORMATION CONTACT: Jody Kenworthy; telephone: (202) 690–5230; email: Jody.Kenworthy@usda.gov.

Persons with disabilities who require alternative means for communication should contact the USDA Target Center at (202) 720–2600 (voice).

SUPPLEMENTARY INFORMATION:

Background

FSA will provide assistance to timber harvesting or timber hauling businesses for losses due to the COVID–19 pandemic. FSA is implementing
PATHH to distribute up to $200 million as authorized by Subtitle B of Title VII of Division N of the Consolidated Appropriations Act, 2021 (CAA; Pub. L. 116–260) to support timber harvesting and timber hauling businesses that have experienced a decrease in their gross revenue of 10 percent or more for the period of January 1, 2020, and December 1, 2020, compared to gross revenue for the period of January 1, 2019 and December 1, 2019. PATHH is intended for timber harvesting and hauling businesses that derive the majority of their income from timber harvesting or hauling activities. Timber harvesting and hauling businesses are also commonly referred to as loggers and truckers. This document uses the terms timber harvesting and timber hauling businesses for consistency with the CAA. FSA is administering the direct payments under the general supervision and direction of the FSA Administrator, and the United States Forest Service (USFS). USFS will provide technical assistance to FSA, which includes, but is not limited to, sharing expertise on the timber sector, connecting with stakeholders, and providing outreach and training materials.

Definitions

For PATHH, the following definitions apply:

**Gross revenue** means the business’s gross receipts. Gross receipts are the total amounts the timber harvesting business or timber hauling business received from timber harvesting and timber hauling activities, without subtracting any costs or expenses. For PATHH, applicants should not include sale of physical assets, such as machinery or equipment, when calculating gross revenue.

**Legal entity** means for the purposes of administering PATHH, a timber harvesting business or timber hauling business that is a corporation, joint stock company, association, limited partnership, irrevocable trust, estate, charitable organization, or other similar organization including any such organization participating in a business structure as a general partnership, a joint venture, a grantor of a revocable trust, or as a participant in a similar organization, is considered a legal entity, subject to the payment limitation and payment eligibility requirements described in this NOFA. A business operating as a sole proprietorship is considered a legal entity.

**NAICS** means the 2017 North American Industry Classification System (NAICS). It is the standard used by Federal statistical agencies in classifying business establishments for the purpose of collecting, analyzing, and publishing statistical data related to the U.S. business economy.

**Person** means an individual, natural person and does not include a legal entity.

**Principal business code** means a six-digit number that classifies the main type of product a business sells or service offered. It is based on NAICS codes and is synonymous in this notice with NAICS.

**Timber** means trees or logs harvested from forest land. It includes trees or logs that have been minimally processed onsite in the forest before transportation from the forest land (for example, wood chips, slash, etc.).

**Timber harvesting business** means a business, also known as a logging business, with its gross revenue derived from one or more of the following:

- Cutting timber;
- Cutting and transporting timber; or
- Producing wood chips on forest land.

In addition, the business must be classified under NAICS Code 113310 for tax purposes; or as otherwise determined by the Deputy Administrator for Farm Programs.

**Timber hauling business** means a business, also known as a log hauling business, with its gross revenue derived from transporting products harvested directly from forest land with vehicles registered (under the laws of the state or states in which the vehicle is required to be registered) as highway motor vehicles used in the transportation of timber. The business must also be classified under NAICS Code 484220 or 484230 for tax purposes and have filed IRS Form 2290 for logging vehicles for 2019 and 2020, or otherwise determined by the Deputy Administrator for Farm Programs.

**United States** means all 50 states of the United States, the District of Columbia, the Commonwealth of Puerto Rico and any other territory or possession of the United States.

Eligibility

To be eligible for a PATHH payment, an applicant must:

- Be in operation as a timber harvesting business or timber hauling business during the periods of:
  - January 1, 2019, through December 1, 2019, and
  - January 1, 2020, through December 1, 2020; and
- Have had at least a 10 percent gross revenue loss when comparing the 2020 period with the 2019 period mentioned above;
- Have 50 percent or more of its gross revenue derived from timber harvesting, timber hauling, or both during the periods of:
  - January 1, 2019, through December 1, 2019, and
  - January 1, 2020, through December 1, 2020;
- Meet all of the requirements in this NOFA;
- Be a:
  - Citizen of the United States;
  - Resident alien, which for purposes of this NOFA means “lawful alien” as defined in 7 CFR part 1400; or
  - Partnership of citizens or resident aliens of the United States; or
  - Corporation, limited liability company, or other organizational structure organized under State law and solely owned by U.S. citizens or resident aliens; or
  - Indian Tribe or Tribal organization, as defined in section 4(b) of the Indian Self-Determination and Education Assistance Act (25 U.S.C. 5304);
- Provide names and taxpayer identification numbers of each person or legal entity that holds an ownership interest in an eligible legal entity in accordance with 7 CFR 1400.107; 2 and
- Comply with the provisions of 7 CFR part 12, “Highly Erodible Land and Wetland Conservation,” and the provisions of 7 CFR 718.6, which address ineligibility for benefits for offenses involving controlled substances.

The following types of applicants are ineligible for PATHH:

- Any legal entity that includes a member at any level of ownership in the entity’s ownership structure who is not a citizen of the United States or an alien lawfully admitted into the United States for permanent residence under the Immigration and Nationality Act (8 U.S.C. 1101–1778);
- The following types of businesses or operations:
  - Residential or commercial tree care;
  - Landscape services;
  - Trucking businesses that do not transport trees or logs;
  - Timber broker; and
  - United States Federal, State, and local governments.

---

1 Applicants must have operated for part of the eligible PATHH period in both 2019 and 2020 to be eligible for PATHH. FSA will adjust the applicant’s gross revenue proportionately if the applicant did not operate during the entire PATHH period.

2 Like all other programs administered by FSA, names and taxpayer identification numbers are required to limit payments to persons and legal entities.
Payment Limitation

A person or legal entity cannot receive payments of more than $125,000 under PATHH. FSA may reduce the maximum payment limitation after all applications have been approved, based on available funding. Like all other programs administered by FSA, payments made to a PATHH applicant that is a Indian Tribe or Tribal organization, as defined in section 4(b) of the Indian Self-Determination and Education Assistance Act (25 U.S.C. 5304), will not be subject to payment limitation.

Application

To apply for PATHH, each eligible timber harvesting business and timber hauling business must complete the form FSA–1118, Pandemic Assistance for Timber Harvesters and Haulers (PATHH) Program Application, which is available at https://www.farmers.gov/PATHH and in FSA county offices. A complete form FSA–1118 must be submitted in person, by mail, email, OneSpan, Box, or facsimile to any FSA county office by October 15, 2021. In addition to the form FSA–1118, an applicant must submit the additional forms discussed below. Failure of an individual, legal entity, or a member(s) of a legal entity to submit the following payment limitation and payment eligibility forms within 60 days from the date of submitting the PATHH application may result in no payment or a reduced payment, as explained in the previous section.

Applicants will be required to complete the form AD–2047 Customer Data Worksheet. This form must be filled out for all applicants, as well as members who own a share in any legal entity

PATHH participants are required to retain documentation in support of their application for 3 years after the date of approval.

Participants receiving PATHH payments or any other person who furnishes such information to USDA must permit authorized representatives of FSA or the Government Accountability Office, during regular business hours, to enter the participant’s business and to inspect, examine, and to allow representatives to make copies of books, records, or other items for the purpose of confirming the accuracy of the information provided by the participant.

Payment

For eligible applicants, if gross revenue for the period of January 1, 2020, through December 1, 2020, decreased by at least 10 percent compared to gross revenue for the period of January 1, 2019, through December 1, 2019, the payment amount will be calculated as follows:

- Gross revenue received from January 1, 2019, through December 1, 2019, minus gross revenue received from January 1, 2020, through December 1, 2020;
- Multiplied by 80 percent.

For applicants whose business either originated between January 1, 2019, and December 1, 2019, or dissolved in between January 1, 2020, and December 1, 2020, the applicant must report the amount of time they were in business during the eligible PATHH periods of January 1, 2019, through December 1, 2019, and January 1, 2020, through December 1, 2020, on their application, and FSA will adjust gross revenue proportionally for the purpose of payment calculation. If there was a change in the ownership of an entity in 2019, but the entity’s name and business remain the same, the entity is not considered to have originated in 2019. For example, Timber Business A originated on July 17, 2019. It is still in operation today; therefore, it was in operation during the PATHH periods January 1, 2020, through December 1, 2020, (336 days) and July 17, 2019, to December 1, 2019 (138 days). The business’s gross revenue is $140,000 for 2019, and $200,000 in 2020. Since the number of days the business existed in 2019 is not the same as the number of days it existed in 2020, the business’s gross revenue for 2019 will be calculated on a daily basis, and that daily revenue will then be multiplied by the number of days it operated in 2020. This will allow an equitable comparison of the gross revenue for the 2 years to determine the loss. To calculate the
business’s gross revenue for 2019, $140,000, will be divided by the number of days its operation existed, 138 days, to get the business’s 2019 gross revenue per day. That amount, $1,014.49275 (not rounded), is then multiplied by the number of days the business existed in 2020 if the business existed during the entire application period, 335 days. This amount, $339,855.0724 (not rounded) will then be used as the business’s 2019 gross revenue in the PATHH payment calculation. Seasonal timber harvesting and timber hauling business will be considered in operation during the entire PATHH applicable period and their gross revenue will not be prorated. FSA will issue an initial payment equal to the lesser of:

- The amount calculated above; or
- $2,000.

After the close of the application period, FSA will issue a final payment equal to the amount calculated above minus the amount of the applicant’s initial payment. If total calculated payments exceed the total funding available for PATHH, the payment limitation may be adjusted and the final payment amounts will be prorated to stay within the amount of available funding. An initial payment to a recipient will not be recalculated or reduced if the factored payment to that recipient is $2,000 or less.

Miscellaneous Provisions

In the event that a PATHH payment resulted from erroneous information reported by the applicant, the payment will be recalculated, and the applicant must refund any excess payment to FSA, including interest to be calculated from the date of disbursement.

If FSA determines that the applicant intentionally misrepresented their total gross revenue, their application will be disapproved and they must refund to USDA all PATHH payments made to the applicant with interest from the date of disbursement.

If any corrections to the ownership interest in the business result in a lower PATHH payment, the applicant must refund any excess payment to FSA, including interest to be calculated from the date of disbursement.

Any required refunds must be resolved in accordance with debt settlement regulations in 7 CFR part 3.

Equitable relief and finality provisions of 7 CFR 718 subpart D apply to determinations under PATHH, as well as appeal regulations in 7 CFR parts 11 and 780. The determination of matters of general applicability that are not in response to, or result from, an individual case or facts in an individual participant’s application for payment are not matters that can be appealed. Such matters of general applicability include, but are not limited to, program definitions, payment limitation, the method of determining gross revenue loss, and the PATHH payment calculation.

A timber hauling business or timber harvesting business may file an application with the FSA county office after the PATHH application deadline, along with a statement as to why the application is being filed after the deadline. In such case the application and statement will be considered a request to waive the application deadline. If funding is available, the Deputy Administrator has the discretion and authority to consider the case and waive or modify application deadlines and other requirements or program provisions not specified in law, in cases where the Deputy Administrator determines it is equitable to do so and where the Deputy Administrator finds that the lateness or failure to meet such other requirements or program provisions do not adversely affect the operation of PATHH. Although applicants have a right to a decision on whether they filed applications by the deadline or not, applicants have no right to a decision in response to a request to waive or modify deadlines or program provisions. The Deputy Administrator’s refusal to exercise discretion to consider the request will not be considered an adverse decision and is, by itself, not appealable.

PATHH payments will be made without regard to questions of title under State law and without regard to any claim or lien against the timber harvesting or hauling business. The regulations governing offsets in 7 CFR part 3 do not apply to PATHH payments.

Perjury

In either applying for or participating in PATHH, or both, the applicant is subject to laws against perjury and any penalties and prosecution resulting therefrom, with such laws including but not limited to 18 U.S.C. 1621. If the applicant willfully makes and represents as true any verbal or written declaration, certification, statement, or verification that the applicant knows or believes not to be true, in the course of either applying for or participating in PATHH, or both, then the applicant is guilty of perjury and, except as otherwise provided by law, may be fined, imprisoned for not more than 5 years, or both, regardless of whether the applicant makes such verbal or written declaration, certification, statement, or verification within or without the United States.

Paperwork Reduction Act Requirements

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 35), the emergency information collection request has been submitted to the Office of Management and Budget (OMB). OMB approved the 6-month emergency PATHH information collection activity. FSA is providing direct payments to eligible applicants who have suffered a gross revenue loss of at least 10 percent for the period of January 1, 2020, through December 1, 2020, compared to the period of January 1, 2019, through December 1, 2019.

Environmental Review

The environmental impacts have been considered in a manner consistent with the provisions of the National Environmental Policy Act (NEPA, 42 U.S.C. 4321–4347), the regulations of the Council on Environmental Quality (40 CFR parts 1500–1508), and the FSA regulation for compliance with NEPA (7 CFR part 799).

As previously stated, PATHH is providing payments to eligible timber harvesting and hauling businesses who have suffered a gross revenue loss of at least 10 percent for the period of January 1, 2020, through December 1, 2020, compared to the period of January 1, 2019, through December 1, 2019. The limited discretionary aspects of PATHH do not have the potential to impact the human environment as they are administrative. Accordingly, these discretionary aspects are covered by the FSA Categorical Exclusions specified in 7 CFR 799.31(b)(6)(iii) that applies to price support programs and § 799.31(b)(6)(vi) that applies to safety net programs.

No Extraordinary Circumstances (§ 799.33) exist. As such, the implementation of PATHH and the participation in PATHH do not constitute major Federal actions that would significantly affect the quality of the human environment, individually or cumulatively. Therefore, FSA will not prepare an environmental assessment or environmental impact statement for this action and this document serves as documentation of the programmatic environmental compliance decision for this federal action.

Federal Assistance Programs

The title and number of the Federal assistance programs, as found in the Catalog of Federal Domestic Assistance, to which this document applies is 10.137—Pandemic Assistance for Timber Harvesters and Haulers Program.
USDA Non-Discrimination Policy

In accordance with Federal civil rights law and U.S. Department of Agriculture (USDA) civil rights regulations and policies, USDA, its Agencies, offices, and employees, and institutions participating in or administering USDA programs are prohibited from discriminating based on race, color, national origin, religion, sex, gender identity (including gender expression), sexual orientation, disability, age, marital status, family or parental status, income derived from a public assistance program, political beliefs, or reprisal or retaliation for prior civil rights activity, in any program or activity conducted or funded by USDA (not all bases apply to all programs). Remedies and complaint filing deadlines vary by program or incident.

Persons with disabilities who require alternative means of communication for program information (for example, braille, large print, audiotape, American Sign Language, etc.) should contact the responsible Agency or USDA TARGET Center at (202) 720–2600 or (844) 433–2774 (toll-free nationwide). Additionally, program information may be made available in languages other than English.

To file a program discrimination complaint, complete the USDA Program Discrimination Complaint Form, AD–3027, found online at https://www.usda.gov/oascr/how-to-file-a-program-discrimination-complaint and at any USDA office or write a letter addressed to USDA and provide in the letter all the information requested in the form. To request a copy of the complaint form, call (866) 632–9992. Submit your completed form or letter to USDA by mail to: U.S. Department of Agriculture, Office of the Assistant Secretary for Civil Rights, 1400 Independence Avenue SW, Washington, DC 20250–9410 or email: OAC@usda.gov. USDA is an equal opportunity provider, employer, and lender.

Zach Ducheneaux,
Administrator, Farm Service Agency.

Agency Information Collection Activities: Proposed Collection; Comment Request—Summer Food Service Program

AGENCY: Food and Nutrition Service (FNS), Agriculture (USDA).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, this notice invites the general public and other public agencies to comment on the Agency’s proposed revision to the currently approved information collection for the Summer Food Service Program (SFSP). FNS uses this collection to obtain account and record information from State and program operators that is necessary to effectively manage the SFSP and ensure compliance with statutory and regulatory Program requirements.

DATES: Written comments must be received on or before September 21, 2021.

addressed to USDA and provide in the letter all the information requested in the form. To request a copy of the complaint form, call (866) 632–9992. Submit your completed form or letter to USDA by mail to: U.S. Department of Agriculture, Office of the Assistant Secretary for Civil Rights, 1400 Independence Avenue SW, Washington, DC 20250–9410 or email: OAC@usda.gov. USDA is an equal opportunity provider, employer, and lender.

Zach Ducheneaux,
Administrator, Farm Service Agency.

Agency Information Collection Activities: Proposed Collection; Comment Request—Summer Food Service Program

AGENCY: Food and Nutrition Service (FNS), Agriculture (USDA).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, this notice invites the general public and other public agencies to comment on the Agency’s proposed revision to the currently approved information collection for the Summer Food Service Program (SFSP). FNS uses this collection to obtain account and record information from State and program operators that is necessary to effectively manage the SFSP and ensure compliance with statutory and regulatory Program requirements.

DATES: Written comments must be received on or before September 21, 2021.

Zach Ducheneaux,
Administrator, Farm Service Agency.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of this information collection should be directed to Megan Geiger, Community Meals Program Monitoring Branch, Program Monitoring and Operational Support Division, Child Nutrition Programs, Food and Nutrition Service, U.S. Department of Agriculture, at 703–605–3223 or via email to megan.geiger@usda.gov.

SUPPLEMENTARY INFORMATION: Comments are invited on: (1) Whether the proposed collection of information is necessary for the proper performance of the Agency’s functions, including whether the information will have practical utility; (2) the accuracy of the Agency’s estimate of the proposed information collection burden, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on those who are to respond, including use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Title: 7 CFR part 225, Summer Food Service Program.

OMB Number: 0584–0280.

Expiration Date: December 31, 2022.

Type of Request: Revision of a currently approved collection.

Abstract: The Summer Food Service Program (SFSP) is authorized under section 13 of the Richard B. Russell National School Lunch Act (NSLA) (42 U.S.C. 1761). The Program is directed toward children in low-income areas when school is not in session and is administered by FNS in partnership with State agencies and local program sponsors. Approved sponsors may include public or private non-profit school food authorities (SFAs), public or private non-profit residential summer camps, units of local, municipal, county or State governments, or other private non-profit organizations that develop a special summer program and provide meal service similar to that available to children during the school year under the National School Lunch Program and the School Breakfast Program. Collection of information is required to administer and operate SFSP in accordance with the NSLA. FNS will seek approval by the Office of Management and Budget (OMB) to revise the reporting burden in the information collection for the SFSP under OMB Control Number 0584–0280 to include two existing monitoring requirements that were omitted in previous ICRs. Under current regulations, sponsors are required to visit each of their sites at least once during the first week of operation under the program (7 CFR 225.15(d)(2)), and to conduct a full review of food service operations at each site within the first four weeks of operation (7 CFR 225.15(d)(3)). The burden associated with these existing monitoring requirements was overlooked in previous ICRs and has not yet been approved under the Paperwork Reduction Act. This revision corrects these omissions. In addition, FNS is taking this opportunity to correct rounding errors in the total estimated burden hours currently approved for the collection.

FNS estimates that each of the 5,524 sponsors that participate in SFSP (3,314 local and tribal government sponsors, and 2,210 business sponsors) complete, on average, nine first week site visit reports and nine food service reviews annually, for a total of 99,432 responses. In addition, FNS estimates that the average number of burden hours per response is 30 minutes (0.50 hours) for first week site visits, and two hours for
food service reviews, resulting in an estimated total of 124,290 additional burden hours annually (5,524 × 9 × 2.5). As a result of program adjustments for these two monitoring requirements, the reporting burden associated with this collection increases from 328,870 hours and 185,884 responses to 453,160 hours and 285,316 responses. These adjustments do not affect the currently approved recordkeeping and public disclosure burdens. Furthermore, in preparation for this ICR, FNS discovered erroneous rounding errors in the burden chart submitted as part of the previous renewal request, which resulted in an additional two hours to the total burden estimate for the collection. During that renewal, which was approved by OMB on December 2, 2019, the total public disclosure burden was entered as 1,395 hours when it should have more accurately been rounded to 1,394 hours. In addition, the total burden hours estimate for the collection was rounded up an additional hour when it should have been rounded down. Because of these two rounding errors, current OMB inventory for this collection totals 338,411 hours rather than the more accurate total of 338,409 hours. As a result of the program adjustments subject to this notice, due to the addition of previously omitted reporting requirements, as well as the administrative adjustment for rounding errors, FNS estimates the revised total burden for the collection to increase by 124,288 hours (124,290 for the two monitoring requirements – 2 to correct rounding errors) and 99,432 responses, to a total of 462,699 hours and 391,795 responses. The adjusted average burden per response and the annual burden hours for reporting, recordkeeping, and public disclosure are explained below and summarized in the charts that follow. The charts reflect the changes in reporting burden at the State/Local/Tribal Government and Business Sponsors levels and the correction of rounding errors in the public disclosure burden. No changes were made in the recordkeeping burden.

Affected Public: State, Local, or Tribal Governments and Businesses or Other For Profit, or Not for Profit. Respondent groups identified include State Agencies and local, tribal, and business sponsors.

Estimated Number of Respondents: 63,942.

Estimated Number of Responses per Respondent: 6.13.

Estimated Total Annual Responses: 391,795.

Estimated Time per Response: 1.18.

Estimated Total Annual Burden: 462,699.

Current OMB Inventory: 338,411.

Difference (Burden Revisions Requested): 124,288.

Refer to the table below for estimated total annual burden for each type of respondent.

Census Bureau

Request for Nominations of Members To Serve on the National Advisory Committee on Racial, Ethnic, and Other Populations

AGENCY: Census Bureau, Commerce.

ACTION: Notice of request for nominations.

SUMMARY: The Director of the Census Bureau (Director) is seeking nominations for the National Advisory Committee on Racial, Ethnic and Other Populations (NAC). The purpose of the NAC is to provide advice to the Director on the full range of economic, housing, demographic, socioeconomic, linguistic, technological, methodological, geographic, behavioral, and operational variables affecting the cost, accuracy and implementation of Census Bureau programs and surveys, including the decennial census. The Director has determined that the work of the NAC is in the public interest and relevant to the duties of the Census Bureau. Therefore, the Director is seeking nominations to fill vacancies on the NAC. Additional information concerning the NAC can be found by visiting the NAC’s website at: https://www.census.gov/about/cac/sac.html.

DATES: Nominations must be received on or before September 30, 2021.

Nominations must contain a completed resume. The Census Bureau will retain nominations received after the deadline for consideration should additional vacancies occur.

For further information contact: Shana Banks, Chief, Advisory Committee Brach, Office of Program, Performance and Stakeholder Integration (PPSI), Census Bureau, by telephone at 301–763–3815 or by email at Shana.J.Banks@census.gov. Individuals who use telecommunication devices for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 between 8:00 a.m. and 8:00 p.m., Eastern Standard Time, Monday through Friday.

FOR FURTHER INFORMATION CONTACT: Shana Banks, Chief, Advisory Committee Brach, Office of Program, Performance and Stakeholder Integration (PPSI), Census Bureau, by telephone at 301–763–3815 or by email at Shana.J.Banks@census.gov. Individuals who use telecommunication devices for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 between 8:00 a.m. and 8:00 p.m., Eastern Standard Time, Monday through Friday.

SUPPLEMENTARY INFORMATION:

Background

In accordance with the Federal Advisory Committee Act (FACA), Title 5, United States Code, Appendix 2, Section 10, the Director of the Census Bureau is seeking nominations for the National Advisory Committee on Racial, Ethnic, and Other Populations (NAC). The NAC will operate under the provisions of FACA and will report to the Secretary of the Department of Commerce through the Director of the Census Bureau.

The Census Bureau’s National Advisory Committee on Racial, Ethnic, and Other Populations will advise the Director of the Census Bureau on the full range of Census Bureau programs and activities. The Advisory Committee will provide race, ethnic, and other population expertise from the following disciplines: Economic, housing, demographic, socioeconomic, linguistic, technological, methodological, geographic, and behavioral and operational variables affecting the cost, accuracy, and implementation of Census Bureau programs and surveys, including the decennial census.

Objectives and Duties

1. The NAC advises the Director of the Census Bureau (the Director) on the full range of economic, housing, demographic, socioeconomic, linguistic, technological, methodological, geographic, behavioral, and operational variables affecting the cost, accuracy, and implementation of Census Bureau programs and surveys, including the decennial census.

2. The NAC advises the Census Bureau on the data needs of underserved communities and how Census data products might address such needs.

3. The NAC provides guidance on Census policies, research and methodology, tests, operations, communications, and other activities to ascertain needs and best practices to improve censuses, surveys, operations, and programs.

4. The NAC reviews and provides formal recommendations and feedback on working papers, reports, and other documents related to the design and implementation of Census Bureau programs and surveys.

5. In providing insight, perspectives, and expertise on the full spectrum of Census Bureau surveys and programs, the NAC examines such areas as hidden households, language barriers, students and youth, aging populations, American Indian and Alaska Native tribal considerations, new immigrant populations, populations affected by natural disasters, highly mobile and migrant populations, complex households, poverty, race/ethnic distribution, privacy and confidentiality, rural populations and businesses, individuals and households with limited access to information and communications technologies, the dynamic nature of new businesses, minority ownership of businesses, as well as other concerns impacting...
Census Bureau survey design and implementation.

6. The NAC uses formal advisory committee meetings, webinars, web conferences, working groups, and other methods to accomplish its goals, consistent with the requirements of the FACA. The NAC will consult with regional office staff to help identify regional, local, tribal and grass roots issues, trends and perspectives related to Census Bureau surveys and programs.

7. The NAC functions solely as an advisory body under the FACA.

Membership

1. The NAC consists of up to 32 members who serve at the discretion of the Director. The Census Bureau is seeking eight qualified candidates to be considered for appointment.

2. The NAC aims to have a balanced representation among its members, considering such factors as geography, age, sex, race, ethnicity, technical expertise, community involvement, and knowledge of census programs and/or activities.

3. The NAC aims to include members from diverse backgrounds, including state, local and tribal governments; academia; research, national and community-based organizations; and, the private sector.

4. Members will be selected from the public and private sectors. Members may serve as Special Government Employees (SGEs) or representatives who are selected to represent specific organizations.

5. SGEs and representatives will be selected based on their expertise in or representation of specific areas to include: Diverse populations (including race and ethnic populations); national, state, local, and tribal interest organizations serving hard-to-count populations; researchers and/or curriculum vitae) must be included along with the nomination letter. Nominees must be able to actively participate in the tasks of the committee, including, but not limited to, regular meeting attendance, committee meeting discussions, responsibilities, review of materials, as well as participation in conference calls, webinars, working groups, and/or special committee activities.

3. The Department of Commerce is committed to equal opportunity in the workplace and seeks diverse NAC membership.

Ron S. Jarmin, Acting Director, Census Bureau, approved the publication of this Notice in the Federal Register.

Dated: July 20, 2021.

Shelleen Dumas, Department PRA Clearance Officer, Office of the Chief Information Officer, Commerce Department

Census Bureau

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Commodity Flow Survey (CFS)

AGENCY: U.S. Census Bureau, Commerce.

ACTION: Notice of information collection, request for comment.

SUMMARY: The Department of Commerce, in accordance with the Paperwork Reduction Act (PRA) of 1995, invites the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public’s reporting burden. The purpose of this notice is to allow for 60 days of public comment on the proposed reinstatement, with change, of the Commodity Flow Survey, prior to the submission of the information collection request (ICR) to OMB for approval.

DATES: To ensure consideration, comments regarding this proposed information collection must be received on or before September 21, 2021.

ADDRESSES: Interested persons are invited to submit written comments by email to Thomas.J.Smith@census.gov. Please reference Commodity Flow Survey in the subject line of your comments. You may also submit comments, identified by Docket Number USBC–2021–0017, to the Federal e-Rulemaking Portal: http://www.regulations.gov. All comments received are part of the public record. No comments will be posted to http://www.regulations.gov for public viewing until after the comment period has closed. Comments will generally be posted without change. All Personally Identifiable Information (for example, name and address) voluntarily submitted by the commenter may be publicly accessible. Do not submit Confidential Business Information or otherwise sensitive or protected information. You may submit attachments to electronic comments in Microsoft Word, Excel, or Adobe PDF file formats.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or specific questions related to collection activities should be directed to Berin Linfors, Branch Chief, at 301–763–5366 or berin.linfors@census.gov.

SUPPLEMENTARY INFORMATION:
I. Abstract

The Commodity Flow Survey, a component of the 2022 Economic Census, is the only comprehensive and publicly available source of multimodal, system-wide data on the volume and pattern of goods movements in the United States. The Commodity Flow Survey is conducted in partnership with the Bureau of Transportation Statistics, Office of the Assistant Secretary for Research and Technology, U.S. Department of Transportation.

The Commodity Flow Survey data are used by policy makers and transportation planners in various federal, state, and local agencies to assess the demand for transportation facilities and services, energy use, safety risks, and environmental concerns. Additionally, business owners, private researchers, and analysts use the Commodity Flow Survey data for analyzing trends in the movement of goods, mapping spatial patterns of commodity and vehicle flows, forecasting demands for the movement of goods, and determining the needs for associated infrastructure and equipment.

The survey provides data on the movement of commodities in the United States from their origin to destination. The survey produces summary statistics on value, tons, ton-miles and average miles by commodity, industry, and mode of transportation. The Census Bureau will publish these shipment characteristics for the nation, census regions and divisions, states, and CFS defined geographical areas.

Primary strategies for reducing respondent burden in the Commodity Flow Survey include: Employing a stratified random sample of business establishments, requesting data on a limited sample of shipment records from each establishment with the option to provide all shipments in the week, accepting estimates of shipping activity, applying machine learning to code products based on their descriptions, providing electronic reporting and including the option for consolidated reporting of multiple locations through a single login for larger companies.

II. Method of Collection

The Commodity Flow Survey will be conducted on a sample of business establishments classified in mining, manufacturing, wholesale, and select retail and services industries, as defined by the North American Industry Classification System (NAICS). The survey will also cover auxiliary establishments (i.e., warehouses and managing offices) of multi-establishment companies. Each selected establishment will be surveyed four times, once during each calendar quarter of 2022. Quarters one and four will include a supplement with questions on hazardous materials packaging for companies that ship hazardous materials. Each questionnaire will ask the establishment to report data for up to 100 shipments for a predetermined reporting week. These data will include the value, net weight, commodity, and origin and destination of each selected shipment. Survey responses will be collected electronically, and respondents will have the option to provide all shipments for the reporting week instead of sampling shipments.

III. Data

OMB Control Number: 0607–0932. Form Number(s): CFS 1000 (2022). Type of Review: Regular submission, Request for a Reinstatement, with Change, of a Previously Approved Collection. Affected Public: Business and other for-profit, small businesses or organizations. Estimated Number of Respondents: 160,000. Estimated Time per Response: 2.5 hours. Estimated Total Annual Burden Hours: 1,600,000. Estimated Total Annual Cost to Public: $0. (This is not the cost of respondents’ time, but the indirect costs respondents may incur for such things as purchases of specialized software or hardware needed to report, or expenditures for accounting or records maintenance services required specifically by the collection.) Respondent’s Obligation: Mandatory. Legal Authority: Title 13 U.S.C., Sections 8(b), 131 and 193; Title 49 U.S.C., Section 6302.

IV. Request for Comments

We are soliciting public comments to permit the Department/Bureau to: (a) Evaluate whether the proposed information collection is necessary for the proper functions of the Department, including whether the information will have practical utility; (b) Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used; (c) Evaluate ways to enhance the quality, utility, and clarity of the information to be collected; and (d) Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Comments that you submit in response to this notice are a matter of public record. We will include, or summarize, each comment in our request to OMB to approve this ICR. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you may ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Sheleen Dumas, Department PRA Clearance Officer, Office of the Chief Information Officer, Commerce Department.

International Trade Administration

Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules From the People’s Republic of China: Partial Rescission of Countervailing Duty Administrative Review; 2019

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Commerce) is partially rescinding the administrative review of the countervailing duty order on crystalline silicon photovoltaic cells (solar cells) from the People’s Republic of China (China) for the period of review (POR) January 1, 2019, through December 31, 2019.

SUPPLEMENTARY INFORMATION:

Background

On December 2, 2020, Commerce published a notice of opportunity to request an administrative review of the countervailing duty order on solar cells from China.1 Pursuant to requests from

1 See Antidumping or Countervailing Duty Order, Finding, or Suspended Investigation; Opportunity
interested parties, on February 4, 2021, Commerce published the notice of initiation of an administrative review with respect to 83 companies, in accordance with section 751(a) of the Tariff Act of 1930, as amended (the Act). Subsequent to the initiation of the administrative review, the petitioner timely withdrew its request for an administrative review of 19 companies on May 5, 2021. Eight of the 19 companies requested their own review of their entries and did not withdraw their requests for review. Thus, Commerce will only be rescinding this review with respect to the 11 companies for which a review request was received and subsequently withdrawn by the party(ies) requesting review.

BYD (Shangluo) Industrial Co., Ltd. (BYD) also withdrew its self-requested review on May 5, 2021. However, the petitioner also requested a review of BYD and has not withdrawn the request; therefore, Commerce will not rescind the review with respect to BYD.

Partial Recession of Administrative Review

Pursuant to 19 CFR 351.213(d)(1), Commerce will rescind an administrative review, in whole or in part, if the party that requested a review withdraws its request within 90 days of the date of publication of the notice of initiation. All requests for an administrative review were withdrawn by the established deadline of May 5, 2021, for the companies listed in the appendix. As a result, Commerce is rescinding this review with respect to these companies, in accordance with 19 CFR 351.213(d)(1). The administrative review will continue with respect to the remaining 72 companies listed in our Initial Notice.*

Assessment

Commerce will instruct U.S. Customs and Border Protection (CBP) to assess countervailing duties on all appropriate entries. For the companies for which this review is rescinded, countervailing duties shall be assessed at rates equal to the cash deposit of estimated countervailing duties required at the time of entry, or withdrawal from warehouse for consumption, in accordance with 19 CFR 351.212(c)(l)(i). Commerce intends to issue assessment instructions to CBP no earlier than 35 days after the date of publication of this rescission notice in the Federal Register.

Notification Regarding Administrative Protective Orders

This notice also serves as a reminder to parties subject to administrative protective order (APO) of their responsibility concerning the return or destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305, which continues to govern business proprietary information in this segment of the proceeding. Timely written notification of the return or destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

Notification to Interested Parties

This notice is issued and published in accordance with sections 751(a)(1) and 777(i)(l) of the Act, and 19 CFR 351.213(d)(4).

*See Initiation Notice, 86 FR at 8172–73.

Dated: July 19, 2021.

James Maeder,
Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

Certain Steel Nails From the People’s Republic of China: Notice of Court Decision Not in Harmony With Final Scope Ruling and Notice of Amended Final Scope Ruling Pursuant to Court Decision

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: On July 12, 2021, the U.S. Court of International Trade (CIT) issued its final judgment in Midwest Fastener Corp. v. United States, Court No. 17–00231, sustaining the Department of Commerce’s (Commerce’s) remand redetermination pertaining to a scope ruling in which Commerce found Midwest Fastener Corp. (Midwest)’s strike pin anchors to be outside the scope of the antidumping duty (AD) order on certain steel nails from the People’s Republic of China. Commerce is notifying the public that the CIT’s final judgment is not in harmony with Commerce’s scope ruling, and that Commerce is amending the scope ruling to find that Midwest’s strike pin anchors are not covered by the order.

SUPPLEMENTARY INFORMATION:
Background

On August 2, 2017, Commerce found Midwest’s strike pin anchors, which consist of four components—a steel pin, a threaded body, a nut, and a flat washer—to be within the scope of the AD order on certain steel nails from the People’s Republic of China.1 Midwest appealed Commerce’s Final Scope Ruling. On October 19, 2018, the CIT remanded Commerce’s scope ruling to Commerce for further consideration.2 On April 25, 2019, Commerce issued its First Remand Redetermination, determining that the “pin” portion “of the product is subject to the (Order), while the additional pieces, i.e., the outer-body anchor, hex nut, and washer anchor, would not be subject.” 3

On March 4, 2020, the CIT again remanded Commerce’s scope determination.4 Pursuant to the Second Remand Order, on June 17, 2020, Commerce issued its Second Remand Redetermination, finding that Midwest’s strike pin anchors, in their entirety, are covered by the scope of the Order.5

On August 28, 2020, the U.S. Court of Appeals for the Federal Circuit (CAFC) issued its final decision in OMG.6 In light of the CAFC’s decision, on January 21, 2021, the CIT remanded the Final Scope Ruling to Commerce.7

In its final remand redetermination, issued in March 2021, Commerce found Midwest’s strike pin anchors to be outside the scope of the Order.8 The CIT sustained Commerce’s final redetermination.9

---

Timken Notice

In its decision in Timken,10 as clarified by Diamond Sawblades,11 the CAFC held that, pursuant to sections 516A(c) and (e) of the Tariff Act of 1930, as amended (the Act), Commerce must publish a notice of court decision that is not “in harmony” with a Commerce determination and must suspend liquidation of entries pending a “conclusive” court decision. The CIT’s July 12, 2021, judgment constitutes a final decision of the CIT that is not in harmony with Commerce’s Final Scope Ruling. Thus, this notice is published in fulfillment of the publication requirements of Timken.

Amended Final Scope Ruling

In accordance with the CIT’s July 12, 2021, final judgment, Commerce is amending its Final Scope Ruling and finds that the scope of the order does not cover the products addressed in the Final Scope Ruling.

Liquidation of Suspended Entries

Commerce will instruct U.S. Customs and Border Protection (CBP) that, pending any appeals, Midwest’s strike pin anchors will not be subject to a cash deposit requirement.

In the event that the CIT’s final judgment is not appealed or is upheld on appeal, Commerce will instruct CBP to liquidate entries of Midwest’s strike pin anchors without regard to antidumping duties and to lift suspension of liquidation of such entries.

At this time, Commerce remains enjoined by CIT from liquidating entries included in the scope of the Order by the Final Scope Ruling. These entries will remain enjoined pursuant to the terms of the injunction during the pendency of any appeals process.

Notification to Interested Parties

This notice is issued and published in accordance with sections 516A(c) and (e) of the Act.

Dated: July 19, 2021.

Christian Marsh, Acting Assistant Secretary for Enforcement and Compliance.

Large Power Transformers From the Republic of Korea: Notice of Court Decision Not in Harmony With Final Results, Notice of Amended Final Results of Review; 2015–16

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: On July 9, 2021, the Court of International Trade (CIT) sustained the final results of redetermination pursuant to remand pertaining to the administrative review of the antidumping duty order on large power transformers (LPTs) from the Republic of Korea (Korea) covering the period August 1, 2015, through July 31, 2016. The Department of Commerce (Commerce) is notifying the public that the final judgment is not in harmony with the final results of the administrative review, and that Commerce is amending the final results of review with respect to the weighted-average dumping margin assigned to Hyundai Heavy Industries Co., Ltd., Hysong Corporation, and the non-examined company ILJIN Electric Co., Ltd.

SUPPLEMENTARY INFORMATION:

Background

On March 16, 2018, Commerce issued the final results of the administrative review for the period August 1, 2015, through July 31, 2016. In the Final Results, Commerce determined a weighted-average dumping margin for the two mandatory respondents, Hyundai Heavy Industries Co., Ltd. (Hyundai) and Hysong Corporation (Hysong), based on total facts available with an adverse inference, of 60.81 percent. Further, Commerce determined the weighted-average dumping margin for the three companies that were under review but not selected for individual examination, ILJIN, ILJIN Electric Co., Ltd. (ILJIN Electric), and LSIS Co., Ltd.
Corporation, Iljin Electric Co., Ltd. v. Hyundai Heavy Industries, Co. Ltd. and Hyosung
Redetermination Pursuant to Court Remand

Consol. Court No. 18–00066, Slip Op. 20–165
remanded Commerce’s Final First Results of Redetermination with respect to the application of total adverse facts available for both Hyundai and Hyosung. Commerce reconsidered its reliance on total facts available with adverse inferences for both Hyundai and Hyosung. Commerce determined that the application of partial facts available with no adverse inferences was warranted with respect to both Hyundai and Hyosung. Commerce calculated a weighted-average dumping margin of zero percent for both Hyundai and Hyosung. Commerce also applied an average of these two rates, i.e., zero percent, to ILJIN Electric, which was not selected for individual examination during the period of review and which was party to this litigation.

On July 9, 2021, the CIT sustained Commerce’s Final Second Results of Redetermination.9

Timken Notice

In its decision in Timken,10 as clarified by Diamond Sawblades,11 the United States Court of Appeals for the Federal Circuit held that, pursuant to sections 516A(c) and (e) of the Tariff Act of 1930, as amended (the Act), Commerce must publish a notice of a court decision that is not “in harmony” with a Commerce determination and must suspend liquidation of entries pending a “conclusive” court decision. The CIT’s July 9, 2021, judgment sustaining Commerce’s Final Second Results of Redetermination constitutes a final decision of the CIT that is not in harmony with the Final Results. This notice is published in fulfillment of the publication requirements of Timken. Accordingly, Commerce will continue the suspension of liquidation of the subject merchandise at issue pending expiration of the period to appeal or, if appealed, pending a final and conclusive court decision.

Amended Final Results

Because there is now a final court decision, Commerce is amending the Final Results with respect to the weighted-average dumping margin calculated for Hyundai, Hyosung and ILJIN Electric. Based on the Final Results of Second Redetermination, as affirmed by the CIT, the revised weighted-average dumping margin for Hyundai, Hyosung, and ILJIN Electric, from August 1, 2013, through July 31, 2016, are as follows:

Producer or exporter | Weighted-average dumping margin (percent)
---|---
Hyundai Heavy Industries Co., Ltd | 0.00
Hyosung Corporation | 0.00
ILJIN Electric Co., Ltd | 0.00

In the event that the CIT’s final judgement is not appealed or, if appealed, is upheld by a final and conclusive court decision, Commerce will instruct U.S. Customs and Border Protection to assess antidumping duties on unliquidated entries of subject merchandise based on the weighted-average dumping margins listed above for the Amended Final Results.

Cash Deposit Requirements

Since the Final Results, Commerce has established new cash deposit rates for Hyundai, Hyosung, and ILJIN Electric.12 Therefore, this Final Results of Second Redetermination, as affirmed by the CIT, and as published in this notice, does not prospectively change the existing cash deposit rates for Hyundai, Hyosung, and ILJIN Electric.

Polyethylene Terephthalate Resin From the People’s Republic of China and India: Final Results of the Expedited First Sunset Reviews of the Countervailing Duty Orders

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: As a result of these expedited sunset reviews, the Department of Commerce (Commerce) finds that revocation of the countervailing duty (CVD) orders on polyethylene terephthalate (PET) resin from the People’s Republic of China (China) and India would be likely to lead to continuation or recurrence of countervailable subsidies at the levels as indicated in the “Final Results of Sunset Review” section of this notice.

SUPPLEMENTAL INFORMATION:

Background

On May 6, 2016, Commerce published the CVD orders on PET resin from China and India in the Federal Register.1 On March 31, 2021, Commerce published the notice of initiation of the first sunset reviews of the Orders, pursuant to section 751(c) of the Tariff Act of 1930, as amended (the Act).2 Commerce received a notice of intent to participate from DAK Americas, LLC, Indorama Ventures USA Inc., and Nan Ya Plastics Corporation, America (collectively, domestic interested parties) within the deadline specified in 19 CFR 351.218(d)(1)(i).3 Each claimed interested party status under section 771(9)(C) of the Act as domestic producers engaged in the production of PET resin in the United States. On April 30, 2021, Commerce received a substantive response from the domestic interested parties within the 30-day deadline specified in 19 CFR 351.218(d)(3)(i).4 On May 3, 2021, two respondent interested parties, CG Roxane, LLC (CG Roxane) and Niagara Bottling, LLC (Niagara), filed substantive responses pursuant to 19 CFR 351.218(d)(3), to the record of the China sunset review.5 However, for the substantive responses of respondent interested parties to be considered adequate under this regulation, the respondents must account for, on average, more than 50 percent (volume or value) of total exports during the five-year period preceding the year of publication of the initiation notice, pursuant to 19 CFR 351.218(e)(1)(ii)(A). CG Roxane and Niagara failed to demonstrate this. We did not receive a substantive response from any other interested party in these proceedings.

On May 21, 2021, Commerce notified the U.S. International Trade Commission (ITC) that it did not receive an adequate substantive response from respondent interested parties.6 As a result, pursuant to section 751(c)(3)(B) of the Act and 19 CFR 351.216(e)(1)(iii)(C)(2), Commerce conducted expedited (120-day) sunset reviews of these Orders.

Scope of the Orders

The merchandise covered by these orders is polyethylene terephthalate (PET) resin having an intrinsic viscosity of at least 0.70, but not more than 0.88 deciliters per gram. The scope includes blends of virgin PET resin and recycled PET resin containing 50 percent or more virgin PET resin content by weight, provided such blends meet the intrinsic viscosity requirements above. The scope includes all PET resin meeting the above specifications regardless of additives introduced in the manufacturing process. The merchandise subject to these orders is properly classified under subheading 3907.60.00.30 of the Harmonized Tariff Schedule of the United States (HTSUS). Although the HTSUS subheading is provided for convenience and customs purposes, the written description of the merchandise covered by these orders is dispositive.

Analysis of Comments Received

All issues raised in these sunset reviews are addressed in the Issues and Decision Memorandum, including the likelihood of continuation or recurrence of countervailable subsidies and the net countervailable subsidy likely to prevail if the Orders were revoked.7 The Issues and Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance’s Antidumping and Countervailing Duty Centralized Electronic Services System (ACCESS). ACCESS is available to registered users at http://access.trade.gov. In addition, a complete version of the Issues and Decision Memorandum can be accessed directly at https://enforcement.trade.gov/frn/index.html. A list of the issues discussed in the decision memorandum is attached at the appendix to this notice.

Final Results of Sunset Reviews

Pursuant to sections 751(c)(1) and 752(b) of the Act, Commerce determines that revocation of the Orders would be likely to lead to continuation or recurrence of countervailable subsidies at the following rates:

**Administrative Protective Order**

This notice serves as the only reminder to parties subject to the administrative protective order (APO) of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a). Timely written notification of the destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

**Notification to Interested Parties**

We are issuing and publishing this notice in accordance with sections 751(c), 752(b), and 777(i)(1) of the Act.

Dated: July 16, 2021.

Christian Marsh,
Acting Assistant Secretary for Enforcement and Compliance.

**DEPARTMENT OF COMMERCE**

International Trade Administration

[A–588–879]

**Methionine From Japan: Final Affirmative Determination of Sales at Less Than Fair Value and Final Negative Determination of Critical Circumstances**

**AGENCY:** Enforcement and Compliance, International Trade Administration, Department of Commerce.

**SUMMARY:** The Department of Commerce (Commerce) determines that imports of methionine from Japan are being, or are likely to be, sold in the United States at less than fair value (LTFV) for the period of investigation July 1, 2019, through June 30, 2020.

**DATES:** Applicable July 23, 2021.

**SUPPLEMENTARY INFORMATION:**

**Background**

On March 4, 2021, Commerce published in the Federal Register the preliminary affirmative determination in the LTFV investigation of methionine from Japan, in which we also postponed the final determination until July 19, 2021.\(^1\) We invited interested parties to comment on the Preliminary Determination. A summary of the events that occurred since Commerce published the Preliminary Determination may be found in the Issues and Decision Memorandum.\(^2\)

**Scope of the Investigation**

The product covered by this investigation is methionine from Japan. For a complete description of the scope of this investigation, see Appendix I.

**Analysis of Comments Received**

All the issues raised in the case and rebuttal briefs that were submitted by parties in this investigation are addressed in the Issues and Decision Memorandum. A list of the issues addressed in the Issues and Decision Memorandum is attached to this notice as Appendix II. The Issues and Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance’s Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at https://access.trade.gov. In addition, a complete version of the Issues and Decision Memorandum can be accessed directly at http://enforcement.trade.gov/frn/index.html.

**Verification**

Commerce was unable to conduct on-site verification of the information relied upon in making its final determination in this investigation. However, we took additional steps in lieu of an on-site verification to verify the information relied upon in making this final determination, in accordance with section 762(i) of the Tariff Act of 1930, as amended (the Act).\(^3\)

**Changes Since the Preliminary Determination**

Based on our analysis of the comments received, we have made certain changes to the margin calculations for Sumitomo Chemical Company, Ltd. (Sumitomo Chemical). For a discussion of these changes, see the Issues and Decision Memorandum.

**All-Others Rate**

Section 735(c)(5)(A) of the Act provides that the estimated weighted-average dumping margin for all other producers and exporters not individually investigated shall be equal to the weighted average of the estimated weighted-average dumping margins established for exporters and producers individually investigated excluding rates that are zero, de minimis, or determined entirely under section 776 of the Act.

Commerce calculated an individual estimated weighted-average dumping margin for Sumitomo Chemical. Therefore, the only rate which is not zero, de minimis, or determined entirely under section 776 of the Act is the rate calculated for Sumitomo Chemical. Consequently, the rate calculated for Sumitomo Chemical is also assigned as the rate for all other producers and exporters.

---

\(^1\) See Methionine from Japan: Preliminary Affirmative Determination of Sales at Less Than Fair Value, Preliminary Affirmative Determination of Critical Circumstances and Postponement of Final Determination and Extension of Provisional Measures, 86 FR 12625 (March 4, 2021) (Preliminary Determination), and accompanying Preliminary Decision Memorandum.

\(^2\) See Memorandum, “Issues and Decision Memorandum for the Final Affirmative Determination in the Less-Than-Fair-Value Investigation of Methionine from Japan,” dated concurrently with, and hereby adopted by, this notice (Issues and Decision Memorandum).

Final Negative Determination of Critical Circumstances

Commerce preliminarily determined that critical circumstances exist for Sumitomo Chemicals and with respect to all other producers/exporters. Parties submitted comments regarding our preliminary critical circumstances determination and we have modified our critical circumstances finding for Sumitomo Chemicals and all other producers/exporters. For a full description of the methodology and results of Commerce’s critical circumstances analysis, see the Issues and Decision Memorandum.

Final Determination

The final estimated weighted-average dumping margins are as follows:

<table>
<thead>
<tr>
<th>Exporter/producer</th>
<th>Estimated weighted-average dumping margin (percent)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sumitomo Chemicals, Ltd</td>
<td>76.50</td>
</tr>
<tr>
<td>All Others</td>
<td>76.50</td>
</tr>
</tbody>
</table>

Disclosure

We intend to disclose the calculations performed in this final determination within five days of the date of publication of this notice to parties in this proceeding in accordance with 19 CFR 351.224(b).

Continuation of Suspension of Liquidation

In accordance with section 735(c)(1)(B) of the Act, Commerce will instruct U.S. Customs and Border Protection (CBP) to continue to suspend the liquidation of all appropriate entries of subject merchandise, as described in Appendix I of this notice, entered, or withdrawn from warehouse, for consumption on or after March 4, 2021, the date of publication in the Federal Register of the affirmative Preliminary Determination.

Pursuant to section 735(c)(1)(B)(ii) of the Act and 19 CFR 351.210(d), where appropriate, we will instruct CBP to require a cash deposit for such entries of merchandise equal to the estimated weighted-average dumping margin or estimated all-others rate, as follows: (1) The cash deposit rate for the respondents listed above will be equal to the company-specific estimated weighted-average dumping margins determined in this final determination; (2) if the exporter is not a respondent identified above, but the producer is, then the cash deposit rate will be equal to the company-specific estimated weighted-average dumping margin established for that producer of the subject merchandise; and (3) the cash deposit rate for all other producers and exporters will be equal to the all-others estimated weighted-average dumping margin. These suspension of liquidation instructions will remain in effect until further notice.

Further, because our final critical circumstances determination is negative, in accordance with section 735(c)(3) of the Act, we will instruct CBP to terminate the retroactive suspension of liquidation ordered at the Preliminary Determination for Sumitomo Chemicals and all other producers/exporters and to refund any cash deposits required with respect to entries of subject merchandise covered by the retroactive suspension of liquidation.

International Trade Commission Notification

In accordance with section 735(d) of the Act, we will notify the International Trade Commission (ITC) of the final affirmative determination of sales at LTFV. Because Commerce’s final determination is affirmative, in accordance with section 735(b)(2) of the Act, the ITC will make its final determination as to whether the domestic industry in the United States is materially injured, or threatened with material injury, by reason of imports or sales (or the likelihood of sales) for importation of methionine no later than 45 days after this final determination. If the ITC determines that such injury does not exist, this proceeding will be terminated, and all cash deposits posted will be refunded and suspension of liquidation will be lifted. If the ITC determines that such injury does exist, Commerce will issue an antidumping duty order directing CBP to assess, upon further instruction by Commerce, antidumping duties on all imports of the subject merchandise entered, or withdrawn from warehouse, for consumption on or after the effective date of the suspension of liquidation, as discussed above in the “Continuation of Suspension of Liquidation” section.

Notification Regarding Administrative Protective Orders

This notice will serve as a final reminder to the parties subject to administrative protective order (APO) of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of return or destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and the terms of an APO is a sanctionable violation.

Notification to Interested Parties

This determination and this notice are issued and published in accordance with sections 735(d) and 777(i)(1) of the Act, and 19 CFR 351.210(c).

Dated: July 19, 2021.

Christian Marsh,
Acting Assistant Secretary for Enforcement and Compliance.

Appendix I

Scope of the Investigation

The merchandise covered by this investigation is methionine and dl-Hydroxy analogue of dl-methionine, also known as 2-Hydroxy 4-(Methylthio) Butanoic acid (HMTBa), regardless of purity, particle size, grade, orphysical form. Methionine has the chemical formula C_{8}H_{17}NO_{2}S, liquid HMTBa has the chemical formula C_{8}H_{16}O_{2}S, and dry HMTBa has the chemical formula (C_{9}H_{17}O_{3})_{2}Ca.

Subject merchandise also includes methionine processed in a third country including, but not limited to, refining, converting from liquid to dry or dry to liquid form, or any other processing that would not otherwise remove the merchandise from the scope of this investigation if performed in the country of manufacture of the in-scope methionine or dl-Hydroxy analogue of dl-methionine.

The scope also includes methionine that is commingled (i.e., mixed or combined) with methionine from sources not subject to this investigation. Only the subject component of such commingled products is covered by the scope of this investigation.

Excluded from this investigation is United States Pharmacopoeia (USP) grade methionine. In order to qualify for this exclusion, USP grade methionine must meet or exceed all of the chemical, purity, performance, and labeling requirements of the United States Pharmacopoeia and the National Formulary for USP grade methionine.

Methionine is currently classified under subheadings 2930.40.00.00 and 2930.90.46.00 of the Harmonized Tariff Schedule of the United States (HTSUS). Methionine has the Chemical Abstracts Service (CAS) registry numbers 583–91–5, 4857–44–7, 59–51–8 and 922–50–9. While the HTSUS subheadings and CAS registry number are provided for convenience and customs purposes, the written description of the scope of this investigation is dispositive.
Supplementary Information:

Background

On March 4, 2021, Commerce published in the Federal Register the preliminary affirmative determination in the LTFV investigation of methionine from Spain, in which we also postponed the final determination until July 19, 2021. Commerce invited interested parties to comment on the Preliminary Determination. A summary of the events that occurred since Commerce published the Preliminary Determination, may be found in the Issues and Decision Memorandum.2

Scope of the Investigation

The product covered by this investigation is methionine from Spain. For a complete description of the scope of this investigation, see Appendix I.

Scope Comments

During the course of this investigation, Commerce received no scope comments from interested parties. Therefore, Commerce is not modifying the scope language as it appeared in the Preliminary Determination. See Appendix I for the final scope of the investigation.

Analysis of Comments Received

All issues raised in the case and rebuttal briefs that were submitted by parties in this investigation are addressed in the Issues and Decision Memorandum. Commerce had an opportunity to respond to the comments received and our findings related to our request for information in lieu of verification, we made certain changes to the margin calculations with respect to Adisseo España, the sole mandatory respondent in this investigation. In light of these changes to the margin calculations and the resulting revised estimated weighted average dumping margin for Adisseo España, we have also revised the all-others rate. For a discussion of these changes, see the Issues and Decision Memorandum.

Final Affirmative Determination of Critical Circumstances

In accordance with section 733(e) of the Act and 19 CFR 351.206, Commerce preliminarily determined that critical circumstances did not exist for Adisseo España or for all others. Commerce did not receive any comments in response to its preliminary determination with respect to critical circumstances. However, for this final determination, Commerce determines that critical circumstances exist, within the meaning of section 735(a)(3) of the Act and 19 CFR 351.206, for imports of methionine from Spain exported and/or produced by Adisseo España and imports of methionine from Spain produced and/or exported by all other companies. For a full description of methodology and results of Commerce’s final affirmative critical circumstances analyses, see Issues and Decision Memorandum.

Product Characteristics

Commerce preliminary identified three criteria for the physical characteristics of the subject merchandise: (1) Type; (2) form; and (3) concentration level of methionine content. For this final determination, we made no changes to physical characteristics in our analysis. However, because Commerce made a change with respect to packaging characteristics in

Changes Since Preliminary Determination

Based on our analysis of the comments received and our findings related to our request for information in lieu of verification, we made certain changes to the margin calculations with respect to Adisseo España, the sole mandatory respondent in this investigation. In light of these changes to the margin calculations and the resulting revised estimated weighted average dumping margin for Adisseo España, we have also revised the all-others rate. For a discussion of these changes, see the Issues and Decision Memorandum.

Statistics

The estimated weighted average dumping margins, calculated in accordance with section 752(i) of the Tariff Act of 1930, as amended (the Act), are as follows:

<table>
<thead>
<tr>
<th>Party</th>
<th>Dumping Margin</th>
</tr>
</thead>
<tbody>
<tr>
<td>Adisseo España</td>
<td>15.75%</td>
</tr>
<tr>
<td>All Others</td>
<td>14.18%</td>
</tr>
</tbody>
</table>

3 For a full description of the methodology and results of Commerce’s critical circumstances analysis, see Preliminary Determination Memorandum at 4.

4 See Commerce’s Letter, “Product Characteristics for Use in Sections B and C Questionnaire Responses of Methionine from Spain,” dated September 25, 2020; see also Preliminary Determination PDM at 12.
the final determination of Methionine from Japan,6 if Commerce were to issue an antidumping duty order in this case, we expect to reexamine this issue during the first administrative review conducted in this proceeding.

All-Others Rate

Section 735(c)(5)(A) of the Act provides that the estimated weighted-average dumping margin for all other producers and exporters not individually investigated shall be equal to the weighted average of the estimated weighted-average dumping margins established for exporters and producers individually investigated excluding rates that are zero, de minimis, or determined entirely under section 776 of the Act. Pursuant to section 735(c)(5)(B) of the Act, if the estimated weighted-average dumping margins established for all exporters and producers individually examined are zero, de minimis, or determined based entirely on facts otherwise available, Commerce may use any reasonable method to establish the estimated weighted-average dumping margin for all other producers and exporters.

Commerce calculated an individual estimated weighted-average dumping margin for the sole mandatory respondent, Adisseo España. Therefore, for the purposes of determining the all-others rate, and pursuant to section 735(c)(5)(A) of the Act, we are using the dumping margin calculated for Adisseo España, which is not zero, de minimis, or determined entirely under section 776 of the Act. For a full description of the methodology underlying Commerce’s analysis, see the Issues and Decision Memorandum.

Final Determination

Pursuant to section 735 of the Act, the final estimated weighted-average dumping margins are as follows:

<table>
<thead>
<tr>
<th>Exporter and/ or producer</th>
<th>Estimated weighted-average dumping margin (percent)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Adisseo España S.A. .................</td>
<td>37.53</td>
</tr>
<tr>
<td>All Others .........................</td>
<td>37.53</td>
</tr>
</tbody>
</table>

Disclosure

We intend to disclose the calculations performed in this final determination within five days of the date of publication of this notice to parties in this proceeding in accordance with 19 CFR 351.224(b).

Continuation of Suspension of Liquidation

In accordance with section 735(c)(1)(B) of the Act, Commerce will instruct U.S. Customs and Border Protection (CBP) to continue to suspend liquidation of all appropriate entries of methionine from Spain, as described in Appendix I of this notice, which were entered, or withdrawn from warehouse, for consumption on or after March 4, 2021, the date of publication in the Federal Register of the affirmative Preliminary Determination.

In accordance with section 735(c)(4) of the Act, Commerce may use any reasonable method to establish the estimated weighted-average dumping margin for all other producers and exporters. Therefore, in accordance with section 735(c)(4) of the Act, suspension of liquidation shall continue to apply to unliquidated entries of subject merchandise produced and/or exported by Adisseo España and by all other producers and exporters. Therefore, in accordance with section 735(c)(4) of the Act, suspension of liquidation shall continue to apply to unliquidated entries of subject merchandise produced and/or exported by Adisseo España and by all other producers and exporters that were entered, or withdrawn from warehouse, for consumption on or after the effective date of the suspension of liquidation, as discussed above in the “Continuation of Suspension of Liquidation” section.

Notification Regarding Administrative Protective Orders

This notice will serve as a final reminder to the parties subject to administrative protective order (APO) of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of return or destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and the terms of an APO is a sanctionable violation.

Notification to Interested Parties

This determination and this notice are issued and published pursuant to sections 735(d) and 777(i)(1) of the Act, and 19 CFR 351.210(d). Commerce will instruct CBP to require a cash deposit equal to the estimated weighted-average dumping margin determined in this final determination; (2) if the exporter is not a respondent identified above, but the producer is, then the cash deposit rate will be equal to the company-specific estimated weighted-average dumping margin established for that producer of the subject merchandise; and (3) the cash deposit rate for all other producers and exporters will be equal to the all-others estimated weighted-average dumping margin.

These suspension of liquidation instructions will remain in effect until further notice.

International Trade Commission Notification

In accordance with section 735(d) of the Act, we will notify the International Trade Commission (ITC) of this final affirmative determination of sales at LTFV. Because Commerce’s final determination is affirmative, in accordance with section 735(b)(2) of the Act, the ITC will make its final determination as to whether the domestic industry in the United States is materially injured, or threatened with material injury, by reason of imports or sales (or the likelihood of sales) for importation of methionine from Spain no later than 45 days after this final determination. If the ITC determines that such injury does not exist, this proceeding will be terminated, all cash deposits posted will be refunded, and suspension of liquidation will be lifted. If the ITC determines that such injury does exist, Commerce will issue an antidumping duty order directing CBP to assess, upon further instruction by Commerce, antidumping duties on all imports of the subject merchandise entered, or withdrawn from warehouse, for consumption on or after the effective date of the suspension of liquidation, as discussed above in the “Continuation of Suspension of Liquidation” section.

---

Appendix I

Scope of the Investigation

The merchandise covered by this investigation is methionine and dl-Hydroxy analogue of dl-methionine, also known as 2-
Hydroxy 4-(Methylthio) Butanoic acid (HMTBa), regardless of purity, particle size, grade, or physical form. Methionine has the chemical formula C₃H₇(NO₃)S, liquid HMTBa has the chemical formula C₃H₇(O₂)S, and dry HMTBa has the chemical formula (C₃H₇O₃S)₂Ca.

Subject merchandise also includes methionine processed in a third country including, but not limited to, refining, converting from liquid to dry or dry to liquid form, or any other processing that would not otherwise remove the merchandise from the scope of this investigation if performed in the country of manufacture of the in-scope methionine or dl-Hydroxy analogue of dl-methionine.

The scope also includes methionine that is commingled (i.e., mixed or combined) with methionine from sources not subject to this investigation. Only the subject component of such commingled products is covered by the scope of this investigation.

Excluded from this investigation is United States Pharmacopeia (USP) grade methionine. In order to qualify for this exclusion, USP grade methionine must meet or exceed all of the chemical, purity, performance, and labeling requirements of the United States Pharmacopeia and the National Formulary for USP grade methionine.

Methionine is currently classified under subheadings 2930.40.00.00 and 2930.90.46.00 of the Harmonized Tariff Schedule of the United States (HTSUS). While the scope of this investigation is dispositive. The written description of customs purposes, the subheadings 2930.90.46.00 of the Harmonized Tariff Schedule of the United States (HTSUS).

ACTION: Notice; public meeting.

SUMMARY: The Mid-Atlantic Fishery Management Council’s Mackerel, Squid, and Butterfish (MSB) Committee and MSB Advisory Panel will hold a joint public meeting.

DATES: The meeting will be held on Friday, August 6, 2021, from 9 a.m. to 2 p.m. For agenda details, see SUPPLEMENTARY INFORMATION.

ADDRESSES: The meeting will be held via webinar. Webinar connection, agenda items, and any additional information will be available at www.mafmc.org/council-events.

FOR FURTHER INFORMATION CONTACT: Christopher M. Moore, Ph.D., Executive Director, Mid-Atlantic Fishery Management Council, telephone: (302) 526–5255.

SUPPLEMENTARY INFORMATION: The purpose of the meeting is for the MSB Committee and MSB Advisory Panel to provide recommendations regarding Atlantic mackerel, potentially including: 2021/22 emergency action, future specifications, and/or rebuilding plan modifications and options.

Special Accommodations

The meeting is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Kathy Collins at the Council Office, (302) 526–5253, at least 5 days prior to the meeting date.

Authority: 16 U.S.C. 1801 et seq.

Dated: July 20, 2021.

Tracey L. Thompson, Acting Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

—Other Business
—Next Meeting

Note [1]: Other than starting time and dates of the meetings, the established times for addressing items on the agenda may be adjusted as necessary to accommodate the timely completion of discussion relevant to the agenda items.

To further accommodate discussion and completion of all items on the agenda, the meeting may be extended from, or completed prior to the date established in this notice. Changes in the agenda will be posted to the CFMC website, Facebook, Twitter and Instagram as practicable.

Note [2]: Financial disclosure forms are available for inspection at this meeting, as per 50 CFR part 601.

The order of business may be adjusted as necessary to accommodate the completion of agenda items. The meeting will begin on August 11, 2021, at 9 a.m. AST, and will end on August 11, 2021, at 5 p.m. AST. Other than the start time on the first day of the meeting, interested parties should be aware that discussions may start earlier or later than indicated in the agenda, at the discretion of the Chair.

Special Accommodations

Simultaneous interpretation will be provided.

For simultaneous interpretation English-Spanish-English follow your Zoom screen instructions. You will be asked which language you prefer when you join the meeting.

For any additional information on this public virtual meeting, please contact Diana Martino, Caribbean Fishery Management Council, 270 Muñoz Rivera Avenue, Suite 401, San Juan, Puerto Rico, 00918–1903, telephone: (787) 226–8849.

Authority: 16 U.S.C. 1801 et seq.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; External Needs Assessment for NOAA Education Products and Programs

AGENCY: National Oceanic & Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of information collection, request for comment.

SUMMARY: The Department of Commerce, in accordance with the Paperwork Reduction Act of 1995 (PRA), invites the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public’s reporting burden. The purpose of this notice is to allow 60 days of public comment preceding submission of the collection to OMB.

DATES: To ensure consideration, comments regarding this proposed information collection must be received on or before September 21, 2021.

ADDRESSES: Interested persons are invited to submit written comments to Adrienne Thomas, NOAA PRA Officer, at Adrienne.thomas@noaa.gov.

TO SUBMIT: Comments should be submitted online at: https://www.regulations.gov or mailed to Adrienne Thomas, NOAA PRA Officer, Office of the PRA, National Oceanic and Atmospheric Administration, 1305 East West Hwy., Bldg. 23, Silver Spring, MD 20910–3278.

For further information contact:

Adrienne Thomas, NOAA PRA Officer, Adrienne.thomas@noaa.gov.

For simultaneous interpretation requests for additional information or specific questions related to collection activities should be directed to Bruce Moravchik, National Ocean Service (NOS), 1305 East West Hwy., Bldg. SSMC4, Silver Spring, MD 20910–3278, (240) 533–0874, bruce.moravchik@noaa.gov.

I. Abstract

This is a request for revision and extension of a currently approved information collection. The National Ocean Service (NOS) on behalf of the NOAA’s Education Council is revising and extending a voluntary multi-question survey used to assess the needs of educators pertaining to the development of future NOAA multimedia products and programs. In developing multimedia materials that convey NOAA’s science, service, and stewardship, the Agency must ensure that these resources are of the highest quality and meet the needs of formal and informal educators across the United States. To achieve this goal, it is necessary to conduct surveys identifying the types of educational programs and products that are of the highest interest and greatest need by formal and informal educators. By surveying external educators to gather this information, budget expenditures will be used optimally to develop appropriate products and programs most desired by educators to support and enhance Ocean and Earth science,
in addition to other related STEM education subjects throughout our nation. NOAA will use the data to plan, design, and create multimedia products and programs.

The proposed revisions would expand the level of detail in the currently approved information collection. As a result of the Covid-19 pandemic, learning and teaching have changed. The proposed revisions would expound upon previously collected data, giving a better indication of educators’ needs regarding multimedia products and programs in their teaching as well as the educator’s professional development.

II. Method of Collection

The voluntary needs assessment mechanism will be distributed via email with a link to a Google form to external educators subscribed to NOAA education programs as well as their partners’ email distribution lists. The voluntary needs assessment mechanism will also be distributed in person (paper and electronically) at education conferences, workshops, and other venues hosting educators.

III. Data

OMB Control Number: 0648–0784.
Form Number(s): None.
Type of Review: Regular submission [revision and extension of a currently approved collection].
Affected Public: Individuals or households and business or other for-profit organizations.
Estimated Number of Respondents: 1,200 annually.
Estimated Time per Response: Five minutes per survey.
Estimated Total Annual Burden Hours: 100.
Estimated Total Annual Cost to Public: $0.
Respondent’s Obligation: Voluntary.
Legal Authority: Magnuson-Stevens Fishery Conservation and Management Act SEC. 315(c).

IV. Request for Comments

We are soliciting public comments to permit the Department/Bureau to: (a) Evaluate whether the proposed information collection is necessary for the proper functions of the Department, including whether the information will have practical utility; (b) Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used; (c) Evaluate ways to enhance the quality, utility, and clarity of the information to be collected; and (d) Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this information collection. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you may ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Sheleen Dumas,
Department PRA Clearance Officer, Office of the Chief Information Officer, Commerce Department.

DEPARTMENT OF COMMERCE
National Oceanic and Atmospheric Administration

[RTID 0648–XB245]
14th Scientific Advisory Subcommittee to the General Advisory Committee and 29th General Advisory Committee to the U.S. Section to the Inter-American Tropical Tuna Commission; Meeting Announcement

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of public meeting.

SUMMARY: NMFS announces a combined public meeting of the 14th Scientific Advisory Subcommittee (SAS) to the General Advisory Committee (GAC), and the 29th GAC to the U.S. Section to the Inter-American Tropical Tuna Commission (IATTC). This meeting will be held virtually on Friday, July 23, 2021, via webinar, and is the second combined virtual meetings of the SAS and GAC in 2021. The meeting topics are described under the SUPPLEMENTARY INFORMATION section of this notice.

DATES: The virtual meeting of the SAS and GAC will be held on Friday, July 23, 2021, from 9 a.m. to 1 p.m. PDT (or until business is concluded).

ADDRESSES: Please notify William Stahnke (see FOR FURTHER INFORMATION CONTACT) by Friday, July 16, if you plan to attend the webinar. Instructions on how to access the meeting will be emailed to meeting participants before the meeting occurs.

FOR FURTHER INFORMATION CONTACT: William Stahnke, West Coast Region, NMFS, at william.stahnke@noaa.gov, or at (562) 980–4088.

SUPPLEMENTARY INFORMATION: The timing of U.S. SAS and GAC meetings is dependent on when IATTC annual meeting(s) occur. This year, the 98th Annual Meeting of the IATTC will take place from August 23–27, 2021. As such, the combined U.S. SAS and GAC Meeting will be held before the 98th IATTC Annual Meeting. It should be noted that while the 97th (Extraordinary) IATTC Meeting was focused solely on tropical tuna (i.e., bigeye, yellowfin, skipjack tuna) measures, the 98th Annual Meeting of the IATTC will cover additional topics.

In accordance with the Tuna Conventions Act (16 U.S.C. 951 et seq.), the U.S. Department of Commerce, in consultation with the Department of State (the State Department), appoints a GAC to the U.S. Section to the IATTC and a SAS that advises the GAC. The U.S. Section consists of the four U.S. Commissioners to the IATTC and representatives of the State Department, NOAA, Department of Commerce, other U.S. Government agencies, and stakeholders. The GAC advises the U.S. Section with respect to U.S. participation in the work of the IATTC, focusing on the development of U.S. policies, positions, and negotiating tactics. The purpose of the SAS is to advise the GAC on scientific matters. NMFS West Coast Region staff provide administrative support for the SAS and GAC. The meetings of the SAS and GAC are open to the public, unless in executive session. The time and manner of public comment will be at the discretion of the Chairs for the SAS and GAC.

For more information and updates on these upcoming meetings, please visit the IATTC’s website: https://www.iattc.org/MeetingsENG.htm.

SAS and GAC Meeting Topics

This meeting will have a reduced agenda to prepare for the 98th IATTC Meeting that is expected to focus on tropical tuna, but will cover other topics as well.

The meeting agenda will include, but is not limited to, the following topics:

(1) Relevant scientific information from the IATTC scientific staff and the International Scientific Committee for Tuna and Tuna-Like Species in the North Pacific Ocean (ISC) for tuna, tuna-like species, and other species caught in association with those fisheries in the eastern Pacific Ocean;

(2) Additional topics, as determined by the IATTC, that are of mutual interest to the U.S. Section, SAS, and GAC.

The meeting topics were discussed in detail in the Notice of Combined Meeting of the IATTC, which is available online at https://www.iattc.org/MeetingsENG.htm and at www.fish.nmp.noaa.gov/SPD/IATTC.

The meeting agenda will include, but is not limited to, the following topics:

(1) Relevant scientific information from the IATTC scientific staff and the International Scientific Committee for Tuna and Tuna-Like Species in the North Pacific Ocean (ISC) for tuna, tuna-like species, and other species caught in association with those fisheries in the eastern Pacific Ocean;

(2) Additional topics, as determined by the IATTC, that are of mutual interest to the U.S. Section, SAS, and GAC.

The meeting topics were discussed in detail in the Notice of Combined Meeting of the IATTC, which is available online at https://www.iattc.org/MeetingsENG.htm and at www.fish.nmp.noaa.gov/SPD/IATTC.

Agency Information Collection Activities: Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Deep Seabed Mining Exploration Licenses

The Department of Commerce will submit the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, on or after the date of publication of this notice. We invite the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. Public comments were previously requested via the Federal Register on April 23, 2021, (86 FR 21706) during a 60-day comment period. This notice allows for an additional 30 days for public comments.

Agency: National Oceanic and Atmospheric Administration, Commerce.

Title: Deep Seabed Mining Exploration Licenses.

OMB Control Number: 0648–0145. Form Number[s]: None.

Type of Request: Regular submission (extension of a currently approved collection).

Number of Respondents: 1.

Average Hours per Response: Annual report: 40 hours; extension request: 20 hours (annualized).

Total Annual Burden Hours: The annual total time for license holders to prepare paperwork related to meeting the requirements of DSHMRA is 60 hours (40 hours per annual report and 20 hours on an annualized basis) for extension requests.

Needs and Uses: This request is for the extension of the currently approved information collection. No changes have been made to the collection requirements. NOAA’s regulations at 15 CFR 970 govern the issuing and monitoring of exploration and production licenses under the Deep Seabed Hard Mineral Resources Act. The NOAA Office for Coastal Management is responsible for approving and administering licenses. Any persons seeking a license must submit certain information that allows NOAA to ensure the applicant meets the standards of the Act. Licensees are required to conduct monitoring and make reports, and they may request revisions, transfers, or extensions of licenses. Information required for the issuance and extension of licenses is provided to fulfill statutory requirements to ensure that license applicants have identified areas of interest for deep seabed hard mineral exploration and production; developed plans for those activities; have the financial resources available to conduct proposed activity; and have considered the effects of the activity on the natural and human environment. This information is used to determine whether licenses should be granted or extended.

Exploration licenses and commercial recovery permits under the Deep Seabed Hard Mineral Resources Act are only for activities by U.S. citizens in international waters. No license or permit applications have been received since the early 1980s, and none are expected during this collection period. U.S. deep seabed exploration licenses and commercial recovery permits are not recognized by the International Seabed Authority and would not have security of tenure due to the lack of U.S. accession to the United Nations Convention on the Law of the Sea Treaty. Two exploration licenses issued in the early 1980s are held by Lockheed Martin Corporation. The licenses are subject to annual reporting requirements and extension requests every five years. No at-sea exploration is authorized under the licenses without further authorization from NOAA. Such activities are not expected during the reporting period for the same reason as above.

Affected Public: Large businesses.

Frequency: Report on activities pursuant to the exploration licenses due annually. Extension requests must be submitted every five years.

Respondent’s Obligation: Required to maintain licenses.

This information collection request may be viewed at www.reginfo.gov. Follow the instructions to view the Department of Commerce collections currently under review by OMB.

Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function and entering either the title of the collection or the OMB Control Number 0648–0145.

Sheleen Dumas,
Department PRA Clearance Officer, Office of the Chief Information Officer, Commerce Department.

[RTID 0648–XB253]

Magnuson-Stevens Act Provisions; General Provisions for Domestic Fisheries; Application for Exempted Fishing Permits

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; request for comments.

SUMMARY: The Assistant Regional Administrator for Sustainable Fisheries, Greater Atlantic Region, NMFS, has made a preliminary determination that an Exempted Fishing Permit application submitted by Nordic, Inc. in partnership with the Coonamessett Farm Foundation contains all of the required information and warrants further consideration. Regulations under the Magnuson-Stevens Fishery Conservation and Management Act require publication of this notification to provide interested parties the opportunity to comment on applications for proposed Exempted Fishing Permits.
ADDRESSES: You may submit written comments by the following method:
• Email: nmfs.gar.efp@noaa.gov.
Include in the subject line “Nordic Scallop Transplanting EFP.”

FOR FURTHER INFORMATION CONTACT: Shannah Jaburek, Fishery Management Specialist, shannah.jaburek@noaa.gov, (978) 281–9135.

SUPPLEMENTARY INFORMATION: Nordic, Inc. submitted a complete application for an Exempted Fishing Permit (EFP) to conduct commercial fishing activities that the regulations would otherwise restrict. This EFP would exempt the participating vessels from: Day-at-sea requirements at 50 CFR 648.53; crew size restrictions at § 648.51(c); scallop fishing restrictions in the Nantucket Lightship Closed Area—South at § 648.60(g); scallop trawl restrictions at § 648.51(a)(1) and (f); scallop dredge restrictions at § 648.51(b)(2) and (b)(3); and minimum size and possession restrictions for onboard sampling and scallop transplanting in § 648 subparts B and D through O.

Nordic, Inc., Eastern Fisheries, Quinn Fisheries, and Fultcher Trawling applied for an EFP on April 22, 2021, to work with the Goonamessett Farm Foundation (CFF) on a scallop transplanting study. This project would continue previous scallop transplanting work done by CFF and investigate the feasibility of using scallop transplanting to increase scallop growth by moving them from deep, scallop dense areas to shallower, less populated areas.

The proposed EFP would allow Nordic, Inc. and CFF to transplant 750,000 scallops in the Nantucket Lightship Access Area—South with trawls and a dredge. A subsample of the catch would be tagged (i.e., 10,000 scallops), along with a subsample of previously transplanted scallops caught in the proposed research area. Transplanting work would begin when an EFP is issued, and monitoring of the harvest and transplant areas would occur during scallop Research Set-Aside (RSA) funded surveys conducted by CFF, the Virginia Institute of Technology, and the University of Massachusetts at Dartmouth School of Marine Science and Technology.

CFF would provide scientific staff to oversee transplant operations, tag scallops, and collect data during field operations. Scallop vessels would harvest scallops with a two-panel box net towed between 2.5 and 3.5 knots (4.6 and 6.5 km per hour) for 10 minutes per tow. These vessels would steam to the transplant area with the trawl doors closed and the net remaining in the water. One vessel would harvest scallops by towing two, 4.57-meter wide New Bedford style dredges for 10 minutes per tow. No catch will be landed for sale.

Once catch is brought on board, it would be sorted by size, marked, and stored in cooled fish totes. A subsample of scallops would be tagged with disc tags. Tagging would occur between dusk and dawn to minimize mortality. Scallop vessels would release scallops overboard at the transplanting area.

If approved, the applicant may request minor modifications and extensions to the EFP throughout the year. EFP modifications and extensions may be granted without further notice if they are deemed essential to facilitate completion of the proposed research and have minimal impacts that do not change the scope or impact of the initially approved EFP request. Any fishing activity conducted outside the scope of the exempted fishing activity would be prohibited.

Authority: 16 U.S.C. 1801 et seq.

Dated: July 20, 2021.
Jennifer M. Wallace, Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

FOR FURTHER INFORMATION CONTACT: Marcia Muto, 206–526–4026, Marcia.Muto@noaa.gov, regarding Alaska regional stock assessments; Elizabeth Josephson, 508–495–2362, Elizabeth.Josephson@noaa.gov, regarding Atlantic, Gulf of Mexico, and Caribbean regional stock assessments; or Jim Carretta, 858–546–7171, Jim.Carretta@noaa.gov, regarding Pacific regional stock assessments.

SUPPLEMENTARY INFORMATION: Background

Section 117 of the MMPA (16 U.S.C. 1361 et seq.) requires NMFS and the U.S. Fish and Wildlife Service (FWS) to prepare stock assessments for each stock of marine mammals occurring in waters under the jurisdiction of the United States, including the U.S. Exclusive Economic Zone (EEZ). These reports must contain information regarding the distribution and abundance of the stock, population growth rates and trends, estimates of annual human-caused Mortality and Serious Injury (M/SI) from all sources, descriptions of the fisheries with which the stock interacts, and the status of the stock. Initial reports were completed in 1995.

The MMPA requires NMFS and FWS to review the SARs at least annually for strategic stocks and for which significant new information is available, and at least once every three years for non-strategic stocks. The term “strategic stock” means a marine mammal stock: (A) For which the level of direct human-caused mortality exceeds the potential biological removal level or PBR (defined by the MMPA as the maximum number of animals, not including natural mortalities, that may be removed from a marine mammal stock while allowing that stock to reach or maintain its optimum sustainable population (OSP)); (B) which, based on the best available scientific information, is declining and is likely to be listed as a threatened species under the Endangered Species Act (ESA) within the foreseeable future; or (C) which is listed as a threatened species or endangered species under the ESA. NMFS and the FWS are required to revise a SAR if the status of the stock
has changed or can be more accurately determined.

Prior to public review, the updated SARs under NMFS’ jurisdiction are peer-reviewed within NMFS Fisheries Science Centers and by members of three regional independent Scientific Review Groups (SRG), established under the MMPA to independently advise NMFS on information and uncertainties related to the status of marine mammals.

The period covered by the 2020 SARs is 2014–2018. NMFS reviewed all strategic stock SARs and others as appropriate and updated 80 SARs representing 84 stocks in the Alaska, Atlantic, and Pacific regions to incorporate new information. The 2020 revisions to the SARs consist primarily of updated or revised estimates of human-caused M/SI new stock names, new methodology and updated abundance estimates. Four stocks changed status from “non-strategic” to “strategic” (Eastern Bering Sea beluga whale, Gulf of Mexico spinner dolphin, Gulf of Mexico striped dolphin, and Gulf of Mexico Clymene dolphin).

The revised draft 2020 SARs were made available for public review and comment for 90 days (85 FR 78307, December 4, 2020). NMFS received letters containing comments on the draft 2020 SARs through March 8, 2021 and has revised the reports as necessary. This notice announces the availability of 80 final 2020 reports, which are available on NMFS’ website (see ADDRESSES). The Gulf of Maine humpback whale SAR was not finalized because of a technical error; the corrected report will be published in a subsequent SAR cycle. NMFS also announces the availability of the revised final 2019 NARW SAR that includes a typographic correction.

Comments and Responses

NMFS received letters containing comments on the draft 2020 SARs from the Marine Mammal Commission (Commission); Department of Fisheries and Oceans Canada (DFO); Makah Indian Tribe (Makah); Western Pacific Regional Fishery Management Council (WPRFMC); Natural Resources Defense Council (NRDC); two fishing industry associations (Hawaii Longline Association (HLA) and Maine Lobstermen’s Association (MLA)); and a coalition comment letter from four non-governmental organizations (Center for Biological Diversity, Whale and Dolphin Conservation, Conservation Council for Hawai‘i, and Conservation Law Foundation, referred to hereafter as “the Coalition”). Responses to substantive comments are below; responses to comments not related to the SARs are not included. Comments suggesting editorial or minor clarifying changes were incorporated in the reports, but they are not included in the summary of comments and responses. In some cases, NMFS’ responses state that comments would be considered or incorporated in future revisions of the SARs rather than being incorporated into the final 2020 SARs.

Comments on National Issues

Comment 1: The Coalition notes that the MMPA requires that NMFS revise stock assessments for strategic stocks annually and comments that the public is not able to timely contribute to the SARs. For those stocks, which are especially important to conserve, the public is not able to timely contribute to the SARs. The publication of the draft SARs is same month as the Scientific Review Groups are reviewing the draft 2021 marine mammal SARs and the coalition commented that undermines the public’s ability to participate in a meaningful manner.

Response: The MMPA requires NMFS to review, not revise, SARs at least annually for strategic stocks and stocks for which significant new information is available. Following this review, NMFS revises SARs as necessary. We acknowledge and agree with this comment regarding the importance of following the SAR process timeline so the current year’s draft SARs do not overlap with the final SARs from the previous year. Unfortunately, the publication of the draft 2020 SARs was delayed until the end of the year, largely due to the impacts of the ongoing COVID–19 pandemic. The public comment period of 90 days, however, remained unchanged.

Comment 2: The Commission continues to be concerned about NMFS’ performance in meeting several of the requirements of Section 117 of the MMPA. Without a minimum abundance estimate (Nmin) derived from recent data, PBR cannot be calculated and is considered “unknown.” Including the revised 2020 draft SARs, the Commission comments that an Nmin estimate is lacking for 81 of the 252, or 32 percent of identified stocks. The lack of data for over one third of the stocks recognized by NMFS is a serious shortcoming in meeting statutory obligations. The Commission reiterates its recommendation that NMFS continue its efforts to prioritize and coordinate requests to secure the necessary survey resources across regions.

Response: We acknowledge the Commission’s comment and will continue to prioritize our efforts for the collection of data to address outdated Nmin estimates, as resources allow.

Comment 3: The Commission notes that in a few of the individual SARs (e.g., Eastern North Pacific gray whale, CA/WA/OR fin whale, and all of the Northeast stocks), M/SI data are lumped for the five-year analysis period. The Commission feels strongly that M/SI data should be presented individually for each year of the analysis period, and comments that the detection of short-term trends or extreme events affecting M/SI are difficult to discern if five-year averages are the only data available. The Commission recommends that NMFS present estimates for each year of a five-year analysis period for all SARs with M/SI data.

Response: For two of the stocks highlighted by the Commission (Eastern North Pacific gray whale and CA/WA/OR fin whales), the number of observed bycatch events in the most-recent five-year period (one and zero respectively) are highlighted in the SAR bycatch table and the California swordfish/SAR drift gillnet fishery that is observed annually. For the sake of visual simplicity in the SAR (rather than parsing out five zeros or four zeros and a one), these data are pooled into a five-year time frame and individual annual totals may be found in supporting citations (bycatch and serious injury reports). In cases where there has been a large spike in bycatch, or major changes in fishery effort or observer coverage, these details are reflected in the SAR text. Where MS/I data are collected opportunistically from strandings or at-sea sightings, the five-year sum of observed totals is assessed against PBR and individual year data is published in annual serious injury reports. We agree that in some cases where observer coverage is sporadic or highly-variable within a five-year period, parsing out such annual data may be useful to highlight potential data gaps or changes in bycatch levels. However, these benefits are outweighed by the costs of parsing and presenting annual data that is prone to higher levels of statistical noise.

Comments on Alaska Issues

Comment 4: Over the past decade, the Commission has repeatedly recommended that NMFS, in collaboration with its co-management partners, improve its monitoring and reporting of subsistence hunting in Alaska. While there have been improvements in the number of communities reporting take levels for some ice seals in the SARs in recent years, the majority of communities that hunt or may hunt ice seals are still unaccounted for. Therefore, the
Commission continues to recommend that NMFS pursue additional mechanisms to gather reliable information on the numbers of marine mammals taken for subsistence and handicraft purposes, including by securing adequate funding for comprehensive surveys of subsistence use and Native hunting effort in collaboration with co-management partners and the State of Alaska.

Further, the Commission encourages NMFS to continue to provide updated information in the SARs whenever it becomes available, even if it pertains only to a limited number of villages or a subset of years. The Commission has previously recommended that NMFS include all available data about harvest numbers, including struck and lost, in the SARs for beluga whales, and that NMFS work with the Alaska Beluga Whale Committee to improve the completeness of and consistency in reporting harvest data, with a focus on struck and lost information for these stocks. The Commission understands that, in response to a recommendation from the Alaska SRG, struck and lost numbers will be included in the final 2020 SARs and the Commission looks forward to seeing those numbers.

Response: NMFS agrees that it is important to collect reliable information on the numbers of marine mammals taken for subsistence and handicraft purposes. Funding for subsistence use surveys remains limited; thus, in most cases, the best available data are not comprehensive. Nevertheless, we continue to work with our Alaska Native co-management partners (and the State of Alaska in some cases) to conduct surveys of subsistence use as resources allow, including animals struck and lost, and we incorporate that information into the SARs as it becomes available.

Comment 5: The Coalition emphasizes that, in the Humpback Whale, Central North Pacific Stock SAR, the section on habitat concerns should include Currie et al. (2021), which showed that in the presence of vessels, humpback whales increase swim speed and respiration rate and decrease dive times, which has been shown to be an energetically demanding avoidance strategy. In order to ensure recovery to OSP, the Coalition comments that the SARs must include non-lethal effects of human disturbance, as described in Currie et al. (2021) and believes that recording those interactions is a first step toward assessing and mitigating the severity. The Coalition also requests that the Habitat Concerns section include the increasing overlap between whales and high concentrations of marine debris.

Response: NMFS has added information on (1) the behavioral responses of humpback whales to vessel presence in Southeast Alaska and Hawaii (Schuler et al. 2019, Currie et al. 2021), and (2) the overlap between humpback whales and high concentrations of marine debris (Currie et al. 2017) to the Habitat Concerns section of the final 2020 Central North Pacific humpback whale SAR.

Comments on Atlantic Issues
North Atlantic Right Whale, Western Atlantic Stock

Comment 6: Department of Fisheries and Oceans Canada (DFO) notes that Entanglement Mortality #3893 (1/22/2018) was discovered on a U.S. beach (1/22/2018) with no gear recovered but was assigned to Canada. DFO is not aware of any conclusive evidence to support this death being attributed to Canada.

Response: NMFS thanks the reviewer for the detailed examination of individual cases. Gear was recovered from #3893 and identified as Canadian snow crab fishing gear.

Comment 7: DFO comments on Entanglement Prorated Injury #3312, which was sighted in Canadian waters (7/13/2018) with no gear recovered and then assigned to Canada (CN). Entanglement Prorated Injury #3843 was sighted in Canadian waters (7/30/2018), also with no gear recovered, and it was unassigned as a first sighting in Canada (XC). DFO is not aware of any conclusive evidence to suggest that #3312 would reasonably be assigned to Canada. Moreover, a seemingly similar case of Entanglement Prorated Injury in U.S. waters (12/20/2018, #2310, Nantucket, MA), where there was also no gear recovered but was first sighted in the United States, is marked as unassigned (XU).

Response: Entanglement Prorated Injury #3312 was sighted in Canada earlier in the day on 7/13/2018 gear free. NMFS determined the entanglement occurred within a 2-hour window that day, thus it was assigned to CN. The other two whales sighted as examples had pre-entanglement sighting histories >1 month; therefore, there was much more uncertainty about when and where the entanglement may have occurred.

Comment 8: DFO comments on the summary in Table 3. Confirmed human-caused M/MI records of right whales: 2014–2018a assigns a 1.55 average M/MI over 5 years due to entanglement to Canada. Looking at the incidents in the table marked EN (entanglement) CN (Canada) there are 6.75 incidents (4 mortalities + 2 serious injuries + 0.75 prorated injury), resulting in an average of 1.35 per year rather than 1.55. The discrepancy is carried over from the 2019 draft SAR, when #3694 mortality was assigned to Canada. However, in response to DFO’s comment related to the mortality assignment of #3694 (published 85 FR 149; August 3, 2020), the entry for #3694 was changed from CN (assigned to Canada) to XC (Unassigned first sighted in Canada) in the final 2019 North Atlantic right whale Stock Assessment Report. DFO points out that the total counts have not been updated in the summary for the 2020 draft SAR.

Response: Right whale #3694 was changed from XU (unassigned, first sighted in US) to CN in the 2019 draft that went out for public comment based on identification of the gear as Canadian snow crab gear. In the conversion from draft to final, this was inadvertently changed to XC (unassigned, first sighted in Canada). A correction has been issued and we have made the changes to the final 2019 report which is now available. Summary statistics have also been corrected in the final 2020 report.

Comment 9: DFO is not aware of any conclusive evidence used in assigning the following to Canada: Serious Injury #4057 (8/13/2016) and Serious Injury #4094 (07/19/2017).

Response: The gear involved with Serious Injury #4057 (8/13/2016) was identified as Canadian crab pot by DFO. For Serious Injury #4094 (07/19/2017), the gear was identified as Canadian crab pot in Daoust et al. (2018).

Comment 10: The Coalition recommends that the section “Stock Definition and Geographic Range” be changed to reflect the current habitat use of right whales. As written, it is confusing to discern between historic and more recent data. For example, the introduction states that foraging habitat is in New England and Canadian waters, which does not address the year-round use of waters south of Cape Cod as a foraging habitat as reflected in the NOAA Expert Working Group Report, or the detections in all seasons of right whales in the near shore waters of New Jersey during which right whales were documented skin feeding. The Coalition comments that the mid-Atlantic is increasingly used by the species as more than a migratory corridor, which should be reflected in the SAR. The current references to the mid-Atlantic in the draft SAR precede 2010, the time when a significant shift in right whale habitat use was first noted. More recent sightings of right whales in the Gulf of Mexico and off the
Canary Islands should also be included. The Coalition also notes that it is important to consider that population demographics may dictate habitat use, which could impact associated risks to those individuals.

Response: Although NMFS considers the description of the right whale range and habitat use to be an accurate reflection of published findings to date, we acknowledge that new observations indicate additional changes in the species’ seasonal distribution. We also agree that demographics are an important consideration. Several studies have been recently completed; but, until published, our ability to utilize this information in the SAR is limited. In addition, we have no evidence to suggest that “changing habitat use” has settled into a new stable state. Still, we endeavor to consider all significant changes in habitat use. When it comes to management decisions based on habitat use, the agency uses the most current habitat use models available including those from the Marine Geospatial Ecology Lab at Duke University, which does reflect an increase in habitat use in the mid-Atlantic region.

Comment 11: The Coalition comments that the “Population Size and PBR” section is outdated and does not reflect the most recent analysis indicating that the Nmin for 2019 is 347. Even considering 2018, the value in the SAR is higher than the best population estimate of 383 based on the Pace method (Pace et al. 2021). As such, PBR is below 0.8.

Response: NMFS strives to update the SARs with as timely data as possible, to ensure the SARs are based upon the best available scientific information. As noted in previous years, as a result of the review, revision, and assessment of available data, the data used typically lag two years behind the year of the SAR. The agency recognizes the lags in SAR processing time, but this is necessary to achieve the appropriate peer review. To that extent, we are finalizing a NMFS technical memorandum to provide up-to-date population estimates. We expect to include these data and information in the 2021 SAR.

Comment 12: The Coalition appreciates NMFS’ inclusion of cryptic mortality as calculated by Pace et al. (2021). The current reference in the document should be updated from submitted to reflect its publication.

Response: Now that Pace et al. (2021) is published, we have updated the reference.

Comment 13: The Coalition asks NMFS to update the “Fishery-Related Mortality and Serious Injury” section to include Hamilton et al. (2019), from which NMFS determined that “11.04 percent of the right whale population is entangled annually in U.S. federal fishing gear.” The Coalition requests that NMFS include its findings that an average of 6.724 right whales are seriously injured or killed in U.S. fishing gear each year.

Response: We have updated language in the final 2020 SAR referencing observations by Hamilton et al. (2019) that 30.25 percent of the population was entangled annually between 2010 and 2017. We recognized in the text of the document that MS/I is likely much higher than observed. However, the estimates above are based on a NMFS 2021 analysis that is still a draft and was not reviewed by the Atlantic SRG at the time of writing. Approaches to these issues were discussed with recommendations made by the Atlantic SRG in 2021 that will be considered in the 2021 SAR.

Comment 14: The Coalition asks NMFS to include the findings in the recently published North Atlantic Right Whale (Eubalaena glacialis) Vessel Speed Rule Assessment, which concluded that voluntary measures did not have a meaningful impact on reducing vessel collisions, small vessel collisions can seriously injure right whales, and that the current SMAs should be modified.

Response: We appreciate this comment; the implications of the Vessel Speed Rule Assessment are being considered for the 2021 SAR.

Comment 15: The Coalition requests that the 2018 prorated injuries for the following whales be changed to a value of 1 against PBR to reflect NMFS’ determination that these individuals meet the criteria of Seriously Injured, as reflected on the Agency’s Unusual Mortality Page: #3312 (entanglement), #3843 (entanglement), and #2310 (entanglement). The Coalition requests NMFS’ Unusual Mortality Event (UME) web page is currently tallying prorated injuries and serious injuries together; but, for the SARs, NMFS follows the assessment guidelines here: https://media.fisheries.nmoa.gov/dam-migration/02-238-01.pdf.

Response: NMFS requests that NMFS revise the draft North Atlantic right whale SAR to reflect the most up-to-date estimate of population size. The best population estimate for the end of 2019 is now just 356 individuals, representing a more “precipitous drop [in the population size] than previous years.” The best population estimate for the end of 2018 has been revised down from 409 individuals to 380 individuals. NRDC comments that the new 2019 and revised 2018 estimates indicate a significant decrease in survivorship during the last three years as a result of the ongoing unusual mortality event. NRDC emphasizes that NMFS should update the draft SAR according to the best available scientific information on North Atlantic right whale population size.

Response: See our response to comment 11.

Comment 17: NRDC requests that NMFS revise the PBR level downward for the NARW. The updated population size estimate has implications for the calculation of the PBR level for the North Atlantic right whale. NMFS’ draft SAR states that PBR for the species is currently 0.8; however, the agency has acknowledged in other fora that the most recent population estimate has further reduced PBR to 0.7. NMFS must revise the PBR level in the draft SAR downwards to reflect the best available scientific information.

Response: We appreciate this comment; please see our response to comment 11.

Comment 18: NRDC comments that NMFS must accurately account for cryptic mortalities in its calculation of “total” estimated human-caused mortality and serious injury. The number of observed mortalities is a significant underestimate of actual deaths. A scientific study published this year by Richard Pace and colleagues (Pace et al. 2021) concludes only 29 percent (2 standard errors = 2.8 percent) of right whale carcasses were detected from 2010 to 2017. The same study found that entanglements accounted for the “vast majority” of detected serious injuries (87 percent), but only about half of detected deaths (49 percent) from 1990 to 2017. Thus, “cryptic deaths due to entanglements significantly outnumber cryptic deaths from vessel collisions or other causes.” NMFS must update the estimates of “total” mortality included in the draft SAR based on the findings of the new Pace et al. (2021) model.

Response: NMFS appreciates this request. While Pace et al. (2021) make reference to the regime period of 2010–2017, the SARs—which work on 5-year rolling averages—make use of the time period 2013–2017. As such, the numbers in the SAR are not in disagreement with the estimates in Pace et al. 2021. Recognizing the significance of the population decline, we intend to publish a NMFS Technical Memorandum to provide an update on these estimates, as resources allow. We expect to reference...
this NMFS Technical Memorandum in a future SAR.

Comment 19: NRDC notes that NMFS must include the best available scientific information on sub-lethal impacts of entanglement. Entanglement remains the leading cause of North Atlantic right whale mortality and a major factor in reproductive loss. NRDC notes the pervasive sub-lethal effects of entanglement, including impaired reproductive potential and negative health effects, currently undermine any opportunity for the species to recover and may eventually lead to individual mortalities. NRDC emphasizes that NMFS must include, and should more thoroughly consider, the best available scientific information on sub-lethal effects of entanglement and the implications for the survival of the North Atlantic right whale in the draft SAR.

Response: This is a valid point, and sub-lethal effects of entanglement was acknowledged in the “Current and Maximum Productivity Rates” section. NMFS had not yet cited the work by Christiansen et al. (2020), so we added that reference in the final 2020 SAR.

Comment 20: The Commission is hopeful that its recommendations and those of other experts will compel NMFS to take decisive and effective steps toward enabling right whales to recover. In that effort, it is imperative that NMFS apply the best available data and science to its estimation of population size and the M/SI rate. The best available population estimates are provided by the population model developed by Pace et al. (2017), and NMFS is making use of those estimates. NMFS has always done an excellent job of estimating the number of known M/SI due to entanglement in fishing gear and due to vessel strikes. However, a secondary finding of the Pace et al. (2017) population model was that only 60 percent of the total mortality estimated by the model was accounted for by the known M/SI. It was long suspected that some mortalities were going undetected, and the Pace et al. (2017) model suggested that the undetected proportion was 40 percent. Therefore, the Commission recommends that NMFS immediately take steps to include the best available science by incorporating the Pace et al. (2021) estimates of undetected mortalities in its estimates of total human-caused mortality and serious injuries of right whales in the final 2020 SAR.

Response: Please see NMFS response to Comment 20.

Comment 21: MLA comments that the draft SAR must include more information regarding NARW entanglements in fishing gear. The draft SAR contains none of the statutorily required information on commercial fisheries that interact with the stock (16 U.S.C. 1386(a)(4)). As a result, the public has no information about the fisheries that interact with the NARW and the levels, types, and seasonal and geographic patterns of entanglement that occur within and among those fisheries. This information must be included in the final SAR.

The draft SAR presents only M/SI entanglement data—non-serious injury entanglements are omitted. This highly important information is relevant to assessing the effectiveness of the Atlantic Large Whale Take Reduction Plan (TRP). For example, the TRP requires certain measures that are intended to reduce the severity of fishery interactions, rendering them non-serious. MLA emphasizes that a comparison of M/SI and non-serious injury data over time, by area, and by fishery, is relevant to evaluating the effectiveness of measures intended to reduce the severity of fishery interactions. This information must be included in the final SAR.

Response: This is a valid point. MLA requests that the SAR include data on the severity of entanglements. The New England Aquarium (2020) reports that from 2010 to 2017, the annual average serious entanglement rate ranged from 1.4 percent to 3.8 percent, and that from 2014–2018 the majority of NARW entanglements were minor (62 percent), with less than half either moderate or severe (19 percent and 19 percent, respectively). None of this important information is reported in the draft SAR, but it should be.

Response: Table 3 of the NARW SAR provides considerable detail on each entanglement case that merited a prorated serious injury or greater. The New England Aquarium applies different criteria than defined in NMFS’ Serious Injury Policy (NMFS 2014). While there is often agreement between institutions, inconsistencies occur based on different criteria. The “rates” quoted above are based upon observed events. However, Pace et al. (2021) stated, “We used an abundance estimation model to derive estimates of cryptic mortality for NARW and found that observed carcasses accounted for only 36 percent of all estimated deaths during 1990–2017. We found strong evidence that total mortality varied over time, and that observed carcass counts were poor predictors of estimated annual numbers of whales dying.” As such, focusing on the rates above would amount to ‘cherry picking’ and misleading conclusions that under-represent the true scale of the entanglement problem, given that Pace et al. (2021) indicate only 36 percent of mortalities have been observed since 1990, and given the bias that most serious injuries are entanglements (vs. ship strikes) that are never seen again. This indicates hundreds of entanglement mortalities have gone undetected even in just the past decade.

Comment 22: MLA notes that the SAR include data on the severity of entanglements. The New England Aquarium (2020) reports that from 2010 to 2017, the annual average serious entanglement rate ranged from 1.4 percent to 3.8 percent, and that from 2014–2018 the majority of NARW entanglements were minor (62 percent), with less than half either moderate or severe (19 percent and 19 percent, respectively). None of this important information is reported in the draft SAR, but it should be.

Response: Table 3 of the NARW SAR provides considerable detail on each entanglement case that merited a prorated serious injury or greater. The New England Aquarium applies different criteria than defined in NMFS’ Serious Injury Policy (NMFS 2014). While there is often agreement between institutions, inconsistencies occur based on different criteria. The “rates” quoted above are based upon observed events. However, Pace et al. (2021) stated, “We used an abundance estimation model to derive estimates of cryptic mortality for NARW and found that observed carcasses accounted for only 36 percent of all estimated deaths during 1990–2017. We found strong evidence that total mortality varied over time, and that observed carcass counts were poor predictors of estimated annual numbers of whales dying.” As such, focusing on the rates above would amount to ‘cherry picking’ and misleading conclusions that under-represent the true scale of the entanglement problem, given that Pace et al. (2021) indicate only 36 percent of mortalities have been observed since 1990, and given the bias that most serious injuries are entanglements (vs. ship strikes) that are never seen again. This indicates hundreds of entanglement mortalities have gone undetected even in just the past decade.

Comment 23: MLA requests that the SAR include data on the severity of entanglements. The New England Aquarium (2020) reports that from 2010 to 2017, the annual average serious entanglement rate ranged from 1.4 percent to 3.8 percent, and that from 2014–2018 the majority of NARW entanglements were minor (62 percent), with less than half either moderate or severe (19 percent and 19 percent, respectively). None of this important information is reported in the draft SAR, but it should be.

Response: Table 3 of the NARW SAR provides considerable detail on each entanglement case that merited a prorated serious injury or greater. The New England Aquarium applies different criteria than defined in NMFS’ Serious Injury Policy (NMFS 2014). While there is often agreement between institutions, inconsistencies occur based on different criteria. The “rates” quoted above are based upon observed events. However, Pace et al. (2021) stated, “We used an abundance estimation model to derive estimates of cryptic mortality for NARW and found that observed carcasses accounted for only 36 percent of all estimated deaths during 1990–2017. We found strong evidence that total mortality varied over time, and that observed carcass counts were poor predictors of estimated annual numbers of whales dying.” As such, focusing on the rates above would amount to ‘cherry picking’ and misleading conclusions that under-represent the true scale of the entanglement problem, given that Pace et al. (2021) indicate only 36 percent of mortalities have been observed since 1990, and given the bias that most serious injuries are entanglements (vs. ship strikes) that are never seen again. This indicates hundreds of entanglement mortalities have gone undetected even in just the past decade.
and serious injury, estimated extrapolated mortality and serious injury and associated CV, and percent observer coverage in that year, with the last column providing the average annual mortality and serious injury estimate for that fishery.” Although the draft SAR presents a table of entanglements showing “country” and “gear type,” this falls well short of the detailed and well-organized table recommended by GAMMS (and included in numerous other SARs). MLA notes that such a table should be included in the SAR. This information is important for assessing individual fisheries, which has even more significance given that NMFS’ revised “negligible impact determination” policy includes a process for assessing individual fisheries.

Response: Table 3 provides all known information on injuries. The requested table is not provided because the data are not available to populate it. Appendix 3 describes the U.S. fisheries and their observer coverage level (or the complete lack thereof, in the case of the lobster fishery). Additional language to address this concern has been added to the first paragraph of the “Fishery-Related Mortality and Serious Injury” section of the SAR.

Comment 24: With respect to the lobster fishery, MLA requests that the SAR include data showing that there has been a 90 percent decline in instances where lobster gear was removed from entangled NARW since 2010. There were four known cases of lobster gear removed from NARW from 1997 to 2000, six from 2000–2010, and one from 2010 to 2019. MLA notes that the only confirmed M/SI resulting from entanglement in lobster gear occurred in 2002 and none of this is reported in the draft SAR.

Response: The right whale SAR provides summaries of all available data relating to right whale serious injury and mortalities during 2014–2018, including all identified fisheries. NMFS has included in the narrative the primary points and statistics. Because right whale injuries are rarely witnessed, we have relied on opportunistic reports to build our understanding of impacts to the population and provide a minimum number of deaths. However, 11 opportunistic records since 1997, as cited by the commenter, are insufficient to assess trends in entanglement rates, especially without context on fishing effort during the same time period.

Specifically, gear was only retrieved from 73 percent of the right whale entanglement incidents from 2010 to 2018 (22/167). Of those, most (73 percent) are identifiable to a fishery. However, the work by Pace et al. (2021) shows there is no evidence of observed rates/causes of mortality corresponding to cryptic mortality rates. As such, the reporting of “trends” for observed cases is misleading.

Comment 25: MLA comments that the draft SAR omits data and information collected by NMFS showing that more entanglements occur with Canadian fishing gear. The draft SAR is virtually silent on the outsized role of Canadian fisheries in a significant spike in M/SI incidents since 2017, even though relevant data, scientific observations, and expert analyses are available to NMFS. This should be included in the final SAR in order to provide a full and accurate picture of the known and/or probable origin of entanglements outside U.S. waters.

Response: The final SAR assigns fishing gear to fishery type, e.g., pot/trap and country of origin, when sufficient data are available. Given the low frequency at which such data are available, and the lack of a statistical relationship between observed and actual mortalities (Pace et al. 2021), no annual serious injury and mortality statistics are derived on a ‘by fishery’ basis. All confirmed Canadian mortalities were identified in Table 3. Differences in survey effort between Canada and the United States need to be considered when attempting to compare incidents of M/SI. The apparent increase in M/SI incidents in Canadian fisheries since 2017 is influenced in part by the increased detection of mortalities that happened within the confines of a relatively closed body of water that had several aircraft surveying it beginning in 2017, and as many as 5 aerial survey platforms conducting regular surveys since then. Increased Canadian monitoring efforts were in response to this being an area of significant mortality. However, the coastal waters of New England represent a similar length of area, with a similar number of vertical lines. The lack of fishery observers, much more limited aerial survey capacity over an open section of coast with currents that can carry carcasses offshore, and gear that is heavy enough to anchor whales below the surface contributes to making coastal New England waters an area where the odds of detecting mortality are quite low. However, spatial models suggest a high risk of mortality in this area. As above, we note that many of these comments recommend placing strong emphasis on limited observations, which is ill advised based upon the findings of Pace et al. (2021).

Comment 26: MLA comments that although the draft SAR acknowledges that “[a]n Unusual Mortality Event was established for North Atlantic right whales in June 2017 due to elevated strandings along the Northwest Atlantic Ocean coast, especially in the Gulf of St. Lawrence region of Canada,” it omits discussion of significant relevant information showing that a large number of NARW have altered their migratory patterns because their preferred prey has responded to altered oceanographic conditions by moving into the Gulf of St. Lawrence, where NARW are at very high risk of entanglement in snow crab gear that is heavier and more lethal than gear fished in U.S. waters. This relates directly to the severity of injury resulting from entanglement, as noted in previous MLA comments. This information provides important insights into the source of entanglement risk and severity of entanglement for North Atlantic right whales, and MLA requests NMFS include the best available scientific information.

Response: NMFS has addressed this comment in the “Stock Definition/Geographic Range,” “Current Population Trend,” and “Habitat Issues” sections.

Comment 27: MLA suggests that the draft SAR should be revised to incorporate the best available scientific information regarding the increasing proportion of M/SI from Canada as a result of altered North Atlantic right whale migratory patterns to the Gulf of St. Lawrence. These data are critical to understanding the increase in M/SI. Specifically, MLA requests the inclusion of data concerning the country of origin of NARW entanglements during the relevant time period, taking into account scientific observations of entangling gear, depicting differentiating attributes of that gear (such as rope diameter and strength) which make it so lethal, and describing the differences between the conservation programs and relative effectiveness of measures to protect NARW in each country.

Response: NMFS has applied the best available science to the narrative of right whale distribution and entanglement rates, but the scientific understanding of right whale movement in the western North Atlantic is limited. Also, the timeline of mortality data for this SAR is through 2018. As future data become available and statistically meaningful trends emerge, they will be discussed in future SARs as resources allow. Through roughly a third of the population currently visits the Gulf of St. Lawrence, their residency in...
surveyed areas appears to be highly variable, and we have little idea where the other two-thirds of the population is residing. We do not know the relationship between detected entanglement and mortality and what the levels are for the population as a whole. We know that mortality rates are significantly higher than the number of observed cases, but currently do not have sufficient evidence to support apportioning undetected mortality to one country or another.

Comment 28: MLA states that the draft SAR omits best available scientific information about NARW behavior that affects its risk of harm from fishing gear. MLA suggests that NMFS has not taken account of significant variances in North Atlantic right whale behavior across its migratory range. MLA requests that NMFS provide greater detail on these known foraging areas, including the number and proportion of North Atlantic right whales sighted in these areas in recent years, to ensure adequate protections are in place.

To address seasonal or area differences in incidents of M/SI, MLA requests the final SAR incorporate information such as that described above detailing geographic shifts in NARW and differing behavior in these habitats in response to oscillating oceanographic conditions across their migratory range, which places North Atlantic right whales at varying levels of risk from gear entanglement.

Response: NMFS agrees that risk is elevated where high right whale density overlaps with fishing gear. Higher gear densities also elevate risk, and heavier gear likely increases injury severity. The SAR presents our current understanding of right whale distribution and population assessment for the public and management decisions. It also describes our level of understanding of entanglement risk. Although more than 80 percent of right whales bear evidence of entanglement, there are few events where the location or depth that the whale encountered the gear is known. All reported entanglement events from 2014 to 2018 are presented in Table 3.

Comment 29: MLA notes that the draft SAR must reincorporate deleted text and include supplemental information to provide a full appreciation of the status of the North Atlantic right whale population. On page 42, the draft SAR strikes text indicating that “the existence of important habitat areas is not presently well described,” but nonetheless states that “long-range matches indicate an extended range for at least adults” and “the location of much of the population is unknown during the winter.” In the absence of new data, the MLA recommends that the deleted text remain in the document to help the reader understand that much of North Atlantic right whale habitat remains poorly understood.

Response: The new text represents NMFS’ evolving understanding of right whale habitat. We continue to close knowledge gaps. Some blanket statements retained from previous versions of the SAR are no longer accurate. We endeavor to provide the most pertinent information for the reader.

Comment 30: MLA comments that on page 42, NMFS has removed language stating that the majority of right whale sightings occur within 90 kilometers (km) of the shoreline of the southeastern United States. However, at page 43, the draft SAR states that “telemetry data have shown rather lengthy excursions, including into deep water off the continental shelf (Mate et al. 1997; Baumgartner and Mate 2005).” Has NMFS received new data that warrants noting North Atlantic right whale excursions into deeper water but not that North Atlantic right whales are known to occur within 90 km of the shoreline? The MLA recommends that both are important to include in the final SAR, and NMFS should provide additional details on the number of North Atlantic right whales known to use these habitats.

Response: The SAR includes both text and a figure that describes the distribution of sightings. The statement that the majority of sightings occur within 90 km of the shoreline was misleading because it does not account for effort; most right whale sightings occur close to shore because that is where most people are present to see and report the sightings. The excursions into deep water are not otherwise well represented. Telemetry data provide another dimension to NMFS’ understanding and are important to note.

Comment 31: MLA noted that, on page 43, the draft SAR states that “New England waters are important feeding habitats for right whales, where they feed primarily on copepods (largely of the genera Calanus and Pseudocalanus).” MLA believes the best available information allows NMFS to be more specific in this statement. Given the pending regulatory focus on offshore Maine, MLA believes it would be appropriate to distinguish where these feeding grounds occur.

Response: The narrative in the SAR is meant to provide a general description of right whale distribution. NMFS is providing other products with detailed information on right whale densities throughout the right whales’ range for management and Atlantic Large Whale Take Reduction Team consideration.

Comment 32: On page 44, the draft SAR states: “In 2016, the Northeastern U.S. Foraging Area Critical Habitat was expanded to include nearly all U.S. waters of the Gulf of Maine (81 FR 4837, 26 February 2016).” MLA requests that NMFS clarify that critical habitat is designated because it contains at least one physical or biological feature to support foraging, and not necessarily because NARW have been observed to forage in all designated areas throughout the entire Gulf of Maine. Some readers may not understand the regulatory criteria for designating critical habitat, which are not dependent upon whale presence.

Response: NMFS agrees with this distinction, and language has been added to this point in the final 2020 NARW SAR.

Comment 33: MLA noted, on page 44, the draft SAR states: “An important shift in habitat use patterns in 2010 was highlighted...” The number of individuals using Cape Cod Bay in spring increased, (Mayo et al. 2018). In addition, right whales apparently abandoned the central Gulf of Maine in winter (see Cole et al. 2013), but have since been seen in large numbers in a region south of Martha’s Vineyard and Nantucket Islands. Aerial surveys of the Gulf of St. Lawrence during the summers of 2015, 2017, and 2018, documented at least 34, 105, and 131 unique individuals using the region, respectively (NMFS unpublished data).” MLA believes NMFS should provide as much detail as possible to help the public understand the spatial distribution of North Atlantic right whales. MLA requests the inclusion of the number of North Atlantic right whales and proportion of the population sighted in Cape Cod Bay (as noted in previous MLA comments), clarify what is meant by central Gulf of Maine (which MLA interprets to be the portion of the Gulf of Maine located off the Maine coast), and include the proportion of North Atlantic right whales represented by Gulf of St. Lawrence sightings.

Response: Clarification has been added to text regarding the central Gulf of Maine location. Describing the proportion of individuals sighted in various habitats may provide a false impression of our level of knowledge of right whale use of these areas. Photographic capture of individuals and maximum likelihood models of these data indicate considerable immigration...
and emigration of individuals. A tally of individuals seen in a habitat does not accurately convey the spatial distribution of right whales, or potential risk. There is a significant difference in risk levels if 10 whales occupy an area for a day versus 10 whales occupying an area for 100 days. NMFS’ level of understanding is evolving and is currently better in some areas than others. The text is an accurate reflection of our current understanding when considering the combined effects of sightings, survey effort, and potential residency of right whales.

Comment 34: MLA commented that, on pages 44–45, the draft SAR strikes the language: “an additional interpretation of paternity analyses is that the population size may be larger than was previously thought. Fathers for only 45 percent of known calves have been genetically determined; yet, genetic profiles were available for 69 percent of all photo-identified males (Frasier 2005). The conclusion was that the majority of these calves must have different fathers that cannot be accounted for by the unsampled males, therefore the population of males must be larger (Frasier 2005).” MLA comments is unclear why this text citing data from Frasier (2005) is struck from the SAR and why Fitzgerald (2018) now represents the best available information?

Response: NMFS has determined that Fitzgerald (2016) best represents the current understanding of pedigree-informed abundance estimation; however, Frasier (2005) has not been conclusively refuted. We have restored Frasier (2005), and added Frasier et al. (2007), to the text and references.

Comment 35: MLA points out that on page 56, the draft SAR states: “Whales often free themselves of gear following an entanglement event, and as such scarring may be a better indicator of fisheries interaction than entanglement records.” As noted previously, this statement fails short of providing a useful and complete understanding of scarring data for the relevant time period. As described above, the New England Aquarium (2020) states that the majority of entanglements between 2014 and 2018 are minor (62 percent).

Response: This is a valid point, and NMFS will include more detailed results from entanglement scar-coding research in a future draft NARW SAR, as resources allow.

Comment 36: MLA noted, on page 56, the SAR cites three studies concluding that North Atlantic right whales mitigated Northwest Atlantic right whales to provide population estimates that are robust to changes in whale distribution and survey effort. This approach, coupled with high levels of effort to photographically capture individuals each year, provides relatively precise estimates and the ability to detect small changes in the population from year to year.

Comment 39: MLA comments that the draft SAR should make clear that while Pace et al. (2017) assumes no natural mortality, natural mortality has been documented by Taylor et al. (2013) and Curtis et al. (2014). The fact that there is a significant amount of neonate mortality (see draft SAR, p. 53) is critical for the public to understand. By ignoring neonate mortality, as done by the Pace model, MLA believes the below-expected number of individuals recruited into the population could be construed as a reflection of the NARW calving rate when, in fact, natural mortality is occurring. The appropriate regulatory and management responses to an anomalously low calving rate are different from elevated neonate mortality from natural predators. MLA requests the SAR cite relevant literature on natural mortality and put it in the context of studies such as Pace et al. (2017).

Response: First, the Pace et al. (2017) model does not assume any particular cause of death (natural or human-caused); it simply allows one to estimate total mortality using sighting histories as described in the draft SAR. Second, we agree that there are likely neonate mortalities that go undetected, some of which may due to natural causes. However, since these undetected mortalities would not have a sighting history, including these instances would only add to the total mortality derived from the Pace et al. (2021) method and would not change the findings of Sharp et al. (2019) that all non-calf mortality for which cause of death could be determined was human-caused. To date, only one neonate mortality was determined to be from white shark predation. Pre-mortem shark attack was determined to be a contributing cause of death of two other calves that were entangled in fishing gear (Taylor et al. 2010). In general, calf mortality in this population is determined by extensive survey effort along the coast of the North Atlantic.
Southeastern United States, with very few individuals found to “enter the population” without having been detected as calves in recent years.  

**Comment 40:** MLA points out that the SAR concludes 100 percent of the estimated mortality of 18.6 animals per year is assumed to be human-caused and comments that this may be somewhat positively biased (i.e., a slight overestimate) given that some calf mortality is likely not human-caused. Although the draft SAR acknowledges this is likely a “slight overestimate,” its conclusion that all mortality is human-caused is not supported by Sharp et al. (2019). The draft SAR ignores the underlying data that of 124 whales examined, 42 percent were confirmed to be anthropogenic (26 due to vessel strikes, 26 due to entanglement), and 58 percent were due to natural or unknown cause (18 neonates died of natural causes, while 54 died of unknown causes). With natural causes constituting a total of 14.5 percent of all examined individuals and 25 percent of those incidents where cause was confirmed, it is not a “slight overestimate” and the best available scientific information does not support attributing all mortalities of unknown cause to human activity. MLA reiterates that the SAR must be revised to accurately reflect the best available science.

**Response:** NMFS disagrees with the assertion that Sharp et al. (2019) does not support the assignment of all estimated mortality to human causes. Only 8 deaths of the 124 (2 percent) documented between 1970 and 2018 were attributed to natural causes, and all 6 were calves. For one calf, shark predation was implicated; the other natural deaths were determined to have been stillbirth, dystocia, or malnutrition. Conversely, 100 percent of all examined, non-calf carcasses for which cause of death could be established were determined to have died from either entanglement or vessel collision. Cause of death could not be verified for the remaining carcasses due to either decomposition or logistical constraints, such as distance from shore or poor field conditions. While it is possible that some of these unexamined deaths were due to natural causes, existing evidence indicates right whales rarely die of natural causes. Also see response to comment 39.

**Comment 41:** MLA states that the report by Kenney (2018) is fundamentally flawed and should not be cited in the SAR. The draft SAR cites Kenney (2018) to support the statement that “[p]rojection models suggest that the [maximum net productivity rate] could be 4 percent per year if female survival was the highest recorded over the time series from Pace et al. (2017).”

**Response:** The Kenney (2018) reference is a relevant, peer-reviewed study that helps provide context for the impacts of fishery-related mortality on the right whale population. The study does account for other mortality, removing only confirmed fishery-related deaths. Several scenarios are provided with varying levels of hypothetical entanglement mortality rates corresponding to degrees of compliance with MMPA regulations. While the paper presents a very simple representation of complex processes, the model parameters are reasonable and the results are valid.

**Gray Seal Western North Atlantic**

**Comment 42:** The Commission requests improved reporting of serious injury data for gray seals. Human-caused serious injury data are reported by source within the SARs, including both observations and extrapolations, if possible. Summaries of observations of human-caused injuries may include some uncertainty of the specific source, but the Commission believes these should still be included in the total M/SI summaries reported in the Status of the Stock section relative to PBR level.

The Commission is concerned that numerous observations of potentially serious injuries of gray seals are not being accounted for in the SAR. Based on unmanned aerial surveys of gray seals hauled out on shore, Martins et al. (2019) reported the minimum total number of entangled gray seals could range from 192 to 857 (or 0.83 percent to 3.7 percent of the population in U.S. Atlantic waters). It appears that these seriously injured animals are not being counted in either the commercial fisheries observer M/SI data or the stranding data. Zero serious injuries were reported for 2014–2018 in the commercial fisheries observer data (for both gillnet and trawl fisheries in which mortality is known to occur), and only mortalities are being reported in the human-interaction stranding table. Further, because no serious injuries are reported in fisheries observer data, these injured animals are not accounted for in the extrapolated M/SI estimates either.

The Commission recommends that NMFS ensure that these observations of injured seals are being accurately quantified and included in the SAR, consistent with the agency’s 2012 guidelines on injury determinations (including consultation with staff from other Science Centers). This Commission also believes NMFS should continue to collaborate with the Northwest Atlantic Seal Research Consortium, Northeast Fisheries Observer Program, and regional stranding responders on efforts to better photo-document and identify injured and dead seals.

**Response:** NMFS is actively collaborating on this issue both internally and externally with the Northwest Atlantic Seal Research Consortium. NMFS plans to address how to better document the number of animals living with fisheries entanglements in order to account for them in the SAR, via a standardized system for data collection and entry into the National Stranding Database. The Northeast Fisheries Science Center, in partnership with other organizations, has also submitted a proposal to utilize artificial intelligence to identify specific individuals with entanglements from photographs, which is necessary to avoid double reporting of animals that may live with serious entanglements for several years.

**Humpback Whale, Gulf of Maine**

**Comment 43:** The Coalition appreciates the inclusion of cryptic mortality in this analysis, which appropriately elevates the stock to strategic as a result. The Coalition reiterates their comments from last year that the distribution map, while based on NOAA survey data, does not accurately depict the distribution of humpback whales, particularly in the near shore mid-Atlantic areas.

**Response:** There is a technical error with the Gulf of Maine humpback whale SAR and, as a result, this report has not been finalized. An updated draft report will be published in a subsequent SAR cycle.

**Bryde’s Whale, Gulf of Mexico Stock**

**Comment 44:** The Coalition appreciates the extensive updates to the Gulf of Mexico Bryde’s whale SAR and reminds NMFS that, as an ESA-listed species, the SAR for these whales should be updated every year. The Coalition also reiterates their introductory comments on the general timing of review and comment for the 2020 SARs and the substantial delay in including new information, as it is now known that these whales have been designated as a new species: Rico’s whales. The Coalition requests that this new designation be recognized and the 2021 SAR updated accordingly.

**Response:** Section 117 of the MMPA requires NMFS to review annually, and update as necessary with any new information, SARs for strategic stocks, which would include the ESA-listed species. NMFS will review the Bryde’s whale SAR annually to ensure
that applicable updates are incorporated.

The 2021 SARs were drafted in fall of 2020, prior to the publication of the new species recommendation, and the Gulf of Mexico Bryde’s whale SAR is not being updated in the 2021 cycle. In order to change the name of the species listed under the ESA, NMFS must update the common and scientific name of this species in the Code of Federal Regulations (CFR; see 50 CFR 224.101) by publishing a technical correction in the Federal Register (FR), a process that is currently underway. After the CFR has been updated, we will make the name change in the SAR. Prior to initiating this technical correction, NMFS awaited notification from the Taxonomy Committee of the Society for Marine Mammalogy that they had reviewed the new publication recommending recognition of the Bryde’s whales in the Gulf of Mexico as a different species, and that they agreed with the findings and would place the new species on the accepted list of taxonomic names. NMFS received that notification on March 4, 2021. Importantly, the name of the species does not affect the protections it receives under the ESA or the MMPA.

Comments on Pacific Issues

Hawaiian Monk Seal

Comment 45: The Coalition states that the Harting et al. (2020) analysis provides important information to guide recovery planning by comparing the impact of multiple threats, and should be cited. Their analysis demonstrates that anthropogenic causes of death of Hawaiian monk seals have a larger impact than either natural or disease causes of death. The Coalition also requests that the recent decision by NMFS that the two monk seals found dead off Kauai in late 2020 likely drowned in lay nets be included in the SAR.

Response: Since these human-caused mortalities are outside the time period for the draft 2020 SAR (2014–2018), Harting et al. (2020) will be cited in the draft 2021 SAR. Human-caused deaths that occurred in 2020 will be reported in the 2022 SAR.

Bottlenose Dolphin

Comment 46: The Coalition suggests there are several studies about bottlenose dolphin population abundance and health that should be included in the SARs. First, Van Cise et al. (in press) observed a decline in abundance in three out of four stocks and lower-than-expected survival rates in all stocks. For these small populations that experience concentrated anthropogenic disturbances, the authors recommended closely monitoring trends in abundance. Second, Stack et al. (2019) encouraged the use of bent dorsal fin observations as an indicator of population health for odontocetes. In the case of 164 bottlenose dolphins sighted during the study, none included a bent dorsal fin. The study noted that one bottlenose dolphin with a bent dorsal fin in Hawaii was reported in Alves et al. (2018). The Coalition encourages the SARs for these species to include an account of sightings of bent dorsal fins. Third, in a study of coastal waters and marine debris, bottlenose dolphins had the largest area of interaction risk out of all odontocete species (Currie et al. 2017). The SARs should include this study as a high-concern threat to bottlenose dolphin habitat.

Response: NMFS is aware of the new abundance estimates for bottlenose dolphins of the Hawaiian Islands Stock Complex presented in Van Cise et al. (in press). These estimates will be included in the 2022 draft SARs along with appropriate caveats about the potential influence of sampling variability and bias on the estimates and associated trends. We appreciate the work done by Stack et al. (2019), although we interpreted their conclusions as calling for a consideration of the impacts of bent dorsal fins on population health given the potential for long-term effects on individuals, as opposed to suggesting that bent dorsal fins should be used as an indicator of population health. As the authors note, bent dorsal fins are also extremely rare, which makes them less reliable as a measure of population health compared to an attribute such as body or skin condition that could be readily measured across individuals. That said, bent dorsal fins can be indicators of impacts such as fishery interactions. When bent dorsal fin observations are made and linked to human-caused injuries, these could be cited in the SARs of relevant species, as is currently done with other information that provides evidence of potential threats. In that respect, we agree that the threat posed by marine debris described in Currie et al. (2017) should be considered for inclusion in the SARs of relevant species.

Killer Whale, Southern Resident Stock

Comment 47: The Coalition reiterates previous comments that the change in return timing and overall use of core summer habitat complicates the established census schedule that the SAR relies on. The Coalition requests that NMFS use the most recent population estimate for Southern Resident killer whales (SRKW) and urges NMFS to include the most recent full count from the Center for Whale Research in the SAR, regardless of the date that count was reached. The Coalition asks that NMFS clearly state the decline observed following the “peak census count of 99 animals in 1995,” with average decrease per year, and specifically for the time period included in this SAR. Recent Population Viability Assessments completed in both the U.S. and Canada should be used to describe the current population trend as well as future outlook.

Response: NMFS has helped support the Center for Whale Research’s annual Southern Resident killer whales census since 2004. The census technically ends on 1 July of each year (that date continues to be used in order to maintain comparability to prior years). We note that that Center for Whale Research does not provide their 1 July results until 1 October of that year, hence they have the benefit of two additional months. In particular, September (for which SRKW still have a relatively high occurrence rate in inland waters), to confirm if animals are missing or assess the survivability of calves. In recent years NMFS has been providing additional support to the Center for Whale Research for surveys outside inland waters to allow them to complete the census by 1 July. As well, in recent years DFO has been working at the west entrance to the Strait of Juan de Fuca from mid-July to mid-August and has provided the Center for Whale Research with photo-identifications from their fairly frequent encounters. However, given that mortalities are relatively rare events (e.g., 4 mortalities in 2019, or approximately one every 3 months), a delay of a month or two in the Center for Whale Research’s ability to complete the census only fractionally raises the likelihood that a mortality that occurred after 1 July would be inappropriately “assigned” to the prior year census.

Section 117(2) of the MMPA specifies that SARs shall include information on the current population trend. The Population Viability Assessments for SRKW are only projections of the population size, and reporting this information herein has no statutory requirement associated with the SAR and is not included. Language on the population’s annual rate of decline following the peak census count in 1995 is included in the SAR, along with the current census value. In addition, Figure 2 displays the population census since 1974, including how the population has increased and decreased in size.
following the peak census in 1995. Originally, the caption of Figure 2 provided the citation to Center for Whale Research 2019. However, given the Coalition’s comment, we have corrected this citation to be Center for Whale Research 2020, which provides annual census values since 1974 from which specific annual changes in population abundance can be easily calculated if desired.

Comment 48: The Coalition notes that growth rates and productivity in different Resident killer whale populations may be affected by variability in diet, environmental conditions, and habitat range. The Coalition points out that Alaskan Resident killer whales consume Chinook salmon, similar to Northern Resident killer whales (NRKW) and SRKW but appear to have a more diverse diet and benefit from larger and healthier salmon runs. The maximum net productivity rate for NRKW has been updated and is now estimated to be 2.9 percent. The Coalition recommends using the same rate for SRKW, which yields a PBR of 0.11 (1 animal every 9 years) for a population level of 73 whales, as included in this SAR.

Response: NMFS appreciates this recommendation regarding designating humpback whale stocks. In late 2019, NMFS finalized a new Policy Directive: Reviewing and Designating Stocks and Issuing Stock Assessment Reports under the Marine Mammal Protection Act (NMFS 2019). This directive established that DIP delineation and stock designation are separate processes. DIP delineation is the process of interpreting the scientific lines of evidence supporting whether groups of animals are demographically independent, including determining the geographic range of the groups. DIP delineation occurs outside the SAR process, and is described in Martien et al. (2019). Stock designation is the process of officially classifying a stock as a management unit that will then be described and assessed in SARs and considers whether individual DIPs can be effectively managed as stocks. In light of the 2016 ESA humpback whale DPS listings, the MMPA humpback whale stock designations are currently being re-evaluated according to the process laid out in NMFS (2019). NMFS is reviewing the best available science on humpback whale population structure in the Pacific and evaluating the lines of evidence to, where possible, delineate humpback whale DIPs as guided by Martien et al. (2019). This review and evaluation is currently underway and following its completion, we will follow the process to revise stock designations following NMFS (2019) as resources allow.

Both the humpback whale incidents referred to in the comment were outside the time frame of this SAR. Regarding EM technologies, NMFS believes these can provide valuable supplementary data in addition to traditional fisheries observers for collecting data on fishing effort and catch (landings and discards), including bycatch of protected species. While we have made significant strides in assessing the technology and potential applications of EM, there are continuing policy and data-related challenges that come with new technologies. These include how to process and store the enormous amount of electronic data, enforcement of compliance issues, privacy concerns of fishery participants, costs, and image processing. As research and development efforts continue, we are actively working to include protected species in those efforts. In time, we expect to see EM technologies available for wider applications, including select fisheries for monitoring bycatch of protected species.

False Killer Whale, Hawaiian Island Stock Complex

Comment 50: HLA appreciates that NMFS has updated the False Killer whale SAR to incorporate the results of the line transect survey that occurred in 2017, as well as NMFS’ associated modeling work. For future SARs, HLA requests that the results be processed and reported in the SAR more promptly. HLA comments that it is not consistent with the MMPA, or otherwise acceptable, to update a SAR with key information four years after the data has been gathered. HLA believes the results presented in the draft SAR, which reflect the best available scientific information, demonstrate that the deep-set fishery’s M/SI rate for the Hawaii Pelagic False Killer whale Stock (Pelagic Stock) is far below the stock’s PBR. Specifically, the deep-set fishery’s M/SI rate in the U.S. EEZ (6.5) is less than half of the PBR for the Pelagic Stock in the EEZ (16), and the fishery’s overall Pelagic Stock M/SI rate (35.3 [combining inside and outside the EEZ]) is less than 15 percent of NMFS estimated PBR for the central Pacific (259). These results confirm the positions HLA has taken since the False Killer whale Take Reduction Team formed in 2009—i.e., that NMFS has consistently underestimated the abundance of the Pelagic Stock and that the deep-set fishery’s M/SI rate does not exceed, and has never exceeded, the PBR for that stock. HLA comments that it presented a detailed statistical analysis performed by Dr. Ray Hilborn showing that NMFS had substantially underestimated the population size of the Pelagic Stock in the Hawaii EEZ. At that time, NMFS estimated the EEZ stock size to be 484 whales. Dr. Hilborn’s analysis concluded that a more accurate abundance estimate was 2,066 whales in the EEZ. After HLA presented those results, HLA believes NMFS wrongly criticized and discarded Dr. Hilborn’s analysis.

HLA comments that NMFS current estimate for the Pelagic Stock in the EEZ is 2,086 whales (only 20 more than Dr. Hilborn estimated in 2009). HLA comments that the best available science, as reported in the draft SAR, shows that the population size of the Pelagic Stock in the EEZ has consistently been approximately 2,100 animals going back to 2002. Specifically, the draft SAR based on Bradford et al. (2020), estimates that the stock numbered 2,144 animals in 2010.
and 2,122 animals in 2002. This demonstrates that the Pelagic Stock has never been “strategic” because the deep-set fishery’s M/SI rate has never exceeded a PBR based on those abundances. This also shows that there was no basis, as HLA argued in 2009, to include the Pelagic Stock within the scope of the False Killer whale Take Reduction Team. Finally, HLA believes the best available science also shows that the Pelagic Stock is either increasing or, at worst, remaining stable. If NMFS’ pre-2010 estimate of 484 whales for the Pelagic Stock in the EEZ is to be believed, then the stock has increased in size dramatically over the ensuing years. Alternatively, based on the current best available science (Bradford et al. 2020), the stock has remained stable at a high abundance (of approximately 2,100 whales) within the Hawaii EEZ since at least 2002. Either way, HLA believes there is no evidence that the Hawaii-based longline fisheries are having any noticeable impact on the stock.

Response: NMFS agrees that the timely publication of results that inform SARs is important. Surveys were completed at the end of 2017, and the collected data were quality-checked and verified into 2018. New data protocols designed to improve abundance estimates for this species had to be integrated with existing line-transect methodology and updated analysis approaches to obtain the most robust estimates of abundance. After undergoing peer review, the final results were published in 2020, with the time between data collection and publication consistent with other studies using new approaches to generate estimates of abundance.

False killer whale assessments are complex. We have learned a lot about false killer whale social structure and behavior over the past 10–15 years that has significantly changed the way we collect and analyze survey data for this species. While we have much greater confidence in our 2002, 2010, and 2017 estimates now than we did when the 2002 or 2010 estimates were originally formulated, the older estimates were the best available estimates at the time they were published and used in the SARs. We no longer refer to those estimates in the SAR because they are no longer the best available. To refer to them now as rationale for arguing the stock has increased is inappropriate. The MMPA calls for using the best available scientific data available at the time that the assessments are to be completed. PBR is designed to deal with great uncertainty and is inherently precautionary. Although it is coincidental that the Hilborn 2009 analysis produced an abundance estimate that is close to our current estimate, our assessment of that analysis has not changed. There were documented problems with the Hilborn analysis, and it used which data is now severely outdated data and parameter estimates, such that it is inappropriate to compare the outdated Hilborn 2009 estimate with our current estimate representing years of targeted improvements in data collection, analytical approach, g(0) estimation, etc. With regard to comparing the current PBR to fishery mortality, we are clear within the SAR and in all other communications about our pelagic stock abundance estimates that the full central Pacific estimate provided in Bradford et al. (2020) and in the SAR represents more than one stock of false killer whales. The Palmyra stock, Hawaii pelagic stock, and any Eastern Pacific stocks are all also partially included here. Since we do not presently have high-seas boundaries for any of these stocks, we are unable to partition the full central Pacific estimate to the Hawaii pelagic stock, and, therefore, cannot meaningfully compare the full Hawaii pelagic stock abundance and PBR with fishing mortality.

Comment 51: HLA comments that the draft 2020 SAR assigns a recovery factor of 0.5 to the Hawaii pelagic stock, which is the value typically assigned to depleted or threatened stocks or stock of unknown status with a mortality estimate CV of 0.5 or less. However, the Hawaii pelagic stock is not depleted or threatened, nor is its status unknown. This status should be accurately reflected with a recovery factor that is greater than 0.5 (i.e., closer to 1.0 than to 0.5).

Response: A recovery factor of 0.5 is appropriate for the Hawaii pelagic stock. There are no estimates of population trend for this stock, and the model used to produce the new 2002, 2010, and 2017 estimates did not do so. With the 2002 or 2010 estimates were originally formulated, the older estimates were the best available estimates at the time they were published and used in the SARs. We no longer refer to those estimates in the SAR because they are no longer the best available. To refer to them now as rationale for arguing the stock has increased is inappropriate. The MMPA calls for using the best available scientific data available at the time that the assessments are to be completed. PBR is designed to deal with great uncertainty and is inherently precautionary. Although it is
underestimation is substantial. NMFS basis to suggest that this annual abundance estimates, but that all some degree of underestimation in the study period, although not that unavoidable sampling biases led to this number for purposes of reporting the “minimum population estimate” because NMFS already has a scientifically published “reasonable assurance that the stock size is equal to or greater than” 167 animals. HLA comments that to report an even lower “minimum population estimate” is arbitrary and contrary to the MMPA. Finally, HLA believes should NMFS retain their stock population estimate of 167 animals with no additional information about the actual population size, it must, consistent with its obligation to report the best available scientific information, disclose what specific portion of the MHI insular stock’s range was surveyed in the Bradford et al. (2018) study. HLA believes if NMFS is going to report an abundance estimate for only a portion of an MMPA stock’s range, then at the very minimum it must disclose to the public what portion of the range is at issue. Response: The second excerpt from Bradford et al. (2018) was incomplete. The remainder of the quoted paragraph is: “However, movement analyses of 2 of the 3 social clusters have shown that individuals satellite-tagged by CRC [Cascadia Research Collective] on the leeward sides of the MHI regularly use both leeward and windward waters throughout the chain (Baird et al. 2010, 2012), which suggests there are unlikely to be individuals in the population that never use the predominantly leeward sampling areas [that were clearly identified relative to the stock range in Figure 1 of the paper]. Therefore, it is likely that all individuals in the population have been exposed to sampling efforts at some point during the study period, although not necessarily in each year.” In general, this paper appropriately acknowledges that unavoidable sampling biases led to some degree of underestimation in the annual abundance estimates, but that all supporting evidence indicates the population has been sufficiently sampled there is no basis to suggest that this underestimation is substantial. NMFS has, and will continue to work towards understanding and addressing the availability issues discussed at length in Bradford et al. (2018), though we do not believe the underestimation is equal in all years or that it is substantial in any year. We will continue to use the point estimates and CV provided there to compute an Nmin.

Comment 54: WPRFMC comments that in the draft 2020 SAR, NMFS uses only the most recent abundance estimate to calculate the PBR. WPRFMC recommends that using a tiered approach for calculating PBR based on data availability would allow for the use of all available abundance estimates to estimate the minimum population estimate (Nmin) and recovery factor, and reduce the uncertainty in the PBR estimates. WPRFMC therefore requests that NMFS include all available abundance estimates for the pelagic false killer whale stock using the approach developed by Brandon et al. (2017). Response: NMFS appreciates the request for more expediency in generating false killer whale abundance estimates and reporting them in the SARs. We understand the importance of these estimates and their bearing on management, which underscores our commitment to ensure our results are as robust and reliable as possible. Please see our response to comment 50.

Regarding the tiered PBR approach, the MMPA calls for using the best available scientific data available at the time that the assessments are to be completed. The NMFS Guidelines for Assessing Marine Mammal Stock (GAMMS 2016), provide guidance on the calculation of Nmin to the 20th percentile of a log-normal distribution. This approach is designed to deal with great uncertainty and is inherently precautionary.

North Pacific Gray Whales

Comment 55: The Makah Tribe notes that the draft SAR compounds contextual ambiguity by using the name Western Breeding Stock (WBS) to identify the “third unnamed stock” in the description of the International Whaling Commission (IWC) Scientific Committee’s stock structure hypothesis 4a. They recommend that NMFS either name the third implied stock based on its feeding and wintering grounds, e.g., Sakhalin Eastern Breeding Stock which will distinguish it from the WBS and Eastern Breeding Stock (EBS), or use the same phrase as the IWC Scientific Committee: “WFG (Western Feeding Group) whales that interbred largely with each other while migrating to the Mexican wintering ground” (IWC 2020b).

Response: NMFS has aligned the stock hypothesis language used in the IWC stock structure document (IWC 2020b) with that appearing in both the Eastern North Pacific (ENP) and Western North Pacific (WNP) gray whale SARs. This should eliminate the previously confounding reference to the WBS for the implied third breeding stock. The unnamed third breeding stock referenced by the IWC is now referred to as “WFG (Western Feeding Group) whales that interbred largely with each other while migrating to the Mexico wintering ground.”

Comment 56: The Makah Tribe comments that the new abundance estimate for the Pacific Coast Feeding Group (PCFG) was completed in late 2019 and should be included in the 2020 SAR in the section on Population Size, Potential Biological Removal, and other appropriate sections to reflect current information (Calambokidis et al. 2020). The SAR should also include the recently published abundance estimate for the ENP stock based on the 2019–20 survey (Stewart and Weller 2021). Additionally, the Makah Tribe recommends removing the description of the stranded whales as emaciated in the description of the Unusual Mortality Event (UME) in the Population Size section.

Response: NMFS appreciates reference to new documents that became available during the public comment period for the draft 2020 SARs. New abundance estimates for ENP and PCFG whales will be included the next time the ENP SAR is revised. This will allow for thorough peer review by the SRG and adequate public comment. Language has been changed in the final 2020 SAR to better reflect the variable body conditions of stranded whales during the UME. Figures that pertain to the UME have been removed from the SAR and the reader is now pointed to the UME website, which includes periodic updates to the UME status.

Comment 57: The Makah Tribe recommends the first sentence of the Subsistence/Native Harvest Information section be modified to remove the geographic limitation to the Bering Sea. Furthermore, the Makah Tribe requests that the sentence should recognize that gray whales were once hunted in Canada (Monks et al. 2001). Additionally, in the new text describing NMFS’ proposed waiver, the Makah Tribe recommends two changes. First, in the reference to three annual strikes, the SAR should explain that this is the maximum number of strikes allowed under the proposed regulations, e.g.,
“based on the maximum allowed 3 strikes annually.” Second, the description of the post-hearing comment period should reflect that it ended in March 2020, e.g., “NMFS requested public comment.” Also, the description of the IWC’s approval of a gray whale catch limit should be revised to reflect current terminology, e.g., replacing “quota” with “catch limit,” and should reflect changes to the catch limit made in 2018.

Response: NMFS has included new language in the final 2020 SAR to incorporate these suggestions.

Comment 58: The draft SAR refers to unpublished reports that have since been published in peer-reviewed journals. The Makah Tribe recommends that the following replacement citations for unpublished reports be used where applicable: Lang et al. (2011b) should be updated to Lang et al. (2014) and Mate et al. (2010) should be updated to Lagerquist et al. (2019).

Response: These references have been updated in the final 2020 SAR.

Comment 59: Please see the Makah Tribe’s recommended changes to IWC stock structure hypotheses in the draft SAR for the ENP stock, as the draft WNP SAR incorporates identical text.

Response: See response to comment 57.

Comment 60: The tribe comments that the draft SAR updates text regarding the estimated probabilities of a Makah hunt taking a WNP gray whale to reflect the conclusions of Moore and Weller (2018). However, in making the update, the draft SAR fails to carry forward an explanation of the probabilities that is helpful to laypeople reading the SAR and makes clear that the estimated probability of such a take is very low. The Makah Tribe recommends that an updated version of that explanatory sentence (“This corresponds to an expectation of greater than 1 WNP whale strike in one of every 83 to 167 years”), which is stricken in the draft SAR, be included in the revision. NMFS also needs to correct the 95 percent Bayesian Credible Interval (CRI) for the probability for a 10-year hunt to “(95 percent CRI 0.030–0.093).” Because the same text is used in the draft ENP SAR, the changes above should be made in revising that SAR as well.

Response: NMFS has added language to reflect statements from the proposed rule (84 FR 13604; April 5, 2019) that provides details on the WNP risk assessment by Moore and Weller (2018).

Comment 61: The Status of Stock section of the draft SAR begins with the assertion that “the WNP stock is listed as ‘Endangered’ under the U.S. Endangered Species Act of 1973 (ESA) and is therefore also considered ‘strategic’ and ‘depleted’ under the MMPA.” As with previous SARs for the WNP stock, no explanation of the listing status is provided, but the draft SAR does note an ongoing 5-year Status Review initiated by NMFS in 2018. The Tribe believes NMFS never addresses the crux of the issue, i.e., the agency’s description of the WNP stock in the 1994 ESA delisting decision as geographically and reproductively isolated from the ENP stock is fundamentally inconsistent with the draft SAR’s classification of whales migrating from Sakhalin to Mexico as part of the same WNP stock and, therefore, “Endangered.”

In the draft SAR, intermittent observations of gray whales in Asian waters are cited as evidence of continued migration to an Asian breeding ground. Further, Cooke et al. (2019) found that up to 20 percent of WNP whales migrate to breeding grounds in Asian waters, providing support for their conclusion that “it is likely that a western breeding population that migrates through Asian waters still exists.” At the same time, the IWC Scientific Committee has developed stock structure hypotheses where in the most plausible hypotheses the WBS, which in Makah’s view corresponds to the WNP stock described in the ENP stock’s delisting documents, has either been extinguished (3a and 4a) or is extant but exists solely in Asian waters (5a). The same hypotheses postulate that whales that feed at Sakhalin and migrate to North America are either the WFG, which interbreeds with other whales of the EBS (3a and 5a) or breeds largely with other WFG whales while migrating to Mexico (4a). NMFS has never provided a rational explanation for its treatment of the ENP stock, i.e., those Sakhalin whales that migrate to North America, as equivalent to the WBS, which as described by the IWC matches the agency’s 1994 description of the geographically isolated, “Endangered” WNP stock. Indeed, the agency’s incorrect use of “WBS” for this unnamed, implied third breeding stock, as discussed above, appears related to this lack of clarity in the draft SAR. Absent an explanation in the SAR, NMFS’ assertion that the WNP stock described in the draft SAR is “Endangered” is untenable and the Status of Stock should be changed to “unknown” until NMFS makes a formal determination of the status of WFG whales.

The Tribe has commented at length on this issue in previous draft SARs (2014 and 2018) and believes NMFS’ response does not explain how, if at all, the agency’s view of stock structure corresponds to the stock structure hypotheses of the Scientific Committee.

Response: We acknowledge that the stock structure of North Pacific gray whales is an area of active investigation, internationally and domestically, as evidenced by the IWC’s Scientific Committee currently recognizing three ‘high plausibility’ stock structure hypotheses for WNP gray whales (IWC 2020). Consistent with our responses to related comments from the Makah on the 2018 SAR, we have relied on the best available information to update the “Stock Definition and Geographic Range” information in the final SAR. Also, NMFS has convened a Status Review Team to evaluate this information and the ESA status of WNP gray whales (83 FR 4032; January 29, 2018), including the delineation of any distinct population segment (DPS). Results from this evaluation will be incorporated as appropriate in future updates of the North Pacific gray whale SARs.

The Committee for Purchase From People Who Are Blind or Severely Disabled

Procurement List; Proposed Additions and Deletions

AGENCY: Committee for Purchase From People Who Are Blind or Severely Disabled.

ACTION: Proposed deletions from the procurement list.

SUMMARY: The Committee is proposing to delete product(s) and service(s) from the Procurement List that were furnished by nonprofit agencies employing persons who are blind or have other severe disabilities.

DATES: Comments must be received on or before: August 22, 2021.

ADDRESS: Committee for Purchase From People Who Are Blind or Severely Disabled, 1401 S. Clark Street, Suite 715, Arlington, Virginia 22202–4149.

FOR FURTHER INFORMATION CONTACT: For further information or to submit comments contact: Michael R. Jurkowski, Telephone: (703) 785–6404, or email CMTEFedReg@AbilityOne.gov.

SUPPLEMENTARY INFORMATION: This notice is published pursuant to 41 U.S.C. 8531(a)(2) and 41 CFR 51–2.3. Its purpose is to provide interested persons an opportunity to submit comments on the proposed actions.

Deletions

The following product(s) and service(s) are proposed for deletion from the Procurement List:

Product(s)

NSN(s)—Product Name(s):
7510–01–600–7630—Wall Calendar, Dated 2021, Wire Bound w/Hanger, 12” x 17”
7510–01–600–7575—Wall Calendar, Dated 2021, Wire Bound w/Hanger, 15.5” x 22”
7510–01–682–8098—Wall Calendar, Recycled, Dated 2021, Vertical, 3 Months, 12” x 26”
7530–01–600–7617—Weekly Planner Book, Dated 2021, 5” x 8”, Black
7530–01–600–7590—Daily Desk Planner, Dated 2021, Wire Bound, Non-refillable, Black Cover
7530–01–600–7759—Monthly Desk Planner, Dated 2021, Wire Bound, Non-refillable, Black Cover
7530–01–600–7701—Weekly Desk Planner, Dated 2021, Wire Bound, Non-refillable, Black Cover
7510–01–682–8110—Professional Planner, Dated 2021, Recycled, Weekly, Black, 8½” x 11”
7510–01–682–8091—Monthly Planner, Dated 2021, 14-month, 6½” x 8¼”

7510–01–682—Wall Calendar, Dated 2021, Wire Bound w/Hanger, 12” x 17”
7510–01–600–7575—Wall Calendar, Dated 2021, Wire Bound w/Hanger, 15.5” x 22”
7510–01–682–8098—Wall Calendar, Recycled, Dated 2021, Vertical, 3 Months, 12” x 26”
7530–01–600–7617—Weekly Planner Book, Dated 2021, 5” x 8”, Black
7530–01–600–7590—Daily Desk Planner, Dated 2021, Wire Bound, Non-refillable, Black Cover
7530–01–600–7759—Monthly Desk Planner, Dated 2021, Wire Bound, Non-refillable, Black Cover
7530–01–600–7701—Weekly Desk Planner, Dated 2021, Wire Bound, Non-refillable, Black Cover
7510–01–682–8110—Professional Planner, Dated 2021, Recycled, Weekly, Black, 8½” x 11”
7510–01–682–8091—Monthly Planner, Dated 2021, 14-month, 6½” x 8¼”

Designated Source of Supply: Lighthouse Industries, Chicago, IL

Contracting Activity: GSA/FAS ADMIN SVCS ACQUISITION BR(2, NEW YORK, NY)

NSN(s)—Product Name(s):
7510–01–600–8027—Dated 2021 12-Month 2-Sided Laminated Wall Planner, 24” x 37”

Designated Source of Supply: Chicago Lighthouse Industries, Chicago, IL

Contracting Activity: GSA/FAS FURNITURE SYSTEMS MGT DIV, PHILADELPHIA, PA

NSN(s)—Product Name(s):
7520–01–484–8166—Load Lifter Attachment Strap, MOLLE Components, Desert Camouflage

Designated Source of Supply: Industries for the Blind and Visually Impaired, Inc., West Allis, WI

Contracting Activity: DLA TROOP SUPPORT, PHILADELPHIA, PA

NSN(s)—Product Name(s):
8465–01–519–6132—Load Lifter Attachment Strap, MOLLE Components, Desert Camouflage

Designated Source of Supply: AlphaPointe, Kansas City, MO

Contracting Activity: DLA TROOP SUPPORT, PHILADELPHIA, PA

NSN(s)—Product Name(s):
8465–01–580–1666—Load Lifter Attachment Strap, MOLLE Components, Universal Camouflage

Contracting Activity: DLA TROOP SUPPORT, PHILADELPHIA, PA

NSN(s)—Product Name(s):
8660–00–165–5778—Kit, Urine Specimen Bottles With Mailers

Designated Source of Supply: AlphaPointe, Kansas City, MO

Contracting Activity: DLA TROOP SUPPORT, PHILADELPHIA, PA

Service(s)

Service Type: Sourcing, Warehousing, Assembly and Kitting

Mandatory for: Army National Guard Recruiting and Retention Command, Nashville, TN, Houston Barracks, Nashville, TN

Designated Source of Supply: Industries for the Blind and Visually Impaired, Inc., West Allis, WI

Contracting Activity: DEPT OF THE ARMY, W7N1 USPFO ACTIVITY TN ARNG

Service Type: Furniture Design and Configuration Services

Mandatory for: Maine National Guard, Augusta, ME, 194 Winthrop Street, Augusta, ME
CONSUMER PRODUCT SAFETY COMMISSION

[Docket No. CPSC–2018–0005]

Agency Information Collection Activities; Proposed Collection; Comment Request; Survey on Smoke and Carbon Monoxide Alarms

AGENCY: Consumer Product Safety Commission.

ACTION: Notice.

SUMMARY: As required by the Paperwork Reduction Act of 1995, the Consumer Product Safety Commission (CPSC or Commission) requests comments on a proposed extension of approval for an information collection on a survey that will estimate the use of smoke and carbon monoxide alarms in United States households. The Office of Management and Budget (OMB) previously approved the collection of information under OMB Control No. 3041–0180. The current information collection will expire on October 31, 2021. CPSC will consider all comments received in response to this notice before requesting an extension of approval of this collection of information from OMB.

DATES: Submit written or electronic comments on the collection of information by September 21, 2021.

ADDRESSES: You may submit comments, identified by Docket No. CPSC–2018–0005, by any of the following methods:

Electronic Submissions: Submit electronic comments to the Federal eRulemaking Portal at: https://www.regulations.gov. Follow the instructions for submitting comments. CPSC does not accept comments submitted by electronic mail (email), except through https://www.regulations.gov and as described below. CPSC encourages you to submit electronic comments by using the Federal eRulemaking Portal, as described above.

Mail/hand delivery/courier Written Submissions: Submit comments by mail/hand delivery/courier to: Division of the Secretariat, Consumer Product Safety Commission, 4330 East West Highway, Bethesda, MD 20814; telephone: (301) 504–7479. Alternatively, as a temporary option during the COVID–19 pandemic, you may email such submissions to: cpsc-os@cpsc.gov.

Instructions: All submissions must include the agency name and docket number for this notice. CPSC may post all comments received without change, including any personal identifiers, contact information, or other personal information provided, to: https://www.regulations.gov. Do not submit electronically: Confidential business information, trade secret information, or other sensitive or protected information that you do not want to be available to the public. If you wish to submit such information, please submit it according to the instructions for mail/hand delivery/courier written submissions.

Docket: For access to the docket to read background documents or comments received, go to: https://www.regulations.gov, insert Docket No. CPSC–2018–0005 into the “Search” box, and follow the prompts. A copy of the proposed survey titled “SCOA ICR 2021 60-day” is available at: http://www.regulations.gov under Docket No. CPSC–2018–0005, Supporting and Related Material.

FOR FURTHER INFORMATION CONTACT: Cynthia Gillham, Consumer Product Safety Commission, 4330 East West Highway, Bethesda, MD 20814; (301) 504–7991, or by email to: cgillham@cpsc.gov.

SUPPLEMENTARY INFORMATION:

A. Background

The Commission is authorized under section 5(a) of the Consumer Product Safety Act (CPSA), 15 U.S.C. 2054(a), to conduct studies and investigations relating to the causes and prevention of deaths, accidents, injuries, illnesses, other health impairments, and economic losses associated with consumer products. Section 5(b) of the CPSA, 15 U.S.C. 2054(b), further provides that the Commission may conduct research, studies, and investigations on the safety of consumer products or test consumer products and develop product safety test methods and testing devices.

In 1992, the CPSC sponsored a national in-home survey to collect information on the number of residential smoke alarms in actual use in homes and to evaluate the operability of the sampled alarms. The results were published in the 1994 report, Consumer Product Safety Commission Smoke Detector Operability Survey Report on Findings. Although the survey results were instrumental for many years in developing state and local codes and standards related to smoke alarms, subsequent changes in technology, installation codes, and state/local ordinances in the past 25 years have rendered the information outdated and less effective. Stakeholders’ groups for fire loss prevention have identified a need for an updated national survey to increase the installation and maintenance of smoke alarms in the United States. In addition, installations of CO alarms have increased since 1992. Accordingly, CPSC sought to update its data information collection related to smoke and CO alarm use through a new survey, the National Smoke and CO Alarm Survey (SCOA survey).

Although the SCOA survey initially commenced in January 2019, CPSC experienced lower response rates relative to expectations in the administration of the SCOA survey in field locations than had been established by the study’s approved methodology. To correct for this challenge, and to complete the number of homes surveyed in the contract, CPSC undertook a revised sampling method and contact protocol of participant recruitment. Among the revisions to the methodology, CPSC included a redesign of the recruitment, screening, and in-home survey based on a random walk door-to-door knocking sample methodology. The SCOA survey seeks to collect information from 1,185 households within the United States. The survey will be conducted only through face-to-face, in-home interviews. Following all COVID–19 safety precautions, survey professionals will provide pre-notification door hangers requesting participation in the survey. These households will be recruited, and willing participants will be provided with consent forms, and the survey team will administer questions regarding the residence type and smoke and CO alarm availability and functionality in the residences. The survey team also will identify, test, and examine several of the alarms in the home, as time permits, and if they are found faulty, provide new alarms or batteries, if requested by the participant. No action will be taken if participants choose not to have the alarm fixed or replaced.

CPSC entered into a contract with Eureka Facts to conduct the SCOA survey through a national in-home survey that would estimate the use and
functionality of smoke and CO alarms in households, as well as assess user hazard perceptions regarding such alarms. The purpose of the SCOA survey is to collect data that will assist CPSC with better estimation of the number and types of smoke and CO alarms installed in U.S. households, the proportion of working smoke and CO alarms, the characteristics of residences and residents where the smoke and CO alarms are not operational, perceptions of residents related to the causes of “false” alarms or causes of faulty alarms, consumer hazard awareness, and consumer behavior related to alarm use and smoke and CO hazards.

The information collected from the SCOA survey would provide CPSC updated national estimates regarding the use of smoke alarms and CO alarms in households, based on direct observation of alarm installations. The survey also would help CPSC identify the groups that do not have operable smoke alarms and CO alarms and understand the reasons why they do not have such alarms. With this information, CPSC would be able to target better its messaging to improve consumer use and awareness regarding the operability of these alarms. In addition, the survey results would help to inform CPSC’s recommendations to voluntary standards groups and state/local jurisdictions regarding their codes, standards, and/or regulations on smoke and CO alarms.

### B. Burden Hours

We estimate the number of respondents to be 1,185. We estimate the total annual burden hours for respondents to be 1,552 hours, based on the total time required to respond to the invitation, screener, and the actual survey. According to the U.S. Bureau of Labor Statistics, the total compensation for civilian workers in March 2021 was $39.01 per hour (Employer Cost for Employee Compensation, Table 2, https://www.bls.gov/news.release/cecec.t02.htm). Therefore, CPSC estimates the cost burden for respondents to be $60,544 ($39.01 per hour × 1,552 hours = $60,543.52). The total cost to the federal government for the contract to design and conduct the revised survey is $562,725.

### C. Request for Comments

The CPSC invites comments on these topics:
- The accuracy of CPSC’s estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Ways to enhance the quality, utility, and clarity of the information to be collected; and
- Ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques, when appropriate, and other forms of information technology.

Alberta E. Mills, Secretary, Consumer Product Safety Commission.

DEPARTMENT OF DEFENSE

### Department of the Army

Environmental Impact Statement for Army Training Land Retention of State Lands at Kahuku Training Area, Poamoho Training Area, and Makua Military Reservation, Island of Oʻahu, Hawaiʻi

**AGENCY:** Department of the Army; DoD.

**ACTION:** Notice of intent.

**SUMMARY:** In accordance with the National Environmental Policy Act (NEPA) 1969 and the Hawai‘i Environmental Policy Act (HEPA), the Department of the Army (Army) is issuing this Notice of Intent to prepare an Environmental Impact Statement (EIS) to address the Army’s proposed retention of up to approximately 6,300 acres of land currently leased to the Army by the State of Hawai‘i (“State-owned lands”) on the island of O‘ahu. Lease agreements between the State of Hawai‘i and the Army at each of these three training areas were initiated in 1964 and expire in 2029. State-owned lands includes approximately 1,170 acres at Kahuku Training Area (KTA), approximately 4,370 acres at Poamoho Training Area (Poamoho), and approximately 760 acres at Makua Military Reservation (MMR). Training areas are utilized by Army units and other users such as the Marine Corps and Hawaii Army National Guard. Because the Proposed Action involves State-owned lands, the EIS will be a joint NEPA–HEPA document; therefore, the public scoping processes will run concurrently and will jointly meet NEPA and HEPA requirements. The EIS will evaluate the environmental impacts from implementing the proposed land retention.

**DATES:** The Army invites public comments on the scope of the EIS during a 40-day public scoping period. Comments must be received by September 1, 2021.

**ADDRESSES:** Please send written comments to the EIS website at: https://home.army.mil/hawaii/index.php/OAHUEIS. Alternatively, comments can be emailed to usarmy.hawaii.nepa@mail.mil, or mailed to: O‘ahu ATLR EIS Comments, P.O. Box 3444, Honolulu, HI 96801–3444.

**FOR FURTHER INFORMATION CONTACT:** Please contact Amy Bugala, U.S. Army Garrison-Hawai‘i (USAG–HI) Public Affairs Officer, at: (808) 656–3160 or by email to: usarmy.hawaii.comrel@mail.mil.

**SUPPLEMENTARY INFORMATION:** USAG–HI is home to the 25th Infantry Division (ID), and other commands, whose mission is to deploy to conduct decisive actions in support of unified land operations; the Division conducts continuous persistent engagement with regional partners to shape the environment and prevent conflict across the Pacific operational environment. On orders, these units may conduct theater-wide deployment to perform combat operations in support of U.S. Indo-Pacific Command (USINDOPACOM). The 25th ID is based out of Schofield Barracks on the island of O‘ahu and trains on a rotational basis at various training areas, including KTA, Poamoho, and MMR.

Located in northeast O‘ahu, KTA has been the site of military training since the mid-1950s. Current training activities on State-owned lands at KTA include high-density company-level helicopter training in a tactical environment, large-scale ground maneuver training, and air support training.

Located in the Ko‘olau Mountains in north-central O‘ahu, the Poamoho Training Area has been the site of military training since 1964 and provides ideal airspace with ravines and deep vegetation vital to realistic helicopter training.

Located in northwest O‘ahu, MMR has been a site for military training for nearly 100 years. Tactical training at MMR began in 1941 after the surprise attack on Pearl Harbor and military exercises continue to this day. Current training activities on State-owned lands at MMR include maneuver training, the establishment and use of restricted airspace for unmanned aerial vehicle training, as well as wildfire suppression and security activities.

The purpose of land retention is to secure the long-term military use of...
State-owned parcels, for which current leases expire in 2029. The need to retain use of these training lands is to allow the military to continue to meet current and future training and combat readiness requirements on Army-managed lands in Hawai‘i. To understand the environmental consequences of the decisions to be made, the EIS will evaluate the reasonably foreseeable impacts of a range of potential alternatives that meet the purpose of and need for the Proposed Action. Alternatives to be considered include the No Action Alternative, (1) Full Retention, (2) Modified Retention, and (3) Minimum Retention and Access. The Proposed Action does not involve new training, construction, or resource management activities. Under Full Retention, the Army would retain all State-owned lands within each training area. Under Modified Retention, the Army would retain all State-owned lands within each training area except lands on which limited training occurs. Under Limited Retention and Access, the Army would retain the minimum amount of State-owned lands within each training area that is required for USARHAW to continue to meet its current ongoing training requirements. This includes the State-owned lands with the most vital training/support facilities, infrastructure, maneuver land, all U.S. Government-owned utilities, and access to these features. Other reasonable alternatives raised during the scoping process that meet the Army mission, project purpose, and need will also be considered for evaluation in the EIS.

An EIS-level analysis is being undertaken because the land retention action could have potentially significant impacts on environmental and social resource areas including biological resources, cultural resources, hazardous and toxic materials and wastes, socioeconomics, utilities, and human health and safety. The analysis in the EIS will determine the projected level of impact on each resource area.

The Army anticipates permits and authorizations may be required for the Proposed Action, including a lease from the State of Hawai‘i Department of Land and Natural Resources (DLNR), National Historic Preservation Act and Hawai‘i Historic Preservation Review consultation with the State Historic Preservation Officer, Endangered Species Act Section 7 consultation with the U.S. Fish and Wildlife Service, a Coastal Zone Management consistency determination from the Hawai‘i State Coastal Zone Management Office, and a Conservation District Use Permit applicability determination from the DLNR Office of Conservation and Coastal Lands.

The Draft EIS will be available in the summer of 2022. The Final EIS 2023, ROD spring 2024. The Final EIS and Record of Decision are estimated to be available within three years of this notice.

Native Hawaiian organizations; Federal, State, and local agencies; and the public are invited to be involved in the scoping process for the preparation of this EIS by participating in a scoping meeting and/or submitting written comments. The Army requests assistance with identifying potential alternatives to the Proposed Action to be considered and identification of information and analyses relevant to the Proposed Action. Written comments must be sent within 40 days of publication of the Notice of Intent in the Federal Register. In response to the coronavirus (COVID–19) pandemic in the United States and the Center for Disease Control’s current recommendations for social distancing and avoiding large public gatherings, the Army may not hold in-person public scoping meetings for this action. In lieu of in-person public scoping meetings, the Army may provide virtual scoping opportunities that will include an online presentation and collaboration tools, as appropriate, and reasonable accommodations for the public to view information and provide oral or written comments subject to COVID–19 limitations. An EIS Scoping Virtual Open House will be held at Leilehua Golf Course (199 Leilehua Golf Course Rd., Wahiawa, HI 96786) on August 9 and 10, 2021 from 6 to 9 p.m. During the EIS Scoping Virtual Open House, video presentations describing the Proposed Action can be viewed online at: https://home.army.mil/hawaii/index.php/OAHUEIS and oral comments will be taken via an accompanying call-in option. Written comments will be accepted during the EIS Scoping Virtual Open House and throughout the duration of the 40-day scoping process through an online comment platform or by mail or email. Additional in-person public comment stations may be made available, subject to procedural compliance with governmental guidance and restrictions related to COVID–19. Notification of the EIS Scoping Virtual Open House and in-person public comment stations will also be published and announced in local news media outlets and on the EIS website: https://home.army.mil/hawaii/index.php/OAHUEIS. Hard copy scoping information will be available by making a request to Amy Bugala, USAG–HI Public Affairs Officer at (808) 656–3160 or by email to: usarmy.hawaii.comrel@mail.mil.

James W. Satterwhite Jr.,
Army Federal Register Liaison Officer.

DEPARTMENT OF DEFENSE
Office of the Secretary
[Docket ID: DoD–2021–HA–0067]

Proposed Collection: Comment Request

AGENCY: The Office of the Assistant Secretary of Defense for Health Affairs, Department of Defense (DoD).

ACTION: Information collection notice.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995, the Defense Health Agency announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency’s estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by September 21, 2021.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods: Federal eRulemaking Portal: http://www.regulations.gov. Follow the instructions for submitting comments. Mail: DoD cannot receive written comments at this time due to the COVID–19 pandemic. Comments should be sent electronically to the docket listed above.

Instructions: All submissions received must include the agency name, docket number and title for this Federal Register document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at http://www.regulations.gov as they are received without change, including any personal identifiers or contact information.
FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to the Defense Health Agency, ATTN: Maj Nathan Reynolds, 7700 Arlington Blvd., STE 5158, 3M546B, Falls Church, VA 22042 or call 703–681–5101.

SUPPLEMENTARY INFORMATION:
Title: Associated Form; and OMB Number: DoD COVID–19 Vaccine Questionnaire; OMB Control Number 0720–0069.

Needs and Uses: The purpose of the DoD COVID–19 Vaccine Questionnaire is as follows: (1) Exercise due-diligence to reach out to the vast majority of our authorized vaccine eligible population (but has not received the COVID–19 vaccine per Military Health System records) with instructions on how to receive the vaccine. (2) Understand existing vaccine demand to adjust. (3) Inform future (i.e. booster) vaccination efforts. (4) Lift an administrative burden i.e. executing a standardized survey at the HQ level. (5) Remind message/questionnaire recipients to have their medical record updated with their vaccination as applicable.

Affected Public: Individuals or households.

Annual Burden Hours: 19,000.
Number of Respondents: 570,000.
Responses per Respondent: 1.
Annual Responses: 570,000.
Average Burden per Respondent: 2 minutes.
Frequency: One time.

Dated: July 20, 2021.

Aaron T. Siegel,
Alternate OSD Federal Register, Liaison Officer, Department of Defense.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Medical Screening of Military Personnel-Medical History Report and Accession Medical History Report; DD Form 2807–1/DD Form 2807–2; OMB Control Number 0704–0413.

Needs and Uses: This information is needed to determine the medical qualifications of applicants based upon their current and past medical history. The information obtained on the DD Form 2807–2 ensures the recruiter that an applicant has identified any medical disqualifying condition(s) prior to application process and meets the Congressional requirements to obtain both the applicants Health Care provider and Insurance provider. Additionally, it allows the military examining physician to obtain medical records critical to evaluating the applicant’s medical condition(s) prior to their entry examination. The DD Form 2807–1 is needed as part of the required medical examination to assist physicians in making determinations as to acceptability of applicants for military service and verifies disqualifying medical condition(s) noted on the accession medical history report form.

Affected Public: Individuals or households.

Annual Burden Hours: 128,834 hours.

Number of Respondents: 773,003.

Responses per Respondent: 1.

Annual Responses: 773,003.

Average Burden per Response: 10 minutes.

Frequency: On occasion.

Dated: July 20, 2021.

BILLING CODE 5001–06–P

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DoD–2021–OS–0068]

Proposed Collection; Comment Request

AGENCY: Office of the Under Secretary of Defense for Personnel and Readiness, Department of Defense (DoD).

ACTION: Information collection notice.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995, the Office of the Under Secretary of Defense for Personnel and Readiness announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency’s estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by September 21, 2021.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods: Federal eRulemaking Portal: http://www.regulations.gov. Follow the instructions for submitting comments.

Mail: DoD cannot receive written comments at this time due to the COVID–19 pandemic. Comments should be sent electronically to the docket listed above.

Instructions: All submissions received must include the agency name, docket number and title for this Federal Register document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at http://www.regulations.gov as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to Ms. Angela Duncan at the Department of Defense, Washington Headquarters Services, ATTN: Executive Services Directorate, Directives Division, 4800 Mark Center Drive, Suite 03F09–09, Alexandria, VA 22350–3100 or call 571–372–7574.

SUPPLEMENTARY INFORMATION:

Title: Associated Form; and OMB Number: SAPR/SHARP Survey; OMB Control Number 0704–0608.

Needs and Uses: NORC at the University of Chicago, in collaboration with the United States Naval Academy (USNA) Sexual Assault Prevention and Response (SAPR) staff and the United States Military Academy (USMA) sexual harassment/assault response and prevention (SHARP) staff, is conducting the SAPR/SHARP Surveys (a baseline survey and one follow-up survey) with USNA students (midshipmen) and USMA students (cadets) with funding support from the Sexual Assault Prevention and Response Office. The purpose of the overall study is to determine the effectiveness of the academy prevention programming in addressing sexual harassment and sexual assault. The survey assesses topics such as rape myth acceptance, descriptive behavioral norms at the respective academies, experiences of sexual harassment and sexual assault, alcohol-related sex expectancies, witnessing experiences that might call for bystander intervention to prevent sexual harassment and/or sexual assault, and personal responses when exposed to these situations. The surveys are voluntary. Data are aggregated by appropriate sociodemographic categories (sex, sexual orientation, race/ethnicity, and varsity athletic participation; sociodemographic responses will be recoded as binary indicators to prevent anyone from figuring out an individual participant’s...

Proposed Collection; Comment Request

AGENCY: Defense Counterintelligence and Security Agency, Department of Defense (DoD).

ACTION: Information collection notice.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995, the Defense Counterintelligence and Security Agency announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by September 21, 2021.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods: Federal eRulemaking Portal: http://www.regulations.gov. Follow the instructions for submitting comments. Mail: DoD cannot receive written comments at this time due to the COVID–19 pandemic. Comments should be sent electronically to the dockets listed above.

Instructions: All submissions received must include the agency name, docket number and title for this Federal Register document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at http://www.regulations.gov as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to the Defense Counterintelligence and Security Agency, 27130 Telegraph Rd., Quantico, VA 22134–2253 ATTN: Ms. Stepheny Fanning, or call (571) 305–6685.

SUPPLEMENTARY INFORMATION:

Title: Associated Form; and OMB Number: Transitional Compensation for Abused Dependents (TCAD); DD Form 2698; OMB Control Number 0704–0578.

Needs and Uses: The information collection requirement is necessary to establish eligibility, determine the number of payments, determine the number of dependents, determine the amount of compensation, and direct payment to the abused dependent(s).

Affected Public: Individuals or Households.

Annual Burden Hours: 166.7.
Number of Respondents: 500.
Responses per Respondent: 1.
Annual Responses: 500.
Average Burden per Response: 20 minutes.

Frequency: On occasion.

Respondents are abused dependents or former dependents, or legal representatives of abused dependents or former dependents, of service members who are convicted or administratively separated from military service due to a dependent abuse offense. In order to receive the benefit, the recipient must complete the required information in DD Form 2698.

Dated: July 20, 2021.

SUPPLEMENTARY INFORMATION:

Title: Associated Form; and OMB Number: Basic Employee and Security Tracking Systems (BEAST); OMB Control Number 0704–0507.

Needs and Uses: The information collection requirement is necessary to obtain, track, and record the personnel security data, training information, and travel history within the White House Military Office (WHMO) and White House Communications Agency (WHCA).

AFFECTED PUBLIC: Individuals or Households.

Annual Burden Hours: 38.

Number of Respondents: 150.

Responses per Respondent: 1.

Annual Responses: 150.

Average Burden per Response: 0.25 hours (15 minutes).

Frequency: On Occasion.

Respondents are DoD contractors, retired military members who have departed the agency, and agency visitors. The data collected is used for security background checks, training records, and also to encompass the historical travel records of members of the agency. This data collection is essential in maintaining the integrity of the agency’s personnel, training, and travel programs.

Dated: July 20, 2021.

BILLING CODE 5001–06–P
DEPARTMENT OF EDUCATION
National Assessment Governing Board

Meeting

AGENCY: National Assessment Governing Board, Department of Education.

ACTION: Notice of open and closed virtual meetings.

SUMMARY: This notice sets forth the agenda for the National Assessment Governing Board (hereafter referred to as Governing Board) meeting scheduled for August 5–6, 2021. This notice provides information about the meeting to members of the public who may be interested in attending and/or providing written comments related to the work of the Governing Board. Notice of this meeting is required under the Federal Advisory Committee Act (FACA).

ADDITIONAL INFORMATION:

Title: Associated Form; and OMB Number: DoD Child Development Program (CDP)—Criminal History; DD Form 2981; OMB Control Number 0704–22350–3100.

Needs and Uses: The information collection requirement is necessary to obtain a self-reported record of criminal history from each employee, contractor, volunteer, family child care provider, and family child care adult family member residing in the home. Authority is granted by 42 United States Code 13041 which requires the application for individuals who are seeking work for an agency of the Federal Government, or for a facility or program operated by (or through contract with) the Federal Government, contain a question asking whether the individual has ever been arrested for or charged with a crime involving a child, and if so requiring a description of the disposition of the arrest or charge. Individuals who are interested in working for the DoD or for a program operated by or through a contract with the DoD must complete the form prior to working with children under the age of 18 years.

Affected Public: Individuals or households.

Average Burden per Response: 15 minutes.

Frequency: On occasion.

Dated: July 20, 2021.

Aaron T. Siegel,
Alternate OSD Federal Register, Liaison Officer, Department of Defense.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to Ms. Angela Duncan at the Department of Defense, Washington Headquarters Services, ATTN: Executive Services Directorate, Directives Division, 4800 Mark Center Drive, Suite 03F09–09, Alexandria, VA 22350–3100 or call 571–372–7574.

SUPPLEMENTARY INFORMATION:

The information needs and uses are as follows:

Annual Burden Hours: 2,000 hours.
Number of Respondents: 8,000.

The Governing Board is established under the National Assessment of Educational Progress Authorization Act, Title III of Public Law 107–279. Information on the Governing Board and its work can be found at www.nagb.gov.

Quarterly Governing Board Meeting

The plenary sessions of the August 5–6, 2021 quarterly meeting of the Governing Board will be held on the following dates and times:

Thursday, August 5, 2021: Open Meeting: 1:15 p.m.–5:30 p.m.; Closed Meeting: 10:00 a.m.–1:15 p.m.; Open Meeting: 2:15 p.m.–4:00 p.m.
August 5, 2021: Open Meetings

On Thursday, August 5, 2021, the Governing Board will meet in open session from 1:15 p.m. to 5:30 p.m. From 1:15 p.m. to 1:30 p.m., Chair Haley Barbour will welcome members, review and approve the August 5–6, 2021 quarterly Governing Board meeting agenda, and approve minutes from the May 14–15, 2021 quarterly Governing Board meeting.

From 1:30 p.m. to 1:45 p.m., Lesley Muldoon, Executive Director of the Governing Board, will provide an update on ongoing work, followed by an update from the National Center for Education Statistics (NCES) from 1:45 p.m. to 2:15 p.m.

From 2:15 p.m. to 2:45 p.m., the Chairs of Standing Committees will provide updates on ongoing work. Two action items will be presented for Governing Board vote based on recommendations made by the Executive Committee—the nomination for Governing Board Vice Chair for the term October 1, 2021–September 30, 2022, and a recommendation to change the Long-Term Trend Administration in 2022 from 17-year-olds to 9-year-olds.

After a 15-minute break, from 3:00 p.m. to 4:00 p.m., the Governing Board will meet in open session to discuss and take action on the NAEP Reading Framework. From 4:00 p.m. to 5:30 p.m., the Governing Board will receive an overview of the Technology and Engineering Literacy Assessment.

The Thursday, August 5, 2021 session of the Governing Board meeting will adjourn at 5:30 p.m.

August 6, 2021

On Friday, August 6, 2021, the Governing Board meeting will convene in two closed sessions from 12:30 p.m. to 1:15 p.m. and thereafter in open session from 2:15 p.m. to 4:00 p.m.

The first closed session will convene from 10:00 a.m. to 11:30 a.m. to receive a briefing from Peggy Carr, Associate Commissioner of NCES, and Lesley Muldoon on the NAEP Budget and Assessment Schedule. The briefing and Governing Board discussions may affect current and future NAEP contracts and budgets and must be kept confidential to maintain the integrity of the federal acquisition process. Public disclosure of this confidential information would significantly impede implementation of the NAEP assessment program if conducted in open session. Such matters are protected by exemption 9(B) of § 552b of Title 5 U.S.C.

The second closed session will convene from 11:45 a.m. to 1:15 p.m. to receive briefings from NCES on two upcoming releases—the Long-Term Trend Assessment and the High School Transcript Study. This session must be closed because both sets of results are not yet publicly released. Such matters are protected by exemption 9(B) of § 552b of Title 5 U.S.C.

The Governing Board will reconvene in open session from 2:15 p.m. to 3:30 p.m. to receive a briefing from Ebony Walton, NCES, on understanding patterns of similar NAEP results across different subject areas. Following this session, from 3:30 p.m. to 4:00 p.m., departing members whose terms of service will end on September 30, 2021 will provide farewell remarks. The August 6, 2021 session of the Governing Board meeting will adjourn at 4:30 p.m.

The Quarterly Board meeting and committee meeting agendas, together with meeting materials will be posted on the Governing Board’s website at www.nagb.gov no later than five working days prior to each meeting. Virtual attendance for all open sessions will be accessible to members of the public via online registration only at www.nagb.gov 5 business days prior to each meeting.

Access to Records of the Meeting: Pursuant to FACA requirements, the public may also inspect the meeting materials at www.nagb.gov five business days prior to each meeting. The official verbatim transcripts of the public meeting sessions will be available for public inspection no later than 30 calendar days following each meeting.

Reasonable Accommodations: The meeting is accessible to individuals with disabilities. If you will need an auxiliary aid or service to participate in the meeting (e.g., interpreting service, assistive listening device, or materials in an alternate format), notify the contact person listed in this notice no later than ten working days prior to each meeting. Written comments related to the work of the Governing Board may be submitted electronically or in hard copy to the attention of the Executive Officer/Designated Federal Official (see contact information noted above).

Public Participation: Members of the public may virtually attend and attend in person all open sessions of the standing committee and full Governing Board meetings via advance registration. A link to the registration page will be posted on www.nagb.gov five business days prior to each meeting date.

Electronic Access to this Document: The official version of this document is the document published in the Federal Register. This is the official edition of the Federal Register and the Code of Federal Regulations is available via the Federal Digital System at: www.gpo.govfdsys. At this site you can view this document, as well as all other documents of this Department published in the Federal Register, in text or Adobe Portable Document Format (PDF). To use PDF, you must have Adobe Acrobat Reader, which is available free at the Adobe website. You may also access documents of the Department published in the Federal Register by using the article search feature at: www.federalregister.gov. Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

Authority: Public Law 107–279, Title III—National Assessment of Educational Progress § 301.

Lesley Muldoon,
Executive Director, National Assessment Governing Board (NAGB), U.S. Department of Education.

DEPARTMENT OF EDUCATION
[Docket No.: ED–2021–SCC–0109]

Agency Information Collection Activities; Comment Request; Consolidated Annual Report (CAR) for the Carl D. Perkins Career and Technical Education Act of 2006

AGENCY: Office of Career, Technical, and Adult Education (OCTAE), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, ED is proposing a revision of a currently approved collection.

DATES: Interested persons are invited to submit comments on or before September 21, 2021.

ADDRESSES: To access and review all the documents related to the information collection listed in this notice, please use http://www.regulations.gov by searching the Docket ID number ED–2021–SCC–0109. Comments submitted in response to this notice should be submitted electronically through the Federal eRulemaking Portal at http://www.regulations.gov by selecting the Docket ID number or via postal mail, commercial delivery, or hand delivery. If the regulations.gov site is not available to the public for any reason, ED will temporarily accept comments at ICDOcketMgr@ed.gov. Please include the docket ID number and the title of the information collection request when requesting documents or submitting
comments. Please note that comments submitted by fax or email and those submitted after the comment period will not be accepted. Written requests for information or comments submitted by postal mail or delivery should be addressed to the PRA Coordinator of the Strategic Collections and Clearance Governance and Strategy Division, U.S. Department of Education, 400 Maryland Ave. SW, LBJ, Room 6W208D, Washington, DC 20202–8240.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Braden Goetz, 202–245–7405.

SUPPLEMENTARY INFORMATION: The Department of Education (ED), in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public’s reporting burden. It also helps the public understand the Department’s information collection requirements and provide the requested data in the desired format. ED is soliciting comments on the proposed information collection request (ICR) that is described below. The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

OMB Control Number: 1830–0569.

Type of Review: A revision of a currently approved collection.

Respondents/Affected Public: State, Local, and Tribal Governments.

Total Estimated Number of Annual Responses: 53.

Total Estimated Number of Annual Burden Hours: 12,632.

Abstract: This information collection is used by the U.S. Department of Education to gather annual performance and financial data from eligible agencies under the Carl D. Perkins Career and Technical Education Act of 2006 as amended by the Strengthening Career and Technical Education for the 21st Century Act (Pub. L. 115–224). We are proposing to revise the ICR to remove the option to report enrollment and performance data via the EDFacts system, amend the Fiscal Responsibility section of the Narrative Performance Report to collect additional data about subgrants and their recipients, and to make clarifying changes to some of the instructions.

Dated: July 20, 2021.

Kate Mullan,

PRA Coordinator, Strategic Collections and Clearance, Governance and Strategy Division, Office of Chief Data Officer, Office of Planning, Evaluation and Policy Development.

ENVIRONMENTAL PROTECTION AGENCY

Information Collection Request Submitted to OMB for Review and Approval; Comment Request; NSPS for Bulk Gasoline Terminals (Renewal)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) has submitted an information collection request (ICR),
Washington, DC. The telephone number for the Docket Center is 202–566–1744. For additional information about EPA’s public docket, visit: http://www.epa.gov/dockets.

Abstract: Owners and operators of gasoline bulk terminals are required to comply with reporting and record keeping requirements for the General Provisions (40 CFR part 60, subpart A), as well as for the applicable standards in 40 CFR part 60, subpart XXX. This includes submitting initial notifications, performance tests, and maintaining records of inspections and the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility. These reports are used by EPA to determine compliance with these standards.

Form Numbers: None.

Respondents/affected entities: Bulk gasoline terminals.

Respondent’s obligation to respond: Mandatory (40 CFR part 60, subpart XX).

Estimated number of respondents: 214 (total).

Frequency of response: Initially. Total estimated burden: 70,900 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: $8,320,000 (per year), which includes $0 for annualized capital/startup and/or operation & maintenance costs.

Changes in the estimates: There is an adjustment increase in the total estimated burden as currently identified in the OMB Inventory of Approved Burdens. This increase is not due to any program changes. The change in the burden and cost estimates occurred because of an increase in the number of existing respondents. The number of existing respondents in this ICR has been adjusted based on data collected from EPA’s Enforcement and Compliance History Online (ECHO) database. A review of the ECHO data based on NAICS code 424710 (Petroleum Bulk Stations and Terminals), availability of EIS ID, identification as subject to Subpart XX, and reported to the National Emissions Inventory identified approximately 214 active sources. This ICR reflects a more accurate estimate of the number of existing respondents. The number of new respondents per year has not been adjusted due to uncertainty in current industry trends. The overall result is an increase in burden hours and costs.

Courtney Kerwin.
Director, Regulatory Support Division.

ENVIRONMENTAL PROTECTION AGENCY

Information Collection Request Submitted to OMB for Review and Approval; Comment Request; Background Checks for Contractor Employees (Renewal)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) has submitted an information collection request (ICR), Background Checks for Contractor Employees (EPA ICR Number 2159.08, OMB Control Number 2050–0043) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act. This is a proposed extension of the ICR, which is currently approved through September 30, 2021. Public comments were previously requested via the Federal Register on January 21, 2021 during a 60-day comment period. This notice allows for an additional 30 days for public comments. A fuller description of the ICR is given below, including its estimated burden and cost to the public. An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

DATES: Additional comments may be submitted on or before August 23, 2021.

ADDRESSES: Submit your comments, referencing Docket ID Number EPA–HQ–OARM–2017–0752, online using www.regulations.gov (our preferred method), or by mail to: EPA Docket Center, Environmental Protection Agency, Mail Code 28221T, 1200 Pennsylvania Ave. NW, Washington, DC 20460. EPA’s policy is that all comments received will be included in the public docket without change including any personal information provided, unless the comment includes profanity, threats, information claimed to be Confidential Business Information (CBI), or other information whose disclosure is restricted by statute.

Submit written comments and recommendations to OMB for the proposed information collection within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-Day Review—Open for Public Comments” or by using the search function.

FOR FURTHER INFORMATION CONTACT: Denise Clarke, Policy Training and Oversight Division, Office of Acquisition Solutions (3802R), Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460; telephone number: (202) 564–8414; email address: clarke.denise@epa.gov.

SUPPLEMENTARY INFORMATION:
Supporting documents, which explain in detail the information that the EPA will be collecting, are available in the public docket for this ICR. The docket can be viewed online at www.regulations.gov or in person at the EPA Docket Center, WJC West, Room 3334, 1301 Constitution Ave. NW, Washington, DC. The telephone number for the Docket Center is 202–566–1744. For additional information about EPA’s public docket, visit http://www.epa.gov/dockets.

Abstract: The EPA uses contractors to perform services throughout the nation with regard to environmental emergencies involving the release, or threatened release, of oil, radioactive materials, or hazardous chemicals that may potentially affect communities and the surrounding environment. The Agency may request contractors responding to any of these types of incidents to conduct background checks and apply Government-established suitability criteria in Title 5 CFR Administrative Personnel 731.104 Appointments Subject to Investigation, 732.201 Sensitivity Level Designations and Investigative Requirements, and 736.102 Notice to Investigative Sources when determining whether employees are acceptable to perform on given sites or on specific projects. In addition to emergency response contractors, EPA may require background checks for contractor personnel working in sensitive sites or sensitive projects. The background checks and application of the Government’s suitability criteria must be completed prior to contract employee performance. The contractor shall maintain records associated with all background checks. Background checks cover citizenship or valid visa status, criminal convictions, weapons offenses, felony convictions, and parties prohibited from receiving federal contracts.

Form numbers: None.

Respondents/affected entities: Private Contractors.

Respondent’s obligation to respond: Required to obtain a benefit.

Estimated number of respondents: 1,000 (total).

Frequency of response: Annual.
Total estimated burden: 1,000 hours (per year). Burden is defined at 5 CFR 1320.03(b).
Total estimated cost: $208,720 (per year), includes $0 annualized capital or operation & maintenance costs.

Changes in estimates: There is no change in the hours in the total estimated respondent burden compared with the ICR currently approved by OMB.

Courtney Kerwin,
Director, Regulatory Support Division.

FOR FURTHER INFORMATION CONTACT:
Thomas Valentino, Policy Training and Oversight Division, Office of Acquisition Solutions (3802R), Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460; telephone number: (202) 564–4522; email address: valentino.thomas@epa.gov.

SUPPLEMENTARY INFORMATION:
Supporting documents which explain in detail the information that the EPA will be collecting are available in the public docket for this ICR. The docket can be viewed online at www.regulations.gov or in person at the EPA Docket Center, WJC West, Room 3334, 1301 Constitution Ave. NW, Washington, DC. The telephone number for the Docket Center is 202–566–1744. For additional information about EPA’s public docket, visit http://www.epa.gov/dockets.

Abstract: This ICR applies to contractors who perform response services at sensitive sites with serious security concerns where the Agency and public interest would best be protected through drug testing. It requires the contractor to test its employees for the use of marijuana, cocaine, opiates, amphetamines, phencyclidine (PCP), and any other controlled substances. Only contractor employees who have been tested within the previous 90 calendar days and have passing drug test results may be directly engaged in on-site response work and/or on-site related activities at designated sites with significant security concerns. The Agency may request contractors responding to any of these types of incidents to conduct drug testing and apply Government-established suitability criteria in title 5 CFR 731.104. Appointments subject to investigation, 732.201. Sensitivity level designations and investigative requirements, and 736.102, Notice to investigative sources, when determining whether employees are acceptable to perform on given sites or on specific projects.

Form numbers: None.
Respondents/affected entities: Private contractors.
Respondent’s obligation to respond: Required to obtain a benefit per title 5 CFR 731.104.
Estimated number of respondents: 500 (total).
Frequency of response: Annual.
Total estimated burden: 1,125 hours (per year). Burden is defined at 5 CFR 1320.03(b).
Total estimated cost: $133,010 (per year), includes $0 annualized capital or operation & maintenance costs.

Changes in estimates: There is no change in the hours in the total estimated respondent burden compared with the ICR currently approved by OMB.

Courtney Kerwin,
Director, Regulatory Support Division.

FEDERAL COMMUNICATIONS COMMISSION
[OMB 3060–XXXX; FR ID 38901]
Information Collection Being Submitted for Review and Approval to Office of Management and Budget

AGENCY: Federal Communications Commission.

ACTION: Notice and request for comments.

SUMMARY: As part of its continuing effort to reduce paperwork burdens, as required by the Paperwork Reduction Act (PRA) of 1995, the Federal Communications Commission (FCC or the Commission) invites the general public and other Federal Agencies to take this opportunity to comment on the following information collection.

Pursuant to the Small Business Paperwork Relief Act of 2002, the FCC seeks specific comment on how it might “further reduce the information collection burden for small business concerns with fewer than 25 employees.” The Commission may not conduct or sponsor a collection of information unless it displays a currently valid OMB control number.

DATES: Written comments and recommendations for the proposed
information collection should be submitted on or before August 23, 2021. 

**ADDRESSES:** Comments should be sent to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function. Your comment must be submitted to www.reginfo.gov per the above instructions for it to be considered. In addition to submitting in www.reginfo.gov also send a copy of your comment on the proposed information collection to Cathy Williams, FCC, via email to PRA@fcc.gov and to Cathy.Williams@fcc.gov. Include in the comments the OMB control number as shown in the SUPPLEMENTARY INFORMATION below.

**FOR FURTHER INFORMATION CONTACT:** For additional information or copies of the information collection, contact Cathy Williams at (202) 418–2918. To view a copy of this information collection request (ICR) submitted to OMB: (1) Go to the web page http://www.reginfo.gov/public/do/PRAMain, (2) look for the section of the web page called “Currently Under Review.” (3) click on the downward-pointing arrow in the “Select Agency” box below the “Currently Under Review” heading, (4) select “Federal Communications Commission” from the list of agencies presented in the “Select Agency” box, (5) click the “Submit” button to the right of the “Select Agency” box, (6) when the list of FCC ICRs currently under review appears, look for the Title of this ICR and then click on the ICR Reference Number. A copy of the FCC submission to OMB will be displayed.

**SUPPLEMENTARY INFORMATION:** As part of its continuing effort to reduce paperwork burdens, as required by the Paperwork Reduction Act (PRA) of 1995 (44 U.S.C. 3501–3520), the FCC invited the general public and other Federal Agencies to take this opportunity to comment on the following information collection. Comments are requested concerning: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission’s burden estimates; (c) ways to enhance the quality, utility, and clarity of the information collected; and (d) ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology. Pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107–198, see 44 U.S.C. 3506(c)[4], the FCC seeks specific comment on how it might “further reduce the information collection burden for small business concerns with fewer than 25 employees.”

**OMB Control Number:** 3060–XXXX. 
**Title:** Advanced Methods to Target and Eliminate Unlawful Robocalls, Fourth Report and Order, CG Docket No. 17–59, FCC 20–187. 
**Type of Review:** New information collection. 
**Form Number:** N/A. 
**Total Annual Burden:** 199,412 hours. 
**Respondents:** Business or other for-profit entities. 
**Number of Respondents:** 6,493 respondents. 
**Estimated Time per Respondent:** 25 to 40 hours. 
**Frequency of Response:** On-occasion reporting requirement, on-going reporting requirement and Third-party Disclosure requirement. 
**Total Annual Cost:** No cost. 
**Obligation to Respond:** Required to obtain or retain benefits. Statutory authority for these collections are contained in sections 4(i), 201, 202, 217, 227, 227b, 251(e), 303(r), and 403 of the Communications Act of 1934, as amended, 47 U.S.C. 154(i), 201, 202, 217, 227, 227b, 251(e), 303(r), 403.

**Needs and Uses:** This notice and request for comments seeks to establish a new information collection as it pertains to the Advanced Methods to Target and Eliminate Unlawful Robocalls Fourth Report and Order (“Call Blocking Fourth Report and Order”), FCC 20–187. Unwanted and illegal robocalls have long been the Federal Communication Commission’s (“Commission”) top source of consumer complaints and one of the Commission’s top consumer protection priorities. In 2019, Congress passed the Pallone-Thune Telephone Robocall Abuse Criminal Enforcement and Deterrence (TRACED) Act. In addition to directing the Commission to mandate adoption of caller ID authentication technology and encourage voice service providers to block calls by establishing safe harbors, the TRACED Act directs the Commission to ensure that both consumers and callers are provided with transparency and effective redress when calls are blocked in error. In the Call Blocking Fourth Report and Order, the Commission took several steps to better protect consumers from unwanted and illegal robocalls, and implement the TRACED Act. The Commission expanded the existing safe harbor for blocking of calls, established affirmative requirements to ensure that voice service providers better police their networks against illegal calls, and adopted several transparency and redress requirements to ensure that erroneous blocking can be quickly identified and remedied.

**Call Blocking Fourth Report and Order, FCC 20–187, Paras. 22–31, 47 CFR 64.1200(n)(2)**

A voice service provider must: . . . Take steps to effectively mitigate illegal traffic when it receives actual written notice of such traffic from the Commission through its Enforcement Bureau. In providing notice, the Enforcement Bureau shall identify with as much particularity as possible the suspected traffic; provide the basis for the Enforcement Bureau’s reasonable belief that the identified traffic is unlawful; cite the statutory or regulatory provisions the suspected traffic appears to violate; and direct the voice service provider receiving the notice that it must comply with this section. Each notified provider must promptly and to effectively mitigate the identified traffic, each notified provider must then promptly report the results of its investigation to the Enforcement Bureau, including any steps the provider has taken to effectively mitigate the identified traffic or an explanation as to why the provider has reasonably concluded that the identified calls were not illegal and what steps it took to reach that conclusion. Should the notified provider find that the traffic comes from an upstream provider with direct access to the U.S. Public Switched Telephone Network, that provider must promptly inform the Enforcement Bureau of the source of the traffic and, if possible, take steps to mitigate this traffic.

The first portion of the new information collection for which OMB approval is sought comes from the affirmative obligation adopted in the Call Blocking Fourth Report and Order that voice service providers effectively mitigate illegal traffic when notified of such traffic by the Commission’s Enforcement Bureau. In adopting this requirement as well as the other affirmative obligations, the Commission made clear that, while most blocking is done by terminating voice service providers, originating and intermediate voice service providers are integral to stopping illegal calls. This requirement in particular gives the Commission an important tool in the fight to stop illegal calls.

**Call Blocking Fourth Report and Order, FCC 20–187, Paras. 62–70, 47 CFR 64.1200(k)(10)**

Any terminating provider that blocks calls on an opt-out or opt-in basis, either
FEDERAL RESERVE SYSTEM
Change in Bank Control Notices; Acquisitions of Shares of a Bank or Bank Holding Company

The notificants listed below have applied under the Change in Bank Control Act (Act) (12 U.S.C. 1817(j)) and § 225.41 of the Board’s Regulation Y (12 CFR 225.41) to acquire shares of a bank or bank holding company. The factors that are considered in acting on the applications are set forth in paragraph 7 of the Act (12 U.S.C. 1817(j)(7)).

The public portions of the applications listed below, as well as other related filings required by the Board, if any, are available for immediate inspection at the Federal Reserve Bank(s) indicated below and at the offices of the Board of Governors. This information may also be obtained on an expedited basis, upon request, by contacting the appropriate Federal Reserve Bank and from the Board’s Freedom of Information Office at https://www.federalreserve.gov/foia/request.htm. Interested persons may express their views in writing on the standards enumerated in paragraph 7 of the Act.

Comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors, Ann E. Misback, Secretary of the Board, 20th Street and Constitution Avenue NW, Washington, DC 20551–0001, not later than August 9, 2021.

FEDERAL DEPOSIT INSURANCE CORPORATION
Sunshine Act Meetings; Notice of Change in Subject Matter of Agency Sunshine Act Meeting

Pursuant to the provisions of subsection (e)(2) of the “Government in the Sunshine Act” (5 U.S.C. 552b(e)(2)), notice is hereby given that at its open meeting held at 10:01 a.m. on Tuesday, July 20, 2021, the Corporation’s Board of Directors determined, on motion of Director Martin J. Gruenberg (Appointive), seconded by Director David Uejio (Acting Director, Consumer Financial Protection Bureau), and concurred in by Director Michael J. Hsu (Acting Comptroller of the Currency), that Corporation business required the deferral of an item on the agenda for consideration at the meeting, on less than seven days’ notice to the public, of the following matter:

Memorandum and resolution re: Notice of Proposed Rulemaking on Revisions to Standardized Approach for Calculating the Exposure Amount of Derivative Contracts.

The Board further determined, by the same majority vote, that no notice earlier than July 20, 2021, of the change in the subject matter of the meeting was practicable.

Dated this the 20th day of July, 2021.
Federal Deposit Insurance Corporation.

James P. Sheesley,
Assistant Executive Secretary.

GENERAL SERVICES ADMINISTRATION
Information Collection; General Services Administration Acquisition Regulation; Contract Administration, Quality Assurance (GSA Forms 1678 and 308)

AGENCY: Office of Acquisition Policy, General Services Administration (GSA).

ACTION: Notice of request for comments regarding an extension to an existing OMB clearance.

SUMMARY: Under the provisions of the Paperwork Reduction Act, the General Services Administration, in accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 et seq.), has submitted a request for OMB approval of this information collection. GSA is seeking public comments concerning aspects of the information collection requirements identified in the notice. The information collection is required under the acquisition regulation for all contract administration, quality assurance, and technical services contracts, in accordance with the General Services Administration Acquisition Regulation, subtitle D, part 7, chapter 2, part 4, chapter 3, and part 5, chapter 4, part 3, chapter 3, and part 5, chapter 3, part 7, chapter 3, and part 4, chapter 1, part 5, chapter 1, sections 14 through 20, 21 through 25, 26 through 28, 29 through 30, 31 through 32, 33 through 34, and 35 through 36. The information collection is associated with a particular implementation of the acquisition regulation, and provides for the submission of data to the GSA Office of Acquisition Policy, for audit purposes.
Services Administration will be submitting to the Office of Management and Budget (OMB) a request to review and approve an extension of a previously approved information collection requirement regarding contract administration and quality assurance.

DATES: Submit comments on or before: September 21, 2021.

ADDRESSES: Submit comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to http://www.regulations.gov. Submit comments via the Federal eRulemaking portal by searching the OMB Control number 3090–0027. Select the link “Comment Now” that corresponds with “Information Collection 3090–0027, Contract Administration and Quality Assurance (GSA Forms 1678 and 308)”. Follow the instructions on the screen. Please include your name, company name (if any), and “Information Collection 3090–0027, Contract Administration and Quality Assurance (GSA Forms 1678 and 308)”, on your attached document.

If your comment cannot be submitted using https://www.regulations.gov, call or email the points of contact in the FOR FURTHER INFORMATION CONTACT section of this document for alternate instructions.

Instructions: Please submit comments only and cite Information Collection 3090–0027, Contract Administration and Quality Assurance (GSA Forms 1678 and 308), in all correspondence related to this collection. Comments received generally will be posted without change to regulations.gov, including any personal and/or business confidential information provided. To confirm receipt of your comment(s), please check regulations.gov, approximately two-to-three business days after submission to verify posting.

FOR FURTHER INFORMATION CONTACT: Ms. Vernita Misidor, Procurement Analyst, General Services Acquisition Policy Division, at 202–357–9681, or via email to vernita.misidor@gsa.gov.

SUPPLEMENTARY INFORMATION:

A. Purpose

Under certain contracts, because of reliance on contractor inspection in lieu of Government inspection, GSA’s Federal Acquisition Service requires documentation from its contractors to effectively monitor contract performance and ensure that it will be able to take timely action should that performance be deficient.

B. Annual Reporting Burden

GS Form 1678

Annual Responses: 250,000.
Responses per Respondent: 1.
Total Annual Responses: 250,000.
Hours per Response: 0.008.
Total Burden Hours: 2,000.

GS Form 308

Annual Responses: 2,600.
Responses per Respondent: 1.
Total Annual Responses: 2,600.
Hours per Response: 0.08.
Total Burden Hours: 208.

C. Public Comments

Public comments are particularly invited on: Whether this collection of information is necessary and whether it will have practical utility; whether our estimate of the public burden of this collection of information is accurate and based on valid assumptions and methodology; and ways to enhance the quality, utility, and clarity of the information to be collected.

Obtaining Copies of Proposals: Requesters may obtain a copy of the information collection documents from the Regulatory Secretariat Division by calling 202–501–4755 or emailing GSARegSec@gsa.gov. Please cite OMB Control No. 3090–0027, Contract Administration, Quality Assurance (GSA Forms 1678 and 308), in all correspondence.

Jeffrey A. Koses,
Senior Procurement Executive, Office of Acquisition Policy, Office of Government-wide Policy.

BILLING CODE 6820–61–P

GENERAL SERVICES ADMINISTRATION

[OMB Control No. 3090–0248; Docket No. 2021–0001; Sequence No. 6]

Information Collection; General Services Administration Acquisition Regulation; Solicitation Provisions and Contract Clauses; Placement of Orders Clause; and Ordering Information Clause

AGENCY: Office of Acquisition Policy, General Services Administration (GSA).

ACTION: Notice of request for public comments regarding an extension to an existing OMB clearance.

SUMMARY: Under the provisions of the Paperwork Reduction Act, the Regulatory Secretariat Division will be submitting to the Office of Management and Budget (OMB) a request to review and approve an extension of a previously approved information collection requirement regarding solicitation provisions and contract clauses, placement of orders clause, and ordering information clause.

DATES: Submit comments on or before: September 21, 2021.

ADDRESSES: Submit comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to http://www.regulations.gov. Submit comments via the Federal eRulemaking portal by searching for Information Collection 3090–0248. Select the link “Comment Now” that corresponds with “Information Collection 3090–0248, Solicitation Provisions and Contract Clauses, Placement of Orders Clause, and Ordering Information Clause”.

Follow the instructions on the screen. Please include your name, company name (if any), and “Information Collection 3090–0248, Solicitation Provisions and Contract Clauses, Placement of Orders Clause, and Ordering Information Clause” on your attached document. If your comment cannot be submitted using https://www.regulations.gov, call or email the points of contact in the FOR FURTHER INFORMATION CONTACT section of this document for alternate instructions.

Instructions: Comments received generally will be posted without change to http://www.regulations.gov, including any personal and/or business confidential information provided. To confirm receipt of your comment(s), please check www.regulations.gov, approximately two-to-three days after submission to verify posting.

FOR FURTHER INFORMATION CONTACT: Ms. Vernita Misidor, Procurement Analyst, GSA Acquisition Policy Division, by phone at 202–357–9681 or by email at vernita.misidor@gsa.gov.

SUPPLEMENTARY INFORMATION:

A. Purpose

GSA has various mission responsibilities related to the acquisition and provision of the Federal Acquisition Service’s (FAS’s) Stock, Special Order, and Federal Supply Schedule (FSS) Programs. These mission responsibilities generate requirements that are realized through the solicitation and award of various types of FAS contracts. Individual solicitations and resulting contracts may impose unique information collection and reporting requirements on contractors, not required by regulation, but necessary to evaluate particular program accomplishments and measure success in meeting program objectives.
As such, the General Services Administration Acquisition Regulation (GSAR) 516.506, Solicitation provision and clauses, specifically directs contracting officers to insert 552.216–72, Placement of Orders, and 552.216–73, Ordering Information, when the contract authorizes FAS and other activities to issue delivery or task orders. These clauses include information reporting requirements for Offerors to receive electronic orders through computer-to-computer Electronic Data Interchange (EDI).

B. Annual Reporting Burden

Respondents: 18,590.
Responses per Respondent: 1.
Annual Responses: 18,590.
Hours Per Response: .25.
Total Burden Hours: 4,648.

C. Public Comments

Public comments are particularly important on whether this collection of information is necessary and whether it will have practical utility; whether our estimate of the public burden of this collection of information is accurate and based on valid assumptions and methodology; and ways to enhance the quality, utility, and clarity of the information to be collected.

Obtaining Copies of Proposals:
Requestors may obtain a copy of the information collection documents from the Regulatory Secretariat Division by calling 202–501–4755 or emailing GSARRegSec@gsa.gov. Please cite OMB Control No. 3090–0248, Solicitation Provisions and Contract Clauses, Placement of Orders Clause, and Ordering Information Clause, in all correspondence.

Jeffrey A. Koses,
Senior Procurement Executive, Office of Acquisition Policy, Office of Government-wide Policy.

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Notice of Award of a Single-Source Unsolicited Grant To Fund the Community Education Group

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: The Centers for Disease Control and Prevention (CDC), located within the Department of Health and Human Services (HHS) announces the award of approximately $5,000,000 annually in COVID–19 funding for a three-year period in response to an unsolicited application that has been submitted by the Community Education Group to support vaccine coverage, in particular for COVID–19.

DATES: The period for this award will be July 31, 2021 through July 30, 2024.

FOR FURTHER INFORMATION CONTACT: Stephanie Griswold, MPH, National Center for Immunization and Respiratory Diseases, Centers for Disease Control and Prevention, 1600 Clifton Road NE, MS–H24–8, Atlanta, GA 30329, Telephone: 800–232–6348, E-Mail: ecoevent515@cdc.gov.

SUPPLEMENTARY INFORMATION: The proposed work being funded aims to build the evidence base of effective interventions to improve vaccination coverage and to identify and implement strategies to reduce disparities in vaccination coverage in rural populations, specifically in West Virginia. Community Education Group (CEG) works to eliminate disparities in health outcomes and improve public health in disadvantaged populations and under-served communities by conducting research, training community health workers, educating and testing people who are hard to reach or at risk, sharing its expertise through national networks and local capacity building efforts, and advocating for practical and effective health policies that lead to social change.

This award is being made non-competitively because there is no current, pending, or planned funding opportunity announcement under which this proposal could compete.

The National Center for Immunization and Respiratory Diseases performed an objective review of the unsolicited proposal and determined that the proposal has merit and CEG is in a unique position to perform the activities contained within their proposal. CEG works to eliminate disparities in health outcomes and improve public health in disadvantaged populations and under-served communities by conducting research, training community health workers, educating and testing people who are hard to reach or at risk.

Summary of the Award

Recipient: Community Education Group (CEG)

Purpose of the Award: The purpose of the award is to build the evidence base of effective interventions to improve vaccination coverage and to identify and implement strategies to reduce disparities in vaccination coverage in rural populations. The proposal submitted was not solicited either formally or informally by any federal government official.

Amount of Award: $5,000,000 in Federal Fiscal Year (FY) 2021 funds, and an estimated $5,000,000 for each subsequent year budget period, subject to availability of funds.

Period of Performance: July 31, 2021 through July 30, 2024.

Dated: July 20, 2021.

Joseph I. Hungate, III,
Deputy Director, Office of Financial Resources, Office of the Chief Operating Officer, Centers for Disease Control and Prevention.

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[Document Identifier: CMS–10572 and CMS–10781]

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: Centers for Medicare & Medicaid Services, Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: The Centers for Medicare & Medicaid Services (CMS) is announcing an opportunity for the public to comment on CMS’ intention to collect information from the public. Under the Paperwork Reduction Act of 1995 (the PRA), federal agencies are required to publish notice in the Federal Register concerning each proposed collection of information (including each proposed extension or reinstatement of an existing collection of information) and to allow 60 days for public comment on the proposed action. Interested persons are invited to send comments regarding our burden estimates or any other aspect of this collection of information, including the necessity and utility of the proposed information collection for the proper performance of the agency’s functions, the accuracy of the estimated burden, ways to enhance the quality, utility, and clarity of the information to be collected, and the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

DATES: Comments must be received by September 21, 2021.
ADDRESS: When commenting, please reference the document identifier or OMB control number. To be assured consideration, comments and recommendations must be submitted in any one of the following ways:

1. Electronically. You may send your comments electronically to http://www.regulations.gov. Follow the instructions for “Comment or Submission” or “More Search Options” to find the information collection document(s) that are accepting comments.

2. By regular mail. You may mail written comments to the following address: CMS, Office of Strategic Operations and Regulatory Affairs, Division of Regulations Development, Attention: Document Identifier/OMB Control Number: ____, Room C4–26–05, 7500 Security Boulevard, Baltimore, Maryland 21244–1850.

To obtain copies of a supporting statement and any related forms for the proposed collection(s) summarized in this notice, you may make your request using one of following:

FOR FURTHER INFORMATION CONTACT: William N. Parham at (410) 786–4669.

SUPPLEMENTARY INFORMATION:

Contents

This notice outlines a summary of the use and burden associated with the following information collections. More detailed information can be found in each collection’s supporting statement and associated materials (see ADDRESSES).

CMS–10572 Transparency in Coverage Reporting by Qualified Health Plan Issuers

CMS–10781 FOIA/Privacy Act

Requests for Medicare Claims Data via CMS FOIA Public Portal

Under the PRA (44 U.S.C. 3501–3520), federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. The term “collection of information” is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA requires federal agencies to publish a 60-day notice in the Federal Register concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, CMS is publishing this notice.

Information Collection

1. Type of Information Collection Request: Extension of a currently approved collection; Title of Information Collection: Transparency in Coverage Reporting by Qualified Health Plan Issuers; Use: Secs. 1311(e)(3)(A)–(C) of the ACA, as implemented at 45 CFR 155.1040(a)–(c) and 156.220, establish standards for qualified health plan (QHP) issuers to submit specific information related to transparency in coverage. QHP issuers are required to post and make data related to transparency in coverage available to the public in plain language and submit this data to the Department of Health and Human Services (HHS), the Exchange, and the state insurance commissioner. Section 2715A of the Public Health Service (PHS) Act as added by the ACA largely extends the transparency provisions set forth in section 1311(e)(3) to non-grandfathered group health plans and health insurance issuers offering group and individual health insurance coverage. Form Number: CMS–10572 (OMB control number: 0938–1310); Frequency: Annually; Affected Public: Private sector (Business or Not-for-profit institutions); Number of Respondents: 360; Total Annual Responses: 360; Total Annual Hours: 17,160. (For policy questions regarding this collection contact Jack Reeves at 301–492–5152).

2. Type of Information Collection Request: New collection (Request for a new OMB control); Title of Information Collection: Use: This collection of information is dedicated to Medicare beneficiaries and third party requesters (law firms or others) acting on behalf of beneficiaries that are making requests for CMS to produce Medicare beneficiary records through 5 U.S.C. 552(b) (See also 42 CFR 401.136). Currently the requests are mailed/faxed/e-mailed to CMS. The new online portal will allow for ease and efficiency to upload the request and required authorization, which will be quickly and securely sent directly to CMS. Additionally, with the new online portal, requesters will be able to securely submit requests electronically that contain PHI or PII; they will be advised that MyMedicare.gov/Blue Button is an online service available for beneficiaries to set up an account to access their own records and give authorization to share with third parties. This secure public online portal will be integrated with the agency’s current FOIA/Privacy Act case management system to ensure a centralized location for housing, securing, tracking and processing the incoming requests (See 45 CFR 5.22 and 5.24). Form Number: CMS–10781 (OMB control number: 0938–New); Frequency: Occasionally; Affected Public: Individuals or Households; Number of Respondents: 19,000; Total Annual Responses: 360; Total Annual Hours: 17,160. (For policy questions regarding this collection contact Hugh Gilmore at 410–786–5352).

Dated: July 20, 2021.

William N. Parham, III,
Director, Paperwork Reduction Staff, Office of Strategic Operations and Regulatory Affairs.

BILLING CODE 4120–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[CMS–1764–N]

Medicare Program; Announcement of the Advisory Panel on Hospital Outpatient Payment Meeting

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Notice of meeting.

SUMMARY: This notice announces a virtual meeting of the Advisory Panel on Hospital Outpatient Payment (the Panel) for Calendar Year 2021. The purpose of the Panel is to advise the Secretary of the Department of Health and Human Services and the Administrator of the Centers for Medicare & Medicaid Services concerning the clinical integrity of the Ambulatory Payment Classification groups and their associated weights, and supervision of hospital outpatient therapeutic services. The advice provided by the Panel will be considered as we prepare the annual updates for the hospital outpatient prospective payment system.

DATES: Meeting date: The virtual meeting of the Panel is scheduled for Monday, August 23, 2021, from 9:30 a.m. to 5:00 p.m. Eastern Daylight Time (EDT). The times listed in this notice are EDT and are approximate times. Consequently, the meetings may last longer or be shorter than the times listed in this notice, but would not begin before the posted time.

Deadline for presentations and comment letters: Presentations or
comment letters, and form CMS–20017 (located at https://www.cms.gov/Medicare/CMS-Forms/CMS-Forms/downloads/cms20017.pdf), must be received by 5:00 p.m. EDT, Friday, August 6, 2021. We note that form CMS–20017 must accompany each presentation or comment letter submission. Presentations and comment letters that are not received by the due date and time, or that do not include a completed form CMS–20017 are considered late or incomplete, and cannot be included on the agenda. In commenting, refer to file code CMS–1764–N.

Meeting Registration Timeframe: All presentation or comment letter speakers, including any alternates, with items on the agenda must register electronically to our Panel mailbox, APCPanel@cms.hhs.gov no later than 5:00 p.m. EDT, Friday, August 6, 2021. The subject of the email may state “Agenda Speaker Registration for HOP Panel Meeting.”

ADDRESSES:
Meeting location and webinar: The meeting will be held virtually. The public may participate in this meeting by webinar, or listen-only via teleconference. Closed captioning will be available on the webinar. Teleconference dial-in and webinar information will appear on the final meeting agenda, which will be posted on our website when available at: https://www.cms.gov/Regulations-and-Guidance/Guidance/FACA/AdvisoryPanelAmbulatoryPaymentClassificationGroups.

News media: Press inquiries are handled through the CMS Press Office at (202) 690–6145.

Advisory committees information line: The telephone number for the Advisory Panel on Hospital Outpatient Payment Committee Hotline is (410) 786–3985.

Websites: For additional information on the Panel, including the Panel charter, and updates to the Panel’s activities, we refer readers to view our website at: https://www.cms.gov/Regulations-and-Guidance/Guidance/FACA/AdvisoryPanelAmbulatoryPaymentClassificationGroups. Information about the Panel and its membership in the Federal Advisory Committee Act (FACA) database are also located at: https://www.facade.gov.

FOR FURTHER INFORMATION CONTACT:
Elise Barringer, Designated Federal Official (DFO) (410) 786–9222, email at: APCPanel@cms.hhs.gov.

SUPPLEMENTARY INFORMATION:

I. Background
The Secretary of the Department of Health and Human Services (the Secretary) is required by section 1833(t)(9)(A) of the Social Security Act (the Act) and is allowed by section 222 of the Public Health Service Act (PHA) to consult with an expert outside Panel, such as the Advisory Panel on Hospital Outpatient Payment (the Panel), regarding the clinical integrity of the Ambulatory Payment Classification (APC) groups and relative payment weights. The Panel is governed by the provisions of the Federal Advisory Committee Act (Pub. L. 92–463), as amended (5 U.S.C. Appendix 2), to set forth standards for the formation and use of advisory Panels. We consider the technical advice provided by the Panel as we prepare the proposed and final rules to update the Hospital Outpatient Prospective Payment System (OPPS) for the following calendar year (CY).

II. Annual Advisory Panel Meeting
A. Meeting Agenda
The agenda for the August 23, 2021 Panel meeting will provide for discussion and comment on the following topics as designated in the Panel’s Charter:

• Addressing whether procedures within an APC group are similar both clinically and in terms of resource use.
• Reconfiguring APCs.
• Evaluating APC group weights.
• Reviewing packaging the cost of items and services, including drugs and devices, into procedures and services, including the methodology for packaging and the impact of packaging the cost of those items and services on APC group structure and payment.
• Removing procedures from the inpatient only list for payment under the OPPS.
• Using claims and cost report data for Centers for Medicare & Medicaid Services (CMS) determination of APC group costs.
• Addressing other technical issues concerning APC group structure.
• Evaluating the required level of supervision for hospital outpatient services.
• OPPS APC rates for covered Ambulatory Surgical Center (ASC) procedures.

The agenda for the August 23, 2021 Panel meeting will provide for discussion and comment on the following topics as designated in the Panel’s Charter:

B. Meeting Information Updates
The actual meeting hours and days will be posted in the agenda. As information and updates regarding this meeting and webinar will be posted in the agenda, become available, they will be posted to our website at: https://www.cms.gov/Regulations-and-Guidance/Guidance/FACA/AdvisoryPanelAmbulatoryPaymentClassificationGroups.

C. Presentations and Comment Letters
The subject matter of any presentation and comment letter must be within the scope of the Panel as designated in the Charter. Any presentations or comments outside of the scope of the Panel will be returned or requested for amendment. Unrelated topics include, but are not limited to: The conversion factor, pass-through payments, charge compression, revisions to the cost report, pass-through payments, correct coding, new technology applications (including supporting information/documentation), provider payment adjustments, supervision of hospital outpatient diagnostic services, and the types of practitioners that are permitted to supervise hospital outpatient services. The Panel may not recommend that services be designated as nonsurgical extended duration therapeutic services. Presentations or Comment Letters that address OPPS APC rates as they relate to covered ASC procedures are within the scope of the Panel’s charter; however, ASC payment rates, ASC payment indicators, the ASC covered procedures list, or other ASC payment system matters will be considered out of scope. The Panel may use data collected or developed by entities and organizations other than Department of Health and Human Services and CMS in conducting its review. We recommend organizations submit data for CMS staff and the Panel’s review. All presentations are limited to 5 minutes, regardless of the number of individuals or organizations represented by a single presentation. Presenters may use their 5 minutes to present either one or more agenda items. In the email, all of the following information must be submitted when registering:

• Speaker’s name.
• Speaker’s organization or company name.
• Company or organization that the speaker is representing that submitted a presentation or comment letter that is on the agenda.

Email addresses to which materials regarding meeting registration and instructions on connecting to the meeting may be sent.
Registration details may not be revised once they are submitted. If registration details require changes, a new registration entry must be submitted by August 06, 2021. In addition, registration information must reflect individual-level content and not reflect an organization entry. Also, each individual may only register one person at a time (that is, one individual may not register multiple individuals at the same time).

A confirmation email will be sent upon receipt of the registration. The email will provide information to the speaker in preparation for the meeting.

Registration is only required for agenda speakers and alternates and must be submitted by the deadline specified above. We note that no registration is required for participants who plan to view the Panel meeting by webinar or listen teleconference.

Section 508 Compliance

For this meeting, we are aiming to have all presentations and comment letters available on our website. Materials on our website must be Section 508 compliant to ensure access to federal employees and members of the public with and without disabilities. We encourage presenters and commenters to reference the guidance on making documents Section 508 compliant as they draft their submissions, and, whenever possible, to submit their presentations and comment letters in a Section 508 compliant form. Such guidance is available at: https://www.cms.gov/research-statistics-data-and-systems/cms-information-technology/section508.

We will review presentations and comment letters for Section 508 compliance and place compliant materials on our website. As resources permit, we will also convert non-compliant submissions to Section 508 compliant forms, and offer assistance to submitters who are making their submissions Section 508 compliant. All Section 508 compliant presentations and comment letters will be made available on the CMS website. If difficulties are encountered accessing the materials, contact the Designated Federal Official (DFO) (the DFO’s address, email, and phone number are provided in the FOR FURTHER INFORMATION CONTACT section of this notice).

In order to consider presentations and/or comment letters, we will need to receive the following:

1. An email copy of the presentation or comment letters sent to the DFO mailbox: APCPanel@cms.hhs.gov.

2. Form CMS–20017, with complete contact information that includes the names, addresses, phone numbers, and email addresses for all presenters; comment letters; and a contact person who can answer any questions and provide revisions that are requested for the presentation or comment letter. Presenters and commenter letters must clearly explain the actions that they are requesting CMS take in the appropriate section of the form. A presenter or commenter’s relationship with the organization that they represent must also be clearly listed.

   - The form is available through the CMS Forms website at: https://www.cms.gov/Medicare/CMS-Forms/CMS-Forms/downloads/cms20017.pdf.

   - We encourage submitters to make efforts to ensure that their presentations and comment letters are 508 compliant.

D. Formal Presentations

In addition to formal presentations (limited to 5 minutes total per presentation), there will be an opportunity during the meeting for public comments as time permits (limited to 1 minute for each individual and a total of 3 minutes per organization).

E. Panel Recommendations and Discussions

The Panel’s recommendations at any Panel meeting generally are not final until they have been reviewed and approved by the Panel on the last day of the meeting, before the final adjournment. These recommendations will be posted to our website after the meeting.

F. Membership Appointments to the Advisory Panel on Hospital Outpatient Payment

The Panel Charter provides that the Panel may meet up to 3 times annually. We consider the technical advice provided by the Panel as we prepare the proposed and final rules to update the OPPS for the following calendar year. The Panel may consist of a chair and up to 15 members who are full-time employees of hospitals, hospital systems, or other Medicare providers that are subject to the OPPS. The Panel may also include a representative of the provider with ASC expertise, who may advise CMS only on OPPS APC rates, as appropriate, impacting ASC covered procedures within the context and purview of the Panel’s scope. The Secretary or a designee selects the Panel membership based upon either self-nominations or nominations submitted by Medicare providers and other interested organizations of candidates determined to have the required expertise. For supervision deliberations, the Panel may include members that represent the interests of Critical Access Hospitals, who advise CMS only regarding the level of supervision for hospital outpatient therapeutic services. New appointments are made in a manner that ensures a balanced membership under the FACA guidelines. The Secretary rechartered the Panel in 2020 for a 2-year period effective through November 20, 2022. The current charter is available on the CMS website at: https://www.cms.gov/files/document/2020-hop-panel-charter.pdf. The Panel presently consists of members and a Chair named below.

- E.L. Hambrick, M.D., J.D., CMS Chairperson
- Scott Manaker, M.D., Ph.D.
- Michael Kuettel, M.D., M.B.A, Ph.D.
- Bo Gately, M.B.A.
- Matthew Wheatley, M.D., F.A.C.E.P.

III. Collection of Information Requirements

This document does not impose information collection requirements, that is, reporting, recordkeeping or third-party disclosure requirements. Consequently, there is no need for review by the Office of Management and Budget under the authority of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 et seq.).

The Administrator of the Centers for Medicare & Medicaid Services (CMS), Chiquita Brooks-LaSure, having reviewed and approved this document, authorizes Lynette Wilson, who is the Federal Register Liaison, to electronically sign this document for purposes of publication in the Federal Register.

Dated: July 20, 2021.

Lynette Wilson,
Federal Register Liaison, Centers for Medicare & Medicaid Services.

BILLING CODE 4120–01–P
DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

Reduction of Issuer Burden Through Technology Grant

AGENCY: Centers for Medicare & Medicaid Services (CMS), Department of Health and Human Services (HHS).

ACTION: Notice of funding opportunity.

SUMMARY: This notice announces the issuance of the March 10, 2021 (and amended on April 29, 2021) single-source funding opportunity titled “Reduction of Issuer Burden Through Technology Grant” (hereafter referred to as the “RIBTT Grant”) available solely to the National Association of Insurance Commissioners (NAIC) to build a connection between the State Electronic Rate and Form Filing (SERFF) system, owned and operated by the NAIC, and the Health Insurance Oversight System (HIOS), which is operated by the Centers for Medicare and Medicaid Services (CMS). This connection will enable health insurance issuers to enter rate justification data into the SERFF system and then have this rate justification data automatically transfer to HIOS. Currently, health insurance issuers have to enter duplicate data into both the SERFF system and HIOS in order to maintain compliance with federal and state law in 49 states and the District of Columbia.

DATES: The project period of the award, in the amount of $250,000 to the NAIC, will be 24 months from the date of award. The tentative award date is July 29, 2021.

FOR FURTHER INFORMATION CONTACT: Jim Taing, (301) 492–4182.

SUPPLEMENTARY INFORMATION:

I. Background

The Reduction of Issuer Burden Through Technology Grant (RIBTT Grant) provides a funding source to build a connection between the SERFF system and the Unified Rate Review (URR) module of HIOS. Forty-nine states and the District of Columbia currently use the SERFF system to collect and review rate data. Building a connection between SERFF and HIOS will reduce burden on health insurance issuers and decrease the potential for data mismatches between the two systems. It will enable health insurance issuers to enter rate justification data into the SERFF system and the rate justification data will automatically transfer to HIOS. Currently, health insurance issuers have to enter duplicate data into both the SERFF system and HIOS in order to maintain compliance with applicable federal and state law. Funding under the RIBTT Grant is available to the NAIC to complete their portion of the technical changes needed in order to build such a connection between the SERFF system and HIOS.

II. Provisions of the Notice

CMS is anticipating approximately a total of $250,000 will be available for the RIBTT Grant, pending availability of funds, to the NAIC to complete their portion of the technical changes needed in order to build such a connection between the SERFF system and HIOS for the transfer of rate filing information.

The NAIC may use grant funds for a variety of planning, development, testing, and implementation objectives related to the technical changes needed to build the connection between the SERFF system and HIOS. This includes, but is not limited to, hiring or contracting with information technology professionals or firms to complete the work. Pending an acceptable application and budget, the CMS will recommend awarding a single source grant to the NAIC who is uniquely qualified to complete the work requested. The NAIC is uniquely positioned to perform this work as they are the only applicant under this funding opportunity to meet the objectives of this funding opportunity as they own, operate, and maintain the SERFF system and the SERFF system is what is utilized by health insurance issuers to submit rate filing justification data in 49 states and the District of Columbia. The NAIC has built previous IT connections between their SERFF system and HIOS for the submission of Qualified Health Plan certification data between SERFF and the Plan Management module of HIOS. Funds enable NAIC to establish this new IT connection between the SERFF system and the URR module of HIOS based on the prior system architecture.

The Administrator of the Centers for Medicare & Medicaid Services (CMS), Chiquita Brooks-LaSure, having reviewed and approved this document, authorizes Lynette Wilson, who is the Federal Register Liaison, to electronically sign this document for purposes of publication in the Federal Register.

Dated: July 19, 2021.

Lynette Wilson,
Federal Register Liaison, Centers for Medicare & Medicaid Services.

Correction

In notice document 2021–15025, appearing on page 37337 in the issue of Thursday, July 15, 2021 make the following correction:

On page 37337, in the first column, in the DATES section, on the second and third lines, “August 30, 2021” should read, “August 16, 2021”.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2021–N–0703]

Animal Generic Drug User Fee Rates and Payment Procedures for Fiscal Year 2022

AGENCY: Food and Drug Administration, Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing the fee rates and payment procedures for fiscal year (FY) 2022 generic new animal drug user fees. The Federal Food, Drug, and Cosmetic Act (FD&C Act), as amended by the Animal Generic Drug User Fee Amendments of 2018 (AGDUFA III), authorizes FDA to collect user fees for certain abbreviated applications for generic new animal drugs, for certain generic new animal drug products, and for certain sponsors of such abbreviated applications for generic new animal drugs and/or investigational submissions for generic new animal drugs. This notice establishes the fee rates for FY 2022.

FOR FURTHER INFORMATION CONTACT: Lisa Kable, Center for Veterinary Medicine (HFV–10), Food and Drug Administration, 7500 Standish Pl., Rockville, MD 20855, 240–402–6888, Lisa.Kable@fda.hhs.gov or visit FDA’s website at https://www.fda.gov/ForIndustry/UserFees/AnimalGenericDrugUserFeeActAGDUFA/default.htm. For general questions, you may also email the Center for Veterinary
Medicine (CVM) at cvmagdufa@fda.hhs.gov.

SUPPLEMENTARY INFORMATION:

I. Background

Section 741 of the FD&C Act (21 U.S.C. 379j–21) establishes three different types of user fees: (1) Fees for certain types of abbreviated applications for generic new animal drugs; (2) annual fees for certain generic new animal drug products; and (3) annual fees for certain sponsors of abbreviated applications for generic new animal drugs and/or investigational submissions for generic new animal drugs (21 U.S.C. 379j–21(a)). When certain conditions are met, FDA will waive or reduce fees for generic new animal drugs intended solely to provide for a minor use or minor species indication (21 U.S.C. 379j–21(d)).

For FY 2019 through FY 2023, the FD&C Act establishes a yearly base revenue amount and percentages for each of these fee categories (21 U.S.C. 379j–21(b)). Base revenue amounts are subject to adjustment for inflation and workload (21 U.S.C. 379j–21(c)(2) and (3)). Beginning with FY 2021, the annual fee revenue amounts are also subject to adjustment to reduce workload-based increases by the amount of certain excess collections (21 U.S.C. 379j–21(c)(3)[B]). The target revenue amounts for each fee category for FY 2022, are as follows: For application amounts for each fee category for FY 2022, the target revenue amount is $9,299,250; and for sponsor fees, the target revenue amount is $9,299,250.

For FY 2022, the generic new animal drug user fee rates are: $548,628 for each abbreviated application for a generic new animal drug other than those subject to the criteria in section 512(d)(4) of the FD&C Act (21 U.S.C. 360b(d)(4)); $274,314 for each abbreviated application for a generic new animal drug subject to the criteria in section 512(d)(4) of the FD&C Act; $17,513 for each generic new animal drug product; $234,297 for each generic new animal drug sponsor paying 100 percent of the sponsor fee; $175,723 for each generic new animal drug sponsor paying 75 percent of the sponsor fee; and $117,149 for each generic new animal drug sponsor paying 50 percent of the sponsor fee. FDA will issue invoices for FY 2022 product and sponsor fees by December 31, 2021. These fees will be due by January 31, 2022. The application fee rates are effective for all abbreviated applications for a generic new animal drug submitted on or after October 1, 2021, and will remain in effect through September 30, 2022. Applications will not be accepted for review until FDA has received full payment of related application fees and any other fees owed under the Animal Generic Drug User Fee program (AGDUFA program).

II. Revenue Amount for FY 2022

A. Statutory Fee Revenue Amounts

AGDUFA III, Title II of Public Law 115–234, specifies that the aggregate base fee revenue amount for FY 2022 for all generic new animal drug user fee categories is $18,336,340 (21 U.S.C. 379j–21(b)(1)).

B. Inflation Adjustment to Fee Revenue Amount

AGDUFA III specifies that the annual fee revenue amount is to be adjusted for inflation increases for FY 2020 and subsequent fiscal years, using two separate adjustments—one for personnel compensation and benefits (PC&B) and one for non-PC&B costs (see 21 U.S.C. 379j–21(c)(2)). The component of the inflation adjustment for payroll costs shall be one plus the average annual percent change in the cost of all PC&B paid per full-time equivalent position (FTE) at FDA for the first 3 of the 4 preceding fiscal years of available data, multiplied by the average proportion of PC&B costs to total FDA costs for the first 3 of the 4 preceding fiscal years of available data. The data on total PC&B paid and numbers of FTE paid, from which the average cost per FTE can be derived, are published in FDA’s Justification of Estimates for Appropriations Committees.

Table 1 summarizes the actual cost and FTE data for the specified fiscal years, and provides the percent change from the previous fiscal year and the average percent change over the first 3 of the 4 fiscal years preceding FY 2022. The 3-year average is 2.7383 percent.

<table>
<thead>
<tr>
<th></th>
<th>2018</th>
<th>2019</th>
<th>2020</th>
<th>3-year average</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total PC&amp;B</td>

<tr>
<td>Percent Change from Previous Year</td>
<td>4.2206</td>
<td>-3.3120</td>
<td>7.3063</td>
<td>2.7383</td>
</tr>
</tbody>
</table>

The statute specifies that this 2.7383 percent should be multiplied by the proportion of PC&B costs to total FDA costs. Table 2 shows the amount of PC&B and the total amount obligated by FDA for the same 3 FYs.

<table>
<thead>
<tr>
<th></th>
<th>2018</th>
<th>2019</th>
<th>2020</th>
<th>3-year average</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total PC&amp;B</td>
<td>$2,690,678,000</td>
<td>$2,620,052,000</td>
<td>$2,875,592,000</td>
<td></td>
</tr>
<tr>
<td>Total Costs</td>
<td>$5,370,935,000</td>
<td>$5,663,389,000</td>
<td>$6,039,321,000</td>

<td>PC&amp;B Percent</td>
<td>50.0970</td>
<td>46.2630</td>
<td>47.6145</td>
<td>47.9915</td>
</tr>
</tbody>
</table>

The portion of the inflation adjustment relating to payroll cost is 2.7383 percent multiplied by 48.9915 percent, or 1.3142 percent.
WV’’ index was discontinued and replaced with two separate indices (i.e., “Washington-Arlington-Alexandria, DC-VA-MD-WV” and “Baltimore-Columbia-Towson, MD”). In order to continue applying a CPI that best reflects the geographic region in which FDA is headquartered and that provides the most current data available, FDA is using the Washington-Arlington-Alexandria index, less food and energy, in calculating the relevant adjustment factors for FY 2020 and subsequent years. Table 3 provides the summary data for the percent change in the specified CPI for the Washington-Arlington-Alexandria area. The data from the Bureau of Labor Statistics is shown in table 3.

<table>
<thead>
<tr>

</tr>
</thead>
<tbody>
<tr>
<td><strong>Year</strong></td>
</tr>
<tr>
<td>Annual CPI</td>
</tr>
<tr>
<td>Annual Percent Change</td>
</tr>
</tbody>
</table>

To calculate the inflation adjustment for non-payroll costs, we multiply 1.02121 by the proportion of all costs other than PC&B to total FDA costs. Since 47.9915 percent was obligated for PC&B as shown in table 2, 52.0085 percent is the portion of costs other than PC&B (100 percent – 47.9915 percent = 52.0085 percent). The non-payroll adjustment is 1.02121 times 52.0085 percent, or 0.7396 percent.

Next, we add the payroll component (1.3142 percent) to the non-payroll component (0.7396 percent), for an inflation adjustment of 2.0538 percent for FY 2022.

AGDUFA III provides for the inflation adjustment to be compounded each fiscal year after FY 2020 (see 21 U.S.C. 379j–21(c)(2)). The inflation adjustment for FY 2022 (2.0538 percent) is compounded by adding 1 and then multiplying by 1 plus the inflation adjustment factor for FY 2021 (3.5847 percent), as published in the Federal Register on August 3, 2020 (85 FR 46647 to 46651), which equals 1.057121 (rounded) (1.020538 × 1.035847) for FY 2022. We then multiply the base revenue amount for FY 2022 ($18,336,340) by 1.057121, yielding an inflation adjusted amount of $19,383,730.

C. Workload Adjustment to Inflation Adjusted Fee Revenue Amount

The fee revenue amounts established in AGDUFA III for FY 2020 and subsequent fiscal years are also subject to adjustment to account for changes in FDA’s review workload. A workload adjustment will be applied to the inflation adjusted fee revenue amount (21 U.S.C. 379j–21(c)(3)).

To determine whether a workload adjustment applies, FDA calculates the weighted average of the change in the total number of each of the four types of applications and submissions specified in the workload adjustment provision (abbreviated applications for generic new animal drugs, manufacturing supplemental abbreviated applications for generic new animal drugs, investigational generic new animal drug study submissions, and investigational generic new animal drug protocol submissions) received over the 5-year period that ended on September 30, 2018 (the base years), and the average number of each of these types of applications and submissions over the most recent 5-year period that ended May 31, 2021.

The results of these calculations are presented in the first two columns of table 4. Column 3 reflects the percent change in workload over the two 5-year periods. Column 4 shows the weighting factor for each type of application, reflecting how much of the total FDA generic new animal drug review workload was accounted for by each type of application or submission in the table during the most recent 5 years. Column 5 is the weighted percent change in each category of workload, and was derived by multiplying the weighting factor in each line in column 4 by the percent change from the base year in column 3. At the bottom right of the table the sum of the values in column 5 is calculated, reflecting a total change in workload of 49.0190 percent for FY 2022. This is the workload adjuster for FY 2022.

<table>

</tr>
<tr>
<td>FY 2022 AGDUFA III Workload Adjuster</td>
</tr>
</tbody>
</table>

The statutory revenue amount after the inflation adjustment ($19,383,730) must now be increased by 49.0190 percent to reflect the changes in review workload (workload adjustment), for a workload and inflation-adjusted amount of $28,885,441.

D. Reduction of Workload-Based Increase by Amount of Certain Excess Collections

Under section 741(c)(3)(B) of the FD&C Act, for FYs 2021 through 2023, if application of the workload adjustment increases the amount of fee revenues established for the fiscal year, as adjusted for inflation, the fee revenue increase will be reduced by the amount of any excess collections, for the second preceding fiscal year, up to the amount of the fee revenue increase for workload. The workload and inflation-adjusted amount ($28,885,441) is subtracted by the inflation adjusted amount ($19,383,730) to get the workload adjustment amount ($9,501,711). Then the excess fees collected from FY 2020 as of May 31, 2021 ($4,087,114) are subtracted from the workload adjustment amount ($9,501,711) to get a reduced workload adjustment amount of $5,414,597. Next, the reduced workload adjustment amount ($5,414,597) is added to the inflation-adjusted revenue amount ($19,383,730), for a total fee revenue target of $24,798,000 (rounded to the nearest thousand dollars).

E. FY 2022 Fee Revenue Amounts

AGDUFA III specifies that the revenue amount of $24,798,000 for FY 2022 is to be divided as follows: 25 percent, or a total of $6,199,500, is to come from application fees; 37.5 percent, or a total of $9,299,250, is to come from product fees; and 37.5 percent, or a total of $9,299,250, is to come from sponsor fees (21 U.S.C. 379j–21(b)).

III. Abbreviated Application Fee Calculations for FY 2022

A. Application Fee Revenues and Numbers of Fee-Paying Applications

Each person who submits an abbreviated application for a generic new animal drug shall be subject to an application fee, with limited exceptions (21 U.S.C. 379j–21(a)(1)). The term “abbreviated application for a generic new animal drug” means an abbreviated application for the approval of any generic new animal drug submitted under section 512(b)(2) of the FD&C Act (21 U.S.C. 379j–21(k)(1)). The application fees are to be set so that they will generate $6,199,500 in fee revenue for FY 2022.

To set fees for abbreviated applications for generic new animal drugs to realize $6,199,500 FDA must first make some assumptions about the number of fee-paying abbreviated applications it will receive during FY 2022.

The Agency knows the number of applications that have been submitted in previous years. That number fluctuates annually. In estimating the fee revenue to be generated by generic new animal drug applications in FY 2022, FDA is assuming that the number of applications for which fees will be paid in FY 2022 will equal the average number of submissions over the 5 most recently completed fiscal years of the AGDUFA program (FY 2016–FY 2020). Also, under AGDUFA III, an abbreviated application for an animal generic drug subject to the criteria in section 512(d)(4) of the FD&C Act and submitted on or after October 1, 2013, shall be subject to 50 percent of the fee applicable to all other abbreviated applications for a generic new animal drug (21 U.S.C. 379j–21(a)(1)(C)(ii)).

The average number of original submissions of abbreviated applications for generic new animal drugs over the 5 most recently completed fiscal years is 8.2 applications not subject to the criteria in section 512(d)(4) of the FD&C Act and 6.2 submissions subject to the criteria in section 512(d)(4). Each of the submissions described under section 512(d)(4) of the FD&C Act pays 50 percent of the fee paid by the other applications and will be counted as one half of a fee. Adding all of the applications not subject to the criteria in section 512(d)(4) of the FD&C Act and 50 percent of the number that are subject to such criteria results in a total of 11.30 anticipated full fees.

Based on the previous assumptions, FDA is estimating that it will receive a total of 11.30 fee-paying generic new animal drug applications in FY 2022 (8.2 original applications paying a full fee and 6.2 applications paying a half fee).

B. Application Fee Rates for FY 2022

FDA must set the fee rates for FY 2022 so that the estimated 11.30 abbreviated applications that pay the fee will generate a total of $6,199,500. To generate this amount, the fee for a generic new animal drug application will have to be $548,628 and for those applications that are subject to the criteria set forth in section 512(d)(4) of the FD&C Act, 50 percent of that amount, or $274,314.

IV. Generic New Animal Drug Product Fee Calculations for FY 2022

A. Product Fee Revenues and Numbers of Fee-Paying Products

The generic new animal drug product fee must be paid annually by the person named as the applicant in an abbreviated application or supplemental abbreviated application for a generic new animal drug product submitted for listing under section 510 of the FD&C Act (21 U.S.C. 360), and who had an abbreviated application or supplemental abbreviated application for a generic new animal drug product pending at FDA after September 1, 2008 (see 21 U.S.C. 379j–21(a)(2)). The term “generic new animal drug product” means each specific strength or potency of a particular active ingredient or ingredients in final dosage form marketed by a particular manufacturer or distributor, which is uniquely identified by the labeler code and product code portions of the National Drug Code, and for which an abbreviated application for a generic new animal drug or supplemental abbreviated application for a generic new animal drug has been approved (21 U.S.C. 379j–21(k)(6)). The product fees are to be set so that they will generate $9,299,250 in fee revenue for FY 2022.

To set generic new animal drug product fees to realize $9,299,250, FDA must make some assumptions about the number of products for which these fees will be paid in FY 2022. FDA gathered data on all generic new animal drug products that have been submitted for listing under section 510 of the FD&C Act and matched this to the list of all persons who had a generic new animal drug application or supplemental abbreviated application pending after September 1, 2008. As of May 2021, FDA estimates a total of 536 products submitted for listing by persons who had an abbreviated application for a generic new animal drug or supplemental abbreviated application for a generic new animal drug pending after September 1, 2008. Based on this, FDA believes that a total of 536 products will be subject to this fee in FY 2022.

In estimating the fee revenue to be generated by generic new animal drug product fees in FY 2022, FDA is estimating that 1 percent of the products invoiced, or 5 products, will qualify for minor use/minor species fee waiver (see 21 U.S.C. 379j–21(d)). FDA has made this estimate at 1 percent this year, based on historical data over the past 5 completed fiscal years of the AGDUFA program.
Accordingly, the Agency estimates that a total of 531 (536 minus 5) products will be subject to product fees in FY 2022.

B. Product Fee Rates for FY 2022

FDA must set the fee rates for FY 2022 so that the estimated 531 products that pay fees will generate a total of $9,299,250. To generate this amount will require the fee for a generic new animal drug product, rounded to the nearest dollar, to be $17,513.

V. Generic New Animal Drug Sponsor Fee Calculations for FY 2022

A. Sponsor Fee Revenues and Numbers of Fee-Paying Sponsors

The generic new animal drug sponsor fee must be paid annually by each person who: (1) Is named as the applicant in an abbreviated application for a generic new animal drug, except for an approved application for which all subject products have been removed from listing under section 510 of the FD&C Act, or has submitted an investigational submission for a generic new animal drug that has not been terminated or otherwise rendered inactive and (2) had an abbreviated application for a generic new animal drug, supplemental abbreviated application for a generic new animal drug, or investigational submission for a generic new animal drug pending at FDA after September 1, 2008 (see 21 U.S.C. 379–21(a)(7) and 379–21(a)(3), respectively). A generic new animal drug sponsor is subject to only one such fee each fiscal year (see 21 U.S.C. 379–21(a)(3)(C)). Applicants with more than 6 approved abbreviated applications will pay 100 percent of the sponsor fee; applicants with more than 1 and fewer than 7 approved abbreviated applications will pay 75 percent of the sponsor fee; and applicants with 1 or fewer approved abbreviated applications will pay 50 percent of the sponsor fee (see 21 U.S.C. 379–21(a)(3)(C)). The sponsor fees are to be set so that they will generate $9,299,250 in fee revenue for FY 2022.

To set generic new animal drug sponsor fees to realize $9,299,250, FDA must make some assumptions about the number of sponsors who will pay these fees in FY 2022. FDA estimates that in FY 2022, 12 sponsors will pay 100 percent fees, 18 sponsors will pay 75 percent fees, and 30 sponsors will pay 50 percent fees. That totals the equivalent of 40.5 full sponsor fees (12 × 100 percent or 12, plus 18 × 75 percent or 13.5, plus 30 × 50 percent or 15).

VI. Fee Schedule for FY 2022

The fee rates for FY 2022 are summarized in table 5.

*An animal drug sponsor is subject to only one fee each fiscal year.

VII. Fee Waiver or Reduction; Exemption From Fees

The types of fee waivers and reductions that applied last fiscal year still exist for FY 2022. In AGDUFA III a new exemption from fees was established, as follows:

Fees will not apply to any person who not later than September 30, 2023, submits to CVM a supplemental abbreviated application relating to a generic new animal drug approved under section 512 of the FD&C Act, solely to add the application number to the labeling of the drug in the manner specified in section 502(w)(3) of the FD&C Act (21 U.S.C. 352(w)(3)), if that person otherwise would be subject to user fees under AGDUFA based only on the submission of the supplemental abbreviated application (21 U.S.C. 379–21(d)(2)).

VIII. Procedures for Paying FY 2022 Generic New Animal Drug User Fees

A. Abbreviated Application Fees and Payment Instructions

The FY 2022 fee established in the new fee schedule must be paid for a generic new animal drug application subject to fees under AGDUFA III that is submitted on or after October 1, 2021. The payment must be made in U.S. currency from a U.S. bank by one of the following methods: Wire transfer, electronically, check, bank draft, or U.S. postal money order payable to the Food and Drug Administration. The preferred payment method is online using an electronic check (Automated Clearing House (ACH), also known as eCheck) or credit card (Discover, VISA, MasterCard, American Express). Secure electronic payments can be submitted using the User Fees Payment Portal at [https://userfees.fda.gov/pay](https://userfees.fda.gov/pay) or the Pay.gov payment option is available to you after you submit a cover sheet. (Note: only full payments are accepted. No partial payments can be made online.) Once you have found your invoice, select “Pay Now” to be redirected to Pay.gov. Electronic payment options are based on the balance due. Payment by credit card is available only for balances less than $25,000. If the balance exceeds this amount, only the ACH option is available. Payments must be made using U.S. bank accounts as well as U.S. credit cards.
When paying by check, bank draft, or U.S. postal money order, please write your application’s unique Payment Identification Number (PIN), beginning with the letters “AG,” on the upper right-hand corner of your completed Animal Generic Drug User Fee Cover Sheet. Also write FDA’s post office box number (P.O. Box 979033) and PIN on the enclosed check, bank draft, or money order. Mail the payment and a copy of the completed Animal Generic Drug User Fee Cover Sheet to: Food and Drug Administration, P.O. Box 979033, St. Louis, MO 63197–9000. Note: In no case should the payment for the fee be submitted to FDA with the application.

When paying by wire transfer, it is required that the invoice number or PIN is included; without the invoice number or PIN the payment may not be applied, and the invoice amount would be referred to collections. The originating financial institution may charge a wire transfer fee. If the financial institution charges a wire transfer fee, it is required to add that amount to the payment to ensure that the invoice is paid in full. Use the following account information when sending a wire transfer:
U.S. Department of the Treasury, TREAS
NYC, 33 Liberty St., New York, NY 10045, Account Name: Food and Drug Administration, Account No.: 75060099, Routing No.: 021030004, SWIFT No.: FRNYUS33.

To send a check by a courier such as Federal Express, the courier must deliver the check and printed copy of the cover sheet to: U.S. Bank, Attn: Government Lockbox 979033, 1005 Convention Plaza, St. Louis, MO 63101. (Note: This address is for courier delivery only. If you have any questions concerning courier delivery, contact U.S. Bank at 314–418–4013. This phone number is only for questions about courier delivery.)

It is important that the fee arrives at the bank at least a day or two before the abbreviated application arrives at FDA’s CVM. FDA records the official abbreviated application receipt date as the later of the following: The date the application was received by CVM, or the date U.S. Bank notifies FDA that your payment in the full amount has been received, or when the U.S. Department of the Treasury notifies FDA of payment. U.S. Bank and the United States Treasury are required to notify FDA within 1 working day, using the PIN described previously.

The tax identification number of FDA is 53–0196965.

B. Application Cover Sheet Procedures

Step One—Create a user account and password. Log onto the AGDUFA website at https://www.fda.gov/ForIndustry/UserFees/AnimalGenericDrugUserFeeActAGDUFA/ucm137049.htm and scroll down the page until you find the link “Create AGDUFA User Fee Cover Sheet.” Select that link and follow the directions. For security reasons, each firm submitting an application will be assigned an organization identification number, and each user will also be required to set up a user account and password the first time you use this site. Online instructions will walk you through this process.

Step Two—Create an Animal Generic Drug User Fee Cover Sheet, transmit it to FDA, and print a copy. After logging into your account with your user name and password, complete the steps required to create an Animal Generic Drug User Fee Cover Sheet. One cover sheet is needed for each abbreviated application for a new animal drug. Once you are satisfied that the data on the cover sheet is accurate and you have finalized the cover sheet, you will be able to transmit it electronically to FDA and you will be able to print a copy of your cover sheet showing your unique PIN.

Step Three—Send the payment for your application as described in section VIII.A.

Step Four—Please submit your application and a copy of the completed Animal Generic Drug User Fee Cover Sheet to the following address: Food and Drug Administration, Center for Veterinary Medicine, Document Control Unit (HFV–199), 7500 Standish Pl., Rockville, MD 20855.

C. Product and Sponsor Fees

By December 31, 2021, FDA will issue invoices and payment instructions for product and sponsor fees for FY 2022 using this fee schedule. Fees will be due by January 31, 2022. FDA will issue invoices in November 2022 for any products and sponsors subject to fees for FY 2022 that qualify for fees after the December 2021 billing.

Dated: July 16, 2021.

Lauren K. Roth,
Acting Principal Associate Commissioner for Policy.

Food and Drug Administration

[Docket No. FDA–2021–N–0363]

Agency Information Collection Activities; Submission for Office of Management and Budget Review; Comment Request; Prescription Drug Advertising

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing that a proposed collection of information has been submitted to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995.

DATES: Submit written comments (including recommendations) on the collection of information by August 23, 2021.

ADDRESSES: To ensure that comments on the information collection are received, OMB recommends that written comments be submitted to https://www.reginfo.gov/public/do/PRAmain. Find this particular information collection by selecting “Currently under Review—Open for Public Comments” or by using the search function. The OMB control number for this information collection is 0910–0686. Also include the FDA docket number found in brackets in the heading of this document.

FOR FURTHER INFORMATION CONTACT: Domini Bean, Office of Operations, Food and Drug Administration, Three White Flint North, 10A–12M, 11601 Landsdown St. North Bethesda, MD 20852, 301–796–5733, PRAStaff@fda.hhs.gov.

SUPPLEMENTARY INFORMATION: In compliance with 44 U.S.C. 3507, FDA has submitted the following proposed collection of information to OMB for review and clearance.

Prescription Drug Advertising—21 CFR Part 202

OMB Control Number 0910–0686—Extension

This information collection supports Agency regulations and associated guidance. FDA protects the public health by assuring the safety, effectiveness, and security of a wide range of products. We also help consumers get accurate, science-based information they need to use medicines appropriately and improve their health.
Section 301 of the Federal Food, Drug, and Cosmetic Act (the FD&C Act) (21 U.S.C. 331) prohibits the misbranding of FDA-regulated products, including prescription drugs. Section 502 of the FD&C Act (21 U.S.C. 352) requires that manufacturers, packers, and distributors, or anyone acting on their behalf (firms) include certain information in human prescription drug promotional labeling and advertisements.

Our prescription drug advertising regulations in part 202 (21 CFR part 202) describe requirements and standards for print and broadcast advertisements. Section 202.1 applies to advertisements published in journals, magazines, other periodicals, and newspapers, and advertisements broadcast through media such as radio, television, and telephone communication systems. Print advertisements must include a brief summary of each of the risk concepts from the product’s approved package labeling (§ 202.1(e)(1)). Advertisements that are broadcast through media such as television, radio, or telephone communication systems must disclose the major risks from the product’s package labeling in either the audio or visual parts of the presentation (§ 202.1(e)(1)); this disclosure is known as the “major statement.” If a broadcast advertisement omits the major statement, or if the major statement minimizes the risks associated with the use of the drug, the advertisement could render the drug misbranded in violation of the FD&C Act (21 U.S.C. 352(n) and section 201 of the FD&C Act (21 U.S.C. 321(n)), and FDA’s implementing regulations at § 202.1(e).

Section 202.1(e)(6) provides for certain waivers. The waiver request must set forth clearly and concisely the petitioner’s interest in the advertisement, the specific provision of § 202.1(e)(6) from which a waiver is sought, a complete copy of the advertisement, and a showing that the advertisement is not false, lacking in fair balance or otherwise misleading, or otherwise violative of section 502(n) of the FD&C Act.

Under § 202.1(j)(1), a sponsor must submit advertisements to FDA for prior approval before dissemination if: (1) The sponsor or FDA has received information that has not been widely publicized in medical literature that the use of the drug may cause fatalities or serious damage; (2) FDA has notified the sponsor that the information must be part of the advertisements for the drug; and (3) the sponsor has failed to present to FDA a program for ensuring that such information will be publicized promptly and adequately to the medical profession in subsequent subsequent advertisements, or if such a program has been presented to FDA but is not being followed by the sponsor.

Under § 202.1(j)(1)(iii), a sponsor must provide to FDA a program for assuring that significant new adverse information about the drug that becomes known (i.e., use of drug may cause fatalities or serious damage) will be publicized promptly and adequately to the medical profession in any subsequent advertisements. Under § 202.1(j)(4), a sponsor may voluntarily submit advertisements to FDA for comment prior to publication. While the regulations establish requirements for prescription drug advertisements, we have developed the guidance document entitled, “Product Name Placement, Size, and Prominence in Promotional Labeling and Advertisements; Guidance for Industry” to clarify requirements for product name placement, size, prominence, and frequency in promotional labeling and advertisements for human and animal prescription drugs and prescription biological products. The guidance includes recommendations that pertain to traditional print promotional labeling and advertisements (e.g., journal ads, detail aids, brochures), audiovisual promotional labeling (e.g., videos shown in a healthcare provider’s office), broadcast advertisements (e.g., television advertisements, radio advertisements), and electronic and computer-based promotions (e.g., internet, social media, emails, CD-ROMs, DVDs). The guidance document was issued consistent with our Good Guidance Practice regulations in part 10.115 which provide for public comment at any time, and is available from our website at: https://www.fda.gov/media/87202/download.

In the Federal Register of April 29, 2021 (86 FR 22686), we published a 60-day notice requesting public comment on the proposed collection of information. Three comments were received, all generally supportive of FDA’s drug advertising regulations; however, some commenters suggested FDA might do more to promote truthful advertising with regard to prescription drug products. We appreciate all comments. No comment suggested a revision to our current estimate for the information collection.

We estimate the burden of the information collection as follows:

1 There are no capital costs or operating and maintenance costs associated with this collection.
2 Numbers rounded to the nearest one/hundredth.

Under § 202.1, advertisements for human and animal prescription drug and biological products must comply with the standards described in that section. Under § 202.1(j)(1), if information that the use of a prescription drug may cause fatalities or serious damage has not been widely publicized in the medical literature, a sponsor must include such information in the advertisements for that drug. Based on a review of Agency data we estimate an average of 29,770,040 hours is incurred annually by respondents in complying with third-party disclosure requirements for prescription drug advertising. We assume a placeholder of 1 for disclosures under § 202.1(j)(1).

### Table 3—Estimated Annual Disclosure Burden Discussed in Agency Guidance

<table>
<thead>
<tr>

<td>190.3</td>
<td>136,069</td>
<td>3</td>
<td>408,207</td>
</tr>
</tbody>
</table>

The placement, size, prominence, and frequency of the proprietary and established names for human prescription drugs, including prescription biological products, and animal prescription drugs are specified in labeling and advertising regulations (§§ 201.10(g) and (h); 202.1(b)–(d)). Based on Agency data, we estimate that, for human and animal prescription drugs and prescription biological products, an average of 715 firms disseminate approximately 136,069 advertisements and promotional pieces each year. We assume that the burden associated with complying with the regulatory requirements discussed in the guidance would be approximately 3 hours per response.

We have adjusted our estimate upward to reflect increases in prescription drug advertisements and associated disclosures.

DATED: July 16, 2021.

Lauren K. Roth,
Acting Principal Associate Commissioner for Policy.

Food and Drug Administration
[Docket No. FDA–2021–N–0387]

Agency Information Collection Activities; Submission for Office of Management and Budget Review; Comment Request; Recommended Content of Medical Product Communications That Are Consistent With the Food and Drug Administration-Required Labeling and Recommendations for Drug and Device Manufacturer Communications With Payors, Formulary Committees, and Similar Entities

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing that a proposed collection of information has been submitted to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995.

DATES: Submit written comments (including recommendations) on the collection of information by August 23, 2021.

ADDRESSES: To ensure that comments on the information collection are received, OMB recommends that written comments be submitted to https://www.reginfo.gov/public/do/PRAMain.

Find this particular information collection by selecting “Currently under Review—Open for Public Comments” or by using the search function. The OMB control numbers for the collections of information are 0910–0856 and 0910–0857. Also include the FDA docket number found in brackets in the heading of this document.

FOR FURTHER INFORMATION CONTACT: Domini Bean, Office of Operations, Food and Drug Administration, Three White Flint North, 10A–12M, 11601 Landsdown St. North Bethesda, MD 20852, 301–796–5733, PRASstaff@fda.hhs.gov.

SUPPLEMENTARY INFORMATION: In compliance with 44 U.S.C. 3507, FDA has submitted the following proposed collection of information to OMB for review and clearance.

I. Medical Product Communications That Are Consistent With the FDA-Required Labeling—Questions and Answers

OMB Control Number 0910–0856—Extension

This information collection supports the Federal Food, Drug, and Cosmetic Act (FD&C Act) and FDA’s implementing regulations that govern drug and device labeling and prescription drug and restricted device advertising. Section 502(a) of the FD&C Act (21 U.S.C. 352(a)) specifies that a drug or device shall be deemed to be misbranded if its labeling is false or
misleading in any particular, and that labeling may be considered misleading if it fails to reveal material facts about the product being promoted, including facts that are material in light of the representations made in a promotional piece (section 201(n) of the FD&C Act (21 U.S.C. 321(n))). Similarly, under sections 201(n) and 502(n) of the FD&C Act and FDA’s implementing regulations (21 CFR 202.1(e)(5)(i) and (iii)), an advertisement for a prescription drug must not be false or misleading with respect to side effects, contraindications, or effectiveness, or fail to reveal material facts about the product being advertised, including facts that are material in light of the representations made in a promotional piece. The FD&C Act also specifies that restricted device advertisements must not be false or misleading (section 502(q)(1)) and must reveal facts that are material about the product being advertised (section 201(n)).

To assist respondents with drug and device labeling requirements and prescription drug and restricted device advertising, we developed the guidance for industry entitled “Medical Product Communications That Are Consistent With the FDA-Required Labeling—Questions and Answers” (June 2018) (medical product communications guidance), available at https://www.fda.gov/media/133619/download. This medical product communications guidance includes recommendations that firms consider when developing “consistent with the FDA-required labeling (CFL)” presentations in their labeling and advertising materials to help ensure the presentations are not false or misleading in violation of the FD&C Act and FDA’s implementing regulations. The guidance also describes FDA’s thinking when examining the consistency of a firm’s product communications with that product’s own FDA-required labeling.

As explained in the guidance, if a firm communicates information that is not contained in its product’s FDA-required labeling but that is determined to be consistent with the FDA-required labeling, FDA does not intend to rely on that communication to establish a new intended use that is different from the use or uses for which the product is legally marketed. Establishing a product’s intended uses is an element in establishing certain violations under the FD&C Act and Public Health Service Act. Firms’ communications about their products that are consistent with the products’ FDA-required labeling but that are false or misleading may subject a firm to enforcement action under the FD&C Act. Thus, the guidance not only describes FDA’s thinking on communications that are consistent with the FDA-required labeling, but also provides general recommendations intended to help firms comply with requirements in the FD&C Act and FDA’s implementing regulations for conveying information that is consistent with the FDA-required labeling in a truthful and non-misleading way. The medical product communications guidance recommends that firms accurately represent in the communications any study results or other data and information that are relied upon to support a firm’s CFL promotional communication. Other recommendations include the clear and prominent disclosure of aspects of study design and methodology that are material for audiences to accurately interpret the information being presented (e.g., type of study, study objectives, product dosage and use regimens, control or controls used, patient population studied), as well as material limitations related to the study design, methodology, and results. Also, the guidance recommends that firms accurately characterize and contextualize the relevant information about the product, including by disclosing unfavorable or inconsistent findings. In addition, the guidance recommends that firms disclose material contextual information from the FDA-required labeling in these communications, such as data and information from studies in the FDA-required labeling that are relevant to the data or information presented in the CFL promotional communication.

The recommendations will help ensure that health care professional and consumer audiences receive truthful information about the benefits and risks of drugs and devices in firms’ CFL promotional communications and that material contextual information is included in these communications so that audiences are not misled. Accurate information helps these audiences know whether drugs or devices may be appropriate for them or their patients and know what they can expect to experience when prescribing or using these products.

In the Federal Register of May 10, 2021 (86 FR 24868), we published a 60-day notice requesting public comment on the proposed collection of information. Two comments were received; one appearing to question the effectiveness of the information collection and the other offering its support. Neither comment suggested FDA revise its estimate of the attendant information collection.

We estimate the burden of this collection of information as follows:

<table>
<thead>
<tr>
<th>Information collection activity</th>
<th>Number of respondents</th>
<th>Number of disclosures per respondent</th>
<th>Total annual disclosures</th>
<th>Average burden per disclosure</th>
<th>Total hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>Recommended information to be included when firms choose to disseminate communications that are consistent with the FDA-required labeling</td>
<td>324</td>
<td>30</td>
<td>9,720</td>
<td>4</td>
<td>38,880</td>
</tr>
</tbody>
</table>

1 There are no capital costs or operating and maintenance costs associated with this collection of information.

Since our last request for OMB approval, we have made no adjustments to the currently approved burden estimate.

II. Recommendations for Drug and Device Manufacturer Communications With Payors, Formulary Committees, and Similar Entities

OMB Control Number 0910–0857—Extension

This information collection also supports implementation of section 502(a) of the FD&C Act and applicable Agency regulations. Section 502(a)(1) of the FD&C Act provides that a drug or device is deemed to be misbranded “[i]f its labeling is false or misleading in any particular.” Under longstanding FDA practice and FDA’s statute and regulations, and under case law,
labeling encompasses more than merely the label of the drug, but extends to other written, printed, or graphic matter “accompanying such article” (section 201(m) of the FD&C Act; see also 21 CFR 1.3(a)). Section 502(a) of the FD&C Act also includes a provision about communication of health care economic information (HCEI) to payors through labeling or advertising. To assist respondents in this regard, we developed the guidance for industry and review staff entitled “Drug and Device Manufacturer Communications With Payors, Formulary Committees, and Similar Entities—Questions and Answers” (June 2018) (drug and device communications guidance), available at https://www.fda.gov/media/133620/download.

This drug and device communications guidance includes recommendations regarding information firms should include in HCEI for prescription drugs if they choose to disseminate such materials (HCEI materials) to payors, in accordance with section 502(a) of the FD&C Act. Specifically, if a manufacturer communicates HCEI for approved prescription drugs (including biological products that also meet the definition of drug under the FD&C Act and approved or cleared medical devices (collectively referred to as medical products)) to payors, FDA recommends that firms include in HCEI materials disseminated to payors information about: (1) Various aspects of study design and methodology of an economic analysis (i.e., type of analysis, modeling technique, patient population, perspective or viewpoint, treatment comparator, time horizon, outcome measures, cost estimates, and assumptions); (2) factors that limit generalizability of an economic analysis; limitations to an economic analysis; and (3) sensitivity analyses, if applicable, to allow for informed decision making by payors.

Furthermore, FDA recommends that firms include other information when disseminating HCEI materials, as applicable, to provide a balanced and complete presentation. Such information includes a statement of the FDA-approved indication of the drug and a copy of the most current FDA-approved labeling. Under section 502(a) of the FD&C Act, firms must also include a conspicuous and prominent statement to describe any material differences between the HCEI and the FDA-approved labeling. HCEI materials should also disclose whether certain studies or data sources were omitted from an economic analysis and how the omission of those studies or data sources may alter the conclusions presented in the analysis. Moreover, FDA recommends that HCEI materials disclose important risk information associated with the approved use of the drug, and pursuant to section 502(a) of the FD&C Act, HCEI materials must disclose any additional risk information related to assumptions that vary from the approved labeling. In addition, HCEI materials should disclose potential financial or affiliation biases to the extent reasonably known by firms at the time of dissemination.

The drug and device communications guidance provides similar recommendations for HCEI materials disseminated to payors about approved or cleared devices.

If firms choose to make communications to payors about unapproved products or unapproved uses of approved or cleared products, FDA recommends that firms include a clear statement with their communications that the product or use is not approved or cleared and that the safety or effectiveness of the product or use has not been established.

In the Federal Register of May 10, 2021, we published a 60-day notice requesting public comment on the proposed collection of information. Two comments were received; one appearing to question the effectiveness of the information collection and the other offering its support. Neither comment suggested FDA revise its estimate of the attendant information collection.

We estimate the burden of this collection of information as follows:

<table>
<thead>
<tr>
<th>Information collection activity</th>
<th>Number of respondents</th>
<th>Number of responses per respondent</th>
<th>Total annual responses</th>
<th>Average burden per response</th>
<th>Total hours</th>

1 There are no capital costs or operating and maintenance costs associated with this collection of information.
We have adjusted the estimate of burden we associate with the information collection recommendations in the guidance to reflect an increase of 2,000 hours and 100 responses annually.

Dated: July 16, 2021.

Lauren K. Roth,
Acting Principal Associate Commissioner for Policy.

[FR Doc. 2021–15653 Filed 7–22–21; 8:45 am]

BILLING CODE 4161–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2021–N–0739]

International Drug Scheduling; Convention on Psychotropic Substances; Single Convention on Narcotic Drugs; 4F-MDMB-BICA (4F-MDMB-BUTICA); Brophrine; Metonitazene; Eutylone (bk-EBDB); BMDP (3,4-Methylenedioxy-N-benzylcathinone); Kratom (mitragynine, 7-hydroxymitragynine); Phenibut; Request for Comments

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice; request for comments.

SUMMARY: The Food and Drug Administration (FDA or Agency) is inviting interested persons to submit comments concerning abuse potential, actual abuse, medical useffulness, trafficking, and impact of scheduling changes on availability for medical use of seven drug substances. These comments will be considered in preparing a response from the United States to the World Health Organization (WHO) regarding the abuse liability and diversion of these drugs. WHO will use this information to consider whether to recommend that certain international restrictions be placed on these drug substances. This notice requesting comments is required by the Controlled Substances Act (CSA).

DATES: Submit either electronic or written comments by August 9, 2021.

ADDRESSES: You may submit comments as follows. Please note that late, untimely filed comments will not be considered. Electronic comments must be submitted on or before August 9, 2021. The https://www.regulations.gov electronic filing system will accept comments until 11:59 p.m. Eastern Time at the end of August 9, 2021. Comments received by mail/hand delivery/courier (for written/paper submissions) will be considered timely if they are postmarked or the delivery service acceptance receipt is on or before that date.

Electronic Submissions

Submit electronic comments in the following way:

• Federal eRulemaking Portal: https://www.regulations.gov. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to https://www.regulations.gov will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else’s Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on https://www.regulations.gov.
• If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see “Written/Paper Submissions” and “Instructions”).

Written/Paper Submissions

Submit written/paper submissions as follows:

• Mail/Hand Delivery/Courier (for written/paper submissions): Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
• For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in “Instructions.”

Instructions: All submissions received must include the Docket No. FDA–2021–N–0739 for “International Drug Scheduling; Convention on Psychotropic Substances; Single Convention on Narcotic Drugs; 4F-MDMB-BICA (4F-MDMB-BUTICA); Brophrine; Metonitazene; Eutylone (bk-EBDB); BMDP (3,4-Methylenedioxy-N-benzylcathinone); Kratom (mitragynine, 7-hydroxymitragynine); Phenibut; Request for Comments.” Received comments, those filed in a timely manner (see ADDRESSES), will be placed in the docket and, except for those submitted as “Confidential Submissions,” publicly viewable at https://www.regulations.gov or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.
• Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states “THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.” The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on https://www.regulations.gov. Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as “confidential.” Any information marked as “confidential” will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA’s posting of comments to public docket, see 80 FR 56469, September 18, 2015, or access the information at: https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to https://www.regulations.gov and insert the docket number, found in brackets in the heading of this document, into the “Search” box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

FOR FURTHER INFORMATION CONTACT:

SUPPLEMENTARY INFORMATION:

I. Background

The United States is a party to the 1971 Convention on Psychotropic Substances (Psychotropic Convention). Article 2 of the Psychotropic Convention provides that if a party to the convention or WHO has information about a substance, which in its opinion
may require international control or change in such control, it shall so notify the Secretary-General of the United Nations (U.N. Secretary-General) and provide the U.N. Secretary-General with information in support of its opinion. Paragraph (d)(2)(A) of the CSA (21 U.S.C. 811) (Title II of the Comprehensive Drug Abuse Prevention and Control Act of 1970) provides that when WHO notifies the United States under Article 2 of the Psychotropic Convention that it has information that may justify adding a drug or other substances to one of the schedules of the Psychotropic Convention, transferring a drug or substance from one schedule to another, or deleting it from the schedules, the Secretary of State must transmit the notice to the Secretary of Health and Human Services (Secretary of HHS). The Secretary of HHS must then publish the notice in the Federal Register and provide opportunity for interested persons to submit comments that will be considered by HHS in its preparation of the scientific and medical evaluations of the drug or substance.

II. WHO Notification

The Secretary of HHS received the following notice from WHO (nonrelevant text removed):

Ref.: C.L. 20.2021

The World Health Organization (WHO) presents its compliments to Member States and Associate Members and has the pleasure of announcing that the 44th Expert Committee on Drug Dependence (ECDD) will meet from 11 to 15 October 2021, coordinated from Geneva, Switzerland. Given that WHO Expert Committee meetings are of a closed nature, this letter serves to notify Member States of the substances under review at the 44th ECDD, which are in the Annex I, attached for reference. WHO is mandated by the 1961 and 1971 International Drug Control Conventions to make recommendations to the UN Secretary-General on the need for and level of international control of psychoactive substances based on the advice of its independent scientific advisory body, the ECDD. To assess the appropriate control of a psychoactive substance, the ECDD convenes annually to review the potential of this substance to cause dependence, abuse and harm to health, as well as any therapeutic applications. In order to perform this review and make scientific and evidence-based decisions, the ECDD conducts medical, scientific, and public health evaluations of the selected psychoactive substances using the best available information. Although the meetings are of a closed nature, Member States are invited to contribute to the ECDD review process by joining the 44th ECDD Open Session on 11 October 2021. The Open Session will allow interested parties to learn about present and future activities of the ECDD Secretariat, and present information concerning substances under review to the Expert Committee Registration information will be made available on the ECDD website: https://www.who.int/medicines/access/controlled-substances/en/.

As in the past and in line with the publication “Guidance on the WHO review of psychoactive substances for international control” (EB126/2010/REC1, Annex 6),1 Member States can also contribute to the ECDD review process by providing accurate information concerning the substances under review in advance of the meeting. For this purpose, a questionnaire will be sent to Member States to gather country information on the legitimate use, harmful use, status of national control and potential impact of international control for each substance under evaluation.

In addition to the questionnaire, Member States are also encouraged to provide any additional relevant information (unpublished or published) on substances to be reviewed by the 44th ECDD by emailing ecddsecretariat@who.int with the subject “Ref: C.L.20.2021”.

The World Health Organization takes this opportunity to renew to Member States and Associate Members the assurance of its highest consideration.

GENEVA, 10 June 2021

Annex I

44th Expert Committee on Drug Dependence (ECDD) 11–15 October 2021, Substances For Review

Critical reviews: The substances listed below have never been formally reviewed by WHO and are not currently under international control. Information was brought to WHO’s attention that these substances are clandestinely manufactured, of especially serious risk to public health and society, and of no recognized therapeutic use by any Party. The Expert Committee will consider whether information presented during a critical review may justify the scheduling or a change in the scheduling of the substance in the 1961 or 1971 Conventions.

Synthetic cannabinoids receptor agonists

1. 4F-MDMB-BICA (4F-MDMB-BUTICA)

Not I synthetic opioids

2. Brorphine

3. Metonitazene

Cathinones/stimulants

4. Eutylone (bk-EBDB)

5. BMDB (3,4-Methylenedioxy-N-benzylcathinone), benzylomorphinan

Pre-reviews: The substances listed below have been proposed for a pre-review. The purpose of a pre-review is to determine whether current information justifies an Expert Committee critical review. A pre-review is a preliminary analysis and findings at this stage should not determine whether the control status of a substance should be changed.

Herbal drugs

6. Kratom, mitragynine, 7-hydroxymitragynine

Medicines

7. Phenibut

FDA has verified the website addresses contained in the WHO notice, as of the date this document publishes in the Federal Register, but websites are subject to change over time. Access to view the WHO questionnaire can be found at https://www.who.int/groups/who-expert-committee-on-drug-dependence/fourty-fourth-ecddd-documents.

III. Substances Under WHO Review

4F-MDMB-BICA (4F-MDMB-BUTICA) is a synthetic cannabinoid that has been sold online and used to mimic the biological effects of tetrahydrocannabinol, the main psychoactive constituent in marijuana. Research and clinical reports have demonstrated that synthetic cannabinoids are applied onto plant material so that the material may be smoked as users attempt to obtain a euphoric and psychoactive "high." Synthetic cannabinoids have been marketed under the guise of "herbal incense," and promoted by drug traffickers as legal alternatives to marijuana. According to the National Forensic Laboratory Information System database, 4F-MDMB-BICA emerged in the United States in May 2020 through identification in drug seizures. Per NPS Discovery,1 4F-MDMB-BICA has been identified in at least 26 toxicology cases associated with postmortem and driving under the influence of drugs investigations in the United States. There are no commercial or approved medical uses for 4F-MDMB-BICA, and it is not a controlled substance under the CSA but may be considered an analogue of other Schedule I substances.

Bromphine (chemical name: 1-(1-(1-(4-bromophenyl)ethyl)piperidin-4-yl)-1,3-dihydro-2H-benzol[d]imidazol-2-one) is a potent synthetic opioid encountered as both a single substance of abuse and in combination with other opioid substances, such as heroin and fentanyl. The appearance of bromphine on the illicit drug market is similar to other designer drugs trafficked for their psychoactive effects. Beginning in June 2019, bromphine emerged in the United States illicit, synthetic drug market as evidenced by its identification in drug seizures. The use of bromphine has been associated with at least seven fatalities between June and July 2020 in the United States. Bromphine is not approved for medical use in the United States. On March 1, 2021, the U.S. Drug Enforcement Administration issued a

temporary order to control brorphine as a Schedule I substance under the CSA.
Eutylone (bk-EBDB) (chemical name: 1-(1,3-benzodioxol-5-yl)-2-(ethylamino)butan-1-one) is a designer drug of the phenethylamine class. Eutylone is a synthetic cathinone with chemical structural and pharmacological similarities to Schedule I and II amphetamines and cathinones, such as to 3,4-Methylenedioxyamphetamine, methylene, and pentylene. Eutylone emerged in the United States illicit, synthetic drug market in 2014 as evidenced by its identification in drug seizures. Other evidence indicates that eutylone, like other Schedule I synthetic cathinones, is abused for its psychoactive effects. Adverse effects associated with synthetic cathinones abuse include agitation, hypertension, tachycardia, and death. Eutylone is not approved for medical use in the United States. As a positional isomer of pentylene, eutylone is controlled in Schedule I of the CSA.

Mitragynine and 7-hydroxymitragynine are the main active constituents of the plant Mitragyna speciosa, commonly known as kratom, an indigenous plant of Southeast Asia. Kratom is abused for its ability to produce opioid-like effects. Kratom is available in several different forms to include dried/crushed leaves, powder, capsules, tablets, liquids, and gum/resin. Kratom is an increasingly popular drug of abuse and readily available on the recreational drug market in the United States. Evidence suggests that kratom is abused individually and with other psychoactive substances. Kratom does not have an approved medical use in the United States and has not been studied as a treatment agent in the United States. Kratom has a history of being used as an opium substitute in Southeast Asia. In the United States, kratom is misused to self-treat chronic pain and opioid withdrawal symptoms. Consumption of kratom can lead to a number of health impacts, including, among others, respiratory depression, vomiting, nervousness, weight loss, and constipation. Kratom has been reported to have both narcotic and stimulant-like effects, and withdrawal symptoms may include hostility, aggression, excessive tearing, aching of muscles and bones, and jerky limb movements. Kratom is not a controlled substance under the CSA.

Phenibut (chemical name: Beta-phenyl-gamma-aminobutyric acid HCl) is a nootropic (cognition enhancing) effects. Phenibut acts as a gamma-aminobutyric acid (GABA)-mimetic, primarily at GABA(A) receptors. Phenibut is sold online as a supplement to improve cognitive function, memory, creativity in healthy persons, and used to self-medicate anxiety, insomnia, and alcohol cravings. There are reports of people taking phenibut arriving to emergency departments with agitation, intoxication, altered mental status, and withdrawal, and also reports of phenibut in toxicology urinalysis reports from a prison facility, where inmates were abusing multiple drugs, including phenibut. There is no approved medical use for phenibut in the United States, and phenibut is not a controlled substance under the CSA.

Although FDA is, through this notice, requesting comments from interested persons, which will be considered by HHS when it prepares an evaluation of these drug substances, HHS will not now make any recommendations to WHO regarding whether any of these drugs should be subjected to international controls. Instead, HHS will defer such consideration until WHO has made official recommendations to the Commission on Narcotic Drugs, which are expected to be made in late 2021. Any HHS position regarding international control of these drug substances will be preceded by another Federal Register notice soliciting public comments, as required by paragraph (d)(2)(B) of the CSA.

Dated: July 19, 2021.
Lauren K. Roth,
Acting Principal Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration
[Docket No. FDA–2020–N–1584]

Authorization of Emergency Use of Certain Medical Devices During COVID–19; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing the issuance of Emergency Use Authorizations (EUAs) (the Authorizations) for certain medical devices related to the Coronavirus Disease 2019 (COVID–19) public health emergency. FDA has issued the Authorizations listed in this document under the Federal Food, Drug, and Cosmetic Act (FD&C Act). These Authorizations contain, among other things, conditions on the emergency use of the authorized products. The Authorizations follow the February 4, 2020, determination by the Secretary of Health and Human Services (HHS) that there is a public health emergency that has a significant potential to affect national security or the health and security of U.S. citizens living abroad, and that involves the virus that causes COVID–19, and the subsequent declarations on February 4, 2020, March 2, 2020, and March 24, 2020, that circumstances exist justifying the authorization of emergency use of in vitro diagnostics for detection and/or
diagnosis of the virus that causes COVID-19, personal respiratory protective devices, and medical devices, including alternative products used as medical devices, respectively, subject to the terms of any authorization issued under the FD&C Act. These Authorizations, which include an explanation of the reasons for issuance, are listed in this document, and can be accessed on FDA’s website from the links indicated.

DATES: These Authorizations are effective on their date of issuance.

ADDRESSES: Submit written requests for single copies of an EUA to the Office of Counterterrorism and Emerging Threats, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 1, Rm. 4338, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your request or include a fax number to which the Authorization may be sent. See the SUPPLEMENTARY INFORMATION section for electronic access to the Authorization.

FOR FURTHER INFORMATION CONTACT: Jennifer J. Ross, Office of Counterterrorism and Emerging Threats, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 1, Rm. 4332, Silver Spring, MD 20993–0002, 301–796–8510 (this is not a toll free number).

SUPPLEMENTARY INFORMATION:

I. Background

Section 564 of the FD&C Act (21 U.S.C. 360bbb–3) allows FDA to strengthen the public health protections against biological, chemical, radiological, or nuclear agent or agents. Among other things, section 564 of the FD&C Act allows FDA to authorize the use of an unapproved medical product or an unapproved use of an approved medical product in certain situations. With this EUA authority, FDA can help ensure that medical countermeasures may be used in emergencies to diagnose, treat, or prevent serious or life-threatening diseases or conditions caused by a biological, chemical, radiological, or nuclear agent or agents when there are no adequate, approved, and available alternatives.

Section 564(b)(1) of the FD&C Act provides that, before an EUA may be issued, the Secretary of HHS must declare that circumstances exist justifying the authorization based on one of the following grounds: (1) A determination by the Secretary of Homeland Security that there is a domestic emergency, or a significant potential for a domestic emergency, involving a heightened risk of attack with a biological, chemical, radiological, or nuclear agent or agents; (2) a determination by the Secretary of Defense that there is a military emergency, or a significant potential for a military emergency, involving a heightened risk to U.S. military forces, including personnel operating under the authority of title 10 or title 50 of the U.S. Code, of attack with (A) a biological, chemical, radiological, or nuclear agent or agents; or (B) an agent or agents that may cause, or are otherwise associated with, an imminently life-threatening and specific risk to U.S. military forces; (3) a determination by the Secretary of HHS that there is a public health emergency, or a significant potential for a public health emergency, that affects, or has a significant potential to affect, national security or the health and security of U.S. citizens living abroad, and that involves a biological, chemical, radiological, or nuclear agent or agents, or a disease or condition that may be attributable to such agent or agents; or (4) the identification of a material threat by the Secretary of Homeland Security pursuant to section 319F–2 of the Public Health Service (PHS) Act (42 U.S.C. 247d–6b) sufficient to affect national security or the health and security of U.S. citizens living abroad.

Once the Secretary of HHS has declared that circumstances exist justifying an authorization under section 564 of the FD&C Act, FDA may authorize the emergency use of a drug, device, or biological product if the agency concludes that the statutory criteria are satisfied. Under section 564(h)(1) of the FD&C Act, FDA is required to publish in the Federal Register a notice of each authorization, and each termination or revocation of an authorization, and an explanation of the reasons for the action. Under section 564(h)(1) of the FD&C Act, revisions to an authorization shall be made available on the internet website of the FDA.

Section 564 of the FD&C Act permits FDA to authorize the introduction into interstate commerce of a drug, device, or biological product intended for use when the Secretary of HHS has declared that circumstances exist justifying the authorization of emergency use. Products appropriate for emergency use may include products and uses that are not approved, cleared, or licensed under section 505, 510(k), 512, or 515 of the FD&C Act (21 U.S.C. 355, 360(k), 360b, or 360e) or section 351 of the PHS Act (42 U.S.C. 262), or conditionally approved under section 571 of the FD&C Act (21 U.S.C. 360ccc). FDA may issue an EUA only if, after consultation with the HHS Assistant Secretary for Preparedness and Response, the Director of the National Institutes of Health, and the Director of the Centers for Disease Control and Prevention (CDC) (to the extent feasible and appropriate given the applicable circumstances), FDA2 concludes: (1) That an agent referred to in a declaration of emergency or threat can cause a serious or life-threatening disease or condition; (2) that, based on the totality of scientific evidence available to FDA, including data from adequate and well-controlled clinical trials, if available, it is reasonable to believe that (A) the product may be effective in diagnosing, treating, or preventing (i) such disease or condition; or (ii) a serious or life-threatening disease or condition caused by a product authorized under section 564, approved or cleared under the FD&C Act, or licensed under section 351 of the PHS Act, for diagnosing, treating, or preventing such a disease or condition caused by such an agent; and (B) the known and potential benefits of the product, when used to diagnose, prevent, or treat such disease or condition, outweigh the known and potential risks of the product, taking into consideration the material threat posed by the agent or agents identified in a declaration under section 564(b)(1)(D) of the FD&C Act, if applicable; (3) that there is no adequate, approved, and available alternative to the product for diagnosing, preventing, or treating such disease or condition; (4) in the case of a determination described in section 564(b)(1)(B)(ii), that the request for emergency use is made by the Secretary of Defense; and (5) that such other criteria as may be prescribed by regulation are satisfied. No other criteria for issuance have been prescribed by regulation under section 564(c)(4) of the FD&C Act.

II. Electronic Access

1In the case of a determination by the Secretary of Defense, the Secretary of HHS shall determine within 45 calendar days of such determination, whether to make a declaration under section 564(b)(1) of the FD&C Act, and, if appropriate, shall promptly make such a declaration.

2The Secretary of HHS has delegated the authority to issue an EUA under section 564 of the FD&C Act to the Commissioner of Food and Drugs.
III. The Authorizations

Having concluded that the criteria for the issuance of the following Authorizations under section 564(c) of the FD&C Act are met, FDA has authorized the emergency use of the following products for diagnosing, treating, or preventing COVID–19 subject to the terms of each Authorization. The Authorizations in their entirety, including any authorized fact sheets and other written materials, can be accessed from the FDA web page entitled “Emergency Use Authorization,” available at https://www.fda.gov/emergency-preparedness-and-response/mcm-legal-regulatory-and-policy-framework/emergency-use-authorization. The lists that follow include Authorizations issued from February 16, 2021, through May 31, 2021, and we have included explanations of the reasons for their issuance, as required by section 564(h)(1) of the FD&C Act. In addition, the EUAs that have been reissued can be accessed from FDA’s web page: https://www.fda.gov/emergency-preparedness-and-response/mcm-legal-regulatory-and-policy-framework/emergency-use-authorization.

FDA is hereby announcing the following Authorizations for molecular diagnostic and antigen tests for COVID–19, excluding multianalyte tests: 3

- University of Illinois Office of the Vice President for Economic Development and Innovation’s covidSHIELD, issued February 24, 2021;
- Viracor Eurofins Clinical Diagnostics’ Viracor SARS–CoV–2 Assay DTC, issued February 26, 2021;
- Quidel Corporation’s QuickVue At-Home COVID–19 Test, issued March 1, 2021;
- Clinical Research Sequencing Platform (CRSP), LLC at the Broad Institute of the Massachusetts Institute of Technology and Harvard’s CRSP SARS–CoV–2 Real-time Reverse Transcriptase (RT)-PCR Diagnostic Assay (Version 3), issued March 5, 2021;
- Cue Health Inc.’s Cue COVID–19 Test for Home and Over The Counter (OTC) Use, issued March 5, 2021; 3

- Color Health, Inc.’s Color SARS–CoV–2 RT–LAMP Diagnostic Assay DTC, issued March 19, 2021;
- Twist Bioscience Corporation’s SARS–CoV–2 NGS Assay, issued March 23, 2021;
- STS Lab Holdco’s (a subsidiary of Amazon.com Services LLC), Amazon Real-Time RT–PCR Test for Detecting SARS–CoV–2, issued March 23, 2021;
- DiaSorin, Inc.’s LIAISON SARS–CoV–2 Ag, issued March 26, 2021;
- Abbott Diagnostics Scarborough, Inc.’s BinaxNOW COVID–19 Ag 2 Card, issued March 31, 2021;
- Quidel Corporation’s QuickVue At-Home OTC COVID–19 Test, issued March 31, 2021;
- Abbott Diagnostics Scarborough, Inc.’s BinaxNOW COVID–19 Antigen Self Test, issued March 31, 2021;
- Abbott Diagnostics Scarborough, Inc.’s BinaxNOW COVID–19 Ag Card 2 Home Test, issued March 31, 2021;
- Thermo Fisher Scientific’s Amplitude Solution with the TaqPath COVID–19 High-Throughput Combo Kit, issued April 9, 2021;
- Lucira Health, Inc.’s Lucira CHECK\(\)IT COVID–19 Test Kit, issued April 9, 2021;
- PerkinElmer Genomics’s PerkinElmer SARS–CoV–2 RT-qPCR Reagent Kit, issued April 12, 2021;
- Qorvo Biotechnologies, LLC’s Omnia SARS–CoV–2 Antigen Test, issued April 13, 2021;
- Clinical Enterprise, Inc.’s Clinical Enterprise SARS–CoV–2 RT–PCR Assay DTC, issued April 13, 2021;
- Clinical Enterprise, Inc.’s Clinical Enterprise SARS–CoV–2 RT–PCR Assay, issued April 13, 2021;
- LGC, Bioscience Technologies’ Bioscience Technologies SARS–CoV–2 Real-Time and End-Point RT–PCR Test, issued April 15, 2021;
- Synergy Diagnostic Laboratory, Inc.’s (DBA SynergyDx), SynergyDx SARS–CoV–2 RNA Test, issued April 16, 2021;
- Synergy Diagnostic Laboratory, Inc.’s (DBA SynergyDx), SynergyDx SARS–CoV–2 RNA Test DTC, issued April 16, 2021;
- Celltrion USA, Inc.’s Celltrion DiaTest COVID–19 Ag Rapid Test, issued April 16, 2021;
- Southern California Permanente Medical Group’s Kaiser Permanente High Throughput SARS–CoV–2 Assay, issued April 19, 2021;
- PathogenDx, Inc.’s DetectX-Rv, issued April 20, 2021;
- InBios International, Inc.’s sCOV–2 Ag Detect Rapid Test, issued May 6, 2021;
- Phosphorous Diagnostics LLC’s Phosphorous COV19 RT-qPCR Test DTC, issued May 17, 2021;
- Saloja Oy’s Sienna-Clarity COVID–19 Antigen Rapid Test Cassette, issued May 20, 2021;
- Harvard University Clinical Laboratory’s Quaeris SARS–CoV–2 Assay, issued May 21, 2021;

FDA is hereby announcing the following Authorizations for serology tests: 4

- Abbott Laboratories Inc.’s AdviaDx SARS–CoV–2 IgG II, issued March 1, 2021;
- Beckman Coulter, Inc.’s Access SARS–CoV–2 IgG II, issued March 22, 2021;
- Siemens Healthcare Diagnostics Inc.’s Atellica IM SARS–CoV–2 IgG (sCOVG), issued March 23, 2021;
- Symbiota, Inc.’s COVID–19 Self-Collected Antibody Test System, issued April 5, 2021;
- Inova Diagnostics, Inc.’s QUANTA Flash SARS–CoV–2 IgG, issued April 19, 2021;
- QIAGEN, GmbH’s QIAreach Anti-SARS–CoV–2 Total Test, issued May 11, 2021;
- ZEUS Scientific, Inc.’s ZEUS ELISA SARS–CoV–2 Total Antibody Test System, issued May 11, 2021;
- DiaSorin, Inc.’s LIAISON SARS–CoV–2 TrimericS IgG, issued May 19, 2021;
- NOWDiagnostics, Inc.’s ADEXUSDx COVID–19 Test, issued May 24, 2021.

FDA is hereby announcing the following Authorization for a T-cell immune response test:

- Adaptive Biotechnologies Corporation’s T-Detect COVID Test, issued May 3, 2021. 5

As set forth in the EUAs for these products, FDA has concluded that: (1) SARS–CoV–2 can cause a serious or life-threatening disease or condition, including severe respiratory illness, to humans infected by this virus; (2) based on the totality of scientific evidence available to FDA, it is reasonable to believe that the products may be effective in diagnosing recent or prior infection with SARS–CoV–2 by identifying individuals with an adaptive immune response to the virus that causes COVID–19 and that the known and potential benefits of the products when used for such use, outweigh the known and potential risks of the products; and (3) there is no adequate, approved, and available alternative to the emergency use of the products.

As set forth in the EUA, FDA has concluded that: (1) SARS–CoV–2 can cause a serious or life-threatening disease or condition, including severe respiratory illness, to humans infected by this virus; (2) based on the totality of scientific evidence available to FDA, it is reasonable to believe that the T-Detect COVID Test may be effective in diagnosing recent or prior infection with SARS–CoV–2 by identifying individuals with a T-cell immune response to the virus that causes COVID–19 and that the known and potential benefits of your product when used for such use, outweigh the known and potential risks of the T-Detect COVID Test; and (3) there is no adequate, approved, and available alternative to the emergency use of the products.
FDA is hereby announcing the following authorizations for multianalyte in vitro diagnostic:

- Abbott Molecular Inc.’s Alinity m Resp-4-Plex, issued March 4, 2021.

FDA is hereby announcing the following authorizations for other medical devices:

As set forth in the EUA, FDA has concluded that: (1) SARS–CoV–2 can cause a serious or life-threatening disease or condition, including severe respiratory illness, to humans infected by this virus; (2) based on the totality of scientific evidence available to FDA, it is reasonable to believe that the product may be effective in diagnosing COVID–19 through the simultaneous detection and differentiation of SARS–CoV–2; and (3) there is no adequate, approved, and available alternative to the emergency use of the product.

As set forth in the EUA, FDA has concluded that: (1) SARS–CoV–2 can cause a serious or life-threatening disease or condition, including severe respiratory illness, to humans infected by this virus; (2) based on the totality of scientific evidence available to FDA, it is reasonable to believe that the product may be effective in diagnosing COVID–19 through the simultaneous detection and differentiation of SARS–CoV–2, and/or influenza A virus and influenza B virus protein antigens and that the known and potential benefits of the product when used for such a use, outweigh the known and potential risks of the product; and (3) there is no adequate, approved, and available alternative to the emergency use of the product.

As set forth in the EUA, FDA has concluded that: (1) SARS–CoV–2 can cause a serious or life-threatening disease or condition, including severe respiratory illness, to humans infected by this virus; (2) based on the totality of scientific evidence available to FDA, it is reasonable to believe that the product may be effective in diagnosing COVID–19 and that the known and potential benefits of the product when used for such a use, outweigh the known and potential risks of the product; and (3) there is no adequate, approved, and available alternative to the emergency use of the product.

As set forth in the EUA, FDA has concluded that: (1) SARS–CoV–2 can cause a serious or life-threatening disease or condition, including severe respiratory illness, to humans infected by this virus; (2) based on the totality of scientific evidence available to FDA, it is reasonable to believe that the product may be effective in diagnosing COVID–19 and that the known and potential benefits of the product when used for such a use, outweigh the known and potential risks of the product; and (3) there is no adequate, approved, and available alternative to the emergency use of the product.

As set forth in the EUA, FDA has concluded that: (1) SARS–CoV–2 can cause a serious or life-threatening disease or condition, including severe respiratory illness, to humans infected by this virus; (2) based on the totality of scientific evidence available to FDA, it is reasonable to believe that the product may be effective in diagnosing COVID–19 and that the known and potential benefits of the product when used for such a use, outweigh the known and potential risks of the product; and (3) there is no adequate, approved, and available alternative to the emergency use of the product.

As set forth in the EUA, FDA has concluded that: (1) SARS–CoV–2 can cause a serious or life-threatening disease or condition, including severe respiratory illness, to humans infected by this virus; (2) based on the totality of scientific evidence available to FDA, it is reasonable to believe that the product may be effective in diagnosing COVID–19 and that the known and potential benefits of the product when used for such a use, outweigh the known and potential risks of the product; and (3) there is no adequate, approved, and available alternative to the emergency use of the product.

As set forth in the EUA, FDA has concluded that: (1) SARS–CoV–2 can cause a serious or life-threatening disease or condition, including severe respiratory illness, to humans infected by this virus; (2) based on the totality of scientific evidence available to FDA, it is reasonable to believe that the product may be effective in diagnosing COVID–19 and that the known and potential benefits of the product when used for such a use, outweigh the known and potential risks of the product; and (3) there is no adequate, approved, and available alternative to the emergency use of the product.
such use outweigh its known and potential risks; and (3) there are no adequate, approved, and available alternatives to the emergency use of the IBU. During the public health emergency, it would not be feasible to require healthcare providers to limit the IBU use for patients with suspected or confirmed COVID–19; therefore, the authorization does not restrict use to such patients.

As set forth in the EUA, FDA has concluded that: (1) SARS–CoV–2, the virus that causes COVID–19, can cause a serious or life-threatening disease or condition, including severe respiratory illness, to humans infected by this virus; (2) based on the totality of scientific evidence available to FDA, it is reasonable to believe that the SalivaDirect At-Home Collection Kit may be effective in diagnosing COVID–19, by serving as an appropriate means to collect and transport human specimens so that an authorized laboratory can detect SARS–CoV–2 RNA from the self-collected human specimen, and that the known and potential benefits of the SalivaDirect At-Home Collection Kit when used for diagnosing COVID–19, outweigh the known and potential risks of the SalivaDirect At-Home Collection Kit; and (3) there is no adequate, approved, and available alternative to the emergency use of the SalivaDirect At-Home Collection Kit.

As set forth in the EUA, FDA has concluded that: (1) SARS–CoV–2, the virus that causes COVID–19, can cause a serious or life-threatening disease or condition, including severe respiratory illness, to humans infected by this virus; (2) based on the totality of scientific evidence available to FDA, it is reasonable to believe that the SalivaDirect At-Home Collection Kit with Saline may be effective in diagnosing COVID–19, by serving as an appropriate means to collect and transport human specimens so that an authorized laboratory can detect SARS–CoV–2 RNA from the self-collected human specimen, and that the known and potential benefits of the SalivaDirect At-Home Collection Kit with Saline when used for diagnosing COVID–19, outweigh the known and potential risks of the SalivaDirect–19 Self-Swab Collection Kit with Saline; and (3) there is no adequate, approved, and available alternative to the emergency use of the SalivaDirect–19 Self-Swab Collection Kit with Saline.

Finally, FDA is hereby announcing an amendment to certain EUAs to allow certain authorized molecular diagnostic SARS–CoV–2 tests to be distributed and used to pool anterior nasal respiratory specimens from asymptomatic individuals as part of a serial testing program after developers submit a complete notification, including meeting required validation data, as set forth in the amendment letter. The amendment “Amending Certain EUAs for RT–PCR Molecular-Based Diagnostic Tests to Authorize the Detection of Nucleic Acid from SARS–CoV–2 from Pooled Anterior Nasal Respiratory Specimens for Screening When Used as Part of a Serial Testing Program,” was issued to “Developers of Molecular-Based Diagnostic Tests Authorized for Emergency Use for Coronavirus Disease 2019 (COVID–19) as of Today’s Date” on April 20, 2021.21

Dated: July 16, 2021.

Lauren K. Roth,
Acting Principal Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2017–N–6395]

Request for Applications for New Members of the Clinical Trials Transformation Initiative/Food and Drug Administration Patient Engagement Collaborative

AGENCY: Food and Drug Administration, Health and Human Services (HHS).

ACTION: Notice; request for applications.

SUMMARY: The Food and Drug Administration (FDA or Agency), in collaboration with the Clinical Trials Transformation Initiative (CTTI), is requesting applications of patient advocates interested in participating on the Patient Engagement Collaborative (PEC). The PEC is an ongoing, collaborative forum coordinated through the Office of Patient Affairs, Office of Clinical Policy and Programs (OGCPP), Office of the Commissioner, and is hosted by CTTI. Through the PEC, the patient community and regulators are able to discuss an array of topics regarding increasing meaningful patient engagement in medical product development and regulatory discussions at FDA. The activities of the PEC may include, but are not limited to, providing diverse perspectives on topics such as systematic patient engagement, transparency, and communication; providing considerations for implementing new strategies to enhance patient engagement at FDA; and proposing new models of collaboration in which patients and patient advocates are partners in non-product specific
aspects of the medical product development and FDA review process.

DATES: Applications submitted by 11:59 p.m. Eastern time on August 23, 2021, will be considered for membership in the PEC. Incomplete applications and applications completed after the above-specified deadline will not be reviewed.

ADDRESS: All applications should be submitted to FDA’s Office of Patient Affairs in OCP. The preferred application method is via the online submission system provided by CTTI, available at https://duke.qualtrics.com/ffe/form/SV_eLDSvMvVXdzAdVP. For those applicants unable to submit an application electronically, please call FDA’s Office of Patient Affairs at 301–796–8460 to arrange for mail or delivery service submission. Only complete applications, as described under section IV of this document, will be considered.

FOR FURTHER INFORMATION CONTACT: Wendy Slavit, Office of the Commissioner, Office of Clinical Policy and Programs, Office of Patient Affairs, Food and Drug Administration, 301–796–8460, PatientEngagementCollaborative@fda.hhs.gov.

SUPPLEMENTARY INFORMATION:

I. Background and Purpose

The CTTI is a public-private partnership cofounded by FDA and Duke University whose mission is to develop and drive adoption of practices that will increase the quality and efficiency of clinical trials. FDA and CTTI have long involved patients and considered patient perspectives in their work. Furthering the engagement of patients as valued partners across the medical product research and development continuum requires an open forum for patients and regulators to discuss and exchange ideas.

The PEC is an ongoing, collaborative forum in which the patient community and regulators discuss an array of topics regarding increasing patient engagement in medical product development and regulatory discussions at FDA. The PEC is a joint endeavor between FDA and CTTI. The activities of the PEC may inform relevant FDA and CTTI activities. The PEC is not intended to advise or otherwise direct the activities of either organization, and membership will not constitute employment by either organization.

The Food and Drug Administration Safety and Innovation Act (Pub. L. 112–14, section 1137, entitled “Patient Participation in Medical Product Discussion Groups,” added section 569C to the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 360bbb–8c). This provision directs the Secretary of Health and Human Services to “develop and implement strategies to solicit the views of patients during the medical product development process and consider the perspectives of patients during regulatory discussions.” On November 4, 2014, FDA issued a Federal Register notice establishing a docket (FDA–2014–N–1698) for public commenters to submit information related to FDA’s implementation of this provision. Upon review of the comments received, one common theme, among others, included establishing an external group to provide input on patient engagement strategies across FDA’s Centers. After considering the comments, FDA formed the PEC in 2018 to discuss a variety of patient engagement topics. This group is consistent with additional legislation subsequently enacted in section 3001 of the 21st Century Cures Act (Pub. L. 114–255) and section 605 of the FDA Reauthorization Act of 2017 (Pub. L. 115–52), further supporting tools for fostering patient participation in the regulatory process.

The PEC currently has 16 members. To help ensure continuity in its activities and organizational knowledge, the PEC maintains staggered membership terms. As of September 2021, eight members will complete a term and up to eight new members will be selected. The purpose of this notice is to announce that the application process for up to eight new members of the PEC is now open, and to invite and encourage applications by the submission deadline for appropriately qualified individuals.

II. Criteria for Membership

The PEC includes up to 16 diverse representatives of the patient community. Eight members from the previous application process will remain on the PEC. The current application process is to select up to eight new PEC members. Selected members will include the following: (1) Patients who have personal disease experience; (2) caregivers who support patients, such as a parent, child, partner, other family member, or friend, and who have personal disease experience through this caregiver role; and, (3) representatives from patient groups who, through their role in the patient group, have direct or indirect disease experience. Please note that for purposes of this activity, the term “caregiver” is not intended to include individuals who are engaged in caregiving as healthcare professionals; and the noun “patient group” is used here to encompass patient advocacy organizations, disease advocacy organizations, voluntary health agencies, nonprofit research foundations, and public health organizations. The ultimate goal of the application and selection process is to identify individuals who can represent a collective patient voice for their patient community.

Selection criteria include the applicant’s potential to meaningfully contribute to the activities of the PEC, ability to represent and express the patient voice for his or her constituency, ability to work in a constructive manner with involved stakeholders, and understanding of the clinical research enterprise. Consideration will also be given to ensuring the PEC includes diverse perspectives and experiences, including but not limited to sociodemographic and disease experience diversity. PEC members are required to be residents of the United States and must be 18 years of age or older.

Financial and other conflicts of interest will not necessarily make applicants ineligible for membership in the PEC. However, applicants cannot be direct employees of the medical product development industry or a currently registered lobbyist for an FDA-regulated industry.

III. Responsibilities and Expectations

Working meetings of the PEC will typically be held two to four times per year, either in-person (in the Washington DC area) or virtually (teleconference or webinar). Given the ongoing COVID–19 pandemic, meetings will be conducted virtually and may resume in-person when it is safe to do so. Additional meetings may be organized as needed, and currently include monthly, 1-hour teleconferences.

Reasonable accommodations will be made for members with special needs for travel or for participation in a meeting. Applications for PEC membership are encouraged from individuals of all racial, ethnic, cultural groups, sexual orientations, gender identities, with and without disabilities. Travel support will be provided as applicable.

To help ensure continuity in its activities and organizational knowledge, the PEC will maintain staggered membership terms for patient community representatives.

Membership terms for new members will be 2-year appointments. Members may serve up to two terms, with the possibility of extensions.

Additional responsibilities and expectations are set forth in the PEC Framework, which should be reviewed...

IV. Application Process

Any interested person may apply for membership on the PEC. To apply, go to https://duke.qualtrics.com/jfe/form/SV_eLDSvnmVXdxsAdVP. The application process is completed online and includes answering questions to help determine eligibility for the PEC, demographic and other background questions, and four brief essay questions. Many of the demographic questions are optional. The four brief essay questions, which must be answered in 500 characters or fewer (including spaces), are as follows:

• Please explain why you would have an outstanding ability to represent and express the patient voice for the disease area(s) you selected above.

• Please give a few examples of experiences that demonstrate your outstanding ability to work across stakeholders in the medical product development process.

• Please explain how you have developed a strong understanding of the medical product development process.

• Please tell us why you are interested in becoming a member of the PEC and how you would be able to contribute.

Completing the application form also requires submitting: (1) A current, complete curriculum vitae or résumé that shows relevant activities and experience (PDF format preferred) and (2) a letter of endorsement (maximum 800 words) from a patient group with which the applicant has worked closely on activities that are relevant to the PEC (PDF format preferred). The letter of endorsement should emphasize information relevant to the criteria for membership described above. The letter may address topics such as the applicant’s involvement in patient advocacy activities, experiences that stimulated an interest in participating in discussions about patient engagement in medical product development and regulatory decision making, and other information that may be helpful in evaluating the applicant’s qualifications as a potential member of the PEC. Only complete applications submitted by the deadline (see DATES) will be reviewed.

Additional information may be needed from applicants, including information relevant to understanding potential conflicts of interest, in which case applicants will be contacted directly.

Dated: July 19, 2021.

Lauren K. Roth,
Acting Principal Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2018–D–2326]

Field Alert Report Submission: Questions and Answers; Guidance for Industry; Availability

AGENCY: Food and Drug Administration, Health and Human Services (HHS).

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing the availability of a final guidance for industry entitled “Field Alert Report Submission: Questions and Answers.” This guidance provides FDA’s current thinking regarding the requirements for submission of field alert reports (FARs) by applicants of new drug applications (NDAs) and abbreviated new drug applications (ANDAs) and outlines FDA’s recommendations for FAR submissions to help improve their consistency and relevancy. The guidance also addresses certain frequently asked questions about FARs. This guidance finalizes the draft guidance of the same title issued on July 19, 2018.

ADDRESSES: You may submit either electronic or written comments on Agency guidances at any time as follows:

Electronic Submissions

Submit electronic comments in the following way:

• Federal eRulemaking Portal: https://www.regulations.gov. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to https://www.regulations.gov will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else’s Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on https://www.regulations.gov.

• If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission in the manner detailed (see “Written/Paper Submissions” and “Instructions”).

Written/Paper Submissions

Submit written/paper submissions as follows:

• Mail/Hand Delivery/Courier (for written/paper submissions): Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

• For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments except for information submitted, marked and identified, as confidential, if submitted as detailed in “Instructions.”

Instructions: All submissions received must include the Docket No. FDA–2018–D–2326 for “Field Alert Report Submission: Questions and Answers.” Received comments will be placed in the docket and, except for those submitted as “Confidential Submissions,” publicly viewable at https://www.regulations.gov or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

• Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states “THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.” The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on https://www.regulations.gov. Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as “confidential.” Any information marked as “confidential” will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For
more information about FDA’s posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: https://www.govinfo.gov/content/pkg/FR-2015-09-08/pdf/2015-23389.pdf.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to https://www.regulations.gov and insert the docket number, found in brackets in the heading of this document, into the “Search” box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishters Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

You may submit comments on any guidance at any time (see 21 CFR 10.115(g)(5)).

Submit written requests for single copies of this guidance to the Division of Drug Information, Center for Drug Evaluation and Research, Food and Drug Administration, 10001 New Hampshire Ave., Hillandale Building, 4th Floor, Silver Spring, MD 20993–0002, or to the Office of Communication, Outreach and Development, Center for Biologics Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 3128, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your requests. See the Supplementary Information section for electronic access to the guidance document.

For further information contact: Mohamed Ghorab, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 51, Rm. 3128, Silver Spring, MD 20993–0002, or Stephen Ripley, Center for Biologics Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 7301, Silver Spring, MD 20993–0002, 240–402–7911.

Supplementary Information:

I. Background

FDA is announcing the availability of a guidance for industry entitled “Field Report Alert Submission: Questions and Answers.” The FAR regulations found in §314.81(b)(1) (21 CFR 314.81(b)(1)) and 21 CFR 314.98(b) establish an early warning system to help FDA fulfill its responsibility to protect patient health. Under these regulations, NDA and ANDA applicants must submit certain information to FDA about distributed drug products regulated by the Center for Drug Evaluation and Research or the Center for Biologics Evaluation and Research.

The guidance addresses the FAR submission requirements and focuses on topics such as the incidents and possible/actual quality issues that require submission of a FAR, the contents of the FAR, who submits the FAR, and when, where, and how they should submit it. The guidance also addresses followup and final FARs, which are not required under §314.81(b), and recommends their submission to inform FDA of the status of root cause investigations and corrective actions taken, if any. This guidance finalizes the draft guidance issued on July 19, 2018 (83 FR 34142). In response to public comments, FDA made minor editorial changes and clarified that the FAR requirements apply to all products under an NDA or ANDA, including positron emission tomography drugs, designated medical gases, and combination products containing a drug constituent part. Although not the focus of this guidance, FDA notes that FAR requirements also apply to certain combination products under 21 CFR part 4, subpart B. For additional information about these products, see the guidance for industry and FDA staff “Postmarketing Safety Reporting for Combination Products,” available at https://www.fda.gov/media/111788/download, and the Postmarketing Safety Reporting for Combination Products web page at https://www.fda.gov/combination-products/guidance-regulatory-information/postmarketing-safety-reporting-combination-products. FDA may consider whether additional adjustments are needed to guidance or FAR-related instructions for biologics license applications or device applications for combination products that contain a drug constituent part as the Agency gains experience with safety reporting for such products.

This guidance is being issued consistent with FDA’s good guidance practices regulation (21 CFR 10.115). The guidance represents the current thinking of FDA on “Field Report Alert Submission.” It does not establish any rights for anyone not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations.

II. Paperwork Reduction Act of 1995

While this guidance contains no collection of information, it does refer to previously approved FDA collections of information. Therefore, clearance by the Office of Management and Budget (OMB) for the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3521) is not required for this guidance. The previously approved collections of information are subject to review by OMB under the PRA. The collections of information in 21 CFR part 314 have been approved under OMB control number 0910–0001.

III. Electronic Access

Dated: July 16, 2021.

Lauren K. Roth,
Acting Principal Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2021–P–0424]

Medical Devices; Exemption From Premarket Notification: Powered Patient Transport; All Other Powered Patient Transport; Extension of Comment Period

AGENCY: Food and Drug Administration, Health and Human Services (HHS).

ACTION: Notice; extension of comment period.

SUMMARY: The Food and Drug Administration (FDA or the Agency) is extending the comment period for the notice that appeared in the Federal Register of June 15, 2021. In the notice, FDA requested comments by August 16, 2021. The Agency is taking this action in response to a correction to the notice’s docket number that appeared in the Federal Register of June 30, 2021, to allow interested persons time to submit comments in response to the corrected notice.

DATES: FDA is extending the comment period on the notice published June 15, 2021 (86 FR 31722). Submit either electronic or written comments by August 30, 2021.

ADDRESSES: You may submit comments as follows. Please note that late, untimely filed comments will not be considered. Electronic comments must be submitted on or before August 30, 2021. The https://www.regulations.gov...
Docket numbers identified in this notice and any confidential information submitted in response to the notice will inform FDA's response to a petition requesting exemption from premarket notification requirements associated with the notice (86 FR 34770). FDA has considered the requirements associated with receipt of a petition requesting exemption from premarket notification requirements under section 510(m) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 360(m)). Due to the correction to the docket number, the Agency is extending the comment period for the notice, until August 30, 2021. The Agency believes that an extension allows adequate time for interested persons to submit comments from the date of the correction to the notice issued June 30, 2021, without delaying our consideration of these important issues.

Dated: July 16, 2021.

Lauren K. Roth,
Acting Principal Associate Commissioner for Policy.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

Guidance Documents Related to Coronavirus Disease 2019; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing the availability of FDA guidance documents related to the Coronavirus Disease 2019 (COVID–19) public health emergency (PHE). This notice of availability (NOA) is pursuant to the process that FDA announced, in the Federal Register of March 25, 2020, for making available to the public COVID–19-related guidances. The guidances identified in this notice address issues related to the COVID–19 PHE and have been issued in accordance with the process announced in the March 25, 2020, notice. The guidances have been implemented without prior comment, but they remain subject to comment in accordance with the Agency’s good guidance practices.

ADDRESSES: You may submit either electronic or written comments on Agency guidances at any time as follows:

Electronic filing system will accept comments until 11:59 p.m. Eastern Time at the end of August 30, 2021. Comments received by mail/hand delivery/courier (for written/paper submissions) will be considered timely if they are postmarked or the delivery service acceptance receipt is on or before that date.

**Electronic Submissions**

Submit electronic comments in the following way:

- Federal eRulemaking Portal: https://www.regulations.gov. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to https://www.regulations.gov will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else’s Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on https://www.regulations.gov.

- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see “Written/Paper Submissions” and “Instructions”).

**Written/Paper Submissions**

Submit written/paper submissions as follows:

- Mail/Hand Delivery/Courier (for written/paper submissions): Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in “Instructions.”

**Instructions:** All submissions received must include the Docket No. FDA–2021–P–0424 for “Medical Devices; Exemption from Premarket Notification: Powered Patient Transport, All Other Powered Patient Transport.” Received comments, those filed in a timely manner (see ADDRESSES), will be placed in the docket and, except for those submitted as “Confidential Submissions,” publicly viewable at https://www.regulations.gov or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states “THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.” The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on https://www.regulations.gov. Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as “confidential.” Any information marked as “confidential” will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA’s posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.

**Docket:** For access to the docket to read background documents or the electronic and written/paper comments received, go to https://www.regulations.gov and insert the docket number, found in brackets in the heading of this document, into the “Search” box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

**FOR FURTHER INFORMATION CONTACT:** Dan Reed, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, Rm. 1526, Silver Spring, MD 20993–0002, 240–402–4717.

**SUPPLEMENTARY INFORMATION:** In the Federal Register of June 15, 2021, FDA published a notice with a 60-day comment period requesting comments by August 16, 2021. Comments on the notice will inform FDA’s response to a petition requesting exemption from premarket notification requirements for powered patient transport, all other powered patient transport. In the Federal Register of June 30, 2021, FDA corrected the docket number associated with the notice (86 FR 34770).
Electronic Submissions
Submit electronic comments in the following way:
• Federal eRulemaking Portal: https://www.regulations.gov. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to https://www.regulations.gov will be posted to the docket unchanged. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on https://www.regulations.gov.
• If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see “Written/Paper Submissions” and “Instructions”).

Written/Paper Submissions
Submit written/paper submissions as follows:
• Mail/Hand Delivery/Courier (for written/paper submissions): Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
• For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in “Instructions.”

Instructions: All submissions received must include the name of the guidance document that the comments address and the docket number for the guidance (see table 1). Received comments will be placed in the docket(s) and, except for those submitted as “Confidential Submissions,” publicly viewable at https://www.regulations.gov or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states “THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.” The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on https://www.regulations.gov. Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as “confidential.” Any information marked as “confidential” will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA’s posting of comments to public docket, see 80 FR 56469, September 18, 2015, or access the information at: https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to https://www.regulations.gov and insert the docket number, found in brackets in the heading of this document, into the “Search” box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

You may submit comments on any guidance at any time (see § 10.115(g)(5) (21 CFR 10.115(g)(5))). Submit written requests for single copies of these guidances to the address noted in table 1. Send two self-addressed adhesive labels to assist that office in processing your requests. See the SUPPLEMENTARY INFORMATION section for electronic access to the guidance.

FOR FURTHER INFORMATION CONTACT: Kimberly Thomas, Center for Drug Evaluation and Research (CDER), Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 51, Rm. 6220, Silver Spring, MD 20993–0002, 301–796–2357, or Stephen Ripley, Center for Biologics Evaluation and Research (CBER), Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 7301, Silver Spring, MD 20993–0002, 240–402–7911.

SUPPLEMENTARY INFORMATION:
I. Background
On January 31, 2020, as a result of confirmed cases of COVID–19, and after consultation with public health officials as necessary, the Secretary of Health and Human Services, pursuant to the authority under section 319 of the Public Health Service Act (42 U.S.C. 247d), determined that a PHE exists and has existed since January 27, 2020, nationwide.1 On March 13, 2020, there was a Presidential declaration that the COVID–19 outbreak in the United States constitutes a national emergency, beginning March 1, 2020.2

In the Federal Register of March 25, 2020 (85 FR 16949) (the March 25, 2020, notice) (available at https://www.govinfo.gov/content/pkg/FR-2020-03-25/pdf/2020-06222.pdf), FDA announced procedures for making available FDA guidances related to the COVID–19 PHE. These procedures, which operate within FDA’s established good guidance practices regulations, are intended to allow FDA to rapidly disseminate Agency recommendations and policies related to COVID–19 to industry, FDA staff, and other stakeholders. The March 25, 2020, notice stated that due to the need to act quickly and efficiently to respond to the COVID–19 PHE, FDA believes that prior public participation will not be feasible or appropriate before FDA implements COVID–19-related guidances. Therefore, FDA will issue COVID–19-related guidances for immediate implementation without prior public comment (see section 701(h)(1)(C) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 371(h)(1)(C)) and § 10.115(g)(2)). The guidances are available on FDA’s web pages entitled “COVID–19–Related Guidance Documents for Industry, FDA Staff, and Other Stakeholders” (available at https://www.fda.gov/emergency-preparedness-and-response/mcm-issues/covid-19-related-guidance-documents-industry-fda-staff-and-other-stakeholders) and “Search for FDA Guidance Documents” (available at https://www.fda.gov/regulatory-
The March 25, 2020, notice further stated that, in general, rather than publishing a separate NOA for each COVID–19-related guidance, FDA intends to publish periodically a consolidated NOA announcing the availability of certain COVID–19-related guidances that FDA issued during the relevant period, as included in table 1. This notice announces COVID–19-related guidances that are posted on FDA’s website.

### II. Availability of COVID–19-Related Guidance Documents

Pursuant to the process described in the March 25, 2020, notice, FDA is announcing the availability of the following COVID–19-related guidances:

#### TABLE 1—Guidances Related to the COVID–19 Public Health Emergency

<table>
<thead>
<tr>
<th>Docket No.</th>
<th>Center</th>
<th>Title of guidance</th>
<th>Contact information to request single copies</th>
</tr>
</thead>
</table>

Although these guidances have been implemented immediately without prior comment, FDA will consider all comments received and revise the guidances as appropriate (see §10.115(g)(3)). These guidances are being issued consistent with FDA’s good guidance practices regulation (§10.115). The guidances represent the current thinking of FDA. They do not establish any rights for any person and are not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations.

### III. Paperwork Reduction Act of 1995

#### A. CDER Guidance

While this guidance contains no collection of information, it does refer to previously approved FDA collections of information (listed in table 2). Therefore, clearance by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3521) is not required for this guidance. The previously approved collections of information are subject to review by OMB under the PRA. The collections of information in the following FDA regulations and guidances have been approved by OMB as listed in the following table:

#### TABLE 2—CDER Guidances and Collections

B. CBER Guidance

While this guidance contains no collection of information, it does refer to previously approved FDA collections of information (listed in table 3).

Therefore, clearance by OMB under the PRA (44 U.S.C. 3501–3521) is not required for this guidance. The previously approved collections of information are subject to review by OMB under the PRA. The collections of information in the following FDA regulations and guidance have been approved by OMB as listed in the following table:

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

National Institute of Neurological Disorders and Stroke; Notice of Closed Meeting

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended, notice is hereby given of the following meeting.

The meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: National Institute of Neurological Disorders and Stroke Special Emphasis Panel; NINDS BRAIN Review Meeting (U01 and R01 Applications).

Date: August 12–13, 2021.
Time: 10:00 a.m. to 4:30 p.m.
Agenda: To review and evaluate grant applications.
Place: National Institutes of Health, Neuroscience Center, 6001 Executive Boulevard, Rockville, MD 20852 (Virtual Meeting).
Contact Person: Mir Ahamed Hossain, Ph.D., Scientific Review Officer, Scientific Review Branch, NINDS/NIH/DHHS, Neuroscience Center, 6001 Executive Blvd., Suite 3208, MSC 9229, Rockville, MD 20852, (301) 496–9223, mirahamed.hossain@nih.gov.

DEPARTMENT OF HEALTH AND
HUMAN SERVICES

Substance Abuse and Mental Health Services Administration

Notice of Meeting for the Interdepartmental Serious Mental Illness Coordinating Committee (ISMICC)

AGENCY: Substance Abuse and Mental Health Services Administration, Department of Health and Human Services.

ACTION: Notice.

SUMMARY: The Secretary of Health and Human Services announces a meeting of the Interdepartmental Serious Mental Illness Coordinating Committee (ISMICC). The ISMICC is open to the public and can be accessed via telephone or webcast only, and not in person. Agenda with call-in information will be posted on SAMHSA’s website prior to the meeting at: https://www.samhsa.gov/about-us/advisory-councils/meetings. The meeting will include information on federal efforts related to serious mental illness (SMI) and serious emotional disturbance (SED).

DATES: August 27, 2021, 1:00 p.m.–5:00 p.m. (EDT)/Open.

ADRESSES: The meeting will be held virtually and can be accessed via Zoom.

FOR FURTHER INFORMATION CONTACT: Pamela Foote, ISMICC Designated Federal Officer, SAMHSA, 5600 Fishers Lane, 14E53C, Rockville, MD 20857; telephone: 240–276–1279; email: Pamela.Foote@samhsa.hhs.gov.

SUPPLEMENTARY INFORMATION:

I. Background and Authority

The ISMICC was established on March 15, 2017, in accordance with section 6031 of the 21st Century Cures Act, and the Federal Advisory Committee Act, 5 U.S.C. App., as amended, to report to the Secretary, Congress, and any other relevant federal department or agency on advances in SMI and SED, research related to the prevention of, diagnosis of, intervention in, and treatment and recovery of SMI and SED, and advances in access to services and supports for adults with SMI or children with SED. In addition, the ISMICC will evaluate the effect federal programs related to SMI and SED have on public health, including public health outcomes such as: (A) Rates of suicide, suicide attempts, incidence and prevalence of SMI, SED, and substance use disorders, overdose, overdose deaths, emergency hospitalizations, emergency room boarding, preventable emergency room visits, interaction with the criminal justice system, homelessness, and unemployment; (B) increased rates of employment and enrollment in educational and vocational programs; (C) quality of mental and substance use disorders treatment services; or (D) any other criteria determined by the Secretary. Finally, the ISMICC will make specific recommendations for actions that agencies can take to better coordinate the administration of mental health services for adults with SMI or children with SED. Not later than one (1) year after the date of enactment of the 21st Century Cures Act, and five (5) years after such date of enactment, the ISMICC shall submit a report to Congress and any other relevant federal department or agency.

II. Membership

This ISMICC consists of federal members listed below or their designees, and non-federal public members.

Federal Membership: Members include, The Secretary of Health and Human Services; The Assistant Secretary for Mental Health and Substance Use; The Attorney General; The Secretary of the Department of Veterans Affairs; The Secretary of the Department of Defense; The Secretary of the Department of Housing and Urban Development; The Secretary of the Department of Labor; The Administrator of the Centers for Medicare and Medicaid Services; and The Commissioner of the Social Security Administration.

Non-Federal Membership: Members include, 15 non-federal public members appointed by the Secretary, representing psychologists, psychiatrists, social workers, peer support specialists, and other providers, patients, family of patients, law enforcement, the judiciary, and leading research, advocacy, or service organizations.

The ISMICC is required to meet at least twice per year.

To attend virtually, submit written or brief oral comments, or request special accommodation for persons with disabilities, contact Pamela Foote. Individuals can also register on-line at: https://snaregister.samhsa.gov/MeetingList.aspx.

The public comment section will be scheduled at the conclusion of the meeting. Individuals interested in submitting a comment, must notify Pamela Foote on or before August 20, 2021 via email to: Pamela.Foote@samhsa.hhs.gov.

Up to three minutes will be allotted for each approved public comment as time permits. Written comments received in advance of the meeting will be considered for inclusion in the official record of the meeting.

Substantive meeting information and a roster of Committee members is available at the Committee’s website: https://www.samhsa.gov/about-us/advisory-councils/meetings.
DEPARTMENT OF THE INTERIOR
Geological Survey
[GR21ZD01BNNEC00; OMB Control Number 1028–NEW]

Agency Information Collection Activities; Angler Participation Study

AGENCY: Geological Survey, Interior.

ACTION: Notice of information collection; request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, we, the U.S. Geological Survey (USGS) are proposing a new information collection.

DATES: Interested persons are invited to submit comments on or before September 21, 2021.

ADDRESSES: Send your comments on this information collection request (ICR) by mail to U.S. Geological Survey, Information Collections Officer, 12201 Sunrise Valley Drive, MS 159, Reston, VA 20192; or by email to gs-info collec@usgs.gov. Please reference OMB Control Number 1028–NEW in the subject line of your comments. Individuals who are hearing or speech impaired may call the Federal Relay Service at 1–800–877–8339 for TTY assistance.

FOR FURTHER INFORMATION CONTACT: To request additional information about this ICR, contact Lucas Bair by email at lbair@usgs.gov, or by telephone at 928–556–7362.

SUPPLEMENTARY INFORMATION: In accordance with the Paperwork Reduction Act of 1995, we provide the general public and other Federal agencies with an opportunity to comment on new, proposed, revised, and continuing collections of information. This helps us assess the impact of our information collection requirements and minimize the public’s reporting burden. It also helps the public understand our information collection requirements and provide the requested data in the desired format.

We are soliciting comments on the proposed ICR that is described below. We are especially interested in public comment addressing the following issues: (1) Is the collection necessary to the proper functions of the USGS; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the USGS enhance the quality, utility, and clarity of the information to be collected; and (5) how might the USGS minimize the burden of this collection on the respondents, including through the use of information technology.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this ICR. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Abstract: In 2019 the National Park Service (NPS) completed a plan for non-native fish management from Glen Canyon Dam to Lees Ferry and on through Grand Canyon National Park. The NPS identified specific tools for managing non-native brown trout with public and partner input, including an incentivized harvest program that offers a reward to anglers for catching and harvesting brown trout. The Glen Canyon Dam Adaptive Management Program along with its science provider, the US Geological Survey’s Grand Canyon Monitoring and Research Center, is interested in understanding the participation of anglers in the brown trout incentivized harvest program. A mail-back survey will be used to collect information concerning (1) trip characteristics, (2) incentive structure and (3) opinions on river management. This collection proposes to provide data that will be used to inform the ongoing incentivized harvest program.

Title of Collection: Angler Participation Study.

OMB Control Number: 1028–NEW.

Form Number: None.

Type of Review: New.

Respondents/Affected Public: General public and individual households.

Total Estimated Number of Annual Respondents: 800.

Total Estimated Number of Annual Responses: 400.

Estimated Completion Time per Response: We estimate the public reporting burden to be 20 minutes per completed survey response.

Total Estimated Number of Annual Burden Hours: 200.

Total Estimated Annual Nonhour Burden Cost: We have not identified any nonhour burden costs associated with this collection of information.

An agency may not conduct, or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 et seq.).

Theodore Melis, Deputy Center Director, Southwest Region.

DEPARTMENT OF THE INTERIOR
Bureau of Land Management

[LLAK941000.L14100000.ET0000.212]

Notice of Intent To Prepare an Environmental Assessment To Consider Opening Lands Subject to ANCSA 17(d)(1) Withdrawals to Selection Under the Alaska Native Vietnam-Era Veterans Land Allotment Program of 2019

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of intent.

SUMMARY: In accordance with the National Environmental Policy Act of 1969 (NEPA), as amended; the Federal Land Policy and Management Act of 1976 (FLPMA), as amended; the Alaska Native Interest Lands Conservation Act of 1980 (ANILCA), as amended; the Alaska Native Claims Settlement Act (ANCSA), as amended; and the John D. Dingell, Jr. Conservation, Management, and Recreation Act of 2019 (Dingell Act), the Bureau of Land Management (BLM) intends to prepare an Environmental Assessment (EA) to consider the effects of opening lands withdrawn pursuant to Section 17(d)(1) of ANCSA to selection by eligible individuals under the Dingell Act.

DATES: This notice initiates the public scoping process for the EA. Comments on relevant issues may be submitted in writing by September 21, 2021. The deadline to submit public comment is September 21, 2021.

ADDRESSES: You may submit comments on issues related to the proposed project by any of the following methods:

• ePlanning Website: https://eplanning.blm.gov/eplanning-ui/project/20147485/510.
• Mail: 222 W. 7th Avenue, Stop #13, Anchorage, Alaska 99513.
More details and instructions for submitting public comment can be found on the BLM ePlanning website at https://eplanning.blm.gov/eplanning-ui/project/2014748/510.

Documents pertinent to this proposal may be examined at the ePlanning website.

FOR FURTHER INFORMATION CONTACT:
Serena Sweet at (907) 271–4534, or by email at ssweet@blm.gov on questions specific to NEPA, and Paul Krabacher at (907) 271–5681, or by email at pkrabacher@blm.gov, on questions specific to the Native Vietnam-Era Veterans Land Allotment Program of 2019. People who use a telecommunications device for the deaf (TDD) may call the Federal Relay Service (FRS) at 1–800–877–8339 to contact the above individual during normal business hours. The FRS is available 24 hours a day, 7 days a week, to leave a message or question. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION:
Public Land Order (PLO) 7899, addressing lands in the Kobuk-Seward Peninsula planning area, was signed on January 11, 2021, and published in the Federal Register on January 19, 2021 (86 FR 5236). PLOs 7900, 7901, 7902, and 7903—addressing lands in the Ring of Fire, Bay, Bering Sea-Western Interior, and East Alaska planning areas—were signed on January 15 and 16, 2021, but were never published in the Federal Register and therefore do not have an opening date. The Department extended the opening order for PLO 7899 by 60 days on February 18, 2021, to provide an opportunity to review the decisions and ensure the orderly management of the public lands (86 FR 10131). Subsequently, certain procedural and legal defects were identified in the decision-making process for these PLOs, including insufficient analysis under NEPA, failure to follow section 106 of the National Historic Preservation Act (NHPA), and possible failure to adequately evaluate impacts under section 7 of the Endangered Species Act (ESA). Due to these deficiencies, on April 16, 2021, the Department—relying on inherent authority to revisit decisions based on identified legal errors—delayed the opening of lands under PLO 7899 and the publication of PLOs 7900, 7901, 7902, and 7903 for up to two years.

In the meantime, the BLM has committed to undertaking a process to update the NEPA analysis for these decisions, comply with the consent requirements of Section 204(i) of FLPMA, and complete appropriate consultation under Section 106 of the NHPA, Section 7 of the ESA, and Section 810 of ANILCA in order to ensure that any decision to open some or all of the lands under reconsideration for selection under the Alaska Native Vietnam-Era Veterans Land Allotment Program is adequately supported under the law and, once conveyed, there are no questions about ownership of Alaska Native Veterans’ allotments.

The Alaska Native Vietnam-Era Veterans Land Allotment Program was established by Section 1119 of the Dingell Act. Through this program, the BLM can provide eligible individuals the opportunity to select an allotment of up to 160 acres from vacant, unappropriated, and unreserved Federal lands in Alaska, or lands selected by the State of Alaska or Alaska Native corporations if that entity agrees to relinquish that portion of their selection. By law, lands will be available for selection only for a period of five years, which began when the regulation-tongue became effective on December 28, 2020, and continues through December 29, 2025. For more information on the Alaska Native Vietnam-Era Veterans Land Allotment Program, please visit https://www.blm.gov/programs/lands-and-realty/regional-information/alaska/land-transfer/ak-native-allotment-act/alaska-native-vietnam-veterans-land-allotment.

Currently, approximately 1.6 million acres of BLM-administered land in Alaska is available for selection by Alaska Native Veterans, including lands selected by the State of Alaska and Alaska Native Corporations. The areas subject to this review would—if opened for selection under the Alaska Native Vietnam-Era Veterans Land Allotment Program—make available up to 28 million additional acres of lands within the Kobuk-Seward Peninsula, Ring of Fire, Bay, Bering Sea-Western Interior, and East Alaska planning areas.

Because the Dingell Act allows eligible individuals to select lands for only a limited period, and consistent with the Congressional intent that the Alaska Native Vietnam-Era Veterans Land Allotment Program quickly convey allotments to eligible individuals, the BLM will hold any applications for lands covered by PLOs 7900, 7901, 7902, and 7903 within the Kobuk-Seward Peninsula, Bay, Ring of Fire, Bering Sea-Western Interior, and East Alaska planning areas while the agency completes the EA to consider opening the lands for selection. All complete applications for lands within those planning areas will be considered as simultaneously filed at the time that any lands covered by those applications are opened to selection. If the BLM receives applications for an allotment within these lands, the agency will send a letter acknowledging receipt and notifying the applicant that all valid applications received at or prior to 8 a.m. Alaska Time on April 16, 2023, or the time that the lands covered by the applications are opened to selection, would be considered as simultaneously filed at that time. If the lands selected are not made available at the end of this process, the BLM will provide the applicant notice and they will have 60 days to make a substitute selection.

The input of Alaska Native Tribes is of critical importance to this EA. Therefore, the BLM has already held a series of government-to-government consultations with Tribes and a consultation meeting with Alaska Native corporations. During the planning process, the BLM will continue to consult with potentially affected Federally recognized Tribes on a government-to-government basis, and with affected Alaska Native corporations in accordance with Executive Order 13175 and other policies. Native concerns, including impacts on Indian trust assets and potential impacts to cultural resources, will be given appropriate consideration. We respectfully request participation in consultation by these Alaska Native entities to receive their views and recommendations on lands to be opened for selection by eligible individuals. The BLM anticipates holding additional informational meetings and will also hold individual consultation meetings if requested.

The BLM will utilize and coordinate the NEPA process to help fulfill the public involvement process under the NHPA, including as provided in 36 CFR 800.2(d)(3). The information about historic and cultural resources within the area potentially affected by the proposed action will assist the BLM in identifying and evaluating impacts to such resources. Federal, State, and local agencies, along with Tribes and other stakeholders that may be interested in or affected by the proposed opening of lands withdrawn by Section 17(d)(1) of ANCSA to selection of allotments for the Alaska Native Vietnam-Era Veterans Land Allotment Program, are invited to participate in the scoping process and, if eligible, may request or be asked by the BLM to participate in the development of the EA as cooperating agencies. Potentially affected Tribes will receive a letter inviting participation under Section 106 of the NHPA in the coming weeks and the BLM will work
with consulting parties to schedule consultation meetings.

The BLM is seeking public comments on issues, planning criteria, concerns, potential impacts, alternatives, and mitigation measures that should be considered in the analysis. Substantive comments will be used to prepare an EA. Additional opportunities, for public participation will be available upon publication of the draft EA.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Chad Padgett, State Director, Alaska.

AGENCY: Bureau of Safety and Environmental Enforcement (BSEE), Interior.

ACTION: Notice of intent (NOI) to prepare a Programmatic Environmental Impact Statement (PEIS).

SUMMARY: Consistent with the regulations implementing the National Environmental Policy Act (NEPA), BSEE intends to prepare a PEIS to inform future decisions on applications for the decommissioning of oil and gas pipelines, platforms, and other facilities offshore of Southern California on the Pacific Outer Continental Shelf (OCS). The Bureau of Ocean Energy Management (BOEM) is assisting BSEE in the preparation of this environmental analysis.

DATES: BSEE requests comments concerning the scope of the analysis, identifying potential alternatives, significant issues for analysis (or those to be eliminated as insignificant), and potentially relevant information, studies, and analyses to be considered.

All comments must be received by September 7, 2021. The draft PEIS is tentatively scheduled for publication in February 2022, followed by a 45-day public comment period. The final PEIS is tentatively scheduled for publication in June 2022, followed by a programmatic record of decision (ROD) no sooner than 30 days after publication of the final PEIS.

ADDRESSES: Comments may be submitted in writing or through www.regulations.gov. If in written form, comments may be delivered by hand or by mail, enclosed in an envelope labeled, “Pacific Decommissioning” and addressed to Richard Yarde, Regional Supervisor, Office of Environment, BOEM Pacific Region, 760 Paseo Camarillo, Suite 102, Camarillo, CA, 93010. Comments may also be submitted online through the regulations.gov web portal: Navigate to http://www.regulations.gov and search for Docket No. BOEM–2021–0043. Click on the “Comment Now!” button to the right of the document link. Enter your information and comment, then click “Submit.”

FOR FURTHER INFORMATION CONTACT: For information on the PEIS, contact Richard Yarde, Regional Supervisor, Office of Environment, at richard.yarde@boem.gov or 805–384–6379.

Individuals who use telecommunication devices for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 800–877–8339 between 8 a.m. and 8 p.m., Eastern Time, Monday through Friday.

SUPPLEMENTARY INFORMATION:

Purpose and Need for the Proposed Action

Oil and gas lessees, owners of operating rights, and holders of rights-of-way must decommission all OCS wells, platforms, other facilities, and pipelines, and clear the seafloor of all obstructions, in compliance with regulatory requirements principally located at 30 CFR part 250 Subpart Q. There are currently 23 oil and gas platforms and associated wells, facilities, and pipelines on the OCS offshore Southern California that were installed between the late 1960s and early 1990s and that eventually need to be decommissioned. Lessees and owners of operating rights and holders of rights-of-way must first apply for and obtain approval from the appropriate BSEE District Manager or Regional Supervisor before decommissioning platforms, pipelines, and facilities. 30 CFR 250.1703–250.1704. Well abandonment activities are reviewed and completed prior to removal of platforms, pipelines, and other facilities, and are therefore not included within the scope of this PEIS. BSEE reviews decommissioning applications to ensure compliance with applicable regulatory standards and for safety and protection of other OCS uses and the environment. The purpose and need for this PEIS is to support future Federal review of and action on decommissioning applications for platforms, pipelines, and other facilities offshore Southern California on the Pacific OCS. Currently, eight oil and gas platforms on the OCS offshore Southern California, near Point Conception and in the Santa Barbara Channel, no longer produce oil and gas and are located on terminated leases that no longer allow resumption of production. BSEE expects to receive decommissioning applications for these platforms and associated pipelines and other facilities in the near term. It is currently unknown when decommissioning may be initiated for the remaining 15 platforms, though by regulation an initial platform removal application must be submitted for Pacific OCS facilities at least two years before production is projected to cease.

Preliminary Proposed Action and Alternatives

BSEE expects to analyze three alternatives in the PEIS: Complete Removal of platforms and associated facilities and pipelines; Partial Removal of platforms and any associated facilities and pipelines; and No Action. Each alternative is briefly described below. The action alternatives contain a number of overlapping elements. For example, a particular type of cutting tool might be used in either complete removal or partial removal, with no difference in the activity or the expected impacts. In these instances analysis of the options may be included as part of the Proposed Action only.

Alternative 1—Complete Removal (the Preliminary Proposed Action). The Preliminary Proposed Action is to authorize applications for complete removal of platforms and other facilities, decommissioning of all pipelines by removal, and clearing the seafloor of all obstructions created by the lease or right-of-way operations, as described in 30 CFR part 250 Subpart Q. These activities must be completed in a manner that is safe, does not unreasonably interfere with other uses of the OCS, and does not cause undue or serious harm to the environment. Both the Proposed Action and Partial Removal alternative would consider
several decommissioning tools and techniques that might be proposed for use in future decommissioning projects. Some of the tools and techniques that BSEE expects to consider include the use of mechanical, hydraulic, laser, explosive, or other tools for the severance of structures; different types and sizes of vessels; various methods of excavation around the jacket to facilitate removal; and the possibility of reeving some parts of the structure either nearby or at an alternative reefing site on the OCS.

Alternative 2—Partial Removal. Partial removal of platforms and other facilities may include removing the top of the platform jacket to a level that is at least 85 feet below the waterline while leaving the lower portions of the jacket intact. This alternative may include decommissioning pipelines in place once they have been properly prepared in accordance with 30 CFR 250.1750–250.1751.

Alternative 3—No Action. The PEIS will also evaluate a No Action alternative, which means no Federal action would be taken on decommissioning applications. This alternative would not meet the purpose and need of the Proposed Action or legal obligations of the bureau. However, this alternative is included as a comparison that helps in understanding the Proposed Action and the other action alternative and their associated impacts.

Summary of Expected Impacts

Potential environmental impacts may result from platform or other facility or pipeline removal, marine vessel operations, and, potentially, any objects or structures left in place. The primary resources potentially impacted may include air quality, water quality, wildlife habitat, benthic resources, fish, and marine mammals. Major socio-economic considerations may include commercial and recreational fishing, vessel space-use issues, and changes to the viewshed during and after decommissioning activities. Factors that may result in impacts include air emissions, water pollution, noise, habitat alteration, and turbidity.

Anticipated Permits and Authorizations

Neither the PEIS nor the resulting programmatic ROD will authorize any specific activities or approve any individual applications. The PEIS and ROD will provide a programmatic environmental analysis and framework to support future decisionmaking on individual decommissioning applications. When decommissioning applications are submitted to BSEE, the site-specific characteristics of the project will be evaluated at that time by preparing additional environmental analyses that may tier to this PEIS. Based on the site-specific applications and evaluations, BSEE may then reach a site-specific NEPA determination and approve, approve with conditions, or deny individual decommissioning applications. This PEIS will inform future BSEE decisions on various decommissioning activities, but will not independently approve or authorize any applications or permits and therefore neither the PEIS nor ROD will constitute final agency action.

Potential future BSEE decisions that may rely on this PEIS include decisions on initial platform removal applications (30 CFR 250.1726), decisions on final applications to remove a platform or other facility (30 CFR 250.1727), decisions on pipeline decommissioning applications (30 CFR 250.1750 and 250.1752), decisions on departure requests (30 CFR 250.142 and 250.1730), and decisions on alternate procedures or equipment requests (30 CFR 250.141). The decommissioning process may also require permits and approvals from other agencies, potentially including the U.S. Army Corps of Engineers, the U.S. Coast Guard, and the California Coastal Commission, among others. Further, decommissioning of OCS facilities may proceed concurrently with decommissioning activities for related oil and gas infrastructure located in State waters and onshore, and therefore may involve additional oversight and approvals from the State of California.

Schedule for the Decision-Making Process

The draft PEIS is tentatively scheduled for publication in February 2022. The final PEIS is tentatively scheduled for publication in June 2022, with a ROD to follow no sooner than 30 days later.

The timing of regulatory decisions that BSEE must make on future decommissioning applications is uncertain. BSEE could receive applications for decommissioning at any time over the next several years, with actual decommissioning occurring any time into subsequent years and possibly decades. The intent of this programmatic analysis is to analyze broad commonalities among expected future decommissioning projects and to provide a forum for early consideration of programmatic impacts and policy choices. BSEE expects that once decommissioning applications are received, additional analyses will then be tiered to this PEIS (including any supplemental PEISs, as appropriate) and will consider the site-specific circumstances present at that time.

Public Scoping Process

This NOI initiates the scoping process, which guides the development of the PEIS. The scope of the PEIS is the range of issues, alternatives, impacts, and mitigation measures to be considered. Scoping will help focus the analysis in the PEIS on the significant issues and alternatives and will eliminate from detailed NEPA analysis any issues that are insignificant or irrelevant. After the publication of this NOI in the Federal Register, the public will have 45 days to submit comments; the deadline to submit comments is identified in the DATES section above. The methods to submit comments are provided in the ADDRESSES section above. Supplemental information to assist the public in providing scoping comments is available at www.boem.gov/Pacific-decomm-PEIS.

This supplemental information includes maps of the relevant geographic area, a description of the environmental setting, and further details about existing oil and gas infrastructure.

Please include your name and address as part of your comment. BSEE makes all comments, including the names, addresses, and other personally identifiable information included in the comment, available for public review online and during regular business hours. Individuals may request that BSEE withhold their names or addresses from the public record; however, BSEE cannot guarantee that it will be able to do so. In order for BSEE to withhold from disclosure your personally identifiable information, you must identify any information contained in your comments that, if released, would constitute a clearly unwarranted invasion of your privacy. You also must briefly describe any possible harmful consequences of the disclosure of information, such as embarrassment, injury, or other harm. All submissions from organizations or businesses and from individuals identifying themselves as representatives of or affiliated with organizations or businesses will be made available for public inspection in their entirety.

NEPA Cooperating Agencies

BSEE invites other Federal agencies and State, federally recognized tribes (Tribes), and local governments to consider becoming cooperating agencies in the preparation of this PEIS. The Council on Environmental Quality (CEQ) NEPA regulations specify that qualified agencies and governments are those with “jurisdiction by law or
special expertise.” 40 CFR 1501.7(h).
Potential cooperating agencies should consider their authority and capacity to assume the responsibilities of a cooperating agency and should be aware that an agency’s role in the environmental analysis neither enlarges nor diminishes the final decision-making authority of any other agency involved in the NEPA process.

Upon request, BSEE will provide potential cooperating agencies with a written summary of expectations for cooperating agencies, including schedules, milestones, responsibilities, scope and detail of cooperating agencies’ contributions, and availability of pre-decisional information. BSEE anticipates this summary will form the basis for a memorandum of agreement between BSEE and any cooperating agency outside the Department of the Interior. Agencies also should consider the factors for determining cooperating agency status in CEQ’s memorandum entitled, “Cooperating Agencies in Implementing the Procedural Requirements of the National Environmental Policy Act,” dated January 30, 2002. This document is available on the internet at: https://www.energy.gov/nepa/downloads/cooperating-agencies-implementing-procedural-requirements-national-environmental. BSEE, as the lead agency, will not provide financial assistance to cooperating agencies. Even if a governmental entity is not a cooperating agency, it will have opportunities to provide information and comments to BSEE during the public input stages of the NEPA process.

National Historic Preservation Act (NHPA) Consulting Parties

Certain individuals and organizations with a demonstrated interest in the Preliminary Proposed Action or alternatives may request to participate as NHPA consulting parties under 36 CFR 800.2(c)(5) based on their legal or economic stake in historic properties affected by the Preliminary Proposed Action or its alternatives. Additionally, the same provision allows those with concerns about the Preliminary Proposed Action’s effect on historic properties to request to be consulting parties. Parallel with its NEPA analyses, BSEE will compile a list of potential consulting parties and, in writing, invite these potential participants to become consulting parties. To become a consulting party, those invited must respond in writing. Interested individuals or organizations that do not receive an invitation may request to be consulting parties by writing to BSEE via the means provided in the

INTERNATIONAL TRADE COMMISSION

Uncoated Paper From Australia, Brazil, China, Indonesia, and Portugal;
Scheduling of Full Five-Year Reviews

ACTION: Notice.

SUMMARY: The Commission hereby gives notice of the scheduling of full reviews pursuant to the Tariff Act of 1930 (“the Act”) to determine whether revocation of the antidumping duty orders on uncoated paper from Australia, Brazil, China, Indonesia, and Portugal and the countervailing duty orders on uncoated paper from China and Indonesia would be likely to lead to continuation or recurrence of material injury within a reasonably foreseeable time. The Commission has determined to exercise its authority to extend the review period by up to 90 days.

DATES: July 19, 2021.

Hearing-impaired persons can obtain information on this matter by contacting the Commission’s TDD terminal on 202–205–1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at 202–205–2000.

General information concerning the Commission may also be obtained by accessing its internet server (https://www.usitc.gov). The public record for these reviews may be viewed on the Commission’s electronic docket (EDIS) at https://edis.usitc.gov.

SUPPLEMENTARY INFORMATION: Background.—On May 7, 2021, the Commission determined that responses to its notice of institution of the subject five-year reviews were such that full reviews should proceed (86 FR 27650, May 21, 2021); accordingly, full reviews are being scheduled pursuant to section 751(c)(5) of the Tariff Act of 1930 (19 U.S.C. 1675(c)(5)). A record of the Commissioners’ votes, the Commission’s statement on adequacy, and any individual Commissioner’s statements are available from the Office of the Secretary and at the Commission’s website.

Participation in the reviews and public service list.—Persons, including industrial users of the subject merchandise and, if the merchandise is sold at the retail level, representative consumer organizations, wishing to participate in these reviews as parties must file an entry of appearance with the Secretary to the Commission, as provided in section 201.11 of the Commission’s rules, by 45 days after publication of this notice. A party that filed a notice of appearance following publication of the Commission’s notice of institution of these reviews need not file an additional notice of appearance. The Secretary will maintain a public service list containing the names and
addresses of all persons, or their representatives, who are parties to the reviews.

For further information concerning the conduct of these reviews and rules of general application, consult the Commission’s Rules of Practice and Procedure, part 201, subparts A and B (19 CFR part 201), and part 207, subparts A, D, E, and F (19 CFR part 207).

Please note the Secretary’s Office will accept only electronic filings during this time. Filings must be made through the Commission’s Electronic Document Information System (EDIS, https://edis.usitc.gov). No in-person paper-based filings or paper copies of any electronic filings will be accepted until further notice.

Limited disclosure of business proprietary information (BPI) under an administrative protective order (APO) and BPI service list.—Pursuant to section 207.7(a) of the Commission’s rules, the Secretary will make BPI gathered in these reviews available to authorized applicants under the APO issued in the reviews, provided that the application is made by 45 days after publication of this notice. Authorized applicants must represent interested parties, as defined by 19 U.S.C. 1677(9), who are parties to the reviews. A party granted access to BPI following publication of the Commission’s notice of institution of the reviews need not reapply for such access. A separate service list will be maintained by the Secretary for those parties authorized to receive BPI under the APO.

Staff report.—The prehearing staff report in the reviews will be placed in the nonpublic record on October 28, 2021, and a public version will be issued thereafter, pursuant to section 207.64 of the Commission’s rules.

Hearing.—The Commission will hold a hearing in connection with the reviews beginning at 9:30 a.m. on November 18, 2021. Information about the place and form of the hearing, including about how to participate in and/or view the hearing, will be posted on the Commission’s website at https://www.usitc.gov/calendarpad/calendar.html. Interested parties should check the Commission’s website periodically for updates. Requests to appear at the hearing should be filed in writing with the Secretary to the Commission on or before November 12, 2021. A nonparty who has testimony that may aid the Commission’s deliberations may request permission to present a short statement at the hearing. All parties and nonparties desiring to appear at the hearing and make oral presentations should attend a prehearing conference to be held at 9:30 a.m. on November 15, 2021. Oral testimony and written materials to be submitted at the public hearing are governed by sections 201.6(b)(2), 201.13(f), and 207.24 of the Commission’s rules. Parties must submit any request to present a portion of their hearing testimony in camera no later than 7 business days prior to the date of the hearing.

Written submissions.—Each party to the reviews may submit a prehearing brief to the Commission. Prehearing briefs must conform with the provisions of section 207.65 of the Commission’s rules; the deadline for filing is November 8, 2021. Parties may also file written testimony in connection with their presentation at the hearing, as provided in section 207.24 of the Commission’s rules, and posthearing briefs, which must conform with the provisions of section 207.67 of the Commission’s rules. The deadline for filing posthearing briefs is November 30, 2021. In addition, any person who has not entered an appearance as a party to the reviews may submit a written statement of information pertinent to the subject of the reviews on or before November 30, 2021. On December 22, 2021, the Commission will make available to parties all information on which they have not had an opportunity to comment. Parties may submit final comments on this information on or before December 30, 2021, but such final comments must not contain new factual information and must otherwise comply with section 207.68 of the Commission’s rules. All written submissions must conform with the provisions of section 201.8 of the Commission’s rules; any submissions that contain BPI must also conform with the requirements of sections 201.6, 207.3, and 207.7 of the Commission’s rules.

The Commission’s Handbook on Filing Procedures, available on the Commission’s website at https://www.usitc.gov/documents/handbook_on_filing_procedures.pdf, elaborates upon the Commission’s procedures with respect to filings. Additional written submissions to the Commission, including requests pursuant to section 201.12 of the Commission’s rules, shall not be accepted unless good cause is shown for accepting such submissions, or unless the submission is pursuant to a specific request by a Commissioner or Commission staff.

In accordance with sections 201.16(c) and 207.3 of the Commission’s rules, each document filed by a party to the reviews must be served on all other parties to the reviews (as identified by either the public or BPI service list), and a certificate of service must be timely filed. The Secretary will not accept a document for filing without a certificate of service.

The Commission has determined that the reviews are extraordinarily complicated and therefore has determined to exercise its authority to extend the review period by up to 90 days pursuant to 19 U.S.C.1675(c)(5)(B).

Authority: These reviews are being conducted under authority of title VII of the Tariff Act of 1930; this notice is published pursuant to section 207.62 of the Commission’s rules.

By order of the Commission.

Issued: July 19, 2021.

Lisa Barton,
Secretary to the Commission.

[FR Doc. 2021–15670 Filed 7–22–21; 8:45 am]

BILLING CODE 7020–02–P

DEPARTMENT OF JUSTICE

Bureau of Alcohol, Tobacco, Firearms and Explosives

[OMB 1140–0022]

Agency Information Collection Activities; Proposed eCollection of eComments Requested; Extension Without Change of a Currently Approved Collection; Federal Explosives License/Permit (FEL) Renewal Application—ATF Form 5400.14/5400.15, Part III

AGENCY: Bureau of Alcohol, Tobacco, Firearms and Explosives, Department of Justice.

ACTION: 60-Day notice.

SUMMARY: The Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF), Department of Justice (DOJ), will submit the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. The proposed information collection (IC) is also being published to obtain comments from the public and affected agencies.

DATES: Comments are encouraged and will be accepted for 60 days until September 21, 2021.

FOR FURTHER INFORMATION CONTACT: If you have additional comments, regarding the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions, or additional information, please contact: Shawn Stevens, Federal Explosives

AGENCY: Bureau of Alcohol, Tobacco, Firearms and Explosives, Department of Justice.

ADDITIONAL INFORMATION: The Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF), Department of Justice (DOJ), will submit the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. The proposed information collection (IC) is also being published to obtain comments from the public and affected agencies.

DATES: Comments are encouraged and will be accepted for 60 days until September 21, 2021.

FOR FURTHER INFORMATION CONTACT: If you have additional comments, regarding the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions, or additional information, please contact: Shawn Stevens, Federal Explosives
Licensing Center, either by mail at 244 Needy Road, Martinsburg, WV 25405, by email at Shawn.Stevens@atf.gov, or by telephone at 304–616–4400.

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

1. Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
2. Evaluate the accuracy of the agency’s estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
3. Evaluate whether and if so how the quality, utility, and clarity of the information to be collected can be enhanced; and
4. Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Overview of this Information Collection

1. Type of Information Collection (check justification or form 83): Extension without change of a currently approved collection.
2. The Title of the Form/Collection: Federal Explosives License/Permit (FEL) Renewal Application.
3. The agency form number, if any, and the applicable component of the Department sponsoring the collection: Form number (if applicable): ATF Form 5400.14/5400.15, Part III.
4. Affected public who will be asked or required to respond, as well as a brief abstract:
   Primary: Business or other for-profit.
   Other (if applicable): Individuals or households.
5. An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond: An estimated 2,500 respondents will use the form annually, and it will take each respondent approximately 20 minutes to complete their responses.
6. An estimate of the total public burden (in hours) associated with the collection: The estimated annual public burden associated with this collection is 825 hours, which is equal to 2,500 (# of respondents) * .33 (20 minutes).

If additional information is required contact: Melody Braswell, Department Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution Square, 145 N Street NE, Mail Stop 3F.405A, Washington, DC 20530.

Dated: July 20, 2021.

Melody Braswell,
Department Clearance Officer for PRA, U.S. Department of Justice.

[FR Doc. 2021–15715 Filed 7–22–21; 8:45 am]

BILLING CODE 4410–FY–P

DEPARTMENT OF JUSTICE

Antitrust Division

Notice is hereby given pursuant to the Antitrust Procedures and Penalties Act, 15 U.S.C. 16(b)–(h), that a proposed Final Judgment, Stipulation, and Competitive Impact Statement have been filed with the United States District Court for the District of Columbia in United States of America v. Danfoss A/S and Eaton Corporation plc. Civil Action No.: 1:21–cv–1880–CJN. On July 14, 2021, the United States filed a Complaint alleging that Danfoss’s proposed acquisition of Eaton Corporation plc’s hydraulics business would violate Section 2 of the Clayton Act, 15 U.S.C. 18. The proposed Final Judgment, filed at the same time as the Complaint, requires Danfoss to divest three Danfoss hydraulic orbital motor and hydraulic steering unit manufacturing facilities and from Eaton two orbital motor production lines and one hydraulic steering unit production line.

Copies of the Complaint, proposed Final Judgment, and Competitive Impact Statement are available for inspection on the Antitrust Division’s website at http://www.justice.gov/atr and at the Office of the Clerk of the United States District Court for the District of Columbia. Copies of these materials may be obtained from the Antitrust Division upon request and payment of the copying fee set by Department of Justice regulations.

Public comment is invited within 60 days of the date of this notice. Such comments, including the name of the submitter, and responses thereto, will be posted on the Antitrust Division’s website, filed with the Court, and, under certain circumstances, published in the Federal Register. Comments should be submitted in English and directed to Jay Owen, Acting Chief, Defense, Industrials, and Aerospace Section, Antitrust Division, Department of Justice, 450 Fifth Street NW, Suite 8700, Washington, DC 20530 (email address: jay.owen@usdoj.gov).

Suzanne Morris,
Chief, Premerger and Division Statistics, Antitrust Division.

United States District Court for the District of Columbia

Civil Action No.: 1:21–cv–1880–CJN

Complaint

The United States of America (“United States”), acting under the direction of the Attorney General of the United States, brings this civil antitrust action against Defendants Eaton Corporation plc (“Eaton”) and Danfoss A/S (“Danfoss”) to enjoin Danfoss’s proposed acquisition of Eaton’s hydraulics business. The United States complains and alleges as follows:

I. Nature of the Action

1. Pursuant to a Transaction Agreement dated January 21, 2020, Danfoss intends to acquire Eaton’s hydraulics business for approximately $3.3 billion. The hydraulic power components that Danfoss and Eaton manufacture make it possible to steer, propel, and operate equipment used to pave roads, harvest produce, construct buildings, and perform other heavy industrial and agricultural tasks across the United States every day.

2. Danfoss and Eaton are two of only three suppliers of hydraulic orbital motors (“orbital motors”) and hydraulic steering units (“steering units”) used in tractors, wheel loaders, lifts, and other types of mobile off-road equipment in the United States. Orbital motors, also
called “low-speed, high-torque” motors, are a low-cost way to move heavy loads in a slow, and thus controlled, way. Steering units direct hydraulic fluid in response to commands from equipment operators and are necessary for any hydraulic steering system to function. Three of every four orbital motors and four of every five steering units purchased in the United States are supplied by either Danfoss or Eaton.

3. Competition between Danfoss and Eaton has driven prices down and spurred the production of new and better orbital motors and steering units. The proposed merger would eliminate this competition, leading to higher prices, lower quality, and diminished innovation.

4. As a result, the proposed acquisition would substantially lessen competition in the market for the design, manufacture, and sale of orbital motors and steering units for mobile off-road equipment in the United States in violation of Section 7 of the Clayton Act, 15 U.S.C. 18.

II. Defendants and the Transaction

5. Danfoss is a global corporation headquartered in Nordborg, Denmark that specializes in the manufacturing of components and engineering technologies for, inter alia, hydraulics for off-road machinery. Danfoss’s Power Solutions division produces hydraulic pumps, motors, valves and steering solutions, as well as electronic components, software, motors, and converters. The Power Solutions division accounted for 35% of Danfoss’s $6.3 billion in revenue in 2019.

6. Eaton is a global corporation headquartered in Dublin, Ireland that focuses on power management solutions for electrical, hydraulics, aerospace, and vehicle applications. Eaton Hydraulics, based in Eden Prairie, Minnesota, consists of a Fluid Conveyance Division that sells hoses and other fluid conveyance products and a Power & Motion Controls Division offering hydraulic motors, power units, valves, and steering units. The Power & Motion Controls division had sales of $2.2 billion in 2019.

7. On January 21, 2020, Danfoss and Eaton signed an agreement under which Danfoss will acquire Eaton’s hydraulics business in exchange for $3.3 billion.

III. Jurisdiction and Venue

9. Defendants design, manufacture, and sell orbital motors and steering units for mobile off-road equipment throughout the United States, and their activities in these areas substantially affect interstate commerce. This Court therefore has subject matter jurisdiction over this action pursuant to Section 15 of the Clayton Act, 15 U.S.C. 25, and 28 U.S.C. 1331, 1337(a), and 1345.

10. Defendants have consented to venue and personal jurisdiction in this judicial district. Venue is therefore proper in this district under Section 12 of the Clayton Act, 15 U.S.C. 22, and under 28 U.S.C. 1391(b) and (c).

IV. Industry Background

A. Hydraulic Systems

11. Most heavy industrial and agricultural operations rely on specialized equipment to perform work “off-road” (e.g., in a construction site, a field, a forest, a mine, or on a golf course). A motor to convert hydraulic pressure into mechanical energy; and components that accomplish the intended task, such as cylinders.

12. Mobile off-road equipment often has multiple hydraulic systems. Each system serves one of three functions: To carry out the steering commands given by a driver, to propel equipment forward, or to make the equipment perform its intended work function (e.g., to operate the forks on a forklift or raise a scissor lift’s platform).

13. Original Equipment Manufacturers ("OEMs") of mobile off-road equipment select components of hydraulic systems individually, considering the performance requirements of the equipment at issue, price, and the space available to house the components selected. To determine components for a new platform, OEMs may solicit bids, seek the services of a distributor, collaborate with a preferred provider, or use in-house engineers as experts.

B. Orbital Motors

15. While all hydraulic motors turn hydraulic pressure into mechanical energy, there are different designs that can be used for mobile equipment: Gear motors, orbital motors, vane motors, and piston motors. Each design presents a different way of propulsion in terms of power, pressure, fluid displacement, torque, and rotational speed. OEMs consider each of these performance characteristics, as well as price and physical size, when selecting a motor to be used in a particular hydraulic system.

16. There is a direct relationship between a motor’s power metrics and its price. In addition to being more expensive, a motor that is more powerful than necessary for the job has less operating efficiency. Thus, OEMs prefer products that meet, but do not exceed, their desired performance specifications. Once selected, it is difficult and expensive for an OEM to switch motor designs because of the need to retrofit the equipment to the new motor.

17. Orbital motors have a rotating gear design consisting of an external gear ring and an inner gear star. When the internal gear star rotates in a planetary-type movement, fluid that has been inserted by a pump is displaced between every gear tooth. The result is a high torque output at a low rotational speed. For this reason, orbital motors are also referred to as “low-speed, high-torque” motors.

18. Orbital motors are in the “low-to-medium” power category of motors, generating fewer than 100 kilowatts of power. However, an orbital motor is efficient and generates high output levels of torque at low rotational speeds, which makes it easier to control the movement of heavy loads. Orbital motors are also uniquely attractive to OEMs because they come in a standard compact size, which OEMs can count on when designing mobile off-road equipment.

19. Because orbital motors are more commoditized and thus less expensive than other motors that produce similar amounts of torque, they are considered a “workhorse” motor for many OEMs that design mobile off-road equipment, and can be used for the “work” or “propel” functions for a long list of mobile off-road equipment, including potato harvesters, wheel loaders, skid steer loaders, aerial lifts, asphalt pavers, rollers, salt spreaders, harvesters, and street sweepers.

20. In contrast to orbital motors, piston motors are higher powered, higher priced, larger, and often inefficient for an application that is appropriate for an orbital motor. Similarly, gear and vane motors fail to meet an orbital motor’s performance metrics for torque.

C. Hydraulic Steering Units

21. An OEM designing a power steering system for mobile off-road equipment can choose from three different steering technologies.
V. The Relevant Markets Threatened by
the Acquisition

A. Relevant Product Markets

24. An OEM in need of an orbital motor’s performance characteristics for a mobile off-road vehicle design would not simply substitute an alternative motor technology. No other motor offers the same combination of (1) efficiency (i.e., operating power necessary for the intended use), (2) torque output, and (3) low price. Vane and gear motors do not meet the torque output performance metrics of an orbital motor, and piston and electric motors are more expensive and less efficient than an orbital motor. In order for a customer to switch to any of these alternative technologies, that customer would need to downgrade its performance expectations, engage in a costly redesign, or spend significantly more money.

25. Because of these factors, in the event of a small but significant increase in price by a hypothetical monopolist of orbital motors, substitution away from orbital motors would be insufficient to render the price increase unprofitable. Orbital motors for mobile off-road equipment are therefore a line of commerce, or relevant product market, for purposes of analyzing the effects of the acquisition under Section 7 of the Clayton Act, 15 U.S.C. 18.

26. Similarly, an increase in the price of hydraulic steering systems would not cause OEM customers to replace a hydraulic steering system in mobile off-road equipment with electric steering technology. Electric steering technology—the only alternative steering system that does not require a hydraulic steering unit—is largely unproven and more expensive than hydraulic steering technology. Electric steering, for example, is vulnerable in wet terrains and often lacks the power necessary to move cylinders connected to the wheels of large off-road equipment. Finally, the switching costs from hydraulic steering to electric steering are high and would require a costly redesign by OEMs.

27. Because of these factors, in the event of a small but significant increase in price by a hypothetical monopolist of steering units, substitution away from steering units would be insufficient to render the price increase unprofitable. Steering units for mobile off-road equipment are therefore a line of commerce, or relevant product market, for purposes of analyzing the effects of the acquisition under Section 7 of the Clayton Act, 15 U.S.C. 18.

B. Geographic Markets

28. OEMs located in the United States cannot reasonably turn to suppliers without a U.S. presence for the supply of orbital motors or steering units for mobile off-road equipment. Long lead times due to international shipping and unexpected delays in the delivery of products can cause significant business disruption. Customers similarly require that suppliers warehouse new and replacement parts to avoid costly delays or interruptions to business operations and expect local service and support from suppliers.

29. A hypothetical monopolist of orbital motors or steering units sold in the United States could profitably impose a small but significant non-transitory increase in price for orbital motors or steering units without losing sufficient sales to render the price increase unprofitable. Nor would the price increase be defeated by arbitrage, e.g., by OEMs purchasing through subsidiaries located outside the United States. Accordingly, the relevant geographic market for the purposes of analyzing the effects of the acquisition on orbital motors and steering units for mobile off-road equipment under Section 7 of the Clayton Act, 15 U.S.C. 18, is the United States.
steering units for mobile off-road equipment, the pre-merger HHI is 4,155 and the post-merger HHI is 8,273, representing an increase in the HHI of 4,118. Under the Horizontal Merger Guidelines, the proposed acquisition will result in highly concentrated markets for both orbital motors and steering units for mobile off-road equipment and is thus presumed likely to enhance market power.

35. The HHI indicators of highly concentrated markets and enhanced market power are consistent with historical head-to-head competition between Danfoss and Eaton to supply orbital motors and steering units for mobile off-road equipment. Danfoss and Eaton compete directly on price, quality, product innovation, delivery, and technical service, and the competition between them has benefited U.S. customers of orbital motors and steering units for mobile off-road equipment. Danfoss and Eaton have a reputation for high-quality orbital motors and steering units, product development that benefit OEMs, an extensive network of distributors throughout the United States, and localized customer support and service. As a result, Danfoss and Eaton are considered to be the two primary—and sometimes the only two—suppliers of orbital motors and steering units to customers in the United States.

36. For all of these reasons, the proposed transaction between Danfoss and Eaton likely would substantially lessen competition in the design, manufacture, and sale of orbital motors and steering units for mobile off-road equipment sold to customers in the United States and lead to higher prices, decreased quality of delivery and service, and diminished innovation.

VII. Absence of Countervailing Factors

37. Entry into the design, manufacture, and sale of orbital motors and steering units for mobile off-road equipment sold in United States is unlikely to be timely, likely, or sufficient to prevent the harm to competition caused by Danfoss’s acquisition of Eaton’s hydraulics business. A new entrant must have the technical capabilities necessary to design, manufacture, and sell orbital motors and steering units that meet customer requirements for quality, performance, and reliability. Additionally, a new entrant must have the requisite scale, an established reputation, and an extensive network of distributors to supply to all customers throughout the United States.

38. As a result of these entry barriers, entry into the market for the design, manufacture, and sale of orbital motors and steering units for mobile off-road equipment sold to customers in United States would not be timely, likely, or sufficient to defeat the substantial lessening of competition that likely would result from Danfoss’s acquisition of Eaton’s hydraulics business.

VIII. Violations Alleged

39. Danfoss’s proposed acquisition of Eaton’s hydraulics business likely would substantially lessen competition in the design, manufacture, and sale of orbital motors and steering units for mobile off-road equipment in the United States in violation of Section 7 of the Clayton Act, 15 U.S.C. 18.

40. Unless enjoined, the proposed acquisition would likely have the following anticompetitive effects, among others, related to the relevant market:

1. A substantial lessening of competition generally;
2. an elimination of actual and potential head-to-head competition between Danfoss and Eaton; and
3. a likely increase in prices and decrease in quality and innovation.

IX. Request for Relief

41. The United States requests that this Court:

1. Adjudge and decree that Danfoss’s acquisition of Eaton’s hydraulics business would be unlawful and violate Section 7 of the Clayton Act, 15 U.S.C. 18;
2. preliminarily and permanently enjoin and restrain Defendants and all persons acting on their behalf from consummating the proposed acquisition of Eaton’s hydraulics business by Danfoss, or from entering into or carrying out any other contract, agreement, plan, or understanding which would combine Eaton’s hydraulics business with Danfoss;
3. award the United States its costs for this action; and
4. award the United States such other and further relief as the Court deems just and proper.

Dated: July 14, 2021
Respectfully submitted,
Counsel for Plaintiff United States:

Appendix A

Definition of the Herfindahl–Hirschman Index

“The HHI” means the Herfindahl–Hirschman Index, a commonly accepted measure of market concentration. It is calculated by squaring the market share of each firm competing in the market and then summing the resulting numbers. For example, for a market consisting of four firms with shares of 30 percent, 30 percent, 20 percent, and 20 percent, the HHI is 2,600 (302 + 302 + 202 + 202 = 2,600). The HHI takes into account the relative size distribution of the firms in a market and approaches zero when a market consists of a large number of small firms. The HHI increases both as the number of firms in the market decreases and as the disparity in size between those firms increases. Markets in which the HHI is above 2,500 are considered to be highly concentrated. See Horizontal Merger Guidelines § 5.3. Transactions that increase the HHI by more than 200 points in highly concentrated markets are presumed to be likely to enhance market power under the guidelines issued by the U.S. Department of Justice and Federal Trade Commission. See id.

United States District Court for the District of Columbia

United States of America, Plaintiff, v.
Danfoss A/S, and Eaton Corporation PLC, Defendants.
Case No: 1:21–cv–1880–CJN

[Proposed] Final Judgment

Whereas, Plaintiff, United States of America, filed its Complaint on July 14, 2021,
And Whereas, United States and Defendants, Danfoss A/S (“Danfoss”) and Eaton Corporation plc (“Eaton”), have consented to entry of this Final Judgment without the taking of testimony, without trial or adjudication of any issue of fact or law, and without this Final Judgment constituting any evidence against or admission by any party relating to any issue of fact or law;
And Whereas, Defendants agree to make a divestiture to remedy the loss of competition alleged in the Complaint;
And Whereas, Defendants represent that the divestiture and other relief required by this Final Judgment can and will be made and that Defendants will
not later raise a claim of hardship or difficulty as grounds for asking the Court to modify any provision of this Final Judgment:

Now therefore, it is ordered, adjudged, and decreed:

I. Jurisdiction

The Court has jurisdiction over the subject matter of and each of the parties to this action. The Complaint states a claim upon which relief may be granted against Defendants under Section 7 of the Clayton Act (15 U.S.C. 18).

II. Definitions

As used in this Final Judgment:
A. “Danfoss” means Defendant Danfoss A/S, a Danish corporation with its headquarters in Nordborg, Denmark, its successors and assigns, and its subsidiaries, divisions, groups, affiliates, partnerships, and joint ventures, and their directors, officers, managers, agents, and employees.
B. “Eaton” means Defendant Eaton Corporation plc, an Irish corporation with its headquarters in Dublin, Ireland, its successors and assigns, and its subsidiaries, divisions, groups, affiliates, partnerships, and joint ventures, and their directors, officers, managers, agents, and employees.
C. “Interpump” means Interpump Group S.p.A., an Italian corporation with its headquarters in Sant’Ilario d’Enza, Reggio Emilia, its successors and assigns, and its subsidiaries, divisions, groups, affiliates, partners, and joint ventures, and their directors, officers, managers, agents, and employees.
D. “Acquirer” means Interpump Group S.p.A. or another entity approved by the United States in its sole discretion to which Defendants divest the Divestiture Assets.
F. “Danfoss Hydraulic Steering Unit Business” means Danfoss’s global business of designing, manufacturing, and selling its OSM, OSP, LAGB, LAGU, LAGS, LAGC, LAGL, and LAGZ models of hydraulic steering unit products.
G. “Danfoss Hydraulic Steering Unit IP Licenses” means worldwide, non-exclusive, irrevocable licenses to the intellectual property listed in Exhibit 1.
H. “Danfoss Orbital Motor IP Licenses” means all of Eaton’s assets used to manufacture its HP 30, VIS 30, VIS 40, and VIS 45 models of orbital motor products.
I. “Eaton Hydraulic Steering Unit Assets” means all of Eaton’s assets used to manufacture its Series 10 and Series 20 models of hydraulic steering unit products.
J. “Eaton Orbital Motor IP Licenses” means worldwide, non-exclusive, royalty-free, perpetual, paid-up, irrevocable licenses to the intellectual property listed in Exhibit 2.
K. “Eaton Hydraulic Steering Unit IP Licenses” means worldwide, non-exclusive, royalty-free, perpetual, paid-up, irrevocable licenses to the intellectual property listed in Exhibit 3.
L. “Char Lynn IP License” means a non-exclusive, irrevocable, fully paid-up, royalty-free, perpetual license to use the “Char Lynn” trademark to market models HP 30, VIS 30, VIS 40, and VIS 45, or their equivalents, of orbital motors.
M. “Divestiture Assets” means the Danfoss Divestiture Assets and the Eaton Divestiture Assets.
N. “Divestiture Date” means the date on which the Divestiture Assets are divested to the Acquirer pursuant to this Final Judgment.
O. “Danfoss Divestiture Assets” means (i) all assets, located in Zhenjiang, China as of January 21, 2020, including lapping machines, grinders, testers, measurement devices, and any other assets that the United States, in its sole discretion, deems to be necessary for the manufacture of Danfoss’s S70 model hydraulic steering unit product and (ii) all of Defendants’ rights, titles, and interests in and to the Danfoss Orbital Motor Business, the Danfoss Hydraulic Steering Unit Business, and all other property and assets, tangible and intangible, wherever located, relating to or used in connection with the Danfoss Orbital Motor Business or Danfoss Hydraulic Steering Unit Business, including:

1. the facility located at 110 Bill Bryan Blvd., Hopkinsville, KY 42240 (the “Hopkinsville Facility”);
2. the facility located at ul. Logistyzena 1, 55-040 Kobierzyce, Wroclaw (Poland) (the “Wroclaw Facility”);
3. the facility located at Ludwigsburger Chaussee 5, 19370, Parchim (Germany) (the “Parchim Facility”);
4. all other real property, including fee simple interests, real property leasehold interests and renewal rights thereto, improvements to real property, and options to purchase any adjoining or other real property, together with all buildings, facilities, and other structures;
6. all tangible personal property, including fixed assets, machinery and manufacturing equipment, tools, vehicles, inventory, materials, office equipment and furniture, computer hardware, and supplies;
7. all contracts, contractual rights, and customer relationships, and all other agreements, commitments, and understandings, including supply agreements, teaming agreements, and leases, and all outstanding offers or solicitations to enter into a similar arrangement;
8. all licenses, permits, certifications, approvals, consents, registrations, waivers, and authorizations issued or granted by any governmental organization, and all pending applications or renewals;
9. all records and data, including (a) customer lists, accounts, sales, and credits records, (b) production, repair, maintenance, and performance records, (c) manuals and technical information Defendants provide to their own employees, customers, suppliers, agents, or licensees, (d) records and research data concerning historic and current research and development activities, including designs of experiments and the results of successful and unsuccessful designs and experiments, and (e) drawings, blueprints, and designs;
10. the Danfoss Hydraulic Steering Unit IP Licenses;
11. all intellectual property owned, licensed, or sublicensed, either as licensor or licensee, including (a) patents, patent applications, and inventions and discoveries that may be patentable, (b) registered and unregistered copyrights and copyright applications, and (c) registered and unregistered trademarks, trade dress, service marks, trade names, and trademark applications; and
12. all other intangible property, including (a) commercial names and d/b/a names, (b) technical information, (c) computer software and related documentation, know-how, trade secrets, design protocols, specifications for materials, specifications for parts, specifications for devices, safety procedures (e.g., for the handling of materials and substances), quality assurance and control procedures, and design tools, and (d) rights in internet websites and internet domain names.

Provided, however, that the Danfoss Divestiture Assets do not include (i) rights, titles, or interests in real property or tangible personal property located in Zhenjiang, China that is used to manufacture CE, RS, RC, and WS model orbital motor products that, at the Divestiture Date, are sold exclusively to
customers outside of the United States; (ii) rights, titles, or interests in real property or tangible personal property located in Nordborg, Denmark that is used to manufacture OMEWF model orbital motor products that, at the Divestiture Date, are sold exclusively to customers outside of the United States; or (iii) intellectual property listed in Exhibit 1.

P. “Eaton Divestiture Assets” means all of Defendants’ rights, titles, and interests in and to the Eaton Orbital Motor Assets, the Eaton Hydraulic Steering Unit Assets, and all other property and assets, tangible and intangible, wherever located, relating to or used in connection with the Eaton Orbital Motor Assets or the Eaton Hydraulic Steering Unit Assets, including:

1. The Char Lynn IP License;
2. the Eaton Orbital Motor IP Licenses;
3. the Eaton Hydraulic Steering Unit IP Licenses;
4. the Eaton Divested Equipment and all other tangible personal property, including fixed assets, machinery and manufacturing equipment, tools, vehicles, inventory, materials, office equipment and furniture, computer hardware, and supplies;
5. all contracts, contractual rights, and customer relationships, and all other agreements, commitments, and understandings, including supply agreements, teaming agreements, and leases, and all outstanding offers or solicitations to enter into a similar arrangement;
6. all licenses, permits, certifications, approvals, consents, registrations, waivers, and authorizations issued or granted by any governmental organization, and all pending applications or renewals;
7. all records and data, including (a) customer lists, accounts, sales, and credits records, (b) production, repair, maintenance, and performance records, (c) manuals and technical information, (d) records and research data concerning historic and current research and development activities, including designs of experiments and the results of successful and unsuccessful designs and experiments, and (e) drawings, blueprints, and designs;
8. all intellectual property owned, licensed, or sublicensed, either as licensor or licensee, including (a) patents, patent applications, and inventions and discoveries that may be patentable, (b) registered and unregistered copyrights and copyright applications, and (c) registered and unregistered trademarks, trade dress, service marks, trade names, and trademark applications; and
9. all other intangible property, including (a) commercial names and d/b/a names, (b) technical information, (c) computer software and related documentation, know-how, trade secrets, design protocols, specifications for materials, specifications for parts, specifications for devices, safety procedures (e.g., for the handling of materials and substances), quality assurance and control procedures, and design tools, and (d) rights in websites and internet domain names.

Provided, however, that the Eaton Divestiture Assets do not include: (i) Real property, (ii) tangible property, including fixed assets, machinery, and manufacturing equipment, used to manufacture Eaton’s Series 20 model of hydraulic steering unit products; (iii) the Char Lynn trademark; (iv) intellectual property listed in Exhibit 2; (v) intellectual property listed in Exhibit 3; (vi) paint line assets used for the Eaton Orbital Motor Assets or Eaton Hydraulic Steering Unit Assets; and (vi) all other intellectual property listed in Exhibit 2.

Q. “Eaton Divested Equipment” means machining, assembly, and test assets relating to or used in connection with the production lines used for the Eaton Orbital Motor Assets or Eaton Hydraulic Steering Unit Assets. Provided, however, that the Eaton Divested Equipment does not include paint line assets used for the Eaton Orbital Motor Assets or Eaton Hydraulic Steering Unit Assets.

R. “Including” means including, but not limited to.

S. “Relevant Personnel” means all full-time, part-time, or contract employees of Danfoss wherever located, that the United States, in its sole discretion, deems to be primarily involved in the design, manufacture, or sale of Danfoss’s OMP X, OMR X, OMEW, OMH, OMS, OMM, OML, CE, RE, RC, RS, DH, DS, DT, DR, D9, HB, HK, and WS models of orbital motor products and Danfoss’s S70, OSPM, OSP, LAG, LAGU, LAGS, LAGC, LAGL, and LAGZ models of hydraulic steering unit products, at any time between January 21, 2020, and the Divestiture Date.

Provided, however, Relevant Personnel does not include employees of Danfoss’s OMP X, OMR X, OMEW, OMH, OMS, OMM, OML, CE, RE, RC, RS, DH, DS, DT, DR, D9, HB, HK, and WS models of orbital motor products and Danfoss’s S70, OSPM, OSP, LAG, LAGU, LAGS, LAGC, LAGL, and LAGZ models of hydraulic steering unit products, at any time between January 21, 2020, and the Divestiture Date. Such employees of Danfoss’s OMP X, OMR X, OMEW, OMH, OMS, OMM, OML, CE, RE, RC, RS, DH, DS, DT, DR, D9, HB, HK, and WS models of orbital motor products and Danfoss’s S70, OSPM, OSP, LAG, LAGU, LAGS, LAGC, LAGL, and LAGZ models of hydraulic steering unit products, at any time between January 21, 2020, and the Divestiture Date, may not be primarily engaged in human resources, legal, or other general or administrative support functions. The United States, in its sole discretion, will resolve any disagreement relating to which employees are Relevant Personnel.

T. “Regulatory Approvals” means any approvals or clearances pursuant to filings under antitrust, competition, or other U.S. or international laws that are required for Acquirer’s acquisition of the Divestiture Assets to proceed.

U. “Transaction” means the proposed acquisition by Danfoss of certain assets and equity interests from Eaton, pursuant to the Stock and Asset Purchase Agreement between Eaton Corporation PLC as the Seller and Danfoss A/S as the Buyer, dated January 21, 2020.

III. Applicability

A. This Final Judgment applies to Danfoss and Eaton, as defined above, and all other persons in active concert or participation with any Defendant who receive actual notice of this Final Judgment.

B. If, prior to complying with Section IV and Section V of this Final Judgment, Defendants sell or otherwise dispose of all or substantially all of their assets or of business units that include the Divestiture Assets, Defendants must require any purchaser to be bound by the provisions of this Final Judgment. Defendants need not obtain such an agreement from Acquirer.

IV. Divestitures

A. Defendant Danfoss is ordered and directed, within sixty (60) calendar days after the Court’s entry of the Asset Preservation Stipulation and Order in this matter, to divest the Divestiture Assets in a manner consistent with this Final Judgment to Interpump or another Acquirer acceptable to the United States, in its sole discretion. The United States, in its sole discretion, may agree to one or more extensions of this time period not to exceed sixty (60) calendar days in total and will notify the Court of any extensions.

B. If Defendant Danfoss has not received all Regulatory Approvals within sixty (60) calendar days after the Court’s entry of the Asset Preservation Stipulation and Order in this matter, and Acquirer or Defendant Danfoss has initiated contact with any governmental entity to seek any Regulatory Approval within five (5) calendar days after the Court’s entry of the Asset Preservation Stipulation and Order in this matter, the time period provided in Paragraph IV.A will be extended until ten (10) calendar days after that Regulatory Approval is received. This extension allowed for securing Regulatory Approvals may be
no longer than thirty (30) calendar days past the time period provided in Paragraph IV.A, unless the United States, in its sole discretion, consents to an additional extension.

C. Defendants must use best efforts to divest the Divestiture Assets as expeditiously as possible. Defendants must take no action that would jeopardize the completion of the divestiture ordered by the Court, including any action to impede the permitting, operation, or divestiture of the Divestiture Assets.

D. Unless the United States otherwise consents in writing, divestiture pursuant to this Final Judgment must include the entire Divestiture Assets and must be accomplished in such a way as to satisfy the United States, in its sole discretion, that the Divestiture Assets can and will be used by Acquirer as part of a viable, ongoing business of designing, manufacturing, and selling orbital motors and hydraulic steering units for mobile off-road equipment and that the divestiture to Acquirer will remedy the competitive harm alleged in the Complaint.

E. The divestiture must be made to an Acquirer that, in the United States’ sole judgment, has the intent and capability, including the necessary managerial, operational, technical, and financial capability, to compete effectively in the design, manufacture and sale of orbital motors and hydraulic steering units for mobile off-road equipment.

F. The divestiture must be accomplished in a manner that satisfies the United States, in its sole discretion, that none of the terms of any agreement between Acquirer and Defendant Danfoss gives Defendants the ability unreasonably to raise Acquirer’s costs, to lower Acquirer’s efficiency, or otherwise interfere in the ability of Acquirer to compete effectively in the design, manufacture, and sale of orbital motors and hydraulic steering units for mobile off-road equipment.

G. In the event Defendant Danfoss is attempting to divest the Divestiture Assets to an Acquirer other than Interpump, Defendant Danfoss promptly must make known, by usual and customary means, the availability of the Divestiture Assets. Defendant Danfoss must inform any person making an inquiry relating to a possible purchase of the Divestiture Assets that the Divestiture Assets are being divested in accordance with this Final Judgment and must provide that person with a copy of this Final Judgment. Defendants must offer to furnish to all prospective Acquirers, subject to customary confidentiality assurances, all information and documents relating to the Divestiture Assets that are customarily provided in a due diligence process; provided, however, that Defendants need not provide information or documents subject to the attorney-client privilege or work-product doctrine. Defendants must make all information and documents available to the United States at the same time that the information and documents are made available to any other person.

H. Defendants must provide prospective Acquirers with (1) access to make inspections of the Divestiture Assets; (2) access to all environmental, zoning, and other permitting documents and information relating to the Divestiture Assets; and (3) access to all financial, operational, or other documents and information relating to the Divestiture Assets that would customarily be provided as part of a due diligence process. Defendants also must disclose all encumbrances on any part of the Divestiture Assets, including on intangible property.

I. Defendant Danfoss must cooperate with and assist Acquirer in identifying and, at the option of Acquirer, in hiring all Relevant Personnel, including:

1. Within ten (10) business days following the filing of the Complaint in this matter, Defendant Danfoss must identify all Relevant Personnel to Acquirer and the United States, including by providing organization charts covering all Relevant Personnel.

2. Within ten (10) business days following receipt of a request by Acquirer, the United States, or the monitoring trustee, Defendant Danfoss must provide to Acquirer, the United States, and the monitoring trustee additional information relating to Relevant Personnel, including name, job title, reporting relationships, past experience, responsibilities, training and educational histories, relevant certifications, and job performance evaluations. Defendant Danfoss must also provide to Acquirer, the United States, and the monitoring trustee information relating to the current and accrued compensation and benefits of Relevant Personnel, including most recent bonuses paid, aggregate annual compensation, current target or guaranteed bonus, if any, any retention agreement or incentives, and any other payments due, compensation or benefit accrued, or promises made to the Relevant Personnel. If Defendant Danfoss is barred by any applicable law from providing any of this information, Defendant Danfoss must provide, within ten (10) business days following receipt of the request, the requested information to the full extent permitted by law and also must provide a written explanation of Defendant Danfoss’s inability to provide the remaining information, including specifically identifying the provisions of the applicable laws.

3. At the request of Acquirer, Defendants must promptly make Relevant Personnel available for private interviews with Acquirer during normal business hours at a mutually agreeable location.

4. Defendants must not interfere with any effort by Acquirer to employ any Relevant Personnel. Interference includes offering to increase the compensation or improve the benefits of Relevant Personnel unless (a) the offer is part of a company-wide increase in compensation or improvement in benefits that was announced prior to January 21, 2020 or (b) the offer is approved by the United States in its sole discretion. Defendants’ obligations under this Paragraph will expire six (6) months after the Divestiture Date.

5. For Relevant Personnel who elect employment with Acquirer within one hundred-eighty (180) calendar days of the Divestiture Date, Defendant Danfoss must waive all non-compete and non-disclosure agreements; vest and pay to the Relevant Personnel (or to Acquirer for payment to the employee) on a prorated basis any bonuses, incentives, other salary, benefits or other compensation fully or partially accrued at the time of the transfer of the employee to Acquirer; vest any unvested pension and other equity rights; and provide all other benefits that those Relevant Personnel otherwise would have been provided had the Relevant Personnel continued employment with Defendants, including any retention bonuses or payments. Defendants may maintain reasonable restrictions on disclosure by Relevant Personnel of Defendants’ proprietary non-public information that is unrelated to the design, manufacture, and sale of orbital motors and hydraulic steering units and not otherwise required to be disclosed by this Final Judgment.

J. Defendant Danfoss must warrant to Acquirer that (1) the Divestiture Assets will be operational and without material defect on the date of their transfer to Acquirer; (2) there are no material defects in the environmental, zoning, or other permits relating to the operation of the Divestiture Assets; and (3) Defendant Danfoss has disclosed all encumbrances on any part of the Divestiture Assets, including on intangible property. Following the sale of the Divestiture Assets, Defendants must not undertake, directly or indirectly, challenges to the environmental, zoning, or other permits
relating to the operation of the Divestiture Assets.

K. Defendants must assign, subcontract, or otherwise transfer all contracts, agreements, and customer relationships (or portions of such contracts, agreements, and customer relationships) included in the Divestiture Assets, including all supply and sales contracts, to Acquirer; provided, however, that for any contract or agreement that requires the consent of another party to assign, subcontract, or otherwise transfer, Defendants must use best efforts to accomplish the assignment, subcontracting, or transfer. Defendants must not interfere with any negotiations between Acquirer and a contracting party.

L. Defendants must use best efforts to assist Acquirer to obtain all necessary licenses, registrations, and permits to operate the Divestiture Assets. Until Acquirer obtains the necessary licenses, registrations, and permits, Defendants must provide Acquirer with the benefit of Defendants’ licenses, registrations, and permits to the full extent permissible by law.

M. Within twelve (12) months after the Court’s entry of the Asset Preservation Stipulation and Order in this matter, Defendants must relocate the Eaton Divested Equipment to one or more locations as specified by Acquirer. In order to fulfill this obligation, the Eaton Divested Equipment must be fully operational at the new location(s). The United States, in its sole discretion, may agree to one or more extensions of this time period not to exceed six (6) months in total.

N. At the option of Acquirer, and subject to approval by the United States in its sole discretion, on or before the Divestiture Date, Defendant Danfoss must enter into a supply contract or contracts for heat treatment services for the Danfoss Divestiture Assets located in Wroclaw, Poland; generators for Eaton’s S10 model of hydraulic steering units; spools, sleeves, and gear sets for Danfoss’ OSMP model of hydraulic steering units; shafts for Danfoss’ OMS model of orbital motors; and the components for Eaton’s HP30 2-speed model 22 orbital motor product listed in Exhibit 4, sufficient to meet Acquirer’s needs, as determined by Acquirer, for a period of up to twelve (12) months, on terms and conditions reasonably related to market conditions for the supply of heat treatment services, generators, spools, sleeves, gear sets, shafts, and the components listed in Exhibit 4. Any amendment to or modification of any provision of any such supply contract is subject to approval by the United States, in its sole discretion. The United States, in its sole discretion, may approve one or more extensions of any supply contract for a total of up to an additional six (6) months. If Acquirer seeks an extension of the term of any supply contract, Defendants must notify the United States in writing at least sixty (60) days prior to the date the supply contract expires. Acquirer may terminate a supply contract, or any portion of a supply contract, without cost or penalty at any time upon commercially reasonable notice.

O. At the option of Acquirer, and subject to approval by the United States in its sole discretion, on or before the Divestiture Date, Defendants must enter into a supply contract for HP 30, VIS 30, VIS 40, and VIS 45 models of orbital motor products and S10 and S20 models of hydraulic steering unit products sufficient to meet Acquirer’s needs, as determined by Acquirer, for a period of up to eighteen (18) months, on terms and conditions reasonably related to market conditions for the supply of HP/ VIS orbital motors and S10 and S20 Hydraulic Steering Units. Any amendment to or modification of any provision of any such supply contract is subject to approval by the United States, in its sole discretion. The United States, in its sole discretion, may approve one or more extensions of any supply contract for a total of up to an additional six (6) months. If Acquirer seeks an extension of the term of any supply contract, Defendants must notify the United States in writing at least sixty (60) days prior to the date the supply contract expires. Acquirer may terminate a supply contract, or any portion of a supply contract, without cost or penalty at any time upon commercially reasonable notice.

P. At the option of Acquirer, and subject to approval by the United States in its sole discretion, on or before the Divestiture Date, Defendant Danfoss must enter into a contract to provide transition services for back office, accounting, human resources, information technology services and support, and employee health and safety for the Divestiture Assets, and technical training services and support for the Eaton Divestiture Assets for a period of up to twelve (12) months on terms and conditions reasonably related to market conditions for the provision of the transition services. Any amendment to or modification of any provision of a contract to provide transition services is subject to approval by the United States, in its sole discretion. The United States, in its sole discretion, may approve one or more extensions of any contract for transition services for a total of up to an additional six (6) months. If Acquirer seeks an extension of the term of any contract for transition services, Defendants must notify the United States in writing at least three (3) months prior to the date the contract expires. Acquirer may terminate a contract for transition services, or any portion of a contract for transition services, without cost or penalty at any time upon commercially reasonable written notice. The employee(s) of Defendants tasked with providing transition services must not share any competitively sensitive information of Acquirer with any other employee of Defendants.

Q. For a period of one (1) year following the Divestiture Date, Defendants must not initiate customer-specific communications to solicit any customer for the portion of that customer’s business covered by a contract, agreement, or relationship (or portion thereof) that is included in the Divestiture Assets; provided, however, that: (1) Defendants may respond to inquiries initiated by customers and enter into negotiations at the request of such customers (including responding to requests for quotation or proposal) to supply any business, whether or not such business was included in the Divestiture Assets; and (2) Defendants must maintain a log of telephonic, electronic, in-person, and other communications that constitute inquiries or requests from customers within the meaning of this Paragraph and make it available to the United States for inspection upon request. The United States, in its sole discretion, may agree to one or more extensions of this time period not to exceed six (6) months in total.

R. If any term of an agreement between Defendants and Acquirer, including an agreement to effectuate the divestiture required by this Final Judgment, varies from a term of this Final Judgment, to the extent that Defendants cannot fully comply with both, this Final Judgment determines Defendants’ obligations.

V. Appointment of Divestiture Trustee

A. If Defendants have not divested the Divestiture Assets within the period specified in Paragraph IV.A, Defendants must immediately notify the United States of that fact in writing. Upon application of the United States, which Defendants may not oppose, the Court will appoint a divestiture trustee selected by the United States and approved by the Court to effect the divestiture of the Divestiture Assets.

B. After the appointment of a divestiture trustee by the Court, only the divestiture trustee will have the right to
sell the Divestiture Assets. The
divestiture trustee will have the power
and authority to accomplish the
divestiture to an Acquirer acceptable to
the United States, in its sole discretion,
at a price and on terms obtained
through reasonable effort by the
divestiture trustee, subject to the
provisions of Sections IV, V, and VI of
this Final Judgment, and will have other
powers as the Court deems appropriate.
The divestiture trustee must sell the
Divestiture Assets as quickly as
possible.
C. Defendants may not object to a sale
by the divestiture trustee on any ground
other than malfeasance by the
divestiture trustee. Objections by
Defendants must be conveyed in writing
to the United States and the divestiture
trustee within ten (10) calendar days
after the divestiture trustee has provided
the notice of proposed divestiture
required by Section VI.
D. The divestiture trustee will serve at
the cost and expense of Defendant
Danfoss pursuant to a written
agreement, on terms and conditions,
including confidentiality requirements
and conflict of interest certifications,
approved by the United States in its sole
discretion.
E. The divestiture trustee may hire at
the cost and expense of Defendant
Danfoss any agents or consultants,
including investment bankers,
attorneys, and accountants, that are
reasonably necessary in the divestiture
trustee’s judgment to assist with the
divestiture trustee’s duties. These agents
or consultants will be accountable
solely to the divestiture trustee and will
serve on terms and conditions,
including confidentiality requirements
and conflict-of-interest certifications,
approved by the United States in its sole
discretion.
F. The compensation of the
divestiture trustee and agents or
consultants hired by the divestiture
trustee must be reasonable in light of the
value of the Divestiture Assets and
based on a fee arrangement that
provides the divestiture trustee with
incentives based on the price and terms
of the divestiture and the speed with
which it is accomplished. If the
divestiture trustee and Defendant
Danfoss are unable to reach agreement
on the divestiture trustee’s
compensation or other terms and
conditions of engagement within
fourteen (14) calendar days of the
appointment of the divestiture trustee
by the Court, the United States, in its
sole discretion, may take appropriate
action, including by making a
recommendation to the Court. Within
three (3) business days of hiring an
agent or consultant, the divestiture
trustee must provide written notice of
the hiring and rate of compensation to
Defendant Danfoss and the United
States.
G. The divestiture trustee must
account for all monies derived from the
sale of the Divestiture Assets sold by the
divestiture trustee and all costs and
expenses so incurred. Within thirty (30)
calendar days of the Divestiture Date,
the divestiture trustee must submit that
accounting to the Court for approval.
After approval by the Court of the
divestiture trustee’s accounting,
including fees for unpaid services and
those of agents or consultants hired by
the divestiture trustee, all remaining
money must be paid to Defendant
Danfoss and the trust will then be
terminated.
H. Defendants must use best efforts to
assist the divestiture trustee to
accomplish the required divestiture.
Subject to reasonable protection for
trade secrets, other confidential
research, unpublished, or commercial
information, or any applicable
privileges, Defendants must provide the
divestiture trustee and agents or
consultants retained by the divestiture
trustee with full and complete access to
all personnel, books, records, and
facilities of the Divestiture Assets.
Defendants also must provide or
develop financial and other information
relevant to the Divestiture Assets that
the divestiture trustee may reasonably
request. Defendants must not take any
action to interfere with or to impede the
divestiture trustee’s accomplishment of
the divestiture.
I. The divestiture trustee must
maintain complete records of all efforts
made to sell the Divestiture Assets,
including by filing monthly reports with
the United States setting forth the
divestiture trustee’s efforts to
accomplish the divestiture ordered by
this Final Judgment. The reports must
include the name, address, and
telephone number of each person who,
during the preceding month, made an
offer to acquire, expressed an interest in
acquiring, entered into negotiations to
acquire, or was contacted or made an
inquiry about acquiring any interest in
the Divestiture Assets and must describe
in detail each contact.
J. If the divestiture trustee has not
accomplished the divestiture ordered by
this Final Judgment within six (6)
months of appointment, the divestiture
trustee must promptly provide the
United States with a report setting forth
(1) the divestiture trustee’s efforts to
accomplish the required divestiture; (2)
the reasons, in the divestiture trustee’s
judgment, why the required divestiture
has not been accomplished; and (3) the
divestiture trustee’s recommendations
for completing the divestiture.
Following receipt of that report, the
United States may make additional
recommendations to the Court. The
Court thereafter may enter such orders
as it deems appropriate to carry out the
purpose of this Final Judgment, which
may include extending the trust and the
term of the divestiture trustee’s
appointment by a period requested by
the United States.
K. The divestiture trustee will serve
until divestiture of all Divestiture Assets
is completed or for a term otherwise
ordered by the Court.
L. If the United States determines that
the divestiture trustee is not acting
diligently or in a reasonably cost-
effective manner, the United States may
recommend that the Court appoint a
substitute divestiture trustee.

VI. Notice of Proposed Divestiture
A. Within two (2) business days
following execution of a definitive
agreement with an Acquirer other than
Interpump to divest the Divestiture
Assets, Defendants or the divestiture
trustee, whichever is responsible for
effecting the divestiture, must notify
the United States of the proposed
divestiture. If the divestiture trustee is
responsible for completing the
divestiture, the divestiture trustee also
must notify Defendants. The notice
must set forth the details of the
proposed divestiture and list the name,
address, and telephone number of each
person not previously identified who
offered or expressed an interest in or
desire to acquire any ownership interest
in the Divestiture Assets.
B. Within fifteen (15) calendar days of
receipt by the United States of the
notice required by Paragraph VI.A, the
United States may request from
Defendants, the proposed Acquirer,
other third parties, or the divestiture
trustee additional information
concerning the proposed divestiture, the
proposed Acquirer, and other
prospective Acquirers. Defendants and
the divestiture trustee must furnish the
additional information requested within
fifteen (15) calendar days of the receipt
of the request, unless the United States
provides written agreement to a
different period.
C. Within forty-five (45) calendar days
after receipt of the notice required by
Paragraph VI.A or within twenty (20)
calendar days after the United States
has provided the additional
information requested pursuant to
Paragraph VI.B, whichever is later, the
United States will provide written
notice to Defendants and any divestiture
trustee that states whether the United States, in its sole discretion, objects to the proposed Acquirer or any other aspect of the proposed divestiture. Without written notice that the United States does not object, a divestiture may not be consummated. If the United States provides written notice that it does not object, the divestiture may be consummated, subject only to Defendants’ limited right to object to the sale under Paragraph V.C of this Final Judgment. Upon objection by Defendants pursuant to Paragraph V.C, a divestiture by the divestiture trustee may not be consummated unless approved by the Court.

D. No information or documents obtained pursuant to this Section may be divulged by the United States to any person other than an authorized representative of the executive branch of the United States, except in the course of legal proceedings to which the United States is a party, including grand-jury proceedings, for the purpose of evaluating a proposed Acquirer or securing compliance with this Final Judgment, or as otherwise required by law.

E. In the event of a request by a third party for disclosure of information under the Freedom of Information Act, 5 U.S.C. 552, the United States Department of Justice’s Antitrust Division will act in accordance with that statute, and the Department of Justice regulations at 28 CFR part 16, including the provision on confidential commercial information, at 28 CFR 16.7. Persons submitting information to the Antitrust Division should designate the confidential commercial information portions of all applicable documents and information under 28 CFR 16.7. Designations of confidentiality expire ten (10) years after submission, “unless the submitter requests and provides justification for a longer designation period.” See 28 CFR 16.7(b).

F. If at the time that a person furnishes information or documents to the United States pursuant to this Section, that person represents and identifies in writing information or documents for which a claim of protection may be asserted under Rule 26(c)(1)(G) of the Federal Rules of Civil Procedure, and marks each pertinent page of such material, “Subject to claim of protection under Rule 26(c)(1)(G) of the Federal Rules of Civil Procedure,” the United States must give that person ten (10) calendar days’ notice before divulging the material in any legal proceeding (other than a grand-jury proceeding).

VII. Financing

Defendants may not finance all or any part of Acquirer’s purchase of all or part of the Divestiture Assets.

VIII. Asset Preservation

Defendants must take all steps necessary to comply with the Asset Preservation Stipulation and Order entered by the Court.

IX. Affidavits

A. Within twenty (20) calendar days of the filing of the Complaint in this matter, and every thirty (30) calendar days thereafter until the divestiture required by this Final Judgment has been completed, each Defendant must deliver to the United States an affidavit, signed by each Defendant’s Chief Financial Officer and General Counsel, describing in reasonable detail the fact and manner of that Defendant’s compliance with this Final Judgment. The United States, in its sole discretion, may approve different signatories for the affidavits. Defendant Eaton’s obligations under this Paragraph IX.A shall cease thirty (30) calendar days after the closing of the Transaction.

B. Each affidavit required by Paragraph IX.A must include: (1) The name, address, and telephone number of each person who, during the preceding thirty (30) calendar days, made an offer to acquire, expressed an interest in acquiring, entered into negotiations to acquire, or was contacted or made an inquiry about acquiring, an interest in the Divestiture Assets, and describe in detail each contact with such persons during that period; (2) a description of the efforts Defendants have taken to solicit buyers for and complete the sale of the Divestiture Assets and to provide required information to prospective Acquirers; and (3) a description of any limitations placed by Defendants on information provided to prospective Acquirers. Objection by the United States to information provided by Defendants to prospective Acquirers must be made within fourteen (14) calendar days of receipt of the affidavit, except that the United States may object at any time if the information set forth in the affidavit is not true or complete.

C. Defendants must keep all records of any efforts made to divest the Divestiture Assets until one (1) year after the Divestiture Date.

D. Within twenty (20) calendar days of the filing of the Complaint in this matter, each Defendant must deliver to the United States an affidavit signed by that Defendant’s Chief Financial Officer and General Counsel that describes in reasonable detail all actions that Defendant has taken and all steps that Defendant has implemented on an ongoing basis to comply with Section VIII of this Final Judgment. The United States, in its sole discretion, may approve different signatories for the affidavits.

E. If a Defendant makes any changes to the actions and steps described in affidavits provided pursuant to Paragraph IX.D, the Defendant must, within fifteen (15) calendar days after any change is implemented, deliver to the United States an affidavit describing those changes.

F. Defendants must keep all records of any efforts made to comply with Section VIII until one (1) year after the Divestiture Date.

X. Appointment of Monitoring Trustee

A. Upon application of the United States, which Defendants may not oppose, the Court will appoint a monitoring trustee selected by the United States and approved by the Court.

B. The monitoring trustee will have the power and authority to monitor Defendants’ compliance with the terms of this Final Judgment and the Asset Preservation Stipulation and Order entered by the Court and will have other powers as the Court deems appropriate. The monitoring trustee will have no responsibility or obligation for operation of the Divestiture Assets.

C. Defendants may not object to actions taken by the monitoring trustee in fulfillment of the monitoring trustee’s responsibilities under any Order of the Court on any ground other than malfeasance by the monitoring trustee.

Objections by Defendants must be conveyed in writing to the United States and the monitoring trustee within ten (10) calendar days of the monitoring trustee’s action that gives rise to Defendants’ objection.

D. The monitoring trustee will serve at the cost and expense of Defendant Danfoss pursuant to a written agreement, on terms and conditions, including confidentiality requirements and conflict of interest certifications, approved by the United States in its sole discretion.

E. The monitoring trustee may hire, at the cost and expense of Defendant Danfoss, any agents and consultants, including investment bankers, attorneys, and accountants, that are reasonably necessary in the monitoring trustee’s judgment to assist with the monitoring trustee’s duties. These agents or consultants will be solely accountable to the monitoring trustee and will serve on terms and conditions, including confidentiality requirements.
Final Judgment, Defendants have to either Section IV or Section V of this Divestiture. Assets is finalized pursuant until the divestiture of all the monitoring trustee’s reports.

Order. The United States, in its sole efforts to comply with their obligations under this Final Judgment and under the Asset Preservation Stipulation and agreements and progress of production line transfers. The monitoring trustee must provide periodic reports to the United States setting forth Defendants’ efforts to comply with their obligations under this Final Judgment and under the Asset Preservation Stipulation and Order. The United States, in its sole discretion, will set the frequency of the monitoring trustee’s reports.

The monitoring trustee will serve until the divestiture of all the Divestiture assets finalized pursuant to either Section IV or Section V of this Final Judgment, Defendants have complied with the terms of the transition services agreements and supply contracts provided for in Paragraphs IV.N, IV.O, and IV.P of this Final Judgment, and Defendants have fulfilled all their obligations under Paragraphs IV.M and IV.Q of this Final Judgment, unless the United States, in its sole discretion, determines a different period is appropriate.

K. If the United States determines that the monitoring trustee is not acting diligently or in a reasonably cost-effective manner, the United States may recommend that the Court appoint a substitute.

XI. Compliance Inspection

A. For the purposes of determining or securing compliance with this Final Judgment or of related orders such as the Asset Preservation Stipulation and Order or of determining whether this Final Judgment should be modified or vacated, upon written request of an authorized representative of the Assistant Attorney General for the Antitrust Division, and reasonable notice to Defendants, Defendants must permit, from time to time and subject to legally recognized privileges, authorized representatives, including agents retained by the United States:

1. To have access during Defendants’ office hours to inspect and copy, or at the option of the United States, to require Defendants to provide electronic copies of all books, ledgers, accounts, records, data, and documents in the possession, custody, or control of Defendants relating to any matters contained in this Final Judgment; and
2. To interview, either informally or on the record, Defendants’ officers, employees, or agents, who may have their individual counsel present, relating to any matters contained in this Final Judgment. The interviews must be subject to the reasonable convenience of the interviewee and without restraint or interference by Defendants.

B. Upon the written request of an authorized representative of the Assistant Attorney General for the Antitrust Division, Defendants must submit written reports or respond to written interrogatories, under oath if requested, relating to any matters contained in this Final Judgment.

C. No information or documents obtained by the United States pursuant to this Section may be divulged by the United States to any person other than an authorized representative of the executive branch of the United States, except in the course of legal proceedings to which a party including grand jury proceedings, for the purpose of securing compliance with this Final Judgment, or as otherwise required by law.

D. In the event of a request by a third party for disclosure of information under the Freedom of Information Act, 5 U.S.C. 552, the Antitrust Division will act in accordance with that statute, and the Department of Justice regulations at 28 CFR part 16, including the provision on confidential commercial information, at 28 CFR 16.7. Defendants submitting information to the Antitrust Division should designate the confidential commercial information portions of all applicable documents and information under 28 CFR 16.7. Designations of confidentiality expire ten (10) years after submission, “unless the submitter requests and provides justification for a longer designation period.” See 28 CFR 16.7(b).

E. If at the time that Defendants furnish information or documents to the United States pursuant to this Section, Defendants represent and identify in writing information or documents for which a claim of protection may be asserted under Rule 26(c)(1)(G) of the Federal Rules of Civil Procedure, and Defendants mark each pertinent page of such material, “Subject to claim of protection under Rule 26(c)(1)(G) of the Federal Rules of Civil Procedure,” the United States will inform Defendants ten (10) calendar days’ notice before divulging the material in any legal proceeding (other than a grand jury proceeding).

XII. Firewall

A. For a period of two (2) years following the filing of this Proposed Final Judgment, Defendants must implement and maintain procedures to prevent any employees of Defendants from sharing competitively sensitive information relating to the Divestiture Assets with personnel of Defendants with responsibilities relating to Danfoss’s or Eaton’s design, manufacture, and sale of hydraulic orbital motors or hydraulic steering units.

B. Defendants, within thirty (30) calendar days of the Court’s entry of the Asset Preservation Stipulation and Order, must submit to the United States a document setting forth in detail the procedures implemented to effect compliance with this Section. Upon receipt of the document, the United States will inform Defendants within ten (10) business days whether, in its sole discretion, the United States approves or rejects Defendants’ compliance plan. Within ten (10) business days of receiving a notice of rejection, Defendants must submit a revised compliance plan. The United States may then request a hearing to determine compliance with the original or revised compliance plan.
XIII. Limitations on Reacquisitions

Defendants may not reacquire any part of or any interest in the Divestiture Assets during the term of this Final Judgment without prior authorization of the United States.

XIV. Retention of Jurisdiction

The Court retains jurisdiction to enable any party to this Final Judgment to apply to the Court at any time for further orders and directions as may be necessary or appropriate to carry out or construe this Final Judgment, to modify any of its provisions, to enforce compliance, and to punish violations of its provisions.

XV. Enforcement of Final Judgment

A. The United States retains and reserves all rights to enforce the provisions of this Final Judgment, including the right to seek an order of contempt from the Court. Defendants agree that in a civil contempt action, a motion to show cause, or a similar action brought by the United States relating to an alleged violation of this Final Judgment, the United States may apply to the Court for an extension of this Final Judgment, together with other relief that may be appropriate. In connection with a successful effort by the United States to enforce this Final Judgment against a Defendant, whether litigated or resolved before litigation, that Defendant agrees to reimburse the United States for the fees and expenses of its attorneys, as well as all other costs including experts’ fees, incurred in connection with that effort to enforce this Final Judgment, including in the investigation of the potential violation.

B. This Final Judgment should be interpreted to give full effect to the procompetitive purposes of the antitrust laws and to restore the competition the United States alleges was harmed by the challenged conduct. Defendants agree that they may be held in contempt of, and that the Court may enforce, any provision of this Final Judgment that, as interpreted by the Court in light of these procompetitive principles and applying ordinary tools of interpretation, is stated specifically and in reasonable detail, whether or not it is clear and unambiguous on its face. In any such interpretation, the terms of this Final Judgment should not be construed against either party as the drafter.

C. In an enforcement proceeding in which the Court finds that Defendants have violated this Final Judgment, the United States may apply to the Court for an extension of this Final Judgment, if the United States has evidence that a Defendant violated this Final Judgment, if the United States has evidence that a Defendant violated this Final Judgment before it expired, the United States may file an action against that Defendant in this Court requesting that the Court order: (1) Defendant to comply with the terms of this Final Judgment for an additional term of at least four (4) years following the filing of the enforcement action; (2) all appropriate contempt remedies; (3) additional relief needed to ensure the Defendant complies with the terms of this Final Judgment; and (4) fees or expenses as called for by this Section.

XVI. Expiration of Final Judgment

Unless the Court grants an extension, this Final Judgment will expire ten (10) years from the date of its entry, except that after five (5) years from the date of its entry, this Final Judgment may be terminated upon notice by the United States to the Court and Defendants that the divestiture has been completed and continuation of this Final Judgment is no longer necessary or in the public interest.

XVII. Public Interest Determination

Entry of this Final Judgment is in the public interest. The parties have complied with the requirements of the Antitrust Procedures and Penalties Act, 15 U.S.C. 16, including by making available to the public copies of this Final Judgment and the Competitive Impact Statement, public comments thereon, and any response to comments by the United States. Based upon the record before the Court, which includes the Competitive Impact Statement and, if applicable, any comments and response to comments filed with the Court, entry of this Final Judgment is in the public interest.

Date:

Court approval subject to procedures of Antitrust Procedures and Penalties Act, 15 U.S.C. 16

United States District Judge

Competitive Impact Statement

In accordance with the Antitrust Procedures and Penalties Act, 15 U.S.C. 16(b)–(h) (the “APPA” or “Tunney Act”), the United States of America files this Competitive Impact Statement relating to the proposed Final Judgment filed in this civil antitrust proceeding.

I. Nature and Purpose of the Proceeding

On January 21, 2020, Defendant Danfoss A/S (“Danfoss”) entered into a binding agreement with Defendant Eaton Corporation (“Eaton”) to acquire Eaton’s hydraulics business for approximately $3.3 billion in cash. The United States filed a civil antitrust Complaint on July 14, 2021 seeking to enjoin the proposed transaction. The Complaint alleges that the likely effect of this transaction would be to substantially lessen competition in the design, manufacture, and sale of orbital motors and hydraulic steering units in the United States in violation of Section 7 of the Clayton Act, 15 U.S.C. 18.

At the same time the Complaint was filed, the United States filed a proposed Final Judgment and an Asset Preservation Stipulation and Order (“Stipulation and Order”), which are designed to remedy the loss of competition alleged in the Complaint.

Under the proposed Final Judgment, which is explained more fully below, Defendant Danfoss is required to divest the following assets: The Danfoss Orbital Motor Business; the Danfoss Steering Unit Business; the Eaton Orbital Motor Assets; the Eaton Steering Unit Assets, and certain Intellectual Property (collectively “The Divestiture Assets”). Under the terms of the Stipulation and Order, Defendants must take certain steps to ensure that the Divestiture Assets that must be divested are operated as ongoing, economically viable, competitive Divestiture Assets for the design, manufacture, and sale of orbital motors and steering units and must take all other actions to preserve and maintain the full economic viability, marketability, and competitiveness of the Divestiture Assets to be divested.

The United States and Defendants have stipulated that the proposed Final Judgment may be entered after compliance with the APPA. Entry of the proposed Final Judgment will terminate this action, except that the Court will retain jurisdiction to construe, modify, or enforce the provisions of the proposed Final Judgment and to punish violations thereof.
II. Description of Events Giving Rise to the Alleged Violation

(A) The Defendants and the Proposed Transaction

Danfoss and Eaton are global corporations based in Nordborg, Denmark and Dublin, Ireland, respectively, that manufacture components of hydraulic power systems for industrial and agricultural use. Defendants’ hydraulic components make it possible to steer, propel, and operate equipment used to pave roads, harvest produce, construct buildings, and perform other heavy industrial and agricultural tasks across the United States every day. Pursuant to a Transaction Agreement dated January 21, 2020, Danfoss intends to acquire Eaton’s hydraulics business for approximately $3.3 billion.

(B) The Competitive Effects of the Transaction

The Complaint alleges that the transaction as proposed will lead to anticompetitive effects in the markets for the design, manufacture, and sale of hydraulic orbital motors (“orbital motors”) and hydraulic steering units (“steering units”).

a. Relevant Product Markets

The Complaint alleges that orbital motors for mobile off-road equipment and steering units for mobile off-road equipment are lines of commerce, or relevant product markets, for purposes of analyzing the effects of the acquisition under Section 7 of the Clayton Act, 15 U.S.C. 18.

The Complaint alleges that OEMs located in the United States wish to avoid business disruption and cannot reasonably turn to suppliers without a U.S. presence for the supply of orbital motors or steering units for mobile off-road equipment. Long lead times due to international shipping and unexpected delays in the delivery of products can cause significant business disruption. Customers similarly require that suppliers warehouse new and replacement parts to avoid costly delays or interruptions to business operations and expect local service and support from suppliers. Thus, a hypothetical monopolist of orbital motors or steering units sold in the United States could profitably impose a small but significant non-transitory increase in price for orbital motors or steering units without losing sufficient sales to render the price increase unprofitable. Nor would the price increase be defeated by arbitrage, e.g., by OEMs purchasing through subsidiaries located outside the United States. Accordingly, the relevant geographic market for purposes of analyzing the effects of the acquisition on orbital motors and steering units for mobile off-road equipment under Section 7 of the Clayton Act, 15 U.S.C. 18, is the United States.

b. Relevant Geographic Markets

The Complaint alleges that entry of additional competition into the design, manufacture, and sale of orbital motors and steering units sold in North America is unlikely to be timely, likely, or sufficient to prevent the harm to competition caused by Danfoss’s acquisition of Eaton’s hydraulics business. A new entrant must have the technical capabilities necessary to design, manufacture, and sell orbital motors and steering units that meet customer requirements for quality, performance, and reliability. Additionally, a new entrant must have the requisite scale, an established reputation, and an extensive network of distributors to supply to all customers throughout the United States.

c. Anticompetitive Effects of the Proposed Transaction

The Complaint alleges that the transaction as proposed would lessen competition and harm customers for orbital motors and steering units for mobile off-road equipment in the United States. The Herfindahl-Hirschman Index (“HHI”) methodology, the Horizontal Merger Guidelines issued by the Department of Justice and the Federal Trade Commission, measures the likely anticompetitive effects of an acquisition by assessing how concentrated a market is. The more concentrated a market, the higher the likelihood that a transaction will result in a meaningful reduction in competition and harm customers. HHI calculations in the markets for both orbital motors and steering units indicate that the proposed acquisition will result in highly concentrated markets and is thus presumed likely to enhance market power.

The HHI indicators of highly concentrated markets and enhanced market power are consistent with historical head-to-head competition between Danfoss and Eaton to supply orbital motors and steering units for mobile off-road equipment. Danfoss and Eaton compete directly on price, quality, product innovation, delivery, and technical service, and the competition between them has benefited U.S. customers of orbital motors and steering units for mobile off-road equipment. Danfoss and Eaton have a reputation for high-quality orbital motors and steering units, product developments that benefit OEMs, an extensive network of distributors throughout the United States, and localized customer support and service.

As a result, Danfoss and Eaton are considered to be the two primary—and sometimes the only two—suppliers of orbital motors and steering units to customers in the United States.

d. Difficulty of Entry

Similarly, in the event of a small but significant increase in price by a hypothetical monopolist of steering units, the Complaint alleges that substitution away from steering units would be insufficient to render the price increase unprofitable. Electric steering technology—the only alternative steering system that does not require a hydraulic steering unit—is largely unproven and more expensive than hydraulic steering technology. The switching costs from hydraulic steering to electric steering are high and would require a costly redesign by Original Equipment Manufacturers (“OEMs”). Steering units for mobile off-road equipment are therefore a line of commerce, or relevant product market, for purposes of analyzing the effects of the acquisition under Section 7 of the Clayton Act, 15 U.S.C. 18.

III. Explanation of the Proposed Final Judgment

The Complaint alleges that entry of additional competition into the design, manufacture, and sale of orbital motors and steering units sold in North America is unlikely to be timely, likely, or sufficient to prevent the harm to competition caused by Danfoss’s acquisition of Eaton’s hydraulics business. A new entrant must have the technical capabilities necessary to design, manufacture, and sell orbital motors and steering units that meet customer requirements for quality, performance, and reliability.
Paragraph IV.A of the proposed Final Judgment requires Defendant Danfoss, within 60 days after the entry of the Stipulation and Order by the Court, to divest the Divestiture Assets to Interpump Group S.p.A. ("Interpump") or an alternative acquirer acceptable to the United States, in its sole discretion. If the 60 days expire while Defendants are waiting for regulatory approval from U.S. or international regulators, Paragraph IV.B extends the time allowed for the divestiture to take place to ten calendar days after the Regulatory Approval has been received. The extension may be no longer than 30 calendar days, unless the United States, in its sole discretion, consents to an additional extension.

(A) Divestiture Assets

The Divestiture Assets consist of the Danfoss Divestiture Assets and the Eaton Divestiture Assets. Taken together, the Divestiture Assets will form a viable, ongoing business that can compete effectively in the hands of an acquirer approved by the United States, in its sole discretion. The combination of product model lines from both Defendants ensures that an acquirer will have the breadth and scale necessary to succeed while preserving Danfoss’s headquarters in Nordborg, Denmark, which houses businesses that are not being divested.

(B) Danfoss Divestiture Assets

The Danfoss Divestiture Assets are defined in Paragraph II.O as all tangible and intangible assets relating to or used in connection with the Danfoss Orbital Motor Business or the Danfoss Hydraulic Steering Unit Business—including three facilities that are located in Hopkinsville, Kentucky; Wroclaw, Poland; and Parchim, Germany. The Danfoss Orbital Motor Business and Danfoss Hydraulic Steering Unit Business, in turn, are defined by model of orbital motor or steering unit in Paragraphs II.E and II.F and comprise all the assets used to manufacture these models of orbital motors and steering units. Unlike the Danfoss Divestiture Assets, the Eaton Divestiture Assets do not include real property. Instead, the Eaton Orbital Motor Assets and Eaton Hydraulic Steering Unit Assets will move to the divested facility located in Hopkinsville, KY. The Eaton Divestiture Assets will include all fixed assets, machinery, and manufacturing equipment for the Eaton Orbital Motor Assets and Eaton Hydraulic Steering Unit Assets except Eaton’s Series 20 model of hydraulic steering unit products. The Eaton Divestiture Assets also do not include the transfer of paint line assets (see Paragraph II.Q), which are instead included in the Danfoss Divestiture Assets.

(D) Intellectual Property

With the exceptions of the intellectual property listed in Exhibits 1, 2, or 3, and the Char Lynn license, all Intellectual Property including, but not limited to (a) patents, patent applications, and inventions and discoveries that may be patentable, (b) registered and unregistered copyrights and copyright applications, and (c) registered and unregistered trademarks, trade dress, service marks, trade names, and trademark applications will be divested to the acquirer.

The intellectual property listed in Exhibits 1, 2, and 3 is necessary for the Divestiture Assets as well as for assets that will be retained by Defendant Danfoss. Consequently, the acquirer will receive worldwide, non-exclusive, royalty-free, perpetual, paid-up, irrevocable licenses to the intellectual property listed in Exhibits 1, 2, and 3. Likewise, the acquirer will receive a worldwide, non-exclusive, royalty-free, perpetual, paid-up, irrevocable license to use the Char Lynn name, which is used for certain Eaton orbital motor models. This license will allow the acquirer to transition these products to its own product names.

(E) Divestiture Provisions

Section IV of the proposed Final Judgment contains additional detail about how the divestitures should be carried out. Defendants are required to act expeditiously (Paragraph IV.C), to divest the Divestiture Assets in such a way as to satisfy the United States, in its sole discretion, that the Divestiture Assets will be used as a part of a viable ongoing business and will remedy the competitive harm alleged in the Complaint (Paragraph IV.D). The divestiture must be made to an acquirer that, in the United States’ sole judgment, has the intent and capability to compete effectively in the design, manufacture and sale of orbital motors and hydraulic steering units for mobile off-road equipment (Paragraph IV.E) and must be done in such a manner that Defendants cannot interfere in the acquirer’s efforts to compete effectively in the design, manufacture, and sale of orbital motors and hydraulic steering units for mobile off-road equipment. If the Divestiture Assets are divested to an acquirer other than Interpump, Paragraphs IV.G and IV.H require Defendants to make certain information available to the prospective acquirer, including a copy of the proposed Final Judgment.

Paragraph IV.I of the proposed Final Judgment contains provisions intended to facilitate the acquirer’s efforts to hire certain employees. Specifically, Paragraph IV.I of the proposed Final Judgment requires Defendant Danfoss to provide the acquirer and the United States with organization charts and information relating to these employees and to make them available for interviews. It also provides that Defendants must not interfere with any efforts by the acquirer to hire these employees. In addition, for employees who elect employment with the acquirer, Defendant Danfoss must waive all non-compete and non-disclosure agreements, vest and pay to these employees (or to the acquirer for payment to the employee) on a prorated basis any bonuses, incentives, other salary, benefits or other compensation fully or partially accrued at the time of the transfer of the employee to the acquirer; vest any unvested pension or other equity rights; and provide all other benefits that the employees would generally be provided had those employees continued employment with Defendants, including but not limited to any retention bonuses or payments.

Paragraph IV.J of the proposed Final Judgment ensures that the Divestiture Assets are unencumbered and operable from the first day that the acquirer takes ownership. Paragraph IV.J ensures that the acquirer will receive all necessary licenses, registrations, and permits to
operate the Divestiture Assets once they are transferred.

Paragraph IV.K of the proposed Final Judgment will facilitate the transfer to the acquirer of customers and other contractual relationships that are included within the Divestiture Assets. Defendants must transfer all contracts, agreements, and relationships to the acquirer and must use best efforts to assign, subcontract, or otherwise transfer contracts or agreements that require the consent of another party before assignment, subcontracting, or other transfer.

Paragraph IV.M of the proposed Final Judgment requires Defendants to accomplish the move of Eaton Divested Equipment, as defined in Paragraph II.Q, to the acquirer’s preferred location within 12 months after the Court’s entry of the Stipulation and Order. In the interim, the supply contracts mandated by Paragraph IV.O will ensure that the acquirer can serve its new customer base without disruption. Paragraphs IV.M and IV.O allow the United States to extend the time to move the Eaton Divested Equipment and the terms of the supply contracts up to an additional six months if necessary.

Paragraphs IV.N and IV.O of the proposed Final Judgment address supply contracts between Defendant Danfoss and the acquirer. Paragraph IV.N requires Defendant Danfoss, at the acquirer’s option, to enter into a supply contract for certain services and components, such as heat treatment services and gerotors, sufficient to meet the acquirer’s needs, as determined by the acquirer, for a period of up to 12 months. The acquirer may terminate the supply contract, or any portion of it, without cost or penalty at any time upon commercially reasonable notice, and any amendments to or modifications of any provisions of a supply contract are subject to approval by the United States in its sole discretion. Paragraph IV.O requires Defendant Danfoss to provide certain transition services to maintain the acquirer’s request of the customers but must maintain a log of any such inquiries and requests. This provision gives the acquirer time to establish a performance record with new customers without interference from Defendants. Paragraph IV.Q allows the United States to extend the time period of this provision up to an additional six months if necessary.

Paragraph IV.R ensures that the terms of the proposed Final Judgment supersede any terms of agreement between Defendants and the acquirer that are inconsistent with the proposed Final Judgment.

(F) Divestiture Trustee Provisions

If Defendants do not accomplish the divestiture within the period prescribed in Paragraph IV.A or IV.B of the proposed Final Judgment, Section V of the proposed Final Judgment provides that the Court will appoint a divestiture trustee selected by the United States to effect the divestiture. If a divestiture trustee is appointed, the proposed Final Judgment provides that Defendant Danfoss must pay all costs and expenses of the trustee. The divestiture trustee’s compensation must be structured so as to provide an incentive for the trustee based on the price and terms obtained and the speed with which the divestiture is accomplished. After the divestiture trustee’s appointment becomes effective, the trustee must provide monthly reports to the United States setting forth his or her efforts to accomplish the divestiture. If the divestiture has not been accomplished within six months of the divestiture trustee’s appointment, the United States may make recommendations to the Court, which will enter such orders as appropriate, in order to carry out the purposes of the Final Judgment, including by extending the trust or the term of the divestiture trustee’s appointment by a period requested by the United States.

(G) Monitoring Trustee Provisions

Section X of the proposed Final Judgment provides that the United States may appoint a monitoring trustee who will have the powers and authority to investigate and report on Defendants’ compliance with the terms of the Final Judgment and the Stipulation and Order, including compliance with all supply and transition service agreements and progress of production line transfers, and will have other powers as the Court deems appropriate. The monitoring trustee will not have any responsibility or obligation for the operation of Defendants’ businesses. The monitoring trustee will serve at Defendant Danfoss’ expense, on such terms and conditions as the United States approves, and Defendants must assist the monitoring trustee in fulfilling his or her obligations. The monitoring trustee will provide periodic reports to the United States and will serve until the divestiture of all the Divestiture Assets is finalized pursuant to either Section IV or Section V of this Final Judgment and Defendant Danfoss has complied with the terms of the transition services agreements and supply contracts provided for in this Final Judgment, unless the United States, in its sole discretion, determines a different period is appropriate.

(H) Firewall Provision

The relocation of the Eaton Divested Equipment to a location specified by the acquirer will require Defendants’ employees to train employees of the acquirer on how to properly operate the equipment. Section XII of the proposed Final Judgment requires Defendants to implement and maintain a firewall to prevent the exchange of competitively sensitive information between Defendants and the acquirer.
Specifically, Defendants must implement and maintain procedures to prevent any employees of Defendants from sharing competitively sensitive information relating to the Divestiture Assets with personnel of Defendants with responsibilities relating to Danfoss’s or Eaton’s design, manufacture, and sale of hydraulic orbital motors or hydraulic steering units. Such a firewall will prevent competitively sensitive information about the Divestiture Assets from being used to influence business decisions relating to Danfoss’s or Eaton’s design, manufacturing, or sale of orbital motors or steering units. The implementation of these procedures for a two-year period will ensure that the information cannot be used while it is still competitively sensitive. After two years, any information will be sufficiently out of date to no longer pose a risk and the firewall can be eliminated. Under Paragraph XII.B, Defendants must, within 30 days of entry of the Stipulation and Order, submit to the United States a document setting forth in detail the procedures each has implemented to effect compliance with Section XII. The United States will determine, in its sole discretion, whether to approve or reject Defendants’ proposed compliance plans.

(I) Compliance and Enforcement Provisions

The proposed Final Judgment also contains provisions designed to promote compliance with and make enforcement of the Final Judgment as effective as possible. Paragraph XV.A provides that the United States retains and reserves all rights to enforce the Final Judgment, including the right to seek an order of contempt from the Court. Under the terms of this paragraph, Defendants have agreed that in any civil contempt action, any motion to show cause, or any similar action brought by the United States regarding an alleged violation of the Final Judgment, the United States may establish the violation and the appropriateness of any remedy by a preponderance of the evidence and that Defendants have waived any argument that a different standard of proof should apply. This provision aligns the standard for compliance with the Final Judgment with the standard of proof that applies to the underlying offense that the Final Judgment addresses.

Paragraph XV.B provides additional clarification regarding the interpretation of the provisions of the proposed Final Judgment. The proposed Final Judgment is intended by the loss of competition the United States alleges would otherwise be harmed by the transaction. Defendants agree that they will abide by the proposed Final Judgment and that they may be held in contempt of the Court for failing to comply with any provision of the proposed Final Judgment that is stated specifically and in reasonable detail, as interpreted in light of this procompetitive purpose.

Paragraph XV.C provides that if the Court finds in an enforcement proceeding that a Defendant has violated the Final Judgment, the United States may apply to the Court for an extension of the Final Judgment, together with such other relief as may be appropriate. In addition, to compensate American taxpayers for any costs associated with investigating and enforcing violations of the Final Judgment, Paragraph XV.C provides that, in any successful effort by the United States to enforce the Final Judgment against a Defendant, whether litigated or resolved before litigation, the Defendant must reimburse the United States for attorneys’ fees, experts’ fees, and other costs incurred in connection with any effort to enforce the Final Judgment, including the investigation of the potential violation.

Paragraph XV.D states that the United States may file an action against a Defendant for violating the Final Judgment for up to four years after the Final Judgment has expired or been terminated. This provision is meant to address circumstances such as when evidence that a violation of the Final Judgment occurred during the term of the Final Judgment is not discovered until after the Final Judgment has expired or been terminated or when there is not sufficient time for the United States to complete an investigation of an alleged violation until after the Final Judgment has expired or been terminated. This provision, therefore, makes clear that, for four years after the Final Judgment has expired or been terminated, the United States may still challenge a violation that occurred during the term of the Final Judgment.

(J) Term of the Final Judgment

Finally, Section XVI of the proposed Final Judgment provides that the Final Judgment will expire 10 years from the date of its entry, except that after five years from the date of its entry, the Final Judgment may be terminated upon notice by the United States to the Court and Defendants that the divestiture has been completed and that continuation of the Final Judgment is no longer necessary or in the public interest.

IV. Remedies Available to Potential Private Plaintiffs

Section 4 of the Clayton Act, 15 U.S.C. 15, provides that any person who has been injured as a result of conduct prohibited by the antitrust laws may bring suit in federal court to recover three times the damages the person has suffered, as well as costs and reasonable attorneys’ fees. Entry of the proposed Final Judgment neither impair nor assists the bringing of any private antitrust damage action. Under the provisions of Section 5(a) of the Clayton Act, 15 U.S.C. 16(a), the proposed Final Judgment has no prima facie effect in any subsequent private lawsuit that may be brought against Defendants.

V. Procedures Available for Modification of the Proposed Final Judgment

The United States and Defendants have stipulated that the proposed Final Judgment may be entered by the Court after compliance with the provisions of the APPA, provided that the United States has not withdrawn its consent. The APPA conditions entry upon the Court’s determination that the proposed Final Judgment is in the public interest.

The APPA provides a period of at least 60 days preceding the effective date of the proposed Final Judgment within which any person may submit to the United States written comments regarding the proposed Final Judgment. Any person who wishes to comment should do so within 60 days of the date of publication of this Competitive Impact Statement in the Federal Register, or the last date of publication in a newspaper of the summary of this Competitive Impact Statement, whichever is later. All comments received during this period will be considered by the U.S. Department of Justice, which remains free to withdraw its consent to the proposed Final Judgment at any time before the Court’s entry of the Final Judgment. The comments and the response of the United States will be filed with the Court. In addition, the comments and the United States’ responses will be published in the Federal Register unless the Court agrees that the United States instead may publish them on the U.S. Department of Justice, Antitrust Division’s internet website.

Written comments should be submitted in English to: Jay Owen, Acting Chief, Defense, Industrials, and Aerospace Section, Antitrust Division, U.S. Department of Justice, 450 Fifth Street NW, Suite 8700, Washington, DC 20530.
The proposed Final Judgment provides that the Court retains jurisdiction over this action, and the parties may apply to the Court for any order necessary or appropriate for the modification, interpretation, or enforcement of the Final Judgment.

VI. Alternatives to the Proposed Final Judgment

As an alternative to the proposed Final Judgment, the United States considered a full trial on the merits against Defendants. The United States could have continued the litigation and sought preliminary and permanent injunctions against Danfoss’s acquisition of certain assets and equity interests of Eaton’s hydraulics business. The United States is satisfied, however, that the relief required by the proposed Final Judgment will remedy the anticompetitive effects alleged in the Complaint, preserving competition for the design, manufacture, and sale of orbital motors and hydraulic steering units. Thus, the proposed Final Judgment achieves all or substantially all of the relief the United States would have obtained through litigation but avoids the time, expense, and uncertainty of a full trial on the merits.

VII. Standard of Review Under the APPA for the Proposed Final Judgment

Under the Clayton Act and APPA, proposed Final Judgments or “consent decrees” in antitrust cases brought by the United States are subject to a 60-day comment period, after which the Court shall determine whether entry of the proposed Final Judgment “is in the public interest.” 15 U.S.C. 16(e)(1). In making that determination, the Court, in accordance with the statute as amended in 2004, is required to consider:

(A) The competitive impact of such judgment, including termination of alleged violations, provisions for enforcement and modification, duration of relief sought, anticipated effects of alternative remedies actually considered, whether its terms are ambiguous, and any other competitive considerations bearing upon the adequacy of such judgment that the court deems necessary to a determination of whether the consent judgment is in the public interest; and

(B) the impact of entry of such judgment upon competition in the relevant market or markets, upon the public generally and individuals alleging specific injury from the violations set forth in the complaint including consideration of the public benefit, if any, to be derived from a determination of the issues at trial.

15 U.S.C. 16(e)(1)(A) & (B). In considering these statutory factors, the Court’s inquiry is necessarily a limited one as the government is entitled to “broad discretion to settle with the defendant within the reaches of the public interest.” United States v. Microsoft Corp., 56 F.3d at 1448, 1461 (D.C. Cir. 1995); United States v. U.S. Airways Grp., Inc., 38 F. Supp. 3d 69, 75 (D.D.C. 2014) (explaining that the “court’s inquiry is necessarily a limited one” in Tunney Act settlements); United States v. InBev N.V./S.A., No. 08–1965 (JR), 2009 U.S. Dist. LEXIS 84787, at *3 (D.D.C. Aug. 11, 2009) (noting that a court’s review of a proposed Final Judgment is limited and only inquires “into whether the government’s determination that the proposed remedies will cure the antitrust violations alleged in the complaint was reasonable, and whether the mechanism to enforce the final judgment are clear and manageable”).

As the U.S. Court of Appeals for the District of Columbia Circuit has held, under the APPA a court considers, among other things, the relationship between the remedy secured and the specific allegations in the government’s complaint, whether the proposed Final Judgment is sufficiently clear, whether its enforcement mechanisms are sufficient, and whether it may positively harm third parties. See Microsoft, 56 F.3d at 1456–62. With respect to the adequacy of the relief secured by the proposed Final Judgment, a court may not “make de novo determination of facts and issues.” United States v. W. Elec. Co., 993 F.2d 1572, 1577 (D.C. Cir. 1993) (quotations marks omitted); see also Microsoft, 56 F.3d at 1460–62; United States v. Alcoa, Inc., 152 F. Supp. 2d 37, 40 (D.D.C. 2001); United States v. Enova Corp., 107 F. Supp. 2d 10, 16 (D.D.C. 2000); InBev, 2009 U.S. Dist. LEXIS 84787, at *3. Instead, “[t]he balancing of competing social and political interests affected by a proposed antitrust consent decree must be left, in the first instance, to the discretion of the Attorney General.” W. Elec. Co., 993 F.2d at 1577 (quotations marks omitted). “The court should bear in mind the flexibility of the public interest inquiry: the Court’s function is not to determine whether the resulting array of rights and liabilities is one that will best serve society, but only to confirm that the resulting settlement is within the reaches of the public interest.” Microsoft, 56 F.3d at 1460 (quotations marks omitted); see also United States v. Deutsche Telekom AG, No. 19–2232 (TJK), 2020 WL 1873555, at *7 (D.D.C. Apr. 14, 2020). More demanding requirements would “have enormous practical consequences for the government’s ability to negotiate future settlements,” contrary to congressional intent. Microsoft, 56 F.3d at 1456. “The Tunney Act was not intended to create a disincentive to the use of the consent decree.” Id.

The United States’ predictions about the efficacy of the remedy are to be afforded deference by the Court. See, e.g., Microsoft, 56 F.3d at 1461 (recognizing courts should give “due respect to the Justice Department’s . . . view of the nature of its case”); United States v. Iron Mountain, Inc., 217 F. Supp. 3d 146, 152–53 (D.D.C. 2016) (“In evaluating objections to settlement agreements under the Tunney Act, a court must be mindful that [the government need not prove that the settlements will perfectly remedy the alleged antitrust harms:] it need only provide a factual basis for concluding that the settlements are reasonably adequate remedies for the alleged harms.” (internal citations omitted)); United States v. Republic Servs., Inc., 723 F. Supp. 2d 157, 160 (D.D.C. 2010) (noting “the deferential review to which the government’s proposed remedy is accorded”); United States v. Archer Daniels Midland Co., 917 F. Supp. 2d 1, 6 (D.D.C. 2003) (“A district court must accord due respect to the government’s prediction as to the effect of proposed remedies, its perception of the market structure, and its view of the nature of the case.”). The ultimate question is whether “the remedies [obtained by the Final Judgment are] so consonant with the allegations charged as to fall outside of the ‘reaches of the public interest’.” Microsoft, 56 F.3d at 1461 (quoting W. Elec. Co., 900 F.2d at 309).

Moreover, the Court’s review under the APPA is limited to reviewing the remedy in relationship to the violations that the United States has alleged in its complaint, and does not authorize the Court to “construct [its] own hypothetical case and then evaluate the decree against that case.” Microsoft, 56 F.3d at 1459; see also U.S. Airways, 38 F. Supp. 3d at 75 (noting that the court must simply determine whether there is a factual foundation for the government’s decisions such that its conclusions regarding the proposed settlements are reasonable); InBev, 2009 U.S. Dist. LEXIS 84787, at *20 (“[T]he ‘public interest’ is not to be measured by comparing the violations alleged in the complaint against those the court believes could have, or even should have, been alleged”). Because the “court’s authority to review the decree depends entirely on the government’s exercising its prosecutorial discretion by bringing a case in the first place,” it follows that “the court is only authorized to review the decree itself,” and not to “effectively redraft the complaint” to inquire into other matters.
that the United States did not pursue. Microsoft, 56 F.3d at 1459–60.

In its 2004 amendments to the APPA, Congress made clear its intent to preserve the practical benefits of using judgments proposed by the United States in antitrust enforcement, Public Law 108–237 § 221, and added the unambiguous instruction that “[a]nything in this section shall be construed to require the court to conduct an evidentiary hearing or to require the court to permit anyone to intervene.” 15 U.S.C. 16(e)(2); see also U.S. Airways, 38 F. Supp. 3d at 76 (indicating that a court is not required to hold an evidentiary hearing or to permit intervenors as part of its review under the Tunney Act). This language explicitly wrote into the statute what Congress intended when it first enacted the Tunney Act in 1974. As Senator Tunney explained: “[t]he court is nowhere compelled to go to trial or to engage in extended proceedings which might have the effect of vitiating the benefits of prompt and less costly settlement through the consent decree process.” 119 Cong. Rec. 24,598 (1973) (statement of Sen. Tunney). “A court can make its public interest determination based on the competitive impact statement and response to public comments alone.” U.S. Airways, 38 F. Supp. 3d at 76 (citing Enova Corp., 107 F. Supp. 2d at 17).

VIII. Determinative Documents

There are no determinative materials or documents within the meaning of the APPA that were considered by the United States in formulating the proposed Final Judgment.

Dated: July 14, 2021

Respectfully submitted,

For Plaintiff United States of America:

ACTION: Notice of application.

SUMMARY: Arizona Department of Corrections has applied to be registered as an importer of basic class(es) of controlled substance(s). Refer to Supplementary Information listed below for further drug information.

DATES: Registered bulk manufacturers of the affected basic class(es), and applicants therefore, may file written comments on or objections to the issuance of the proposed registration on or before August 23, 2021. Such persons may also file a written request for a hearing on the application on or before August 23, 2021.

ADDRESSES: Written comments should be sent to: Drug Enforcement Administration, Attention: DEA Federal Register Representative/DPW, 8701 Morrissette Drive, Springfield, Virginia 22152. All requests for a hearing must be sent to: Drug Enforcement Administration, Attn: Administrator, 8701 Morrissette Drive, Springfield, Virginia 22152. All requests for a hearing should also be sent to: (1) Drug Enforcement Administration, Attn: Hearing Clerk/OALJ, 8701 Morrissette Drive, Springfield, Virginia 22152; and (2) Drug Enforcement Administration, Attn: DEA Federal Register Representative/DPW, 8701 Morrissette Drive, Springfield, Virginia 22152.

SUPPLEMENTARY INFORMATION: In accordance with 21 CFR 1301.34(a), this is notice that on June 7, 2021, Arizona Department of Corrections, 1305 E Butte Avenue, ASPC-Florence, Florence, Arizona 85132–9221, applied to be registered as an importer of the following basic class(es) of controlled substance(s):

<table>
<thead>
<tr>
<th>Controlled substance</th>
<th>Drug code</th>
<th>Schedule</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pentobarbital</td>
<td>2270</td>
<td>II</td>
</tr>
</tbody>
</table>

The facility intends to import the above-listed controlled substance for legitimate use. This particular controlled substance is not available for the intended legitimate use within the current domestic supply of the United States. No other activity for this drug code is authorized for this registration.

Approval of permit applications will occur only when the registrant’s business activity is consistent with what is authorized under 21 U.S.C. 952(a)(2). Authorization will not extend to the import of Food and Drug Administration-approved or non-approved finished dosage forms for commercial sale.

William T. McDermott, Assistant Administrator.

BILLING CODE P

DEPARTMENT OF JUSTICE

Office of Justice Programs

[OMB Number 1121–0334]

Agency Information Collection Activities; Proposed Collection Comments Requested; Reinstatement, With Change, of a Previously Approved Collection for Which Approval Has Expired: 2021 Survey of Campus Law Enforcement Agencies (SCL EA)

AGENCY: Office of Justice Programs, Department of Justice.

ACTION: 30-Day notice.

SUMMARY: The Department of Justice (DOJ), Office of Justice Programs, Bureau of Justice Statistics, will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. The proposed information collection was previously published in the Federal Register, Volume 86, Number 94, page 26944 on Tuesday, May 18, 2021, allowing a 60-day comment period. Following publication of the 60-day notice, BJS did not receive any comments on the proposed information collection.

DATES: Comments are encouraged and will be accepted for 30 days until August 23, 2021.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-Day Review—Open for Public Comments” or by using the search function.

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should
Overview of this Information Collection

(1) Type of Information Collection: Reinstatement of the Survey of Campus Law Enforcement Agencies (SCLEA), with changes, a previously approved collection for which approval has expired.

(2) The Title of the Form/Collection: 2021 Survey of Campus Law Enforcement Agencies (SCLEA).

(3) The agency form number, if any, and the applicable component of the Department sponsoring the collection: The form number for the questionnaire is CJ–42. The applicable component within the Department of Justice is the Bureau of Justice Statistics, in the Office of Justice Programs.

(4) Affected public who will be asked or required to respond, as well as a brief abstract: Respondents will be campus law enforcement agencies (LEAs) serving public and private 2- and 4-year postsecondary educational institutions with a full-time enrollment of 1,000 or more students. Periodically since 1995, BJS has collected information about the personnel, policies, and practices of campus law enforcement agencies via the Survey of Campus Law Enforcement Agencies (SCLEA). This survey has been used to produce nationally representative estimates on campus law enforcement personnel, duties, administration, technology, officer selection, officer training, equipment, and jurisdiction. The survey instrument was reviewed by practitioners and subject matter experts to update it from the 2011 form and ensure it covers current topics of interest to campus law enforcement while reducing respondent burden. BJS plans to publish the information collected in a report and archive the data for public use.

(5) An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond: An agency-level survey will be sent to approximately 1,860 campus LEA respondents. The expected burden placed on these respondents is about 1 hour per respondent.

(6) An estimate of the total public burden (in hours) associated with the collection: There is an estimated 1,860 total burden hours associated with this collection.

If additional information is required contact: Melody Braswell, Department Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution Square, 145 N Street NE, 3E.405A, Washington, DC 20530.

Dated: July 20, 2021.
Melody Braswell,
Department Clearance Officer for PRA, U.S. Department of Justice.

[FR Doc. 2021–15516 Filed 7–22–21; 8:45 am]
BILLING CODE 4410–18–P

DEPARTMENT OF JUSTICE
U.S. Marshals Service

[OMB Number 1105–0106]

Agency Information Collection Activities; Proposed eCollection eComments Requested; Extension Without Change of a Currently Approved Collection; Comments Requested: Form USM–164, Applicant Appraisal Questionnaire

AGENCY: U.S. Marshals Service, Department of Justice.

ACTION: 60-Day notice.

SUMMARY: The Department of Justice (DOJ), U.S. Marshals Service (USMS), will submit the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995.

DATES: Comments are encouraged and will be accepted for 60 days until September 21, 2021.

FOR FURTHER INFORMATION CONTACT: If you have additional comments, particularly with respect to the estimated public burden or associated response time, have suggestions, need a copy of the proposed information collection instrument with instructions, or desire any additional information, please contact Nicole Timmons either by mail at CG–3, 10th Floor, Washington, DC 20530–0001, by email at Nicole.Timmons@usdoj.gov, or by telephone at 202–236–2646.

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

—Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

—Evaluate the accuracy of the agency’s estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

—Evaluate whether and if so how the quality, utility, and clarity of the information to be collected can be enhanced; and

—Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.
DEPARTMENT OF LABOR

Employment and Training Administration

Agency Information Collection Activities; Comment Request

ACTION: Notice.

SUMMARY: The Department of Labor’s (DOL) Employment and Training Administration (ETA) is soliciting comments concerning a proposed extension for the authority to conduct the information collection request (ICR) titled, Unemployment Insurance (UI) Title XII Advances and Voluntary Repayment Process. This comment request is part of continuing Departmental efforts to reduce paperwork and respondent burden in accordance with the Paperwork Reduction Act of 1995 (PRA).

DATES: Consideration will be given to all written comments received by September 21, 2021.

ADDRESSES: A copy of this ICR with applicable supporting documentation, including a description of the likely respondents, proposed frequency of response, and estimated total burden, may be obtained free by contacting Joe Williams by telephone at (202) 693–2928 (this is not a toll-free number), TTY 1–877–889–5617, (this is not toll-free number) or by email at williams.joseph@dol.gov.

Submit written comments about, or requests for a copy of, this ICR by mail or courier to the U.S. Department of Labor, Employment and Training Administration, Office of Unemployment Insurance, Room S–4524, 200 Constitution Avenue NW, Washington, DC 20210; by email: williams.joseph@dol.gov; or by Fax (202) 693–3975.

FOR FURTHER INFORMATION CONTACT: Cynthia Greene by telephone at (202) 693–2724 (this is not a toll-free number) or by email at Cynthia.greene.m@dol.gov.

SUPPLEMENTARY INFORMATION: DOL, as part of continuing efforts to reduce paperwork and respondent burden, conducts a pre-clearance consultation program to provide the general public and Federal agencies an opportunity to comment on proposed and/or continuing collections of information before submitting them to the Office of Management and Budget (OMB) for final approval. This program helps to ensure requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirements can be properly assessed.

Title XII, Section 1201, of the Social Security Act (SSA) provides for advances to states from the Federal Unemployment Account (FUA). The law further sets out specific requirements to be met by a state requesting an advance:

• The Governor, or designee, must apply for the advance;
• The application must cover a three-month period and the Secretary of Labor (Secretary) must be furnished with estimates of the amounts needed in each month of the three month period;
• The application must be made on such forms and shall contain such information and data (fiscal and otherwise) concerning the operation and administration of the state unemployment compensation law as the Secretary deems necessary or relevant to the performance of his or her duties under this title;
• The amount required by any state for the payment of compensation in any month shall be determined with due allowance for contingencies and taking into account all other amounts that will be available in the state’s unemployment fund for the payment of compensation in such month; and
• The term “compensation” means cash benefits payable to individuals with respect to their unemployment exclusive of expenses of administration.

Section 1202(a) of the SSA provides that the Governor of any state may at any time request that funds be transferred from the account of such state to the FUA in repayment of part or all of the balance of advances made to such state under Section 1201. These applications and repayments may be requested by an individual designated for that authority in writing by the Governor. Sections 1201 and 1202(a) of the SSA authorize this information collection.

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless it is approved by OMB under the PRA and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid Control Number. See 5 CFR 1320.5(a) and 1320.6.

Interested parties are encouraged to provide comments to the contact shown in the ADDRESSES section. Comments must be written to receive consideration, and they will be summarized and included in the request for OMB approval of the final ICR. In order to help ensure appropriate consideration, comments should mention OMB control number 1205–0199.

Submitted comments will also be a matter of public record for this ICR and posted on the internet, without redaction. DOL encourages commenters not to include personally identifiable information, confidential business data, or other sensitive statements/information in any comments.

DOL is particularly interested in comments that:

• Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
• Evaluate the accuracy of the agency’s estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
NATIONAL SCIENCE FOUNDATION

Notice of Permit Applications Received Under the Antarctic Conservation Act of 1978

AGENCY: National Science Foundation.

ACTION: Notice of permit applications received.

SUMMARY: The National Science Foundation (NSF) is required to publish a notice of permit applications received to conduct activities regulated under the Antarctic Conservation Act of 1978. NSF has published regulations under the Antarctic Conservation Act in the Code of Federal Regulations. This is the required notice of permit applications received.

DATES: Interested parties are invited to submit written data, comments, or views with respect to this permit application by August 23, 2021. This application may be inspected by interested parties at the Permit Office, address below.

ADDRESSES: Comments should be addressed to Permit Office, Office of Polar Programs, National Science Foundation, 2415 Eisenhower Avenue, Alexandria, Virginia 22314.

FOR FURTHER INFORMATION CONTACT: Polly Penhale, ACA Permit Officer, at the above address, 703–292–7420, or ACApermits@nsf.gov.

SUPPLEMENTARY INFORMATION: The National Science Foundation, as directed by the Antarctic Conservation Act of 1978 (Pub. L. 95–541, 45 CFR 670) as amended by the Antarctic Science, Tourism and Conservation Act of 1996, has developed regulations for the establishment of a permit system for various activities in Antarctica and designation of certain animals and certain geographic areas a requiring special protection. The regulations establish such a permit system to designate Antarctic Specially Protected Areas.

Application Details

Permit Application: 2022–003

1. Applicant: Dr. George Watters, Director, AMLR Program, Southwest Fisheries Science Center, National Marine Fisheries Service, 8901 La Jolla Shores Drive, La Jolla, CA 92037

Activity for Which Permit is Requested: Waste management permit. This permit application pertains to ship and shore-based research and logistic activities conducted by the National Oceanic and Atmospheric Administration’s (NOAA) Antarctic Marine Living Resources (AMLR) Program. The AMLR Program conducts research from a vessel platform in the Antarctic Peninsula region, collecting environmental, oceanographic, primary productivity, finfish, and prey data. Research is also conducted at two temporary field camps in the South Shetland Islands, Antarctica: Cape Shirreff and Copacabana. The scope of the application pertains to environmental and waste management issues resulting from proposed research, logistic and construction activities by the U.S. AMLR program between 2021 and 2026.

Ocean-based research activities will include the deployment of retrievable instrumentation. Instruments to be deployed include several long-range underwater gliders to measure environmental conditions and population densities, as well as up to 20 stationary moorings. Unoccupied Aerial Systems (UAS) will also be deployed from research vessels for surveying and censusing purposes. Deployment of all retrievable instrumentation will be performed by trained personnel associated with the research project. Activities proposed at the Cape Shirreff field camp include the necessary construction of new temporary camp structures and the removal of previous temporary structures. Care will be taken to minimize environmental disturbance throughout construction and resulting structures are planned to occupy an approximate footprint similar to that of existing structures. Construction of long-term research activities at the Cape Shirreff field camp will include deployment and maintenance of up to 30 autonomous cameras to assist in studies of avian breeding colonies, deployment of snow gauges and continued use of UAS for census surveying of surrounding fauna.

Research activities proposed at the Copacabana field camp are similar to those at Cape Shirreff, including deployment of autonomous cameras and use of UAS for surveying purposes. All UAS pilots are licensed FAA remote aircraft pilots and care will be taken to follow all best practices for UAS operation in polar regions along with all appropriate safety measures.

Wastes and designated pollutants associated with typical field camp operations will be generated, released, stored, and removed at both camps. The field camps will release wastes to air in the form of emissions resulting from the combustion of gasoline, propane, and charcoal. Releases of wastes to water will be limited to greywater and human sewage only. Wastes and designated pollutants resulting from scientific research include materials used to mark animals and attach necessary instrumentation. Additional waste may be generated by construction activities at Cape Shirreff, but mitigation measures will be put in place to minimize the introduction of waste into the environment. For designated pollutants stored at field camps, strict protocols for storage and handling will be followed. All U.S. AMLR personnel will receive proper training on handling and management of designated pollutants prior to deployment.

Location: Cape Shirreff, Livingston Island; Copacabana, western shore of Admiralty Bay; Western Antarctic Peninsula.

Dates of Permitted Activities: October 1, 2021–July 31, 2026.

Erika N. Davis, Program Specialist, Office of Polar Programs.

BILLING CODE 7555–01–P
NATIONAL SCIENCE FOUNDATION

Notice of Permit Applications Received Under the Antarctic Conservation Act of 1978

AGENCY: National Science Foundation.

ACTION: Notice of permit applications received.

SUMMARY: The National Science Foundation (NSF) is required to publish a notice of permit applications received to conduct activities regulated under the Antarctic Conservation Act of 1978. NSF has published regulations under the Antarctic Conservation Act in the Code of Federal Regulations. This is the required notice of permit applications received.

DATES: Interested parties are invited to submit written data, comments, or views with respect to this permit application by August 23, 2021. This application may be inspected by interested parties at the Permit Office, address below.

ADDRESSES: Comments should be addressed to Permit Office, Office of Polar Programs, National Science Foundation, 2415 Eisenhower Avenue, Alexandria, Virginia 22314.

FOR FURTHER INFORMATION CONTACT: Polly Penhale, ACA Permit Officer, at the above address, 703–292–7420, or ACAPermits@nsf.gov.

SUPPLEMENTARY INFORMATION: The National Science Foundation, as directed by the Antarctic Conservation Act of 1978 (Pub. L. 95–541, 45 CFR 670) as amended by the Antarctic Science, Tourism and Conservation Act of 1996, has developed regulations for the establishment of a permit system for various activities in Antarctica and the designation of certain animals and certain geographic areas a requiring special protection.

Application Details

Permit Application: 2022–001

1. Applicant: Luis Huckstadt, Institute of Marine Sciences, University of California Santa Cruz.

   Activity for Which Permit is Requested: Take, Harmful interference, Import into U.S.A. The applicant proposes to study the foraging behavior, physiology, and habitat utilization of crabeater seals in the West Antarctic Peninsula. In each of three field seasons, the applicant would capture and tag no more than 40 adult individuals. Individual seals will be sedated and anesthetized during tagging and biological sampling procedures. Proposed procedures include the following: Weighing and measuring of individuals, flipper tagging and marking, attaching of instrumentation, tissue sampling, collecting blood samples and measuring blood volume, swabbing of mucous membranes, and determining body composition by metamorphic measurements.

   Location: West Antarctic Peninsula.

   Dates of Permitted Activities: January 1, 2022–December 31, 2024.

   Erika N. Davis,
   Program Specialist, Office of Polar Programs.

NATIONAL SCIENCE FOUNDATION

OFFICE OF SCIENCE AND TECHNOLOGY POLICY

Request for Information (RFI) on an Implementation Plan for a National Artificial Intelligence Research Resource

AGENCY: White House Office of Science and Technology Policy and National Science Foundation.

ACTION: Request for information.

SUMMARY: The Office of Science and Technology Policy and the National Science Foundation are issuing this Request for Information (RFI) to inform the work of the National Artificial Intelligence Research Resource (NAIRR) Task Force (“Task Force”). The Task Force has been directed by Congress to develop an implementation roadmap for a shared research infrastructure that would provide Artificial Intelligence (AI) researchers and students across scientific disciplines with access to computational resources, high-quality data, educational tools, and user support.

DATES: To be considered, responses and comments must be received, no later than 11:59 p.m., EDT on September 1, 2021.

ADDRESSES: Comments submitted in response to this notice may be sent by any of the following methods:

   • Email: NAIRR-responses@nitrd.gov.

   Email submissions should be machine-readable and not be copy-protected. Submissions should include “RFI Response: National AI Research Resource” in the subject line of the message.

   • Mail: Attn: Wendy Wigen, NCO, 2415 Eisenhower Avenue, Alexandria, VA 22314, USA.

   Instructions: Response to this RFI is voluntary. Each individual or institution is requested to submit only one response. Submissions must be in 12 point or larger font, include a page number on each page, and not exceed 10 pages. Responses should include the name of the person(s) or organization(s) filing the comment. Responses should refer to the particular topic number(s) and letter(s), as listed below, to which the comments pertain.

   Responses to this RFI may be posted online at www.ai.gov. Therefore, responses must be appropriate for posting publicly without change or redaction, and we request that no business proprietary information, copyrighted information, or personally identifiable information be submitted in response to this RFI.

   In accordance with FAR 15.202(3), responses to this notice are not offers and cannot be accepted by the Government to form a binding contract. Responders are solely responsible for all expenses associated with responding to this RFI.

   FOR FURTHER INFORMATION CONTACT: Wendy Wigen and NAIRR-responses@nitrd.gov, (202) 459–9683. Individuals who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 between 8 a.m. and 8 p.m., Eastern time, Monday through Friday.

SUPPLEMENTARY INFORMATION:

Background

Congress directed the National Science Foundation (NSF), in coordination with the White House Office of Science and Technology Policy (OSTP), to establish the NAIRR Task Force in the William M. (Mac) Thornberry National Defense Authorization Act for Fiscal Year 2021, Public Law 116–283 § 5106, and in accordance with the provisions of the Federal Advisory Committee Act. The mandate of the Task Force is to investigate the feasibility and advisability of establishing and sustaining a NAIRR and propose a roadmap detailing how such a resource should be established and sustained.

The NAIRR is envisioned as a shared computing and data infrastructure that would provide AI researchers and students across scientific fields with access to a holistic advanced computing ecosystem. This would include secure, privacy-preserving frameworks; high-quality, representative datasets; and appropriate educational tools and user support mechanisms. The goal for such a national resource is to democratize access to the cyberinfrastructure that fuels AI research and development, enabling all of America’s diverse AI researchers to fully participate in...
exploring innovative ideas for advancing AI, including communities, institutions, and regions that have been traditionally underserved—especially with regard to AI research and related education opportunities.

Composed of members from government, academia, and the private sector, the NAIRR Task Force is required to submit an interim report to Congress and the President by May 2022, with a final report to be issued in November 2022. Find more information on the Task Force members and upcoming meetings at AI.gov.

As outlined in § 5106(b) of Public Law 116–283, the implementation roadmap developed by the Task Force should include the following:

A. Goals for establishment and sustainment of a National Artificial Intelligence Research Resource and metrics for success;
B. A plan for ownership and administration of the National Artificial Intelligence Research Resource, including:
   i. An appropriate agency or organization responsible for the implementation, deployment and administration of the Research Resource; and
   ii. A governance structure for the Research Resource, including oversight and decision-making authorities;
C. A model for governance and oversight to establish strategic direction, make programmatic decisions, and manage the allocation of resources;
D. Capabilities required to create and maintain a shared computing infrastructure to facilitate access to advanced computing resources for researchers across the country, including provision of curated data sets, compute resources, educational tools and services, a user-interface portal, secure access control, resident expertise, and scalability of such infrastructure;
E. An assessment of, and recommended solutions to, barriers to the dissemination and use of high-quality government data sets as part of the National Artificial Intelligence Research Resource;
F. An assessment of security requirements associated with the National Artificial Intelligence Research Resource and its management of access controls;
G. An assessment of privacy and civil rights and civil liberties requirements associated with the National Artificial Intelligence Research Resource and its research;
H. A plan for sustaining the National Artificial Intelligence Research Resource, including through Federal funding and partnerships with the private sector; and
I. Parameters for the establishment and sustainment of the National Artificial Intelligence Research Resource, including agency roles and responsibilities.

This RFI seeks input from a broad array of stakeholders on the topics set forth below. Comments from the public will be used to inform the Task Force’s consideration of options and development of an implementation roadmap.

Responders are invited to provide answers to the following questions (please number your responses accordingly):

1. What options should the Task Force consider for any of roadmap elements A through I above, and why?
   [Please take care to annotate your responses to this question by indicating the letter(s) of the item A through I in the list above for which you are identifying options.]
2. Which capabilities and services (see, for example, item D above) provided through the NAIRR should be prioritized?
3. How can the NAIRR and its components reinforce principles of ethical and responsible research and development of AI, such as those concerning issues of racial and gender equity, fairness, bias, civil rights, transparency, and accountability?
4. What building blocks already exist for the NAIRR, in terms of government, academic, or private-sector activities, resources, and services?
5. What role should public-private partnerships play in the NAIRR? What exemplars could be used as a model?
6. Where do you see limitations in the ability of the NAIRR to democratize access to AI R&D? And how could these limitations be overcome?

Submitted by the National Science Foundation and the White House Office of Science and Technology Policy on July 19, 2021.

Suzanne H. Plimpton,
Reports Clearance Officer, National Science Foundation.

Stacy Murphy,
Operations Manager, White House Office of Science and Technology Policy.

BILLING CODE 7555–01–P

NATIONAL SCIENCE FOUNDATION
Notice of Permit Applications Received Under the Antarctic Conservation Act of 1978

AGENCY: National Science Foundation.

ACTION: Notice of permit applications received.

SUMMARY: The National Science Foundation (NSF) is required to publish a notice of permit applications received to conduct activities regulated under the Antarctic Conservation Act of 1978. NSF has published regulations under the Antarctic Conservation Act in the Code of Federal Regulations. This is the required notice of permit applications received.

DATES: Interested parties are invited to submit written data, comments, or views with respect to this permit application by August 23, 2021. This application may be inspected by interested parties at the Permit Office, address below.

ADDRESSES: Comments should be addressed to Permit Office, Office of Polar Programs, National Science Foundation, 2415 Eisenhower Avenue, Alexandria, Virginia 22314.

FOR FURTHER INFORMATION CONTACT: Polly Penhale, ACA Permit Officer, at the above address, 703–292–7420, or ACApermits@nsf.gov.

SUPPLEMENTARY INFORMATION: The National Science Foundation, as directed by the Antarctic Conservation Act of 1978 (Pub. L. 95–541, 45 CFR 670) as amended by the Antarctic Science, Tourism and Conservation Act of 1996, has developed regulations for the establishment of a permit system for various activities in Antarctica and designation of certain animals and certain geographic areas requiring special protection. The regulations establish such a permit system to designate Antarctic Specially Protected Areas.

Application Details

1. Applicant: Dr. George Watters, Director, AMLR Program, Southwest Fisheries Science Center, National Marine Fisheries Service, 8901 La Jolla Shores Drive, La Jolla, CA 92037

Activity for Which Permit is Requested: Take, Harmful Interference, Enter Antarctic Specially Protected Areas, Import into USA. This permit application pertains to research activities conducted by the National Oceanic and Atmospheric Administration’s (NOAA) Antarctic Marine Living Resources (AMLR) Program. The U.S. AMLR Program proposes to take pinniped species in the Antarctic Peninsula region as part of a long-term ecosystem monitoring program established in 1986. Permission
is requested for take and harmful interference for Antarctic fur seals (Arctocephalus gazella), leopard seals (Hydrurga leptonyx), Weddell seals (Leptonychotes weddellii), crabeater seals (Lobodon carcinophaga), southern elephant seals (Mirounga leonine) and Ross seals (Ommatophoca rossii) by harassment associated with life-history studies and surveys to census or estimate abundance and distribution of pinnipeds. Specific take activities include capture/handling/release of animals for studies of attendance behavior, diving, and at-sea foraging location, diet, and population dynamics. Animals will be sedated and anesthetized during tagging and sampling procedures. Procedures include standard measuring of morphometrics, ultra-sounding, attaching of instrumentation, blood and tissue sampling and flipper marking/tagging. All studies of foraging ecology, population dynamics, mark-recapture, census, reproductive success, and energetics are part of a long-term monitoring effort coordinated with other Antarctic treaty nations under the auspices of the Convention for the Conservation of Antarctic Marine Living Resources.

The U.S. AMLR Program also proposes continue studies of the behavioral ecology and population biology of the Adélie, gentoo, chinstrap and king penguins, as well as interactions among these species and their principal avian predators. Specific take activities associated with avian research include capture/handling/release, attaching of instrumentation, tagging/banding, weighing/measuring of individuals, tissue and egg sampling, diet sampling, placing of nest markers and censusing. The number of takes per annum of each avian species will be as follows: Chinstrap penguin (Pygoscelis antarcticus), Adélie penguin (Pygoscelis adeliae), Gentoo penguin (Pygoscelis papua), king penguin (Aptenodytes patagonicus), brown skua (Catharacta lombergii), south polar skua (Catharacta maccormicki), giant petrel (Macronectes giganteus), kelp gull (Larus dominicanus), blue-eyed shag (Phalacrocorax atriceps), snowy sheathbill (Chionis alba) and cape petrel (Daption capensis). Those protocols related to the CCAMLR Ecosystem Monitoring Program (CEMP) are described by CCAMLR.

The U.S. AMLR Program requests permission to continue long-term studies at the Cape Shirreff and Copacabana research sites. Additionally, the Program anticipates conducting intermittent peninsula-wide pinniped and seabird surveys. As such, access to all ASPAs in the South Shetland Islands and in the Antarctic Peninsula region is requested. Entry to sites will be made via U.S. AMLR charter or NSF vessels, with immediate access via zodiac operations. Peninsula-wide pinniped and seabird surveys may include the use of unmanned aerial vehicles and photogrammetry. All species, pinniped and avian, are subject to harmful interference due to census (aerial or ground) and other work described in this application.

Location: Antarctic Peninsula region, South Shetland Islands vicinity: Cape Shirreff, Livingston Island; San Telmo Islands; Copacabana, western shore of Admiralty Bay; and Lions Rump, King George Island.

ASPA 108, Green Island, Berthelot Islands, Antarctic Peninsula
ASPA 112, Coppermine Peninsula, Robert Island
ASPA 113, Litchfield Island, Arthur Harbor, Palmer Archipelago

Office of Personnel Management

Summary: The Office of Personnel Management (OPM) offers the general public and other Federal agencies the opportunity to comment on an existing information collection request (ICR) by submitting comments for this collection.

Dates: Comments are encouraged and will be accepted until August 23, 2021. This process is conducted in accordance with 5 CFR 1320.1.

Addresses: Interested persons are invited to submit written comments on the proposed information collection to the Office of Information and Regulatory Affairs, Office of Management and Budget, 725 17th Street NW, Washington, DC 20503, Attention: Desk Officer for the Office of Personnel Management or sent via electronic mail to oira_submission@omb.eop.gov or faxed to (202) 395–6974.

For Further Information Contact: A copy of this ICR, with applicable supporting documentation, may be obtained by contacting the Office of Personnel Management, Employee Services, Pay and Leave, 1900 E Street NW, Room 7H31, Washington, DC 20415–8200, Attention: Brenda L. Roberts, Deputy Associate Director for Pay and Leave, by phone 202–606–7400, or sent via electronic mail to pay-leave-policy@opm.gov.

Supplementary Information: The information collection was previously published in the Federal Register on February 26, 2021, at Volume 86 FR 11804 allowing for a 60-day public comment period. No comments were received for this information collection. The purpose of this notice is to allow an additional 30 days for public comments. The Office of Management and Budget is particularly interested in comments that:

1. Evaluate whether the proposed collection of information is necessary for the
proper performance of the functions of the agency, including whether the information will have practical utility;

2. Evaluate the accuracy of the agency’s estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

3. Enhance the quality, utility, and clarity of the information to be collected; and

4. Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submissions of responses.

The Establishment Information Form, the Wage Data Collection Form, and the Wage Data Collection Continuation Form are wage survey forms developed by OPM for use by the Department of Defense to establish prevailing wage rates for Federal Wage System employees.

Analysis

Agency: Employee Services, Office of Personnel Management.

Title: Establishment Information Form (DD 1918), Wage Data Collection Form (DD 1919), and Wage Data Collection Continuation Form (DD 1919C).

OMB Number: 3260–0036.

Frequency: Annually.

Affected Public: Private Sector Establishments.

Number of Respondents: 21,760.

Estimated Time per Respondent: 1.5 hours.

Total Burden Hours: 32,640.

SUPPLEMENTARY INFORMATION:
Table of Contents
I. Introduction
II. Docketed Proceeding(s)

I. Introduction

The Commission gives notice that the Postal Service filed request(s) for the Commission to consider matters related to negotiated service agreement(s). The request(s) may propose the addition or removal of a negotiated service agreement from the market dominant or the competitive product list, or the modification of an existing product currently appearing on the market dominant or the competitive product list.

Section II identifies the docket number(s) associated with each Postal Service request, the title of each Postal Service request, the request’s acceptance date, and the authority cited by the Postal Service for each request. For each request, the Commission appoints an officer of the Commission to represent the interests of the general public in the proceeding, pursuant to 39 U.S.C. 505 (Public Representative). Section II also establishes comment deadline(s) pertaining to each request.

The public portions of the Postal Service’s request(s) can be accessed via the Commission’s website (http://www.prc.gov). Non-public portions of the Postal Service’s request(s), if any, can be accessed through compliance with the requirements of 39 CFR 3011.301.1

The Commission invites comments on whether the Postal Service’s request(s) in the captioned docket(s) are consistent with the policies of title 39. For request(s) that the Postal Service states concern market dominant product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3622, 39 U.S.C. 3642, 39 CFR part 3030, and 39 CFR part 3040, subpart B. For request(s) that the Postal Service states concern competitive product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3632, 39 U.S.C. 3633, 39 U.S.C. 3642, 39 CFR part 3035, and 39 CFR part 3040, subpart B. Comment deadline(s) for each request appear in section II.

II. Docketed Proceeding(s)

This Notice will be published in the Federal Register.

SECURITIES AND EXCHANGE COMMISSION

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To List and Trade Shares of the Cambiar Large Cap ETF, Cambiar Small Cap ETF and Cambiar SMID ETF

Pursuant to Section 19(b)(1) 1 of the Securities Exchange Act of 1934 (“Act”) 2 and Rule 19b–4 the thereunder, 3 notice is hereby given that, on July 9, 2021, NYSE Arca, Inc. (“NYSE Arca” or “Exchange”) filed with the Securities and Exchange Commission (“Commission”) the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization’s Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to list and trade shares of the following under Rule 8.900–E (Managed Portfolio Shares): Cambiar Large Cap ETF, Cambiar Small Cap ETF and Cambiar SMID ETF. The proposed rule change is available on the Exchange’s website at www.nyse.com, at the principal office of the Exchange, and

at the Commission’s Public Reference Room.

II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization’s Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

NYSE Arca Rule 8.900–E permits the listing and trading, or trading pursuant to unlisted trading privileges (“UTP”), of Managed Portfolio Shares, which are securities issued by an actively managed open-end investment management company.\(^4\) Rule 8.900–E(b)(1) requires the Exchange to file separate proposals under Section 19(b) of the Act before listing and trading any series of Managed Portfolio Shares on the Exchange. Therefore, the Exchange is submitting this proposal in order to list and trade Managed Portfolio Shares of the Cambiar Large Cap ETF, Cambiar Small Cap ETF and Cambiar SMID ETF (each a “Fund” and, collectively, the “Funds”) under Rule 8.900–E.

The Commission has previously approved listing and trading of the Exchange of Managed Portfolio Shares under NYSE Arca Rule 8.900–E.\(^5\) Description of the Funds and the Trust

The shares of each Fund (the “Shares”) will be issued by The Advisors’ Inner Circle Fund (the “Trust”), a statutory trust organized under the laws of the State of Massachusetts and registered with the Commission as an open-end management investment company.\(^6\) The investment adviser to each Fund will be Cambiar Investors, LLC (the “Advisor”). SEI Investments Distribution Company (the “Distributor”) will serve as the distributor of each of the Funds’ Shares.

All statements and representations made in this filing regarding (a) the description of the portfolio or reference assets, (b) limitations on portfolio holdings or reference assets, or (c) the applicability of Exchange rules shall constitute continued listing requirements for listing the Shares on the Exchange, as provided under Rule 8.900–E(b)(1).

Rule 8.900–E(b)(4) provides that, if the investment adviser to the Investment Company issuing Managed Portfolio Shares is registered as a broker-dealer or is affiliated with a broker-dealer, such investment adviser will erect and maintain a “firewall” between the investment adviser and personnel of the broker-dealer or broker-dealer affiliate, as applicable, with respect to access to information concerning the composition of and/or changes to such Investment Company portfolio and/or the Creation Basket.\(^7\) Any person related to the investment adviser or Investment Company who makes decisions pertaining to the Investment Company’s portfolio composition or has access to information regarding the Investment Company’s portfolio composition or changes thereto or the Creation Basket must be subject to procedures designed to prevent the use and dissemination of material non-public information regarding the applicable Investment Company portfolio or changes thereto or the Creation Basket.

Rule 8.900–E(b)(4) is similar to Commentary .03(a)(i) and (iii) to Rule 5.2–E(i)(3); however, Commentary .03(a) in connection with the establishment of a “firewall” between the investment adviser and the broker-dealer reflects the applicable open-end fund’s portfolio, not an underlying benchmark index, as is the case with index-based funds.\(^8\) Rule 8.900–E(b)(4) is also similar to Commentary .06 to Rule 8.600–E related to Managed Fund Shares, except that Rule 8.900–E(b)(4) relates to establishment and maintenance of a “firewall” between the investment adviser and personnel of

\(^5\) See SEI Investments Distribution Company’s Form N–1A filed with the Commission under the Investment Company Act of 1940 (the “1940 Act”) and the Investment Company Act of 1940 (the “Advisers Act”). As a result, the Adviser and its related personnel will be subject to the provisions of Rule 204A–1 under the Advisers Act relating to codes of ethics. This Rule requires investment advisers to adopt a code of ethics that reflects the fiduciary nature of the relationship to clients as well as compliance with other applicable securities laws. Accordingly, procedures designed to prevent the communication and misuse of non-public information by an investment adviser must be consistent with Rule 204A–1 under the Advisers Act. In addition, Rule 206(4)–7 under the Advisers Act makes it unlawful for an investment adviser to provide investment advice to clients unless such investment adviser has (i) adopted and implemented written policies and procedures reasonably designed to prevent violations, by the investment adviser and its supervised persons, of the Advisers Act and the Commission rules adopted thereunder; (ii) implemented, at a minimum, an annual review regarding the adequacy of the policies and procedures established pursuant to subparagraph (i) above and the effectiveness of their implementation; and (iii) designated an individual (who is a supervised person) responsible for administering the policies and procedures adopted under subparagraph (i) above. The Funds will also be required to comply with Exchange rules relating to disclosure, including Rule 5.3–E(i).
the broker-dealer or broker-dealer affiliate, as applicable, with respect to an Investment Company’s portfolio and Creation Basket, and not just to the underlying portfolio, as is the case with Managed Fund Shares.

The Adviser is not registered as a broker-dealer and is not affiliated with any broker-dealer. In the event (a) the Adviser or any sub-adviser becomes registered as a broker-dealer or becomes newly affiliated with a broker-dealer, or (b) any new adviser or sub-adviser is a registered broker-dealer, or becomes affiliated with a broker-dealer, it will implement and maintain a fire wall with respect to personnel of the broker-dealer or broker-dealer affiliate regarding access to information concerning the composition and/or changes to the portfolio and/or Creation Basket. Any person related to the Adviser or the Trust who makes decisions pertaining to a Fund’s portfolio composition or that has access to information regarding a Fund’s portfolio composition or that has access to information regarding a Fund’s portfolio or changes thereto or the Creation Basket will be subject to procedures designed to prevent the use and dissemination of material non-public information regarding such portfolio or changes thereto and the Creation Basket.

Further, Rule 8.900–E(b)(5) requires that any person or entity, including an AP Representative (as defined below), custodian, Reporting Authority, distributor, or administrator, who has access to non-public information regarding the Investment Company’s portfolio composition or changes thereto or the Creation Basket, must be subject to procedures reasonably designed to prevent the use and dissemination of material non-public information regarding the applicable Investment Company portfolio or changes thereto or the Creation Basket. Moreover, if any such person or entity is registered as a broker-dealer or affiliated with a broker-dealer, such person or entity will erect and maintain a “fire wall” between the person or entity and the broker-dealer with respect to access to information concerning the composition and/or changes to such Investment Company portfolio or Creation Basket.

Description of the Funds

Each Fund’s holdings will conform to the permissible investments as set forth in the Exemptive Application and Exemptive Order and the holdings will be consistent with all requirements in the Exemptive Application and Exemptive Order.10

Cambiari Large Cap ETF

The Fund’s investment objective is to seek total return and capital preservation. Under normal circumstances, the Fund will invest at least 80% of its net assets in common stocks of small-cap companies. The Fund generally considers small-cap companies to be companies with market capitalizations not greater than either that of the largest company in the Russell 2000® Value Index or $3.5 billion, whichever is greater at the time of initial purchase.

Cambiari Small Cap ETF

The Fund’s investment objective is to seek long-term capital appreciation. Under normal circumstances, the Fund will invest at least 80% of its net assets in common stocks of small- to mid-sized companies. The Fund generally considers small- and mid-sized companies to be companies with market capitalizations not greater than either that of the largest company in the Russell 2500® Value Index or $12 billion, whichever is greater at the time of initial purchase.

Investment Restrictions

Each Fund’s holdings will be consistent with all requirements described in the Exemptive Application and Exemptive Order.11

Each Fund’s investments, including derivatives, will be consistent with its investment objective and will not be used to enhance leverage (although certain derivatives and other investments may result in leverage). That is, for each Fund, the Fund’s investments will not be used to seek performance that is the multiple or inverse multiple (e.g., 2X or –3X) of the Fund’s benchmark.

Creations and Redemptions of Shares

Creations and redemptions of Shares will take place as described in Rule 8.900–E. Specifically, in connection with the creation and redemption of Creation Units and Redemption Units,12 the delivery or receipt of any portfolio securities in-kind will be required to be effected through a separate confidential brokerage account (a “Confidential Account”).14 Authorized Participants (“AP”), as defined in the applicable Form N–1A filed with the Commission, will sign an agreement with an Authorized Participant15 establishing the Confidential Account for the benefit of the AP. AP Representatives will be broker-dealers. An AP must be a depository trust company participant that has executed an authorized participant agreement (“Participant Agreement”) with the Distributor with respect to the creation and redemption of Creation Units and Redemption Units and formed a Confidential Account with an AP.

10 Pursuant to the Exemptive Order, the only permissible investments for a Fund are the following that trade on a U.S. exchange contemporaneously with the Funds’ Shares: Exchange-traded funds (“ETFs”), exchange-traded notes, exchange-listed common stocks, exchange-traded preferred stocks, exchange-traded American Depositary Receipts, exchange-traded real estate investment trusts, exchange-traded commodity pools, exchange-traded metals trusts, exchange-traded currency trusts and exchange-traded futures, as well as cash and cash equivalents (short-term U.S. Treasury securities, government money market funds, and repurchase agreements). All of the equity instruments or futures held by a Fund will be traded on an exchange.16

11 See id.

12 Rule 8.900–E(c)(6) provides that the term “Creation Unit” means a specified minimum number of Managed Portfolio Shares issued by an Investment Company at the request of an Authorized Participant in return for a designated portfolio of instruments and/or cash.

13 Rule 8.900–E(c)(7) provides that the term “Redemption Unit” means a specified minimum number of Managed Portfolio Shares that may be redeemed to an Investment Company at the request of an Authorized Participant in return for a portfolio of instruments and/or cash.

14 Rule 8.900–E(c)(4) provides that the term “Confidential Account” means an account owned by an Authorized Participant and held with an AP Representative on behalf of the Authorized Participant. The account will be established and governed by contractual agreement between the AP Representative and the Authorized Participant solely for the purposes of creation and redemption, while keeping confidential the Creation Basket constituents of each series of Managed Portfolio Shares, including from the Authorized Participant. The books and records of the Confidential Account on behalf of the Authorized Participant.

15 Rule 8.900–E(c)(3) provides that the term “AP Representative” means an unaffiliated broker-dealer, with which an Authorized Participant has signed an agreement to establish a Confidential Account for the benefit of such Authorized Participant, that will deliver or receive, on behalf of the Authorized Participant, all consideration to or from the Investment Company in a creation or redemption. An AP Representative will not be permitted to disclose the Creation Basket to any person, including the Authorized Participants.
Representative for its benefit in accordance with the terms of the Participant Agreement. For purposes of creations or redemptions, all transactions will be effected through the respective AP’s Confidential Account, for the benefit of the AP, without disclosing the identity of such securities to the AP.

Each AP Representative will be given, before the commencement of trading each Business Day (as defined below), the Creation Basket (as described below) for that day. This information will permit an AP that has established a Confidential Account with an AP Representative to instruct the AP Representative to buy and sell positions in the portfolio securities to permit creation and redemption of Creation Units and Redemption Units. Shares of each Fund will be issued and redeemed in Creation Units and Redemption Units. A Creation Unit and Redemption Unit consists of 10,000 shares. The size of Creation Units and Redemption Units is subject to change. The Funds will offer Creation Units and Redemption Units on a continuous basis at the net asset value ("NAV") per Share next determined after receipt of an order in proper form. The NAV per Share of each Fund will be determined as of the close of regular trading on the Exchange on each day that the Exchange is open (a "Business Day"). The Funds will sell and redeem Creation Units and Redemption Units only on Business Days.

In order to keep costs low and permit each Fund to be as fully invested as possible, Shares will be purchased and redeemed from the respective Fund in Creation Units and Redemption Units and generally on an in-kind basis. Accordingly, except where the purchase or redemption is exclusively made in cash under the circumstances permitted in the Exemptive Application, APs will be required to purchase Creation Units by accepting an in-kind deposit of a designated portfolio of securities ("Deposit Securities"), and APs redeeming their Shares will receive from the Funds a like-kind transfer of a designated portfolio of securities ("Fund Securities") through the AP Representative into their Confidential Account. On any given Business Day, the names and quantities of the instruments that constitute the Deposit Securities and the names and quantities of the instruments that constitute the Fund Securities will be identical, and these instruments may be referred to, in the case of either a purchase or a redemption, as the "Creation Basket." Placement of Purchase Orders

Each Fund will issue Shares through the Distributor on a continuous basis at NAV. The Exchange represents that the issuance of Shares will operate in a manner substantially similar to that of other ETFs. Each Fund will issue Shares only at the NAV per Share next determined after an order in proper form is received. The Distributor will furnish acknowledgements to those placing such orders that the orders have been accepted, but the Distributor may reject any order which is not submitted in proper form, as described in each Fund’s prospectus or Statement of Additional Information ("SAI").

The NAV of each Fund is expected to be determined once each Business Day as of the close of the regular trading session on the NYSE (normally 4:00 p.m. E.T.) (the "Valuation Time"). To initiate a purchase of Shares, an AP must submit to the Distributor an irrevocable order to purchase such Shares after the most recent prior Valuation Time. In purchasing the necessary securities, the AP Representative will use methods, such as breaking the transaction into multiple transactions and transacting in multiple marketplaces, to avoid revealing the composition of the Creation Basket. Each Fund will establish a cut-off time ("Order Cut-Off Time") for purchase orders in proper form.

Generally, all orders to purchase Creation Units must be received by the Distributor no later than the Order Cut-Off Time on the date such order is placed ("Transmittal Date") in order for the purchaser to receive the NAV per Share determined on the Transmittal Date. As with all existing ETFs, if there is a difference between the NAV attributable to a Creation Unit and the aggregate market value of the Creation Basket exchanged for the Creation Unit, the party conveying instruments with the lower value will also pay to the other an amount in cash equal to that difference (the "Balancing Amount").

Purchases of Shares will be settled in-kind and/or cash for an amount equal to the applicable NAV per Share purchased plus applicable transaction fees. Other than the Balancing Amount, a Fund will substitute cash only under exceptional circumstances and as set forth under the Fund’s policies and procedures governing the composition of Creation Baskets. Authorized Participant Redemption

The Shares may be redeemed to a Fund in Redemption Unit size or multiples thereof as described below. Redemption orders of Redemption Units must be placed by or through an AP ("AP Redemption Order") in proper form. Redemption Units of a Fund will be redeemable at their NAV per Share next determined after receipt of a request for redemption by the Trust in the manner specified below before the Order Cut-Off Time. To initiate an AP Redemption Order, an AP must submit to the Distributor an irrevocable order to redeem such Redemption Unit no later than the Order Cut-Off Time on the Transmittal Date. A transaction fee may be imposed to offset costs associated with redemption orders.

In the case of a redemption, the AP would enter into an irrevocable redemption order, and then the applicable Fund would instruct its custodian to deliver the Fund Securities to the appropriate Confidential Account. The Authorized Participant would direct the AP Representative on when that day to liquidate those securities. As with the purchase of securities, the AP Representative will use methods, such as breaking the transaction into multiple transactions and transacting in multiple marketplaces, to avoid revealing the composition of the Creation Basket.

Redemptions will occur primarily in-kind, although redemption payments may also be made partly or wholly in cash. The Participant Agreement signed by each AP will require establishment of a Confidential Account to receive distributions of securities in-kind upon redemption. Each AP will be required to open a Confidential Account with an AP Representative in order to facilitate orderly processing of redemptions.

Net Asset Value

Each Fund calculates its NAV once each business day as of the regularly scheduled close of trading on the New York Stock Exchange, normally 4:00 p.m. Eastern Time. The NAV of each Fund is computed by (i) taking the current market value of its total assets, (ii) subtracting any liabilities, and (iii) dividing the result by the total number of shares outstanding.

In computing each Fund’s NAV, the Fund’s securities holdings are valued based on their last readily available market price. Securities for which such information is readily available are generally valued at the last reported

---

16 According to the Registration Statement, the Funds must comply with the federal securities laws in accepting Deposit Securities and satisfying redemptions with Fund Securities, including that the Deposit Securities and Fund Securities are sold in transactions that would be exempt from registration under the 1933 Act.

17 To the extent that a Fund allows creations or redemptions to be conducted in cash, such transactions will be effected in the same manner for all APs transacting in cash.
sales price, the official closing price as reported by an independent pricing service on the primary market or exchange on which they are traded, or, in the absence of reported sales, at the most recent bid price. If market prices are unavailable or a Fund thinks that they are unreliable, or when the value of a security has been materially affected by events occurring after the relevant market closes, the Fund will price those securities at fair value as determined in good faith using methods approved by the Fund’s Board. More information about the valuation of each Fund’s holdings can be found in the SAI.

Information showing the number of days that the market price of each Fund’s Shares was greater than the Fund’s NAV (i.e., at a premium) or less than the Fund’s NAV (i.e., at a discount) for various time periods will be available on the Funds’ website at www.cambiar.com.

Availability of Information

The Funds’ website, www.cambiar.com, will include a form of the prospectus for each Fund that may be downloaded. The Funds’ website will include additional quantitative information updated on a daily basis, including, on a per share basis for each Fund, the prior Business Day’s NAV, market closing price, the bid/ask spreads at the time of calculation of such NAV (the “Bid/Ask Price”), and a calculation of the premium or discount of the market closing price or Bid/Ask Price against the NAV. The website and information will be publicly available at no charge.

Form N–PORT requires reporting of a Fund’s complete portfolio holdings on a position-by-position basis on a quarterly basis within 60 days after fiscal quarter end. Investors can obtain a Fund’s SAI, its shareholder reports, its Form N–CSR, filed twice a year, and its Form N–CEN, filed annually. Each Fund’s SAI and shareholder reports are available free upon request from the Investment Company, and those documents and the Form N–PORT, Form N–CSR, and Form N–CEN may be viewed onscreen or downloaded from the Commission’s website at www.sec.gov.

Information regarding market price and trading volume of the Shares will be continually available to market participants on a real-time basis throughout the day on brokers’ computer screens and other electronic services. Information regarding the previous day’s closing price and trading volume information for the Shares will be published daily in the financial section of newspapers. Quotation and last sale information for the Shares will be available via the Consolidated Tape Association (“CTA”) high-speed line. In addition, the Verified Intraday Indicative Value (“VIIV”), as defined in Rule 8.900–E(c)(2),18 will be widely disseminated by the Reporting Authority and/or one or more major market data vendors in one second intervals during the Exchange’s Core Trading Session.

Dissemination of the VIIV

With respect to trading of the Shares, the ability of market participants to buy and sell Shares at prices near the VIIV is dependent upon their assessment that the VIIV is a reliable, indicative real-time value for a Fund’s underlying holdings. Market participants are expected to trade the VIIV as a reliable, indicative real-time value because (1) the VIIV will be calculated and disseminated based on a Fund’s actual portfolio holdings, (2) the securities in which a Fund plans to invest are generally highly liquid and actively traded and trade at the same time as the Fund and therefore generally have accurate real-time pricing available, and (3) market participants will have a daily opportunity to evaluate whether the VIIV at or near the close of trading is indeed predictive of the actual NAV.

The VIIV will be widely disseminated by the Reporting Authority and/or by one or more major market data vendors in one second intervals during the Core Trading Session and will be disseminated to all market participants at the same time. The VIIV is based on the current market value of the securities in a Fund’s portfolio that day. The methodology for calculating the VIIV will be available on the Funds’ website. The VIIV is intended to provide investors and other market participants with a highly correlated per Share value of the underlying portfolio that can be compared to the current market price. Therefore, under normal circumstances the VIIV would be effectively a near real time approximation of each Fund’s NAV, which is computed only once a day, and is available free of charge from one or more major market data vendors.

Trading Halts

With respect to trading halts, the Exchange may consider all relevant factors in exercising its discretion to halt or suspend trading in the Shares of a Fund.21 Trading in Shares of a Fund will be halted if the circuit breaker parameters in Rule 7.12–E have been reached. Trading also may be halted because of market conditions or for reasons that, in the view of the Exchange, make trading in the Shares inadvisable. Trading in the Shares will be subject to Rule 8.900–E(d)(2)(C), which sets forth circumstances under which Shares of a Fund will be halted. Specifically, Rule 8.900–E(d)(2)(C)(i) provides that the Exchange may consider all relevant factors in exercising its discretion to halt trading in a series of Managed Portfolio Shares. Trading may be halted because of market conditions or for reasons that, in the view of the Exchange, make trading in the series of Managed Portfolio Shares inadvisable. These may include:

(a) The extent to which trading is not occurring in the securities and/or the financial instruments composing the portfolio; or
(b) whether other unusual conditions or circumstances detrimental to the maintenance of a fair and orderly market are present.22

Rule 8.900–E(d)(2)(C)(i) provides that, if the Exchange becomes aware

---

18 Rule 8.900–E(c)(2) provides that the term “Verified Intraday Indicative Value” is the indicative value of a Managed Portfolio Share based on all of the holdings of a series of Managed Portfolio Shares as of the close of business on the prior business day and, for corporate actions, based on the applicable holdings as of the opening of business on the current business day, priced and disseminated in one second intervals during the Core Trading Session by the Reporting Authority.

21 Rule 7.12–E.

22 The Exemptive Application provides that the Investment Company or their agent will request that the Exchange halt trading in the applicable series of Managed Portfolio Shares where: (i) The intraday indicative values calculated by the calculation engines differ by more than 25 basis points for 60 seconds in connection with pricing of the VIIV; or (ii) holdings representing 10% or more of a series of Managed Portfolio Shares’ portfolio have become subject to a trading halt or otherwise do not have readily available market quotations. Any such requests will be one of many factors considered by the Exchange in determining whether trading should be halted. As provided in the Exemptive Application, each request made by a series of Managed Portfolio Shares and the Exchange retains sole discretion in determining whether trading should be halted. As provided in the Exemptive Application, each request made by a series of Managed Portfolio Shares would employ a pricing verification agent to continuously compare two intraday indicative values during regular trading hours in order to ensure the accuracy of the VIIV.
that: (i) The VIIV of a series of Managed Portfolio Shares is not being calculated or disseminated in one second intervals, as required; (ii) the NAV with respect to a series of Managed Portfolio Shares is not disseminated to all market participants at the same time; (iii) the holdings of a series of Managed Portfolio Shares are not made available on at least a quarterly basis as required under the 1940 Act; or (iv) such holdings are not made available to all market participants at the same time (except as otherwise permitted under the currently applicable exemptive order or no-action relief granted by the Commission or Commission staff to the Investment Company with respect to the series of Managed Portfolio Shares), it will halt trading in such series until such time as the VIIV, the net asset value, or the holdings are available, as required.

Trading Rules
The Exchange deems the Shares to be equity securities, thus rendering trading in the Shares subject to the Exchange’s existing rules governing the trading of equity securities. Shares will trade on the Exchange in all trading sessions in accordance with Rule 7.34–E(a). As provided in Rule 7.6–E, the minimum price variation (“MPV”) for quoting and entry of orders in equity securities traded on the NYSE Arca Marketplace is $0.01, with the exception of securities that are priced less than $1.00, for which the MPV for order entry is $0.0001. A minimum of 100,000 Shares of each Fund will be outstanding at the commencement of trading on the Exchange.

The Shares will conform to the initial and continued listing criteria under Rule 8.900–E, as well as all terms in the Exemptive Order. The Exchange will obtain a representation from the issuer of the Shares of each Fund that the NAV per Share of each Fund will be calculated daily and will be made available to all market participants at the same time.

Surveillance
The Exchange believes that its surveillance procedures are adequate to properly monitor the trading of Shares on the Exchange during all trading sessions and to deter and detect violations of Exchange rules and the applicable federal securities laws. Trading of Shares through the Exchange will be subject to the Exchange’s surveillance procedures for derivative products. As part of these surveillance procedures and consistent with Rule 8.900–E(b)(3) and 8.900–E(d)(2)(B), the Adviser will upon request make available to the Exchange and/or FINRA, on behalf of the Exchange, the daily portfolio holdings of a Fund. The issuer of the Shares of each Fund will be required to represent to the Exchange that it will advise the Exchange of any failure by a Fund to comply with the continued listing requirements, and, pursuant to its obligations under Section 19(g)(1) of the Act, the Exchange will surveil for compliance with the continued listing requirements. If a Fund is not in compliance with the applicable listing requirements, the Exchange will commence delisting procedures under Exchange Rule 5.5–E(m).

FINRA, on behalf of the Exchange, or the regulatory staff of the Exchange, or both, will conduct, as needed regarding trading in the Shares and certain exchange-traded instruments with other markets and other entities that are members of the ISG, and FINRA, on behalf of the Exchange, or the regulatory staff of the Exchange, or both, may obtain trading information regarding trading such securities from such markets and other entities. In addition, the Exchange may obtain information regarding trading in the Shares and certain exchange-traded instruments from markets and other entities that are members of ISG or with which the Exchange has in place a comprehensive surveillance sharing agreement.

In addition, the Exchange also has a general policy prohibiting the distribution of material, non-public information by its employees. FINRA also generally prohibits its employees from disseminating or disclosing any non-public information obtained in the course of his or her employment.23

2. Statutory Basis
The Exchange believes that the proposed rule change is consistent with Section 6(b) of the Act,24 in general, and furthers the objectives of Section 6(b)(5) of the Act,25 in particular, in that it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest.

The Exchange believes that this proposed rule change is designed to prevent fraudulent and manipulative acts and practices in that the Funds would meet each of the rules relating to listing and trading of Managed Portfolio Shares. To the extent that a Fund is not in compliance with such rules, the Exchange would either prevent the Fund from listing and trading on the Exchange or commence delisting procedures under Rule 8.900–E(d)(2)(B). Specifically, the Exchange would consider the suspension of trading, and commence delisting proceedings under Rule 8.900–E(d)(2)(B), of a Fund under any of the following circumstances: (a) If, following the initial twelve-month period after commencement of trading on the Exchange, there are fewer than 50 beneficial holders of the Fund; (b) if the Exchange has halted trading in a Fund because the VIIV is interrupted pursuant to Rule 8.900–E(d)(2)(C)(ii) and such interruption persists past the trading day in which it occurred or is no longer available; (c) if the Exchange has halted trading in a Fund because the net asset value with respect to such Fund is not disseminated to all market participants at the same time, the holdings of such Fund are not made available on at least a quarterly basis as required under the 1940 Act, or such holdings are not made available to all market participants at the same time pursuant to Rule 8.900–E(d)(2)(C)(ii) and such issue persists past the trading day in which it occurred; (d) if the Exchange has halted trading in Shares of a Fund pursuant to Rule 8.900–E(d)(2)(C)(i) and such issue persists past the trading day in which it occurred; (e) if a Fund has failed to file any filings required by the Commission or if the Exchange is aware that a Fund is not in compliance with the conditions of any currently applicable exemptive order or no-action relief granted by the Commission or Commission staff with respect to the Fund; (f) if any of the continued listing requirements set forth in Rule 8.900–E are not continuously maintained; (g) if any of the statements of representations regarding (a) the description of the portfolio, (b) limitations on portfolio holdings, or (c) the applicability of Exchange listing rules as specified herein to permit the listing and trading of a Fund, are not continuously maintained; or (h) if such other event shall occur or condition exists which, in the opinion of the Exchange, makes further dealings on the Exchange inadvisable.

As discussed above, the Adviser is not registered as a broker-dealer and is not affiliated with any broker-dealer. In the event that (a) the Adviser or sub-adviser
becomes registered as a broker-dealer or becomes newly affiliated with a broker-dealer, or (b) any new adviser or sub-adviser is a registered broker-dealer or becomes affiliated with a broker-dealer, the Adviser will implement and maintain a firewall with respect to personnel of the broker-dealer or broker-dealer affiliate regarding access to information concerning the composition and/or changes to the portfolio or Creation Basket. Any person related to the Adviser or the Trust who makes decisions pertaining to a Fund’s portfolio composition or that has access to information regarding a Fund’s portfolio or changes thereto or the Creation Basket will be subject to procedures designed to prevent the use and dissemination of material non-public information regarding such portfolio or changes thereto and the Creation Basket.

In addition, Rule 8.900–E(b)(5) requires that any person or entity, including an AP Representative, custodian, Reporting Authority, distributor, or administrator, who has access to non-public information regarding the Investment Company’s portfolio composition or changes thereto or the Creation Basket, must be subject to procedures designed to prevent the use and dissemination of material non-public information regarding the applicable Investment Company portfolio or changes thereto or the Creation Basket. Moreover, if any such person or entity is registered as a broker-dealer or affiliated with a broker-dealer, such person or entity will erect and maintain a “fire wall” between the person or entity and the broker-dealer with respect to access to information concerning the composition and/or changes to such Investment Company portfolio or Creation Basket. Any person or entity who has access to information regarding a Fund’s portfolio composition or changes thereto or the Creation Basket will be subject to procedures designed to prevent the use and dissemination of material non-public information regarding the portfolio or changes thereto or the Creation Basket.

The Exchange further believes that Rule 8.900–E is designed to prevent fraudulent and manipulative acts and practices related to the listing and trading of Shares of the Funds and to promote just and equitable principles of trade and to protect investors and the public interest because the Exchange would halt trading under certain circumstances under which trading in the Shares of a Fund may be inadvisable. Specifically, trading in the Shares will be subject to Rule 8.900–E(d)(2)(C)(i), which provides that the Exchange may consider all relevant factors in exercising its discretion to halt trading in a Fund. Trading may be halted because of market conditions or for reasons that, in the view of the Exchange, make trading in the series of Managed Portfolio Shares inadvisable. These may include: (a) The extent to which trading is not occurring in the securities and/or the financial instruments composing the portfolio; or (b) whether other unusual conditions or circumstances detrimental to the maintenance of a fair and orderly market are present.

Additionally, trading in the Shares will be subject to Rule 8.900–E(d)(2)(C)(ii), which provides that the Exchange would halt trading when the Exchange becomes aware that: (a) the VIIV of a series of Managed Portfolio Shares is not being calculated or disseminated in one second intervals, as required; (b) the net asset value with respect to a series of Managed Portfolio Shares is not disseminated to all market participants at the same time; (c) the holdings of a series of Managed Portfolio Shares are not made available at least on a quarterly basis as required under the 1940 Act; or (d) such holdings are not made available to all market participants at the same time (except as otherwise permitted under the currently applicable exemptive order or no-action relief granted by the Commission or Commission staff to the Investment Company with respect to the series of Managed Portfolio Shares). The Exchange would halt trading in such Shares until such time as the VIIV, the NAV, or the holdings are available, as required.

With respect to the proposed listing and trading of Shares of the Funds, the Exchange believes that the proposed rule change is designed to prevent fraudulent and manipulative acts and practices in that the Shares will be listed and traded on the Exchange pursuant to the initial and continued listing criteria in Rule 8.900–E. Each Fund’s holdings will conform to the permissible investments as set forth in the Exemptive Application and Exemptive Order. As noted above, FINRA, on behalf of the Exchange, or the regulatory staff of the Exchange, or both, will communicate as needed regarding trading in the Shares and the underlying exchange-traded instruments with other markets and other entities that are members of the ISG, and FINRA, on behalf of the Exchange, or the regulatory staff of the Exchange, or both, may obtain trading information regarding trading such instruments from such markets and other entities. In addition, the Exchange may obtain information regarding trading in the Shares and the underlying exchange-traded instruments from markets and other entities that are members of ISG or with which the Exchange has in place a comprehensive surveillance sharing agreement.

With respect to trading of Shares of the Funds, the ability of market participants to buy and sell Shares at prices near the VIIV is dependent upon their assessment that the VIIV is a reliable, indicative real-time value for a Fund’s underlying holdings. Market participants are expected to accept the VIIV as a reliable, indicative real-time value because (1) the VIIV will be calculated and disseminated based on a Fund’s actual portfolio holdings, (2) the securities in which the Funds plan to invest are generally highly liquid and actively traded and trade at the same time as the Funds and therefore generally have accurate real-time pricing available, and (3) market participants

27 The Exchange represents that, for initial and continued listing, each Fund will be in compliance with Rule 10A–3 under the Act. See 17 CFR 240.10A–3.

28 See supra note 10.

See supra note 22.

26
will have a daily opportunity to evaluate whether the VIIV at or near the close of trading is indeed predictive of the actual NAV.

The proposed rule change is designed to promote just and equitable principles of trade and to protect investors and the public interest in that the Exchange will obtain a representation that the NAV per Share of the Funds will be calculated daily and that the NAV will be made available to all market participants at the same time. Investors can also obtain a Fund’s SAI, its shareholder reports, its Form N–CSR (filed twice a year), and its Form N–CEN (filed annually). A Fund’s SAI and shareholder reports will be available free upon request from the applicable Fund, and those documents and the Form N–PORT, Form N–CSR, and Form N–CEN may be viewed on-screen or downloaded from the Commission’s website at www.sec.gov. In addition, a large amount of information will be publicly available regarding the Funds and the Shares, thereby promoting market transparency. Quotation and last sale information for the Shares will be available via the CTA high-speed line. Information regarding the VIIV will be widely disseminated in one second intervals throughout the Core Trading Session by the Reporting Authority and/or one or more major market data vendors. The website for the Funds will include a prospectus for the Funds that may be downloaded, and additional data relating to NAV and other applicable quantitative information, updated on a daily basis. Moreover, prior to the commencement of trading, the Exchange will inform its members in an Information Bulletin of the special characteristics and risks associated with trading the Shares.

In addition, as noted above, investors will have ready access to the VIIV, and quotation and last sale information for the Shares. The Shares will conform to the initial and continued listing criteria under Rule 8.900–E. Each Fund’s investments, including derivatives, will be consistent with its investment objective and will not be used to enhance leverage (although certain derivatives and other investments may result in leverage). That is, a Fund’s investments will not be used to seek performance that is the multiple or inverse multiple (e.g., 2X or −3X) of the Fund’s benchmark.

The Exchange also believes that the proposed rule change is designed to perfect the mechanism of a free and open market and, in general, to protect investors and the public interest in that it will facilitate listing and trading of actively-managed exchange-traded products that will enhance competition among market participants, to the benefit of investors and the marketplace. As noted above, the Exchange has in place surveillance procedures relating to trading in the Shares and may obtain information via ISG from other exchanges that are members of ISG or with which the Exchange has entered into a comprehensive surveillance sharing agreement. In addition, as noted above, investors will have ready access to information regarding the VIIV and quotation and last sale information for the Shares.

For the above reasons, the Exchange believes that the proposed rule change is consistent with the requirements of Section 6(b)(5) of the Act.

B. Self-Regulatory Organization’s Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange believes the proposed rule change would permit the listing and trading of additional actively-managed exchange-traded products, thereby promoting competition among exchange-traded products to the benefit of investors and the marketplace.

C. Self-Regulatory Organization’s Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A) of the Act and Rule 19b–4(f)(6) thereunder.30

A proposed rule change filed pursuant to Rule 19b–4(f)(6) under the Act normally does not become operative for 30 days after the date of its filing. However, Rule 19b–4(f)(6)(iii)31 permits the Commission to designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has requested that the Commission waive the 30-day operative delay so that the proposal may become operative immediately upon filing. The Exchange states that the Commission has approved proposed rule changes to permit listing and trading on the Exchange of Managed Portfolio Shares similar to the Funds.32 The proposed listing rule for the Funds raises no novel legal or regulatory issues. For this reason, the Commission believes that waiver of the 30-day operative delay is consistent with the protection of investors and the public interest. Accordingly, the Commission hereby waives the 30-day operative delay and designates the proposed rule change operative upon filing.33

At any time within 60 days of the filing of the proposed rule change, the Commission may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.34

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

• Use the Commission’s internet comment form (http://www.sec.gov/rules/sro.shtml); or
• Send an email to rule-comments@sec.gov. Please include File Number SR–NYSEArca–2021–54 on the subject line.

Paper Comments

• Send paper comments in triplicate to: Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–NYSEArca–2021–54. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will

31 17 CFR 240.19b–4(f)(6)(iii). In addition, Rule 19b–4(f)(6) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.
32 See supra note 5.
33 For purposes only of waiving the 30-day operative delay, the Commission has also considered the proposed rule’s impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f).
post all comments on the Commission’s internet website (http://www.sec.gov/rules/sro.shtml). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission’s Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–NYSEArca–2021–54 and should be submitted on or before August 13, 2021.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.

J. Matthew DeLesDernier, Assistant Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

Self-Regulatory Organizations; National Securities Clearing Corporation; Notice of Filing of a Proposed Rule Change To Modify the Rules & Procedures of National Securities Clearing Corporation in Connection With the Implementation of Section 1446(f) of the Internal Revenue Code of 1986

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (“Act”) ¹ and Rule 19b–4 thereunder, ² notice is hereby given that on July 14, 2021, National Securities Clearing Corporation (“NSCC”) ³ filed with the Securities and Exchange Commission (“Commission”) the proposed rule change as described in Items I, II and III below, which Items have been prepared by the clearing agency. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Clearing Agency’s Statement of the Terms of Substance of the Proposed Rule Change

The proposed rule change consists of modifications to the Rules & Procedures (“Rules”) ⁴ of NSCC in connection with the implementation of section 1446(f) of the Internal Revenue Code of 1986, as amended, that was enacted as part of the Tax Cuts and Jobs Act of 2017, ⁵ and the Treasury Regulations or other official interpretations thereunder, as in effect from time to time (collectively “Section 1446(f)”), as described in greater detail below.

II. Clearing Agency’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the clearing agency included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The clearing agency has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

(A) Clearing Agency’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of this proposed rule change is to amend the Rules in connection with the implementation of Section 1446(f). The proposed rule change also includes technical changes.

(i) Background

Section 1446(f) and Section 1446(f) Withholding

Section 1446(f) was enacted on December 22, 2017, as part of the Tax Cuts and Jobs Act of 2017, ⁶ and the U.S. Treasury Department (“Treasury Department”) finalized and issued various implementing regulations on October 7, 2020, ⁷ including the tax withholding required pursuant to Treasury Regulation Section 1.1446(f)–4(a) ⁸ upon the transfer of an interest in a publicly traded partnership (“Section 1446(f) Withholding”). It is NSCC’s understanding that Section 1446(f) Withholding is designed to ensure any non-U.S. person (either individual or entity) appropriately files a U.S. federal income tax return following the sale or disposition of its interest in certain partnerships.

Section 1446(f) generally imposes a ten percent (10%) withholding tax on the payment of gross proceeds arising from the sale or other disposition by a non-U.S. person of an interest in certain partnerships that are engaged in a U.S. trade or business. ⁹ In such a case, a tax withholding obligation is imposed on the buyer of the partnership interest, who is required to remit the withheld tax amount to the U.S. Internal Revenue Service (“IRS”), unless or to the extent an applicable exception applies. ¹⁰ The buyer obligated to withhold the 10% tax is liable for any amount that it underwithheld, plus associated interest and penalties. ¹¹

On October 7, 2020, the IRS and Treasury Department issued final regulations under Section 1446(f) (the “Final Regulations”), ¹² which require Section 1446(f) Withholding on partnerships that are publicly traded on exchanges (“PTPs”) in respect of transfers that occur on or after January 1, 2022. The Final Regulations provided U.S. clearing organizations, such as NSCC, an exemption from the obligation to perform the Section 1446(f) Withholding at this time. This exemption is premised in part on the IRS and Treasury Department’s understanding that all of NSCC’s non-U.S. Members are of the types of entities that are permitted to perform the Section 1446(f) Withholding themselves. ¹³ ¹⁴ NSCC currently clears and settles all transactions on a netted basis. If NSCC were required to perform Section 1446(f) Withholding, NSCC would have to clear and settle transfers in a U.S. Trade or Business, 85 FR 76910 (Nov. 30, 2020).

10 I.R.C. Section 1446(f).
11 Id.
12 See note 6.
13 See note 6, at 76922.
14 The Final Regulations provided that if a direct clearing member of a U.S. clearing organization is not of a type of entity permitted to perform Section 1446(f) Withholding, the IRS and Treasury Department will issue proposed guidance that would revise the Final Regulations to require Section 1446(f) Withholding by U.S. clearing organization on such direct clearing member. Id.

4 Id.
5 Withholding of Tax and Information Reporting With Respect to Interests in Partnerships Engaged
of PTP interest on a gross basis, which may be disruptive to the efficiency and liquidity of the trading of PTP interests in the capital markets, as noted in the Final Regulations.\textsuperscript{15}

Currently, all of NSCC’s non-U.S. Members are of the types of entities permitted to perform the Section 1446(f) Withholding themselves either because (i) they are the types of entities allowed to perform U.S. tax withholdings pursuant to applicable Treasury Regulations or (ii) they have entered into the requisite agreements with the IRS that allow them to perform U.S. tax withholdings (commonly known as the Qualified Intermediary Agreements). Nearly all such Members have historically accepted the responsibility to perform all U.S. tax withholdings in respect of their NSCC accounts, and it is NSCC’s understanding that they would continue to do the same for Section 1446(f) Withholding.

(ii) Proposed Rule Changes

In order to comport with the legislative understanding underlying the Section 1446(f) Withholding exemption, NSCC is proposing amendments to its Rules to ensure that all NSCC FFI Members that are Members would accept the responsibility to perform the Section 1446(f) Withholding.\textsuperscript{16}

Rule 1 (Definitions and Descriptions)

NSCC is proposing to add the following terms and definitions in Rule 1 (Definitions and Descriptions), as described below.

The term “Section 1446(f)” would mean section 1446(f) of the Code and the related Treasury Regulations or other official interpretations thereof, as in effect from time to time.

The term “Section 1446(f) Withholding” would mean the tax withholding required pursuant to Treasury Regulation Section 1.1446(f)–4(a), upon the transfer of an interest in a publicly traded partnership. As defined, “Section 1446(f) Withholding” would not apply to any tax withholding required on distributions made by such a partnership.

The term “Section 1446(f) Withholding Agent” would mean an FFI Member that is a Member and has certified to NSCC that Section 1446(f) Withholding would not apply to any Gross Credit Balance of such FFI Member by providing to NSCC a Tax Certification (as defined below and in the proposed rule text).

The term “Section 1446(f) Withholding Compliance Date” would mean January 1, 2022 or, if the commencement of Section 1446(f) Withholding is delayed beyond January 1, 2022 under Section 1446(f), two calendar months plus one calendar day before such delayed effective date.

NSCC is proposing to delete “FATCA Certification” and replace it with “Tax Certification.” As proposed, the term “Tax Certification” would mean an executed copy of the relevant tax form required by the IRS, as in effect from time to time, that each Member and Limited Member (or applicant to become such) shall provide from time to time to NSCC as set forth under the Rules and Procedures.

NSCC is also proposing two technical changes. First, NSCC is proposing to delete “FATCA Certification” from Rule 1 because it would no longer be used in the Rules under the proposal. Second, NSCC is proposing to delete the definition of “Code” that is currently embedded within the definition of “FATCA” and add it as a standalone definition entry in Rule 1 so that it can be readily identified.

Rule 2 (Members and Limited Members)

NSCC is proposing to retitle Section 4(iii) of Rule 2 (Members and Limited Members) from “FATCA” to “FATCA and Section 1446(f).”

NSCC is also proposing to delete a reference to FATCA Compliance Date in the first paragraph of Section 4(iii) of Rule 2 because it is no longer relevant given FATCA is already in effect. In addition, NSCC is proposing to add a paragraph to Section 4(iii) of Rule 2 to require that, beginning on the Section 1446(f) Withholding Compliance Date, each FFI Member that is a Member must agree not to conduct any transaction or activity through NSCC if such FFI Member is not a Section 1446(f) Withholding Agent, unless such requirement has been explicitly waived in writing by NSCC with respect to the specific FFI Member.\textsuperscript{17}

In addition, NSCC is proposing to revise the last two paragraphs in Section 4(iii) of Rule 2 by changing FATCA Certification to Tax Certification, deleting a reference to FATCA, as well as adding references to Section 1446(f) Withholding Agent. As revised, each FFI Member is required to certify and periodically recertify to NSCC that such FFI Member is FATCA Compliant and/or a Section 1446(f) Withholding Agent, as applicable, by providing to NSCC a Tax Certification. In addition, an FFI Member shall indemnify NSCC for any loss, liability or expense sustained by NSCC as a result of such FFI Member failing to be FATCA Compliant or a Section 1446(f) Withholding Agent.

Rule 2A (Initial Membership Requirements)

NSCC is proposing to revise Section 1.B and 1.C of Rule 2A (Initial Membership Requirements) by including a reference to Section 1446(f) Withholding Agent and replacing FATCA Certification with Tax Certification, respectively. As proposed, Section 1.B of Rule 2A would provide that any applicant that shall be an FFI Member must be FATCA Compliant and/or a Section 1446(f) Withholding Agent, as applicable. In addition, as proposed, Section 1.C of Rule 2A would provide that, as part of its membership application, each applicant shall complete and deliver to NSCC a Tax Certification instead of a FATCA Certification. NSCC is also proposing a technical change by deleting an extraneous comma from Section 1.C of Rule 2A.

Rule 2B (Ongoing Membership Requirements and Monitoring)

NSCC is proposing to revise Section 2.B.(c) of Rule 2B (Ongoing Membership Requirements and Monitoring) by removing a reference to FATCA Compliance Date because it is no longer relevant given FATCA is already in effect. NSCC is also proposing to replace FATCA Certification with Tax Certification in Section 2.B.(c). It is proposed to add a new sentence to Section 2.B.(c) of Rule 2B that provides, beginning on the Section 1446(f) Withholding Compliance Date, each FFI Member that is a Member shall inform NSCC, both orally and in writing, if it has reason to know that it is not, or will not be, a Section 1446(f) Withholding Agent within two calendar days of knowledge thereof.

Rule 53 (Alternative Investment Product Services and Members)

NSCC is proposing to revise Sections 1(d)(iv) and 5(b)(i) of Rule 53 (Alternative Investment Product Services and Members) by replacing references of FATCA Certification with Tax Certification. In addition, NSCC is
proposing to retitle Section 5(e) of Rule 53 as “Tax Considerations—AIP Settling Sub-Accounts.”

Addendum O (Admission of Non-U.S. Entities as Direct NSCC Members)

NSCC is proposing to revise Addendum O (Admission of Non-U.S. Entities as Direct NSCC Members) to include requirements associated with Section 1446(f) Withholding. As proposed, NSCC would require each non-U.S. entity that is applying to become a Member or certain Limited Member to (i) agree not to conduct any transaction or activity through NSCC if the non-U.S. entity is not FATCA Compliant and/or is not a Section 1446(f) Withholding Agent, as applicable and (ii) indemnify NSCC for any loss, liability or expense sustained by NSCC as a result of the non-U.S. entity failing to be FATCA Compliant or a Section 1446(f) Withholding Agent. NSCC is also proposing to retitle the second bullet in Addendum O to “FACTA, Section 1446(f) Withholding, and Tax Certification.” In addition, NSCC is proposing to remove the reference to FATCA Compliance Date from the second bullet in Addendum O because it is no longer relevant given FATCA is already in effect. Furthermore, NSCC is proposing to revise the second bullet in Addendum O by (i) adding references to Section 1446(f) Withholding Compliance Date and Section 1446(f) Withholding Agent and (ii) replacing FATCA Certification with Tax Certification. As proposed, the second bullet in Addendum O would provide, in part, that each non-U.S. entity that is applying to become a Member or certain Limited Member must be at all times FATCA Compliant and, beginning on the Section 1446(f) Withholding Compliance Date, be a Section 1446(f) Withholding Agent, if applicable, and must certify and recertify to NSCC that it is FATCA Compliant and/or a Section 1446(f) Withholding Agent, as applicable, by providing to NSCC a Tax Certification, unless such requirements have been explicitly waived in writing by NSCC.

(iii) Member Outreach

Beginning in December 2020, NSCC conducted ongoing outreach to non-U.S. Members that are not currently performing U.S. tax withholding in order to provide them with notice of the proposed changes. As of the date of this filing, no written comments relating to the proposed changes have been received in response to this outreach. The Commission will be notified of any written comments received.

2. Statutory Basis

NSCC believes this proposal is consistent with Section 17A(b)(3)(F) of the Act for the reasons described below.

Section 17A(b)(3)(F) of the Act requires, in part, that the Rules be designed to promote the prompt and accurate clearance and settlement of securities transactions.19 NSCC believes that the proposed rule change to amend the Rules in connection with the implementation of Section 1446(f) is consistent with Section 17A(b)(3)(F) of the Act. This is because the proposed rule change is designed to ensure that all NSCC FFI Members that are Members would accept the responsibility to perform the Section 1446(f) Withholding, consistent with the understanding of the IRS and Treasury Department as expressed in the Final Regulations.20

As mentioned above, the Final Regulations provided NSCC an exemption from the obligation to perform Section 1446(f) Withholding at this time.21 However, the Final Regulations also provided that if a direct clearing member of a U.S. clearing organization is not of a type of entity permitted to perform Section 1446(f) Withholding, the IRS and Treasury Department will issue proposed guidance that would revise the Final Regulations to require Section 1446(f) Withholding by U.S. clearing organizations, such as NSCC, on such direct clearing member.22 If the IRS and Treasury Department were to revise the Final Regulations and revoke NSCC’s exemption, NSCC would be required to clear and settle each transfer of PTP interest on a gross basis in order to perform Section 1446(f) Withholding on such transfer. Given that NSCC currently clears and settles all transactions on a netted basis, if NSCC has to clear and settle transfers of PTP interest on a gross basis, it may be disruptive to the efficiency and liquidity of the trading of PTP interests in the capital market. By avoiding any potential disruption to the efficiency and liquidity of the trading of PTP interests in the capital market, the proposed rule change would help to promote the prompt and accurate clearance and settlement of transactions. As such, NSCC believes the proposed rule change to amend the Rules in connection with the implementation of Section 1446(f) is consistent with Section 17A(b)(3)(F) of the Act.25

NSCC believes the proposal to make technical changes to the Rules is also consistent with Section 17A(b)(3)(F) of the Act.26 The proposed technical changes to the Rules would help ensure that the Rules remain accurate and clear to Members. Having accurate and clear Rules would help Members to better understand their rights and obligations regarding NSCC’s clearance and settlement services. NSCC believes that when Members better understand their rights and obligations regarding NSCC’s clearance and settlement services, they can act in accordance with the Rules. NSCC believes that better enabling Members to comply with the Rules would promote the prompt and accurate clearance and settlement of securities transactions by NSCC. As such, NSCC believes the proposal to make technical
changes to the Rules is consistent with Section 17A(b)(3)(F) of the Act.\textsuperscript{27}

(B) Clearing Agency’s Statement on Burden on Competition

NSCC believes that the proposed rule change to amend the Rules in connection with the implementation of Section 1446(f) could impose a burden on competition because the change could impose a cost on firms that currently do not do U.S. tax withholding by requiring them to perform the Section 1446(f) Withholding by the Section 1446(f) Withholding Compliance Date. However, NSCC believes any such burden is necessary and appropriate. Specifically, NSCC believes that any burden on competition that is created by the proposed rule change would be necessary in furtherance of the purposes of Section 17A(b)(3)(F) of the Act. As described above, the proposed rule change is designed to ensure that all NSCC FFI Members that are Members would accept the responsibility to perform the Section 1446(f) Withholding, consistent with the understanding of the IRS and Treasury Department as expressed in the Final Regulations.\textsuperscript{28} By ensuring that all NSCC FFI Members that are Members would accept their responsibility to perform the Section 1446(f) Withholding, NSCC believes it would not affect Members’ rights and obligations. As such, NSCC believes the proposal to make technical changes to the Rules would not have any impact on competition.

(C) Clearing Agency’s Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments relating to this proposed rule change have not been solicited or received. NSCC will notify the Commission of any written comments received by NSCC.

III. Date of Effectiveness of the Proposed Rule Change, and Timing for Commission Action

Within 45 days of the date of publication of this notice in the \textit{Federal Register} or within such longer period up to 90 days (i) as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) by order approve or disapprove such proposed rule change, or

(B) institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission’s internet comment form (http://www.sec.gov/rules/sro.shtml);
- Send an email to rule-comments@sec.gov. Please include File Number SR–NSCC–2021–009 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549.

All submissions should refer to File Number SR–NSCC–2021–009 and should be submitted on or before August 13, 2021.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.\textsuperscript{31}

J. Matthew DeLosDernier,
Assistant Secretary.

**Federal Aviation Administration**

[Docket No. FAA–2021–0167]

Agency Information Collection Activities: Requests for Comments; Clearance of a Renewed Approval of Information Collection: Rotorcraft External Load Operator Certificate Application

**AGENCY:** Federal Aviation Administration (FAA), Transportation (DOT).

**ACTION:** Notice and request for comments.

**SUMMARY:** In accordance with the Paperwork Reduction Act of 1995, FAA invites public comments about our intention to request the Office of Management and Budget (OMB) approval to renew an information collection. The Federal Register Notice with a 60-day comment period soliciting comments on the following collection of information was published on February 26, 2021. This collection involves the application for issuance or renewal of a 14 CFR part 133 Rotorcraft External Load Operator Certificate. Application for an original certificate or renewal of a certificate issued under 14 CFR part 133 is made on a form, and in a manner prescribed by the Administrator. The FAA form 8710–4 may be obtained from an FAA Flight Standards District Office, or online at [https://www.faa.gov/documentLibrary/media/form/faa8710-4.pdf](https://www.faa.gov/documentLibrary/media/form/faa8710-4.pdf). The completed application is sent to the district office that has jurisdiction over the area in which the applicant's home base of operation is located. The information collected includes: Type of application, Operator's name/DBAs, telephone number, mailing address, physical address of the principal base of operations, chief pilot/designee name, airman certificate grade and number, rotorcraft make/model, registration numbers to be used and load combinations requested. In addition, this information collection includes requirements to report emergency operations, plans for operation over congested areas, and submission of flight manuals for approval, and recordkeeping requirements for certificates and crewmember testing and training records.

**DATES:** Written comments should be submitted by August 23, 2021.

**ADDRESSES:** Interested persons are invited to submit written comments on the proposed information collection to the Office of Information and Regulatory Affairs, Office of Management and Budget. Comments should be addressed to the attention of the Desk Officer, Department of Transportation/FAA, and sent via electronic mail to oira_submission@omb.eop.gov, or faxed to (202) 395–6974, or mailed to the Office of Information and Regulatory Affairs, Office of Management and Budget, Docket Library, Room 10102, 725 17th Street NW, Washington, DC 20503.

**FOR FURTHER INFORMATION CONTACT:** Raymond Plessinger by email at raymond.plessinger@faa.gov; phone: 717–443–7296.

**SUPPLEMENTARY INFORMATION:**

**Public Comments Invited:** You are asked to comment on any aspect of this information collection, including (a) Whether the proposed collection of information is necessary for FAA's performance; (b) the accuracy of the estimated burden; (c) ways for FAA to enhance the quality, utility and clarity of the information collection; and (d) ways that the burden could be minimized without reducing the quality of the collected information. The agency will summarize and/or include your comments in the request for OMB's clearance of this information collection.

**OMB Control Number:** 2120–0044.

**Title:** Rotorcraft External Load Operator Certificate Application.

**Form Numbers:** FAA Form 8710–4.

**Type of Review:** Renewal.

**Background:** The Federal Register Notice with a 60-day comment period soliciting comments on the following collection of information was published on February 26, 2021 (86 FR 11821). This collection involves the application for issuance or renewal of a 14 CFR part 133 Rotorcraft External Load Operator Certificate. Application for an original certificate or renewal of a certificate issued under 14 CFR part 133 is made on a form, and in a manner prescribed by the Administrator. The FAA form 8710–4 may be obtained from an FAA Flight Standards District Office, or online at [https://www.faa.gov/documentLibrary/media/form/faa8710-4.pdf](https://www.faa.gov/documentLibrary/media/form/faa8710-4.pdf). The completed application is sent to the district office that has jurisdiction over the area in which the applicant's home base of operation is located. The information collected includes: Type of application, Operator's name/DBAs, telephone number, mailing address, physical address of the principal base of operations, chief pilot/designee name, airman certificate grade and number, rotorcraft make/model, registration numbers to be used and load combinations requested. In addition, this information collection includes requirements to report emergency operations, plans for operation over congested areas, and submission of flight manuals for approval, and recordkeeping requirements for certificates and crewmember testing and training records.

**Respondents:** 357 active part 133 certificate-holders.

**Frequency:** New applications when needed; current 14 CFR part 133 certificate-holders must renew every 24 months. Flight manuals are submitted as part of the application process, and plans for operation over congested areas are submitted as needed.

**Estimated Total Annual Burden:** 3,295 total hours per year, or 9.3 hours per respondent.

**Issued in Washington, DC, on July 20, 2021.

Dwayne C. Morris,
Project Manager, Flight Standards Service, General Aviation and Commercial Division.
Louisiana/New Mexico Airports Development Office, ASW–640, 10101 Hillwood Parkway, Fort Worth, Texas 76177, Telephone: (817) 222–5522, Email: jean.gamarra@faa.gov, Fax: (817) 222–5989.

SUPPLEMENTARY INFORMATION: The FAA invites public comment on the request to release property at the Roswell Air Center under the provisions of the AIR 21. The following is a brief overview of the request:

The City of Roswell requests the release of 13.3974 acres of non-aeronautical airport property. The land was acquired by Deed without Warranty from the United States on January 24th, 1968. The property to be released will be sold to allow for future airport development.

Any person may inspect the request in person at the FAA office listed above under FOR FURTHER INFORMATION CONTACT.

In addition, any person may, upon request, inspect the application, notice and other documents relevant to the application in person at the City of Roswell Legal Department, telephone number (575) 347–5703.

Issued in Fort Worth, Texas, on July 16, 2021.

Ignacio Flores,
Director, Office of Airports Southwest Region.

FOR FURTHER INFORMATION CONTACT:

FOR FURTHER INFORMATION CONTACT: Mr. Andrew Brooks, Environmental Program Manager, Eastern Regional Office, AEA–610, Federal Aviation Administration, 1 Aviation Plaza, Jamaica, NY 11434. Telephone: 718–553–2511.

SUPPLEMENTARY INFORMATION: The FAA, as lead agency, has completed and is publishing a ROD for proposed improvements identified at LGA. The ROD was prepared pursuant to Title 40 Code of Federal Regulations (CFR) 1505.2.

The Final EIS for the proposed LGA Access Improvement Project was published on the project website at www.lgaaccessseis.com on March 15, 2021 and two Notices of Availability in the Federal Register were published: the first by the FAA on March 18, 2021 (86 FR 14796) and the second by the Environmental Protection Agency on March 19, 2021 (86 FR 14908). The FAA prepared the Final EIS pursuant to: The National Environmental Policy Act (NEPA) of 1969, 42 United States Code (U.S.C.) 4321 et seq.; the Council of Environmental Quality implementing regulations, 40 CFR parts 1500–1508; FAA Order 1050.1F; and FAA Order 5050.4B. FAA assessed the potential environmental impacts of the Proposed Action, as well as the No Action Alternative.

In the Final EIS, the FAA identified the Proposed Action as its preferred alternative in meeting the purpose and need of addressing unpredictable and increasing travel times to and from LGA and space constraints for employee parking. The Proposed Action includes:

- Construction of an above ground fixed guideway automated people mover (APM) system approximately 2.3 miles in length that extends from the LGA Central Hall Building under construction to the Mets-Willets Point Long Island Rail Road (LIRR) and New York City Transit Subway Flushing Line (7 Line) Stations:
  - construction of two on-Airport APM stations (Central Hall LGA Access Improvement Project and its connected actions (the Proposed Action). The ROD includes numerous environmental findings by the FAA, as well as environmental determinations related to
4(f) of the DOT Act, and the Proposed Action includes all possible planning to minimize harm to resources protected under Section 4(f) of the DOT Act (49 U.S.C. 303(c) and Section 106, National Historic Preservation Act);

• Relocation assistance, if any, will be provided in accordance with 42 U.S.C. 460, Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970;

• Further mitigation measures or alternatives that would avoid or reduce the disproportionately high and adverse effects to minority environmental and justice populations are not practicable (DOT Order 5610.2B and E.O. 12989);

• The Proposed Action would conform to all applicable state and/or local floodplain protection standards (E.O. 11988);

• The Proposed Action complies with the enforceable policies of New York State’s approved coastal management program and will be conducted in a manner consistent with such program;

• The Proposed Action conforms to the Avoidance, Minimization and/or Compensation of Harm to Wetlands in Accordance with E.O. 11990 and the Clean Water Act;

• The Proposed Action includes all practicable means to avoid or minimize harm from the alternative selected (40 CFR 1505.2(a)(3)); and

• The FAA has given this proposal the independent and objective evaluation required by the CEQ (40 CFR 1506.5).

The determinations included in the ROD are:

• The Proposed Action is reasonably consistent with existing plans of public agencies for development of areas surrounding the airport (49 U.S.C. 47106(a)(1)), and E.O. 12372;

• Appropriate action, including the adoption of zoning laws, has been or will be taken as reasonable to restrict the land use next to or near the airport to uses that are compatible with airport operations (49 U.S.C. 47107(a)(10)); and

• The interest of the communities in or near where the Proposed Action may be located were given fair consideration (49 U.S.C. 47106(b)(2)).

This ROD also presents the decision of the NPS, as cooperating agency in the Final EIS, to approve a partial conversion of 0.5 acres of parklands subject to the Land and Water Conservation Fund (LWCF) Act in Flushing Meadows-Corona Park, as well as to approve a Temporary Non-Conforming Use (TNCU) of 1.2 acres of parkland subject to the LWCF Act.

A copy of the ROD is available for public review at FAA’s website: https://www.faa.gov/airports/environmental/

DEPARTMENT OF TRANSPORTATION
Federal Highway Administration

Notice of Final Federal Agency Actions of Proposed Highway in California

AGENCY: Federal Highway Administration (FHWA), Department of Transportation (DOT).

ACTION: Notice of limitation on Claims for Judicial Review of Actions by the California Department of Transportation (Caltrans).

SUMMARY: The FHWA, on behalf of Caltrans, is issuing this notice to announce actions taken by Caltrans that are final within the meaning of the regulation. The actions relate to a proposed highway project on State Route 198 from post mile R13.1/R12.0 and on State Route 216 from post mile R0.0/R2.56 in Tulare County for the Lovers Lane Operational Improvements and Rehabilitation Project. Those actions grant licenses, permits, and approvals for the project.

DATES: By this notice, the FHWA, on behalf of Caltrans, is advising the public of final agency actions subject to 23 U.S.C. 139(j)(1). A claim seeking judicial review of the Federal agency actions on the highway project will be barred unless the claim is filed on or before December 20, 2021. If the Federal law that authorizes judicial review of a claim provides a time period of less than 150 days for filing such claim, then that shorter time period still applies.

FOR FURTHER INFORMATION CONTACT: For Caltrans: Richard Putler, Senior Environmental Planner, Caltrans, 2015 East Shields Avenue, Suite 200, Fresno, CA 93721; phone number 559–304–6599, richard.putler@dot.ca.gov. For FHWA, contact David Tedrick at (916) 498–5024 or email david.tedrick@dot.gov.

SUPPLEMENTARY INFORMATION: Effective July 1, 2007, FHWA assigned, and Caltrans assumed, environmental responsibilities for this project pursuant to 23 U.S.C. 327. Notice is hereby given that the Caltrans has taken final agency actions subject to 23 U.S.C. 139(j)(1) by issuing licenses, permits, and approvals for the following highway project in the State of California: Caltrans proposes making operational improvements at the Lovers Lane Undercrossing (Tulare-198–Post Mile 11.7. Bridge Number 46–216) and restoring the existing facility to a state of good repair. The project covers a 0.7-mile segment of State Route 198 from 0.3 mile west of the Lovers Lane Undercrossing to 0.5 mile east of it. The operational improvements consist of widening Lovers Lane below the undercrossing and improving the following four intersections: Lovers Lane (State Route 216) at Mineral King Avenue, Lovers Lane at State Route 198 on the eastbound on-ramps and off-ramps, Lovers Lane at Noble Avenue, and State Route 198 on the westbound on-ramps and off-ramps at Mineral King Avenue. The project also proposes to extend the life of the existing pavement along State Route 216 by rehabilitating the existing pavement and including all pertinent standards as required by the 3R Program (resurfacing, restoration, and rehabilitation).

The actions by the Federal agencies, and the laws under which such actions were taken, are described in the Final Environmental Assessment (EA) for the project, approved on June 23th 2021, in the Finding of No Significant Impact (FONSI) issued on June 23th 2021, and in other documents in the FHWA project records. The EA, FONSI, and other project records are available by contacting Caltrans at the addresses provided above. The Caltrans EA and FONSI can be obtained by contacting Caltrans: Richard Putler, Senior Environmental Planner, Caltrans, 2015 East Shields Avenue, Suite 200, Fresno, CA 93721; phone number 559–304–6599, richard.putler@dot.ca.gov, or viewed at public libraries in the project area. This notice applies to all Federal agency decisions as of the issuance date of this notice and all laws under which such actions were taken, including but not limited to:

1. Council on Environmental Quality regulations (40 CFR 1500 et seq.; 23 CFR 771);
3. Moving Ahead for Progress in the 21st Century Act (Map-21, Pub. L. 112–141);
5. Clean Air Act of 1963, as amended (42 U.S.C. 7401 et seq.);
7. Department of Transportation Act of 1966, Section 4(i) (49 U.S.C. 303);
SUMMARY: FMCSA announces its decision to deny the application from one individual treated with an Implantable Cardiopacer Defibrillator (ICD) who requested an exemption from the Federal Motor Carrier Safety Regulations (FMCSRs) prohibiting operation of a commercial motor vehicle (CMV) in interstate commerce by persons with a current clinical diagnosis of myocardial infarction, angina pectoris, coronary insufficiency, thrombosis, or any other cardiovascular disease of a variety known to be accompanied by syncope (transient loss of consciousness), dyspnea (shortness of breath), collapse, or congestive heart failure.

FOR FURTHER INFORMATION CONTACT: Ms. Christine A. Hydock, Chief, Medical Programs Division, (202) 366–4001, fmcsamedical@dot.gov, FMCSA, DOT, 1200 New Jersey Avenue SE, Room W64–224, Washington, DC 20590–0001. Office hours are from 8:30 a.m. to 5 p.m., ET, Monday through Friday, except Federal holidays. If you have questions regarding viewing materials in the docket, contact Dockets Operations, (202) 366–9826.

SUPPLEMENTARY INFORMATION:

I. Public Participation

A. Viewing Comments

To view comments go to www.regulations.gov. Insert the docket number, FMCSA–2021–0036, in the keyword box, and click “Search.” Next, sort the results by “Posted (Newer-Older),” choose the first notice listed, and click “Browse Comments.” If you do not have access to the internet, you may view the docket online by visiting Dockets Operations in Room W12–140 on the ground floor of the DOT West Building, 1200 New Jersey Avenue SE, Washington, DC 20590–0001, between 9 a.m. and 5 p.m., ET, Monday through Friday, except Federal holidays. To be sure someone is there to help you, please call (202) 366–9317 or (202) 366–9826 before visiting Dockets Operations.

B. Privacy Act

In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to www.regulations.gov, as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at www.transportation.gov/privacy.

II. Background

On February 9, 2021, FMCSA published a Federal Register notice (86 FR 8830) announcing receipt of an application from one individual treated with an ICD and requested comments from the public. The individual requested an exemption from 49 CFR § 391.41(b)(4) which prohibits operation of a CMV in interstate commerce by persons with a current clinical diagnosis of myocardial infarction, angina pectoris, coronary insufficiency, thrombosis, or any other cardiovascular disease of a variety known to be accompanied by syncope, dyspnea, collapse, or congestive heart failure. The public comment period closed on March 11, 2021, and one comment was received.

FMCSA has evaluated the eligibility of the applicant and concluded that granting an exemption would not provide a level of safety that would be equivalent to, or greater than, the level of safety that would be obtained by complying with § 391.41(b)(4). A summary of the applicant’s medical history related to the ICD exemption request was discussed in the February 9, 2021, Federal Register notice and will not be repeated here.

The Agency’s decision regarding this exemption application is based on information from the Cardiovascular Medical Advisory Criteria, an April 2007 evidence report titled “Cardiovascular Disease and Commercial Motor Vehicle Driver Safety,” 1 and a December 2014 focused research report titled “Implantable Cardiopacer Defibrillators and the Impact of a Shock in a Patient When Deployed.” Copies of these reports are included in the docket.

FMCSA has published advisory criteria to assist medical examiners in determining whether drivers with certain medical conditions are qualified to operate a CMV in interstate commerce. 2 The advisory criteria for § 391.41(b)(4) indicates that coronary artery bypass surgery and pacemaker implantation are remedial procedures and thus, not medically disqualifying. ICDs are disqualifying due to risk of syncope.

III. Discussion of Comments

FMCSA received one comment in this proceeding. The comment was from a private citizen who did not support granting the exemption. The individual disagreed that granting an exemption for an ICD would ensure the safety of the driver and local pedestrians. FMCSA evaluates each ICD application received to determine whether an equivalent or greater level of safety can be achieved by the applicant. While FMCSA has received and carefully evaluated many ICD exemption application requests, thus far the Agency has been unable to conclude that granting an exemption to any of the applicants would achieve a level of safety equivalent to, or greater than, the level of safety maintained without an exemption.

Basis for Exemption Determination

Under 49 U.S.C. 31136(e) and 31315(b), FMCSA may grant an exemption from the FMCSRs for no longer than a 5-year period if it finds such exemption would likely achieve a level of safety that is equivalent to, or greater than, the level that would be achieved absent such exemption. The Agency’s decision regarding this exemption application is based on an

1 The report is available on the internet at https://rosap.ntdl.bts.gov/view/dot/16462.
individualized assessment of the applicant’s medical information, available medical and scientific data concerning ICDs, and any relevant public comments received.

In the case of persons with ICDs, the underlying condition for which the ICD was implanted places the individual at high risk for syncope or other unpredictable events known to result in gradual or sudden incapacitation. ICDs may discharge, which could result in loss of ability to safely control a CMV. The December 2014 focused research report referenced previously upholds the findings of the April 2007 report and indicates that the available scientific data on persons with ICDs and CMV driving does not support that persons with ICDs who operate CMVs are able to meet an equal or greater level of safety.

IV. Conclusion

The Agency has determined that the available medical and scientific literature and research provides insufficient data to enable the Agency to conclude that granting this exemption would achieve a level of safety equivalent to, or greater than, the level of safety maintained without the exemption. Therefore, the following applicant has been denied an exemption from the physical qualification standards in § 391.41(b)(4):

Matthew Wackt (WI)

The applicant has, prior to this notice, received a letter of final disposition regarding his exemption request. The decision letter fully outlined the basis for the denial and constitute final action by the Agency. The name of the individual published today summarizes the Agency’s recent denials as required under 49 U.S.C. 31315(b)(4).

Larry W. Minor,
Associate Administrator for Policy.

DEPARTMENT OF THE TREASURY
Office of the Comptroller of the Currency

Agency Information Collection Requirements; Information Collection Renewal; Submission for OMB Review; Release of Non-Public OCC Information

AGENCY: Office of the Comptroller of the Currency (OCC), Treasury.

ACTION: Notice and request for comment.

SUMMARY: The OCC, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on a continuing information collection as required by the Paperwork Reduction Act of 1995 (PRA). In accordance with the requirements of the PRA, the OCC may not conduct or sponsor, and the respondent is not required to respond to, an information collection unless it displays a currently valid Office of Management and Budget (OMB) control number. The OCC is soliciting comment concerning the renewal of its information collection titled, “Release of Non-Public OCC Information.” The OCC is also giving notice that it has submitted the collection to OMB for review.

DATES: You should submit written comments by August 23, 2021.

ADDRESSES: Commenters are encouraged to submit comments by email, if possible. You may submit comments by any of the following methods:

• Email: prainfo@occ.treas.gov.

• Hand Delivery/Courier: 400 7th Street SW, Suite 3E–218, Washington, DC 20219.
• Fax: (571) 465–4326.

Instructions: You must include “OCC” as the agency name and “1557–0200” in your comment. In general, the OCC will publish comments on www.reginfo.gov without change, including any business or personal information provided, such as name and address information, email addresses, or phone numbers. Comments received, including attachments and other supporting materials, are part of the public record and subject to public disclosure. Do not include any information in your comment or supporting materials that you consider confidential or inappropriate for public disclosure.

Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

You may review comments and other related materials that pertain to this information collection 1 following the close of the 30-day comment period for this notice by the following method:

• Viewing Comments Electronically: Go to www.reginfo.gov. Click on the “Information Collection Review” tab. Underneath the “Currently under Review” section heading, from the drop-down menu select “Department of Treasury” and then click “submit.” This information collection can be located by searching by OMB control number “1557–0200” or “Release of Non-Public Information.” Upon finding the appropriate information collection, click on the related “ICR Reference Number.” On the next screen, select “View Supporting Statement and Other Documents” and then click on the link to any comment listed at the bottom of the screen.

• For assistance in navigating www.reginfo.gov, please contact the Regulatory Information Service Center at (202) 482–7340.

SUPPLEMENTARY INFORMATION: Under the PRA (44 U.S.C. 3501–3520), Federal agencies must obtain approval from the OMB for each collection of information that they conduct or sponsor.

“Collection of information” is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) to include agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. The OCC asks that OMB extend its approval of the collection in this document.

Title: Release of Non-Public OCC Information

OMB Control No.: 1557–0200.

Abstract: The information collection requirements require individuals who are requesting non-public OCC information to provide the OCC with information regarding the legal grounds for the request. The release of non-public OCC information to a requester without sufficient legal grounds to obtain the information would inhibit open consultation between a bank and the OCC, thereby impairing the OCC’s supervisory and regulatory mission. The OCC is entitled, under statute and case law, to require requesters to demonstrate that they have sufficient legal grounds for the OCC to release non-public OCC information. The OCC needs to identify the requester’s legal grounds to determine if it should release the requested non-public OCC information.

The information requirements in 12 CFR part 4, subpart C, are as follows:

1 On April 8, 2021, the OCC published a 60-day notice for this information collection, 86 FR 18371.
The OCC uses the information to process requests for non-public OCC information and to determine if sufficient grounds exist for the OCC to release the requested information or provide testimony that would include a discussion of non-public information. This information collection facilitates the processing of requests and expedites the OCC’s release of non-public information and testimony to the requester, as appropriate.

Type of Review: Extension, without change, of a currently approved collection.

Affected Public: Businesses or other for-profit; individuals.

Number of Respondents: 2.

Frequency of Response: On occasion.

Total Annual Burden: 6 hours.

On April 8, 2021, the OCC published a 60-day notice for this information collection, 86 FR 18371. No comments were received. Comments continue to be invited on:

(a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information has practical utility;

(b) The accuracy of the agency’s estimate of the burden of the collection of information;

(c) Ways to enhance the quality, utility, and clarity of the information to be collected;

(d) Ways to minimize the burden of the collection on respondents, including through the use of automated collection techniques or other forms of information technology; and

(e) Estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Theodore J. Dowd,
Deputy Chief Counsel, Office of the Comptroller of the Currency.

DEPARTMENT OF THE TREASURY
Internal Revenue Service

Proposed Collection; Comment Request for Forms 2210 and 2210–F

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Internal Revenue Service, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on continuing information collections, as required by the Paperwork Reduction Act of 1995. The IRS is soliciting comments concerning Form 2210, Underpayment of Estimated Tax by Individuals, Estate, and Trusts, and Form 2210–F, Underpayment of Estimated Tax by Farmers and Fishermen.

DATES: Written comments should be received on or before September 21, 2021 to be assured of consideration.

ADDRESSES: Direct all written comments to Kinna Brewington, Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224. For further information contact Sara L. Covington by phone at (202) 622-3300, via email at Sara.L.Covington@irs.gov, or through the internet at www.reginfo.gov.

SUPPLEMENTARY INFORMATION:

Title: Underpayment of Estimated Tax by Individuals, Estate, and Trusts (Form 2210), and Underpayment of Estimated Tax by Farmers and Fishermen (Form 2210–F).

OMB Number: 1545–0140.

Form Number: 2210 AND 2210–F.

Abstract: Internal Revenue Code section 6654 imposes a penalty for failure to pay estimated tax. Form 2210 is used by individuals, estates, and trusts. Form 2210–F is used by farmers and fisherman to determine whether they are subject to the penalty and to compute the penalty if it applies. The Service uses this information to determine whether taxpayers are subject to the penalty, and to verify the penalty amount. If you’re self-employed, the Coronavirus Aid, Relief and Economic Security (CARES) Act allows you to defer the deposit or payment of 50% of the social security tax on net earnings from self-employment imposed on March 27, 2020, through December 31, 2020.

Current Actions: There are no changes to the forms at this time; the burden hours are reduced based on the most current filing data.

Type of Review: Extension of a currently approved collection.

Affected Public: Individuals or households, business or other for-profit organizations, and farms.

Estimated Number of Respondents: 80,150.

Estimated Time per Respondent: 4 hrs.

Estimated Total Annual Burden Hours: 312,897.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on:

(a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility;

(b) the accuracy of the agency’s estimate of the burden of the collection of information;

(c) ways to enhance the quality, utility, and clarity of the information to be collected;

(d) ways to minimize the burden of the collection on respondents, including through the use of automated collection techniques or other forms of information technology; and

(e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Approved: July 20, 2021.

Sara L. Covington,
IRS, Tax Analyst.
In accordance with section 999(a)(3) of the Internal Revenue Code of 1986, the Department of the Treasury is publishing a current list of countries which require or may require participation in, or cooperation with, an international boycott (within the meaning of section 999(b)(3) of the Internal Revenue Code of 1986).

On the basis of the best information currently available to the Department of the Treasury, the following countries require or may require participation in, or cooperation with, an international boycott (within the meaning of section 999(b)(3) of the Internal Revenue Code of 1986).

Medicare Program; CY 2022 Payment Policies Under the Physician Fee Schedule and Other Changes to Part B Payment Policies; Medicare Shared Savings Program Requirements; Provider Enrollment Regulation Updates; Provider and Supplier Prepayment and Post-Payment Medical Review Requirements.

AGENCY: Centers for Medicare & Medicaid Services (CMS), Health and Human Services (HHS).

ACTION: Proposed rule.

SUMMARY: This major proposed rule addresses: Changes to the physician fee schedule (PFS); other changes to Medicare Part B payment policies to ensure that payment systems are updated to reflect changes in medical practice, relative value of services, and changes in the statute; Medicare Shared Savings Program requirements; updates to the Quality Payment Program; Medicare coverage of opioid use disorder services furnished by opioid treatment programs; updates to certain Medicare provider enrollment policies; requirements for prepayment and post-payment medical review activities; requirement for electronic prescribing for controlled substances for a covered Part D drug under a prescription drug plan, or a Medicare Advantage Prescription Drug (MA–PD) plan; updates to the Medicare Ground Ambulance Data Collection System; changes to the Medicare Diabetes Prevention Program (MDPP) expanded model; and amendments to the physician self-referral law regulations.

DATES: To be assured consideration, comments must be received at one of the addresses provided below, no later than 5 p.m. on September 13, 2021.

ADDRESSES: In commenting, please refer to file code CMS–1751–P. Comments, including mass comment submissions, must be submitted in one of the following three ways (please choose only one of the ways listed):

1. Electronically. You may submit electronic comments on this regulation to http://www.regulations.gov. Follow the “Submit a comment” instructions.

2. By regular mail. You may mail written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1751–P, P.O. Box 8016, Baltimore, MD 21244–8016.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. By express or overnight mail. You may send written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1751–P, Mail Stop C4–26–05, 7500 Security Boulevard, Baltimore, MD 21244–1850.

FOR FURTHER INFORMATION CONTACT: DivisionOfPractitionerServices@cms.hhs.gov, for any issues not identified below.

Michael Sorace, (410) 786–6312, for issues related to practice expense, work RVUs, conversion factor, and PFS specialty-specific impacts.

Larry Chan, (410) 786–6864, for issues related to potentially misvalued services under the PFS.

Donta Henson, (410) 786–1947, Patrick Sartini, (410) 786–9252, and Larry Chan, (410) 786–8864, for issues related to telehealth services and other services involving communications technology.

Julie Adams, (410) 786–8932, for issues related to payment for anesthesia services.

Sarah Leipnik, (410) 786–3933, for issues related to split (or shared) services.

Christiane LaBonte, (410) 786–7237, for issues related to indirect practice expense, PFS payment for critical care services, and PFS payment for teaching physician services.

DivisionOfPractitionerServices@cms.hhs.gov, for issues related to payment for vaccine administration services.

Regina Walker-Wren, (410) 786–9160, for issues related to billing for services of physician assistants.

Pamela West, (410) 786–2302, for issues related to PFS payment for therapy services, medical nutrition therapy services, and services of registered dieticians and nutrition professionals.

Liane Grayson, (410) 786–6583, and Donta Henson, (410) 786–1947, for issues related to coinsurance for certain colorectal cancer screening services.

Lisa Parker, (410) 786–4949, for issues related to RHCs and FQHCs.

Laura Kennedy, (410) 786–3377, for issues related to drugs payable under Part B.

Heather Hostetler, (410) 786–4515, and Elizabeth Truong, (410) 786–6005, for issues related to removal of select national coverage determinations.

Sarah Fulton, (410) 786–2749, for issues related to Appropriate Use Criteria for Advanced Diagnostic Imaging (AUC); and Pulmonary Rehabilitation, Cardiac Rehabilitation and Intensive Cardiac Rehabilitation.

Rachel Katonak, (410) 786–8564, for issues related to Medical Nutrition Therapy.

Fiona Larbi, (410) 786–7224, for issues related to the Medicare Shared Savings Program (Shared Savings Program) Quality performance standard and quality reporting requirements.

Janae James, (410) 786–0801, or Elizabeth November, (410) 786–4518, or SharedSavingsProgram@cms.hhs.gov, for issues related to Shared Savings Program beneficiary assignment, repayment mechanism requirements, and benchmarking methodology.

Naseem Tarmohamed, (410) 786–0814, or SharedSavingsProgram@cms.hhs.gov, for inquiries related to Shared Savings Program application, compliance and beneficiary notification requirements.

Amy Gruber, AmbulanceDataCollection@cms.hhs.gov, for issues related to the Medicare Ground Ambulance Data Collection System.

Juliana Tiongson, (410) 786–0342, for issues related to the Medicare Diabetes Prevention Program (MDPP).

Laura Ashbaugh, (410) 786–1113, for issues related to Clinical Laboratory Fee Schedule: Laboratory Specimen Collection and Travel Allowance and Use of Electronic Travel Logs.

Frank Whelan, (410) 786–1302, for issues related to Medicare provider enrollment regulation updates.

Thomas J. Kessler, (410) 786–1991, for issues related to provider and supplier prepayment and post-payment medical review requirements.

Lindsey Baldwin, (410) 786–1694, and Michele Franklin, (410) 786–9226, for issues related to Medicare coverage of opioid use disorder treatment services furnished by opioid treatment programs.

Lisa O. Wilson, (410) 786–8852, or Meredith Larson, (410) 786–7923, for inquiries related to the physician self-referral law.

Joella Roland, (410) 786–7638, for issues related to requirement for electronic prescribing for controlled substances for a covered Part D drug under a prescription drug plan or an MA–PD plan.

Kathleen Ott, (410) 786–4246, for issues related to open payments.
Molly MacHarris, (410) 786–4461, for inquiries related to Merit-based Incentive Payment System (MIPS).

Brittany LaCouture, (410) 786–0481, for inquiries related to Alternative Payment Models (APMs).

SUPPLEMENTARY INFORMATION:

Inspection of Public Comments: All comments received before the close of the comment period are available for viewing by the public, including any personally identifiable or confidential business information that is included in a comment. We post all comments received before the close of the comment period on the following website as soon as possible after they have been received: http://www.regulations.gov. Follow the search instructions on that website to view public comments. CMS will not post on Regulations.gov public comments that make threats to individuals or institutions or suggest that the individual will take actions to harm the individual. CMS continues to encourage individuals not to submit duplicative comments. We will post acceptable comments from multiple unique commenters even if the comment is identical or nearly identical to other comments.

Addenda Available Only Through the Internet on the CMS Website: The PFS Addenda along with other supporting documents and tables referenced in this proposed rule are available on the CMS website at https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html. Click on the link on the left side of the screen titled, “PFS Federal Regulations Notices” for a chronological list of PFS Federal Register and other related documents. For the CY 2022 PFS proposed rule, refer to item CMS–1751–P. Readers with questions related to accessing any of the Addenda or other supporting documents referenced in this proposed rule and posted on the CMS website identified above should contact DivisionofPractitionerServices@cms.hhs.gov.

CPT (Current Procedural Terminology) Copyright Notice: Throughout this proposed rule, we use CPT codes and descriptions to refer to a variety of services. We note that CPT codes and descriptions are copyright 2020 American Medical Association. All Rights Reserved. CPT is a registered trademark of the American Medical Association (AMA). Applicable Federal Acquisition Regulations (FAR) and Defense Federal Acquisition Regulations (DFAR) apply.

I. Executive Summary

This major proposed rule proposes to revise payment policies under the Medicare PFS and makes other policy changes, including proposals to implement certain provisions of the Consolidated Appropriations Act, 2021 (CAA, 2021) (Pub. L. 116–9, December 27, 2020), Bipartisan Budget Act of 2018 (BBA of 2018) (Pub. L. 115–123, February 9, 2018) and the Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment (SUPPORT) for Patients and Communities Act (the SUPPORT Act) (Pub. L. 115–271, October 24, 2018), related to Medicare Part B payment. In addition, this major proposed rule includes proposals regarding other Medicare payment policies described in sections III and IV.

A. Summary of the Major Provisions

The statute requires us to establish payments under the PFS, based on national uniform relative value units (RVUs) that account for the relative resources used in furnishing a service. The statute requires that RVUs be established for three categories of resources: Work, practice expense (PE), and malpractice (MP) expense. In addition, the statute requires that we establish each year by regulation the payment amounts for physicians’ services paid under the PFS, including geographic adjustments to reflect the variations in the costs of furnishing services in different geographic areas.

In this major proposed rule, we are proposing to establish RVUs for CY 2022 for the PFS to ensure that our payment systems are updated to reflect changes in medical practice and the relative value of services, as well as changes in the statute. This proposed rule also includes discussions and provisions regarding several other Medicare Part B payment policies.

Specifically, this proposed rule addresses:

• Practice Expense RVUs (section II.B.)
• Potentially Misvalued Services Under the PFS (section II.C.)
• Telehealth and Other Services Involving Communications Technology (section II.D.)
• Valuation of Specific Codes (section II.E.)
• Evaluation and Management Visits (section II.F.)
• Billing for Physician Assistant Services (section II.G.)
• Therapy Services (section II.H.)
• Changes to Beneficiary Coinsurance for Additional Procedures Furnished During the Same Clinical Encounter as Certain Colorectal Cancer Screening Tests (section II.I.)
• Vaccine Administration Services (section II.J.)
• Payment for Medical Nutrition Therapy Services and Related Services (section II.K.)
• Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs) (sections III.A., III.B., and III.C.)
• Requiring Certain Manufacturers to Report Drug Pricing Information for Part B and Determination of ASP for Certain Self-administered Drug Products (sections III.D.1. and 2.)
• Medicare Part B Drug Payment for Drugs Approved under Section 505(b)(2) of the Federal Food, Drug, & Cosmetic Act (section III.E.)
• Appropriate Use Criteria for Advanced Diagnostic Imaging (section III.F.)
• Removal of Select National Coverage Determinations (section III.G.)
• Pulmonary Rehabilitation, Cardiac Rehabilitation and Intensive Cardiac Rehabilitation (section III.H.)
• Medical Nutrition Therapy (section III.I.)
• Medicare Shared Savings Program (section III.J.)
• Medicare Ground Ambulance Data Collection System (section III.K.)
• Medicare Diabetes Prevention Program (MDPP) (section III.L.)
• Clinical Laboratory Fee Schedule: Laboratory Specimen Collection and Travel Allowance for Clinical Diagnostic Laboratory Tests and Use of Electronic Travel Logs (section III.M.)
• Medicare Provider and Supplier Enrollment Changes (section III.N.1.)
• Provider/Supplier Medical Review Requirements: Addition of Provider/Supplier Requirements related to Prepayment and Post-payment Reviews (section III.N.2.)
• Modifications Related to Medicare Coverage for Opioid Use Disorder (OUD) Treatment Services Furnished by Opioid Treatment Programs (OTPs) (section III.O.)
• Updates to the Physician Self-Referral Regulations (section III.P.)
• Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D Drug under a Prescription Drug Plan or an MA–PD Plan (section 2003 of the SUPPORT Act) (section III.Q.)
• Open Payments (section III.R.)
• Updates to the Quality Payment Program (section IV.)
• Collection of Information Requirements (section V.)
• Response to Comments (section VI.)
• Regulatory Impact Analysis (section VII.)
3. Summary of Costs and Benefits

We have determined that this proposed rule is economically significant. For a detailed discussion of the economic impacts, see section VII., Regulatory Impact Analysis, of this proposed rule.

II. Provisions of the Proposed Rule for the PFS

A. Background

Since January 1, 1992, Medicare has paid for physicians’ services under section 1848 of the Social Security Act (the Act), “Payment for Physicians’ Services.” The PFS relies on national relative values that are established for work, practice expense (PE), and malpractice (MP), which are adjusted for geographic cost variations. These values are multiplied by a conversion factor (CF) to convert the relative value units (RVUs) into payment rates. The concept and methodology underlying the PFS were enacted as part of the Omnibus Budget Reconciliation Act of 1989 (OBRA ’89) (Pub. L. 101–129, December 19, 1989), and the Omnibus Budget Reconciliation Act of 1990 (OBRA ’90) (Pub. L. 101–508, November 5, 1990). The final rule published in the November 25, 1991 Federal Register (56 FR 59502) set forth the first fee schedule used for payment for physicians’ services.

We note that throughout this proposed rule, unless otherwise noted, the term “practitioner” is used to describe both physicians and nonphysician practitioners (NPPs) who are permitted to bill Medicare under the PFS for the services they furnish to Medicare beneficiaries.

1. Development of the RVUs

a. Work RVUs

The work RVUs established for the initial fee schedule, which was implemented on January 1, 1992, were developed with extensive input from the physician community. A research team at the Harvard School of Public Health developed the original work RVUs for most codes under a cooperative agreement with the Department of Health and Human Services (HHS). In constructing the code-specific vignettes used in determining the original physician work RVUs, Harvard worked with panels of experts, both inside and outside the federal government, and obtained input from numerous physician specialty groups.

As specified in section 1848(c)(1)(A) of the Act, the work component of physicians’ services means the portion of the resources used in furnishing the service that reflects physician time and intensity. We establish work RVUs for new, revised and potentially misvalued codes based on our review of information that generally includes, but is not limited to, recommendations received from the American Medical Association/Specialty Society Relative Value Scale Update Committee (RUC), the Health Care Professionals Advisory Committee (HCPA), the Medicare Payment Advisory Commission (MedPAC), and other public commenters; medical literature and comparative databases; as well as a comparison of the work for other codes within the Medicare PFS, and consultation with other physicians and health care professionals within CMS and the federal government. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters, and the rationale for their recommendations. In the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329), we discussed a variety of methodologies and approaches used to develop work RVUs, including survey data, building blocks, crosswalk to key reference or similar codes, and magnitude estimation. More information on these issues is available in that rule.

b. Practice Expense RVUs

Initially, only the work RVUs were resource-based, and the PE and MP RVUs were based on average allowable charges. Section 121 of the Social Security Act Amendments of 1994 (Pub. L. 103–432, October 31, 1994), amended by section 1848(c)(2)(C)(ii) of the Act and required us to develop resource-based PE RVUs for each physicians’ service beginning in 1998. We were required to consider general categories of expenses (such as office rent and wages of personnel, but excluding MP expenses) comprising PEs. The PE RVUs continue to represent the portion of these resources involved in furnishing PFS services.

Originally, the resource-based method was to be used beginning in 1998, but section 4505(a) of the Balanced Budget Act of 1997 (BBA ’97) (Pub. L. 105–33, August 5, 1997) delayed implementation of the resource-based PE RVU system until January 1, 1999. In addition, section 4505(b) of the BBA ’97 provided for a 4-year transition period from the charge-based PE RVUs to the resource-based PE RVUs.

We established the resource-based PE RVUs for each physicians’ service in the November 25, 1999, PFS final rule (63 FR 58814), effective for services furnished in CY 1999. Based on the requirement to transition to a resource-based system for PE over a 4-year period, payment rates were not fully based upon resource-based PE RVUs until CY 2002. This resource-based system was based on two significant sources of actual PE data: The Clinical Practice Expert Panel (CPEP) data; and the AMA’s Socioeconomic Monitoring System (SMS) data. These data sources are described in greater detail in the CY 2012 PFS final rule with comment period (76 FR 73033).

Separate PE RVUs are established for services furnished in facility settings, such as a hospital outpatient department (HOPD) or an ambulatory surgical center (ASC), and in nonfacility settings, such as a physician’s office. The nonfacility RVUs reflect all of the direct and indirect PEs involved in furnishing a service described by a particular HCPCS code. The difference, if any, in these PE RVUs generally results in a higher payment in the nonfacility setting because in the facility settings some resource costs are borne by the facility. Medicare’s payment to the facility (such as the outpatient prospective payment system (OPPS) payment to the HOPD) would reflect costs typically incurred by the facility. Thus, payment associated with those specific facility resource costs is not made under the PFS.

Section 212 of the Balanced Budget Refinement Act of 1999 (BBRA) (Pub. L. 106–113, November 29, 1999) directed the Secretary of Health and Human Services (the Secretary) to establish a process under which we accept and use, to the maximum extent practicable and consistent with sound data practices, data collected or developed by entities and organizations to supplement the data we normally collect in determining the PE component. On May 3, 2000, we published the interim final rule (65 FR 25664) that set forth the criteria for the submission of these supplemental PE survey data. The criteria were modified in response to comments received, and published in the Federal Register (65 FR 55376) as part of a November 1, 2000 final rule. The PFS final rules published in 2001 and 2003, respectively, (66 FR 55246 and 68 FR 63196) extended the period during which we would accept these supplemental data through March 1, 2005.

In the CY 2007 PFS final rule with comment period (71 FR 69624), we revised the methodology for calculating direct PE RVUs from the top-down to the bottom-up methodology beginning in CY 2007. We adopted a 4-year transition to the new PE RVUs. This transition was completed for CY 2010. In the CY 2010 PFS final rule with
comment period, we updated the practice expense per hour (PE/HR) data that are used in the calculation of PE RVUs for most specialties (74 FR 61749). In CY 2010, we began a 4-year transition to the new PE RVUs using the updated PE/HR data, which was completed for CY 2013.

c. Malpractice RVUs

Section 4505(f) of the BBA '97 amended section 1848(c) of the Act to require that we implement resource-based MP RVUs for services furnished on or after CY 2000. The resource-based MP RVUs were implemented in the PFS final rule with comment period published November 2, 1999 (64 FR 59380). The MP RVUs are based on commercial and physician-owned insurers’ MP insurance premium data from all the states, the District of Columbia, and Puerto Rico.

d. Refinements to the RVUs

Section 1848(c)(2)(B)(i) of the Act requires that we review RVUs no less often than every 5 years. Prior to CY 2013, we conducted periodic reviews of work RVUs and PE RVUs independently from one another. We completed 5-year reviews of work RVUs that were effective for calendar years 1997, 2002, 2007, and 2012.

Although refinements to the direct PE inputs initially relied heavily on input from the RUC Practice Expense Advisory Committee (PEAC), the shifts to the bottom-up PE methodology in CY 2007 and to the use of the updated PE/HR data in CY 2010 have resulted in significant refinements to the PE RVUs in recent years.

In the CY 2012 PFS final rule with comment period (76 FR 73057), we finalized a proposal to consolidate reviews of work and PE RVUs under section 1848(c)(2)(B) of the Act and reviews of potentially misvalued codes under section 1848(c)(2)(K) of the Act into one annual process.

In addition to the 5-year reviews, beginning for CY 2009, CMS and the RUC identified and reviewed a number of potentially misvalued codes on an annual basis based on various identification screens. This annual review of work and PE RVUs for potentially misvalued codes was supplemented by the amendments to section 1848 of the Act, as enacted by section 3134 of the Affordable Care Act, that require the agency to periodically identify, review and adjust values for potentially misvalued codes.

e. Application of Budget Neutrality to Adjustments of RVUs

As described in section VII. of this proposed rule, the Regulatory Impact Analysis, in accordance with section 1848(c)(2)(B)(ii)(II) of the Act, if revisions to the RVUs cause expenditures for the year to change by more than $20 million, we will make adjustments to ensure that expenditures do not increase or decrease by more than $20 million.

2. Calculation of Payments Based on RVUs

To calculate the payment for each service, the components of the fee schedule (work, PE, and MP RVUs) are adjusted by geographic practice cost indices (GPCIs) to reflect the variations in the costs of furnishing the services. The GPCIs reflect the relative costs of work, PE, and MP in an area compared to the national average costs for each component. Please refer to the CY 2020 PFS final rule for a discussion of the last GPCI update (84 FR 62615 through 62623).

RVUs are converted to dollar amounts through the application of a CF, which is calculated based on a statutory formula by CMS’ Office of the Actuary (OACT). The formula for calculating the Medicare PFS payment amount for a given service and fee schedule area can be expressed as:

\[
\text{Payment} = (\text{RVU work} \times \text{GPCI work}) + (\text{RVU PE} \times \text{GPCI PE}) + (\text{RVU MP} \times \text{GPCI MP}) \times \text{CF}
\]

3. Separate Fee Schedule Methodology for Anesthesia Services

Section 1848(b)(2)(B) of the Act specifies that the fee schedule amounts for anesthesia services are to be based on a uniform relative value guide, with appropriate adjustment of an anesthesia CF, in a manner to ensure that fee schedule amounts for anesthesia services are consistent with those for other services of comparable value. Therefore, there is a separate fee schedule methodology for anesthesia services. Specifically, we establish a separate CF for anesthesia services and we utilize the uniform relative value guide, or base units, as well as time units, to calculate the fee schedule amounts for anesthesia services. Since anesthesia services are not valued using RVUs, a separate methodology for locality adjustments is also necessary. This involves an adjustment to the national anesthesia CF for each payment locality.

B. Determination of PE RVUs

1. Overview

Practice expense (PE) is the portion of the resources used in furnishing a service that reflects the general categories of physician and practitioner expenses, such as office rent and personnel wages, but excluding MP expenses, as specified in section 1848(c)(1)(B) of the Act. As required by section 1848(c)(2)(C)(ii) of the Act, we use a resource-based system for determining PE RVUs for each physicians’ service. We develop PE RVUs by considering the direct and indirect practice resources involved in furnishing each service. Direct expense categories include clinical labor, medical supplies, and medical equipment. Indirect expenses include administrative labor, office expense, and all other expenses. The sections that follow provide more detailed information about the methodology for translating the resources involved in furnishing each service into service-specific PE RVUs. We refer readers to the CY 2010 PFS final rule with comment period (74 FR 61743 through 61748) for a more detailed explanation of the PE methodology.

2. Practice Expense Methodology

a. Direct Practice Expense

We determine the direct PE for a specific service by adding the costs of the direct resources (that is, the clinical staff, medical supplies, and medical equipment) typically involved with furnishing that service. The costs of the resources are calculated using the refined direct PE inputs assigned to each CPT code in our PE database, which are generally based on our review of recommendations received from the RUC and those provided in response to public comment periods. For a detailed explanation of the direct PE methodology, including examples, we refer readers to the 5-year review of work RVUs under the PFS and proposed changes to the PE methodology CY 2007 PFS proposed notice (71 FR 37242) and the CY 2007 PFS final rule with comment period (71 FR 69629).

b. Indirect Practice Expense per Hour Data

We use survey data on indirect PEs incurred per hour worked, in developing the indirect portion of the PE RVUs. Prior to CY 2010, we primarily used the PE/HR by specialty that was obtained from the AMA’s SMS. The AMA administered a new survey in CY 2007 and CY 2008, the Physician Practice Expense Information Survey (PPIS). The PPIS is a multispecialty,
nationally representative, PE survey of both physicians and NPPs paid under the PFS using a survey instrument and methods highly consistent with those used for the SMS and the supplemental surveys. The PPIS gathered information from 3,656 respondents across 51 physician specialty and health care professional groups. We believe the PPIS is the most comprehensive source of PE survey information available. We used the PPIS data to update the PE/HR data for the CY 2010 PFS for almost all of the Medicare-recognized specialties that participated in the survey.

When we began using the PPIS data in CY 2010, we did not change the PE/HR methodology itself or the manner in which the PE/HR data are used in that methodology. We only updated the PE/HR data based on the new survey. Furthermore, as we explained in the CY 2010 PFS final rule with comment period (74 FR 61751), because of the magnitude of payment reductions for some specialties resulting from the use of the PPIS data, we transitioned its use over a 4-year period from the previous PE RVUs to the PE RVUs developed using the new PPIS data. As provided in the CY 2010 PFS final rule with comment period (74 FR 61751), the transition to the PPIS data was complete for CY 2013. Therefore, PE RVUs from CY 2013 forward are developed based entirely on the PPIS data, except as noted in this section.

Section 1848(c)(2)(H)(i) of the Act requires us to use the medical oncology supplemental survey data submitted in 2003 for oncology drug administration services. Therefore, the PE/HR for medical oncology, hematology, and hematology/oncology reflects the continued use of these supplemental survey data.

Supplemental survey data on independent labs from the College of American Pathologists were implemented for payments beginning in CY 2005. Supplemental survey data from the National Coalition of Quality Diagnostic Imaging Services (NCQDIS), representing independent diagnostic testing facilities (IDTFs), were blended with supplementary survey data from the American College of Radiology (ACR) and implemented for payments beginning in CY 2007. Neither IDTFs, nor independent labs, participated in the PPIS. Therefore, we continue to use the PE/HR that was developed from their supplemental survey data.

Consistent with our past practice, the previous indirect PE/HR values from the supplemental surveys for these specialties were updated to CY 2006 using the Medicare Economic Index (MEI) to put them on a comparable basis with the PPIS data. We also do not use the PPIS data for reproductive endocrinology and spine surgery since these specialties currently are not separately recognized by Medicare, nor do we have a method to blend the PPIS data with Medicare-recognized specialty data.

Previously, we established PE/HR values for various specialties without SMS or supplemental survey data by crosswalking them to other similar specialties to estimate a proxy PE/HR. For specialties that were part of the PPIS for which we previously used a crosswalked PE/HR, we instead used the PPIS-based PE/HR. We use crosswalks for specialties that did not participate in the PPIS. These crosswalks have been generally established through notice and comment rulemaking and are available in the file titled “CY 2022 PFS proposed rule PE/HR” on the CMS website under downloads for the CY 2022 PFS proposed rule at http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.

For CY 2022, we have incorporated the available utilization data for two new specialties, each of which became a recognized Medicare specialty during 2020. These specialties are Micrographic Dermatologic Surgery (MDS) and Adult Congenital Heart Disease (ACHD). We are proposing to use proxy PE/HR values for these new specialties, as there are no PPIS data for these specialties, by crosswalking the PE/HR as follows from specialties that furnish similar services in the Medicare claims data:

- Micrographic Dermatologic Surgery (MDS) from Dermatology; and
- Adult Congenital Heart Disease (ACHD) from Cardiology.

These updates are reflected in the “CY 2022 PFS proposed rule PE/HR” file available on the CMS website under the supporting data files for the CY 2022 PFS proposed rule at http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.

c. Allocation of PE to Services

To establish PE RVUs for specific services, it is necessary to establish the direct and indirect PE associated with each service.

(1) Direct Costs

The relative relationship between the direct cost portions of the PE RVUs for any two services is determined by the relative relationship between the sum of the direct cost resources (that is, the clinical staff, medical supplies, and medical equipment) typically involved with furnishing each of the services. The costs of these resources are calculated from the refined direct PE inputs in our PE database. For example, if one service has a direct cost sum of $400 from our PE database and another service has a direct cost sum of $200, the direct portion of the PE RVUs of the first service would be twice as much as the direct portion of the PE RVUs for the second service.

(2) Indirect Costs

We allocate the indirect costs at the code level based on the direct costs specifically associated with a code and the greater of either the clinical labor costs or the work RVUs. We also incorporate the survey data described earlier in the PE/HR discussion. The general approach to developing the indirect portion of the PE RVUs is as follows:

- For a given service, we use the direct portion of the PE RVUs calculated as previously described and the average percentage that direct costs represent of total costs (based on survey data) across the specialties that furnish the service to determine an initial indirect allocator. That is, the initial indirect allocator is calculated so that the direct costs equal the average percentage of direct costs of those specialties furnishing the service. For example, if the direct portion of the PE RVUs for a given service is 2.00 and direct costs, on average, represent 25 percent of total costs for the specialties that furnish the service, the initial indirect allocator would be calculated so that it equals 75 percent of the total PE RVUs. Thus, in this example, the initial indirect allocator would equal 6.00, resulting in a total PE RVU of 8.00 (2.00 is 25 percent of 8.00 and 6.00 is 75 percent of 8.00).

- Next, we add the greater of the work RVUs or clinical labor portion of the direct portion of the PE RVUs to this initial indirect allocator. In our example, if this service had a work RVU of 4.00 and the clinical labor portion of the direct PE RVU was 1.50, we would add 4.00 (since the 4.00 work RVUs are greater than the 1.50 clinical labor portion) to the initial indirect allocator of 6.00 to get an indirect allocator of 10.00. In the absence of any further use of the survey data, the relative relationship between the indirect cost portions of the PE RVUs for any two services would be determined by the relative relationship between these indirect cost allocators. For example, if one service had an indirect cost allocator of 10.00 and another service had an indirect cost allocator of 5.00,
the indirect portion of the PE RVUs of the first service would be twice as great as the indirect portion of the PE RVUs for the second service.

• Then, we incorporate the specialty-specific indirect PE/HR data into the calculation. In our example, if, based on the survey data, the average indirect cost of the specialties furnishing the first service with an allocator of 10.00 was half of the average indirect cost of the specialties furnishing the second service with an indirect allocator of 5.00, the indirect portion of the PE RVUs of the first service would be equal to that of the second service.

(3) Facility and Nonfacility Costs

For procedures that can be furnished in a physician’s office, as well as in a facility setting, where Medicare makes a separate payment to the facility for its costs in furnishing a service, we establish two PE RVUs: Facility and nonfacility. The methodology for calculating PE RVUs is the same for both the facility and nonfacility RVUs, but is applied independently to yield two separate PE RVUs. In calculating the PE RVUs for services furnished in a facility, we do not include resources that would generally not be provided by physicians when furnishing the service. For this reason, the facility PE RVUs are generally lower than the nonfacility PE RVUs.

(4) Services With Technical Components and Professional Components

Diagnostic services are generally comprised of two components: A professional component (PC); and a technical component (TC). The PC and TC may be furnished independently or by different providers, or they may be furnished together as a global service. When services have separately billable PC and TC components, the payment for the global service equals the sum of the payment for the TC and PC. To achieve this, we use a weighted average of the ratio of indirect to direct costs across all the specialties that furnish the global service. TCs and PCs: that is, we apply the same weighted average indirect percentage factor to allocate indirect expenses to the global service, PCs, and TCs for a service. (The direct PE RVUs for the TC and PC sum to the global.)

(5) PE RVU Methodology

For a more detailed description of the PE RVU methodology, we refer readers to the CY 2010 PFS final rule with comment period (74 FR 61745 through 61746). We also direct readers to the file titled “Calculation of PE RVUs under Methodology for Selected Codes” which is available on our website under downloads for the CY 2022 PFS proposed rule at http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html. This file contains a table that illustrates the calculation of PE RVUs as described in this proposed rule for individual codes.

(a) Setup File

First, we create a setup file for the PE methodology. The setup file contains the direct cost inputs, the utilization for each procedure code at the specialty and facility/facility place of service level, and the specialty-specific PE/HR data calculated from the surveys.

(b) Calculate the Direct Cost PE RVUs

Sum the costs of each direct input. Step 1: Sum the direct costs of the inputs for each service.
Step 2: Calculate the aggregate pool of direct PE costs for the current year. We set the aggregate pool of PE costs equal to the product of the rate of the current aggregate PE RVUs to current aggregate work RVUs and the projected aggregate work RVUs.
Step 3: Calculate the aggregate pool of direct PE costs for use in ratesetting. This is the product of the aggregate direct costs for all services from Step 1 and the utilization data for that service. Step 4: Using the results of Step 2 and Step 3, use the CF to calculate a direct PE scaling adjustment to ensure that the aggregate pool of direct PE costs calculated in Step 3 does not vary from the aggregate pool of direct PE costs for the current year. Apply the scaling adjustment to the direct costs for each service (as calculated in Step 1).
Step 5: Convert the results of Step 4 to a RVU scale for each service. To do this, divide the results of Step 4 by the CF. Note that the actual value of the CF used in this calculation does not influence the final direct cost PE RVUs as long as the same CF is used in Step 2 and Step 4. Different CFs would result in different direct PE scaling adjustments, but this has no effect on the final aggregate PE RVUs since changes in the CFs and changes in the associated direct scaling adjustments offset one another.

(c) Create the Indirect Cost PE RVUs

Create indirect allocators. Step 6: Based on the survey data, calculate direct and indirect PE percentages for each physician specialty.
Step 7: Calculate direct and indirect PE percentages at the service level by taking a weighted average of the results of Step 6 for the specialties that furnish the service. Note that for services with TCs and PCs, the direct and indirect percentages for a given service do not vary by the PC, TC, and global service.

We generally use an average of the 3 most recent years of available Medicare claims data to determine the specialty mix assigned to each code. Codes with low Medicare service volume require special attention since billing or enrollment irregularities for a given year can result in significant changes in specialty mix assignment. We finalized a policy in the CY 2018 PFS final rule (82 FR 52092 through 59283) to use the most recent year of claims data to determine which codes are low volume for the coming year (those that have fewer than 100 allowed services in the Medicare claims data). For codes that fall into this category, instead of assigning specialty mix based on the specialties of the practitioners reporting the services in the claims data, we use the expected specialty that we identify on a list developed based on medical review and input from experts.

We decided this list of expected specialty assignments as part of the annual set of data files we make available as part of notice and comment rulemaking and consider recommendations from the RUC and other stakeholders on changes to this list on an annual basis. Services for which the specialty is automatically assigned based on previously finalized policies under our established methodology (for example, “always therapy” services) are unaffected by the list of expected specialty assignments.

We also finalized in the CY 2018 PFS final rule (82 FR 52092 through 59283) a policy to apply these service-level overrides for both PE and MP, rather than one or the other category.

Step 8: Calculate the service level allocators for the indirect PEs based on the percentages calculated in Step 7. The indirect PEs are allocated based on the three components: the direct PE RVUs; the clinical labor PE RVUs; and the work RVUs.

For most services the indirect allocator is: Indirect PE percentage * (direct PE RVUs/direct percentage) + work RVUs.

There are two situations where this formula is modified:
• If the service is a global service (that is, a service with global, professional, and technical components), then the indirect PE allocator is: Indirect percentage (direct PE RVUs/direct percentage) + clinical labor PE RVUs + work RVUs.
• If the clinical labor PE RVUs exceed the work RVUs (and the service is not a global service), then the indirect
allocators is: Indirect PE percentage (direct PE RVUs/direct percentage) +
clinical labor PE RVUs.

(Note: For global services, the indirect PE allocator is based on both the work
RVUs and the clinical labor PE RVUs. We do this to recognize that, for the PC
service, indirect PEs would be allocated using the work RVUs, and for the TC
service, indirect PEs would be allocated using the direct PE RVUs and the
clinical labor PE RVUs. This also allows the global component RVUs to equal the
sum of the PC and TC RVUs.)

For presentation purposes, in the examples in the download file titled
"Calculation of PE RVUs under Methodology for Selected Codes", the
formulas were divided into two parts for
each service.

1. The first part does not vary by
service and is the indirect percentage
(direct PE RVUs/direct percentage).

2. The second part is either the work
RVU, clinical labor PE RVU, or both
depending on whether the service is a
global service and whether the clinical
PE RVUs exceed the work RVUs (as
described earlier in this step).

Step 9: Calculate the current aggregate
pool of indirect PE RVUs by multiplying
the result of step 8 by the average
indirect PE percentage from the survey
data.

Step 10: Calculate an aggregate pool of
indirect PE RVUs for all PFS services by
adding the product of the indirect PE
allocator for a service from Step 8 and the
utilization data for that service.

Step 11: Using the results of Step 9
and Step 10, calculate an indirect PE
adjustment so that the aggregate indirect
allocation does not exceed the available
aggregate indirect PE RVUs and apply it
to indirect allocators calculated in Step
8.

Calculate the indirect practice cost
index.

Step 12: Using the results of Step 11,
calculate aggregate pools of specialty-
specific adjusted indirect PE allocators
for all PFS services for a specialty by
adding the product of the adjusted
indirect PE allocator for each service
and the utilization data for that service.

Step 13: Using the specialty-specific
indirect PE/HR data, calculate specialty-
specific aggregate pools of indirect PE
for all PFS services for that specialty by
adding the product of the indirect PE/
HR for the specialty, the work time for
the service, and the specialty's
utilization for the service across all
services furnished by the specialty.

Step 14: Using the results of Step 12
and Step 13, calculate the specialty-
specific indirect PE scaling factors.

Step 15: Using the results of Step 14,
calculate an indirect practice cost index
at the specialty level by dividing each
specialty-specific indirect scaling factor
by the average indirect scaling factor for
the entire PFS.

Step 16: Calculate the indirect
practice cost index at the service level
to ensure the capture of all indirect
costs. Calculate a weighted average of
the practice cost index values for the
specialties that furnish the service.

(Note: For services with TCs and PCs,
we calculate the indirect practice cost
index across the global service, PCs, and
TCs. Under this method, the indirect
practice cost index for a given service
(for example, echocardiogram) does not
vary by the PC, TC, and global service.)

Step 17: Apply the service level
indirect practice cost index calculated in
Step 16 to the service level adjusted
indirect allocators calculated in Step 11
to get the indirect PE RVUs.

(d) Calculate the Final PE RVUs

Step 18: Add the direct PE RVUs from
Step 5 to the indirect PE RVUs from
Step 17 and apply the final PE budget
neutrality (BN) adjustment. The final PE
BN adjustment is calculated by
comparing the sum of steps 5 and 17 to
the aggregate work RVUs scaled by the
ratio of current aggregate PE and work
RVUs. This adjustment ensures that all
PE RVUs in the PFS account for the fact
that certain specialties are excluded
from the calculation of PE RVUs but
included in maintaining overall PFS
budget neutrality. (See “Specialties
excluded from ratesetting calculation”
later in this final rule.)

Step 19: Apply the phase-in of
significant RVU reductions and its
associated adjustment. Section
1848(c)(7) of the Act specifies that for
services that are not new or revised
codes, if the total RVUs for a service for
a year would otherwise be decreased by
an estimated 20 percent or more as
compared to the total RVUs for the
previous year, the applicable
adjustments in work, PE, and MP RVUs
shall be phased in over a 2-year period.
In implementing the phase-in, we
consider a 19 percent reduction as the
maximum 1-year reduction for any
service not described by a new or
revised code. This approach limits the
year one reduction for the service to the
maximum allowed amount (that is, 19
percent), and then phases in the
remainder of the reduction. To comply
with section 1848(c)(7) of the Act, we
adjust the PE RVUs to ensure that the
total RVUs for all services that are not
new or revised codes decrease by no
more than 19 percent, and then apply a
relativity adjustment to ensure that the
total pool of aggregate PE RVUs remains
relative to the pool of work and MP
RVUs. For a more detailed description
of the methodology for the phase-in of
significant RVU changes, we refer
readers to the CY 2016 PFS final rule
with comment period (80 FR 70927
through 70931).

(e) Setup File Information

• Specialties excluded from
ratesetting calculation: For the purposes of
calculating the PE and MP RVUs, we
exclude certain specialties, such as
certain NPPs paid at a percentage of the
PFS and low-volume specialties, from the
calculation. These specialties are
included for the purposes of calculating
the BN adjustment. They are displayed
in Table 1.
Crosswalk certain low volume physician specialties: Crosswalk the utilization of certain specialties with relatively low PFS utilization to the associated specialties.

Physical therapy utilization: Crosswalk the utilization associated with all physical therapy services to the specialty of physical therapy.

Identify professional and technical services not identified under the usual TC and 26 modifiers: Flag the services that are PC and TC services but do not use TC and 26 modifiers (for example, electrocardiograms). This flag associates the PC and TC with the associated global code for use in creating the indirect PE RVUs. For example, the professional service, CPT code 93010 (Electrocardiogram, routine ECG with at least 12 leads; interpretation and report only), is associated with the global service, CPT code 93000 (Electrocardiogram, routine ECG with at least 12 leads; with interpretation and report).

Payment modifiers: Payment modifiers are accounted for in the creation of the file consistent with current payment policy as implemented in claims processing. For example, services billed with the assistant at surgery modifier are paid 16 percent of the PFS amount for that service; therefore, the utilization file is modified to only account for 16 percent of any service that contains the assistant at surgery modifier. Similarly, for those services to which volume adjustments are made to account for the payment modifiers, time adjustments are applied as well. For time adjustments to surgical services, the intraoperative portion in the work time file is used; where it is not present, the intraoperative percentage from the payment files used by contractors to process Medicare claims is used instead. Where neither is available, we use the payment adjustment ratio to adjust the time accordingly. Table 2 details the manner in which the modifiers are applied.

</table>
We also make adjustments to volume and time that correspond to other payment rules, including special multiple procedure endoscopy rules and multiple procedure payment reductions (MPPRs). We note that section 1848(c)(2)(B)(v) of the Act exempts certain reduced payments for multiple imaging procedures and multiple therapy services from the BN calculation under section 1848(c)(2)(B)(ii)(II) of the Act. These MPPRs are not included in the development of the RVUs.

Beginning in CY 2022, section 1834(v)(1) of the Act requires that we apply a 15 percent payment reduction for outpatient occupational therapy services and outpatient physical therapy services that are provided, in whole or in part, by a physical therapist assistant (PTA) or occupational therapy assistant (OTA). Section 1834(v)(2)(A) of the Act required CMS to establish modifiers to identify these services, which we did in the CY 2019 PFS final rule (83 FR 59654 through 59661), creating the CQ and CO payment modifiers for services provided in whole or in part by PTAs and OTAs, respectively. These payment modifiers are required to be used on claims for services with dates of service beginning January 1, 2020, as specified in the CY 2020 PFS final rule (84 FR 62702 through 62708). We will apply the 15 percent payment reduction to therapy services provided by PTAs (using the CQ modifier) or OTAs (using the CO modifier), as required by statute.

Under sections 1834(k) and 1848 of the Act, payment is made for outpatient therapy services at 80 percent of the lesser of the actual charge or applicable fee schedule amount (the allowed charge). The remaining 20 percent is the beneficiary copayment. For therapy services to which the new discount applies, payment will be made at 85 percent of the 80 percent of allowed charges. Therefore, the volume discount factor for therapy services to which the CQ and CO modifiers apply is: (0.20 + (0.80 * 0.85), which equals 88 percent.

For anesthesia services, we do not apply adjustments to volume since we use the average allowed charge when simulating RVUs; therefore, the RVUs as calculated already reflect the payments as adjusted by modifiers, and no volume adjustments are necessary. However, a time adjustment of 33 percent is made only for medical direction of two to four cases since that is the only situation where a single practitioner is involved with multiple beneficiaries concurrently, so that counting each service without regard to the overlap with other services would overstate the amount of time spent by the practitioner furnishing these services.

- **Work RVUs**: The setup file contains the work RVUs from this final rule.

(6) **Equipment Cost per Minute**

The equipment cost per minute is calculated as:

\[ \frac{1}{\text{(minutes per year} \times \text{usage})} \times \text{price} \times \left(\frac{\text{(interest rate)/(1 - 1/((1 + \text{interest rate})^{(life of equipment)}) + maintenance)}}{}}\right) \]

Where:

- minutes per year = maximum minutes per year if usage were continuous (that is, usage = 1); generally 150,000 minutes.
- usage = variable, see discussion below in this proposed rule.
- price = price of the particular piece of equipment.
- life of equipment = useful life of the particular piece of equipment.
- maintenance = factor for maintenance; 0.05.
- interest rate = variable, see discussion below in this proposed rule.

**Usage**: We currently use an equipment utilization rate assumption of 50 percent for most equipment, with the exception of expensive diagnostic imaging equipment, for which we use a 90 percent assumption as required by section 1848(b)(4)(C) of the Act.

**Useful Life**: In the CY 2005 PFS final rule we stated that we updated the useful life for equipment items primarily based on the AHA’s “Estimated Useful Lives of Depreciable Hospital Assets” guidelines (69 FR 66246). The most recent edition of these guidelines was published in 2018. This reference material provides an estimated useful life for hundreds of different types of equipment, the vast majority of which fall in the range of 5 to 10 years, and none of which are lower than 2 years in duration. We believe that the updated editions of this reference material remain the most accurate source for estimating the useful life of depreciable medical equipment.
In the CY 2021 PFS final rule, we finalized a proposal to treat equipment life durations of less than 1 year as having a duration of 1 year for the purpose of our equipment price per minute formula. In the rare cases where items are replaced every few months, we noted that we believe it is more accurate to treat these items as disposable supplies with a fractional supply quantity as opposed to equipment items with very short equipment life durations. For a more detailed discussion of the methodology associated with very short equipment life durations, we refer readers to the CY 2021 PFS final rule (85 FR 84482 through 84483).

• **Maintenance:** We finalized the 5 percent factor for annual maintenance in the CY 1998 PFS final rule with comment period (62 FR 33164). As we previously stated in the CY 2016 PFS final rule with comment period (80 FR 70897), we do not believe the annual maintenance factor for all equipment is precisely 5 percent, and we concur that the current rate likely understates the true cost of maintaining some equipment. We also noted that we believe it likely overstates the maintenance costs for other equipment. When we solicited comments regarding sources of data containing equipment maintenance rates, commenters were unable to identify an auditable, robust data source that could be used by CMS on a wide scale. We noted that we did not believe voluntary submissions regarding the maintenance costs of individual equipment items would be an appropriate methodology for determining costs. As a result, in the absence of publicly available datasets regarding equipment maintenance costs or another systematic data collection methodology for determining a different maintenance factor, we did not propose a variable maintenance factor for equipment cost per minute pricing as we did not believe that we have sufficient information at present. We noted that we would continue to investigate potential avenues for determining equipment maintenance costs across a broad range of equipment items.

• **Interest Rate:** In the CY 2013 PFS final rule with comment period (77 FR 68902), we updated the interest rates used in developing an equipment cost per minute calculation (see 77 FR 68902 for a thorough discussion of this issue). The interest rate was based on the Small Business Administration (SBA) maximum interest rates for different categories of loan size (equipment cost) and maturity (useful life). The Interest rates are listed in Table 3.

We are not proposing any changes to the equipment interest rates for CY 2022.

3. Changes to Direct PE Inputs for Specific Services

This section focuses on specific PE inputs. The direct PE inputs are included in the CY 2022 direct PE input public use files, which are available on the CMS website under downloads for the CY 2022 PFS proposed rule at [http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html](http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html).

a. Standardization of Clinical Labor Tasks

As we noted in the CY 2015 PFS final rule with comment period (79 FR 67640 through 67641), we continue to make improvements to the direct PE input database to provide the number of clinical labor minutes assigned for each task for every code in the database instead of only including the number of clinical labor minutes for the preservice, service, and post service periods for each code. In addition to increasing the transparency of the information used to set PE RVUs, this level of detail would allow us to compare clinical labor times for activities associated with services across the PFS, which we believe is important to maintaining the relativity of the direct PE inputs. This information would facilitate the identification of the usual numbers of minutes for clinical labor tasks and the identification of exceptions to the usual values. It would also allow for greater transparency and consistency in the assignment of equipment minutes based on clinical labor times. Finally, we believe that the detailed information can be useful in maintaining standard times for particular clinical labor tasks that can be applied consistently to many codes as they are valued over several years, similar in principle to the use of physician preservice time packages. We believe that setting and maintaining such standards would provide greater consistency among codes that share the same clinical labor tasks and could improve relativity of values among codes. For example, as medical practice and technologies change over time, changes in the standards could be updated simultaneously for all codes with the applicable clinical labor tasks, instead of waiting for individual codes to be reviewed.

In the CY 2016 PFS final rule with comment period (80 FR 70901), we solicited comments on the appropriate standard minutes for the clinical labor tasks associated with services that use digital technology. After consideration of comments received, we finalized standard times for clinical labor tasks associated with digital imaging at 2 minutes for “Availability of prior images confirmed”, 2 minutes for “Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protoled by radiologist”, 2 minutes for “Review examination with interpreting MD”, and 1 minute for “Exam documents scanned into PACS” and “Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue.” In the CY 2017 PFS final rule (81 FR 80184 through 80186), we finalized a policy to establish a range of appropriate standard minutes for the clinical labor activity, “Technologist QCs images in PACS, checking for all images, reformat, and dose page.” These standard minutes will be applied to new and revised...
codes that make use of this clinical labor activity when they are reviewed by us for valuation. We finalized a policy to establish 2 minutes as the standard for the simple case, 3 minutes as the standard for the intermediate case, 4 minutes as the standard for the complex case, and 5 minutes as the standard for the highly complex case. These values were based upon a review of the existing minutes assigned for this clinical labor activity; we determined that 2 minutes is the duration for most services and a small number of codes with more complex forms of digital imaging have higher values. We also finalized standard times for a series of clinical labor tasks associated with pathology services in the CY 2016 PFS final rule with comment period (80 FR 70902). We do not believe these activities would be dependent on number of blocks or batch size, and we believe that the finalized standard values accurately reflect the typical time it takes to perform these clinical labor tasks.

In reviewing the RUC-recommended direct PE inputs for CY 2019, we noticed that the 3 minutes of clinical labor time traditionally assigned to the “Prepare room, equipment and supplies” (CA013) clinical labor activity were split into 2 minutes for the “Prepare room, equipment and supplies” activity and 1 minute for the “Confirm order, protocol exam” (CA014) activity. We proposed to maintain the 3 minutes of clinical labor time for the “Prepare room, equipment and supplies” activity and remove the clinical labor time for the “Confirm order, protocol exam” activity wherever we observed this pattern in the RUC-recommended direct PE inputs. Commenters explained in response that when the new version of the PE worksheet introduced the activity codes for clinical labor, there was a need to translate old clinical labor tasks into the new activity codes, and that a prior clinical labor task was split into two of the new clinical labor activity codes: CA007 (Review patient clinical extant information and questionnaire) in the preservice period, and CA014 (Confirm order, protocol exam) in the service period. Commenters stated that the same clinical labor from the old PE worksheet was now divided into the CA007 and CA014 activity codes, with a standard of 1 minute for each activity. We agreed with commenters that we would finalize the RUC-recommended 2 minutes of clinical labor time for the CA007 activity code and 1 minute for the CA014 activity code in situations where this was the case. However, when reviewing the clinical labor for the reviewed codes affected by this issue, we found that several of the codes did not include this old clinical labor task, and we also noted that several of the reviewed codes that contained the CA014 clinical labor activity code did not contain any clinical labor for the CA007 activity. In these situations, we continue to believe that in these cases, the 3 total minutes of clinical staff time would be more accurately described by the CA013 “Prepare room, equipment and supplies” activity code, and we finalized these clinical labor refinements. For additional details, we direct readers to the discussion in the CY 2019 PFS final rule (83 FR 59463 and 59464).

Following the publication of the CY 2020 PFS proposed rule, a commenter expressed concern with the published list of common refinements to equipment time. The commenter stated that these refinements were the formulaic result of the applying refinements to the clinical labor time and did not constitute separate refinements. The commenter requested that CMS no longer include these refinements in the table published each year. In the CY 2020 PFS final rule, we agreed with the commenter that these equipment time refinements did not reflect errors in the equipment recommendations or policy discrepancies with the RUC’s equipment time recommendations. However, we believed that it was important to publish the specific equipment times that we were proposing (or finalizing in the case of the final rule) when they differed from the recommended values due to the effect that these changes can have on the direct costs associated with equipment time. Therefore, we finalized the separation of the equipment time refinements associated with changes in clinical labor into a separate table of refinements. For additional details, we direct readers to the discussion in the CY 2020 PFS final rule (84 FR 62584).

Historically, the RUC has submitted a “PE worksheet” that details the recommended direct PE inputs for our use in developing PE RVUs. The format of the PE worksheet has varied over time and among the medical specialties developing the recommendations. These variations have made it difficult for both the RUC’s development and our review of code values for individual codes. Beginning with its recommendations for CY 2019, the RUC has mandated the use of a new PE worksheet for purposes of their recommendation development process that standardizes the clinical labor tasks and assigns them a clinical labor activity code. We believe the RUC’s use of the new PE worksheet in developing and submitting recommendations will help us to simplify and standardize the hundreds of different clinical labor tasks currently listed in our direct PE database. As we did in previous calendar years, to facilitate rulemaking for CY 2022, we are continuing to display two versions of the Labor Task Detail public use file: one version with the old listing of clinical labor tasks, and one with the same tasks crosswalked to the new listing of clinical labor activity codes. These lists are available on the CMS website under downloads for the CY 2022 PFS proposed rule at http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/Physician FeeSched/PFS-Federal-Regulation-Notices.html.

b. Technical Corrections to Direct PE Input Database and Supporting Files

For CY 2022, we are proposing to address the following:

- Following the publication of the CY 2021 PFS proposed rule, several commenters questioned the proposed RVUs associated with several occupational therapy evaluation procedures (CPT codes 97165 through 97167). Commenters stated that the PE valuation for these codes appeared to be illogical as it was counterintuitive for the PE RVU to go down as the level of complexity increased. Commenters stated that the distribution of code usage has not changed in any manner to justify a reduction in the code values and that all three evaluation codes should reimburse at the same rate. In response to the commenters, we noted that although the three codes in question shared the same work RVU and the same direct PE inputs, they did not share the same specialty distribution in the claims data and therefore would not necessarily receive the same allocation of indirect PE. In the CY 2021 PFS final rule (85 FR 84490), we finalized the implementation of a technical change intended to ensure that these three services received the same allocation of indirect PE. We agreed with commenters that it was important to avoid a potential rank order anomaly in which the simple case for a service was valued higher than the complex case.

After the publication of the CY 2021 PFS final rule, stakeholders stated their appreciation for the technical change made in the final rule to ensure that the indirect PE allocation was the same for all three levels of occupational therapy evaluation codes. However, stakeholders expressed concern that the PE RVUs we finalized for CPT codes...
the PE RVUs we proposed for CY 2021. Stakeholders stated that nothing had occurred in the past year that would account for a reduction to the proposed PE for these codes, especially in a year where the proposed PE increased for the corresponding physical therapy evaluation procedures (CPT codes 97161–97163), and stakeholders questioned whether there had been an error in applying the indirect PE methodology.

We reviewed the indirect PE allocation for CPT codes 97165–97167 in response to the stakeholder inquiry and we do not agree that there was an error in applying the indirect PE methodology. We finalized a technical change in the CY 2021 PFS final rule intended to ensure that these three services received the same allocation of indirect PE, which achieved its desired goal of assigning equivalent indirect PE to these three services. However, by forcing CPT codes 97165–97167 to have the same indirect PE allocation, the indirect PE values for these codes no longer relied on the claims data, which ended up affecting the indirect practice cost index for the wider occupational therapy specialty. Because CPT codes 97165–97167 are high volume services, this resulted in a lower indirect practice cost index for the occupational therapy specialty and a smaller allocation of indirect PE for CY 2021 than initially proposed.

We are addressing this issue for CY 2022 by proposing to assign all claims data associated with CPT codes 97165–97167 to the occupational therapy specialty. This should ensure that CPT codes 97165–97167 would always receive the same indirect PE allocation as well as preventing any fluctuations to the indirect practice cost index for the wider occupational therapy specialty. This proposal is intended to avoid a potential rank order anomaly in which the simple case for a service is valued higher than the complex case. As the utilization for CPT codes 97165–97167 is overwhelmingly identified as performed by occupational therapists, we do not anticipate that assigning all of the claims data for these codes to the occupational therapy specialty will have a noticeable effect on their valuation.

We are soliciting public comments regarding this proposal, and specifically on what commenters suggest as the most appropriate method of assigning indirect PE allocation for these services.

- In the CY 2020 PFS final rule (84 FR 63102 through 63104), we created two new HCPCS G codes, G2082 and G2083, effective January 1, 2020 on an interim final basis for the provision of self-administered esketamine. In the CY 2021 PFS final rule, we finalized a proposal to refine the values for HCPCS codes G2082 and G2083 using a building block methodology that summed the values associated with several codes (85 FR 84641 through 84642). Following the publication of the CY 2021 PFS final rule, stakeholders expressed their concern that the finalized PE RVU had decreased for HCPCS codes G2082 and G2083 as compared to the proposed valuation and as compared to the previous CY 2020 interim final valuation. Stakeholders questioned whether there had been an error in the PE allocation since CMS had finalized increases in the direct PE inputs for the services.

We reviewed the indirect PE allocation for HCPCS codes G2082 and G2083 in response to the stakeholder inquiry and discovered a technical change that was applied in error. Specifically, we inadvertently assigned a different physician specialty than we intended ("All Physicians") to HCPCS codes G2082 and G2083 for indirect PE allocation during validation of these codes in the CY 2020 PFS final rule, and continued that assignment into the CY 2021 PFS proposed rule. This specialty assignment caused the PE value for these services to be higher than anticipated for CY 2020. We intended to revise the assigned physician specialty for these codes to "General Practice" in the CY 2021 PFS final rule; however, we neglected to discuss this change in the course of PFS rulemaking for CY 2021. Since we initially applied this technical change in the CY 2021 PFS final rule without providing an explanation, we issued a correction notice (86 FR 14690) to remove this change from the CY 2021 PFS final rule, and to instead maintain the All Physicians specialty assignment through CY 2021. We apologize for any confusion this may have caused.

For CY 2022, we are proposing to maintain the currently assigned physician specialty for indirect PE allocation for HCPCS codes G2082 and G2083. We are proposing to assign these two services to the All Physicians specialty for indirect PE allocation which will maintain payment consistency with the rates published in the CY 2020 PFS final rule and the CY 2021 PFS proposed rule. Although we had previously intended to assign the General Practice specialty to these codes, stakeholders have provided additional information about these services suggesting that maintaining the All Physicians specialty assignment for these codes will help maintain payment stability and preserve access to this care for beneficiaries. We are soliciting public comments to help us discern which specialty would be the most appropriate to use for indirect PE allocation for HCPCS codes G2082 and G2083. We note that the PE methodology, which relies on the allocation of indirect costs based on the magnitude of direct costs, should appropriately reflect the typical costs for the specialty the commenters suggest. For example, we do not believe it would be appropriate to assign the Psychiatry specialty for these services given that HCPCS codes G2082 and G2083 include the high direct costs associated with esketamine supplies. The Psychiatry specialty is an outlier compared to most other specialties, allocating indirect costs at a 15:1 ratio based on direct costs because psychiatry services typically have very low direct costs. Assignment of most other specialties would result in allocation of direct costs at roughly a 3:1 ratio. We request that commenters explain in their comments how the indirect PE allocation would affect the payment for these services. Specifically, to ensure appropriate payment for HCPCS codes G2082 and G2083, we would like to get a better understanding of the indirect costs associated with these services, relative to other services furnished by the suggested specialty.

- A stakeholder contacted us regarding a potential error involving the intraoperative work time for CPT code 35860 (Exploration for postoperative hemorrhage, thrombosis or infection; extremity). The stakeholder stated that the RUC recommended an intraoperative work time of 90 minutes for this code when it was last reviewed in the CY 2012 PFS final rule and we finalized the work time without refinement at 60 minutes (76 FR 73131). The stakeholder requested that the intraoperative work time for CPT code 35860 should be updated to 90 minutes.

We reviewed the intraoperative work time for CPT code 35860 and found that the RUC inadvertently recommended a time of 60 minutes for the code, which we proposed and finalized without comment in rulemaking for the CY 2012 PFS. As a result, we do not believe that this is a technical error on our part. However, since the stakeholder has clarified that the RUC intended to recommend 90 minutes of intraoperative work time for CPT code 35860 based on the surveyed median time, we are proposing to update the intraoperative work time to 90 minutes to match the survey results.
c. Updates to Prices for Existing Direct PE Inputs

In the CY 2011 PFS final rule with comment period (75 FR 73205), we finalized a process to act on public requests to update equipment and supply price and equipment useful life inputs through annual rulemaking, beginning with the CY 2012 PFS proposed rule. For CY 2022, we are proposing to update the price of six supplies and two equipment items as a response to the public submission of invoices. Since this is the final year of the supply and equipment pricing update, the new pricing for each of these supply and equipment items will take effect for CY 2022 as there are no remaining years of the transition. The six supply and equipment items with proposed updated prices are listed in the valuation of specific codes section of the preamble under Table 16: CY 2022 Invoices Received for Existing Direct PE Inputs.

(1) Market-Based Supply and Equipment Pricing Update

Section 220(a) of the Protecting Access to Medicare Act of 2014 (PAMA) (Pub. L. 113–93, April 1, 2014) provides that the Secretary may collect or obtain information from any eligible professional or any other source on the resources directly or indirectly related to furnishing services for which payment is made under the PFS, and that such information may be used in the determination of relative values for services under the PFS. Such information may include the time involved in furnishing services; the amounts, types and prices of PE inputs; overhead and accounting information for practices of physicians and other suppliers, and any other elements that would improve the valuation of services under the PFS.

As part of our authority under section 1848(c)(2)(M) of the Act, we initiated a market research contract with StrategyGen to conduct an in-depth and robust market research study to update the PFS direct PE inputs (DPEI) for supply and equipment pricing for CY 2019. These supply and equipment prices were last systematically developed in 2004–2005. StrategyGen submitted a report with updated pricing recommendations for approximately 1300 supplies and 750 equipment items currently used as direct PE inputs. This report is available as a public use file displayed on the CMS website under downloads for the CY 2019 PFS final rule at http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.

The StrategyGen team of researchers, attorneys, physicians, and health policy experts conducted a market research study of the supply and equipment items currently used in the PFS direct PE input database. Resources and methodologies included field surveys, aggregate databases, vendor resources, market scans, market analysis, physician substantiation, and statistical analysis to estimate and validate current prices for medical equipment and medical supplies. StrategyGen conducted secondary market research on each of the 2,072 DPEI medical equipment and supply items that CMS identified from the current DPEI. The primary and secondary resources StrategyGen used to gather price data and other information were:

- Telephone surveys with vendors for top priority items (Vendor Survey).
- Physician panel validation of market research results, prioritized by total spending (Physician Panel).
- The General Services Administration system (GSA).
- An aggregate health system buyers database with discounted prices (Buyers).
- Publicly available vendor resources, that is, Amazon Business, Cardinal Health (Vendors).

The Federal Register, current DPEI data, historical proposed and final rules prior to CY 2018, and other resources; that is, AMA RUC reports (References). StrategyGen prioritized the equipment and supply research based on current share of PE RVUs attributable by item provided by CMS. StrategyGen developed the preliminary Recommended Price (RP) methodology based on the following rules in hierarchical order considering both data representativeness and reliability.

(1) If the market share, as well as the sample size, for the top three commercial products were available, the weighted average price (weighted by percent market share) was the reported RP. Conversely, as a weighted average of market share, represents a more robust estimate for each piece of equipment and a more precise reference for the RP.

(2) If no data were available for commercial products, the current CMS prices were used as the RP.

GSA prices were not used to calculate the StrategyGen recommended prices, due to our concern that the GSA system curtails the number and type of suppliers whose products may be accessed on the GSA Advantage website, and that the GSA prices may often be lower than prices that are available to non-governmental purchasers. After reviewing the StrategyGen report, we proposed to adopt the updated direct PE input prices for supplies and equipment as recommended by StrategyGen.

StrategyGen found that despite technological advancements, the average commercial price for medical equipment and supplies has remained relatively consistent with the current CMS price. Specifically, preliminary data indicated that there was no statistically significant difference between the estimated commercial prices and the current CMS prices for both equipment and supplies. This cumulative stable pricing for medical equipment and supplies appears similar to the pricing impacts of non-medical technology advancements where some historically high-priced equipment (that is, desktop PCs) has been increasingly substituted with current technology (that is, laptops and tablets) at similar or lower price points. However, while there were no statistically significant differences in pricing at the aggregate level, medical specialties would experience increases or decreases in their Medicare payments if we were to adopt the pricing updates recommended by StrategyGen. At the service level, there may be large shifts in PE RVUs for individual codes that happened to contain supplies and/or equipment with major changes in pricing, although we note that codes with a sizable PE RVU decrease would be limited by the requirement to phase in significant reductions in RVUs as required by section 1848(c)(7) of the Act. The phase-in requirement limits the maximum RVU reduction for codes that are not new or revised to 19 percent in any individual calendar year.

We believe that it is important to make use of the most current information available for supply and equipment pricing instead of continuing to rely on pricing information that is more than a decade old. Given the potentially significant changes in payment that would occur, both for specific services and more broadly at the specialty level, in the CY 2019 PFS proposed rule we proposed to phase in our use of the new direct PE input pricing over a 4-year period using a 25/75 percent (CY 2019), 50/50 percent (CY 2020), 75/25 percent (CY 2021), and 100/0 percent (CY 2022) split between new and old pricing. This approach is consistent with how we have previously incorporated significant new data into the calculation of PE RVUs, such as the 4-year transition to professionalized in CY 2007 PFS final rule with comment period when changing to the “bottom-
up” PE methodology (71 FR 69641). This transition period will not only ease the shift to the updated supply and equipment pricing, but will also allow interested parties an opportunity to review and respond to the new pricing information associated with their services.

We proposed to implement this phase-in over 4 years so that supply and equipment values transition smoothly from the prices we currently include to the finalized prices. We proposed to implement this pricing transition such that one quarter of the difference between the current price and the fully phased-in price is implemented for CY 2019, one third of the difference between the CY 2019 price and the final price is implemented for CY 2020, and one half of the difference between the CY 2020 price and the final price is implemented for CY 2021, with the new direct PE prices fully implemented for CY 2022. An example of the transition from the current to the fully-implemented new pricing is provided in Table 4.

For new supply and equipment codes for which we establish prices during the transition years (CYs 2019, 2020 and 2021) based on the public submission of invoices, we proposed to fully implement those prices with no transition since there are no current prices for these supply and equipment items. These new supply and equipment codes would immediately be priced at their newly established values. We also proposed that, for existing supply and equipment codes, when we establish prices based on invoices that are submitted as part of a revaluation or comprehensive review of a code or code family, they will be fully implemented for the year they are adopted without being phased in over the 4-year pricing transition. The formal review process for a HCPCS code includes a review of pricing of the supplies and equipment included in the code. When we find that the price on the submitted invoice is typical for the item in question, we believe it would be appropriate to finalize the new pricing immediately along with any other revisions we adopt for the code valuation.

For existing supply and equipment codes that are not part of a comprehensive review and valuation of a code family and for which we establish prices based on invoices submitted by the public, we proposed to implement the established invoice price as the updated price and to phase in the new price over the remaining years of the proposed 4-year pricing transition. During the proposed transition period, where price changes for supplies and equipment are adopted without a formal review of the HCPCS codes that include them (as is the case for the many updated prices we proposed to phase in over the 4-year transition period), we believe it is important to include them in the remaining transition toward the updated price. We also proposed to phase in any updated pricing we establish during the 4-year transition period for very commonly used supplies and equipment that are included in 100 or more codes, such as sterile gloves (SB024) or exam tables (EF023), even if invoices are provided as part of the informal review of a code family. We will implement the new prices for any such supplies and equipment over the remaining years of the proposed 4-year transition period. Our proposal was intended to minimize any potential disruptive effects during the proposed transition period that could be caused by other sudden shifts in RVUs due to the high number of services that make use of these very common supplies and equipment items (meaning that these items are included in 100 or more codes).

We believed that implementing the proposed updated prices with a 4-year phase-in would improve payment accuracy, while maintaining stability and allowing stakeholders the opportunity to address potential concerns about changes in payment for particular items. Updating the pricing of direct PE inputs for supplies and equipment over a longer timeframe will allow more opportunities for public comment and submission of additional, applicable data. We welcomed feedback from stakeholders on the proposed updated supply and equipment pricing, including the submission of additional invoices for consideration.

We received many comments regarding the market-based supply and equipment pricing proposal following the publication of the CY 2019 PFS proposed rule. For a full discussion of these comments, we direct readers to the CY 2019 PFS final rule (83 FR 59475 through 59480). In each instance in which a commenter raised questions about the accuracy of a supply or equipment code’s recommended price, the StrategyGen contractor conducted further research on the item and its price with special attention to ensuring that the recommended price was based on the correct item in question and the clarified unit of measure. Based on the commenters’ requests, the StrategyGen contractor conducted an extensive examination of the pricing of any supply or equipment items that any commenter identified as requiring additional review. Invoices submitted by multiple commenters were greatly appreciated and ensured that medical equipment and supplies were re-examined and clarified. Multiple researchers reviewed these specified supply and equipment codes for accuracy and proper pricing. In most cases, the contractor also reached out to a team of nurses and their physician panel to further validate the accuracy of the data and pricing information. In some cases, the pricing for individual items needed further clarification due to a lack of information or due to significant variation in packaged items. After consideration of the comments and this additional price research, we updated the recommended prices for approximately 70 supply and equipment codes identified by the commenters. Table 9 in the CY 2019 PFS final rule lists the supply and equipment codes with price changes based on feedback from the commenters and the resulting additional research into pricing (83 FR 59479 through 59480).

After consideration of the public comments, we finalized our proposals.
associated with the market research study to update the PFS direct PE inputs for supply and equipment pricing. We continue to believe that implementing the updated prices with a 4-year phase-in will improve payment accuracy, while maintaining stability and allowing stakeholders the opportunity to address potential concerns about changes in payment for particular items. We continue to welcome feedback from stakeholders on the updated supply and equipment pricing, including the submission of additional invoices for consideration.

For CY 2022, we received invoice submissions from stakeholders for approximately half a dozen supply and equipment codes as part of the fourth year of the market-based supply and equipment pricing update. We used these submitted invoices in many cases to supplement the pricing originally proposed for the CY 2019 PFS rule cycle. We reviewed the invoices, as well as our own data for the relevant supply/equipment codes to make sure the item in the invoice was representative of the supply/equipment item in question and aligned with past research. Based on this review, we are proposing to update the prices of six supply items listed in the valuation of specific codes section of the preamble under Table 16: CY 2022 Invoices Received for Existing Direct PE Inputs. Since this is the final year of the supply and equipment pricing update, the new pricing for each of these supply and equipment items would take effect immediately for CY 2022.

The proposed prices for the supply and equipment items listed in Table 16 of CY 2022 were generally calculated following our standard methodology of averaging together the prices on the submitted invoices. In the case of the Liquid coverslip (Ventana 650–010) (SL479) supply, we are proposing a price of $0.051 based on the median invoice due to the presence of an outlier invoice that substantially increased the pricing when using an average. We believe that the proposed price of $0.051 would be more typical for the SL479 supply based on the pricing information contained on the other submitted invoices. We also received several invoices for the 3C patch system (SD343) supply; however, since we established a price of $625.00 for this supply in last year’s CY 2021 PFS final rule and the submitted invoices had an average price of $612.50, we are not proposing to update the price. We believe that the submitted invoices confirm that the current pricing of $625.00 is typical for the SD343 supply.

(2) Invoice Submission

The full list of updated supply and equipment pricing as implemented over the 4-year transition period will be made available as a public use file displayed on the CMS website under downloads for the CY 2022 PFS proposed rule at http://www.cms.gov/Medicare/MedicareFee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.

We routinely accept public submission of invoices as part of our process for developing payment rates for new, revised, and potentially misvalued codes. Often these invoices are submitted in conjunction with the RUC-recommended values for the codes. To be included in a given year’s proposed rule, we generally need to receive invoices by the same February 10th deadline we noted for consideration of RUC recommendations. However, we will consider invoices submitted as public comments during the comment period following the publication of the PFS proposed rule, and would consider any invoices received after February 10th or outside of the public comment process as part of our established annual process for requests to update supply and equipment prices. Stakeholders are encouraged to submit invoices with their public comments or, if outside the notice and comment rulemaking process, via email at PE_Price_Input_Update@cms.hhs.gov.

(3) Autologous Platelet-Rich Plasma (HCPCS Code G0460) Supply Inputs

We did not make any proposals associated with HCPCS code G0460 (Autologous platelet rich plasma for chronic wounds/ulcers, including phlebotomy, centrifugation, and all other preparatory procedures, administration and dressings, per treatment) in the CY 2021 PFS proposed rule. Following publication of the rule, stakeholders contacted CMS regarding the creation of a new 3C patch system supply, which is topically applied for the management of exuding cutaneous wounds, such as leg ulcers, pressure ulcers, and diabetic ulcers and mechanically or surgically-debrided wounds. Stakeholders first sought clarification on how CMS calculated the underlying nonfacility PE RVUs for HCPCS code G0460. Stakeholders also stated that autologous platelet rich plasma administration procedures furnished in clinical trials (including the new 3C patch system) are reported using HCPCS code G0460 and requested that CMS revalue the service to reflect the PEVs associated with the new patch system supply. The stakeholders stated that the use of the new 3C patch system will represent the typical case for HCPCS code G0460, and suggested that, therefore, the cost inputs for this supply should be used to establish the RVUs for this code, as the current PFS payment rate is substantially less than the amount it costs to furnish the 3C patch.

We want to clarify that the direct PE inputs for HCPCS code G0460 increased for CY 2021 as a result of the ongoing market-based supply and equipment pricing update. However, there was also a minor decrease in the indirect PE allocation associated with this service for CY 2021, with the net result that the proposed PE RVU coincidently ended up remaining the same as in the previous year. We also clarify that HCPCS code G0460 is not included in the Anticipated Specialty Assignment for Low Volume Services list, and therefore, was unaffected by low utilization in the claims data. In addition, as a contractor priced service, HCPCS code G0460 is unaffected by inclusion or exclusion from this list.

We share the concerns of the stakeholders that patient access to the 3C patch could be materially impacted if CMS maintains the current PE RVUs for HCPCS G0460. In the CY 2021 PFS final rule, we established contractor pricing for HCPCS code G0460 for CY 2021. We believe that the use of contractor pricing again for CY 2022 will allow us additional time to consider the most appropriate resource inputs and PE RVUs for HCPCS code G0460. We also added the 3C patch system to our supply database under supply code SD343 at a price of $625.00 based on an average of the submitted invoices. We are proposing to maintain contractor pricing for CY 2022 for HCPCS code G0460 as we do not currently have sufficient information to establish national pricing. It remains unclear to us what the typical supply inputs would be for HCPCS code G0460 and whether they would include the use of the new 3C patch system. We believe that it would be more appropriate to maintain contractor pricing for the service, which will allow for more flexibility in pricing. We are soliciting any additional information that commenters can supply that CMS should consider to establish national payment for HCPCS code G0460.

d. Clinical Labor Pricing Update

Section 220(a) of the PAMA provides that the Secretary may collect or obtain information from any eligible professional or any other source on the resources directly or indirectly related to furnishing services for which payment is made under the PFS.
that such information may be used in the determination of relative values for services under the PFS. Such information may include the time involved in furnishing services; the amounts, types and prices of PE inputs; overhead and accounting information for practices of physicians and other suppliers, and any other elements that would improve the valuation of services under the PFS.

Since 2019, we have been updating the supply and equipment prices used for PE as part of a market-based pricing transition; CY 2022 will be the final year of this 4-year transition. We initiated a market research contract with StrategyGen to conduct an in-depth and robust market research study to update the supply and equipment pricing for CY 2019, and we finalized a policy in CY 2019 to phase in the new pricing over a period of 4 years. However, we did not propose to update the clinical labor pricing, and the pricing for clinical labor has remained unchanged during this pricing transition. Clinical labor rates were last updated for CY 2002 using Bureau of Labor Statistics (BLS) data and other supplementary sources where BLS data were not available; we refer readers to the full discussion in the CY 2002 PFS final rule (66 FR 55257 through 55262).

Stakeholders have raised concerns that the long delay since clinical labor pricing was last updated has created a significant disparity between CMS’ clinical wage data and the market average for clinical labor. In recent years, a number of stakeholders have suggested that certain wage rates are inadequate because they do not reflect current labor rate information. Some stakeholders have also stated that updating the supply and equipment pricing without updating the clinical labor pricing could create distortions in the allocation of direct PE. Since the pool of aggregated direct PE inputs is budget neutral, if these rates are not routinely updated, clinical labor may become undervalued over time relative to equipment and supplies, especially since the supply and equipment prices are in the process of being updated. There has been considerable stakeholder interest in updating the clinical labor rates, and when we solicited comment on this topic in past rules, such as in the CY 2019 PFS final rule (83 FR 59480), stakeholders supported the idea.

Therefore, we are proposing to update the clinical labor pricing for CY 2022, in conjunction with the final year of the supply and equipment pricing update. We believe it is important to update the clinical labor pricing to maintain relativity with the recent supply and equipment pricing updates. We are proposing to use the methodology outlined in the CY 2002 PFS final rule (66 FR 55257), which draws primarily from BLS wage data, to calculate updated clinical labor pricing. As we stated in the CY 2002 PFS final rule, the BLS’ reputation for publishing valid estimates that are nationally representative led to the choice to use the BLS data as the main source. We believe that the BLS wage data continues to be the most accurate source to use as a basis for clinical labor pricing and this data will appropriately reflect changes in clinical labor resource inputs for purposes of setting PE RVUs under the PFS. We used the most current BLS survey data (2019) as the main source of wage data for this proposal.

We recognize that the BLS survey of wage data does not cover all the staff types contained in our direct PE database. Therefore, we crosswalked or extrapolated the wages for several staff types using supplementary data sources for verification whenever possible. In situations where the price wages of clinical labor types were not referenced in the BLS data, we have used the national salary data from the Salary Expert, an online project of the Economic Research Institute that surveys national and local salary ranges and averages for thousands of job titles using mainly government sources. (A detailed explanation of the methodology used by Salary Expert to estimate specific job salaries can be found at www.salaryexpert.com). We previously used Salary Expert information as the primary backup source of wage data during the last update of clinical labor pricing in CY 2002. If we did not have direct BLS wage data available for a clinical labor type, we used the wage data from Salary Expert as a reference for pricing, then crosswalked these clinical labor types to a proxy BLS labor category rate that most closely matched the reference wage data, similar to the crosswalks used in our PE/HR allocation. For example, there is no direct BLS wage data for the Mammography Technologist (L043) clinical labor type; we used the wage data from Salary Expert as a reference and identified the BLS wage data for Respiratory Therapists as the best proxy category. We calculated rates for the “blend” clinical labor categories by combining the rates for each labor type in the blend and then dividing by the total number of labor types in the blend.

As in the CY 2002 clinical labor pricing update, the proposed cost per minute for each clinical staff type was derived by dividing the average hourly wage rate by 60 to arrive at the per minute cost. In cases where an hourly wage rate was not available for a clinical staff type, the proposed cost per minute for the clinical staff type was derived by dividing the annual salary (converted to 2021 dollars using the Medicare Economic Index) by the number of hours in a typical work week to arrive at the hourly wage rate and then again by 60 to arrive at the per minute cost. To account for the employers’ cost of providing fringe benefits, such as sick leave, we used the same benefits multiplier of 1.366 as employed in CY 2002. As an example of this process, for the Physical Therapy Aide (L023A) clinical labor type, the BLS data reflected an average hourly wage rate of $14.03, which we multiplied by the 1.366 benefits modifier and then divided by 60 minutes to arrive at the proposed per-minute rate of $0.32.

Table 5 lists our proposed updates to the clinical labor prices. The BLS occupational code used as a source of wage data is listed for each clinical labor type; for the “blend” clinical labor types, this may include multiple BLS occupational codes and other clinical labor types which were calculated separately and then averaged together. Clinical labor types without a direct BLS labor category where we are employing a proxy BLS wage rate are indicated with an asterisk in Table 5.
We are proposing to use the 75th percentile of the average wage data for the Medical Physicist (L152A) clinical labor type because we believe this level...

would most closely fit with the historic wage data for this clinical labor type. A Medical Physicist is a specific type of physicist, and the available BLS wage data describes the more general category of physicist which is paid at a lower rate. In this specific case, the 75th percentile more accurately describes the clinical labor type in question based on how it has historically been paid. We are also proposing to maintain the current clinical labor pricing for the Behavioral Health Care Manager (L057B) clinical labor type rather than update it. Although the BLS data reflected a decreased clinical labor rate for the Behavioral Health Care Manager labor type, we do not believe that the typical wages have decreased for this clinical labor type given that every other clinical labor type has increased over the past 5 years since the Behavioral Health Care Manager clinical labor type was created. The Behavioral Health Care Manager labor type was initially established in the CY 2017 PFS final rule (81 FR 80350). It seems more likely that we misidentified the proper BLS category for this clinical labor type than that wages have decreased since 2017. We believe that the clinical labor rate for the Behavioral Health Care Manager should be held constant for CY 2022 pending additional public feedback.

We are soliciting comments on the proposed updated clinical labor pricing. We are particularly interested in additional wage data for the clinical labor types for which we lacked direct BLS wage data and made use of proxy labor categories for pricing. We understand that the clinical labor undertaken by, for example, a Histotechnologist (L037B) is not the same as the clinical labor provided by the Health Information Technologist category of BLS wage data that we employed as a proxy for pricing. Although these occupations are not directly analogous to each other in terms of the work they do, we nonetheless believe that the proposed crosswalks are appropriate in terms of the resulting hourly wage data. We appreciate any additional information that commenters can supply both in terms of direct wage data, as well as identifying the most accurate types of BLS categories that could be used as proxies to update pricing for clinical labor types that lack direct BLS wage data. We isolated the anticipated effects of the clinical labor pricing update on specialty payment impacts by comparing the proposed CY 2022 PFS rates with and without the clinical labor pricing updates in place.

</tbody>
</table>
The potential effects of the clinical labor pricing update on specialty payment impacts are largely driven by the share that labor costs represent of the direct PE inputs for each specialty. Specialties with a substantially lower or higher than average share of direct costs attributable to labor would experience significant declines or increases, respectively, if this proposal is finalized. For example, the Family Practice specialty has a higher share of direct costs associated with clinical labor, and payments to services comprising the specialty would be expected to increase as a result of this clinical labor pricing update. In contrast, Diagnostic Testing Facilities have a lower share of direct costs that are associated with clinical labor, and payments to services comprising the specialty would be expected to decrease. Other specialty-level payment impacts for the proposed clinical labor pricing changes are driven by changes in wage rates for a clinical labor category that affects a given specialty more than average. One such example would be the proposed increase of 11 percent for Oncology nurses as opposed to the average increase for nurses of 63 percent. We emphasize that these are not the projected impacts by specialty of all the policies we are proposing in this proposed rule for CY 2022, only the anticipated effect of the isolated clinical labor pricing update, should this clinical labor pricing update be finalized as proposed.

When updates to our payment methodology based on new data produce significant shifts in payment, we often consider whether it would be appropriate to implement the updates through a phased transition across several calendar years. For example, we utilized a 4-year transition for the market-based supply and equipment pricing update concluding in CY 2022. We are considering the use of a similar 4-year transition to implement the clinical labor pricing update. A multi-year transition could smooth out the increases and decreases in payment caused by the pricing update for affected stakeholders, promoting payment stability. However, a phased transition would delay the full implementation of updated pricing and continue to rely in part on outdated data for clinical labor pricing. We discuss a potential 4-year transition for the clinical labor pricing update as an alternative considered in the Regulatory Impact Analysis (section VII.I) of this rule.

e. Proposal To Establish Values for Remote Retinal Imaging (CPT Code 92229), Comment Solicitation for Fractional Flow Reserve Derived From Computed Tomography (CPT Code 0503T), and Comment Solicitation for Codes Involving Innovative Technology

Rapid advances in innovative technology are having a profound effect on every facet of the economy, including in the delivery of health care. Emerging and evolving technologies are introducing advances in treatment options that have the potential to increase access to care for Medicare beneficiaries, improve outcomes, and reduce overall costs to the program. While new services have emerged over the last several years, it is possible that the COVID–19 public health emergency (PHE) could be accelerating the supply and demand for these innovations. Emerging and evolving technologies could be useful tools for improving disparities in care that have been exacerbated by the PHE. Some of these new applications have codes for which innovative technology is substituting for and/or augmenting physician work. For example, the CPT Editorial Panel created CPT code 92229 (Imaging of retina for detection or monitoring of disease; point-of-care automated analysis and report, unilateral or bilateral), a diagnostic test for diabetic retinopathy that uses a software algorithm, and the RUC provided valuation recommendations which included a retinal camera and an analysis fee for remote imaging. In the CY 2021 PFS final rule (85 FR 84629 through 84630), we considered CPT code 92229 to be a diagnostic service under the PFS, contractor-priced it, and solicited feedback to help us better understand the resource costs for services involving the use of innovative technologies such as software algorithms and artificial intelligence (AI).

In our discussion of CPT code 92229 in the CY 2021 PFS final rule (85 FR 84629 through 84630), we wrote that as the data used in our PE methodology have aged, and more services have begun to include innovative technology such as software algorithms and AI, these innovative applications are not well accounted for in our PE methodology. As described earlier in this section, PE resources involved in furnishing services are characterized as either direct or indirect costs. Direct costs of the PE resources involved in furnishing a service are estimated for each code and include clinical labor, medical supplies, and medical equipment. Indirect costs include administrative labor, office expenses, and all other expenses. Indirect PE is allocated to each service based on physician work, direct costs, and a specialty-specific indirect percentage. The source of the specialty specific indirect percentage was the Physician Practice Information Survey (PPIS), last administered in 2007 and 2008, when emerging technologies that rely primarily on software, licensing, and analysis fees, with minimal costs in equipment and hardware may not have been typical. Thus, these costs are not well accounted for in the PE methodology.

Consistent with our PE methodology and as we have stated in past PFS rulemaking (83 FR 59557), we have considered most computer software and associated analysis and licensing fees to be indirect costs tied to costs for associated hardware that is considered to be medical equipment. In the case of CPT code 92229, the hardware is a retinal camera used for remote imaging. Given that indirect costs are based on physician work, direct costs, and

specialty-specific indirect percentages that can include high-cost equipment, our concern is that if we were to consider an analysis fee to be a supply cost, as was recommended by the RUC, it is possible that we would inadvertently allocate too many indirect costs for a supply item that may not require additional indirect expenses. Unlike a piece of equipment, such as the retinal camera, an analysis fee for software does not require physical space in an office or administrative staff hours to maintain it.

However, increasingly, stakeholders have routinely expressed concerns with our policy to consider analysis fees as indirect costs, especially for evolving technologies that rely primarily on these fees with minimal costs in equipment or hardware. In comments in the CY 2021 PFS final rule (85 FR 84629 through 84630) responding to our proposal to price the analysis fee for remote imaging as an indirect cost, stakeholders stated that there would be no service if the software was not used. There are two aspects that distinguish CPT code 92229 from other services. First, most of the RUC’s recommended resource costs for CPT code 92229 were for the analysis fee, rather than high-cost equipment or other supplies that require commensurate indirect costs to accommodate for space or administrative labor. Second, the innovative technology incorporated into the service is a software algorithm, which interprets data collected during the test, either augmenting the work of the physician performing the test, or in some cases replacing at least some work that a physician would typically furnish. In general, it is possible that physician work time and intensity of furnishing care to patients could be affected as more services that involve innovative technologies such as software algorithms or AI become available.

We finalized a policy to establish contractor pricing for CPT code 92229 (85 FR 84629 through 84630) because analysis fees for software algorithms and AI applications are not well accounted for our PE methodology, and to recognize that practitioners do incur resource costs for purchase and ongoing use of the software. We stated that we would continue to seek out new data sources and have ongoing conversations with stakeholders while also considering other approaches to reflect overall resource costs for these technologies in our PE methodology.

As we described in the CY 2021 PFS final rule (85 FR 84629 through 84630), the RAND Corporation is currently studying potential improvements to CMS PE allocation methodology and the data that underlie it. RAND has found that the PPIS data last collected in 2007–2008 may no longer reflect the resource allocation, staffing arrangements, and cost structures that describe practitioners’ resource requirements in furnishing services to Medicare beneficiaries, and consequently may not accurately capture the indirect PE resources required to furnish services to Medicare FFPS beneficiaries. Our experience with the challenge of accurately accounting for resource costs for innovative and emerging technologies such as ongoing service-specific software costs that are included in CPT code 92229 is another reason we continue to be interested in potentially refining the PE methodology and updating the data used to establish RVUs and payment rates under the PFS. We commonly employ a crosswalk to recognize resource costs when we lack the inputs that we would need to calculate work, PE, and/or malpractice RVUs for a service otherwise. When we use a crosswalk to value a service, we substitute the established RVUs for other services with similar resource costs in the physician office setting to set RVUs and the national payment rates for that particular service.

For CY 2022, we are proposing to establish values for CPT code 92229 using our crosswalk approach, and thus this service would no longer be contractor-priced. We continue to believe that the software algorithm present in the analysis fee for CPT code 92229 is not well accounted for in our PE methodology; however, we recognize that practitioners are incurring resource costs for purchase of the software and its ongoing use. We are proposing to use a crosswalk that reflects the overall relative resource costs for this service while we continue to consider potentially refining the PE methodology and updating the data we use to establish PE RVUs under the PFS. Specifically, we are proposing a crosswalk to CPT code 92325 (Modification of contact lens (separate procedure), with medical supervision of adaptation), a PE-only code used for the eye, as we believe it reflects overall resource costs for CPT code 92229 in the physician office setting. We recognize that the services described by CPT code 92325 are not the same as the services in CPT code 92229; however, we believe that the total resource costs would be similar across these two codes. We believe that crosswalking the RVUs for CPT code 92229 to a code with similar resource costs allows CMS to recognize that practitioners are incurring resource costs for the purchase and ongoing use of the software employed in CPT code 92229, which would not typically be considered direct PE under our current methodology. We are also soliciting comments on our proposal to crosswalk CPT code 92229 to CPT code 92325, and whether other codes would provide a more appropriate crosswalk in terms of resource costs. In addition, as discussed in section I.E of this proposed rule, we are proposing to use our crosswalk approach for CPT code 77X01 (Trabecular bone score (TBS), structural condition of the bone microarchitecture; using dual X-ray absorptiometry (DXA) or other imaging data on gray-scale variogram, calculation, with interpretation and report on fracture risk) and CPT code 77X03 (Trabecular bone score (TBS), structural condition of the bone microarchitecture; using dual X-ray absorptiometry (DXA) or other imaging data on gray-scale variogram, calculation, with interpretation and report on fracture risk, technical calculation only).

We are aware of other services that use similar innovative technologies to those used for the diagnostic test for diabetic retinopathy and trabecular bone score, and that those technologies also are not well-accounted for in our PE methodology. For CY 2018, the AMA CPT Editorial Panel established four new Category III CPT codes for fractional flow reserve derived from computed tomography (FFRCT): CPT code 0501T (Noninvasive estimated coronary fractional flow reserve (FFR) derived from coronary computed tomography angiography data using computation fluid dynamics physiologic simulation software analysis of functional data to assess the severity of coronary artery disease; data preparation and transmission, analysis of fluid dynamics and simulated maximal coronary hyperemia, generation of estimated FFR model, with anatomical data review in comparison with estimated FFR model to reconcile discordant data, interpretation and report) CPT code 0502T (Noninvasive estimated coronary fractional flow reserve (FFR) derived from coronary computed tomography angiography data using computation fluid dynamics physiologic simulation software analysis of functional data to assess the severity of coronary artery disease; data preparation and transmission); CPT code 0503T (Noninvasive estimated coronary fractional flow reserve (FFR) derived from coronary computed tomography angiography data using computation fluid dynamics physiologic simulation software analysis of functional data to assess the severity of coronary artery disease; data preparation and transmission, analysis of fluid dynamics and simulated maximal coronary hyperemia, generation of estimated FFR model, with anatomical data review in comparison with estimated FFR model to reconcile discordant data, interpretation and report) CPT code 0504T (Noninvasive estimated coronary fractional flow reserve (FFR) derived from coronary computed tomography angiography data using computation fluid dynamics physiologic simulation software analysis of functional data to assess the severity of coronary artery disease; data preparation and transmission, analysis of fluid dynamics and simulated maximal coronary hyperemia, generation of estimated FFR model, with anatomical data review in comparison with estimated FFR model to reconcile discordant data, interpretation and report).
simulation software analysis of functional data to assess the severity of coronary artery disease; analysis of fluid dynamics and simulated maximal coronary hyperemia, and generation of estimated FFR model); and CPT code 0504T (Noninvasive estimated coronary fractional flow reserve (FFR) derived from coronary computed tomography angiography data using computation fluid dynamics physiologic simulation software analysis of functional data to assess the severity of coronary artery disease; anatomical data review in comparison with estimated FFR model to reconcile discordant data, interpretation and report). FFRCT is a noninvasive diagnostic service that allows physicians to measure coronary artery disease in a patient through coronary CT scans. It uses a proprietary data analysis process performed at a central facility to develop a three-dimensional image of a patient’s coronary arteries, which allows physicians to identify the fractional flow reserve to assess whether or not patients should undergo further invasive testing or treatment (typically, a coronary angiogram). We understand that FFRCT can show through noninvasive imaging whether a beneficiary has coronary artery disease thereby potentially avoiding an invasive coronary procedure. Medicare began payment for CPT code 0503T in the hospital outpatient department setting under the Outpatient Prospective Payment System (OPPS) in CY 2018 (82 FR 59284). For the PFS, we typically assign contractor pricing for Category III codes since they are temporary codes assigned to emerging technology and services. We followed this established process for Category III codes by assigning and listing them as contractor pricing in Appendix B in the CY 2018 PFS final rule (available at https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices-Items/CMS-1676-F). We have since been trying to understand the costs of the PE resource inputs for CPT code 0503T in the physician office setting. In the CY 2021 PFS final rule, we stated that we found FFRCT to be similar to other technologies that use algorithms, artificial intelligence, or other innovative forms of analysis to determine a course of treatment, where the analysis portion of the service cannot adequately be reflected under the PE methodology; and that our recent review data for the overall cost of CPT code 0503T have to some degree in the physician office setting to be similar to costs reflected in payment under the OPPS (85 FR 84630). For the CY 2021 OPPS/ASC final rule, we found that the geometric mean cost reported by hospital outpatient departments for the service was $804.35 (85 FR 85943). We believe the costs reported under the OPPS are instructive as they reflect actual costs that hospitals incurred in furnishing the service described by CPT code 0503T to Medicare beneficiaries, and, as we stated in the CY 2021 PFS final rule, we believe that these costs would be similar in the physician office setting. Using the geometric mean costs under the OPPS as a proxy, we then searched for services paid under the PFS that could potentially serve as a crosswalk. Specifically, we looked for services paid under the PFS that include only a technical component because CPT code 0503T is a technical component-only service, and that have similar total costs to CPT code 0503T. We identified the following potential crosswalks, and seek public comment on which, if any of them, would be appropriate: CPT code 93455 (Catheter placement in coronary artery(s) for coronary angiography, including intraprocedural injection(s) for coronary angiography, imaging supervision and interpretation; with catheter placement(s) in bypass graft(s) (internal mammary, free arterial, venous grafts) including intraprocedural injection(s) for bypass graft angiography) and CPT code 93458 (Catheter placement in coronary artery(s) for coronary angiography, including intraprocedural injection(s) for coronary angiography, imaging supervision and interpretation; with left heart catheter including intraprocedural injection(s) for left ventriculography, when performed). We are also seeking comment on whether other codes would provide a more appropriate crosswalk in terms of resource costs.

We are also more broadly soliciting public comment to help us better understand the resource costs for services involving the use of innovative technologies, including but not limited to software algorithms and AI. Specifically, we are requesting commenters consider the following questions:

• To what extent are services involving innovative technologies such as software algorithms and/or AI substitutes and/or supplements for physician work? To what extent do these services involving innovative technology inform, augment, or replace physician work? For example, CPT code 92229 is a PE-only code in which the software algorithm may be substituting for some work of an ophthalmologist to diagnose/detect diabetic retinopathy. CPT code 77X01 is a service in which the trabecular bone score software may be supplementing physician work to predict and detect fracture risk. CPT code 0503T may be both substituting for, and supplementing physician work to detect coronary artery disease.

• How has innovative technology such as software algorithms and/or AI affected physician work time and intensity of furnishing services involving the use of such technology to Medicare beneficiaries? For example, if new software algorithms or AI for a diagnostic test results in a reduction in the amount of time that a practitioner spends reviewing and interpreting the results of a diagnostic test that previously did not involve such software algorithm or AI technology, and if the software algorithm or AI could be considered in part a substitute for at least some physician work, it may follow that the intensity of the service decreases. It is also possible that a software algorithm for a diagnostic test that is supplementing other tests to establish a diagnosis or treatment pathway for a particular condition could result in an increase in the amount of time that a practitioner spends explaining the test to a patient and then reviewing the results.

• How is innovative technology such as software algorithms and/or AI changing cost structures in the physician office setting? As discussed previously, the PPIS data that underlie the PE methodology were last collected in 2007 and 2008, which was prior to the widespread adoption of electronic health records and services that involve care management, non-face-to-face and/or asynchronous remote care; the need to use electronic clinical quality measure data to support quality improvement, disparity identification and resolution, and value based payment; and the emergence of software algorithms and/or AI and other technologies that use data to inform, augment, or replace physician work in the delivery of health care. Do costs for innovative technology such as software algorithms and/or AI to furnish services to patients involve a one-time investment and/or recurring costs? How should CMS consider costs for software algorithms and/or AI that use patient data that were previously collected as part of another service? As technology adoption grows, do these costs decrease over time?

• How is innovative technology affecting beneficiary access to Medicare-covered services? How are services involving software algorithms and/or AI being furnished to Medicare beneficiaries and what is important for
influence outcomes for racial and ethnic minorities and people who are socioeconomically disadvantaged, are there guardrails, such as removing the source of bias in a software algorithm and/or AI that Medicare should require as part of considering payment amounts for services enabled by software algorithm and/or AI?

- Our proposals to use crosswalks to set values for codes describing diabetic retinopathy and trabecular bone score would allow us to account for overall resource costs involved in furnishing the services. The possible crosswalks for FFRCT may also account for overall resource costs involved in furnishing the service. We also believe it is important to accurately account for resource costs for innovative and emerging technologies such as ongoing service-specific software costs and, as explained above, such costs are not well accounted for in the PE methodology. We continue to be interested in potentially refining the PE methodology and updating the underlying data, including the PPIS data that are the data source that underpins the indirect PE allocation. How might CMS consider updating such data to reflect ongoing advances in technology so that we could establish appropriate relative values without resorting to crosswalks? The RAND Corporation laid out a number of issues for CMS to consider in two reports. We refer readers to RAND’s first phase of research, available at https://www.rand.org/pubs/research_reports/RR2166.html, and RAND’s second phase of research, available at https://www.rand.org/pubs/research_reports/RR3248.html.

C. Potentially Misvalued Services Under the PFS

1. Background

Section 1848(c)(2)(B) of the Act directs the Secretary to conduct a periodic review, not less often than every 5 years, of the relative value units (RVUs) established under the PFS. Section 1848(c)(2)(K) of the Act requires the Secretary to periodically identify potentially misvalued services using certain criteria and to review and make appropriate adjustments to the relative values for those services. Section 1848(c)(2)(L) of the Act also requires the Secretary to develop a process to validate the RVUs of certain potentially misvalued codes under the PFS, using the same criteria used to identify potentially misvalued codes, and to make appropriate adjustments.

As discussed in section II.E. of this proposed rule, under the Medicare Payment Advisory Commission (MedPAC), and other stakeholders. For many years, the RUC has provided us with recommendations on the appropriate relative values for new, revised, and potentially misvalued PFS services. We review these recommendations on a code-by-code basis and consider these recommendations in conjunction with analyses of other data, such as claims data, to inform the decision-making process as authorized by statute. We may also consider analyses of work time, work RVUs, or direct PE inputs using other data sources, such as Department of Veterans Affairs (VA), National Surgical Quality Improvement Program (NSQIP), the Society for Thoracic Surgeons (STS), and the Merit-based Incentive Payment System (MIPS) data. In addition to considering the most recently available data, we assess the results of physician surveys and specialty recommendations submitted to us by the RUC for our review. We also consider information provided by other stakeholders. We conduct a review to assess the appropriate RVUs in the context of contemporary medical practice. We note that section 1848(c)(2)(A)(ii) of the Act authorizes the use of extrapolation and other techniques to determine the RVUs for physicians’ services for which specific data are not available and requires us to take into account the results of consultations with organizations representing physicians who provide the services. In accordance with section 1848(c) of the Act, we determine and make appropriate adjustments to the RVUs.

In its March 2006 Report to the Congress (http://www.medpac.gov/docs/default-source/reports/Mar06Ch03.pdf?sfvrsn=0), MedPAC discussed the importance of appropriately valuing physicians’ services, noting that misvalued services can distort the market for physicians’ services, as well as for other health care services that physicians order, such as hospital services. In that same report, MedPAC postulated that physicians’ services under the PFS can become misvalued over time. MedPAC stated, “When a new service is added to the physician fee schedule, it may be assigned a relatively high value because of the time, technical skill, and psychological stress that are often required to furnish that service. Over time, the work...
required for certain services would be expected to decline as physicians become more familiar with the service and more efficient in furnishing it.” We believe services can also become overvalued when PE costs decline. This can happen when the costs of equipment and supplies fall, or when equipment is used more frequently than is estimated in the PE methodology, reducing its cost per use. Likewise, services can become undervalued when physician work increases or PE costs rise.

As MedPAC noted in its March 2009 Report to Congress (http://www.medpac.gov/docs/default-source/reports/march-2009-report-to-congress-medicare-payment-policy.pdf), in the intervening years since MedPAC made the initial recommendations, CMS and the RUC have taken several steps to improve the review process. Also, section 1848(c)(2)(K)(ii) of the Act augments our efforts by directing the Secretary to specifically examine, as determined appropriate, potentially misvalued services in the following categories:

- Codes that have experienced the fastest growth.
- Codes that have experienced substantial changes in PE.
- Codes that describe new technologies or services within an appropriate time-period (such as 3 years) after the relative values are initially established for such codes.
- Codes which are multiple codes that are frequently billed in conjunction with furnishing a single service.
- Codes with low relative values, particularly those that are often billed multiple times for a single treatment.
- Codes that have not been subject to review since implementation of the fee schedule.
- Codes that account for the majority of spending under the PFS.
- Codes for services that have experienced a substantial change in the hospital length of stay or procedure time.
- Codes for which there may be a change in the typical site of service since the code was last valued.
- Codes for which there is a significant difference in payment for the same service between different sites of service.
- Codes for services where there may be efficiencies when a service is furnished at the same time as other services.
- Codes with high intraservice work per unit of time.
- Codes with high PE RVUs.
- Codes with high cost supplies.
- Codes as determined appropriate by the Secretary.

Section 1848(c)(2)(K)(iii) of the Act also specifies that the Secretary may use existing processes to receive recommendations on the review and appropriate adjustment of potentially misvalued services. In addition, the Secretary may conduct surveys, other data collection activities, studies, or other analyses as the Secretary determines to be appropriate, to facilitate the review and appropriate adjustment of potentially misvalued services. This section also authorizes the use of analytic contractors to identify and analyze potentially misvalued codes, conduct surveys or collect data, and make recommendations on the review and appropriate adjustment of potentially misvalued services. Additionally, this section provides that the Secretary may coordinate the review and adjustment of any RVU with the periodic review described in section 1848(c)(2)(B) of the Act. Section 1848(c)(2)(K)(iii)(V) of the Act specifies that the Secretary may make appropriate coding revisions (including using existing processes for consideration of coding changes) that may include consolidation of individual services into bundled codes for payment under the PFS.

2. Progress in Identifying and Reviewing Potentially Misvalued Codes

To fulfill our statutory mandate, we have identified and reviewed numerous potentially misvalued codes as specified in section 1848(c)(2)(K)(ii) of the Act, and we intend to continue our work examining potentially misvalued codes in these areas over the upcoming years. As part of our current process, we identify potentially misvalued codes for review, and request recommendations from the RUC and other public commenters on revised work RVUs and direct PE inputs for those codes. The RUC, through its own processes, also identifies potentially misvalued codes for review. Through our public nomination process for potentially misvalued codes established in the CY 2012 PFS final rule with comment period, other individuals and stakeholder groups submit nominations for review of potentially misvalued codes as well. Individuals and stakeholder groups may submit codes for review under the potentially misvalued codes initiative to CMS in one of two ways. Nominations may be submitted to CMS via email or through postal mail. Email submissions should be sent to the CMS emailbox MedicarePhysicianFeeSchedule@cms.hhs.gov, with the phrase “Potentially Misvalued Codes” and the referencing CPT code number(s) and/or the CPT descriptor(s) in the subject line. Physical letters for nominations should be sent via the U.S. Postal Service to the Centers for Medicare & Medicaid Services, Mail Stop: C4–10–26, 7500 Security Blvd., Baltimore, Maryland 21244. Envelopes containing the nomination letters must be labeled “Attention: Division of Practitioner Services, Potentially Misvalued Codes.”

Nominations for consideration in our next annual rule cycle should be received by our February 10th deadline. Since CY 2009, as a part of the annual potentially misvalued code review and Five-Year Review process, we have reviewed over 1,700 potentially misvalued codes to refine work RVUs and direct PE inputs. We have assigned appropriate work RVUs and direct PE inputs for these services as a result of these reviews. A more detailed discussion of the extensive prior reviews of potentially misvalued codes is included in the Medicare Program; Payment Policies Under the Physician Fee Schedule, Five-Year Review of Work Relative Value Units, Clinical Laboratory Fee Schedule: Signature on Requisition, and Other Revisions to Part B for CY 2012; final rule (76 FR 73052 through 73055) (hereinafter referred to as the “CY 2012 PFS final rule with comment period”). In the CY 2012 PFS final rule with comment period (76 FR 73055 through 73958), we finalized our policy to consolidate the review of physician work and PE at the same time, and established a process for the annual public nomination of potentially misvalued services.

In the Medicare Program; Revisions to Payment Policies Under the Physician Fee Schedule, DME Face-to-Face Encounters, Elimination of the Requirement for Termination of Non-Random Prepayment Complex Medical Review and Other Revisions to Part B for CY 2013 (77 FR 68892) (hereinafter referred to as the “CY 2013 PFS final rule with comment period”), we built upon the work we began in CY 2009 to review potentially misvalued codes that have not been reviewed since the implementation of the PFS (so-called “Harvard-valued codes”). In the Medicare Program; Revisions to Payment Policies Under the Physician Fee Schedule and Other Revisions to Part B for CY 2009; and Revisions to the Amendment of the E-Prescribing Exemption for Voucher-Generated Facsimile Transmissions; Proposed Rule (73 FR 38589) (hereinafter referred to as
the “CY 2009 PFS proposed rule”], we requested recommendations from the RUC to aid in our review of Harvard-valued codes that had not yet been reviewed, focusing first on high-volume, low intensity codes. In the fourth Five-Year Review (76 FR 32410), we requested recommendations from the RUC to aid in our review of Harvard-valued services with annual utilization of greater than 30,000 services. In the CY 2013 PFS final rule with comment period, we identified specific Harvard-valued services with annual allowed charges that total at least $10,000,000 as potentially misvalued. In addition to the Harvard-valued codes, in the CY 2013 PFS final rule with comment period we finalized for review a list of potentially misvalued codes that have stand-alone PE (codes with physician work and no listed work time and codes with no physician work that have listed work time). We continue each year to consider and finalize a list of potentially misvalued codes that have or will be reviewed and revised as appropriate in future rulemaking.

3. CY 2022 Identification and Review of Potentially Misvalued Services

In the CY 2012 PFS final rule with comment period (76 FR 73058), we finalized a process for the public to nominate potentially misvalued codes. In the CY 2015 PFS final rule with comment period (79 FR 67606 through 67608), we modified this process whereby the public and stakeholders may nominate potentially misvalued codes for review by submitting the code with supporting documentation by February 10th of each year. Supporting documentation for codes nominated for the annual review of potentially misvalued codes may include the following:

• Documentation in peer reviewed medical literature or other reliable data that demonstrate changes in physician work due to one or more of the following: Technique, knowledge and technology, patient population, site-of-service, length of hospital stay, and work time.
• An anomalous relationship between the code being proposed for review and other codes.
• Evidence that technology has changed physician work.
• Analysis of other data on time and effort measures, such as operating room logs or national and other representative databases.
• Evidence that incorrect assumptions were made in the previous valuation of the service, such as a misleading vignette, survey, or flawed crosswalk assumptions in a previous evaluation.
• Prices for certain high cost supplies or other direct PE inputs that are used to determine PE RVUs are inaccurate and do not reflect current information.
• Analyses of work time, work RVU, or direct PE inputs using other data sources (for example, VA, NSQIP, the STS National Database, and the MIPS data).
• National surveys of work time and intensity from professional and management societies and organizations, such as hospital associations.

We evaluate the supporting documentation submitted with the nominated codes and assess whether the nominated codes appear to be potentially misvalued codes appropriate for review under the annual process. In the following year’s PFS proposed rule, we publish the list of nominated codes and indicate for each nominated code whether we propose it with its inclusion as a potentially misvalued code. The public has the opportunity to comment on these and all other proposed potentially misvalued codes. In that year’s final rule, we finalize our list of potentially misvalued codes.

a. Public Nominations

In this proposed rule, we are soliciting comments regarding the potentially misvalued codes nominated by the public to inform our decision on whether to establish the codes as potentially misvalued in the CY 2022 PFS final rule. We received public nominations for potentially misvalued codes by February 10th. We display these public nominations on our public website, including the submitter’s name and their associated organization to provide full transparency. Among the public nominations that we received this year, one was a request for CMS to review a PE-related input for a code. We refer readers to section II.B. of this proposed rule, Determination of PE RVUs, for further discussion on the PE-related submission. The summary of this year’s submissions under the potentially misvalued code initiative are discussed below.

A stakeholder nominated CPT code 22551 (Fusion of spine bones with removal of disc at upper spinal column, anterior approach, complex) “and common related services” as potentially misvalued. Citing the CY 2021 PFS final rule (84 FR 84501) where CMS agreed with the public nomination of CPT code 22867 (Insertion of interlaminar/interlaminar process stabilization/distraction device, without fusion, including image guidance when performed, with open decompression, lumbar; single level) as potentially misvalued, and discussed the relationship between CPT code 22867 and CPT code 63047 (Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [e.g., spinal or lateral recess stenosis]), single vertebral segment; lumbar), this stakeholder suggests that there are additional CPT code values related to spine procedures that are in need of contemporaneous review with CPT code 22867. The stakeholder believes that CMS has an interest in reviewing associated anterior cervical discectomy and fusion (ACDF) procedures as well, and suggests that CPT code 22551 “and common related services” can result in cumulative RVUs that do not sufficiently reflect physician work, time, or outcomes.

In their submission, the stakeholder expressed concern that there is a discrepancy between the typical total RVUs for codes billed for vertebral fusion procedures performed using three synthetic cage devices with plate and vertebral fusion procedures performed using three allografts with plate. Both methods of vertebral fusion are described by CPT code 22551 (includes a 90-day global period), which has a work RVU of 25.00. Both methods of vertebral fusion involve two units of CPT code 22552 (Arthrodesis, anterior interbody, including disc space preparation, discectomy, osteophytectomy and decompression of spinal cord and/or nerve roots; cervical below C2, each additional interspace (List separately in addition to code for primary procedure) (ZZZ global period)) with a total work RVU of 13.00 (6.50 × 2); and both methods of vertebral fusion involve 1 unit of CPT code 22846 (Anterior instrumentation; 4 to 7 vertebral segments (List separately in addition to code for primary procedure) (ZZZ global period)) with a work RVU of 12.40. The vertebral fusion method employing three synthetic cage devices with a plate would involve CPT code 22853 (Insertion of interbody biomechanical device(s) (e.g., synthetic cage, mesh) with integral anterior instrumentation for device anchoring (e.g., screws, flanges), when performed, to intervertebral disc space in conjunction with interbody arthrodesis, each interspace (List separately in addition to code for primary procedure) (ZZZ global period)) for the insertion of synthetic cage devices for a total work RVU of 12.75 (4.25 × 3), and CPT code 20930 (Allograft, morselized, or...
placement of osteopromotive material, for spine surgery only (List separately in addition to code for primary procedure)) with a work RVU of 0.00 (because Medicare considers this code to be bundled into codes for other services). The stakeholder stated that the total work RVUs for the typical vertebral fusion employing three synthetic cage devices with plate would be 63.15 work RVUs.

In contrast, the stakeholder asserted that the vertebral fusion method employing three allografts with plate involves the same set of services and codes (CPT code 22551 (090 global period) and CPT code 22846 (ZZZ global period)), but instead of CPT codes 22853 or 20930, involve CPT code 20931 (Allograft, structural, for spine surgery only (List separately in addition to code for primary procedure) (ZZZ global period)) with a work RVU of 1.81. Altogether, the total work RVUs for CPT codes involved in this vertebral fusion method is 52.21. The stakeholder suggested that this difference in total work RVUs, 63.15 versus 52.21, is evidence that these services are misvalued, and that the total work RVUs do not reflect the differences in the amount of work, resources, and intensity between the two vertebral fusion methods.

This stakeholder’s description of the potential misvaluation of CPT code 22551 “and common related services” differs from the CMS approach to identifying potentially misvalued services by using certain criteria, as described in the beginning of this section. Our determination that one or more codes are potentially misvalued generally revolves around the specific RVUs assigned to an individual code, or several codes within a family of codes. CMS generally does not examine the summed differences in total RVUs based on billing patterns using different codes in different scenarios, representing different physician work, and then comparing the two methods of a procedure, in this case, the use or non-use, of the synthetic cage devices in the vertebral fusion with removal of the disc in the upper spinal column. We do not believe that the stakeholder has provided support for the premise that CPT code 22551 alone is misvalued, or that any of the codes identified as common related services are misvalued. Therefore, we are not inclined to propose this code as potentially misvalued. However, we welcome additional comment, including any analysis or studies demonstrating that one or more of these codes meet the criteria listed above under “Identification and Review of Potentially Misvalued Services,” particularly in regard to any changes in the resources to providing a service, or are otherwise potentially misvalued.

A stakeholder nominated CPT code 29436 (Delayed creation of exit site from embedded subcutaneous segment of intraperitoneal cannula or catheter) as potentially misvalued, as it has not been valued for payment in the non-facility/office setting. This stakeholder did not include in their submission detailed recommendations for the items, quantities, and unit costs for the supplies, equipment types, and clinical labor (if any), that might be incurred in the non-facility/office setting, all of which are key factors when determining potential valuation or mis-valuation of a service. Medicare claims data for 2018, 2019, and 2020 show that CPT code 29436 is solely performed in the facility ambulatory surgical center (ASC) setting. We are not inclined to propose this code as potentially misvalued; however, we welcome additional comment, including any analysis or studies demonstrating that this code meets the criteria listed above under “Identification and Review of Potentially Misvalued Services,” particularly in regard to any changes in the resources to providing a service, or is otherwise potentially misvalued.

A stakeholder nominated CPT code 59200 (Insertion cervical dilator (e.g., laminaria, prostaglandin) as potentially misvalued because the direct PE inputs do not include the supply item, Dilapan-S. This stakeholder had sought to establish a Level II HCPCS code for Dilapan-S, but CMS did not find sufficient evidence to support that request. The stakeholder now submits Dilapan-S to be considered as PE supply input to a Level I CPT code(s). This stakeholder seeks to add Dilapan-S to the nonfacility/office PE inputs for CPT code 59200. Specifically, the stakeholder recommends adding 4 rods of Dilapan-S at $80.00 per unit, for a total of $320.00, as a replacement for the current PE supply item, laminaria tent (a small rod of dehydrated seaweed that when inserted in the cervix, rehydrates, absorbing the water from the surrounding tissue in the woman’s body), which is currently listed at $4.69 per unit, with a total of 75 units, for a total of $12.20. We welcome additional comment, including any analysis or studies demonstrating that this code meets the criteria listed above under “Identification and Review of Potentially Misvalued Services,” particularly in regard to any changes in the resources to providing a service, or is otherwise potentially misvalued.

A stakeholder nominated CPT codes 66982 through 66986 as potentially misvalued, as they have not been valued in the non-facility/office setting. This stakeholder did not submit other details or reasoning to support their nomination. We note that some of these cataract-related procedures were initially reviewed and valued in CY 2020 PFS final rule (84 FR 62751), and that presently, additional codes in this family are scheduled to be reviewed and valued in this CY 2022 PFS proposed rule (we refer readers to section II.E. of this proposed rule, Valuation of Specific Codes). The highest utilization of these cataract codes are CPT code 66982 (Extracapsular cataract removal with insertion of intraocular lens prosthesis
D. Telehealth and Other Services Involving Communications Technology, and Interim Final Rule With Comment Period for Coding and Payment of Virtual Check-In Services—Payment for Medicare Telehealth Services Under Section 1834(m) of the Act

As discussed in prior rulemaking, several conditions must be met for Medicare to make payment for telehealth services under the PFS. See further details and full discussion of the scope of Medicare telehealth services in the CY 2018 PFS final rule (82 FR 53006) and CY 2021 PFS final rule (85 FR 84507), we created a temporary, 1-stage procedure, manual or mechanical technique (e.g., irrigation and aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine cataract surgery (e.g., iris expansion device, suture support for intraocular lens, or primary posterior capsulorhexis) or performed on patients in the amblyogenic developmental stage; without endoscopic cyclophotocoagulation) and CPT code 66984 (Extracapsular cataract removal with insertion of intraocular lens prosthesis) were almost all performed in the ASC facility setting, but based on 2020 claims, the most common setting appears to have shifted to the hospital inpatient or hospital outpatient facility setting. There is no case presented here that constitutes a misvaluation of CPT codes 66982 to 66986, and therefore, we are not inclined to put this code family forward as potentially misvalued for CY 2022; however, we welcome additional comment, including any analysis or studies demonstrating that one or more of these codes meet the criteria listed above under “Identification and Review of Potentially Misvalued Services,” particularly in regard to any changes in the resources to providing a service, or are otherwise potentially misvalued.

...
when furnished via telehealth. We considered the following factors:

++ Whether, outside of the circumstances of the PHE for COVID–19, there are concerns for patient safety if the service is furnished as a telehealth service.

++ Whether, outside of the circumstances of the PHE for COVID–19, there are concerns about whether the provision of the service via telehealth is likely to jeopardize quality of care.

++ Whether all elements of the service could fully and effectively be performed by a remotely located clinician using two-way, audio/video telecommunications technology.

In the CY 2021 PFS final rule (85 FR 84507), we also temporarily added several services to the Medicare telehealth services list using the Category 3 criteria described above. In this proposed rule, we are considering additional requests to add services to the Medicare telehealth services list on a Category 3 basis using the previously described Category 3 criteria.

The Medicare telehealth services list, including the additions described later in this section, is available on the CMS website at https://www.cms.gov/Medicare/Medicare-General-Information/Telehealth/index.html.

Beginning in CY 2019, we stated that for CY 2019 and onward, we intend to accept requests through February 10, consistent with the deadline for our receipt of code valuation recommendations from the RUC (83 FR 59491). For CY 2022, requests to add services to the Medicare telehealth services list must have been submitted and received by February 10, 2021. Each request to add a service to the Medicare telehealth services list must have included any supporting documentation the requester wishes us to consider as we review the request. Because we use the annual PFS rulemaking process as the vehicle to make changes to the Medicare telehealth services list, requesters are advised that any information submitted as part of a request is subject to public disclosure for this purpose. For more information on submitting a request in the future to add services to the Medicare telehealth services list, including where to mail these requests, see our website at https://www.cms.gov/Medicare/Medicare-General-Information/Telehealth/index.html.

b. Requests To Add Services to the Medicare Telehealth Services List for CY 2022

Under our current policy, we add services to the Medicare telehealth services list on a Category 1 basis when we determine that they are similar to services on the existing Medicare telehealth services list for the roles of, and interactions among, the beneficiary, physician (or other practitioner) at the distant site and, if necessary, the telepresenter. As we stated in the CY 2012 PFS final rule with comment period (76 FR 73098), we believe that the Category 1 criteria not only streamline our review process for publicly requested services that fall into this category, but also expedite our ability to identify codes for the Medicare telehealth services list that resemble those services already on the Medicare telehealth services list.

We received several requests to permanently add various services to the Medicare telehealth services list effective for CY 2022. We found that none of the requests we received by the February 10th submission deadline met our Category 1 or Category 2 criteria for permanent addition to the Medicare telehealth services list. The requested services are listed in Table 8.

</table>
|                                    | 97162  | Physical therapy evaluation: moderate complexity, requiring these components: A history of present problem with 1-2 personal factors and/or comorbidities that impact the plan of care; An examination of body systems using standardized tests and measures in addressing a total of 3 or more elements from any of the following: body structures and functions, activity limitations, and/or participation restrictions; An evolving clinical presentation with changing characteristics; and Clinical decision making of moderate complexity using standardized patient assessment instrument and/or measurable assessment of functional outcome.
We remind stakeholders that the criterion for adding services to the Medicare telehealth list under Category 1 is that the requested services are similar to professional consultations, office visits, and office psychiatry services that are currently on the Medicare telehealth services list, and that the criterion for adding services under Category 2 is that there is evidence of clinical benefit if provided as telehealth. As explained below, we find that none of the requested services met the Category 1 criterion.

We received a request to permanently add CPT code 51741 (Complex uroflowmetry (e.g., calibrated electronic equipment)) to the Medicare telehealth services list. This CPT code describes the acquisition of uroflowmetric information and analysis of that information. The code includes a technical component and a professional component. The technical component describes the acquisition of the uroflowmetric information when billed as a standalone service. The professional component describes the analysis for the uroflowmetric information when it is billed as a standalone service. As we have explained in previous rulemaking (see 83 FR 59483), the remote interpretation of diagnostic tests is not considered to be a telehealth service under section 1834(m) of the Act or our regulation at § 410.78. We do not believe that the technical component, which would include acquisition of the uroflowmetric information, meets the Category 1 criterion.
information, would meet the criterion to be added on a Category 1 basis because it is not similar to other services on the Medicare telehealth list. Moreover, we do not believe the uroflowmetric information can be accurately and effectively collected using two-way, audio/video communication technology to the degree that would make the results clinically useful. We believe the patient would need to be in the same location as the equipment; thus, making it impracticable to achieve via telehealth. Due to these concerns, we do not believe that the submitted information demonstrates sufficient clinical benefit to support the addition of CPT code 51741 to the Medicare telehealth services list.

We received a request to permanently add several biofeedback, services, CPT codes 90901, 90912, and 90913, to the Medicare telehealth services list. We do not believe these services are similar to Category 1 services on the Medicare telehealth list in that these services describe the application of electrodes directly to the patient’s skin and using them to monitor the patient’s response. Therefore, we do not believe they meet the criterion for addition to the Medicare telehealth services list on a Category 1 basis. We also believe that proper application of electrodes and monitoring of the patient’s response would require the furnishing practitioner to be in the same physical location as the beneficiary. As such, we do not believe these services would meet the criteria for addition to the Medicare telehealth list on a Category 2 basis. When we reviewed these biofeedback services on a Category 2 basis, we found that the information supplied with the requests was not detailed enough to determine if the objective functional outcomes (that is, Activities of Daily Living (ADLs) and Instrumental Activities of Daily Living (IADLs) of the telehealth patients) were similar to that of patients treated in person. Moreover, we believe that the ADLs/IADLs alone are not sufficient to determine if these services, when performed, demonstrate a clinical benefit to a patient. We would request that stakeholders supply a more comprehensive set of objective data in order to fully illustrate any benefits, to better enable us to evaluate all outcomes.

We received requests to permanently add Neuropsychological/Psychological Testing services, CPT codes 96130–96133 and 96136–96139, to the Medicare telehealth services list. We separately reviewed each of the services in these two code families. In prior years’ rulemaking, we have declined to add these services on a Category 1 basis because, in contrast to other services on the telehealth list these services require close observation by the furnishing practitioner to monitor how a patient responds and progresses through the testing (see 81 FR 80197). We continue to believe that this is the case. All of these codes describe services that involve a very thorough observation and testing process, and require the tester to observe the following: Speed of responses; the ability to adjust focus; written, sometimes manual tasks; following tasks that display the patients’ visuospatial mapping abilities, pattern recognition, abstraction, calculation—all while appreciating that the patient may be distracted or aided by environmental cues. The tester must also maintain some subjective amount of flexibility to allow the patient to be in their environment. Additionally, the tester has to maintain professional scrutiny through dynamic tasks. Given all of the above, remote observation by the furnishing practitioner to accomplish the testing in question seems impractical and potentially creates the risk of inaccuracies in diagnosis and subsequent treatment. We note that the information supplied by stakeholders did not address these concerns, and as such, we have concerns over patient safety and the ability of these services to be accurately and thoroughly performed via telehealth to demonstrate a clinical benefit to Medicare beneficiaries. Therefore, we do not believe these services meet the Category 1 criteria for permanent addition to the Medicare telehealth list of services.

Consequently, we are not proposing to add these services to the Medicare telehealth services list. We encourage stakeholders to submit information addressing the concerns we have stated in any future requests to have these services added to the Medicare telehealth list of services.

We received requests to add Therapy Procedures, CPT codes 97110, 97112, 97116, 97150, and 97530; Physical Therapy Evaluations, CPT codes 97161–97164; Therapy Personal Care services, CPT codes 97535, 97537, and 97542; and Therapy Tests and Measurements services, CPT codes 97750, 97755, and 97763, to the Medicare telehealth services list. In the CY 2017 PFS final rule (81 FR 80198), we noted that section 1842(b)(18)(C) of the Act specifies the types of practitioners who may furnish and bill for Medicare telehealth services as those practitioners under section 1842(b)(18)(C) of the Act. Physical therapists (PTs), occupational therapists (OTs), and speech-language pathologists (SLPs) are not among the practitioners identified in section 1842(b)(18)(C) of the Act. We also stated in the CY 2017 PFS final rule that, because these services are predominantly furnished by PTs, OTs, and SLPs, we did not believe it would be appropriate to add them to the Medicare telehealth services list at that time. In a subsequent request to consider adding these services for 2018, the original requester suggested that we might propose these services be added to the Medicare telehealth services list so that payment can be made for them when furnished via telehealth by physicians or practitioners who can serve as distant site practitioners. We stated that, since the majority of the codes are furnished over 90 percent of the time by therapy professionals who are not included on the statutory list of eligible distant site practitioners, we believed that adding therapy services to the Medicare telehealth services list could result in confusion about who is authorized to furnish and bill for these services when furnished via telehealth. We continue to believe this to be true; however, we reviewed each therapy service separately, and have categorized them together here for convenience as the same set of information accompanied the request for each of these services.

We determined that these services did not meet the Category 1 criteria for addition to the Medicare telehealth services because they are therapeutic in nature and in many instances involve direct physical contact between the practitioner and the patient. In assessing the evidence that was supplied by stakeholders in support of adding these services to the Medicare telehealth services list on a Category 2 basis, we concluded that it did not provide sufficient detail to determine whether all of the necessary elements of the service could be furnished remotely, and whether the objective functional outcomes of ADL and IADL for the telehealth patients were similar to those of patients receiving the services in person. As we stated above when discussing the request to add certain biofeedback services to the telehealth list, we do not believe ADLs and IADLS alone are sufficient to demonstrate clinical benefit to a Medicare beneficiary. We have enumerated above some examples of the types of clinical benefits we would consider when evaluating services using the Category 2 criterion.

Therefore, we do not believe the submitted information demonstrates that the services meet either the Category 1 or the Category 2 criteria. We are not
proposing to add these services to the Medicare telehealth services list. We continue to encourage commenters to supply sufficient data for us to be able to see all measurements/parameters performed, so that we may evaluate all outcomes.

We received requests to add the services in Table 9, and we note that these services are generally not separately payable under the Medicare PFS. Given that these services are not separately payable when furnished in-person, they would not be separately payable when furnished as telehealth. Section 1834(m)(2)(A) of the Act provides that payment for a service when furnished as a telehealth service is equal to the payment when the service is furnished in person. CPT code 90849 has a restricted payment status, indicating that claims must be adjudicated on a case-by-case basis when furnished in-person. Accordingly, any separate payment for that service would require special consideration and not be routine. Therefore, we do not believe this service should be added to the Medicare telehealth list. CPT codes 98960–98962 are bundled services, and therefore, payment for these services is always bundled into payment of other services. For that reason, we are not proposing to add them to the Medicare list of telehealth services.

We received requests to temporarily add Neurostimulators, CPT codes 95970–95972, and Neurostimulators, Analysis-Programming services, CPT codes 95983 and 95984, to the Medicare telehealth services list using the Category 3 criteria (see Table 10). In their submission, the requestor noted they would conduct a future study and would submit the study data to CMS at a later date. These services are on the expanded telehealth services list for the PHE, but were not added by CMS on a category 3 basis in the CY 2021 PFS final rule. We do not yet have sufficient information to adjudicate whether these services are likely to meet the category 1 or category 2 criteria given additional time on the Medicare telehealth services list, without having evaluated the full data, and we encourage commenters to submit all available information, when available, for future consideration. As a result, we are not proposing to add these services to the Medicare telehealth list of services on a Category 3 basis at this time.
c. Revised Timeframe for Consideration of Services Added to the Telehealth List on a Temporary Basis

In the CY 2021 PFS final rule (85 FR 84506), in response to the PHE for COVID–19, we created a third category of criteria for adding services to the Medicare telehealth services list on a temporary basis. We included in this category the services that were added during the PHE for COVID–19 for which we believed there is likely to be clinical benefit when furnished via telehealth, but for which there is not yet sufficient evidence available to consider the services as permanent additions under Category 1 or Category 2 criteria. We recognized that the services we added on a temporary basis under Category 3 would ultimately need to meet the criteria under Categories 1 or 2 in order to be permanently added to the Medicare telehealth services list, and that there was a potential for evidence development that could continue through the Category 3 temporary addition period. We also stated that any service added on a temporary basis under Category 3 would remain on the Medicare telehealth services list through the end of the calendar year in which the PHE for COVID–19 ends.

We added 135 services to the Medicare telehealth list in CY 2020 on an interim basis in response to the PHE for COVID–19 through the interim final rule with comment period (IFC) (March 31st COVID–19 IFC (85 FR 19234–19243)) and the subregulatory process established in the May 8th COVID–19 IFC (85 FR 27550–27649). Since the publication of the May 8th COVID–19 IFC, we have added several services to the Medicare telehealth list of services using this subregulatory process (please see https://www.cms.gov/Medicare/Medicare-General-Information/Telehealth/Telehealth-Codes for the list of codes available for telehealth under the PFS). As discussed in the CY 2021 PFS final rule (FR 85 84507), at the conclusion of the PHE for COVID–19, associated waivers and interim policies will expire, payment for Medicare telehealth services will once again be limited by the requirements of section 1834(m) of the Act, and we will return to the policies established through the regular notice-and-comment rulemaking process, including the previously established Medicare telehealth services list, as modified by subsequent changes in policies and additions to the telehealth services list adopted through rulemaking. Services that were temporarily added on an interim basis during the PHE for COVID–19 would not be continued on the list after the end of the PHE for COVID–19.

Numerous stakeholders have continued to note that there is uncertainty about when the PHE for COVID–19 may end, and express concerns that the services added to the telehealth list on a temporary basis could be removed from the list before practitioners have had time to compile...
and submit evidence to support the permanent addition of these services on a Category 1 or Category 2 basis. To respond to these continuing concerns, we are proposing to revise the timeframe for inclusion of the services we added to the Medicare telehealth services list on a temporary, Category 3 basis. Extending the temporary inclusion of these services on the telehealth list will allow additional time for stakeholders to collect, analyze and submit data on those services to support their consideration for permanent addition to the list on a Category 1 or Category 2 basis.

We propose to retain all services added to the Medicare telehealth services list on a Category 3 basis until the end of CY 2023. This will allow us time to collect more information regarding utilization of these services during the pandemic, and provide stakeholders the opportunity to continue to develop support for the permanent addition of appropriate services to the telehealth list through our regular consideration process, which includes notice-and-comment rulemaking. By keeping these services on the Medicare telehealth services list through CY 2023, we will facilitate the submission of requests to add services permanently to the Medicare telehealth services list for consideration in the CY 2023 PFS rulemaking process and for consideration in the CY 2024 PFS rule.

See Table 11 for a list of services that were added to the Medicare telehealth services list on an interim basis to respond to the PHE for COVID–19, but were not extended on a temporary Category 3 basis in the CY 2021 PFS final rule. Under our current policy, these services will be removed from the Medicare telehealth services list as of the date that the PHE for COVID–19 ends. We recognize that, during the time between the publication of the CY 2021 PFS final rule and this proposed rule, practitioners may have used that time to compile new evidence of clinical benefit to support addition to the Medicare telehealth services list on a category 3 basis, including information that suggests that a certain service would likely meet the category 1 or category 2 criteria if provided with more time. We are soliciting comment on whether any of the services that were added to the Medicare telehealth list for the duration of the PHE for COVID–19 should now be added to the Medicare telehealth list on a Category 3 basis to allow for additional data collection for submission for CMS to consider as part of the rulemaking process described in prior paragraphs.

</table>
disorder (SUD) for treatment of that patient with a diagnosed substance use disorder. Section 123(a) of Division CC of the CAA amended section 1834(m)(7)(A) of the Act to broaden the scope of services for which the geographic restrictions under section 1834(m)(4)(C)(i) of the Act do not apply and for which the patient’s home is a permissible originating site to include telehealth services furnished for the purpose of diagnosis, evaluation, or treatment of a mental health disorder, effective for services furnished on or after the end of the PHE for COVID–19.2

Section 123(a) of the CAA also added subparagraph (B) to section 1834(m)(7) of the Act to prohibit payment for a telehealth service furnished in the patient’s home under paragraph (7) unless the physician or practitioner furnishes an item or service in-person, without the use of telehealth, within 6 months prior to the first time the physician or practitioner furnishes a telehealth service to the beneficiary, and thereafter, at such times as the Secretary determines appropriate. However, section 123(a) of the CAA added a clarification at section 1834(m)(7)(B)(ii) of the Act that the periodic requirement for an in-person item or service does not apply if payment for the telehealth service furnished would have been allowed without the new amendments. As such, the requirement for a periodic in-person item or service applies only for telehealth services furnished for purposes of diagnosis, evaluation, or treatment of a mental health disorder other than for treatment of a diagnosed SUD or co-occurring mental health disorder, and only in locations that do not meet the geographic requirements in section 1834(m)(4)(C)(i) of the Act or when the originating site is the home of the patient, regardless of geography. We are seeking comment on whether we furnish an item or service in-person, without the use of telehealth, within 6 months prior to the first time the physician or practitioner furnishes a telehealth service to the beneficiary, and thereafter, at such times as the Secretary determines appropriate. However, section 123(a) of the CAA added a clarification at section 1834(m)(7)(B)(ii) of the Act that the periodic requirement for an in-person item or service does not apply if payment for the telehealth service furnished would have been allowed without the new amendments. As such, the requirement for a periodic in-person item or service applies only for telehealth services furnished for purposes of diagnosis, evaluation, or treatment of a mental health disorder other than for treatment of a diagnosed SUD or co-occurring mental health disorder, and only in locations that do not meet the geographic requirements in section 1834(m)(4)(C)(i) of the Act or when the originating site is the home of the patient, regardless of geography. We are seeking comment on whether we
should adopt a claims-based mechanism to distinguish between the mental health telehealth services that are within the scope of the CAA amendments and those that are not (in other words, the services for which payment was newly authorized by the CAA amendments, and those for which payment was authorized before the CAA amendments), and if so, what that mechanism should be. In the event that we need to distinguish between the mental health telehealth services that are within the scope of the CAA amendments and those that are not we are also seeking comment on whether a clarification should be added to the regulation at § 410.78 as follows (which would take into account the other amendments we are proposing to § 410.78):

The requirement that the physician or practitioner must furnish an item or service in person, without the use of telehealth, within a specified time frame shall not apply to telehealth services furnished for treatment of a diagnosed substance use disorder or co-occurring mental health disorder, or to services furnished in an originating site described in paragraphs (b)(3)(i) through (viii) or (xiii) that meets the geographic requirements specified in paragraph (b)(4) other than (b)(4)(iv)(D).

As we noted above, section 123(a) of the CAA amends section 1834(m)(7)(B)(ii)(I) of the Act to prohibit payment for telehealth services under that paragraph unless the physician or practitioner furnished an item or service to the patient in person, without the use of telehealth, within 6 months before the first telehealth service. Thereafter, section 1834(m)(7)(B)(ii)(II) of the Act leaves the Secretary discretion to specify the times or intervals at which an in-person, non-telehealth service is required as a condition of payment for these telehealth services. Therefore, in order to implement the new statutory requirement to specify when an in-person service is required, we propose that, as a condition of payment for a mental health telehealth service described in section 1834(m)(7)(A) of the Act other than services described in section 1834(m)(7)(B)(i) of the Act (that is, services for which payment was authorized before the CAA amendments), the billing physician or practitioner must have furnished an in-person, non-telehealth service to the beneficiary within the 6-month period before the date of the telehealth service.

We are also seeking comment on whether the required in-person, non-telehealth service could also be furnished by another physician or practitioner of the same specialty and same subspecialty within the same group as the physician or practitioner who furnishes the telehealth service. We note that the language in the CAA states that the physician or practitioner furnishing the in-person, non-telehealth service must be the same person as the practitioner furnishing the telehealth service. There are several circumstances, however, under which we have historically treated the billing practitioner and other practitioners of the same specialty or subspecialty in the same group as if they were the same individual. For instance, for purposes of deciding whether a patient is a new or established patient, or whether to bill for initial or subsequent visit, practitioners of the same specialty/subspecialty in the same group are treated as the same person. For example, when Physician A and Physician B are of the same specialty and subspecialty and in the same group, if Physician A furnishes an initial critical care service to a patient, and Physician B subsequently furnishes additional critical care services to the same beneficiary for the same condition on the same day, Physician B would bill for a subsequent critical care service rather than an initial critical care visit. As we explain in in section II.F.2 of this proposed rule, because practitioners in the same specialty and same group often cover for one another to provide concurrent services, we believe the total time for critical care services furnished to a patient on the same day by the practitioners in the same group with the same specialty should be reflected as if it were a single set of critical care services furnished to the patient. See section II.F.2 of this proposed rule for further discussion of our current and proposed policies for billing critical care services. Similarly, if Physician A furnished a service to a patient, and then Physician B furnished a service to the patient a few months later, that patient would be considered an established patient with respect to both Physician A and Physician B. For example, Physician B could initiate care management services for the patient as an established patient. An example of guidance to this effect can be found in the Medicare Claims Processing Manual (IOM Pub. 100–04, Chapter 12, § 30.6.7), which defines “new patient” as a patient who has not received any professional services, that is, E/M service or other face-to-face service (for example, surgical procedure) from the physician or physician group (same physician specialty) within the previous 3 years, for E/M services.

We note that this manual provision is also consistent with CPT guidance on whether a patient is a new or established patient.3

We are interested in comments regarding the extent to which a patient routinely receiving mental health services from one practitioner in a group might have occasion to see a different practitioner of the same specialty in that group for treatment of the same condition. This might occur when practitioners in a group cover for each other when a particular practitioner is unavailable or when a practitioner has left the group, but the beneficiary continues to receive services furnished by the group. In addition, fee-for-time compensation arrangements (formerly referred to as locum tenens arrangements), as described in section 1842(b)(6)(D) of the Act, allow for payment to be made to a physician for physicians’ services (and services furnished incident to such services) furnished by a second physician to patients of the first physician if the first physician is unavailable to provide the services, and the services are furnished pursuant to an arrangement that is either informal and reciprocal, or involves per diem or other fee-for-time compensation for such services.

Recognizing the importance of ensuring access to mental health telehealth services to beneficiaries who are unable to see the same practitioner who furnished the prerequisite in-person services due to the practitioner’s unavailability, we are seeking comments on an alternative policy to also allow the prerequisite in-person, non-telehealth service for certain mental health telehealth services furnished by a practitioner in the same specialty/subspecialty in the same group when the physician or practitioner who furnishes the telehealth service is unavailable or the two professionals are practicing as a team.

As amended by the CAA, section 1834(m)(7)(B)(ii)(I) of the Act specifies that for subsequent mental health telehealth service, an in-person, non-telehealth service is required at such times as the Secretary determines appropriate. We are proposing to require that an in-person, non-telehealth service must be furnished by the physician or practitioner at least once within 6 months before each telehealth service furnished for the diagnosis, evaluation, or treatment of mental health disorders by the same practitioner, other than for

treatment of a diagnosed SUD or co-occurring mental health disorder, and that the distinction between the telehealth and non-telehealth services must be documented in the patient’s medical record. We distinguish between mental health services furnished for a diagnosed SUD or co-occurring mental health disorder and those furnished to beneficiaries without a SUD diagnosis on the basis of ICD–10 diagnosis codes included on claims when the services are billed. We chose this interval because we are concerned that an interval less than 6 months may impose potentially burdensome travel requirements on the beneficiary, but that an interval greater than 6 months could result in the beneficiary not receiving clinically necessary in-person care/observation. The proposed 6-month interval also matches the specified statutory interval for the initial telehealth service. We believe that a 6-month interval strikes an appropriate balance between these competing considerations, but are seeking comment on whether a different interval, whether shorter, such as 3–4 months or longer, such as 12 months, may be appropriate to balance program integrity and patient safety concerns with increased access to care. However, we note that regardless of the time interval we establish, the practitioner is not precluded from scheduling in-person visits at a more frequent interval should such visit be determined to be clinically appropriate or preferred by the patient.

As discussed below in this section of this proposed rule, “e. Payment for Medicare Telehealth Services Furnished Using Audio-Only Communication Technology,” we are proposing to revise our regulatory definition of “interactive telecommunications system” to permit use of audio-only communications technology for mental health telehealth services under certain conditions when provided to beneficiaries located in their home. Therefore, we are also seeking comment on whether it would be appropriate to establish a different interval for these telehealth services, for the diagnosis, evaluation, or treatment of mental health disorders, other than for treatment of diagnosed SUD or co-occurring mental health disorder, when furnished as permitted through audio-only communications technology.

In any event, we propose that there would need to be an in-person visit within 6 months of any telehealth service furnished for the diagnosis, evaluation, or treatment of mental health disorders (other than for treatment of a diagnosed SUD or co-occurring mental health disorder), and the in-person visit would need to be documented in the patient’s medical record. Payment would not be made for these telehealth services unless the required in-person service was furnished within 6 months of the telehealth service.

Given the addition of the home of the individual as a permissible originating site for telehealth services for purposes of diagnosis, evaluation, or treatment of a mental health disorder, we are proposing to revise our regulation at § 410.78(b)(3) to add a new paragraph (xiv) to identify the home of a beneficiary as an originating site for telehealth services for the diagnosis, evaluation, or treatment of a mental health disorder, effective for services furnished on or after the first day after the end of the PHE as defined § 400.200 of our regulations; and to provide that payment will not be made for a telehealth service furnished under this paragraph unless the physician or practitioner has furnished an item or service in person, without the use of telehealth, for which Medicare payment was made (or would have been made if the patient were entitled to, or enrolled for, Medicare benefits at the time the item or service is furnished) within 6 months of the telehealth service. We are also proposing to revise our regulation at § 410.78(b)(4)(iv)(D) to specify that the geographic restrictions in § 410.78(b)(4) do not apply to telehealth services furnished for the diagnosis, evaluation, or treatment of a mental health disorder, effective for services furnished on or after the first day after the end of the PHE as defined in our regulation at § 400.200.

In addition, section 125(c) of the CAA amended section 1834(m)(4)(C)(ii) of the Act to add to the list of permissible telehealth originating sites a rural emergency hospital, which is a new Medicare provider type added by section 125 of the CAA effective beginning in CY 2023.

We are also proposing to amend our regulation at § 410.78, Telehealth services, to conform with the statutory change to include rural emergency hospitals as telehealth originating sites beginning in CY 2023. In accordance with section 1834(m)(4)(C)(iii)(X) of the Act, as added by section 125(c) of the CAA, we propose to revise § 410.78(b)(3) of our regulations to add a rural emergency hospital, as defined in section 1861(kkk)(2) of the Act, as a permissible originating site for telehealth services furnished on or after January 1, 2023.

e. Payment for Medicare Telehealth Services Furnished Using Audio-Only Communication Technology

Section 1834(m) of the Act outlines the requirements for Medicare payment for telehealth services that are furnished via a “telecommunications system,” and specifies that, only for purposes of Medicare telehealth services through a federal telemedicine demonstration program conducted in Alaska or Hawaii, the term “telecommunications system” includes asynchronous, store-and-forward technologies. We further defined the term, “telecommunications system,” in the regulation at § 410.78(a)(3) to mean an interactive telecommunications system, which is defined as multimedia communications equipment that includes, at a minimum, audio and video equipment permitting two-way, real-time interactive communication between the patient and distant site physician or practitioner.

During the PHE for COVID–19, we used waiver authority under section 1135(b)(8) of the Act to temporarily waive the requirement, for certain behavioral health and/or counseling services and for audio-only evaluation and management (E/M) visits, that telehealth services must be furnished using an interactive telecommunications system that includes video communications technology. Therefore, for certain services furnished during the PHE for COVID–19, we make payment for these telehealth services when they are furnished using audio-only communications technology. Emergency waiver authority is no longer available after the PHE for COVID–19 ends, and telehealth services will again be subject to all statutory and regulatory requirements.

In the CY 2021 PFS final rule (85 FR 84535), we noted that we continued to believe that our longstanding regulatory definition of “telecommunications system” reflected the intent of statute and that the term should continue to be defined as including two way, real-time, audio/video communication technology. Historically, we have not proposed any permanent modifications to the definition of “interactive telecommunications system” to allow for use of audio-only communications technology due to our interpretation of the statutory requirements, as well as concerns over program integrity and quality of care. Specifically, we were concerned that the use of audio-only communications technology for Medicare telehealth services could lead to inappropriate overutilization, and believed that video visualization of the patient generally was necessary to fulfill
the full scope of service elements of the codes included on the Medicare telehealth list. We believe it is reasonable to reassess these concerns, given the now widespread utilization during the PHE for COVID–19 of Medicare telehealth services furnished using audio-only communication technology. Based upon an initial review of claims data collected during the PHE for COVID–19, which describe audio-only telephone E/M services, we observed that the audio-only E/M visits have been some of the most commonly performed telehealth services during the PHE, and that most of the beneficiaries receiving these services were receiving them for treatment of a mental health condition. Given the generalized shortage of mental health care professionals (https://bhwarts.gov/sites/default/files/bureau-health-workforce/data-research/technical-documentation-health-workforce-simulation-model.pdf), and the existence of areas and populations where there is limited access to broadband due to geographic or socioeconomic challenges, we believe beneficiaries may have come to rely upon the use of audio-only communication technology in order to receive mental health services, and that a sudden discontinuation of this flexibility at the end of the PHE could have a negative impact on access to care.

As explained above, section 123 of the CAA removes the geographic restrictions for Medicare telehealth services for the diagnosis, evaluation, or treatment of a mental health disorder, and adds the patient’s home as a permissible originating site for these telehealth services. We also believe that mental health services are different from most other services on the Medicare telehealth services list in that many of the services primarily involve verbal conversation where visualization between the patient and furnishing physician or practitioner may be less critical to provision of the service. While we continue to believe that two-way, audio/video communications technology is the appropriate, general standard for telehealth services, and that there may be particular instances where visual cues may help a practitioner’s ability to assess and treat patients with mental health disorders, especially where opioids or other mental health medications are involved (for example, visual cues as to patient hygiene, or indicators of self-destructive behavior), we note that stakeholders have suggested to us that the availability of telehealth services for mental health care via audio-only communications technology would increase access to care. This is especially true in areas with poor broadband infrastructure and among patient populations that do not wish to use, do not have access to, and/or are unable to utilize devices that permit a two-way, audio/video interaction. Our preliminary analysis of Medicare claims data, as well as information provided to us by stakeholders on the popularity of these services, indicates that use of interactive communication technology for mental health care would likely continue to be high even beyond the circumstances of the COVID–19 pandemic. According to our analysis of Medicare Part B claims data for services furnished via Medicare telehealth during the PHE for COVID–19, utilization of telehealth for many professional services spiked around April 2020 and has diminished over the ensuing months. In contrast, preliminary analysis of Medicare claims data suggest that, for many mental health services that were permanently and temporarily added to the Medicare Telehealth list, there is a steady utilization trend from April 2020 and thereafter. Furthermore, as described above, according to preliminary analysis of claims data which examined utilization by diagnosis, the codes for audio-only E/M services have been highly utilized during the PHE, particularly for beneficiaries with mental health conditions.

Given these considerations, we now believe that it would be appropriate to revisit our regulatory definition of “interactive telecommunications system” beyond the circumstances of the PHE to allow for the inclusion of audio-only services under certain circumstances. Therefore, we are proposing to amend our regulation at §410.78(a)(3) to define interactive telecommunications system to include audio-only communications technology when used for telehealth services for the diagnosis, evaluation, or treatment of mental health disorders furnished to beneficiaries in their home. We believe this proposal is consistent with the expansion of at-home access to mental health telehealth services in section 1834(m)(7) of the Act, as amended by section 123 of the CAA, which required that the beneficiary must have received a Medicare-paid (or payable), in-person item or service from the physician or practitioner furnishing the mental health services through telehealth within 6 months of the first mental health telehealth service. We are proposing to adopt a similar ongoing requirement that an in-person item or service must be furnished within 6 months of such a mental health telehealth service. We reiterate that our proposed policy to permit audio-only telehealth services is limited to services where the home is the originating site. This is because the other enumerated telehealth originating sites are medical settings that are more likely to have access to reliable broadband Internet service. When a patient is located at one of these originating sites, access to care is far less likely to be limited by access to broadband that facilitates a video connection. In contrast, access to broadband, devices, and user expertise to enable a video connection is less likely to be available in the patient’s home. As described in prior paragraphs, we also believe that mental health services are different from other kinds of services on the Medicare telehealth list in that many of these services do not necessarily require visualization of the patient to fulfill the full scope of service elements.

We are also proposing to limit payment for audio-only services to services furnished by physicians or practitioners who have the capacity to furnish two-way, audio/video telehealth services but are providing the mental health services via audio-only communication technology in an instance where the beneficiary is unable to use, does not wish to use, or does not have access to two-way, audio/video technology. We believe that this requirement will ensure that mental health services furnished via telehealth are only conducted using audio-only communication technology in instances where the use of audio-only technology is facilitating access to care that would be unlikely to occur otherwise, given the patient’s technological limitations or preferences. In the interests of monitoring utilization and program integrity concerns for audio-only telehealth services furnished under the terms of this proposed exception, we are proposing to create a service-level modifier that would identify these mental health telehealth services furnished to a beneficiary in their home using audio-only communications technology. The use of this modifier would also serve to certify that the audio-only telehealth service meets the requirements for the exception specified in proposed on §410.78(a)(3), including that the furnishing physician or practitioner has the capacity to furnish the service using interactive two-way, real-time audio/video communication technology, but instead used audio-only
technology under the conditions specified in the regulation.

We are proposing to amend our regulation at § 410.78(a)(3) to specify that an interactive telecommunications system can include interactive, real-time, two-way audio-only technology for telehealth services furnished for the diagnosis, evaluation, or treatment of a mental health disorder as described under paragraph (b)(4)(ID), under the following conditions: The patient is located in their home at the time of service as described at § 410.78(b)(3)(xiv); the distant site physician or practitioner has the technical capability at the time of the service to use an interactive telecommunications system that includes video; and the patient is not capable of, or does not consent to, the use video technology for the service.

We are seeking comment on these proposals, as well as what, if any, additional documentation should be required in the patient’s medical record to support the clinical appropriateness of providing audio-only telehealth services for mental health in the event of an audit or claims denial. Additional required documentation could include information about the patient’s level of risk and any other guardrails that are appropriate to demonstrate clinical appropriateness, and minimize program integrity and patient safety concerns.

We are also seeking comment on whether, for purposes of the proposed audio-only mental health telehealth services exception, we should exclude certain higher-level services, such as level 4 or 5 E/M visit codes, when furnished alongside add-on codes for psychotherapy, or codes that describe psychotherapy with crisis. We are seeking comment on whether the full scope of service elements for these codes could be performed via audio-only communication technology. However, we also note that maintaining the availability of these services through audio-only communication technology might give patients access to care needed to address their higher level or acute mental health needs in instances where they are unable to access two-way, audio/video communication technology.

2. Other Non-Face-to-Face Services Involving Communications Technology Under the PFS

a. Expiration of PHE Flexibilities for Direct Supervision Requirements

Under section 1861 of the Act and at § 410.32(b)(3) of the regulations, Medicare requires certain types of services to be furnished under specific levels of supervision of a physician or practitioner, including diagnostic tests, services incident to physician services, and other services. For professional services furnished incident to the services of a billing physician or practitioner (see § 410.26) and many diagnostic tests (see § 410.32), direct supervision is required. Additionally, for pulmonary rehabilitation services (see § 410.47) and for cardiac rehabilitation and intensive cardiac rehabilitation services (see § 410.49), requirements for immediate availability and accessibility of a physician are considered to be satisfied if the physician meets the requirements for direct supervision for physician office services at § 410.26 and for hospital outpatient services at § 410.27. Outside the circumstances of the PHE, direct supervision requires the immediate availability of the supervising physician or other practitioner, but the professional need not be present in the same room during the service, and we have interpreted this “immediate availability” requirement to mean in-person, physical, non virtual, availability.

Through the March 31st COVID–19 IFC, we changed the definition of “direct supervision” during the PHE for COVID–19 (85 FR 19245 through 19246) as it pertains to supervision of diagnostic tests, physicians’ services, and some hospital outpatient services, to allow the supervising professional to be immediately available through virtual presence using real-time audio/video technology, instead of requiring their physical presence. In the CY 2021 PFS final rule (85 FR 84538 through 84540), we finalized continuation of this policy through the later of the end of the calendar year in which the PHE for COVID–19 ends or December 31, 2021. In that rule, we also solicited comment on issues related to the policy allowing virtual provision of direct supervision, specifically whether there should be any additional guardrails or limitations put in place to ensure patient safety/clinical appropriateness, beyond typical clinical standards, and whether we should consider potential restrictions to prevent fraud or inappropriate use. We also stated that we will consider this and other information as we contemplate future policy regarding use of communication technology to satisfy supervision requirements, as well as the best approach for safeguarding patient safety while promoting use of technology to enhance access.

We also note that the temporary exception to allow immediate availability for direct supervision through virtual presence facilitates the provision of telehealth services by clinical staff of physicians and other practitioners incident to their own professional services. This is discussed in the March 31st COVID–19 IFC (85 FR 19246). This is especially relevant for services such as physical therapy, occupational therapy, and speech language pathology services, since those practitioners can only bill Medicare directly for telehealth services under telehealth waivers that are effective only during the PHE for COVID–19. We note that sections 1834(m)(4)(D) and (E) of the Act specifies the types of clinicians who may furnish and bill for Medicare telehealth services, and include only physicians as defined in section 1861(r) of the Act and practitioners described in section 1842(b)(18)(C) of the Act.

We continue to seek information on whether this flexibility should be continued beyond the later of the end of the PHE for COVID–19 or CY 2021. Specifically, we are seeking comment on the extent to which the flexibility to meet the immediate availability requirement for direct supervision through the use of real-time, audio/video technology is being used during the PHE, and whether physicians and practitioners anticipate relying on this flexibility after the end of the PHE. We are seeking comment on whether this flexibility should potentially be made permanent, meaning that we would revise the definition of “direct supervision” at § 410.32(b)(3)(ii) to include immediate availability through the virtual presence of the supervising physician or practitioner using real-time, interactive audio/video communications technology without limitation after the PHE for COVID–19, or if we should continue the policy in place for a short additional time to facilitate a gradual sunset of the policy. We are soliciting comment on whether the current timeframe for continuing this flexibility at § 410.32(b)(3)(ii), which is currently the later of the end of the year in which the PHE for COVID–19 ends or December 31, 2021, remains appropriate, or if this timeframe should be extended through some later date to facilitate the gathering of additional information in recognition that, due to the on-going nature of the PHE for COVID–19, practitioners may not yet have had time to assess the implications of a permanent change in this policy. We also seek comment regarding the possibility of permanently allowing immediate availability for direct supervision through virtual presence using real-time audio/video technology for only a subset of services, as we recognize that it may be inappropriate to allow direct
supervision without physical presence for some services, due to potential concerns over patient safety if the practitioner is not immediately available in-person. We are also seeking comment on, were this policy to be made permanent, if a service level modifier should be required to identify when the requirements for direct supervision were met using two-way, audio/video communications technology.

c. Interim Final Provisions in the CY 2021 PFS Final Rule

In the CY 2021 PFS final rule (85 FR 84536), we finalized the establishment of HCPCS code G2252 (Brief communication technology-based service, e.g., virtual check-in, by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related e/m service provided within the previous 7 days nor leading to an e/m service or procedure within the next 24 hours or soonest available appointment; 11–20 minutes of medical discussion). Commenters also supported valuing HCPCS code G2252 through a direct crosswalk to CPT code 99442. We agree with commenters that additional time may be needed to assess the necessity of an in-person service given circumstances where more time is spent determining whether an in-person visit is needed beyond the 5–10 minutes accounted for by HCPCS code G2012 (Brief communication technology-based service, e.g., virtual check-in, by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related e/m service provided within the previous 7 days nor leading to an e/m service or procedure within the next 24 hours or soonest available appointment; 5–10 minutes of medical discussion). Commenters also supported the creation and interim final value for this service, which can include audio-synchronous communication technology-based service, which can include audio-synchronous communication technology, including audio-only, on an interim basis. We stated that, given the widespread concerns expressed by commenters about the continuing need for audio-only conversations with patients and our determination that we would not continue to pay for audio-only E/M visits after the conclusion of the PHE (see 85 FR 84533 through 84535 for further discussion of that policy), we believed it would be expedient to establish additional coding and payment for an extended virtual check-in, which could be furnished using any form of synchronous communication technology, including audio-only, on an interim basis for CY 2021. We stated that we believed establishing payment for this service on an interim basis will support access to care for beneficiaries who may be reluctant to return to in-person visits unless absolutely necessary, and allow us to consider whether this policy should be adopted on a permanent basis. We finalized a direct crosswalk to CPT code 99442, the value of which we believe most accurately reflects the resources associated with a longer service delivered over synchronous communication technology, which can include audio-only communication. Commenters supported the creation and interim final adoption of this service. Commenters stated that, as beneficiaries and practitioners may be reluctant to return to primarily in-person services post-PHE, the longer virtual check-in would be necessary to account for circumstances where more time is spent
federal government as part of our process for establishing valuations. Where we concur that the RUC’s recommendations, or recommendations from other commenters, are reasonable and appropriate and are consistent with the time and intensity paradigm of physician work, we proposed those values as recommended. Additionally, we continually engage with stakeholders, including the RUC, with regard to our approach for accurately valuing codes, and as we prioritize our obligation to value new, revised, and potentially misvalued codes. We continue to welcome feedback from all interested parties regarding valuation of services for consideration through our rulemaking process.

2. Methodology for Establishing Work RVUs

For each code identified in this section, we conduct a review that includes the current work RVU (if any), RUC-recommended work RVU, and the time to furnish the preservice, intraservice, and postservice activities, as well as other components of the service that contribute to the value. Our reviews of recommended work RVUs and time inputs generally include, but have not been limited to, a review of information provided by the RUC, the HCPAC, and other public commenters, medical literature, and comparative databases, as well as a comparison with other codes within the PFS, consultation with other physicians and health care professionals within CMS and the federal government, as well as Medicare claims data. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters and the rationale for the recommendations. In the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329), we discussed a variety of methodologies and approaches used to develop work RVUs, including survey data, building blocks, crosswalks to key reference or similar codes, and magnitude estimation. See the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329) for more information. When referring to a survey, unless otherwise noted, we mean the surveys conducted by specialty societies as part of the formal RUC process.

Components that we use in the building block approach may include preservice, intraservice, or postservice time and post-procedure visits. When referring to a bundled CPT code, the bundling components could include the CPT codes that make up the bundled code and the inputs associated with those codes. We use the building block methodology to construct, or deconstruct, the work RVU for a CPT code based on component pieces of the code. Magnitude estimation refers to a methodology for valuing work that determines the appropriate work RVU for a service by gauging the total amount of work for that service relative to the work for a similar service across the PFS without explicitly valuing the components of that work. In addition to these methodologies, we frequently utilize an incremental methodology in which we value a code based upon its incremental difference between another code and another family of codes. Section 1848(c)(1)(A) of the Act specifically defines the work component as the resources that reflect time and intensity in furnishing the service. Also, the published literature on valuing work has recognized the key role of time in overall work. For particular codes, we refine the work RVUs in direct proportion to the changes in the best information regarding the time resources involved in furnishing particular services, either considering the total time or the intraservice time.

Several years ago, to aid in the development of preservice time recommendations for new and revised CPT codes, the RUC created standardized preservice time packages. The packages include preservice evaluation time, preservice positioning time, and preservice scrub, dress and wait time. Currently, there are preservice time packages for services typically furnished in the facility setting (for example, preservice time packages reflecting the different combinations of straightforward or difficult procedure, and straightforward or difficult patient). Currently, there are three preservice time packages for services typically furnished in the facility setting.

We developed several standard building block methodologies to value services appropriately when they have common billing patterns. In cases where a service is typically furnished to a beneficiary on the same day as an E/M service, we believe that there is overlap between the two services in some of the activities furnished during the preservice evaluation and postservice time. Our longstanding adjustments have reflected a broad assumption that at least one-third of the work time in both the preservice evaluation and postservice period is duplicative of work furnished during the E/M visit. Accordingly, in cases where we believe that the RUC has not adequately accounted for the overlapping activities in the recommended work RVUs and/or times, we adjust the work RVU and/or times to account for the overlap. The work RVU for a service is the product of the time involved in furnishing the service multiplied by the intensity of the work. Preservice evaluation time and postservice time both have a long-established intensity of work per unit of time (IWPUT) of 0.0224, which means that 1 minute of preservice evaluation or postservice time equates to 0.0224 of a work RVU.

Therefore, in many cases when we remove 2 minutes of preservice time and 2 minutes of postservice time from a procedure to account for the overlap with the same day E/M service, we also remove a work RVU of 0.09 (4 minutes × 0.0224 IWPUT) if we do not believe the overlap in time had already been accounted for in the work RVU. The RUC has recognized this valuation policy and, in many cases, now addresses the overlap in time and work when a service is typically furnished on the same day as an E/M service.

The following paragraphs contain a general discussion of our approach to reviewing RUC recommendations and developing proposed values for specific codes. When they exist we also include a summary of stakeholder reactions to our approach. We note that many commenters and stakeholders have expressed concerns over the years with our ongoing adjustment of work RVUs based on changes in the best information we had regarding the time resources involved in furnishing individual services. We have been particularly concerned with the RUC’s and various specialty societies’ objections to our approach given the significance of their recommendations to our process for valuing services and since much of the information we used to make the adjustments is derived from their survey process. We are obligated under the statute to consider both time and intensity in establishing work RVUs for PFS services. As explained in the CY 2016 PFS final rule with comment period (80 FR 70933), we recognize that adjusting work RVUs for changes in time is not always a straightforward process, so we have applied various methodologies to identify several potential work values for individual codes.

We have observed that for many codes reviewed by the RUC, recommended work RVUs have appeared to be incongruous with recommended assumptions regarding the resource costs in time. This has been the case for a significant portion of codes for which we recently established or proposed work RVUs that are outside our usual refinements to the RUC-recommended values. When we have adjusted work
RVUs to account for significant changes in time, we have started by looking at the change in the time in the context of the RUC-recommended work RVU. When the recommended work RVUs do not appear to account for significant changes in time, we have employed the different approaches to identify potential values that reconcile the recommended work RVUs with the recommended time values. Many of these methodologies, such as survey data, building block, crosswalks to key reference or similar codes, and magnitude in time that we believe have been used in developing work RVUs under the PFS. In addition to these, we sometimes use the relationship between the old time values and the new time values for particular services to identify alternative work RVUs based on changes in time components.

In so doing, rather than ignoring the RUC-recommended value, we have used the recommended values as a starting reference and then applied one of these several methodologies to account for the reductions in time that we believe were not otherwise reflected in the RUC-recommended value. If we believe that such changes in time are already accounted for in the RUC’s recommendation, then we do not make such adjustments. Likewise, we do not arbitrarily apply time ratios to current work RVUs to calculate proposed work RVUs. We use the ratios to identify potential work RVUs and consider these work RVUs as potential options relative to the values developed through other options.

We do not imply that the decrease in time as reflected in survey values should always equate to a one-to-one or linear decrease in newly valued work RVUs. Instead, we believe that, since the two components of work are time and intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, significant decreases in time should be reflected in decreases to work RVUs. If the RUC’s recommendation has appeared to disregard or dismiss the changes in time, without a persuasive explanation of why such a change should not be accounted for in the overall work of the service, then we have generally used one of the aforementioned methodologies to identify potential work RVUs, including the methodologies intended to account for the changes in the resources involved in furnishing the procedure.

Several stakeholders, including the RUC, have expressed general objections to our use of these methodologies and deemed our actions in adjusting the recommended work RVUs as inappropriate; other stakeholders have also expressed general concerns with CMS refinements to RUC-recommended values in general. In the CY 2017 PFS final rule (81 FR 80272 through 80277), we responded in detail to several comments that we received regarding this issue. In the CY 2017 PFS proposed rule (81 FR 46162), we requested comments regarding potential alternatives to making adjustments that would recognize overall estimates of work in the context of changes in the resource of time for particular services; however, we did not receive any specific potential alternatives. As described earlier in this section, crosswalks to key reference or similar codes are one of the many methodological approaches we have employed to identify potential values that reconcile the RUC-recommended work RVUs with the recommended time values when the RUC-recommended work RVUs did not appear to account for significant changes in time.

In response to comments, in the CY 2019 PFS final rule (83 FR 59515), we clarified that terms “reference services”, “key reference services”, and “crosswalks” as described by the commenters are part of the RUC’s process for code valuation. These are not terms that we created, and we do not agree that we necessarily must employ them in the identical fashion for the purposes of discussing our valuation of individual services that come up for review. However, in the interest of minimizing confusion and providing clear language to facilitate stakeholder feedback, we will seek to limit the use of the term, “crosswalk,” to those cases where we are making a comparison to a CPT code with the identical work RVU. We also occasionally make use of a “bracket” for code valuation. A “bracket” refers to when a work RVU falls between the values of two CPT codes, one at a higher work RVU and one at a lower work RVU.

We look forward to continuing to engage with stakeholders and commenters, including the RUC, as we prioritize our obligation to value new, revised, and potentially misvalued codes; and will continue to welcome feedback from all interested parties regarding valuation of services for consideration through our rulemaking process. We refer readers to the detailed discussion in this section of the valuation considered for specific codes. Table 13 contains a list of codes and descriptors for which we are proposing work RVUs and all codes for which we received RUC recommendations by February 10, 2021. The proposed work RVUs, work time and other payment information for all CY 2022 payable codes are available on the CMS website under downloads for the CY 2022 PFS proposed rule at https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html.  

3. Methodology for the Direct PE Inputs To Develop PE RVUs

a. Background

On an annual basis, the RUC provides us with recommendations regarding PE inputs for new, revised, and potentially misvalued codes. We review the RUC-recommended direct PE inputs on a code by code basis. Like our review of recommended work RVUs, our review of recommended direct PE inputs generally includes, but is not limited to, a review of information provided by the RUC, HCPAC, and other public commenters, medical literature, and comparative databases, as well as a comparison with other codes within the PFS, and consultation with physicians and health care professionals within CMS and the federal government, as well as Medicare claims data. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters and the rationale for the recommendations. When we determine that the RUC’s recommendations appropriately estimate the direct PE inputs (clinical labor, disposable supplies, and medical equipment) required for the typical service, are consistent with the principles of relativity, and reflect our payment policies, we use those direct PE inputs to value a service. If not, we refine the recommended PE inputs to better reflect our estimate of the PE resources required for the service. We also confirm whether CPT codes should have facility and/or nonfacility direct PE inputs and refine the inputs accordingly.

Our review and refinement of the RUC-recommended direct PE inputs includes many refinements that are common across codes, as well as refinements that are specific to particular services. Table 14 details our refinements of the RUC’s direct PE recommendations at the code-specific level. In section II.B. of this proposed rule, Determination of Practice Expense Relative Value Units (PE RVUs), we addressed certain refinements that would be common across codes. Refinements to particular codes are addressed in the portions of that section that are dedicated to particular codes. We noted that for each refinement, we
indicated the impact on direct costs for that service. We noted that, on average, in any case where the impact on the direct cost for a particular refinement is $0.35 or less, the refinement has no impact on the PE RVUs. This calculation considers both the impact on the direct portion of the PE RVU, as well as the impact on the indirect allocator for the average service. We also noted that many of the refinements listed in Table 14 result in changes under the $0.35 threshold and are unlikely to result in a change to the RVUs.

We also noted that the direct PE inputs for CY 2022 are displayed in the CY 2022 direct PE input files, available on the CMS website under the downloads for the CY 2022 PFS proposed rule at http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html. The inputs displayed there have been used in developing the CY 2022 PE RVUs as displayed in Addendum B.

b. Common Refinements

(1) Changes in Work Time

Some direct PE inputs are directly affected by revisions in work time. Specifically, changes in the intraservice portions of the work time and changes in the number or level of postoperative visits associated with the global periods result in corresponding changes to direct PE inputs. The direct PE input recommendations generally correspond to the work time values associated with services. We believe that inadvertent discrepancies between work time values and direct PE inputs should be refined or adjusted in the establishment of proposed direct PE inputs to resolve the discrepancies.

(2) Equipment Time

Prior to CY 2010, the RUC did not generally provide CMS with recommendations regarding equipment time inputs. In CY 2010, in the interest of ensuring the greatest possible degree of accuracy in allocating equipment minutes, we requested that the RUC provide equipment times along with the other direct PE recommendations, and we provided the RUC with general guidelines regarding appropriate equipment time inputs. We appreciate the RUC’s willingness to provide us with these additional inputs as part of its PE recommendations.

In general, the equipment time inputs correspond to the service period portion of the clinical labor times. We clarified this principle over several years of rulemaking, indicating that we consider equipment time as the time within the intraservice period when a clinician is using the piece of equipment plus any additional time that the piece of equipment is not available for use for another patient due to its use during the designated procedure. For those services for which we allocate cleaning time to portable equipment items, because the portable equipment does not need to be cleaned in the room where the service is furnished, we do not include that cleaning time for the remaining equipment items, as those items and the room are both available for use for other patients during that time. In addition, when a piece of equipment is typically used during follow-up postoperative visits included in the global period for a service, the equipment time would also reflect that use.

We believe that certain highly technical pieces of equipment and equipment rooms are less likely to be used during all of the preservice or postservice tasks performed by clinical labor staff on the day of the procedure (the clinical labor service period) and are typically available for other patients even when one member of the clinical staff may be occupied with a preservice or postservice task related to the procedure. We also note that we believe these same assumptions would apply to inexpensive equipment items that are used in conjunction with and located in a room with non-portable highly technical equipment items since any items in the room in question would be available if the room is not being occupied by a particular patient. For additional information, we refer readers to our discussion of these issues in the CY 2012 PFS final rule with comment period (76 FR 73182) and the CY 2015 PFS final rule with comment period (79 FR 67639).

(3) Standard Tasks and Minutes for Clinical Labor Tasks

In general, the preservice, intraservice, and postservice clinical labor minutes associated with clinical labor inputs in the direct PE input database reflect the sum of particular tasks described in the information that accompanies the RUC-recommended direct PE inputs, commonly called the “PE worksheets.” For most of these described tasks, there is a standardized number of minutes, depending on the type of procedure, its typical setting, its global period, and the other procedures with which it is typically reported. The RUC sometimes recommends a number of minutes either greater than or less than the typically allotted for certain tasks. In those cases, we review the deviations from the standards and any rationale provided for the deviations. When we do not accept the RUC-recommended exceptions, we refine the proposed direct PE inputs to conform to the standard times for those tasks. In addition, in cases when a service is typically billed with an E/M service, we remove the preservice clinical labor tasks to avoid duplicative inputs and to reflect the resource costs of furnishing the typical service.

We refer readers to section II.B. of this proposed rule, Determination of Practice Expense Relative Value Units (PE RVUs), for more information regarding the collaborative work of CMS and the RUC in improvements in standardizing clinical labor tasks.

(4) Recommended Items That Are Not Direct PE Inputs

In some cases, the PE worksheets included with the RUC’s recommendations include items that are not clinical labor, disposable supplies, or medical equipment or that cannot be allocated to individual services or patients. We addressed these kinds of recommendations in previous rulemaking (78 FR 74242), and we do not use items included in these recommendations as direct PE inputs in the calculation of PE RVUs.

(5) New Supply and Equipment Items

The RUC generally recommends the use of supply and equipment items that already exist in the direct PE input database for new, revised, and potentially misvalued codes. However, some recommendations include supply or equipment items that are not currently in the direct PE input database. In these cases, the RUC has historically recommended that a new item be created and has facilitated our pricing of that item by working with the specialty societies to provide us copies of sales invoices. For CY 2022 we received invoices for several new supply and equipment items. Tables 16 and 17 detail the invoices received for new and existing items in the direct PE database. As discussed in section II.B. of this proposed rule, Determination of Practice Expense Relative Value Units, we encourage stakeholders to review the prices associated with these new and existing items to determine whether these prices appear to be accurate. Where prices appear inaccurate, we encourage stakeholders to submit invoices or other information to improve the accuracy of pricing for these items in the direct PE database by February 10th of the following year for consideration in future rulemaking, similar to our process for consideration of RUC recommendations.
We remind stakeholders that due to the relativity inherent in the development of RVUs, reductions in existing prices for any items in the direct PE database increase the pool of direct PE RVUs available to all other PFS services. Tables 16 and 17 also include the number of invoices received and the number of nonfacility allowed services for procedures that use these equipment items. We provide the nonfacility allowed services so that stakeholders will note the impact the particular price might have on PE relativity, as well as to identify items that are used frequently, since we believe that stakeholders are more likely to have better pricing information for items used more frequently. A single invoice may not be representative of typical costs and we encourage stakeholders to provide additional invoices so that we might identify and use accurate prices in the development of PE RVUs.

In some cases, we do not use the price listed on the invoice that accompanies the recommendation because we identify publicly available alternative prices or information that suggests a different price is more accurate. In these cases, we include this in the discussion of these codes. In other cases, we cannot adequately price a newly recommended item due to inadequate information. Sometimes, no supporting information regarding the price of the item has been included in the recommendation. In other cases, the supporting information does not demonstrate that the item has been purchased at the listed price (for example, vendor price quotes instead of paid invoices). In cases where the information provided on the item allows us to identify clinically appropriate proxy items, we might use existing items as proxies for the newly recommended items. In other cases, we include the item in the direct PE input database without any associated price. Although including the item without an associated price means that the item does not contribute to the calculation of the final PE RVU for particular services, it facilitates our ability to incorporate a price once we obtain information and are able to do so.

(6) Service Period Clinical Labor Time in the Facility Setting

Generally speaking, our direct PE inputs do not include clinical labor minutes assigned to the service period because the cost of clinical labor during the service period for a procedure in the facility setting is not considered a resource cost to the practitioner since Medicare makes separate payment to the facility for these costs. We address code-specific refinements to clinical labor in the individual code sections.

(7) Procedures Subject to the Multiple Procedure Payment Reduction (MPPR) and the OPPS Cap

We note that the list of services for the upcoming calendar year that are subject to the MPPR on diagnostic cardiovascular services, diagnostic imaging services, diagnostic ophthalmology services, and therapy services; and the procedures that meet the definition of imaging under section 1848(b)(4)(B) of the Act, and therefore, are subject to the OPPS cap; are displayed in the public use files for the PFS proposed and final rules for each year. The public use files for CY 2022 are available on the CMS website under downloads for the CY 2022 PFS proposed rule at http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html. For more information regarding the history of the MPPR policy, we refer readers to the CY 2014 PFS final rule with comment period (78 FR 74261 through 74263).

Effective January 1, 2007, section 5102(b)(1) of the Deficit Reduction Act of 2005 (Pub. L. 109–171) (DRA) amended section 1848(b)(4) of the Act to require that, for imaging services, if—(i) the technical component (including the technical component portion of a global fee) of the service established for a year under the fee schedule without application of the geographic adjustment factor, exceeds (ii) the Medicare OPD fee schedule amount established under the prospective payment system (PPS) for hospital outpatient department services under section 1833(i)(3)(D) of the Act for such service for such year, determined without regard to geographic adjustment under paragraph (i)(2)(D) of such section, the Secretary shall substitute the amount described in clause (ii), adjusted by the geographic adjustment factor [under the PFS], for the fee schedule amount for such technical component for such year. As required by the section 1848(b)(4)(A) of the statute, for imaging services furnished on or after January 1, 2007, we cap the TC of the PFS payment amount for the year (prior to geographic adjustment) by the Outpatient Prospective Payment System (OPPS) payment amount for the service (prior to geographic adjustment). We then apply the PFS geographic adjustment to the capped payment amount. Section 1848(b)(4)(B) of the Act defines imaging services as “Imaging and computer-assisted imaging services, including X-ray, ultrasound (including echocardiography), nuclear medicine (including PET), magnetic resonance imaging (MRI), computed tomography (CT), and fluoroscopy, but excluding diagnostic and screening mammography.” For more information regarding the history of the cap on the TC of the PFS payment amount under the DRA (the “OPPS cap”), we refer readers to the CY 2007 PFS final rule with comment period (71 FR 69659 through 69662).

For CY 2022, we identified new and revised codes to determine which services meet the definition of “imaging services” as defined above for purposes of this cap. Beginning for CY 2022, we are proposing to include the following services on the list of codes to which the OPPS cap applies: CPT codes 6933T (Computed tomography, breast, including 3D rendering, when performed, unilateral; without contrast material), 0634T (Computed tomography, breast, including 3D rendering, when performed, unilateral; with contrast material(s)), 0635T (Computed tomography, breast, including 3D rendering, when performed, unilateral; with contrast material(s)), 0636T (Computed tomography, breast, including 3D rendering, when performed, bilateral; without contrast material(s)), 0637T (Computed tomography, breast, including 3D rendering, when performed, bilateral; with contrast material(s)), 0638T (Computed tomography, breast, including 3D rendering, when performed, bilateral; with contrast material(s)), 0649T (Quantitative magnetic resonance for analysis of tissue composition (e.g., fat, iron, water content), including multiparametric data acquisition, data preparation and transmission, interpretation and report, obtained without diagnostic MRI examination of the same anatomy (e.g., organ, gland, tissue, target structure) during the same session), 77X01 (Trabecular bone score (TBS), structural condition of the bone microarchitecture; using dual X-ray absorptiometry (DXA) or other imaging data on gray-scale radiogram; calculation, with interpretation and report on fracture risk), 77X02

39154 Federal Register / Vol. 86, No. 139 / Friday, July 23, 2021 / Proposed Rules
VerDate Sep 11 2014 17:59 Jul 22, 2021 Jkt 253001 PO 00000 Frm 00053 Fmt 4701 Sfmt 4702 E:\FR\FM\23JYP2.SGM 23JYP2

revised building block methodology analysis. The RUC has stated that the schedule that uses a revised building and a method to assess the relativity of 10,000 or more that have increased by at least 100 percent from 2009 through 2014. Additionally, at the October 2019 meeting, this service was identified by the RUC via a RUC database search of codes with similar total times and post-induction period procedure anesthesia (PIPPA) times, 12 base units appears to be on the very high range. We are proposing a valuation of 10 base units supported by reference codes CPT code 00620 (anesthesia for procedures on the thoracic spine and cord, not otherwise specified) and CPT code 00600 (Anesthesia for procedures on cervical spine and cord; not otherwise specified), which both have a valuation of 10 base units. CPT code 00620 has a very similar total time of 235 minutes and CPT code 00600 has a higher total time of 257 minutes and the same base unit value of 10, which indicates that this is an appropriate valuation. Additionally, we note that the survey total time for CPT code 00537 increased from 150 to 238 minutes, resulting in a survey result 25 percentile valuation of 10 base units.

We are proposing the RUC-recommended direct PE inputs for CPT code 00537.

(2) Anesthesia Services for Image-Guided Spinal Procedures (CPT Codes 01XX2, 01XX3, 01XX4, 01XX5, 01XX6, and 01XX7)

In 2017, the RUC identified CPT code 01936 (Anesthesia for percutaneous image guided procedures on the spine and spinal cord; therapeutic) as possibly needing refinement due to inaccurate reporting via the high volume growth screen. The Relativity Assessment Workgroup reviewed data on what procedures were reported with this anesthesia code. In October 2019, the Workgroup reviewed this service and recommended that it be referred to the CPT Editorial Panel to create more granular codes. In October 2020, the CPT Editorial Panel replaced CPT codes 01935 and 01936 with six new codes to report percutaneous image-guided spine and spinal cord anesthesia procedures. These CPT codes are 01XX2 (Anesthesia for percutaneous image-guided injection, drainage or aspiration procedures on the spine or spinal cord; cervical or thoracic), 01XX3 (Anesthesia for percutaneous image guided injection, drainage or aspiration procedures on the spine or spinal cord; lumbar or sacral), 01XX4 (Anesthesia for percutaneous image guided destruction procedures by neurolytic agent on the spine or spinal cord; cervical or thoracic), 01XX5 (Anesthesia for percutaneous image guided destruction procedures by neurolytic agent on the spine or spinal cord; lumbar or sacral), 01XX6 (Anesthesia for percutaneous image guided neuromodulation or intravertebral procedures (e.g., Kyphoplasty, vertebroplasty) on the spine or spinal cord; cervical or thoracic) and 01XX7 (Anesthesia for percutaneous image guided neuromodulation or intravertebral procedures (e.g., Kyphoplasty, vertebroplasty) on the spine or spinal cord; lumbar or sacral).

We are proposing the RUC-recommended valuation of 4 base units for CPT codes 01XX2, 01XX3, 01XX4, and 01XX5.

We disagree with the RUC-recommended valuation of 6 base units for CPT codes 01XX6 and 01XX7. After performing a RUC database search of codes with similar total times and post-induction period procedure anesthesia (PIPPA) times, 6 base units for CPT codes 01XX6 and 01XX7 appears to be a high valuation. We are proposing a valuation of 5 base units for both codes supported by a reference code, CPT code 00813 (Anesthesia for combined upper and lower gastrointestinal endoscopic procedures, endoscope introduced both proximal to and distal to the duodenum). CPT code 00813 has a valuation of 5 base units with a higher PIPPA time of 40 minutes as well as a higher total time of 70 minutes. The RUC notes that CPT codes 01XX6 and 01XX7 should have a higher base unit valuation than the other similar codes within this family due to the complex nature of these procedures that have a more intensive anesthesia process. The RUC supports their recommendation with a crosswalk code, CPT code 00732 (Anesthesia for upper gastrointestinal endoscopic procedures, endoscope introduced proximal to duodenum; endoscopic retrograde cholangiopancreatography (ERCP)). CPT code 00732 has a valuation of 6 base units, a total time of 100 minutes, and a PIPPA time of 65 minutes. CPT codes 01XX6 and 01XX7 have a total time of 58 minutes and a PIPPA time of 20 minutes. We agree that a more complex procedure may require a higher base unit valuation within a family; however, given the disparity in total and PIPPA time, we disagree with the use of...
this crosswalk code to support a valuation of 6 base units and instead propose a valuation of 5 base units supported by reference CPT code 00813, which has higher times and the same base unit valuation.

We are proposing the RUC-recommended direct PE inputs for all six codes in the family.

(3) Closed Treatment of Nasal Bone Fracture (CPT Codes 21315 and 21320)

We agree with the RUC’s recommendation to change CPT codes 21315 (Closed treatment of nasal bone fracture; without stabilization) and 21320 (Closed treatment of nasal bone fracture; with stabilization) to 000-day global period codes from 010-day global period codes to account for the degree of swelling within 10 days post-procedure, and because the patient can remove their own splint at home for CPT code 21320. For CPT codes 21315 and 21320, we disagree with the RUC-recommended RVUs of 2.00 and 2.33, respectively, as we believe these values do not adequately reflect the surveyed reductions in physician time and the change to a 000-day global period from a 010-day global period for these CPT codes. We are proposing a work RVU of 0.96 for CPT code 21315 and 1.59 for CPT code 21320 based on the reverse building block methodology to remove the RVUs associated with the 010-day global period and the surveyed reductions in physician time. We believe that the proposed work RVU of 0.96 for CPT code 21315 adequately accounts for the 50 percent decrease in intraservice and postservice time, a 31-minute decrease in total time, and a change to a 000-day global period which will allow for separately billable E/M visits as medically necessary. We believe that the proposed work RVU of 1.59 for CPT code 21320 adequately accounts for the 5-minute decrease in intraservice time, 3-minute decrease in total time, and 48 percent decrease in postservice time. Absent an explicitly stated rationale for an intensity increase for CPT codes 21315 and 21320, we are proposing to adjust the work RVU to reflect significant decreases in surveyed physician time.

The global period changes from 010-day to 000-day allow for separately billable E/M visits relating to CPT codes 21315 and 21320, therefore we removed RVUs that we believed were attributable to the currently bundled E/M visits totaling 1.30 RVUs for CPT code 21315 and 0.35 RVUs for CPT code 21320. CPT code 21315 is currently bundled with one post-operative follow up office visit, CPT code 99213 (Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 20–29 minutes of total time is spent on the date of the encounter). CPT code 21320 is currently bundled with half of a post-operative follow up office visit, CPT code 99212 (Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 10–19 minutes of total time is spent on the date of the encounter). We do not believe the RUC adequately accounted for the loss of these E/M visits in their recommended work RVUs for CPT codes 21315 and 21320. The RUC’s recommendations also seem to dismiss the significant changes in surveyed physician time, without a persuasive explanation of a significant increase in IWPUT that results from the RUC’s recommended work RVUs for CPT codes 21315 and 21320. We believe the surveyed decreases in physician time in conjunction with the loss of the post-operative visits for CPT codes 21315 and 21320 merit decreases in the work RVUs from the current work RVUs.

We considered using a modified total time ratio methodology given the age and potentially flawed methodology used to arrive at the current valuation. The modified total time ratio calculation does not include the loss of 8 minutes of post-operative time attributable to the change from a 010-day global period to a 000-day global period for CPT code 21320 and loss of 23 minutes of post-operative time for CPT code 23215. This modified time ratio methodology reflects how the physician time is changing in the pre-, intra-, and postservice periods when a code’s global period is changing, given that E/M services can be as medically necessary and appropriate for a 000-day global code. The total time ratio between the current and proposed total times for CPT code 21315, excluding the 23 minutes of post-operative time in the current total time, equals 1.64. We arrived at 1.64 by modifying the original total time ratio equation to equal the proposed new total time divided by the current time, less any time attributable to the post-operative global period, then multiplied by the current work RVU. The current total time for CPT code 21315 without the 23 minutes of post-operative time that will be lost by going from a 010-day to a 000-day global period code is 76 minutes, therefore, the modified total time ratio = (68 minutes/ (99 minutes – 23 minutes)) * 1.83 = 1.64. When using the original total time ratio methodology for CPT code 21315, it shows a 31 percent decrease in total time [(68 minutes – 99 minutes)/99 minutes = −0.31], whereas the modified methodology shows that there is only an 11 percent decrease in newly proposed pre-, intra-, and postservice time from the current times [(68 minutes – 76 minutes)/76 minutes = −0.11]. The same modified total time ratio methodology could be applicable to CPT code 21320. The current total time for CPT code 21320 without the 8 minutes of post-operative time that will be lost by going from a 010-day to a 000-day global period code is 70 minutes, therefore, the modified total time ratio = (75 minutes/(78 minutes – 8 minutes)) * 1.88 = 2.01. The modified methodology shows that the pre-, intra-, and postservice time is increasing by 7 percent for CPT code 21320, whereas the original methodology, which accounts for the loss of the 8 post-operative minutes in the total time ratio, shows a 4 percent decrease in total time that would indicate the need for a work RVU decrease. We recognize that we have not previously used a modified total time approach to consider work RVU values when there is a change in the global period for a service in conjunction with significant surveyed changes to the pre-, intra-, and postservice times; therefore, we are seeking comment on application of the modified total time ratio approach to value services that have a global period change and significant surveyed physician time changes. We believe this methodology may account for the loss of post-operative visits and the surveyed changes in the pre-, intra-, and postservice times in this unique situation, given the potentially flawed methodology used to arrive at the current valuations for CPT codes 21315 and 21320 that are used in the total time ratios.

We are also proposing the RUC-recommended direct PE inputs without refinements and the surveyed physician times for CPT codes 21315 and 21320.

(4) Insertion of Interlaminar/Interspinous Device (CPT Code 22687)

We are proposing the RUC-recommended work RVU of 15.00 for CPT code 22687 (Insertion of interlaminar/interspinous process stabilization/distraction device, without fusion, including image guidance when appropriately used, with open decompression, lumbar; single level). The RUC is not recommending changes to the current
PE inputs, and CMS is not proposing any changes to the current PE inputs.

(5) Treatment of Foot Infection (CPT Codes 28001, 28002, and 28003)

Through a screen of codes with 010-day global period service with more than one post-operative follow-up office visit, the RUC identified this family of major surgical codes that did not have consistent global periods. The RUC conducted a survey of these codes as 000-day globals for their April 2020 meeting, and the review was postponed until October 2020. CPT code 28001 (Incision and drainage, bursa, foot) (work RVU of 2.78 with 31 minutes of intraservice time) currently has a 010-day global period with one post-operative follow-up office visit, CPT code 99212 (Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient’s and/or family’s needs. Usually, the presenting problem(s) are self limited or minor. Typically, 10 minutes are spent face-to-face with the patient and/or family). Survey results from podiatrists and orthopedic surgeons yielded a median work RVU of 2.00 with 17 minutes of preservice evaluation time, 5 minutes of preservice positioning time, 5 minutes of preservice scrub/dress/wait time, 20 minutes intraservice time, and 15 minutes immediate postservice time for a total of 60 minutes total time. We are proposing the RUC-recommended work RVU of 2.00 and the surveyed physician times for this 000-day global code.

CPT code 28002 (Incision and drainage below fascia, with or without tendon sheath involvement, foot; single bursal space) (work RVU of 5.34 with 30 minutes of intraservice time) currently has a 010-day global period with two post-operative follow-up office visits, CPT code 99212 (Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient’s and/or family’s needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 15 minutes are spent face-to-face with the patient and/or family); and a half day hospital discharge CPT code 99236 (Hospital discharge day management; 30 minutes or less). For CPT code 28002, the RUC recommended 30 minutes of preservice evaluation time, 5 minutes of preservice positioning time, 15 minutes of preservice scrub/dress/wait time, 30 minutes of intraservice time, and 20 minutes of immediate postservice time, for a total of 100 minutes total time. The RUC recommended a work RVU of 3.50 and the surveyed physician times for this 000-day global code.

We note that the result from the survey’s 50th percentile work RVU was 3.73 and that the survey’s 25th percentile work RVU was 2.80. As this CPT code is converting from a 010-day global to a 000-day global we find the reference CPT code 43193 (Esophagoscopy, rigid, transoral; with biopsy, single or multiple) has a 010-day global period with one post-operative follow-up office visit, CPT code 99212 (Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient’s and/or family’s needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 15 minutes are spent face-to-face with the patient and/or family); one post-operative CPT code 99231 (Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A problem focused interval history; A problem focused examination; Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient’s and/or family’s needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 15 minutes are spent face-to-face with the patient and/or family); one post-operative CPT code 99231 (Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A problem focused interval history; A problem focused examination; Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient’s and/or family’s needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 15 minutes are spent face-to-face with the patient and/or family); and one hospital discharge CPT code 99236 (Hospital discharge day management; 30 minutes or less), for a total of eight post op follow-up visits, across five types of E/M and hospital care codes. For CPT code 28003, the RUC recommends 40 minutes of preservice evaluation time, 10 minutes of preservice positioning time, 15 minutes of preservice scrub/dress/wait time, 45 minutes of intraservice time, and 20 minutes of immediate postservice time, for a total time of 130 minutes. We are proposing the RUC-recommended work RVU of 5.28 and surveyed physician times for this 000-day global code.

In order to complete the adjustments for making these Treatment of Foot Infection codes consistent as 000-day global codes, the RUC adjusted the PE inputs for these codes to reflect their proposed global periods from 010 and 000-day globals to 000-day global, and to reflect the use of more typical supplies, equipment, and clinical labor
employed now, than what was necessary a decade ago. Some relatively small valued supply items were removed, while other items were added, and clinical labor times were largely adjusted to remove minutes from the post-operative follow-up office visit times in the 010 and 090-day global codes. We are proposing all of the PE refinements as recommended by the RUC for these codes, which can be found in section II.B. of this proposed rule, under the Determination of Practice Expense RVUs.

(6) Percutaneous Cerebral Embolic Protection (CPT Codes 33XXX)

CPT code 33XXX (Transcatheter placement and subsequent removal of cerebral embolic protection device(s), including arterial access, catheterization, imaging, and radiological supervision and interpretation, percutaneous (List separately in addition to code for primary procedure)) was created in October 2020, by the CPT Editorial Panel as a new add-on code to report transcatheter placement and subsequent removal of cerebral embolic protection device(s). The CPT Editorial Panel also added instructions to report the new code in the Aortic Valve guidelines. The RUC reviewed the survey results for the new add-on code and noted that the survey respondents likely overvalued the physician work involved in performing this service, with a 25th percentile work value of 3.43. The RUC recommends a work RVU of 2.50 for CPT code 33XXX.

We are proposing the RUC-recommended work RVU of 2.50 for CPT code 33XXX. This is a facility-based add-on code with no direct PE inputs.

(7) Exclusion of Left Atrial Appendage (CPT Codes 33XXX3, 33XXX4, and 33XXX5)

In May 2020, the CPT Editorial Panel approved the creation of the new codes to describe open and thoracoscopic left atrial appendage management procedures when performed as stand-alone procedures or in conjunction with other procedures. The codes represent new technology and surgical techniques that may be used to treat atrial fibrillation at the time of another surgical procedure and include CPT code 33XXX3 (Exclusion of left atrial appendage, open, any method (e.g., excision, isolation via stapling, oversewing, ligation, plication, clip)), CPT code 33XXX4 (Exclusion of left atrial appendage, open, performed at the time of other sternotomy or thoracotomy procedure(s), any method (e.g., excision, isolation via stapling, oversewing, ligation, plication, clip), and CPT code 33XXX5 (Exclusion of left atrial appendage, thoracoscopic, any method (e.g., excision, isolation via stapling, oversewing, ligation, plication, clip.

CPT codes 33XXX3 and 33XXX5 are 090-day global codes while CPT code 33XXX4 is a ZZZ global code.

In October 2020, the RUC reviewed and recommended work and PE values for the three new codes. Recommended work values include 18.50 RVUs for CPT code 33XXX3, 2.50 work RVUs for CPT code 33XXX4, and 14.31 work RVUs for CPT code 33XXX5. We are proposing the RUC-recommended work RVUs for the three new codes. We are also proposing the RUC-recommended direct PE inputs for CPT codes 33XXX3 and 33XXX5. We note that CPT code 33XXX4 has no direct PE inputs.

(8) Endovascular Repair of Aortic Coarctation (CPT Codes 338X1, 338X2, and 338X0)

In October 2020, the CPT Editorial Panel created CPT codes 338X1 (Endovascular stent repair of coarctation of the ascending, transverse, or descending thoracic or abdominal aorta, involving stent placement; across major side branches) and 338X2 (Endovascular stent repair of coarctation of the ascending, transverse, or descending thoracic or abdominal aorta, involving stent placement; not crossing major side branches) to report endovascular stent repair of coarctation of the thoracic or abdominal aorta; and CPT code 338X0 (Percutaneous transluminal angioplasty of native or recurrent coarctation of the aorta) to report trans-liminal angioplasty for repair of native or recurrent percutaneous coarctation of the aorta.

For CY 2022, the RUC recommended a work RVU of 21.70 for CPT code 338X1, a work RVU 17.97 for CPT code 338X2, and a work RVU 14.00 for CPT code 338X0.

We disagree with the RUC-recommended work RVUs for the CPT code family of 338X1, 338X2, and 338X0. We found that the recommended work RVUs for these CPT codes were high when compared to other codes with similar time values. Therefore, we are proposing the RUC survey 25th percentile of 18.27 as the work RVU for 338X1, we are proposing a work RVU of 14.54 for 338X2, and we are proposing a work RVU of 10.81 for 338X0.

When we reviewed CPT code 338X1, we found that the recommended work RVU was high compared to other codes with similar time values. The RUC survey 25th percentile of 18.27 falls within the range of RVUs with similar intra service time. This is supported by the reference CPT codes we compared to CPT code 338X1 with intra service time similar to the 134 minutes of intra service time for CPT code 338X1; reference CPT code 37231 (Revascularization, endovascular, open or percutaneous, tibial, peroneal artery, unilateral, initial vessel; with translesional stent placement(s) and atherectomy, includes angioplasty within the same vessel, when performed) has a work RVU of 14.75 with 135 minutes of intra service time, and CPT code 93590 (Percutaneous transcatheter closure of paravalvular leak; initial occlusion device, mitral valve) has a work RVU of 21.70 with 135 minutes of intra service time. We note that the RUC-recommended RVU of 21.70 is a crosswalk from CPT code 93590 and is the highest value code within the range of reference codes we reviewed with similar intra service time. Again, we believe the RUC survey 25th percentile of 18.27 is a more appropriate value overall than 21.70 when compared to the range of codes with similar intra service time.

The RUC-recommended RVU of 17.97 for CPT code 338X2 was higher than other codes with the same 120 minutes of intra service time and similar total time. Although we disagree with the RUC-recommended work RVU for 338X2, we concur that the relative difference in work between CPT codes 338X1 and 338X2 is equivalent to the RUC-recommended interval of 3.73 RVUs. We believe the use of an incremental difference between these CPT codes is a valid methodology for setting values, especially in valuing services within a family of codes where it is important to maintain an appropriate intra-family relativity. Therefore, we are proposing a work RVU of 14.54 for CPT code 338X2, based on the RUC-recommended interval of 3.73 RVUs below our proposed work RVU of 18.27 for CPT code 338X1.

The RUC-recommended work RVU of 14.00 for CPT code 338X0 was higher than other codes with the same 90 minutes of intra service time and similar total time and we believe it would be more accurate to propose a work RVU that maintains the 3.73 incremental difference between the codes in this family. Therefore, for CPT code 338X0, we propose a work RVU of 10.81 which also continues the 3.73 incremental difference used between CPT codes 338X1 and 338X2. In the proposed CPT code 338X0, we are proposing an incremental difference of 3.97 between CPT codes 338X2 and 338X0. Although
the work RVU of 10.81 we are proposing for CPT code 338X0 is lower than the RUC recommendation, the 3.73 incremental difference between CPT codes 338X2 and 338X0 we are proposing is more generous than the RUC incremental difference of 3.97 between CPT codes 338X2 and 338X0.

We are proposing no direct PE inputs for the CPT code family of 338X1, 338X2, and 338X0, as recommended by the RUC. These services are provided exclusively in the facility setting. (9) Harvest of Upper Extremity Artery (CPT Codes 35XX0 and 35600)

In May 2020, the CPT Editorial Panel created CPT code 35XX0 (Harvest of upper extremity artery, 1 segment, for coronary artery bypass procedure, endoscopic) to describe endoscopic radial artery harvest via an endoscopic approach, and CPT code 35600 (Harvest of upper extremity artery, 1 segment, for coronary artery bypass procedure, open) was newly included in the code family as an open approach for the upper extremity harvesting procedure. The RUC also stated that CPT codes 35XX0 and 35600 are almost always exclusively performed in conjunction with coronary artery bypass grafting (CABG) procedures. For CY 2022, the RUC-recommended work RVU for code 35XX0 and a work RVU of 4.00 for code 35600.

We disagree with the RUC-recommended work RVUs for the CPT code family of 35XX0 and 35600. We found that the recommended work RVUs for these CPT codes were high when compared to other codes with similar time values. Therefore, we are proposing 3.34 as the work RVU for 35XX0 and we are proposing a work RVU of 3.59 for 35600.

We disagree with the RUC-recommended work RVU for CPT code 35XX0 and are proposing an RVU of 3.34 which is a direct work RVU crosswalk from CPT code 35686 (Creation of distal arteriovenous fistula during lower extremity bypass surgery (non-hemodialysis) (List separately in addition to code for primary procedure)). The RUC-recommended value of 3.75 is higher than other codes with similar intra service time and total time. This is supported by the reference CPT codes we compared to CPT code 35XX0 with the same 35 minutes of intra service time and 35 minutes of total time as CPT code 35XX0; reference CPT code 74713 (Magnetic resonance (e.g., proton) imaging; fetal, including placental and maternal pelvic imaging when performed; each additional gestation (List separately in addition to code for primary procedure)) has a work RVU of 1.85, and CPT code 35686 has a work RVU of 3.34.

Although we disagree with the RUC-recommended work RVU for CPT code 35600, we concur that the relative difference in work between CPT codes 35XX0 and 35600 is equivalent to the RUC-recommended interval of 0.25 RVUs. We believe the use of an incremental difference between these CPT codes is a valid methodology for setting values, especially in valuing services within a family of codes where it is important to maintain an appropriate intra-family relativity. Therefore, we are proposing a work RVU of 3.59 for CPT code 35XX0, based on the RUC-recommended interval of 0.25 RVUs above our proposed work RVU of 3.34 for CPT code 35XX0.

We are proposing no direct PE inputs for the CPT code family of 35XX0 and 35600 as recommended by the RUC. These services are provided exclusively in the facility setting. The RUC acknowledged that CPT codes 35XX0 and 35600 are almost always exclusively performed in conjunction with coronary artery bypass grafting (CABG) procedures. Such codes are designated as add-on procedures and are assigned a ZZZ-day global period (that is, code related to another service and is always included in the global period of the other service). The RUC also requested that the global period for both CPT codes 35XX0 and 35600 be an XXX-day global period (that is, global concept does not apply) and not a ZZZ-day global period as is customary for add-on codes. The RUC stated that an XXX-day global period would allow the individual that performs the harvest of upper extremity artery procedure (often separate from the surgeon performing the base CABG procedure) to report it under their own provider number. The RUC noted that it is often a nurse practitioner (NP) or physician’s assistant (PA) who performs the harvest procedure. However, the RUC surveyed CPT codes 35XX0 and 35600 using reference codes with the ZZZ-day global period. Therefore, we believe it is appropriate to use that same ZZZ-day global period for CPT codes 35XX0 and 35600, and we are proposing to assign the ZZZ-day global period to CPT codes 35XX0 and 35600 for CY 2022. Through our scrutiny of comparing the code descriptions of codes with matching intra service times, we find much more clinically coherent similarities with codes with a ZZZ-day global period (procedures complementary, and sometimes necessary, to complete a larger procedure) than codes with an XXX-day global period.

However, we are compelled to understand more about the billing circumstances presented by the RUC and stakeholders that have presented this approach for CPT codes 35XX0 and 35600 to CMS for consideration. We are seeking comments and requesting information that may inform why CPT codes 35XX0 and 35600 should have an XXX-day global period instead of the ZZZ-day global period that is customary for add-on codes.

(10) Needle Biopsy of Lymph Nodes (CPT Code 38505)

CPT code 38505 (Biopsy or excision of lymph node(s); by needle, superficial (e.g., cervical, inguinal, axillary)) was identified in October 2019 as Harvard Valued with a utilization of over 30,000 claims. In January 2020, the RUC recommended that the code be surveyed for October 2020 RUC meeting. The RUC recommended increasing the work RVU to 1.59 which is the survey 25th percentile, acknowledging a change in the service, which now involves larger tissue samples as well as a change in technology, and a change in the dominant specialty now reporting the service.

We are proposing the RUC-recommended work RVU of 1.59 for CPT code 38505. We are also proposing the RUC-recommended direct PE inputs for this code.

(11) Drug Induced Sleep Endoscopy (CPT Codes 42XXX)

CPT code 42XXX (Drug induced sleep endoscopy; with dynamic evaluation of velum, pharynx, tongue base, and larynx for evaluation of sleep disordered breathing; flexible, diagnostic) is a new code created to report drug induced sleep endoscopy (DISE) flexible, diagnostic. The RUC recommended, and we agree, that the survey 25th percentile for the work RVU of 1.90 accurately reflects the typical physician work necessary to perform this service.

Since this is a drug induced sleep endoscopy, we are proposing CPT code 31575 (Diagnostic laryngoscopy) as the endoscopic base code for CPT code 42XXX because the description of the proposed CPT code is the same as what is described for CPT code 31575 with the additional component of the patient being sedated. The procedure is performed with a flexible endoscope or laryngoscope. CPT code 42XXX is not an add-on code, it has a 0-day global period. The endoscopic base code that it is using is a specific type of multiple procedure discount that applies to some endoscopy codes.

We are proposing the RUC-recommended work RVU of 1.90 for
CPT code 42XXX. We are also proposing the RUC-recommended direct PE inputs for this code.

(12) Per-Oral Endoscopic Myotomy (POEM) (CPT Codes 434XX)

In May 2020, the CPT Editorial Panel created a new CPT code 434XX (Lower esophageal myotomy, transoral (i.e., peroral endoscopic myotomy (POEM))) to describe a Per-Oral Endoscopic Myotomy (POEM), which involves the visualization and dissection of the esophageal muscle layers via an endoscope to treat esophageal motility disorders such as achalasia. This procedure accomplishes a comparable myotomy to what traditional open and laparoscopic myotomy (Heller) accomplishes. POEM utilizes an endoscope and specially designed dissecting, cutting, and cauterizing instruments to create a long submucosal tunnel beginning in the mid-esophagus and extending several centimeters into the cardia. For CY 2022, the RUC recommended a work RVU of 15.50 for CPT code 434XX.

We disagree with the RUC-recommended work RVU for CPT code 434XX and are proposing a work RVU of 13.29 based on a direct work RVU crosswalk from CPT code 36819 (Arteriovenous anastomosis, open; by upper arm basilic vein transposition). CPT code 36819 has the same 120 minutes of intra-service time as CPT code 434XX, and has 283 minutes of total time, which is 2 minutes more than the 281 minutes of total time than for 434XX. The RUC used CPT codes 43279 (Laparoscopy, surgical, esophagomyotomy (Heller type), with fundoplasty, when performed) and 43180 (Esophagoscopy, rigid, transoral with diverticulectomy of hypopharynx or cervical esophagus (e.g., Zenker’s diverticulum), with cricopharyngeal myotomy, includes use of telescope or operating microscope and repair, when performed) as reference codes for CPT code 434XX. However, the intra-service time of 150 minutes and total time of 404 minutes for the RUC reference CPT code 43279, and intra-service time of 60 minutes and total time of 201 minutes for the RUC reference CPT code 43180, are not adequate comparisons since they do not have similar time values to those of CPT code 434XX. Therefore, we believe the proposed work RVU of 13.29 for CPT code 434XX based on a direct work RVU crosswalk from CPT code 36819 is a better representation of the work being performed and is more appropriate based on the same intra-service time and similar total time.

We are proposing the RUC-recommended direct PE inputs for CPT code 434XX without refinement.

(13) Placement-Removal of Seton (CPT Codes 46020 and 46030)

For CPT codes 46020 (Placement of seton) and 46030 (Removal of anal seton, other marker), we disagree with the RUC-recommended work RVUs of 3.50 and 2.00, respectively, as we believe these values do not adequately reflect the surveilled reductions in physician time for CPT code 46020 and the change to a 000-day global period from a 010-day global period for these CPT codes. Instead, we are proposing a work RVU of 1.86 for CPT code 46020 and 1.48 for CPT code 46030 based on a reverse building block methodology.

The survey showed that total time and intraservice time are decreasing for CPT code 46020 by 26 minutes and 5 minutes, respectively. We believe the surveilled decreases in physician time in conjunction with the loss of the post-operative visits for CPT code 46020 merit a decrease in work RVU from the current work RVU.

We note that the proposed work RVU of 1.48 for CPT code 46030 falls between CPT code 57410 (Pelvic examination under anesthesia (other than local)), which has a work RVU of 1.75, and CPT code 64487 (Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by continuous infusion(s) (includes imaging guidance, when performed)), which has a work RVU of 1.48. Both of these bracketing reference codes have identical intraservice times and similar total time values. While we understand that total time is going up for CPT code 46030, this increase is a result of significant increases to evaluation, positioning, and scrub, dress, wait preservice times, which is mostly low-intensity physician work.

We agree with the RUC’s recommendation to change CPT codes 46020 and 46030 to 000-day global period codes from 010-day global period codes to account for the highly variable follow-up care for these services, but we note that the differences in RUC-recommended work RVUs and our proposed work RVUs largely reflect the change in global period and loss of physician time to provide the E/M services. The global period changes from 010-day to 000-day allow for separately billable E/M visits relating to CPT codes 46020 and 46030, therefore we removed RVUs that we believed were attributable to the currently bundled E/M visits totaling 2.04 RVUs for CPT code 46020 and 0.35 RVUs for CPT code 46030. CPT code 46020 is currently bundled with two post-operative follow up office visits, CPT code 99212 (Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 10–19 minutes of total time is spent on the date of the encounter), and a half hospital discharge CPT code 99238 (Hospital discharge day management; 30 minutes or less). CPT code 46030 is currently bundled with half of a post-operative follow up office visit, CPT code 99212 (Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 10–19 minutes of total time is spent on the date of the encounter). We do not believe the RUC adequately accounted for the loss of these E/M visits in their recommended work RVUs for CPT codes 46020 and 46030.

The RUC proposed the standard 090-day preservice times for the clinical labor activities CA001, CA002, CA003, CA004, and CA005 for CPT code 46020 in the facility. We note that the RUC recommended 090-day preservice clinical labor times despite surveying the service as a 000-day service. We disagree with the RUC-recommended 090-day preservice clinical labor times as we believe 000-day services should have times consistent with 000-day services, not 090-day services. However, we recognize there is time needed to coordinate this service. Therefore, we are proposing the following standard clinical labor times for extensive use of clinical staff for a 000-day global code:

- Complete preservice diagnostic and referral forms (CA001) 5 minutes.
- Coordinate pre-surgery services (including test results) (CA002) 10 minutes.
- Schedule space and equipment in facility (CA003) 5 minutes.
- Provide preservice education/obtain consent (CA004) 7 minutes.
- Complete pre-procedure phone calls and prescription (CA005) 3 minutes.

We are also proposing to refine the direct PE input for Coordinate post-procedure services (CA038) to 0 minutes from the RUC-recommended 3 minutes to align with 000-day standards instead of 090-day standards for CPT code 46020.

For CPT code 46030, the RUC recommended the standard 000-day...
extensive use of clinical staff preservice times for clinical activities CA001, CA002, CA003, CA004, and CA005 in the facility and non-facility settings. Preservice times for 000-day codes are presumed to be zero unless there is sufficient justification that preservice time is warranted. We do not agree that sufficient justification was presented to warrant preservice time in the non-facility setting, therefore, we are proposing the following standard clinical labor times for use of clinical staff in the non-facility setting. We are also proposing the standards for minimal use of clinical staff in the facility setting, as we recognize there is time needed to coordinate this service for CPT code 46030:

- Complete preservice diagnostic and referral forms (CA001) 0 minutes for non-facility and 3 minutes for facility.
- Coordinate pre-surgery services (including test results) (CA002) 0 minutes for non-facility and 3 minutes for facility.
- Schedule space and equipment in facility (CA003) 0 minutes for non-facility and 3 minutes for facility.
- Provide preservice education/obtain consent (CA004) 0 minutes for non-facility and 3 minutes for facility.
- Complete pre-procedure phone calls and prescription (CA005) 0 minutes for non-facility and 3 minutes for facility.

We are also proposing to refine the direct PE input for Coordinate post-procedure services (CA038) to 0 minutes from the RUC-recommended 3 minutes to align with 000-day standards instead of 090-day standards for CPT code 46030.

(14) Periurethral Balloon Continence Device Procedures (CPT Codes 53XX1, 53XX2, 53XX3, and 53XX4)

In October 2020, the CPT Editorial Panel replaced four CPT Category III codes with four new CPT Category I codes to report periurethral adjustable balloon continence devices. Given the low utilization and the low survey response rate for the four new codes, the RUC recommended that CMS assign contractor pricing to these procedures. We agree with the RUC and we are proposing contractor pricing for all four codes in the family, CPT codes 53XX1 (Periurethral transperineal adjustable balloon continence device; bilateral insertion, including cystourethroscopy and imaging guidance), 53XX2 (Periurethral transperineal adjustable balloon continence device; unilateral insertion, including cystourethroscopy and imaging guidance), 53XX3 (Periurethral transperineal adjustable balloon continence device: removal, each balloon) and 53XX4 (Periurethral transperineal adjustable balloon continence device; percutaneous adjustment of balloon(s) fluid volume).

(15) Intracranial Laser Interstitial Thermal Therapy (LITT) of lesion, intracranial, including burr hole(s), with magnetic resonance (MR) imaging guidance for a single trajectory for 1 simple lesion and multiple trajectories for multiple or complex lesion(s). LITT is a novel procedure that involves multiple steps and movements of the patient through the hospital for different stages of the procedure. The typical facility does not have an interoperative MRI suite (a small minority of academic medical centers may), so patient transport is necessary.

The RUC recommended a work RVU of 20.00 for CPT code 617X1 (Laser interstitial thermal therapy (LITT) of lesion, intracranial, including burr hole(s), with magnetic resonance imaging guidance, when performed: single trajectory for 1 simple lesion) based on the survey median response. CPT code 617X1 was surveyed with having one subsequent hospital visit, CPT code 99232 (sbsq hospital care/day 25 minutes) and 40 minutes of immediate postservice time. The RUC noted that although the survey median immediate postservice time was 40 minutes, for 617X1, the CMS 23-Hour Stay Outpatient Surgical Services with Subsequent Hospital Visits Policy was applied which resulted in the 99232 visit being removed and its 20 minutes of intraservice time being applied to the 40 minutes of immediate postservice time resulting in 60 minutes of immediate postservice time. See the 2011 PFS final rule (75 FR 73226) for an in-depth explanation of the 23-hour policy. We believe the RUC partially applied the 23-hr policy when it applied the policy to the immediate post service time but not to the work RVU. We believe the 23-hour policy in its entirety should be applied to 617X1, which includes the work RVUs along with the immediate postservice time.

Following the valuation methodology we established for 23-hour stay services in the CY 2011 PFS final rule, 617X1 would have a work RVU of 19.06.

The steps are as follows:

- **Step (1):** CPT code 617X1 does not have a hospital discharge day management service; therefore, we would skip this step.
- **Step (2):** 20 minutes + 1.39 = 19.06.

In October 2020, the CPT Editorial Panel approved the addition of two codes to report laser interstitial thermal therapy (LITT) of lesion, intracranial, including burr hole(s), with magnetic resonance imaging (MR) imaging guidance for a single trajectory for 1 simple lesion and multiple trajectories for multiple or complex lesion(s). LITT is a novel procedure that involves multiple steps and movements of the patient through the hospital for different stages of the procedure. The typical facility does not have an interoperative MRI suite (a small minority of academic medical centers may), so patient transport is necessary.

The RUC recommended a work RVU of 20.00 for CPT code 617X1 (Laser interstitial thermal therapy (LITT) of lesion, intracranial, including burr hole(s), with magnetic resonance imaging guidance, when performed: single trajectory for 1 simple lesion) based on the survey median response. CPT code 617X1 was surveyed with having one subsequent hospital visit, CPT code 99232 (sbsq hospital care/day 25 minutes) and 40 minutes of immediate postservice time. The RUC noted that although the survey median immediate postservice time was 40 minutes, for 617X1, the CMS 23-Hour Stay Outpatient Surgical Services with Subsequent Hospital Visits Policy was applied which resulted in the 99232 visit being removed and its 20 minutes of intraservice time being applied to the 40 minutes of immediate postservice time resulting in 60 minutes of immediate postservice time. See the 2011 PFS final rule (75 FR 73226) for an in-depth explanation of the 23-hour policy. We believe the RUC partially applied the 23-hr policy when it applied the policy to the immediate post service time but not to the work RVU. We believe the 23-hour policy in its entirety should be applied to 617X1, which includes the work RVUs along with the immediate postservice time.

Following the valuation methodology we established for 23-hour stay services in the CY 2011 PFS final rule, 617X1 would have a work RVU of 19.06.

The steps are as follows:

- **Step (1):** CPT code 617X1 does not have a hospital discharge day management service; therefore, we would skip this step.
- **Step (2):** 20 minutes + 1.39 = 19.06.
- **Step (3):** 18.61 + (20 minutes × 0.0224) = 19.06 RVUs.

** Value associated with 1/2 hospital discharge day management service.
- ** Value associated with an inpatient hospital visit, CPT code 99232.
- ** Value associated with the reallocated intraservice time multiplied by the postservice intensity of the 23-hour stay code.

Therefore, for CY 2022 we are proposing a work RVU of 19.06 for CPT code 671X1.

In reviewing the RUC-recommended direct PE inputs for 671X1 we noticed the RUC proposed the standard 090-day preservice times for the following clinical labor activities:

- Complete preservice diagnostic and referral forms (CA001) 5 minutes.
- Coordinate pre-surgery services (including test results) (CA002) 20 minutes.
- Schedule space and equipment in facility (CA003) 8 minutes.
- Provide preservice education/obtain consent (CA004) 20 minutes.
- Complete pre-procedure phone calls and prescription (CA005) 7 minutes.

We note that the RUC recommended 090-day preservice times despite surveying the service as a 000-day service. We disagree with the RUC-recommended 090-day times as we believe this is a 000-day service and should have times consistent with 000-day services. However, we recognize there is time needed to coordinate this service. Therefore, for CY 2022 we are proposing the following standard clinical labor times for a 000-day extensive:

- Complete preservice diagnostic and referral forms (CA001) 5 minutes.
- Coordinate pre-surgery services (including test results) (CA002) 10 minutes.
- Schedule space and equipment in facility (CA003) 5 minutes.
- Provide preservice education/obtain consent (CA004) 7 minutes.
- Complete pre-procedure phone calls and prescription (CA005) 3 minutes.

For CPT code 617X2 (Laser interstitial thermal therapy (LITT) of lesion, intracranial, including burr hole(s), with magnetic resonance imaging guidance, when performed: multiple trajectories for multiple or complex lesion(s)), the RUC recommended a work RVU of 24.00 which is the survey median. The RUC’s recommendation also included 40 minutes of immediate postservice time and one hospital visit, CPT code 99233 (sbsq hospital care/day visit 35 minutes). We believe it would be appropriate to apply the 23-hr policy to CPT code 617X2 as well.
The steps are as follows:

- **Step (1):** CPT code 617X2 does not have a hospital discharge day management service. Therefore, we would skip this step.
- **Step (2):** \(24 - 2^* = 22\)
- **Step (3):** \(22 + (30 \text{ minutes} \times 0.0224)** **= 22.67 RVUs**

*: Value associated with 1/2 hospital discharge day management service. **: Value associated with an inpatient visit, CPT code 99233.

** = Value associated with the reallocated intraservice time multiplied by the postservice intensity of the 23-hour stay code.

This results in a work RVU of 22.67, and an immediate post service time of 70 minutes. Therefore, for CY 2022 we are proposing a work RVU of 22.67 and 70 minutes of immediate postservice time for CPT code 617X2.

For the direct PE, the RUC proposed identical preservice times for CPT codes 617X1 and 617X2. For the reasons stated above concerning the direct PE inputs for CPT code 617X1, we are proposing the standard clinical labor times associated with a 000-day extensive for CPT code 617X2 for CY 2022.

(16) Arthrodesis Decompression (CPT Codes 630XX and 630X1)

For CPT codes 630XX (Laminectomy, facetectomy, or foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s]), during posterior interbody arthrodesis, lumbar; single vertebral segment (List separately in addition to code for primary procedure)) and 630X1 (Laminectomy, facetectomy, or foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [eg, spinal or lateral recess stenosis]), during posterior interbody arthrodesis, lumbar; single vertebral segment (List separately in addition to code for primary procedure)), we disagree with the RUC-recommended work RVUs of 3.08. We believe that CPT code 63048 is a stronger reference code for CPT code 630XX than the RUC-recommended reference CPT codes 33924 (Ligation and takedown of a systemic-to-pulmonary artery shunt, performed in conjunction with a congenital heart procedure (List separately in addition to code for primary procedure)) and 22614 (Arthrodesis, posterior or posterolateral technique, single level; each additional vertebral segment (List separately in addition to code for primary procedure)) because of the similarities in the long descriptors, physician time, and intensity of intraservice work for CPT codes 630XX and 63048. The intraservice time ratio between CPT codes 63048 and 630XX equals a work RVU of 3.08 for CPT code 630XX (40 minutes/45 minutes) * 3.47 = 3.08. Therefore, we are proposing a work RVU of 3.08 for CPT code 630XX. The work RVU of 3.08 for CPT code 630XX falls between CPT code 630XX and 3.08 for CPT code 630X1. The work RVU ratio between CPT codes 63048 and 630XX was selected to value CPT code 630XX because of the similarities in the descriptions of intraservice work provided in the RUC’s summary of recommendations for CPT code 630XX and the RUC Database for CPT code 63048. We are proposing a work RVU of 3.08 for CPT code 630X1 based on an intraservice time ratio between the proposed 30 minutes of intraservice time for CPT code 630X1 and the proposed 40 minutes of intraservice time for CPT code 630XX (30 minutes/40 minutes) * 3.08 = 2.31, given that the RUC contends that there are some efficiencies in providing an additional level of decompression, evidenced by the 10 minutes less of intraservice time for CPT code 630X1 compared to CPT code 630XX. These work RVU proposals are further supported by brackets of other 30 and 40 minute ZZZZ codes.

We note that the proposed work RVU for CPT code 630XX falls between CPT code 19294 (Preparation of tumor cavity, with placement of a radiation therapy applicator for intraoperative radiation therapy (IORT) concurrent with partial mastectomy (List separately in addition to code for primary procedure)), which has a work RVU of 3.00, and CPT code 37115 (Primary percutaneous transluminal mechanical thrombectomy, noncoronary, nonintracranial, arterial or arterial bypass graft, including fluoroscopic guidance and intraprocedural pharmacological thrombolytic injection(s); second and all subsequent vessel(s) within the same vascular family (List separately in addition to code for primary mechanical thrombectomy procedure)), which has a work RVU of 3.28. Both of these bracketing reference codes have identical intraservice times as CPT code 630XX. The proposed work RVU for CPT code 630X1 falls between CPT code 43273 (Endoscopic cannulation of papilla with direct visualization of pancreatic/common bile duct(s) (List separately in addition to code(s) for primary procedure)), which has a work RVU of 2.24, and CPT code 22870 (Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; second level (List separately in addition to code for primary procedure)), which has a work RVU of 2.34. Both of these bracketing reference codes have identical intraservice times as CPT code 630X1. When we compared the RUC-recommended work RVU of 5.55 for CPT code 630XX and 4.44 for CPT code 630X1 to other spinal add-on codes in the 63000 CPT code series in the RUC database, we found that CPT code 630XX would have the highest work RVU and the second shortest intraservice time (with CPT code 630X1 having the shortest intraservice time), and CPT code 630X1 would have the third highest work RVU and shortest intraservice time compared to the other nationally-priced spinal add-on codes in the 63000 CPT code series. We do not agree that decompression when performed in conjunction with posterior interbody arthrodesis at the same interspace should have an anomalously high work value in comparison to other similar add-on codes that have longer intraservice times. We believe that our proposed work RVUs of 3.08 for CPT code 630XX and 2.31 for CPT code 630X1 better serve the interests of relativity. We note that the specialty societies did not survey the two new add-on codes with the base codes, which is a standard to provide assurance that the respondents followed instruction to only consider the work of the add-on codes. CPT codes 630XX and 630X1 were reviewed again with their base codes at the April 2021 RUC meeting. There were no discussions to the base codes’ definitions, guidelines, and parenthetical instructions, which
were approved by the CPT Editorial Panel for CY 2022.

The RUC did not recommend any direct PE inputs for these codes and we are not proposing any direct PE inputs.

We are not proposing the RUC-recommended work value of 16.50 for CPT code 645X2 (Revision or replacement of hypoglossal nerve neurostimulator array and distal respiratory sensor electrode or electrode array, including connection to an existing pulse generator), rather we are proposing a work RVU of 14.50. Although we disagree with the RUC-recommended work RVU, we concur that the relative difference in work between CPT codes 645X1 and 645X2 is equivalent to the recommended increment of 0.50 RVUs. Therefore, we are proposing a work RVU of 14.50 for CPT code 645X2 based on the recommended increment of 0.50 additional RVUs above our proposed work RVU of 14.00 for CPT code 645X1. We believe the use of an incremental difference between these CPT codes is a methodologically valid methodology for setting values, especially in valuing services within a family of codes where it is important to maintain an appropriate intra-family relativity. Additionally, we note that the proposed work RVU of 14.50 is also nearly identical to the 25th percentile survey value for CPT code 645X2 of 14.63. Therefore, as previously stated, we believe 14.50 is a more appropriate value than 16.50 to maintain an appropriate intra-family relativity.

We are not proposing the RUC-recommended work value of 14.00 for CPT code 645X3 (Removal of hypoglossal nerve neurostimulator array, pulse generator, and distal respiratory sensor electrode or electrode array, including connection to an existing pulse generator) and 64570 (Removal of cranial nerve (eg, vagus nerve) neurostimulator electrode array and pulse generator).

CPT code 645X1 (Open implantation of hypoglossal nerve neurostimulator array, pulse generator, and distal respiratory sensor electrode or electrode array) was previously reported using the now deleted Category III CPT code 0466T (Insertion of chest wall respiratory sensor electrode or electrode array, including connection to an existing pulse generator (List separately in addition to code for primary procedure)) along with CPT code 64568. We are not proposing the RUC-recommendation to use the survey median work RVU of 16.00 for CPT code 645X1. We are proposing a work RVU of 14.00 based on the intraservice time of 140 minutes and total time of 275 minutes. CPT code 645X1 has a RUC-recommended intraservice time of CPT code 645X1. CPT code 64568 has a work RVU of 9.00, intraservice time of 90 minutes and total time of 275 minutes. CPT code 645X1 has a RUC-recommended work RVU of 16.00, intraservice time of 140 minutes and total time of 294 minutes. Additionally, when we reviewed CPT code 645X1, we found that the RUC-recommended work RVU was higher than other global 90-day codes with similar time values. We do not agree that it would be typical to value this code so much higher than services with similar work time values. Additionally, we note that the proposed work RVU of 14.00 is also the survey 25th percentile. Therefore, as previously stated, we believe 14.00 is a more appropriate value overall than 16.00 when compared to the range of codes with similar work times.
We are proposing the RUC-recommended direct PE inputs without refinement.

(19) Destruction of Intraosseous Basivertebral Nerve (CPT Codes 646X0 and 646X1)

In October 2020, the CPT Editorial Panel added two Category I codes to report thermal destruction of intraosseous basivertebral nerve, inclusive of all imaging guidance for the first two vertebral bodies (lumbar or sacral) and for each additional vertebral body (lumbar or sacral).

We are not proposing the RUC-recommended work value of 8.25 for CPT code 646X0 (Thermal destruction of intraosseous basivertebral nerve, inclusive of all imaging guidance; first two vertebral bodies, lumbar or sacral). When we reviewed CPT code 646X0, we found that the RUC-recommended work RVU was higher than codes with the same 10-day global period, same intraservice time, and similar total times. The RUC-recommended work RVU of 8.25 would value CPT code 646X0 at the 90th percentile of comparable 10-dayglobals and we do not agree that it would be typical to value this code so much higher than services with similar work time values. We believe it would be more accurate to propose a work RVU of 7.15 based on a crosswalk to CPT code 63650 (Percutaneous implantation of neurostimulator electrode array, epidural) with a work RVU of 7.15, identical intraservice time of 60, and similar total time of 170. We believe the crosswalk to CPT code 63650 serves as a more accurate valuation for CPT code 646X0.

We also are not proposing the RUC-recommended work value of 4.87 for CPT code 646X1 (Thermal destruction of intraosseous basivertebral nerve, inclusive of all imaging guidance; each additional vertebral body, lumbar or sacral (List separately in addition to code for primary procedure)). Although we disagree with the RUC-recommended work RVU, we concur that the relative difference in work between CPT codes 646X0 and 646X1 is equivalent to the recommended increment of -3.38 RVUs. However, since the recommended work RVU of code 646X0 was higher than other codes with the same 10-day global period, same intraservice time, and similar total times, we refined the work RVU for code 646X1 to preserve the incremental difference between the two codes. We believe that these refinements maintain the relationship between the two codes in the family while better preserving relativity with other similar 10-day global codes on the wider PFS. We believe the use of an incremental difference between these CPT codes is a valid methodology for setting values, especially in valuing services within a family of codes where it is important to maintain an appropriate intra-family relativity. Therefore, we are proposing a work RVU of 3.77 for CPT code 646X1 based on the recommended increment of 3.38 RVUs below our proposed work RVU of 7.15 for CPT code 646X0.

We are proposing the RUC-recommended direct PE inputs without refinements for CPT code 646X0. CPT code 646X1 is an add-on code and does not have any direct PE inputs.

(20) Dilation of Aqueous Outflow Canal (CPT Codes 66174 and 66175)

These services were identified through the New Technology/New Services List. In January 2020, the specialty societies submitted an action plan and the RUC recommended referral to the CPT Editorial Panel in 2020 to discuss possible refinements for CPT code 66174. The RUC noted the intensity and time considerations associated with this service and recommend exclusionary parentheticals for CPT code 66174 (Transluminal dilation of aqueous outflow canal; without retention of device or stent). To further collect data, the RUC recommended increased work RVUs, an increment of 1.72, from our proposed work RVU of 9.34 for CPT code 66175 to a work RVU of 7.62 for CPT code 66174. We believe this approach is consistent with the RUC’s assumption that the intensity and complexity of CPT code 66174 is the same as that of CPT code 66175, the only difference between the two procedures being the additional intraservice time associated with placement of the stent. As further support for these values, we note that they fall between CPT code 66984 (Extracapsular cataract removal with insertion of intraocular lens prosthesis (1-stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification); without endoscopic cyclophotocoagulation), with 7.35 work RVUs, and CPT code 15150 (Tissue cultured skin autograft, trunk, arms, legs; first 25 sq cm or less), with 9.39 work RVUs.

We are proposing the RUC-recommended PE inputs without refinement.

(21) Cataract Removal With Drainage Device Insertion (CPT Codes 669X1, 669X2, 66982, 66984, 66987, 66988, and 0X12T)

The RUC identified CPT code 0191T (Insertion of anterior segment aqueous drainage device, without extracorocular reservoir, internal approach, into the trabecular meshwork; initial insertion) via the Category III codes with High Utilization screen (2018 estimated Medicare utilization over 1,000). In January 2020, the RUC recommended that the specialty societies develop a code application form for Category I status for code 0191T and CPT code 0376T (each additional device insertion (List separately in addition to code for primary procedure)). In October 2020, the CPT Editorial Panel replaced two Category III codes (CPT codes 0191T and 0376T) with two new codes, CPT codes 669X1 and 669X2, to report extracapsular cataract removal with insertion of intraocular lens prosthesis and one Category III code to report insertion of anterior segment aqueous drainage device without concomitant cataract removal.

The RUC recommended a work RVU of 12.13 for CPT code 669X1 (Extracapsular cataract removal with insertion of intraocular lens prosthesis (1-stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine cataract surgery (eg, iris expansion device, suture support for intraocular lens, or primary posterior capsulorhexis) or performed on patients in the amblyogenic developmental stage; with insertion of intraocular (eg, trabecular meshwork, supraciliary, suprachoroidal) anterior segment aqueous drainage device, without extracorocular reservoir, internal approach, one or more) based on the survey 25th percentile.

In its recommendation, the RUC noted that the recommended intraservice time of 28 minutes for CPT code 669X1 is 2 minutes less than the intraservice time of 30 minutes associated with CPT code 66984 (Extracapsular cataract removal with insertion of intraocular lens prosthesis (1-stage procedure), manual...
or mechanical technique (eg, irrigation and aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine cataract surgery (eg, iris expansion device, suture support for intraocular lens, or primary posterior capsulorrhexis) or performed on patients in the ambyogenic developmental stage; without endoscopic cyclophotocoagulation). The RUC further noted this should not be the case, as the insertion of the intraocular lens prosthesis should take the same amount of time and be represented by the same relative work for both procedures and that it is counterintuitive that the intraservice time for CPT code 660X1 would be lower than the intraservice time for CPT code 66982, as CPT code 669X1 includes both complex cataract surgery and the insertion of the intraocular anterior segment aqueous drainage device. The specialty society that surveyed the codes explained that this is likely because the early adopters of this new technology service are highly skilled surgeons who would likely perform these procedures quickly. They stated that as this procedure differentiates into the wider population of ophthalmologic surgeons over the next few years, the intraservice time will likely rise above the intraservice time associated with CPT codes 66982 and 66984 and will come in line for both CPT codes 669X1 and 669X2.

CPT code 66982 has a work RVU of 10.25, 125 minutes of total time and 30 minutes of intraservice time. CPT code 660X1 has a RUC-recommended work RVU of 12.13, 176 minutes of total time and 28 minutes of intraservice time. We agree with the RUC assessment that both procedures, CPT code 66982 and CPT code 660X1, are almost identical in time and intensity. However, we disagree with the RUC-recommended work RVU of 12.13 for CPT code 660X1 noting that CPT code 66982 has a work RVU of 10.25. We are proposing a work RVU of 10.31 based on the current total time and intensity of CPT code 66982 compared to the RUC-recommended total time for CPT code 660X1.

For CPT code 660X2, the RUC recommended a work RVU of 9.23. The RUC determined that it would be appropriate to use the increment between the 25th percentile work RVU value for CPT code 669X1 and the current RUC-reviewed work RVU value for CPT code 66982 to build a work RVU recommendation for CPT code 660X2. The RUC determined that the increment between the 25th percentile work RVU value for CPT code 669X1 (work RVU = 12.13) and the current RUC-reviewed work RVU value for CPT code 66982 (work RVU = 10.25) would yield an increment between those two codes of 1.88. The RUC added the 1.88 increment to 7.35, the current work RVU for 66984, which yields a RUC-recommended work RVU value of 9.23. This comparison results in a work RVU recommendation of 9.23 for CPT code 660X2. We are proposing a work RVU of 7.41, which is the increment between the current RUC-reviewed work RVU value for CPT code 66982 and CPT code 66984. The increment between CPT code 66982 (work RVU = 10.25) and CPT code 66984 (work RVU = 7.35) yields a work RVU of 2.90. We subtracted this 2.90 increment from 10.31, to determine our proposed work RVU of 7.41 for CPT code 660X1.

We are proposing the RUC-recommended indirect PE values for CPT codes 669X1 and 669X2.

We are not proposing any new valuations but reaffirming the work RVUs and direct PE inputs that we previously finalized for CPT codes 66982 (Extracapsular cataract removal with insertion of intraocular lens prostheses (1-stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine cataract surgery (eg, iris expansion device, suture support for intraocular lens, or primary posterior capsulorrhesis) or performed on patients in the ambyogenic developmental stage; without endoscopic cyclophotocoagulation) and 66984 (Extracapsular cataract removal with insertion of intraocular lens prostheses (1-stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification), without endoscopic cyclophotocoagulation). For CPT codes 66987 (Extracapsular cataract removal with aspiration or phacoemulsification), 9.50 for CPT code 67312

For CPT code 67145 (Prophylaxis of retinal detachment (eg, retinal break, lattice degeneration) without drainage, 1 or more sessions; photocoagulation (laser or xenon arc)) was identified in October 2019 as a Harvard Valued service with utilization over 30,000. In January 2020, the RUC surveyed the specialty societies that surveyed the service and recommended that CPT code 67145, as well as its parent CPT code 67141 (Prophylaxis of retinal detachment (eg, retinal break, lattice degeneration) without drainage, 1 or more sessions; cryotherapy, diathermy), be referred to the CPT Editorial Panel for a descriptor and global period change. The codes were edited to remove the reference to “1 or more sessions” so that the services may be valued as a 010-day procedure versus the current 090-day global. At the May 2020 CPT Editorial Panel meeting, the Panel approved revision of the two codes to remove “1 or more sessions” from the descriptors and deletion of the Eye and Ocular Adnexa Prophylaxis guidelines.

For CY 2022, we are proposing the RUC-recommended work RVU of 2.53 for CPT codes 67141 and 67145. We are also proposing the RUC-recommended direct PE inputs without refinements.

For CPT codes 67311, 67312, 67314, 67316, 67318, 67320, 67331, 67332, 67334, 67335, and 67340.

In April 2020, The RUC recommend that add-on CPT codes 67320, 67331, 67332, 67334, 67335, and 67340 be surveyed along with the base codes in which these services are typically reported (CPT codes 67311, 67312, 67314, 67316 and 67318). When AMA staff compiled a list of 010-day and 090-day services for increases in physician work and time during the surgical global period, they noticed that several low volume codes that were converted to ZZZ global periods in 1999 still included office visits (specifically CPT codes 67320, 67331, 67332, 67334, 67335, and 67340). It appeared that these office visits may not be appropriate for these services. This issue was deferred until October 2020.

We are proposing the RUC-recommended work RVUs for all base codes within this family. This includes a work RVU of 5.93 for CPT code 67311 (Strabismus surgery, recession or resection procedure; 1 horizontal muscle), 9.50 for CPT code 67312
(Strabismus surgery, recession or resection procedure; 2 horizontal muscles), 5.93 for CPT code 67314 (Strabismus surgery, recession or resection procedure; 1 vertical muscle (excluding superior oblique), 10.31 for CPT code 67316 (Strabismus surgery, recession or resection procedure; 2 or more vertical muscles (excluding superior oblique)), and 9.80 for CPT code 67318 (Strabismus surgery, any procedure, superior oblique muscle).

We are also proposing the RUC-recommended work RVUs for all of the add-on codes within this family. This includes a work RVU of 3.00 for CPT code 67320 (Transposition procedure (eg, for paretic extraocular muscle), any extraocular muscle (specify) (List separately in addition to code)), 5.00 for CPT code 67331 (Strabismus surgery on patient with previous eye surgery or injury that did not involve the extraocular muscles (List separately in addition to code for primary procedure)), 3.50 for CPT code 67332 (Strabismus surgery on patient with scarring of extraocular muscles (eg, prior ocular injury, strabismus or retinal detachment surgery) or restrictive myopathy (eg, dysthyroid opthalmopathy) (List separately in addition to code for primary procedure)), 2.06 for CPT code 67334 (Strabismus surgery by posterior fixation suture technique, with or without muscle recession (List separately in addition to code for primary procedure)), 3.23 for CPT code 67335 (Strabismus surgery by posterior fixation suture technique, with or without muscle recession (List separately in addition to code for primary procedure)), and 5.00 for CPT code 67340 (Strabismus surgery by posterior fixation suture technique, with or without muscle recession (List separately in addition to code for primary procedure)).

We are proposing the RUC-recommended direct PE inputs for this code family without refinements.

(24) Lacrimal Canaliculus Drug Eluding Implant Insertion (CPT Codes 68XXX)

CPT code 68XXX (Insertion of drug-eluting implant, including punctual dilation, when performed, into lacrimal canaliculus, each) was recommended for RUC review in October 2020 since the CPT Editorial Panel replaced CPT Category III (temporary) code 0356T with a new CPT Category I code to report the insertion of a drug eluting implant into the lacrimal canaliculus. We are proposing the RUC-recommended work RVU of 0.49 for CPT code 68XXX.

For the direct PE inputs, we are proposing to refine the equipment time for the “lane, screening (oph)” (EL006) from the RUC-recommended 9 minutes of equipment time to the 5 minute equipment standard for CPT code 68XXX. Five minutes is the standard equipment time associated with EL006 for this procedure. The recommended materials for this code family from the RUC state that the screening lane is used for the duration of setup, procedure, cleaning, and counselling post procedure and that the standard formulas are applied. We believe that the RUC inadvertently failed to update the equipment time associated with this procedure when CPT code 68XXX was reviewed. The recommended materials for CPT code 68XXX state the standard equipment time formula would be typical for this service, which would be 5 minutes in this case (the CA013 and CA024 equipment times are included but not the CA035 equipment time). We are proposing to refine the equipment time for the equipment item lane, screening (oph) (EL006) from 9 minutes to 5 minutes to match this change in equipment time and are seeking additional comment from stakeholders regarding the RUC-recommended non-standard equipment time of 9 minutes. We do not agree that it would be typical for CPT code 68XXX to require an additional 4 minutes of equipment time totaling 9 minutes.

(25) Transcutaneous Passive Implant-Temporal Bone (CPT Codes 69714, 69717, 69X50, 69X51, 69X52, and 69X53)

In October 2020, the CPT Editorial Panel deleted two codes used for mastoidectomy and replaced them with four new codes for magnetic transcutaneous attachment to external speech processor. The CPT Editorial Panel made additional revisions to differentiate implantation, removal, and replacement of the implants.

We are proposing the RUC-recommended work RVU for all six of the codes in this family. We are proposing a work RVU of 8.69 for CPT code 69714 (Implantation, osseointegrated implant, skull; with magnetic transcutaneous attachment to external speech processor), a work RVU of 9.77 for CPT code 69X50 (Implantation, osseointegrated implant, skull; with percutaneous attachment to external speech processor), a work RVU of 9.77 for CPT code 69X51 (Revision/ replacement (including removal of existing device), osseointegrated implant, skull; with magnetic transcutaneous attachment to external speech processor), a work RVU of 9.77 for CPT code 69X52 (Removal, osseointegrated implant, skull; with percutaneous attachment to external speech processor), and a work RVU of 7.13 for CPT code 69X53 (Removal, osseointegrated implant, skull; with magnetic transcutaneous attachment to external speech processor).

For the direct PE inputs, we are proposing to refine the clinical labor time for the “Post-operative visits (total time)” (CA039) activity from the RUC-recommended 108 minutes to 99 minutes for CPT codes 69714 and 69717. 99 minutes is the clinical labor time associated with one Level 2 postoperative office visit and two Level 3 postoperative office visits; we believe that the RUC inadvertently failed to update the clinical labor time associated with these postoperative office visits when CPT codes 69714 and 69717 were reviewed. We are proposing to refine the equipment time for all equipment items other than the basic instrument pack (EQ137) from 108 minutes to 99 minutes to match this change in clinical labor time.

(26) X-Rays at Surgery Add-On (CPT Code 74301)

The RUC recommended that CPT code 74301 (Cholangiography and/or pancreateography; additional set intraoperative, radiological supervision and interpretation (List separately in addition to code for primary procedure)) be deleted for October 2020. The specialty societies that typically bill for this service submitted a code change application to delete CPT code 74301 at the February 2020 CPT meeting. However, the specialty societies withdrew the deletion request after receiving feedback from the dominant provider of CPT code 74301 (general surgery), indicating the code is still necessary and should not be deleted. The RUC recommended to maintain the work RVU of 0.21 for CPT code 74301. The specialty societies did not resurvey CPT code 74301 due to its low utilization (2019 Medicare utilization = 63) and the difficulty of obtaining 30 survey responses from providers with experience in the past 12 months. Since there was no survey done, there is no new information and the RUC recommended to maintain the current value. The work RVU suggested by the RUC is a reaffirmation of the current value.

We are proposing the RUC-recommended work RVU of 0.21 for
CPT code 74301. This is an add-on code with no direct PE inputs. (27) Trabecular Bone Score (TBS) (CPT Codes 77X01, 77X02, 77X03, and 77X04)

We are proposing the RUC-recommended work RVUs of 0.20 for CPT codes 77X01 (Trabecular bone score (TBS), structural condition of the bone microarchitecture; using dual X-ray absorptiometry (DXA) or other imaging data on gray-scale variogram, calculation, with interpretation and report on fracture risk) and 77X04 (Trabecular bone score (TBS), structural condition of the bone microarchitecture; using dual X-ray absorptiometry (DXA) or other imaging data on gray-scale variogram, calculation, with interpretation and report on fracture risk interpretation and report on fracture risk only, by other qualified health care professional). CPT codes 77X02 (Trabecular bone score (TBS), structural condition of the bone microarchitecture; technical preparation and transmission of data for analysis to be performed elsewhere) and 77X03 (Trabecular bone score (TBS), structural condition of the bone microarchitecture; technical calculation only) are PE only codes; the RUC did not recommend and we are not proposing a work RVU for these codes.

The RUC PE recommendations for CPT codes 77X01 and 77X03 include a new “TBS iNsight Software” supply input. The submitted invoice for this supply indicates that it is a licensing fee associated with the use of the software, which is not typically considered to be a form of direct PE under our methodology. Historically, we have considered most computer software and associated licensing fees to be indirect costs tied to associated costs for hardware considered to be medical equipment. However, as we noted in section II.B. of this proposed rule (the PE section), stakeholders have routinely expressed concerns with this policy, especially for evolving technologies that rely primarily on software and licensing fees with minimal costs in equipment or hardware. Most of the recommended resource costs for CPT codes 77X01 and 77X03 are for this analysis fee and these costs are not well accommodated by the PE methodology since these sorts of technological applications did not exist when the data that underlie the PE allocation was last collected in 2007 through 2008.

We are therefore proposing to value the PE for CPT codes 77X01 and 77X03 through the crosswalk to a comparable service, CPT code 71101 (Radiologic examination, ribs, unilaterial; including posteroanterior chest, minimum of 3 views), which, for CY 2021, had a PE RVU of 0.94. We are proposing that the PE RVU for CPT code 77X03 equals the PE RVU from code 77X01 minus the PE RVU from codes 77X02 and 77X04 so that the three codes sum to the valuation of code 77X01. (CPT code 77X01 is the global code in this family and CPT codes 77X02, 77X03, and 77X04 must sum together to equal the value of 77X01.) CPT code 71101 is another type of bone imaging procedure that we believe reflects codes 77X01 and 77X03 similar direct PE resource costs as CPT codes 77X01 and 77X03. We recognize that the services being performed in this crosswalk are not the same as the services in CPT codes 77X01 and 77X03, however we believe that the direct resource costs would typically be analogous across these codes. We believe that this is the most accurate way to incorporate the costs of the software employed in CPT codes 77X01 and 77X03 which would not typically be considered direct PE under our current methodology. We are soliciting comments, both on the specific proposal for the Trabecular Bone Score codes as well as our broader discussion of this topic in section II.B. of this proposed rule.

(28) Pathology Clinical Consult (CPT Codes 80XX0, 80XX1, 80XX2, and 80XX3)

The Relative Assessment Workgroup identified CPT code 80500 (Clinical pathology consultation; limited, without review of patient’s history and medical records) via the CMS/Other source codes with the Medicare utilization over 20,000 screen. In October 2019, the RUC referred this issue to the CPT Editorial Panel to define this service more specifically as the current descriptor is vague. In October 2020, the CPT Editorial Panel replaced CPT codes 80500 and 80502 (Clinical pathology consultation; comprehensive, for a complex diagnostic problem, with review of patient’s history and medical records) with four new codes, CPT codes 80XX0 (Pathology clinical consultation; for a clinical problem with limited review of patient’s history and medical records and straightforward medical decision making). When using time for code selection, 5–20 minutes of total time is spent on the date of the consultation. (For consultations involving the examination and evaluation of the patient, see 99241–99255) to report pathology clinical consultation and creation of guidelines to select and document the appropriate level of service.

The RUC recommended a work RVU of 0.50 for CPT code 80XX0 based on the 25th percentile of the survey. The RUC-recommended 15 minutes of intraservice and total times for CPT code 80XX0 are 2 minutes above the current intraservice and total times for CPT code 80500. This represents a 15 percent increase in the respective times. However, the RUC-recommended work RVU of 0.50 is 35 percent higher than the current work RVU of 0.37 for CPT code 80500. We believe the increase or decrease in times should be commensurate with the increase or decrease in the work RVU. Therefore, we are proposing a work RVU of 0.43. This represents the ratio of total time between the current total time of CPT code 80500 and the proposed total time of CPT code 80XX0 (0.15) applied to the current value of CPT code 80500 (0.37 × 0.15 = 0.43).

We are proposing the RUC-recommended work RVU of 0.91 without refinements for CPT code 80XX1.

The RUC recommended a work RVU of 1.80 for CPT code 80XX2 based on the 25th percentile of the survey. The current intraservice and total times for CPT code 80502 are 42 minutes. The RUC-recommended times for CPT code 80XX2 are 54 minutes. Similar to the scenario described above for CPT code 80XX0, the intraservice and total times for CPT code 80XX2 increased 28.6 percent while the work RVU increased 35 percent. As stated above, we believe the increase or decrease in time should be commensurate with the increase or
decrease in the work RVU. Therefore, for CPT code 80XX2 we are proposing a work RVU of 1.71, which is the current total time ratio of CPT code 80502 compared to the RUC-recommended total time for CPT code 80XX2.

We are proposing the RUC-recommended work RVU of 0.80 for CPT code 80XX3 without refinement.

For the direct PE inputs of CPT codes 80XX0, 80XX1, and 80XX2, we are proposing to refine the time associated with the clinical labor activity PA001 (Accession and enter information) from the RUC-recommended time of 4 minutes to 0 minutes as we believe the time is duplicative with clinical labor activity PA008 (File specimen, supplies, and other materials).

The RUC recommended 15, 30, 54, and 30 minutes of equipment time for EP024 (microscope, compound) for CPT codes 80XX0, 80XX1, 80XX2, and 80XX3, respectively. We note that there is no indication from the code descriptors that the pathologist is reviewing physical slides. The code descriptor and description of work indicate that the pathologist is reviewing paper records and/or EHR and therefore we are proposing to remove the equipment time associated with EP024 (microscope, compound) from CPT codes 80XX0, 80XX1, 80XX2, and 80XX3.

Additionally, the proposed Levels of Decision Making for Table for Pathology Clinical Consult codes includes “Assessment requiring an independent historian(s)” as an element of “Amount and/or Complexity of Data to be Reviewed and Analyzed” — Each unique test, order, or document contributes to the combination of 2 or combination of 3 in Category 1 below.” Neither the code descriptors nor the descriptions of work indicate that this type of assessment is typical in a pathology clinical consult as was discussed for the office visit Levels of Decision Making table. For these reasons, CMS proposes that this element not be included as an element that CMS would recognize as an element of medical decision making. We note that CMS will monitor the use of these replacement codes per our usual practice to ensure appropriate billing and inform future rulemaking as needed. We are also seeking comment on how these replacement codes would most typically be billed relative to use of existing pathology coding. Such information would also inform future rulemaking as needed.

(29) Revaluing End Stage Renal Disease (ESRD) Monthly Capitation Payment Services (MCP) (CPT Code 90954)

In the CY 2021 PFS final rule (85 FR 84551 through 84554), we revalued most, but not all, of the ESRD MCP services. We finalized an increase in valuations for those ESRD MCP codes with values tied to the values of Outpatient/Office Evaluation and Management (O/O E/M) codes. We did not revalue CPT code 90954 (End-stage renal disease (ESRD) related services monthly, for patients 2–11 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 4 or more face-to-face visits by a physician or other qualified health care professional per month) because it was originally valued by a crosswalk. Stakeholders stated that CPT code 90954 was different from the other ESRD MCP codes. Rather than using an O/O E/M code building block methodology as had been used originally to value the other ESRD MCP codes, CPT code 90954 was valued based upon a crosswalk to CPT code 99293 (Inpatient pediatric critical care provided for children age 29 days through 24 months old, per day). When CPT code 99293 was deleted, the value of CPT code 90954 was crosswalked to a replacement code, CPT code 99471 (Initial inpatient pediatric critical care, per day, for the evaluation and management of a critically ill infant or young child, 29 days through 24 months of age). By crosswalking CPT code 90954 to CPT code 99471, the rank order across the ESRD MCP code family at that time was preserved.

Since we finalized the revalued ESRD MCP values for CY 2021, stakeholders have requested that we revalue CPT code 90954 because by not updating it, we created a rank order anomaly for work RVUs and time within the ESRD MCP code family. A stakeholder suggested that we address the rank order anomaly by revaluing CPT code 90954 based upon a new crosswalk to CPT code 33977 (Removal of a ventricular assist device; extracorporeal, single ventricle). The stakeholder stated that CPT code 33977 more appropriately represented the time and effort of the service provided over one month than the existing crosswalk to CPT code 99471 relative to the revalued services within the MCP code family.

In response to stakeholder requests to update the value of CPT code 90954, we are proposing to increase the value of CPT code 90954, a global code with a current work RVU of 15.98, by crosswalking it to CPT code 33977, a 090-day procedural code with a work RVU of 20.86 to preserve relativity within the ESRD MCP family. We are also seeking comment on our proposal to increase the value of CPT code 90954.

(30) Colon Capsule Endoscopy (CPT Codes 91110, 91111, and 9111X)

In October 2020, the CPT Editorial Panel replaced Category III code 0353T (Gastrointestinal tract imaging, intraluminal (eg, capsule endoscopy), colon, with interpretation and report) with a new Category I code 9111X (Gastrointestinal tract imaging, intraluminal (eg, capsule endoscopy), colon, with interpretation and report) to report gastrointestinal tract imaging. CPT codes 91110 (Gastrointestinal tract imaging, intraluminal (eg, capsule endoscopy), esophagus through ileum, with interpretation and report) and 91111 (Gastrointestinal tract imaging, intraluminal (eg, capsule endoscopy), esophagus with interpretation and report) were added as part of the family and surveyed for the January 2021 RUC meeting.

We are proposing the RUC-recommended work RVU for two of the codes in this family. We are proposing a work RVU of 2.24 for CPT code 91110 and a work RVU of 2.41 for CPT code 9111X as recommended by the RUC in both cases. For CPT code 91111, we disagree with the RUC-recommended work RVU of 1.00 and we are proposing a work RVU of 0.90 based on a crosswalk to CPT code 95923 (Testing of autonomic nervous system function; sudomotor, including 1 or more of the following: Quantitative sudomotor axon reflex test (QSA)T, sudomotor imprint, thermoregulatory sweat test, and changes in sympathetic skin potential). CPT code 95923 is an autonomic nervous system testing procedure that shares the identical intraservice work time of 15 minutes with CPT code 91111 and has 5 additional minutes of immediate postservice work time. When we reviewed CPT code 91111, we noted that the surveyed intraservice work time had decreased by 3 minutes, from 18 minutes to 15 minutes, while the RUC recommended maintaining the current work RVU of 1.00. Although we do not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, decreases in time should typically be reflected in decreases to work RVUs. In the case of CPT code 91111, we believe that it would be more accurate to propose a work RVU of 0.90 based on a crosswalk...
to CPT code 95923 to account for these decreases in the surveyed work time. For the direct PE inputs, we are proposing to refine the clinical labor time for the “Prepare, set-up and start IV, initial positioning and monitoring of patient” (CA016) activity from the RUC-recommended 9 minutes to 6 minutes for CPT code 91111. The recommended materials for this code family state that the 6 minutes for the CA016 activity are used to connect the equipment, fit belt to patient, put data recorder on patient, and sync capsule to each sensor on belt. This description of this clinical labor activity is identical for CPT codes 91110 and 9111X and each code has the same recommended time of 6 minutes.

However, the recommended materials for CPT code 91111 state that 6 minutes are used to connect the equipment, fit belt, put data recorder on patient, sync capsule to each sensor and then an additional 3 minutes are used to position the patient (assist patient onto table lying down on right side and then into a sitting position after the capsule is swallowed). We do not agree that it would be typical for CPT code 91111 to require an additional 3 minutes for positioning as compared with the other codes in the family, particularly in light of the clinical similarities between these services. We are refining the clinical labor time to 6 minutes for CPT code 91111 to maintain relativity within the family.

We are also proposing to refine the equipment time for the capsule endoscopy recorder kit (EQ146) from 64 minutes to 61 minutes and the exam table (EF023) from 44 minutes to 41 minutes to match this change in clinical labor time for code 91111.

(31) External Cardiovascular Device Monitoring (CPT Codes 93228 and 93229)

For CPT code 93228 (External mobile cardiovascular telemetry with electrophysiologic recording, concurrent computerized real time data analysis and greater than 24 hours of accessible ECG data storage (retrievable with query) with ECG triggered and patient selected events transmitted to a remote attended surveillance center for up to 30 days; review and interpretation with report by a physician or other qualified health care professional), we disagree with the RUC-recommended duplication of clinical labor to provide education that the patient will hear for a second time from the IDTF technician. While we understand that the duplication is by design, we do not agree with a second walk from CPT code 93229, because the provider of CPT code 93229 will likely have more in-depth education, specific to the patient, including materials and instructions for the patient to review. Therefore, we are proposing the standard 2 minutes for CA011 in the non-facility for CPT code 93228.

The RUC recommended the addition of 24 minutes for quality assurance “overread” done by a second, senior technician (CA016) for CPT code 93228, and we are seeking public comment about the typicality of a second senior technician. We are requesting additional information about the IDTF’s current quality assurance measures and parameters within the ECG recording program that should act as some degree of quality assurance. We are also seeking additional information from IDTFs about the current error rate for improperly transmitted tracings to the physician that would indicate that it is typical for a second, senior technician to perform “overread.” We are proposing 0 minutes for Clinical Activity Code CA021, Line 67 on the RUC-recommended PE Spreadsheet, unless commenters can provide compelling information that a second, senior technician typically performs quality assurance measures. Otherwise, we agree with the RUC-recommended direct PE inputs and are proposing the refinements as recommended.

In addition to the proposed work RVU and direct PE input refinements, we are requesting additional information about the acquisition costs for equipment item EQ340 Patient Worn Telemetry System. Due to the proprietary nature of this equipment, invoices were unattainable to update this equipment item. Substantial technological improvements have been made to these devices since the last update in 2008, but they are proprietary devices, owned and manufactured for each IDTF. We are seeking public comment on the manufacturing costs and other information to help update the equipment item for CY 2022. Second, we are requesting additional information about the useful lifetime of EQ340. CMS currently assigns 3 years of useful life to EQ340, but the RUC notes that this is the only equipment item and CPT code 93228 is the only CPT code with an equipment item that has more than 500 minutes of equipment time and a useful life of 3 years or less. We are seeking public comment to help update the useful life of EQ340, as it has not been updated since 2008, and the device has experienced significant technological changes.

(32) Electrophysiologic Evaluation (CPT Code 93621)

In October 2019, the RUC identified CPT code 93621 (Comprehensive electrophysiologic evaluation including insertion and repositioning of multiple electrode catheters with induction or attempted induction of arrhythmia; with left atrial pacing and recording from coronary sinus or left atrium (List separately in addition to code for
A survey of the Cardiac Ablation Services was sent out using the newly revised CPT code descriptors asking cardiac electrophysiologists about the revised language in the existing CPT codes. From the survey results, the RUC advisory committee believes that many of the survey respondents may not have realized that the code descriptors had been substantially revised and that they may not have read the updated code descriptors thoroughly enough to understand that services that are separately billed, were now combined into the existing codes (since CPT did not issue new codes for the revised descriptors). The RUC recommended that these services be valued as interim to allow for re-survey and subsequent review at the April 2021 RUC meeting.

CPT code 93653 (Comprehensive electrophysiologic evaluation with insertion and repositioning of multiple electrode catheters, induction or attempted induction of an arrhythmia with right atrial pacing and recording, and catheter ablation of arrhythmogenic focus, including intracardiac electrophysiologic 3-dimensional mapping, right ventricular pacing and recording, left atrial pacing and recording from coronary sinus or left atrium, and His bundle recording, when performed; treatment of supraventricular tachycardia by ablation of fast or slow atrioventricular pathway, accessory atrioventricular connection, cavo-tricuspid isthmus or other single atrial focus or source of atrial re-entry)(previous work RVU of 15.75 with 90 minutes of intraservice time, 125 minutes of preservice time for a total of 336 minutes). Instead, the RUC-recommended intraservice time has decreased to 125 minutes.

Accounting for changes in technologies and clinical practices from over 10 years since this code family’s last review, we would expect better efficiencies and reductions in work times, but with the addition of two add-on codes whose work is mostly, if not all, added to the intraservice time, one would not expect a net decrease in minutes. This is not what the collected responses from this survey show and it is a concern. Some of CPT code 93653 add-on service times may have shifted over to the increases in preservice times, but there does appear to be a collective misunderstanding in the survey’s work RVUs and physician work time responses.

In light of the RUC’s intention to resurvey and re-review CPT code 93653 (and this family of codes) at the April 2021 RUC meeting, and to resolve any flaws from the initial survey, such as survey respondents probably not realizing that a new descriptor describing the inclusion of services is not bundled to the existing CPT code (and not a newly issued CPT code), we are proposing to maintain the current physician times and current work RVU of 14.75, until the AMA RUC returns with a more definitive and accurate valuation.

For CPT code 93654 (Comprehensive electrophysiologic evaluation with insertion and repositioning of multiple electrode catheters, induction or attempted induction of an arrhythmia with right atrial pacing and recording, and catheter ablation of arrhythmogenic focus, including intracardiac electrophysiologic 3-dimensional mapping, right ventricular pacing and recording, left atrial pacing and recording from coronary sinus or left atrium, and His bundle recording, when performed; with treatment of ventricular tachycardia or focus of ventricular ectopy including left ventricular pacing and recording, when performed) (work RVU of 19.75), the RUC recommends 40 minutes of preservice evaluation, 3 minutes of preservice positioning, 20 minutes of preservice scrub/dress/wait time, 240 minutes of intraservice time and 33 minutes of immediate postservice time for a total of 336 minutes, an increase to the code’s current 309 total minutes. Unlike CPT codes 93653 and 93656, CPT code 93654 already accounts for the work RVUs and physician times for 3-dimensional mapping of add-on CPT code 93613. The RUC recommended maintaining the current work RVU
value of 19.75. We are proposing the RUC-recommended updates to the physician times (net increase in total minutes) and to maintain the same work RVUs for CPT code 93654 for CY 2022.

CPT code 93655 (Intracardiac catheter ablation of a discrete mechanism of arrhythmia which is distinct from the primary ablated mechanism, including repeat diagnostic maneuvers, to treat a spontaneous or induced arrhythmia (List separately in addition to code for primary procedure)) has a current work RVU of 7.50 with a physician intraservice time of 90 minutes. The RUC recommended a revised intraservice time of 60 minutes and 6.50 work RVUs. The primary change to CPT code 93655 is the reduction of the intraservice time of about 67 percent, which we use as a guide to determine a work RVU. We compare add-on CPT code 22854 (Insertion of intervertebral biomechanical device(s) (e.g., synthetic cage, mesh) with integral anterior instrumentation for device anchoring (e.g., screws, flanges), when performed, to vertebral corpectomy(ies) (vertebral body resection, partial or complete) defect, in conjunction with interbody arthrodesis, each contiguous defect (List separately in addition to code for primary procedure)) also with 60 minutes of intraservice and total time and a work RVU of 5.50 to CPT code 93655 and we believe that this is a more accurate valuation, since the primary change to this add-on code was separately reported add-on services, similar to above CPT code 93653 and its add-on codes.

The RUC-recommended work RVU for CPT code 93656 is 20.00, with 40 minutes of preservice evaluation, 3 minutes of preservice positioning, 20 minutes of preservice scrub/dress/wait time, 210 minutes of intraservice time and 33 minutes of immediate postservice time, for a total of 309 minutes. The current physician times for CPT code 93656 are 23 minutes of preservice evaluation, 5 minutes of preservice positioning, 5 minutes of preservice scrub/dress/wait time, 20 minutes of intraservice time, and 40 minutes of immediate postservice time, for a total of 309 minutes, which is a net difference of 3 minutes less in the total proposed minutes, and the RUC is recommending a work RVU of 20.00, which is 0.23 more work RVUs than the current work RVU of 19.77.

In light of the RUC’s intention to resurvey and review CPT code 93653 (and this family of codes) with its new bundling at their April 2021 RUC meeting to resolve any flaws from the initial survey, where many of the survey respondents may not have realized that the code descriptors had been substantially revised and that they may not have read the updated code descriptors thoroughly enough to respond correctly, we believe CPT code 93656 is in the same situation with its new bundling thus, we are proposing the RUC-recommended updates to the physician times (a net decrease of 3 minutes in total time) and to maintain the current work RVU of 19.77. From the current RVU CPT code 93657 (Additional linear or focal intracardiac catheter ablation of the left or right atrium for treatment of atrial fibrillation remaining after completion of pulmonary vein isolation (List separately in addition to code for primary procedure)), a value of 8.00 work RVUs was obtained at the 25th percentile for this add-on code. The RUC recommended a work RVU of 6.50, for the 60 minutes of intraservice and total physician time. The current work RVU is 7.50, for 90 minutes of intraservice and total physician time.

We compare add-on CPT code 22854 (Insertion of intervertebral biomechanical device(s) (e.g., synthetic cage, mesh) with integral anterior instrumentation for device anchoring (e.g., screws, flanges), when performed, to vertebral corpectomy(ies) (vertebral body resection, partial or complete) defect, in conjunction with interbody arthrodesis, each contiguous defect (List separately in addition to code for primary procedure)) with 60 minutes of intraservice and total time and 5.50 work RVUs to CPT code 93656 and we believe that this is a more accurate valuation, since the primary change to CPT code 93657 is the reduction of the intraservice time of about 67 percent, which we use as a guide to determining a work RVU. The RUC-recommended work RVU is crosswalked from CPT code 34709 (Placement of extension prosthesis(es) distal to the common iliac artery(ies) or proximal to the renal artery(ies) for endovascular repair of infrarenal abdominal aortic or iliac aneurysm, false aneurysm, dissection, penetrating ulcer, including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, and treatment zone angioplasty/stenting, when performed, per vessel treated (List separately in addition to code for primary procedure)) with 90 minutes of intraservice and total physician time. The current work RVU of 20.00, which is 0.23 more work RVUs than the current work RVU of 19.77.

(34) 3D Imaging of Cardiac Structures (CPT Codes 933X0)

In May 2020, the CPT Editorial Panel created one new add-on code to describe the 3D echocardiographic imaging and postprocessing during transesophageal or transthoracic echocardiography for congenital cardiac anomalies for the assessment of cardiac...
structure(s). The 3D imaging could be performed as a follow-up to a 2D transthoracic echocardiogram.

We are proposing the RUC-recommended work RVU of 0.50 for CPT code 93XX0 (3D echocardiographic imaging and postprocessing during transesophageal echocardiography, or during transesophageal echocardiography for congenital cardiac anomalies, for the assessment of cardiac structure(s) (eg, cardiac chambers and valves, left atrial appendage, interatrial septum, interventricular septum) and function, when performed (List separately in addition to code for echocardiographic imaging).

While we are proposing no refinements to the direct PE inputs, we are requesting additional information about the 3D echocardiography probe equipment item. The RUC recommended that a 3D probe was required in addition to the base echocardiography machine. We received an invoice for $31,754.30 for this equipment item. It was unclear if the invoice reflected both the 3D probe and the base echocardiography machine or only the probe itself. We are seeking additional information to know if this equipment item reflected both the 3D probe and the base echocardiography machine or only the probe.

(35) Cardiac Catheterization for Congenital Defects (CPT Codes 93X1X, 93X2X, 93X3X, 93X4X, 93X5X, and 93X6X)

In May 2020, the CPT Editorial Panel replaced a family of four cardiac catheterization codes with five new codes (CPT codes 93X1X–93X5X) to describe cardiac catheterization for congenital cardiac defect(s). The CPT Editorial Panel also replaced two cardiac output measurement codes with one new add-on code (CPT code 93X6X) to report cardiac output measurement(s), performed during cardiac catheterization for congenital cardiac defects.

We are proposing the RUC-recommended work RVU for two of the codes in this family. We are proposing a work RVU of 3.99 for CPT code 93X1X (Right heart catheterization for congenital heart defect(s) including imaging guidance by the proceduralist to advance the catheter to the target zone; normal or abnormal native connections) and a work RVU of 6.10 for CPT code 93X2X (Right heart catheterization for congenital heart defect(s) including imaging guidance by the proceduralist to advance the catheter to the target zone; abnormal native connections) as recommended by the RUC in both cases.

For CPT code 93X3X (Left heart catheterization for congenital heart defect(s) including imaging guidance by the proceduralist to advance the catheter to the target zone, normal or abnormal native connections), we disagree with the RUC-recommended work RVU of 6.00 and we are instead proposing a work RVU of 5.50 based on a crosswalk to CPT code 32607 (Thoracoscopic procedures: with diagnostic biopsy(ies) of lung infiltrate(s) (eg, wedge, incisional, unilateral)). CPT code 32607 is a thoracoscopic procedure with three fewer minutes of intraservice work time (45 minutes) than CPT code 93X3X but a higher total work time of 178 minutes. CPT code 93X3X has similar surveyed work time to CPT code 93X1X but the RUC recommended a work RVU of 3.99 for the first code in the family as compared to 6.00 for CPT code 93X3X. While we agree that CPT code 93X3X is a more intensive procedure, we do not agree that it should be valued more than two full RVUs higher as compared to the first code in the family. We believe that it would be more accurate to propose a work RVU of 5.50 based on the aforementioned crosswalk to CPT code 32607. We note that the intensity of CPT code 93X3X is higher than the first two codes in the family at the proposed work RVU of 5.50.

For CPT code 93X4X (Right and left heart catheterization for congenital heart defect(s) including imaging guidance by the proceduralist to advance the catheter to the target zone(s); normal native connections), we disagree with the RUC-recommended work RVU of 7.91 and we are instead proposing a work RVU of 6.84 based on a crosswalk to CPT code 32608 (Thoracoscopic procedures: with diagnostic biopsy(ies) of lung nodules( ) or mass(es) (eg, wedge, incisional, unilateral)). CPT code 32608 is another thoracoscopic procedure from the same family as CPT code 32607, with the same 60 minutes of intraservice work time as CPT code 93X4X and a higher total work time of 195 minutes. In the same fashion as the previous code, CPT code 93X4X has similar surveyed work time to CPT code 93X2X but the RUC recommended a work RVU of 6.10 for the second code in the family as compared to 7.91 for CPT code 93X4X. While we agree that CPT code 93X4X is a more intensive procedure, we do not agree that it should be valued almost two full RVUs higher as compared to the second code in the family. We believe that it would be more accurate to propose a work RVU of 6.84 based on the aforementioned crosswalk to CPT code 32608.

We note that the intensity of CPT code 93X4X remains the highest among the four first codes in the family at the proposed work RVU of 6.84. We believe that our proposed RVUs for CPT codes 93X3X and 93X4X better preserve relativity both within the family and also with other services on the PFS.

For CPT code 93X5X (Right and left heart catheterization for congenital heart defect(s) including imaging guidance by the proceduralist to advance the catheter to the target zone(s); abnormal native connections), we disagree with the RUC-recommended work RVU of 9.99 and we are instead proposing a work RVU of 8.88 based on the median work RVU from the survey. The RUC’s recommendation of a work RVU of 9.99, based on maintaining the prior work RVU of deleted CPT code 93532 (Combined right heart catheterization and transeptal left heart catheterization through intact septum with or without retrograde left heart catheterization, for congenital cardiac anomalies), was nearly equal to the 75th percentile work RVU from the survey at 10.00. Since the RUC recommended the survey median work RVU for the other four non-measurement codes in the family, we do not understand the recommendation of a value for CPT code 93X5X that sits within 0.01 RVUs of the survey 75th percentile. The survey for CPT code 93X5X also revealed that it typically requires far less work time to perform as compared with predecessor code 93532 (83 minutes of intraservice work time as compared to 175 minutes for the predecessor code). Although we agree that CPT code 93X5X is a more intensive procedure than its predecessor code, we do not believe that the work RVU should remain unchanged given the greatly reduced work time in the new procedure. Since the two components of work are time and intensity, we believe that decreases in time should typically be reflected in decreases to work RVUs. We are therefore proposing a work RVU of 8.88 for CPT code 93X5X based on the survey median outcome. We believe that our proposed RVU more accurately accounts for these changes in surveyed work time and better preserves relativity with the rest of the family.

For CPT code 93X6X (Cardiac output measurement(s), thermodilution or other indicator dilution method, performed during cardiac catheterization for the evaluation of congenital heart defects), we disagree with the RUC-recommended work RVU of 1.75 and we are instead proposing a work RVU of 1.44 based on a crosswalk
to CPT code 37253 (Intravascular ultrasound (noncoronary vessel) during diagnostic evaluation and/or therapeutic intervention, including radiological supervision and interpretation; each additional noncoronary vessel). CPT code 37253 is an intravascular ultrasound procedure that shares the same intraservice work time of 20 minutes as CPT code 93X6X and has 1 additional minute of immediate postservice time. We note that the intensity of CPT code 93X6X as recommended by the RUC at a work RVU of 1.75 would be the second-highest in the family, higher than CPT code 93X5X for example. We do not agree that this cardiac output measurement code would typically be more intensive to perform than the two types of heart catheterization placing in CPT code 93X5X.

We also note that the recommended work RVU for CPT code 93X6X was higher than the sum of its two predecessor codes. Former CPT codes 93561 (Indicator dilution studies such as dye or thermodilution, including arterial and/or venous catheterization; with cardiac output measurement) and 93562 (Indicator dilution studies such as dye or thermodilution, including arterial and/or venous catheterization; subsequent measurement of cardiac output) had CY 2021 work RVUs of 0.95 and 0.77 respectively. These two codes sum together to a work RVU of 1.72 which would be lower than the RUC’s recommendation of 1.75 for CPT code 93X6X. The RUC’s recommendation suggests that there would be no efficiencies gained or savings created in the process of creating CPT code 93X6X; we believe that the survey for the new code indicates otherwise, as the predecessor codes had work times of 15 minutes and 12 minutes respectively (27 minutes total) as compared to 20 minutes of surveyed work time for the new code. This lower work time suggests that the creation of CPT code 93X6X has led to greater efficiencies in the service which, under the resource-based nature of the RVU system, lends further support for a reduction in the work RVU as compared to a sum of the predecessor codes. We therefore believe that it would be more accurate to propose a work RVU of 1.44 based on the aforementioned crosswalk to CPT code 37253.

The RUC did not recommend any direct PE inputs for these six codes and we are not proposing any direct PE inputs.

(36) Outpatient Pulmonary Rehabilitation Services (CPT Codes 946X1 and 946X2)

CPT code 946X1 (Physician or other qualified health care professional services for outpatient pulmonary rehabilitation; without continuous oximetry monitoring (per session)) and CPT code 946X2 (Physician or other qualified health care professional services for outpatient pulmonary rehabilitation; with continuous oximetry monitoring (per session) (Do not report 946X1, 946X2 in conjunction with 94760, 94761)) are two new codes created by the CPT Editorial Panel to take the place of the HCPCS G-code G0424 (Pulmonary rehabilitation, including exercise (includes monitoring), one hour, per session, up to two sessions per day) which was created in 2010. The RUC recommended work RVUs for CPT codes 946X1 and 946X2 of 0.55 and 0.69 respectively. We disagree with the RUC-recommended work RVUs for both CPT code 946X1 and 946X2. Although the pulmonary rehab service as described by these new codes have not changed, the RUC recommendation included an increase in intraservice and total time for the services. As the survey time increased for the pulmonary rehabilitation codings, an increase in work value may be appropriate.

Based on a comparison of intraservice time for the current code relative the recommended values, we are proposing a work RVU of 0.36 for CPT code 946X1 and a work RVU of 0.56 for CPT code 946X2, which is an increase to the work RVU from the HCPCS G-code G0424 that these two codes are replacing and reflects a commensurate increase in work relative to the increase in intraservice time.

For the direct PE inputs, we are proposing to refine the practical labor time for the “Provide education/obtain consent” (CA011) activity from the RUC-recommended 15 minutes to 2 minutes for both CPT codes 946X1 and 946X2. The recommended materials for this code family state that the 15 minutes for the CA011 activity are used for education which is an integral component of pulmonary rehabilitation programs. There is education provided at each separate session following a curriculum outlined in the guideline and covers both educational topics concerning self-management and educational topics concerning advance care planning which is different at every session.

We do not agree that it would be typical for CPT codes 946X1 and 946X2 to require an additional 13 minutes for education and consent given the patient is seen two to three times a week for pulmonary rehabilitation and the education can be covered during those sessions. We are refining the clinical labor time to 2 minutes for both CPT codes 946X1 and 946X2 to maintain relativity, particularly in light of the clinical similarities between these services. The education would be done during the “Perform procedure/service—NOT directly related to physician work time” (CA021), as stated above, as the patient is seen two to three times a week for pulmonary rehabilitation.

We are also proposing to refine the equipment time and lower the pulse oximeter w-printer nil (EQ211) and exercise equipment (treadmill, bike, stepper, UBE, pulleys, balance board) (EQ118) equipment times from 93 minutes to 80 minutes to match this change in clinical labor time for CPT codes 946X1 and 946X2.

Additionally, we are proposing to revise the utilization that we would use to set rates for CPT code 946X2 to reflect our understanding that pulmonary rehabilitation is always done with pulse oximetry. Thus, we are proposing to update our analytic crosswalk to reflect our belief that 100 percent of the utilization for the pulmonary rehabilitation services currently billed using HCPCS code G0424 will now be billed using CPT code 946X2. We believe that it is unlikely that these services would typically be billed using CPT code 946X1 since it is our understanding that pulmonary rehabilitation is typically provided with pulse oximetry, and therefore, we expect little to no utilization for CPT code 946X1. We are seeking comment from stakeholders on our understanding and proposal to revise the utilization as stated.

(37) Remote Therapeutic Monitoring (CPT Codes 989X1, 989X2, 989X3, 989X4, and 989X5)

Remote Therapeutic Monitoring (RTM) is a family of five codes created by the CPT Editorial Panel in October 2020 and valued by the RUC at its January 2021 meeting. The RTM family includes three PE-only codes and two codes that include professional work. In recent years, we have finalized seven codes in the Remote Physiological Monitoring (RPM) family that include services similar to the new RTM codes. (See the CY 2021 PFS final rule at 85 FR 84542 through 84546 for more information.) Based upon our analysis, the services and code structure of RTM resemble those of RPM. For example, the RTM codes reflect similar staff and
physician work, although the specific equipment used is different.

While there are notable similarities between the two sets of code descriptors, there are two primary differences. One difference is that according to RUC documents, primary billers of RTM codes are projected to be nurses and physical therapists. Stakeholders have suggested that the new RTM coding was created to allow practitioners who cannot bill RPM codes to furnish and bill for services that look similar to those of RPM. RPM services are considered to be E/M services and physical therapists, for example, are practitioners who cannot bill E/M services. The RTM codes, instead, are general medicine codes.

In our review of the new codes, we identified an issue that disallows physical therapists and other practitioners, who are not physicians or NPPs, to bill the RTM codes. By modeling the new RTM codes on the RPM codes, “incident to” services became part of direct practice expense-only (PE-only) codes (that is, CPT codes 989X1, 989X2, and 989X3) as well as the two professional work codes (that is, CPT codes 989X4 and 989X5).

As a result, the RTM codes as constructed currently cannot be billed by, for example, physical therapists. We describe “incident to” services in the CMS Medicare Benefit Policy Manual, Chapter 15, beginning at section 60 and note that only physicians and certain other practitioners are authorized to furnish and bill “incident to” services. Incident to services are:

- An integral, although incidental, part of the physician’s professional service (see § 60.1);
- Commonly rendered without charge or included in the physician’s bill (see § 60.1A);
- Of a type that are commonly furnished in physician’s offices or clinics (see § 60.1A); and
- Furnished by the physician or by auxiliary personnel under the physician’s direct supervision (see § 60.1B).

Additionally, we designated the treatment management RPM codes (that is, CPT codes 99457 and 99458) as care management services (84 FR 62697 through 62698), which allow general supervision rather than direct supervision for incident to services. The treatment management RPM codes (CPT codes 989X4 and 989X5), because they are not E/M codes, cannot be designated as care management services. As a result, we are seeking comment on how we might remedy the issues related to the RTM code construction in order to permit practitioners who are not physicians or NPPs to bill the RTM codes.

The second primary difference between the RTM and RPM codes is the nature of the data to be collected and how it is collected. According to the code descriptors, RTM codes monitor health conditions, including musculoskeletal system status, respiratory system status, therapy (medication) adherence, and therapy (medication) response, and as such, allow non-physiologic data to be collected. Reportedly, data also can be self-reported as well as digitally uploaded. RPM requires that data be physiologic and be digitally uploaded. We note that, for both sets of codes, the device used must meet the FDA definition of a medical device as described in section 201(h) of the Federal Food, Drug and Cosmetic Act (FFDCA). We are seeking comment on the typical type of device(s) and associated costs of the device(s) that might be used to collect the various kinds of data included in the code descriptors (for example, respiratory system status, musculoskeletal status, medication adherence, pain) for the RTM services.

For CY 2022, we are proposing the RUC-recommended work RVU of 0.62 for CPT code 989X4 (Remote therapeutic monitoring treatment management services, physician/other qualified health care professional time in a calendar month requiring at least one interactive communication with the patient/caregiver during the calendar month; first 20 minutes) and the RUC-recommended work RVU of 0.61 for its add-on code, CPT code 989X5 (Remote therapeutic monitoring treatment management services, physician/other qualified health care professional time in a calendar month requiring at least one interactive communication with the patient/caregiver during the calendar month; each additional 20 minutes (List separately in addition to code for primary procedure)) as a means of maintaining parity with the two RPM treatment management codes (CPT codes 99457 and 99458) upon which the new RTM code was based. We also are proposing the RUC-recommended direct PE inputs for the two treatment management codes, CPT codes 989X4 and 989X5, without refinement.

We are proposing to refine the direct PE inputs for the three PE-only codes: CPT code 989X1 (Remote therapeutic monitoring (e.g., respiratory system status, musculoskeletal system status, therapy adherence, therapy response); initial set-up and patient education on use of equipment), CPT code 989X2 (Remote therapeutic monitoring (e.g., respiratory system status, musculoskeletal system status, therapy adherence, therapy response); device(s) supply with scheduled (e.g., daily) recording(s) and/or programmed alert(s) transmission to monitor respiratory system, each 30 days), and CPT code 989X3 (Remote therapeutic monitoring (e.g., respiratory system status, musculoskeletal system status, therapy adherence, therapy response); device(s) supply with scheduled (e.g., daily) recording(s) and/or programmed alert(s) transmission to monitor musculoskeletal system, each 30 days).

We are proposing to value the PE for CPT code 989X1 by crosswalking to the PE RVU for RPM code 99453 upon which the new RTM code was based. We also are proposing to value the PE for CPT codes 989X2 and 989X3 by crosswalking to the PE RVU for comparable RPM code 99454, a code that includes payment for the medical device used to collect and transmit data. We note that the only input to CPT code 989X2 is a monthly fee of $25, which would not be paid as a direct cost under the PFS. Historically, we have considered most computer software and associated licensing fees to be indirect costs. However, as we noted in section II.B. of this proposed rule (the PE section), stakeholders have routinely expressed concerns with this policy, especially for evolving technologies that rely primarily on software and licensing fees with minimal costs in equipment or hardware.

(38) Principal Care Management and Chronic Care Management (CPT Codes 99490, 99439, 99491, 994X21, 99487, 99489, 99X22, 99X23, 99X24, and 99X25)

In recent years, we have engaged in efforts to update and improve the relative value of care management and coordination services within the PFS by identifying gaps in payment and coding. One of those PFS services is Chronic Care Management (CCM). CCM services, which include management and support services provided by clinical staff under the supervision of a physician or NPP or services provided personally by a physician or NPP, have received ongoing refinements related to payment and coding since CY 2013.

Beginning in the CY 2014 PFS final rule (78 FR 74414 through 74427), we noted that physicians and NPPs who furnish care to patients with multiple chronic conditions require greater resources than are required to support patient care in a typical E/M service. In response, we finalized a separately payable HCPCS code, GXXX1 (Chronic Care Management (CCM) services...
furnished to patients with multiple (2 or more) chronic condition expected to last at least 12 months, or until the death of the patient; 20 minutes or more per in 30 days of chronic care management services provided by clinical staff and directed by a physician or other qualified health care practitioner). For CY 2015 (79 FR 67715 through 67730), we refined aspects of the existing CCM policies and adopted separate payment for CCM services under CPT code 99490 (Chronic care management services (CCM), at least 20 minutes of clinical staff time directed by a physician or other qualified health professional, per calendar month, with the following required elements: Multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient; chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored). Then, in the CY 2019 PFS final rule (83 FR 62690), we established payment for an add-on code to CPT code 99490 by creating HCPCS code G2058 (Chronic care management services, each additional 20 minutes of clinical staff time directed by a physician or other qualified healthcare professional, per calendar month). We also created two new HCPCS G codes, G2064 and G2065 (84 FR 62692 through 62694), representing comprehensive services for a single high-risk disease (that is, principal care management). In the CY 2021 PFS final rule (85 FR 84639), we finalized a RUC-recommended replacement code for HCPCS code G2058, CPT code 99439, which was given the same valuation and the identical descriptor as G2058.

For CY 2022, the RUC resurveyed the CCM code family, including Complete Chronic Care Management (CCCM) and Principal Care Management (PCM), and added five new CPT codes: 99X21 (Chronic care management services each additional 30 minutes by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)), 99X22 (Principal care management services for a single high-risk disease first 30 minutes provided personally by a physician or other qualified health care professional, per calendar month), 99X23 (Principal care management services for a single high-risk disease each additional 30 minutes provided personally by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)), 99X24 (Principal care management services, for a single high-risk disease first 30 minutes of clinical staff time directed by physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)). The CCM/CCCM/PCM code family now includes five sets of codes, each set with a base code and an add-on code. The sets vary by the degree of complexity of care (that is, CCM, CCCM, or PCM), who furnishes the care (that is, clinical staff or the physician or NPP), and the time allocated for the services. The RUC-recommended values for work RVUs and direct PE inputs for CY 2022 derive from the recent RUC specialty society survey (see Table 12).

We reviewed the RUC-recommended values for the 10 codes in the CCM family and are proposing to accept the recommended work values for the codes. We are proposing the RUC-recommended direct PE inputs without refinements. We believe that proposing to accept these updated values is consistent with our goals of ensuring continued and consistent access to these crucial care management services and acknowledges our longstanding concern about undervaluation of care management under the PFS. We are seeking comment, however, on whether keeping professional PCM and CCM at the same value creates an incentive to bill CCM instead of billing PCM when appropriate.

In addition to the proposals on the values for CCM codes, we are interested in understanding more about the standard practice used by practitioners to obtain beneficiary consent for these services. We have received questions from stakeholders regarding the consent requirements for CCM services. We believe that these questions have arisen because of the many flexibilities allowed in response to the PHE for COVID–19. In particular, during the PHE for COVID–19, we allowed stakeholders to obtain beneficiary consent for certain services under general supervision (85 FR 19230, April 6, 2020). Before the PHE for COVID–19, we required that beneficiary consent be obtained either by or under the direct supervision of the primary care practitioner. This requirement is consistent with the conditions of payment for this service under the PFS. As we consider what policies implemented during the PHE for COVID–19 should remain in effect beyond the PHE, we are interested in understanding how billing practitioners furnishing CCM at different service sites (for example, physician office settings, RHCs, FQHCs) have been obtaining beneficiary consent over the past year and how different levels of supervision impact this activity. We welcome public comment on the issue, specifically on what levels of supervision are necessary to obtain beneficiary consent when furnishing CCM services and will...
consider such comments in future
rulemaking.

We also are proposing to adopt CPT
codes 90X22 (PCM First 30 minutes
provided personally by a physician or
other qualified health care professional,
per calendar month) and 99X24 (PCM
First 30 minutes of clinical staff time
directed by physician or other qualified
health care professional, per calendar
month) to replace HCPCS codes G2064
and G2065 in the calculation of the rate
for HCPCS code G0511 for General Care
Management services billed by RHCs
and FQHCs. The payment rate for
HCPCS code G0511 is calculated based
on the average of the national non-
facility PFS payment rate for care
management and general behavioral
health integration codes (CPT codes
99484, 99487, 99490, and 99491) as well
as HCPCS codes G2064 and G2065
which describe PCM services billed
under the PFS. The payment rate for
HCPCS code G0511 is updated annually
based on the PFS amounts for these
codes.

(39) Moderate Sedation (HCPCS code G0500)

Following the publication of the CY
2021 PFS final rule, a stakeholder
contacted us regarding what they
believed to be an error in the
intraservice work time for HCPCS code
G0500 (Moderate sedation services
provided by the same physician or other
qualified health care professional
performing a gastrointestinal
endoscopic service that sedation
supports, requiring the presence of an
independent trained observer to assist
in the monitoring of the patient’s level
of consciousness and physiological
status; initial 15 minutes of intraservice
time; patient age 5 years or older)
presented at the October 2015 RUC
meeting. The survey data for CPT code
99152 showed a significant bimodal
distribution with data from
gastroenterologists performing
endoscopic procedures demonstrating a
markedly different and lesser amount of
physician work for moderate sedation
compared to other specialties. The
stakeholder stated that the finalization
of 12 minutes of intraservice work time
for HCPCS code G0500 appeared to be an
error and asked CMS to correct it to
reflect the 5 minutes of intraservice
work time indicated by survey data
when gastroenterologists performed
endoscopic procedures. While we
appreciate the feedback from the
stakeholder, we disagree that the
finalization of 12 minutes of
intraservice work time for HCPCS code
G0500 (matching CPT code 99152) was an
error. The work time for HCPCS code
G0500 was proposed and finalized at 12
minutes in CY 2017, with the intention
that it would match the work time for
CPT code 99152. This was the rationale
behind the descriptor for HCPCS code
G0500 listing that the code was
intended for the initial 15 minutes of
intraservice time. Furthermore, several
commenters questioned the work time
for HCPCS code G0500 in the CY 2017
PFS final rule (81 FR 80341) and we
stated in response that we expected that
practitioners would report the
appropriate CPT or HCPCS code that
most accurately described the services
performed during a patient encounter,
including those services performed
concurrently and in support of a
procedural service consistent with CPT
guidance. We noted that the
commenters referred to the time for
moderate sedation in the survey data,
while the time thresholds for the
moderate sedation codes were intended
to match the intraservice time of the
procedure itself. For a full discussion of
this topic, we refer readers to the CY
Currently, graft skin substitute application services are paid separately from the (HCT/Ps) skin substitutes under the PFS. Specifically, when a physician or NPF furnishes a surgical service to apply a (HCT/Ps) skin substitute in a non-facility setting, they may bill Medicare for the surgical service (as described by CPT codes 15271 through 15278), and separately bill for the (HCT/Ps) skin substitute. For CY 2022, in order to reconcile the gap in payment for synthetic products in the physician office setting, we are proposing to create eight HCPCS codes (parallel to the aforementioned existing surgical codes) that would include the synthetic graft skin substitute product as a supply cost in determining the PFS rate. We believe that it would be appropriate to consider these products as incident to supplies in the office setting, and as such they should be built in as a supply cost in calculating the PFS rate. Therefore, we are proposing to consider these products as incident to supplies in the office setting.

The codes and long descriptors for the proposed synthetic graft skin substitute services are:

- HCPCS Code GXXAB: Application of synthetic skin substitute graft to trunk, arms, legs, total wound surface area up to 100 sq cm, including provision of synthetic skin substitute; first 25 sq cm or less wound surface area.
- HCPCS Code GXXAC: Application of synthetic skin substitute graft to face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits, total wound surface area up to 100 sq cm, including provision of synthetic skin substitute; each additional 25 sq cm wound surface area, or part thereof (List separately in addition to code for primary procedure).
- HCPCS Code GXXAI: Application of synthetic skin substitute graft to face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits, total wound surface area greater than or equal to 100 sq cm, including provision of synthetic skin substitute; each additional 100 sq cm wound surface area, or part thereof, or each additional 1% of body area of infants and children.
- HCPCS Code GXXAG: Application of synthetic skin substitute graft to face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits, total wound surface area greater than or equal to 100 sq cm, including provision of synthetic skin substitute; each additional 1% of body area of infants and children, or part thereof (List separately in addition to code for primary procedure).
- HCPCS Code GXXAH: Application of synthetic skin substitute graft to face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits, total wound surface area greater than or equal to 100 sq cm, including provision of synthetic skin substitute; each additional 25 sq cm wound surface area, or part thereof, or each additional 1% of body area of infants and children, or part thereof (List separately in addition to code for primary procedure).
- HCPCS Code GXXAJ: Application of synthetic skin substitute graft to face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits, total wound surface area greater than or equal to 100 sq cm, including provision of synthetic skin substitute; each additional 1% of body area of infants and children, or part thereof (List separately in addition to code for primary procedure).
- HCPCS Code GXXAE: Application of synthetic skin substitute graft to face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits, total wound surface area greater than or equal to 100 sq cm, including provision of synthetic skin substitute; each additional 25 sq cm wound surface area, or part thereof, or each additional 1% of body area of infants and children, or part thereof (List separately in addition to code for primary procedure).
- HCPCS Code GXXAF: Application of synthetic skin substitute graft to face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits, total wound surface area greater than or equal to 100 sq cm, including provision of synthetic skin substitute; each additional 1% of body area of infants and children, or part thereof (List separately in addition to code for primary procedure).

Though we are proposing contractor pricing for these codes for CY 2022, we note that there is limited data available on the cost of synthetic skin substitute products in physician offices, so we are also seeking comment and documentation regarding the appropriate values for these services for consideration of national pricing in future rulemaking. Though we are proposing contractor pricing in the interim, we also considered an alternative approach that would use crosswalks to value these services in the physician office setting in a way that is commensurate with the rates paid under the OPPS. Though limited data exists on the cost of graft synthetic skin substitute products in physician offices, hospitals began reporting costs associated with synthetic skin substitute products in CY 2020 after C1849 became effective and payable under the OPPS starting in July, 2020. We analyzed CY 2020 OPPS claims data and estimate hospital outpatient department costs for graft synthetic skin substitute products averaged $1,500. We note that under the OPPS, outpatient departments are paid separately for the primary surgical application codes (CPT codes 15271, 15273, 15275, 15277), and the costs associated with the synthetic products...
as well as the add-on services (described by CPT codes 15272, 15274, 15276, 15278) are packaged into the payment for the primary procedure.

Under this alternative, we considered following an approach similar to that under the OPPS where the cost of the supply would be included in the primary codes (described by HCPCS GXXAB, GXXAD, GXXAF, and GXXAH) and not the add-on codes (described by HCPCS GXXAC, GXXAE, GXXAG, and GXXAI), though the add-on would continue to be reported and paid separately. Specifically, we would use direct crosswalks for the work RVUs, MP RVUs, and facility PE RVUs from the current surgical application codes (that is, CPT codes 15271 through 15278) as we believe that these payment components for the synthetic graft skin substitute services, described by the aforementioned HCPCS codes, would be similar.

However, with regards to the non-facility PE RVUs, we recognize that there are supply costs associated with synthetic skin substitute products. As described previously, we estimate that hospitals face average costs associated with synthetic skin substitute products of $1,500. We note that the PE methodology, which relies on the allocation of indirect costs based on the magnitude of direct costs, may not be appropriate for these types of services because the specialists that typically furnish these types of services do not typically have significant supply costs within the methodology. As such, we used the hospital reported costs and we looked to other codes where specialists frequently have similarly high supply costs in order to crosswalk the non-facility PE RVUs. We considered services that have a significant proportion of supply costs and are furnished by specialists who typically have higher supply costs as potential crosswalks for the non-facility PE RVUs. For example, we considered a crosswalk to CPT code 21461 (Open treatment of mandibular fracture: without interdental fixation) for HCPCS codes GXXAB and GXXAF, and a crosswalk to CPT code 21462 (Open treatment of mandibular fracture: with interdental fixation) for HCPCS codes GXXAD and GXXAH. An estimate of non-facility PE, we believe these would be appropriate codes for crosswalking non-facility PE RVUs. As previously discussed, for the purposes of the work RVUs, MP RVUs, and facility PE RVUs, we believe direct crosswalks to the current surgical application codes would be inappropriate and those values would generally not be impacted by the addition of a synthetic skin substitute product. We realize this alternative considered would follow a similar coding and payment approach established under the OPPS, and that potential adoption of this alternative would mean that the cost of the products is included in the primary codes and not included in the add-on codes. We welcome feedback on our proposal to treat synthetic skin substitute products as incident to supplies in the physician office, the proposal to have contractor pricing for these codes, and other ways we could obtain detailed and reliable cost information on synthetic skin substitutes that are furnished in the non-facility setting. We are also seeking comment on the alternative approach that we considered (using crosswalks to value these services in the physician office setting). Additionally, we are seeking comment on potential ways to reconcile these coding and payment differences across settings to yield a more consistent and rational payment approach for synthetic and HCTP graft skin substitutes.

(41) External Extended ECG Monitoring (CPT Codes 93241, 93242, 93243, 93244, 93245, 93246, 93247, and 93248)

In the CY 2021 PFS proposed rule (85 FR 50164), we proposed to adopt the RUC recommendations for CPT codes 93241 (External electrocardiographic recording for more than 7 days up to 15 days by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation), 93242 (External electrocardiographic recording for more than 48 hours up to 7 days by continuous rhythm recording and storage; recording (includes connection and initial recording)), 93243 (External electrocardiographic recording for more than 48 hours up to 7 days by continuous rhythm recording and storage; scanning analysis with report), 93244 (External electrocardiographic recording for more than 48 hours up to 7 days by continuous rhythm recording and storage; recording (includes connection and initial recording)), 93245 (External electrocardiographic recording for more than 7 days up to 15 days by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation), 93246 (External electrocardiographic recording for more than 7 days up to 15 days by continuous rhythm recording and storage; recording (includes connection and initial recording)), 93247 (External electrocardiographic recording for more than 7 days up to 15 days by continuous rhythm recording and storage; scanning analysis with report), and 93248 (External electrocardiographic recording for more than 7 days up to 15 days by continuous rhythm recording and storage; review and interpretation).

We noted that the recommendations for this family of codes contain one new supply item, the “extended external ECG patch, medical magnetic tape recorder” (SD339). We did not receive a traditional invoice to establish a price for this supply item. Instead we received pricing information from two sources: A weighted median of claims data with the cost of the other direct PE inputs removed, and a top-down approach calculating the cost of the supply per service based on summing the total costs of the health care provider and dividing by the total number of tests furnished. The former methodology yielded a supply price of approximately $440 while the latter methodology produced an estimated supply price of $416.85. Stakeholders also submitted a series of invoices from the clinical study marketplace with a price of $595, which we rejected as we typically require an invoice representative of commercial market pricing to establish a national price for a new supply or equipment item.

After consideration of the information, we proposed to employ a crosswalk to an existing supply for use as a proxy price until we received pricing information to use for the “extended external ECG patch, medical magnetic tape recorder” item. We proposed to use the “kit, percutaneous neuro test stimulation” (SA022) supply as our proxy item at a price of $413.24. We believed the kit to be the closest match from a pricing perspective to employ as a proxy until we would be able to arrive at an invoice that is representative of commercial market pricing. We welcomed the submission of invoices or other additional information for use in pricing the “extended external ECG patch, medical magnetic tape recorder” supply. In response to our proposal, we received conflicting information from commenters and in the CY 2021 PFS final rule (85 FR 84631), we ultimately finalized contractor pricing for CY 2021 for the four codes that include this supply input (CPT codes 93241, 93243, 93245, and 93247) to allow additional time to receive more pricing information.

We note that stakeholders have continued to engage with CMS and the MACs on payment for this service. We remain concerned that we continue to hear that the supply costs as initially considered in our CY 2021 PFS proposal are much higher than they should be. At the same time we also have heard that
the resource costs, as reflected in the contractor based payments do not adequately cover the incurred cost for the SD339 supply that is used to furnish these services. In consideration of continued access to these services for Medicare beneficiaries, we are once again seeking public comment and information to support CMS’ future rulemaking to establish a uniform national payment that appropriately reflects the PE that are used to furnish these services. As previously stated, invoices or other additional information, including for example, which proxy supply items could be used to establish cost for the SD339 supply, information on use/application and potential alternatives (as appropriate) to the supply items, would be ideal for us to use in establishing fair and stable pricing for these services. We note that in the absence of such additional and actionable information (that is, information that provides further context to information that has already been considered) we are proposing to maintain contractor pricing for these services.

(42) Comment Solicitation for Impact of Infectious Disease on Codes and Ratesetting

During the PHE for COVID–19, several stakeholders have contacted CMS with concerns about the additional costs borne by physician and NPPs due to the pandemic that may impact the professional services furnished to Medicare beneficiaries. For example, we have heard from stakeholders about higher costs due to additional supplies, such as personal protective equipment, and increased time that physicians, NPPs and their clinical staff may spend with patients to mitigate further spread of infection when, for example, stakeholders are working to rule out a COVID–19 infection, or furnishing other services to a patient with a confirmed COVID–19 infection. While costs such as these may diffuse into Medicare payment rates over a period of time, our payment systems, including the PFS, are not generally designed to accommodate more acute increases in resource costs, even if they are widespread. We acknowledge the circumstances stakeholders have identified that may lead to additional costs borne by physicians and NPPs during the PHE, and we have developed and implemented policies, as appropriate and where possible, to maintain beneficiary access to necessary services during the PHE. CMS is continuing to think broadly about the concerns raised, and specifically about the types of resource costs that may not be fully reflected in payment rates for existing services, or costs that could be accounted for by establishing new payment rates for new services. We are interested in feedback from stakeholders about additional strategies to account for PHE-related costs, including feedback on the specific types of services and costs that may benefit from further review, such as infectious disease control measures, research-related activities and services, or PHE-related preventive or therapeutic counseling services. We are interested in detailed feedback from stakeholders to help inform whether we should consider making changes to payments for services or develop separate payments for such services in future rulemaking.

(43) Comment Solicitation on Separate PFS Coding and Payment for Chronic Pain Management

Adequate treatment of pain is a significant public health challenge. Centers for Disease Control and Prevention (CDC) data indicate 50 million adults in the United States have chronic daily pain, with nearly 20 million experiencing high impact pain that interferes with daily life or work. Pain is the most common reason individuals seek medical care, and more than 20 percent of office visits are associated with pain.4 In the United States, 42.6 percent of adults report having pain on some days in the past 6 months,5 and chronic pain and high-impact chronic pain are experienced by 20.4 percent and 8 percent of adults, respectively.6 The high prevalence of pain exacts a substantial economic toll: Medical expenditures and lost productivity related to pain result in a cost to the United States estimated at up to $635 billion.7

In 2010, HHS, through the National Institutes of Health (NIH), contracted with the Institute of Medicine to make recommendations “to increase the recognition of pain as a significant public health problem in the United States.” In its 2011 report entitled Relieving Pain in America: A Blueprint for Transforming Prevention, Care, Education, and Research, the Institute of Medicine, through a study mandated by Congress, recommended significant improvements in pain prevention, care, education, and research and development of a population health-level strategy to address pain care.8 The report described that the unique experience of pain requires a combination of person-centered therapies and coping techniques influenced by genes, cultural attitudes, stress, depression, ability to understand health information, and other behavioral, cultural, and emotional factors. It noted that individualized care can require adequate extra time to counsel patients and caregivers, promote self-management, and consult with other providers, but current reimbursement systems are not designed to efficiently pay for this approach. HHS subsequently convened an expert committee to oversee creation of the National Pain Strategy (NPS), issued in 2016.9 The NPS addressed six key areas of care: Population research, prevention and care, disparities, service delivery and payment, professional education and training, and public education/communication. In this report, NPS’ vision is to “decrease the prevalence of pain across its continuum from acute to high-impact chronic pain and its associated morbidity and disability across the lifespan, and aim “to reduce the burden of pain for individuals, their families, and society as a whole.”

This work was followed by HHS’s 2018 release of its Pain Management Best Practices Inter-Agency Task Force Report: Updates, Gaps, Inconsistencies, and Recommendations (PMTF Report).10 The PMTF Report focuses on the development of patient-centered pain treatment plans to establish diagnosis and set measurable outcomes such as improvements in quality of life, function, and activities of daily living. It emphasized multi-modal, multi-disciplinary approaches that include various modalities for acute and chronic pain. The PMTF Report also identified five broad treatment categories: Medications including opioids and non- opioids, restorative therapies, interventional approaches, behavioral approaches, and complementary and integrative health. It stressed the importance of special populations including older adults and persons with

relapsing conditions, Veterans, and people who receive palliative care. The PMTF Report recognized the importance of proper opioid stewardship for individuals who need opioids to effectively manage their pain. As the Task Force noted, there are ongoing concerns regarding suicide and suicidal ideation due to pain, and a lack of access to pain treatment, including appropriate access to opioid medications. The PMTF Report noted that management of pain conditions often requires multidisciplinary coordination among health care professionals, and that the experience of pain can intensify other health issues such as delayed recovery from surgery, or exacerbate behavioral health conditions. Many health care professionals, including primary care providers, have opted out entirely in treating pain, worsening an existing shortage of pain specialists and making chronic pain care hard to access, including for people who frequently experience disparities in pain care such as rural dwellers, racial/ethnic minorities, and people with disabilities. The COVID–19 Public Health Emergency has also had an impact on the ability of many older adults and people with disabilities’ access to care, although telehealth modalities have shown promise in broadening access to services and supports.

At the same time individuals are experiencing difficulties finding pain care, the country is also coping with a worsening opioid and SUD crisis. The current environment involves shifting “waves” of overdose deaths associated with heroin, synthetic opioids, and prescription drugs, and intensifying stimulant and polysubstance use. Preliminary Centers for Disease Control and Prevention data released in April 2021 show a 29 percent rise in overdose deaths from October 2019 through September 2020—the most recent data available—compared with the previous 12-month period. I1 Ilicitly manufactured fentanyl and other synthetic opioids were the primary drivers, although many fatal overdoses have also involved stimulant drugs, particularly methamphetamine. In December 2020, the Substance Abuse and Mental Health Services Administration (SAMHSA) released a preliminary report from its Drug Abuse Warning Network, which captures data on emergency department (ED) visits related to recent substance use and misuse such as alcohol use, illicit drug use, suicide attempts, and nonmedical use of pharmaceuticals. Most commonly associated with ED visits in the participating hospitals are illicit substances and central nervous system agents. Among illicit drugs, stimulants (including methamphetamine and illicit amphetamine) are the most common, followed by cannabinoids (including marijuana and synthetic cannabinoids). I2

The PMTF Report urged clinicians to use a comprehensive, individualized, person-centered approach to the diagnosis and treatment of pain featuring multiple therapeutic modalities. The uptake of this approach is an urgent concern as growing numbers of older adults are enrolling in Medicare. Some estimates indicate about half of older adults have pain that interferes with function. Primary care clinicians and specialists are already facing challenges in treating pain and associated chronic disease in the Medicare population, where conditions such as arthritis, bone/joint disorders, back and neck pain, cancer and other conditions that inform and at times inhibit employing the full spectrum of pain management therapies are common. We believe untreated and inappropriately treated pain may translate to increased costs to the Medicare program as more beneficiaries experience functional decline, incapacitation, and frailty. Additional risks in untreated pain include individuals using illicit drugs such as cannabis; inadequate treatment of mental disorders such as depression and anxiety, misuse of prescription drugs, alcohol and other drug use disorder, and increased suicide risk and suicide.

In 2019 HHS issued the Guide for Clinicians on the Appropriate Dosage Reduction or Discontinuation of Long-Term Opioid Analgesics (the Guide) to support the thoughtful, deliberative, and measured discontinuation of long-term opioid analgesics, and mitigate harm and risk to patients who are working with their clinicians to undergo appropriate tapering or discontinuation. I3 The Guide notes that decisions to continue or reduce opioid medications for pain should be collaborative and based on the individual patient’s goals and circumstances and clinicians should consider, for example, whether opioid medications continue to support patients meeting treatment goals; if opioids are exposing the person to an increased risk for serious adverse events or an opioid use disorder; and whether benefits continue to outweigh risks of opioids. Whether or not opioids are used in treatment, safe and effective non-opioid treatments can be integrated into patients’ pain management plans based on an individualized assessment of benefits and risks, and considering the patient’s diagnosis, goals and circumstances. I4 Unique needs and coordination across the health care team is critical and clinicians and care teams have a responsibility to provide, or arrange for, coordinated management of patients’ pain including any medication-related issues. The system of care should not ultimately result in patient abandonment. The FDA issued a safety announcement in 2019, advising that health care professionals should not abruptly discontinue opioids in patients who are physically dependent and that patient-specific plans should be created to gradually taper off opioids, in part due to the risk of adverse events including abrupt withdrawal symptoms, increased pain, mood changes, mental health impact, psychosocial impact, and importantly, suicide risk. I5

In 2020 the National Academy of Medicine, as part of its “Action Collaborative to Countering the U.S. Opioid Epidemic,” began an effort to understand more about the state of chronic pain management, and to bring greater awareness to any intended and unintended consequences of opioid prescribing metrics as they pertain to the delivery, access, and coordination of chronic pain management and care. CMS is one of the sponsors of this work. The aim of this project is to visually illustrate the chronic pain management journey and accelerate the uptake of a range of pain treatments by outlining approaches to effective communication that leads to strong clinical relationships and optimal quality of life for people with pain. I6

The SUPPORT Act (Pub. L. 115–271, October 24, 2018) outlines national strategies to help address America’s opioid and substance use disorders (SUD) crisis, and advances policies to improve the treatment of pain and SUD. The SUPPORT Act recognizes the importance of opioid-related medication management, as well as the overall need to identify SUD in the Medicare

beneficiary population. Sections 2002 and 6086 of the SUPPORT Act are of particular importance regarding pain management. For beneficiaries with chronic pain, section 2002 of the SUPPORT Act amended sections 1861(ww) and (hh)(2) of the Act to include a review of any current opioid prescriptions in conjunction with the initial preventive physical examination (the “Welcome to Medicare” visit) and annual wellness visit (AWV). The opioid prescription review is to include a review of the potential risk factors to the individual for opioid use disorder, an evaluation of the individual’s pain severity and current treatment plan, the provision of information on non-opioid treatment options, and referral to a specialist, if appropriate. Section 2002 also amended sections 1861(ww) and (hh)(2) of the Act to add a screening for potential SUDs to the Welcome to Medicare visit and the AWV, and to add referral to a specialist, as appropriate, to the AWV.

Section 6086 of the SUPPORT Act, the Dr. Todd Graham Pain Management Study, will provide HHS and CMS with key information about services delivered to Medicare beneficiaries with acute or chronic pain, help in understanding the current landscape of pain relief options for Medicare beneficiaries, and inform decisions around payment and coverage for pain management interventions, including those that minimize the risk of SUD.

CMS has worked with the Agency for Healthcare Research and Quality, which has undertaken three topic briefs and two systematic reviews to inform Medicare coverage for the treatment of acute and chronic pain. CMS has also worked with HHS’s Office of the Secretary for Planning and Evaluation to write a Report on the Study, which will be submitted to Congress. CMS will post a completed copy of the Report on our website. The Report will address questions regarding coverage and payment for evidence-based interventions for acute and chronic pain in Medicare, barriers to access, costs and coading or revenue and emotional benefits not currently covered, and legislative and administrative options to improve pain interventions.

We believe it is important to highlight the role of a person-centered approach to pain care. The National Quality Forum, which as its core work defines measures and health care practices as the best, evidence-based approaches to improving care, has defined person-centered planning as “a facilitated, individual-directed, positive approach to the planning and coordination of a person’s services and supports based on individual aspirations, needs, preferences, and values,” and stated that the “goal of person-centered planning is to create a plan that would optimize the person’s self-defined quality of life, choice, and control, and self-determination through meaningful exploration and discovery of unique preferences and needs and wants in areas including, but not limited to, health and well-being, relationships, safety, communication, residence, technology, community, resources, and assistance.”

The federal principles should also apply in the treatment of individuals with pain, where clinicians confirm and affirm the individual’s recovery and/or maintenance goals, and focus on those, where treatment is a means to an end. For example, one goal might be to not rely on aiming to reduce a simple pain score, such as a numeric or visual score, but to evaluate function for example, through a tool such as the Defense and Veterans Pain Rating scale, which integrates functional status, and then aim to optimize physical function and mental function in the beneficiary with chronic pain.

We recognize that there are no existing codes that specifically describe the work of the clinician involved in performing the tasks necessary to perform pain management care. We believe there are complexities in treating pain management patients that could include lifestyle discussion, ongoing medication management (such as opioid tapering or discontinuation, when appropriate), behavioral health care, preparation and updating of a care plan, consideration of federal and other opioid prescribing limits and guidelines, Prescription Drug Monitoring Program checks, electronic prescribing requirements, special licensing requirements (controlled substance licenses; buprenorphine “X-waivers”), interdisciplinary interactions, prescription drug coverage, CMS high-prescriber oversight, consideration of out-of-pocket costs, and other issues. As one example, decreasing or discontinuing opioid treatment requires careful, person-centered consideration of all of these aspects of providing care. These unique challenges often adversely impact the delivery of care, and subsequent access to care, for beneficiaries with chronic pain. Current Medicare payment methodologies such as Chronic Care Management (CCM) support chronic disease management, though may not provide adequate payment to health care providers or systems to holistically care for beneficiaries with chronic pain; we believe the complexity and resources required for safe and effective pain management may not be adequately captured and paid through these codes.

We believe that creating separate or add-on payment for care and management for people with pain might provide opportunities to better leverage services furnished using telecommunication technology and non-face-to-face care while expanding access to treatment for pain. Such an additional payment could potentially be effective in preventing or reducing the need for acute services such as fall avoidance, and reduce the need for treatment for mental disorders such as depression, anxiety, and sleep disorders which may occur in some individuals with pain. There is also reason to believe that addressing chronic pain (for example, pain that lasts more than 3 months) early in its course may result in averting the development of “high-impact” chronic pain in some individuals, where they experience at least one major activity restriction (for example, unable to work, go to school, perform household chores). These individuals report more severe pain, more difficulty with self-care, and higher health care use than others with chronic pain. From a social determinants of health perspective, Blacks, Native Americans, persons of Asian/Indian descent, older adults, and people with less education, and single individuals report more high impact chronic pain.

In 2019, 12.2 million individuals were enrolled in both Medicaid and Medicare, including people age 65 and older and younger beneficiaries with disabilities. Many have multiple chronic conditions, physical disabilities, behavioral health conditions, and cognitive impairments and on average, use more services and supports than those enrolled in only Medicaid or Medicare, with higher per capita costs. Dually eligible beneficiaries often have multiple social risk factors such as housing insecurity and homelessness, food insecurity, inadequate access to transportation, and low health literacy. A 2019 study on dually eligible beneficiaries using “high dose” opioids to treat pain between 2006 through 2015.

indicated that the common conditions in beneficiaries studied were chronic pain, migraine, rheumatoid arthritis, osteoporosis, HIV/AIDS, viral hepatitis, and SUD.\textsuperscript{22}

We are soliciting comment on whether we should consider creating separate coding and payment for medically necessary activities involved with chronic pain management and achieving safe and effective dose reduction of opioid medications when appropriate, or whether the resources involved in furnishing these services are appropriately recognized in current coding and payment. These activities could include, but are not limited to the following:

- Diagnosis;
- Assessment and monitoring;
- Administration of a validated rating scale(s);
- Development and maintenance of a person-centered care plan;
- Overall treatment management;
- Facilitation and coordination of any needed behavioral health treatment;
- Medication management;
- Patient education and self-management;
- Crisis care;
- Specialty care coordination such as complementary and integrative pain care, and SUD care; and
- Other aspects of pain and/or behavioral health services, including care rendered through telehealth modalities.

We are interested in feedback regarding whether the resource costs involved in furnishing these activities would be best captured through an add-on code to be billed with an E/M visit or a standalone code. To price such a code, we could consider using a crosswalk to the valuation and inputs for reference codes such as CPT code 99483 (Assessment of and care planning for a patient with cognitive impairment), HCPCS code G2064 (Comprehensive care management services for a single high-risk disease, e.g., principal care management, at least 30 minutes of physician or other qualified health care professional time per calendar month), HCPCS code G0108 (Diabetes outpatient self-management training services, individual, per 30 minutes), or other services paid under the PFS with similar resource costs.

We also seek information on which healthcare settings and stages in treatment these transitions from opioid dependence are occurring, as well as what types of practitioners furnish these services. We are soliciting comments on whether the specific activities we identify above are appropriate, and whether there are other activities that should be included. We are interested in stakeholder feedback regarding how we could define and value separate coding or an E/M add-on code. We also seek comment on whether any components of the service could be provided “incident to” the services of the billing physician who is managing the beneficiary’s overall care similar to the structure of the Behavioral Health Integration (BHI) codes, which can include BHI services that are not delivered personally by the billing practitioner and delivered by other members of the care team (except the beneficiary), under the direction of the billing practitioner on an incident to basis (as an integral part of services delivered by the billing practitioner), subject to applicable state law, licensure, and scope of practice. The other care team members are either employees or working under contract to the practitioner who bills for BHI services.

We welcome feedback from stakeholders and the public on potential separate coding or an E/M add-on code for chronic pain management for our consideration for CY 2022 or for future rulemaking.

F. Evaluation and Management (E/M) Visits

Over the past several years, CMS has engaged with the AMA and other stakeholders in a process to update coding and payment for office/outpatient evaluation and management (E/M) visits, with recent changes taking effect January 1, 2021 (see 85 FR 84548 through 84574). In light of these changes, we are engaged in an ongoing review of other E/M visit code sets and are proposing a number of refinements to our current policies. The following section will discuss proposed policies regarding split (or shared) visits, critical care services, and teaching physician visits.

1. Split (or Shared) Visits
   a. Background

   A split (or shared) visit refers to an E/M visit that is performed (“split” or “shared”) by both a physician and a NPP who are in the same group. Because the Medicare statute provides a higher PFS payment rate for services furnished by physicians than services furnished by NPPs, we need to address whether and when the physician can bill for split (or shared) visits. For visits in the non-facility (for example, office) setting for which the physician and NPP each perform portions of the visit, the physician can bill for the visit rather than the NPP as long as the visit meets the conditions of payment in our regulations at § 410.26(b)(1) for services furnished “incident to” a physician’s professional services. However, for visits furnished under similar circumstances in facility settings (for example, in a hospital), our current regulations provide for payment only to the physician or NPP who personally performs all elements of the service, and no payment is made for services furnished “incident to” the billing professional’s services.

   As stated in our regulation at § 410.26(b)(1), Medicare Part B pays for services and supplies furnished “incident to” a physician’s professional services. However, for visits furnished under similar circumstances in facility settings (for example, in a hospital), our current regulations provide for payment only to the physician or NPP who personally performs all elements of the service, and no payment is made for services furnished “incident to” the billing professional’s services.

   As stated in our regulation at § 410.26(b)(1), Medicare Part B pays for services and supplies furnished “incident to” a physician’s professional services. However, for visits furnished under similar circumstances in facility settings (for example, in a hospital), our current regulations provide for payment only to the physician or NPP who personally performs all elements of the service, and no payment is made for services furnished “incident to” the billing professional’s services.

   As stated in our regulation at § 410.26(b)(1), Medicare Part B pays for services and supplies furnished “incident to” a physician’s professional services. However, for visits furnished under similar circumstances in facility settings (for example, in a hospital), our current regulations provide for payment only to the physician or NPP who personally performs all elements of the service, and no payment is made for services furnished “incident to” the billing professional’s services.
policy allows a physician to bill for an E/M visit when both the billing physician and an NPP in their group each perform portions of the visit, but only if the physician performs a substantive portion of the visit. When the physician bills for such a split (or shared) visit, in accordance with section 1833(a)(1)(N) of the Act, the Medicare Part B payment is equal to 80 percent of the payment basis under the PFS which, under section 1848(a)(1) of the Act, is the lesser of the actual charge or the fee schedule amount for the service. In contrast, if the physician does not perform a substantive portion of such a split (or shared) visit and the NPP bills for it, in accordance with section 1833(a)(1)(O) of the Act, the Medicare Part B payment is equal to 80 percent of the lesser of the actual charge or 85 percent of the fee schedule rate.

Previously, our policy for billing these split (or shared) visits was reflected in several provisions of our Medicare Claims Policy Manual (sections 30.6.1(B), 30.6.12, and 30.6.13(H)) which were withdrawn effective May 9, 2021, in response to a petition under the Department’s Good Guidance regulations at 45 CFR 1.5 (see Transmittal 10742 available on the CMS website at https://www.cms.gov/Regulations-and-Guidance/Guidance/Transmittals/Transmittals/r10742cp). In the absence of these manual provisions, the Medicare statute and various broadly applicable regulations continue to apply. In addition to withdrawing the manual provisions, we issued our response to the petition and an accompanying enforcement instruction on May 26, 2021, available on the CMS website at https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/Evaluation-and-Management-Visits. In those documents, we indicated that we intend to address split (or shared) visits and critical care services (addressed below) through rulemaking; and that until we do, we will limit review to the applicable statutory and regulatory requirements for purposes of assessing payment compliance.

The list of applicable statutory and regulatory requirements includes the CY 2021 PFS final rule (85 FR 84549), where CMS generally adopted new CPT prefatory language and code descriptors for office/outpatient E/M visits. The new CPT guidelines for E/M services introduced a CPT definition of a split (or shared) visit for the first time, effective January 1, 2021. This new CPT definition was part of CPT’s new guidelines indicating how to select the visit level based on time, which can be done for all office/outpatient E/M visits starting in 2021. The CPT guidelines that we are referring to are published in the CPT Codebook, in a section titled “Evaluation and Management Services (E/M) Guidelines.”

In this section of our proposed rule, we use the term “CPT E/M Guidelines” to refer to this material.

In the CY 2021 PFS final rule (85 FR 84549), we stated that we are generally adopting the CPT E/M Guidelines for the new office/outpatient E/M visit codes. However, the CPT E/M Guidelines do not address many issues that arise in the context of PFS payment for split (or shared) visits, such as which practitioner should report the visit when elements of the visit are performed by different practitioners; whether a substantive portion of the visit must be performed by the billing practitioner; whether practitioners must be in the same group to bill for a split (or shared) visit; or the settings of care where split (or shared) visits may be furnished and billed. The CPT E/M Guidelines simply state, “A split or shared visit is defined as a visit in which a physician and other qualified health care professional(s) jointly provide the face-to-face and non-face-to-face work related to the visit. When time is being used to select the appropriate level of services for which time-based reporting of shared or split visits is allowed, the time personally spent by the physicians and other qualified health care professional(s) assessing and managing the patient on the date of the encounter is summed to define total time. Only distinct time should be summed for split or shared visits (that is, when two or more individuals jointly meet with or discuss the patient, only the time of one individual should be counted).”

In contrast, to ensure appropriate PFS payment, our policy for split (or shared) visits, as expressed in the recently withdrawn manual provisions, is that the physician may bill for a split (or shared) visit only if they perform a substantive portion of the visit, and the practitioners must be in the same group and furnishing the visit in specified settings in order to bill for a split (or shared) visit. Our manual also limited billing for split (or shared) visits to services furnished to established patients. In this proposed rule, we are making a number of proposals to address the recently withdrawn manual sections and improve transparency and clarity regarding our policies on billing for split (or shared) visits, to update them to account for recent revisions to E/M visit coding and payment, and to revise our regulations to reflect these policies.

b. Definition of Split (or Shared) Visits

We are proposing to define a split (or shared) visit as an E/M visit in the facility setting that is performed in part by both a physician and an NPP who are in the same group, in accordance with applicable laws and regulations. We propose to add this definition to a new section of our regulations at § 415.140.

Additionally, we propose to define split (or shared) visits as those that:

- Are furnished in a facility setting by a physician and an NPP in the same group, where the facility setting is defined as an institutional setting in which payment for services and supplies furnished incident to a physician or practitioner’s professional services is prohibited under our regulation at § 410.26(b)(1).
- Are furnished in accordance with applicable law and regulations, including conditions of coverage and payment, such that the E/M visit could be billed by either the physician or the NPP if it were furnished independently by only one of them in the facility setting (rather than as a split (or shared) visit).

We are proposing to revise our regulations at § 415.140 to codify this definition.

We believe that limiting the definition of split (or shared) visits to include only E/M visits in institutional settings, for which “incident to” payment is not available, will allow for improved clarity, and clearly distinguish, the policies applicable to split (or shared) visits, from the policies applicable to services furnished incident to the professional services of a physician. We do not see a need for split (or shared) visit billing in the office setting, because the “incident to” regulations govern situations where an NPP works with a physician who bills for the visit, rather than billing under the NPP’s own provider number.

We are also proposing to modify our policy to allow physicians and NPPs to bill for split (or shared) visits for both new and established patients, and for critical care and certain Skilled Nursing Facility/Nursing Facility (SNF/NF) E/M visits. We are proposing these modifications to the current policy and conditions of payment for split (or shared) visits, discussed below, to account for changes that have occurred in medical practice patterns, including

22 2021 CPT Codebook, p. 5.
24 2021 CPT Codebook, p. 7.
the evolving role of NPPs as part of the medical team.

c. Definition of Substantive Portion

(1) More Than Half of the Total Time

As stated earlier, only the physician or NPP who performs the substantive portion of the split (or shared) visit would bill for the visit. We are proposing to define “substantive portion” as more than half of the total time spent by the physician and non-physician practitioner performing the visit. We note that our withdrawn manual instructions contained a few definitions of “substantive portion.” For example, one section defined substantive portion as any face-to-face portion of the visit, while another section defined it as any of the three key components of an E/M visit—either the history of present illness (HPI), physical exam, and/or medical decision-making (MDM). Given recent changes in the CPT E/M Guidelines, HPI and physical exam are no longer necessarily included in all E/M visits, because as noted above, for office/outpatient E/M visits, the visit level can now be selected based on either MDM or time, and history and exam are performed only as medically appropriate. Accordingly, defining “substantive portion” as one of these three key components is no longer a viable approach. Similarly, MDM is not easily attributed to a single physician or NPP when the work is shared, because MDM is not necessarily quantifiable and can depend on patient characteristics (for example, risk). We believe that time is a more precise factor than MDM to use as a basis for deciding which practitioner performs the substantive portion of the visit.

We also do believe it would be appropriate to consider the performance of any portion of the visit—with or without direct patient contact—as a substantive portion. For instance, we do not believe it would be appropriate to consider a brief or minor interaction, with or without direct patient contact, such as where the physician merely “pokes their head” into the room, to be a substantive portion of the visit. Therefore, as we are proposing to define “substantive portion” as more than half of the total time spent by the physician and NPP performing the split (or shared) visit. We are proposing to revise our regulation at §415.140 to codify this definition.

We recognize that the billing practitioner, who would be the practitioner providing the substantive portion of the visit, could select the level for the split (or shared) visit based on MDM, but we nonetheless propose to base the definition of substantive portion on the amount of time spent by the physician and NPP providing the visit. We recognize that this policy would necessitate the practitioners’ tracking and documenting the time they spent for these visits. However, we believe that practitioners are likely to increasingly time their visits for purposes of visit level selection independent of our split (or shared) visit policies, given recent changes to the CPT E/M Guidelines, and the fact that critical care visits are already timed. Accordingly, we do not believe this would comprise a substantial new burden.

(2) Distinct Time

We propose that the distinct time of service spent by each physician or NPP furnishing a split (or shared) visit would be summed to determine total time and who provided the substantive portion (and therefore bills for the visit). This would be consistent with the CPT E/M Guidelines stating that, for split (or shared) visits, when two or more individuals jointly meet with or discuss the patient, only the time of one individual should be counted.25 For example, if the NPP first spent 10 minutes with the patient and the physician then spent another 15 minutes, their individual time spent would be summed to equal a total of 25 minutes. The physician would bill for this visit since they spent more than half of the total time (15 of 25 total minutes). If, in the same situation, the physician and NPP met together for five additional minutes (beyond the 25 minutes) to discuss the patient’s treatment plan, that overlapping time could only be counted once for purposes of establishing total time and who provided the substantive portion of the visit. The total time would be 30 minutes, and the physician would bill for the visit since they spent more than half of the total time (20 of 30 total minutes).

(3) Qualifying Time

Drawing on the CPT E/M Guidelines, we are proposing a listing of activities that could count toward total time for purposes of determining the substantive portion. For visits that are not critical care services, we are proposing the same listing of activities that can count when time is used to select E/M visit level, specifically the following activities, when performed and regardless of whether or not they involve direct patient contact:

- Preparing to see the patient (for example, review of tests).
- Obtaining and/or reviewing separately obtained history.
- Performing a medically appropriate examination and/or evaluation.
- Counseling and educating the patient/family/caregiver.
- Ordering medications, tests, or procedures.
- Referring and communicating with other health care professionals (when not separately reported).
- Documenting clinical information in the electronic or other health record.
- Independently interpreting results (not separately reported) and communicating results to the patient/family/caregiver.
- Care coordination (not separately reported).
- Travel.
- Teaching that is general and not limited to discussion that is required for the management of a specific patient.26

Since critical care services can include additional activities that are bundled into the critical care visit code(s), we are proposing a different listing of qualifying activities, discussed in our section below on split (or shared) critical care services. Additionally, we are seeking public comment on whether there should be a different listing of qualifying activities for purposes of determining the total time and substantive portion of split (or shared) emergency department visits, since those visits also have a unique construct.

(4) Application to Prolonged Services

For office/outpatient E/M visits, as discussed in our CY 2021 PFS final rule (85 FR 84572), HCPCS code G2212 can be used to report prolonged services in 15-minute increments of time beyond the maximum time for a level 5 office/outpatient E/M visit. For all other E/M visits (except critical care and emergency department visits), CPT codes 99354–9 can be used to report prolonged services in 15-minute increments of time beyond the maximum time for a level 5 office/outpatient E/M visit. We recognize that this policy would necessitate the practitioners’ tracking and documenting the time they spent for these visits. However, we believe that practitioners are likely to increasingly time their visits for purposes of visit level selection independent of our split (or shared) visit policies, given recent changes to the CPT E/M Guidelines, and the fact that critical care visits are already timed. Accordingly, we do not believe this would comprise a substantial new burden.

Our withdrawn manual provisions instructed that practitioners cannot bill prolonged services as a split (or shared) visit. Having reviewed this policy, we believe that codes that are billed as add-on codes for prolonged service time for an E/M visit, which could be furnished and billed as a split (or shared) visit under our proposed policy, should be considered to be part of that E/M visit. Therefore, we are proposing to change our policy to allow a practitioner to bill for a prolonged E/M visit as a split (or shared) visit. Specifically, the physician or practitioner who spent more than half the total time (that is, performed the substantive portion described above) would bill for the primary E/M visit and the prolonged service code(s) when the service is furnished as a split (or shared) visit, if all other requirements to bill for the services were met. The physician and NPP would sum their time together, and whomever furnished more than half of the total time, including prolonged time, is, the substantive portion would report both the primary service code and the prolonged services add-on code(s), assuming the time threshold for reporting prolonged services is met. We note that for critical care visits, the practitioner would not bill prolonged E/M services because the practitioners would instead aggregate their time, as proposed below, to report additional units of critical care services.

d. New and Established Patients, and Initial and Subsequent Visits

Our withdrawn manual provisions stated that when an E/M service is furnished as a split or shared encounter, between a physician and an NPP (that is, an NP, PA, CNS or CNM), the service is considered to have been performed “incident to” if the requirements for “incident to” are met and the patient is an established patient. This provision was generally interpreted to mean that split (or shared) visits cannot be billed for new patients. The withdrawn manual provisions also did not specify whether the practitioner who bills for the split or shared visit could bill for initial, versus subsequent, split (or shared) visits in the facility setting. After conducting an internal review, including consulting our medical officers, we believe that the practice of medicine has evolved toward a more team-based approach to care, and greater integration in the practice of physicians and NPPs, particularly when care is furnished by practitioners in the same group in the facility setting. Given this evolution in medical practice, the concerns that may have been present when we issued the manual instructions may no longer be as relevant. We understand that there have been changes in the practice of medicine over the past several years, some facilitated by the advent of electronic health records (EHRs) and other systems, toward a more team-based approach to care. There has also been an increase in alternative payment models that employ a more team-based approach to care. After considering and reevaluating our policy, we see no reason to preclude the physician or NPP from billing for split (or shared) visits for a new patient, in addition to an established patient, or for initial and subsequent split (or shared) visits. Therefore, we are proposing to permit the physician or NPP to bill for split (or shared) visits for both new and established patients, as well as for initial and subsequent visits. We believe this approach is also consistent with the CPT E/M Guidelines for split (or shared) visits, which does not exclude these types of visits from being billed when furnished as split (or shared) services.

e. Settings of Care

The concept of split (or shared) visits was developed as an analog in the facility setting to payment policies for services and supplies furnished incident to a physician’s or an NPP’s professional services in the non-institutional setting. Section 410.26a(3)(6) of our regulations defines the non-institutional setting as all settings other than a hospital or SNF. We are proposing to allow billing of split (or shared) visits, including critical care visits, when they are performed in any institutional setting and are proposing to codify the definition of facility setting in the regulation at §415.140. We discuss our proposals regarding billing for critical care split (or shared) E/M services below (see section II.F. of this proposed rule). Our withdrawn manual provisions did not allow practitioners to bill for split (or shared) visits that are critical care services or SNF/NF visits. The manual stated that the split (or shared) E/M policy did not apply to critical care services or procedures, and that a split (or shared) E/M service performed by a physician and a qualified NPP of the same group (or employed by the same employer) cannot be reported as a critical care service. It also stated that a split (or shared) E/M visit cannot be reported in the SNF/NF setting. We propose to define split (or shared) visits to be limited to services furnished in institutional settings, as discussed above. As discussed below, we do not see any disruption in continuity of care for split (or shared) visits.”
and NPP to bill independently, and only for the services they specifically and fully furnish. Further, consistent with our withdrawn manual guidance, we note that Medicare does not pay for partial physician’s visits, so CPT modifier – 52 (reduced services) could not be used to report split (or shared) visits. Thus, if a physician and an NPP who are in different groups each furnish part of an E/M service, but not all of it, then we would not consider either service to be a billable service. Similarly, if two physicians, each in their own private practice, both saw the same patient in the hospital, but neither one fully furnished a billable service—there would be no basis on which to combine their efforts or minutes of service into one billable E/M visit.

We are seeking public comment on whether we should further define “group” for purposes of split (or shared) visit billing. While we are not proposing a definition in this proposed rule, we have considered several options, such as requiring that the physician and NPP must be in the same clinical specialty, in which case we would use the approach outlined in the CPT E/M Guidelines; that is the NPP is considered to be in the same specialty and subspecialty as the physician with whom they are working.27 We are also considering an approach under which we would align the definition of “group” with the definition of “physician organization” at § 411.351. The term “physician organization” is defined at § 411.351 for purposes of section 1877 of the Act and our regulations in 42 CFR part 411, subpart J (collectively, the physician self-referral law), and explained further in frequently asked questions available on the CMS website at https://www.cms.gov/Medicare/Fraud-and-Abuse/PhysicianSelfReferral/Downloads/FAQs-Physician-Self-Referral-Law.pdf. Another approach would be to consider practitioners with the same billing tax identification number as being in the same group. We are concerned that this particular approach may be too broad in multispecialty groups or health care systems that include many practitioners who do not typically work together to furnish care to patients in the facility setting. We note that some of these approaches may not align with the definition of “group” used for purposes of Medicare enrollment.

27 2021 CPT Codebook, p. 6. “When advanced practice nurses and physician assistants are working with physicians, they are considered as working in the exact same specialty and exact same subspecialties as the physician.”

g. Medical Record Documentation

To ensure program integrity and quality of care, we are proposing that documentation in the medical record must identify the two individual practitioners who performed the visit. The individual who performed the substantive portion (and therefore bills the visit) would be required to sign and date the medical record. We are proposing to revise our regulation at § 415.140 to reflect the conditions of payment for split (or shared) visits as discussed in this section.

h. Claim Identification

We are proposing to create a modifier to describe split (or shared) visits, and we are proposing to require that the modifier must be appended to claims for split (or shared) visits, whether the physician or NPP bills for the visit. Currently, we cannot identify through claims that a visit was performed as a split (or shared) visit, which means that we could know that a visit was performed as a split (or shared) visit only through medical record review. We believe it is important for program integrity and quality considerations to have a way to identify who is providing which E/M services, and how often we are paying at the physician rate for services provided in part by NPPs. (Please see the documentation section below for additional information). The proposed modifier, if finalized, would give CMS insight, directly through our claims data instead of only through medical record review, into the specific circumstances under which these split (or shared) visits are furnished. Such information would be helpful to CMS for program integrity purposes, and could be instructive in considering whether we may need to offer additional clarification to the public, or further revise the policy for these E/M visits in future rulemaking.

We are proposing to revise our regulation at § 415.140 to reflect the conditions of payment for split (or shared) visits as discussed in this section.

Consistent with our current policy, Medicare does not pay for partial E/M visits for which all elements of the service are not furnished. Therefore, we are proposing that the modifier identified by CPT for purposes of reporting partial services (modifier – 52 (reduced services)) could not be used to report partial E/M visits, including any partial services furnished as split (or shared) visits. We are also considering whether it is necessary to amend our regulations to explicitly state that Medicare does not pay for partial E/M visits and are interested in public comments on this issue.

2. Critical Care Services (CPT Codes 99291–99292)

As stated previously, in light of updates that we previously finalized for coding and payment for office/ outpatient E/M visits, we are proposing a number of refinements to other E/M code sets. Historically, our policy for billing critical care services was reflected in several provisions of the Medicare Claims Processing Manual (sections 30.6.1(B), 30.6.12, and 30.6.13(H)) which were withdrawn effective May 9, 2021, in response to a petition under the Department’s Good Guidance regulation at 45 CFR 1.5 (see Transmittal 10742 available on the CMS website at https://www.cms.gov/Regulations-and-Guidance/Guidance/Transmittals/Transmittals/r10742cp). In the absence of these manual provisions, the Medicare statute and various broadly applicable regulations continue to apply. In addition to withdrawing the manual provisions, we issued our response to the petition and accompanying enforcement instruction issued on May 26, 2021, available on the CMS website at https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/Evaluation-and-Management-Visits. In those documents, we indicated that we intend to address split (or shared) visits (addressed above) and critical care services (addressed below) through rulemaking; and that until we do, we will limit review to the applicable statutory and regulatory requirements for purposes of assessing payment compliance. The list of applicable statutory and regulatory requirements includes the CY 2021 PFS final rule (85 FR 84549), where CMS generally adopted new CPT prefatory language and code descriptors for office/ outpatient E/M visits. Therefore, in this section of the proposed rule, we are proposing to update our critical care E/M visit policies to improve transparency and clarity, and to account for recent revisions to E/M visit coding and payment.

The CPT 2021® Professional Codebook (hereafter, CPT Codebook) provides guidelines for critical care services in the CPT E/M Guidelines on pp. 5–9 and in prefatory language, code descriptors, and parentheticals on pp. 31–33. We are proposing to adopt the CPT prefatory language for critical care services as currently described in the CPT Codebook, except as otherwise specified in this section of the proposed rule. Should CPT make changes to the guidance for critical care services in a
a. Definition of Critical Care

Critical care visits are described by CPT codes 99291 (Critical care, evaluation and management of the critically ill or critically injured patient; first 30–74 minutes) and 99292 (each additional 30 minutes (List separately in addition to code for primary service). As stated above, the CPT Codebook defines critical care services in prefatory language on pp. 31–33.

Critical care services were defined in the withdrawn provisions of the Medicare Claims Processing Manual, and that definition tracked closely with the CPT prefatory language regarding critical care services. To improve transparency and clarity, we are proposing to adopt the CPT prefatory language as the definition of critical care services. The CPT prefatory language states that critical care is the direct delivery by a physician(s) or other qualified healthcare professional (QHP) of medical care for a critically ill/injured patient in which there is acute impairment of one or more vital organ systems, such that there is a probability of imminent or life-threatening deterioration of the patient’s condition. It involves high complexity systems, such that there is a probability in a patient in which there is acute deterioration of the patient’s condition.28 It involves high complexity systems, such that there is a probability in a patient in which there is acute deterioration of the patient’s condition.

b. Critical Care by a Single Physician or NPP

Our withdrawn manual provisions and the prefatory language in the CPT Codebook cited above both describe the time duration for the correct reporting of critical care services by a single physician or NPP. To improve transparency and clarity of our policy for this service, we are proposing to adopt the CPT prefatory language.

Under our proposal, the physician or NPP would report CPT code 99291 for the first 30–74 minutes of critical care services provided to a patient on a given date. Thereafter, they would report CPT code 99292 for additional 30-minute time increments provided to the same patient. We refer readers to the CPT Codebook for examples of the total duration of critical care visits.29 The prefatory language states that CPT codes 99291 and 99292 are used to report the total duration of time spent by the physician or QHP providing critical care services to a critically ill or critically injured patient, even if the time spent by the practitioner on that date is not continuous; and that non-continuous time for medically necessary critical care services may be aggregated. The CPT Codebook indicates that CPT code 99291 is used to report the first 30–74 minutes of critical care on a given date, and that the code should be used only once per date even if the time spent by the practitioner is not continuous on that date. We are proposing to adopt this rule for critical care services furnished by a single physician or NPP. We note that the prefatory language does not indicate how practitioners should report critical care when a service lasts beyond midnight. We are seeking comment about how practitioners should report CPT codes 99291 and 99292 when a service extends beyond midnight to the following calendar day.

c. Critical Care Services Furnished Concurrently by Different Specialties

The CPT Codebook does not provide any special instructions regarding how to report critical care furnished by more than one physician or practitioner, whether in a split (or shared) visit context or other contexts that might be relevant given the unique nature of critical care and the long timeframes over which patients may receive these services. The CPT E/M Guidelines state broadly that concurrent care is the provision of similar services for

---

28 2021 CPT Codebook, p. 31.
29 2021 CPT Codebook, p. 32.
In the context of critical care services, our withdrawn manual provisions provided guidance on concurrent care, and stated that there are situations where physicians or NPPs within a group provide coverage or follow-on care for one another on a single day. The manual also stated that critically ill or injured patients may require the care of more than one practitioner from more than one specialty regardless of group affiliation, and this work could transpire simultaneously or overlap. Consistent with our current policy, and to improve transparency and clarity of our policy for critical care services, we are proposing that concurrent care occurs where more than one physician or qualified NPP furnishes services to the same patient on the same day. In general, concurrent care is covered when the services of each practitioner are medically necessary, and not duplicative. For example, concurrent care may be medically necessary because of the existence of more than one medical condition requiring diverse specialized medical services, that is, more than one specialty (which can include a qualified NPP as a specialty). In the context of critical care services, a critically ill patient may have more than one medical condition requiring diverse specialized medical services and thus requiring more than one practitioner having different specialties to play an active role in the patient’s treatment. Thus, we are proposing that critical care services may be furnished as concurrent care (or concurrently) to the same patient on the same day by more than one practitioner in more than one specialty (for example, an internist and a surgeon, allergist and a cardiologist, neurosurgeon and NPP), regardless of group affiliation, if the service meets the definition of critical care and is not duplicative of other services. However, as for most Medicare-covered services, these critical care services would need to be medically reasonable and necessary for the diagnosis or treatment of illness or injury or to improve the functioning of a malformed body member. We are seeking comment on this proposal to better understand current clinical practice for critical care, and when it would be appropriate for more than one physician or NPP of the same or different specialties, and within the same or a different group, to provide critical care services.

d. Critical Care Furnished Concurrently by Practitioners in the Same Specialty and Same Group (Follow-Up Care)

Physician(s) or NPP(s) in the same specialty and in the same group may provide concurrent follow-up care, such as a critical care visit subsequent to another practitioner’s critical care visit. This may be as part of continuous staff coverage or follow-up care to critical care services furnished earlier in the day on the same calendar date. According to CPT coding and billing conventions that we generally acknowledge, a practitioner who furnishes a timed service such as critical care would typically need to report the primary service or procedure code before reporting an add-on code. However, we are proposing that when critical care is furnished concurrently by two or more practitioners in the same specialty and in the same group to the same patient on the same day, the individual physician(s) or NPP(s) providing the follow-up or subsequent care would report their time using the code for subsequent time intervals (CPT code 99292), and would not report the primary service code (CPT code 99291). CPT code 99291 would not be reported more than once for the same patient on the same day by these practitioners. This proposal recognizes that multiple practitioners in the same specialty and the same group can maintain continuity of care by providing follow-up care for the same patient on the same day, and is consistent with our current policy as described in the withdrawn manual provisions. Because practitioners in the same specialty and same group cover for one another to provide concurrent critical care services, we believe the total time for critical care services furnished to a patient on the same day by the practitioners in the same group with the same specialty should be reflected as if it were a single set of critical care services furnished to the patient. The practitioner furnishing the initial critical care service would report CPT code 99291, and the practitioner(s) reporting subsequent critical care service time would report CPT code 99292.

Under our current policy, the initial critical care service must be performed by a single physician or qualified NPP. In considering and reevaluating this policy, we believe it would better reflect current medical practice to allow critical care service time spent by more than one practitioner in the same group with the same specialty to be added together for the purposes of meeting the time requirement to bill for the initial critical care service using CPT code 99291. We are proposing this policy for two main reasons. First, we believe this proposal would appropriately recognize that multiple practitioners in the same specialty and group can concurrently furnish critical care services to a patient on a single day. Second, this proposal would conform our policy for the initial critical care service with our proposal described above for multiple practitioners in the same specialty and same group to report CPT code 99292 for their cumulative critical care service time. Thus, we are proposing that where one practitioner begins furnishing the initial critical care service but does not meet the time required to report CPT code 99291, and another practitioner in the same specialty and group continues to deliver critical care to the same patient on the same day, the time spent by those practitioners could be aggregated to meet the time requirement to bill CPT code 99291. Under our proposal, once the cumulative required critical care service time is met to report CPT code 99291, CPT code 99292 would not be reported by the practitioner or another practitioner in the same specialty and group unless and until an additional 30 minutes of critical care services are furnished to the same patient on the same day (114 total minutes). Finally, consistent with our current policy, we are proposing that the aggregated time spent on critical care visits must be medically necessary and each visit must meet the definition of critical care in order to add the times for purposes of meeting the time requirement to bill CPT code 99291. We are seeking comment on this proposal to better understand current clinical practice for critical care, and when it would be appropriate for more than one physician or NPP of the same or different specialties, and within the same or a different group, to provide
critical care services to a patient on a single day.

e. Split (or Shared) Critical Care Services

Under current CMS policy, critical care services cannot be billed as split (or shared) E/M services. As previously discussed in section II.F.1. of this proposed rule for split (or shared) visits, we believe the practice of medicine has evolved toward a more team-based approach to care, and greater integration in the practice of physicians and NPPs, particularly when care is furnished by clinicians in the same group in the facility setting. Given this evolution in medical practice, the concerns that may have been present when we issued current policy may no longer be as relevant. We understand that there have been changes in the practice of medicine over the past several years, some facilitated by the advent of EHRs and other systems, toward a more team-based approach to care. There has also been an alternative payment models that employ a more team-based approach to care. In considering and reevaluating this policy, we believe it would be appropriate to revise our policy to allow critical care services to be reported when furnished as split (or shared) services. Therefore, we are proposing that critical care visits may be furnished as split (or shared) visits. The proposals described in section II.F.1. of this proposed rule for split (or shared) visits would apply (with one exception discussed below), and service time would be counted for CPT code 99292 in the same way as for prolonged E/M services. In other words, we are proposing that the total critical care service time provided by a physician and NPP in the same group on a given calendar date to a patient would be summed, and the practitioner who furnishes the substantive portion of the cumulative critical care time would report the critical care visit(s).

In section II.F.1. of this proposed rule, drawing on the CPT E/M Guidelines, we proposed a list of activities that could count toward total time for purposes of determining the substantive portion. We stated that since critical care services can include additional activities that are bundled into the critical care visit code(s), we are proposing a different listing of qualifying activities for split (or shared) critical care. These qualifying activities are described in prefatory language on pp. 31–32 of the CPT Codebook. Thus, when critical care services are furnished as a split (or shared) visit, we are proposing to define the substantive portion as more than half the cumulative total time in qualifying activities that are included in CPT codes 99291 and 99292. Additionally, the billing practitioner would first report CPT code 99291 and, if 75 or more cumulative total minutes were spent providing critical care, one or more units of CPT code 99292. We would require practitioners to include the proposed split (or shared) visit modifier on the claim, and we are proposing that the documentation and other rules proposed in section II.F.1. of this proposed rule for split (or shared) visits would apply to split critical care services. We note that, in contrast to our proposals regarding concurrent critical care services above, we are proposing that when a critical care service is furnished as a split (or shared) visit, when two or more practitioners spend time jointly meeting with or discussing the patient, the time may be counted only once for purposes of reporting the split (or shared) critical care visit. This proposed policy accords with our proposed policy for all split (or shared) visits. It also accords with the CPT E/M Guidelines stating that, for split (or shared) visits, when two or more individuals jointly meet with or discuss the patient, only the time of one individual should be counted.32

We are seeking comment on these proposals to ensure they reflect a clinically appropriate approach, and intend to assess whether we should instead require that an individual physician or NPP directly perform the entirety of each critical care visit. We are seeking comment on this proposal to better understand current clinical practice for critical care, and when it would be appropriate for more than one physician or NPP of the same or different specialties, and within the same or a different group, to provide critical care to a patient.

f. Critical Care Visits and Same-Day Emergency Department, Inpatient or Office/Outpatient Visits

The CPT Codebook states that critical care and other E/M services may be provided to the same patient on the same date of service to one individual. However, our general policy as described in the Medicare Claims Processing Manual states that physicians in the same group who are in the same specialty must bill and be paid for services under the PFS as though they were a single physician. If more than one E/M visit is provided on the same day to the same patient by the same physician, or by more than one physician in the same specialty in the same group, only one E/M service may be reported unless the E/M services are for unrelated problems. Instead of billing separately, the physicians should select a level of service representative of the combined visits and submit the appropriate code for that level.33 This policy is intended to ensure that multiple E/M visits for a patient on a single day are medically necessary and not duplicative. With respect to office/ outpatient E/M visits specifically, our current manual instructs, “As for all other E/M services except where specifically noted, the Medicare Administrative Contractors (MACs) may not pay two E/M office visits billed by a physician (or physician of the same specialty from the same group) for the same beneficiary on the same day unless the physician documents that the visits were for unrelated problems in the office, off campus-outpatient hospital, or on campus-outpatient hospital setting which could not be provided during the same encounter.”34 With respect to hospital visits, hospital ED visits, and critical care services furnished on the same day, the Medicare Claims Processing Manual states, “When a hospital inpatient or office/outpatient E/M service are furnished on a calendar date at which time the patient does not require critical care and the patient subsequently requires critical care both the critical care services (CPT codes 99291 and 99292) and the previous E/ M service may be paid on the same date of service. Hospital ED services are not paid for the same date as critical care services when provided by the same physician to the same patient.”35

We are concerned that adopting the CPT rule that critical care and other E/M services may be furnished to the same patient on the same date by the same practitioner could have unintended consequences for the Medicare program. We have previously expressed concerns that multiple E/M visits by the same practitioner, or by practitioners in the same specialty within a group, on the same day as another E/M service ordinarily would not be medically necessary (83 FR 59639). It is possible that adopting the CPT rule allowing billing for critical care and other E/M

32 2021 CPT Codebook (Evaluation and Management (E/M) Services Guidelines), p. 7.
33 Medicare Claims Processing Manual (Pub. 100–02), Chapter 12, Section 30.6.5, Physicians In Group Practice.
visits on the same day, by practitioners in the same group and of the same specialty, could lead to duplicative payment, particularly given the frequently long duration of critical care services, the CPT preatory language indicating that time spent furnishing critical care may be non-continuous, and the relatively higher valuation of critical care services compared to other E/M services. Thus, we are proposing that no other E/M visit can be billed for the same patient on the same date as a critical care service when the services are furnished by the same practitioner, or by practitioners in the same specialty in the same group.

There are possible alternative approaches to address our concerns about medical necessity and duplicative payment for E/M services furnished to a patient on the same day by the same practitioner or a practitioner in the same group. We have previously considered a Multiple Procedure Payment Reduction (MPPR) for standalone office/outpatient E/M visits that occur on the same day as a procedure to address efficiencies (for example, in preservice and postservice clinician work and PE) that are not accounted for in the current payment rates (83 FR 59639). These visits could be identified on the claim with modifier –25 (significant, separately identifiable E/M service by the same physician on the same day of the procedure or other service) and CMS could assign a reduced payment rate to one of the visits. CMS could also use documentation requirements to support the medical necessity and non-duplicative nature of a claim for critical care services on the same calendar date as another E/M visit provided to a patient by the same practitioner or practitioner of the same specialty in a group. We also recognize that our proposal not to allow an E/M visit to be billed for the same patient on the same date as a critical care service when the services are furnished by the same practitioner, or by practitioners in the same specialty within a group, may be appropriate only in certain clinical situations. For example, it may be possible that a patient would not require critical care services at the time of an ED visit, but then be admitted to the hospital on the same calendar date as the ED visit and require care that meets the definition of critical care services. It may also be possible that the practitioner who furnished the ED visit later provided critical care services to the same patient on the same calendar date. Thus, we are seeking comment on this proposal to better understand clinical practice for critical care, whether and how CMS could pay for E/M services furnished on the same date as critical care services when provided by the same practitioner, or practitioners in the same specialty within a group, while also reducing the potential for duplicative payment.

h. Documentation Requirements

Because critical care is a time-based service, we are proposing to require practitioners to document in the medical record the total time that critical care services were provided by each reporting practitioner (not necessarily start and stop times). The documentation would also need to indicate that the services furnished to the patient, including any concurrent care by the practitioners, were medically reasonable and necessary for the diagnosis or treatment of illness or injury or to improve the functioning of a malformed body member. To support coverage and payment determinations regarding concurrent care, services would need to be sufficiently documented to allow a medical reviewer to determine the role each practitioner played in the patient’s care (that is, the condition or conditions for which the practitioner treated the patient). To support coverage and payment determinations regarding split (or shared) critical care services, the documentation requirements proposed above for all split (or shared) E/M visits would also apply to critical care visits (see section II.F. of this proposed rule).

3. Payment for the Services of Teaching Physicians

As part of the CPT office/outpatient E/M visit coding framework that we finalized beginning for CY 2021 (85 FR 84548 through 84574), practitioners can select the office/outpatient E/M visit level to bill, based either on the total time personally spent by the reporting practitioner or MDM. Stakeholders have asked us how teaching physicians who involve residents in furnishing care should consider time spent by the resident in selecting the office/outpatient E/M visit level.

For teaching physicians, section 1842(b) of the Act specifies that in the case of physicians’ services furnished to a patient in a hospital with a teaching program, the Secretary shall not provide payment for such services unless the physician renders sufficient personal and identifiable physicians’ services to the patient to exercise full, personal control over the management of the portion of the care for which payment is sought.

Regulations regarding PFS payment for teaching physician services are codified in 42 CFR part 415. In general, under §415.170, payment is made under the PFS for services furnished in a teaching hospital setting if the services are personally furnished by a physician.
who is not a resident, or the services are furnished by a resident in the presence of a teaching physician, with exceptions as specified in subsequent regulatory provisions in part 415. Medicare separately pays for the time spent by the resident through direct graduate medical education (GME) under Medicare Part A.

a. General Policy for Evaluation and Management Visits

Under our regulation at §415.172 and absent a public health emergency (PHE), if a resident participates in a service furnished in a teaching setting, a teaching physician can bill for the service only if they are present for the key or critical portion of the service. For residency training sites that are located outside a metropolitan statistical area, PFS payment may also be made if a teaching physician is present through audio/video real-time communications technology (that is, “virtual presence”). In the case of E/M services, the teaching physician must be present during the portion of the service that determines the level of service billed.

We are proposing that when total time is used to determine the office/outpatient E/M visit level, only the time that the teaching physician was present can be included. We believe it is appropriate to include only the time of the teaching physician because the Medicare program makes separate payment for the program’s share of the resident’s graduate medical training program, which includes time spent by a resident furnishing services with a teaching physician, under Medicare Part A. During the PHE, the time of the teaching physician when they are present through audio/video real-time communications technology may also be included in the total time considered for visit level selection. We note that, outside the circumstances of the COVID–19 PHE, the teaching physician presence requirement can be met virtually, through audio/video real-time communications technology, only in residency training sites that are located outside of a metropolitan statistical area.

This proposal is consistent with our previously finalized policy that practitioners can use total time personally spent by the reporting practitioner to select office/outpatient E/M visit level. It is also consistent with our regulation at §415.172 that states that PFS payment is made when a teaching physician involves a resident in providing care only if the teaching physician is present for the key or critical portion of the service, including the portion that is used to select the visit level.

b. Primary Care Exception Policy

The regulation at §415.174 sets forth an exception to the conditions for PFS payment for services furnished in teaching settings in the case of certain E/M services furnished in certain primary care centers. Under the so-called “primary care exception.” Medicare makes PFS payment in certain teaching hospital primary care centers for certain services of lower and mid-level complexity furnished by a resident without the physical presence of a teaching physician. We expanded the list of services that residents could furnish without the physical presence of the teaching physician for the duration of the PHE to include all levels of an office/outpatient E/M visit, among other services. Upon the conclusion of the PHE, levels 4–5 office/outpatient E/M visits will no longer be included in the primary care exception (85 FR 84583 through 84590).

Section 415.174(a)(3) requires that the teaching physician must not direct the care of more than four residents at a time, and must direct the care from such proximity as to constitute immediate availability (that is, provide direct supervision), and must review with each resident during or immediately after each visit, the beneficiary’s medical history, physical examination, diagnosis, and record of tests and therapies. Section 415.174(a)(3) also requires that the teaching physician must have no other responsibilities at the time, assume management responsibility for the beneficiaries seen by the residents, and ensure that the services furnished are appropriate.

We are proposing that under the primary care exception, only MDM may be used to select office/outpatient E/M visit level. The intent of the primary care exception as described in §415.174 is that E/M visits of lower and mid-level complexity furnished by residents are simple enough to permit a teaching physician to be able to direct and manage the care of up to four residents at any given time and direct the care from such proximity as to constitute immediate availability. In the context of teaching hospital primary care centers that are staffed by residents and teaching physicians, we believe that MDM would be a more accurate indicator of the complexity of the visit as opposed to time. Because residents are in training, they may need more time than is reflected in the code descriptor to furnish a visit that has a low-level of medical decision making. For example, CPT code 99213 (Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 20–29 minutes of total time is spent on the date of the encounter) involves a low level of MDM and between 20–29 minutes of total time. If time was used for level selection instead of MDM, it is possible that residents may need more than 20–29 minutes of time, including any conferring with the teaching physician, to furnish CPT code 99213. Thus, residents may be less efficient relative to a teaching physician in furnishing care.

Office/outpatient E/M visits requiring 30 or more minutes of total time are described by visit levels 4–5. After the expiration of the COVID–19 PHE, office/outpatient levels 4–5 will no longer be included in the primary care exception. In the CY 2021 PFS final rule, we expressed concern that the teaching physician may not be able to maintain sufficient personal involvement in all of the care to warrant PFS payment for the services being furnished by up to four residents when some or all of the residents might be furnishing services that are more than lower and mid-level complexity. We noted that when the teaching physician is directing the care of a patient that requires moderate or higher medical decision-making, the ability to be immediately available to other residents could be compromised, potentially putting patients at risk (85 FR 84586). Thus, to guard against the possibility of residents furnishing visits that are of more than lower and mid-level complexity, we are proposing that only MDM may be used for office/outpatient E/M visit level selection for services furnished by residents under the primary care exception.

We acknowledge that under the new CPT office/outpatient E/M visit coding framework, it is possible that time is an accurate indicator of the complexity of the visit. Thus, we are seeking comment on this proposal, including our assumption that MDM is a more accurate indicator of the appropriate level of the visit relative to time in the context of the primary care exception for services furnished by residents and billed by teaching physicians in primary care centers. We are also seeking comment on whether time is an accurate indicator of the complexity of the visit and how teaching physicians might select office/outpatient E/M visit level using time when directing the care of a patient that is being furnished by a resident in the context of the primary care exception.
G. Billing for Physician Assistant (PA) Services

Under the respective Medicare statutory benefit categories for services of Physician assistants (PAs), nurse practitioners (NPs), and clinical nurse specialists (CNSs), these practitioners are authorized to furnish services that would be physicians’ services if they were furnished by a physician, and which are legally authorized to perform by the state in which the services are furnished; and such services that are furnished incident to the practitioners’ professional services (but only if no facility or other provider charges or is paid any amount for the services). Additionally, the payment amount for the services of PAs, NPs, and CNSs, as specified under section 1833(a)(1)(O) of the Act, is equal to 80 percent of the lesser of the practitioner’s actual charge or 85 percent of the amount that would be paid to a physician under the PFS. However, while NPs and CNSs are authorized to bill the Medicare program and be paid directly for their professional services, section 1842(b)(6)(C)(i) of the Act has required since the inception of the PA benefit (with a narrow exception not relevant here) that payment for PA services must be made to the PA’s employer. Accordingly, our regulation at §410.74(a)(2)(v) specifies that PA services are covered under Medicare Part B only when billed by the PA’s employer. Our regulation that addresses to whom Medicare Part B payment is made, at §410.150(b)(15), further provides that payment is made to the qualified employer of a PA, and specifies that the PA could furnish services under a W–2 employment relationship, an employer-employee relationship, or as an independent contractor through a 1099 employment relationship. The regulation also specifies that a group of PAs that incorporate to bill for their services is not a qualified employer. Given the statutory requirement that we make payment to the PA’s employer, PAs are prohibited from directly billing the Medicare program and receiving payment for their services, and do not have the ability to reassign Medicare payment rights for their services to any employer, facility, or billing agent.

Section 403 of the Consolidated Appropriations Act, 2021 (CAA) (Pub. L. 116–260, December 27, 2020), amends section 1842(b)(6)(C)(i) of the Act to remove the requirement to make payment for PA services only to the employer of a PA effective January 1, 2022. With the removal of this requirement, PAs will be authorized to bill the Medicare program and be paid directly for their services in the same way that NPs and CNSs do. Effective with this amendment, PAs also may reassign their rights to payment for their services, and may choose to incorporate as a group comprised solely of practitioners in their specialty and bill the Medicare program, in the same way that NPs and CNSs may do. We note that the amendment made by section 403 of the CAA changed only the statutory billing construct for PA services. It neither changed the statutory benefit category for PA services, including the requirement that PA services are performed under physician supervision, at section 1861(s)(2)(K)(i) of the Act, nor did it change the statutory payment percentage applicable to PA services specified in section 1833(a)(1)(O) of the Act.

We are proposing to amend pertinent sections of our regulations to reflect the amendment made by section 403 of the CAA. Specifically, we are proposing to amend §410.74(a)(2)(v) to specify that the current requirement that PA services must be billed by the PA’s employer in order to be covered under Medicare Part B is effective only until January 1, 2022. We are also proposing to amend §410.150(b) to redesignate the current requirements in paragraph (b)(15) as §410.150(b)(15)(i), and to amend that paragraph to provide that Medicare payment is made for PA services to the qualified employer of the PA for services furnished prior to January 1, 2022. In §410.150, we further propose to add a new paragraph (b)(15)(ii) to state that, effective for services furnished on or after January 1, 2022, payment is made to a PA for their professional services, including services and supplies furnished incident to their services. We would conform this new paragraph with the regulation at §410.150(b)(16) regarding to whom payment is made for NP or CNS services. As such, the proposed new paragraph at §410.150(b)(15)(ii) would provide that payment will be made to a PA for professional services furnished by a PA in all settings in both rural and non-rural areas; and that payment is made only if no facility or other provider charges or is paid any amount for services furnished by a PA. We also intend to update our program manual instructions to reflect the statutory change made by section 403 of the CAA and the changes to our regulations.

H. Therapy Services

We are implementing the third and final part of the amendments made by section 53107 of the Bipartisan Budget Act (BBA of 2018) (Pub. L. 115–123, February 9, 2018). The BBA of 2018 added a new section 1834(v) of the Act. Section 1834(v)(1) of the Act requires CMS to make a reduced payment for physical therapy and occupational therapy services furnished in whole or in part by physical therapist assistants (PTAs) and occupational therapy assistants (OTAs) at 85 percent of the otherwise applicable Part B payment for the service, effective January 1, 2022.

Section 1834(v)(2) of the Act requires that: (1) By January 1, 2019, CMS must establish a modifier to indicate that a therapy service was furnished in whole or in part by a PTA or OTA; and, (2) beginning January 1, 2020, each claim for a therapy service furnished in whole or in part by a PTA or an OTA must include the modifier. Section 1834(v)(3) of the Act requires CMS to implement these amendments through notice and comment rulemaking.

In the CY 2019 PFS final rule (83 FR 59654 through 59660), we established the CQ and CO modifiers that were required to be used by the physical therapist or therapy provider to identify therapy services provided in whole or in part by PTAs and OTAs, respectively, beginning January 1, 2020. We require these payment modifiers to be appended on claims for therapy services, alongside the GP and GO therapy modifiers which are used to indicate the services are furnished under a physical therapy or occupational therapy plan of care, respectively. The payment modifiers are defined as follows:

- **CQ modifier:** Physical therapy services furnished in whole or in part by PTAs.
- **CO modifier:** Occupational therapy services furnished in whole or in part by OTAs. In the CY 2019 PFS final rule (83 FR 59654 through 59660), we did not finalize our proposed definition of “furnished in whole or in part by a PTA or OTA” as a service for which any minute of a therapeutic service is furnished by a PTA or OTA. Instead, in response to public comments, we finalized a de minimis standard under which a service is considered to be furnished in whole or in part by a PTA or OTA when more than 10 percent of the service is furnished by the PTA or OTA.

In the CY 2019 PFS proposed and final rules (83 FR 35850 through 35852, and 83 FR 59654 through 59660, respectively), we explained that the CQ and CO modifiers would not apply to claims for outpatient therapy services that are furnished by, or incident to, the services of, physicians or NPPs, including NPs, PAs, and CNSs. This is because our outpatient physical and
occupational therapy services regulations require that the individual who performs outpatient therapy services incident to the services of a physician or NPP must meet the qualifications and standards for a therapist (other than state licensure). As such, only therapists, and not therapy assistants, can perform outpatient therapy services incident to the services of a physician or NPP (83 FR 59655 through 59656); and the modifiers to describe services furnished in whole or in part by a PTA or OTA are not applicable to the claim for a therapy service billed by a physician or NPP incident to their professional services. We indicated that we would add this distinction in the provision of the Medicare Benefit Policy Manual (MBPM) Chapter 15 that discusses therapy services furnished incident to the physician’s or NPP’s services at section 230.5, as well as the sections that discuss PTA and OTA services at sections 230.1 and 230.2, respectively.

In the CY 2020 PFS proposed and final rule (84 FR 40558 through 40564 and 62702 through 62708, respectively), we explained that the CQ/CO modifiers and the de minimis policy would apply to both untimed and timed codes. The untimed codes are evaluation and reevaluation codes, group therapy and supervised modalities, and when these are billed, only one unit is reflected in the “units” portion of the claim. When the PTA/OTA provides more than 10 percent of the service, the code is billed with a CQ/CO modifier. For timed codes, a standard at and above which the CQ/CO modifier applies.

For purposes of deciding whether the 10 percent de minimis standard is exceeded, we offered two different ways to compute this:

- The simple method: Divide the total of the PTA/OTA + PT/OT minutes by 10, round to the nearest integer then add 1 minute to get the number of minutes needed to exceed the de minimis standard at and above which the CQ/CO modifier applies.
- The percentage method: Divide the PTA/OTA minutes by the sum of the PTA/OTA and therapist minutes and then multiply this number by 100 to calculate the percentage of the service that involves the PTA/OTA, if this number is greater than 10 percent the CQ/CO modifier applies.

Hypothetical examples of each of these methods are included later in this section. In response to our proposal that all the units of one service needed to be considered when determining if the de minimis is applied, commenters stated that: (1) The statute does not require documentation to explain why a
modifier was or was not applied for each code; (2) the proposed documentation requirements are exceedingly burdensome and conflict with the agency’s “Patients over Paperwork Initiative”; (3) the proposed documentation requirement that calls for a narrative phrase in the treatment note and requires documentation of the minutes is duplicative of current requirements that require adding the total timed code minutes and total treatment time (includes timed and untimed codes) to the daily treatment note; and, (4) the Medicare Benefit Policy Manual (MBPM) already includes extensive documentation requirements. In response to the feedback, we did not finalize the proposed documentation requirement; nor did we finalize a requirement that the therapist and therapy assistant minutes be included in the documentation. Instead, we reminded therapists and therapy providers that correct billing requires sufficient documentation in the medical record to support the codes and units reported on the claim, including those reported with and without an assistant modifier. Further, in agreement with many commenters, we clarified that we would expect the documentation in the medical record to be sufficient to know whether a specific service was furnished independently by a therapist or a therapist assistant, or was furnished “in part” by a therapist assistant, in sufficient detail to permit the determination of whether the 10 percent standard was exceeded.

In the CY 2020 PFS proposed rule, we also provided multiple typical clinical billing scenarios to illustrate when the CQ/CO modifier would and would not be applicable. Because these clinical scenarios did not convey our finalized policies as modified in response to public comments, we indicated in the CY 2020 PFS final rule that we would provide further detail regarding the clinical scenario examples to illustrate how to use the therapy assistant modifiers through information we would post on the cms.gov website. We clarified that our revised finalized policy applied generally in the same way as illustrated in those examples, except for the difference in the minutes of time that are counted toward the 10 percent standard (not counting the minutes furnished together by a therapist and therapy assistant), the application of the 10 percent standard to each billed unit of a timed code rather than to all billed units of a timed code, and the billing on two separate claim lines of the units of a timed code to which the therapy assistant modifiers do and do not apply.

In early March 2021, we posted on our Therapy Services website at https://www.cms.gov/Medicare/Billing/TherapyServices general guidance on how to assign the CQ/CO modifiers for multiple billing scenarios. In the guidance, we provided general examples for 8 different billing scenarios in which multiple units of 15-minute codes are provided by PTs/OTs and PTAs/OTAs and one billing example that used the untimed code for group therapy performed for equal minutes by a PT and a PTA.

We noted that prior to applying our rules to determine appropriate application of the CQ/CO modifiers, the PTA/OTA or PT/OT first needs to determine how many 15-minute units can be billed in a single treatment day for a patient. For information on this topic, we referred readers to the chart in section 20.2.C of Chapter 5 of the Medicare Claims Processing Manual (MCPM) that describes how to count minutes for timed codes defined by 15-minute units, since the therapist or assistant should use the same counting rule, commonly known as the “8-minute rule,” that they have used previously. Once the therapist or therapy assistant has identified the number of 15-minute units that can be billed for a patient on a single treatment day, we provided the following information to clarify how to apply our policy for application of the CQ and CO modifiers, as follows:

Step 1. Identify the Timed HCPCS Codes Furnished for 15 Minutes or More: List the code numbers of each of the services furnished along with the number of minutes in total done by the PT, PTA, or OTA. When a PT, PTA, OT, or OTA provides at least 15 minutes and less than 30 minutes of a service on a single treatment day, we provided the following information to clarify how to apply our policy for application of the CQ and CO modifiers, as follows:

Step 2. Identify Services For Which the PT/OT and PTA/OTA Provide Minutes of the Same HCPCS Code: After applying Step 1, where applicable, identify any minutes (including remaining minutes from Step 1) performed by a PT/OT and PTA/OTA for the same service/code. Add the minutes furnished by the PT/OT and the PTA/OTA together, then divide the total by 10 and round to the nearest integer—that is the 10 percent de minimis time standard. Then add 1 minute to get the fewest number of minutes performed by the PTA/OTA that would exceed the 10 percent time standard for that service—if the PTA/OTA minutes meet or exceed this number, the CQ/CO modifier would be appended. This is the “simple” method for calculating the de minimis number of minutes.

Step 3. Identify Services Where the PT/OT and PTA/OTA Furnish Services of Two Different Timed HCPCS Codes: After applying Step 1 for each service, compare the remaining minutes furnished by the PT/OT for one service with the remaining minutes furnished by the PTA/OTA for a different service. Assign the CQ/CO modifier to the service provided by the PTA/OTA when the time spent is greater than the time spent by the PT/OT performing the different service. The CQ/CO modifier does not apply when the minutes spent delivering a service by the PT/OT are greater than the minutes spent by the PTA/OTA delivering a different service.

Step 4. Identify the Different HCPCS Codes Where the PT/OT and the PTA/OTA Each Independently Furnish the Same Number of Minutes: Once Step 1 is completed for each service (when applicable), and when the remaining minutes for each service—one provided by the PT/OT and the other provided by the PTA/OTA—are the same, either service may be billed. If the service provided by the PT/OT is billed, the CQ/CO modifier does not apply. However, if the service provided by the PTA/OTA is billed, the CQ/CO modifier does apply.

The below two examples are taken from our guidance on the CMS website. These are examples of when the PT and PTA provide minutes of the same service:

Example #1
PTA—23 minutes 97110
PT—13 minutes 97110
PT—30 minutes 97140

Total = 66 minutes—qualifies for billing 4 units (53 minutes through 67 minutes).

Billing Explanation:
• First Step: Assign units to services based on those that have at least 15 minutes or codes that were provided in multiples of 15 minutes. For 97110, assign one unit of 97110 with the CQ modifier because the PTA furnished at least 15 minutes of 97110 (therapeutic exercise). Then, assign two units of 97140 without the modifier, because the PT furnished the full 30 minutes of manual therapy.
• Second Step: Determine if the PTA furnished more than 10 percent of the remaining minutes of the 97110 service. To do this via the simple method: Add
the PTA’s 8 remaining minutes to the PT’s 13 minutes for a total time of 21 minutes. Divide the total by 10 to get 2.1 minutes and round to the nearest integer, which is 2 minutes (the 10 percent time standard for this service). Add 1 minute to find the threshold number of minutes that would exceed the de minimis standard, which in this example is 3 minutes. Using the percentage method, divide the PTA’s remaining 8 minutes by the total 21 minutes of the service (8 PTA + 13 PT = 21 minutes) to get 0.38, then multiply the result × 100 = 38 percent.

Final Step: Because 8 minutes meets or exceeds the 3-minute threshold, and 38 percent is greater than 10 percent, a second unit of 97110 is billed with the CQ modifier.

Example #2

PTA—19 minutes of 97110
PT—10 minutes of 97110

Total = 29 minutes—two units of 97110 can be billed (23 minutes through 37 minutes).

Billing Explanation:
- First Step: Bill one unit of 97110 with the CQ modifier because a full 15 minutes was provided by the PTA, with 4 minutes remaining.
- Second Step: Determine if the PTA’s 4 remaining minutes exceed the 10 percent de minimis standard. Simple method: Add together the PTA’s 4 remaining minutes and the 10 PT minutes to get the total time of 14 minutes and divide by ten to get 1.4 minutes and round to the nearest integer = 1 minute to get the 10 percent de minimis standard. Then add 1 minute to get a threshold minimum of 2 minutes for PT time. If the PTA minutes are at or above the threshold, the CQ modifier applies. Percentage method: Divide the PTA’s 4 remaining minutes by the total time of 14 to get 0.29 then multiply by 100 = 29 percent. If the resulting percentage is greater than 10 percent, the PTA modifier applies.
- Final Step: Bill another unit of 97110 with the CQ modifier since 4 minutes is greater than the 2-minute threshold minimum and 29 percent is greater than 10 percent.

After reviewing the information posted on the CMS Therapy Services web page, therapy stakeholders reached out to CMS to express concern that certain aspects of the billing scenarios described in the guidance contradict their interpretation of our de minimis policy, especially as it applies to a final unit of a multiple-unit timed service.

The therapy stakeholders suggested that the guidance we offered would lead to confusion for the same-service billing scenarios (including examples #1 and #2 above). We consider the unit of measure for a timed therapy service code to be 15 minutes. In billing scenarios with multiple units, we would consider the combined time for same or different services in 15-minute unit increments.

The stakeholders agree that the de minimis standard is applied to the last unit of a timed therapy service code in two separate cases. The first case happens when the PTA/OTA and the PT/OT each furnish less than 8 minutes for that final unit of a service. For example, if the PTA/OTA provided 7 minutes and the PT/OT furnished 5 minutes—using the simple method: 12 minutes divided by 10 equals 1.2, rounded to the nearest integer is 1, plus 1 equals 2—if the PTA/OTA provides 2 or more minutes, the CQ/CO modifier is applied. The second case occurs when the PTA/OTA provides 8 or more minutes and the PT/OT furnishes less than 8 minutes—in which event, the de minimis standard is exceeded and the CQ/CO modifier is applied.

We note that the therapy stakeholders’ interpretation of when the de minimis policy applies for a final 15-minute unit of a multiple unit timed service is based on what is commonly termed the “8-minute rule” which recognizes a unit of a 15-minute timed therapy service code as 8 minutes (more than the midpoint of the service or 7.5 minutes), but only when it applies to the final unit billed. Applied to the above two examples, the stakeholders informed us that they believe the second unit of CPT code 97110 in both examples should not be billed with an assistant modifier because the therapist provided enough minutes of the service on their own, that is, 8 minutes or more, to bill for the last unit without the assistant’s additional minutes. The stakeholders indicated that the therapist would have a financial incentive to not have the PTA/OTA provide the additional minutes at all if the CQ or CO modifier would apply. We note that, in addition to the two cases discussed above, there is another billing scenario to address in the context of our de minimis policy—specifically, where the PT/OT and PTA/OTA each furnish between 9 and 14 minutes of a 15-minute timed service when the total time of therapy services furnished in combination by the PTA/OTA and PT/OT is at least 23 but no more than 28 minutes, and there are two remaining units left to be billed. These “two remaining unit” cases with time ranges between 9 and 14 minutes include the following PTA/OTA PT/OT (or vice versa) time splits: 9:14, 10:13, 11:12, 12:12, 12:13, 13:13; 13:14; and 14:14.

We believe that the stakeholder’s interpretation of the de minimis standard is not consistent with the de minimis policy we finalized in the CY 2020 PFS final rule (84 FR 62702 through 62708). However, in working through the billing scenarios with the stakeholders, we identified where we could make refinements to our policy to address some of the confusion and concerns expressed by stakeholders and to address the “two remaining unit” cases noted above. These refinements may also avoid implementing a payment policy that could be perceived to penalize the provision of additional care by a therapy assistant when those minutes of service would lead to a reduced payment for a unit of a service. The stakeholders criticized the finalized de minimis policy because they believed it provides an inherent financial incentive for the therapist to ensure that PTAs/OTAs provide services in exactly 15-minute intervals—to avoid any leftover PTA/OTA minutes that could necessitate application of the CQ/CO modifier, and reduced payment, for the service that the therapist is also providing—without regard to the clinical needs of the individual patient. The stakeholders suggested that if we were to recognize their “8-minute rule” and recommended policy, we would remove the incentive for the therapist to avoid providing appropriate minutes of therapy services performed by the PTA/OTA.

To address the concerns expressed by the stakeholders and the “two remaining unit” cases we identified in our review, we propose to modify our existing policy, specifically for billing scenarios when only one unit of a timed therapy service remains to be billed (the majority of all billing scenarios) and the “two remaining unit” cases described above. As shown in Table 19, this proposal would require application of the CQ/CO modifier when the PTA/OTA provides at least 8 minutes or more and the PT/OT provides less than 8 minutes of the service; or, when both the PT/OT and the PTA/OTA provide less than 8 minutes of the same service.
Under this proposed modification, the CQ/CO modifier would not apply when the PT/OT furnishes 8 minutes or more, or both the PT/OT and the PTA/OTA furnish 8 minutes or more, of a timed service. This proposed “midpoint rule” policy was suggested to us by the therapy stakeholders. We agree that since, in this circumstance, the PT/OT provided enough minutes of the service on their own to bill the last unit of the service, the additional minutes of service performed by the PTA/OTA are not material, and thus, should be disregarded, as shown in the examples in Table 20.

### TABLE 20: Billing Scenario Examples Where the “Midpoint Rule” Applies

<table>

<tr>
<td><strong>Scenario 1</strong></td>
<td></td>
</tr>
<tr>
<td>PT (8 minutes) + PTA/OTA (7 minutes) - for a total of 15 minutes.</td>
<td>The PT/OT bills without the CQ/CO modifier because they provided enough minutes on their own (8 minutes or more) without the PTA’s/OTA’s time to bill the one unit. Disregard PTA/OTA minutes.</td>
</tr>
<tr>
<td><strong>Scenario 2</strong></td>
<td></td>
</tr>
<tr>
<td>PT (11 minutes) + PTA/OTA (11 minutes) - for a total of 22 minutes.</td>
<td>The PT/OT bills without the CQ/CO modifier because they provided enough minutes on their own (8 minutes or more) without the PTA’s/OTA’s time to bill the one unit. Disregard PTA/OTA minutes.</td>
</tr>
</tbody>
</table>

With these proposed policy adjustments, the CQ/CO modifiers apply when the PTA/OTA provides all the minutes of a timed service, and to some services (as illustrated in Table 19) when the PTA/OTA and PT/OT each, independent of the other, furnish portions of the same timed service. The CQ/CO modifiers also apply if the portion of an untimed code furnished by the PTA/OTA exceeds the de minimis standard. The CQ/CO modifiers do not apply when the PTA/OTA and the PT/OT furnish different services. Time spent by the PT/OT and PTA/OTA providing services together is considered time spent by the PT/OT for purposes of applying the de minimis standard. Finally, we propose to modify our policy so that the CQ/CO modifiers would not apply when the PT/OT provides enough minutes of the service on their own to bill for the last unit of a timed service, (more minutes than the midpoint or 8 minutes of a 15-minute timed code) regardless of any additional minutes for the service provided by the PTA/OTA. Examples of Billing Scenarios using the CQ/CO modifiers when the de minimis standard applies, and the proposed policy for the last billed unit of a service:

Example #A:
- PTA—10 minutes of 97110
- PT—5 minutes of 97110
  - Total = 15 minutes—qualifies to bill one 15-minute unit (6 minutes to 22 minutes).
  - Analysis: Bill one unit of 97110 with the CQ modifier because the PTA provided 8 minutes or more and the PT provided less than 8 minutes. The de minimis standard applies in these cases.

Example #B:
- PTA—6 minutes of 97110
- PT—6 minutes of 97110
  - Total = 12 minutes—qualifies to bill one 15-minute unit (6 minutes through 22 minutes).
  - Analysis: Bill one unit of 97110 with the CQ modifier because the PTA and PT both provided less than 8 minutes. In this case, the PT provided 6 minutes and the PTA furnished 5 minutes independent of each other. The de minimis standard applies in these cases.

Example #C:
- PTA—22 minutes of 97110
  - PT—23 minutes of 97110
  - Total = 45 minutes—qualifies to bill three 15-minute units (38 minutes through 52 minutes).
  - Analysis:
    - Apply Step One of the general policy rules and bill one unit of 97110 with the CQ modifier because the PTA provided 15 full minutes with 7 minutes remaining.
    - Apply Step One to the PT’s 23 minutes and bill one unit without the assistant modifier with 8 minutes remaining.
    - The third unit of 97110 is billed without the assistant modifier because the therapist provided enough minutes (8 or more minutes) without the PTAs minutes to bill the final unit.
Example #D—also see the below regulatory proposal using this “two remaining unit” example.

PT—12 minutes of 97110
PTA—14 minutes of 97110
PT—20 minutes of 97140

Total = 46 minutes—qualifies to bill three units (38 minutes through 52 minutes).

Analysis:
- Apply Step One of the general policy rules and bill one unit of 97140 without the CQ modifier because the PT provided 15 full minutes of one unit with 5 minutes remaining.
- Two units remain to be billed and the PT and the PTA each provided between 9 and 14 minutes independent of one another with a total time between 23 and 28 minutes—in these “two remaining unit” scenarios, one unit is billed with the CQ modifier for the PTA and the other unit is billed without it for the PT.
- The PT’s 5 remaining minutes of 97140 are counted towards the total timed minutes but are not billable in this scenario.

Example #E

OTA—11 minutes of 97535
OT—11 minutes of 97530

Total = 22 minutes—qualifies to bill one (1) unit (8 minutes through 22 minutes).

Billing Analysis:

Since two different services were furnished for an equal number of minutes—the “tie-breaker” scenario applies. Either code 97530 by the OT or code 97535 by the OTA can be billed in accordance with a billing example in the MCMR, Chapter 5, section 20.2.C. Either one unit of 97530 is billed without the CO modifier or one unit of 97535 is billed with the CO modifier.

Example #F: Untimed code—1 unit is billed for all untimed codes including evaluations, reevaluations, supervised modalities, and group therapy.

OTA—20 minutes 97150 independent of the OT
OT—20 minutes 97150 independent of the OTA

Total = 40 minutes of Group Therapy = 1 unit of 97150 is billed for each group member.

Billing Analysis: One unit of group therapy 97150 is billed with the CO modifier because the OTA provided more than the 10 percent time standard in this example. Either method can be used to determine if the OTA’s time exceeded the 10 percent time standard for this clinical scenario, see below:
- The simple method: First add the OTA’s 20 minutes to the OT’s 20 minutes to get 40, then divide by 10 to get 4.0 and add 1 to equal 5 minutes. The OTA’s 20 minutes is equal to or greater than 5 minutes so the CO modifier is required on the claim.
- The percentage method: Divide the number of minutes that an OTA independently furnished a service by the total number of minutes the service was furnished as a whole—20 divided by 40 equals 0.50. Then multiply by 100 to get 50 percent, which is greater than 10 percent. The CO modifier is applied to 97150.
- Tie breaker: The tie breaker does not apply in this scenario because the example does not contain two different timed codes described in 15-minute intervals. For “tie breaker” see Example #F above.

As noted above and illustrated in Example #D, there are a finite number of cases where there are two 15-minute units left to bill. In these “two remaining unit” cases, the PTA/OTA and the PT/OT each provide between 9 and 14 minutes with a total time of at least 23 minutes through 28 minutes. Under our proposed policy, one unit of the service would be billed with the CQ/CO modifier for the minutes furnished by the OTA/PTA (who furnished between 9 and 14 minutes of the service), and one unit would be billed without the CQ/CO modifier for the service provided by the PT/OT (who also furnished between 9 and 14 minutes of the same service). This is because the PTA/OTA and the PT/OT each independently furnished part of each unit of the same service, and these cases are not addressed by the proposed midpoint rule that would apply when there is only one single unit left to bill. We are proposing to amend our regulation to address the scenario where there are two remaining 15-minute units of the same service for which the PTA/OTA and the PT/OT each independently furnished part of each unit of the same service, and these cases are not addressed by the proposed midpoint rule that would apply when there is only one single unit left to bill. We are proposing to amend our regulation to address the scenario where there are two remaining 15-minute units of the same service for which the PTA/OTA and the PT/OT each independently furnished part of each unit of the same service, and these cases are not addressed by the proposed midpoint rule that would apply when there is only one single unit left to bill. We are proposing to amend our regulation to address the scenario where there are two remaining 15-minute units of the same service for which the PTA/OTA and the PT/OT each independently furnished part of each unit of the same service, and these cases are not addressed by the proposed midpoint rule that would apply when there is only one single unit left to bill. We are proposing to...
Certain Colorectal Cancer Screening Tests, amends section 1833(a) of the Act to offer a special coinsurance rule for screening flexible sigmoidoscopies and screening colonoscopies, regardless of the code that is billed for the establishment of a diagnosis as a result of the test, or for the removal of tissue or other matter or other procedure, that is furnished in connection with, as a result of, and in the same clinical encounter as the colorectal cancer screening test. The reduced coinsurance will be phased-in beginning January 1, 2022. Currently, the addition of any procedure beyond a planned colorectal cancer screening test (for which there is no coinsurance), results in the beneficiary having to pay coinsurance.

Section 1861(pp) of the Act defines “colorectal cancer screening tests” and, under sections 1861(pp)(1)(B) and (C) of the Act, identifies “screening flexible sigmoidoscopy” and “screening colonoscopy” as two of the recognized procedures. During the course of either one of these two procedures, removal of tissue or other matter may become necessary for diagnostic purposes. Among other things, section 1861(pp)(1)(D) of the Act authorizes the Secretary to include in the definition other tests or procedures and modifications to the tests and procedures described under this subsection, with such frequency and payment limits as the Secretary determines appropriate, in consultation with appropriate organizations. Section 1861(s)(2)(R) of the Act includes colorectal cancer screening tests in the definition of the medical and other health services that fall within the scope of Medicare Part B benefits described in section 1832(a)(1) of the Act. Section 1861(ddd)(3) of the Act includes colorectal cancer screening tests within the definition of “preventive services.” In addition, section 1833(a)(1)(Y) of the Act provides for payment for a preventive service under the PFS at 100 percent of the lesser of the actual charge or the fee schedule amount for these colorectal cancer screening tests, and under OPPS at 90 percent of the OPPS payment amount, when the preventive service is recommended by the United States Preventive Services Task Force (USPSTF) with a grade of A or B. As such, there is no beneficiary coinsurance for recommended colorectal cancer screening tests as defined in section 1861(pp)(1) of the Act.

Under these statutory provisions, we have issued regulations governing payment for colorectal cancer screening tests at § 410.152(l)(5). We pay 100 percent of the Medicare payment amount established under the applicable payment methodology for the setting for providers and suppliers, and beneficiaries are not required to pay Part B coinsurance for colorectal cancer screening tests (except for barium enemas, which are not recommended by the USPSTF with a grade of A or B). In addition to colorectal cancer screening tests, which typically are furnished to patients in the absence of signs or symptoms of illness or injury, Medicare also covers various diagnostic tests (see § 410.32). In general, diagnostic tests must be ordered by the physician or practitioner who is treating the beneficiary and who uses the results of the diagnostic test in the management of the patient’s specific medical condition. Under Part B, Medicare may cover flexible sigmoidoscopies and colonoscopies as diagnostic tests when those tests are reasonable and necessary as specified in section 1862(a)(1)(A) of the Act. When these services are furnished as diagnostic tests rather than as screening tests, patients are responsible for the Part B coinsurance (20 or 25 percent depending on the setting) associated with these services.

We define colorectal cancer screening tests in our regulation at § 410.37(a)(1) to include “flexible screening sigmoidoscopies” and “screening colonoscopies, including anesthesia furnished in conjunction with the service.” Under our current regulations, we exclude from the definition of colorectal screening services, colonoscopies and sigmoidoscopies that begin as services, but where a polyp or other growth is found and removed as part of the procedure. The exclusion of these services from the definition of colorectal cancer screening tests is based upon longstanding provisions under sections 1834(d)(2)(D) and (d)(3)(D) of the Act dealing with the detection of lesions or growths during procedures (see CY 1998 PFS final rule at 62 FR 59048, 59082 for a more detailed explanation).

Prior to the enactment of section 122 of the CAA, section 1834(d)(2)(D) of the Act provided that if, during the course of a screening flexible sigmoidoscopy, a lesion or growth is detected which results in a biopsy or removal of the lesion or growth, payment under Medicare Part B shall not be made for the screening flexible sigmoidoscopy, but shall be made for the procedure classified as a flexible sigmoidoscopy with such biopsy or removal. Similarly, prior to the recent legislative change, section 1834(d)(3)(D) of the Act provided that if, during the course of a screening colonoscopy, a lesion or growth is detected that results in a biopsy or removal of the lesion or growth, payment under Medicare Part B shall not be made for the screening colonoscopy but shall be made for the procedure classified as a colonoscopy with such biopsy or removal. In these situations, Medicare pays for the flexible sigmoidoscopy and colonoscopy tests as diagnostic tests rather than as screening tests and the 100 percent payment rate for recommended preventive services under section 1833(a)(1)(Y) of the Act, as codified in our regulation at § 410.152(l)(5), has not applied.

Under section 1833(b) of the Act, before making payment under Medicare Part B for expenses incurred by a beneficiary for covered Part B services, beneficiaries must first meet the applicable deductible for the year. Section 4104 of the Affordable Care Act (that is, the Patient Protection and Affordable Care Act [Pub. L. 111–148, March 23, 2010], and the Health Care and Education Reconciliation Act of 2010 [Pub. L. 111–152, March 30, 2010], collectively referred to as the “Affordable Care Act”) amended section 1833(b)(1) of the Act to make the deductible inapplicable to expenses incurred for certain preventive services that are recommended with a grade of A or B by the USPSTF, including colorectal cancer screening tests as defined in section 1861(pp) of the Act. Section 4104 of the Affordable Care Act also added a sentence at the end of section 1833(b)(1) of the Act specifying that the exception to the deductible shall apply with respect to a colorectal cancer screening test regardless of the code that is billed for the establishment of a diagnosis as a result of the test, or for the removal of tissue or other matter or other procedure that is furnished in connection with, as a result of, and in the same clinical encounter as the screening test. Although amendments made by the Affordable Care Act addressed the applicability of the deductible in the case of a colorectal cancer screening test that involves biopsy or tissue removal, they did not alter the coinsurance provision in section 1833(a) of the Act for such procedures. Public commenters encouraged the agency to eliminate the coinsurance in these circumstances;
however, the agency found that statute did not provide for elimination of the coinsurance (75 FR 73170 at 73431).

Beneficiaries have continued to contact us noting their concern that a coinsurance percentage applies (20 or 25 percent depending upon the setting) under circumstances where they expected to receive only a colorectal screening test to which coinsurance does not apply. Instead, these beneficiaries received what Medicare considers to be a diagnostic procedure because, for example, polyps were discovered and removed during the procedure. Similarly, physicians have expressed concern about the reactions of beneficiaries when they are informed that they will be responsible for coinsurance if polyps are discovered and removed during a procedure that they had expected to be a screening procedure to which coinsurance does not apply.

Section 122 of the CAA addresses this coinsurance issue by successively reducing the percentage amount of coinsurance for which the beneficiary is responsible. Ultimately, for services furnished on or after January 1, 2030, the coinsurance will be zero.

To implement the amendments made by section 122 of the CAA, we are proposing to modify our regulations to reflect the changes to Medicare statute. As amended, the statute effectively provides that, for services furnished on or after January 1, 2022, a flexible sigmoidoscopy or a colonoscopy can be considered a screening flexible sigmoidoscopy or a screening colonoscopy test even if an additional procedure is furnished to remove tissue or other matter during the screening test. Specifically, section 122(a)(3) of the CAA added a sentence to the end of section 1833(a) of the Act to include as colorectal screening tests described in section 1833(a)(1)(Y) of the Act, a colorectal cancer screening test, regardless of the code that is billed for the establishment of a diagnosis as a result of the test, or for the removal of tissue or other matter or other procedure that is furnished in connection with, as a result of, and in the same clinical encounter as the screening test. We note that only flexible screening sigmoidoscopies and screening colonoscopies are recognized currently as colorectal cancer screening tests that might involve removal of tissue or other matter. This new sentence added under section 1833(a) of the Act uses the same language that was used to amend the status of section 1833(b)(1) of the Act and to broaden the scope of colorectal cancer screening tests to which a deductible does not apply. Section 122(b)(1) of the CAA then limits application of the 100 percent Medicare payment rate (that is, no beneficiary coinsurance) under section 1833(a)(1)(Y) of the Act for the additional colorectal cancer screening tests (those that are not screening tests “but for” the new sentence at the end of section 1833(a) of the Act) by making payment for them subject to a new section 1833(dd) of the Act. Section 1833(dd) of the Act provides for a series of increases in the Medicare payment rate percentage for those services over successive periods of years through CY 2029. Thereafter, section 1833(dd) of the Act has no effect, so payment for all colorectal cancer screening tests would be made at 100 percent under section 1833(a)(1)(Y) of the Act.

To codify the amendments made by section 122 of the CAA in our regulations, we are proposing to make two modifications to current regulations.

At § 410.152(j)(5), we propose to modify our regulation where we define conditions for and limitations on coverage for colorectal cancer screening tests by adding a new paragraph (i). That paragraph would provide that, effective January 1, 2022, when a planned colorectal cancer screening test, that is, screening flexible sigmoidoscopy or screening colonoscopy test, requires a related procedure, including removal of tissue or other matter, furnished in connection with, as a result of, and in the same clinical encounter as the screening test, it is considered to be a colorectal cancer screening test.

At § 410.152(j)(5), we also propose to modify our regulation. Here we describe payment for colorectal cancer screening tests. Effective January 1, 2022, we propose to provide for an increase in the Medicare payment percentage that is phased in over time. As the Medicare payment percentage increases, the beneficiary coinsurance percentage decreases. We propose to revise § 410.152(j)(5) to provide that Medicare payment in a calendar year is equal to a specified percent of the lesser of the actual charge for the service or the amount determined under the fee schedule that applies to the test. The phased in Medicare payment percentages for colorectal cancer screening services described in the proposed regulation at § 410.37(j) (and the corresponding reduction in coinsurance) are as follows:

- 80 percent payment for services furnished during CY 2022 (with coinsurance equal to 20 percent);
- 85 percent payment for services furnished during CY 2023 through CY 2026 (with coinsurance equal to 15 percent);
- 90 percent payment for services furnished during CY 2027 through CY 2029 (with coinsurance equal to 10 percent); and
- 100 percent payment for services furnished from CY 2030 onward (with coinsurance equal to zero percent).

Thus, between CY’s 2022 and 2030, the coinsurance required of Medicare beneficiaries for planned colorectal cancer screening tests that result in additional procedures furnished in the same clinical encounter will be reduced over time from the current 20 or 25 percent to zero percent in CY 2030 and will remain at zero percent for those services furnished beginning in CY 2030 and thereafter.

J. Vaccine Administration Services: Comment Solicitation: Medicare Payments for Administering Preventive Vaccines

On January 31, 2020, under section 319 of the Public Health Service (PHS) Act (42 U.S.C. 247d), the Secretary of the Department of Health and Human Services (the Secretary) determined that a public health emergency (PHE) as a result of confirmed cases of 2019 Novel Coronavirus exists nationwide and has existed since January 27, 2020 (hereafter referred to as the PHE for COVID–19). The Secretary has since renewed this declaration for successive 90-day periods, the latest on April 15, 2021.

The PHE for COVID–19 has reinforced the important and positive impact that preventive vaccines can have on the health of Medicare beneficiaries and the broader public. At the time of publishing this proposed rule, the PHE for COVID–19 declaration is still in effect and the United States is in the middle of a national effort to vaccinate as many people against COVID–19 as quickly as possible. This national effort has at least temporarily altered the landscape for vaccines and vaccine administration by, for example, encouraging existing providers and suppliers to dramatically expand their vaccination capabilities and by encouraging new (and new types) of providers and suppliers to furnish vaccines.

Over the past several years, stakeholders have expressed concerns about the reduction in Medicare payment rates for the service to administer preventive vaccines covered by Medicare Part B under section 1861(s)(10) of the Act, including the influenza, pneumococcal, and hepatitis B vaccines. During the last few PFS rulemaking cycles (that is, for CY 2020 and CY 2021), we have attempted...
to address some of these concerns and these efforts are discussed in more detail below. However, CY 2021 payment rates for administration of these vaccines by suppliers including physicians, NPPs, and mass immunizers remain the same as in CY 2019: A national average rate of $16.94, which is geographically adjusted. In this section, we are seeking feedback on how we should update the payment rate for administration of these preventive vaccines under Medicare Part B.

1. Medicare Part B Payment for Vaccines

Under section 1861(s)(10) of the Act, Medicare Part B covers both the vaccine and its administration for the preventive vaccines specified—the influenza, pneumococcal, HBV, and COVID–19 vaccines. Under sections 1833(a)(1)(B) and (b)(1) of the Act, there is no applicable beneficiary coinsurance, and the annual Part B deductible does not apply for these vaccinations or the services to administer them. In CY 2021, payment for these vaccines is based on 95 percent of the Average Wholesale Price (AWP) for a particular vaccine product except where furnished in the settings for which payment is based on reasonable cost, such as a hospital outpatient department, rural health clinic (RHC), or federally qualified health center (FQHC). For example, for the 2020–2021 influenza season, payment limits for adult influenza vaccine products range from about $19 to $61 per adult dose. We note that most other preventive vaccines not specified for Medicare Part B coverage under section 1861(s)(10) of the Act, such as the shingles vaccine, are covered and paid for under Medicare Part D.

Section 3713 of the Coronavirus Aid, Relief, and Economic Security Act (CARES Act) (Pub. L. 116–136) added the COVID–19 vaccine and its administration to section 1861(s)(10)(A) of the Act in the same subparagraph as the influenza and pneumococcal vaccines and their administration. To implement this section, we issued an interim final rule with comment period (November 4th COVID–19 IFC (85 FR 71145 through 71150)) which established that payments for COVID–19 vaccines and vaccine administration would be made in the same manner as payments for the influenza and pneumococcal vaccines. The IFC specifically amended §§ 414.707(a)(2)(iii) and 414.904(e)(1) to include the COVID–19 vaccine in the list of vaccines with payment limits calculated using 95 percent of the AWP (85 FR 71147). We note that Medicare does not pay providers and suppliers for the vaccine product when the federal government purchases it and gives it to the provider or suppliers for free, as has been the case for all COVID–19 vaccines as of the publication of this proposed rule.

We note that the vaccine administration services described under 1861(s)(10) of the Act are not technically valued or paid under the PFS, as they are not included within the statutory definition of physicians’ services in section 1848(j)(3) of the Act. Despite this, we have historically based payment rates for the administration of these preventive vaccines by suppliers such as physicians, NPPs, and mass immunizers on an evaluation of the resource costs involved in furnishing the service, which is similar to the methodology that we use to establish payment rates for the PFS. We note further that we also assign a payment rate for administering these preventive vaccines under the Outpatient Prospective Payment System (OPPS), and those payment rates are for hospitals and home health agencies for preventive vaccine administration. Certain other types of providers and suppliers, such as RHCs, FQHCs and critical access hospitals (CAHs), are paid based on reasonable cost for vaccine administration. We also note that these payments are geographically adjusted based on the provider’s wage index.

As discussed in the CY 2021 PFS proposed rule (85 CFR 50162), many stakeholders raised concerns about the reductions in payment rates for the preventive vaccine administration services that had occurred over the past several years. We generally have established payment rates for the three Healthcare Common Procedural Coding System (HCPCS) codes G0008, G0009, and G0010—which describe the services to administer an influenza, pneumococcal and HBV vaccines, respectively, based on a direct crosswalk to the PFS payment rate for CPT code 96372 (Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular). Because we proposed and finalized reductions in valuation for that code for CY 2018, the payment rate for the vaccine administration codes was concurrently reduced. Further, because the reduction in RVUs for CPT code 96372 was significant enough to be required to be phased in over several years under section 1848(c)(7) of the Act, the reductions in overall valuation for the vaccine administration codes were likewise subject to reductions over several years. As noted in Table 21, the national payment rate for administering these preventive vaccines has declined more than 30 percent since 2015.
We have attempted to address the reduction in payment rates for these vaccine administration HCPCS codes in the last two PFS rulemaking cycles. In the CY 2020 PFS final rule, we acknowledged that it is in the public interest to ensure appropriate resource costs are reflected in the valuation of the immunization administration services that are used to deliver these vaccines, and noted that we planned to review the valuations for these services in future rulemaking. For CY 2020, we maintained the CY 2019 national payment amount for immunization administration services described by HCPCS codes G0008, G0009 and G0010. In the CY 2021 PFS proposed rule, we proposed to crosswalk G0008, G0009 and G0010 to CPT code 36000 (Introduction of needle or intracatheter, vein) (85 FR 50163). In the proposed rule, we noted that CPT code 36000 is a service with a similar clinical vignette, and that the additional clinical labor, supply, and equipment resources associated with furnishing CPT code 36000 were similar to costs associated with these vaccine administration codes. We also noted that this crosswalk would have resulted in payment rates for vaccine administration services at a rate that is approximately the same as the CY 2017 rate (as noted in Table 21) that was in place prior to the revaluation of CPT code 96372 (the original crosswalk code). In the CY 2021 PFS final rule, we did not finalize the proposed policy, and instead finalized a policy to maintain the CY 2019 payment amount for G0008, G0009 and G0010 (85 FR 84628). In the final rule, we also noted that we continued to seek additional information that specifically identifies the resource costs and inputs that should be considered to establish payment for vaccine administration services on a long-term basis.

As noted above, section 3713 of the CARES Act added the COVID–19 vaccine and its administration to the preventive vaccines covered under Medicare Part B under section 1861(s)(10)(A) of the Act in the same subparagraph as the influenza and pneumococcal vaccines and their administration. Section 3713 of the CARES Act allows us to implement the amendments made by that section through “program instruction or otherwise.” In the November 4th COVID–19 IFC (85 FR 71147) implementing section 3713 of the CARES Act, we indicated that we would establish specific coding and payment rates for the COVID–19 vaccine and vaccine administration through technical direction to Medicare Administrative Contractors (MACs) and information posted publicly on CMS’ website.

In December 2020, we publicly posted the applicable CPT codes for the Pfizer-BioNTech and Moderna COVID–19 vaccines and initial Medicare payment rates for administration of these vaccines upon the FDA’s authorization of these vaccines. We announced an initial Medicare payment rate for COVID–19 vaccine administration of $28.39 to administer single-dose vaccines. For a COVID–19 vaccine requiring a series of two or more doses—for example, for both the Pfizer-BioNTech and Moderna products—we announced a payment rate for administration of the initial dose(s) of $16.94, which was based on the Medicare payment rate for administering the other preventive vaccines under section 1861(s)(10) of the Act. We also announced a payment rate for administering the second dose of $28.39, which was based on the payment rate that was proposed, but not finalized, for administration of the other preventive vaccines under section 1861(s)(10) of the Act in the CY 2021 PFS proposed rule, discussed in more detail above.

On March 15, 2021, we announced an increase in the payment rate for administering a COVID–19 vaccine to $40 per dose, effective for doses administered on or after March 15, 2021, which means the payment rate is $40 to administer a single dose product, and $40 each to administer the first and second dose in a two-dose regime ($80 total).

1 We note that there were technically two national payment rates in 2015 due to legislation passed mid-year, although the payment amount for G0008, G0009 and G0010 only changed during the year by roughly $0.20.
2 Frozen to 2019 rate through rulemaking (PFS).
3 Frozen to 2019 rate through rulemaking (PFS).
As discussed above, payment rates for suppliers such as physicians, NPPs, and mass immunizers for administering the Part B covered preventive vaccines have generally been based on a direct crosswalk to CPT code 96372 (Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular). This crosswalk code is paid under the PFS, and Medicare’s process to value codes under the PFS relies in part on recommended resource inputs provided by the AMA RUC and steps to translate those recommended inputs into national RVUs.

In 2020, the RUC resubmitted its 2009 valuation recommendation for vaccine administration services described by CPT codes, including CPT codes 90460 (Administration of first vaccine or toxoid component through 18 years of age with counseling), 90471 (Administration of 1 vaccine), and 90473 (Administration of 1 nasal or oral vaccine). The AMA RUC also recently provided valuation recommendations for the CPT codes that describe the service to administer the COVID–19 vaccines.

As noted earlier, we also assign a payment rate for administering preventive vaccines under the OPPS by assigning an ambulatory payment classification (APC) to each service based on clinical and resource cost similarity to other services assigned to the APC. Geometric mean costs, which are generally used in establishing the prospective OPPS payments for each APC, are calculated using historical claims data and cost report information. In CY 2021, CMS assigned HCPCS codes G0008, G0009 and G0010 to APC 5691 (level 1 drug administration), which has a national payment rate of $40 for CY 2021.

Our practice of setting payment rates for preventive vaccine administration services described by HCPCS codes G0008, G0009 and G0010 for physicians, NPPs, and mass immunizers by using the PFS approach (for example, a crosswalk to an existing CPT code) means that costs incorporated into the rate primarily reflect costs of furnishing the service in a physician office setting. It also means that the payment rate can be affected by other aspects of the PFS rate-setting methodology, such as the allocation of indirect PE, and broader changes to PFS codes and rates, including the multi-year phase-in of significant reductions in RVUs discussed earlier. We note that we have not historically collected or used information from other providers and suppliers, including pharmacies which are commonly enrolled as mass immunizers to furnish vaccines and vaccine administration services, for purposes of establishing a rate for these codes.

We are requesting feedback from stakeholders that would support the development of an accurate and stable payment rate for administration of the preventive vaccines described in section 1861(s)(10) of the Act for physicians, NPPs, mass immunizers and certain other providers and suppliers. We are interested in detailed feedback on the following questions, which we believe would assist us in establishing payment rates for these services that could be appropriate for use on a long-term basis.

- What are the differences in incurred resource costs that physicians, NPPs, mass immunizers and certain other suppliers incur when furnishing vaccines safely and effectively? We are interested in specific information on costs related to staffing/labor, infrastructure, patient onboarding/enrollment, vaccine storage and handling, vaccine procurement and coordination, supplies, CDC and state reporting requirements, patient counseling about safety and efficacy, and other costs we may not have considered. We are also interested in specific resource costs per vaccine dose within each cost category, if that is available.

- What are the impacts of the PHE for COVID–19 on resource costs incurred by vaccination providers, and do stakeholders envision that these impacts will continue after the PHE has ended? Following the end of the PHE, do you expect that the same types of vaccination providers and suppliers will continue to administer vaccines, or do you envision that this will change (if so, how, and what would be the primary factors driving the change)?

- As described previously, Medicare has generally relied on the PFS methodology for setting payment rates for HCPCS codes G0008, G0009 and

G0010. How should Medicare assess costs associated with furnishing these preventive vaccines outside of the physician office setting, such as in pharmacies, mass immunization sites, mobile vaccine clinics or other locations? In addition, we understand that there could be administrative burden associated with the routine collection of cost data to support more accurate rate-setting for suppliers that are vaccinating patients. Are there other ways to update and validate costs for a broader range of entities using existing data?

- Payment rates for vaccine administration currently vary by setting. For HCPCS codes G0008, G0009 and G0010, the CY 2021 national average payment rate for physicians, practitioners and other suppliers is $16.94, which is geographically adjusted, while for hospital outpatient departments it is $40. However, for COVID–19 vaccine administration, Medicare now pays $40 per administration in all settings, unless the vaccine in administered under certain circumstances in the beneficiary’s home or residence (as discussed in more detail below). Should Medicare continue to pay differently for non-COVID–19 preventive vaccines furnished in certain settings or under certain conditions? If not, what factors contribute to higher costs for administration of non-COVID–19 vaccines that are not currently reflected in the Medicare payment rates?

- Should CMS use a different process to update the payment rates for administration of the preventive vaccines described in section 1861(s)(10) of the Act on an annual basis?

  - In the last few years we have also crosswalked vaccine administration CPT codes 90460 (Administration of first vaccine or toxoid component through 18 years of age with counseling), 90461 (Administration of vaccine or toxoid component through 18 years of age with counseling), 90471 (Administration of 1 vaccine), 90472 (Administration of vaccine), 90473 (Administration of 1 nasal or oral vaccine), and 90474 (Administration of nasal or oral vaccine) to the same rate used by G0008, G0009 and G0010. How should Medicare address payment rates for these CPT codes under the PFS?

  - Are there major differences between what Medicare pays physicians, NPs, and mass immunizers for non-COVID–19 preventive vaccine administration and what commercial insurers pay? To the extent possible we are also interested in feedback on specific rates used by other insurers.

2. Payment for COVID–19 Vaccine Administration in the Home

Effective June 8, 2021, we announced a new add-on payment with a national rate of $35.50 when a COVID–19 vaccine is administered in the beneficiary’s home. Under this new policy, providers and suppliers that administer a COVID–19 vaccine in a beneficiary’s home under certain circumstances can bill Medicare for one of the existing COVID–19 vaccine administration CPT codes (0001A, 0002A, 0011A, 0012A, 0031A) along with HCPCS code M0201 (COVID–19 vaccine administration inside a patient’s home; reported only once per individual home per date of service when only COVID–19 vaccine administration is performed at the patient’s home). Providers and suppliers administering a COVID–19 vaccine in the home will be paid a national average payment $75.50 dollars per dose ($40 for COVID–19 vaccine administration and $35.50 for the additional payment for administration in the home, and both payments are geographically adjusted).

In establishing the additional payment for COVID–19 vaccine administration in the beneficiary’s home, we also established certain conditions for the add-on payment described by HCPCS code M0201. More specifically, for purposes of this additional payment for administration of the COVID–19 vaccine in the beneficiary’s home, we established that Medicare will make this payment when either of these situations applies:

- The patient has difficulty leaving the home to get the vaccine, which could mean any of these:
  1. They have a condition, due to an illness or injury, that restricts their ability to leave home without a supportive device or help from a paid or unpaid caregiver;
  2. They have a condition that makes them more susceptible to contracting a pandemic disease like COVID–19; or
  3. They are generally unable to leave the home, and if they do leave home, it requires a considerable and taxing effort;

- The patient is hard-to-reach because they have a disability or face clinical, socioeconomic, or geographical barriers to getting a COVID–19 vaccine in settings other than their home. These patients face challenges that significantly reduce their ability to get vaccinated outside the home, such as challenges with transportation, communication, or caregiving.

We also specified that payment is made for HCPCS code M0201 if the sole purpose of the visit is to administer the COVID–19 vaccine. However, Medicare will not pay the additional amount if the provider or supplier furnished another Medicare covered service in the same home on the same date.

For purposes of this add-on payment for in-home COVID–19 vaccine administration, we announced that a home can be a private residence or temporary lodging (for example, a hotel or motel, campground, hostel, or homeless shelter), an apartment in an apartment complex or a unit in an assisted living facility or group home, or a patient’s home that is made provider-based to a hospital during the PHE for COVID–19. As such, a home may be a domiciliary or rest home, meaning a facility, which provides room, board, and other personal assistance services (for example, an assisted living facility).

We also announced that the following locations are not considered to be the patient’s home for purposes of the add-on payment for COVID–19 vaccine administration: Communal spaces of a multi-unit living arrangement; hospitals; Medicare SNFs, and Medicaid NFs, regardless of whether they are the patient’s permanent residence; assisted living facilities participating in the CDC’s Pharmacy Partnership for Long-Term Care Program when their residents are vaccinated through this program. We are clarifying that an institution is not considered to be a patient’s home if the institution meets the requirements of sections 1861(o)(1), 1819(a)(1), or 1919(a)(1) of the Act, which includes hospitals and skilled nursing facilities, as well as most nursing facilities under Medicaid.

Additionally, we established that assisted living facilities participating in the CDC Pharmacy Partnership for Long-Term Care Program partnership would not be eligible for this higher payment for COVID–19 vaccine administration in the home when their residents were vaccinated through this program. In addition, the COVID–19 vaccine administration service must be furnished inside an individual’s home. An individual unit in a multi-dwelling building is considered a home. For example, an individual apartment in an apartment complex or an individual bedroom inside an assisted living facility or group home is considered a home. We established that communal spaces of, or related to, congregate living arrangements (such as a communal area of an apartment or condominium complex, assisted living facility, group

---

39 42 CFR 409.42(a).
As noted in the code descriptor for HCPCS code M0201, this code can be billed only once per individual home per date of service. In situations where more than one Medicare beneficiary lives in the same individual home, the additional payment for COVID–19 vaccine administration in the home is limited to one time in that home on that day, while any additional COVID–19 vaccine administration services for other individuals in that same home would be paid at the generally applicable rate of approximately $40 without the additional in-home add-on payment amount.

We established the payment amount for HCPCS code M0201 for in-home vaccination to reflect the additional costs associated with administrating the vaccine in the home, such as upfront administration costs like scheduling, the additional clinical time needed for post administration monitoring of a single patient, and public health reporting requirements. To identify an appropriate payment rate for HCPCS code M0201, we used the home health low utilization payment adjustment add-on factor for skilled nursing as a proxy for the increased resource costs, above those reflected in the base payment rate for COVID–19 vaccine administration, involved in arranging and furnishing COVID–19 vaccine administration services in the home. For home health services, we make a low utilization payment adjustment (LUPA) when, during a 30-day period of home health care (or prior to January 1, 2020, a 60-day episode of home health care) a patient receives minimal services (less visits than a predetermined threshold) and the home health agency is paid per visit rather than the full 30-day (previously 60-day) bundled payment amount (see 42 CFR 440.230). As stated in the CY 2020 OPPS proposed rule, after the HH PPS went into effect we received comments and correspondence stating that the LUPA per-visit payment rates do not adequately account for the front-loading of costs in an episode. Commenters suggested that because of the small number of visits in a LUPA episode, HHAs have little opportunity to spread the costs of lengthy initial visits over a full episode (72 FR 25424).

As such, under the Medicare home health payment system, LUPA add-on payments are made to account for the upfront fixed costs and prolonged visit lengths in a LUPA period/episode compared to those for non-LUPA periods/episodes. We believe the LUPA add-on factor for skilled nursing is an appropriate proxy for the upfront fixed costs and prolonged visit lengths that exemplify and constitute the increased resource costs involved in arranging and furnishing COVID–19 vaccine administration services in the home. The CY 2021 LUPA add-on factor for skilled nursing is 1.8451, and we applied this to the base rate for COVID–19 vaccine administration of $40 per dose (effective March 15, 2021). This calculation results in a total proxy payment rate for in-home COVID–19 vaccine administration of approximately $74. Subtracting the $40 base rate for COVID–19 vaccine administration, which applies across most other settings, results in an additional proxy payment rate of roughly $34. To expedite access to this service and ensure consistency in payment rates for HCPCS code M0201 between health care professionals, other suppliers, and institutional providers, we established a proxy rate that corresponds to the proxy we calculated based on the LUPA add-on factor using a reference amount. Specifically, we looked to APC payment amounts under the hospital OPPS that were similar to the proxy we calculated based on the LUPA add-on factor as a reference amount. To another proxy payment rate under the hospital OPPS. Specifically, we looked to APC payment amounts under the hospital OPPS that were similar to the $34 proxy amount and could be implemented with speed under the COVID–19 vaccine benefit (which relies on both institutional and professional claims processing systems). We identified New Technology APC 1494 under the hospital OPPS with a national payment rate that corresponds to the proxy we calculated based on the LUPA add-on factor using a reference amount for this service for most providers and suppliers, and established that amount as the national payment rate for HCPCS code M0201. That is, the national payment rate for HCPCS code M0201 is $35.50 for all providers and suppliers not paid reasonable cost.

In announcing the add-on payment for in-home COVID–19 vaccine administration, we noted that we established these policies on a “preliminary basis to ensure access to COVID–19 vaccines during the public health emergency” and that “we continue to evaluate the needs of Medicare patients and these policies, and will address them in the future, as needed.”40 We are using this proposed rule as a way to collect feedback on these policies and potential future changes.

We are interested in feedback on our requirements, including the definition of the “home” and the types of clinical and non-clinical circumstances that make it difficult for a beneficiary to receive a COVID–19 vaccine outside the home. Do these requirements strike the appropriate balance of ensuring access to vaccines for vulnerable beneficiaries while also protecting against potential fraud? Should we maintain these requirements during the PHE as-is, and if not, what changes should we consider? Outside of the circumstances of the PHE that create a need for beneficiaries to be vaccinated as quickly and broadly as possible, under what circumstances do health care providers, suppliers, or others find particular need to vaccinate people at home rather than periodically in association with routine in-person visits?

- As noted, we established an add-on payment of $35.50, which is based on applying the LUPA add-on factor for skilled nursing to the national $40 payment rate for the base service as a proxy to reflect the additional resources involved in furnishing services in the home setting. We are interested in detailed feedback on the costs associated with furnishing COVID–19 vaccines in the home, and how these costs differ from costs of furnishing vaccines in traditional locations, such as a physician’s office or mass immunization site.

- What other steps should we take related to program integrity and beneficiary protection with this new add-on payment for administering the COVID–19 vaccine in the home? What documentation should providers and suppliers furnish vaccines in the home be required to maintain and/or provide?

We note that this add-on payment of $35.50 only applies when providers or suppliers furnish the COVID–19 vaccine in the beneficiary’s home, and is not billable when providers and suppliers furnish a different preventive vaccine (influenza, pneumonia, HBV) in the home. We believe the additional payment is only appropriate for COVID–19 vaccines due to the unique circumstances of the PHE, as well as the upfront fixed costs and prolonged visit lengths that exemplify and constitute the increased resource costs involved in arranging and furnishing COVID–19 vaccine administration services in the home. However, we are interested in feedback on whether the same barriers that could prevent a beneficiary from obtaining a COVID–19 vaccine would also prevent them from obtaining other vaccines. Further, we believe Medicare should make a similar add-on vaccine administration payment in those

circumstances, and whether the costs to furnish other preventive vaccines in the beneficiary’s home would be consistent with the costs to furnish the COVID–19 vaccine.

3. Monoclonal Antibodies Used To Treat COVID–19

On November 10, 2020, the FDA issued an Emergency Use Authorization (EUA) for bamlanivimab monotherapy.44 On November 21, 2020 the FDA issued an EUA for casirivimab and imdevimab, which are administered together.45 On February 9, 2021, the FDA issued an EUA for bamlanivimab and etesevimab, which are also administered together.46 On April 16, 2021, the FDA revoked the EUA for bamlanivimab monotherapy.47 On May 26, 2021, the FDA issued an EUA for sotrovimab monotherapy.48 On June 3, 2021, the FDA revised the EUA for casirivimab and imdevimab, which revised the dosing regimen from 2400mg (1200 mg of casirivimab and 1200 mg of imdevimab) to 1200mg (600 mg of casirivimab and 600 mg of imdevimab), authorized the addition of a new presentation consisting of a single vial of casirivimab and imdevimab co-formulated in a 1:1 ratio, and also authorized casirivimab and imdevimab to be administered together via subcutaneous injection in certain limited circumstances.49 On June 24, 2021, the FDA issued an EUA for tocilizumab monotherapy.50 Under the EUAs, for all of these products except for tocilizumab, they can be used for certain high-risk patients with mild-to-moderate COVID–19 with the goal of preventing further deterioration and hospitalization. Tocilizumab is authorized for hospitalized patients who are receiving systemic corticosteroids and require supplemental oxygen, non-invasive or invasive mechanical ventilation, or extracorporeal membrane oxygenation (ECMO).

When these products were authorized during the PHE for COVID–19, we made the determination to cover and pay for them under the COVID–19 vaccine benefit in section 1861(s)(10) of the Act. When we announced this approach, we also indicated that we would address “potential refinements to payment for administering monoclonal antibody products to treat COVID–19 through future notice-and-comment rulemaking”.48

We make a separate payment for the products (when not given to the provider or supplier for free by the government) and for the service to administer them. We note that as of June 30, 2021, the monoclonal antibody products authorized by the FDA under an EUA include two products involving drugs administered together, casirivimab and imdevimab and bamlanivimab and etesevimab, the sotrovimab monotherapy, and the tocilizumab monotherapy. All four products may be administered through intravenous [IV] infusion, and casirivimab and imdevimab may be administered via subcutaneous injection in certain limited circumstances under the updated June 3rd EUA.

Initially, we established a national payment rate of $309.10 for the service to administer (through IV infusion only at the time) these products, which was based on one hour of infusion and post-infusion monitoring in the hospital outpatient setting. We note that while these products are typically infused over a period of roughly one hour, the EUA for casirivimab and imdevimab allows the product to be infused over a shorter time-period, such as 20 minutes, when appropriate. We note that, as of June 15, 2021, the EUAs require at least one hour of post infusion monitoring for all of the products available. On May 6, 2021, we increased the payment rate for administration to $450.00 and established a separate payment rate of $750.00 when a monoclonal antibody product used to treat COVID–19 is administered in a home or residence.49

The decision to cover and pay for monoclonal antibody products used to treat COVID–19 under the COVID–19 vaccine benefit prioritized access to these products during the COVID–19 pandemic by allowing almost all Medicare enrolled providers and suppliers, as permitted by state law and consistent with the terms of the EUA, to furnish and bill for administering these products across settings of care.

Covering and paying for these services under the COVID–19 vaccine benefit also means that beneficiaries are not responsible for any cost sharing for the product or the service to administer.

We note that Medicare considers other monoclonal antibody products—that is, monoclonal antibody products used in the treatment of other health conditions—“biologicals” and pays for them based on the methodology in section 1847A of the Act when they are furnished in physician offices, ambulatory infusion clinics and under a similar methodology under the hospital OPPS. We also note that, for these care settings, we typically rely on the applicable AMA CPT codes to describe and pay for drug administration services performed by providers and suppliers.

As noted above, bamlanivimab monotherapy and casirivimab and imdevimab, administered together, were authorized in late 2020, we made the determination to cover and pay for them under the vaccine benefit in section 1861(s)(10) of the Act, and this decision prioritized beneficiary access for purposes of addressing the PHE for COVID–19. Since that time, the EUA for bamlanivimab monotherapy has been revoked, the EUA for casirivimab and imdevimab administered together has been revised to include a new presentation, a new dosing regimen, and a new route of administration (in certain limited circumstances), the sotrovimab monotherapy has been authorized and the tocilizumab monotherapy has been authorized. It is also becoming clear that, as more products enter the market, the federal government may not purchase them for distribution to providers and suppliers for free, as is the case with sotrovimab monotherapy and tocilizumab monotherapy. Given these fast-moving changes, we are seeking feedback on our approach to coverage and payment for COVID–19 monoclonal antibody products under the COVID–19 vaccine benefit. We are considering whether we should align payment and coverage for these products with our approach for other monoclonal antibody products following the end of the PHE. We believe that the context in which these products are furnished to beneficiaries after the end of the PHE may more closely resemble the circumstances under which similar drugs and biologics are ordinarily furnished, specifically to a more targeted patient population outside of a pandemic. Outside the context of the PHE, we believe treating these products like other drugs and biologics paid under section 1847A of the Act may better align Medicare coverage and payment policies for COVID–19 monoclonal antibody products with other monoclonal antibody products, which are purchased by providers and suppliers through...
similar channels and administered using similar modalities. As noted above, coverage and payment for COVID–19 monoclonal antibodies under the COVID–19 vaccine benefit has meant that Medicare beneficiaries are not responsible for any cost-sharing, which is typically 20 percent of the allowed amount in most settings. We note that if Medicare were to pay for COVID–19 monoclonal antibody products under the methodologies in 1847A of the Act, it would mean that beneficiary co-insurance would apply, similar to how it applies to other drugs and biologics that are not paid for under a preventive vaccine benefit.

We also note that tocilizumab—typically sold under the brand name Actemra—was previously approved by the FDA for several indications.50 As a result, during the PHE for COVID–19, Medicare has separate coding and payment rules for tocilizumab when it is furnished to patients with COVID–19 and in a manner consistent with the terms of the EUA, and for when tocilizumab is used for other clinical purposes. This may be confusing for hospital providers and we believe that treating these monoclonal antibody products like other drugs and biologics paid under section 1847A of the Act may help clarify these inconsistencies. We are interested in feedback on these issues.

We are also interested in additional feedback on the resource costs to administer COVID–19 monoclonal antibody products, such as costs associated with infrastructure, clinical labor, and equipment, including personal protective equipment. We recognize that administering monoclonal antibodies used to treat COVID–19 may be complex due the need to interact with beneficiaries that have active infections and manage the potential for spreading disease. We are interested in information on how the costs to furnish monoclonal antibodies used to treat COVID–19 compare with infusions of other complex biologics, and how the costs to furnish these products may be different when these products are administered in the home.

COVID–19 infused or injected monoclonal antibody product. We also developed specific payment rates when these products are administered in the beneficiary’s home. Taken together, these efforts signal our understanding of the importance of COVID–19 vaccines for the health of the individual beneficiary and the public. We also believe these efforts, and the PHE broadly, provide an opportunity to consider a more rational payment framework for the other preventive vaccines covered under Medicare Part B. We are encouraged by stakeholder engagement on these important issues and continue to seek information that reflects the resource costs that we should consider for vaccine administration services. We are interested in detailed feedback and verifiable data from the public to help inform whether we should consider making changes to payments for administering preventive vaccines, or develop separate payments for vaccine administration in the home.

We appreciate feedback from the public on these important issues regarding preventive vaccine administration, vaccine administration in the home, and monoclonal antibodies used to treat COVID–19.

K. Payment for Medical Nutrition Therapy Services and Related Services

Section 105 of the Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (BIPA) (Pub. L. 106–554, December 21, 2000) added section 1861(vv)(1) to the Act which provided Medicare coverage under Part B for Medical Nutrition Therapy (MNT) services when performed by registered dietitians and nutrition professionals pursuant to a referral from a physician. Under section 1842(b)(18)(C) of the Act, registered dietitians and nutrition professionals are included in the list of NPPs that may bill Medicare and be paid directly for their services, effective January 1, 2002. To submit claims for MNT services, the registered dietitian or nutrition professional must enroll as a Medicare supplier and bill under the physician identifying number (PIIN) of the treating physician. The importance of MNT services for managing diabetes or renal disease, as well as the underutilization of the benefit by Medicare beneficiaries is discussed in this proposed rule at section III.H. More recently, stakeholders who are concerned about the low utilization rate for the services have requested that CMS make changes geared toward making MNT services more accessible to Medicare beneficiaries. These stakeholders believe the underutilization of Medicare services is due to multiple factors. Some of these factors and our proposal to address them are discussed elsewhere in this rule (see section III.H.), including proposals to remove the requirement that the MNT referral be made by the “treating physician” and update the glomerular filtration rate (GFR) to reflect current medical practice. And, some factors are being considered here. First, stakeholders recommend that we modify the Medicare Claims Processing Manual (MCPM) to increase the viability of MNT services by moving the provisions that address these services to appear near the provisions addressing other preventive services. (We note that MNT services are included in the definition of preventive services under section 1861(ddd)(3)(A) of the Act). Second, the stakeholders recommend that we revise our Medicare Benefit Policy Manual to address registered dietitians and nutrition professionals, and the MNT services they furnish, in a way that aligns with the provisions addressing other types of practitioners and the services they furnish.

50 https://www.accessdata.fda.gov/drugsatfda_docs/label/2021/125472s044lbl.pdf.
We established the MNT regulations in the CY 2002 PFS final rule at § 410.130 through § 410.134 and § 414.64. There have since been two significant changes to payment for MNT services, which are discussed in more detail below: (1) We added MNT services to the Medicare telehealth services list and recognized that registered dietitians and nutrition professionals can furnish and bill for these services as distant site practitioners; and (2) section 4104 of the Affordable Care Act (ACA) amended the statute to remove application of the Medicare Part B deductible and coinsurance for MNT services effective January 1, 2011. In the CY 2006 PFS final rule (70 FR 70155 through 70157), we amended our regulation to add registered dietitians and nutrition professionals to the list of distant site practitioners for telehealth services at § 410.78(b)(2)(viii), and to add the three individual MNT services to the Medicare telehealth services list by adding “individual medical nutrition therapy” to § 414.65(a)(1). In the CY 2011 PFS final rule, we also added one of the group MNT codes (97804) to the Medicare telehealth services list (75 FR 73314 through 73315).

In the CY 2011 PFS final rule, (75 FR 73412 through 73430), we implemented the amendments made by section 4104 of the ACA, which were designed to remove financial barriers that may have prevented beneficiaries from obtaining certain preventive services. Section 4104 of the ACA amended section 1833(a)(1) of the Act by adding a new subparagraph (Y), which provides for Medicare Part B payment at 100 percent for preventive services described in section 1861(ddd)(3)(A) of the Act that are recommended with a grade of A or B by the United States Preventive Services Task Force (USPSTF); and, amended section 1833(b)(1) of the Act to specify that the annual Medicare Part B deductible does not apply to preventive services with a recommended grade of A or B by the USPSTF. Section 1861(ddd)(3) of the Act defines “preventive services” and includes MNT services as a preventive service through a cross references section 1861(ww)(2) of the Act. Additionally, section 4104 of the ACA amended section 1833(a)(1)(T) of the Act to specify that Medicare Part B payment is made at 100 percent (instead of 80 percent) of the lesser of the actual charge or 85 percent of the PFS payment amount for these services if they are recommended with an A or B rating by the USPSTF, thereby removing beneficiary coinsurance for these services. In the CY 2011 PFS final rule, we listed all preventive services and their recommended ratings from the USPSTF in Table 66 (66 FR 73420 through 73430), noting that all 5 MNT services received a grade of B from the USPSTF; and the last column in the table noted that the coinsurance and deductible are not applicable to these services beginning January 1, 2011. We codified the coinsurance exception for MNT services at § 410.152(l)(7) to indicate that Medicare Part B pays 100 percent of the Medicare payment amount, and the exception for the Medicare Part B deductible at § 410.160(b)(11).

At that time, the preventive services coinsurance and deductible changes were implemented through Change Request 7012 (Transmittal 864); however, we neglected to update the payment regulation for MNT services at § 414.64(a). As a result, we are now proposing to modify to the requirement at § 414.64(a) for payment of MNT services to reflect that MNT services, with their USPSTF recommended B rating, are paid at 100 percent of the lesser of the actual charges or 85 percent of the PFS amount.

Because the registered dietitian and nutrition professional are the only practitioners listed at section 1842(b)(18)(C) of the Act without a specific regulatory provision addressing them as a type of practitioner and specifying payment policies for their services, we are proposing to create a new section at § 410.72 to reflect these policies. We are proposing to include in the regulation at § 410.72 a cross reference to the regulation at § 410.134 that addresses the qualifications for registered dietitians and nutrition professionals. For covered services described at § 410.72(b), we are proposing as a condition of coverage to refer to medical nutrition therapy services as defined at § 410.130, and also to refer to the conditions for coverage of MNT services at § 410.132(a). Section 410.132(a) requires a referral for MNT services from a physician (an M.D. or D.O.), and that MNT services are personally performed by the registered dietitian or nutrition professional in a face-to-face encounter except when those services are furnished as a telehealth service as provided in § 410.78 of our regulations.

Because registered dietitians and nutrition professionals are also the primary specialty that furnishes diabetes self-management training (DSMT) services, we are proposing to include them, similar to the other practitioner listed at § 410.72(b)(2) as an “other service” that registered dietitians and nutrition professionals can provide in cases where the registered dietitian or nutrition professional is a certified provider of DSMT services as specified at section 1861(qq)(2)(A) of the Act; and they have submitted necessary documentation to, and are accredited by, a CMS-approved accreditation organization, as specified in § 410.141(e) for DSMT services. We also propose to address in the regulation at § 410.72(b)(2) the current requirement that, as specified in the regulation at § 410.141(b)(1), DSMT services require a referral from the physician or qualified NPP (as defined in § 410.32(a)(2)) who is treating the beneficiary’s diabetes condition. We also propose to specify in the regulation at § 410.72(b)(3) that MNT and DSMT services cannot be furnished together on the same date of service as detailed in the national coverage determination for MNT services (see https://www.cms.gov/medicare-coverage-database/details/ncd-details.aspx?ncdid=252); and, that neither MNT nor DSMT services can be furnished incident to the professional services of a physician or other practitioner. For MNT services, we are proposing to clarify that MNT services cannot be provided incident to the services of a billing physician. As a distinct, stand-alone benefit under Medicare Part B at section 1861(s)(2)(V) of the Act, MNT services cannot be furnished incident to a physician’s professional service that is separately specified at section 1861(s)(2)(A) of the Act. Further, if a physician also meets the qualifications to bill Medicare as a registered dietitian or nutrition professional (although not necessarily enrolled as one), they would have to personally provide any MNT services as explained above, meaning that those services could not be furnished by auxiliary personnel incident to their own professional services. For DSMT services, we are also proposing to clarify that DSMT services cannot be provided incident to the services of a billing physician or practitioner. DSMT is a distinct benefit under Medicare Part B, as specified in a stand-alone statutory provision at section 1861(s)(2)(S) of the Act. Approved DSMT entities are separately recognized programs, rather than individuals or practitioners, that provide DSMT services in accordance with their accreditation from a CMS-approved organization under § 410.142, indicating that the entity meets a set of quality standards described in § 410.144. Even when the DSMT services are billed by a physician or other practitioner, only a CMS-DSMT certified provider, the physician or other practitioner could not provide
DSMT services directly, unless they themselves are also an approved DSMT entity. If a physician or practitioner is an approved entity, the DSMT services must be provided in accordance with the requirements to furnish such services. For these reasons, we are adding at § 410.72(b)(3)(ii) that neither MNT nor DSMT may be furnished and billed incident to the professional services of a physician or practitioner, where applicable.

As such, we are proposing to add at § 410.72(d) that the registered dietitian or nutrition professional can be paid for their professional services only if those services have been personally performed by them. Section 1861(vv) of the Act clearly indicates that MNT services are only provided by registered dietitians and nutrition professionals; and this was reiterated at § 410.134 in the CY 2002 PFS final rule (66 FR 55331). In addition, in the CY 2002 PFS final rule, we established a regulation at § 410.132(a) that requires registered dietitians and nutrition professionals to provide MNT services and that those services consist of face-to-face nutritional assessments and interventions in accordance with nationally accepted dietary or nutritional protocols. Both of these provisions were codified in our regulations at §§ 410.132(a) and 410.134.

In the CY 2001 PFS final rule, we discussed that registered dietitians and nutrition professionals who are enrolled in Medicare could furnish services in various settings including private practices and outpatient hospitals, but that payment for MNT services would not be made when beneficiaries are inpatients in Part A stays in hospitals and skilled nursing facilities (SNFs) (66 FR 55279). We explained that our payment to hospitals and SNFs includes payment for MNT services. We established these regulations at § 414.64(c). We are proposing to add these rules to our regulation at § 410.72(c)(1) and (2), as on payment for services of registered dietitians and nutrition professionals when beneficiaries are inpatients of hospitals and SNFs. Also, in the CY 2001 PFS final rule, we finalized, in accordance with section 1861(s)(2)(V)(ii) of the Act, that there is no coverage for MNT services available for beneficiaries who are receiving maintenance dialysis for which payment is made under section 1881 of the Act, that is, services from an end-stage renal disease (ESRD) facility. This was reiterated at § 410.132(b). We are proposing to add this non-covered service to our regulation at § 410.72(c)(3) and note its cross reference to § 410.132(b).

In accordance with section 1842(b)(18)(B) of the Act, the registered dietitian or nutrition professional must accept assignment, meaning that they must accept the payment amount Medicare approves as payment in full and collect nothing from the beneficiaries for those services for which Medicare pays 100 percent of the Medicare approved amount or only collect the difference between the Medicare approved amount and the Medicare Part B payment in accordance with § 424.55. We are proposing to add at § 410.72(f) that the services of a registered dietitian or nutrition professional are provided on an assignment-related basis. Because Medicare pays 100 percent of the Medicare approved amount for MNT covered services, this means that beneficiaries cannot be billed any amount for MNT covered services. For other services, including DSMT, for which the Medicare Part B coinsurance percentage is 20 percent, a registered dietitian or nutrition professional must not collect amounts in excess of the limits specified in § 424.55 of our regulation, and if they do, they must refund the full amount of the impermissible charge to the beneficiary. Finally, we note that the proposed regulatory text for § 410.72(f) is consistent with the text in existing §§ 410.74(d)(2), 410.75(e)(2), 410.76(e)(2) and 410.77(d)(2). We are also considering whether alternate regulatory text that cross-references the assignment requirements in § 424.55 would provide additional clarity. Specifically, we are considering whether to specify restrictions at § 410.72(f) to specify that the services of a registered dietitian or nutrition professional are provided on an assignment-related basis, and the registered dietitian or nutrition professional may not charge a beneficiary in excess of the amounts permitted under 42 CFR 424.55. In addition, if a beneficiary has made payment for a service in excess of these limits, the registered dietitian or nutrition professional must refund the full amount of the impermissible charge to the beneficiary.

To ensure maximum consistency in our regulations, if we finalize the alternate regulatory text for § 410.72(f), we would also make corresponding revisions to §§ 410.74(d)(2), 410.75(e)(2), 410.76(e)(2) and 410.77(d)(2). We are seeking comment on our proposals.

III. Other Provisions of the Proposed Rule

A. Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs)

1. Background

a. RHC and FQHC Payment Methodologies

As discussed in 42 CFR part 405, subpart X, RHC and FQHC visits generally are face-to-face encounters between a patient and one or more RHC or FQHC practitioners during which one or more RHC or FQHC qualifying services are furnished. RHC and FQHC practitioners are physicians, nurse practitioners (NPs), physician assistants (PA), certified nurse midwives (CNMs), clinical psychologists (CPs), and clinical social workers, and under certain conditions, a registered nurse or licensed practical nurse furnishing care to a homebound RHC or FQHC patient in an area with a shortage of home health agencies. A Transitional Care Management (TCM) service can also be an RHC or FQHC visit. In addition, a Diabetes Self-Management Training (DSMT) service or a Medical Nutrition Therapy (MNT) service furnished by a certified DSMT or MNT program may also be considered an FQHC visit. Only medically necessary medical, mental health, or qualified preventive health services that require the skill level of an RHC or FQHC practitioner are RHC or FQHC billable visits. Services furnished by auxiliary personnel (for example, nurses, medical assistants, or other clinical personnel acting under the supervision of the RHC or FQHC practitioner) are considered incident to the visit and are included in the per-visit payment.

RHCs generally are paid an all-inclusive rate (AIR) for all medically necessary medical and mental health services and qualified preventive health services furnished on the same day (with some exceptions). The AIR is subject to a payment limit, meaning that an RHC will not receive any payment beyond the specified limit amount. As of April 1, 2021, all RHCs are subject to a payment limit for the AIR, and this limit will be determined for each RHC in accordance with section 130 of the Consolidated Appropriations Act, 2021, described below.

FQHCs were paid under the same AIR methodology until October 1, 2014. Beginning that date, in accordance with section 134(e) of the Act (as added by section 10501(i)(3) of the Affordable

Federal Register / Vol. 86, No. 139 / Friday, July 23, 2021 / Proposed Rules 39229
Care Act), they began to transition to an FQHC PPS system in which they are paid based on the lesser of the FQHC PPS rate or their actual charges. The FQHC PPS rate is adjusted for geographic differences in the cost of services by the FQHC PPS geographic adjustment factor (GAF). The rate is increased by 34 percent when an FQHC furnishes care to a patient that is new to the FQHC, or to a beneficiary receiving an initial preventive physical examination (IPPE) or an annual wellness visit (AWV). Both the RHC AIR and FQHC PPS payment rates were designed to reflect the cost of all services and supplies that an RHC or FQHC furnishes to a patient in a single day. The rates are not adjusted for the complexity of the patient health care needs, the length of the visit, or the number or type of practitioners involved in the patient’s care.

2. Payment Methodology for RHCs

a. Background

As we discussed previously, under Medicare Part B, payment to RHCs for services (defined in §405.2411) furnished to beneficiaries is made on the basis of an all-inclusive payment methodology subject to a maximum payment per-visit (discussed in section III.A.3. of this proposed rule) and annual reconciliation. Our regulations, at §405.2470 provides that RHCs are required to submit cost reports to allow the Medicare Administrative Contractor (MAC) to determine payment in accordance with 42 CFR part 405, subpart X, and instructions issued by CMS. The statutory payment requirements for RHC services are set forth at section 1833(a)(3) of the Act, (as amended by the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 54), which states that RHCs are paid reasonable costs “** less the amount a provider may charge as described in clause of section 1866(a)(2)(A), but in no case may the payment exceed 80 percent of such costs. The beneficiary is responsible for the Medicare Part B deductible and coinsurance amounts. Section 1866(a)(2)(A)(i) of the Act and implementing regulations at §405.2410(h) establish beneficiary coinsurance at an amount not to exceed 20 percent of the clinic’s reasonable charges for covered services.

We explain in §405.2464(a) the AIR is determined by the MAC at the beginning of the cost reporting period. The MAC calculates the AIR that will apply for the upcoming cost reporting period for each RHC by dividing the estimated total allowable costs by estimated total visits for RHC services. The MAC also periodically reviews the AIR throughout the cost reporting period to assure that payments approximate actual allowable costs and visits and may adjust the rate. Productivity, payment limits, and other factors are also considered in the calculation. Allowable costs must be reasonable and necessary and may include practitioner compensation, overhead, equipment, space, supplies, personnel, and other costs incident to the delivery of RHC services (§405.2468).

Medicare payment for RHC services are ultimately determined at cost report settlement. That is, during the annual reconciliation as explained in §405.2466, MACs determine the total reimbursement amount due the RHC for covered services furnished to Medicare beneficiaries based on the reporting period. The total reimbursement amount due is compared with total payments made to the RHC for the reporting period, and the difference constitutes the amount of the reconciliation. If the total reimbursement due the RHC exceeds the payments made for the reporting period, the MAC makes a lump-sum payment to the RHC to bring total payments into agreement with total reimbursement due the RHC. If the total payments made to an RHC for the reporting period exceed the total reimbursement due the RHC for the period, the MAC arranges with the RHC for repayment.

In the event a new RHC is in its initial reporting period, and the MAC does not have a cost report to set its AIR, the RHC provides the MAC an estimate of what it expects its costs to be for its initial reporting period. In the Provider Reimbursement Manual (Pub. 15–2), chapter 46, section 4600,52 we explain that for an RHC’s initial reporting period, the clinic completes the cost report’s worksheets with estimates of costs and visits and other information required by the reports. The MAC uses these estimates to determine an interim rate of payment for the RHC. This interim rate may be adjusted throughout the reporting period. Following the end of the RHC’s reporting period, the RHC is required to submit its worksheets, using data based on its actual experience for the reporting period. The AIR for the following year will then be based on the RHC’s actual experience.

As discussed in Pub. 100–02, Chapter 13, section 80.2 55 when RHCs are part of the same organization with more than one RHC, they may elect to file consolidated cost reports rather than individual cost reports. Under this type of reporting, each RHC in the organization need not file individual cost reports. Rather, the group of RHCs may file a single report that accumulates the costs and visits for all RHCs in the organization. In order to qualify for consolidation reporting, all RHCs in the group must be owned, leased, or through any other agreement, controlled by one organization.

3. RHC Payment Limit Per-Visit

a. Background

Prior to the Balanced Budget Act of 1997 54 (BBA), the payment methodology for an RHC depended on whether it was “provider-based” or “independent.” Specifically, payment to provider-based RHCs for services furnished to Medicare beneficiaries was made on a reasonable cost basis by the provider’s MAC in accordance with the regulations at 42 CFR part 413; whereas payment to independent RHCs for services furnished to Medicare beneficiaries was made on the basis of a uniform all-inclusive rate payment methodology in accordance with 42 CFR part 405, subpart X. In addition, payment to independent RHCs also was subject to a maximum payment per visit (also referred to as a “payment limit per-visit”, “upper payment limit per-visit”, or “cap”) as set forth in section 1833(f) of the Act. This national statutory payment limit was set at $46 and was adjusted annually based on the Medicare Economic Index (MEI) described in section 1842(b)(3) of the Act.

Section 1833(f) of the Act was further amended by section 4205(a) of the BBA (Pub. L. 105–33) to permit an exception to the national statutory payment limit for RHCs based in rural hospitals with less than 50 beds. Our guidance directed Medicare intermediaries to use the bed definition at §412.105(b) and the rural definition at §412.62(i)(1) to determine which RHCs are eligible for the exception. The hospital bed definition was based on available bed days and the rural definition was based on the Office of Management and Budget’s

---

54 https://www.congress.gov/105/plaws/publ33/PLAW-105publ33.pdf
metropolitan statistical area (MSA) method.

Section 224 of the Medicare, Medicaid and SCHIP Benefits Improvement and Protection Act of 2000 (Appendix F of Consolidated Appropriations Act of 2001) (BIPA)55 (Pub. L. 106–554, December 21, 2000) further amended section 1833(f) of the Act by expanding the eligibility criteria for receiving an exception to the national statutory payment limit for RHCs. Specifically, this section of BIPA extended the exemption to RHCs based in small, urban hospitals. Effective July 1, 2001, all hospitals of less than 50 beds were eligible to receive an exception from the per visit payment limit for their RHCs.

As discussed in Change Request 1958, Transmittal A–01–138 issued on December 6, 2001, following the implementation of the BBA provision, CMS announced an alternative bed size definition for very rural, sole community hospitals with seasonal fluctuation in patient census. The MAC reviews the number of beds twice a year to determine whether the provider-based RHC meets the exception, during the Desk Review process and during the interim rate process (that is, determining the RHC’s AIR). The provider-based RHC continues to receive the exception until the hospital which they are affiliated with submits a cost report with more than 50 beds.

However, in the May 8, 2020 Federal Register, in response to the PHE for COVID–19, we published the “Medicare and Medicaid Programs, Basic Health Program, and Exchanges; Additional Policy and Regulatory Revisions in Response to the COVID–19 Public Health Emergency and Delay of Certain Reporting Requirements for the Skilled Nursing Facility Quality Reporting Program” interim final rule with comment period (85 FR 27550) (May 8, 2020 IFC). In the May 8, 2020 IFC, we implemented, on an interim basis, a change to the period of time used to determine the number of beds in a hospital at §412.105(b) for purposes of determining which provider-based RHCs are subject to the payment limit (85 FR 27569). That is, for the duration of the PHE, we adopted an interim final policy to use the number of beds from the cost reporting period prior to the start of the PHE as the official hospital bed count for application of this policy. As such, RHCs with provider-based status that were exempt from the national statutory payment limit in the period prior to the effective date of the PHE (January 27, 2020) would continue to be exempt from the bed count requirement for the duration of the PHE for the COVID–19 pandemic, as defined at §400.200, even if the hospital raised its bed count above 50. Once the PHE for COVID–19 ends, hospitals need to lower their bed count to less than 50 beds to utilize an RHC policy that has such a requirement.

b. Section 130 of the Consolidated Appropriations Act, 2021

Section 1833(f)(2) of the Act, as added by section 130 of the CAA 2021, states that beginning April 1, 2021, RHCs will begin to receive an increase in their payment limit per visit over an 8-year period, with a prescribed amount for each year from 2021 through 2028. Then, in a subsequent year, at the limit established for the previous year increased by the percentage increase in the MEI applicable to primary care services furnished as of the first of such subsequent year. This provision also subjects all new RHCs (including provider-based RHCs in a hospital with less than 50 beds and enrolled in Medicare after December 31, 2020) to the national statutory payment limit. The national statutory payment limit for RHCs over an 8-year period is as follows:

- In 2021, after March 31, at $100 per visit;
- In 2022, at $113 per visit;
- In 2023, at $126 per visit;
- In 2024, at $139 per visit;
- In 2025, at $152 per visit;
- In 2026, at $165 per visit;
- In 2027, at $178 per visit; and
- In 2028, at $190 per visit.

Beginning April 1, 2021, provider-based RHCs that meet the qualifications in section 1833(f)(3)(B) of the Act, as added by section 130 of the CAA 2021 and amended by Public Law 117–7, are entitled to special payment rules, as described in section 1833(f)(3)(B) of the Act. That is, a provider-based RHC must meet the following criteria to have its payment limit established based on its per visit payment amount (or AIR):

- As of December 31, 2020, was in a hospital with less than 50 beds and after December 31, 2020 in a hospital that continues to have less than 50 beds (not taking into account any increase in the number of beds pursuant to a waiver during the PHE for COVID–19); and one of the following circumstances:
  • As of December 31, 2020, was enrolled in Medicare (including temporary enrollment during the PHE for COVID–19); or
  • Submitted an application for enrollment in Medicare (or a request for temporary enrollment during the PHE for COVID–19) that was received not later than December 31, 2020.

Specifically, beginning April 1, 2021, for provider-based RHCs that had a per visit payment amount (or AIR) established for services furnished in 2020, the payment limit per visit shall be set at an amount equal to the greater of:

1. The per visit payment amount applicable to such RHC for services furnished in 2020, increased by the percentage increase in the MEI applicable to primary care services furnished as of the first day of 2021; or
2. The national statutory payment limit for RHCs per visit.

We note that the MEI percentage increase for CY 2021 is 1.4 percent, which reflects historical MEI data through the second quarter of the prior calendar year. For example, the 2021 update reflects data through the second quarter 2020. We note that the MEI percentage increase for CY 2021 is 1.4 percent, which reflects historical MEI data through the second quarter 2020 and historical multifactor productivity (MFP) data through 2019. IGI is a nationally recognized economic and financial forecasting firm with which we contract to forecast the components of the MEI and other CMS market baskets, https://ihsmarkit.com/index.html.

In a subsequent year (that is, after 2021), the provider-based RHC’s payment limit per visit shall be set at an amount equal to the greater of:

1. The payment limit per visit established for the previous year, increased by the percentage increase in the MEI applicable to primary care services furnished as of the first day of such subsequent year; or
2. The national statutory payment limit for RHCs per visit.

The proposed CY 2022 MEI update is 1.8 percent based on the IGI 1st quarter 2021 forecast of the MEI and productivity adjustment, which reflects historical MEI data through 4th quarter 2020 and historical MFP data through 2019. As is our general practice, we are
proposing that if more recent data become available after the publication of this proposed rule and before the publication of the final rule (for example, a more recent estimate of the MEI percentage increase or productivity adjustment), we would use such data, if appropriate, to determine the final CY 2022 MEI update.

For provider-based RHCs that meet certain requirements, but did not have a per visit payment amount (or AIR) established for services furnished in 2020, the payment limit per visit shall be at an amount equal to the greater of: (1) The per visit payment amount applicable to the provider-based RHC for services furnished in 2021; or (2) the national statutory payment limit for RHCs.

In a subsequent year (that is, after 2022), the provider-based RHCs payment limit per visit will be the greater of: (1) The payment limit per visit established for the previous year, increased by the percentage increase in MEI applicable to primary care services furnished as of the first day of such subsequent year; or (2) the national statutory payment limit for RHCs.

A provider-based RHC that meets the qualifications of section 1833(f)(3)(B) of the Act, as corrected by Public Law 117–7 will lose this designation if the hospital does not continue to have less than 50 beds, beyond the exemptions provided for the PHE for COVID–19. If this occurs, the provider-based RHC will be subject to the statutory payment limit per visit applicable for such year and not able to regain the specified provider-based payment limit.

Provider-based RHCs that are newly enrolled beginning January 1, 2021, and after are subject to the national statutory payment limit applicable for such year for RHCs.

c. Implementation of Section 130 of the Consolidated Appropriations Act, 2021

As we stated above, RHCs began to receive an increase in the national statutory payment limit over an 8-year period, with a prescribed amount for each year from 2021 through 2028. Prior to this legislation, the CY 2020 national statutory payment limit for RHCs was $86.31. Then for calendar year 2021, there are two sets of payment rules for RHCs. For the period before March 31, 2021, independent RHCs and provider-based RHCs that did not meet specified requirements were subject to the payment limit of $87.52 that CMS announced in Change Request 12035, Transmittal 10413 issued on October 29, 2020. Provider-based RHCs that met specified requirements were not subject to a payment limit for the first quarter of calendar year 2021. However, beginning April 1, 2021, in accordance with section 130 of the CAA 2021, all RHCs are now subject to a payment limit.

For example, beginning April 1, 2021 through December 31, 2021 the national statutory payment limit for RHCs is $100.00. To prepare for this change in payment limits during the calendar year, Change Request 12185, Transmittal 10679 was issued on March 16, 2021, to implement an increase in the RHC statutory payment limit per visit and establish the provider-based RHC payment limits per visit, which went into effect on April 1, 2021. We note, Change Request 12185, Transmittal 10679 was rescinded and replaced by Transmittal 10780 issued on May 4, 2021 to reflect the technical corrections in section 2 of H.R. 1866 (Pub. L. 117–7).

We also note that this provision does not impact the way beneficiary coinsurance is calculated as described in §405.2410(b)(1).

i. Specified Provider-Based RHCs

In section III.A.3.b. of this proposed rule, we discuss the qualifications specified in section 1833(f)(3)(B) of the Act, as amended by Public Law 117–7, that determine if a provider-based RHC is entitled to the special payment rules described in section 1833(f)(3)(A) of the Act. To determine if an RHC was in a hospital with less than 50 beds as of December 31, 2020, we will review each provider-based RHC using the existing bed count review process, as described above, to determine if this criterion is met.

In addition, this process generally includes ongoing review by the MACs two times a year. The beds to be counted for purposes of this criterion are described in §412.105(b), in accordance with existing policy.

In continuing with our existing policy and in accordance with section 1833(f)(3)(B)(i) of the Act which states that “as of December 31, 2020, was in a hospital with less than 50 beds and after such date the hospital continues to have less than 50 beds” an RHC will retain its specified provider-based status until the hospital which they are affiliated submits a cost report with more than 50 beds. An RHC will no longer retain its specified provider-based status nor be eligible for specified status in the future once the hospital which they are affiliated submits a cost report with more than 50 beds.

However, in response to the PHE for COVID–19 and in accordance with section 1833(f)(3)(B)(ii) of the Act, we will apply the policy that allows for increased hospital bed counts, as described in the May 8, 2020 IFC, for purposes of determining this bed count criterion for specified provider-based RHC status. That policy specifies that for the duration of the PHE, we will use the number of beds from the cost reporting period prior to the start of the PHE as the official hospital bed count. We note that the criteria specified in section 1833(f)(3)(B)(i) of the Act specifies “in a hospital with less than 50 beds” therefore, beginning April 1, 2021, we will apply the bed definition at §412.105(b) exclusively.

Section 1833(f)(3)(B)(ii) of the Act, as added by section 2 of Public Law 117–7, requires that these specified provider-based RHCs as of December 31, 2020 are “enrolled under 1866(j) (including temporary enrollment during such emergency period for such emergency period).” or “submitted an application for enrollment under section 1866(j) of the Act (or a request for such a temporary enrollment for such emergency period) that was received not later than December 31, 2020.”

We propose that the RHC’s effective date of enrollment (as established under existing regulations) would be used in our determination as to whether an RHC is enrolled under section 1866(j) of the Act as of December 31, 2020. In addition, with regard to an application for enrollment under section 1866(j) of the Act or a request for temporary enrollment, we propose to use the date an application or request was received to determine if the RHC met the qualification. RHCs that established temporary locations for the purpose of responding to the PHE for COVID–19, in accordance with their state pandemic response plan, are permitted to enroll and receive temporary Medicare billing privileges. When the PHE for COVID–19 ends, an RHC that had been temporarily enrolled under the flexibilities described above must submit a complete CMS–855 enrollment application in order to establish full Medicare billing privileges. Failure to do so will result in the deactivation of the RHC’s temporary billing privileges. No payments can be made for services provided while the temporary billing privileges are deactivated. For RHCs enrolled through the temporary enrollment process that will need to submit a complete CMS–855 enrollment application, we propose, regardless of when the temporarily enrolled RHC is fully enrolled, that the RHC would be entitled to the special payment rules as long as it was
temporarily enrolled as of December 31, 2020 or a temporary enrollment request was received by December 31, 2020, and it meets the bed count requirement.

As stated above, section 1833(f)(3)(A) of the Act instructs Medicare to set payment limits per visit for these specified provider-based RHCs under certain payment rules. Specifically, beginning April 1, 2021, a payment limit per visit shall be set at an amount equal to the greater of: (1) The per visit payment amount applicable to such RHC for services furnished in 2020, increased by the percentage increase in the MEI applicable to primary care services furnished as of the first day of 2021; or (2) the statutory payment limit per visit as described in section 1833(f)(2) of the Act. For subsequent years, in accordance with section 1833(f)(3)(A)(ii) of the Act, that payment amount is increased by the percentage increase in the MEI or the statutory payment limit described in section 1833(f)(2) of the Act, whichever is greater.

We interpret the “per visit payment amount” to align with the interim rate process the MACs use in determining an RHC’s AIR (discussed above in section III.A.2 of this proposed rule). That is, as explained in §405.2464(a) the AIR is determined by the MAC using the most recently available cost report. Therefore, with regard to “services furnished in 2020” we interpret this to mean the period at which the services were furnished in 2020 and that costs for those services were reported. We understand that there may be more than one cost report that reports costs for services furnished in calendar year 2020. However, since section 130 of the CAA 2021 states that the “per visit payment amount” is to be increased by the CY 2021 MEI, if a provider has a cost reporting period that differs from a calendar year time-period then the MACs should use data based on the relevant cost report period ending in 2020.

Finally, we understand that certain RHCs file consolidated cost reports, as described above. For specified provider-based RHCs, existing RHCs that are independent, and existing RHCs that are in a hospital with greater than 50 beds, we will continue to use the parent RHCs’ cost reports to determine the payment limit per visit (for multi-facility RHC systems), as consolidated cost reporting reduces the reporting burden and cost report preparation time for RHCs. Combining multiple individual RHC cost reports into a consolidated cost report allows RHCs to take advantage of administrative efficiencies and economies of scale that do not exist otherwise.

However, in accordance with section 1833(f)(2) of the Act, all new provider-based RHCs and independent RHCs enrolled, as of January 1, 2021, shall have a payment limit established at the national statutory payment limit for RHCs. Therefore, beginning with RHCs enrolled in Medicare as of January 1, 2021, we will no longer allow new RHCs to file consolidated cost reports.

ii. All Other RHCs

While there are criteria that allow for specified provider-based RHCs to be eligible for certain payment rules, all other RHCs are subject to payment limits as described in section 405.2462 to 405.2464 of the Act. As discussed above, these RHCs will still have an AIR per visit determined based on their allowable costs for each year going forward. However, the payment limit that is established will be the maximum amount that an RHC will be paid by Medicare per visit. As discussed above, at the time of reconciliation, if an RHCs costs per visit are above the AIR, they will be paid an amount that reflects these additional costs, not to exceed the payment limit. If an RHCs costs per visit are below the AIR, then CMS will collect any overpayment for that visit. To implement this provision beginning April 1, 2021, CMS instructed the MACs to increase the payment limits to $100 per visit.

Although the payment limit per-visit as set forth in section 1833(f) of the Act has already been implemented in administrative instructions issued to the MACs in Change Request 12185, we are proposing revisions to §405.2462 to reflect the provisions set forth in section 1833(f)(2) and (3) of the Act. We solicit comment on these revisions and on our proposals regarding the implementation of section 130 of the CAA 2021.

3. Payment for Attending Physician Services Furnished by RHCs or FQHCs to Hospice Patients

a. Background

In the Fiscal Year (FY) 2021 Hospice Payment Rate Update final rule (85 FR 47079) we explained that hospice care is a comprehensive, holistic approach to treatment that recognizes the impending death of a terminally ill individual and warrants a change in the focus from curative care to palliative care for relief of pain and for symptom management. Palliative care is at the core of hospice philosophy and care practices, and is a critical component of the Medicare hospice benefit. The goal of hospice care is to help terminally ill individuals continue life with minimal disruption to normal activities while remaining primarily in the home environment.

A hospice uses an interdisciplinary approach to deliver medical, nursing, social, psychological, emotional, and spiritual services through a collaboration of professionals and other caregivers, with the goal of making the beneficiary as physically and emotionally comfortable as possible. As referenced in our regulations at §418.22(b)(1), to be eligible for Medicare hospice services, the patient’s attending physician (if any) and the hospice medical director must certify that the individual is “terminally ill,” as defined in section 1861(dd)(3)(A) of the Act and our regulations at §418.3; that is, the individual’s prognosis is for a life expectancy of 6 months or less if the terminal illness runs its normal course.

While the payment limit is described, these RHCs will still have an AIR per visit determined based on their allowable costs for each year going forward. However, the payment limit that is established will be the maximum amount that an RHC will be paid by Medicare per visit. As discussed above, at the time of reconciliation, if an RHC’s costs per visit are above the AIR, they will be paid an amount that reflects these additional costs, not to exceed the payment limit. If an RHC’s costs per visit are below the AIR, then CMS will collect any overpayment for that visit.

To implement this provision beginning April 1, 2021, CMS instructed the MACs to increase the payment limits to $100 per visit.

Although the payment limit per-visit as set forth in section 1833(f) of the Act has already been implemented in administrative instructions issued to the MACs in Change Request 12185, we are proposing revisions to §405.2462 to reflect the provisions set forth in section 1833(f)(2) and (3) of the Act. We solicit comment on these revisions and on our proposals regarding the implementation of section 130 of the CAA 2021.

3. Payment for Attending Physician Services Furnished by RHCs or FQHCs to Hospice Patients

a. Background

In the Fiscal Year (FY) 2021 Hospice Payment Rate Update final rule (85 FR 47079) we explained that hospice care is a comprehensive, holistic approach to treatment that recognizes the impending death of a terminally ill individual and warrants a change in the focus from curative care to palliative care for relief of pain and for symptom management. Palliative care is at the core of hospice philosophy and care practices, and is a critical component of the Medicare hospice benefit. The goal of hospice care is to help terminally ill individuals continue life with minimal disruption to normal activities while remaining primarily in the home environment.

A hospice uses an interdisciplinary approach to deliver medical, nursing, social, psychological, emotional, and spiritual services through a collaboration of professionals and other caregivers, with the goal of making the beneficiary as physically and emotionally comfortable as possible. As referenced in our regulations at §418.22(b)(1), to be eligible for Medicare hospice services, the patient’s attending physician (if any) and the hospice medical director must certify that the individual is “terminally ill,” as defined in section 1861(dd)(3)(A) of the Act and our regulations at §418.3; that is, the individual’s prognosis is for a life expectancy of 6 months or less if the terminal illness runs its normal course.

Section 1861(dd)(3)(B) of the Act defines the term “attending physician” to mean, with respect to an individual, the physician, the NP or PA who may be employed by a hospice program, whom the individual identifies as having the most significant role in the determination and delivery of medical care to the individual at the time the individual makes an election to receive hospice care.

As explained in Pub. 100–02, chapter 9, section 20.1,57 the attending physician is a doctor of medicine or osteopathy who is legally authorized to practice medicine or surgery by the state in which he or she performs that function, an NP, or PA, and is identified by the individual, at the time he or she elects to receive hospice care, as having the most significant role in the determination and delivery of the individual’s medical care. An NP is defined as a registered nurse who performs such services as legally authorized to perform (in the state in which the services are performed) in accordance with state law (or state regulatory mechanism provided by state law) and who meets training, education, and experience requirements described in §410.75. A PA is defined as a professional who has graduated from an accredited PA educational program who

performs such services as he or she is legally authorized to perform (in the state in which the services are performed) in accordance with state law (or state regulatory mechanism provided by state law) and who meets the training, education, and experience requirements as the Secretary may prescribe. The PA qualifications for eligibility for furnishing services under the Medicare program can be found in the regulations at § 410.74 (c).

RHCs and FQHCs are not authorized under the statute to serve in the role of an attending physician. However, a physician, NP, or PA who works for an RHC or FQHC may provide hospice attending physician services during a time when they are not working for the RHC or FQHC (unless prohibited by their RHC or FQHC contract or employment agreement). These services would not be considered RHC or FQHC services, since they are not being provided by an RHC or FQHC practitioner during RHC or FQHC hours. The physician, NP, or PA would bill for services under Part B using their own provider number/NPI. In addition, any service provided to a hospice beneficiary by an RHC or FQHC practitioner must comply with Medicare prohibitions on commingling. Further information regarding commingling is available in Pub. 100-02, Chapter 13, section 100.38

b. Section 132 of the Consolidated Appropriations Act 2021

Section 132 of the CAA 2021 amended section 1834(o) of the Act and added a new section 1834(y) to the Act, to provide the authority for both FQHCs and RHCs, respectively, to receive payment for hospice attending physician services. Specifically, when a designated attending physician employed by or working under contract with an FQHC or RHC furnishes hospice attending physician services (as described in section 1812(d)(2)(A)(ii) of the Act) on or after January 1, 2022, the FQHC or RHC is eligible to receive payment under the FQHC PPS or RHC AIR, respectively.

Therefore, beginning January 1, 2022, a physician, NP, or PA who is employed by or working under contract with an RHC or FQHC may provide hospice attending physician services during a time when they are working for the RHC or FQHC. The RHC or FQHC would bill for these services as they would for any other qualified service to be paid the RHC AIR or the FQHC PPS rate, respectively. When the RHC/FQHC furnishes a hospice attending physician service that has a technical component, the provider furnishing the technical component would go to the hospice for payment as discussed in the Medicare Claims Processing Manual at https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c11.pdf.

We propose to codify the new statutory provisions as described in section 132 of the CAA 2021 in 42 CFR 405, subpart X, specifically:

- At § 405.2411, Scope of benefits, we are amending § 405.2411(b) to reflect that hospice attending physician services are covered when furnished during a patient’s hospice election only when provided by an RHC/FQHC physician, NP, or PA designated by the patient at the time of hospice election as his or her attending physician and employed or under contract with the RHC or FQHC at the time the services are furnished.

- At § 405.2446, Scope of services, we are amending § 405.2446(c) to include that FQHC services are covered when they are hospice attending physician services furnished during a hospice election.

4. Concurrent Billing for Chronic Care Management Services

In the CY 2013 PFS final rule (77 FR 69878 through 68994), Medicare payment for TC services furnished by an RHC or FQHC practitioner was effective January 1, 2013, consistent with the effective date of payment for TC services under the PFS. We adopted two CPT codes (99495 and 99496) to report physician or qualifying NNP care management services for a patient following a discharge from an inpatient hospital or SNF, an outpatient hospital stay for observation or partial hospitalization services, or partial hospitalization in a community mental health center. As a condition for receiving TC payment, a face-to-face visit was required.

In the CY 2016 PFS final rule with comment period (80 FR 71080 through 71088), we finalized policies for payment of CCM services in RHCs and FQHCs. Payment for CCM services in RHCs and FQHCs was effective beginning on January 1, 2016, for RHCs and FQHCs that furnish a minimum of 20 minutes of qualifying CC services during a calendar month to patients with multiple (two or more) chronic conditions that are expected to last at least 12 months or until the death of the patient, and that would place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline. Payment was made for CCM services when CPT code 99490 was billed alone or with other payable services on an RHC or FQHC claim, and the rate was based on the PFS national average non-facility payment rate. The requirement that RHC or FQHC services be furnished face-to-face was waived for CC services furnished to an RHC or FQHC patient because CC describes non-face-to-face services.

In the CY 2018 PFS final rule, (82 FR 53172 through 53180), we finalized payment for CCM, general Behavioral Health Integration (BHI), and the psychiatric collaborative care model (CoCM) services furnished by RHCs or FQHCs on or after January 1, 2018, described by HCPCS codes G0511 and G0512. HCPCS code G0511 is a General Care Management code for use by RHCs or FQHCs when at least 20 minutes of qualified CCM or general BHI services are furnished to a patient in a calendar month. HCPCS code G0512 is a psychiatric CoCM code for use by RHCs or FQHCs when at least 70 minutes of initial psychiatric CoCM services or 60 minutes of subsequent psychiatric CoCM services are furnished to a patient in a calendar month. The payment amount for HCPCS code G0511 is set at the average of the three national non-facility PFS payment rates for the CCM and general BHI codes and updated annually based on the PFS rates. The three codes are CPT code 99490 (20 minutes or more of CCM services), CPT code 99487 (60 minutes or more of complex CCM services), and CPT code 99484 (20 minutes or more of BHI services). The payment amount for HCPCS code G0512 is set at the average of the two national non-facility PFS payment rates for the CoCM codes and is updated annually based on the PFS rates. The two codes are CPT code 99492 (70 minutes or more of initial psychiatric CoCM services) and CPT code 99493 (60 minutes or more of subsequent psychiatric CoCM services).

In the CY 2019 PFS final rule (83 FR 59687), we finalized that effective January 1, 2019, the payment rate for HCPCS code G0511 (General Care Management Services) is set at the average of the national non-facility PFS payment rates for CPT codes 99490, 99487, 99484, and 99491.

In the CY 2020 PFS final rule with comment period (84 FR 62692), we added HCPCS code G2065 (30 minutes of PCM services furnished by physicians or NPs) and G2066 (30 minutes or more of PCM services furnished by

clinical staff under the direct supervision of a physician or NPP) as a general care management service and included it in the calculation of HCPCS code G0511. Beginning January 1, 2021, the payment for HCPCS code G0511 is set at the average of the national non-facility PFS payment rates for CPT codes 99490, 99487, 99484, and 99491, and HCPCS codes G2064 and G2065, and is updated annually based on the PFS rates. Additional information on CMS requirements is available on the CMS Care Management web page and on the CMS RHC and FQHC web pages.

Currently, RHCs and FQHCs may not bill for TCM services for a beneficiary if another practitioner or facility has already billed for CCM services for the same beneficiary during the same time period.

b. Concurrent Billing for Chronic Care Management Services and TCM Services for RHCs and FQHCs

In the CY 2020 PFS final rule (84 FR 62687), we finalized a policy allowing suppliers paid under the PFS to concurrently bill care management codes that were previously restricted from being billed with TCM for services billed under the PFS. This included allowing concurrent billing of TCM with 14 HCPCS codes, as well as CPT codes 99490 and 99491, which describe CCM services furnished under the PFS. However, we did not extend this policy to care management services furnished in RHCs or FQHCs at that time.

Consistent with changes made in the CY 2020 PFS final rule for care management services billed under the PFS, for CY 2022, we are proposing to allow RHCs and FQHCs to bill for TCM and other care management services furnished for the same beneficiary during the same service period, provided that all requirements for billing each code are met. This would include the services described by HCPCS codes G0511 (General Care Management for RHCs and FQHCs only) and G0512 (Psychiatric CoCM code for RHCs and FQHCs only), which both describe a service period of one calendar month. We believe that when medically necessary, these services may complement each other rather than substantially overlapping or duplicating services since TCM services are furnished once within 30 days of a patient’s discharge, whereas CCM services require a more comprehensive care management plan, care coordination and ongoing clinical care, and CoCM services describe care management services specifically for behavioral health conditions. We note that under this proposal, time and effort could not be counted more than once.

4. Proposed Conforming Technical Changes to 42 CFR 405.2466
In the November 6, 2020 Federal Register, we published the “Additional Policy and Regulatory Revisions in Response to the COVID–19 Public Health Emergency” interim final rule with request for comment (85 FR 71145 through 71147) (hereinafter referred to as the November 6, 2020 IFC). In the November 6, 2020 IFC, we implemented section 3713 of the CARES Act (Pub. L. 116–136, March 27, 2020), which established Medicare Part B coverage and payment for a COVID–19 vaccine and its administration. As we discussed in that rule (85 FR 71147), section 3713 of the CARES Act added the COVID–19 vaccine and administration to section 1861(s)(10)(A) of the Act in the same subparagraph as the influenza and pneumococcal vaccines and their administration. Therefore, the Medicare allowed amount and billing processes for COVID–19 vaccinations are similar to those in place for influenza and pneumococcal vaccinations across provider/supplier settings. The amendments made to section 1861(s)(10)(A) of the Act were effective on the date of enactment, that is, March 27, 2020, and apply to a COVID–19 vaccine beginning on the date that such vaccine is licensed under section 351 of the PHS Act (42 U.S.C. 262). A list of vaccines and their effective dates are updated as they are available and located on the CMS website at https://www.cms.gov/medicare/medicare-part-b-drug-average-sales-price/covid-19-vaccines-and-monoclonal-antibodies.

Although there were regulations updated to reflect the changes set forth by the CARES Act, we inadvertently did not revise the specific regulation text that applies to RHCs and FQHCs. Therefore, consistent with the changes described above, we are proposing to make conforming technical changes to the applicable RHC and FQHC regulations in 42 CFR part 405, subpart X, specifically:

- At §405.2466. Annual reconciliation, we are proposing to amend paragraph (b)(4)(iv) to include the COVID–19 vaccine in the list of vaccines and their administration that would be paid at 100 percent of Medicare reasonable cost.

B. Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs)—Telecommunications Technology
1. Revising the Definition of an RHC and FQHC Mental Health Visit

a. Payment Rules for RHC and FQHC Visits and for Medicare Telehealth Services

Section 1861(aa)(1) of the Act defines RHC services as physicians’ services and such services and supplies that are furnished as an incident to a physician’s professional service, and items and services as well as certain vaccines and their administration. It also includes services furnished by a PA, NP, clinical psychologist, or clinical social worker and services and supplies furnished as incident to these services as would otherwise be covered if furnished by a physician or incident to a physician’s service. In the case of an RHC in an area with a home health agency shortage, part-time or intermittent nursing care and related medical supplies may be furnished by a registered professional nurse or licensed practical nurse to a homebound individual under certain conditions. Section 1861(aa)(3) of the Act defines FQHC services to include the specified RHC services and preventive services as well as required primary preventive health services.

As previously stated, RHC and FQHC visits are defined as medically-necessary, face-to-face encounters between a patient and an RHC or FQHC practitioner, during which time one or more RHC or FQHC qualifying services are furnished. Services furnished must be within the practitioner’s state scope of practice, and only services that require the skill level of the RHC or FQHC practitioner are considered RHC or FQHC visits. The RHC and FQHC payment is based on the costs of all services, except in certain circumstances, such as vaccines and their administration.

RHCs are paid an all-inclusive rate (AIR) for medically-necessary primary health care services, and qualified preventive health services, furnished by an RHC practitioner. Medicare pays 80 percent of the RHC AIR, subject to a payment limit. Services furnished incident to an RHC professional service are included in the AIR and are not billed as a separate visit. The professional component of a procedure is usually covered, but is not a stand-alone billable visit. The costs of covered services provided incident to a

61 https://www.cms.gov/Center/Provider-Type/Federally-Qualified-Health-Centers-FQHC-Center.html
b. Adoption of Telehealth Technologies for Mental Health Care

While not specific to RHC and FQHC telehealth services provided during the PHE, according to MedPAC’s report, Telehealth in Medicare after the Coronavirus Public Health Emergency,62 there were 8.4 million telehealth services paid under the PFS in April 2020, compared with 102,000 in February 2020. MedPAC also reported that during focus groups held in the summer of 2020, clinicians and beneficiaries supported continued access to telehealth visits with some combination of in-person visits. They cited benefits of telehealth, including improved access to care for those with physical impairments, increased convenience from not traveling to an office, and increased access to specialists outside of a local area. In their annual beneficiary survey, over 90 percent of respondents who had a telehealth visit reported being “somewhat” or “very satisfied” with their video or audio visit, and nearly two-thirds reported being “very satisfied.”

Widespread use of telecommunications technology to furnish services during the PHE has illustrated interest within the medical community and among Medicare beneficiaries in furnishing and receiving care through the use of technology beyond the PHE. During the PHE for COVID–19 pandemic, RHCs and FQHCs, much like other provider types, have had to change how they furnish care in order to meet the needs of their patients, and use of the temporary authority to bill Medicare for PFS telehealth services has been widely utilized by RHCs and FQHCs during the PHE. This shift in how care is furnished has prompted us to reevaluate the regulations regarding visit requirements for encounters between an RHC or FQHC patient and an RHC or FQHC practitioner to ensure that they reflect contemporary medical practice.

Recently enacted legislation modified the circumstances under which Medicare makes payment for mental health services furnished via telehealth technology under the PFS following the PHE. Division CC, section 123 of the Consolidated Appropriations Act of 2021 (CAA) (Pub. L. 116–260, December 27, 2020) removed the domestic geographic originating site restrictions and added the home of the individual as a permissible originating site for telehealth services billed under the PFS when furnished for the purposes of diagnosis, evaluation, or treatment of a mental health disorder. This change correlates with a growing acceptance of the use of technology in the provision of mental health care. Clinicians furnishing telepsychiatry services at Massachusetts General Hospital Department of Psychiatry during the PHE observed several advantages of the virtual format for furnishing psychiatric services, noting that patients with psychiatric pathologies that interfere with their ability to leave home (for example, immobilizing depression,
anxiety, agoraphobia, and/or time-consuming obsessive-compulsive rituals) were able to access care more consistently since eliminating the need to travel to a psychiatry clinic can increase privacy, and therefore, decrease stigma-related barriers to treatment, potentially bringing care to many more patients in need, as well as enhanced ease of scheduling, decreased rate of no-shows, increased understanding of family and home dynamics, and protection for patients and practitioners with underlying health conditions.63

These findings are consistent with our analysis of Medicare claims data that indicate that use of interactive communication technology for mental health care is likely to continue to be in broad use beyond the circumstances of the pandemic. According to our analysis of Medicare Part B claims data for services furnished via Medicare telehealth under the PFS during the PHE, use of telehealth for many professional services spiked in utilization around April 2020 and diminished over time; however, utilization was still higher than it was prior to the PHE. In contrast, Medicare claims data suggests that for mental health services both permanently and temporarily added to the Medicare Telehealth list, subsequent to April 2020, the trend is toward maintaining a steady state of usage over time. Given this information, broad acceptance in the public and medical community, and the relatively stable Medicare utilization of services during the entire COVID–19 pandemic, we believe use of interactive communication technology in furnishing mental health care is becoming an established part of medical practice, very likely to persist well after the COVID–19 pandemic, and available across the country under Medicare statute for the range of professionals furnishing mental health care and paid under the PFS.

c. Revising the Definition of an RHC and FQHC Mental Health Visit

We believe beneficiaries receiving mental health services from RHC and FQHC practitioners should have the same access to mental health care delivered via telecommunications technology as beneficiaries receiving services from practitioners paid under the PFS. We also believe that disruptions in access to mental health care from trusted practitioners can be particularly problematic for Medicare beneficiaries, especially when it results in fragmented care. However, absent changes in the definition of mental health visits, RHCs and FQHCs would no longer be paid by Medicare for mental health care services delivered via telecommunications technology and would likely resume furnishing solely in-person, face-to-face mental health visits after the PHE, thereby removing the ability for beneficiaries to be able to receive these services from RHC/FQHC practitioners if furnished via interactive communication technology.

Because the definitions of RHC and FQHC services, as specified in sections 1861(aa)(1) and (3) of the Act, respectively, refer specifically to physicians’ services, and services that would be physicians’ services, but are instead furnished by certain other types of practitioners, we believe it would be consistent to align policies to provide access to services furnished by RHCs and FQHCs similar to PFS services, where appropriate and within statutory requirements. To ensure that beneficiaries can access services furnished by RHCs and FQHCs in a manner similar to mental health services under the PFS after the PHE, we believe it is appropriate to consider modifying our regulatory definition of a mental health visit to provide for remote access to RHC and FQHC services. Therefore, to avoid both the inequities in access to modes of care, and to avoid potentially problematic interruptions to care or the negative consequences of fragmented care, for CY 2022, we are proposing to revise the regulatory requirement that an RHC or FQHC mental health visit must be a face-to-face (that is, in person) encounter between an RHC or FQHC patient and an RHC or FQHC practitioner to also include encounters furnished through interactive, real-time telecommunications technology, but only when furnishing services for the purposes of diagnosis, evaluation, or treatment of a mental health disorder. Additionally, similar to the discussion of proposals for mental health services furnished under the PFS, as described in section II.D. of this proposed rule, we believe that mental health telehealth services furnished via audio-only communications technology would increase access to care, especially in areas with poor broadband infrastructure and among patient populations that either are not capable of, or do not consent to, the use of devices that permit a two-way, audio/video interaction. Therefore, in order to align with proposals related to use of audio-only telecommunications technology to furnish similar mental health services under the PFS, we are proposing to allow RHCs and FQHCs to furnish mental health visits using audio-only interactions in cases where beneficiaries are not capable of, or do not consent to, the use of devices that permit a two-way, audio/video interaction. We note that the decision related to a service being furnished via telecommunications technology should be a patient-centered choice and that providers/practitioners should not force or impose services being furnished via telecommunications technology on beneficiaries who prefer to receive the services in-person. Additionally, some patients may prefer a hybrid whereby some mental health services are in person, but other times they are done using telecommunications technology. We believe that this decision should be based on the clinical judgment of the practitioner, in consideration of patient needs and preferences.

This proposed change would allow RHCs and FQHCs to report and be paid for mental health visits furnished via real-time, telecommunication technology in the same way they currently do when these services are furnished in-person. This proposed expansion of payable modes of mental health services furnished by RHCs and FQHCs corresponds with the expanded availability for professionals paid for Medicare Telehealth services under the PFS authorized by section 123 of the CAA and using the technology available for use for corollary services when paid under the PFS. This proposed revision would not allow RHCs or FQHCs to report visits furnished using asynchronous communications like email exchanges. Rather, RHCs and FQHCs would continue to report and be paid for furnishing medically necessary virtual communications services in accordance with the requirements for HCPCS code G0071 (83 FR 59686). Also, this proposed change would not allow RHCs and FQHCs to report Medicare telehealth services under section 1834(m) of the Act or be paid under the PFS since RHCs and FQHCs are not authorized to serve as distant site practitioners for Medicare telehealth services once the PHE for the COVID–19 pandemic has been terminated. In order to track utilization of mental health visits furnished using communication technology, we are proposing that RHCs and FQHCs would append the 95 modifier (Synchronous Telemedicine Service Rendered via Real-Time Interactive Audio and Video Telecommunications System) in instances where the service was furnished using audio/video communication technology or a new

63 https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7347331/
service level modifier in cases where the service was furnished audio-only.

Additionally, we note that section 123 of the CAA also requires that there be an in-person service within 6 months prior to the furnishing of the telehealth service and at intervals thereafter as specified by the Secretary for mental health services furnished via Medicare telehealth under the PFS. We are seeking comment on whether we should consider a similar requirement for mental health services furnished by RHCs and FQHCs via telecommunications technology, or whether this requirement may be especially burdensome for beneficiaries receiving treatment at RHCs and FQHCs, particularly in rural areas. If we were to establish a similar requirement for RHC and FQHC mental health services, we could consider the proposal for Medicare telehealth services described in section II.D. of this proposed rule that there be an in-person service within 6 months prior to the furnishing of the telecommunications service and that an in-person service (without the use of telecommunications technology) be provided at least every 6 months while the beneficiary is receiving services furnished via telecommunications technology for diagnosis, evaluation, or treatment of mental health disorders, which would be documented in the patient’s medical record, or whether we should defer to the clinical judgment of the practitioner on how often an in-person visit would be appropriate.

d. Regulatory Changes

We are proposing to revise the regulation at §405.2463, to revise paragraph (a)(1)(i) to state that a mental health visit is a face-to-face (that is, in person) encounter (or, for mental health visits only, an encounter that meets the requirements under paragraph (b)(3)) between an RHC patient and an RHC practitioner. We are proposing to revise paragraph (b)(3) to define a mental health visit as a face-to-face encounter or an encounter where services are furnished using interactive, real-time, audio and video telecommunications technology or audio-only interactions in cases where beneficiaries are not capable of, or do not consent to, the use of devices that permit a two-way, audio/video interaction for the purposes of diagnosis, evaluation or treatment of a mental health disorder. We are also proposing to revise §405.2469, FQHC supplemental payments, to revise paragraph (d) by adding that a supplemental payment required under this section is made to the FQHC when a covered face-to-face (that is, in-person) encounter or an encounter where services are furnished using interactive, real-time, telecommunications technology or audio-only interactions in cases where beneficiaries do not wish to use or do not have access to devices that permit a two-way, audio/video interaction for the purposes of diagnosis, evaluation or treatment of a mental health disorder occurs between a MA enrollee and a practitioner as set forth in §405.2463.

C. Federally Qualified Health Centers (FQHCs) Payment for Tribal FQHCs—Comment Solicitation

1. Health Services to American Indians and Alaska Natives (AI/AN)

There is a special government-to-government relationship between the federal government and federally recognized tribes based on U.S. treaties, laws, Supreme Court decisions, Executive Orders and the U.S. Constitution. This government-to-government relationship forms the basis for federal health services to American Indians/Alaska Natives (AI/AN) in the U.S. In 1976, the Indian Health Care Improvement Act (IHCIA) (Pub. L. 94–437, September 30, 1976) amended the statute to permit payment by Medicare and Medicaid for services provided to AI/ANs in Indian Health Service (IHS) and tribal health care facilities that meet the applicable requirements. Under this authority, Medicare services to AI/ANs may be furnished by IHS operated facilities and programs and tribally-operated facilities and programs under Title I or Title V of the Indian Self Determination Education Assistance Act, as amended (ISDEAA) (Pub. L. 93–638, January 4, 1975). According to the IHS Profile, the IHS healthcare delivery system currently consists of 46 hospitals, with 24 of those hospitals operated by the IHS and 22 of them operated by tribes under the ISDEAA, as well as 492 health centers, 75 operated by IHS and 417 operated by tribes under the ISDEAA.

Payment rates for outpatient medical care (also referred to as outpatient hospital services) furnished by the IHS and tribal facilities is set annually by the IHS under the authority of sections 321(a) and 322(b) of the Public Health Service Act (the PHS Act) (42 U.S.C. 248 and 249(b)) (Pub. L. 83–568 (42 U.S.C. 2001(a)), and the IHCIA, based on the previous year cost reports from federal and tribal hospitals. The IHCIA provided the authority for CMS (then HCFA) to pay IHS and tribal facilities for its outpatient hospital services to Medicare eligible patients, using an outpatient per visit rate (also referred to as the Medicare all-inclusive payment rate (AIR)).

2. Federally Qualified Health Centers (FQHCs) Prospective Payment System (PPS)

FQHCs were established in 1990 by section 4161 of the Omnibus Budget Reconciliation Act of 1990 (OBRA 90) (Pub. L. 101–508, November 5, 1990), and were effective beginning on October 1, 1991. They are facilities that furnish services that are typically furnished in an outpatient clinic setting. There are many FQHCs operated by IHS and tribes. The statutory requirements that FQHCs must meet to furnish services to Medicare beneficiaries are in section 1861(aa)(4) of the Act. All FQHCs are subject to Medicare regulations at 42 CFR part 405, subpart X, and 42 CFR part 491. Based on these provisions, the following three types of organizations that are eligible to enroll in Medicare as FQHCs:

• Health Center Program grantees: Organizations receiving grants under section 330 of the PHS Act (42 U.S.C. 254b).

• Health Center Program “lookalikes”: Organizations that have been identified by the Health Resources and Services Administration as meeting the requirements to receive a grant under section 330 of the PHS Act, but which do not receive section 330 grant funding.

• Outpatient health programs or facilities operated by a Tribe or tribal organization under the ISDEAA, or by an urban Indian organization receiving funds under Title V of the IHCIA.

FQHCs are also entities that were treated by the Secretary, for purposes of Medicare Part B, as a comprehensive federally funded health center as of January 1, 1990 (see section 1861(aa)(4)(C) of the Act). Section 1834 of the Act was amended in 2010 by section 10501(i)(3)(A) of the Affordable Care Act by adding a new subsection (o), “Development and Implementation of Prospective Payment System” for FQHCs. Section 1834(o)(1)(A) of the Act requires that the system include a process for appropriately describing the services furnished by FQHCs, and establish payment rates based on such descriptions of services, taking into account the type, intensity, and duration of services furnished by FQHCs. It also stated that the new system may include adjustments (such as geographic adjustments) as determined appropriate by the Secretary. Section 1833(a)(1)(Z) of the Act, as added by the Affordable Care

https://www.ihs.gov/newsroom/factsheets/ihspdfs/
Act, requires that Medicare payment for FQHC services under section 1834(o) of the Act be 80 percent of the lesser of the actual charge or the PPS amount determined under section 1834(o) of the Act.

In accordance with the requirements in the statute, as amended by the Affordable Care Act, beginning on October 1, 2014, payment to FQHCs is based on the lesser of the national encounter-based FQHC PPS rate, or the FQHC’s total charges, for primary health services and qualified preventive health services furnished to Medicare beneficiaries. The FQHC PPS rate is adjusted by the FQHC geographic adjustment factor (GAF), which is based on the Geographic Practice Cost Index used under the PFS. The FQHC PPS rate is also adjusted when the FQHC furnishes services to a patient that is new to the FQHC, and when the FQHC furnishes an IPPE or an AWV. Payment to the FQHC for a Medicare visit is the lesser of the FQHC’s charges (as established by the G-code), or the PPS rate. The CY 2021 FQHC PPS rate is $176.45.

3. Grandfathered Tribal FQHCs

In the November 16, 2015 Federal Register, we published a final rule, entitled “Medicare Program; Revisions to Payment Policies Under the Physician Fee Schedule and Other Revisions to Part B for CY 2016 (referred to as CY 2016 PFS final rule). In that rule, we discuss the payment methodology and requirements finalized for grandfathered tribal FQHCs (80 FR 71089 through 71096). We stated that tribal facilities that met the conditions of §413.65(m) on or before April 7, 2000, had a change in their status on or after April 7, 2000, from IHS to tribal operation, or vice versa, or the realignment of a facility from one IHS or tribal hospital to another IHS or tribal hospital, such that the organization no longer met the Medicare Conditions of Participation (CoPs) for Medicare-participating hospitals at §482.12, the “governing body” of the facility could nevertheless seek to become certified as a grandfathered tribal FQHC.

In CY 2016 PFS final rule, we explained that a different structure was needed to maintain access to care for AI/AN populations served by the hospitals and clinics impacted by the provider-based rules at §413.65, while also ensuring that the tribal clinics are in compliance with our health and safety rules. We recognized that a tribal clinic billing under an IHS hospital’s CMS Certification Number (CCN), without any additional administrative or clinical relationship with the IHS hospital, could put that hospital at risk for noncompliance with their CoPs because the clinic had a separate governing body although still provider-based. We explained that the FQHC program provided an alternative structure that met the needs of these tribal clinics and the populations they served, while also ensuring the IHS hospitals were not at risk of being cited for non-compliance with the requirements with their CoPs (80 FR 71090).

As stated in §405.2462(d)(1) a “grandfathered tribal FQHC” is a FQHC that is operated by a tribe or tribal organization under the ISDEAA; was billing as if it were provider-based to an IHS hospital on or before April 7, 2000 and is not currently operating as a provider-based department of an IHS hospital. We refer to these tribal FQHCs as “grandfathered tribal FQHCs” to distinguish them from freestanding tribal FQHCs that are currently being paid the lesser of their charges or the adjusted national FQHC PPS rate, and from provider-based tribal clinics that may have begun operations subsequent to April 7, 2000. There are 7 “grandfathered tribal FQHCs”.

Under the authority in section 1834(o) of the Act to include adjustments determined appropriate by the Secretary, we revised §§405.2462 and 405.2464 to pay these grandfathered tribal FQHCs on the Medicare outpatient per visit rate as set annually by the IHS, that is, the AIR and not the FQHC PPS payment rates (80 FR 71089). Payment rates for outpatient medical care (also referred to as outpatient hospital services) furnished by the IHS and tribal facilities is set annually by the IHS under the authority of sections 321(a) and 322(b) of the Public Health Service Act (the PHS Act) (42 U.S.C. 248 and 249(b)) (Pub. L. 83–568 (42 U.S.C. 2001(a)), and the IHCIA, based on the previous year cost reports from federal and tribal hospitals. The outpatient per visit rate is only applicable for those IHS or tribal facilities that meet the definition of a provider-based department as described at §413.65(m), or a “grandfathered” tribal FQHC as described at §405.2462(d)(1). There is an outpatient per visit AIR for Medicare visits in Alaska and a separate outpatient per visit AIR for Medicare visits in the lower 48 states. For CY 2021, the outpatient per visit rate for Medicare visits in Alaska is $862 and $414 in the lower 48 states (85 FR 80940). There are no grandfathered tribal FQHCs in Alaska because the tribes own and operate the hospital, not IHS. We note that IHS does not operate any hospitals or facilities in Hawaii or the territories, and thus no rates are set, in those localities.

As we discussed in CY 2016 PFS final rule, the payment rate is not adjusted by the FQHC GAF; for new patients, annual wellness visits, or initial preventive physical examinations; or annually by the FQHC PPS market basket, as further adjustments would be unnecessary and/or duplicative of adjustments already made by IHS in deriving the rate. Comparatively, the FQHC PPS rate established by CMS is $176.45. The reimbursement is the lesser of the charges or the IHS AIR rate. We stated as part of the CY 2016 PFS final rule that we would monitor future costs and claims data of these tribal clinics and reconsider options as appropriate.

4. Paying all IHS- and Tribally-Operated Outpatient Clinics the AIR

CMS established a Tribal Technical Advisory Group (TTAG) in 2004 to provide advice and input to CMS on policy and program issues impacting AI/AN populations served by CMS programs. Although not a substitute for formal consultation with Tribal leaders, the TTAG enhances the government-to-government relationship and improves increased understanding between CMS and Tribes. The TTAG has subject specific subcommittees that meet on a regular basis in order to be more effective and perform in-depth analysis of Medicare, Medicaid, CHIP, and the Health Insurance Marketplace policies that have Tribal implications. The TTAG is comprised of 17 representatives: An elected Tribal leader, or an appointed representative from each of the 12 geographic areas of the IHS delivery system and a representative from each of the national Indian organizations headquartered in Washington DC—the National Indian Health Board, the National Congress of American Indians, and the TribalSelf-Governance Advisory Group. The American Recovery and Reinvestment Act of 2009 section 5006(e)(1), which became effective July 1, 2009, mandates that TTAG shall be maintained within CMS and added two new representative’s positions: A representative and alternate from a national urban Indian health organization (National Council of Urban Indian Health) and a representative and alternate from the IHS.

The TTAG has requested65 that CMS amend its Medicare regulations to make all IHS and tribally-operated outpatient

facilities eligible for payment at the IHS Medicare outpatient per visit rate/AIR. The TTAG explained that outpatient clinics, which are otherwise similar to grandfathered tribal FQHCs, are paid at different rates depending upon whether they meet the requirements as a “provider based facility,” a “grandfathered tribal FQHC,” or none of the above. They believe that the rates vary based on the Medicare regulatory definition, rather than the actual costs of the outpatient clinic. There are varying payment differentials among Medicare enrolled providers and suppliers under the authorities of the SSA. For example, Ambulatory Surgical Centers are paid differently than hospital outpatient departments; which are paid differently whether they’re under the outpatient prospective payments system or a located in a critical access hospital.

The TTAG also questioned the need for grandfathered tribal FQHCs to file cost reports. Specifically, the TTAG stated that the FQHC cost reports have no relationship to the IHS Medicare outpatient per visit rate/AIR paid to grandfathered tribal FQHCs, as they use hospital cost reports in setting the rate. Therefore, they stated, the FQHCs should only need to file a cost report to the extent necessary to support payment for non-FQHC services that are reimbursed outside the Medicare outpatient per visit rate/AIR.

We note that under section 1815(a) of the Act, providers participating in the Medicare program are required to submit financial and statistical information to achieve settlement of costs relating to health care services rendered to Medicare beneficiaries. Under the FQHC PPS, Medicare payment for FQHC services is the lesser of the FQHC PPS rate or the charges on the claim. In the establishment of the FQHC PPS, the statute does not exempt FQHCs from submitting cost reports. In addition, Medicare payments for the reasonable costs of the influenza and pneumococcal vaccines and their administration, allowable graduate medical education costs, and bad debts are determined and paid through the cost report. The FQHC market basket also uses information from the FQHC cost report to determine the cost share weights, which reflect the relative costs of input expenses that FQHCs face in order to provide FQHC services. Having a full picture of the costs of providing care by grandfathered FQHCs is important so that CMS can be sure that payments are adequate.

5. Comment Solicitation

We appreciate the TTAG’s concerns with ensuring that CMS make appropriate payments among the clinics for similar services and the impact this has on tribal Medicare beneficiaries and ensuring that access to healthcare is available and equitable and we take these concerns seriously. However, we have insufficient information necessary to evaluate the costs and benefits of potential changes to these policies. Therefore, we would like to solicit comment on the TTAG’s request for CMS to amend its Medicare regulations to make all IHS- and tribally-operated outpatient facilities/clinics eligible for payment at the Medicare outpatient per visit rate/AIR, regardless of whether they were owned, operated, or leased by IHS.

We seek information on the kinds of and number of facilities or clinics that could potentially enroll in Medicare as an FQHC, or are already an FQHC paid under the Medicare outpatient PPS, and if these clinics are freestanding or provider-based to expand on information provided by the IHS Profile. We seek information regarding the relative operating costs of IHS- and tribally-operated outpatient clinics compared to non-tribal FQHCs, stakeholder feedback and supporting evidence to address whether or why payment set at the IHS AIR would be more appropriate than payment rate under the FQHC PPS. Further, we seek comment on how the IHS AIR, which is based upon a limited number of hospital cost reports, relates to costs in such clinics and the kinds of services that the clinics furnish. Finally, we seek comment on the concerns that the AI/AN community may have on issues regarding access or inequity care in situations where a payment differential exists.

While, we have information on grandfathered tribal FQHCs and the outpatient hospital cost reports, we do not have any information specific to the composition of IHS and tribal facilities. For example, if the facility is not enrolled in Medicare as an FQHC or is not provider based to a hospital, is it a physician practice? It would be helpful to know how the facilities are organized and related. Are there other options for enrolling as different types of providers or suppliers?

As increasing the rate would increase payments from the Medicare Trust Fund, we are also seeking comment on the magnitude of that payment change and whether any program integrity concerns would be present with the increased payment. We also request comments on FQHC services that are paid through the cost report, like influenza, pneumococcal, and COVID-19 vaccinations and GME and how that impacts the request to not file cost reports. As stated above, having a full picture of the costs of providing care is important so that CMS can be sure that payments are adequate. Are these services included in the IHS/AIR?

We are also seeking input on other potential uses of the adjustment authority under section 1834(o)(1)(A) of the Act which provides that the FQHC PPS may include adjustments determined appropriate by the Secretary. For example, we could consider TTAG’s request on the expansion of the payment policy finalized in the CY 2016 PFS final rule for grandfathered tribal FQHCs to all Tribally-operated outpatient clinics. Alternatively, we could develop a payment adjustment applicable to IHS- and tribally-operated outpatient clinics based on the cost differential reported in their cost reports when compared to non-IHS outpatient clinics, or non-provider-based clinics. If such differentials exist and would be interested in specific comments about appropriate adjustments to the FQHC PPS rate for clinics that are enrolled as FQHCs. We seek comment on other potential ways to determine whether the costs associated with furnishing services to AI/AN are uniquely greater than other clinics within the confines of the FQHC PPS outlined in section 1834(o)(1) of the Act.

D. Requiring Certain Manufacturers To Report Drug Pricing Information for Part B and Determination of ASP for Certain Self-Administered Drug Products

1. Requiring Certain Manufacturers To Report Drug Pricing Information for Part B (§§ 414.802 and 414.806)

a. Overview and Summary

Section 1927(b)(3)(A)(i)(I) of the Act requires manufacturers with a Medicaid drug rebate agreement to report Average Sales Price (ASP) data as specified in section 1847A of the Act. Some manufacturers without Medicaid drug rebate agreements voluntarily submit ASP data for their single source drugs or biologicals that are payable under Part B; however, other manufacturers without Medicaid drug rebate agreements do not voluntarily submit such data. Without manufacturer reported ASP data, CMS cannot calculate the ASP payment limit, and consequently, payment is typically based on Wholesale Acquisition Cost (WAC). Consistent with section 1847A(c)(3) of the Act and our regulations at
§ 414.804(a)(2), the ASP is net of price concessions. However, consistent with the definition of WAC at section 1847A(c)(6)(B) of the Act, the WAC is not net of price concessions, and thus, is nearly always, and sometimes, significantly higher than ASP. Drugs with payment allowances based on WAC may have greater “spreads” between acquisition costs and payment than drugs for which there is an ASP-based payment allowance, which, in turn, may: (1) Incent the use of the drug based on its spread rather than on purely clinical or cost considerations; (2) result in increased payments under Medicare Part B; and (3) increase beneficiary cost sharing.

Section 401 of Division CC, Title IV of the CAA, 2021 (for the purposes of this section of this proposed rule, hereinafter is referred to as “section 401”) amended section 1847A of the Act to add new section 1847A(f)(2) of the Act, which requires manufacturers without a Medicaid drug rebate agreement to report ASP information to CMS for calendar quarters beginning on January 1, 2022, for drugs or biologicals payable under Medicare Part B and described in sections 1842(o)(1)(C), (E), or (G) or 1881(b)(14)(B) of the Act, including items, services, supplies, and products that are payable under Part B as a drug or biological. Section 401(b)(2) also amended section 1847A(c)(6)(A) of the Act to permit the Secretary to exclude repackagers66 from the definition of “manufacturer” for purposes of the ASP reporting requirement at section 1847A(f)(2) of the Act, if the Secretary determines appropriate.

Section 401(b)(1) also adds provisions to section 1847A of the Act addressing confidentiality, audit and verification provisions; civil money penalties for misrepresentation, late reporting, and reporting of false information; and increasing oversight and enforcement provisions. These provisions largely track the statutory provisions in section 1927(b) of the Act that apply to the reporting of ASP by manufacturers with Medicaid drug rebate agreements. Additionally, section 401(d) requires HHS Office of the Inspector General (OIG) to submit a report on the accuracy of ASP submissions to Congress by January 1, 2023.

Finally, section 401 amended section 1927(b) of the Act to clarify that for Part B ASP reporting, drugs would include items, services, supplies, and products that are payable under Medicare Part B as a drug or biological.

We are proposing regulatory changes to implement the new reporting requirements at 42 CFR, part 414, subpart J.

b. Reporting Requirements for Manufacturers Without a Medicaid Drug Rebate Agreement

Starting with calendar quarters beginning on January 1, 2022, manufacturers will be required to report ASP for drugs and biologicals payable under Medicare Part B consistent with the statutory requirements of section 1847A(f) of the Act, regardless of whether they have Medicaid drug rebate agreements. Our existing regulations at 42 CFR part 414, subpart J implement the ASP reporting requirements referenced in section 1847A(f)(1) of the Act, that is, the requirements of section 1927(b)(3) of the Act. Thus, the existing regulations at 42 CFR part 414, subpart J already set forth requirements for manufacturers with Medicaid drug rebate agreements to report their ASP information (and if required to make payment, WAC) each quarter. Many manufacturers without Medicaid drug rebate agreements voluntarily submit ASP data consistent with these requirements. Whether obligated to report or voluntarily reporting, manufacturers are accustomed to the existing regulatory requirements at 42 CFR part 414 subpart J, and indeed, the methodology for reporting ASP reflected in these regulations does not currently distinguish between manufacturers with Medicaid drug rebate agreements and those without these agreements.

Because new section 1847A(f)(2) of the Act, as noted previously, largely parallels section 1927(b)(3) of the Act, and thus both manufacturers with Medicaid drug rebate agreements, as well as those without such agreements, will be subject to the requirements already reflected in the existing regulations at subpart J, we do not believe it is necessary to propose substantial changes to the regulation text. For these reasons, our proposal to amend the regulations to reflect the new requirements of section 1847A(f)(2) of the Act seeks to preserve the status quo to the extent possible.

c. Definitions

As noted previously, the new section 1847A(f)(2) of the Act, as added by section 401(a), requires manufacturers without a Medicaid drug rebate agreement to report ASP information to CMS for calendar quarters beginning on January 1, 2022 for drugs or biologicals payable under Medicare Part B and described in sections 1842(o)(1)(C), (E), or (G) or 1881(b)(14)(B) of the Act, including items, services, supplies, and products that are payable under Part B as a drug or biological. Section 401 also made a conforming amendment to the ASP reporting requirements applicable to manufacturers with Medicaid drug rebate agreements at section 1927(b)(3)(A)(iii) of the Act to specify that those reporting requirements also apply to items, services, supplies, and products that are payable under Part B as a drug or biological.

To implement this change, we propose to amend the definition of the term “drug” at § 414.802 to mean a drug or biological, and includes an item, service, supply, or product that is payable under Medicare Part B.

Section 1847A(c)(6)(A) of the Act incorporates the definition of manufacturer at section 1927(k)(5) of the Act, except that section 401(b)(2) permits the Secretary to exempt repackagers from the definition of manufacturer, as determined appropriate, for purposes of section 1847A(f)(2) of the Act. However, no such exemption is provided for manufacturers with Medicaid drug rebate agreements (see the definition of manufacturer at § 447.502).

Consequently, the current ASP data reporting includes submissions by repackagers.

To confirm the Medicare Payment Advisory Commission’s (MedPAC’s) assertion in their June 2017 report (available at http://medpac.gov/docs/default-source/reports/jun17_ch2.pdf) that many repackagers currently do not report ASP data, and thus inform our consideration of whether we should propose to exclude repackagers from the definition of manufacturers for purposes of section 1847A(f)(2) of the Act, we conducted an analysis to estimate the proportion of repackaged products in our existing ASP data. If our existing ASP data do not contain an appreciable

---

66 The FDA has defined “repackaging,” for purposes of drug establishment registration, as “the act of taking a finished drug product or unfinished drug from the container in which it was placed in commercial distribution and placing it into a different container without manipulating, changing, or affecting the composition or formulation of the drug.” 21 CFR 207.1. The FDA has defined “repackager” for purposes of drug establishment registration as the person who owns or operates an establishment that repacks a drug or drug package. Id. For more information about repackaging, please see FDA guidance documents, including a January 2017 Guidance for Industry titled, “Repackaging of Certain Human Drug Products by Pharmacies and Outsourcing Facilities,” available at https://www.fda.gov/media/90978/download and the FDA’s January 2018 Guidance for Industry titled, “Mixing, Diluting, or Repackaging Biological Products Outside the Scope of an Approved Biological License Application,” available at https://www.fda.gov/files/drugs/published/Mixing-Diluting-or-Repackaging-Biological-Products-Outside-the-Scope-of-an-Approved-Biological-License-Application.pdf.
proportion of repackaged products, it may be appropriate to exclude repackagers from the definition of manufacturer for this limited purpose. However, if repackaged products comprise an appreciable proportion of our existing ASP data, we would reasonably anticipate this trend to follow under the new requirements, and in such a scenario, it would not be appropriate to exclude repackagers from the definition of manufacturer for purposes of section 1847A(f)(2) of the Act because excluding their sales could distort the ASP.67

To effectuate this analysis, we obtained a list of National Drug Codes (NDCs) of repackaged drugs from the United States Food and Drug Administration (FDA).68 We also obtained a list of labeler codes for which the manufacturers have Medicaid drug rebate agreements.68 We then performed a crosswalk both of these to our composite file of ASP data submissions to segregate our composite file of ASP data submissions into four categories: (1) Repackaged products for which ASP data submissions were required (that is, manufacturers with Medicaid drug rebate agreements); (2) Repackaged products for which ASP data submissions were voluntary (that is, for manufacturers without Medicaid drug rebate agreements); (3) Non-repackaged products for which ASP data submissions were required; and (4) Non-repackaged products for which ASP data submissions were voluntary.

We estimate that, of all 6319 products for which we currently receive ASP data submissions (the sum of categories (1)–(4) above), repackaged products accounted for 271 (4.29 percent) of these products. Additionally, repackaged products accounted for 137 (2.51 percent of) products for which ASP data submissions were required, and 134 (15.23 percent of) products for which ASP data were voluntarily submitted.

Additionally, we conducted another analysis to estimate: (1) The number of new ASP submissions we can expect as a result of the new requirements under section 401; and (2) the proportion of those submissions that involve repackaged products. To effectuate this analysis, we obtained a crosswalk of NDCs and Healthcare Common Procedure Coding System (HCPCS) codes that includes the NDCs and HCPCS codes of items for which ASP reporting is not currently required.69 We supplemented this crosswalk by adding HCPCS codes with NDCs that are payable under Part B, but not already reflected in the crosswalk.70 We then identified and removed from the crosswalk all of the products contained in our composite file of ASP data submissions and those HCPCS codes that are non-covered under Medicare Part B. Adding the results of this analysis to the results of categories two and four from the prior analysis (that is, repackaged and non-repackaged products for which ASP submissions were voluntary), we estimate there will be 6994 total products for which manufacturers will now be required to submit ASP data. We then compared this number to the FDA’s list of repackaged products in the previous analysis, and found that of the 6994 products for which manufacturers will be required to submit ASP data, 223 (3.19 percent) are repackaged products.

Furthermore, we estimate 6114 products for which their manufacturers did not previously (voluntarily) submit ASP data and will now be required to do so under the new reporting requirements of section 401. Of these, 89 (1.46 percent) are repackaged products. These data do not persuade us that it is necessary to exempt repackagers from the new reporting requirements under section 401 at this time. Our current operational process to verify the accuracy of manufacturers’ reported ASP data does not distinguish: (1) Products on the basis of repackaging, and (2) manufacturers who are required to report ASP data from those who do so voluntarily.

Each month, CMS reviews ASP data submissions at the NDC level (and for products without NDCs, the manufacturer’s product code). Previously, we would not require manufacturers to identify which products are repackaged as part of these submissions. Exempting repackagers from the new requirements of section 1847A(f)(2) of the Act would significantly increase our administrative burden because we would have to undergo an additional quality check for each NDC from a different database for which data are submitted as part of our operational process to verify the accuracy of manufacturers’ reported ASP data. Moreover, for products without NDCs, our ability to determine if these products are repackaged (without manufacturer attestation) to that effect is significantly limited. Finally, any such attestation would require a data source for us to verify the accuracy of the attestation, and no such data source currently exists.

These additional checks could, in turn, significantly increase the time it takes for us to calculate and display on our website the volume-weighted ASP payment limits. Additionally, we are concerned that exempting repackagers from the new reporting requirements could lead to a gap in ASP reporting, meaning that ASPs could be distorted to the extent that certain sales are carved out of the reporting requirement through the use of repackagers. Consequently, in order to maintain consistency and integrity of the ASP data for those manufacturers with and without Medicaid drug rebate agreements, we do not believe it is appropriate to exclude repackagers from the requirements of section 401 at this time. However, we may propose to exempt repackagers in the future, if warranted.

We solicit comment on this approach. In summary, we propose to modify the definition of drug at § 414.802 to include any item, service, supply or product that is payable under Part B as a drug or biological. We are not proposing to exclude repackagers from the definition of manufacturer for purposes of the reporting requirements at section 1847A(f)(2) of the Act.

d. Civil Money Penalties

As amended by section 401(b), section 1847A(d)(4)(A) of the Act specifies the penalties associated with misrepresentations in the reporting of the manufacturer’s ASP for a drug or biological. Consistent with our existing regulation at § 414.806, if the Secretary determines that a manufacturer has made a misrepresentation in the reporting of ASP data, a civil money penalty in an amount of up to $10,000 may be applied for each price misrepresentation and for each day in which the price misrepresentation was applied.

New sections 1847A(d)(4)(B) and (C) of the Act, as added by section 401(b),
apply civil money penalties for failure to report timely and accurate ASP data for manufacturers without Medicaid drug rebate agreements, consistent with the civil money penalties found at sections 1927(b)(3)(C)(i) and (ii) of the Act for manufacturers with Medicaid drug rebate agreements. Our current regulations at § 414.806 refer to section 1927(b)(3)(C) of the Act, as amended by section 303(i)(4) of the Medicare Prescription Drug, Improvement, and Modernization Act (MMA) of 2003 (Pub. L. 108–173, December 8, 2003), as specifying the penalties associated with a manufacturer’s failure to submit timely information or the submission of false information.

We propose to amend § 414.806 to reflect the new provisions specifying penalties for manufacturers without Medicaid drug rebate agreements and to provide some technical changes to streamline the regulations text. Specifically, we propose to do the following:

• Add paragraph (a), labeled as “Misrepresentation”, moving the existing regulatory language at § 414.806 specific to misrepresentation to this paragraph;

• Remove the sentence which reads, “If the Secretary determines that a manufacturer has made a misrepresentation in the reporting of ASP data, a civil money penalty in an amount of up to $10,000 may be applied for each price misrepresentation and for each day in which the price misrepresentation was applied,” since the previous sentence in the regulations text already references the statutory provision for this language;

• Add paragraph (b), labeled as “Failure to provide timely information or the submission of false information”;

• Add paragraph (b)(1) to clarify that the existing language at § 414.806 regarding civil money penalties for failure to submit timely information or for the submission of false information applies to manufacturers with a Medicaid drug rebate agreement;

• Remove the phrase “as amended by section 303(i)(4) of the MMA”; and

• Add paragraph (b)(2) to reflect new sections 1847A(d)(4)(B) and (C) of the Act regarding civil money penalties for failure to submit timely information or for the submission of false information for manufacturers without a Medicaid drug rebate agreement.

We welcome comments on these proposals.

e. Summary of all Proposals

In summary, to implement the new reporting requirements for manufacturers without Medicaid drug rebate agreements, we are proposing to modify:

• The definition of drug at § 414.802; and

• The regulations describing civil money penalties at § 414.806.

We welcome comments on these proposals.

2. Determination of ASP for Certain Self-Administered Drug Products (§ 414.904)

a. Background

Drugs and biologicals payable under Medicare Part B fall into three general categories: those furnished incident to a physician’s services (hereinafter referred to as “incident to” (section 1861(s)(2) of the Act), those administered via a covered item of durable medical equipment (DME) (section 1861(s)(6) of the Act), and others as specified by statute (for example, certain vaccines described in sections 1861(10)(A) and (B) of the Act). Payment limits for most drugs and biologicals separately payable under Medicare Part B are determined using the methodology in section 1847A of the Act, and in many cases, payment is based on the Average Sales Price (ASP) plus a statutorily mandated 6 percent add-on. Most drugs payable under Part B are paid under the “incident to” benefit under section 1861(s)(2) of the Act, which includes drugs and biologicals not usually self-administered by the patient.

Paragraphs (4)(A) and (6) of sections 1847A(b) of the Act require that the Medicare Part B payment amount for a single-source drug or biological be determined using all of the NDCs assigned to it. Section 1847A(b)(5) of the Act further states that the payment limit shall be determined without regard to any special packaging, labeling, or identifiers on the dosage form or product or package. In 2007, CMS issued a program instruction (available at https://www.cms.gov/Medicare/Coding/MedHCPCSGenInfo/Downloads/ 051807_coding_announcement.pdf), as permitted under section 1847A(c)(5)(C) of the Act, stating that the payment limit for a single source drug or biological will be based on the pricing information for products produced or distributed under the applicable FDA approval (such as a New Drug Application (NDA) or Biologics License Application (BLA)). Therefore, all versions of a single-source drug or biological product (NDCs) marketed under the same FDA approval number (for example, NDA or BLA, including supplements) are considered the same drug or biological, for payments made under section 1847A of the Act and are crosswalked to the same billing and payment code. This means that a self-administered version marketed under the same FDA approval is subject to the ASP reporting requirements and is not excluded from the payment limit calculation, even though Medicare does not make separate Part B payment for it. This is consistent with our longstanding policy on the scope of the ASP reporting requirements. (Please see our final rule titled, “Medicare Program; Revisions to Payment Policies, Five-Year Review of Work Relative Value Units, Changes to the Practice Expense Methodology Under the Physician Fee Schedule, and Other Changes to Payment Under Part B; Revisions to the Payment Policies of Ambulance Services Under the Fee Schedule for Ambulance Services; and Ambulance Inflation Factor Update for CY 2007,” published in the December 1, 2006 Federal Register (71 FR 69675)). The price of a drug or biological product that may be administered by the patient (that is, self-administered) may differ from versions that are administered incident to a physician’s service, which may affect the ASP-based payment limit for drug or biological product’s billing and payment code.

The HHS OIG conducted studies 72 73 of payment-limit calculations for certain drugs paid under section 1847A of the Act. The OIG identified two highly utilized biological products for which there are both Part-B-covered (versions administered incident to a physician’s service) and non-covered versions (those identified to be self-administered) for which the NDCs were marketed under the same FDA approval number. OIG’s studies found that when the ASPs of the self-administered versions are included in the payment limit calculation, the resulting payment limit is substantially higher than if the ASPs of only the incident-to versions had been included.

The OIG studies concluded that as a result, Medicare payment amounts were inflated, causing the program and its beneficiaries to pay an additional $366 million from 2014 through 2016 and $497 million from 2017 through 2018. They recommended that legislative changes be made to provide CMS the flexibility to determine when certain versions of a drug identified to be self-administered should be included in ASP payment limit calculations.

Section 405 of Division CC, Title IV of the CAA, 2021, amended section 1847A of the Act by redesignating...

---

existing subsection (g) as subsection (h) and adding new subsection (g), which describes the Medicare Part B ASP payment-limit adjustment for certain drugs and biological products for which NDCs have been identified by the OIG to be self-administered and not covered under Medicare Part B. The new section 1847A(g)(1) of the Act directs OIG to conduct periodic studies to identify NDCs for drug or biological products that are identified to be self-administered for which payment may not be made under Part B pursuant to section 1861(s)(2) of the Act and the OIG determines should be excluded from the determination of the payment amount under section 1847A of the Act.

New section 1847A(g)(2) of the Act specifies that if the OIG identifies an NDC under section 1847A(g)(1) of the Act, it must inform the Secretary at such times as the Secretary may specify.

Then the Secretary shall, to the extent appropriate, apply as the payment limit for the applicable billing and payment code the lesser of: (1) The payment allowance that would be determined under section 1847A of the Act if the NDC for the identified drug or biological product were excluded from the calculation; or (2) the payment limit otherwise determined under section 1847A of the Act without application of section 1847A(g) of the Act. In other words, the Medicare payment limit for a drug or biological product’s billing and payment code in these circumstances would be the lesser of the payment limit determined including the NDCs identified to be self-administered (hereinafter referred to as the “lesser-of payment methodology”).

Although section 1847A(g)(1) of the Act provides us with discretion in whether to apply the lesser-of methodology to billing and payment codes that include self-administered versions identified by the OIG (because we are directed to apply the methodology to the extent deemed appropriate), new section 1847A(g)(3) of the Act, requires the application of the lesser-of methodology to the two billing and payment codes identified in the OIG’s July 2020 report titled, “Loophole in Drug Payment Rule Continues To Cost Medicare and Beneficiaries Hundreds of Millions of Dollars.” (available at https://oig.hhs.gov/oei/reports/OEI-BL-20-00100.asp) (hereinafter referred to as “OIG’s July 2020 report”) beginning July 1, 2021.

To meet the implementation date required by this provision, we applied the lesser-of methodology to the payment limit calculations for the billing and payment codes representing Certolizumab pegol and Ocrevus® (abatacept), details on these calculations are described in this section. In a memorandum providing supplemental information on the OIG July 2020 report, the OIG provided specific NDCs that the report identified: 00000-2188-11, 00003-2188-51, 00003-2814-11, 00003-2818-11, 50474-0710-79, 50474-0710-81. The lesser-of methodology was applied to these billing and payment codes for the July 2021 ASP Drug Pricing Files and crosswalks along with program instructions in a change request (CR) at https://www.cms.gov/medicare/medicare-part-b-drug-average-sales-price/2021-asp-drug-pricing-files.

We propose to codify the new requirements of section 1847A(g) of the Act at § 414.904. Our proposals described in the next section specify when the application of the lesser-of methodology would be appropriate, describe how we will apply the lesser-of methodology in billing and payment codes that OIG has identified, pursuant to studies described in section 1847A(g)(1) of the Act, and codify the approach we used for the certolizumab pegol and abatacept billing and payment codes.

b. Identification of Billing and Payment Codes to Which the Lesser-of Policy Will Be Applied

As noted previously, section 1847A(g)(1) of the Act directs OIG to conduct periodic studies to identify NDCs for drug or biological products that are self-administered and for which payment is not made under Part B. Section 1847A(g)(2) of the Act specifies that if OIG makes an identification under section 1847A(g)(1) of the Act, OIG informs CMS at such times as we may specify, and in such an event, we apply the lesser-of methodology to the extent deemed appropriate. We propose that when the OIG conducts a periodic study, OIG informs us at the time the study becomes publicly available. CMS will obtain the NDCs identified by the OIG study described in section 1847A(g)(1) of the Act. However, if the specific NDCs are not available in the OIG study report, we will request OIG provide documentation of the identified NDCs to CMS.

To allow operational time for assessment and application of the lesser-of methodology, we believe it is reasonable that the application of the lesser-of methodology be reflected beginning in the ASP pricing file two quarters following the OIG study publication. For example, if the OIG study becomes available to the public in the first quarter of the calendar year, the lesser-of methodology would be applied to the payment limit calculation of the applicable billing and payment code in the third quarter ASP pricing file (in other words, the July ASP pricing file) and each quarter thereafter.

c. Calculation of Payment Allowance Using the Lesser-of Payment Methodology

Sections 1847A(g)(2) and (g)(3) of the Act set forth the lesser-of payment methodology for applicable billing and payment codes with NDCs for certain drug or biological products identified by the OIG as self-administered products for which payment may not be made under this part because such products are not covered under section 1861(s)(2) of the Act. In this section, we describe how we propose to apply the lesser-of methodology. We propose to codify this methodology, which we currently use for the billing and payment codes that describe certolizumab pegol and abatacept, and which we propose to use for billing and payment codes for which OIG identifies a drug or biological product with NDCs identified to be self-administered as described in section 1847A(g)(1) of the Act.

The ASP payment limit calculation is described in section 1847A(b)(6) of the Act and codified at § 414.904(b)(2)(ii) and (c)(2)(ii), which specifies that for a billing and payment code, the volume-weighted average of the average sales prices reported by the manufacturer is determined by:

• Computing the sum of the products (for each NDC assigned to such drug products) of:
  • The manufacturer’s average sales price determined by the Secretary without dividing such price by the total number of billing units for the NDC for the billing and payment code; and
  • The total number of units sold; and
• Dividing the sum determined under (A) by the sum of by the sum of the products (for each NDC assigned to such drug products) of:
  • The total number of units specified sold; and
  • The total number of billing units for the NDC for the billing and payment code.

When applying the lesser-of methodology described in 1847A(g)(2) and (g)(3) of the Act, we propose to make two calculations as described in section 1847A(b)(6) of the Act: (1) The ASP payment limit for the billing and payment code, excluding the NDCs that have been identified by the OIG study (that is, excluding the ASPs for those NDCs as well as the units of such NDCs...
sold in the quarter); and (2) the ASP payment limit for the billing and payment code, including such NDCs’ ASPs and units sold. The calculation resulting in the lower payment limit will be used as the payment limit for the applicable billing and payment code for that quarter’s ASP pricing files. We propose to apply the lesser-of methodology to the billing and payment codes containing OIG-identified products each quarter when determining ASP payment limits.

New section 1847A(g) of the Act does not change ASP reporting requirements, and consistent with section 1847A(f)(1) of the Act and, beginning January 1, 2022, section 1847A(f)(2) of the Act, manufacturers must continue to report ASP data for all NDCs of the drug or biological product. Under new section 1847A(g) of the Act, ASP data for all NDCs under the same FDA approval application (for example, NDA or BLA, including any supplements) are required to carry out the lesser-of calculations for the purposes of determining the payment limit for the billing and payment code. Even if the resulting payment limit does not reflect the ASPs or units sold of self-administered versions of a product identified by the OIG, the manufacturer must continue to report those versions’ ASPs and units sold to the Secretary.

The implementation of the lesser-of methodology is not expected to be associated with substantial administrative costs. We plan to incorporate methodology in the current operational process that is used to determine ASP payment limits each quarter. The OIG found that Medicare and its beneficiaries would have saved a combined $497 million on certolizumab pegol and abatacept over 2 years (2017–2018) if such a methodology had been in place.

d. Exceptions

We further propose that the application of the lesser-of methodology is deemed appropriate in all cases in which OIG identifies a drug or biological product in a periodic study described in section 1847A(g)(1) of the Act and made publicly available, unless the drug or biological product is in short supply.74 As stated in the OIG’s July 2020 report, CMS expressed concern about potential impact on beneficiary access if certain versions identified to be self-administered were excluded from the ASP payment limit calculation. Because of potential for drug shortages that may affect patient care, beneficiary and provider access, and drug prices for providers, we would consider it not appropriate to apply the lesser-of methodology when a product is in short supply. Similar to the average manufacturer price (AMP) price substitution provision in section 1847A(d)(3)(C) of the Act (codified in § 414.904(d)(3)), we propose to add § 414.904(d)(4)(ii) to specify that we will not apply the lesser-of methodology (that is, we will determine the payment allowance including all NDCs of the drug or biological product) if the drug and dosage form(s) represented by the billing and payment code are reported by the Drug Shortage list established under section 506E of the Federal Food, Drug, and Cosmetic Act (FFDCA) at the time that ASP payment limits are being finalized for the next quarter. However, we propose that this exception to the application of the lesser-of methodology would not apply in the case of the billing and payment codes for certolizumab pegol and abatacept because section 1847A(g)(3) of the Act does not provide us with the same discretion as section 1847A(g)(2) of the Act. Thus, for these applicable billing and payment codes we will always apply the lesser-of methodology. We recognize that NDCs identified by an OIG study described in section 1847A(g)(1) or (g)(3) of the Act may change, for example, because of a manufacturer change. In the event that the manufacturer of an OIG-identified product simply redesignates the NDC for its NDC, we believe the new OIG study would meet the same criteria defined in the OIG study. In this circumstance, we expect that the product labeling would not contain substantial changes regarding the redesignated NDC. Therefore, we propose to add § 414.904(d)(4)(iv) to codify the application of the lesser-of methodology such that the manufacturer-reported pricing data associated with redesignated NDCs will be used in the lesser-of methodology in the same way as the original OIG-identified NDC.

Once an OIG study identifies self-administered versions of a drug or biological product, there may be subsequent FDA approvals of other products with the same active ingredient, such as new syringe sizes, new types of injector syringes, generic formulations, biosimilar biological products, or interchangeable biological products. For example, this would include the situation in which the current manufacturer of certolizumab pegol or abatacept obtains a supplemental FDA approval for a new version of the product. Similarly, this would also include the situation in which another manufacturer gains FDA approval of a product with the same active ingredient as an OIG-identified self-administered version. We believe that provisions at new section 1847A(g) of the Act would require a new OIG study as described in section 1847A(g)(1) of the Act in order for us to apply the lesser-of methodology to the drug or biological product.

e. Summary

In summary, to implement new section 1847A(g) of the Act, we are proposing to:

• Add § 414.904(d)(4) to codify the lesser-of-payment methodology and define when the application of the lesser-of methodology would first be reflected in the ASP pricing file following the OIG study publication;

• Describe the lesser of methodology at § 414.904(d)(4)(iv).

• Describe exceptions to application of the lesser-of methodology at § 414.904(d)(4)(ii).

• Clarify application of the lesser-of methodology for billing and payment code described under section 1847A(g)(3) of the Act at § 414.904(d)(4)(iii).

• Describe the application of the lesser-of methodology to redesignated NDCs of those identified in the OIG studies at § 414.904(d)(4)(v).

We welcome comments on these proposals.

E. Medicare Part B Payment for Drugs Approved Through the Pathway Established Under Section 505(b)(2) of the Federal Food, Drug, & Cosmetic Act

1. Background

For most drugs that are payable under Medicare Part B, payment-limit amounts are determined using the methodology in section 1847A of the Act. In many cases, the payment-limit amount is based on the Average Sales Price (ASP) plus a statutorily mandated 6 percent add-on. Additionally, small molecule drugs payable under Medicare Part B using the methodology in section 1847A of the Act fall into two broad, mutually exclusive categories: (1) Multiple source drugs, and (2) single source drugs. These terms are defined in sections 1847A(c)(6)(C) and (D) of the Act, respectively.

74Our regulation at § 414.904(d)(3)(ii)(C) in reference to AMP price substitution refers to drugs “identified by FDA as being in short supply.” The current AMP price substitution policy for shortages is consistent with the policy discussed here, as we interpret the phrase “identified by FDA as being in short supply” at § 414.904(d)(3)(ii)(C) to mean the list in effect under section 506E of the Federal Food, Drug, and Cosmetic Act.
In most cases, the distinction between multiple source drugs and single source drugs is straightforward. We published program instructions in 2007 (available at https://www.cms.gov/Medicare/Coding/MedHCPCSGenInfo/Downloads/051807_coding_announcement.pdf) that address how these distinctions are made. However, a subset of drugs that are approved by the FDA under New Drug Applications (NDAs) are approved through the pathway established under section 505(b)(2) of the FFDCA (Pub. L. 75–717, June 25, 1938) (hereinafter referred to as “section 505(b)(2) drug products”). For section 505(b)(2) drug products, the distinction between multiple source drugs and single source drugs can be less straightforward.

The drug approval pathway established under section 505(b)(2) of the FFDCA (hereinafter referred to as “the section 505(b)(2) pathway”) provides an avenue for applications that contain full reports of investigations of safety and effectiveness, where at least some of the information needed for an approval comes from studies not conducted by or for the applicant, and for which the applicant has not obtained a right of reference or use.75 An application submitted under the section 505(b)(2) pathway (hereinafter referred to as a “section 505(b)(2) application”) may rely either on the FDA’s findings of safety, effectiveness, or both, for an already-FDA-approved drug product or on published literature, provided that: (1) Such reliance is scientifically justified, and (2) the section 505(b)(2) application complies with applicable statutory and regulatory requirements, including, but not limited to, patent certification, if appropriate. Unlike a generic drug product approved under an Abbreviated New Drug Application (ANDA), a section 505(b)(2) drug product is not required to have the same FDA-approved labeling as the labeling for the already-FDA-approved drug product(s) upon which the section 505(b)(2) application relied. (For more information, see the FDA’s May 2019 guidance titled, “Determining Whether to Submit an ANDA or a 505(b)(2) Application,” available at https://www.fda.gov/media/124848/download.)

The number of section 505(b)(2) drug products approved each year has been growing, from about 40 per year from 2011 to 2016, to about 60 to 70 per year from 2017 to 2020. Approximately 10 to 20 percent of these section 505(b)(2) drug products are payabe under Medicare Part B. Of these, some section 505(b)(2) drug products share substantial portions of the FDA-approved labeling with the approved drug product(s) upon which the section 505(b)(2) application relied, for example prescribing information on safety, efficacy, and pharmacokinetics. In some cases, the section 505(b)(2) drug product even shares substantial portions of labeling with generic drug products that are payable under Part B as multiple source drugs. Medicare Part B claims data from 2020 indicate that spending for some of these section 505(b)(2) drug products (that is, those that could be assigned to a multiple source drug code under the framework described below, but are instead currently assigned to a single source drug code) is substantially greater than that for the corresponding generic drug products assigned to a multiple source drug code. One example is a sterile injectable drug that was first approved as a lyophilized powder for reconstitution in a vial and later was approved through the section 505(b)(2) pathway as a concentrated liquid in a vial. Another example is a drug available as a lyophilized powder for reconstitution in a vial that was then approved through the section 505(b)(2) pathway as a ready-to-use intravenous (IV) solution in a bag. Analysis of 2020 claims data for the separately coded section 505(b)(2) drug product (that is, the ready-to-use IV solution) shows that Medicare spending per service unit was approximately eight times that of the corresponding products in the multiple source drug code. Moreover, in the July 2021 ASP Pricing File (available at https://www.fda.gov/drugs/development-approval-process-drugs/orange-book-preface) each product is a therapeutic equivalent (TE) rating,76 77 and would impair access for patients, underpay providers, and stifle innovation. Several commenters from beneficiary advocate and provider organizations generally repeated the same points, although some commenters expressed support for curbing drug prices, particularly if the proposal did not affect patient access. Several commenters appeared to take a middle ground that conditionally supported the proposals, particularly if more detail could be provided and if effects on patient access were considered. Several commenters supported the proposals without conditions. Several commenters expressed that we should provide more

75 Regulations at 21 CFR 314.3 define “Right of Reference or Use” to mean the authority to rely upon, and otherwise use, an investigation for the purpose of obtaining approval of an NDA, including the ability to make available the underlying raw data from the investigation for FDA audit, if necessary.

77 See also 21 CFR 314.3(b) for definitions of “therapeutic equivalents” and related terms, as well as https://www.fda.gov/drugs/development-approval-process-drugs/orange-book/preface.
Some commenters on the CY 2021 PFS proposed rule requested that we provide more details about the process by which certain section 505(b)(2) drug products would be assigned to multiple source drug codes. Commenters requested that we include more detail on how factors described in the CY 2021 PFS proposal, (for example, differences in the active ingredient and labeling) may be interpreted and which drug products might be affected. Commenters also requested that we provide the public more time to assess a more detailed proposal as well as an opportunity, such as through future rulemaking, for public input both on the proposal and on decisions about specific drug products.

Several commenters stated that if we move forward with the CY 2021 proposal, we should exclude products with “meaningful differences” from the policy and encouraged us to continue an approach “that allows for innovation, competition, and ultimately more therapeutic choices for Medicare beneficiaries.” We recognize that some section 505(b)(2) drug products have clear differences in factors such as safety, efficacy, or pharmacokinetics, which would not result in the assignment of the product to the existing multiple source drug code. The framework discussed in the next section would address situations in which a section 505(b)(2) drug product is not described by an existing multiple source drug code, and therefore, would not be assigned to the existing multiple source drug code.

In response to commenters’ requesting more detail about our proposed approach and to delay finalizing a decision, we did not finalize our proposals in the CY 2021 PFS proposed rule regarding section 505(b)(2) drug products. We stated that the delay would allow time for CMS to further consider this issue. As part of our further consideration, we are soliciting comment on a more detailed framework (hereinafter referred to as “the framework”) for determining when a section 505(b)(2) drug product is a multiple source drug under section 1847(A)(c)(6)(C) of the Act.

The framework is consistent with program instruction published in 2007, which addressed how we would assign “single source drugs” and “biological products” using a multi-step process. However, this program instruction did not expressly address how we would assign multiple source drugs. The program instruction uses the term “drug” at the billing and payment code level when discussing single source drugs in the same way that the discussion in this preamble uses the term “drug” in reference to multiple source drugs. Development of standards for identifying multiple source drugs (that is, the framework) would add to the 2007 program instruction and provide detail about an approach to Medicare Part B payment for section 505(b)(2) drug products.

The framework described in the next section aims to build off the current CMS policy for assigning drug products to billing and payment codes by describing detailed standards for determining whether a section 505(b)(2) drug product corresponds to an existing multiple source drug code. We are not proposing to adopt the framework at this time. Rather, we are seeking comment on the framework to inform future policy making.

3. The Framework

The framework is a determination process to identify when section 505(b)(2) drug products without an FDA TE rating to an existing drug product payable under Part B correspond to an existing multiple source drug code for the purpose of payment under Medicare Part B. The framework would provide additional detail about the decision-making process and increase transparency about potential determinations resulting from the framework.

The first portion of the framework would compare certain qualities of the section 505(b)(2) drug product with drug products already assigned to an existing multiple source drug code. This includes comparison of the: (1) Active ingredient(s); (2) dosage form (if part of the drug product name); (3) salt form; and (4) other ingredients in the drug product formulation. The drug product assessment could result in a match or non-match designation. Section 505(b)(2) drug products receiving a match designation in the first portion of the framework would continue to a verification step. This step would compare the pharmacokinetic and clinical studies of the section 505(b)(2) drug product’s FDA-approved labeling with those of the drug products already assigned to an existing multiple source code. Finally, a determination would be made as to whether the section 505(b)(2) drug product could be assigned to the existing multiple source code.

We are soliciting comment on:

- The framework and how it aligns with the statutory definitions of single source and multiple source drugs in section 1847(A)(c)(6)(C) and (D) of the Act, respectively;
- How the framework distinguishes situations in which a section 505(b)(2) drug product is not described by an existing multiple source drug code; and
- The potential impacts of the framework on Medicare beneficiaries, the government, and other stakeholders.

F. Appropriate Use Criteria for Advanced Diagnostic Imaging

Section 218(b) of the Protecting Access to Medicare Act (Pub. L. 113–93, April 1, 2014) (PAMA) amended Title XVIII of the Act to add section 1834(q) of the Act directing us to establish a program to promote the use of appropriate use criteria (AUC) for advanced diagnostic imaging services. We have taken steps to implement this program over several years, and codified the AUC program in our regulations at 42 CFR 414.94. In CY 2020, we began conducting an educational and operations testing period for the claims-based reporting of AUC consultation information, which has been extended through CY 2021.

The CY 2016 PFS final rule with comment period (80 FR 70886) addressed the initial component of the new Medicare AUC program, specifying applicable AUC. In the CY 2016 PFS final rule with comment period, we established an evidence-based process and transparency requirements for the development of AUC, defined provider-led entities (PLEs) and established the process by which PLEs may become qualified to develop, modify or endorse AUC. The first list of qualified PLEs was posted on the CMS website at the end of June 2016 at which time their AUC libraries became specified applicable AUC for purposes of section 1834(q)(2)(A) of the Act.

The CY 2017 PFS final rule (81 FR 80170) addressed the second component of this program, specification of qualified clinical decision support mechanisms (CDSMs). In the CY 2017 PFS final rule, we defined CDSM, identified the requirements CDSMs must meet for qualification, including preliminary qualification for mechanisms documenting how and when each requirement is reasonably
