expected to be met, and established a process by which CDSMs may become qualified. We also defined applicable payment systems under this program, specified the first list of priority clinical areas, and identified exceptions to the requirement that ordering professionals consult specified applicable AUC when ordering applicable imaging services. The first list of qualified CDSMs was posted on the CMS website in July 2017. The CY 2018 PFS final rule (82 FR 53190) addressed the third component of this program, the consultation and reporting requirements. In the CY 2018 PFS final rule, we established the start date of January 1, 2020 for the Medicare AUC program for advanced diagnostic imaging services. Specifically, for services ordered on and after January 1, 2020, we established that ordering professionals must consult specified applicable AUC using a qualified CDSM when ordering applicable imaging services, and furnishing professionals must report AUC consultation information on the Medicare claim. We further specified that the AUC program will begin on January 1, 2020 with a year-long educational and operations testing period during which time AUC consultation information is expected to be reported on claims, but claims would not be denied for failure to include proper AUC consultation information. We also established a voluntary period from July 2018 through the end of 2019 that ordering professionals who are ready to participate in the AUC program may consult specified applicable AUC through qualified CDSMs and communicate the results to furnishing professionals; and furnishing professionals who are ready to do so may report AUC consultation information on the claim at https://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNMattersArticles/Downloads/MM10481.pdf.

Additionally, to incentivize early use of qualified CDSMs to consult AUC, we established in the CY 2018 Updates to the Quality Payment Program; and Quality Payment Program: Extreme and Uncontrollable Circumstances Policy for the Transition Year final rule with comment period and interim final rule (hereinafter “CY 2018 Quality Payment Program final rule”); a high-weight improvement activity for ordering professionals who consult specified AUC using a qualified CDSM for the Merit-based Incentive Payment System (MIPS) performance period that began January 1, 2018 (82 FR 54193).

In the CY 2019 PFS final rule (83 FR 59452), we made further additions and clarifications to the AUC program requirements. We added independent diagnostic testing facility (IDTF) to the definition of applicable settings under § 414.94(b). We also clarified that the furnishing professionals (including provider or supplier entities furnishing advanced diagnostic imaging services in an applicable setting, paid for under an applicable payment system) are required to report AUC consultation information on the claims as specified under § 414.94(k). We established significant hardship exception criteria and process under § 414.94(f)(3) to be specific to the AUC program and independent of other Medicare programs. We specified under § 414.94(j)(2) that when delegated by the ordering professional, clinical staff under the direction of the ordering professional may perform the AUC consultation with a qualified CDSM. Finally, we announced our intention to use G-codes and modifiers to report AUC consultation information on the Medicare claims. In 2020, in response to the Public Health Emergency (PHE) for the Coronavirus Disease 2019 (COVID–19) (PHE for COVID–19), the educational and operations testing period was extended through CY 2021.

1. Background

AUC present information in a manner that links a specific clinical condition or presentation; one or more services; and an assessment of the appropriateness of the service(s). Evidence-based AUC for imaging can assist clinicians in selecting the imaging study that is most likely to improve health outcomes for patients based on their individual clinical presentation. For purposes of this program, AUC is a set or library of individual AUC. Each individual criterion is an evidence-based guideline for a particular clinical scenario based on a patient presenting symptoms or condition.

AUC need to be integrated as seamlessly as possible into the clinical workflow. CDSMs are the electronic portals through which clinicians access the AUC during the patient workup. They can be standalone applications that require direct entry of patient information, but may be more effective when they are integrated into electronic health records (EHRs). Ideally, practitioners would interact directly with the CDSM through their primary user interface, thus minimizing interruption to the clinical workflow.

2. Statutory Authority

Section 218(b) of the PAMA added a new section 1834(q) of the Act entitled, “Recognizing Appropriate Use Criteria for Certain Imaging Services,” which directed the Secretary to establish a program to promote the use of AUC. Section 1834(q)(4)(B) of the Act requires ordering professionals to consult with specified applicable AUC through a qualified CDSM for applicable imaging services furnished in an applicable setting and paid for under an applicable payment system; and payment for such service may only be made if the claim for the service includes information about the ordering professional’s consultation of specified applicable AUC through a qualified CDSM.

3. Discussion of Statutory Requirements

There are four major components of the AUC program under section 1834(q) of the Act, and each component has its own implementation date: (1) Establishment of AUC by November 15, 2015 (section 1834(q)(2) of the Act); (2) identification of mechanisms for consultation with AUC by April 1, 2016 (section 1834(q)(3) of the Act); (3) AUC consultation by ordering professionals, and reporting on AUC consultation by January 1, 2017 (section 1834(q)(4) of the Act); and (4) annual identification of outlier ordering professionals for services furnished after January 1, 2017 (section 1834(q)(5) of the Act). We did not identify mechanisms for consultation by April 1, 2016. Therefore, we did not require ordering professionals to consult CDSMs or furnishing professionals to report information on the consultation by the January 1, 2017 date.

a. Establishment of AUC

In the CY 2016 PFS final rule with comment period, we addressed the first component of the Medicare AUC program under section 1834(q)(2) of the Act—the requirements and process for establishment and specification of applicable AUC, along with relevant aspects of the definitions under section 1834(q)(1) of the Act. This included defining the term “provider-led entity” and finalizing requirements for the rigorous, evidence-based process by which a PLE would develop AUC, upon which qualification is based, as provided in section 1834(q)(2)(B) of the Act and in the CY 2016 PFS final rule with comment period. Using this process, once a PLE is qualified by us, the AUC that are developed, modified or endorsed by the qualified PLE are considered to be specified applicable AUC under section 1834(q)(2)(A) of the Act. We defined PLE to include national professional medical societies, health systems, hospitals, clinical practices and collaborations of such entities such as the High Value Healthcare Collaborative or the National Comprehensive Cancer Network.
January 1, 2020 effective date for the AUC consultation and reporting requirements for this program. We also established a voluntary period during which early adopters could begin reporting limited consultation information on Medicare claims from July 2018 through December 2019. During the voluntary period, there is no requirement for ordering professionals to consult AUC or furnishing professionals to report information related to the consultation. On January 1, 2020, the program began with an educational and operations testing period and during this time, we have continued to pay claims whether or not they correctly include AUC consultation information. Ordering professionals must consult specified applicable AUC through qualified CDSMs for applicable imaging services furnished in an applicable setting, paid for under an applicable payment system and ordered on or after January 1, 2020; and furnishing professionals must report the AUC consultation information on the Medicare claim for these services ordered on or after January 1, 2020.

Consistent with section 1834(q)(4)(B) of the Act, we also established that the following information must be reported on Medicare claims for advanced diagnostic imaging services as specified in section 1834(q)(1)(C) of the Act and defined in §414.94(b), furnished in an applicable setting as defined in section 1834(q)(1)(D) of the Act, paid for under an applicable payment system as defined in section 1834(q)(4)(D) of the Act, and ordered on or after January 1, 2020: (1) The qualified CDSM consulted by the ordering professional; (2) whether the service ordered would or would not adhere to specified applicable AUC, or whether the specified applicable AUC consulted was not applicable to the service ordered; and (3) the NPI of the ordering professional (if different from the furnishing professional).

Section 1834(q)(4)(C) of the Act provides for exceptions to the AUC consultation and reporting requirements in the case of: A service ordered for an individual with an emergency medical condition, a service ordered for an inpatient and for which payment is made under Medicare Part A, and a service ordered by an ordering professional for whom the Secretary determines that consultation with applicable AUC would result in a significant hardship. In the CY 2017 PFS final rule, we adopted a regulation at §414.94(b)(1)(i) to specify the circumstances under which AUC consultation and reporting requirements are not applicable and in the CY 2019 PFS final rule, we updated the significant hardship exception criteria to be specific to the AUC program and independent of other programs. An ordering professional experiencing any of the following when ordering an advanced diagnostic imaging service is not required to consult AUC using a qualified CDSM, and the claim for the applicable imaging service is not required to include AUC consultation information. Significant hardship exceptions under §414.94(i)(3) include: Insufficient internet access; EHR or CDSM vendor issues; or extreme and uncontrollable circumstances.

We remind readers that, consistent with section 1834(q)(4)(A) of the Act, ordering professionals must consult AUC for every applicable imaging service furnished in an applicable setting and paid under an applicable payment system unless a statutory exception applies.

Section 1834(q)(4)(D) of the Act specifies the applicable payment systems for which AUC consultation and reporting requirements apply. In the CY 2017 PFS final rule, we defined applicable payment system to reflect the statutory requirements in §414.94(b) as: (1) The PFS established under section 1848(b) of the Act; (2) the PPS for hospital outpatient department services under section 1833(l) of the Act; and (3) the ambulatory surgical center payment system under section 1833(l) of the Act.

Section 1834(q)(1)(D) of the Act specifies the applicable settings in which AUC consultation and reporting requirements apply: A physician’s office, a hospital outpatient department (including an emergency department), an ambulatory surgical center, and any other “provider-led outpatient setting determined appropriate by the Secretary.” In the CY 2017 PFS final rule, we added this definition to §414.94(b). As noted above, we expanded that definition to add an IDTF in the CY 2019 PFS final rule.

d. Identification of Outliers

The fourth component of the Medicare AUC program is specified in section 1834(q)(5) of the Act, Identification of Outlier Ordering Professionals. The identification of outlier ordering professionals under this paragraph facilitates a prior authorization requirement that applies for outlier professionals beginning January 1, 2020, as specified under section 1834(q)(6) of the Act. Because we established a start date of January 1, 2020 for AUC consultation and reporting requirements, we did not identify any outlier ordering professionals by that date. As such,
implementation of the prior authorization component is delayed. However, we did finalize in the CY 2017 PFS final rule the first list of priority clinical areas to guide identification of outlier ordering professionals as follows:

- Coronary artery disease (suspected or diagnosed).
- Suspected pulmonary embolism.
- Headache (traumatic and non-traumatic).
- Hip pain.
- Low back pain.
- Shoulder pain (to include suspected rotator cuff injury).
- Cancer of the lung (primary or metastatic, suspected or diagnosed).
- Cervical or neck pain.

We will use future rulemaking to establish the methodology for the identification of outlier ordering professionals who would eventually be subject to a prior authorization process when ordering advanced diagnostic imaging services.

4. Proposals for Continuing Implementation

a. Proposed Clarification of AUC Program Scope

i. Modified Orders

Updates or modifications to orders for advanced diagnostic imaging services may be warranted in certain situations once the beneficiary is under the care of the furnishing professional. Unless they are also serving as the ordering professional, furnishing professionals may not consult AUC on behalf of or in place of the ordering professional. The Medicare Benefit Policy Manual (BPM) (Pub. L. 100–02) addresses situations where the furnishing professional performs imaging services that differ from ordered services in chapter 15, sections 80.6.1–4. These BPM sections on modified orders state that when an interpreting physician determines that a different or additional imaging service not included on the order should be performed, the interpreting physician or testing facility generally may not perform the test until a new order from the treating physician/practitioner has been received. If the treating physician/practitioner cannot be reached to change or obtain a new order, the interpreting physician or testing facility may furnish the additional imaging service under the following circumstances, as documented in the patient’s medical record: The treating physician/practitioner could not be reached, the ordered test is performed and an additional diagnostic test is medically necessary because of the abnormal result of that test, delaying performance of the additional test would have an adverse effect on the patient’s care, the result of the additional test is communicated to and used by the treating physician/practitioner in the patient’s treatment, and the interpreting physician/practitioner documents in the record the reasons for the additional testing.

When the furnishing professional performs additional imaging services not reflected on the order under these circumstances, we do not believe it would be appropriate to consider them to be acting as an ordering professional such that an AUC consultation would be needed. Instead, we believe the furnishing professional in these situations is the interpreting physician/practitioner who is exercising their professional judgment to provide the ordering professional with additional diagnostic test results for use in managing the patient’s care. Additionally, they are doing so only because, after performing the ordered test and determining that additional testing is expedient given the results of that test, the ordering professional cannot be reached to request a modified or additional order. Given the conditions under which these additional imaging services are performed, we propose that when the furnishing professional for an advanced diagnostic imaging service performs one or more additional services under the circumstances described in chapter 15, section 80.6.2–4 of the BPM, neither the ordering professional nor the furnishing professional are required to consult AUC for the additional service(s). In these situations, the AUC consultation information from the original order is to be reported on the claim line for the additional service(s). Where the furnishing professional modifies the order for an advanced diagnostic imaging service without obtaining a new order from the ordering professional, the AUC consultation information provided by the ordering professional with the original order should be reflected on the Medicare claim to demonstrate that the requisite AUC consultation occurred. Because the BPM instructions state that the interpreting physician or testing facility generally may not perform a modified or new test until a new order from the treating physician/practitioner has been received, we expect situations where AUC consultations do not occur for new or modified orders to be infrequent.

ii. Extreme and Uncontrollable Circumstances Hardship Exception

In the CY 2019 PFS final rule, we describe extreme and uncontrollable circumstances to include disasters, natural or man-made, that have a significant negative impact on healthcare operations, area infrastructure or communication systems. We also explain these may include areas where events occur that have been designated by FEMA as a major disaster or a public health emergency declared by the Secretary. To further clarify, these circumstances are events that are entirely outside the control of the ordering professional that prevent the ordering professional from consulting AUC through a qualified CDSM. We believe the hardship criteria under this program are similar to other programs such as the Promoting Interoperability performance category of the Merit-based Incentive Payment System (MIPS), particularly the flexibility that is given to clinicians to identify what they consider to be extreme and uncontrollable circumstances.

The PHE for COVID–19 has been in effect since January 27, 2020. Stakeholders have described challenges in continuing to prepare for the payment penalty phase of the AUC program due to resource reallocation resulting from the PHE. Some stakeholders have explained that all health technology projects unrelated to the PHE were halted, including projects that impact establishing or updating health IT systems that enable AUC consultation through qualified CDSMs. Stakeholders have also indicated that human resources were reallocated to focus on responding to the PHE. Additionally, we recognize that practitioners have been heavily impacted in their own practice of medicine to respond to the PHE and provide treatment to patients which may have prevented them from focusing on and participating in the educational and operations testing period to prepare for the payment penalty phase. While we are continuing to move forward in implementing the AUC program, we want to assure stakeholders that they may attest to a significant hardship under the AUC program due to extreme and uncontrollable circumstances due to the PHE for COVID–19, and such an attestation may be used as needed by ordering practitioners throughout the PHE. Furthermore, as the AUC program progresses into the payment penalty phase, self-attestation for a significant hardship exception will continue to be available for ordering professionals experiencing extreme and uncontrollable circumstances due to the PHE. We also recognize that ordering professionals may experience significant
hardships related to or resulting from the PHE that extend beyond the date the PHE expires and note that AUC program exceptions will continue to be available for such significant hardships as defined at § 414.94(i)(3).

b. Claims Processing

As we move ahead to implement the payment penalty phase of this program, we must address additional operational and administrative issues. We explain these issues here, and our assessments and proposals for addressing them. We are soliciting comments on whether additional scenarios require our consideration, and whether the proposed solutions adequately address issues raised by stakeholders. We are soliciting any additional information stakeholders may offer to assist us in developing claims processing system edits or other measures to ensure that only appropriate claims are subject to AUC claims processing edits. The AUC program will be fully implemented when we have the necessary edits established in the claims processing system and we begin using those edits to deny Medicare claims that fail to report the required AUC consultation information. Therefore, we need to find workable solutions that allow the AUC program to accurately pay and deny claims using the information available on Medicare claims, while working within the limitations of the Medicare claims processing system. The identification of claims that are or are not subject to the Medicare AUC Program must be precise to avoid inadvertently denying claims that should be paid. Because implementation of this program establishes edits for advanced diagnostic imaging claims, the inadvertent denial of claims would disproportionately impact radiologists, hospital outpatient departments and freestanding imaging centers. Also, as we have noted previously, the AUC program is unique in that the burden of consulting AUC and providing AUC consultation information to the furnishing professional falls on the ordering professional, yet the claims that are denied for failing to report AUC consultation information are for services furnished and billed by the professionals and facilities that furnish advance diagnostic imaging.

Two main Medicare claim types are subject to claims processing edits in the AUC program. These are the CMS–1450 and its electronic equivalent (referred to here as the practitioner claim) submitted by physicians and practitioners, ASCs, and IDTFs, and the UB–04, also called the CMS–1450, (referred to here as the institutional claim) submitted by hospital outpatient departments and on-campus and off-campus provider-based departments. These claim types differ in the data elements they contain; therefore, claims processing edits will not be identical across claim types. We have already issued partial claims processing instructions (CR11268, Transmittal 2404) to support the educational and operations testing period. We established HCPCS Level III G-codes for furnishing professionals to report which CDSM was consulted. We also established HCPCS modifiers for furnishing professionals to report situations in which the ordering professional is not required to consult AUC. These modifiers are reported on the same claim line as the code for the advanced diagnostic imaging procedure since a G-code would not be reported. We also established a procedure code list that identifies the advanced diagnostic imaging codes that are subject to the AUC program. Based on a review of CY 2020 Medicare claims (noting for readers that during this year the AUC program was only in the education and operations testing phase with no payment penalties), we estimate between 9–10 percent of all claims paid under the AUC program reported information sufficient to be considered compliant with the program, which means that 90–91 percent of claims would not be considered compliant with AUC program requirements. In other words, if the claims processing systems edits had been in place for the payment penalty phase, only 9–10 percent of claims subject to the AUC program would have been paid as opposed to being denied or rejected. An additional 6–7 percent of claims subject to the AUC program included some relevant information, which demonstrates an awareness of the AUC program among these billing entities; but the claims did not include all of the necessary AUC consultation information that will ultimately be required for the claim to be paid.

i. Ordering Professional NPI

There are locations on both the practitioner and institutional claim types to report the NPI of the ordering professional. The institutional claim uses the K3 segment and the practitioner claim uses the referring professional field. However, to fully implement the AUC program, we must establish a claims processing edit to require these fields to be populated on all advanced diagnostic imaging claims subject to the AUC program.

In addition, there are situations in which multiple advanced diagnostic imaging services ordered by more than one ordering professional may be reported on a single claim. This would not be workable for purposes of reporting AUC consultation information because the referring professional field is reported at the claim-level and not at the claim line- or service-level for professional claims. Therefore, the furnishing professional will need to submit separate claims for the services ordered by each referring or ordering professional. In other words, only one ordering professional can be reported per claim.

ii. Critical Access Hospitals

As discussed in the CY 2018 PFS final rule with comment period (82 FR 53192), advanced diagnostic imaging services furnished in an outpatient department of a critical access hospital (CAH) are not subject to the AUC program because, in accordance with section 1833(q)(1)(D) of the Act, a CAH is not an applicable setting under the program. Therefore, we must identify these advanced diagnostic imaging services and allow them to bypass the AUC program claims processing edits. For institutional claims, we intend to apply the AUC program claims processing edits to type of bill 13x, which is used only for outpatient hospital settings. CAHs submit outpatient claims using type of bill 85x, rather than type of bill 13x.

In the CY 2019 PFS final rule (83 FR 59694), we further explained that because section 1834(q)(6)(B) of the Act clearly includes all claims paid under applicable payment systems without exclusion, the claims from both furnishing professionals and facilities must include AUC consultation information. We revised our regulation at § 414.94(k) to specify that consultations information must be reported on Medicare claims for advanced diagnostic imaging services furnished in an applicable setting and paid under an applicable payment system. Prior to this revision, § 414.94(k) required furnishing professionals to report AUC consultation on the claim, without also specifying that facility claims must include the AUC consultation information.

information. In the CY 2019 PFS final rule, we explained that the AUC consultation information would be included on the practitioner’s claim for the professional component (PC) of the service and on the provider’s or supplier’s claim for the facility portion or technical component (TC) of the service. Under § 414.94(k), the requirement to report AUC consultation information on the claim applies to both the PC and TC of the imaging services that are furnished in an applicable setting and paid under an applicable payment system. Section 1834(q)(4)(B) of the Act further specifies that the requirement to report AUC consultation information is specific to claims for advanced diagnostic imaging services furnished in an applicable setting and paid under an applicable payment system. We believe that all claims for advanced diagnostic imaging services, both the PC and TC, must include the AUC consultation information when they are furnished both in an applicable setting and paid under an applicable payment system. However, if advanced diagnostic imaging services are not entirely furnished in an applicable setting, we believe that neither the PC nor TC claim should be required to include AUC consultation information. This ensures consistent application of the AUC consultation requirements across claims submitted for advanced diagnostic imaging services even when the PC and TC components of the service are furnished by different furnishing professionals. As such, we propose that claims submitted by physicians or practitioners for the PC of an advanced diagnostic imaging service when the TC was not furnished in an applicable setting would not be subject to the AUC program since the setting where the TC of the imaging service is furnished is not subject to the AUC program since the setting where the TC of the imaging service is furnished is not subject to the AUC consultation requirements and reporting requirements. If a physician or practitioner submits a claim for the PC of an advanced imaging service for which the TC was performed as an outpatient CAH service, there currently is not a systems-based way for us to recognize that the TC of the service was furnished by a CAH. Place of service codes reported on practitioner claims are not specific enough. We have not yet identified a way to segregate these claims and automatically allow them to bypass AUC program claims processing edits. Therefore, as discussed below, we propose to establish a separate HCPCS modifier that will be used to identify practices for advanced diagnostic imaging services that are not subject to the AUC program and that are not otherwise identified using the other AUC program modifiers designated to identify specific situations where the claims are not subject to the AUC program.

iii. Maryland Total Cost of Care Model

Section 1834(q)(4)(D) of the Act specifies that the applicable payment systems for which AUC consultation and reporting requirements apply are the PFS, the hospital OPPS and the ambulatory surgical center payment system. We define applicable payment system consistent with statute at § 414.94(b) and, as noted above, require AUC consultation information to be reported on Medicare claims for advanced diagnostic imaging services, both the PC and TC, furnished in an applicable setting and paid under an applicable payment system at § 414.94(k). Section 1834(q)(4)(B) of the Act specifies that the requirement to report AUC consultation information is specific to claims for advanced diagnostic imaging services furnished in an applicable setting and paid under an applicable payment system. We believe that all claims for the advanced diagnostic imaging services, both the PC and TC, must include the AUC consultation information when they are furnished both in an applicable setting and paid under an applicable payment system. Therefore, if both the PC and TC for advanced diagnostic imaging services are not paid under an applicable payment system, neither the PC nor TC claim is required to include AUC consultation information. This ensures consistent application of the AUC consultation requirements across claims submitted for advanced diagnostic imaging services even when the PC and TC components of the service are furnished by different furnishing professionals. Similar to claims for the PC of services for which the TC is furnished outside of an applicable setting, and because both practitioner and institutional claims are subject to the AUC program as discussed above, when the practitioner or institutional claim for the advanced imaging service is not subject to the AUC program (for example, payment is not made under an applicable payment system), the corresponding practitioner or institutional claim for the same imaging service is also not subject to the AUC program.

Stakeholders alerted CMS to concerns about whether advanced diagnostic imaging services furnished in hospitals participating in the Maryland Total Cost of Care Model are subject to the AUC program. We appreciate that this has been brought to our attention and we seek comments on other models. Advanced diagnostic imaging services furnished in outpatient departments of Maryland hospitals that participate in the Hospital Payment Program within the Maryland Total Cost of Care Model are not subject to the AUC program because these services are not paid under an applicable payment system (Maryland hospitals that receive payments under the Hospital Payment Program within the Maryland Total Cost of Care Model are not paid under the OPPS). Because these services are not subject to the AUC program requirements when furnished in a hospital paid under the Hospital Payment Program within the Maryland Total Cost of Care Model, as opposed to an applicable payment system, we propose that the PCs of these advanced diagnostic imaging services, when billed separately, are also not required to include AUC consultation information. We believe we can identify all institutional claims from a hospital that is paid under the Hospital Payment Program within the Maryland Total Cost of Care Model based on their CMS Certification Number (CCN) and allow those claims to bypass AUC program claims processing edits. We understand that when the TC and PC of advanced diagnostic imaging services are billed separately, the professional claim must identify in box 32 the location where the TC of the imaging service was furnished to the patient. Therefore, we believe we will have the ability to identify situations in which the imaging service was furnished in a hospital that is paid under the Hospital Payment Program within the Maryland Total Cost of Care Model and exclude those claims from being subject to AUC program claims processing edits. We believe this can be accomplished by using the CCN and will continue to work to determine if a list of CCNs can be used as the source of our edits in addition to determining the frequency that the list will be updated.

Note that advanced diagnostic imaging services furnished in applicable settings in the state of Maryland and paid under an applicable payment system are subject to the AUC program—the above discussion applies only to the outpatient departments of hospitals that are paid under the Hospital Payment Program within the Maryland Total Cost of Care Model.

iv. Inpatients Converted to Outpatients

While uncommon, there are situations in which a beneficiary’s hospital inpatient status is changed to outpatient. Certain criteria must be met for this to occur and, if met, condition
code 44 (inpatient admission changed to outpatient) is appended to the institutional claim (https://www.cms.gov/regulations-and-guidance/guidance/transmittals/downloads/r299cp.pdf). We propose to allow institutional claims with condition code 44 to bypass AUC claims processing edits. We make this proposal because, at the time advanced diagnostic imaging services were ordered and furnished, they were ordered for and furnished to a beneficiary who was in inpatient status. As such, the AUC consultation requirement would not have applied at that time. We believe that any professional claims would include place of service code 21 (inpatient hospital) since the expectation, until just prior to discharge, would be that the patient is in an inpatient status. We expect less than half of one percent of claims will include condition code 44.

v. Deny or Return Claims That Fail AUC Claims Processing Edits

As discussed above, claims that do not properly include AUC consultation information will not be paid once we fully implement the AUC claims processing edits. We are considering whether claims that do not pass the AUC claims processing edits, and therefore will not be paid, should be initially returned to the health care provider so they can be corrected and resubmitted, or should be denied so they can be appealed. On one hand, we expect there will be some errors in reporting AUC consultation information on claims, especially early on, and health care providers might find it helpful to have the opportunity to correct claims. However, there may be situations in which the health care provider would prefer the claim be denied so they have an earlier opportunity to appeal. We are requesting comments to help us better understand which path would be most appropriate once we fully implement the AUC program claims edits. Additionally, we are requesting comments on whether the payment penalty phase should begin first with returning claims and then transition to denying claims after a period of time, which may be helpful to furnishing professionals and facilities as they become more proficient in submitting claims under the AUC program.

vi. Medicare as a Secondary Payer

We understand based on feedback from stakeholders that, in some EHRs, the provider information is readily available and known to the ordering professional; however, secondary payer information typically is not available. Additionally, it is possible that when Medicare is the secondary payer that no Medicare payment would be made at all after the primary payer makes payment. Medicare is reported as the secondary payer for approximately 1.5 percent of advanced diagnostic imaging services that are subject to the AUC program. Because the secondary payer information for a patient generally is not available to the ordering professional, and because no Medicare payment may be involved at all when Medicare is the secondary payer, we propose to exclude claims that identify Medicare as the secondary payer from application of the AUC consultation and reporting requirements. Specifically, we propose to allow claims that identify Medicare as the secondary payer (using block 1 or the electronic equivalent of the practitioner claims and using FL 50/51 or the electronic equivalent of institutional claims) to bypass the AUC program claims processing edits.

vii. Date of Service and Date of Order

We will specify a start date for the AUC program claims processing edits to take effect. Medicare claims include a date of service but do not allow for the date of an imaging order to be recorded. Because we cannot identify the order date for an advanced imaging service based on claims, we propose that the AUC program claims processing edits for the payment penalty phase will be applicable for advanced imaging services furnished on or after the effective date of the claims edits. For imaging services ordered prior to, but furnished on or after the effective date of the AUC program claims processing edits, the furnishing professional would apply the separate HCPCS modifier discussed in section III.F.4.b.ii. (Critical Access Hospitals) of this proposed rule to indicate that the claim is not subject to the AUC claims processing edits.

viii. HCPCS Modifiers

We established two primary sets of HCPCS modifiers for this program. One set is to be included on the same claim line as the G-code identifying the CDSM that was consulted, and reports whether the imaging service adheres to the AUC (modifier ME), does not adhere to the AUC (modifier MF), or the qualified CDSM does not contain AUC that applies to the order (modifier MG). We intend for these modifiers to continue to be used when the program enters the payment penalty phase. Additionally, reporting of these modifiers should be limited to one per qualified CDSM G-code since these modifiers are mutually exclusive.

The second set of HCPCS modifiers is available for use when the ordering professional does not consult a qualified CDSM. On these claims, providers would not add a G-code for a CDSM because a consultation did not take place, and the HCPCS modifier would be included on the same line as the procedure code for the advanced diagnostic imaging service that was furnished. These HCPCS modifiers include the three that were created to describe significant hardship exceptions (insufficient internet access (modifier MB), EHR or CDSM vendor issues (modifier MC) and extreme and uncontrollable circumstances (modifier MD)). Additionally, section 1834(p)(4)(C) of the Act includes an exception for services ordered for an individual with an emergency medical condition and modifier MA is available to identify claims for patients with a suspected or confirmed emergency medical condition. This set of codes is mutually exclusive and we expect only one to be reported per procedure code-level claim line.

Modifier QQ was created for use during the voluntary period, before more detailed modifiers and codes were created, to indicate that an ordering professional consulted a qualified CDSM for the service and related data was provided to the furnishing professional. The descriptor for this code explains that the ordering professional consulted a qualified CDSM for this service and the related information was provided to the furnishing professional. The descriptor for this modifier continues to be available for use through the educational and operations testing period, but we intend to end the use of that modifier and not carry it forward into the payment penalty phase since we have established and will require the use of distinct modifiers to communicate specific AUC consultation information.

Modifier MH was created for use during the educational and operations testing phase to identify claims for which AUC consultation information was not provided to the furnishing professional and furnishing facility. When the AUC program enters the payment penalty phase, we will no longer have a need for this modifier because claims will be required to include AUC consultation information or indicate a reason the information is not required in order to avoid AUC program claims processing edits. Beginning for services furnished on and after the effective date of the AUC program claims processing edits, we propose to redefine modifier MH to describe situations in which the
order professional is not required to consult AUC and the claim is not required to report AUC consultation information. For example, we would repurpose modifier MH to be used in the scenarios described in sections III.F.4.b.ii. (Critical Access Hospitals), III.F.4.b.iii (Maryland Total Cost of Care Model) if other options to identify claims are not feasible, and III.F.4.b.vii. (Date of Service and Date of Order) of this proposed rule as those scenarios would fall outside the scope of the AUC program requirements.

ix. Additional Claims Processing Information

Section 1834(q)(1)(D) of the Act specifies the applicable settings for the AUC program as a physician’s office, a hospital outpatient department (including an emergency department), and ambulatory surgical center and any other provider-led outpatient setting determined appropriate by the Secretary. As discussed in the CY 2019 PFS final rule (83 FR 59690 and 59691), we added IDTFs to the definition of applicable setting at § 414.94(b) to the three applicable settings specified in statute because it is a provider-led outpatient setting in which advanced diagnostic imaging services are furnished by licensed, certified nonphysician personnel under appropriate physician supervision. To identify these settings through the Medicare claims system we evaluated type of bill and place of service codes to identify those aligned with applicable settings under the AUC program. For institutional claims, we propose to limit AUC program claims processing edits to apply only to type of bill 13x (hospital outpatient). This claim type code encompasses the hospital outpatient department and the emergency department which represent all applicable settings under the program that would bill Medicare using institutional claims. For practitioner claims, we propose to limit the edits to claims with place of service codes 11 (office), 13 (ambulatory unit), 19 (office outpatient hospital), 22 (on campus outpatient hospital), 23 (emergency room) and 24 (ASC). These place of service codes should encompass all applicable settings under the AUC program as defined at § 414.94(b).

Because these type of bill and place of service codes reflect the applicable settings within which advanced diagnostic imaging services must be furnished to be subject to the AUC program requirements, we believe setting these parameters will allow us to more accurately pay claims while avoiding the need for other types of professionals and facilities to append modifiers to their claims.

x. Claims Processing Summary

We have presented above some of the scenarios that CMS and stakeholders have identified as being potentially challenging or impracticable for application of the AUC program claims processing edits for purposes of the payment penalty phase. We request feedback on whether additional scenarios require consideration and whether the proposed claims processing solutions will adequately address the issues raised. We also request feedback on areas that stakeholders believe need more education to inform our ongoing outreach and education efforts. While much of the discussion is about identifying claims that are not subject to the AUC program, we note that physicians and other practitioners, or providers submitting claims for advanced imaging services that are not subject to the AUC program can volunteer AUC consultation information. We intend to allow those claims to process through the system. We request commenters to provide additional information to assist us in developing edits that ensure only appropriate claims are subject to AUC claims processing edits.

c. Timing of Payment Penalties

We have previously announced in August 2020, via the CMS AUC website, that the education and operations testing period of the AUC program would be extended through 2021 and the payment penalty phase would begin in January 2022. However, given the many complexities around the scope and application of AUC program claims processing edits, we believe that notice and comment rulemaking is the most appropriate means for us to discuss the implementation and claims processing issues, the start date of the payment penalty phase, and to obtain stakeholder feedback before subsequently finalizing a course of action in the final rule. This process will help ensure that we will appropriately identify claims for denial when the payment penalty phase of the program begins. In addition, we acknowledge the circumstances of physicians and other practitioners, and providers, due to the PHE for COVID–19 and that additional time may be needed to prepare for the payment penalty phase given the challenges and practice disruptions they have experienced while responding to the PHE.

The earliest that our claims processing system can begin screening claims using the AUC program claims processing edits for the payment penalty phase is October 2022. This is because it would not be possible for us to finalize implementation and claims processing plans in this final rule (typically published on or before November 1) and make those decisions effective any earlier than the 3rd calendar quarter of 2022. Implementing the types of claims processing edits necessary for this program generally requires a long lead time. However, we note that an effective date for the claims processing edits in October 2022 may be misaligned with typical annual updates to the systems used by the health care providers that are subject to the AUC program such as EHR, CDSM or claims submission systems. Therefore, we believe the earliest practicable effective date for the AUC program claims processing edits and payment penalty phase is January 1, 2023.

While the above date takes into account technical system and programming concerns, it does not expressly take into the account the impact that the PHE for COVID–19 has had, and may yet have, on practitioners, providers and beneficiaries. Therefore, we are proposing a flexible effective date for AUC program claims processing edits and payment penalty phase to begin the later of January 1, 2023, or the January 1 that follows the declared end of the PHE for COVID–19.

We acknowledge that the AUC program has been significantly delayed. We seek public comment on this proposal for the payment penalty phase to begin, and whether we have appropriately taken into account the PHE for COVID–19 and other factors. We recognize that some practitioners and institutions have already invested in qualified CDSMs, while others have had to redirect their resources during the PHE. We seek information from the public on the state of readiness of practitioners, facilities, and EHR and CDSM vendors.

5. Summary

In summary, we are providing clarifications and proposals around the scope of the AUC program specifically pertaining to updates or modifications to orders for advanced diagnostic imaging services and the extreme and uncontrollable circumstances significant hardship exception. We are also proposing several claims processing solutions to ensure accurate identification of claims that are and are not subject to the AUC program requirements. These proposals address special circumstances related to: Services furnished by a CAH, services paid under the Maryland Total Cost of
Care Model, inpatients converted to outpatients, situations when Medicare is the secondary payer, and imaging services ordered prior to the payment penalty phase but furnished on or after the start of the payment penalty phase. We also discuss identifying the ordering professional on practitioner claims for the imaging service and request feedback on whether it is more appropriate to deny or return claims that fail AUC claims processing edits. We are also proposing to begin the AUC claims processing systems edits and payment penalty phase of the program on the later of January 1, 2023, or the January 1 of the year after the year in which the PHE for COVID–19 ends. We invite the public to submit comments on these clarifications and proposals.

We will continue to post information on our website for this program, accessible at www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Appropriate-Use-Criteria-Program/index.html.

G. Removal of Selected National Coverage Determinations

CMS periodically identifies and removes National Coverage Determinations (NCDs) that no longer contain clinically pertinent and current information, in other words those items and services that no longer reflect current medical practice, or that involve items or services that are used infrequently by beneficiaries. Clinical science and technology evolves and items and services that were once considered state-of-the-art or cutting edge and experimental may be established as reasonable and necessary for Medicare beneficiaries or replaced by more beneficial technologies or clinical paradigms.

In the CY 2021 PFS final rule (85 FR 84472), we established rulemaking as an appropriate vehicle for receiving public comment on removing outdated NCDs, replacing the prior subregulatory administrative process used on two occasions in 2013 and 2015. Using rulemaking under section 1871(a)(2) of the Act allows us to consider removal of several NCDs at once as compared to the public comment process established in section 1862(l) of the Act, to be used in making and reconsidering individual NCDs.

Eliminating an NCD that provides national coverage for items and services means that the item or service will no longer be automatically covered by Medicare (42 CFR 405.1060). Instead, the initial coverage determinations for those items and services will be made by local Medicare Administrative Contractors (MACs). On the other hand, removing an NCD that bars coverage for an item or service under title XVIII (that is, national noncoverage NCD), allows MACs to cover the item or service if the MAC determines that such action is appropriate under the statute. Removing a national non-coverage NCD may permit more immediate access to technologies that may now be beneficial for some uses. As the scientific community continues to conduct research, which produces new evidence, the evidence base we previously reviewed may have evolved to support other policy conclusions.

In the CY 2021 PFS final rule, we did not establish an exclusive list of criteria that we would use for identifying and evaluating NCDs for removal. Instead, based on recommendations in public comments, and to be more flexible and nimble, we added considerations to the six factors established in 2013 to guide our decision making process. In addition to the six factors listed below, we also consider the general age of an NCD, changes in medical practice/standard of care, the pace of medical technology development since the last determination, and availability and quality of clinical evidence and information to support removal of an NCD. We would consider proposing the removal of an NCD if:

- We believe that allowing local contractor discretion to make a coverage decision better serves the needs of the Medicare program and its beneficiaries.
- The technology is generally acknowledged to be obsolete and is no longer marketed.
- In the case of a noncoverage NCD based on the experimental status of an item or service, the item or service in the NCD is no longer considered experimental.
- The NCD has been superseded by subsequent Medicare policy.
- The national policy does not meet the definition of an “NCD” as defined in sections 1862(l) or 1869(f) of the Act.
- The benefit category determination is no longer consistent with a category in the statute.

When we evaluate particular NCDs for removal, we take into account information gathered from stakeholders, the claims data for those items and services, and factors such as whether there may be documentation requirements within the NCD that are outdated and create a barrier to coverage. The rulemaking process provides an opportunity to consider public input before the NCD would be removed. We could decide to retain those NCDs after considering public comments.

In Table 23, we list the NCDs that we propose to remove. In addition to conducting an internal review to identify appropriate NCDs for removal, we receive removal requests from a variety of external stakeholders, such as medical specialty societies, device manufacturers, beneficiaries, physicians and providers, and other interested individuals. Additionally, sometimes topics are brought to our attention by the MAC medical directors. Also, we received comments to the NCD Removal proposal in response to the CY 2021 PFS proposed rule suggesting another seven NCDs for CMS to consider removing. After reviewing those comments and considering other available evidence and information, we are proposing to remove one of those seven NCDs in this rulemaking cycle. We have opened a national coverage analysis (NCA) using the NCD process for one and believe the other five NCDs should be retained.

We solicit comment on the two NCDs discussed in Table 23, as well as comments recommending other NCDs for CMS to consider for removal in a future rulemaking or through the NCD process.

### TABLE 23: Proposed NCDs for Removal

<td>Positron Emission Tomography (PET) Scans (09/03/2013)</td>
</tr>
</tbody>
</table>

The following outlines each NCD and provides a summary of the rationale for removal. Each of the current NCDs below is available in the Medicare National Coverage Determinations Manual located at https://www.cms.gov/
1. NCD 180.2 Enteral and Parenteral Nutritional Therapy (July 11, 1984)
   - Circumstances/Factor: We believe that allowing local contractor discretion to make a coverage decision better serves the needs of the Medicare program and its beneficiaries.
   - Rationale: External stakeholders suggested that portions of this NCD are outdated. Enteral nutrition is the delivery of food to a patient with a functioning gastrointestinal tract who, due to pathology or, non-function of the structures that normally permit food to reach the digestive tract, cannot maintain weight and strength. Enteral nutrition is provided through a nasogastric, jejunostomy, or gastrostomy tube. Parenteral nutrition is provided intravenously to the patient with pathology of the alimentary tract severe enough that it does not allow for absorption of sufficient nutrients. This NCD does not provide as a matter of course, for pharmacy prepared parenteral solutions, which would increase patient safety. It also unnecessarily adds to patient and provider burden as it requires repeated reviews of medical necessity for those individuals who need enteral or parenteral nutrition services as a result of chronic diseases that affect the ability to eat or to digest/absorb nutrition. Local contractors have proposed LCDs that, if finalized, would provide parenteral and enteral nutrition coverage for certain Medicare beneficiaries. Therefore, we believe that removing this NCD would better serve the needs of the Medicare program and its beneficiaries.

2. NCD 220.6 Positron Emission Tomography (PET) Scans (September 3, 2013)
   - Circumstances/Factor: We believe that allowing local contractor discretion to make a coverage decision better serves the needs of the Medicare program and its beneficiaries.
   - Rationale: External stakeholders suggested this NCD may be outdated. NCD 220.6 established broad national non-coverage for non-oncologic indications of PET and was established in 2000. Thus we required that every non-oncologic indication for PET must have its own NCD in order to receive coverage. In 2013, we reconsidered the NCD to allow coverage for diagnostic PET imaging for oncologic uses not already determined by an NCD, to be made by local Medicare administrative contractors (MACs), due to “various improvements in the technical, regulatory, and professional aspects of PET imaging for diagnosis.” Since the 2013 reconsideration, new non-oncologic PET agents have been approved by the FDA and multiple professional medical societies have published guidelines relevant to appropriate use of these agents. We believe that local contractor discretion provides an immediate avenue to potential coverage in appropriate candidates for non-oncologic indications. Therefore, we are proposing to eliminate subsection 220.6 to remove the broad national bar to coverage of PET scans for non-oncologic indications, thus allowing local Medicare contractors to make a coverage determination under section 1862(a)(1)(A) of the Act for beneficiaries. We believe this framework better serves the needs of the Medicare program and its beneficiaries. For clarity, we are not proposing to change any other subsections of 220.6. Thus, the NCDs listed at 220.6.1 through 220.6.20 would not be changed by this proposal.

   - In summary, we solicit comment on the proposal to remove the two NCDs, as well as comments recommending other NCDs for CMS to consider for future removal. We request commenters include a rationale to support their comments. We will use the public comments to help inform our decision to take one of three actions on the three NCDs proposed for removal:  
     - Remove the NCD, as proposed, allowing for coverage to be determined by the MACs.
     - Retain the current policy as an NCD.
     - Reconsider the NCD by opening a National Coverage Analysis. Comments suggesting that the NCD should be revised, rather than eliminated, should include new evidence that was not previously available at the time of the original NCD or at the time the NCD was last reconsidered, in order to support a change in national coverage.

H. Pulmonary Rehabilitation, Cardiac Rehabilitation and Intensive Cardiac Rehabilitation

Conditions of coverage for pulmonary rehabilitation (PR), cardiac rehabilitation (CR) and intensive cardiac rehabilitation (ICR) are codified at 42 CFR 410.47 and 410.49. We are proposing revisions to the PR and CR/ICR regulations to emphasize that though one program treats a respiratory disease and one treats cardiac conditions, both types of programs aim to improve quality of life for their participants using similar methods. Because many components are shared between PR and CR/ICR, we strive to ensure consistency in the regulatory language used for these therapeutic programs. Additionally, we are proposing to more closely conform the PR and CR regulations by removing a PR requirement, and to add COVID–19 as a covered condition for PR for certain beneficiaries. As discussed by Fleg and colleagues (2020), CR and PR continue to be severely underutilized despite clear benefits on clinical and patient-centered outcomes. In fact Million Hearts® 2022, a national initiative co-led by the Centers for Disease Control and Prevention (CDC) and CMS to prevent 1 million heart attacks and strokes within 5 years, has incorporated a goal for increasing CR utilization. Million Hearts® worked with CR professionals to set a goal of 70 percent CR participation for eligible patients. With these proposals to improve accuracy and consistency of the regulatory language specifying Medicare conditions of coverage for PR and CR/ICR, we hope to assist programs to better understand the PR and CR/ICR conditions of coverage.

1. Statutory Authority
   - Section 144(a) of the Medicare Improvements for Patients and Providers Act of 2008 (Pub. L. 110–275, July 15, 2008) (MIPPA) amended Title XVIII to add new section 1861(eee) of the Act to provide coverage of CR and ICR under Medicare part B, as well as new section 1861(fff) to provide coverage of PR under Medicare part B. The statute specified certain conditions for coverage of these services and an effective date of January 1, 2010. Conditions of coverage for PR, CR and ICR consistent with the statutory provisions of section 144(a) of the MIPPA were codified in §§410.47 and 410.49 respectively through the CY 2010 PFS final rule with comment period (74 FR 61872 through 61886 and 62002 through 62003 (PR) 62004 through 62005 (CR/ICR)).

2. Background
   - Under §410.47(b), Medicare part B covers PR for beneficiaries with severe to very severe chronic obstructive pulmonary disease (COPD)
consultation and medical emergencies. PR, CR and ICR programs must include: Physician-prescribed exercise, psychosocial assessment, outcomes assessment, cardiac risk factor modification (for CR/ICR) and education or training (for PR), and individualized treatment plans (ITPs) established, reviewed and signed by a physician every 30 days. The statute also includes physician requirements for PR and CR/ICR programs. Namely, section 1861(eee)(5) of the Act requires that the Secretary establish standards to ensure that a physician with expertise in the management of individuals with cardiac pathophysiology is responsible for the CR/ICR program and that such physician, in consultation with appropriate staff, is involved substantially in directing the progress of individual in the program. Section 1861(fff)(3) of the Act similarly requires the Secretary establish standards that ensure that a physician with expertise in the management of individuals with respiratory pathophysiology is responsible for the PR program and, in consultation with appropriate staff, is involved substantially in directing the progress of individual in the program. We established physician standards for PR at § 410.47 and for CR/ICR at § 410.49.

Under the statute, PR and CR/ICR programs include individualized treatment that is furnished under a written plan established, reviewed, and signed by a physician every 30 days. We codified this requirement in §§ 410.47 and 410.49 by defining and describing the ITP which must be established, reviewed, and signed by a physician every 30 days. Because the statute requires a plan to be established, reviewed, and signed by a physician every 30 days, we cannot alter this requirement. Stakeholders have indicated to us that it is very challenging for a program to fulfill these tasks on each patient’s first day of CR/ICR program, and that such physician, in consultation with appropriate staff, is involved substantially in directing the progress of individual in the program. We established physician standards for PR at § 410.47 and for CR/ICR at § 410.49.

As described above, PR and CR/ICR programs are subject to many of the same statutory requirements. Despite the consistency in requirements set forth in statute, we recognize that some of the conditions of coverage codified in regulation are not identical across both programs. We are proposing conforming changes to the regulatory text for both PR and CR/ICR to establish consistency in terminology, definitions and requirements where appropriate which will result in clearer and more streamlined regulatory text. We are also proposing to adjust the statutory structure of § 410.47 to align with § 410.49. The proposed revisions will also enable stakeholders with interest in both PR and CR/ICR programs to more easily compare requirements and implement programs.

82 Section 51008 of the BBA of 2018 makes changes to the statute that will permit other specific practitioners to supervise the items and services effective on January 1, 2024.
a. Definitions

We are proposing revisions to six PR definitions at § 410.47(a), including individualized treatment plan, medical director, outcomes assessment, physician-prescribed exercise, psychosocial assessment and supervising physician; and revisions to three CR/ICR definitions at § 410.49(a), including medical director, outcomes assessment, and physician-prescribed exercise. Specifically, the proposed revisions to the PR definitions of ITP, psychosocial assessment and supervising physician align with the definitions of the same terms for CR/ICR. The proposed revisions to the PR definition of physician-prescribed exercise align with the definition of physician-prescribed exercise for CR/ICR and also include revisions to provide examples of physical activities appropriate to the patient population (which were relocated from the PR components section (previously § 410.47(c))). Similar revisions are proposed for the CR/ICR definition of physician-prescribed exercise. We are proposing to modify language in the PR definition of medical director to align with the CR/ICR definition of medical director to more specifically describe the role of the PR medical director. We are proposing conforming changes to the CR/ICR definition of medical director. Proposed revisions to the PR and CR/ICR definitions of outcomes assessment remove and revise redundant and unnecessary language. Also, we are proposing to clearly state that outcomes assessments may be performed by either the physician or the PR or CR/ICR program staff and that all results of these evaluations performed by program staff must be considered by the physician in the development and/or review of ITPs. These proposals are consistent with descriptions provided in the CY 2010 PFS proposed rule (74 FR at 33608, 33613) which state that PR and CR/ICR staff must provide outcomes assessments to the physician and serve to clearly communicate the important supportive role program staff may play to the physicians of these rehabilitation programs. The proposed conforming changes are designed to more accurately define the existing terms and ensure consistency in definitions used for the same terms across PR and CR/ICR programs. We chose to largely maintain the CR/ICR regulatory text and align the PR regulatory text with CR/ICR based on stakeholder feedback and questions regarding the PR requirements. Aligning PR with CR/ICR is proposed to aligning CR/ICR with PR requirements, better addresses stakeholder feedback and improves consistency in terminology, definitions and descriptions of conditions of coverage. With the proposed revisions and increased consistency, we also aim to improve program efficiency in implementing the conditions of coverage.

b. Covered Conditions

The definition for PR at § 410.47(a) specifies that PR is a physician-supervised program for COPD and certain other chronic respiratory diseases. The CDC uses the term post-COVID conditions to describe health issues that persist more than 4 weeks after first being infected with the caustive virus indicating that this timeframe provides a rough approximation of effects that occur beyond the acute period. Similarly, the National Institute for Health and Care Excellence (NICE), the Scottish Intercollegiate Guidelines Network (SIGN) and the Royal College of General Practitioners (RCGP) have jointly used 4 weeks to differentiate the acute symptoms of COVID from ‘long COVID’, the signs and symptoms that continue or develop after acute COVID–19. Based on the information from the CDC, NICE, SIGN and RCGP, we consider COVID–19 to be chronic when symptoms persist for more than 4 weeks. Symptoms include dyspnea, depression and anxiety which can impair physical function and cause incapacitation. We are proposing to cover PR for Medicare beneficiaries who have been diagnosed with severe manifestations of COVID–19, defined as requiring hospitalization in the ICU or otherwise, and who experience continuing symptomatology, including respiratory dysfunction, for at least 4 weeks post discharge.

Management of COVID–19 post-acute syndrome is an evolving issue in the health of our beneficiaries. We recognize that there is limited evidence available assessing the benefits that PR may provide for patients who were diagnosed with COVID–19. However, early research and consensus statements emphasize the restorative role that PR will likely play in the patient recovering from COVID–19. We are soliciting comments regarding the appropriateness of the coverage criteria for PR for beneficiaries diagnosed with COVID–19, including both the characteristics of the patients for whom PR is covered and the timing of their symptoms as presented above.

c. Components

We are proposing revisions to the description of each of the five PR components under § 410.47(b)(2) (previously § 410.47(c)). Proposed revisions to the descriptions of physician prescribed exercise, psychosocial assessment and outcomes assessment include removing language already used in the definition of each term or references to the definitions in § 410.47(a). The inclusion of already established definition language is redundant and therefore unnecessary. Proposed revisions to the education or training component more concisely explain, but do not change, the existing requirements for meeting this component. Proposed revisions to the description of the ITP align with the description used for the CR/ICR ITP. As noted in the section above, we largely align the PR regulatory text with CR/ICR to better address stakeholder feedback and improve consistency in terminology, definitions and descriptions of conditions of coverage to assist in improving program efficiency in implementing the conditions of coverage.

d. Settings

We are proposing minor edits to align the PR setting text in § 410.47(b)(3)(i) (previously § 410.47(d)(1)) with the CR/ICR setting text and reorganize this section to move and update, consistent with the corresponding CR/ICR section, the requirement that all settings must have a physician immediately available and accessible for medical consultations and emergencies.

e. Physician Standards

We are proposing revisions to align regulatory text regarding the standards for the PR medical director and the supervising physician found at

References:

§ 410.47(c) and (d) (previously § 410.47(e)) with the corresponding CR/ICR medical director and supervising physician text and minor conforming changes to CR/ICR language § 410.49(d) and (e). These revisions will not only align similar requirements for PR and CR/ICR programs, but also more accurately describe the roles and responsibilities of physicians in PR programs, and thereby address stakeholder feedback requesting more specificity around the roles and standards for the physicians involved in PR programs. Specifically, we are proposing to replace the existing PR “physician standards” section with two separate sections. The first, entitled “medical director standards” delineates requirements for the PR medical director, and the second, “supervising physician standards” delineates requirements for physicians fulfilling the supervising physician role when PR items and services are furnished. These revisions also include removing language that is redundant to the definition for medical director already set forth in § 410.47(a) and the requirement that a physician have “direct patient contact related to the periodic review of his or her treatment plan.” We are proposing to remove the direct patient contact language because this requirement is overly burdensome and unnecessary since a physician is already required, in consultation with staff, review patient ITPs every 30 days. Direct physician-patient contact can be written into an ITP for patients who require such attention; however, it is not necessary for every patient and the need for it should instead be specified by the clinician. Furthermore, while we believe direct physician-patient contact within the PR program every 30 days is not necessary for every PR patient, we note that patients are seen by PR staff and their progress is tracked at each session where staff are able to identify the need for direct physician-patient contact as appropriate. Additionally, patients participating in PR generally continue to have ongoing interactions with their treating physicians outside of PR. Because the need for direct physician-patient contact is individualized and patients continue to engage with their treating physicians outside of PR, we are proposing to remove the requirement for direct physician-patient contact within the PR program every 30 days. We are requesting public comment on whether removing the regulatory requirement for direct physician contact every 30 days would be potentially detrimental to PR patients by eliminating a critical physician interaction, or if necessary interactions are already occurring outside of the PR program at appropriate intervals as determined by a physician treating the patient for his or her respiratory condition.

These proposed revisions and clearer delineations of the roles and standards for the PR medical director and, separately, the supervising physician, are important to address stakeholder feedback and reduce burden on PR programs, physicians and patients while ensuring treatment is truly individualized as directed by statute. As these proposed revisions, more accurately describe and delineate the roles and standards for the medical director and the supervising physician, please note that the PR or CR/ICR medical director may serve as a supervising physician if he or she also meets the requirements for a supervising physician. Two different physicians are not necessarily required, as long as the definitions and descriptions in §§ 410.47 and 410.49 are met.

f. Limitations

We are proposing conforming changes to § 410.47(e) (previously § 410.47(f)) and § 410.49(f) to improve clarity of these sections and more closely align the descriptions for session duration, number of sessions covered and time-period over which sessions must be provided.

4. Summary

To improve consistency and accuracy across PR and CR/ICR conditions of coverage, we are proposing largely conforming changes throughout §§ 410.47 and 410.49. We are also proposing to add coverage of PR for beneficiaries who were hospitalized with a COVID–19 diagnosis and experience persistent symptoms, including respiratory dysfunction, for at least 4 weeks after hospital discharge and to remove a PR program requirement that is overly burdensome and unnecessary for all PR patients which was also not expressly required in statute. We believe these proposals result in clearer and more streamlined regulatory text and better assist stakeholders in understanding and implementing PR, CR and ICR programs. We look forward to public comments on our proposals, in particular our proposals to remove the PR direct physician-patient contact requirement and to add coverage of PR for beneficiaries who were hospitalized with a COVID–19 diagnosis and experience persistent symptoms, including respiratory dysfunction, for at least 4 weeks after hospital discharge.

I. Medical Nutrition Therapy

Medical nutrition therapy became a distinct Medicare benefit under section 1861(s)(2) of the Act pursuant to section 105 of the Medicare, Medicaid, and SCHIP Benefits Improvement Protection Act of 2000 (BIPA). Medicare beneficiaries with diabetes or renal disease can receive individualized medical nutrition therapy (MNT) provided by a registered dietitian or nutrition professional, pursuant to a referral by a physician (as defined in section 1861(r)(1) of the Act), with no cost to the beneficiary. Currently, 42 CFR 410.132(c), further requires that the referral must be made by the treating physician. The treating physician was defined as the primary care physician or specialist, coordinating care for the beneficiary with diabetes or renal disease. The regulation also specifically defines renal disease as including chronic renal insufficiency based on glomerular filtration rate (GFR) eligibility criteria.

The National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK), National Kidney Foundation and Academy of Nutrition and Dietetics support MNT for adults with chronic kidney disease (CKD). The National Kidney Foundation and the Academy of Nutrition and Dietetics’ Clinical Practice Guideline on Nutrition in Chronic Kidney Disease acknowledges that the goals of MNT are to optimize nutritional status, and to minimize risks imposed by comorbid conditions and alterations in metabolism on the progression of kidney disease and on adverse clinical outcomes. The authors recognize that patients with CKD have changing needs according to their disease stage and they recommended MNT for each stage of CKD.

In addition, evidence supports the use of MNT as a component of quality diabetes care, including its integration into the medical management of diabetes. Nutrition therapy that includes the development of an eating plan designed to improve blood glucose, blood pressure, and lipid profiles is important in the management of diabetes and can lower the risk of cardiovascular disease, coronary heart disease, and stroke. Despite these findings and endorsement by leading clinical societies, including the American Diabetes Association, American College of Cardiology and the
National Kidney Foundation, less than 1 percent of the estimated 14 million eligible Medicare beneficiaries have accessed MNT.

Over the years, we have heard from several stakeholder groups requesting that we update the MNT regulations to improve beneficiary access. In this proposed rule, we provide background on the MNT services, discuss the MNT regulation revisions, and make proposals to implement these modifications. We are proposing to make changes to the treating physician requirements and update the chronic renal insufficiency GFR criteria in order to improve access and utilization of the MNT benefit. The statute expressly requires the order of a physician; therefore, we are unable to extend referral privileges to NPPs.

1. Background: MNT

MNT is defined in sections 1861(s)(2)(V) and 1861(vv)(1) of the Act and codified in 42 CFR 410.130 (definitions), § 410.132 (MNT), and § 410.134 (provider qualifications).

a. Definitions (§ 410.130)

In 42 CFR subpart G, we define the following definitions that apply to MNT at § 410.130:
- Chronic renal insufficiency.
- Diabetes.
- Episode of care.
- Medical nutrition therapy services.
- Physician.
- Renal disease.
- Treating physician.

b. Medical Nutrition Therapy (§ 410.132)

In § 410.132(a), we outline the conditions for coverage of MNT services. That is, Medicare Part B pays for MNT services provided by a registered dietitian or nutrition professional as defined in § 410.134 when the beneficiary is referred for the service by the treating physician. Services covered consist of face-to-face nutritional assessments and interventions in accordance with nationally-accepted dietary or nutritional protocols. The regulation contains an exception that permits MNT services to be provided as telehealth services under § 410.78.

In § 410.132(b), we outline the limitations on coverage of MNT services. First, the MNT services based on a diagnosis of renal disease as described in 42 CFR subpart G are not covered for beneficiaries receiving maintenance dialysis for which payment is made under section 1881 of the Act. Also, a beneficiary may only receive the maximum number of hours covered under the DSMT benefit for both DSMT and MNT during the initial DSMT training period unless additional hours are determined to be medically necessary under the national coverage determination (NCD) process. In years when the beneficiary is eligible for MNT and follow-up DSMT, Medicare will cover the maximum number of hours covered under MNT unless additional hours are determined to be medically necessary under the NCD process. Under the current MNT NCD (NCD 180.1), Medicare covers 3 hours of MNT in the initial year of referral and up to 2 hours of MNT for subsequent years. In addition, if a beneficiary has both diabetes and renal disease, Medicare will cover the maximum number of hours covered under the renal MNT benefit in one episode of care unless he or she is receiving initial DSMT services, in which case the beneficiary would receive whichever is greater. Finally, an exception to the maximum number of hours described here may be made when the treating physician determines that there is a change of diagnosis, medical condition, or treatment regimen related to diabetes or renal disease that requires a change in MNT during an episode of care.

At § 410.132(c), we discuss that a referral may only be made by the treating physician when the beneficiary has been diagnosed with diabetes or renal disease as defined in 42 CFR subpart G with documentation maintained by the referring physician in the beneficiary’s medical record. We also note that referrals must be made for each episode of care and any additional assessments or interventions required by a change of diagnosis, medical condition, or treatment regimen during an episode of care.

c. Provider Qualifications (§ 410.134)

For Medicare Part B coverage of MNT, only a registered dietitian or nutrition professional may provide the services. At § 410.134, we define registered dietitian or nutrition professional as an individual who, on or after December 22, 2000: (1) Holds a bachelor’s or higher degree granted by a regionally accredited college or university in the United States (or an equivalent foreign degree) with completion of the academic requirements of a program in nutrition or dietetics accredited by an appropriate national accreditation organization recognized for this purpose; (2) has completed at least 900 hours of supervised dietetics practice under the supervision of a registered dietitian or nutrition professional; and (3) is licensed or certified as a dietitian or nutrition professional by the state in which the services are performed. In a state that does not provide for licensure or certification, the individual will be deemed to have met this requirement if he or she is recognized as a registered dietitian by the Commission on Dietetic Registration or its successor organization. However, a dietitian or nutritionist licensed or certified in a state as of December 21, 2000 is not required to hold a bachelor’s or higher degree granted by a regionally accredited college or university in the United States (or an equivalent foreign degree) with completion of the academic requirements of a program in nutrition or dietetics accredited by an appropriate national accreditation organization recognized for this purpose; and need not complete at least 900 hours of supervised dietetics practice under the supervision of a registered dietitian or nutrition professional. In addition, a registered dietitian in good standing, as recognized by the Commission of Dietetic Registration or its successor organization, is deemed to have met these requirements.

2. Proposal for MNT Revisions

a. Removal of the Treating Physician Restriction

For CY 2022, we are proposing to revise the regulations at §§ 410.130 and 410.132. Sections 1861(s)(2)(V) and 1861(vv)(1) of the Act define MNT services as nutritional diagnostic, therapy, and counseling services for the purpose of disease management which are furnished by a registered dietitian or nutrition professional pursuant to a referral by a physician (either an M.D. or D.O.) (as defined in section 1861(r)(1) of the Act). The current regulation further provides that Medicare pays for MNT services when the beneficiary is referred for the service by the treating physician, which is defined as the primary care physician or specialist coordinating care for the beneficiary with diabetes or renal disease. As discussed above in section III.L.2. of this proposed rule and codified at § 410.132(c), we required referrals only by the treating physician when the beneficiary has been diagnosed with diabetes or a renal disease, with documentation maintained by the referring physician in the beneficiary’s medical record. In the CY 2002 PFS final rule (66 FR 55246, November 1, 2001), we believed the treating physician requirement was necessary to ensure coordination of care by the primary care physician or specialist for beneficiaries with chronic diseases in order to assure quality (66 FR 55277).
This relatively narrow definition, however, is now believed to have contributed to the low uptake of referrals to MNT services, although we note that few studies have examined MNT use.

We are proposing to eliminate the requirement that the referral be made by the treating physician and, consistent with the language of the statute, require MNT services to be pursuant to a referral by a physician (as defined in section 1861(r)(1) of the Act) at § 410.130 and § 410.132. It would be reasonable for any physician to refer a beneficiary to MNT. The treating physician restriction is no longer necessary to expect care to be coordinated. Care coordination between the hospital or post-acute care provider and the primary care provider is the goal and a standard of care in today’s medical environment. We have worked to improve, through various efforts, the exchange of patient information between healthcare settings, and that a patient’s healthcare information follows them after discharge from a hospital or post-acute care provider. Such improved transitions of care and exchange of information helps to assure that Medicare beneficiaries will continue to receive quality services. We are proposing to delete the term treating and the definition of treating physician, as there is a separate definition for physician within this provision. Therefore, we are not proposing any change to Medicare’s definition of treating physician and the deletion of treating physician only applies to this provision.

b. Update the GFR Eligibility Criteria for Patients With CKD

We are proposing to revise the regulations at § 410.130. Section 1861(s)(2)(V) of the Act states that MNT services are available to beneficiaries with diabetes or a renal disease. In 2001, we established the definition of chronic renal insufficiency for the purpose of the MNT benefit using definitions from the Institute of Medicine report, “The Role of Nutrition in Maintaining Health in the Nation’s Elderly.” The definitions and staging of chronic kidney disease have evolved since the release of the report and stakeholders have noted that our definition does not reflect current medical practice. Therefore, we are proposing to update the GFR eligibility criteria so that it aligns with up to date standards for CKD stage III through stage V, specifically GFR 15–59 mL/min/1.73m². The accepted CKD staging system separates stage III into two parts: Stage III-a; and Stage III-b. Stage III-a is GFR 45–59. The existing regulatory upper limit of 50 is mid stage III-a and does not meet the widely accepted standard of when a person is diagnosed with moderate kidney disease. The NIDDK and National Kidney Foundation’s staging of CKD align with the proposed change in GFR criteria.91 92

3. Proposed Regulatory Text Changes

We are proposing to make changes to the treating physician requirements and GFR eligibility criteria outlined in § 410.130 and 410.132, consistent with statutory limitations. We propose to revise § 410.130 (definitions) and § 410.132 (MNT) by: (1) Revising the chronic renal insufficiency definition; (2) striking the treating physician definition; and (3) revising conditions for coverage of MNT services, limitations on coverage of MNT services, and referrals.

(1) Definition of Chronic Renal Insufficiency

We propose to revise § 410.130 by revising the chronic renal insufficiency definition by removing the GFR eligibility criteria of 13—50 mL/min/1.73m² and replacing with 15—59 mL/min/1.73m².

(2) Definition of Treating Physician

We propose to revise § 410.130 by removing the definition of treating physician.

(3) Proposed Changes to Conditions for Coverage of MNT Services, Limitations on Coverage of MNT Services, and Referrals

At § 410.132, we are proposing to revise conditions for coverage of MNT services, limitations on coverage of MNT services, and referrals by removing the terms “the” and “treating,” and replacing them with “a,” at paragraphs (a), (b)(5), and (c). In paragraph (c), we are also proposing to strike the term “maintained,” and replace it with the term, “noted.”

4. Summary

The MNT services may help reduce illnesses and improve quality of life for people with diabetes or renal disease. We believe the proposed changes to the treating physician requirements and GFR eligibility criteria are in the best interest of the Medicare program and its beneficiaries. The physician requirement change will increase the capacity and availability of physicians who can refer beneficiaries to MNT, which would alleviate some of the demand on primary care physicians as the usual source to perform this particular function. We note that stakeholders have contacted CMS and suggested such flexibility in the past. We recognize that MNT is not a highly utilized service and we believe these revisions will allow for Medicare patients to gain greater access to MNT services. We look forward to receiving public comment on these proposals.

J. Medicare Shared Savings Program

On March 23, 2010, the Patient Protection and Affordable Care Act (Pub. L. 111–148) was enacted, followed by enactment of the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152) on March 30, 2010, which amended certain provisions of the Patient Protection and Affordable Care Act (hereinafter collectively referred to as “the Affordable Care Act”). Section 3022 of the Affordable Care Act amended Title XVIII of the Act (42 U.S.C. 1395 et seq.) by adding section 1899 to the Act to establish the Medicare Shared Savings Program (Shared Savings Program) to facilitate coordination and cooperation among healthcare providers to improve the quality of care for Medicare fee-for-service (FFS) beneficiaries and reduce the rate of growth in expenditures under Medicare Parts A and B. (See 42 U.S.C. 1395jjj.) Eligible groups of providers and suppliers, including physicians, hospitals, and other healthcare providers, may participate in the Shared Savings Program by forming or participating in an Accountable Care Organization (ACO). Under the Shared Savings Program, providers of services and suppliers that participate in an ACO continue to receive traditional Medicare FFS payments under Parts A and B, but the ACO may be eligible to receive a shared savings payment if it meets specified quality and savings requirements.

Section 1899 of the Act has been amended through subsequent legislation. The requirements for assignment of Medicare FFS beneficiaries to ACOs participating under the program were amended by the 21st Century Cures Act (the CURES Act) (Pub. L. 114–255, December 15, 2016), the Bipartisan Budget Act of 2018 (Pub. L. 115–123, February 9, 2018), further

amended section 1899 of the Act to provide for the following: Expanded use of telehealth services by physicians or practitioners participating in an applicable ACO to furnish services to prospectively assigned beneficiaries, greater flexibility in the assignment of Medicare FFS beneficiaries to ACOs by allowing ACOs in tracks under retrospective beneficiary assignment a choice of prospective assignment for the agreement period; permitting Medicare FFS beneficiaries to voluntarily identify an ACO professional as their primary care provider and requiring that such beneficiaries be notified of the ability to make and change such identification, and mandating that any such voluntary identification will supersede claim-based assignment; and allowing ACOs under certain two-sided models to establish CMS-approved beneficiary incentive programs.

The Shared Savings Program regulations are codified at 42 CFR part 425. The final rule establishing the Shared Savings Program appeared in the November 2, 2011 Federal Register (Medicare Program; Medicare Shared Savings Program: Accountable Care Organizations; final rule (76 FR 67802) (hereinafter referred to as the “November 2011 final rule”)). A subsequent major update to the program rules appeared in the June 9, 2015 Federal Register (Medicare Program; Medicare Shared Savings Program: Accountable Care Organizations; final rule (80 FR 32692) (hereinafter referred to as the “June 2015 final rule”)). The final rule entitled, “Medicare Program; Medicare Shared Savings Program: Accountable Care Organizations—Revised Benchmark Rebasings Methodology, Facilitating Transition to Performance-Based Risk, and Administrative Finality of Financial Calculations,” which addressed changes related to the program’s financial benchmark methodology, appeared in the June 10, 2016 Federal Register (81 FR 37950) (hereinafter referred to as the “June 2016 final rule”). A final rule, “Medicare Program; Revisions to Payment Policies Under the Physician Fee Schedule and Other Revisions to Part B for CY 2019; Medicare Shared Savings Program Requirements; Quality Payment Program; Medicaid Promoting Interoperability Program; Quality Payment Program—Extreme and Uncontrollable Circumstance Policy for the 2019 MIPS Payment Year; Provisions From the Medicare Shared Savings Program—Accountable Care Organizations—Pathways to Success; and Expanding the Use of Telehealth Services for the Treatment of Opioid Use Disorder Under the Substance Use-Disorder Prevention That Promotes Opioid Recovery and Treatment (SUPPORT) for Patients and Communities Act”, appeared in the November 23, 2018 Federal Register (83 FR 59452) (hereinafter referred to as the “November 2018 final rule” or the “CY 2019 PFS final rule”). In the November 2018 final rule, we finalized a voluntary 6-month extension for existing ACOs whose participation agreements would otherwise expire on December 31, 2018; allowed beneficiaries greater flexibility in designating their primary care provider and in the use of that designation for purposes of assigning the beneficiary to an ACO if the clinician they align with is participating in an ACO; revised the definition of primary care services used in beneficiary assignment; provided relief for ACOs and their clinicians impacted by extreme and uncontrollable circumstances in performance year 2018 and subsequent years; established a new Certified Electronic Health Record Technology (CEHRT) use threshold requirement; and reduced the Shared Savings Program quality measure set from 31 to 23 measures (83 FR 59940 through 59990 and 59707 through 59715).

A final rule redesigning the Shared Savings Program appeared in the December 31, 2018 Federal Register (Medicare Program: Medicare Shared Savings Program; Accountable Care Organizations—Pathways to Success and Uncontrollable Circumstances Policies for Performance Year 2019; final rule) (83 FR 67816) (hereinafter referred to as the “December 2018 final rule”). In the December 2018 final rule, we finalized a number of policies for the Shared Savings Program, including a redesign of the participation options available under the program to encourage ACOs to transition to two-sided models; new tools to support coordination of care across settings and strengthen beneficiary engagement; and revisions to ensure rigorous benchmarking.

In the interim final rule with comment period (IFC) entitled “Medicare and Medicaid Programs; Policy and Regulatory Revisions in Response to the COVID–19 Public Health Emergency”, which was effective on the March 31, 2020 date of display and appeared in the April 6, 2020 Federal Register (85 FR 19230) (hereinafter referred to as the “March 31, 2020 COVID–19 IFC”), we removed the restriction which prevented the application of the Shared Savings Program extreme and uncontrollable circumstances policy for disasters that occur during the quality reporting period if the reporting period is extended, to offer relief under the Shared Savings Program to all ACOs that may be unable to completely and accurately report quality data for 2019 due to the Public Health Emergency (PHE) for COVID–19 (85 FR 19267 and 19268).

In the IFC entitled “Medicare and Medicaid Programs; Basic Health Program, and Exchanges; Additional Policy and Regulatory Revisions in Response to the COVID–19 Public Health Emergency and Delay of Certain Reporting Requirements for the Skilled Nursing Facility Quality Reporting Program” which was effective on May 8, 2020, and appeared in the May 8, 2020 Federal Register (85 FR 27573 through 27587) (hereinafter referred to as the “May 8, 2020 COVID–19 IFC”), we modified Shared Savings Program policies to: (1) Allow ACOs whose current agreement periods expire on December 31, 2020, the option to extend their existing agreement period by 1-year, and allow ACOs in the BASIC track’s glide path the option to elect to maintain their current level of participation for performance year 2021; (2) adjust program calculations to remove payment amounts for episodes of care for treatment of COVID–19; and (3) expand the definition of primary care services for purposes of determining beneficiary assignment to include telehealth codes for virtual check-ins, e-visits, and telephonic communication. We also clarified the application of the program’s extreme and uncontrollable circumstances policy to mitigate shared losses for the period of the PHE for COVID–19 starting in January 2020.

We have also made use of the annual CY PFS rules to address quality reporting for theShared Savings Program and certain other issues. Refer to the CY 2020 PFS proposed rule for a summary of policies finalized in prior PFS rules (84 FR 40705). In the CY 2021 PFS final rule, we finalized new Shared Savings Program quality reporting requirements that align with the Alternative Payment Model (APM) Performance Pathway (APP) under the Quality Payment Program and revised the quality performance standard for performance years beginning on or after January 1, 2021, to reduce reporting burden and focus on patient outcomes. We also finalized a policy that waived the requirement that ACOs administer the Consumer Assessment of Healthcare Providers and Systems (CAHPS) for ACOs survey for performance year 2020. In addition, we finalized updates to the definition of primary care services used
for beneficiary assignment, and policies to reduce burden associated with repayment mechanisms. In the CY 2021 PFS final rule, we also finalized the Shared Savings Program provisions included in the March 31, 2020 COVID–19 IFC and the May 8, 2020 COVID–19 IFC, with several modifications in response to public comments received.

Policies applicable to Shared Savings Program ACOs for purposes of reporting for other programs have also continued to evolve based on changes in the statute. The Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10, April 16, 2015) established the Quality Payment Program. In the CY 2017 Quality Payment Program final rule with comment period (81 FR 77008), we established regulations for the Merit-Based Incentive Payment System (MIPS) and Advanced APMs and related policies applicable to eligible clinicians who participate in APMs, including the Shared Savings Program.

As a general summary, in this proposed rule, we are proposing to:

- Clarify the Application of the CAHPS for MIPS Survey sampling policies, including the CAHPS for MIPS minimum sampling thresholds, for Shared Savings Program ACOs.
- Amend the reporting requirements under the APM Performance Pathway (APP) for performance year 2022 and performance year 2023.
- Solicit comments on addressing health disparities and promoting health equity.
- Solicit comments on the feasibility of TIN level reporting and sampling for eCQMs/MIPS CQMs.
- Solicit comments on reporting options for specialist providers within an ACO.
- Update the APM Performance Pathway (APP) measure set to remove the Risk-Standardized, All-Cause Unplanned Admissions for Multiple Chronic Conditions (MCC) for ACOs and replace it with the Risk Standardized, All-Cause Unplanned Admissions for Multiple Chronic Conditions for MIPS.
- Amend the quality performance standard for performance year 2023 by freezing the quality performance standard at the 30th percentile MIPS Quality performance category score.
- Solicit comments on publicly displaying prior year performance scores that equate to the 30th or 40th percentile MIPS Quality performance category scores.
- Revise the extreme and uncontrollable circumstances policy to align with the proposal to freeze the quality performance standard at the 30th percentile MIPS Quality performance category score for performance year 2023.
- Update the definition of primary care services used in beneficiary assignment at § 425.400(c).
- Revise the repayment mechanism arrangement policy in the following manner:
  - To reduce the percentages used in the existing methodology for determining the repayment mechanism amount and to specify the number of assigned beneficiaries used as a multiplier in the calculations, such that the ACO’s repayment mechanism amount would be calculated as the lesser of the following: (1) One-half percent of the total per capita Medicare Parts A and B FFS expenditures for the ACO’s assigned beneficiaries, based on expenditures and the number of assigned beneficiaries for the most recent calendar year for which 12 months of data are available; or (2) 1 percent of the total Medicare Parts A and B FFS revenue of its ACO participants, based on revenue for the most recent calendar year for which 12 months of data are available, and based on the ACO’s number of assigned beneficiaries for the most recent calendar year for which 12 months of data are available.
  - To specify how we identify the number of assigned beneficiaries used in the repayment mechanism amount calculation and the annual repayment mechanism amount recalculation.
  - To allow a one-time opportunity for certain ACOs that established a repayment mechanism to support their participation in a two-sided model beginning on July 1, 2019, January 1, 2020, or January 1, 2021, to elect to decrease the amount of their existing repayment mechanisms.
  - To revise the threshold for determining whether an increase in the repayment mechanism amount is required.
  - Streamline the application process by revising requirements concerning the disclosure of prior participation in the Shared Savings Program by the ACO, ACO participants, and ACO providers/suppliers, in light of other requirements that consider an ACO’s prior participation.
- Reduce the frequency and circumstances under which ACOs submit sample ACO participant agreements and executed ACO participant agreements to CMS.
- Amend the beneficiary identification requirement that applies to ACOs under prospective assignment and ACOs under preliminary prospective assignment with retrospective reconciliation.
- Solicit comments on considerations related to the use of regional FFS expenditures in the Shared Savings Program’s benchmarking methodology.

1. Quality and Other Reporting Requirements

a. Background

Section 1899(b)(3)(C) of the Act states that the Secretary shall establish quality performance standards to assess the quality of care furnished by ACOs and seek to improve the quality of care furnished by ACOs over time by specifying higher standards, new measures, or both. As we stated in the November 2011 final rule establishing the Shared Savings Program (76 FR 67872), our principal goal in selecting quality measures for ACOs has been to identify measures of success in the delivery of high-quality health care at the individual and population levels, with a focus on outcomes. In the November 2011 final rule, we adopted a quality measure set spanning four domains: Patient experience of care, care coordination/patient safety, preventative health, and at-risk population (76 FR 67872 through 67891). We subsequently updated the measures comprising the quality performance measure set for the Shared Savings Program through rulemaking in the CY 2015, 2016, 2017, and 2019 PFS final rules (79 FR 67907 through 67920, 80 FR 71263 through 71268, 81 FR 80484 through 80489, and 83 FR 59707 through 59715 respectively).

Between performance years 2017 (the first performance year under MIPS) and 2020, eligible clinicians who were participating in an ACO and who were subject to MIPS (MIPS eligible clinicians) were scored under the APM scoring standard under MIPS (81 FR 77260). These clinicians include any MIPS eligible clinicians who were participating in an ACO in a track, or payment model within a track (Track 1 and Levels A through D of the BASIC track) of the Shared Savings Program that is not an Advanced APM, as well as those MIPS eligible clinicians participating in an ACO in a track, or payment model within a track (Track 2, Level E of the BASIC track, and the ENHANCED track, or the Medicare ACO Track 1+ Model (Track 1+ Model)) that is an Advanced APM, but who do not become Qualifying APM Participants (QPs) as specified in § 414.1425, and are not otherwise excluded from MIPS.

In the CY 2021 PFS final rule, CMS finalized modifications to the Shared Savings Program quality reporting...
requirements and quality performance standard for PY 2021 and subsequent performance years (85 FR 84720 through 84736). For performance year 2021 and subsequent years, ACOs are required to report quality data via the APP. In addition, CMS finalized a phase-in approach to the new Shared Savings Program quality performance standard that ACOs must achieve in order to be eligible to share in savings or avoid maximum losses. This phase-in allows for a gradual increase of the quality performance standard from a quality performance score that is equivalent to or higher than the 30th percentile across all MIPS Quality performance category scores in performance years 2021 and 2022 to a quality performance score that is equivalent to or higher than the 40th percentile across all MIPS Quality performance category scores in performance year 2023 and subsequent years.

b. Clarification of the Application of CAHPS for MIPS Sampling Policies to Shared Savings Program ACOs

In the CY 2021 PFS final rule (85 FR 84722), we finalized that beginning in performance year (PY) 2021, Shared Savings Program Accountable Care Organizations (ACOs) are required to report quality data via the Alternative Payment Model (APM) Performance Pathway (APP). As part of the APP, ACOs are required to administer the CAHPS for MIPS survey (85 FR 84730 through 84732).

In the CY 2021 PFS final rule, we noted, in response to public comments, that the CAHPS for MIPS survey uses the same survey instrument to assess the same patient experience domains (or Summary Survey Measures (SSMs)) as the CAHPS for ACO survey. We noted that both the CAHPS for MIPS and the CAHPS for ACOs survey use the same shortened, streamlined version of the survey that we implemented for both CAHPS for ACOs and CAHPS for MIPS in 2018, reflecting efforts by CMS to reduce the number of questions. Moreover, in 2019, the two programs used identical survey instruments.

As discussed in the CY 2021 PFS final rule, we conducted analyses to assess the impact of aligning CAHPS scoring and benchmarking using 2019 CAHPS for ACOs and CAHPS for MIPS data. The results of these analyses indicate that scoring ACOs using the MIPS methodology resulted in ACOs having a similar distribution of quality points as MIPS groups. This distribution was wider than the distribution of quality points using the ACO scoring methodology largely due to differences across the two programs in the approach to benchmarking (85 FR 84731).

In addition, we clarified that beneficiaries assigned to an ACO or MIPS group, who are eligible for the CAHPS for MIPS or CAHPS for ACOs survey, are randomly selected for inclusion in the sample. Samples are drawn at the ACO level for CAHPS for ACOs and at the TIN level for MIPS groups. Therefore, each ACO or MIPS group sample is representative of the ACO or group population.

We stated that due to the alignment of CAHPS for ACOs with CAHPS for MIPS, we will use the benchmarking and scoring methodology for CAHPS for MIPS to assess ACOs’ performance on the CAHPS survey measures. We explained that a single set of benchmarks will be calculated using data from all applicable CAHPS for MIPS reporters. We score the CAHPS for MIPS survey as one quality measure, which is a different scoring approach from the Shared Savings Program quality scoring methodology, which scored the 10 CAHPS for ACOs SSMs in one patient/caregiver experience quality domain. As described in the CY 2017 Quality Payment Program final rule (81 FR 77284), each scored SSM has an individual benchmark and is scored individually and compared against the benchmark to establish the number of points earned. The CAHPS score is the average number of points across scored SSMs.

As stated in the CY 2021 PFS final rule (85 FR 84731), eligible beneficiaries assigned to an ACO or MIPS group are randomly selected to be included in the sample for the CAHPS for ACOs or CAHPS for MIPS survey. In the CY 2021 PFS final rule, we explained that the target sample size for CAHPS samples for all participating ACOs, groups, and virtual groups is 860; for ACOs, groups, and virtual groups with 860 or more survey-eligible patients, a random sample of 860 patients is drawn. We also noted that groups and virtual groups with fewer than 860 survey-eligible patients are eligible to participate in the CAHPS for MIPS if they meet the minimum sampling thresholds for CAHPS for MIPS:

- Large groups or virtual groups with 100 or more eligible clinicians: 416 eligible patients.
- Medium groups or virtual groups with 25–99 eligible clinicians: 255 eligible patients.
- Small groups or virtual groups with 2–24 eligible clinicians: 125 eligible patients.

These minimum sampling thresholds are necessary to ensure that groups have an adequate sample size to ensure that the survey responses will be representative of the care furnished by the clinicians in the group. Groups that do not have an adequate sample size would be at risk for not receiving enough survey responses to be representative of the care provided.

In the CY 2021 PFS final rule, we stated that we will continue to draw the CAHPS survey samples for Shared Savings Program ACOs administering the CAHPS for MIPS survey at the Shared Savings Program ACO level, with a target sample size of 860 going forward. Although we did not specifically state in the CY 2021 PFS final rule that the MIPS minimum sampling thresholds would also apply to ACOs participating in the Shared Savings Program, we want to clarify that they do apply for performance year 2021 and subsequent years. As explained in the CY 2021 PFS final rule, under the APP we are replacing the CAHPS for ACOs that was previously used in the Shared Savings Program with the CAHPS for MIPS. Because the intent in including the CAHPS for MIPS in the APP was to align reporting requirements under the Shared Savings Program with MIPS, we believe that the discussion surrounding the CAHPS for MIPS minimum sampling thresholds for groups and virtual groups can be reasonably understood to indicate that the CAHPS for MIPS minimum sampling thresholds would also apply to Shared Savings Program ACOs. We noted that we received stakeholder feedback after the publication of the CY 2021 PFS final rule asking whether the CAHPS for MIPS minimum sampling thresholds would also apply to Shared Savings Program ACOs. From the feedback received, we determined that it was necessary to clarify that the minimum sampling threshold will apply.

As discussed previously in this section, minimum sampling thresholds are necessary to ensure that ACOs have an adequate sample size to ensure that the survey responses will be representative of the care furnished by the ACO clinicians. In addition, we do not want ACOs to be required to contract with a vendor to administer the survey if there is a high risk that the ACO will not have a sufficient sample size to generate a response rate for the survey that will be sufficient to reliably calculate a score for the CAHPS for MIPS survey. Aligning the minimum sampling thresholds for ACOs with the CAHPS for MIPS minimum sampling thresholds allows for consistency across all entities reporting for MIPS. Furthermore, we believe applying the CAHPS for MIPS minimum...
sampling thresholds does not negatively impact Shared Savings Program ACOs because, as discussed below, only a few ACOs would potentially be impacted by these minimum sampling thresholds.

Based on the analysis of proxy data from 2020, nearly all ACOs will fall into the large size classification; that is, they will have 100 or more eligible clinicians that have assigned their billing to TINs participating in the ACO. To quantify the actual number of eligible clinicians associated with each ACO, we used the latest available reassignment and claims data from an internal file that is regularly created twice each performance year to identify the number of individual providers (NPIs) associated with each ACO’s participant TINs. We conducted an analysis with proxy ACO sampling frames from 2020 and 44 ACOs fell into the medium size category of 25–99 eligible clinicians, and no ACOs were determined to have fewer than 24 eligible clinicians. Based on this analysis, we estimate that few ACOs would not be able to administer the CAHPS for MIPS due to sample size. All ACOs classified as medium-sized had more than 860 beneficiaries eligible for sampling. However, based on our analysis, one large-sized ACO would not have been able to administer the CAHPS survey for PY 2020, if we had required ACOs to administer a CAHPS for MIPS survey in performance year 2020 and these sampling rules had applied at that time because the sample size requirements would not have been met. Two additional large-sized ACOs were close to the minimum sampling threshold and would have been at risk for not being able to administer the CAHPS for MIPS survey for performance year 2020. We note that in both cases, these ACOs would have been eligible for CAHPS sampling based on their counts of assigned, quality-eligible beneficiaries with 2 visits during the performance year; however, a large proportion (over 50 percent) of the beneficiaries assigned to these ACOs were residing in nursing homes and institutionalized beneficiaries are excluded from CAHPS for MIPS sampling.

Given that the minimum sampling sizes are set to ensure that groups or ACOs receive enough responses to be representative of the care their clinicians provide, we believe it is important that we should not burden ACOs that fall below the thresholds with the cost of hiring a vendor and fielding a CAHPS for MIPS survey that may not produce enough responses to calculate the CAHPS for MIPS score.

Accordingly, we will inform any ACO that is at risk of falling below the minimum sampling threshold that it may not have enough beneficiaries to field a CAHPS for MIPS survey prior to the deadline for contracting with a CAHPS for MIPS survey vendor. An ACO that does not meet the minimum sampling threshold to administer the survey will not receive a score for the CAHPS for MIPS survey under the APP. When an ACO fails to meet the sampling threshold and is unable to administer the survey, the ACO’s measure set will be scored accordingly, and the number of measures included in the calculation of the ACO’s quality performance score will be reduced from 10 to 9 measures or from 6 to 5 measures in the APP for PY 2021. This means that the denominator used to calculate the quality score will be lower, such that an ACO that falls below the minimum threshold will not be penalized for its inability to administer a CAHPS for MIPS survey.

We seek comment on this clarification that the CAHPS for MIPS Minimum Sampling Thresholds also apply to Shared Savings Program ACOs.

In section IV.A.3.d. of this proposed rule, we discuss proposals related to the CAHPS for MIPS survey. In section IV.A.3.d, the term “performance period” is used to describe the time-period over which quality performance is assessed under MIPS, which is a full calendar year (January 1 through December 31) (except as otherwise specified for administrative claims-based measures in the MIPS final list of quality measures). In contrast, the Shared Savings Program uses the term “performance year” to describe each period for which ACOs’ quality performance is assessed. For performance year 2021 and subsequent performance years, the relevant period is also the full calendar year. Therefore, while the terminology used in the Shared Savings Program and MIPS differs, the period of time for which quality performance is assessed under the APP is the same for both programs.

c. Amending the Reporting Requirements Under the APM Performance Pathway for Performance Years 2022 and 2023

In the CY 2021 PFS final rule, we finalized a change to the quality reporting requirements for purposes of the Shared Savings Program (85 FR 84720 through 84734). Effective for CY 2021 and subsequent performance years, Shared Savings Program ACOs are required to report quality data via the APP. The quality reporting requirements under the Shared Savings Program align with the requirements that apply under the APP under the Quality Payment Program. Under this new approach, ACOs only need to report one set of quality metrics via the APP to satisfy the quality reporting requirements under both the Shared Savings Program and the MIPS. The quality measures reported via the APP for purposes of the MIPS Quality performance category will also be used to determine the quality performance of the ACO for purposes of determining eligibility for shared savings and calculating shared losses, where applicable. We refer readers to Table 40 of the CY 2021 PFS final rule (85 FR 84733) for a list of the measures included in the final APP measure set for performance year 2021.

Under the policies adopted in the CY 2021 PFS final rule:

• For performance year 2021, ACOs are required to report quality data via the APP, and can choose to actively report either the 10 measures under the CMS Web Interface or the 3 eCQM/MIPS CQM measures. In addition, ACOs are required to field the CAHPS for MIPS survey, and CMS will calculate 2 measures using administrative claims data.

• For performance year 2022 and subsequent performance years, ACOs are required to actively report quality data on the 3 eCQM/MIPS CQM measures via the APP. In addition, ACOs are required to field the CAHPS for MIPS survey, and CMS will calculate two measures using administrative claims data. All 6 measures will be included in the calculation of the ACO’s quality performance score for purposes of the Shared Savings Program.

Our initial proposal in the CY 2021 PFS proposed rule included the removal of the CMS Web Interface collection type and a requirement that ACOs report quality data via the eCQM/MIPS CQM collection type starting in PY 2021. Public comments on our proposal expressed concerns about moving ACOs away from a collection type under which they report quality data on a sample of their assigned Medicare beneficiary population to a collection type that requires ACOs to report quality data on a broader, all-payer population.

For example, we received public comments expressing concerns about the increased burden of reporting eCQM/MIPS CQM measures, as ACOs would be responsible for aggregating the data across multiple ACO participant Taxpayer Identification Numbers (TINs) and submitting this data to CMS. In
Since the CY 2021 PFS final rule was issued, stakeholders have continued to express concerns about requiring ACOs to report eCQMs/MIPS CQMs via the APP, due to the cost of purchasing and implementing a system wide infrastructure to aggregate data from multiple ACO participant TINs and varying EHR systems. We note that for performance years beginning on or after January 1, 2019, ACOs are required to certify that they meet the CEHRT use requirements as specified at § 425.506(f). Specifically, ACOs in a track that:

- Does not meet the financial risk standard to be an Advanced APM must certify that the percentage of eligible clinicians participating in the ACO that use CEHRT to document and communicate clinical care to their patients or other health care providers meets or exceeds 50 percent; or
- Meets the financial risk standard to be an Advanced APM must certify that the percentage of eligible clinicians participating in the ACO that use CEHRT to document and communicate clinical care to their patients or other health care providers meets or exceeds the threshold established under § 414.1415(a)(1)[i].

We define CEHRT for purposes of the Shared Savings Program at § 425.20 and the term has the same meaning as provided under § 414.1305 for purposes of the Quality Payment Program. For 2019 and subsequent years, CEHRT is defined to mean EHR technology that meets the 2015 Edition Base EHR definition and that has been certified to the 2015 Edition health IT certification criteria necessary to report on applicable objective measures specified for the MIPS Promoting Interoperability performance category and includes clinical quality measure certification criteria that support the calculation and reporting of clinical quality measures that can be electronically accepted by CMS. Health IT certified to clinical quality measure certification criteria can help to support ACOs’ efforts to meet quality measure reporting requirements.

According to a recent National Association of Accountable Care Organizations (NAACOS) survey regarding the readiness of ACOs to report eCQMs/MIPS CQM data, NAACOS noted that 77 percent of respondents indicated they do not have the infrastructure in place to aggregate data on behalf of their ACO participant TINs on quality performance across all payers starting in 2022. On average, an ACO has 36 ACO participant TINs and the largest Shared Savings Program ACO has 436 ACO participant TINs. The NAACOS survey also noted that almost 40 percent of ACOs have more than 15 EHR systems. Additionally, stakeholders have raised privacy and other concerns about reporting eCQMs/MIPS CQMs on all-payer populations, rather than a sample of assigned Medicare beneficiaries, as required for the CMS web interface measures. These concerns focus on perceived HIPAA Privacy Rule limitations on sharing protected health information (PHI) for non-Medicare beneficiaries with an ACO.

Furthermore, we have heard concerns from ACOs that are acting as business associates of their health care provider ACO participants regarding their ability to update their business associate agreements (BAAs) to include the PHI of patients who are not covered by Medicare. Stakeholders have indicated that current agreements may only address sharing the PHI of Medicare beneficiaries. Therefore, they have raised concerns that reporting all payer eCQMs would violate their BAAs as well as the HIPAA Privacy Rule business associate requirements at 45 CFR 164.502(a) and 164.504(e).

To report eCQMs successfully, health care providers must adhere to the requirements identified by the CMS quality program in which they intend to participate. For purposes of reporting eCQMs/MIPS CQMs under MIPS, clinicians are expressly required under § 414.1340(a) to submit data on the applicable percentage of patients that meet the measure’s denominator criteria, regardless of payer. Under § 414.1380(b)(1)(i)(B)(i)(iii), failure to meet this requirement may result in the clinician receiving zero points for the measure, which may adversely impact their MIPS final score and payment adjustment. As such, we believe the disclosure of all-payer data to CMS as required by § 414.1340(a) would be permitted by the HIPAA Privacy Rule under the provision that permits disclosures of PHI as “required by law.” 95 Under this provision, a HIPAA covered entity, or its business associate when authorized by its BAA, may use or disclose PHI to the extent that such use or disclosure is required by law and the use or disclosure complies with and is limited to the relevant requirements of such law. We note that the HIPAA Privacy Rule minimum necessary

---

95 See 45 CFR 164.512(a).
standard does not apply to uses or disclosures that are required by law.96 Furthermore, the HIPAA Privacy Rule generally permits a covered entity to disclose PHI to a business associate and to allow a business associate to create, receive, maintain, or transmit PHI on its behalf, provided that the parties have a BAA that meets the requirements of 45 CFR 164.504(e) and permits the business associate to use or disclose PHI only as permitted or required by its BAA or as required by law. The BAA must, among other things, establish the permitted and required uses and disclosures of PHI by the business associate. ACO providers and suppliers that are MIPS eligible clinicians will need to review and update any relevant BAA as necessary to include the disclosure of all-payer data, in addition to data for Medicare beneficiaries to the ACO. We believe that ACO providers/suppliers should be able to update those agreements, in consultation with their legal counsel as necessary, to reflect the need to share data for patients covered by all payers with the ACO, in order to permit the ACO to completely and accurately report data on eCQM/MIPS CQM measures consistent with the MIPS reporting requirements.

In addition, we want to correct a statement from the CY 2021 PFS final rule (85 FR 84730). In that final rule, we provided an example of how an ACO could aggregate eCQM measure data. In this example, we stated that an ACO could, on behalf of its ACO participants, combine the results from all the ACO participants’ TIN QRDA 3 files, by adding numerators, denominators, etc. and create an aggregate QRDA 3 file (or other compliant file format) and submit as an ACO to CMS. However, this example did not take into account the potential for duplicate patients for a given measure across the ACO participant TINs within an ACO. It also did not take into account that two of the three eCQMs require that the most recent blood pressure or Hgb A1c be captured to assess performance for those measures. Accordingly, we want to clarify that an ACO that submits eCQM quality data to CMS must de-duplicate the patient level measures data across its ACO providers/suppliers to ensure that the aggregated QRDA 3 file that is submitted to CMS incorporates only quality data that meets the intent of the measure.

Based on the feedback we received, we are convinced that ACOs and their ACO participants, Health IT vendors, and developers need additional time to prepare for reporting all-payer eCQM/MIPS CQM measures. We believe the updates we are proposing to the reporting requirements under the APP are responsive to stakeholder requests to delay the requirement that ACOs report all-payer eCQM/MIPS CQM measures, while still providing incentives for ACOs that are ready to report eCQM/ MIPS CQM measures. As discussed in section IV.A.3.d.(1)(d) of this proposed rule, we are proposing to extend the CMS Web Interface as a collection type for the Quality Payment Program for PY 2022 for MIPS Groups, Virtual groups, and Shared Savings Program ACOs reporting under the APP. For PY 2023, we are proposing that the CMS Web Interface would be a collection type under the APP only for Shared Savings Program ACOs. Accordingly, we are proposing to modify the quality measure set that must be reported by Shared Savings Program ACOs under the APP, as discussed in this section and section IV.A.3.c.(2)(a) of this proposed rule.

To further address stakeholder feedback about ACOs’ readiness to report all-payer measures and in particular the concerns regarding aggregation of eCQM/MIPS CQM data across multiple ACO participant TINs using multiple different electronic health record (EHR) technology, while also providing incentives for ACOs to take the steps necessary to report all-payer measures, we are proposing that:

- For performance year 2022: An ACO would be required to report on either:
  - The three eCQM/MIPS CQM measures and administer a CAHPS for MIPS survey and CMS would calculate the two claims-based measures included under the APP, or
  - The three eCQM/MIPS CQM measures and administer a CAHPS for MIPS survey and CMS would calculate the two claims-based measures included under the APP. If an ACO selects this option, meets the data completeness requirement at § 414.1340 and the case minimum requirement at § 414.1380 for all three eCQM/MIPS CQM measures, and achieves a quality performance score equivalent to or higher than the 30th percentile of the performance benchmark on at least one measure in the APP measure set would provide an incentive to ACOs to report the eCQM/MIPS CQM measures, while allowing them time to gauge their performance on the eCQM/MIPS CQM measures before full reporting of these measures is required beginning in PY 2024. If an ACO chooses this option, its performance on all three eCQM/MIPS CQM measures would be used for purposes of MIPS scoring under the APP. If an ACO decides to report both the ten CMS Web Interface measures and the three eCQM/MIPS CQM measures, it will receive the higher of the two quality scores for purposes of the MIPS Quality performance category. Please note, as indicated in Tables 25 and 40, three of the CMS Web Interface measures (Statin Therapy for the Prevention and Treatment of Cardiovascular Disease (Quality ID# 438); Depression Remission at Twelve Months (Quality ID# 370), and Preventive Care and Screening: Tobacco Cessation: Screening and Cessation Intervention (Quality ID# 236)) do not have benchmarks for performance year 2022 and therefore, will not be scored. However, these measures are required to be reported in order to complete the CMS Web Interface dataset. Based on the ACO’s chosen reporting option, either 6 (three eCQMs/MIPS CQMs + two claims based measures + CAHPS for MIPS Survey measure) or 10 measures (seven CMS Web Interface measures + two claims based measures + CAHPS for MIPS Survey measure) will be included in the calculation of the ACO’s quality performance score.

- For performance year 2023: The ACO would be required to report on either:
  - The ten CMS Web Interface measures and administer a CAHPS for MIPS survey and CMS would calculate the two claims-based measures included under the APP, or
  - The three eCQM/MIPS CQM measures and administer a CAHPS for MIPS survey and CMS would calculate the two claims-based measures included under the APP. If an ACO selects this option, meets the data completeness requirement at § 414.1340 and the case minimum requirement at § 414.1380 for all three eCQM/MIPS CQM measures, and achieves a quality performance score equivalent to or higher than the 30th percentile of the performance benchmark on at least one measure in the APP measure set, the ACO would meet the quality performance standard used to determine eligibility for shared savings and to avoid maximum shared losses, if applicable, for that performance year. We believe that allowing ACOs that report eCQM/MIPS CQM measures to meet the quality performance standard if they achieve a score that is equivalent to or higher than the 30th percentile benchmark on one measure in the APP measure set would be responsive to stakeholder requests to extend the collection type for QPP purpose measures.
the APP measure set, the ACO would meet the quality performance standard used to determine eligibility for shared savings and to avoid maximum shared losses, if applicable, for that performance year. If an ACO chooses this option, its performance on all three eCQM/MIPS CQM measures would be used for purposes of MIPS scoring under the APP. If an ACO decides to report both the ten CMS Web Interface measures and the three eCQM/MIPS CQM measures, it will receive the higher of the two quality scores for purposes of the MIPS Quality performance category.

If an ACO does not report at least one eCQM/MIPS CQM measure in the APP measure set, the ACO would not meet the quality performance standard.

- For performance year 2024 and subsequent performance years: The ACO would be required to report the three eCQM/MIPS CQM measures and administer a CAHPS for MIPS survey and CMS would calculate the two claims based measures included under the APP. If an ACO does not report any of the three eCQM/MIPS CQM measures and does not administer a CAHPS for MIPS survey under the APP, the ACO would not meet the quality performance standard.

Finally, for the first performance year of an ACO’s first agreement period under the Shared Savings Program, if the ACO meets MIPS data completeness and case minimum requirements we are proposing that the ACO would meet the quality performance standard, if:

- For performance year 2022. The ACO reports the ten CMS Web Interface measures or the three eCQM/MIPS CQM measures and administers a CAHPS for MIPS survey under the APP.
- For performance year 2023. The ACO reports the ten CMS Web Interface measures and at least one eCQM/MIPS CQM measure or reports the three eCQM/MIPS CQM measures, and administers a CAHPS for MIPS survey under the APP.
- For performance year 2024 and subsequent performance years. The ACO reports on the three eCQM/MIPS CQM measures and administers a CAHPS for MIPS survey under the APP.

The proposed changes are summarized in Table 24. We are proposing changes to the regulation at § 425.512(a) to reflect these changes to the quality reporting requirements for performance years 2022 and 2023. We note that as part of these proposed changes, we are also proposing to update the provision at § 425.512(a)(2), which applies to new ACOs that are in the first performance year of their first agreement under the Shared Savings Program and are able to meet the quality performance standard under the Shared Savings if they completely and accurately report all required measures via the APP, to reflect the proposed changes to the quality reporting requirements for performance years 2022 and 2023.
We seek comment on these proposed updates to the reporting requirements under the APP for performance year 2022 and subsequent years. In addition, we are seeking comment on whether we should extend the CMS Web Interface collection type for more than the 2 years proposed above. We believe the proposed 2-year extension would provide sufficient time to allow ACOs and their ACO participants to take the necessary steps to address the concerns raised by stakeholders, but are interested in hearing if stakeholders believe additional time would be needed to enable ACOs and their ACO participants to prepare for eCQM/MIPS CQM reporting.

(1) Solicitation of Comments on Addressing Health Disparities and Promoting Health Equity

We note that we continue to believe the move to eCQM/MIPS CQM measures is the appropriate next step for ACO quality measurement. For many years, ACOs have only reported on a sample of their assigned Medicare beneficiary population, as the CMS Web Interface

</tbody>
</table>
| **Shared Savings Program ACO Quality Performance Standard**     | A quality performance score that is equivalent to or higher than the 30th percentile across all MIPS Quality performance category scores. Quality performance standard met: ACOs are eligible to share in savings at the maximum sharing rate; ACOs in two-sided models share in losses based on their quality score or at a fixed percentage based on Track. Quality performance standard not met: ACOs are ineligible to share savings and owe the maximum amount of shared losses, if applicable. | Same as PY 2021. | Same as PY 2022. However, if an ACO does not report at least one eCQM/MIPS CQM measure, the ACO will not meet the quality performance standard. | A quality performance score that is equivalent to or higher than the 40th percentile across all MIPS Quality performance category scores.
only requires that ACOs report on 248 consecutively ranked beneficiaries for each measure in the CMS Web Interface. As we move forward with reporting under the APP and increasing the quality performance standard as described above, we believe that looking at the overall quality of care furnished to all patients is consistent with the goal of improving care furnished by ACOs by ensuring that care delivery is improving across all patients, rather than encouraging ACOs to focus disproportionately on improving measure performance for Medicare beneficiaries. We also believe that assessing Shared Savings Program ACO quality performance on a broader population can have a positive impact on the quality of care for all groups, including Medicare beneficiaries. We also expect the transition to all-payer eCQM/MIPS CQM measures will help to address health disparities and promote health equity by promoting a single standard of care across all patients receiving care from practices participating in Shared Savings Program ACOs regardless of location or racial/ethnic group. However, we are seeking comments and recommendations on how ACOs can utilize their resources to ensure that patients, regardless of racial/ethnic group, geographic location and/or income status, have access to equal care and how ACOs can improve the quality of care provided to certain communities, while addressing the disparities that currently exist in healthcare. We are also seeking comments and recommendations on how we can leverage health care providers serving vulnerable populations to participate in ACOs and other value-based care initiatives, including whether any adjustments should be made to quality measure benchmarks to take into account ACOs serving vulnerable populations.

(2) Solicitation of Comments on Feasibility of TIN Level Reporting and Sampling for eCQMs/MIPS CQMs

To assist ACOs in reporting eCQM/MIPS CQM measures and to address concerns regarding data aggregation across multiple TINs with multiple different EHR systems, we are seeking comment on allowing ACO providers/suppliers to submit eCQMs/MIPS CQM measures to CMS at the ACO participant TIN level. CMS would then calculate/aggregate the TIN level quality data to create an ACO level score. For example, CMS could calculate the average of the decile scores for each measure for each TIN within the ACO to create an aggregate measure level score for the ACO. Alternatively, CMS could calculate an ACO-level numerator for each measure (sum of performance met across TINs within the ACO) and an ACO-level denominator (sum of the met and performance not met across TINs within the ACO), then divide the two—numerator/denominator × 100—to obtain the ACO-level performance rate. We seek comment on these two potential approaches as well as any other suggested approaches to the aggregation of ACO participant TIN level quality data at the ACO level.

While we continue to believe that reporting on all-payer data is important to improve the quality of care furnished to all patients, including Medicare beneficiaries, we have heard from stakeholders that CMS should allow ACOs to report the eCQM/MIPS CQM measures for a smaller, more defined beneficiary population rather than the all-payer population, to serve as an intermediary step to reporting on all patients. Thus, while we believe that the move to all-payer measures is the next step in quality reporting, we acknowledge that the denominator of patients for a given quality measure for an ACO may be significantly higher, depending on ACO size and composition, than for MIPS groups. Therefore, we seek comment on how stakeholders would envision CMS determining an appropriate beneficiary population. For example, should ACOs report on a small sample size similar to the sample size for the CMS Web Interface? Should CMS broaden the beneficiary sample to include all assigned beneficiaries that meet the denominator for a given measure? Should CMS provide ACOs with a bigger sample size, larger than the size that has historically been used for CMS Web Interface but smaller than all the assigned beneficiaries that meet the denominator for a given measure? Or should CMS develop ACO-level eCQM/MIPS CQM measure sampling specifications? We seek comment on whether CMS should create a specific sampling methodology for ACOs, alternate sampling methodologies that could be used, as well as phase-in and tiered implementation strategies.

(3) Comment Solicitation for Reporting Options for Specialist Providers Within an ACO

We have also heard from stakeholders that the population health/primary care focused measures in the APP are not applicable for specialist providers within an ACO. In order to address measure applicability for specialist providers, we are seeking comment on allowing ACO participant TINs to report either the eCQM/MIPS CQM measures in the APP measure set at the TIN level or the applicable MIPS Value Pathways, including how APP and MIPS Value Pathway data reported at the ACO participant TIN level could be aggregated in order to assess ACO quality performance. In addition, we seek input on the role specialists play in ACOs and what specialty measures in the current eCQM or MIPS CQM measure set should be considered for inclusion in the Shared Savings Program quality measure set in future performance years. Alternatively, how could the existing APP measure set be used or modified to reinforce the role of specialists in ACO population health strategies?

(4) Updates to the APM Performance Pathway (APP) Measure Set

In section IV.A.3.(c) of this proposed rule, we are proposing to replace the Risk-Standardized, All-Cause Unplanned Admissions for Multiple Chronic Conditions for ACOs (MCC for ACOs measure) with the Risk-Standardized, All-Cause Unplanned Admissions for Multiple Chronic Conditions for MIPS (MCC for MIPS measure) for performance year 2022. We are proposing to remove the MCC for ACOs measure from the APP measure set in order to reduce the potential for confusion around performance scores and feedback for MIPS eligible clinicians who might otherwise have been scored on both measures with differing results. This proposed change would continue the transition towards alignment of the quality measures reported by MIPS eligible clinicians who are not participants in APMs, such as the Shared Savings Program, and those who are, as discussed in the CY 2021 PFS final rule (85 FR 84720). For a detailed description of this proposal refer to section IV.A.3.(c) of this proposed rule.

By removing the MCC for ACOs measure and aligning the quality measure set for the Shared Savings Program with MIPS, we would have the opportunity to align quality measurement between CMS programs. In addition, given that the Hospital-Wide, 30-day, All-Cause Unplanned Readmission (HWR) Rate for MIPS Eligible Clinician Groups measure calculated as part of the APP looks at an ACO’s all Medicare population rather than just the ACO’s assigned beneficiary population, we believe the proposal to move to the MCC for MIPS measure would be consistent with the approach under the APP of assessing, measuring, and improving quality across a broader population of patients. Further details on the specifications for the MCC.
for MIPS measure can be found in Table A-5 in Appendix A of this proposed rule. Please see Table 25 for the proposed APP measure set that would be reported by Shared Savings Program ACOs for PY 2022 and subsequent performance years.

*We note that Statin Therapy for the Prevention and Treatment of Cardiovascular Disease (Quality ID# 438); Depression Remission at Twelve Months (Quality ID# 370), and Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention (Quality ID# 236) do not have benchmarks and are therefore not scored for PY 2022; they are, however, required to be reported in order to complete the Web Interface dataset. *ACOs will have the option to report via Web Interface for the 2022 & 2023 MIPS Performance years only.

d. Shared Savings Program Quality Performance Standard
(1) Proposal To Freeze the Quality Performance Standard at the 30th Percentile of All MIPS Quality Performance Category Scores for Performance Year 2023

The quality performance standard is the minimum performance level ACOs must achieve in order to be eligible to share in any savings earned, avoid maximum shared losses under certain payment tracks, and avoid quality-related compliance actions. As noted above, in the CY 2021 PFS final rule we finalized a gradual phase in of the revised quality performance standard. Specifically, an ACO would meet the quality performance standard if:
For performance years 2021 and 2022, the ACO achieves a quality performance score that is equivalent to or higher than the 30th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring; and

- For performance year 2023 and subsequent performance years, the ACO achieves a quality performance score that is equivalent to or higher than the 40th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring (85 FR 84735).

We finalized this phase-in approach to address the concerns raised by commenters about the limited time for ACOs to gain familiarity with the new quality reporting requirements under the APP and potential challenges in meeting the new quality performance standard, as well as concerns regarding the shift from a domain-based scoring approach to the original proposal to require an ACO to achieve an overall quality score equal to the 40th percentile across all MIPS Quality performance category scores starting in PY 2021. In conjunction with the decision to phase-in the quality performance standard, we also adopted a phase-in of the reporting requirements under the APP for Shared Savings Program ACOs, as described previously.

In the CY 2021 PFS final rule, we also discussed the potential impact of the final policies on ACO quality performance. We projected that, absent an improvement in quality performance by ACOs, roughly 1-in-5 ACOs, or approximately 20 percent of ACOs, could fall below the 40th percentile MIPS Quality performance category score by performance year 2023, and would not be eligible to share in savings or would owe maximum shared losses, if applicable (85 FR 85007 through 85008). For the CY 2021 rulemaking we conducted analysis, in order to understand better how well ACOs might perform once the CMS Web Interface is no longer an available collection type. The analysis simulated ACO performance on eCQM or MIPS CQM measures, using 2018 and 2019 quality data submitted via the CMS Web Interface. Based on the analysis of the 2018 and 2019 data there were two differing estimates of the number of ACOs that would not meet the quality performance standard. The estimated percent of Shared Savings Program ACOs falling below the 40th percentile MIPS Quality performance category score was 6.3 percent based on a simulation using 2018 data and 22.9 percent based on a simulation using 2019 data.

In the CY 2021 PFS final rule, we indicated that we would continue to monitor emerging performance to determine the impact of a measured increase to the quality performance standard. We stated that we might revisit the policy in future rulemaking in order to promote an attainable standard and degree of improvement based on initial performance under the new methodology (85 FR 85008). If our proposal to extend the availability of the CMS Web Interface as a reporting mechanism under the APP is finalized, performance year 2024 would be the first year that all ACOs would be required to report all three eCQM/MIPS CQM measures and would have no option to report data via the CMS Web Interface, with data submission beginning in 2025. However, we have heard from some ACOs that they are beginning to update their systems and workflows to further develop their capacity for reporting on the eCQM/MIPS CQM quality measure set in performance year 2022. These ACOs are gearing up for all-payer reporting and are performing self-tests in order to understand their performance on the 3 eCQM/MIPS CQM measures. It is also important to note that some ACOs will likely report on eCQM/MIPS CQM measures beginning with the 2021 performance year. Therefore, there is an opportunity for ACOs to gain some familiarity with meeting the requirements for these measures starting in performance year 2021. Even with all of these contingencies in place and our proposals to phase-in reporting of the eCQM/MIPS CQM measures, we still recognize that transitioning to eCQM/MIPS CQM quality data reporting and aggregation may come with unforeseen data collection and/or system operational issues. Therefore, we have concluded that it would be appropriate to freeze the quality performance at the 30th percentile MIPS Quality performance category score for an additional year; and to raise the quality performance standard in conjunction with the transition to reporting of the three eCQM/MIPS CQM measures by all ACOs in PY 2023. Although this increase in the quality performance standard to the 40th percentile would coincide with the first full year of eCQM/MIPS CQM quality reporting, we believe our proposal to extend the CMS Web Interface for an additional 2 years and to allow for a gradual phase-in of reporting the three eCQMs/MIPS CQMs is responsive to stakeholder concerns related to the approach to eCQM/MIPS CQM measures and the need for data aggregation and would provide time for both ACOs and EHR vendors to put in place processes and systems, such that ACOs will be well positioned to report eCQM/MIPS CQMs by performance year 2024.

As discussed earlier in this proposed rule, as part of this gradual phase-in to full reporting of eCQMs/MIPS CQMs, we are proposing to include incentives to encourage early adoption of full eCQM/MIPS CQM reporting prior to performance year 2024. As part of the phase-in, and in order to transition ACOs to reporting all-payer eCQM/MIPS CQM measures, for performance year 2023 we would require an ACO to report at least one eCQM/MIPS CQM measure (that meets data completeness and case minimum requirements) in addition to the CMS Web Interface measures in order to meet the quality performance standard. In addition, we are also proposing for both performance year 2022 and performance year 2023 that ACOs that elect to report all three eCQM/MIPS CQM measures and meet the data completeness requirement and case minimum requirement for all three measures would meet the quality performance standard if they achieve a quality performance score equivalent to or higher than the 30th percentile of the performance benchmark on at least one measure in the APP measure set.

We believe that our proposal to freeze the quality performance standard at the 30th percentile for an additional year, is consistent with the requirement in the statute that CMS increase the quality performance standard overtime. There are two ways to increase the quality performance standard: (1) By increasing the threshold for the quality performance standard, and (2) by moving to all payer measure populations that ACOs are required to report for purposes of Shared Savings Program quality. In this proposed rule, we are proposing to do both by requiring that ACOs begin the transition to reporting all-payer measures before increasing the quality performance standard starting in performance year 2024.

Therefore, we propose to freeze the quality performance standard at the 30th percentile MIPS Quality performance category score for PY 2023, and to establish incentives to encourage ACOs to begin the transition to eCQM/MIPS CQM measure reporting in PY 2022 and PY 2022. This would mean that for all Shared Savings Program ACOs, CMS would designate the quality performance standard as the ACO reporting via the APP established under §414.1367 of this chapter and for:

- Performance year 2022, if an ACO reports:
++ The 10 CMS Web Interface measures and achieves a quality performance score that is equivalent to or higher than the 30th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, or
++ The three eCQM/MIPS CQM measures, meeting the data completeness requirement at § 414.1340 of this chapter and case minimum requirement at § 414.1380 of this chapter for all three measures, and achieves a quality performance score equivalent to or higher than the 30th percentile of the performance benchmark on at least one measure in the APP measure set.

If the ACO does not report any of the 10 CMS Web Interface measures or any of the three eCQM/MIPS CQM measures and does not administer a CAHPS for MIPS survey, the ACO would not meet the quality performance standard.

• Performance year 2023, If an ACO reports:
  ++ The 10 CMS Web Interface measures and at least one eCQM/MIPS CQM measure, and achieves a quality performance score that is equivalent to or higher than the 30th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, or
  ++ The three eCQM/MIPS CQM measures, meeting the data completeness requirement at § 414.1340 of this chapter and case minimum requirement at § 414.1380 of this chapter for all three measures, and achieves a quality performance score equivalent to or higher than the 30th percentile of the performance benchmark on at least one measure in the APP measure set.

If the ACO does not report at least one eCQM/MIPS CQM, the ACO would not meet the quality performance standard.

Our proposal to extend the CMS Web Interface collection type and phase-in the reporting of the eCQMs/MIPS CQMs provides the transition time that stakeholders have requested in order to be ready to submit aggregated data on eCQMs/MIPS CQMs. We believe that the transition to the all-payer eCQM/ MIPS CQM measures is the future of Shared Savings Program quality performance assessment and that ACOs are well-positioned to impact the quality of care across an all-payer population not just the Medicare population given their redesigned care processes and quality improvement activities. Ultimately, we believe that the transition time afforded ACOs by extending the availability of the CMS Web Interface as a collection type, in conjunction with the incentives to encourage early adoption of eCQM/MIPS CQM reporting, should allow ACOs to prepare for full reporting of eCQMs/MIPS CQMs as well as the incremental increase in the quality performance standard to the 40th percentile of MIPS Quality performance category score in PY 2024. Accordingly, we are proposing that for PY 2024 and all subsequent performance years, CMS would designate the quality performance standard for all Shared Savings Program ACOs, with the exception of ACOs in the first performance year of their first agreement period under the Shared Savings Program, as the ACO reporting quality data via the APP established under § 414.1367 according to the method of submission established by CMS and achieving a quality performance score that is equivalent to or higher than the 40th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring. We also propose to revise the regulation at § 425.512 to reflect the extended phase-in of the ACO quality performance standard.

As we explained in the CY 2021 PFS final rule, this approach to phasing in the new, higher quality performance standard is consistent with the statutory requirement in section 1899(b)(3)(C) of the Act, which requires the Secretary to establish quality performance standards to assess the quality of care furnished by ACOs and to seek to improve the quality of care furnished by ACOs over time by specifying higher standards, new measures or both for purposes of assessing such quality of care. We believe that even though we are proposing to freeze the quality performance standard at the 30th percentile MIPS Quality performance category score for an additional year, we will still be holding ACOs to a higher standard than the previous quality standard, which merely required ACOs to achieve the 30th percentile relative to national benchmarks on one measure in each domain. We recognize the change from the CMS Web Interface collection type to the eCQM or MIPS CQM collection type, coupled with this higher quality performance standard, adds complexity for ACOs as they may need to utilize new approaches to combining data across EHR systems to allow for a new data submission type, as well as aggregating ACO participant data for submission to CMS. However, we believe that with this proposal to delay the increase in the quality performance standard, coupled with the proposal to extend the CMS Web Interface through PY2023, with incentives for early adoption of eCQM/MIPS CQM reporting, ACOs will have ample time to prepare for the transition to full eCQM/MIPS CQM reporting in PY 2024 and the incremental increase in the quality performance standard to the 40th percentile MIPS Quality performance category score. We also believe this proposed timeline for phasing in the new quality performance requirements under the Shared Savings Program would signal to ACOs, EHR vendors, and other stakeholders that eCQM/MIPS CQM reporting is the path forward for the Shared Savings Program and clearly establish the standard that ACOs would need to achieve in order to be eligible to share in maximum savings and avoid owing the maximum shared losses, if applicable.

We also considered the possibility of extending the freeze of the Shared Savings Program quality performance standard at the 30th percentile MIPS Quality performance category score for performance year 2024. This alternative would delay the incremental increase in the quality performance standard until all ACOs have at least one year of experience in reporting data for all three eCQM/MIPS CQM measures. This delay would allow ACOs additional time to gain experience reporting on the eCQM/MIPS CQM measures and also provide CMS with more information on ACO performance on all-payer measures and the ability of ACOs to aggregate data across multiple EHR systems and multiple practices. In order to inform the quality performance standard in outlying years. However, for the reasons described previously, we believe the timeline we are proposing for phasing in the new quality reporting and quality performance requirements will provide ample time for ACOs to prepare to meet these new requirements while also satisfying the statutory requirement that we seek to improve the quality of care furnished by ACOs over time.

We seek comment on our proposal to freeze the Shared Savings Program quality performance standard at the 30th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring for PY 2024 and to increase the quality performance standard to the 40th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring starting in PY 2024. In addition, we seek comment on the alternative of freezing Shared Savings Program quality performance standard at the 30th percentile across all MIPS Quality
performance category scores, excluding entities/providers eligible for facility-based scoring for PYs 2023 and 2024. (2) Comment Solicitation on Publicly Displaying Prior Year Performance Scores That Equate to the 30th or 40th Percentile Across MIPS Quality Performance Category Scores

Stakeholders have expressed concerns regarding the lack of information on the level of quality performance that would equate to the 30th or 40th percentile MIPS Quality performance category score and that would enable an ACO to be eligible to share in savings or to avoid maximum shared losses, if applicable. These stakeholders have expressed concern that these data are not publicly available prior to the start of a performance year and that they do not believe that ACOs have a way of determining what quality score they would need to achieve to meet the quality performance standard. For a given performance year, the 30th or 40th percentile MIPS Quality performance category score is calculated based on the distribution across all MIPS Quality performance category scores, excluding entities/providers eligible for scoring for facility-based scoring, only once MIPS final scoring is complete.

Therefore, there is no information that can be provided prior to or during the performance year. However, we note that for performance year 2018 the MIPS Quality performance category score at the 30th percentile was equivalent to 83.9 and the MIPS Quality performance category score at the 40th percentile was equivalent to 93.3. For performance year 2019 the MIPS Quality performance category score at 30th percentile was equivalent to 87.9 and the MIPS Quality performance category score at the 40th percentile was equivalent to 95.7.

We seek comment on whether publicly displaying prior year performance scores that equate to the 30th or 40th MIPS Quality performance category scores would help to address ACOs’ concerns regarding the lack of advance information regarding the quality score they must meet in order to satisfy the quality performance standard under the Shared Savings Program. We also seek comment on other ways we could address these concerns.

e. Revisions to the Extreme and Uncontrollable Circumstances Policy

In the CY 2021 PFS final rule (85 FR 84744 through 84747), we updated the extreme and uncontrollable circumstances policy for performance year 2021 and subsequent performance years to align with the gradual phase in of the revised quality performance standard. Specifically, we finalized that for:

- PY 2021 and PY 2022, the minimum quality performance score for an ACO affected by an extreme and uncontrollable circumstance during the performance year, including the applicable quality data reporting period for the performance year, will be set equal to the 30th percentile MIPS Quality performance category score. If the ACO is able to report quality data and meets the MIPS data completeness and case minimum requirements, we will use the higher of the ACO’s quality performance score or the 30th percentile MIPS Quality performance category score. If an ACO is unable to report quality data and meet the MIPS Quality data completeness and case minimum requirements due to an extreme and uncontrollable circumstance, we will apply the 30th percentile MIPS Quality performance category score. For performance year 2023, if the ACO is able to report quality data via the APP, including at least one eCQM/ MIPS CQM measure, and meets data completeness and case minimum requirements, CMS will use the higher of the ACO’s quality performance score or the 40th percentile MIPS Quality performance category score. If the ACO is unable to report quality data and meet the MIPS Quality data completeness and case minimum requirements due to an extreme and uncontrollable circumstance, we would apply the 30th percentile MIPS Quality performance category score.

- PY 2023, the minimum quality performance score for an ACO affected by an extreme and uncontrollable circumstance during the performance year, including the applicable quality data reporting period for the performance year, will be set equal to the 40th percentile MIPS Quality performance category score. If the ACO is able to report quality data and meets the MIPS data completeness and case minimum requirements, we will use the higher of the ACO’s quality performance score or the 40th percentile MIPS Quality performance category score. If an ACO is unable to report quality data and meet the MIPS Quality data completeness and case minimum requirements due to an extreme and uncontrollable circumstance, we will apply the 40th percentile MIPS Quality performance category score.

As discussed in section III.I.1.d. of this proposed rule, we are proposing to make changes to the quality performance standard for Shared Savings Program ACOs by freezing the quality performance standard at the 30th percentile for PY 2023. Therefore, we are also proposing to update the extreme and uncontrollable circumstances policy under the Shared Savings Program consistent with the proposal in section III.I.1.d. of this proposed rule. Specifically, we propose to set the minimum quality performance score for an ACO affected by an extreme and uncontrollable circumstance during performance year 2023, including the applicable quality data reporting period for the performance year, to equal the 30th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

For performance years 2021 and 2022, if the ACO is able to report quality data via the APP and meets the MIPS data completeness and case minimum requirements, we would use the higher of the ACO’s MIPS Quality performance category score or the 30th percentile MIPS Quality performance category score. If the ACO is unable to report quality data and meet the MIPS Quality data completeness and case minimum requirements due to an extreme and uncontrollable circumstance, we would apply the 30th percentile MIPS Quality performance category score. For performance year 2023, if the ACO is able to report quality data via the APP, including at least one eCQM/ MIPS CQM measure, and meets data completeness and case minimum requirements, CMS will use the higher of the ACO’s quality performance score or the 40th percentile MIPS Quality performance category score. If the ACO is unable to report quality data and meet the MIPS Quality data completeness and case minimum requirements due to an extreme and uncontrollable circumstance, we would apply the 30th percentile MIPS Quality performance category score.

Similarly, we propose that for performance year 2024 and subsequent years, the minimum quality performance score for an ACO affected by an extreme and uncontrollable circumstance during the performance year, including the applicable quality data reporting period for the performance year, would be set equal to the 40th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year. If the ACO is able to report quality data via the APP and meets the MIPS data completeness and case minimum requirements, CMS would use the higher of the ACO’s MIPS Quality performance category score or the 40th percentile MIPS Quality performance category score. If the ACO is unable to report quality data and meet the MIPS Quality data completeness and case minimum requirements due to an extreme and uncontrollable circumstance, we would apply the 40th percentile MIPS Quality performance category score.
eligible to share in savings at their maximum sharing rate or to avoid maximum shared losses, if applicable. We also propose to make conforming changes to the Shared Savings Program regulations at § 425.512(b) to reflect these proposed revisions to the extreme and uncontrollable circumstances policy.

We seek comment on these proposed revisions to the extreme and uncontrollable circumstances policy.

2. Revisions to the Definition of Primary Care Services Used in Shared Savings Program Beneficiary Assignment

a. Background

Section 1899(c)(1) of the Act, as amended by the CURES Act and the Bipartisan Budget Act of 2018, provides that for performance years beginning on or after January 1, 2019, the Secretary shall assign beneficiaries to an ACO based on their utilization of primary care services provided by a physician who is an ACO professional and all services furnished by Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs). However, the statute does not specify a list of services considered to be primary care services for purposes of beneficiary assignment.

In the November 2011 final rule (76 FR 67853), we established the initial list of services, identified by Current Procedural Terminology (CPT) and Healthcare Common Procedure Coding System (HCPCS) codes, that we considered to be primary care services. In that final rule, we indicated that we intended to monitor CPT and HCPCS codes and would consider making changes to the definition of primary care services to add or delete codes used to identify primary care services, if there were sufficient evidence that revisions were warranted. We have updated the list of primary care service codes in subsequent rulemaking to reflect additions or modifications to the codes that have been recognized for payment under the Medicare PFS and to incorporate other changes to the definition of primary care services for purposes of the Shared Savings Program.

In the June 2015 final rule (80 FR 32746 through 32748), we expanded the definition of primary care services to include two transitional care management (TCM) codes (CPT codes 99495 and 99496), and one chronic care management (CCM) code (CPT code 99490). As discussed in the final rule, the TCM codes were established to pay a patient’s physician or practitioner to coordinate the patient’s care in the 30 days following a hospital or SNF stay.

Including these codes in the definition of primary care services reflects our belief that the work of community physicians and practitioners in managing a patient’s care following discharge from a hospital or nursing facility (NF) to ensure better continuity of care for these patients and help reduce avoidable readmissions is a key aspect of primary care.

In the CY 2016 PFS final rule (80 FR 71270 through 71273), we revised the definition of primary care services to exclude services billed under CPT codes 99304 through 99318, containing the place of service modifier specifying that the service was furnished in a skilled nursing facility (SNF). We also revised the definition of primary care services to include claims submitted by Electing Teaching Amendment (ETA) hospitals.

In the CY 2018 PFS final rule (82 FR 53212 and 53213), we revised the definition of primary care services to include three additional CCM service codes, 99487, 99489, and G0506, and four behavioral health integration (BHI) service codes, G0502, G0503, G0504 and G0507.

We further revised the definition of primary care services in the November 2018 final rule (also referred to as the CY 2019 PFS final rule) (83 FR 59964 through 59968), by adding new codes to the definition of primary care services (CPT codes 99497, 99498, 96160, 96161, 99354, and 99355, and HCPCS codes G0444, G0442, and G0443), and by revising how we determine whether services identified by CPT codes 99304 through 99318 were furnished in a SNF.

In the May 8, 2020, COVID–19 IFC (85 FR 27582 through 27586), we revised the definition of primary care services for purposes of beneficiary assignment for the performance year starting on January 1, 2020, and for any subsequent performance year that starts during the COVID–19 PHE defined in § 400.200, to include the following additions specified in § 425.400(c)(2): (1) HCPCS code G2010 (remote evaluation of patient video/images) and HCPCS code G2012 (virtual check-in); (2) CPT codes 99421, 99422 and 99423 (online digital evaluation and management service (e-visit)); and (3) CPT codes 99441, 99442, and 99443 (telephone evaluation and management services).

In the CY 2021 PFS final rule (85 FR 84786 through 84793), we finalized the additional primary care service codes adopted in the May 8, 2020, COVID–19 IFC with modifications to allow these codes to be used in determining beneficiary assignment within the assignment window (as defined at § 425.20) for a benchmark or performance year includes any months during the PHE for COVID–19 defined in § 400.200, and to apply these additional primary care service codes to all months of the assignment window, when the assignment window includes any month(s) during the PHE for COVID–19.

In the CY 2021 PFS final rule (85 FR 84748 through 84753), we expanded the definition of primary care services for purposes of determining beneficiary assignment to include: Online digital E/M CPT codes 99421, 99422, and 99423; assessment of and care planning for patients with cognitive impairment CPT code 99483; chronic care management code CPT code 99491; exclusion of advance care planning CPT code 99497 and the add-on code 99498 when billed in an inpatient care setting; remote evaluation of patient video/images HCPCS codes G2010; virtual check-in HCPCS code G2012; non-complex chronic care management HCPCS code G2058 and its replacement CPT code 99439; principal care management HCPCS codes G2064 and G2065; and psychiatric collaborative care model HCPCS code G2214. In this same final rule (85 FR 84755 through 84756), we finalized revisions to the existing exclusion for professional services billed under CPT codes 99304 through 99318 that are furnished in a SNF to include services reported on an FQHC or RHC claim that includes CPT codes 99304 through 99318, when those services are furnished in a SNF.

For performance years beginning on January 1, 2021, and subsequent performance years, we defined primary care services in § 425.800(c)(1)(v) for purposes of assigning beneficiaries to ACOs under § 425.402 as the set of services identified by the following HCPCS/CPT codes:

CPT codes:
(1) 96160 and 96161 (codes for administration of health risk assessment).
(2) 99201 through 99215 (codes for office or other outpatient visit for the evaluation and management of a patient).
(3) 99304 through 99318 (codes for professional services furnished in a nursing facility: professional services or services reported on an FQHC or RHC claim identified by these codes are excluded when furnished in a SNF).
(4) 99319 through 99340 (codes for patient domiciliary, rest home, or custodial care visit).
(5) 99341 through 99350 (codes for evaluation and management services furnished in a patient’s home for claims identified by place of service modifier 12).
(6) 99354 and 99355 (add-on codes, for prolonged evaluation and management or psychotherapy services beyond the typical service time of the primary procedure; when the base code is also a primary care service code under § 425.400(c)(1)(v)).
(7) 99421, 99422, and 99423 (codes for online digital evaluation and management).
(8) 99439 (code for non-complex chronic care management).
(9) 99483 (code for assessment of and care planning for patients with cognitive impairment).
(10) 99484, 99492, 99493 and 99494 (codes for behavioral health integration services).
(11) 99487, 99489, 99490 and 99491 (codes for chronic care management).
(12) 99495 and 99496 (codes for transitional care management services).
(13) 99497 and 99498 (codes for advance care planning; services identified by these codes furnished in an inpatient setting are excluded).
HCPCS codes:
(1) G0402 (code for the Welcome to Medicare visit).
(2) G0438 and G0439 (codes for the annual wellness visit).
(3) G0442 (code for alcohol misuse screening service).
(4) G0443 (code for alcohol misuse counseling service).
(5) G0444 (code for annual depression screening service).
(6) G0463 (code for services furnished in Electing Teaching Amendment hospitals).
(7) G0506 (code for chronic care management).
(8) G2010 (code for the remote evaluation of patient video/images).
(9) G2012 (code for virtual check-in).
(10) G2058 (code for non-complex chronic care management).
(11) G2064 and G2065 (codes for principal care management services).
(12) G2214 (code for psychiatric collaborative care model).

b. Proposed Revisions

(1) HCPCS and CPT Codes Used in Assignment

Based on feedback from ACOs and our further review of the HCPCS and CPT codes currently recognized for payment under the PFS, we believe it would be appropriate to amend the definition of primary care services used in the Shared Savings Program assignment methodology to include certain additional codes and make other technical changes to the definition of primary care services, for use in determining beneficiary assignment for the performance year starting on January 1, 2022, and subsequent performance years.

We propose to revise the definition of primary care services in the Shared Savings Program regulations to include the following additions: (1) Chronic Care Management (CCM) CPT code 99X21, if finalized through the CY 2022 PFS rulemaking; (2) Principal Care Management (PCM) CPT codes 99X22, 99X23, 99X24, and 99X25, if finalized through the CY 2022 PFS rulemaking; (3) Prolonged office or other outpatient evaluation and management (E/M) service HCPCS code G2212; and (4) Communication Technology-Based Service (CTBS) HCPCS code G2252, if payment for this code is made permanent through the CY 2022 PFS rulemaking. The following provides additional information about the CPT codes and HCPCS codes that we are proposing to add to the definition of primary care services used in assignment:

- **Chronic Care Management (CCM)** CPT code 99X21. For CY 2022, the American Medical Association (AMA) CPT Editorial Panel created a new CPT code that describes CCM services furnished by clinical staff under the supervision of a physician or nonphysician practitioner (NPP) who can bill E/M services, and CCM services personally furnished by a physician or NPP. Elsewhere in this proposed rule, we propose valuation of CPT code 99X21 (Chronic care management services with the following required elements: Multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient; chronic conditions that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored; each additional 30 minutes by a physician or other qualified health care professional, per calendar month).

- **Principal Care Management (PCM)** services CPT Codes 99X22, 99X23, 99X24, and 99X25. The AMA CPT Editorial Panel has created the following new CPT codes that describe PCM services furnished by clinical staff under the supervision of a physician or NPP who can bill E/M services, and PCM services personally furnished by a physician or NPP:
  ++ 99X22 (Principal care management services, for a single high-risk disease, with the following required elements: One complex chronic condition expected to last at least 3 months, and which places the patient at significant risk of hospitalization, acute exacerbation/decompensation, functional decline, or death, the condition requires development, monitoring, or revision of disease-specific care plan, the condition requires frequent adjustments in the medication regimen, and/or the management of the condition is unusually complex due to comorbidities; ongoing communication and care coordination between relevant practitioners furnishing care; first 30 minutes provided personally by a physician or other qualified health care professional, per calendar month).
++ 99X23 (Principal care management services, for a single high-risk disease, with the following required elements: One complex chronic condition expected to last at least 3 months, and which places the patient at significant risk of hospitalization, acute exacerbation/compensation, functional decline, or death; the condition requires development, monitoring, or revision of disease-specific care plan, the condition requires frequent adjustments in the medication regimen, and/or the management of the condition is unusually complex due to comorbidities; ongoing communication and care coordination between relevant practitioners furnishing care; additional 30 minutes provided personally by a physician or other qualified health care professional, per calendar month).
++ 99X24 (Principal care management services, for a single high-risk disease, with the following required elements: One complex chronic condition expected to last at least 3 months, and which places the patient at significant risk of hospitalization, acute exacerbation/compensation, functional decline, or death; the condition requires development, monitoring, or revision of disease-specific care plan; the condition requires frequent adjustments in the medication regimen, and/or the management of the condition is unusually complex due to comorbidities; ongoing communication and care coordination between relevant practitioners furnishing care; additional 30 minutes provided personally by a physician or other qualified health care professional, per calendar month).
++ 99X25 (Principal care management services, for a single high-risk disease, with the following required elements: One complex chronic condition expected to last at least 3 months, and which places the patient at significant risk of hospitalization, acute exacerbation/compensation, functional decline, or death; the condition requires development, monitoring, or revision of disease-specific care plan; the condition requires frequent adjustments in the medication regimen, and/or the management of the condition is unusually complex due to comorbidities; ongoing communication and care coordination between relevant practitioners furnishing care; each additional 30 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month).

Because the Shared Savings Program’s definition of primary care services already includes the temporary HCPCS codes G2064 and G2065 that will be replaced by the permanent CPT codes 99X22 and 99X24, and CPT codes 99X23 and 99X25 represent the same services furnished for a greater length of time, we believe it would be appropriate to propose to include CPT code 99X22, 99X23, 99X24, and 99X25, if finalized through the CY 2022 PFS rulemaking, in the definition of primary care services under § 425.400(c) for the performance year starting on January 1, 2022, and subsequent performance years.

Although the temporary HCPCS codes G2064 and G2065 will be replaced by the permanent CPT codes, the Shared Savings Program will retain the temporary HCPCS codes in the definition of primary care services used for assignment, to be used in conducting beneficiary assignment for benchmark years.

• Prolonged office or other outpatient evaluation and management (E/M) service HCPCS code G2212: In the CY 2021 PFS final rule (85 FR 84536), CMS established additional coding and payment for services delivered via synchronous communication technology, which can include audio-only communication on an interim basis for CY 2021. We stated our belief that establishing payment for a longer service (11–20 minutes) on an interim basis would support access to care for beneficiaries who may be reluctant to return to in-person visits unless absolutely necessary, and allow us to consider whether this policy should be adopted on a permanent basis. Therefore, for CY 2021, on an interim basis, we established HCPCS code G2252 (Brief communication technology-based service, e.g., virtual check-in, by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 11–20 minutes of medical discussion). Elsewhere in this proposed rule, we are proposing to pay for this service on a permanent basis starting January 1, 2022.

HCPCS code G2252 is similar to G2012 (Brief communication technology-based service, e.g., virtual check-in, by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 11–20 minutes of medical discussion), but allows for an extended period of medical discussion. Because G2012 is already included the definition of primary care services at § 425.400(c), we believe including G2252 in the Shared Savings Program definition of primary care services used for assignment, beginning with performance year 2022, would result in more accurate assignment of beneficiaries based on where they receive the plurality of their office/outpatient E/M services, representing the same underlying services being furnished for a longer period of time.

HCPCS code G2212 is defined as an add-on code for those services, for a single high-risk disease, which places the patient at significant risk of hospitalization, acute exacerbation/compensation, functional decline, or death; the condition requires development, monitoring, or revision of disease-specific care plan, the condition requires frequent adjustments in the medication regimen, and/or the management of the condition is unusually complex due to comorbidities; ongoing communication and care coordination between relevant practitioners furnishing care; additional 30 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month.

The current definition of primary care services used in the Shared Savings Program assignment methodology includes CPT codes 99205 and 99215 (codes for office or other outpatient visit for the evaluation and management of a patient). Because HCPCS code G2212 is defined as an add-on code for those services, for a single high-risk disease, which places the patient at significant risk of hospitalization, acute exacerbation/compensation, functional decline, or death; the condition requires development, monitoring, or revision of disease-specific care plan, the condition requires frequent adjustments in the medication regimen, and/or the management of the condition is unusually complex due to comorbidities; ongoing communication and care coordination between relevant practitioners furnishing care; additional 30 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month.

Because HCPCS code G2212 is defined as an add-on code for those
primary care services. Accordingly, we propose to include HCPCS code G2252 in the definition of primary care services under §425.400(c) for the performance year starting on January 1, 2022, and subsequent performance years, if payment for the code is made permanent through the CY 2022 PFS rulemaking.

We propose to specify a revised definition of primary care services in a new provision of the Shared Savings Program regulations at §425.400(c)(1)(vi) to include the list of HCPCS and CPT codes specified in §425.400(c)(1)(v) with the proposed additional CPT codes 90X21, 99223, 99239, and 99245, and HCPCS codes G2212 and G2252, if finalized through the CY 2022 PFS rulemaking, as applicable. We propose the new provision at §425.400(c)(1)(vi) would be applicable for use in determining beneficiary assignment for the performance year starting on January 1, 2022, and subsequent performance years. Further, we propose technical modifications to the introductory text in §425.400(c)(1)(v) to specify the applicability of this provision for determining beneficiary assignment for the performance year starting on January 1, 2021.

(2) Extending the Applicability of the Expanded Definition of Primary Care Services in Response to the COVID–19 PHE

As previously described in this section II.D.2.a. of this proposed rule, in the May 8, 2020 COVID–19 IFC (85 FR 27582 through 27586), we adopted an expanded definition of primary care services for purposes of beneficiary assignment to reflect services furnished during the COVID–19 PHE. This expanded definition was finalized with modifications in the CY 2021 PFS final rule (85 FR 84748 through 84755), we updated the definition of primary care services under §425.400(c) permanently for purposes of determining beneficiary assignment under §425.402 for the performance year starting on January 1, 2021, and subsequent performance years, so that the following codes would not be linked to the duration of the PHE for COVID–19: (1) HCPCS code G2010 (remote evaluation of patient video/images) and HCPCS code G2012 (virtual check-in); (2) CPT codes 99421, 99422, and 99423 (online digital evaluation and management service (e-visit)).

In the CY 2021 PFS final rule, we noted that we did not consider including CPT codes 99441, 99442, and 99443 in the definition of primary care services at §425.400(c) on a permanent basis (85 FR 84751). Telephone E/M services CPT codes 99441 (Telephone evaluation and management service by a physician or other qualified health care professional who may report evaluation and management services provided to an established patient, parent, or guardian not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5–10 minutes of medical discussion); 99442 (Telephone evaluation and management service by a physician or other qualified health care professional who may report evaluation and management services provided to an established patient, parent, or guardian not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 11–20 minutes of medical discussion); and 99443 (Telephone evaluation and management service by a physician or other qualified health care professional who may report evaluation and management services provided to an established patient, parent, or guardian not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 21–30 minutes of medical discussion) are non-covered services.

In order to remain consistent with Medicare FFS payment policies, we propose to revise our existing definition of primary care services for purposes of beneficiary assignment in order to include CPT codes 99441, 99442, and 99443 until they are no longer payable under the Medicare FFS payment policies as specified under section 1834(m) of the Act and §410.78 and 414.65. We propose to specify this modification by revising §425.400(c)(2)(i) and (c)(2)(ii) to include an exception to the applicability of the expanded definition of primary care services, to extend the timeframe for use of CPT codes 99441, 99442, and 99443, and making conforming revisions to paragraphs (c)(2)(i) and (c)(2)(ii).

(3) Incorporation of Replacement Codes Into the Definition of Primary Care Services To Reflect Current Coding

In the June 2015 final rule (80 FR 32746 through 32748), we established a policy under which we make any revisions to the definition of primary care services for purposes of beneficiary assignment through the annual PFS rulemaking process. We established this policy in order to promote flexibility for the Shared Savings Program and to allow the definition of primary care services used for assignment in the Shared Savings Program to respond quickly to HCPCS/CPT coding changes made in the annual PFS rulemaking process. Accordingly, as part of the PFS rulemaking process, we periodically update the definition of primary care services used for assignment to include additional codes that we designate as primary care services for purposes of the Shared Savings Program, including new HCPCS/CPT codes or revenue codes and any subsequently modified or replacement codes.

On a routine basis, the CPT Editorial Panel may delete existing CPT codes and replace them with new CPT codes. In addition, one use of HCPCS G-codes is to identify professional healthcare services furnished during the COVID–19 pandemic that have assigned CPT codes. Thus, the CPT Editorial Panel may also create new CPT codes.
benchmark year. Under this proposal, a replacement CPT code becomes effective during a 12-month initial, quarterly, or final assignment window would be included in the definition of primary care services used to determine beneficiary assignment for the applicable performance year or benchmark year. For ACOs under prospective assignment, claims-based beneficiary assignment is determined prospectively at the beginning of each benchmark and performance year based on the beneficiary’s use of primary care services in the most recent 12 months for which data are available, based on an offset assignment window before the start of the benchmark or performance year. Under this proposal, a replacement CPT code that becomes effective during the offset assignment window would be included in the definition of primary care services used to determine beneficiary assignment for the applicable performance year or benchmark year.

We anticipate that we would continue to undergo periodic notice and comment rulemaking, through the annual PFS rulemaking, to amend the list of CPT codes and HCPCS codes that make up the definition of primary care services used for assignment in the Shared Savings Program to codify the applicable replacement CPT codes.

As discussed in section III.J.2.b.(1) of this proposed rule, we propose to incorporate the revised definition of primary care services used for assignment in a new provision of the Shared Savings Program regulations at § 425.400(c)(1)(vi), applicable for use in determining beneficiary assignment for the performance year starting on January 1, 2022, and subsequent performance years. As part of this revised definition, we propose to incorporate a provision in paragraph (c)(1)(vi)(C), specifying that the primary care service codes for purposes of assigning beneficiaries include a CPT code identified by CMS that directly replaces a CPT code specified in § 425.400(c)(1)(vi)(A) or a HCPCS code specified in § 425.400(c)(1)(vi)(B), when the assignment window defined in § 425.20 for a benchmark or performance year includes any day on or after the effective date of the replacement code for payment purposes under FFS Medicare.

We seek comment on these proposed changes to the definition of primary care services used for assigning beneficiaries to Shared Savings Program ACOs for the performance year starting on January 1, 2022, and subsequent performance years. We also welcome comment on any other existing CPT codes or HCPCS code that are not captured in the primary care services defined in this section, and suggest that we consider adding to the definition of primary care services for purposes of assignment in future rulemaking.

3. Repayment Mechanisms

a. Background

An ACO that will participate in a two-sided model must demonstrate that it has established an adequate repayment mechanism to provide CMS assurance of its ability to repay shared losses for which the ACO may be liable upon reconciliation for each performance year. The requirements for an ACO to establish and maintain an adequate repayment mechanism are described in § 425.204(f), and we have provided additional program guidance on repayment mechanism arrangements.

We established the repayment mechanism requirements through earlier rulemaking,98 and recently modified the repayment mechanism requirements in the December 2018 final rule (83 FR 67928 through 67938) and the CY 2021 PFS final rule (85 FR 84756 through 84763). According to § 425.204(f)(4)(ii), for a BASIC or ENHANCED track ACO, the repayment mechanism amount must be equal to the lesser of the following: (1) 1 percent of the total per capita Medicare Parts A and B FFS revenue of its ACO participants, based on revenue for the most recent calendar year for which 12 months of data are available; or (2) 2 percent of the total Medicare Parts A and B FFS revenue of its ACO participants, based on revenue for the most recent calendar year for which 12 months of data are available. As discussed in the December 2018 final rule (83 FR 67866), this approach allows CMS to use the same sources of revenue and expenditure data during the program’s annual application cycle to estimate the ACO’s repayment mechanism amount and to determine the ACO’s participation options according to whether the ACO is categorized as a low revenue ACO or high revenue ACO.

As specified under § 425.204(f)(4)(ii), for agreement periods beginning on or after July 1, 2022, the ACO must estimate its repayment mechanism amount for the first performance year that is based on revenue after July 1, 2022 and before January 1, 2023, and the repayment mechanism amount must equal to the lesser of the following: (1) 1 percent of the total per capita Medicare Parts A and B FFS revenue of its ACO participants, based on revenue for the most recent calendar year for which 12 months of data are available; or (2) 2 percent of the total Medicare Parts A and B FFS revenue of its ACO participants, based on revenue for the most recent calendar year for which 12 months of data are available. As discussed in the December 2018 final rule (83 FR 67866), this approach allows CMS to use the same sources of revenue and expenditure data during the program’s annual application cycle to estimate the ACO’s repayment mechanism amount and to determine the ACO’s participation options according to whether the ACO is categorized as a low revenue ACO or high revenue ACO.

As specified under § 425.204(f)(4)(iii), for agreement periods beginning on or after July 1, 2022, the ACO must estimate its repayment mechanism amount for each performance year that is based on revenue after July 1, 2022 and before January 1, 2023, and the repayment mechanism amount must equal to the lesser of the following: (1) 1 percent of the total per capita Medicare Parts A and B FFS revenue of its ACO participants, based on revenue for the most recent calendar year for which 12 months of data are available; or (2) 2 percent of the total Medicare Parts A and B FFS revenue of its ACO participants, based on revenue for the most recent calendar year for which 12 months of data are available. As discussed in the December 2018 final rule (83 FR 67866), this approach allows CMS to use the same sources of revenue and expenditure data during the program’s annual application cycle to estimate the ACO’s repayment mechanism amount and to determine the ACO’s participation options according to whether the ACO is categorized as a low revenue ACO or high revenue ACO.

b. Requirements

ACOs must notify the Program of its estimated repayment mechanism amount within 180 days of the close of its most recent performance year. The ACO must also notify CMS of any changes to these estimates when they occur. Repayment mechanism amounts must be based on the ACO’s revenue and expenditure data during the performance year for which the repayment mechanism amount is being estimated, and the ACO must maintain these data throughout the performance year.

c. Oversight

ACOs are required to establish an adequate repayment mechanism to ensure that they have the ability to repay shared losses for which the ACO may be liable upon reconciliation. CMS does not require an ACO to establish a specific repayment mechanism or to provide specific details on the repayment mechanism at any stage of the program. Instead, CMS requires that the ACO establish an adequate repayment mechanism to ensure that it has the ability to repay shared losses for which the ACO may be liable upon reconciliation. An ACO that has established an adequate repayment mechanism will provide CMS assurance that it has the ability to repay shared losses for which the ACO may be liable upon reconciliation for each performance year. The requirements for an ACO to establish and maintain an adequate repayment mechanism are described in § 425.204(f), and we have provided additional program guidance on repayment mechanism arrangements.

We established the repayment mechanism requirements through earlier rulemaking, and recently modified the repayment mechanism requirements in the December 2018 final rule (83 FR 67928 through 67938) and the CY 2021 PFS final rule (85 FR 84756 through 84763). According to § 425.204(f)(4)(ii), for a BASIC or ENHANCED track ACO, the repayment mechanism amount must be equal to the lesser of the following: (1) 1 percent of the total per capita Medicare Parts A and B FFS revenue of its ACO participants, based on revenue for the most recent calendar year for which 12 months of data are available; or (2) 2 percent of the total Medicare Parts A and B FFS revenue of its ACO participants, based on revenue for the most recent calendar year for which 12 months of data are available. As discussed in the December 2018 final rule (83 FR 67866), this approach allows CMS to use the same sources of revenue and expenditure data during the program’s annual application cycle to estimate the ACO’s repayment mechanism amount and to determine the ACO’s participation options according to whether the ACO is categorized as a low revenue ACO or high revenue ACO.
after July 1, 2019, CMS recalculates the ACO’s repayment mechanism amount before the second and each subsequent performance year in the agreement period based on the certified ACO participant list for the relevant performance year. We require an increase in the repayment mechanism amount if the recalculated repayment mechanism amount exceeds the existing repayment mechanism amount by at least 50 percent or $1,000,000, whichever is the lesser value. Under § 425.204(f)(4)(iii), an ACO cannot decrease the amount of its repayment mechanism during its agreement period as a result of changes in its composition.

As discussed in prior rulemaking, program stakeholders have continued to identify the repayment mechanism requirement as a potential barrier for some ACOs to enter into performance-based risk tracks, particularly small, physician-only and rural ACOs that may lack access to the capital that is needed to establish a repayment mechanism with a large dollar amount (see for example, 83 FR 67920).

The design of the current repayment mechanism amount calculation, which is based on a percentage of expenditures for the ACO’s assigned beneficiaries or a percentage of ACO participant revenue, seeks to approximate a percentage of the ACO’s maximum possible shared losses, according to the loss recoupment limits (also referred to as the loss sharing limits) applicable to ACOs under two-sided models. Comparing the calculations for determining repayment mechanism amounts to the calculations for determining the loss sharing limits indicates that repayment mechanisms cover approximately 25 percent of estimated maximum possible losses for ACOs in the BASIC track (determined by dividing 1 percent, the percentage used in the repayment mechanism amount calculation under § 425.204(f)(4)(ii)(A), by 4 percent, the percentage of the benchmark-based loss sharing limit under Level E of the BASIC track under § 425.605(d)(1)(v)(D)(2)), and 7 percent of estimated maximum possible losses for ACOs in the ENHANCED track (determined by dividing 1 percent, the percentage used in the repayment mechanism amount calculation under § 425.204(f)(4)(ii)(A), by 15 percent, the percentage of the benchmark-based loss sharing limit under the ENHANCED track under § 425.610(g)). Based on operational experience, we have found that the repayment mechanism amounts for most ACOs are much larger than needed to cover actual losses, as repayment mechanism amount calculations have been based on a percentage of an amount that approximates the ACO’s loss sharing limit (which is as high as 15 percent of updated benchmark expenditures in the ENHANCED track), and actual historical shared losses have been much lower than the loss sharing limit, averaging 0.96 percent of the ACO’s benchmark. Some ACOs have been required to establish repayment mechanisms with amounts that are 9 times greater than their actual shared losses. Additionally, of the 35 times ACOs have owed shared losses, as determined based on reconciliation for the Shared Savings Program’s first performance year concluding on December 31, 2013, through performance years (or a performance period) in 2019, only one ACO has neglected to repay CMS timely, and most ACOs chose to repay shared losses without the use of their repayment mechanism arrangements. For the one ACO that did not repay CMS, we were able to recoup more than half of the shared losses owed using the ACO’s repayment mechanism, and the remaining debt was referred to the Department of Treasury for collection. Considering this experience, which suggests there may be low risk to the Shared Savings Program by allowing lower repayment mechanism amounts, and the potential reduction in burden on ACOs by lower repayment mechanism amounts, we believe it is appropriate to modify the approach to calculating repayment mechanism amounts. We believe reducing the required amounts of repayment mechanisms may allow ACOs to use these funds to improve patient care and coordination and reduce a potential barrier to entry into performance-based risk models.

In this section of this proposed rule, we discuss four proposed policy changes regarding required repayment mechanism amounts. Under the first policy, we would modify the methodology for calculating repayment mechanism amounts to reduce the required amounts. Second, we would specify how we identify the number of assigned beneficiaries used in the repayment mechanism amount calculation and the annual repayment mechanism amount recalculation. Third, we would permit eligible ACOs that established a repayment mechanism to support their participation in a two-sided model beginning on July 1, 2019, January 1, 2020, or January 1, 2021, to elect to reduce the amount of their existing repayment mechanisms if their recalculated repayment mechanism amount for performance year 2022 is lower than their existing repayment mechanism amount. Fourth, we would modify the threshold for determining whether an ACO is required to increase its repayment mechanism amount during its ACO’s agreement period.

b. Proposed Revisions
(1) Repayment Mechanism Amount Calculations

We considered two options for modifying the calculation of repayment mechanism amounts to result in lower amounts: (1) Reducing the percentages used in the existing repayment mechanism amount calculations specified in § 425.204(f)(4)(iii); or (2) revising the methodology to use a per beneficiary dollar amount estimation methodology. In evaluating these options, we considered the potential impact on low revenue ACOs and high revenue ACOs, as defined according to § 425.20. We also considered a balance of factors, including whether to retain an approach similar to the existing methodology or to use an alternative approach that could simplify the repayment mechanism amount calculation to make it more predictable. We also considered the magnitude of potential decreases in the repayment mechanism amounts under each option. We propose the first option, to reduce the percentages used in the existing repayment mechanism amount calculations, but we are seeking comment on the second alternative we considered. We propose to lower the repayment mechanism amount.
amounts by reducing the percentages used in our current methodology, under which we calculate the repayment mechanism amount as the lesser of the following: (1) 1 percent of the total per capita Medicare Parts A and B FFS expenditures for the ACO’s assigned beneficiaries, based on expenditures for the most recent calendar year for which 12 months of data are available; or (2) 2 percent of the total Medicare Parts A and B FFS revenue of its ACO participants, based on revenue for the most recent calendar year for which 12 months of data are available. Specifically, we propose to calculate the amount as the lesser of the following: (1) One-half (0.5) percent of the total per capita Medicare Parts A and B FFS expenditures for the ACO’s assigned beneficiaries, based on expenditures for the most recent calendar year for which 12 months of data are available; or (2) 1 percent of the total Medicare Parts A and B FFS revenue of its ACO participants, based on revenue for the most recent calendar year for which 12 months of data are available.

Under this proposal, ACOs would receive a 50 percent decrease in their repayment mechanism amounts compared to the current methodology. These amounts would offer lower repayment mechanism amounts for ACOs, while still reserving what we believe to be a reasonable amount in the event CMS uses an ACO’s repayment mechanism funds to support recoupment of shared losses. Our review of data for ACOs under a two-sided model revealed that if this repayment mechanism amount calculation method were in place for PY 2021, the mean repayment mechanism savings would be $297,665 for low revenue ACOs and $2.31 million for high revenue ACOs; the minimum repayment mechanism savings would be $277,030 for low revenue ACOs and $78,106 for high revenue ACOs; and the maximum repayment mechanism savings would be $1.97 million for low revenue ACOs and $11.70 million for high revenue ACOs.

A second, alternative option we considered would be to estimate the repayment mechanism amount using a per beneficiary dollar amount that would be based on a percentage of actual historical median per capita shared losses for Shared Savings Program ACOs, multiplied by an estimate of the size of the ACO’s assigned population as identified during the annual application or annual change request cycle. In considering this option, we analyzed data from the 35 instances when Shared Savings Program ACOs in two-sided models have ever incurred shared losses, defined as performance year expenditures above the ACO’s benchmark by an amount equal to or greater than the ACO’s minimum loss rate. Using data from actual historical shared losses, we determined median per beneficiary shared losses were $100.90 and calculated per beneficiary dollar amounts projected to cover 5 to 25 percent of shared losses for ACOs, as illustrated in Table 26.

<table>

Under this second, alternative option, we considered using separate per beneficiary dollar amounts, for low revenue ACOs and high revenue ACOs. We believe using two separate percentages is supported for a number of reasons. Compared to high revenue ACOs, low revenue ACOs are likely to have a lower loss sharing limit in the BASIC track (determined as a percentage of ACO participant revenue not to exceed a percentage of the ACO’s updated benchmark), under which eligible low revenue ACOs may participate for up to two agreement periods. Historically, low revenue ACOs have owed shared losses less often and have had lower amounts of per beneficiary shared losses compared to high revenue ACOs. Additionally, we believe high revenue ACOs, which tend to include institutional providers and are typically larger and better capitalized, are likely better financially prepared to secure a higher amount in their repayment mechanism than low revenue ACOs, which tend to be smaller and have less capital. For low revenue ACOs, to cover 10 percent of median actual historical shared losses, rounding to the nearest $1 increment, we considered requiring a repayment mechanism amount equal to $10 per beneficiary. For high revenue ACOs, to cover 20 percent of median actual historical shared losses we considered requiring $20 per beneficiary (refer to Table 26). These amounts would offer a lower repayment mechanism amount for 99 percent of low and high revenue ACOs with existing repayment mechanisms, while still reserving what we believe to be a reasonable amount in the event CMS uses an ACO’s repayment mechanism funds to support recoupment of shared losses. Our review of data for ACOs in a two-sided model revealed that if this repayment mechanism amount calculation method were in place for PY 2021, the mean repayment mechanism savings would be $410,682 for low revenue ACOs and $3.84 million for high revenue ACOs; the minimum repayment mechanism savings would be $6.513 for low revenue ACOs and $120,491 for high revenue ACOs; and the maximum repayment mechanism savings would be $3.45 million for low revenue ACOs and $19.73 million for high revenue ACOs.

We believe there are a number of advantages to the option under which we would calculate repayment.
mechanism amounts using per beneficiary dollar amounts for low revenue ACOs and high revenue ACOs. For one, low revenue ACOs would receive additional relief through lower repayment mechanism amounts, relative to high revenue ACOs, under this approach. We believe this is appropriate considering the previously described factors: The lower potential loss liability for low revenue ACOs; historically, low revenue ACOs have incurred shared losses less often and have had lower per beneficiary shared losses compared to high revenue ACOs; and low revenue ACOs tend to be less well capitalized and may face potential barriers to establishing repayment mechanisms.

Second, this approach aligns with the existing repayment mechanism amount calculation methodology, which tends to require proportionally higher amounts for high revenue ACOs, that tend to have higher average total expenditures for ACO assigned beneficiaries and higher total ACO participant revenue, compared to low revenue ACOs. Third, an approach that uses a per beneficiary dollar amount would simplify the method to calculate the repayment mechanism amount, compared to the existing methodology, and may help ACOs better project repayment mechanism amounts prior to entering two-sided models, either at the point of application to a new agreement period or during the ACO’s agreement period within the BASIC track’s glide path as ACOs transition from a one-sided model to a two-sided model.

Lastly, this approach would lower the mean repayment mechanism amount for ACOs more than the reduction that would occur under our proposal to lower the percentages used in the existing amount calculation methodology.

However, we have significant concerns with an approach that uses a per beneficiary dollar amount that is applied based on whether an ACO is determined to be a low revenue ACO or a high revenue ACO, which if unresolved could outweigh the potential benefits of the approach. For one, there would be a significant repayment mechanism amount difference for ACOs near the 5 percent threshold that differentiates low revenue ACOs and high revenue ACOs, and this difference in repayment mechanism amount may not correlate to covering a significant additional increase in risk.

Second, the determination of whether an ACO is a low revenue ACO or high revenue ACO can change during the application cycle and between performance years within an agreement period. Although changes in ACO composition have the potential to affect required amounts determined under the existing repayment mechanism amount calculation methodology, we believe ACO composition changes could result in a greater magnitude of change in the repayment mechanism amount under an approach that applies a $10 per beneficiary amount for low revenue ACOs and a $20 per beneficiary amount for high revenue ACOs.

For ACOs establishing a repayment mechanism under the per beneficiary dollar amount approach, a change in revenue determination in later stages of the application cycle or change request cycle would delay calculation of an ACO’s final repayment mechanism amount. In turn, this could delay when the ACO could submit finalized repayment mechanism documentation to demonstrate it meets the repayment mechanism requirement for entering a two-sided model. We are also concerned that ACOs whose revenue determinations change from low revenue to high revenue would face a substantial increase in the required repayment mechanism amount which they could find challenging to finance. However, based on our operational experience there have been relatively few cases where an ACO’s revenue determination changes during the later stages of the application review period or change request cycle.

During an ACO’s agreement period, a change in the ACO’s revenue determination may cause significant fluctuation in an ACO’s repayment mechanism amount under an approach that calculates the repayment mechanism amount using a per beneficiary dollar amount based on whether an ACO is determined to be a low revenue ACO or a high revenue ACO. Based on our operational experience, however, few ACOs entering agreement periods beginning on July 1, 2019, and in subsequent years, have experienced a change in revenue determination during their agreement period. Section 425.606(e) specifies an approach to addressing the circumstance where an ACO that entered an agreement period under Level E of the BASIC track because it was low revenue and experienced with performance-based risk Medicare ACO initiatives, becomes high revenue during its agreement period. This approach requires the ACO to take corrective action to meet the definition of low revenue ACO, or CMS takes compliance action as specified in §§ 425.216 and 425.218, which may include termination of the participation agreement. Further, in the absence of a policy to permit decreases in the repayment mechanism amount during the ACO’s agreement period, ACOs that establish a repayment mechanism based on a high revenue ACO determination and are subsequently determined to be a low revenue ACO would need to maintain a relatively higher repayment mechanism amount for the duration of their 5-year agreement period.

To resolve these concerns, we considered using a single per beneficiary dollar amount for all ACOs, based on the values described in Table 26. However, we were unable to identify a single per beneficiary dollar amount that would account for historically higher per beneficiary shared losses owed by high revenue ACOs, while resulting in lower repayment mechanism amounts compared to the existing repayment mechanism calculation approach for most low revenue ACOs. Specifically, the dollar amount that would allow for relatively lower repayment mechanism amounts for all ACOs would be $8 per beneficiary, to cover 7.5 percent of median actual historical shared losses, rounding to the nearest $1 increment, which we believe is too low for high revenue ACOs. A higher per beneficiary dollar amount, such as $15, to cover 15 percent of median actual historical shared losses, rounding to the nearest $1 increment, would be relatively disadvantageous to approximately 20 percent of low revenue ACOs.

Both our proposal and the second, alternative option would lower repayment mechanism amounts and would reduce the amount available to CMS to support repayment of shared losses. However, we believe this risk to CMS is mitigated for a number of reasons. As noted previously in this section of this proposed rule, in our analysis of repayment mechanism amounts compared to actual historical shared losses, we believe the lower amounts would continue to provide CMS with reasonable assurance of an ACO’s ability to repay shared losses. Further, as discussed in earlier rulemaking (85 FR 50249), the Shared Savings Program’s existing policies require ACOs to pay shared losses, in full, within 90 days of written notification from CMS of the amount owed (according to §§ 425.605(e)(3), 425.606(h)(3), 425.610(h)(3)). ACOs have an interest in fully paying the amount of shared losses owed within the 90-day payment window to remain in compliance with the Shared Savings Program’s requirements and avoid compliance actions including involuntary termination from the program. CMS may terminate an ACO’s participation agreement for reasons...
including, but not limited to, non-compliance with requirements in 42 CFR part 425 (§ 425.218(b)(1)), such as failure to repay shared losses owed to the program’s regulations and may take pre-termination actions as described in §425.216(a). Under §425.221(b)(2)(ii)(B), an ACO under a two-sided model whose participation agreement is terminated by CMS under §425.218 is liable for a pro-rated share of any shared losses determined for the performance year during which the termination becomes effective. ACOs must also timely repay shared losses owed to avoid accruing interest on any unpaid amounts and to avoid referral of an unpaid debt to the Department of Treasury for collection. Based on our operational experience, nearly all ACOs fully repay shared losses without use of their repayment mechanism arrangement. ACOs will continue to have the option to secure a repayment mechanism at an amount greater than the CMS required amount, if they feel that is appropriate to prepare their ACO to repay all shared losses.

Furthermore, we believe that reduced repayment mechanism amounts could reduce costs for ACOs in fees charged by financial institutions for letters of credit and by insurance companies for surety bonds, although we would not anticipate a significant reduction in fees charged by banks or credit unions for establishing and maintaining escrow accounts. For example, reducing the required repayment mechanism amount of a given ACO by $1 million, could reduce the cost of obtaining a letter of credit or surety bond by roughly 1 or 2 percent, in this example resulting from $10,000 or $20,000 in reduced fees for the ACO. We estimate that such relief, in total for all participating ACOs, could be worth $2 to $4 million annually under the proposed approach (assuming a reduction of approximately $196 million in repayment mechanism amounts, in aggregate) and $3 to $6 million annually under the second, alternative option (assuming a reduction of approximately $322 million in repayment mechanism amounts, in aggregate).

In light of these considerations, we propose to revise the regulations in §425.204(f)(4)(ii) to reduce by one-half the percentages used in the methodology for calculating repayment mechanism amounts for ACOs in a two-sided model of the BASIC track or the ENHANCED track. We propose to revise the percentage specified in §425.204(f)(4)(iii)(A), for calculating an amount based on expenditures for the ACO’s assigned beneficiaries, from 1 percent to one-half percent. We propose to revise the percentage specified in §425.204(f)(4)(ii)(B), for calculating an amount based on ACO participant revenue, from 2 percent to 1 percent. Under this proposed approach for calculating repayment mechanism amounts for ACOs in a two-sided model of the BASIC track or the ENHANCED track, the repayment mechanism amount would be equal to the lesser of the following: (1) One-half percent of the total per capita Medicare Parts A and B FFS expenditures for the ACO’s assigned beneficiaries, based on expenditures for the most recent calendar year for which 12 months of data are available; or (2) 1 percent of the total Medicare Parts A and B FFS revenue of its ACO participants, based on revenue for the most recent calendar year for which 12 months of data are available.

We seek comment on this proposal and the second, alternative option for calculating repayment mechanism amounts using a per beneficiary dollar amount, based on a percentage of actual historical median per capita shared losses for Shared Savings Program ACOs, multiplied by an estimate of the size of the ACO’s assigned population as identified during the annual application or annual change request cycle. We seek comment on applying different per beneficiary dollar amounts for low revenue ACOs and high revenue ACOs under this alternative approach. We welcome comments to address the issues concerning changes in revenue determinations significantly affecting an ACO’s repayment mechanism amount, such as applying a single per beneficiary dollar amount to all ACOs. We also note that if we were to adopt such an approach, we would need to address with greater specificity factors including: (1) How we would identify the population of assigned beneficiaries that would be used in the calculation as a multiplier for the per beneficiary dollar amount; and (2) the frequency with which we would consider modifications to the per beneficiary dollar amount. We welcome comments on these considerations.

We propose that these modifications would be effective and applicable on January 1, 2022. We note that the Shared Savings Program’s application cycle (for new, renewing and re-entering ACOs) and change request cycle (for ACOs within an agreement period) for the performance year beginning on January 1, 2022 occurs between spring and fall 2021. During this timeframe, ACOs preparing to enter two-sided models for performance year 2022 are awaiting the final repayment mechanism amount for establishing a repayment mechanism, and ACOs within two-sided models are awaiting the determination of whether their repayment mechanism amount must be increased in accordance with §425.204(f)(4)(iii) (as discussed in section III.J.3.b.(4) of this proposed rule). If the proposed modifications to the repayment mechanism amount calculation methodology described in this section of this proposed rule are finalized, and effective and applicable on January 1, 2022, we would communicate to ACOs their final repayment mechanism amounts after the issuance of the final rule. We are committed to ensuring that ACOs do not overfund their repayment mechanism arrangements according to the existing methodology if we finalize the proposed revisions to reduce repayment mechanism amounts.

(2) Population of Assigned Beneficiaries Used in Calculating and Recalculating Repayment Mechanism Amounts

We propose to amend the regulations at §§425.204(f)(4)(ii) and 425.204(f)(4)(iii) to specify how we identify the number of assigned beneficiaries used in calculating and recalculating the repayment mechanism amount (respectively). For context, we first describe our current approach for calculating repayment mechanism amounts under §425.204(f)(4)(ii) (for ACOs establishing a repayment mechanism to support their participation under a two-sided model) and under §425.204(f)(4)(iii) (the annual recalculation to determine if an ACO is required to increase the amount of its repayment mechanism).

In accordance with §425.204(f)(4)(ii), for ACOs in a two-sided model of the BASIC track, or the ENHANCED track, the repayment mechanism amount must be equal to the lesser of the following: (1) 1 percent of the total per capita Medicare Parts A and B fee-for-service expenditures for the ACO’s assigned beneficiaries, based on expenditures for the most recent calendar year for which 12 months of data are available (hereinafter referred to as an expenditure-based amount); or (2) 2 percent of the total Medicare Parts A and B fee-for-service revenue of its ACO participants, based on revenue for the most recent calendar year for which 12 months of data are available (hereinafter referred to as a revenue-based amount).
Currently, we use the following steps to calculate the expenditure-based amount specified in § 425.204(f)(4)(iii)(A), which is a percentage of the total per capita Medicare Parts A and B FFS expenditures for the ACO’s assigned beneficiaries, based on expenditures for the most recent calendar year for which 12 months of data are available (referred to below as the “relevant historical calendar year”):

- **Step 1:** Identify the beneficiaries that would have been assigned to the ACO for the relevant historical calendar year (determined based on the ACO participant list for the upcoming performance year submitted by the ACO for CMS’ review during the application cycle or change request cycle, referred to below as the “ACO participant list for the upcoming performance year”) and multiply the number of such beneficiaries by an assignment growth factor to account for expected growth in assignment.

- **Step 2:** Determine estimated per capita FFS expenditures by calculating the total per capita Medicare Parts A and B FFS expenditures incurred during the relevant historical calendar year by the beneficiaries identified in step 1, and dividing that amount by the total number of beneficiaries identified in step 1 before the assignment growth factor is applied, and multiplying the resulting per capita FFS expenditure amount by a dollar trend factor to account for expected growth in Medicare FFS expenditures.

- **Step 3:** Calculate the product of the number of assigned beneficiaries determined according to step 1, and the estimated per capita FFS revenues of ACO participants determined according to step 2.

- **Step 4:** Calculate the repayment mechanism amount by multiplying the amount determined in step 3 by the applicable percentage (currently 2 percent).

Regardless of the ACO’s selected assignment methodology, within step 1 of the expenditure-based and revenue-based repayment mechanism amount calculations, CMS uses an assigned beneficiary population identified based on preliminary prospective assignment with retrospective reconciliation as described in § 425.400(a)(2). This ensures that the assignment window used to determine assigned beneficiaries aligns with the relevant historical calendar year used to calculate expenditures and revenue used in step 2 of the expenditure-based amount and revenue-based amount calculation.

We believe there are several important reasons for using historical data for determining the assigned beneficiary population, Medicare Parts A and B FFS expenditures for the ACO’s assigned beneficiaries, and ACO participants’ Medicare Parts A and B FFS revenue.

For one, this approach ensures CMS’ timely determination of final repayment amount estimates for ACOs required to establish a repayment mechanism arrangement prior to the start of a new agreement period under a two-sided model, or prior to start of the upcoming performance year under a two-sided model (for ACOs transitioning from a one-sided to a two-sided model along the BASIC track’s glide path). Second, under this approach, the data used to determine repayment mechanism amounts is consistent with the data used in making other determinations during the application cycle and annual change request cycle, including determination of whether an ACO is categorized as a low revenue ACO or high revenue ACO.

In accordance with § 425.204(f)(4)(iii), for agreement periods beginning on or after July 1, 2019, CMS recalculates the ACO’s repayment mechanism amount before the second and each subsequent performance year in the agreement period in accordance with § 425.204(f), based on the certified ACO participant list for the relevant performance year. Currently, in recalculating ACOs’ repayment mechanism amounts we use the same approach to calculating the expenditure-based amount and revenue-based amount in accordance with § 425.204(f)(4)(ii), as previously described in this section. That is, in recalculating the repayment amount we determine the assigned beneficiary population, Medicare Parts A and B FFS expenditures for the ACO’s assigned beneficiaries, and ACO participants’ Medicare Parts A and B FFS revenue, for the most recent calendar year for which 12 months of data are available.

We propose to modify the methodology for the annual repayment mechanism amount recalculation. Specifically, we propose to determine the number of assigned beneficiaries that is used as a multiplier in step 3 of the expenditure-based amount and revenue-based amount calculations, based on more recently available assignment data, rather than using a population projected to be assigned to the ACO based on historical data (that is, for the most recent calendar year for which 12 months of data are available).

In determining the number of beneficiaries used as a multiplier in the recalculation estimate, we propose to determine the size of the ACO’s assigned population based on the number of beneficiaries assigned to the ACO at the beginning of the performance year, as specified under § 425.400(a)(2)(i) (for ACOs under preliminary prospective assignment with retrospective reconciliation) or paragraph (a)(3)(i) (for ACOs under prospective assignment). This population of assigned beneficiaries is specified in the ACO’s initial assignment list report for the performance year. For all ACOs, this population is identified based on an assignment window that is offset from the calendar year (that is, from October 1 through September 30 prior to the start of the performance year), and which is the basis for determining prospective assignment for the performance year. Under the proposed approach that uses more recent
assignment data in determining the recalculation estimate, we would not apply an assignment growth factor as a multiplier for the population size since we would no longer be using historical data to project the size of the ACO’s assigned population. We believe this proposed approach would help ensure the recalculated repayment mechanism amounts account for an ACO’s composition as reflected in the size of its assigned population for the performance year for which the recalculated amount relates, and thereby provide more accurate recalculated amounts.

Under this proposed approach, we anticipate performing the annual recalculation of the repayment mechanism amounts shortly before or shortly after the start of the new performance year. CMS will perform the recalculation of the repayment mechanism once the initial assignment list report is available, which is typically delivered to ACOs in the early winter (around mid-December), prior to the start of the relevant future performance year. We also note that under the existing approach and the proposed approach to determining the assigned population used as a multiplier in the annual recalculation of the repayment mechanism amounts, the effects on ACO’s amounts are varied, resulting in relatively higher or lower amounts depending on the change in the size of the population.

In annually recalculating the repayment mechanism amount under this proposed approach, we would follow the previously described steps for calculating the expenditure-based amount and revenue-based amount, with the exception of the number of beneficiaries used as a multiplier in step 3 of the calculations. In step 3 of the expenditure-based amount calculation, we would calculate the product of the total number of assigned beneficiaries determined in the ACO’s initial assignment list report for the relevant future performance year, and the estimated per capita FFS revenues of ACO participants determined for the relevant historical calendar year (determined according to step 2).

Several examples illustrate the calculation and recalculation of the repayment mechanism amounts under the proposals. First, for an ACO applying to enter a two-sided model for an agreement period beginning on January 1, 2022, we will calculate the repayment mechanism amount during the application cycle which occurs during CY 2021. During this time, CY 2020 is the most recent calendar year for which 12 months of data are available, and is the relevant historical calendar year for purposes of calculating the repayment mechanism amount. As described in this illustration, the proposed approach to identifying the assigned beneficiary population, Medicare Parts A and B FFS expenditures for the ACO’s assigned beneficiaries, and ACO participants’ Medicare Parts A and B FFS revenue used within these calculations is consistent with our current operational approach.

In step 1 of the expenditure-based amount and revenue-based amount calculations, we would identify the beneficiaries that would have been assigned to the ACO for CY 2020, determined based on the ACO participant list for PY 2022 submitted with the ACO’s application, and determined using preliminary prospective assignment with retrospective reconciliation. That is, we would determine assignment based on the 12-month assignment window from January 1, 2020, through December 31, 2020.\footnote{Refer to the Medicare Shared Savings Program, Shared Savings and Losses and Assignment Methodology Specifications (version #3, February 2021), available at https://www.cms.gov/files/document/medicare-shared-savings-program-shared-savings-and-losses-and-assignment-methodology Specifications.pdf.} We would multiply the number of such beneficiaries by an assignment growth factor.

In step 2 of the expenditure-based amount calculation, we would calculate total Medicare Parts A and B FFS expenditures incurred in CY 2020 by the beneficiaries determined under step 1 to be assigned to the ACO for CY 2020. In step 2 of the revenue-based amount calculation, we would calculate ACO participants’ total Medicare Parts A and B FFS revenue, based on claims for services furnished to any beneficiary by ACO participants during CY 2020. We would determine the estimated per capita FFS expenditures, and the estimated per capita FFS revenues of ACO participants, by dividing the CY 2020 dollar amounts by the number of assigned beneficiaries for CY 2020 (determined in accordance with step 1) before the assignment growth factor is applied. We would multiply the resulting numbers by a dollar trend factor.

In step 3 of the expenditure-based amount calculation, the number of assigned beneficiaries for CY 2020 would be multiplied by the estimated per capita FFS expenditures determined for CY 2020 in accordance with step 2. In step 3 of the revenue-based amount calculation, the number of assigned beneficiaries for CY 2020 would be multiplied by the estimated per capita Medicare FFS revenues of ACO participants determined for CY 2020 in accordance with step 2.

In step 4, we would calculate the repayment mechanism amount by multiplying the amount determined in step 3 by the applicable percentage. Currently, that is 1 percent under the expenditure-based amount calculation, and 2 percent under the revenue-based amount calculation. Under the proposals described in section III.J.3.b.(1) of this proposed rule, the applicable percentages would be one-half percent under the expenditure-based amount calculation, and 1 percent under the revenue-based amount calculation.

Our second example illustrates how we would perform the annual recalculation of the repayment mechanism amount for performance year (PY) 2022.

In step 1 of both the expenditure-based amount and revenue-based amount calculations, we use a similar method for identifying the CY 2020 assigned population as described in the first example. That is, we would identify the beneficiaries that would have been assigned to the ACO for CY 2020, determined based on the ACO’s certified ACO participant list for PY 2022, and determined using preliminary prospective assignment with retrospective reconciliation. Again, we would determine assignment based on the 12-month assignment window from January 1, 2020, through December 31, 2020.

In step 2 of the expenditure-based amount calculation, we would calculate total Medicare Parts A and B FFS expenditures incurred in CY 2020 by the beneficiaries determined under step 1 to be assigned to the ACO for CY 2020. In step 2 of the revenue-based amount calculation, we would calculate ACO participants’ total Medicare Parts A and B FFS revenue, based on claims for services furnished to any beneficiary by ACO participants during CY 2020, and determined using preliminary prospective assignment with retrospective reconciliation. Again, we would determine assignment based on the 12-month assignment window from January 1, 2020, through December 31, 2020.

In step 2 of the expenditure-based amount calculation, we would calculate total Medicare Parts A and B FFS expenditures incurred in CY 2020 by the beneficiaries determined under step 1 to be assigned to the ACO for CY 2020. In step 2 of the revenue-based amount calculation, we would calculate ACO participants’ total Medicare Parts A and B FFS revenue, based on claims for services furnished to any beneficiary by ACO participants during CY 2020, using the ACO’s certified ACO participant list for PY 2022. We would determine the estimated per capita FFS expenditures, and the estimated per capita FFS revenues of ACO participants, by
dividing the CY 2020 dollar amounts by the number of assigned beneficiaries for CY 2020 (determined in accordance with step 1).

In step 3, we would identify the total number of assigned beneficiaries specified within the ACO’s initial assignment list report for PY 2022. This population of assigned beneficiaries would be specified in the ACO’s initial assignment list report for PY 2022, and would be the population identified based on the assignment window from October 1, 2019 through September 30, 2020, and which would be the basis for determining prospective assignment for PY 2022. Assignment would be determined based on the ACO’s certified ACO participant list for PY 2022. In step 3 of the expenditure-based amount calculation, the number of assigned beneficiaries for PY 2022 would be multiplied by the estimated per capita FFS expenditures determined for CY 2020 in accordance with step 2. In step 3 of the revenue-based amount calculation, the number of assigned beneficiaries for PY 2022 would be multiplied by the estimated per capita FFS revenues determined for CY 2020 in accordance with step 2.

In step 4, we would recalculate the repayment mechanism amount by multiplying the amount determined in step 3 by the applicable percentage. Currently, that is 1 percent under the expenditure-based amount calculation, and 2 percent under the revenue-based amount calculation. Under the proposals described in section III.J.3.b.(1) of this proposed rule, the applicable percentages would be one-half percent under the expenditure-based amount calculation, and 1 percent under the revenue-based amount calculation.

We propose to modify § 425.204(f)(4)(ii) to more clearly specify the assigned population used as a multiplier in calculating the repayment mechanism amount. Under the existing regulation text at § 425.204(f)(4)(ii)(A), the potential repayment mechanism amount is a specified percentage of total per capita Medicare Parts A and B fee-for-service expenditures “for the ACO’s assigned beneficiaries, based on expenditures for the most recent calendar year for which 12 months of data are available.” We propose to amend paragraph (f)(4)(ii)(A) to refer to a specified percentage of total per capita Medicare Parts A and B fee-for-service expenditures “for the ACO’s assigned beneficiaries, based on expenditures for the most recent calendar year for which 12 months of data are available” (emphasis added to reflect revised text).

Under the existing regulation text at § 425.204(f)(4)(ii)(B), the potential repayment mechanism amount is a specified percentage of total Medicare Parts A and B fee-for-service revenue “of its ACO participants, based on revenue for the most recent calendar year for which 12 months of data are available.” We propose to amend paragraph (f)(4)(ii)(B) to refer to a specified percentage of total Medicare Parts A and B fee-for-service revenue “of its ACO participants, based on revenue for the most recent calendar year for which 12 months of data are available, and based on the ACO’s number of assigned beneficiaries for the most recent calendar year for which 12 months of data are available” (emphasis added to reflect revised text).

We also propose technical and conforming changes to the introductory text of § 425.204(f)(4)(iii). We propose to remove as unnecessary and irrelevant the text that the provision applies for agreement periods beginning on or after July 1, 2019. We propose to revise the introductory text for clarity to specify that CMS would recalculate the ACO’s repayment mechanism amount “for” the second and each subsequent performance year in the agreement period, rather than “before” the second and each subsequent performance year in the agreement period. We propose to make a conforming change to the introductory text of § 425.204(f)(4)(iii) to specify that CMS’ recalculation of the ACO’s repayment mechanism amount would be in accordance with § 425.204(f)(4)(ii) based on the certified ACO participant list for the relevant performance year, “except that the number of assigned beneficiaries used in the calculations would be the number of beneficiaries assigned to the ACO at the beginning of the relevant performance year under § 425.400(a)(2)(i) (for ACOs under preliminary prospective assignment with retrospective reconciliation) or § 425.400(a)(3)(i) (for ACOs under prospective assignment).”

We propose that these modifications would be effective and applicable on January 1, 2022. If finalized as proposed, these policies would be used in determining required repayment mechanism amounts for ACOs establishing a repayment mechanism arrangement to support their participation in a two-sided model beginning with performance year 2022. Therefore, ACOs entering a two-sided model for an agreement period beginning on January 1, 2022, and ACOs with an earlier start date participating in the BASIC track’s glide path and entering a two-sided model starting on January 1, 2022, would have established repayment mechanism amounts determined according to the proposed amount calculation methodology, if finalized. Therefore, we would not consider such ACOs eligible for the proposed one-time opportunity to decrease the amount of their repayment mechanism.

Under this proposal, an eligible ACO that established a repayment mechanism to support its participation in a two-sided model beginning on July 1, 2019, January 1, 2020, or January 1, 2021, may elect to decrease the amount
of its repayment mechanism if the recalculated repayment mechanism amount for performance year 2022 is less than the existing repayment mechanism amount. To determine if an ACO is eligible to lower its repayment mechanism amount, we propose to compare the ACO’s existing repayment mechanism amount with the recalculated amount of the ACO’s repayment mechanism based on its certified ACO participant list for performance year 2022, calculated in accordance with §425.204(f)(4)(iii) (including any modifications finalized to the recalculation methodology which would be effective and applicable January 1, 2022, as discussed in this proposed rule). If the recalculated repayment mechanism amount for performance year 2022 is less than the existing repayment mechanism amount, the ACO would be eligible to decrease the amount of its repayment mechanism to the recalculated amount. Under this approach, we would permit a one-time decrease in the repayment mechanism amount even for relatively small differences in dollar amounts.

We propose that CMS would notify the ACO in writing that the ACO may elect to decrease the amount of its repayment mechanism. If this proposal is finalized, we anticipate that we would notify an ACO of its opportunity to reduce its repayment mechanism amount after the start of performance year 2022. We also propose that an ACO must submit such election, and revised repayment mechanism documentation, in a form and manner and by a deadline specified by CMS. We expect that the deadline for submitting the election and revised repayment documentation would be 30 days from the date of the written notice from CMS, although we recognize that there may be circumstances that necessitate a longer timeframe. CMS would review the revised repayment mechanism documentation and may reject the election if the repayment mechanism documentation does not comply with the requirements of §425.204(f)(4)(iv).

We propose to amend §425.204 to add paragraph (f)(4)(v) to establish the policy and relevant procedure that would allow eligible ACOs that established a repayment mechanism to support their participation in a two-sided model beginning on July 1, 2019, January 1, 2020, or January 1, 2021, to elect to lower the amount of their repayment mechanism arrangements.

(4) Threshold for Increasing Repayment Mechanism Amounts

In accordance with §425.204(f)(4)(iii), for agreement periods beginning on or after July 1, 2019, CMS recalculates the ACO’s repayment mechanism amount before the second and each subsequent performance year in the agreement period based on the certified ACO participant list for the relevant performance year. If the recalculated repayment mechanism amount exceeds the existing repayment mechanism amount by at least 50 percent or $1,000,000, whichever is the lesser value, CMS notifies the ACO in writing that the amount of its repayment mechanism must be increased to the recalculated repayment mechanism amount. Within 90 days after receipt of such written notice from CMS, the ACO must submit for CMS approval documentation that the amount of its repayment mechanism has been increased to the amount specified by CMS.

In establishing the annual repayment mechanism amount recalculation policy in earlier rulemaking (83 FR 67930), we explained the purpose of this approach was to address changes in the ACO’s composition of ACO participant TINs and the individuals who bill through the participant TINs over the course of an agreement period and to ensure the adequacy of an ACO’s repayment mechanism. In establishing the annual recalculation policy (83 FR 67932), we explained that a threshold of 50 percent or $1,000,000 would likely require an increased repayment mechanism amount only for ACOs that had the largest changes in their estimated repayment mechanism value (the top 5 to 10 percent). We believed this approach would minimize an ACO’s administrative burden and financial institution fees while adjusting for meaningful changes in repayment mechanism amounts that would help protect the Medicare Trust Funds.

We continue to believe that the annual repayment mechanism amount recalculation serves an important function in identifying the need for repayment mechanism increases when an ACO’s composition changes. Such changes could result in higher expenditures for the ACO’s assigned beneficiaries, higher ACO participant revenue, or a larger assigned beneficiary population. Each of these changes could increase the amount of potential shared losses for an ACO under a two-sided model.

Based on our operational experience with the recalculation policy, we have found that ACOs whose recalculated repayment mechanism amount is at least 50 percent higher than their existing amount, but less than $1,000,000 more, tend to be low revenue ACOs with relatively smaller existing repayment mechanism amounts, typically less than $300,000. Further, based on our operational experience and input from ACOs and other program stakeholders, modifications to repayment mechanism arrangements to revise the amount are burdensome for ACOs. These modifications are time consuming to arrange, and can result in additional fees charged by financial institutions for ACOs to modify their arrangements, in addition to requiring ACOs to set aside additional funds (such as with escrow accounts). We believe the burden for these ACOs to increase their repayment mechanism amounts is disproportional to the benefit to CMS in the availability of additional repayment mechanism arrangement funds to support repayment of losses.

Further, we believe it is timely to revisit the amount increase thresholds under the repayment mechanism amount recalculation policy in light of our proposal described in section III.J.3.b.(1) of this proposed rule to reduce the amounts required for repayment mechanism arrangements. If we finalize our proposal to reduce by one-half the repayment mechanism amounts, the 50 percent threshold of the amount recalculation provision would be proportionally lower, and the burden for these ACOs to increase their repayment mechanism amounts would be even more disproportional to the benefit to CMS.

We believe that requiring an increase in the repayment mechanism amount if the recalculated amount for the performance year is at least $1,000,000 greater than the existing amount balances our interest in ensuring the repayment mechanism amount accounts for significant changes in an ACO’s composition during its agreement period, while avoiding burdensome repayment mechanism modifications for relatively small dollar amounts. Therefore, we propose to amend the regulations at §425.204(f)(4)(iii)(A) to remove the 50 percent threshold from the annual repayment mechanism increase threshold, such that if the recalculated repayment mechanism amount exceeds the existing repayment mechanism amount by at least $1,000,000, CMS would notify the ACO in writing that the amount of its repayment mechanism must be increased to the recalculated repayment mechanism amount. We anticipate this approach would reduce the number of ACOs required to annually increase their repayment mechanism amounts and would further simplify the repayment mechanism amount calculations.
We propose that this modification would be effective and applicable on January 1, 2022. If finalized as proposed, the revised threshold would be used in determining required repayment mechanism increases for performance year 2022, and subsequent performance years.

4. Reducing Shared Savings Program Application Burden
   a. Background

   In order to participate in the Shared Savings Program, a prospective ACO must submit an application and certify that it satisfies the eligibility and other requirements of the Shared Savings Program, including regulatory requirements to disclose prior participation. Under §425.204(b), an ACO must disclose in its Shared Savings Program application whether the ACO, its ACO participants, or its ACO providers/suppliers have participated in the Shared Savings Program under the same or a different name or is related to or affiliated with another Shared Savings Program ACO. The ACO must also disclose in the application whether the related participation agreement was terminated (voluntarily or involuntarily), the cause for prior termination, and what safeguards are in place to ensure the ACO, ACO participant, or ACO provider/supplier complies with the Shared Savings Program regulations and the ACO’s compliance with the Shared Savings Program requirements.

   Our application evaluation criteria for renewing ACOs and re-entering ACOs are designed to prevent ACOs with a history of poor performance or history of noncompliance with the Shared Savings Program regulations from participating in the program. Under §425.224(b), we determine whether to approve an application based on an evaluation of several criteria, including the following: (1) Whether the ACO has a history of noncompliance with the program’s requirements, including a failure to meet the quality performance standard; (2) the ACO’s history of financial performance; (3) whether an ACO under a two-sided model failed to repay shared losses owed to the program; and (4) whether the ACO has demonstrated in its application that it has corrected the deficiencies that caused it to perform poorly or to be terminated.

   Additionally, under §425.204(c)(6), all applicants, including initial, renewing, and re-entering applicants, must submit as part of the application process and upon request by CMS, documents demonstrating that their ACO participants, ACO providers/suppliers, and other individuals or entities performing functions or services related to ACO activities are required to comply with the requirements of the Shared Savings Program. Such documents must include sample or form agreements and the first and signature pages of each executed ACO participant agreement. We may request all pages of an executed ACO participant agreement to confirm that it conforms to the sample form agreement submitted by the ACO. The ACO is also required to certify that each of its ACO participant agreements meet all Shared Savings Program requirements in 42 CFR part 425.

   Under §425.116(c), we also require an ACO to submit an executed ACO participant agreement for each participant at the time of its initial application, participation agreement renewal process, and when making additions to its list of ACO participants in accordance with §425.118. The agreements may be submitted in the form and manner specified under §425.204(c)(6) or as otherwise specified by CMS.

   b. Proposed Revisions

   In conducting Shared Savings Program application reviews, we have found that the document submission requirements in §§425.204(b) and (c)(6), and 425.116(c) substantially increase applicant burden without lending significant value to our review of an organization’s application to confirm that the ACO meets the eligibility requirements for participation. We therefore propose to revise §§425.204(b) and (c)(6), and §425.116(c) to reduce applicant burden.

   First, we propose to modify §425.204(b) so that the prior participation disclosure requirement is prescribed only at the request of CMS—rather than as a mandatory submission with the ACO’s initial or renewal application. During the application cycle and for the purposes of evaluating program eligibility, CMS already determines prior participation for initial and re-entering ACO applicants by reviewing ACO- and ACO participant-level information. We screen all ACO applicants, initial ACOs and re-entering ACOs, to determine if they have participated in the Shared Savings Program, including if their prior participation agreement was terminated early (voluntarily or involuntarily). We also identify initial ACOs as re-entering ACOs if greater than 50 percent of their ACO participants were included on the ACO participant list under §425.118, of the same ACO in any of the 5 most recent performance years prior to the agreement start date (§425.20), in order to hold these ACOs accountable for their ACO participants’ experience with the program.

   Additionally, all ACO participants and ACO providers/suppliers undergo a rigorous screening process during the application cycle (and throughout the agreement period, if approved to participate in the program) to ensure...
they meet certain program requirements. CMS’ screening processes are protective of the program and provide CMS with eligibility information about individual ACO participants including: Medicare-enrollment status (§ 425.20); program integrity history (§ 425.305(a)); any participation in other Medicare shared savings initiatives (§ 425.114); and participation in other Shared Savings Program ACOs, including whether the ACO participant submitted claims used in beneficiary assignment (§ 425.306). These robust application screening processes for ACO participants and ACO providers/suppliers provides necessary information about ACOs and individual ACO participants.

We propose to revise § 425.204(b) to provide that, upon request by CMS during the application cycle, the ACO must submit information regarding prior participation in the Shared Savings Program by the ACO, its ACO participants, or its ACO providers/suppliers, including such information as may be necessary for CMS to determine whether to approve an ACO’s application in accordance with § 425.224(b). Under this proposal, and to ensure future compliance, we may request additional information from an ACO concerning its prior participation or the prior participation of their ACO participants or its ACO providers/suppliers. In that case, we would require the ACO to include in its response assurance agreements describing how they will remain in compliance with program requirements—particularly as to the quality performance standard and financial performance—while completing the full term of the participation agreement. Thus, with the robust evaluation criteria of § 425.224(b) for renewing and re-entering ACOs and the application screening processes for ACO participants and ACO providers/suppliers, we believe we can effectively evaluate an ACO’s prior participation and determine its suitability to participate in the program without requiring ACOs to self-identify prior participation under § 425.204(b), including the cause of termination (if any), and what safeguards have been put into place.

(2) Submission of Sample Agreements (§ 425.204(c)(6))

We propose to revise § 425.204(c)(6) to require an ACO to submit sample or form ACO participant agreement documents during the application cycle only upon request. We review sample agreements to ensure they contain the language required under § 425.116. However, it is ultimately the ACO’s responsibility to ensure that all of its ACO participant agreements comply with the Shared Savings Program requirements. We have concerns that CMS review of sample participant agreements gave the incorrect impression that CMS had determined that an agreement met all regulatory requirements.

We believe that removing the requirement at § 425.204(c)(6) to submit sample agreements reduces administrative burden on both ACOs and CMS in the submission and reviewing of sample agreements. Under our proposal, we would retain the ability to request ACO sample participant agreements during the application cycle and at any point during an agreement period. Although we would not expect to routinely request during the application cycle that an ACO submit copies of ACO participant agreement documentation, it could be particularly useful in the case of ACOs that have a history of noncompliance with § 425.116 or other program requirements.

We would retain the requirement in § 425.204(c)(6) that the ACO must certify that each of its ACO participant agreements comply with the requirements of the Shared Savings Program. We believe this modification to § 425.204(c)(6) more clearly prescribes that the ACO is ultimately responsible for compliance with all program requirements.

(3) Submission of Executed Participant Agreements (§ 425.116(c))

Lastly, we propose to modify § 425.116(c) to remove language requiring an ACO to submit an executed ACO participant agreement for each ACO participant at the time of its initial application and during the participation agreement renewal process. The submission of agreements at the time of initial application will be governed by § 425.204(c)(6) and does not need to be addressed in § 425.116(c). Moreover, unless there have been amendments to an ACO participant agreement, we would not need to collect for a second time executed ACO participant agreements with ACO participants who are actively participating in an ACO at the time it is applying to renew its participation agreement with the program. In our experience, neither ACOs nor their ACO participants have frequently raised concerns about continuing participation with an ACO into a new agreement period, nor did CMS of changes to ACO agreements. An ACO must notify CMS within 30 days after the termination of an ACO participant agreement in accordance with § 425.118(b)(2).

We would retain the remainder of § 425.116(c), which requires ACOs to submit ACO participant agreements when requesting additions to their ACO participant lists in accordance with § 425.118 and specifies that the agreements may be submitted in the form and manner specified under § 425.204(c)(6). We note that although ACOs may request additions to an ACO participant list at specified times during a performance year, all approved ACO participant list additions become effective on January 1 of the following performance year (§ 425.118(b)(1)(ii)). We continue to find value in reviewing executed ACO participant agreements in these circumstances. ACO participant additions may take the form of an initial applicant or renewing ACO submitting proposed ACO participants (that may or may not have participated with another ACO), or a currently participating ACO adding proposed participants (that may or may not be participating with another ACO) to their ACO participant list. Collecting executed agreements (which may include collecting only the first and signature page(s) per § 425.204(c)(6)) for additions to an ACO’s participant list provides CMS with evidence that the ACO and the participant are each aware of the agreement and are participating together in the Shared Savings Program. Should CMS need to review executed participant agreements other than when ACOs are adding to their list of ACO participants, CMS can request them at that time under proposed § 425.206(c)(6) or under its audit authority in accordance with § 425.314.

5. Beneficiary Information Notices for ACOs With Prospective Assignment

a. Background

To ensure full transparency between Shared Savings Program ACOs and the beneficiaries they serve, § 425.312(a)(1) provides that an ACO must ensure that Medicare FFS beneficiaries are notified about all of the following: (1) That its ACO providers/suppliers are participating in the Shared Savings Program; (2) the beneficiary’s opportunity to decline claims data sharing; and (3) the beneficiary’s ability to, and the process by which, he or she may identify or change identification of the individual he or she designated as their primary clinician for purposes of voluntary allocation. Under § 425.312(a)(1), ACOs must notify CMS of changes to ACO participant lists in accordance with § 425.118(b)(2)
and, in settings in which beneficiaries receive primary care services, making standardized written notices available upon request.

In the December 2018 final rule, we specified at § 425.312(a)(2)(ii) that, during the performance year beginning on July 1, 2019 and each subsequent performance year, the information must also be furnished by an ACO or ACO participant providing each beneficiary with a standardized written notice prior to or at the first primary care visit of the performance year in the form and manner specified by CMS. While we continued to encourage ACO participants to distribute the notice to beneficiaries at the point of care to address any beneficiary questions or concerns, the flexibility was granted so that an ACO or its ACO participants could distribute beneficiary notifications through electronic transmission (such as email) or mail. We note that, regardless of the method of notification used, CMS may review evidence related to the dissemination of the beneficiary information notice at any time under its audit authority in accordance with § 425.314. In the December 2018 final rule, we finalized requirements to further strengthen the beneficiary notification requirements. Specifically, we made changes to permit an ACO (not just its ACO participants) to disseminate the beneficiary information notice to beneficiaries, to require the notice to be provided prior to or at the first primary care visit of each performance year, and to permit the distribution of the notice through electronic transmission (such as email) or mail. We believe the modifications made to the beneficiary notification requirements in the December 2018 final rule help empower beneficiary choice, support beneficiary engagement, improve transparency, and ensure that beneficiaries are informed about the program and how it may affect their care and the use of their data. In making the decision to provide a CMS-approved template, we aimed to make the notification a comprehensive resource that compiled information about the program and how it may affect such, we continue to believe that the current requirement of disseminating the beneficiary information notice annually may have the potential to be overly burdensome to ACOs and/or their ACO participants. We seek comment from stakeholders on whether we should modify the frequency with which the beneficiary information notice must be furnished, for example, by reducing the frequency of the existing requirement from annually to once per agreement period. We expect that ACOs would be required to provide the notice to their FFS beneficiaries, based on assignment methodology, including any beneficiaries who seek care from ACO providers/suppliers throughout the agreement period. ACOs would also be responsible for issuing the beneficiary information notice during subsequent agreement periods, reminding assigned beneficiaries of their participation in the Shared Savings Program. Beneficiaries would continue to be able to modify their decision on whether to allow data sharing at any point. While we have received feedback from program stakeholders regarding the current annual requirement being too frequent, potentially confusing beneficiaries, and increasing burden on ACOs, reducing the frequency to once per agreement period may ultimately be too infrequent, given the many changes a beneficiary may experience with their health and life in general in that span of time. It is our goal to provide the notifications in a way that will continue to empower and inform beneficiaries without overwhelming or confusing them with

b. Proposed Revisions

In considering the several different iterations of the beneficiary notice requirement over the history of the program, we have made several revisions to the beneficiary notification provisions over time. Refer to the November 2011 final rule, 76 FR 67892, 67945 through 67946 (establishing the requirement for beneficiary notifications). Refer to the June 2015 final rule, 80 FR 32692, 32740 through 32743 (establishing requirements for ACO to use a CMS-approved template for beneficiary notifications, allowing ACOs to obtain claims data for beneficiaries, and establishing an avenue for beneficiaries to opt out of data-sharing).

102 We have made several revisions to the beneficiary notification provisions over time. Refer to the November 2011 final rule, 76 FR 67892, 67945 through 67946 (establishing the requirement for beneficiary notifications). Refer to the June 2015 final rule, 80 FR 32692, 32740 through 32743 (establishing requirements for ACO to use a CMS-approved template for beneficiary notifications, allowing ACOs to obtain claims data for beneficiaries, and establishing an avenue for beneficiaries to opt out of data-sharing).
information. We encourage stakeholders to provide feedback on this suggestion, as well as other suggestions they may have in the spirit of burden reduction with regard to the beneficiary notification requirement as well as transparency and beneficiary engagement.

6. Seeking Comment on Considerations Related to the Use of Regional FFS Expenditures in Establishing, Adjusting, Updating, and Resetting the ACO’s Historical Benchmark

a. Background on the Shared Savings Program Benchmarking Methodology

Section 1899(d)(1)(B)(ii) of the Act addresses how ACO benchmarks are to be established and updated under the Shared Savings Program. This provision specifies that the Secretary shall estimate a benchmark for each agreement period for each ACO using the most recent available 3 years of per beneficiary expenditures for Parts A and B services for Medicare FFS beneficiaries assigned to the ACO. This benchmark shall be adjusted for beneficiary characteristics and such other factors as the Secretary determines appropriate and updated by the projected absolute amount of growth in national per capita expenditures for Parts A and B services under the original Medicare FFS program, as estimated by the Secretary. The benchmark shall be reset at the start of each agreement period. In addition to the statutory benchmarking methodology established in section 1899(d) of the Act, section 1899(i)(3) of the Act grants the Secretary the authority to use other payment models, including payment models that would use alternative benchmarking methodologies, if the Secretary determines that doing so would improve the quality and efficiency of items and services furnished under the Medicare program and that the alternative methodology would result in program expenditures equal to or lower than those that would result under the statutory payment model.

In the November 2011 final rule establishing the Shared Savings Program, we adopted policies for establishing, updating, and resetting the benchmark at § 425.602. The Shared Savings Program’s regulations have since evolved to include different benchmarking methodologies, including modifications to § 425.602, and the addition of separate benchmarking policies for ACOs entering a second or subsequent agreement period at § 425.603. Benchmarking policies applicable to all ACOs in agreement periods beginning on July 1, 2019, and in subsequent years, are specified in § 425.601. We refer readers to discussions of the benchmark calculations in earlier rulemaking for details on the development of the current policies (see November 2011 final rule, 76 FR 67909 through 67927; June 2015 final rule, 80 FR 32785 through 32786; June 2016 final rule, 81 FR 37953 through 37991; and December 2018 final rule, 83 FR 68006 through 68030).

In the following discussion, we summarize select aspects of the Shared Savings Program’s benchmarking methodology and related concerns that have been expressed by ACOs and other stakeholders. We specify some considerations based on our initial analyses of these issues, and seek comment on considerations that may inform future policy developments. However, we note that we are still in the process of monitoring program calculations based on the initial performance years of experience under the new participation options and program modifications that were adopted as part of the Pathways to Success rulemaking and are applicable for ACOs in agreement periods beginning on July 1, 2019, and in subsequent years, including changes to the benchmarking methodology (finalized in the December 2018 final rule (83 FR 67816)). In addition, we are also monitoring the impact of any anomalies in Medicare FFS expenditures and healthcare utilization by Medicare FFS beneficiaries resulting from the COVID-19 Public Health Emergency, which we anticipate could further inform our considerations of future modifications to Shared Savings Program benchmarking policies (see for example, discussion in the CY 2021 PFS final rule, 85 FR 84770 through 84785).

b. Request for Comment on Calculation of the Regional Adjustment and Blended National-Regional Growth Rates for Trending and Updating the Benchmark

In calculating the historical benchmark, CMS uses historical expenditures for the ACO’s assigned beneficiaries, as well as factors based on regional FFS expenditures, factors based on national FFS expenditures, and factors based on a blend of national and regional FFS expenditures. As we have described in earlier rulemaking, incorporating regional expenditures into benchmark calculations makes the ACO’s cost target more independent of its historical expenditures and more reflective of FFS spending in its region (see, for example, 81 FR 37950, 37951 and 37955). We have also acknowledged in earlier rulemaking that the incorporation of factors based on regional FFS expenditures into ACO benchmarks will have varying effects on ACOs depending on each organization’s individual circumstances (see, for example, 81 FR 37950, 37954 through 37957, and 81 FR 37975 through 37977; and 83 FR 67816, 68017 and 68026).

In accordance with § 425.601(a)(8), CMS adjusts historical benchmark expenditures by Medicare enrollment type (ESRD, disabled, aged/dual eligible, aged/non-dual eligible) by a percentage of the difference between the average per capita expenditure amount for the ACO’s regional service area and the ACO’s historical benchmark amount (referred to herein as the “regional adjustment”). The percentage that is applied in calculating the regional adjustment is determined in accordance with § 425.601(f) and depends on whether the ACO has lower or higher spending compared to the ACO’s regional service area and the agreement period for which the ACO is subject to the regional adjustment, according to the phase-in schedule of the applicable weights. CMS caps the per capita dollar amount of the regional adjustment for each Medicare enrollment type at a dollar amount equal to ±5 percent of national per capita expenditures for Parts A and B services under the original Medicare FFS program in benchmark year (BY) 3 for assignable beneficiaries (as defined in § 425.20) in that Medicare enrollment type identified for the 12-month calendar year corresponding to BY3.

In accordance with § 425.601(a)(5), in establishing and resetting an ACO’s benchmark, CMS trends forward expenditures for each benchmark year (BY1 and BY2) to BY3 dollars using a blend of national and regional growth rates, making separate calculations for each Medicare enrollment type. Similarly, in accordance with § 425.601(b), CMS updates the historical benchmark annually for each year of the agreement period using a blend of national and regional growth rates between BY3 and the benchmark year. As described in the December 2019 final rule (83 FR 68024 through 68030), we...
used our statutory authority under section 1899[i][3] of the Act to adopt this policy under which we update the historical benchmark using a blend of national and regional growth rates, rather than the projected absolute amount of growth in national per capita expenditures for Parts A and B services under the original Medicare FFS program as required under section 1899[d](1)(B)(ii) of the Act. CMS accounts for an ACO’s penetration in its region when calculating the national-regional blended growth rates, by placing a higher weight on the national component of the blend and a lower weight on the regional component as the ACO’s penetration in its region increases.

In determining regional FFS expenditures, CMS uses average county FFS expenditures for assignable beneficiaries, including the ACO’s assigned beneficiaries, in each county in the ACO’s regional service area for the 12-month calendar year corresponding to the relevant benchmark or performance year.\(^{103}\)\(^{104}\) CMS weights these county-level FFS expenditure amounts by the proportion of the ACO’s assigned beneficiaries residing in each county, with all calculations performed separately by Medicare enrollment type. Refer to § 425.601(c) (calculating county expenditures) and (d) (calculating regional expenditures).

ACOs and other program stakeholders have expressed concerns with the approach to determining regional FFS expenditures using a population of assignable beneficiaries that includes the ACO’s assigned beneficiaries, including with respect to the impact on the calculation of the regional adjustment and the blended national-regional growth rate used to trend and update an ACO’s historical benchmark, suggesting this policy results in relatively lower benchmarks for ACOs, particularly ACOs with high market penetration in their regional service area, which may tend to be ACOs located in rural areas.\(^{105}\) For example, the National Association of ACOs’ (NAACOS’) summary “Fixing the Rural Glitch” explains its belief that by including the costs of all beneficiaries in the regional adjustment—both those assigned to the ACO and those who are not—CMS penalizes an ACO for reducing costs relative to its regional competitors. That is, as an ACO reduces the costs of its own assigned beneficiaries, it also reduces the average regional costs. According to NAACOS, this will ultimately reduce savings for efficient ACOs in all areas, but the effect may be most dramatic for rural ACOs because they will tend to care for a greater proportion of their region’s total beneficiary population than an urban ACO.\(^{106}\) As another example, Aledade suggests that incorporating factors based on regional FFS expenditures into the Shared Savings Program’s benchmarking methodology systemically penalizes ACOs with a large market share when they reduce costs, leading to disparate payments to ACOs with identical performance.\(^{107}\) ACOs and other program stakeholders have suggested that CMS remove the effects of the ACO’s own performance from factors based on regional FFS expenditures, such as by excluding an ACO’s assigned beneficiaries from the population of assignable beneficiaries used to determine regional FFS expenditures.\(^{108}\) Other alternatives that have been suggested to address these concerns include capping an ACO’s penetration in the region at 50 percent by Medicare enrollment type, or expanding the ACO’s region.\(^{109}\) In recent years, legislative changes have been introduced, which if enacted would require the removal of the ACO’s assigned beneficiaries from regional expenditure calculations.\(^{110}\)\(^{111}\) We appreciate ACOs and other program stakeholders bringing their concerns, and suggested alternatives, to our attention. We have begun to analyze these concerns about the use of factors based on regional FFS expenditures in calculating ACO benchmarks, and to consider possible modifications to the Shared Savings Program’s benchmarking methodology to ensure the sustainability of the program’s financial models. We note that any such modifications would need to be adopted through notice and comment rulemaking.

In this section of this proposed rule we discuss some of our considerations based on our initial analyses of stakeholders’ concerns. We continue to investigate these concerns and perform additional simulations. We seek comment on these considerations and other related issues, as well as suggested approaches to modifying the program’s benchmarking methodology, which could inform future rulemaking.

There may be several possible approaches that we could consider for removing an ACO’s assigned beneficiaries from the assignable beneficiary population used in regional expenditure calculations, which would vary in the degree of additional program calculations and the level of complexity. We simulated the impact of removing an ACO’s assigned beneficiaries from the regional expenditure calculations using an approach that would pose relatively limited operational burden and would leverage data elements already computed under the current benchmarking methodology. This approach relies on the premise that per capita risk-adjusted regional FFS expenditures for all assignable beneficiaries in an ACO’s regional service area (a) can be interpreted as a weighted average of per capita risk-adjusted FFS expenditures for the

\(^{103}\) Assignable beneficiary, as defined in § 425.20, means a Medicare fee-for-service beneficiary who receives at least one primary care service with a date of service during a specified 12-month assignment window from a Medicare-enrolled physician who is a primary care physician or who has one of the specialty designations included in § 425.402(c).

\(^{104}\) The ACO’s regional service area, as defined in § 425.20, means all counties where one or more beneficiaries assigned to the ACO reside.

\(^{105}\) See for example the CY 2021 FFS final rule, summarizing commenters’ concerns about the program’s benchmarking methodology, received in response to modifications to Shared Savings Program policies that were adopted in the May 8, 2020 COVID–19 IFC to address the impact of the COVID–19 PHE, although we noted these comments
ACO’s assigned beneficiaries (b) and per capita risk-adjusted FFS expenditures for assignable beneficiaries in the region who are not assigned to the ACO (c), where the weight on (b) is the ACO’s regional market share \(^{112}\) and the weight on (c) is one minus the ACO’s regional market share. Shown as an equation this is:

\[
(a) = [(b) \times (ACO’s~regional~market~share)] + [(c) \times (1 - ACO’s~regional~market~share)].
\]

Thus, to remove the ACO’s assigned beneficiaries from the regional expenditure calculation, we would insert the applicable values into the above equation and solve for (c) by rearranging the equation as follows:

\[
(c) = \frac{[(a) - (b) \times (ACO’s~regional~market~share)]}{(1 - ACO’s~regional~market~share)}.
\]

By using such ACO- and regional-level values, this approach, performed separately by Medicare enrollment type, would allow us to calculate individualized ACO county-level risk-adjusted expenditures. We seek comment on the approach we have outlined, or alternative approaches to calculating regional FFS expenditures without an ACO’s assigned beneficiaries. In particular, we seek comment on specific approaches that would strike the balance of achieving the desired outcome of removing the ACO’s assigned beneficiaries from program calculations without introducing an inordinate amount of operational and administrative complexity such that the steps and data included in the calculations can be understood by ACOs and other program stakeholders, and the potential for calculation errors is minimized.

We performed initial simulations, for a subset of Shared Savings Program ACOs, using data for the 6-month performance year starting on July 1, 2019 (sometimes referred to as PY 2019A), for which expenditures were determined based on expenditures for CY 2019, to observe the effects of potential modifications to the benchmarking methodology. In performing these simulations, we used the aforementioned approach for removing expenditures for the ACO’s assigned beneficiaries from the calculation of regional FFS expenditures, by removing the impact of an ACO’s assigned beneficiaries from the assignable population as weighted by the ACO’s regional market share. Specifically, we simulated the effects on the per capita updated benchmark of several alternate policies that would remove an ACO’s assigned beneficiaries from regional expenditures used to trend and update the benchmark (either alone or as part of a national-regional blend) or from regional expenditures used to calculate the regional adjustment, or from both. When looking at average impacts by quintile of the ACO’s penetration in its regional service area (that is, market share) and rural or non-rural status, the various alternatives resulted in estimated increases in the updated benchmark by amounts ranging from 0.1 percent to 1.4 percent, with ACOs with higher market shares tending to see slightly higher average increases than ACOs with lower market shares and rural ACOs seeing slightly higher average increases than non-rural ACOs. We also observed that some ACOs experienced decreases in their benchmark amounts, ranging from −0.02 percent to −1.5 percent under these simulations of alternate benchmarking policies. We note that additional analysis would be needed to consider the impact of such policies on a broader set of ACOs participating in the Shared Savings Program, to include ACOs that did not participate in a 6-month performance year from July 1, 2019, through December 31, 2019. We seek comment on this estimated range of impacts on ACO benchmark values, and on the potential mixed effects on ACOs that could result from modifications to the benchmarking methodology.

In considering alternative benchmarking methodologies to address ACOs’ penetration in their regional service areas, we believe it is important to consider what would constitute heavy penetration by an ACO in its regional service area, and the extent to which market penetration should be considered in benchmark calculations. Based on preliminary analysis of data for CY 2019 using PY 2021 ACO Participant Lists for all ACOs participating in the program as of January 1, 2021, the median ACO regional market share was approximately 16.2 percent, with a minimum of 0.9 percent and a maximum of 59.2 percent. Further, 90 percent of ACOs had a regional market share of less than 37.8 percent, and 80 percent of ACOs had a regional market share of less than 29.3 percent. Accordingly, we seek comment on what would constitute heavy penetration in the ACO’s regional service area and how removing the ACO’s assigned beneficiaries from regional calculations, dependent on the level of penetration, could either increase or decrease the ACO’s benchmark. We also seek comment on approaches that could strike a balance between adjusting program policies to address impacts on potentially few ACOs that are heavily penetrated in their regional service area while maintaining stability for most ACOs that have relatively low penetration in their regional service area.

We seek comment on the following considerations, and other possible unintended consequences that could result from removing an individual ACO’s assigned beneficiaries from regional calculations.

• Would this approach create incentives for ACOs to have assigned beneficiaries who are healthier than the remaining comparison population that is the basis for benchmark factors based on regional FFS expenditures (so as to yield a higher benchmark), which could lead ACOs to seek out healthier beneficiaries and avoid at-risk or higher-cost beneficiaries?

++ Would this approach incent the formation of large ACOs within a particular market to obtain the most competitive benchmarks resulting in market consolidation, and discourage participation by relatively smaller ACOs, thus increasing costs for the Medicare Trust Funds if CMS pays larger amounts of shared savings to ACOs that have consolidated to take advantage of the ability to attract more low-cost beneficiaries in their region?

++ Would a change in the regional benchmarking methodology encourage ACOs to avoid at-risk or higher-cost beneficiaries and potentially exacerbate inequities in access to health care?

• We seek comment on the potential for negative impacts on ACOs that serve larger proportions of medically complex beneficiaries such as ACOs whose assigned beneficiary populations include larger proportions of beneficiaries who are medically complex and cared for in ambulatory or home-based settings or who reside in long term care facilities resulting from an approach that removes the ACO’s assigned beneficiaries from the assignable beneficiary population used to determine regional FFS expenditures.

Would such an approach yield a benchmark so low that such ACOs have little incentive to participate in the Shared Savings Program?

• Would removing an individual ACO’s assigned beneficiaries result in regional FFS expenditures based on very small populations, thus introducing significant variability into

\(^{112}\)What is referred to here as the “ACO’s regional market share” is the share of assignable beneficiaries in the ACO’s regional service area that are assigned to the ACO, which is the weight that it is applied to the national component of the national-regional blend under § 425.601(a)(5)(iv) and (v).
regional FFS expenditure trends used in benchmark calculations?

Additionally, we seek comment on whether removal of an ACO’s assigned beneficiaries from regional FFS expenditure calculations would bring about a need to remove ACO assigned beneficiaries from other Shared Savings Program financial calculations based on a broader Medicare population, including factors based on national FFS expenditures, which are used in calculating blended national and regional expenditure trend and update factors, truncation points used in calculating benchmark and performance year expenditures, and the 5 percent cap on the regional adjustment.

We also seek comment on using other approaches to calculating benchmarks under the Shared Savings Program. In particular, we seek comment on alternatives to determining regional FFS expenditures that would reduce the influence of an ACO’s assigned beneficiaries on regional expenditure calculations as basing these expenditures on a larger geographic area, including using state-level data, Core-Based Statistical Area (CBSA)-level data, or a combination of data for these larger geographic areas and county-level data (such as blended county/state regional expenditures). We also seek comment on alternative benchmarking methodologies that may incorporate data sources other than Medicare FFS expenditure trends, such as by incorporating factors based on Medicare Advantage rates, or other published trends.

We seek comment on considerations related to the potential use of our authority under section 1899(i)(3) of the Act to implement suggested modifications to the benchmarking methodology, in particular alternative approaches to updating the historical benchmark or other alternative benchmarking methodologies that may diverge from the requirements of section 1899(d)(1)[B](ii) of the Act, since to do so we must determine that the alternative payment methodology will improve the quality and efficiency of items and services furnished to Medicare beneficiaries, without resulting in additional program expenditures.

We also note that for each calendar year, CMS releases two public use files (PUFs): (1) County-level Aggregate Expenditure and Risk Score Data on Assignable Beneficiaries PUF, and (2) Number of ACO Assigned Beneficiaries by County PUF. These files are available online at https://www.cms.gov/Research-Statistics-Data-and-Systems/Downloadable-Public-Use-Files/SSPACOSSPBenchmark. Stakeholders may find this data helpful to inform their consideration of these issues.

c. Request for Comment on the Shared Savings Program’s Risk Adjustment Methodology

CMS takes into account changes in severity and case mix of the ACO’s assigned beneficiary population when establishing the benchmark and also in adjusting the benchmark each performance year. In accordance with §425.601(a)(3), in establishing the benchmark, CMS adjusts expenditures for changes in severity and case mix using prospective HCC risk scores. Pursuant to §425.601(a)(10), CMS further adjusts the ACO’s historical benchmark at the time of reconciliation for a performance year to account for changes in severity and case mix for the ACO’s assigned beneficiary population between BY3 and the performance year (refer to §425.601(a)(10); §425.605(a)(1), (a)(2); §425.610(a)(2), (a)(3)). In making this risk adjustment, CMS makes separate adjustments for the population of assigned beneficiaries in each Medicare enrollment type used in the Shared Savings Program (ESRD, disabled, aged/dual eligible, aged/non-dual eligible). CMS uses CMS–HCC prospective risk scores to adjust the historical benchmark for changes in severity and case mix for all assigned beneficiaries, subject to a cap of positive 3 percent for the agreement period. This cap is the maximum increase in risk scores allowed for each agreement period, such that any positive adjustments between BY3 and any performance year in the agreement period cannot be larger than 3 percent. That is, the risk ratios (ratio of performance year risk score to the BY3 risk score) applied to historical benchmark expenditures to capture changes in health status between BY3 and the performance year will never be higher than 1.030 for any performance year over the course of the agreement period. This cap is applied separately for the population of beneficiaries in each Medicare enrollment type.114 115 ACOs and other stakeholders have expressed concerns that the program’s methodology for capping any increase in the risk adjustment to the historical benchmark, such that any positive adjustment between benchmark year 3 and any performance year in the agreement period cannot be larger than 3 percent, does not account for risk score growth in the ACO’s regional service area, and thereby penalizes ACOs. 114 115 In earlier rulemaking, commenters expressed that the 3 percent cap on risk score increases was especially problematic for ACOs whose regional service area includes a population of beneficiaries whose risk scores rise more than the cap. One commenter encouraged CMS to adopt a policy of applying a cap on risk score growth after accounting for regional increase in risk scores (85 FR 84784).

We seek comment on:

• Approaches, generally, to improving the risk adjustment methodology for the Shared Savings Program, and specifically for ACOs with medically-complex, high-cost beneficiaries.

• Approaches to risk adjustment that would balance the need for accurate and complete coding, while protecting against incentivizing coding intensity initiatives by ACO participants and ACO providers/suppliers (which may be even more problematic for ACOs with high penetration in their region) that increase risk score growth above the existing 3 percent cap.

• Alternate approaches that would increase the cap on an ACO’s risk score growth in relation to risk score growth in the ACO’s regional service area, such as:
  
++ Allowing the ACO risk score growth cap to increase by a percentage of the difference between the current 3 percent cap and risk score growth in the ACO’s regional service area. In this alternate approach, the percentage applied would be equal to 1 minus the ACO’s regional market share. This approach would raise the existing cap while limiting the ability for ACOs with high penetration in their region to increase their cap by engaging in coding intensity initiatives that raise the regional risk score.

++ Setting the ACO risk score growth cap at some level between the existing 3 percent risk score cap and the regional risk score growth, which would account for a portion of the regional risk score growth that exceeds the current cap.

• The potential interactions between policies to remove assigned

beneficiaries from the assign able beneficiary population used to calculate regional FFS expenditures and growth rates (described elsewhere in this section of this proposed rule), and policies addressing regional risk score growth.

K. Medicare Ground Ambulance Data Collection System

1. Background on Ambulance Services

Section 1861(s)(7) of the Act establishes an ambulance service as a Medicare Part B service where the use of other methods of transportation is contraindicated by the individual’s condition, but only to the extent provided in regulations. Since April 1, 2002, payment for ambulance services has been made under the ambulance fee schedule (AFS), which the Secretary established under section 1834(l)(4) of the Act. Payment for an ambulance service is made at the lesser of the actual billed amount or the AFS amount, which consists of a base rate for the level of service, a separate payment for mileage to the nearest appropriate facility, a geographic adjustment factor (GAF), and other applicable adjustment factors as set forth at section 1834(l) of the Act and § 414.610 of the regulations. In accordance with section 1834(l)(3) of the Act and § 414.610(f), the AFS rates are adjusted annually based on an inflation factor. The AFS also incorporates two permanent add-on payments and three temporary add-on payments to the base rate and/or mileage rate. The two permanent add-on payments at § 414.610(c)(5)(i) are: (1) A 50 percent increase in the standard mileage rate for ground ambulance transports that originate in rural areas where the travel distance is between 1 and 17 miles; and (2) a 50 percent increase to both the base and mileage rate for rural air ambulance transports. The three temporary add-on payments at sections 1834(l)(12)(A) and (13)(A) of the Act and § 414.610 are: (1) A 3 percent increase to the base and mileage rate for ground ambulance transports that originate in rural areas; (2) a 2 percent increase to the base and mileage rate for ground ambulance transports that originate in urban areas; and (3) a 22.6 percent increase in the base rate for ground ambulance transports that originate in “super rural” areas. Section 50203(a)(1) and (2) of the Bipartisan Budget Act (BBA) of 2018 (Pub. L. 115–123, February 9, 2018) includes an extension of the temporary add-on payments through December 31, 2022.

Our regulations relating to coverage of and payment for ambulance services are set forth at 42 CFR part 410, subpart B, and 42 CFR part 414, subpart H.

2. Statutory Requirements for the Ground Ambulance Providers and Suppliers To Submit Cost and Other Information

Section 50203(b) of the BBA of 2018 added paragraph (17) to section 1834(l) of the Act, which requires ground ambulance providers of services and suppliers to submit cost and other information. Specifically, section 1834(l)(17)(A) of the Act requires the Secretary to develop a data collection system (which may include use of a cost survey) to collect cost, revenue, utilization, and other information determined appropriate by the Secretary for providers and suppliers of ground ambulance services. Section 1834(l)(17)(B)(i) of the Act requires the Secretary to specify the data collection system by December 31, 2019, and to identify the ground ambulance providers and suppliers that would be required to submit information under the data collection system. Section 1834(l)(17)(D) of the Act requires that beginning January 1, 2022, the Secretary apply a 10 percent payment reduction to payments made under section 1834(l) of the Act for the applicable period to a ground ambulance provider or supplier that is required to submit information under the data collection system and does not sufficiently submit such information. The term “applicable period” is defined under section 1834(l)(17)(D)(ii) of the Act to mean, for a ground ambulance provider or supplier, a year specified by the Secretary not more than 2 years after the end of the period for which the Secretary has made a determination that the ground ambulance provider or supplier has failed to sufficiently submit information under the data collection system. Section 1834(l)(17)(F) of the Act requires that no later than March 15, 2023 and as determined necessary by MedPAC, MedPAC must submit a report to Congress on the information submitted by the ground ambulance providers and suppliers through the data collection system on the adequacy of payments for ground ambulance services and geographic variations in the cost of furnishing such services.

In the CY 2020 PFS final rule (84 FR 62864 through 62897), we finalized a data collection system that collects detailed information on ground ambulance provider and supplier characteristics including service areas, service volume, costs, and revenue through a data collection instrument, commonly referred to as the Medicare Ground Ambulance Data Collection Instrument, via a web-based system. This instrument includes the specific questions that will be asked of ground ambulance organizations about the total service volume, costs, and revenue associated with a provider or supplier’s entire ground ambulance organization in such a way that MedPAC could use to calculate an average cost per ground ambulance transport. We refer the reader to our CY 2020 PFS final rule (84 FR 62863 through 62897) for more specifics on the establishment of the Medicare Ground Ambulance Data Collection System.

3. Proposed Revisions to the Medicare Ground Ambulance Data Collection Instrument

As described in the CY 2020 PFS final rule (84 FR 62867), the Medicare Ground Ambulance Data Collection Instrument uses screening questions and skip patterns so that it is applicable to all ground ambulance organizations regardless of their size, scope of operations and services offered, and structure. We stated that we believe this approach is easier to navigate and less time consuming to complete than a cost report template or instrument and that it minimizes respondent burden by directing ground ambulance organizations to only view and respond to questions that apply to their specific type of organization, all while still collecting the information required in sections 1834(l)(17)(A) of the Act.

The CY 2020 PFS final rule provided a detailed overview of the elements of the data collection instrument, including questions to collect information on costs, revenues, utilization (which CMS defines for the purposes of the data collection instrument as service volume and service mix), as well as the characteristics of ground ambulance organizations. Table 27 includes a high-level summary of the 13 sections of the Medicare Ground Ambulance Data Collection Instrument.
TABLE 27: Components for the Data Collection Instrument

<table>

We continue to receive ad hoc questions and feedback related to the Medicare Ground Ambulance Data Collection System and the Medicare Ground Ambulance Data Collection Instrument via three primary channels. First, we receive email and other communication from ground ambulance organizations via the CMS Ambulance Data Collection email inbox (AmbulanceDataCollection@cms.hhs.gov) and through other channels (for example, inquiries sent by organizations to Medicare Administrative Contractors (MACs) and then forwarded to CMS). These emails and other communications often include questions seeking clarification of instrument questions and their applicability to specific ground ambulance organization scenarios and context. We continue to update a Medicare Ground Ambulance Data Collection System Frequently Asked Questions (FAQ) document with answers to commonly asked questions. This document is available on the CMS website at https://www.cms.gov/Center/Provider-Type/Ambulances-Services-Center.html. Through review of questions and feedback, we have identified some instances where a clarification to the instrument language itself will likely be more useful and less burdensome to respondents than having to respond with reference to the FAQ document. Second, our contractor also asked a small number of ground ambulance organizations to complete and provide feedback on a paper version of the Medicare Ground Ambulance Data Collection Instrument. This feedback was helpful to identify some additional opportunities for clarification. Third, we continue to identify opportunities to clarify instructions and correct a small number of typos as we work to develop the web-based, programmed version of the Medicare Ground Ambulance Data Collection Instrument. Based on information that we received via the three sources described above, we are proposing the following changes and clarifications to the Medicare Ground Ambulance Data Collection Instrument. The proposed changes and clarifications aim to reduce burden on respondents, improve data quality, or both.

a. Proposed Change to the Shared Services Questions in Section 2 (Organizational Characteristics)

One component of the data collection instrument is ground ambulance organization characteristics, which is information regarding the identity of the organization and respondent(s) service area, ownership, response time, and other characteristics (84 FR 62871 through 62875). One characteristic on which we sought information is organization type, including whether costs are shared with fire or police response or health care delivery operations (84 FR 62871). The instrument contains a number of questions that are relevant to the issue of shared costs.

Section 2, Question 7 asks “Which category best describes your ground ambulance operation?” and allows respondents to select one of the following options:

(a) Fire department-based; (b) Police or other public safety department-based (including all-hazards public safety organizations); (c) Government stand-alone emergency medical services (EMS) agency; (d) Hospital or other Medicare provider of services (such as skilled nursing facility); (e) Independent/proprietary organization primarily providing EMS services; (f) Independent/proprietary organization primarily providing non-emergency services; or (g) Other (please specify).

Section 2, Question 8 subsequently asks respondents answering a, b, or d to Question 7 to “confirm that your ground ambulance operation shares operational costs, such as building space or personnel, with these other operations.”
Section 2, Question 9 asks “Does your ground ambulance operation share any operational costs, such as building space or personnel, with one of the following.” Respondents were offered the following options: (a) A fire department (not presented if the response to Section 2, Question 7 is “a”); (b) A police or other public safety department (not presented if the response to Section 2, Question 7 is “b”); (c) A hospital or other Medicare provider of services (such as a skilled nursing facility) (not presented if the response to Section 2, Question 7 is “d”); (d) Another healthcare organization (excluding hospitals, skilled nursing facilities, or other Medicare provider of services); (e) Another healthcare organization (excluding hospitals, skilled nursing facilities, or other Medicare provider of services); (f) Other (specify).

Collectively, the purpose of these three questions is to collect information on whether a portion of organizations’ costs and revenues may be related to services or operations other than the central station. We believe this change in the wording of the question, it is not clear to help assess whether they should or should not report a ZIP code as being part of their secondary service area. We propose to add the following text to the Section 2, Question 4 instructions: “Some but not all ground ambulance organizations regularly provide service outside of their primary service area, for example through mutual or auto-aid agreements with nearby municipalities. If this applies to your organization, please report areas that are outside your primary service area but where you regularly provide services as part of your secondary service area. You do not need to report areas where you provide services very rarely or only under exceptional circumstances (for example, national or state responses to disasters or mass casualty events). Use your judgment as to whether your organization regularly serves a secondary service area. For example, you may choose to consider ZIP codes outside your primary service area but where you had 5 or more responses during the data collection period as part of your secondary service area if you believe these transports have a significant impact on your organization’s costs.”

We stated that the area served by ground ambulance organizations is an important characteristic and finalized a policy to collect information on the geographic area served by each ambulance organization in Section 3 of the data collection instrument (84 FR 62875). We included questions related to average trip time in primary and secondary service areas (questions 3 and 6 of Section 3) that were important to understand how geographic distance between the ground ambulance organization’s facilities and patients affects costs (84 FR 62873).

Section 3 (Service Area), Questions 3 and 6 in the instrument ask ground ambulance organizations to report their “average trip time” using a set of categorical time ranges (for example, 30–60 minutes). These questions define average trip time as “the time the ambulance leaves the station to when that ambulance is available to take another call.” Based on feedback from ground ambulance organizations, we believe this definition may be confusing in cases where an ambulance responds to a call from a location other than the station (for example, while en route to another call, from a standby event, or from a hospital). Based on the literal wording of the question, it is not clear whether and if so, how ground ambulance organizations should report trip times for responses not originating at a station when responding to this question, leading to potentially missing or biased data.

We are proposing that this question be revised to ask for “average time on task” defined as “from the time an ambulance begins its response to the time when the ambulance is available to respond to another call (that is, time on task)” to better capture interfacility transfers and situations when an ambulance is already out and responds from a site other than the central station. We believe this change in the wording of the question would be clearer to respondents and would result in higher-quality reported data. We invite comments on our proposal to change the definition of the average trip time.

c. Proposed Change to Secondary Service Area Instructions

In Section 3, Question 4 instructions define the secondary service area for an organization as “outside [its] primary service area” where it regularly provide[s] services through mutual or auto-aid arrangements. The instruction directs organizations to “not include areas where [they] provide services only under exceptional circumstances.” We were notified that some ground ambulance organizations are unsure how to report areas where they (a) did have mutual or auto-aid arrangements in place, which aligns with the definition of secondary service area in the instructions, but where (b) they responded to calls only very rarely, for example once a year, which could be considered an “exceptional circumstance” and ignored for reporting per the instruction.

Although the instructions leave the determination of whether an organization has a secondary service area at the discretion of the sampled ground ambulance organization, we believe that some organizations may benefit from a rule of thumb or example to help assess whether they should or should not report a ZIP code as being part of their secondary service area. We propose to add the following text to the Section 3, Question 4 instructions: “Some but not all ground ambulance organizations regularly provide service outside of their primary service area, for example through mutual or auto-aid agreements with nearby municipalities. If this applies to your organization, please report areas that are outside your primary service area but where you regularly provide services as part of your secondary service area. You do not need to report areas where you provide services very rarely or only under exceptional circumstances (for example, national or state responses to disasters or mass casualty events). Use your judgment as to whether your organization regularly serves a secondary service area. For example, you may choose to consider ZIP codes outside your primary service area but where you had 5 or more responses during the data collection period as part of your secondary service area if you believe these transports have a significant impact on your organization’s costs.”

We also included questions related to the Medicare Ground Ambulance Data Collection System. We invite comments on our proposal to revise the secondary service area instructions.
90th percentile emergency response time, which the question defines as the time separating the quickest 90 percent of responses from the longest 10 percent of responses. The intent of the question was to collect information to help CMS understand the difference between average response times and atypical “outlier” response time. In the CY 2020 PFS proposed rule (84 FR 40688), we proposed to include a question on average response time. As we noted in the CY 2020 PFS final rule (84 FR 62873), several commenters to the CY 2020 PFS proposed rule recommended asking ground ambulance organizations to provide 90th percentile response time rather than or in addition to the average response time. They believed 90th percentile response time is a more accurate indicator of ambulance services capabilities and quality. They stated that the average time has too wide a range for error, since roughly half of responses are quicker/slower than average. They further stated that using average response time also tends to flatten the data, which means the fastest and slowest organizations did not stand out as much. In response to these comments (84 FR 62874), we finalized an additional question to the instrument asking ground ambulance organizations responding to emergency calls for service to report their 90th percentile response time.

Based on feedback from ground ambulance organizations that we have received on this question since we finalized the instrument, we believe most ground ambulance organizations will find it challenging to interpret this question and report the requested information. Several ground ambulance organizations have indicated that they would misinterpret this question, describing a shorter 90th percentile emergency response time compared to average response time, which, while mathematically possible, is not the intent as we were interested in characterizing outlier emergency responses with unusually long response times.

Thus, we propose to revise the question to ask: “What is your best estimate of the share of responses (enter percentage) that take more than twice as long as the average response time as reported in the prior question?” We believe this would be an easier question for ground ambulance organizations to understand. The goal of this question is to help CMS understand whether the organization has some response times that are much longer than its typical response time. Although the question language would be different, the reported information would still help CMS understand the extent to which a small number of emergency responses may be substantially longer than the average response for each organization. We invite comments on our proposal to revise the question to ask respondents to report the share of responses with more than twice the average response time instead of their 90th percentile emergency response time.

e. Proposed Change to Reporting Paid Ambulance Transports

In the CY 2020 PFS final rule (84 FR 62876 through 62877), we established a series of questions in the data collection instrument to collect data on the volume and the mix of services, including paid ground ambulance transports, that is, ground ambulance transports where the ambulance provider or supplier was paid for a billed amount in part or in full. The general instructions for Section 5 (Ground Ambulance Service Volume) note: “A paid ground ambulance transport refers to a ground ambulance transport for which your organization has been paid in full or in part by a payer and/or patient only. Depending on how your organization collects data, you may report (a) the number of transports furnished during the data collection period that were also paid during the data collection period, or (b) the number of transports paid during the data collection period even if some transports occurred prior to the data collection period.” Furthermore, Section 5, Question 7 asks respondents, “What was the total number of paid ground ambulance transports in calendar year 202X [or fill fiscal year as appropriate], across all payer types and regardless of the level of service or geography? (Enter number).”

Based on questions and feedback from ground ambulance organizations that we have received since we finalized the instrument, we believe respondents may have different interpretations of this question, which could lead to inconsistent reported data, including the reported number of ground ambulance transports during the data collection period (Section 5, Question 6). The intent of this question was to capture the reported number of ground ambulance transports during the data collection period, provided such transports were paid by the time the information was prepared for reporting to CMS. We did not intend for organizations to report the total number of ground ambulance transports for which they received the payment itself during the data collection period.

We recognize that the “runout period,” that is, the time from when services are provided to the time when data is being analyzed, will be short and variable across organizations, particularly for transports towards the end of organizations’ data collection periods. Despite this limitation, we believe this approach is preferable to alternatives where (a) respondents have variable interpretations of Section 5, Question 7 and (b) where respondents are asked to report the number of transports for which payment was received during the data collection period, even if the transports for which payment was received happened prior to the data collection period. In the latter case, the number of paid ground ambulance transports could not be directly compared to the number of total ground ambulance transports reported in Section 5, Question 6.

We also are proposing to revise the general instructions in Section 5 to delete the following text as it will no longer be relevant: “Depending on how your organization collects data, you may report (a) the number of transports furnished during the data collection period that were also paid during the data collection period, or (b) the number of transports paid during the data collection period even if some transports occurred prior to the data collection period.”

We invite comments on our proposal to revise reporting paid ground ambulance transports.

f. Proposed Change to Questions Related to Labor Hours

Section 7 (Labor Costs) of the data collection instrument asks respondents to report compensation and hours worked for ground ambulance staff. The instrument currently asks respondents to report, separately for each staff category: Total compensation, total hours worked inclusive of all responsibilities, and total hours worked unrelated to either ground ambulance or
public safety responsibilities. The rationale for asking for total compensation and hours, even if these include compensation and hours for activities other than those related to ground ambulance services, was to preserve the ability to compare compensation between organizations and to external benchmarks such as Bureau of Labor Statistics data. The last item, total hours worked unrelated to either ground ambulance or public safety responsibilities, can be subtracted from overall total hours worked related to ground ambulance and public safety responsibilities combined, and further allocation could separate ground ambulance time and compensation from public safety time and compensation for fire and other public safety-based ground ambulance organizations.

Based on questions received by ground ambulance organizations since we finalized the instrument and feedback through testing on Section 7 questions, we learned that some ground ambulance organizations may misinterpret the Section 7 questions. Specifically, we believe some organizations may assume the question is asking for hours “related” rather than “unrelated” to ground ambulance or public safety responsibilities given the focus of the data collection effort, despite instructions to the contrary. Relatedly, we were notified that some organizations were confused that the Section 7 questions did not provide an opportunity to report total hours worked related to ground ambulance responsibilities, which they assumed was an unintentional omission from the instrument.

We propose to change the instructions in Section 7 to ask respondents to report hours worked on different activities in such a way that the sum of hours worked across different activities equals total hours worked annually. We believe this approach would be easier for respondents to understand and estimate, resulting in less burden for respondents and higher quality reported information.

For stand-alone ground ambulance organizations, we propose to ask respondents to report each of the following per staff category: (a.) Total annual compensation; (b.) Total hours worked annually; (c.) Total hours worked annually related to ground ambulance operations; and (d.) Total hours worked annually related to all other responsibilities. With this change, the instructions in Section 7 would note that “total hours worked annually related to ground ambulance operations” plus “total hours worked annually related to all other responsibilities” should equal “total hours worked annually.”

For fire department or other public safety-based ground ambulance organizations, we propose to ask respondents to report each of the following per staff category: (a.) Total annual compensation; (b.) Total hours worked annually; (c.) Total hours worked annually related to ground ambulance operations; (d.) Total hours worked annually related to fire, police, or other public safety operations; and (e.) Total hours worked annually related to all other responsibilities. The Section 7 instructions would note that the sum of total hours worked related to ground ambulance operations; fire, police, or other public safety operations; and all other responsibilities should equal total hours worked annually. We invite comments on our proposal to revise the labor hours.

g. Proposed Change to Instructions Related to Facility, Vehicle, and Equipment Certain Expenses

In the CY 2020 PFS final rule (84 FR 62882 through 62886), we finalized policies to collect cost information related to facilities, vehicles, and other equipment, consumables, and supplies. The purpose of Sections 8 (Facilities Costs), 9 (Vehicles Costs), and 10 (Equipment, Consumable, and Supply Costs) in the instrument is to collect total expenses during the data collection period related to facilities, vehicles, and equipment and supplies, respectively. Based on feedback from ground ambulance organizations that we have received since we finalized the instrument, we are concerned that some respondents, particularly those that do not currently depreciate facilities, vehicles, and/or equipment for accounting purposes, may not be sure where to report some components of total expenses in these categories. Although we believe most ground ambulance organizations depreciate facilities, vehicles, and capital medical equipment, we were notified that some ground ambulance organizations do not depreciate these items in their regular accounting practices. Upon a review of the instrument, we found that the instructions and opportunities to report costs for organizations using a cash basis for accounting were inconsistent across Sections 8, 9, and 10 of the instrument. In some instances, ground ambulance organizations are asked to report annual depreciation expenses only, without a clear question related to expenses should the organization not regularly consider a certain category of asset. In other cases, there are questions asking respondents to report annual expenses other than annual depreciation expenses, but the instructions provide incomplete guidance on what expenses are in scope.

We considered several factors when developing our proposals to address these inconsistencies. Overall, the purpose of the questions in Sections 8, 9, and 10 is to collect comprehensive information on total expenses related to facilities, vehicles, and equipment and supplies during the organizations’ data collection periods. We believe the primary purpose of changes and clarifications to questions in this section should be to ensure all expenses are reported from both organizations that do and do not depreciate facilities, vehicles, and equipment for accounting purposes. We understand that allowing organizations flexibility to report cost information using their current accounting approach will reduce burden. The instructions to the instrument currently state: “In general, you will be able to report information collected under your organization’s current accounting practices. We understand that some ground ambulance organizations use accrual-basis accounting while others use cash-basis accounting.” We continue to believe this is the correct approach, and that alternatives would impose considerable additional burden on ground ambulance organizations.

We considered several broad alternatives on how to report facility, vehicle, and equipment expenses in Sections 8, 9, and 10. One option is to require all organizations to calculate and report depreciation for facilities, vehicles, and equipment using a standardized approach. Although this would increase burden for respondents, potentially significantly for organizations that do not currently calculate depreciation, it would result in the most standardized information being submitted to CMS and the fewest changes to the layout of the instrument. Another option would be to retain the current structure of the instrument but provide more detailed instructions on how organizations that do and do not depreciate facilities, vehicles, and equipment should report information. A third option is to add new screening questions to the instrument asking individually whether the organization depreciates facilities, vehicles, and equipment. The responses to these screening questions could be used to tailor the instructions, table headings, and question text later in the instrument to avoid confusion. After considering these options, we propose to add screening questions to the instrument asking individually
whether the organization depreciates facilities, vehicles, and equipment. We believe this would not substantively affect response burden for organizations and may in some cases reduce burden by clarifying what and how information on expenses must be reported in Sections 8, 9, and 10.

There are two specific places in Sections 8 and 9 in the instrument where we believe the instructions on how to report annual expenses may not be clear. First, Section 8.2, Question 1 asks respondents to report annual expenses for each facility that they report as being related to their ground ambulance operation in Section 8.1, Question 3. Section 8.2, Question 1 is a table with columns for “annual lease or rental costs,” “annual depreciation expenses,” and “annual mortgage, bond interest, and other costs of ownership.” Although the instructions note “do not report depreciation if your organization does not capitalize facilities for accounting purposes,” it is not immediately clear where organizations that do not capitalize facilities should report expenses if the facility is owned outright (for example, in cases where a facility is acquired during the data collection period).

Second, Section 9.1, Question 5 and Section 9.2, Question 5 are tables where respondents report costs associated with individual vehicles. Both tables currently ask, “What was the annual depreciation expense for this vehicle?” Although the instructions note “for owned vehicles, do not report depreciation accounts for vehicles on a cash basis,” the instructions do not indicate where expenses for vehicles purchased during the data collection period should be reported by organizations that do not capitalize vehicles for accounting purposes.

We considered several options to clarify the instructions in Sections 8 and 9 specifically. One option is to clarify in the instructions that organizations that do not depreciate medical or non-medical equipment should skip Section 10.1, Question 1 and Section 10.2, Question 1 and report expenses for equipment acquired during the data collection period in Section 10.1, Question 3, and Section 10.2, Question 3 instead.

We considered several options to improve the instructions in Section 10.1 specifically. One option is to clarify in the instructions that organizations that do not depreciate medical or non-medical equipment should skip Section 10.1, Question 3, and Section 10.2, Question 3 instead. Although this would involved the least change to the instrument, we would lose the ability to distinguish expenses for the kinds of equipment that most ground ambulance organizations depreciate for organizations reporting in this way. Another option is to change the instructions for Section 10.1, Question 1 and Section 10.2, Question 1 to refer to broad types of equipment that are typically considered capital medical and non-medical equipment, and then ask respondents to report relevant annual expenses for qualifying equipment in these questions, regardless of whether the expenses are annual depreciation expenses or purchase costs (for organizations not calculating depreciation). We propose to ask organizations that do not depreciate equipment to report expenses associated with purchasing equipment in Section 10.1, Question 1 and Section 10.2, Question 1. This option would preserve our and MedPAC’s ability to separately analyze these expenses. We invite comment on these alternatives to address instructions related to facility, vehicle, and equipment expenses.

h. Proposed Changes to Questions Related to National Provider Identifier’s (NPIs) Under Broader Parent Organizations

Some ground ambulance NPIs are part of broader parent organization companies that own and/or operate multiple ground ambulance NPIs. Section 2, Question 2 asks, “Did your organization use more than one NPI to bill Medicare for ground ambulance services during the data collection period?” Based on feedback from ground ambulance organizations that we have received since we finalized the instrument, we were notified that the use of “organization” in this question is potentially confusing because it is not clear whether the term applies to the organization sampled to report information to the Medicare Ground Ambulance Data Collection System (which, by definition, is an individual NPI) or to a broader “parent organization.” We propose clarifying the question to ask “Is this NPI part of a larger ‘parent organization’ that owns or operates multiple NPIs billing for ground ambulance services?” We are also proposing to clarify the wording of the follow-up instruction for organizations that answer “yes” to this question. The follow-up instruction currently reads, “You are being asked to complete this instrument and enter data only for the following NPI: [pre-populate number].” Because very large parent organizations may have several NPIs sampled and a single or small number of staff collecting and reporting data for multiple NPIs, we are proposing to revise the text to read, “You are being asked to complete this instrument and enter data separately for each sampled NPI. The following questions refer only to the following NPI [pre-populate number].”

The instrument asks these organizations to report an allocated share of parent organization expenses at the end of most sections of the instrument. For example, Question 3 in Section 7.2 on paid administration, facilities, and medical director staff costs asks, “Please report the allocated portion of administrative labor costs incurred at the level of the parent organization/central office of this NPI based on your organization’s approach for allocating costs to specific NPIs. (Enter dollar amount.)”

There are four sections in the instrument that lack similar questions: Section 7.1 (Paid EMT/Response Staff Compensation and Hours Worked), Section 7.3 (Volunteers), Section 9.1 (Ground Ambulance Vehicle Costs), and Section 10.1 (Medical Equipment/
Supplies). Without these questions, total reported costs may be biased downward for NPIs that are part of broader parent organizations. We propose to add questions like the one reproduced above to the end of these four sections for completeness. The text would be the same as the above except for replacing “EMT/response staff labor costs,” “costs associated with volunteer labor,” “ground ambulance vehicle costs,” and “medical equipment and supply costs” for “administrative labor costs” in the respective sections.

Relatedly, for completeness, we propose to clarify in the instructions for Section 12 (Total Cost), Question 1, that organizations part of broader parent organizations should include an allocated portion of parent organization (or “central office”) costs when reporting their total costs in this question. We invite comments on our proposal to address questions related to NPIs under broader parent organizations.

i. Other Clarifications to the Medicare Ground Ambulance Data Collection Instrument

We propose the following 11 additional clarifications and updates to the instrument:

i. Replacing all first-person language (for example, “we”) with third-person language (for example, “CMS”) throughout the instrument for editorial consistency.

ii. Section 2, Question 17: There is a typo where this question referred to itself rather than, as is implied by the ordering and framing of the question, the prior item. The question currently asks, “other than what was reported in item 17 . . .,” when it should read, “other than what was reported in item 16 . . .”.

iii. Section 3, Question 2: This question currently asks, “are you the primary emergency ambulance provider . . .,” using “provider” more colloquially than elsewhere in the instrument where the same word is sometimes used to differentiate between Medicare providers of service and Medicare suppliers. We propose to reword this question to read, “are you the primary emergency ambulance organization . . .?”

iv. Section 4, Questions 1 and 2: Clarification: The question currently defines response time as “the time from when the call comes in to when the ambulance or another EMS response vehicle arrives on the scene.” Relatedly, for Section 4, Question 2, we propose adding a second answer option for this question that reads, “From the time our organization receives a call from dispatch to the time the ambulance or other EMS vehicle is at the scene.” Respondents would still have the option to write-in their own response in Section 4, Question 2, if neither of the pre-programmed options apply to their organization.

v. Section 5, Question 3a: Clarification: This question asks respondents to report the percentage of ground ambulance responses that involve a non-transporting agency and the percentage of ground ambulance transports in which the non-transporting agency continues to provide medical care in the ambulance during a transport. Based on feedback from ground ambulance organizations that we have received since we finalized the instrument, we believe many organizations do not currently track this data and will not easily be able to begin tracking it. We propose clarifying this question to note that estimated percentages are acceptable, as they are in response to certain other questions in the instrument (where noted). We specifically propose to edit Section 5 question 3a to read, “What is your best estimate of the percentage of total ground ambulance responses that involved a non-transporting agency? (Enter percentage)”

vi. Section 7.1 Instruction Clarification: We propose clarifying “You will report on these staff in a different section” to “You will report on these staff in a later section” to make it clear that the opportunity to report on these staff follows the current instruction.

vii. Sections 7.1 and 7.2 Instruction Clarification: We propose to add “employer payroll taxes” as an additional example of a component contributing to total compensation, without altering any of the definitions or other instructions in these sections.

viii. Section 7.2, Question 3 Clarification: We propose adding a clarification warning for respondents not to consider labor that was reported elsewhere when responding to this question.

ix. Section 7.3, Question 4 Clarification: We propose adding a clarification that medical director volunteer hours do not contribute to this response and a reminder that they are reported separately below (Section 7.3, Question 5).

x. Section 10 Instructions: We propose to correct a typo in the instructions where the instrument describes “operation expenses” rather than “operating expenses” as intended.

xi. Section 13, Question 3 Clarification: Based on the instructions for this question, organizations may report revenue from specific payers that include patient cost-sharing amounts. To ensure patient cost-sharing is not reported twice, we recommend clarifying the item in the chart that currently reads, “Patient self-pay (amount patients pay for deductibles, coinsurance, etc.) to read, “Patient self-pay (cash payment and the amount patients paid for deductibles, coinsurance, and other cost-sharing only if not reported in a row above.)” We invite comments on these proposed clarifications and updates to the instrument.

4. Collection and Reporting of Information Under the Data Collection System

In the CY 2020 PFS final rule (84 FR 62893), we finalized our sampling proposals to implement a 25 percent stratified sample in each of the first four years of data collection and codified the representative sample approach at §414.626(c). CMS’ sampling approach is designed to result in representative samples of ground ambulance organizations in terms of key characteristics including provider versus supplier status, service area, population density, volume of transports, and ownership category. The selected ground ambulance organizations for year 1 and year 2 have already been listed on the CMS website at https://www.cms.gov/Center/Provider-Type/Ambulances-Services-Center.html.

In the CY 2020 PFS final rule (84 FR 62894), we finalized the data collection period as a continuous 12-month period of time, which is either the calendar year aligning with the data collection year, or the organization’s annual accounting period that begins during the data collection year when an organization has an annual accounting period (such as a fiscal year) that differs from the calendar year and the organization elects to collect and report data over this period rather than the calendar year. We also finalized our proposal to require organizations to report data during a 5-month data reporting period starting immediately following the end of the data collection period. The data collection and reporting requirements for selected ground ambulance organizations were codified at §414.626(b).
organizations will report information to CMS using a web-based version of a data collection instrument that is posted on the CMS website at https://www.cms.gov/Center/Provider-Type/Ambulances-Services-Center.html. We are currently developing the Medicare Ground Ambulance Data Collection System and stated in the CY 2020 PFS final rule (84 FR 62867) that the web-based survey would be available before the start of the first data reporting period to allow time for users to register, receive their secure login information, and receive training from CMS on how to use the system.

Due to the COVID–19 public health emergency (PHE), we issued two blanket waivers (May 5, 2020 and November 25, 2020) to delay the data collection and data reporting periods under the Medicare Ground Ambulance Data Collection System. The first waiver delayed the data collection period and data reporting period for selected year 1 ground ambulance organizations and the second waiver delayed the data collection periods and data reporting periods for selected year 1 and year 2 ground ambulance organizations.

This revised modification has been issued on page 32 in the following document: https://www.cms.gov/files/document/summary-covid-19-emergency-declaration-waivers.pdf. Specifically, we modified the data collection period and data reporting period, as defined at § 414.626(a), for ground ambulance organizations (as defined at § 414.605) that were selected by CMS under § 414.626(c) to collect data beginning between January 1, 2020 and December 31, 2020 (year 1) and for ground ambulance organizations that were selected to collect data beginning between January 1, 2021 and December 31, 2021 (year 2) for purposes of complying with the data reporting requirements described at § 414.626.

Under this modification, these ground ambulance organizations would select a new continuous 12-month data collection period (organizations may choose a collection period aligning with the calendar year or the organization’s fiscal year) that begins between January 1, 2022 and December 31, 2022, to collect data necessary to complete the Medicare Ground Ambulance Data Collection Instrument during their selected data collection period, and submit a completed Medicare Ground Ambulance Data Collection Instrument during the data reporting period that corresponds to their selected data collection period. We modified this data collection period to increase flexibilities for ground ambulance organizations that would otherwise be required to collect data in 2020–2021 so that they can focus on their operations and patient care during the COVID–19 public health emergency (PHE). We stated, when the blanket waiver was granted, in the COVID–19 Frequently Asked Questions (FAQs) on Medicare Fee-for-Service (FFS) Billing document (page 63 of this document: https://www.cms.gov/files/document/03092020-covid-19-FAQs-508.pdf) that CMS will not allow an option to continue with their current data collection period because the data collected in 2020 and 2021 during the PHE may not be reflective of typical costs and revenues associated with providing ground ambulance services.

As a result of the COVID–19 delay, ground ambulance organizations selected in year 1, 2, and 3 will have the same data collection periods beginning between January 1, 2022 and December 31, 2022 and will have the same data reporting periods beginning between January 1, 2023 and December 31, 2023. In the CY 2020 PFS final rule (84 FR 62893), we finalized our sampling proposals to implement a 25 percent stratified sample in each of the 4 years of data collection. Prior to the delay, we anticipated approximately equal shares of ground ambulance organizations would collect and report data in four consecutive periods. However, as a result of the delays, there will now be approximately 75 percent of the ground ambulance organizations that will have data collection periods that start in the same year and subsequently will have data reporting periods starting in the same year. Later, a final 25 percent sample of ground ambulance organizations in year 4 will collect and report data.

When finalizing our policies in regard to ground ambulance collection and reporting of data, we did not intend to have approximately 75 percent of ground ambulance organizations collect and report data at the same time. To provide MedPAC with the data needed for analysis, acknowledging that due to the COVID–19 delay there will be a delay in CMS providing that data, we believe that we should revise the data collection period and data reporting period for selected ground ambulance organizations in year 3.

Accordingly, we are proposing to revise the data collection period beginning between January 1, 2022 and December 31, 2022 and data reporting period beginning between January 1, 2023 and December 31, 2023 for selected ground ambulance organizations in year 3. Under this proposal, there will be a new data collection period beginning between January 1, 2023 and December 31, 2023 and a new reporting period beginning between January 1, 2024 and December 31, 2024 for selected ground ambulance organizations in year 3. With this proposal, we plan to do the sample in 2022 for selected ground ambulance organizations in year 3 rather than the current plan in 2021. The main advantage of delaying the year 3 sample is that the selected organizations would be more representative of the organizations actually collecting beginning in 2023 and reporting beginning in 2024. The longer the delay between sampling and the data collection and data reporting, the more changes in the industry (for example, NPIs ceasing ground ambulance or all operations). This timeline would align with the data collection period and data reporting period requirements for selected ground ambulance organizations in year 4. As a result, there would be approximately 50 percent of ground ambulance organizations selected in year 1 and 2 with data reporting periods beginning between January 1, 2023 and December 31, 2023 and approximately 50 percent of ground ambulance organizations selected in year 3 and 4 with data reporting periods beginning between January 1, 2024 and December 31, 2024.

Due to the delay caused by the COVID–19 PHE, we examined the possibility of extending the data reporting to encompass 4 years as planned instead of 2 years. We concluded that it would not be feasible to extend the data reporting period over 4 years. Extending the data reporting to encompass four years would further delay MedPAC receiving the data required to analyze for its report to Congress, which is required to be submitted by March 15, 2023. The sampling for year 1 and year 2 selected ground ambulance organizations has already been completed and the lists for the selected ground ambulance organizations in year 1 and year 2 are posted on the CMS website.

With this proposal, more data would be collected in 2023 as there would hopefully be more distance from the peak of the COVID–19 pandemic. Thus, it is our hope that 2023 will be even more reflective of a typical year of costs for ground ambulance organizations than 2022. As the course of the pandemic continues to evolve, we believe that our proposal provides a potential for more even distribution of data over two years for comparison by MedPAC. We invite comments on our proposal to revise the data collection period and data reporting period for
ground ambulance organizations selected in year 3.

5. Proposed Change to the Notification Process for Selected Ground Ambulance Organizations Required To Report

In the CY 2020 PFS final rule, we codified our notification process at § 414.626(c)(3) and (b)(1). We stated at § 414.626(c)(3) that CMS will notify an eligible ground ambulance organization that it has been selected to report data for a year at least 30 days prior to the beginning of the calendar year in which the ground ambulance organization must begin to collect data by posting a list of selected organizations on the CMS web page and providing written notification to each selected ground ambulance organization via email or U.S. mail.

The Medicare Administrative Contractor (MAC) is responsible for providing written notifications to the selected ground ambulance organizations in their service area. We codified their role at § 414.626(b)(1) which states that within 30 days of the date we notify a ground ambulance organization that it has been selected to report data under this section, the ground ambulance must select a data collection period that corresponds with its annual accounting period and provide the start date of that data collection period to the ground ambulance organization’s Medicare Administrative Contractor.

We propose to make a technical revision to § 414.626(b)(1) to state that the selected ground ambulance organization provide the start date of the data collection period to CMS or its contractor instead of the Medicare Administrator Contractor. This change will provide CMS with flexibility to have the MACs or other contracted entities provide written notifications and collect information from the selected ground ambulance organizations. If we find the response rate is low, having the flexibility to contract with other entities that could employ additional outreach resources may be useful. This revision would not preclude CMS from including the MACs in the notification process. We also propose to correct a typographical error at § 414.626(b)(1), which currently states “a ground ambulance must select a data collection period” to read “a ground ambulance organization must select a data collection period.” We invite comments on our technical revisions to the citation at § 414.626(b)(1).

6. Payment Reduction for Failure To Report

Section 1834(l)(17)(D)(i) of the Act requires that beginning January 1, 2022, subject to clause (ii), the Secretary reduce the payments made to a ground ambulance organizations under section 1834(l)(17) of the Act for the applicable period by 10 percent if the ground ambulance organization is required to submit data under the data collection system with respect to a data collection period under the data collection period and does not sufficiently submit such data.

We stated in the CY 2020 PFS final rule (84 FR 62895) that we would make a determination that the ground ambulance organization is subject to the 10 percent payment reduction no later than the date that is 3 months following the date that the ground ambulance organization’s data reporting period ends. In this final rule, we provided examples of when the determination will be made based on calendar year and fiscal year data collection period beginning in 2020. Due to the delay caused by the COVID–19 PHE, we did not receive data collected in 2020. We will begin to follow this timeline to make a determination that the ground ambulance organization is subject to the 10 percent payment reduction when data collected in 2022 is required to be reported in 2023 for selected ground ambulance organizations in year 1 and year 2. For example, if a selected ground ambulance organization’s data collection period is based on a calendar year, that is, January 1, 2022 through December 31, 2022, we will allow a ground ambulance organization 5 months to report the data collected during the data collection period. For this example, the data reporting period for this organization is October 1, 2023 –February 28, 2024, we would make a determination that the ground ambulance organization is subject to the 10 percent payment reduction no later than June 1, 2024. With this timeframe, we would apply the 10 percent reduction in payments, if applicable (no hardship exemption or informal review is granted), for ambulance services provided between January 1, 2025 and December 31, 2025.

7. Public Availability of Data

We stated in the CY 2020 PFS final rule (84 FR 62897), the data will be made available to the public through posting on our website at least every 2 years and we will post the summary results by the last quarter of 2022. We codified the public availability at § 414.626(f), which states: (f) Public availability of data. Beginning in 2022, and at least once every 2 years thereafter, CMS will post on its website data that it collects under this section, including but not limited to summary statistics and ground ambulance organization characteristics.

Due to the COVID–19 delay, we are proposing to revise § 414.626(f) to state that we will make the data collected under § 414.626 publicly available beginning in 2024. We invite comments on our proposal to revise the timeline when the public availability of data will begin.

L. Medicare Diabetes Prevention Program (MDPP)

The Medicare Diabetes Prevention Program (MDPP) expanded model is a structured intervention that aims to prevent or delay onset of type 2 diabetes among eligible Medicare beneficiaries diagnosed with pre-diabetes. The MDPP expanded model is an expansion of the Diabetes Prevention Program (DPP) model test, which was initially tested through a Round One Health Care Innovation Award. MDPP services are furnished in community and health care settings by organizations that enroll in Medicare as MDPP suppliers, a new supplier type, even if they have an existing Medicare enrollment as another supplier type. MDPP services furnished under the MDPP expanded model are covered as an additional preventive service with no cost-sharing under Medicare. Eligible organizations seeking to furnish MDPP services began enrolling in Medicare as MDPP suppliers on January 1, 2018, and began furnishing MDPP services on April 1, 2018.
the MDPP beneficiary has started his or her first core session on or before December 31, 2021. In addition, we propose to amend § 414.84(b) and (c) to update the amount of the performance payments for the core sessions and core maintenance sessions and ongoing maintenance sessions (where applicable) to be consistent with the proposal herein. We propose that this change apply to all MDPP beneficiaries starting the MDPP set of services on or after January 1, 2022. Additionally, we propose to amend § 424.205(b) to add a provision to waive the provider enrollment Medicare application fee for all organizations enrolling in Medicare as MDPP suppliers that submit an application on or after January 1, 2022. Finally, we propose to make a conforming amendment to § 424.502 to remove a reference to the CMS—20134 from the definition of “institutional provider.” (In accordance with § 424.514, institutional providers generally must pay the enrollment application fee.)

We do not anticipate that the proposed changes would impact our ability to complete an evaluation of the MDPP expanded model, but the evaluation would consider these proposed changes if enacted. The evaluation would continue to use beneficiary-level Diabetes Prevention Recognition Program (DPRP) encounter data and program data furnished by the CDC in combination with Medicare claims data to analyze the long-term utilization of services by beneficiaries who have received the MDPP set of services. We would use these data as planned to assess whether the MDPP expanded model is expected to improve the quality of care without increasing spending, reduce spending without reducing the quality of care, or improve the quality of care and reduce spending. We anticipate that these programmatic adjustments are likely to result in more MDPP suppliers, increased beneficiary access to MDPP services and an ongoing reduction of the incidence of diabetes in eligible Medicare beneficiaries, in both urban and rural communities.

1. Proposed Changes to § 410.79(b), (c), and (e)

We are proposing to amend certain MDPP expanded model policies previously finalized in the CY 2017 PFS final rule (81 FR 80459 through 80475 and 80552 through 80558), the CY 2018 PFS final rule (82 FR 34157 through 34158), and the CY 2021 PFS final rule (85 FR 50074). Previous rules established a set of MDPP services, beneficiary eligibility criteria, reimbursement structure, and supplier enrollment requirements and compliance standards.

MDPP has experienced challenges recruiting suppliers to participate in the expanded model, which has limited beneficiary access to the preventive services offered under the expanded model. Existing and prospective suppliers have reported that the length of the set of MDPP services and the payment timing and amounts have made implementation and operation of MDPP burdensome and has hindered participation. Currently, MDPP suppliers are required to offer up to 2 years of MDPP services to eligible MDPP beneficiaries. The MDPP set of services, as defined in § 410.79(b), consists of at least 16 sessions offered during the core sessions phase (Months 1–6), monthly maintenance sessions offered during the core maintenance sessions phase (Months 7–12) (collectively the “core sessions phase”), and additional monthly sessions offered during the ongoing maintenance sessions phase (Months 13–24) for eligible beneficiaries. We propose to remove the ongoing maintenance sessions phase as optional for eligible MDPP beneficiaries to meet the minimum weight-loss requirement (5 percent weight loss from baseline), as defined in § 410.79(b), and maintain the minimum weight-loss requirement on a quarterly basis to continue to receive MDPP services in subsequent quarters. The ongoing maintenance sessions delivered in year 2 are a unique feature of MDPP. Both the CMS-funded Health Care Innovation Award (HCIA) to the Young Men’s Christian Association (YMCA) of the USA (Y–USA), referred to as the DPP model test hereafter, and the CDC’s National Diabetes Prevention Program (National DPP) was/are 12 months in length.

CMS included the ongoing maintenance sessions phase in the MDPP set of services to support participants in solidifying the behavioral changes that resulted in weight loss during the first 12 months. In the CY 2017 PFS proposed rule, we proposed adding the ongoing maintenance sessions phase to follow the completion of the 12-month core sessions phase if the beneficiary achieved and maintained the required minimum weight loss of 5 percent from the baseline weight. The proposed rule did not place a limit on the number of ongoing maintenance session phases an eligible beneficiary could attend. In response to stakeholder comments, we modified the proposed policy to limit access to up to 2 years of ongoing maintenance sessions after the 12-month core sessions phase. In the CY 2018 PFS, we again modified the policy to limit access to ongoing maintenance sessions to 1 year after the 12-month core sessions phase as long as MDPP beneficiaries maintained the 5 percent weight loss.

Despite limiting the ongoing maintenance sessions phase to 1 year, we have heard that the MDPP suppliers find the implementation, operation, and costs of the ongoing maintenance sessions phase burdensome. We anticipate that these proposed changes would improve the uptake of organizations enrolling in Medicare to become MDPP suppliers, thus enabling more beneficiaries to access the MDPP set of services. Collectively, this would improve CMS’s ability to evaluate the MDPP expanded model as more suppliers and beneficiaries participate in the expanded model test. Currently, more than 1,000 organizations nationally are eligible to become MDPP suppliers based on their preliminary or full CDC DPRP status. However, only 27 percent of eligible organizations are participating in MDPP. Based on an analysis of National Health and Nutrition Examination Survey (NHANES) data, an estimated 16.4 million people are eligible for MDPP; to date, over 3,600 beneficiaries are participating in the MDPP set of services. We anticipate that the removal of the second year of the MDPP set of services on a prospective basis would make MDPP attractive to more MDPP eligible organizations and beneficiaries.

The requirement to offer a second year of the MDPP set of services has also caused confusion among MDPP suppliers because it is inconsistent with the CDC National DPP requirements and curriculum. Because there is no defined curriculum for the ongoing maintenance sessions phase, MDPP suppliers repeat parts of the curriculum they previously used during the core sessions phase per CDC guidance and their updated 2021 DPRP Standards. We have heard anecdotally, through written inquiries and questions asked by MDPP suppliers during MDPP educational events, that MDPP suppliers struggle with discerning the appropriate timing of determining whether a beneficiary has met and/or maintained the 5 percent minimum weight-loss requirement necessary for continued eligibility for and during the ongoing maintenance

sessions phase. To be eligible to continue to the ongoing maintenance phase of MDPP, beneficiaries must lose and/or maintain a 5 percent weight loss from baseline. MDPP suppliers are responsible for determining if a MDPP beneficiary has met and/or maintained the 5 percent weight loss from baseline during the applicable session and phase. A supplier must submit a claim to the Medicare Administrative Contractor (MAC) for the 5 percent weight loss achievement for each beneficiary, otherwise, all subsequent ongoing maintenance session claims may be rejected by the MAC. Suppliers have 12 months from the date of service to submit claims, if they delay the claim submission for the 5 percent weight loss performance goal, this may impact a supplier’s ability to get paid for the ongoing maintenance sessions. For example, if a beneficiary achieves the 5 percent weight loss goal during the first 6 months of MDPP, or during the core services period, and they do not submit the claim for the 5 percent weight loss goal until after the ongoing maintenance interval has started, the supplier risks having their claim for the ongoing maintenance interval rejected. Furthermore, in this scenario, the supplier will need to submit a claim for the second core maintenance session interval with a 5 percent weight loss for the beneficiary to continue with ongoing maintenance sessions. MDPP monitoring data suggest that 82 percent of MDPP beneficiaries for whom we have claims for the 5 percent weight loss goal achievement reach that goal in the first 6 months of the expanded model. However, our monitoring data show claims for MDPP ongoing maintenance sessions for only 10 percent of MDPP beneficiaries and that beneficiary attendance sharply drops after the first quarter of the initial core session. Collectively, these data suggest that suppliers may not be incentivized to retain MDPP beneficiaries after they attend the 9th core session in the set of MDPP services, which MDPP suppliers are reimbursed after they successfully submit claims for beneficiary attendance, after the 1st, 4th, and 9th core sessions during the first 6 months of the MDPP set of services, and then if beneficiaries attend 2 monthly sessions per quarter thereafter. MDPP eligible organizations have cited beneficiary acquisition and retention as a leading barrier to their MDPP supplier enrollment. Stakeholders and suppliers have commented that the payment levels for a second year are inadequate to cover supplier costs given the low volume of beneficiaries who participate in the ongoing maintenance phase and drive up the per-beneficiary costs for the supplier. Stakeholders comment that sessions have the same fixed costs, yet there are a diminishing number of MDPP beneficiaries eligible to participate. As previously noted, our fee-for-service claims-based monitoring data show that only approximately 10 percent of MDPP beneficiaries continue with the ongoing maintenance sessions phase and the majority of MDPP beneficiaries achieve the 5 percent weight loss milestone within the first 6 months of the MDPP set of services. Given our data, stakeholder comments, the lack of the ongoing maintenance year alignment with the CDC’s National DPP and the DPP model test, the ongoing maintenance phase is not sufficiently beneficial to continue requiring and may be causing harm to the expanded model’s overall goals.

As such, we are proposing to amend our regulations to preclude coverage of ongoing maintenance sessions unless the MDPP beneficiary has started his or her first core session on or before December 31, 2021. Specifically, we propose to amend § 410.79(c)(1)(ii) to provide that an MDPP beneficiary is eligible for the first ongoing maintenance session interval only if the beneficiary started his or her first core session on or before December 31, 2021. If adopted, this change will effectively make the MDPP timeframe consistent with the National DPP for MDPP service periods that begin on or after January 1, 2022. In addition, if finalized, this policy would reduce the administrative burden and costs associated with the ongoing maintenance sessions phase to MDPP suppliers with minimal impact to beneficiaries given their historically low participation rate in the second year of MDPP. This proposed change is consistent with the authority in section 1115A(c) of the Act, and we anticipate this change would improve our ability to evaluate the expanded model test due to an anticipated increase in supplier enrollment, which will increase beneficiary access to the expanded model.

In conjunction with the proposed change to remove the ongoing maintenance sessions phase from the MDPP services period, we are proposing to redistribute a portion of the ongoing maintenance sessions phase performance payments to certain core and core maintenance session performance payments to address stakeholder concerns that the current MDPP payment structure does not cover reasonable costs of MDPP suppliers to deliver the MDPP set of services. For example, the proposed attendance-based performance payments are based on a standardized per-session rate, paid after the 1st, 4th, and 9th sessions attended during the core sessions intervals, and after attending the two (2) sessions during each of the core maintenance intervals. We propose to increase performance payments for MDPP beneficiary achievement of the 5 percent weight loss goal, as well as continued attendance during each core maintenance interval. Although the proposed maximum payment of $661.00 over a 1-year service period is less than the current maximum payment of $704.00 under the original 2-year payment structure, we believe the proposed payment structure would have a net positive effect on the MDPP suppliers. Additionally, the maximum proposed payment is more than the 2021 National Average Facility Medicare Payment of $528.00 for the face-to-face intensive behavioral counseling for obesity (IBT-Obesity) for individuals.118 The IBT-Obesity, a Medicare preventive service benefit whose goal is to promote sustained weight loss among Medicare beneficiaries with a BMI of 30 kg/m2 and higher, pays a similar per session rate as what we are proposing for MDPP, including a maximum of 22 IBT-Obesity sessions in a primary care setting over a 12-month period. Our Office of the Actuary estimated that that the average payment for an MDPP supplier would increase by $100 with the elimination of the second year of MDPP. While the proposed maximum payment available to an MDPP supplier would decrease when compared to the maximum payment under the original 2-year payment structure, the second year of the MDPP set of services has historically been far less utilized than first year set of services. Therefore, it is anticipated that eliminating the second year will improve our ability to evaluate the expanded model test due to an anticipated increase in supplier targeting.
Our data from the DPP model test showed beneficiaries who finished at least nine (9) sessions of the model were considered “completers” and had better weight loss and lower Medicare spending than non-completers (those who attended fewer than 9 sessions). The DPP model test showed that beneficiaries who attend nine or more sessions will, on average, experience a 6.24 percentage point increase in weight loss compared to beneficiaries attending fewer than nine sessions. Currently, our payment structure does not pay for per session attendance, and stakeholders have commented that the expanded model, in its current state, is creating inequities in access to MDPP among eligible beneficiaries because suppliers cannot invest in the costs to retain beneficiaries who may have access barriers related to transportation or distance of the MDPP location from their home. We anticipate the proposed changes to the payment structure, which would pay a total of $61 more per beneficiary who attends at least 9 session than what is currently paid, would encourage existing suppliers to retain MDPP beneficiaries given the one-year commitment versus two for the MDPP set of services. Continuous beneficiary attendance is critical to reaching key outcomes such as 5 percent weight loss and reduced Medicare spending. Additionally, we expect more eligible organizations will enroll as MDPP suppliers due to our eliminating the ongoing maintenance period, increasing the number of locations beneficiaries may access the MDPP set of services. We expect the proposed changes to the MDPP payment structure would not affect MDPP’s qualification for expansion. We would use the CDC DPRP and MDPP claims data as planned to assess whether the MDPP expanded model is expected to improve the quality of care without increasing spending, reduce spending without reducing the quality of care, or improve the quality of care and reduce spending. We anticipate that these programmatic adjustments are likely to result in more MDPP suppliers, increased beneficiary access to MDPP services and an ongoing reduction of the incidence of diabetes in eligible Medicare beneficiaries, in both urban and rural communities.

In our regulatory impact analysis, the CMS Office of the Actuary estimates that these proposed changes would reduce Medicare spending over 10 years, with potential savings starting in 2026. Increasing the first-year payment amounts to suppliers and waiving the Medicare enrollment fee (as discussed below) should increase access to MDPP, resulting in more utilization of the MDPP set of services.

We are proposing a change to our emergency policy at § 410.79(e)(3)(v)(C) to account for the proposed elimination of ongoing maintenance sessions for MDPP beneficiaries who start the set of MDPP services on or after January 1, 2022. Under this proposal, only beneficiaries who start the MDPP set of services between January 1, 2021, and December 31, 2021 and who are in the second year of the set of MDPP services as of the start of an applicable 1135 waiver event may either resume or restart the ongoing maintenance session interval in which they were participating at the start of the applicable 1135 waiver event if they elect not to continue with MDPP services virtually during the applicable 1135 waiver event.

As noted above, we propose to remove the ongoing maintenance sessions phase for all MDPP beneficiaries who start MDPP set of services on or after January 1, 2022. MDPP beneficiaries who start the MDPP set of services on or after January 1, 2022. We are not proposing to change the payment rates for ongoing maintenance sessions in cases where a beneficiary remains eligible for them (that is, because they started receiving the MDPP set of services on or before December 31, 2021 and achieve the minimum required weight loss); rather, we proposed to maintain those payment rates until such time as ongoing maintenance sessions are phased out.

</table>
| Beneficiary starts MDPP set of services on or before December 31, 2021 | • Core Services Period, which is the first 12 months of the MDPP services period, and consists of: (A) At least 16 core sessions offered at least one week apart during months 1 through 6 of the MDPP services period; and (B) Two 3-month core maintenance session intervals offered during months 7 through 12 of the MDPP services period.  
• Ongoing Maintenance Services Period, consists of up to four 3-month ongoing maintenance session intervals offered during months 13 through 24 of the MDPP services period |
| Beneficiary starts MDPP set of services on or after January 1, 2022 | • Core Services Period, which is the first 12 months of the MDPP services period, and consists of: (A) At least 16 core sessions offered at least one week apart during months 1 through 6 of the MDPP services period; and (B) Two 3-month core maintenance session intervals offered during months 7 through 12 of the MDPP services period. |

Additionally, we propose to remove the second duplicate paragraph (c)(3)(ii) given that the electronic CFR contains two paragraphs (c)(3)(ii), both containing the exact same language.

We are proposing to amend our regulation at § 410.79(b), (c), and (e). We seek comment on these proposals and ways to simplify the proposed policies.

2. Proposed Changes to § 414.84(b) and (c)

We propose to amend § 414.84(b) and (c) to update the amount of the performance payments for the core sessions, core maintenance sessions and ongoing maintenance sessions (where applicable) to be consistent with the proposal herein. We propose that this change apply to all MDPP beneficiaries starting the MDPP set of services on or after January 1, 2022.

For those MDPP beneficiaries who started the first core session on or before December 31, 2021, we propose that MDPP suppliers continue to submit claims for the ongoing maintenance sessions attended using the existing ongoing maintenance HCPCS C-codes, G9891, G9892, G9893, G9894, and G9895 when submitting claims for those MDPP beneficiaries who attended ongoing maintenance sessions.

We are proposing to amend our regulation at § 414.84(b) and (c). We seek comment on these proposals.

3. Proposed Changes to § 424.205(b)

Medicare requires all organizations that deliver MDPP services to enroll separately in Medicare as a MDPP supplier and pay an enrollment application fee. This places a unique burden on MDPP suppliers. Approximately 39 percent of these entities are non-traditional suppliers that serve their local communities to increase diversity, equity, and inclusion of their services, including but not limited to YMCAs, county health departments, community health centers, and non-profit organizations that focus on health education that otherwise would neither enroll nor be able to enroll as a Medicare supplier. Indeed, they are often very different from most other Medicare providers and suppliers in terms of business model and financial wherewithal, and they frequently furnish non-health care services to the community. In this vein, they cannot be considered in the same light as, for example, hospitals, skilled nursing facilities, ambulance suppliers, or other organizations specifically and exclusively designed for the provision of health care services.

The provider/supplier enrollment fee for CY 2021 is $509. Although MDPP suppliers may submit a written request to CMS for a hardship exception to the application fee in accordance with § 424.514, many would not qualify. We have heard from stakeholders that the enrollment application fee factors into an organization’s decision to participate in MDPP. Organizations must submit the provider enrollment fee during the initial start-up phase of their expanded model implementation. This is when costs are likely the highest for organizations and the timing of the first CMS reimbursement is farthest away.

MDPP suppliers would need to provide a first core session to at least 24 beneficiaries to simply recoup the Medicare provider enrollment fee. For many potential MDPP suppliers, the provider enrollment application fee, when combined with the additional MDPP requirements, such as the claims processing requirements, result in an organization declining to invest in enrolling as an MDPP supplier.

On April 9, 2020, CMS, through the COVID–19 Emergency Declaration Blanket Waivers for Health Care Providers, waived all provider enrollment application fees. We saw an immediate increase in MDPP supplier enrollment in Q2 2020, the quarter the blanket waivers were announced, but MDPP supplier enrollment slowed thereafter, likely due to the impact of the pandemic and many CDC National DPP organizations pausing their delivery of DPP. We believe that granting a waiver of the fee for MDPP suppliers to extend beyond the COVID–19 Emergency Declaration Blanket Waiver may increase MDPP supplier enrollment, which will ultimately improve beneficiary access to the expanded model and our ability to evaluate the outcome of the MDPP because increasing the number of MDPP suppliers may provide for a more robust evaluation of the expanded model. Given our prior discussion of the unique character of MDPP suppliers in comparison to more traditional provider and supplier types, we believe this policy change is warranted.
In an effort to minimize the impact of this potential barrier and allow for a more robust expanded model evaluation, we are proposing to utilize CMS’ waiver authority under section 1115A(d)(1) of the Act to waive the provider enrollment Medicare application fee (described in sections 1866(i)(2)(C)(i) and (ii) of the Act) for all organizations that submit an application to enroll in Medicare as an MDPP supplier on or after January 1, 2022. We are proposing to amend our regulation at §424.205(b) to reflect this waiver.

We seek comment on these proposals.

4. Proposed Changes to §424.502

We propose to make a conforming amendment to §424.502 to remove the reference to the CMS–20134 from the definition of “institutional provider.”

The CY 2018 PFS final rule, which established the application fee for MDPP suppliers, amended the definition of “institutional provider” in section §424.502 to state that MDPP suppliers that complete the CMS–20134 enrollment application are “institutional provider[s]”.

Thus, the application fee described in section §424.514 applies to organizations enrolling in Medicare as MDPP suppliers. We are proposing to reverse this policy by amending §424.502 to remove the reference to the CMS–20134 thereby removing MDPP suppliers from the list of institutional providers required to pay the Medicare enrollment fee under §424.514. As proposed, §424.514 would no longer be applicable to organizations enrolling in Medicare as an MDPP supplier.

We seek comment on this proposal.

M. Clinical Laboratory Fee Schedule: Laboratory Specimen Collection and Travel Allowance for Clinical Diagnostic Laboratory Tests and Use of Electronic Travel Logs

1. Background on the Clinical Laboratory Fee Schedule

Prior to January 1, 2018, Medicare paid for clinical diagnostic laboratory tests (CDLTs) on the Clinical Laboratory Fee Schedule (CLFS), with certain exceptions, under sections 1833(a), (b), and (h) of the Act. Under the previous payment system, CDLTs were paid based on the lesser of: (1) The amount billed; (2) the local fee schedule amount established by the Medicare Administrative Contractor (MAC); or (3) a national limitation amount (NLA), which is a percentage of the median of all the local fee schedule amounts (or 100 percent of the median for new tests furnished on or after January 1, 2001). In practice, most tests were paid at the

In addition, section 1833(b)(3)(B) of the Act requires the Secretary to provide for and establish a fee to cover the transportation and personnel expenses for trained personnel to travel to the location of an individual to collect the sample, except that such a fee may be provided only with respect to an individual who is homebound or an inpatient in an inpatient facility (other than a hospital). In accordance with this provision, Medicare established a travel allowance for a laboratory technician to draw a specimen from homebound patients and non-hospital inpatients. Under current guidance, the travel allowance is intended to cover the estimated travel costs of collecting a specimen from a Medicare beneficiary and to reflect the technician’s salary and travel costs. It is paid only when the nominal specimen collection is also payable and is not available if the technician is merely performing a messenger service to pick a specimen drawn by a physician or nursing home personnel. The methodology for determining the travel allowance varies depending on the round trip mileage to patients’ homes. For instance, a per mile travel allowance methodology applies when the round trip to patients’ homes is greater than 20 miles and a flat rate travel allowance methodology applies when the round trip to patients’ homes is less than 20 miles. Medicare Part B MACs calculate the travel allowance for each claim. Stakeholders have reported that in some cases, the MACs require them to maintain paper logs of miles traveled to receive the travel allowance.

Our general policies for payment of the nominal specimen collection fee and the fee to cover transportation and expenses for trained personnel to collect specimens from homebound patients and non-hospital inpatients are set forth in Pub. 100–04, Medicare Claims Processing Manual, chapter 16, section 60. We also implemented the increased nominal specimen collection fee under section 1834A(b)(5) of the Act in our regulations at §414.507(f). The manual instructions regarding payment of these fees are available on the CMS website at https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/claimsprocessingmanual.pdf. Neither the annual cash deductible nor the 20 percent coinsurance for Medicare apply to the specimen collection fees or travel allowance for laboratory tests.

In the interim final rule with comment period titled, “Medicare and Medicaid Programs; Policy and Regulatory Revisions in Response to the COVID–19 Public Health Emergency” (March 2020 COVID–19 IFC), which displayed and became effective on
March 31, 2020, and appeared in the April 6, 2020 Federal Register (85 FR 19230), we established that Medicare will pay a nominal specimen collection fee and associated travel allowance to independent laboratories for the collection of specimens for COVID–19 clinical diagnostic laboratory testing for homebound and non-hospital inpatients (85 FR 19256 through 19258). This policy provides independent laboratories with additional resources to provide COVID–19 testing and helps with efforts to limit patients’ exposure to the general population and alleviate patients’ unease with leaving the home specifically for the duration of the public health emergency (PHE) for the COVID–19 pandemic. To identify specimen collection for COVID–19 testing specifically, we established two new level II HCPCS codes: Code G2023 (specimen collection for severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (Coronavirus disease [COVID-19]), any specimen source); and code G2024 (specimen collection for severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (Coronavirus disease [COVID-19]), from an individual in a SNF or by a laboratory on behalf of a HHA, any specimen source), for independent laboratories to use when billing Medicare for the nominal specimen collection fee for COVID–19 testing for the duration of the PHE for COVID–19.

We stated in the March 2020 COVID–19 IFC that, in the context of collecting a specimen for COVID–19 testing, we believe that in the context of and for the duration of the PHE for the COVID–19 pandemic, collecting specimens using nasopharyngeal and oropharyngeal swabs or collection of sputum will require a trained laboratory professional, as well as additional precautions that must be taken to minimize exposure risks in handling specimens that are suspected or confirmed for COVID–19. Thus, we believe that collecting a specimen for COVID–19 testing may incur higher costs than similar specimen collection services, which required laboratory professional, but not additional precautions, to minimize exposure risk.

We indicated in the March 2020 COVID–19 IFC that this specimen collection fee policy was established for the duration of the PHE for COVID–19 (85 FR 19256) and will end once the PHE for the COVID–19 pandemic has ended.

In the CY 2021 PFS proposed rule, we requested comments on whether we should delete HCPCS codes G2023 and G2024 once the PHE for COVID–19 ends (85 FR 50211). Specifically, we sought public input on why these codes, and their corresponding payment amounts, which are higher than the nominal specimen collection fees for other conditions, would be necessary or useful outside of the context of the PHE for COVID–19. We stated that we were particularly interested in why separate, increased payment for specimen collection, specifically for COVID–19 tests, in contrast to other tests, may be needed following the end of the PHE. We noted that comments received may inform a future proposal.

We received public comments on the laboratory specimen collection fees for COVID–19 CDLTs. Commenters expressed support for permanently extending payment for specimen collection for COVID–19 CDLTs after the PHE ends, as commenters expect the COVID–19 virus to be present into CY 2021, thus making it appropriate for Medicare to pay laboratories for specimen collection using HCPCS codes G2023 and G2024. Commenters recommended that we expand and permanently authorize the specimen collection fees under HCPCS codes G2023 and G2024 to apply to all CDLTs to compensate for the supplies, equipment, and sterilization protocols required for safe and uncontaminated specimen collection and handling in the presence of COVID–19. Commenters noted that COVID–19 will continue to spread and may become an ongoing and/or seasonal infectious disease event, and because of this possibility, they expect that the heightened safety precautions, the need for personal protective equipment (PPE), and the requirement for special training for specimen collection will persist beyond the immediate PHE. In the CY 2021 PFS final rule (85 FR 84695), we noted that we planned to take this feedback into consideration for possible future rulemaking or guidance regarding the nominal specimen collection fees and associated travel allowance to independent laboratories for the collection of specimens for COVID–19 clinical diagnostic laboratory testing.

After considering these comments, we continue to believe that the laboratory specimen collection fees for COVID–19 CDLTs established in the context of and for the duration of the PHE for the COVID–19 pandemic should conclude at the termination of the PHE, as originally announced in the March 2020 COVID–19 IFC (85 FR 19258). We believe that these increased payments for specimen collection specifically for COVID–19 tests would no longer be warranted beyond the end of the PHE. As described above, the increased fees were intended to address additional resources needed specifically during the PHE for the COVID–19 pandemic, particularly for the collection of specimens using nasopharyngeal and oropharyngeal swabs or collection of sputum, which required a trained laboratory professional and additional precautions to minimize exposure risks in handling specimens that are suspected or confirmed for COVID–19. Given the advances in the types of COVID–19 CDLTs available to the public and the reduced need for specimen collection by trained laboratory professionals, we believe that the increased laboratory professional resources needed for COVID–19 specimen collection will no longer be necessary after the PHE for the COVID–19 pandemic ends. Additionally, we expect that the termination of the PHE will occur when there is a reduced risk of COVID–19, which will mean the increased supplies, PPE, and heightened sterilization and safety

only sees clinical office staff for services like acquiring a routine specimen sample. CPT® code 99211 describes an: Office visit for E/M of an established patient that may be performed by clinical staff under supervision (may not require a physician’s presence). Usually the presenting problem(s) are minimal and typically, 5 minutes are spent supervising or performing the service.

We described how under the PFS, a trained, non-institutional staff.
protocols for laboratory specimen collection and handling will be at a more manageable level. Likewise, we expect the potential ongoing spread of COVID–19 likely will diminish after the PHE ends, which will mean that advanced safety precautions, extensive PPE, and specialized training for laboratory specimen collection likely will no longer be required to the same extent as during the PHE. Furthermore, we anticipate that widespread vaccination of both medical professionals as well as the general population will likely reduce the need for intensive PPE.

3. Comment Solicitation on Specimen Collection Fee and Travel Allowance for Clinical Diagnostic Laboratory Tests

Although we expect the increased specimen collection fees for COVID–19 CDLTs will end at the termination of the PHE for the COVID–19 pandemic, we are taking this opportunity to seek broad comment on our policies for specimen collection and the travel allowance as we consider updating these policies in the future through notice and comment rulemaking. Therefore, in this proposed rule, we are requesting comments regarding the nominal specimen collection fees for trained personnel to collect specimens from homebound patients and inpatients (not in a hospital). We are also seeking comments related to the calculation of costs for transportation and personnel expenses for trained personnel to collect specimens from such patients.

We are seeking additional public input regarding considerations for the nominal fees for laboratory specimen collection for COVID–19 testing beyond the PHE. We are particularly interested in what additional resources might be needed for specimen collection for COVID–19 CDLTs and other tests after the PHE ends. For example, laboratories may see a benefit to using more PPE for laboratory staff than they did before the onset of the PHE as way to improve safety for personnel and patients. We expect there will be ongoing interest in minimizing outbreaks of diseases such as influenza in various settings, including SNFs, where beneficiaries regarding how their vaccination may have changed the approaches to specimen collection for laboratory testing from homebound patients and inpatients (not in a hospital) in ways that will persist beyond the termination of the PHE for the COVID–19 pandemic, and we want to understand these changes to inform potential modifications to our laboratory specimen collection policies in the future.

We also seek comments on the methodology for calculating the travel allowance, including calculation of mileage specific to per mile or flat rate and proration when there are multiple patients or specimens.

Comments received may inform a future proposal.

4. Medicare Clinical Laboratory Fee Schedule: Electronic Travel Logs

In addition to insights we have gained, and are seeking to gain, from the COVID–19 CDLT laboratory specimen collection fee policies we implemented for the duration of the COVID–19 PHE, we have also had the opportunity to gain insight about other CLFS policies established for the purposes of the PHE for COVID–19.

As described in the March 2020 COVID–19 IFC (85 FR 19256), and noted above, section 1833(h)(3)(B) of the Act requires the Secretary to provide for and establish a fee to cover the transportation and personnel expenses for trained personnel to travel to the location of an individual to collect the sample, except that such a fee may be provided only with respect to an individual who is homebound or an inpatient in an inpatient facility (other than a hospital). In accordance with this provision, Medicare established a travel allowance for a laboratory technician to draw a specimen from homebound patients and non-hospital inpatients. The travel allowance is intended to cover the estimated travel costs of collecting a specimen from a Medicare beneficiary and reflect the technician’s salary and travel costs. It is paid only when the nominal specimen collection is also payable and is not available if the technician is merely performing a messenger service to obtain a specimen drawn by a physician or nursing home personnel.

The methodology for determining the travel allowance varies depending on the round trip mileage to patients’ homes. For instance, a per mile travel allowance methodology applies when the round trip to a patients’ home is greater than 20 miles and a flat rate travel allowance methodology applies when the round trip is less than 20 miles.

We stated in the March 2020 COVID–19 IFC (85 FR 19258) that Medicare payment for transportation and expenses for trained personnel to collect specimens from homebound patients and inpatients (not in a hospital) for purposes of COVID–19 testing would be made in accordance with existing instructions found in the Medicare Claims Processing Manual. Our policies for payment of the fee to cover transportation and expenses for trained personnel to collect specimens from homebound patients and non-hospital inpatients are set forth in Pub. 100–04, Medicare Claims Processing Manual, chapter 16, section 60.5.

Medicare Part B MACs calculate the travel allowance for each claim, and we understand from stakeholders that, in some cases, the MACs have required laboratories to maintain paper logs of miles traveled to receive the travel allowance. In the March 2020 COVID–19 IFC (85 FR 19258), we noted that stakeholders reported to us that maintaining paper logs of miles is burdensome, whereas maintaining electronic logs is less burdensome, especially with the development of GPS systems and various applications for cellular phones in recent years that can track miles traveled. We indicated that, for the duration of the PHE for the COVID–19 pandemic, paper documentation of miles traveled would not be required and that laboratories could maintain electronic logs if they preferred. However, we indicated that laboratories would need to be able to produce these electronic logs in a form and manner that could be shared with MACs, and that the MACs may provide more information on acceptable formats.

We understand that laboratories have benefited from the operational guidance we announced in the March 2020 COVID–19 IFC to permit them to use electronic rather than paper logs of miles traveled. Using electronic logs reduces administrative burden for laboratories and their staffs, as we understand from stakeholders that paper logs are extremely time- and resource-intensive and they have requested that CMS provide flexibilities for the use of electronic logs. Paper logs require storage, which can be a burden to laboratories. Additionally, manipulation of paper logs is time- and labor-intensive, which could increase laboratory costs. Therefore, we are making permanent the option for laboratories to maintain electronic logs of miles traveled for the purposes of covering the transportation and personnel expenses for trained personnel to travel to the location of an individual to collect a specimen sample. To be clear, this option for laboratories to maintain electronic logs is not limited to COVID–19 specimen collection, but...
rather, applies to specimen collection for any CDLT. We are announcing electronic logs as a permanent option in this proposed rule, and will provide guidance in future instructions via forthcoming Change Requests and other materials such as MLN Matters® Articles. Laboratories will need to be able to produce electronic logs in a form and manner that can be shared with MACs, and should continue to consult with their local MACs regarding the format and process for ongoing submission of this information.

N. Medicare Provider and Supplier Enrollment

1. Enrollment Process
   a. General Discussion

   Section 1866(j)(1)(A) of the Act requires the Secretary to establish a process for the enrollment of providers and suppliers in the Medicare program. The overarching purpose of the enrollment process is to help confirm that providers and suppliers seeking to bill Medicare for services and items furnished to Medicare beneficiaries meet all federal and state requirements to do so. The process is, to an extent, a “gatekeeper” that prevents unqualified and potentially fraudulent individuals and entities from being able to enter and inappropriately bill Medicare. Since 2006, we have taken steps via rulemaking to outline our enrollment procedures. These regulations are generally incorporated in 42 CFR part 424.510, one such regulation is the provider enrollment provisions. First, section 1866(j) of the Act furnishes specific authority regarding the enrollment process for providers and suppliers. Second, sections 1102 and 1871 of the Act provide general authority for the Secretary to prescribe regulations for the efficient administration of the Medicare program.

   b. Legal Authorities

   There are two principal categories of legal authorities for our proposed provider enrollment provisions. First, section 1866(j) of the Act furnishes specific authority regarding the enrollment process for providers and suppliers. Second, sections 1102 and 1871 of the Act provide general authority for the Secretary to prescribe regulations for the efficient administration of the Medicare program.

   a. Expansion of Authority To Deny or Revoke Based on Office of Inspector General (OIG) Exclusion

   Under §§ 424.530(a)(2) and 424.535(a)(2), respectively, CMS denies or revokes a provider’s or supplier’s enrollment if the provider or supplier, or any owner, managing employee, authorized or delegated official, medical director, supervising physician, or other health care personnel of the provider or supplier is excluded by the OIG. We propose several changes related to these authorities.

   First, we propose to expand the categories of parties within the purview of these denial and revocation provisions to include excluded administrative or management services personnel who furnish services payable by a federal health care program, such as a billing specialist, accountant, or human resources specialist. This change would align with existing OIG guidance stating that providers and suppliers may not employ excluded persons to provide management or administrative services that are payable by a federal health care program. Such individuals can impact a provider’s or supplier’s operations in a manner harmful to the interests of the Medicare program; for example, an individual in a lower-level administrative position could undertake fraudulent activity to the same extent (and with consequences as severe) as a high-ranking officer. For program integrity purposes, the central issue is not the specific individual who engaged in the abusive conduct, but the conduct itself. Accordingly, we believe this regulatory revision is necessary to protect Medicare and its beneficiaries.

   Second, existing § 424.530(a)(2) references “other health care personnel furnishing Medicare reimbursable services who is required to be reported on the enrollment application.” (Section 424.535(a)(2) does not contain the entirety of this clause.) To conform to our change described in the previous paragraph, we propose to replace this language with “other health care or administrative or management services personnel furnishing services payable by a federal health care program.” This would ensure consistency with the previously referenced OIG guidance, which, we note, is not restricted to services: (1) Only reimbursable by Medicare; or (2) furnished by individuals listed on a Medicare enrollment application. We would also include this language within § 424.535(a)(2) so that the latter aligns with § 424.530(a)(2).

   Third, § 424.535(e) states that if the revocation was due to adverse activity (sanction, exclusion, or felony) against an owner, managing employee, authorized or delegated official, medical director, supervising physician, or other personnel of the provider or supplier furnishing Medicare reimbursable services, the revocation may be reversed if the provider or supplier terminates and submits proof that it has terminated its business relationship with that individual within 30 days of the revocation notification. For the reasons already outlined, we propose to replace the language in § 424.535(e) concerning other personnel furnishing Medicare reimbursable services with “other health care or administrative or management services personnel furnishing services payable by a federal health care program.”

b. Deny or Revoke Enrollment for Surrender of Drug Enforcement Administration (DEA) Certificate of Registration in Response To Show Cause Order

We have existing authority under §424.530(a)(11)(i) to deny a physician’s or other eligible professional’s enrollment if his or her DEA certificate of registration to dispense a controlled substance is currently suspended or revoked; a concomitant authority to revoke enrollment in this circumstance is outlined in §424.535(a)(13)(i). We propose to expand these authorities to include situations where the physician or other eligible professional surrenders his or her DEA certificate in response to an order to show cause.

We have encountered situations where a physician or other eligible professional who has engaged in improper prescribing or other DEA-monitored activities relinquishes his or her DEA certificate pending a DEA show cause order so as to avoid a likely suspension or revocation of his or her DEA certificate or other similar circumstance. We believe these scenarios are no less serious from the standpoint of program integrity and beneficiary safety than a DEA certificate suspension or revocation. Hence, we believe this proposed change is warranted.

c. Creation of Specific Rebuttal Rights for Deactivations

As outlined in §424.540, deactivation means that the provider’s or supplier’s billing privileges are stopped (but not revoked or terminated). Deactivation is intended to protect the provider or supplier from the misuse of its billing number and to safeguard the Trust Funds from unnecessary overpayments. Under existing regulations, a provider’s or supplier’s billing privileges may be deactivated if the provider or supplier: (1) Does not submit any Medicare claims for 12 consecutive calendar months; (2) fails to report certain changes in its enrollment information within required timeframes; or (3) fails to fully and accurately comply with a CMS revalidation request within 90 days. To reactivate one’s billing privileges, current regulations state that the deactivated provider or supplier must recertify that their enrollment information on file with Medicare is correct and must furnish any missing information as appropriate (or submit a complete Form CMS–855 application if required by CMS).

Since a deactivated provider’s or supplier’s billing privileges are stopped, §424.545(b) permits the affected provider or supplier to file a rebuttal in accordance with 42 CFR 405.374 (which allows rebuttals for Medicare payment suspensions). While we have outlined deactivation rebuttal procedures in subregulatory guidance, these procedures are not reflected in regulation. Consequently, we propose to revise 42 CFR part 424, subpart P to describe the deactivation rebuttal process in detail, a process that would generally mirror our existing subregulatory procedures on the topic. This would streamline and clarify the deactivation rebuttal process, promote transparency, and enable the provider community to submit feedback on our proposal.

The specific changes we propose are as follows:

- At §424.545(b), we propose to change the language that reads “in accordance with §405.374 of this chapter” to “in accordance with §424.546.” Instead of continuing to reference §405.374, we are proposing to create a new §424.546 to address the deactivation rebuttal process. This would enable us to tailor our procedures to the unique facts and circumstances of deactivation rebuts, which are different from payment suspensions.

- At new §424.546(a)(1), we propose that if a provider or supplier receives written notice from CMS or its contractor that the provider’s or supplier’s billing privileges are to be or have been deactivated under §424.540, the provider or supplier has 15 calendar days from the date of the written notice to submit a rebuttal to CMS. We believe that a 15-day period strikes an ideal balance between the need to expeditiously take measures to safeguard program integrity and the importance of ensuring that the provider or supplier has a reasonable time-period in which to submit a rebuttal.

- At new §424.546(a)(2), we propose that CMS may, at its discretion, extend the 15-day time-period referenced in §424.546(a)(1). This would permit CMS to account for special situations, such as the following: (1) A particularly and unusually complex deactivation case that perhaps warrants giving the provider or supplier more time to prepare its rebuttal; or (2) circumstances beyond the provider’s or supplier’s control prevents or would likely prevent the timely submission of its rebuttal.

- At new §424.546(b)(1) through (4), we propose that any rebuttal must: (1) Be in writing; (2) specify the facts or issues about which the provider or supplier disagrees with the deactivation’s imposition and/or effective date, as well as the reasons for disagreement; (3) submit all documentation the provider or supplier wants CMS to consider in its review of the deactivation; and (4) be submitted in the form of a letter that is signed and dated by the individual supplier (if the latter is enrolled as an individual physician or NPP), the authorized official or delegated official (as those terms are defined in §424.502), or a legal representative (as defined in 42 CFR 498.10). Concerning proposed paragraph (b)(4), if the legal representative is an attorney, the attorney must include a statement that he or she has the authority to represent the provider or supplier, this statement would be sufficient to constitute notice of such authority. If the legal representative is not an attorney, the provider or supplier must file with CMS written notice of the appointment of a representative; this notice of appointment must be signed and dated by, as applicable, the individual supplier, the authorized official or delegated official, or a legal representative.

We believe that the requirements of proposed §424.546(b)(1) through (4) are necessary to ensure: (1) A uniform and standard process for submitting deactivation rebuts; (2) that there is written documentation of the provider’s or supplier’s contentions; (3) that CMS has sufficient information to perform its review; and (4) that the provider or supplier authorized the rebuttal submission.

- At new §424.546(c), we propose that the provider’s or supplier’s failure to submit a rebuttal that is both timely under paragraph (a) and fully compliant with all of the requirements of paragraph (b) constitutes a waiver of all rebuttal rights under this section and §424.545(b). This provision would not only specify the consequences of an untimely or non-compliant rebuttal but also help encourage the provider or supplier to abide by paragraphs (a) and (b) should it choose to rebut a deactivation.

- At new §424.546(d), we propose that upon receipt of a timely and compliant deactivation rebuttal, CMS...
reviews the latter to determine whether the imposition of the deactivation and/or the designated effective date are correct. We believe this provision would adequately notify the public of the scope of CMS’ review.

- At new §424.546(e), we propose that nothing in §424.546 or in §424.545(b) would require CMS to delay the imposition of a deactivation pending the completion of the CMS review described in paragraph (d). That is, the filing of a rebuttal and the review period associated therewith does not suspend or postpone the deactivation’s implementation. This provision, which mirrors our existing subregulatory policy on the matter, is needed so that CMS can expeditiously enforce the program integrity protections that a deactivation affords, all the while recognizing the provider’s or supplier’s ability to challenge the deactivation via the rebuttal process. If CMS determines under paragraph (d) that the deactivation was erroneous, it would be reversed.

- At new §424.546(f), and consistent with both current subregulatory policy concerning deactivation rebuttals as well as payment suspension rebuttal regulations at §405.375(c), a determination made under §424.546 would not be an initial determination under §498.3(b) and, therefore, would not be appealable. This would clarify for providers and suppliers that a rebuttal is the only administrative remedy available for a deactivation.

d. Modernizing Enrollment Policies for Emerging Technologies in Independent Diagnostic Testing Facilities

Section 410.33(a) states that CMS pays for diagnostic procedures under the PFS only when performed by the suppliers listed in that section. Among these supplier types are independent diagnostic testing facilities (IDTFs). An IDTF may be a fixed location, a mobile entity, or an individual NPP. It is independent of a physician’s office or hospital, although the IDTF regulations outlined in §410.33(a) also apply when an IDTF furnishes diagnostic procedures in a physician’s office.

Section 410.33 as a whole contains provisions with which IDTFs must comply in order to enroll in (and maintain enrollment in) Medicare. This includes requirements for supervising physicians (§410.33(b)), nonphysician personnel (§410.33(c)), and the ordering of tests (§410.33(d)). In addition, §410.33(g) contains various certification standards that IDTFs must meet. We established these standards to help ensure the quality and safety of IDTF diagnostic testing and to strengthen our ability to verify the IDTF’s compliance with enrollment requirements.

IDTFs generally perform diagnostic tests on beneficiaries in, for instance, a health care facility, physician’s office, or mobile setting. Indeed, the IDTF standards at §410.33(g) (as well as other provisions at §410.33) were designed for traditional IDTF suppliers that engage in direct or in-person beneficiary interaction, treatment, and/or testing. Yet, some health care entities have developed or utilize diagnostic tests that do not require this form of interaction. That is, certain IDTFs perform diagnostic services via computer modeling and analytics, or other forms of testing not involving direct beneficiary interaction; the service is often conducted by a technician who undertakes a computer analysis offsite or at another location at which the patient is not present. The physician then reviews the image to determine the appropriate course of action. In short, these entities generally (though not exclusively) have two overriding characteristics. First, the tests they perform do not involve direct patient interaction, meaning that the test is conducted away from the patient’s physical presence and is non-invasive. Second, the test involves off-site computer modeling and analytics.

Despite the comparatively new and innovative forms of testing these entities undertake, they can still qualify as IDTFs (notwithstanding the offsite and indirect nature of the test) so long as they meet the applicable requirements of §410.33. The dilemma is that these entities often cannot meet certain IDTF requirements (and thus cannot enroll in Medicare) strictly because of the test’s indirect nature. In other words, the types of tests at issue do not fall within the category of those to which several of our standards in §410.33 were intended to apply (specifically, to in-person procedures). To account for such technological advances in diagnostic testing, we believe that revisions to §410.33 are necessary. To this end, we propose that IDTFs that have no beneficiary interaction, treatment, or testing at their practice location would be either partially or wholly exempt from the following requirements in §410.33 (hereafter occasionally referenced as “exempted” IDTFs).

Section 410.33(c) requires all nonphysician personnel that the IDTF uses to perform diagnostic tests to demonstrate the basic qualifications to perform these tests as evidenced by state licensure or state certification. In the absence of a state licensing board, the technician must be certified by an appropriate national credentialing body. (The IDTF must also maintain documentation available for review that these requirements have been met.) However, the indirect tests in question often do not require state licensure or state/national credentialing, meaning that §410.33(c) becomes a difficult requirement for such IDTFs to meet. Indeed, §410.33(c) has typically been applied to the qualifications needed to perform in-person tests in traditional IDTF settings; that is, the staff at exempted IDTFs often will instead be primarily trained in the test’s particular software and computer analytics (or other non-credentialing based services). Extending §410.33(c)’s purview to indirect tests would reduce the number of personnel who can perform them, thus hindering beneficiary access to such services and potentially preventing the enrollment of otherwise qualified IDTFs.

Accordingly, we propose to divide current §410.33(c) into two paragraphs. New paragraph (c)(1) would contain the existing requirements of §410.33(c) except as stated in new paragraph (c)(2). We propose in the latter paragraph that, for services that do not require direct or in-person beneficiary interaction, treatment, or testing, any nonphysician personnel performing the test must meet all applicable state licensure requirements for doing so; if there are such state licensure requirements, the IDTF must maintain documentation available for review that these requirements have been met.

While we believe that personnel performing the tests described in proposed paragraph (c)(2) should meet whatever state requirements exist for those services, paragraph (c)(2) would not include any reference to national credentialing bodies. Further, we recognize that, in some instances, states may have no requirements for technicians involved in the particular type of computer analytics involved in the Medicare-covered service.

We also propose that the following IDTF certification standards in §410.33(g) would not apply to the aforementioned exempted IDTFs:

- The IDTF must have a comprehensive liability insurance policy of at least $300,000 per location that covers both the place of business and all customers and employees of the IDTF (§410.33(g)(6)).
- The IDTF must answer, document, and maintain documentation of a beneficiary’s written clinical complaint at the physical site of the IDTF (§410.33(g)(6)). (For mobile IDTFs, this documentation would be stored at their home office.)
• The IDTF must openly post the standards outlined in § 410.33(g) for review by patients and the public (§ 410.33(g)(9)).

Concerning § 410.33(g)(8), we note that exempted IDTFs would not be furnishing direct services to beneficiaries that could result in a beneficiary’s written clinical complaint. Thus, we believe this standard should be inapplicable to exempted IDTFs, and we would revise paragraph (g)(8) in this vein. We propose a similar approach with § 410.33(g)(9); neither beneficiaries whose tests are sent to the exempted IDTF nor the public in general will visit its physical location, therefore negating the need for a posting of standards.

As previously mentioned, we also propose that § 410.33(g)(6) would not apply to exempted IDTFs. The liability policy addressed therein was designed for IDTFs that provide services to beneficiaries in a facility or mobile unit and thus could have issues concerning medical negligence and/or malpractice. Nevertheless, we recognize that a chain of liability could involve an exempted IDTF if a computer malfunction or other error arose in the IDTF’s diagnostic services. To illustrate, a software problem could lead to inaccurate test results, which in turn might result in an incorrect interpretation by a beneficiary’s physician and ultimately harm the beneficiary. There could be other instances, too, where the performance of a particular test raises questions of possible liability.

Consequently, we are soliciting public comment on the types of situations where this could arise as well as on the following issues: (1) Whether exempted IDTFs should indeed be required to maintain a $300,000 liability policy; (2) if § 410.33(g)(6) remains an exception, whether a liability amount of less than $300,000 is warranted and, if so, what that amount should be (for example, $50,000 or $100,000 or $200,000); and (3) whether no liability policy should be required.

In short, we believe that applying the foregoing exemptions to IDTFs that have developed innovative proprietary software for diagnostic testing where no patient interaction is involved would benefit the Medicare program and its beneficiaries by encouraging new IDTF technologies and services. We welcome comments on our proposed exemptions, and we specifically request comment on whether to retain and modify the IDTF standards in § 410.33(g)(6), (8), and (9) for the aforementioned exempted IDTFs, rather than waive those requirements for them.

e. Proposed Revisions at § 424.535(a)(8)

Under § 424.535(a)(8)(ii), CMS may revoke a provider’s or supplier’s enrollment if CMS determines that the provider or supplier has a pattern or practice of submitting claims that fail to meet Medicare requirements. The purpose of this provision is to place providers and suppliers on notice that they are legally obligated to always submit correct and accurate claims and that failing to do so could lead to the revocation of their enrollment; indeed, the submission of non-compliant claims places the Trust Funds at risk due to the potential for erroneous payments. In determining whether a revocation is appropriate under § 424.535(a)(8)(ii), CMS considers, as appropriate and applicable, the factors outlined in § 424.535(a)(8)(ii)(A) through (F); respectively, these are:

(A) The percentage of submitted claims that were denied.

(B) The reason(s) for the claim denials.

(C) Whether the provider or supplier has any history of final adverse actions and the nature of any such actions.

(D) The length of time over which the pattern has continued.

(E) How long the provider or supplier has been enrolled in Medicare.

(F) Any other information regarding the provider or supplier’s specific circumstances that CMS deems relevant to its determination.

We have recently encountered situations where providers and suppliers have engaged in periods of non-compliant billing that, though comparatively brief, have or could have harmed the Medicare program. While we have attempted revocation action per § 424.535(a)(8)(ii) against such providers and suppliers, the current wording of some of the factors in paragraphs (a)(8)(ii)(A) through (F) have hampered our ability to do so. To increase our flexibility to address periods of abusive billing irrespective of their duration, we believe we must revise § 424.535(a)(8)(ii)(A) through (F) as follows:

• In paragraph (a)(8)(ii)(A), we propose revisions to focus on the percentage of denials within subsets of the provider’s or supplier’s claim submissions rather than across the entire universe of their claim submissions. Specifically, we would consider the percentage of submitted claims that were denied during the timeframe under consideration. We believe existing paragraph (a)(8)(ii)(A) inhibits our capacity to target brief periods involving a significant percentage of denied claims; this is because this factor has been interpreted to require said percentage to be weighed against claim denials over the entire period of the provider’s or supplier’s enrollment. As proposed, revised paragraph (a)(8)(ii)(A) would better enable CMS to address these non-compliant periods by restricting the scope of denial percentages to a shorter timeframe. For example, assume Provider X enrolled in Medicare on February 1. Although only a small percentage of its claims were denied through June 30, the denial rate was very high between July 1 and July 31. Under our proposed change, our period of review could be limited to July. This reflects our view that even a comparatively short timeframe of improper billing can threaten the Trust Funds, as evidenced by the aforementioned cases we have seen. We reiterate that the submission of non-compliant claims generates a risk of improper payments, which could lead to thousands or even millions of Medicare dollars being paid pursuant to either a lengthy or brief billing period.

• For reasons similar to our proposed revision of § 424.535(a)(8)(ii)(A), we propose to remove § 424.535(a)(8)(ii)(D) altogether. As already indicated, short but very intense periods of improper billing can endanger the Medicare program no less than a longer pattern of non-compliant yet merely moderate-volume billing. Yet the “length of time” standard in paragraph (a)(8)(ii)(D) often deters us from taking action under paragraph (a)(8)(ii) to address these shorter timeframes. For this reason, we believe that eliminating paragraph (a)(8)(ii)(D) would strengthen our program integrity efforts.

• We also propose to remove § 424.535(a)(8)(ii)(E), which addresses the length of the provider’s or supplier’s enrollment. We consider this factor to be largely immaterial to the issue of whether a pattern of improper billing exists. More importantly, it can hinder our ability to utilize § 424.535(a)(8)(ii) as a whole. We have encountered fraud schemes where providers and suppliers enroll in Medicare, bill inappropriately, and then leave the program after a brief timeframe. We believe the enrollment length in these and other cases of non-compliant billing should have no bearing on whether paragraph (a)(8)(ii) can be applied, for the main issue is the behavior itself and not the period of enrollment.

• We propose to remove § 424.535(a)(8)(ii)(B) as well. Notwithstanding our original inclusion of this factor in paragraph (a)(8)(ii), the overall purpose of paragraph (a)(8)(ii) has always been to deter non-compliant
billing, regardless of the reason for it. Even if a period of erroneous claim submissions reflected no nefarious intent by the provider, the latter still failed to comply with Medicare billing requirements and this presented a risk to the Medicare program. For this reason, we do not view the claim denial reason as particularly germane to the question of whether paragraph (a)(8)(ii) should apply in a particular case.

In addition, we propose to add new paragraph (a)(8)(iii)(C) by which we would consider the type of billing non-compliance and the specific facts surrounding said non-compliance (to the extent this can be determined). We believe this paragraph would provide greater specificity than the broader, catch-all factor at § 424.535(a)(8)(ii)(F) (which we would nonetheless retain). It would also allow us to more narrowly tailor our review to the unique facts of the case, thus also strengthening our ability to consider any aggravating or mitigating circumstances.

Given the foregoing, paragraph (a)(8)(ii) would include the following factors, respectively designated as paragraphs (A) through (D):

• The percentage of submitted claims that were denied during the period under consideration.
• Whether the provider or supplier has any history of final adverse actions and the nature of any such actions.
• The type of billing non-compliance and the specific facts surrounding said non-compliance (to the extent this can be determined).
• Any other information regarding the provider or supplier’s specific circumstances that CMS deems relevant to its determination.

We recognize that these revisions would represent a reduction in the number of factors we would consider. However, we believe the remaining criteria would still give the provider or supplier fair consideration in our determinations while permitting us to address a wider range of non-compliant billing periods in order to protect the Medicare program.

2. Provider/Supplier Medical Review Requirements

a. Background

CMS identifies improper payments in the Medicare Fee-for-Service (FFS) program through a variety of program integrity-related activities, and we use a network of contractors to carry out program integrity initiatives, including Recovery Audit contractors (RACs), the Supplemental Medical Review Contractor (SMRC), Unified Program Integrity Contractors (UPICs), Medicare Administrative Contractors (MACs), and the Comprehensive Error Rate Testing (CERT) contractor. (We are purposely excluding Quality Improvement Organizations (QIOs) from this discussion and the following proposals since QIOs are governed by separate and distinct statutory and regulatory requirements. For information about the QIOs, see sections 1151–1163 of the Act and 42 CFR parts 475–480.) Both UPICs and MACs perform prepayment medical review, while the RACs, SMRC, UPICs, MACs, and CERT all perform post-payment medical reviews. Both prepayment medical reviews and post-payment medical reviews are used by our contractors to determine, among other things, whether items or services are reasonable and necessary under section 1862(a)(1) of the Act. In carrying out these reviews, each contractor requests additional documentation from providers and suppliers, which the contractors then assess to either support the payment of claims or conversely, deny (in full or in part) claims thereby protecting the Medicare Trust Funds against improper payments. Our contractors may also carry out follow-up prepayment or post-payment reviews on the same providers or suppliers to ensure improper payments are not continuing.

Our contractors are authorized to request additional documentation through multiple statutory authorities, including sections 1815(a), 1833(e) and 1862(a)(1)(A) of the Act. Sections 1815(a) and 1833(e) of the Act provide that no payments shall be made to any provider or supplier unless it has furnished such information as the Secretary may request in order to determine the amounts due such provider for the period with respect to which the amounts are being paid or any prior period. Under section 1862(a)(1)(A) of the Act, payment must generally be limited to those items and services that are reasonable and necessary.

b. Proposal for Regulations Governing Prepayment and Post-Payment Medical Review

Despite the statutory authority authorizing our contractors’ activities, we do not have regulatory provisions governing certain medical review activities, specifically prepayment and post-payment medical reviews. In this proposed rule, we are proposing key terms and definitions associated with these two review types; language codifying a contractors’ authority to request additional documentation within established timeframes; and provisions detailing a provider’s or supplier’s responsibility to comply with requests for additional documentation, including the impact should a provider or supplier fail to comply with a request. These provisions are based on existing operational practices used by our contractors. We believe that adding these provisions in regulation will enhance provider and supplier understanding of our review processes, as well as, improve consistency among our contractors.

c. Proposed Key Terms and Definitions

To ensure consistency across prepayment and post-payment reviews and establish clear requirements, we propose adding the following key terms and their definitions to § 405.902:

“Additional documentation” means the information requested by a contractor when conducting a prepayment review or post-payment review; “Post-payment medical review (or post-payment review)” means a review that occurs after payment is made on the selected claim to determine whether the initial determination for payment was appropriate; and “Prepayment medical review (or prepayment review)” means a review that occurs before an initial determination for payment is made on the selected claim to determine whether payment should be made. These definitions would be consistent with longstanding manual language and common use of these terms by our contractors.

d. Prepayment and Post-Payment Medical Review

We are proposing to add new § 405.903 to outline the prepayment medical review provisions.

• At paragraph (a), we are proposing to codify our contractors’ authority to conduct prepayment medical review on selected claims in order to determine whether and how much payment should be made.
• At paragraph (b), we are proposing language detailing our contractors’ authority to request additional documentation while conducting a prepayment review.

• At paragraph (b)(1), we are proposing that a provider or supplier will be provided 45 calendar days to submit additional documentation in response to a contractor’s request except as stated in paragraphs (b)(2) and (c).
• At paragraph (b)(2), we are proposing that a contractor may accept documentation received after 45
calendar days for good cause. Good cause means situations such as natural disasters, interruptions in business practices, or other extenuating circumstances that the contractor deems good cause in accepting the documentation.

- At paragraph (c), we are proposing language detailing a UPIC's authority to provide 30 calendar days to a provider or supplier submitting additional documentation and that a UPIC may accept documentation received after 30 calendar days for good cause. Good cause means situations such as natural disasters, interruptions in business practices, or other extenuating circumstances that the UPIC deems good cause in accepting the documentation.

These provisions reflect longstanding requirements MACs and UPICs have used in conducting prepayment reviews. The different time-periods within which additional documentation must be received is based on unique processing requirements for each contractor. Although both conduct prepayment reviews, the UPICs work directly with law enforcement and focus on potentially fraudulent providers or suppliers. Thus, the different timeframes for receiving additional documentation is necessary to account for the distinction and enables each type of contractor to appropriately balance their need for documentation in completing reviews with the potential burden on providers and suppliers should reviews take longer than is warranted. Efforts to limit the burden placed on providers and suppliers as much as possible is also warranted so that patient care is not unnecessarily impacted.

Additionally, both MACs and UPICs historically have had the authority to accept documentation received after the initial timeframe has expired based on good cause, such as natural disasters, interruptions in business practices, or other extenuating circumstances. These circumstances are best determined on a case-by-case basis, and the language that specifies the UPIC’s authority to accept documentation after 30 or 45 calendar days for good cause is necessary to account for the distinction and enables each contractor to appropriately balance their need for documentation in conducting reviews with the potential burden on providers and suppliers should reviews take longer than may be expected.

We are also proposing similar provisions at new § 405.929 regarding post-payment medical reviews.

- At paragraph (a), we are proposing language outlining our contractors’ authority to select claims and conduct post-payment medical reviews.
- At paragraph (b), we are proposing language that specifies our contractors’ authority to request additional documentation.
- At paragraph (b)(1), we are proposing that a contractor will give a provider or supplier 45 calendar days to submit additional documentation in response to a request except as stated in paragraphs (b)(2) and (c).
- At paragraphs (b)(2) and (c), we propose that a contractor may accept documentation received after 30 days for good cause. Good cause means situations such as natural disasters, interruptions in business practices, or other extenuating circumstances that the contractor deems good cause in accepting the documentation.
- At paragraph (c), we are proposing language that specifies the UPIC’s authority to provide 30 calendar days when requesting additional documentation and that a UPIC may accept documentation received after 30 calendar days for good cause. Good cause means situations such as natural disasters, interruptions in business practices, or other extenuating circumstances that the UPIC deems good cause in accepting the documentation.
- At paragraph (d), we propose that when conducting a post-payment review, a contractor’s review will result in either no change or a revised determination under § 405.984.

As with prepayment reviews, these provisions reflect longstanding requirements UPICs and MACs, RACs, the CERT contractor, and SMRC have used in conducting post-payment reviews. While the MACs, RACs, CERT contractor, and SMRC have relatively comparable medical review processes, the UPICs are somewhat different given their close working relationship with law enforcement and focus on potentially fraudulent providers or suppliers. Thus, the different timeframes for receiving additional documentation is necessary to account for the distinction and enables each contractor to appropriately balance their need for documentation in completing reviews with the potential burden on providers and suppliers should reviews take longer than may be expected.

We are also proposing to add new § 405.930 to clearly outline our contractors’ authority to deny a claim should a provider or supplier fail to convey the additional documentation in response to a request. The proposed language clarifies that the contractor must give the provider or supplier notice and time to respond to the additional documentation request.

Contractors have authority to require additional documentation through multiple statutory provisions, including sections 1815(a), 1833(e) and 1862(a)(1)(A) of the Act. While our contractors maintain discretion to provide additional time to a provider or supplier in responding to an additional documentation request, our contractors also have the authority to deny additional time and the associated claim(s) when the additional documentation is not received within the requested timeframe.

We are also proposing to revise the section heading of § 405.986(a) to read, “Establishing good cause for reopening.” This revision clarifies the distinction made between the process for establishing good cause to reopen an initial determination made on a claim, and the good cause factors that may be applied in accepting documentation submitted after the applicable timeframes in §§ 405.903 and 405.929. In establishing criteria to determine whether to accept late documentation in response to an ADR, we are adopting the criteria set forth in §§ 405.903 and 405.929, and we are not utilizing the good cause criteria for reopening an initial determination on a claim in § 405.986. We believe this change will add further clarification to the substantive text to reflect that the section only applies to reopenings of initial determinations on a claim.
O. Modifications Related to Medicare Coverage for Opioid Use Disorder (OUD) Treatment Services Furnished by Opioid Treatment Programs (OTPs)

1. Background

Section 2005 of the Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment for Patients and Communities (SUPPORT) Act established a new Medicare Part B benefit category for OUD treatment services furnished by OTPs during an episode of care beginning on or after January 1, 2020. In the CY 2020 PFS final rule (84 FR 62630 through 62677 and 84 FR 62919 through 62926), we implemented Medicare coverage and provider enrollment requirements and established a methodology for determining the bundled payments for episodes of care for the treatment of OUD furnished by OTPs. We established new codes for and finalized bundled payments for weekly episodes of care that include methadone, oral buprenorphine, implantable buprenorphine, injectable buprenorphine or naltrexone, and non-drug episodes of care, as well as add-on codes for intake and periodic assessments, take-home dosages for methadone and oral buprenorphine, and additional counseling. In the CY 2021 PFS final rule (85 FR 84683 through 84688), we adopted new add-on codes for take-home supplies of nasal naloxone and injectable naloxone. We are continuing to monitor Medicare enrollment by OTPs and utilization of the new benefit to ensure that Medicare beneficiaries have appropriate access to care as well as monitoring for fraud, waste, and abuse. For CY 2022, we are proposing several refinements to the regulations governing Medicare coverage and payment for OUD treatment services furnished by OTPs.

2. Annual Updates

In the CY 2020 PFS final rule (84 FR 62667), we finalized a policy under which the payment for the drug component of episodes of care will be updated annually using the most recent data available from the applicable pricing mechanism at the time of ratesetting for the applicable calendar year. The payment for the non-drug component of the bundled payment for OUD treatment services will be updated annually based upon the Medicare Economic Index (MEI) (84 FR 62668 and 62669). The current payment rates, as finalized in the CY 2021 PFS final rule, both with and without locality adjustments, can be found on the CMS OTP website under Billing and Payment at https://www.cms.gov/files/document/otp-billing-and-payment-fact-sheet.pdf. The list of the payment rates for OUD treatment services furnished by OTPs, with the annual update applied for CY 2022, will be made available at the time of publication of the CY 2022 PFS final rule.

3. Proposed Refinements to Regulations Governing Medicare Payment to OTPs

In the CY 2021 PFS final rule (85 FR 84684 through 84688), we extended the definition of OUD treatment services to include short acting opioid antagonist medications for the emergency treatment of known or suspected opioid overdose, such as naloxone, and overdose education furnished in conjunction with opioid antagonist medication. We also established an adjustment to the weekly bundled payments when the OTP furnishes take-home supplies of these medications at § 410.67(d)(4)(i)(E). This adjustment includes both a drug component and a non-drug component for overdose education. The payment for the drug component of the adjustment will be determined using the methodology in § 410.67(d)(2)(i), and will be updated annually using the most recent data available at the time of ratesetting. The amount of the non-drug component of the adjustment, which includes overdose education, will be determined based on the CY 2020 Medicare payment rate for CPT code 96161; however, we did not explicitly address either geographic adjustments or annual updates to this payment rate.

In the CY 2020 PFS final rule (84 FR 62666 through 62667), we finalized the application of a geographic adjustment to the non-drug component of the OTP bundled payments, as well as the add-on payment adjustments for non-drug services. This annual update is codified in the regulations at § 410.67(d)(4)(ii), and will be updated annually using the most recent data available at the time of ratesetting. The adjustment for take-home supplies of opioid antagonist medications includes a non-drug component; we believe the same considerations regarding varying costs based on geographic locality and the need for annual updates apply. Accordingly, we are proposing to revise the regulation at § 410.67(d)(4)(ii) to include the adjustment for take-home supplies of opioid antagonist medications in the list of items for which the non-drug component will be geographically adjusted using the GAF. We are also proposing to revise the regulation at § 410.67(d)(4)(iii) to include the adjustment for take-home supplies of opioid antagonist medications in the list of items that will be updated annually using the MEI.

Additionally, in the CY 2021 PFS final rule (85 FR 84688), we explained that consistent with § 410.67(d)(5), any payment to an OTP for naloxone would be duplicative if a claim for the same medication is separately paid under Medicare Part B or Part D for the same beneficiary on the same date of service, and that we would recoup any duplicative payment made to an OTP for naloxone. However, the regulation on duplicative payments at § 410.67(d)(5) does not specifically reference payments for medications that are furnished as part of an adjustment to the bundled payment. Accordingly, we are also proposing to revise § 410.67(d)(5) to stipulate that payments for medications that are delivered, administered or dispensed to
a beneficiary as part of an adjustment to the bundled payment are considered a duplicative payment if a claim for delivery, administration or dispensing of the same medication(s) for the same beneficiary on the same date of service was also separately paid under Medicare Part B or Part D. Consistent with the policies finalized in the CY 2020 PFS final rule (84 FR 62663 through 62664) regarding duplicative payments for medications dispensed as part of the weekly bundle, we believe that it is appropriate to also ensure that Medicare payments for drugs provided as an add-on to the bundled payment rate are not duplicative. We note that this proposed revision would apply not only to duplicative payments for take-home supplies of naloxone, but also to duplicative payments for additional take-home supplies of other medications that are made under § 410.67(d)(4)(i)(D).

We seek comment on these proposed changes.

4. Proposed OTP Coding and Payment for New Nasal Naloxone Product

We are aware that the FDA recently announced the approval of a new, higher dose naloxone hydrochloride nasal spray product used to treat opioid overdose and that the newly approved product delivers 8mg of naloxone. In the CY 2021 PFS final rule (85 FR 84683 through 84685), we finalized payment for HCPCS code G2215 (Take-home supply of nasal naloxone [provision of the services by a Medicare-enrolled Opioid Treatment Program]; List separately in addition to code for primary procedure). HCPCS code G2215 was priced based on an assumption of a typical dosage in which the beneficiary would be provided with a box of two 4mg nasal spray products. At the time of drafting this proposed rule, we do not yet have any available pricing information for this newly approved product. However, in order to be able to make payment to OTPs under Medicare for this product, we are proposing to create a new G-code describing a take-home supply of this higher dose naloxone hydrochloride nasal spray product.

Under this proposal, we would price this new add-on code based on the established methodology for determining the adjustment for take-home supplies of opioid antagonist medications at § 410.67(d)(4)(i)(E). This adjustment includes both a drug component and a non-drug component. The amount of the drug component of the adjustment would be determined using the methodology for pricing the drug component of an episode of care at § 410.67(d)(2)(ii). Accordingly, consistent with the approach used to price the drug component of HCPCS code G2215, we would apply the payment methodology set forth in section 1847A of the Act to determine the payment for the new naloxone hydrochloride nasal spray product, except that payment amounts that are determined based on ASP or wholesale acquisition cost (WAC) would not include any add-on percentages (85 FR 84685).

As stated in the CY 2021 PFS final rule (85 FR 84685), we believe using ASP provides a transparent and public benchmark for manufacturers’ actual pricing as it reflects the manufacturers’ actual sales prices to all purchasers (with limited exceptions as noted in section 1847A(c)(2) of the Act) and is the only pricing methodology that includes off-invoice rebates and discounts as described in section 1847A(c)(9) of the Act. Therefore, we believe ASP to be the most market-based approach to set drug prices. Additionally, we would price the drug component of the code based on an assumption of a typical dosage for a take-home supply of this new product to be a box of two 8mg nasal sprays. Consistent with the methodology established in § 410.67(d)(4)(i)(E), the amount of the non-drug component of the code would be determined based on the CY 2020 Medicare payment rate for CPT code 96161. In addition, payment for the add-on code would be limited to once every 30 days except when a further take-home supply of the medication is medically reasonable and necessary. We welcome comment on this proposal.

4. Counseling and Therapy Furnished via Audio-Only Telephone

In the CY 2020 PFS final rule (84 FR 62645 and 62646), we finalized allowing the use of two-way interactive audio/video communication technology, as clinically appropriate, to furnish the counseling and therapy portions of the weekly bundle of services and additional counseling or therapy services furnished by OTPs. Due to the Public Health Emergency (PHE) for COVID–19, in the interim final rule with comment period (IFC) entitled “Medicare and Medicaid Programs; Policy and Regulatory Revisions in Response to the COVID–19 Public Health Emergency,” which appeared in the April 6, 2020 Federal Register (85 FR 19230) (hereinafter referred to as the “March 31, 2020 COVID–19 IFC”), we revised § 410.67(b)(3) and (4) to allow the therapy and counseling portions of the weekly bundles, and any additional counseling or therapy, to be furnished using audio-only telephone calls rather than via two-way interactive audio/video communication technology for the duration of the PHE for COVID–19. Under the policy adopted in the March 31, 2020 COVID–19 IFC, counseling and therapy could be furnished using audio-only telephone calls only where two-way audio/video communications technology is not available to the beneficiary, and provided all other applicable requirements were met. In the March 31, 2020 COVID–19 IFC, we stated that we believed this change was necessary to ensure that beneficiaries with opioid use disorders would be able to continue to receive these important services during the PHE during which the public has been instructed to practice self-isolation or social distancing, and because interactive audio/video communication technology may not be available to all beneficiaries.

We have continued to evaluate whether this flexibility would be needed after the end of the PHE. According to MedPAC’s March 2021 Report to the Congress, allowing audio-only interaction for certain telehealth services can improve beneficiary choice and equity in access to care for beneficiaries who do not have access to the technology for a video telehealth visit. Additionally, public comments received in response to the CY 2021 PFS proposed rule (85 FR 84691) encouraged us to reconsider our position on coverage of audio-only services following the conclusion of the PHE for COVID–19 and commenters suggested that CMS consider permanently allowing OTPs to furnish certain OUD treatment services using audio-only telephone calls. Commenters stated that allowing OTPs to furnish services via audio-only interactions facilitates broader access to services, particularly for vulnerable populations, and ensures providers have flexibility to deliver care to beneficiaries as efficiently and seamlessly as possible. Given the sensitivity of OUD treatment services, commenters noted that this is an area in which more flexibility will promote not only access but also effective and sustained treatment for beneficiaries in need of care. Other commenters stated that the use of communication technology has reduced stress and stigma for those who require OUD treatment services and the allowance of

audio-only services has greatly expanded access for beneficiaries who may not be able to use interactive video. Another commenter stated that allowing use of audio-only communication to continue after the PHE for COVID–19 would be essential in addressing disparities in healthcare, especially for dually eligible beneficiaries who do not have access to audio-visual communication technology.

After further consideration, we are persuaded by the public comments and other stakeholder feedback that using audio-only telephone calls to furnish therapy and counseling in cases where two-way audio/video communication technology is not available to the beneficiary after the end of the PHE for the COVID–19 pandemic would facilitate broader access to services. Therefore, we are proposing to allow OTPs to continue to furnish the therapy and counseling portions of the weekly bundles, as well as any additional counseling or therapy that is billed using the add-on code, using audio-only telephone calls rather than via two-way interactive audio/video communication technology following the end of the PHE for COVID–19 in cases where audio/video communication technology is not available to the beneficiary, provided all other applicable requirements are met. Accordingly, we are proposing to revise the regulations at § 410.67(b)(3) and (4) to allow OTPs to furnish therapy and counseling using audio-only telephone calls rather than via two-way interactive audio/video communication technology after the conclusion of the PHE for COVID–19 in cases where audio/video communication is not available to the beneficiary, provided all other applicable requirements are met. We note that we interpret the requirement that audio/video technology is “not available to the beneficiary” to include circumstances in which the beneficiary is not capable of or has not consented to the use of devices that permit a two-way, audio/video interaction because in each of these instances audio/video communication technology is not available to be used in furnishing services to the beneficiary.

Additionally, we are proposing that after the conclusion of the PHE for COVID–19, when two-way interactive audio/video communication technology is used to furnish additional counseling and therapy services billed under the add-on code, OTPs would be required to append modifier 95 (Synchronous Telemedicine Service Rendered via Real-Time Interactive Audio and Video Telecommunications System) to the claim. We are not proposing to require the use of this modifier when counseling and therapy services included in the weekly bundle are furnished using two-way interactive audio/video communication technology. We recognize that it may be difficult to determine which modifier to use in cases where multiple services within the bundle are furnished using different modalities, therefore, we are limiting our proposal regarding the use of modifier 95 to claim lines for the counseling and therapy add-on code (HCPCS code G2080). We are also proposing that, following the conclusion of the PHE for COVID–19, when counseling or therapy services are furnished using audio-only telephone calls, either as part of a weekly bundle or billed using the counseling and therapy add-on code (HCPCS code G2080), OTPs would be required to document in the beneficiary’s medical record that the counseling or therapy was furnished via audio-only telephone call and the rationale for doing so. In addition, we are proposing the use of a new service-level modifier to be appended to claims submitted for the counseling and therapy add-on code (HCPCS code G2080) when furnished via an audio-only interaction, which would serve to certify that the practitioner had the capacity to furnish the services using two-way, audio/video communication technology, but instead, used audio-only technology because audio/video communication technology was not available to the beneficiary. The use of this modifier would allow CMS to track utilization of this flexibility in the claims data and evaluate that data as we consider ongoing refinements to the OTP benefit in the future. To avoid placing additional burden on OTPs during the PHE for COVID–19, these proposed new requirements would take effect on January 1, 2022, but would apply only for services furnished after the conclusion of the PHE for COVID–19. Accordingly, if the PHE for COVID–19 extends into 2022, OTPs that furnish counseling and therapy services using either two-way audio/video technology or audio-only telephone calls would not be required to use the applicable modifier or to comply with the new documentation requirements until after the end of the PHE.

Accordingly, we are proposing to revise § 410.67(d) to add a new paragraph (6) to state that when substance use counseling under paragraph (b)(3) of this section or therapy services under paragraph (b)(4) of this section are furnished using audio-only telephone calls after the end of the PHE, as defined in § 400.200 of this chapter, the practitioner must document in the beneficiary’s medical record that the services were furnished using audio-only technology and the rationale for doing so. For purposes of the add-on code for additional counseling and therapy services, the practitioner must also certify, in a form and manner specified by CMS, that they had the capacity to furnish the services using two-way, audio/video communication technology, but used audio-only technology because the beneficiary did not have access to two-way audio/video communications technology. Under these proposals, we would defer to clinician judgment in determining whether in-person counseling or therapy, rather than the use of audio-only telephone calls, would be most appropriate in certain circumstances, such as for patients who are considered to be high risk.

Additionally, we are seeking comment on whether we should put any additional or alternative conditions in place to promote program integrity, minimize patient safety concerns, and ensure that beneficiaries have access to the most appropriate form of care.

P. Physician Self-Referral Updates

1. The Physician Self-Referral Statute and Regulations

Section 1877 of the Act, also known as the physician self-referral law: (1) Prohibits a physician from making referrals for certain designated health services payable by Medicare to an entity with which he or she (or an immediate family member) has a financial relationship, unless an exception applies; and (2) prohibits the entity from filing claims with Medicare (or billing another individual, entity, or third party payer) for those referred services. A financial relationship is an ownership or investment interest in the entity or a compensation arrangement with the entity. The statute establishes a number of specific exceptions and grants the Secretary of the Department of Health and Human Services (the Secretary) the authority to create regulatory exceptions for financial relationships that do not pose a risk of program or patient abuse. Section 1903(s) of the Act extends aspects of the physician self-referral prohibitions to Medicaid. For additional information about section 1903(s) of the Act; see 66 FR 857 through 858.

The following discussion provides a chronology of our more significant and comprehensive rulemakings; it is not an exhaustive list of all rulemakings related to the physician self-referral law. After the passage of section 1877 of the Act, we proposed rulemakings in 1992...
(related only to referrals for clinical laboratory services) (57 FR 8588) (the 1992 proposed rule) and 1998 (addressing referrals for all designated health services) (63 FR 1659) (the 1998 proposed rule). We finalized the proposals from the 1992 proposed rule in 1995 (60 FR 41914) (the 1995 final rule), and issued final rules following the 1998 proposed rule in three stages. The first final rulemaking (Phase I) was a final rule with comment period published in the January 4, 2001 Federal Register (66 FR 856). The second final rulemaking (Phase II) was an interim final rule with comment period (69 FR 16054) published in the March 26, 2004 Federal Register. Due to a printing error, a portion of the Phase II preamble was omitted from the March 26, 2004 Federal Register publication. That portion of the preamble, which addressed reporting requirements and sanctions, was published in the April 6, 2004 Federal Register (69 FR 17933).

The third final rulemaking (Phase III) was a final rule published in the September 5, 2007 Federal Register (72 FR 51012).

In addition to Phase I, Phase II, and Phase III, we issued final regulations on August 19, 2008 in the Fiscal Year (FY) 2009 Inpatient Prospective Payment System final rule with comment period (73 FR 48434) (the FY 2009 IPPS final rule). That rulemaking made various revisions to the physician self-referral regulations, including: (1) Revisions to the “stand in the shoes” provisions; (2) establishment of provisions regarding the privileges and temporary noncompliance with signature requirements; (3) prohibitions on per unit of service (often referred to as “per-click”) and percentage-based compensation formulas for determining the rental charges for office space and equipment lease arrangements; and (4) expansion of the definition of “entity.”

After passage of the Patient Protection and Affordable Care Act of 2010 (Pub. L. 111–148) (Affordable Care Act), we issued final regulations on November 29, 2010 in the CY 2011 PFS final rule with comment period (75 FR 73443). We also issued final regulations on November 24, 2010 in the CY 2011 OPPS final rule with comment period (75 FR 71800), on November 30, 2011 in the CY 2012 OPPS final rule with comment period (76 FR 74122), and on November 10, 2014 in the CY 2015 OPPS final rule with comment period (79 FR 76484). We revised certain regulatory provisions concerning physician-owned hospitals to codify and interpret the Affordable Care Act’s revisions to section 1877 of the Act.

On November 16, 2015, in the CY 2016 PFS final rule, we issued regulations to reduce burden and facilitate compliance (80 FR 71300 through 71341). In that rulemaking, we established two new exceptions, clarified certain provisions of the physician self-referral regulations, updated regulations to reflect changes in terminology, and revised definitions related to physician-owned hospitals. The new exception at §411.357(y) for timeshare arrangements included a limitation on certain per unit of service and percentage-based compensation formulas. On November 15, 2016, in the CY 2017 PFS final rule, we again finalized regulations that the rental charges for the lease of office space or equipment are not determined using a formula based on per unit of service rental charges to the extent that such charges reflect services provided to patients referred by the lessor to the lessee (81 FR 80534). The requirements are identical to those in effect since October 1, 2009, and are included in the exceptions for the rental of office space at §411.357(a)(5)(ii)(B), the rental of equipment at §411.357(b)(4)(ii)(B), fair market value compensation at §411.357(l)(3)(ii), and indirect compensation arrangements at §411.357(p)(1)(ii)(B).

In the December 2, 2020 Federal Register, we published a final rule entitled “Modernizing and Clarifying the Physician Self-Referral Regulations” (the “MCR final rule”) (85 FR 77492) that established three new exceptions to the physician self-referral law applicable to compensation arrangements that qualify as “value-based arrangements,” established exceptions for limited remuneration to a physician and the donation of cybersecurity technology and services, and revised or clarified several existing exceptions. The MCR final rule also provided guidance and updated or established regulations related to the fundamental terminology used in many provisions of the physician self-referral law. Most notably, we defined the term “commercially reasonable” in regulation, established an objective test for evaluating whether compensation varies with the volume or value of referrals or other business generated between the parties, and revised the definitions of “fair market value” and “general market value.” The MCR final rule also revised the definition of “indirect compensation arrangement.”

2. Indirect Compensation Arrangements (§411.354(c)(2))

a. Summary of Proposals

We are proposing to revise the regulation at §411.354(c)(2) that sets forth the conditions for the existence of an indirect compensation arrangement. First, we are proposing to revise §411.354(c)(2)(ii), which identifies when aggregate compensation to a physician results in an indirect compensation arrangement (if the other conditions of §411.354(c)(2) are met), to more precisely address the concerns and effectuate the policies that we articulated in the MCR final rule. Specifically, we are proposing to revise the regulation to include as a potential indirect compensation arrangement any unbroken chain of financial relationships in which the compensation arrangement closest to the physician (or immediate family member of the physician) involves compensation for anything other than services that he or she personally performs. This would include arrangements for the rental of office space or equipment that meet the other conditions of the regulation at §411.354(c)(2), which would be subject to, among other requirements, the prohibition on percentage-based and unit-based (often referred to as “per-click”) compensation formulas at §411.357(p)(1)(ii) in the exception for indirect compensation arrangements (or the requirements of another applicable exception). Second, following the publication of the MCR final rule, we received inquiries from stakeholders requesting clarification on the term “unit” in §411.354(c)(2)(ii)(A). We are proposing to define the term “unit” for purposes of applying the regulation. We are also proposing to define “services that are personally performed” for purposes of applying proposed §411.354(c)(2)(ii)(A)(4).

b. Definition of “Indirect Compensation Arrangement”

Although section 1877(h)(1) of the Act defines the term “compensation arrangement” as including both direct and indirect compensation, the statute does not define the term “indirect compensation arrangement.” In Phase I, relying on the Secretary’s authority under section 1877(b)(4) of the Act, we set forth in regulation the conditions under which an indirect compensation arrangement exists and a corresponding exception for such arrangements (66 FR 684 through 687). In Phase II, we revised the regulation to §411.354(c)(2)(ii) to distinguish the language identifying when an indirect
compensation arrangement exists from the language of the exception for indirect compensation arrangements at § 411.357(p) (69 FR 16609). Most recently, in the MCR final rule, we further revised the regulation at § 411.354(c)(2) that identifies when an indirect compensation arrangement exists (85 FR 77544 through 77546).

Prior to the MCR final rule, an unbroken chain of financial relationships between a referring physician (or a member of his or her immediate family) and the entity furnishing designated health services established an “indirect compensation arrangement” if all the elements of § 411.354(c)(2), as then in effect, existed. The indirect compensation arrangement must satisfy the requirements of an applicable exception in order to avoid the referral and billing prohibitions of the physician self-referral law. (In the alternative, the parties could use an exception at § 411.355 to except the physician’s referrals on a service-by-service basis.) This two-step process, which first identified the universe of unbroken chains of financial relationships that might be of concern and then excepted from the physician self-referral law’s prohibitions those unbroken chains of financial relationships that did not pose a risk of program or patient abuse, was developed to closely correspond to the statutory treatment of compensation arrangements directly between an entity and a referring physician (or an immediate family member of the referring physician) (69 FR 16059).

When analyzing compliance with the requirement that compensation does not take into account the volume or value of a physician’s referrals or the other business generated by the physician for the entity, which is included in the exception for indirect compensation arrangements at § 411.357(p) and certain exceptions for direct compensation arrangements, special rules on unit-based compensation at § 411.354(d)(2) and (3) that deemed certain compensation not to take into account the volume or value of the physician’s referrals or the other business generated by the physician could be applied. As noted above, in the MCR final rule, we established an objective test for evaluating whether compensation varies with the volume or value of referrals or other business generated between the parties and responded to commenters that questioned whether compensation to a physician would run afoul of the objective tests under specified circumstances (85 FR 77539 through 77547). Inquiring about proposed modifications to § 411.354(c)(2)(i) that we did not ultimately finalize, one commenter presented the example of a physician who performs surgeries at a hospital and receives a fixed amount per personally-performed relative value unit that is consistent with the fair market value of the physician’s services (85 FR 77544). In developing our response to the commenter (and other commenters), we revisited the regulatory construct for determining which unbroken chains of financial relationships between entities and physicians (or immediate family members of physicians) establish indirect compensation arrangements and how to determine if they pose a risk of program or patient abuse (85 FR 77545).

With the underlying goal of reducing unnecessary burden on providers and suppliers, we stated that we do not see a need to treat compensation arrangements that may qualify as “indirect compensation arrangements” in the exact same way that the statute treats direct compensation arrangements when that construct creates unnecessary burden on the regulated industry (85 FR 77545 through 77546). We stated that it is possible to simplify the analysis of whether an unbroken chain of financial relationships presents a risk of patient or program abuse or poses program integrity concerns (85 FR 77546), and finalized revisions to § 411.354(c)(2) intended to achieve the same result as the two-step Phase I regulatory construct in protecting against program or patient abuse while reducing unnecessary burden on the regulated industry (85 FR 77546). The revised (now current) regulation at § 411.354(c)(2)(ii) effectively incorporates and applies the conditions of the special rules on unit-based compensation at § 411.354(d)(2) and (3) at the definitional level when determining whether there exists an indirect compensation arrangement that must satisfy the requirements of an applicable exception in order to avoid the prohibitions of the physician self-referral law.

Under the regulation finalized in the MCR final rule, an unbroken chain of financial relationships between an entity and a physician is considered an indirect compensation arrangement if the physician (or immediate family member of the physician) receives aggregate compensation from the person or entity in the chain with which the physician (or immediate family member) has a direct financial relationship that varies with the volume or value of referrals or other business generated by the physician for the entity furnishing the designated health services, and any of the following are true: (1) The individual unit of compensation received by the physician (or immediate family member) is not fair market value for items or services actually provided; (2) the individual unit of compensation received by the physician (or immediate family member) is calculated using a formula that includes the physician’s referrals to the entity furnishing designated health services as a variable, resulting in an increase or decrease in the physician’s (or immediate family member’s) compensation that positively correlates with the number or value of the physician’s referrals to the entity; or (3) the individual unit of compensation received by the physician (or immediate family member) is calculated using a formula that includes other business generated by the physician for the entity furnishing designated health services as a variable, resulting in an increase or decrease in the physician’s (or immediate family member’s) compensation that positively correlates with the physician’s generation of other business for the entity. In addition, the entity must have actual knowledge of, or act in reckless disregard or deliberate ignorance of, the fact that the referring physician (or immediate family member) receives aggregate compensation that varies with the volume or value of referrals or other business generated by the referring physician for the entity. Under the regulation, unless all the elements of § 411.354(c)(2)(i), (ii), and (iii) exist, an unbroken chain of financial relationships between an entity furnishing designated health services and a physician (or immediate family member of a physician) is not considered an indirect compensation arrangement.

As explained previously, the changes to the regulations that identify indirect compensation arrangements of concern under the physician self-referral law occurred in response to comments and inquiries primarily in the context of compensation paid to physicians for their personally performed services (85 FR 55739 through 55747). The revisions to § 411.354(c)(2)(i) through (iii) were intended to more precisely identify arrangements that pose a risk of overutilization, patient steering, and other abusive conduct at an earlier stage of the analysis (85 FR 77546). However, in streamlining the former two-step process for analyzing unbroken chains of financial relationships, we inadvertently omitted an important program integrity requirement that previously applied when determining satisfaction of the requirements of the
exception at § 411.357(p) for indirect compensation arrangements. As a result, we inadvertently excluded from the definition of “indirect compensation arrangement” a subset of unbroken chains including compensation arrangements that we have long identified as presenting significant program integrity concerns: Certain arrangements involving unit of service-based payment for the rental of office space or equipment. We have repeatedly stated our view that unit of service-based compensation formulas in arrangements for the lease of space and equipment are inherently susceptible to abuse because the physician lessor has an incentive to profit from referring a higher volume of patients to the lessee. Beginning with the 1998 proposed rule, we stated that unit of service-based payments for patients who are referred for the service by the lessor physician were not consistent with the requirement that compensation not reflect the volume or value of a physician’s referrals or other business generated (63 FR 1714). In Phase 1, we revisited the issue, reviewed the legislative history, and concluded that, as long as the per-unit payment reflected fair market value in arms’ length bargaining and did not vary over the course of the arrangement, unit of service-based payments could qualify for the protection of an exception, provided that the other requirements of the applicable exception are met. (66 FR 876). We noted that such arrangements might run afoul of the anti-kickback statute and stated our intent to continue to monitor such arrangements for potential abuse (66 FR 878).

Subsequently, in the 2009 IPPS final rule, based on our observations of program integrity concerns and comments in support of prohibiting unit of service-based compensation formulas in office space and equipment leases, we finalized revisions to the exceptions for the rental of office space at § 411.357(a), the rental of equipment at § 411.357(b), fair market value compensation at § 411.357(l), and indirect compensation arrangements at § 411.357(p). The revised exceptions required that, to the extent that such arrangements related to the lease of office space or equipment, the rental charges may not be determined using a formula based on: (1) A percentage of the revenue raised, earned, billed, collected, or otherwise attributable to the service performed or business generated in the office space; or (2) unit of service-based rental charges, to the extent that such charges reflect services provided to patients referred by the lessor to the lessee (73 FR 48713 through 48714). Commenters largely supported the change. A significant number of commenters reported their own experiences of situations in which unit of service-based compensation arrangements resulted in patients being referred for medically unnecessary treatment. Some hospitals reported being effectively compelled to lease equipment from physician groups (73 FR 48715). In the 2016 PFS final rule, we included similar restrictions on percentage-based and unit of service-based compensation formulas in the new exception at § 411.357(y) for timeshare arrangements. In support of that limitation, we again cited concerns that unit of service-based compensation formulas in arrangements involving the use of office space or equipment could lead to overutilization and patient steering (80 FR 71331 through 71332).

We most recently addressed the issue of unit of service-based compensation formulas in depth in the 2017 PFS proposed and final rules. In those rules, at the direction of the D.C. Circuit Court in Council for Urological Interests v. Burwell, 790 F.3d 212 (D.C. Cir. 2015), we explained our rationale for the restrictions as they apply to arrangements for the lease or use of office space or equipment, again identifying overutilization and patient steering as the primary program integrity concerns supporting our conclusion that such compensation provisions present a significant program risk (81 FR 46452 through 46453 and 80528 through 80534). We reiterated that unit of service-based compensation formulas, in particular in arrangements for the lease of equipment:

- Create an incentive for overutilization of imaging services (as described by MedPAC in its comments to our proposal in the CY 2008 PFS proposed rule), as well as other services, including therapeutic services;
- Create an incentive for physicians to narrow their choice of treatment options to those for which they will realize a profit, even where the best course of action may be no treatment;
- Influence physicians to refer to the lessee instead of referring to another entity that utilizes the same or different (and perhaps more efficacious) technology to treat the patient’s condition;
- Result in physicians steering patients to equipment they own, even if it means having the patient travel to a non-convenient site for services using the leased equipment; and
- Increase use of the Medicare program when referring physicians pressure hospitals to use their leasing company despite not being the low cost provider.

We also identified two advisory opinions issued by OIG in which OIG voiced concerns about unit of service-based compensation arrangements and indicated that such arrangements are disfavored under the anti-kickback statute (81 FR 80528). Commenters again were largely supportive of the proposal, which merely re-proposed the then-existing prohibitions on such compensation formulas in arrangements for the lease or use of office space or equipment (81 FR 80528 through 80529).

Our position on the inherent risks presented by unit of service-based compensation formulas in the context of the rental of space or equipment has not changed since the 2017 PFS final rule. This fact is evident elsewhere in the MCR final rule. For example, the rule finalized changes to the exception for fair market value items and services, making it applicable to the rental of office space (85 FR 77606). With this change, we also revisited the exception to state that the previously-established restrictions at § 411.357(l)(3)(i) and (ii) applicable to fair market value equipment leases also apply to leases of office space. We reiterated our longstanding concerns with unit of service-based compensation formulas for leases of office space and equipment, described the history of such concerns, and stated, in response to a comment supporting the inclusion of the restriction, that it was “a necessary safeguard” for the reasons articulated in our prior rulemakings (85 FR 77607). We included a similar restriction in the newly-finalized exception for limited remuneration to a physician at § 411.357(z), citing the same concerns (85 FR 77624).

We continue to believe that arrangements involving unit of service-based compensation for the rental of office space or equipment, whether direct or indirect, may pose a significant risk of program abuse, and are proposing revisions to § 411.354(c)(2)(ii) that would ensure that the prohibition on certain unit of service-based compensation formulas for the rental of office space or equipment applies to all compensation arrangements that include them. Under proposed § 411.354(c)(2)(ii), an unbroken chain of financial relationships in which the compensation arrangement closest to the physician (or immediate family member) is an arrangement for the rental of office space or equipment would be an indirect compensation arrangement if all other conditions of § 411.354(c)(2)(i) through (iii) are met. If
the parties to the compensation arrangement elect to use the exception at § 411.357(p) instead of another applicable exception, if any, the compensation for the rental or office space or equipment may not be determined using a formula based on per-unit of service rental charges to the extent that such charges reflect services provided to patients referred by the lessee to the lessor.

Arrangements involving compensation to a physician for items or the services of others where the physician’s referral of designated health services to an entity or other business generated by the physician for an entity may contribute to the compensation received by the physician are distinguishable from arrangements that solely involve compensation for a physician’s personally performed services. Program integrity concerns arise when payment for items or services provided as the result of a physician’s referrals or the other business the physician generates, rather than the physician’s own labor, is included in the calculation of compensation. As discussed previously, the MCR final rule policy that identifies indirect compensation arrangements of concern under the physician self-referral law in a single-step process was focused on reducing unnecessary burden related to the analysis of unbroken chains of financial relationships that do not pose a risk of program or patient abuse, and was developed in the context of compensation paid to physicians for their personally performed services. However, the current regulations, as finalized in the MCR final rule, are not limited to indirect compensation arrangements under which a physician (or immediate family member) is paid solely for services that he or she personally performs, which, as a general matter, do not raise significant program integrity concerns, provided that the compensation is consistent with fair market value for the personally performed services.

To better align with our view regarding the reduced risk of program or patient abuse where compensation to a physician (or an immediate family member of a physician) is solely for services that he or she personally performs, the proposed revisions to § 411.354(c)(2)(ii) would require a two-step analysis of any unbroken chain of financial relationships in which the compensation paid under the arrangement closest to the physician (or immediate family member) is for anything other than services personally performed by the physician (or immediate family member), including, as noted above, arrangements for the rental of office space or equipment. Specifically, we are proposing to revise the condition at § 411.354(c)(2)(ii)(A) to consider an unbroken chain of financial relationships between a physician and an entity that meets the other conditions of § 411.354(c)(2)(i) through (iii) to be an indirect compensation arrangement for purposes of the physician self-referral law if the unit of compensation received by the physician (or immediate family member) is payment for anything other than services personally performed by the physician (or immediate family member). We are also proposing slight revisions to the language of § 411.354(c)(2)(ii)(A) and (3) to clarify that these conditions relate to the formula for calculating the amount of compensation per unit. As proposed, the condition at § 411.354(c)(ii)(A) would state that the referring physician (or immediate family member) receives aggregate compensation from the person or entity in the chain with which the physician (or immediate family member) has a direct financial relationship that varies with the volume or value of referrals or other business generated by the referring physician for the entity furnishing the designated health services and the individual unit of compensation received by the physician (or immediate family member): (1) Is not fair market value for items or services actually provided; (2) Is calculated using a formula that includes the physician’s referrals to the entity furnishing designated health services as a variable, resulting in an increase or decrease in the amount of compensation that positively correlates with the number or value of the physician’s referrals to the entity; (3) Is calculated using a formula that includes other business generated by the physician for the entity furnishing designated health services as a variable, resulting in an increase or decrease in the amount of compensation per unit that positively correlates with the physician’s generation of other business for the entity; or (4) Is payment for anything other than services personally performed by the physician (or immediate family member). For purposes of proposed § 411.354(c)(2)(ii)(A)(4), we would consider services that are performed by any person other than the physician (or immediate family member), including, but not limited to, the referring physician’s (or immediate family member) employees, the individuals in his or her medical director services, independent contractors, group practice members, or persons supervised by the physician (or immediate family member) not to be personally performed by the physician. We are proposing to codify this policy at § 411.354(c)(2)(ii)(B)(3).

c. Definition of “Unit” for Purposes of Applying § 411.354(c)(ii)(A)

As explained above, under current § 411.354(c)(2)—which was finalized in the MCR final rule—the determination of whether an indirect compensation arrangement exists requires the evaluation of the individual unit of compensation that the physician (or immediate family member) receives. If the individual unit of compensation does not meet any of the conditions at § 411.354(c)(2)(ii)(A)(1) through (3), the unbroken chain of financial relationships does not constitute an indirect compensation arrangement. Since the publication of the MCR final rule, we have received inquiries from stakeholders regarding how the provisions of § 411.354(c)(2)(ii)(A) should be applied in situations where compensation does not appear to be unit-based or is calculated using two or more different units or types of units. We are proposing revisions to § 411.354(c)(2)(ii)(B) to clarify how to identify the unit to analyze against the conditions of current § 411.354(c)(2)(ii)(A)(1) through (3) and proposed § 411.354(c)(2)(ii)(A)(4).

As a preliminary matter, it is our position that all compensation essentially is unit-based compensation. The underlying unit may be a discrete item, a unit of service, a unit of time, or a unit that results from combining different types of units into a single unit used to calculate the compensation. The identification of purely time-based or service-based units is straightforward. With respect to compensation that is entirely paid per hour, per day, per month, per year, or per similar period of time, the individual unit of compensation is the smallest unit of time for which the compensation is paid. For example, where a physician is paid $150 per hour for his or her medical director services, the unit is an hour. Similarly, where a physician is paid $350,000 per year for his or her full-time professional services, the unit is a year. With respect to compensation that is entirely paid per service, such as a work relative value unit (wRVU) or the provision of a training seminar, the unit is the individual service. For example, where a physician is paid $30 per wRVU that he or she personally performs, the unit is a wRVU. Similarly, where a physician is paid $100 for providing a training session, the unit is a training session.
Compensation formulas that incorporate a percentage of a variable are also unit-based. For example, if a physician is paid 50 percent of the amount collected for the professional services that he or she performs in a calendar year, the unit is a calendar year. If a physician is paid 95 percent of the Medicare PFS amount for a particular service that he or she personally performs, the unit is the service.

We are aware that compensation arrangements may include different units of compensation paid to a physician. According to stakeholders inquiring about the application of § 411.354(c)(2)(ii)(A), a physician employed by a physician organization may receive an annual salary for his or her full-time professional services furnished to patients of the physician organization plus a productivity bonus for each wRVU that he or she personally performs. The stakeholders inquired how to identify the unit that results from combining different types of units into a single unit used to calculate the physician’s compensation. In such instances, we consider the unit of compensation to be time-based and reflect the aggregate compensation paid to the physician during the period of time applicable to the payment; that is, the time-period during which compensation is paid (for example, per month or per year) or over the entire term of the arrangement. It is our understanding that fair market valuations generally follow this construct, determining the fair market value of various types of compensation for a physician’s personally performed services, such as fixed salary payments and productivity or bonus compensation, by assessing the physician’s compensation in the aggregate over a period of time. Further, a service-based unit of compensation is easily converted to a time-based unit by incorporating the period of time applicable to the payment for the services (for example, $30 per wRVU per month), while the reverse is not true. It is for these reasons that we believe that the wRVU compensation—that is, compensation that has both a time-based unit component and a service-based unit component—is appropriately analyzed by converting it to compensation for a unit of time for purposes of applying § 411.354(c)(2)(ii).

To illustrate, assume that an employment arrangement between a physician and a physician organization specifies compensation of $200,000 per calendar year for the physician’s full-time professional services plus a productivity bonus of $10 for each wRVU that he or she personally performs, and that the physician is paid on a monthly basis. The unit of compensation would be a month, and the formula for determining the compensation per month would be ($200,000 ÷ 12 months) + ($10 × the number of wRVUs personally performed during the month). (In the alternative, the parties could analyze the arrangement under § 411.354(c)(2)(ii)(A) using a calendar year as the unit of compensation.) However, if the employment arrangement specified productivity bonus compensation of $10 per wRVU only for those personally performed wRVUs above a predetermined target, the unit would be the period of time for which the target is applicable. To illustrate, instead of $10 for each wRVU that the physician personally performs, assume that the physician receives $10 for the wRVUs that he or she personally performs in excess of 4,000 wRVUs per calendar year. The unit of compensation would be a calendar year, and the formula for determining the compensation per year would be $200,000 + $10 × (actual number of wRVUs personally performed during the calendar year – 4,000).

We note that a compensation arrangement may also involve multiple units of the same type. For example, a physician employed by a physician organization may receive a salary of $200,000 per year for his or her full-time professional services plus $150 per hour for his or her personally performed medical director services or $500 per month for each of the physician organization’s NPs that he or she supervises. Or, a physician may receive compensation for services based on a fee schedule; for example, $50 for service A, $75 for service B, and $100 for service C. In circumstances where more than one unit of the same type is used to calculate the physician’s compensation, each unit must be analyzed under § 411.354(c)(2)(ii)(A)(1) through (4) to determine whether the conditions for an indirect compensation arrangement exist. To facilitate compliance with the physician self-referral law as it applies to indirect compensation arrangement, we are proposing a new regulation at § 411.354(c)(2)(ii)(B)(2) that expressly identifies the unit to consider for purposes of applying the regulation at § 411.354(c)(2)(ii)(A) and determining the existence of an indirect compensation arrangement that must satisfy the requirements of an applicable exception. Under proposed § 411.354(c)(2)(ii)(B)(2), for purposes of applying § 411.354(c)(2)(ii)(A), the individual unit is: (1) Time, where the compensation paid to the physician (or immediate family member) is based solely on the period of time during which the services are provided; (2) service, where the compensation paid to the physician (or immediate family member) is based solely on the service provided; and (3) time, where the compensation paid to the physician (or immediate family member) is not based solely on the period of time during which a service is provided or based solely on the service provided.

We seek comment on the proposals discussed above and whether additional guidance is needed with respect to the determination of whether an indirect compensation arrangement exists.

3. Exception for Preventive Screening Tests, Immunizations, and Vaccines (§ 411.355(h))

As a general matter, vaccines fall within the definition of “outpatient prescription drugs” at § 411.351, and therefore, are considered designated health services for purposes of the physician self-referral law. Because the federal government purchased the initial supply of COVID–19 vaccines, Medicare does not make payment for COVID–19 vaccines at this time,123 and COVID–19 vaccines do not fall within the definition of “designated health service” at § 411.351. However, should COVID–19 vaccines become payable by Medicare, unless the requirements of an applicable exception to the physician self-referral law are satisfied, the physician self-referral law’s prohibitions under section 1877(a)(1) of the Act and § 411.353(a) and (b) would apply to the referral and billing of COVID–19 vaccines.

In Phase I, using the Secretary’s authority at section 1877(b)(4) of the Act to create additional exceptions that do not pose a risk of program or patient abuse, we finalized an exception at § 411.355(h) that excludes from the physician self-referral law’s referral and billing prohibitions certain preventive screening tests, immunizations, and vaccines covered under Medicare (66 FR 939). As finalized in Phase I, in addition to requirements related to compliance with the federal anti-kickback statute and federal and state laws and regulations related to billing and claims submission, the exception at § 411.355(h) required that the preventive screening test, immunization, or vaccine is subject to CMS-mandated frequency limits, reimbursed by Medicare based on a fee schedule, and listed on the CMS website.

and in annual PFS Updates. In Phase II, we removed the requirement that the preventive screening test, immunization, or vaccine is reimbursed based on a fee schedule, in recognition that some of the vaccines eligible for the exception may be paid by Medicare using different reimbursement methods (69 FR 16116). In the MCR final rule, as part of a broader effort to decouple the physician self-referral law from the federal anti-kickback statute and federal and state laws or regulations governing billing or claims submission, we removed the requirement at former § 411.355(h)(2) that the arrangement does not violate the federal anti-kickback statute as well as the requirement at former § 411.355(h)(3) that the arrangement does not violate any federal or state law or regulation governing billing or claims submission (85 FR 77567).

Services to which the exception at § 411.355(h) is applicable remain designated health services for purposes of the physician self-referral law; however, referrals may be made and claims submitted for such services if all requirements of the exception are satisfied (69 FR 16100). In the CY 2021 PFS final rule, we added COVID–19 vaccines to the list of immunization and vaccine codes to which the exception at § 411.355(h) is applicable (85 FR 84954 through 85955). We did so to ensure that the physician self-referral law would not impede the availability of COVID–19 vaccines for Medicare and other patients if they become payable by Medicare (85 FR 84955).

Under current § 411.355(h)(1), a preventive screening test, immunization, or vaccine must be subject to CMS-mandated frequency limits, among other requirements. Frequency limits determine the maximum number of times that Medicare will pay for a service for a particular beneficiary during an established period, often a calendar year or 12-month period. CMS-mandated frequency limits also serve to minimize the risk of program or patient abuse due to a physician’s financial self-interest because Medicare would not pay for additional services referred and furnished in excess of the frequency limitation. In Phase I, we stated our belief that, under the terms of the exception at § 411.355(h) as finalized in Phase I—which included the requirement that the service is subject to CMS-mandated frequency limits—the risk of abuse is extremely low. We also stated that the exclusion of certain preventive screening tests, immunizations, and vaccines from the reach of the physician self-referral law is consistent with the statutory language and structure and the expressed Congressional intent to provide preventive care to Medicare beneficiaries (66 FR 939).

The United States continues to respond to the outbreak of COVID–19 caused by the severe acute respiratory syndrome coronavirus 2 (SARS–CoV–2). At this time, we have not mandated frequency limits for the COVID–19 vaccines identified on the List of CPT/HCPCS Codes (Code List) to which the exception at § 411.355(h) is applicable and we are uncertain whether or, if so, when CMS may mandate frequency limits for COVID–19 vaccines. Thus, although COVID–19 vaccines are identified on the List of CPT/HCPCS Codes as codes to which the exception at § 411.355(h) is applicable, they would not satisfy the requirement at current § 411.355(h)(1) that the preventive screening test, immunization, or vaccine is subject to CMS-mandated frequency limits. We are concerned that the current absence of CMS-mandated frequency limits on the available COVID–19 vaccines could impede the availability of critically important COVID–19 vaccines for Medicare and other patients, as physician referrals for COVID–19 vaccines would be prohibited unless another exception to the physician self-referral law is applicable and all its requirements are satisfied. Therefore, we are proposing to permit the use of the exception at § 411.355(h) for COVID–19 vaccines even when they are not subject to CMS-mandated frequency limits, provided that all other requirements of the exception are satisfied. Specifically, we are proposing to revise and renumber the regulation at § 411.355(h). Revised § 411.355(h)(1) would include the conditions that must be met to avoid the physician self-referral law’s referral and billing prohibitions, and revised § 411.355(h)(2) would state that the requirement at § 411.355(h)(1)(i) does not apply to a COVID–19 vaccine code during such period that the vaccine is not subject to a CMS-mandated frequency limit. In light of the impact of the COVID–19 pandemic on the United States and the vital need to protect beneficiaries (and others) from the SARS-CoV–2 virus, we do not believe that making the exception at § 411.355(h) available for COVID–19 vaccines to which no CMS-mandated frequency limits apply would pose a risk of program or patient abuse. We seek comment on our approach and whether we should limit relief from the requirement at proposed § 411.355(h)(1)(i) to the period during which the current public health emergency is in effect, until such time as CMS-mandated frequency limits apply for COVID–19 vaccines, or some other period of time.

In the alternative, we are proposing to remove the CMS-mandated frequency limit requirement for all vaccines. We seek comment on whether it would then be necessary to include alternative program integrity requirements in the exception at § 411.355(h). We are interested in comments regarding whether physicians are likely to order vaccines more frequently than recommended by the Department and any other organization the Department identifies as an authority on this matter.

We are not proposing to remove the CMS-mandated frequency limit requirement with respect to preventive screening tests. We remain concerned that a physician’s ability to refer frequently for preventive screening tests could lead to program or patient abuse, and do not believe that the current COVID–19 pandemic or any other circumstances necessitate the removal of this important program integrity protection with respect to preventive screening tests.

We are also proposing to revise the terminology used in the exception at § 411.355(h) for clarity and consistency. Specifically, we are proposing to remove the terms “immunization” and “immunizations” throughout § 411.355(h) and the headers used in the Code List. The Centers for Disease Control and Prevention (CDC) defines immunization as a process by which a person becomes protected against a disease through vaccination. This term is often used interchangeably with vaccination or inoculation. Vaccine is defined as a product that stimulates a person’s immune system to produce immunity to a specific disease, protecting the person from that disease. All of the codes currently on the Code List to which the exception at § 411.355(h) is applicable have a descriptor containing “vaccine” or a derivative of “vaccine.”

Vaccines fall within the definition of “outpatient prescription drugs” at § 411.351, and therefore, are considered designated health services for purposes of the physician self-referral law. As defined by the CDC, an immunization is not an item or service that is a “designated health service” (as defined in §411.351) and to which the physician self-referral law applies. We believe that “vaccine” is the appropriate term to use in §411.355(h) and in the

---

headers in the Code List. Although we are not aware that including both terms in § 411.355(h) and the Code List has caused stakeholder confusion to date, we are proposing to improve the accuracy of the terminology at this time to prevent any possible confusion in the future. The proposed revisions to § 411.355(h), if finalized, would not affect whether we consider a code to be a designated health service.

4. List of CPT/HCPCS Codes (§ 411.351)

As described in section II.P.1. of this proposed rule, unless an exception applies and its requirements are satisfied, the physician self-referral law prohibits a physician from making a referral for the furnishing of certain designated health services if the physician has a financial relationship with the entity to which the referral is made. Recognizing that providing precise definitions of which designated health services implicate the physician self-referral law would facilitate compliance with the law, in the Phase I final rule, we determined to define certain designated health services by publishing specific lists of CPT and HCPCS codes that physicians and providers most commonly associate with a given designated health service (66 FR 922). This list of codes defines the entire scope of the designated health services category for purposes of the physician self-referral law and is controlling vis-à-vis the definition of the category at § 411.351, which contains a general explanation of the principles used to select the codes.

In Phase I, we stated that, because HCPCS Level I and II codes change and can quickly become out-of-date, we would not include the list of codes that are designated health services in the text of our regulations (66 FR 923). We also stated that, the definitions of specific services in our regulations would cross reference to a comprehensive table that would appear initially in the Federal Register along with Phase I and thereafter in an addendum to the annual final rule concerning payment policies under the PFS rule. We defined at § 411.351 the term “List of CPT/HCPCS Codes Used to Describe Certain Designated Health Services Under the Physician Referral Provisions (Section 1877 of the Social Security Act)” to mean the list of certain designated health services under section 1877 of the Act initially posted on the CMS website and updated annually thereafter in an addendum to the PFS final rule and on the CMS website. In the Phase II interim final rule, we revised the term to “List of CPT/HCPCS Codes” and its definition to “the list of CPT and HCPCS codes that identifies those items and services that are designated health services under section 1877 of the Act or that may qualify for certain exceptions under section 1877 of the Act.” The Phase II definition also stated that the list is updated annually, as published in the Federal Register, and is posted on the CMS website at http://www.cms.gov/medicare/physicianselfreferral/List_of_Codes.

Coding changes have become more frequent since we initially began publishing the Code List. Currently, CPT codes are updated annually and effective for use on January 1 of each year, with some exceptions for Category I, II, and III codes, which are published more frequently. CMS has updated its HCPCS Level II coding procedures to enable shorter and more frequent HCPCS coding cycles. For example, we have implemented quarterly HCPCS code application opportunities for drugs and biologicals; and bi-annual application opportunities for Durable Medical Equipment (DME) and Orthotics, Prosthetics (O&P), and Supplies, as part of our comprehensive initiative to foster innovation and expedite adoption of and patient access to new medical technologies. (See https://www.cms.gov/Medicare/Coding/ MedHCPCSGenInfo.)

In order to make available the most recent updates in a timelier manner for purposes of the physician self-referral law, we are proposing to update the Code List on a more frequent basis. Specifically, we are proposing to update the Code List each calendar quarter, and provide public notification in advance of Code List updates. Advance notification would be posted on the CMS website on March 1, June 1, September 1, and December 1 of each year, with corresponding Code List updates effective on April 1, July 1, October 1, and January 1, respectively. We are also proposing a 30-day public comment period following the posting of each advance notification of the upcoming quarterly Code List update. Under this proposal, we would provide information on our website regarding the process for submitting public comments through www.regulations.gov and address all public comments on the Code List on the CMS website. We anticipate that most comments would be addressed within 90 calendar days of the effective date of the Code List update to which they pertain; however, a longer timeframe may be necessary to address complex comments or those that require coordination with external parties. This new process and schedule would begin with the update effective April 1, 2022. The Code List that is effective January 1, 2022 would be included in the CY 2022 PFS final rule. We believe that predetermined dates for the updates will provide clarity and transparency for stakeholders regarding any revisions to the Code List.

In addition, we are proposing to publish the Code List solely on the CMS website (commencing after the publication of the January 1, 2022 Code List in the CY 2022 PFS final rule, as proposed above). We believe that publication via the CMS website would facilitate compliance with the physician self-referral law and allow access to the most up-to-date Code List. Further, this approach would provide a more comprehensive list of codes identifying designated health services for purposes of the physician self-referral law that better aligns with the current coding cycles for CPT and HCPCS codes.

Finally, we are proposing corresponding revisions to the definition of List of CPT/HCPCS Codes at § 411.351 to update the URL that indicates where the Code List is published on the CMS website. Specifically, we are proposing to revise the definition of List of CPT/HCPCS Codes at § 411.351 to state “List of CPT/HCPCS Codes means the list of CPT and HCPCS codes that identifies those items and services that are designated health services under section 1877 of the Act or that may qualify for certain exceptions under section 1877 of the Act. It is updated each calendar quarter and posted on the CMS website at https://www.cms.gov/Medicare/Fraud-and-Abuse/PhysicianSelfReferral/List_of_Codes.”

We seek comment on our proposals and whether more or less frequent Code List updates would be appropriate.

Q. Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D Drug Under a Prescription Drug Plan or an MA–PD Plan

1. SUPPORT Act Requirements

Section 2003 of the SUPPORT Act generally mandates that the prescribing of a Schedule II, III, IV, or V controlled substances under Medicare Part D be done electronically in accordance with an electronic prescription drug program
FDA requires a prescription to contain elements that are not able to be included in electronic prescribing, such as a drug with risk evaluation and mitigation strategies that include elements to assure safe use:

- A prescription issued by a practitioner—
  ++ For an individual who receives hospice care under title XVIII of the Act; and
  ++ That is not covered under the hospice benefit under title XVIII of the Act;
- A prescription issued by a practitioner for an individual who is—
  ++ A resident of a nursing facility (as defined in section 1919(a) of the Act); and
  ++ Dually eligible for benefits under title XVIII and title XIX of the Act.

2. Previous Regulatory Action

To begin the process of implementing section 2003 of the SUPPORT Act, in August 2020, we released a Request for Information entitled “Medicare Program: Electronic Prescribing of Controlled Substances; Request for Information (RFI)” (85 FR 47151) (hereinafter referred to as the August 2020 RFI). In August 2020, we released the CY 2021 PFS proposed rule (85 FR 50074) (hereinafter referred to as the CY 2021 PFS proposed rule), which proposed that Part D prescribers be required to use the NCPDP SCRIPT 2017071 standard for EPCS prescription transmissions. We proposed that this mandate would not become effective until January 1, 2022.

We received a combined total of 155 timely comments in response to the August 2020 RFI and the CY 2021 PFS proposed rule. Most commenters supported implementing EPCS and use of the NCPDP SCRIPT 2017071 standard. Comments were mixed as to when compliance actions for EPCS should begin. Some commenters requested that CMS adhere to the January 1, 2021 date specified in the SUPPORT Act because of the many safety benefits associated with EPCS articulated in the rule. Some prescriber groups supported the proposed January 1, 2022 date, while others requested even more time for implementation. To balance the needs of prescribers who wanted more time to implement EPCS and commenters who wanted adherence to the January 1, 2021 date, we finalized this provision with an effective date of January 1, 2021 and a compliance date of January 1, 2022 in the CY 2021 Physician Fee Schedule final rule (85 FR 84472) (hereinafter referred to as the CY 2021 PFS final rule). Due to the consensus among commenters that the NCPDP SCRIPT 2017071 standard was the best choice for EPCS, we required in the CY 2021 PFS final rule that Part D prescribers use this standard.

3. Current EPCS Environment

A variety of Part D medications are classified as controlled substances by the Drug Enforcement Administration (DEA). Among these are medications used for the treatment of acute and chronic pain, (for example, hydrocodone, fentanyl, codeine, methadone), and stimulant medications (for example, Adderall®, Ritalin®). Buprenorphine (for example, Suboxone®) is one of only three of the most effective drugs approved by the FDA to treat opioid use disorders (OUD) including in outpatient settings, and is a Schedule III drug. Benzodiazepines and sedative-hypnotics (including Xanax®, Valium®, Ativan®, Restoril®, Midazolam®, and Halcion®) are used for sleep, agitation, and seizure disorders. Anabolic steroids (for example, Depo-testosterone®) are used to treat impotence, delayed puberty, hormonal imbalance, and inoperable breast cancers.

As discussed in the CY 2021 PFS proposed and final rules, we noted that electronic prescribing of controlled substances provides multiple advantages over the traditional processing of paper prescriptions. These advantages include, but are not limited to, improved workflow efficiencies; deterring and detecting prescription fraud and irregularities by requiring an extra layer of identity proofing, two-factor authentication and digital signature processes; enhanced patient safety through patient identity checks, safety alerts, medication menus, electronic history files, and medication recommendations that lower the risk of errors and potentially harmful interactions; and providing more timely and accurate data than paper prescriptions by avoiding data entry errors and pharmacy calls to a prescriber to clarify written instructions. By allowing for the direct transmission of prescriptions for controlled substances between prescribers and pharmacies or facilities, EPCS may also reduce the burden on prescribers who need to coordinate and manage paper prescriptions between staff, patients, facilities, other care sites, and pharmacies. EPCS can also assure prescribers’ identity more easily and may permit a single workflow for prescribing both controlled and non-controlled drugs, improving the overall prescribing process.

From the patient standpoint, EPCS may reduce the logistical burden on patients and caregivers who may...
otherwise be required to make multiple trips between prescribers and pharmacies to transport paper prescriptions when filling time-sensitive prescriptions, while in pain, or otherwise in need of medical treatment with controlled substances. EPCS can lessen the time needed to obtain prescriptions by minimizing trips to the prescriber to pick up paper prescriptions for refills and minimize transportation costs to and from the prescriber’s office. EPCS’s identity and security requirements assure prescribers, patients, and pharmacies that prescriptions are processed as intended. In addition to helping with the reduction in fraud previously described, EPCS minimizes the likelihood that prescriptions have been tampered with, since electronic prescriptions are securely transmitted directly to the pharmacy from health information technology, which minimizes the likelihood of exposure to patients or other third parties. During the PHE for COVID–19, EPCS also helps parties observe social distancing.

It is due to these advantages, coupled with the SUPPORT Act’s EPCS mandate, that we encourage all prescribers to conduct EPCS as soon as is feasible for them. We believe that although EPCS is ultimately more efficient, implementing EPCS does take additional time and resources. Prescribers must follow DEA guidance for EPCS, which is summarized at https://deadiversion.usdoj.gov/ecomm/e_rx/. Prescribers must first ensure that their current ePrescribing software can support EPCS and meets DEA requirements pursuant to 21 CFR part 1311. Further, DEA also requires prescribers to have their identities verified prior to being issued the authentication credentials needed to sign and issue electronic controlled substance prescriptions. For individual prescribers, identity proofing (that is, verification that the prescriber is who he or she claims to be) is conducted by a credential service provider (CSP) or certification authority (CA). Institutional practitioners, as defined under 21 CFR 1300.01, have the option of conducting in-house identity proofing of the practitioners authorized to use the institution’s e-prescribing software. Alternatively, institutional practitioners may require their practitioners to undergo identity proofing by a CSP or CA. Once their identities have been confirmed, prescribers may be issued their authentication credentials. The authentication credentials must be two-factor, meaning that prescribers must be required to supply two factors to confirm both their identity and their authorization to access the e-prescribing software. The factors may be something the prescriber knows (such as a password or PIN), something the prescriber has (such as a smartcard or token), or a biometric (such as a fingerprint). For institutional practitioners, the authentication credentials may be issued by an entity within the institution that is separate from the entity that conducted identity proofing, if identity proofing was conducted in-house. Otherwise, authentication credentials are issued by a CSP or CA. Once a prescriber has received his or her two-factor authentication credentials, the prescriber must be granted access to sign and issue electronic controlled substance prescriptions using the e-prescribing software. This step is completed by certain individuals specifically designated to manage the e-prescribing software’s logical access controls. Prior to granting a prescriber access, the individuals managing logical access controls must verify that the prescriber’s state authorization to practice and, where applicable, state authorization to prescribe controlled substances, are valid. Additionally, for individual prescribers (those prescribers not prescribing under an institutional practitioner’s DEA registration), the individuals managing logical access controls must verify that their DEA registration is valid. This step is required even if they are already prescribing controlled substances on paper. After being granted access, practitioners may sign and issue electronic prescriptions for controlled substances using their two-factor authentication credentials. The EPCS application must require two-factor authentication for each transaction. Software and workflow training is available for each step of the process. When writing prescriptions, the prescriber may wish to talk with the patients and/or caregivers about electronic prescribing, so there is awareness of the general mechanics of how the prescription(s) will be conveyed to the pharmacy.

We recognize that section 2003(c) of the SUPPORT Act tasked the Department of Justice (DOJ) with updating the requirements for the biometric component of multifactor authentication. As shown on the Spring 2021 Unified Agenda,126 rulemaking to address this mandate is currently in progress. After reviewing comments on the August 2020 RFI and CY 2021 PFS proposed rule and talking with industry stakeholders, we recognize that comments believe that an update in the DOJ requirements should allow prescribers to start conducting EPCS with greater ease.

The comments also stated that prescribers have felt strained by the COVID–19 pandemic. Prescribers reported feeling financially strained, worried about their own health and the health of their employees, and concerned about having to make rapid changes during a time when they are continuing to cope with the effects of the COVID–19 pandemic on their practices, and their patients. Despite the strain that has been experienced by prescribers, we have noted an increase in EPCS during this PHE. In CY 2021, EPCS increased to 70 percent of all prescription drug events (PDEs) for controlled substances as compared to 38 percent in CY 2019.127 We believe that social distancing is likely to be at least partly responsible for the increase in EPCS during this PHE for COVID–19. With the use of electronic prescribing, one potential prescriber-patient interaction in which COVID–19 could be transmitted is eliminated, and any necessary prescriptions can be electronically transmitted to the pharmacy without the prescriber and patient having to see each other in person and risk transmitting COVID–19. Some insurers, including Part D plans, have been permitting medication refills, including for controlled substances, earlier than usual or for a more extended period of time than is allowed. Pharmacies that were not doing so before the pandemic have been delivering medications, or delivering them at no charge, and communities and individuals have worked together to design ways for vulnerable persons to continue to receive access to prescribed medications in tandem with government and private sector flexibilities during the PHE. We believe that these additional flexibilities may have encouraged prescribers to more broadly use EPCS, since it prevented them from having their prescription transmissions automatically denied. The reason for this is that EPCS transaction sets can pull certain pieces of required information for use in their transactions, which prevent the transactions from hitting system edits that would have previously prevented these practices.

127 Based on Prescription Drug Event data processed through April 6, 2021.
4. Proposed Timeframe for EPCS Adoption

Section 2003 of the SUPPORT Act mandates that EPCS for Part D controlled substances begin on January 1, 2021. Due to this statutory mandate coupled with the aforementioned advantages provided by EPCS, we encourage all prescribers to adopt EPCS as soon as is feasible for them. However, as stated in our CY 2021 PFS final rule, we recognize that although EPCS is ultimately more efficient, implementing EPCS takes additional time and resources. It is for this reason that, in our CY 2021 PFS final rule, we finalized a policy stating that CMS would not take compliance actions before January 1, 2022.

In crafting this policy, we also examined responses from commenters encouraging earlier adoption of EPCS, due to its benefits for social distancing, improved patient safety and workflow efficiencies, fraud deterrence, adherence management, and reduced burdens. We agreed with commenters that EPCS has many benefits, which is why we specified an effective date of January 1, 2021 in our regulations, even though we declined to take compliance actions until January 1, 2022.

Since finalizing the CY 2021 PFS final rule, we have received additional prescriber feedback indicating concern with having to implement EPCS rapidly. We have also learned more about the degree to which prescribers have been adversely affected by the COVID–19 pandemic, and that the PHE and the widespread effects of the pandemic may last longer than we had anticipated last year. We want to ensure that our actions do not have unintended consequences, such as the abrupt discontinuation of prescribers’ ability to prescribe controlled substances to vulnerable populations, including Part D beneficiaries who need pain treatment or who have SUDs. In addition, once DOJ has had the opportunity to implement updates to EPCS requirements, such updates will allow prescribers to start conducting EPCS more rapidly and easily. It is for these reasons that we are proposing to revise § 423.160(a)(5) to change the EPCS compliance date from January 1, 2022 to January 1, 2023. We welcome comments on this proposal, including whether commenters believe that we should maintain the January 1, 2022 compliance date, given the benefits of EPCS, and the feasibility for prescribers to adopt EPCS for Part D prescriptions by January 1, 2022.

We propose to extend the compliance deadline for Part D controlled substance prescriptions written for beneficiaries in long-term care (LTC) facilities, excluding beneficiaries who are residents of nursing facilities and whose care is provided under Part A of the benefit, from January 1, 2022 to January 1, 2025. The intent of this extension is to strike a balance between being responsive to stakeholder concerns surrounding the increased implementation barriers faced by LTC facilities, while at the same time helping ensure that these facilities eventually implement EPCS, due to its aforementioned benefits.

After considering the comments in response to our August 2020 RFI and CY 2021 PFS proposed rule, in addition to our conversations with stakeholders, we believe that LTC facilities face additional barriers to EPCS adoption that most prescribers do not face. In addition to the current challenge of having to manage care for vulnerable residents during the current COVID–19 pandemic, prescribers who work in LTC facilities or who provide care to residents in LTC facilities face technological barriers that other prescribers do not face. One such barrier is that the NCPDP SCRIPT 2017071 standard lacks appropriate guidance for LTC facilities. We understand that this is because early versions of the NCPDP SCRIPT Standard, such as NCPDP SCRIPT Standard versions 5.0 and 8.1, did not support the workflows in the LTC setting that require prescribers to issue a prescription for a patient to a non-prescriber (such as a nursing facility) that then forwards the prescription to a dispenser (LTC pharmacy). We nevertheless adopted the NCPDP SCRIPT 2017071 standard in the CY 2021 PFS final rule [85 FR 84807] because it is the most commonly used standard for Part D e-prescribing, and we sought to minimize disruption and provider burden when implementing this statutory mandate. However, we understand that NCPDP is in the process of creating specific guidance for LTC facilities within the SCRIPT 2017071 standard, which would allow willing partners to enable three-way communication between the prescriber, LTC facility and pharmacy to bridge any outstanding gaps that impede adoption of the NCPDP SCRIPT 2017071 standard in the LTC setting. We understand that NCPDP may be able to adopt these changes and integrate them into the LTC workflow by January 1, 2023.

We also understand that some LTC settings/services in rural communities do not have sufficient capabilities to support the NCPDP SCRIPT 2017071 standard. This concern is exacerbated by the fact that based on stakeholder feedback and information in several reports, we believe LTC settings often include practitioners and staff serving large numbers of residents across multiple nursing homes. This unique set of circumstances means that some practitioners who primarily practice in suburban or urban areas may have to travel to see residents in rural facilities where there is limited broadband, making EPCS transmission set-ups difficult across LTC facilities. However, we believe that as broadband access increases and the impact of the pandemic decreases, LTCs should be able to more easily conduct EPCS.

As a result, we propose to revise § 423.160(a)(5) to clarify that compliance actions for prescriptions written for beneficiaries in an LTC facility will not begin until January 1, 2025. We do not propose a specific LTC waiver or exception to the EPCS requirement, and we do not anticipate extending the compliance deadline beyond January 1, 2025. We solicit comments on the benefits, burdens, and challenges of this approach.

5. Proposed Compliance Threshold

The EPCS requirement applies to all controlled substance prescriptions for Part D drugs under a Part D plan, unless an exception to the requirement applies. In order to implement this mandate effectively, however, we seek to implement it in a manner that balances the mandate with helping ensure that prescribers are not overly burdened, and are able to issue prescriptions for their patients during the rare occurrences when EPCS is not feasible, such as:

• When it would be impractical for the patient to obtain medication(s) prescribed by electronic prescription in a timely manner and such delay would adversely impact the patient’s medical condition,

• When the NCPDP standard does not support transmitting the prescription,

• When the prescriber is unable to meet DEA requirements for identity proofing for reasons beyond their control;

• Where EPCS is not available due to temporary technological failure.

Based on our review of PDE data, the NCPDP standard, and our conversations with Part D stakeholders, we believe that there are very few scenarios under which a prescription could not be transmitted using the NCPDP standard.

We note that the section 1860D–4(e)(7)(B)(v) of the Act provides that the Secretary may grant an exception for a prescription issued for a drug for which the FDA requires a prescription to contain elements that cannot be included in electronic prescribing. However, after reviewing the NCPDP standard implementation guide, we do not believe that there are any such prescriptions under the current standard. The statute gives as an example a drug with risk evaluation and mitigation strategies that include elements such as the aforesaid. Based on our review of the current NCPDP standard, all opioids have risk evaluation and mitigation strategies and as a result, would fall into the exception if there were one, which would frustrate the purpose of this statute.129 As a result, we decline to propose to adopt this suggested exception. However, we seek comment on this decision.

We do believe that other reasons could make EPCS not feasible for prescribers who currently conduct EPCS, such as the aforementioned cases of temporary technological failures or cases where it would be impractical for the patient to obtain medication(s) prescribed by electronic prescription in a timely manner and such delay would adversely impact the patient’s medical condition. However, we are not proposing a specific exception for these cases, since based on our stakeholder feedback and review of PDE data, we believe that EPCS is not feasible in no more than an estimated 30 percent of instances due to circumstances such as the ones described previously. We believe that Part D prescribers should be able to conduct EPCS on 70 percent of their Part D controlled-substance prescriptions without being overly burdened or burdening patients. Under section 1860D–4(e)(7)(D) of the Act, we have authority to specify appropriate penalties for non-compliance with the EPCS requirement. It follows, then, that we similarly have the authority to specify a threshold for when we would penalize non-compliance. For this reason, we propose that in order for prescribers to be considered compliant with the EPCS mandate, they must prescribe at least 70 percent of their Part D controlled substance prescriptions electronically.

Specifically, we are proposing to revise § 423.160(a)(5) to specify that 70 percent of all prescribing under Part D for Schedule II, III, IV, and V controlled substances be done electronically per calendar year, excluding from that calculation any prescriptions issued while a prescriber falls within an exception or a waiver. We would conduct this calculation by examining PDE data at the end of the calendar year and dividing the number of Part D controlled substances that the prescriber e-prescribed by the total number of Part D controlled substance prescriptions that the prescriber prescribed. We seek comment on this method and the proposal to make 70 percent the compliance threshold for adherence to the EPCS mandate, and what circumstances would make EPCS not feasible.

6. Proposed Classes of Exceptions
   a. Prescriptions Issued When the Prescriber and Dispensing Pharmacy Are Same Entity

   Section 2003 of the SUPPORT Act requires that we specify circumstances by which we may waive the EPCS requirement, and the statute lists several possible circumstances to consider. We listed and sought comment on these circumstances in the August 2020 RFI. The first of these circumstances, which is listed at section 1860D–4(e)(7)(B)(i) of the Act, is when the practitioner issuing the prescription and dispensing pharmacy are the same entity.

   All August 2020 RFI commenters who commented on this exception supported it, stating that such an exception would promote patient safety, workflow efficiency, and health IT performance. Several commenters noted that requiring EPCS in this circumstance may create an unwarranted artificial workflow structure. We believe that this may be because the EPCS transactions conducted within an organization are commonly handled by a single database that exists within the organization, and should we not grant this exemption, these entities would be required to reconfigure their own processes, rather than leverage their own integrated databases. Were we to implement a requirement to use the NCPDP SCRIPT 2017071 standard within this closed system, this requirement could increase costs and the rate of performance errors, such as data corruption and patient matching errors, which we understand often happens when an entity is forced to split a unified database into a transaction system that relays information to and from the same entity. We seek comment on this assumption.

   As stated in our current regulation at § 423.160(a)(3)(iii), we currently allow Part D plans to use either HL7 messages or the NCPDP SCRIPT standard to transmit prescriptions or prescription-related information internally when the sender and the beneficiary are part of the same legal entity. This allowance stands in contrast to our overarching requirement at § 423.160(a)(1) and (3), for prescribers to use the NCPDP SCRIPT standard for most external transactions. We believe that allowing Part D plans to continue to have more discretion over their internal transactions is consistent with our current policy. Therefore, we propose to adopt at § 423.160(a)(5)(i) the EPCS exception listed in section 1860D–4(e)(7)(B)(ii) of the Act, for prescriptions issued where the prescriber and dispensing pharmacy are the same entity. We seek comment on this proposal.

b. Cases Where Prescribers Issue Only a Small Number of Part D Prescriptions

   As we develop regulations to implement section 2003 of the SUPPORT Act, we seek to help ensure that Part D prescribers, including small prescribers (which CMS will define in subsequent rulemaking) are not overly burdened by our regulation. Based on the comments received from the August 2020 RFI and the stakeholder feedback that we received about EPCS in general, we believe it is appropriate to specify circumstances for a waiver of the EPCS requirement in cases where a prescriber issues a very low volume of controlled substance prescriptions for Part D drugs. For prescribers of very few Part D controlled substance prescriptions, the cost of installing EPCS equipment and software may be unduly burdensome relative to its benefit in terms of improving the security of prescriptions for controlled substances. As noted above, we do not want to disincentivize prescribers from prescribing controlled substances to Part D beneficiaries altogether, especially those who have few beneficiaries who need them.

   After reviewing the current PDE data and the costs associated with implementing EPCS, we propose to exempt prescribers who prescribe 100 or fewer Part D controlled substance prescriptions per year. Based on our stakeholder feedback, we understand that EHR companies provide the initial electronic prescribing set-up free of charge, provided the prescribers transmit a minimum number of transactions per year. We estimate that this amount is, on average, 100 Part D controlled substance transactions. In order to do EPCS, prescribers would have to have the capability to e-prescribe more broadly. It is for this reason that we weighed the cost of e-prescribing set-up against the benefit, even though we do not intend to include non-part D prescriptions of controlled or...
non-controlled substances in our calculation of whether or not prescribers meet the threshold of 100 Part D controlled substance prescriptions per year. Since, based on our conversations with stakeholders, the cost of EPCS transactions is less than the cost of transmitting certain transactions manually, we believe that the initial investment to install EPCS equipment and software is likely justified once prescribers transmit more than 100 Part D controlled substance prescriptions per year. We seek comment on this assumption. Although we understand that prescribers will be required to purchase third party applications with additional identity and security measures so that EHRs meet DEA requirements, we have not included this cost in our calculation, due to the wide variability of these costs for which there is a dearth of information. We seek stakeholder feedback on the costs of these third-party applications.

We believe that requiring prescribers who prescribe 100 or fewer Part D controlled substance prescriptions per year to purchase and construct EPCS hardware and software may be financially burdensome for these prescribers compared to the benefits of EPCS, since any reduced costs from EPCS transactions may not be enough to justify the initial start-up costs for purchasing and installation of EPCS hardware and software. We also believe that the cost of any future CMS compliance actions may be too great to justify when 100 or fewer Part D controlled substance prescriptions per year strikes the right balance between helping ensure that we implement section 2003 of the SUPPORT Act’s EPCS mandate and that prescribers can use resources appropriately.

In order to implement this exception using the data that we have available, we are proposing that this exception be given to individual prescribers, regardless of the size of the group practice that they belong to. We also believe that this exception would protect these small prescribers, should they change their place of employment or if their place of employment does not offer support for implementing EPCS. We seek comment on this proposal.

Based on our examination of PDE data and conversations with stakeholders, we believe that prescribers working under most research protocols would fall under the proposed exception for small prescribers. However, we seek comment on this assumption. Although we have not proposed to adopt the suggested exception listed in section 1860D–4(e)(7)(B)(iv) of the Act, which describes an exemption for prescribers working under a research protocol, we believe that in most cases prescribers who would fall within this category would be included in the exception for small prescribers or in the exception for cases where the prescriber and dispenser are the same entity. We decline to propose to specifically create an exception for prescribers working under a research protocol in the regulations, since we believe that so few prescribers would fall outside of these other exceptions. We believe an exception for prescribers working under a research protocol who do not otherwise meet these exceptions is unnecessary because we believe that EHR companies will set up the appropriate EHR equipment, provided around 100 Part D controlled substance prescriptions are transmitted per year.

We propose to implement this proposal by examining PDE claims as of December 31 of the prior year to determine which prescribers fall within this exception. Prescribers can ascertain whether they meet this exception by looking at how many prescriptions for Part D controlled substances they conducted the prior year or by contacting the CMS contractor responsible for administering the compliance portion of this mandate. CMS and its contractor will be using PDE data from the prior year to determine whether the prescriber qualifies for the exception based on the number of Part D controlled substance claims the prescriber had issued the previous year. CMS will use the previous year’s data to determine whether or not the prescriber falls under this exception for the year-in-question. We do not see a compelling reason to exempt prescribers conducting a research protocol on that basis alone.

Based on our conversations with Prescription Drug Plans (PDPs), MA–PD plans, and other organizations with which prescribers are affiliated, we are aware that some are willing to donate the technology and services necessary for prescribers to adopt EPCS. Based on those conversations, we believe that they are more willing to donate these technology and services to prescribers who are working under a research protocol, than to prescribers not working under such a protocol. However, we seek comment on such an assumption. We believe that, to the extent this is an accurate assumption, such donations further decrease the burden for prescribers working under a research protocol. It is for these additional reasons that we have declined to propose an exception for those working under a research protocol. We seek comment on this decision.

We propose to amend § 423.160(a)(5) by adding § 423.160(a)(5)(ii), which creates an exception for prescribers who issue 100 or fewer controlled substance prescriptions for Part D drugs per calendar year as determined using CMS claims data as of December 31st of the preceding year, so that these prescribers will not be required to meet the EPCS requirement. We seek comment on this proposal, including regarding the maximum number of Part D controlled substance prescriptions a prescriber can issue to be still considered a small prescriber and, so, to fall within this exception.

c. Cases of Recognized Emergencies and Extraordinary Circumstances

Section 1860D–4(e)(7)(B)(iii) of the Act, as added by section 2003 of the SUPPORT Act, lists an exception for consideration by the Secretary for cases of exceptional circumstance demonstrated by the prescriber. As stated in our proposal regarding the EPCS compliance threshold, we seek to help ensure that prescribers are able to issue prescriptions for their patients during the rare occurrences when EPCS is not feasible. We believe that the exception listed in the statute, which includes economic hardship, technological limitations that are not reasonably within the control of the prescriber, and other exceptional circumstances, includes prescribers who are overwhelmed due to having to treat patients during a pandemic or a natural disaster such as a hurricane, flood, or earthquake. It is our goal not to penalize prescribers for such circumstances, and we do not want to unduly increase their burden during difficult situations that impact them, and their patients. We seek comment on what other extraordinary circumstances may prevent prescribers from being able to conduct EPCS.

In order to help ensure that these extraordinary circumstances are accounted for, we are proposing two exceptions to the EPCS requirement. The first exception, at proposed § 423.160(a)(5)(iii), is for prescribers who are prescribing during a recognized emergency, such as a natural disaster, a pandemic, or a similar situation where there is an environmental hazard. We want to help ensure that the EPCS mandate does not interfere with necessary care for patients, especially during natural disasters or pandemics.
As a result, we are proposing to exempt prescribers who are issuing prescriptions in areas that are affected by such circumstances. To qualify for this exception, this circumstance would have to arise from an emergency or disaster declared by a federal, state, or local government entity. We would determine whether a prescriber qualifies for this exception based on whether the prescriber’s NCPDP database address is located in the geographic area of an emergency or disaster declared by a federal, state or local government entity. The second exception, at proposed § 423.160(a)(5)(iv), is for prescribers who request and receive from CMS a waiver, which CMS would grant to prescribers who are facing extraordinary circumstances that prevent them from electronically prescribing a controlled substance to a Part D beneficiary, but who are not in an emergency or disaster area. We define “extraordinary circumstance” to mean a situation, other than an emergency or disaster, outside of the control of a prescriber that prevents the prescriber from electronically prescribing a controlled substance to a Part D beneficiary. An example of such a circumstance would be if a prescriber was in a service area that lacks broadband access or EPICS providers refuse to install systems for the prescriber. The prescriber would have to be able to submit evidence of such an extraordinary circumstance to CMS.

For purposes of the exception at proposed § 423.160(a)(5)(iii), prior to imposing EPICS actions on a prescriber, we would ascertain whether there is an emergency or disaster declared by a federal, state, or local government entity for the geographic area associated with the prescriber’s address in the NCPDP database. For purposes of the proposed exception at proposed § 423.160(a)(5)(iv), we are proposing that prescribers will be excepted from the EPICS requirements if they request and receive a waiver from CMS. We intend that prescribers will be able to submit a request for a waiver to inform CMS of any extraordinary circumstances that they may be facing and that would prevent the prescriber from conducting EPICS. This waiver could be for any circumstance outside of the prescriber’s control and does not require an official declaration by a state or local government. To meet the standard for a waiver, prescribers must provide documentation showing the existence of a circumstance beyond their control and that such a circumstance prevents them from conducting EPICS. Section 1860D–4(e)(7)(B)(iii) of the Act, as added by section 2003 of the SUPPORT Act, refers to a waiver or a renewal thereof for a period of time as determined by the Secretary, not to exceed one year, which suggests a timeframe not to exceed one year, but to be determined by the Secretary.

We have proposed the first part of the waiver process below and will include more information about it in subsequent rulemaking. We welcome stakeholder comments on a potential waiver process.

To implement this proposal, we propose to amend § 423.160(a)(5) by adding paragraphs (a)(5)(iii) and (iv). Section 423.160(a)(5)(iii) would specify an exception for prescribers in the geographic service area of an emergency or disaster declared by a federal, state or local government entity. Section 423.160(a)(5)(iv) would clarify that prescribers would be exempt from the EPICS requirements if they have received a CMS-approved waiver certifying that the prescriber is unable to conduct EPICS due to circumstances beyond the prescriber’s control. In order to receive a CMS-approved waiver, the prescriber would have to submit an attestation using a form, which would be made available on a CMS-supported website, so that prescribers will be able to request a waiver via an online portal.

The following minimum set of information would be required on the attestation:

- Prescriber’s first and last name;
- Prescriber’s NPI;
- Prescriber’s taxpayer identification number (TIN) or TIN associated with his or medical practice, if applicable;
- Prescriber’s contact information, including name, email address, telephone number, and mailing address; and
- A description of the extraordinary circumstance necessitating a waiver and how it affects the prescriber.

Following receipt of the attestation, we will: (1) Provide a written acknowledgement of receipt of the request using the contact information submitted via the portal and (2) provide a decision formally granting the attestation using the contact information submitted via the portal. Under the proposed policy, the prescriber would submit their attestation about the circumstance and receive a waiver based on such an attestation. We welcome comments on the different aspects of this proposal.

d. Individuals in Hospice and Nursing Facilities

Section 2003 of the SUPPORT Act, in adding section 1860D–4(e)(7)(B)(vii) to the Act, tasked the Secretary to consider whether prescriptions for individuals under the Part D benefit for an individual enrolled in the Medicare Part A Hospice benefit should be exempt from the EPICS requirement. After considering this issue, we believe that an exception for a prescription made for an individual enrolled in hospice would be inappropriate for several reasons. First, when electing hospice, patients have chosen to move from a curative model of care to a holistic palliative model of care. Regulations at 42 CFR 418.202(f) stipulate that the Medicare hospice benefit covers only drugs and biologicals used primarily for the relief of pain and symptom control for the terminal illness and related conditions. Under section 1860D–2(e)(2)(B) of the Act, a drug is excluded from Part D coverage if payment for such drug, as prescribed and dispensed for the beneficiary, is available under Medicare Part A or Part B. Thus, in cases where, with respect to a beneficiary, the hospice benefit covers a drug or biological used primarily for the relief of pain or symptom control for the terminal illness or related conditions, such drug is excluded from Part D under section 1860D–2(e)(2)(B) of the Act. The HHS OIG worked with CMS and the National Hospice and Palliative Care Organization (NHPCO) to identify four common categories of prescription drugs that are typically used to treat symptoms often experienced during the end of life, regardless of an individual’s terminal diagnosis. The OIG has found that these categories of drugs should generally be paid under the hospice benefit. Thus, there may be very few instances in which a controlled substance prescribed for a Part D enrollee who has elected hospice could be covered under Part D. We believe an exception that would apply only in these rare instances could be confusing and burdensome for prescribers who furnish care to some Part D beneficiaries who are enrolled in hospice and for some who are not because to qualify for the exception they would have to determine when a particular enrollee has elected hospice. Further, a beneficiary is free to elect the hospice benefit and cancel that election as they choose, which would make it difficult for a prescriber to be sure at any point in time whether a beneficiary is, or is not, currently enrolled in hospice and therefore whether a paper prescription is permitted. We note that the EPICS
requirement would not apply to any prescriptions for Part A or Part B controlled substances in any event. Further, were CMS to provide an exception for prescriptions for Part D-covered controlled substances for hospice enrollees, it would pose an operational challenge to accurately match prescription data records with hospice enrollment data where the patient’s hospice status can be fluid. It would be operationally challenging to ensure that paper prescriptions were only issued for beneficiaries enrolled in hospice (which would be permitted), and not for patients not enrolled in hospice (where EPCS would be required). We believe the cost of this potentially confusing and laborious analysis for the small number of prescriptions dispensed for beneficiaries enrolled in hospice but covered under Part D exceeds the benefit creating the exception would provide to prescribers. Therefore, we decline to propose an exemption for prescribers issuing prescriptions for individuals enrolled in hospice. However, we seek comment on this decision.

Section 1860–4(e)(7)(B)(viii) of the Act suggests an exemption for prescribers issuing prescriptions for individuals who are residents of a nursing facility and eligible for Medicare and Medicaid benefits. We sought stakeholder feedback on this exemption in our August 2020 RFI and discussed it with our federal partners at the DEA, and have been informed that there are situations where nursing facilities experience or are at risk of drug diversion. This stakeholder feedback did not inform us of any compelling reasons to include an exemption for prescribers issuing prescriptions for individuals who are residents of a nursing facility and eligible for Medicare and Medicaid benefits. We have also seen the severe impact that the COVID-19 pandemic has had on nursing facility residents, who are at high risk for infection, serious illness, and death from COVID-19, as well as other infectious diseases including clostridium difficile and the seasonal flu. It is for these reasons that we decline to propose an exemption for prescribers issuing prescriptions for individuals who are residents of a nursing facility and eligible for Medicare and Medicaid benefits. However, we seek comment on this issue.

7. Fraud and Abuse Laws

We are aware that Prescription Drug Plans (PDPs), MA–PD plans, or other organizations with which prescribers are affiliated may wish to assist prescribers with satisfying the mandate for electronic prescribing of controlled substances for a covered Part D drug by providing technology and services necessary to effectuate the electronic prescribing of such drugs. Such assistance may implicate the payment and fraud and abuse laws that govern the financial relationships in the health care industry. Specifically, the donation of free or below-fair market value electronic prescribing technology or services to a practitioner (or any other person) may implicate the physician self-referral law and the federal anti-kickback statute. However, there is an exception to the physician self-referral law’s prohibition and a corresponding safe harbor under the federal anti-kickback statute that would permit certain donations in the form of items or services (not including cash or cash equivalents) necessary and used solely to receive and transmit electronic prescription information if all requirements of the applicable exception or safe harbor are satisfied. In addition, other exceptions to the physician self-referral law and safe harbors under the federal anti-kickback statute may apply.

Section III.P.1. of this proposed rule provides a general discussion of the application of, prohibitions of, and exceptions to the physician self-referral law. For information specific to the exception for donations of electronic prescribing items and services, we refer readers to our August 8, 2006 final rule entitled “Physicians’ Referrals to Health Care Entities With Which They Have Financial Relationships; Exceptions for Certain Electronic Prescribing and Electronic Health Records Arrangements” (71 FR 45140) and found at https://www.govinfo.gov/content/pkg/FR-2006-08-08/pdf/06-6667.pdf, and the regulations interpreting the physician self-referral law, including additional exceptions to its prohibitions, which are found in 42 CFR part 411, subpart J. Information regarding the federal anti-kickback statute and its applicable safe harbors can be found at www.oig.hhs.gov.

8. Penalties

Section 1860D–4(e)(7)(D) of the Act gives the Secretary the authority to enforce and specify appropriate penalties for non-compliance with the EPCS requirement. We sought stakeholder feedback on whether CMS should impose penalties and if so, what those penalties should be. We have also examined state EPCS requirements and their accompanying penalties. However, because these requirements have only been recently implemented and most states do not have penalties for failing to adopt EPCS, we have not been able to evaluate what type of penalties have been effective for state mandates.

In implementing the EPCS requirement, we seek to help ensure that we do not place too much of a burden on prescribers, as we do not want this requirement to have an unintended consequence of incentivizing prescribers to stop prescribing controlled substances to Part D beneficiaries, as appropriate, should they not have EPCS set-up. We also need sufficient time to gather more stakeholder feedback on the most effective and most appropriate type of penalties.

Therefore, we propose that with respect to compliance from January 1, 2023 through December 31, 2023, CMS compliance actions will consist of sending letters to prescribers that we believe are violating the EPCS requirement during that period of time. These letters will consist of a notification to prescribers that they are violating the EPCS requirement, information about how they can come into compliance, the benefits of EPCS, an information solicitation as to why they are not conducting EPCS, and a link to the CMS portal to request a waiver. We will re-evaluate whether further compliance actions will be necessary and what those compliance actions will be in future rulemaking. We seek comment on this proposal, including what type of compliance action may be appropriate after the initial period described above, including whether any penalties should be phased in over time.

R. Open Payments

1. Background

a. Open Payments Policies

The Open Payments program is a statutorily-mandated program that promotes transparency by providing information to the public about the financial relationships between the pharmaceutical and medical device industry, and certain types of health care providers. Section 1128G of the Act requires manufacturers of covered drugs, devices, biologicals, or medical supplies (referred to as “applicable manufacturers”), as well as applicable group purchasing organizations (GPOs), to annually submit information for the preceding calendar year about certain payments or other transfers of value made to “covered recipients,” currently defined as physicians, teaching hospitals, physician assistants (PAs), nurse practitioners (NPs), clinical nurse specialists (CNSs), certified registered
nurse anesthetists (CRNAs) & anesthesia assistant (AAs), and certified nurse-midwives (CNMs). Payments or other transfers of value that must be reported include such things as research-related payments, honoraria, gifts, travel expenses, meals, grants, and other compensation. The type of information required to be reported includes, but is not limited to, the date and amount of the payment or other transfer of value, identifying information about the covered recipient, and details about products associated with the transaction. When a payment or other transfer of value is related to marketing, education, or research specific to a covered drug, device, biological or medical supply, the name of that covered drug, device, biological or medical supply also must be reported. The estimated burden of these reporting requirements, as outlined under OMB control number 0938–1237, is approximately 1.9 million hours over the course of 1 year.

Sec. 1128G(e) of the Act establishes minimum dollar thresholds for required reporting, with two bases for reporting: Individual and aggregate payments or transfers of value. To determine if multiple small individual payments or other transfers of value made to a covered recipient exceed the aggregate threshold and therefore must be reported, applicable manufacturers and applicable GPOs must aggregate all individual payments made across all payment categories within a given reporting year. The statutory threshold established was $10 for individual payments and $100 for aggregated payments, and this amount has increased with the consumer price index each year. For CY 2021, the annual reporting thresholds for individual payments or other transfers of value is $11.04 and the aggregate amount is $110.40.

The Open Payments program yields information to the general public about providers, as well as information that researchers may use to look into potential correlations between financial relationships and provider behaviors. Between August 2013 and the June 2020 publication, more than 76 million records have been disclosed under the Open Payments program, enabling significant transparency into applicable exchanges of value. We have been committed to stakeholder engagement in an effort to limit the burden in the Open Payments program reporting processes and improve clarity for the public. Additional background about the program, including frequently asked questions, regarding how the program works and what type of information is required to be reported is available at www.cms.gov/OpenPayments.

In the February 8, 2013 Federal Register (78 FR 9459), we published regulations implementing section 1128G of the Act and establishing the Open Payments program. Section 1128G of the Act requires applicable manufacturers and applicable GPOs to submit information annually about certain payments or other transfers of value made to covered recipients during the course of the preceding calendar year. Additionally, section 1128G(e) of the Act defines covered drugs, devices, biologicals, or medical supplies as those covered under Medicare, a state plan under Medicaid, or the Children’s Health Insurance Program (CHIP) (or a waiver of either such state plan), and requires applicable manufacturers and applicable GPOs to disclose any ownership or investment interests in such entities held by physicians or physicians’ immediate family members, as well as information on any payments or other transfers of value provided to such physician owners or investors.

Under section 1128G(e)(10)(A) of the Act, the term “payment or other transfer of value” refers to a transfer of anything of value, though some exclusions apply. In the CY 2015 PFS final rule with comment period (79 FR 67548), we amended the regulations by standardizing reporting in the Open Payments program. Specifically, we: (1) Deleted the definition of “covered device”; (2) removed the special rules for payments or other transfers of value related to continuing education programs; (3) clarified the marketed name reporting requirements for devices and medical supplies; and (4) required stock, stock options, and any other ownership interests to be reported as distinct forms of payment.

In the CY 2017 PFS proposed rule (81 FR 46395), we solicited information from the public on a wide variety of topics regarding the Open Payments program. Since the implementation of the program and changes made in the CY 2015 PFS final rule with comment period, various commenters have provided us feedback. Consequently, we identified areas in the rule that might benefit from revision and solicited public comments to inform future rulemaking. We sought comment on whether the payment categories listed at 42 CFR 403.904(e)(2) are adequately inclusive to facilitate reporting of all payments or transfers of value, as well as ways to streamline or make the reporting process while facilitating our role in oversight, compliance, and enforcement, along with posing other program-specific questions. A summary of the comments we received was published in the CY 2017 PFS final rule (81 FR 80428 through 80429).

On October 24, 2018, the Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment for Patients and Communities Act (SUPPORT Act) (Pub. L. 115–271) was signed into law. Section 6111 of the SUPPORT Act amended the definition of “covered recipient” under section 1128G(e)(6) of the Act with respect to information required to be submitted on or after January 1, 2022, to include PAs, NPs, CNs, CRNAs, and CNMs, in addition to the previously listed covered recipients of physicians and teaching hospitals. In the CY 2020 PFS final rule, we codified the Open Payments provisions of the SUPPORT Act and addressed public comments received from the CY 2017 PFS proposed rule by simplifying the process for reporting data by adjusting the Nature of Payment categories, and standardized data on reported covered drug, devices, biologicals, or medical supplies.

In this rule, we propose to clarify existing Open Payments requirements, as well as add provisions that program stakeholders have requested and we agree would improve the quality of the data. We propose the following revisions effective for data collection beginning in CY 2023 and reporting in CY 2024: (1) Adding a mandatory payment context field for records to teaching hospitals; (2) adding the option to recertify annually even when no records are being reported; (3) disallowing record deletions without a substantiated reason; (4) updating the definition of ownership and investment interest; (5) adding a definition for a physician-owned distributorship as a subset of applicable manufacturers and group purchasing organizations, for the purposes of Open Payments program reporting only, which definition would not apply for purposes of any other laws or regulations, including, but not limited to, section 1128B of the Act (the federal Anti-Kickback statute), the regulations at 42 CFR 1001.952, and materials interpreting the anti-kickback statute, such as Special Fraud Alerts; and section 1877 of the Act and the regulations at 42 CFR part 411, subpart J (collectively, the physician self-referral law); (6) requiring reporting entities to disclose relationships they have with other companies for the purposes of transparent reporting; (7) disallowing publications delays for general payment records; (8) clarifying the exception for short-term loans applies for 90 total days in a calendar year, regardless of
whether the 90 days were consecutive; and (9) removing the option to submit and attest to general payment records with an “Ownership” Nature of Payment category. We believe these changes will increase the usability of the data, address concerns we have heard from stakeholders, and give reporting entities sufficient time to prepare for changes to their data collection and reporting procedures.

b. Legal Authority

Four legal authorities from the statute ground our provisions:

• Sections 1102 and 1871 of the Act, which provide general authority for the Secretary to prescribe regulations for the efficient administration of the Medicare program.

• Section 1861 of the Act, which defines providers and suppliers.

• Section 1128G of the Act, as amended by section 6111 of the SUPPORT Act, which requires applicable manufacturers of drugs, devices, biologicals, or medical supplies covered under Medicare or a state plan under Medicaid or CHIP to report annually to the Secretary certain payments or transfers of value to physicians and teaching hospitals, and to PAs, NPs, CNSs, CRNAs, and CNMs for information required to be submitted under section 1128G of the Act on or after January 1, 2022.

c. Provisions of the Proposed Regulations

(1) Payment Context Field for Teaching Hospitals

We have received feedback from teaching hospitals during informal interviews that Open Payments submissions do not contain sufficient information to identify reported payments or transfers of value in their own records. This means that teaching hospitals are unable to verify records during the review and dispute process and must dispute the record of value to obtain additional information, which yields additional and unnecessary work for both teaching hospitals and reporting entities.

To reduce the burden created by disputes for both reporting entities and teaching hospitals, we are proposing a mandatory context field for payments or transfers of value attributed to teaching hospitals, which would contain information to better identify the payment as deemed appropriate by the applicable manufacturer or GPO. Examples of data that the reporting entity may choose to include are: The check number or electronic wire number for the payment; related department of the hospital; or other pieces of relevant information.

(2) Optional Annual Recertification

Over the course of the program, we have received feedback from several companies that they would like the ability to attest that they do not have any reportable records for that year. At this time, any entity that does not have any reportable payments or transfers of value does not need to recertify in Open Payments, but also does not have a way to communicate to CMS that it believes it is still compliant even though it has not reported.

We propose to make it optional for a company that does not have reportable payments or transfers of value for the program year to recertify their registration in Open Payments and attest that it does not have any records to submit, which would give peace of mind to reporting entities which are correctly not reporting records. We believe this optional recertification for entities without reporting requirements would be low burden to reporting entities, but would be invaluable to ensuring the integrity of the data. We propose adding the following language to an option for entities that are recertifying without submitting records:

“1. I attest that I am a Chief Executive Officer, Chief Financial Officer, Chief Compliance Officer, or other Officer equivalent authorized representative for the reporting applicable manufacturer or applicable group purchasing organization with the authority to attest to the information submitted in the Open Payments system.

2. I attest that, to the best of my knowledge, belief, and ability, my organization does not have any reportable payments or transfers of value or ownership and investment interest to report for the current program year.

3. If I become aware of any information that my entity is required to report, I will submit this information to CMS as required per 42 CFR 403.908(b)[1], which states that if an applicable manufacturer or applicable group purchasing organization discovers an error or omission in its annual report, it must submit corrected information to CMS immediately upon confirmation of the error or omission.”

(3) Defining a Physician-Owned Distributorship

The preamble of the 2013 Open Payments final rule (78 FR 9458) discusses physician-owned distributorships (PODs), as a subset of group purchasing organizations (GPOs), but does not provide a specific definition for this type of entity. Reporting entities currently have the ability to self-identify as a POD when registering with Open Payments, but due to the lack of a definition of the term “physician-owned distributorship” or “POD,” this designation is not required. We believe that the disclosure of an entity’s status as a POD is essential to the transparency that is central to the program, and will also help clear up confusion about whether PODs are required to report. Accordingly, we propose to include the definition of a POD as set out at § 403.902 as a subset of either an applicable manufacturer or applicable GPO.

We are also proposing to include language at § 403.908(c)(4) to require PODs to self-identify when registering or recertifying.

Furthermore, to better align the Open Payments program with the updated definition of ownership and investment interest at § 411.354(b)(3) (see 85 FR 77587), we are including the exceptions for titular ownership and employee stock ownership programs (ESOPs) that are qualified under IRS regulations for consistency in application.

In addition, we emphasize that:

• The proposed definition of a physician-owned distributorship does not apply for purposes of any other laws or regulations, including, but not limited to, section 1877 of the Act, the regulations at 42 CFR part 411, subpart J, section 1128B of the Act, or the regulations at 42 CFR 1001.952.

• “Ownership or investment interest” is defined at § 403.902 of the Open Payments regulations and would not include publicly traded securities or mutual funds.

• To be considered a physician owner(s), the owner would have to hold at least one active professional license to practice as a physician issued by a U.S. state or territory.

• If a company with common ownership reports in a consolidated report with the POD, the reporting company would only be required to register as a POD if it meets the 5 percent ownership requirement when ownership of all entities in the report is calculated.

• The POD would be required to report ownership and investment interest as required by existing Open Payments requirements. Ownership or investment interest is defined at § 403.902 to include, but is not limited to: Stocks, stock option(s) (other than those received as compensation, until they are exercised); partnership shares, both limited and limited liability company memberships; loans, bonds, or other financial instruments.
that are secured with an entity’s property or revenue or a portion of that property or revenue. This definition explicitly exempts titular ownership and ESOPs that are qualified under IRS regulations.

- The POD would be required to identify as a POD whether or not the physician has a controlling interest in the reporting entity (for example, a silent partner whose only role is to provide capital and is not involved in the company’s operations would still meet requirements for reporting).
- Five percent interest would be calculated as 5 percent of the total dollar value in USD of all ownership in the POD as of December 31, or the latest date that the ownership was held, as of the calendar year proceeding the Program Year. For example, if reporting ownership in a POD for Program Year 2022, the ownership would be calculated as of December 31, 2022, or the latest date in the calendar year that the physician held the ownership or investment interest.
- Indirect ownership interest would also have to be reported as required by § 403.902. Indirect ownership is often the result of the use of holding companies and parent/subsidiary relationships.
- Any entity meeting this definition would be required to identify itself as a POD when submitting and attesting to its records. For example, if an applicable manufacturer meets the definition of a POD, it may not choose to identify itself simply as an “Applicable Manufacturer” but would have to choose its business type as “Applicable Manufacturer—Physician Owned Distributorship.”
- We believe that this proposed definition should not increase industry burden because it is a subset of existing definitions, but should clarify confusion about PODs being outside of reporting requirements.

(4) Disallowing Record Deletion Without Reason

While we have not seen evidence of the following behavior, we believe that our existing regulations might allow entities to be compliant by reporting and attesting to records, then deleting those records so that they are never publicly available. We propose to prevent reporting followed by deletion by adding language at § 403.904(a)(3) that would state that an entity that has reported payments or transfers of value under the scope of this rule may not remove, delete, or alter the records in the Open Payments system unless it discovers an error in the information furnished, or the record is otherwise believed to meet existing exceptions for reporting that were previously unknown.

An example of a properly deleted record would be the deletion of ownership records that were reported for a publicly traded company, since publicly traded companies are not required to report ownership and investment interest. We would add a dialogue box in the system for reporting entities to provide a reason for record deletion. We note that deletions will continue to undergo additional scrutiny to ensure the integrity of the data.

(5) Disallow Publication Delays of General Payments

Delayed publication is permitted for Open Payments records based on concerns that the information provided in the record details may reveal proprietary information about a company’s research activities. According to § 403.910, only payments that are made in connection with (1) Research or on development of a new drug, device, biological, or medical supply, or a new application of an existing drug, device, biological, or medical supply or (2) Clinical investigations regarding a new drug, device, biological, or medical supply” are allowed to be delayed from publication. As of December 26, 2020, there were 20,930 general records with a value of $26.4M that were delayed from publication for at least one Program Year, and based on the information provided in the current format required for the submission of general records, we are unable to verify these records’ connection with research or clinical investigations. Therefore, we propose to eliminate the ability to delay general payments from publication and only permit publication delay of research payments, whose formatting does require the appropriate information to be provided, the details of which are specified at § 403.904(f). Reporting entities may hesitate to include records that are currently being delayed as general payments because they are associated with a research study, but not directly outlined in that research agreement. For example, a company may pay for an airline ticket for a physician to conduct research that is associated with a research agreement, but that travel was not explicitly outlined in that agreement. However, we do not believe that the current requirements for a research payment would exclude these types of payments from being reported as research payments, as long as they are made in connection with, and subject to, a research agreement.

(6) Short Term Loans

The Open Payments final rule makes a reporting exception for short term equipment loans. A short term medical supply or device loan means the loan of a covered device or a device under development, or the provision of a limited quantity of medical supplies for a short-term trial period, not to exceed a loan period of 90 days or a quantity of 90 days of average daily use, to permit evaluation of the device or medical supply by the covered recipient.

The Open Payments regulations also clarify that for a single product the total number of days for the loan should not exceed 90 days for the entire year, regardless of whether the 90 days were consecutive. We believe that this aligns with the intention to limit the loan period to 90 days and not allow a new loan to start at the end of the previous loan period, thus avoiding the reporting requirements. We propose to clarify this by stating that short term medical supply or device loan means the loan of a covered device or a device under development, or the provision of a limited quantity of medical supplies for a short-term trial period, not to exceed a loan period of 90 cumulative days per calendar year or a quantity of 90 cumulative days of average daily use per calendar year, to permit evaluation of the device or medical supply by the covered recipient.

g. Remove General Ownership Records

We currently have two ways for an entity to report ownership: Entities may submit an ownership record or a general record with a Nature of Payment category of “Ownership.” We propose to remove the “Ownership” Nature of Payment category. The statute requires special rules for the reporting of ownership interest, including dollar amount invested and value of interest, which is not captured by the general payment with the Nature of Payment category of “Ownership.” Furthermore, this proposal would create a cleaner and more consistent data set.

(7) Updated Contact Information

When sending communications to entities, the Open Payments program often finds that their contact information is outdated, especially if the entity has not recertified recently. It is important for the integrity of the data that the program is able to contact the reporting entities in case of perceived irregularities or potential noncompliance. We propose to make it mandatory for a company that has had reportable payments or transfers of
value within the past 2 calendar years to keep its contact information current within the Open Payments System. For example, if an applicable manufacturer or group purchasing organization had reported records in Program Years 2018 and 2022, but did not have records for Program Years 2019, 2020, or 2021, it would be required to keep updated contact information in the system during Program Years 2019 and 2020. The applicable manufacturer or group purchasing organization would not have to update its contact information for Program Year 2021. In Program Year 2022, since it once again had reportable records, it would be required to recertify and update its contact information as usual. We propose to include this requirement at § 403.908(c)(3).

IV. Summary of the Quality Payment Program Proposed Provisions

A. CY 2022 Updates to the Quality Payment Program

1. Executive Summary

a. Overview

This section of the final rule sets forth changes to the Quality Payment Program starting January 1, 2022, except as otherwise noted for specific provisions. The 2022 MIPS performance period/2024 MIPS payment year of the Quality Payment Program continues to build on the first few years of implementation of the Quality Payment Program to focus more on our measurement efforts, refine how clinicians will be able to participate in a more meaningful way and encourage participation in Advanced Alternative Payment Models (APMs).

Authorized by the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10, April 16, 2015), the Quality Payment Program is an incentive program that includes two participation tracks, the Merit-based Incentive Payment System (MIPS) and Advanced APMs. MIPS eligible clinicians are subject to a MIPS payment adjustment based on their performance in four performance categories: Cost, quality, improvement activities, and Promoting Interoperability. The weights of those four performance categories are specified in statute. For CY 2022, those weights are as follows: 30 percent for the quality performance category, 30 percent for the cost performance category, 15 percent for the improvement activities performance category, and 25 percent for the Promoting Interoperability performance category. If an eligible clinician participates in an Advanced APM and achieves Qualifying APM Participant (QP) status, they are excluded from the MIPS reporting requirements and payment adjustment. Those that are qualifying APM participants (QPs) for the year receive a 5 percent lump sum incentive payment during the corresponding payment year through CY 2024, or a differential payment update under the PFS for payment years beginning in 2026.

Participation in the Quality Payment Program rose in the third year. We saw 99.99 percent of eligible clinicians participate in MIPS in 2019 with 954,614 MIPS eligible clinicians receiving a payment adjustment, which exceeded our 2018 participation rates. In addition, 97.6 percent of eligible clinicians participating in MIPS received a positive payment adjustment for 2021 based on 2019 performance year results. Regarding performance in Advanced APMs, for the 2019 QP Performance Period, 195,564 eligible clinicians earned Qualifying APM Participant (QP) status while another 27,995 eligible clinicians earned partial QP status.132 We note that due to the Public Health Emergency (PHE) for COVID–19, 65,237 (or about 6.83 percent of 954,614) MIPS eligible clinicians received reweighting for performance year 2019 of one or more MIPS performance categories due to our MIPS extreme and uncontrollable circumstances policy.

We plan to continue developing Quality Payment Program policies that more effectively reward high-quality of care for patients and increase opportunities for Advanced APM participation. We are moving forward with MIPS Value Pathways (MVPs) as MVPs allow for a more cohesive participation experience by connecting activities and measures from the 4 MIPS performance categories that are relevant to a specialty, medical condition, or a particular population. The MVPs would include the Promoting Interoperability performance category as a foundational element and incorporate population health claims-based measures, as feasible, along with relevant measures and activities for the quality, cost, and improvement activities performance categories. To provide clinicians and third party intermediaries with sufficient time to prepare for a shift to this new participation framework, in this rule, we are proposing to begin transitioning to MVPs in the 2023 MIPS performance year.

As we make long-term improvements, evolve MIPS policies, and plan to implement MVPs in the future, we remain committed to our program goals. We are aligning with broader CMS initiatives, such as the CMS Quality Measure Action Plan (https://www.cms.gov/files/document/2021-cms-quality-confidence-cms-quality-measurement-action-plan-march-2021.pdf), to unify strategic efforts to adopt measures most critical to providing high quality care and accelerate strategic improvements for quality programs and measures. The vision for the CMS Quality Measure Action Plan is to use impactful quality measures to improve health outcomes and deliver value by empowering patients to make informed care decisions while reducing burden to clinicians. This plan supports CMS’s work to identify activities for transformation of quality measurement and value-based programs and recognizes the need to modernize the current quality ecosystem of measurement and programs. Additionally, it will encourage further reductions to the burden of quality measure reporting and address the current lack of alignment. These efforts will also support identifying activities that are driving better patient outcomes at lower costs. The planned implementation of MVPs aligns with many of the objectives and goals the CMS Quality Measure Action Plan will strive to achieve.

Through the proposals we describe below, we intend to transform and simplify the MIPS program through MVPs, promote the use of connected measures and activities, reward clinicians for providing high value care, and help all clinicians improve care and engage patients. We also intend to gather information from stakeholders to help guide efforts to advance health equity throughout CMS quality programs.

(1) Major MIPS Provisions

The MIPS program aims to drive value through the collection, assessment, and public reporting of data that informs and rewards the delivery of high-value care. Within MIPS we intend to pay for health care services in a way that drives value by linking performance on cost, quality, and the patient’s experience of care.

We have heard from clinicians that MIPS requirements are confusing, burdensome, and that it is difficult to choose measures from the several hundred MIPS and QCDR quality

measures that are meaningful to their practices and have a direct benefit to patients. We have also heard concerns from stakeholders that MIPS does not allow for sufficient differentiation of performance across practices due in part to clinician quality measure selection bias. These aspects detract from the program’s ability to effectively measure and compare performance, provide meaningful feedback, and incentivize quality. MVPs are intended to lead to a simplified MIPS clinician experience, improve value, reduce burden, and better inform patient choice in selecting clinicians. We noted that the MVP framework would connect measures and activities across the 4 MIPS performance categories, incorporate a set of administrative claims-based quality measures that focus on population health, provide data and feedback to clinicians, and enhance information provided to patients. We intend to focus the future of MIPS on MVP development and implementation.

Additionally, we have heard from patients, clinicians, and other stakeholders that they would like more comprehensive and granular reporting from the MIPS program. To that end, we are proposing to establish voluntary subgroup reporting to help provide patients and clinicians information that is clinically meaningful at a more granular level.

We are additionally issuing a request for information (RFI) to address the Advancing to Digital Quality Measurement and the Use of Fast Healthcare Interoperability Resources (FHIR) in Physician Quality Programs please refer to section IV.A.1.c. of this rule for more information. We are also issuing an RFI to address Closing the Health Equity Gap in CMS Clinician Quality Programs in section IV.A.1.d. of this rule.

(a) Basis and Scope

At § 414.1300, we previously codified the basis and scope of the MIPS and APMs. In order to support the continued application of voluntary reporters, we propose to revise the basis and scope at § 414.1300(a)(2) to remove reference to section 1848(a) of the Act—Payment for Physicians’ Services Based on Fee Schedule and instead redesignate the text at § 414.1300(a)(3) to § 414.1300(a)(2) to state section 1848(k)—Quality Reporting System. At § 414.1400(a)(3), we also propose to add new language to state section 1848(m)—Incentive Payments for Quality Reporting, (b) MIPS Value Pathways and APM Performance Pathway

We recognize that the transition to MVPs will take time and we will continue to evaluate the readiness of clinicians in making this transition, while balancing our strong interest in improving measurement and making MIPS more focused on value.

As discussed in section IV.A.3.b. of this proposed rule, for MIPS Value Pathways (MVPs) we propose:
- To define who can report MVPs, through the term MVP Participant.
- A delay to the CY 2023 MIPS performance period/CY 2025 MIPS payment year: MVP implementation and subgroup reporting timelines. Beginning in the CY 2025 MIPS performance period/CY 2027 MIPS payment year, multispecialty groups would be required to form subgroups in order to report MVPs.
- An introductory set of 7 MVPs to be available beginning with the 2023 performance period.
- MVP reporting requirements that account for the four MIPS performance categories.
- During the CY 2023 and CY 2024 performance periods, voluntary subgroup reporting within MIPS limited to reporting through MVPs or the APP. For the MIPS program, eligibility, special status determination, and QP determination would continue to be determined at the group level for subgroup participants. Subgroup performance will be assessed at the subgroup level for three performance categories (the quality, cost, and improvement activities performance categories) and will be assessed at the group level for one performance category (the Promoting Interoperability performance category). Additionally, subgroups will continue to be included in group level reporting but will receive scores separate from their affiliated group.
- MVP scoring policies closely align with those used in traditional MIPS, with few exceptions.
- MVP scoring policies including policies for scoring administrative claims measures, including population health measures, scoring only the cost measures specified in the MVP, assigning 20 points for each medium-weighted and 40 points for each high-weighted improvement activity specified in the MVP, scoring subgroups on their affiliated group’s data for the Promoting Interoperability performance category, reweighting performance categories for subgroups in certain circumstances, and requirements that the quality performance category be scored with few exceptions for reweighting.
- To provide comparative feedback within performance feedback, comparing the performance of like clinicians who report on the same MVP.

We also discuss in section IV.A.3.b. of this proposed rule, future considerations and goals of the MIPS program:
- We request comment on the timeline to sunset traditional MIPS in the future, and to eventually make MVP reporting mandatory. Note: we are referring to the established MIPS participation options collectively as traditional MIPS (85 FR 84844).
- Through the MVP development work, gradually implement MVPs for all specialties and subspecialties that participate in the program.

As discussed in section IV.A.3.c. of this proposed rule, for the APM Performance Pathway, to create stability within the APP, we are not proposing any major changes to the APP.

(c) Other MIPS and APM Policies

We are proposing the following provisions for MIPS beginning with the 2022 performance period:
- As discussed in section IV.A.3.d. of this proposed rule, for the MIPS Performance Measures and Activities, we propose:
  ++ In section IV.A.3.d.(1) of this proposed rule, for the quality performance category, to maintain the data completeness criteria threshold at 70 percent for the 2021 and 2022 MIPS performance periods (2023 and 2024 MIPS payment years); establish the data completeness criteria threshold at 80 percent for the 2023 MIPS performance period (2025 MIPS payment year); extend the availability of the CMS Web Interface as a collection and submission type for the 2022 MIPS performance period; establish a set of 195 MIPS quality measures; and seek public comment through a request for information (RFI) regarding the draft COVID–19 Vaccination by Clinicians measure specifications.
  ++ In section IV.A.3.d.(2) of this proposed rule, for the cost performance category, to establish 5 new cost measures for implementation into MIPS, which adds to the 2 global or population-based measures and 18 episode-based measures.

In section IV.A.3.e.(2) of this proposed rule, in regard to calculating the final score, we propose formulas for the complex patient bonus with two separate components (one for medical complexity and one for social complexity) and an overall cap of 10 bonus points. Lastly, we propose
updating the formulas for the bonuses to base them on standardized scores and to reward those who fall in higher quintiles and not reward those who fall below a cut-off point.

- As discussed in section IV.A.3.f. of this proposed rule, beginning with year 6 of MIPS (2024 MIPS payment year), the performance threshold must be either the mean or median of the final scores for all MIPS eligible clinicians for a prior period. We are proposing to establish the performance threshold using the mean and the 2017 performance period/2019 MIPS payment year data, which would result in a performance threshold of 75 points. In addition, for the 2024 MIPS payment year, the additional performance threshold must be set at either (1) the 25th percentile of the range of possible final scores above the performance threshold, or (2) the 25th percentile of the actual final scores for MIPS eligible clinicians with final scores at or above the performance threshold with respect to a prior period. We note that under section 1848(h)(6) of the Act, the additional MIPS payment adjustment factors for exceptional performance are available through the 2024 MIPS payment year, making this the last year of the additional performance threshold and the associated additional MIPS payment adjustment factors for exceptional performance. We are proposing to establish an additional performance threshold of 89 points. This is the 25th percentile of actual final scores from the 2017 performance period/2019 MIPS payment year at or above 75 points.

- As discussed in section IV.A.3.h. of this proposed rule, for Third Party Intermediaries, we are proposing to modify third party intermediary requirements, remedial actions and termination policies. Specifically, beginning with the 2023 MIPS performance period/2025 MIPS payment year, QCDRs, qualified registries, and health IT vendors must support MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data. QCDRs, qualified registries, and health IT vendors may also support the APP. We also propose to require QCDRs, qualified registries, health IT vendors, and CMS-approved survey vendors to support subgroup reporting beginning with the 2023 MIPS performance period/2025 MIPS payment year.

- As discussed in section IV.A.3.i. of this proposed rule, for Public Reporting on Compare Tools hosted by the U.S. Department of Health and Human Services (Compare Tools), we are proposing to publicly report clinician affiliations to certain types of facilities (for example, LTCHs, IRFs, etc.). We also seek comment through a RFI to inform the ways in which utilization data may be useful to patients and caregivers for their health care decisions. In order to give MIPS eligible clinicians time to familiarize themselves with MVPs and subgroup reporting, we are proposing to delay public reporting of new improvement activities and Promoting Interoperability measures and attestations reported via MVPs by 1 year, and begin publicly reporting subgroup-level performance information in PY 2024, on the compare tool hosted by the U.S. Department of Health and Human Services. We are also proposing to create a separate subgroup workflow that would allow subgroup performance information to be publicly reported in an online location that can be navigated to and from an individual clinician or group profile page. This also aligns with the historical approach to report performance information at the level that it is submitted.

- As discussed in section IV.A.4.b. and IV.A.4.c. of this rule, we are proposing a change to the APM Incentive Payment payee hierarchy to include payment to TINs associated with QPs during the payment year.

- As discussed in section IV.A.4.d. of this rule, we are proposing to delay public reporting of subgroup-level performance information in PY 2024, on the compare tool hosted by the U.S. Department of Health and Human Services. We are also proposing to establish the performance threshold for quality measurement and reporting and value-based purchasing programs by 2025. This part introduces four possible steps that would enable transformation of CMS’ quality measurement enterprise to be fully digital by 2025. Specific requests for input are included in the section.

- Solicitation of Comments. This part lists all requests for input included in the sections of this RFI.

1) Background

As required by law, we implement quality measurement and value-based purchasing programs across a broad range of inpatient acute care, outpatient, and post-acute care (PAC) settings consistent with our mission to improve the quality of health care for Americans through measurement, transparency, and increasingly, value-based purchasing. These quality programs are foundational for incentivizing value-based care, contributing to improvements in health care, enhancing patient outcomes, and informing consumer choice. In October 2020, we launched the CMS Quality Measure Action Plan. One key goal of the plan is to improve the efficiency of quality measures by a transition to digital measures and use of advanced data analytics. Our objective is to use data and information as essential aspects of a healthy, robust healthcare infrastructure to allow for payment and management of accountable, value-based care and development of learning health organizations. Consistent with the CMS Quality Measure Action Plan, we aim to move fully to digital quality measurement by 2025. We acknowledge providers within the various care and practice settings covered by our quality programs may be at different stages of readiness, and therefore, the timeline for
achieving full digital quality measurement across our quality reporting programs may vary.

We also continue to evolve the Medicare Promoting Interoperability Program’s focus on the use of certified electronic health record (EHR) technology, from an initial focus on electronic data capture to enhancing information exchange and expanding quality measurement (83 FR 41634). However, reporting data for quality measurement via EHRs remains burdensome, and our current approach to quality measurement does not readily incorporate emerging data sources such as patient-reported outcomes (PRO) and patient-generated health data (PGHD).135 There is a need to streamline our approach to data collection, calculation, and reporting to fully leverage clinical and patient-centered information for measurement, improvement, and learning.

Additionally, advancements in technical standards and associated regulatory initiatives to improve integrated health information data are creating an opportunity to significantly improve our quality measurement systems. In May 2020, we finalized interoperability requirements in the CMS Interoperability and Patient Access final rule (85 FR 25510) to support beneficiary access to data held by certain payers. At the same time, the Office of the National Coordinator for Health Information Technology (ONC) finalized policies in the ONC 21st Century Cures Act final rule (85 FR 25642) to advance the interoperability of health information technology (IT) as defined in section 4003 of the Cures Act, including the “complete access, exchange, and use of all electronically accessible health information.” Closely working with ONC, we collaboratedly identified Health Level 7 (HL7)® FHIR Release 4.0.1 as the standard to support Application Programming Interface (API) policies in both rules. ONC, on behalf of HHS, adopted the HL7 FHIR Release 4.0.1 for APIs and related implementation specifications at 45 CFR 170.215. We believe the FHIR standard has the potential to be a more efficient and modular standard to enable APIs. We also believe this standard enables collaboration and information sharing, which is essential for delivering high-quality care and better outcomes at a lower cost. By aligning technology requirements for payers, health care providers, and health IT developers HHS can advance an interoperable health IT infrastructure that ensures providers and patients have access to health data when and where it is needed.

In the ONC 21st Century Cures Act final rule, ONC adopted a “Standardized API for Patient and Population Services” certification criterion for health IT that requires the use of FHIR Release 4 and several implementation specifications. Health IT certified to this criterion will offer single patient and multiple patient services that can be accessed by third-party applications (85 FR 25742).136 The ONC 21st Century Cures Act final rule also requires health IT developers to update their certified health IT to support the United States Core Data for Interoperability (USCDI) standard.137 The scope of patient data identified in the USCDI and the data standards that support this data set are expected to evolve over time, starting with data specified in Version 1 of the USCDI. In November 2020, ONC issued an interim final rule with comment period extending the data when health IT developers must make technology meeting updated certification criteria available under the ONC Health IT Certification Program until December 31, 2022 (85 FR 70064).138 The CMS Interoperability and Patient Access final rule (85 FR 25510) and program policies build on the ONC 21st Century Cures Act final rule (85 FR 25642). The CMS Interoperability and Patient Access final rule and policies require certain payers (for example, Medicare Advantage organizations, Medicaid and CHIP Fee-for-Service programs, Medicaid managed care plans, CHIP managed care entities, and issuers of certain Qualified Health Plan [QHP] on the Federally-facilitated Exchanges [FFEs]) to implement and maintain a standards-based Patient Access API using HL7 FHIR Release 4.0.1 to make data from some data to their enrollees and beneficiaries (called “patients” in the CMS interoperability rule). These certain data include data concerning claims and encounters, with the intent to ensure access to their own health care information through third-party software applications. The rule also established new Conditions of Participation for Medicare and Medicaid participating hospitals and critical access hospitals (CAHs), requiring them to send electronic notifications to another healthcare facility or community provider or practitioner when a patient is admitted, discharged, or transferred if the hospital or CAH utilizes an electronic medical records system or other electronic administrative system which is conformed with the content exchange standard at 45 CFR 170.205(d)(2) (85 FR 25603). In the CY 2021 PFS final rule (85 FR 84472), we finalized a policy to align the certified EHR technology required for use in the Promoting Interoperability Programs and the MIPS Promoting Interoperability performance category with the updates to health IT certification criteria finalized in the ONC 21st Century Cures Act final rule. Under this policy, MIPS eligible clinicians, and eligible hospitals and CAHs participating in the Promoting Interoperability Programs, must use technology meeting the updated certification criteria for performance and reporting periods beginning in 2023 (85 FR 84825).

The use of APIs can also reduce longstanding barriers to quality measurement. Currently, health IT developers are required to implement individual measure specifications within their health IT products. The health IT developer must also accommodate how that product connects with the unique variety of systems within a specific care setting.139 This may be further complicated by systems that integrate a wide range of data schemas. This process is burdensome and costly, and it is difficult to reliably obtain high quality data across systems. As health IT developers map their health IT data to the FHIR standard and related implementation specifications, APIs can enable these structured data to be easily accessible for quality measurement or other use cases, such as care coordination, clinical decision support, and supporting patient access.

We believe the emerging data standardization and interoperability enabled by APIs will support the transition to full digital quality measurement by 2025, and are committed to exploring and seeking input on potential solutions for the

135 What are patient generated health data: https://www.healthit.gov/topic/other-hot-topics/what-are-patient-generated-health-data.

transition to digital quality measurement as described in this RFI.

(2) Definition of Digital Quality Measures

In this section we seek to refine the definition of digital quality measures (dQMs) to further operationalize our objective of fully transitioning to dQMs by 2025. We previously noted dQMs use "sources of health information that are captured and can be transmitted electronically and via interoperable systems," in the FHIR® framework. In this RFI, we seek input on future elaboration that would define a dQM as a software that processes digital data to produce a measure score or measure scores. Data sources for dQMs may include administrative systems, electronically submitted clinical assessment data, case management systems, EHRs, instruments (for example, medical devices and wearable devices), patient portals or applications (for example, for collection of patient-generated health data), health information exchanges (HIEs) or registries, and other sources. We also note that dQMs are intended to improve the patient experience including quality of care, improve the health of populations, and/or reduce costs.

We discuss one potential approach to developing dQM software in section IV.A.1.c of this proposed rule. In this section, we are seeking comment on the potential definition of dQMs in this RFI. We also seek feedback on how leveraging advances in technology (for example, FHIR APIs) to access and electronically transmit interoperable data for dQMs could reinforce other activities to support quality measurement and improvement (for example, the aggregation of data across multiple data sources, rapid-cycle feedback, and alignment of programmatic requirements).

The transition to dQMs relies on advances in data standardization and interoperability. As providers and payers work to implement the required advances in interoperability over the next 2 years, we will continue to support reporting of eCQMs through CMS quality reporting programs and through the Promoting Interoperability programs.140 These fully digital measures continue to be important drivers of interoperability advancement and learning. As discussed in the next section, CMS is currently re-specifying and testing these measures to use FHIR rather than the currently adopted Quality Data Model (QDM) in anticipation of the wider use of FHIR standards. CMS intends to apply significant components of the output of this work, such as the re-specified measure logic and the learning done through measure testing with FHIR APIs, to define and build future dQMs that take advantage of the expansion of standardized, interoperable data.

(3) Use of FHIR for Current eCQMs

Since we adopted eCQMs in our hospital and clinical quality programs, we have heard from stakeholders about the technological challenges, burden, and related costs of reporting eCQM data. The CMS eCQM Strategy Project engaged with stakeholders through site visits and listening sessions with health systems and provider organizations to learn about their experiences. This stakeholder feedback identified recommendations to improve processes related to alignment; development; implementation and reporting; certification; and communication, education, and integrated system testing. Over the past 2 years, we have focused on opportunities to streamline and modernize quality data collection and reporting processes, such as exploring FHIR® (http://hl7.org/fhir) as a framework for measure structure and data submission for quality reporting programs, specifically for eCQMs. FHIR is a free and open source standards framework (in both commercial and government settings) created by Health Level Seven International (HL7®) that establishes a common language and process for all health information technology. FHIR allows systems to communicate and information to be shared seamlessly, with a lower burden for hospitals, providers, clinicians, vendors, and quality measurement stakeholders. Specifically, for quality reporting, FHIR enables representing the data in eCQMs as well as provides a structure for eCQMs and reporting, using FHIR as the standard for all. Whereas today, multiple standards being used to report eCQMs is challenging and cumbersome.

We are working to convert current eCQMs to the FHIR standard. We are currently testing the exchange of data elements represented in FHIR to CMS through ongoing HL7 Connectathons and integrated system testing by using and refining implementation guides. Submitting data through FHIR APIs has the potential to improve data exchange by providing consistent security, performance, scalability, and structure to all users. In addition, development of FHIR APIs can lessen the burden by automating more of the measure data collection process. We continue to explore and expand potential applications of the FHIR standard and testing with eCQM use cases, and we are considering a transition to FHIR-based quality reporting with the use of the FHIR standard for eCQMs in quality and value-based reporting programs. As we move to an all-dQM format for quality programs, we are depending on testing results and community readiness to improve interoperability, reduce burden, and facilitate better patient care. We will continue to consider how to leverage the interoperability advantages offered by the FHIR standards and API-based data submission, including digital quality measurement.

(4) Changes Under Consideration To Advance Digital Quality Measurement: Potential Actions in Four Areas To Transition to Digital Quality Measures by 2025

Building on the advances in interoperability and learning from testing of FHIR-converting eCQMs, we aim to move fully to dQMs, originating from sources of health information that are captured and can be transmitted electronically via interoperable systems, by 2025.

To enable this transformation, we are considering further modernization of the quality measurement enterprise in four major ways: (1) Leverage and advance standards for digital data and obtain all EHR data required for quality measures via provider FHIR-based APIs; (2) redesign our quality measures to be self-contained tools; (3) better support data aggregation; and (4) work to align measure requirements across our reporting programs, other federal programs and agencies, and the private sector where appropriate.

These changes would enable us to collect and utilize more timely, actionable, and standardized data from diverse sources and care settings to improve the scope and quality of data used in quality reporting and payment programs, reduce quality reporting burden, and make results available to stakeholders in a rapid-cycle fashion. Data collection and reporting efforts would become more efficient, supported by advances in interoperability and data standardization. Aggregation of data from multiple sources would allow assessments of costs and outcomes to be measured across multiple care settings for an individual patient or clinical conditions. We believe that aggregating data for measurement can incorporate a more holistic assessment of an individual’s health and health care and produce the rich set of data needed to enable patients and caregivers to make

informed decisions by combining data from multiple sources (for example, patient reported data, EHR data, and claims data) for measurement.

Perhaps most importantly, these steps would help us deliver on the full promise of quality measurement and drive us toward a learning health system that transforms healthcare quality, safety, and coordination and effectively measures and achieves value-based care. The shift from a static to a learning health system hinges on the interoperability of healthcare data, and the use of standardized data. dQMs would leverage this interoperability to deliver on the promise of a learning health system wherein standards-based data sharing and analysis, rapid-cycle feedback, and quality measurement and incentives are aligned for continuous improvement in patient-centered care. Similarly, standardized, interoperable data used for measurement can also be used for other use cases, such as clinical decision support, care coordination and decision support, which impacts the quality and cost of care.

We are seeking comments on four potential future actions that would enable transformation to a fully digital quality measurement enterprise by 2025.

(a) Leveraging and Advancing Standards for Digital Data and Obtaining All EHR Data Required for Quality Measures via Provider FHIR-Based APIs

We are considering targeting the data required for our quality measures that utilize EHR data to be data retrieved via FHIR-based APIs based on standardized, interoperable data. Utilizing standardized data for EHR-based measurement (based on FHIR and associated implementation guides) and aligning where possible with interoperability requirements can eliminate the data collection burden providers currently experience with required chart-abstracted quality measures and reduce the burden of reporting digital quality measure results. We can fully leverage this advance to adapt eCQMs and expand to other dQMs through the adoption of interoperable standards across other digital data sources. We are considering methods and approaches to leverage the interoperability data requirements for APIs in certified health IT set by the ONC 21st Century Cures Act final rule to support modernization of CMS quality measure reporting. As discussed previously, these requirements will be included in certified technology in future years (85 FR 84825) including availability of data included in the USCDI via standards-based APIs, and CMS will require clinicians and hospitals participating in MIPS and the Promoting Interoperability Programs, respectively, to transition to use of certified technology updated consistent with the 2015 Cures Edition Update (85 FR 84825).

Digital data used for measurement could also expand beyond data captured in traditional clinical settings, administrative claims data, and EHRs. Many important data sources are not currently captured digitally, such as survey and PGHD. We intend to work to innovate and broaden the digital data used across the quality measurement enterprise beyond the clinical EHR and administrative claims. Agreed upon standards for these data, and associated implementation guides will be important for interoperability and quality measurement. We will consider developing clear guidelines and requirements for these digital data that align with interoperability requirements, for example, requirements for expressing data in standards, exposing data via standards-based APIs, and incentivizing technologies that innovate data capture and interoperability.

High quality data are also essential for reliable and valid measurement. Hence, in implementing the shift to collect all clinical EHR data via FHIR-based APIs, we would support efforts to strengthen and test the quality of the data obtained through FHIR-based APIs for quality measurement. We currently conduct audits of electronic data submitted to the Hospital IQR Program with functions including checks for data completeness and data accuracy, confirmation of proper data formatting, alignment with standards, and appropriate data cleaning (82 FR 38398 through 38402). These functions would continue and be applied to dQMs and further expanded to automate the manual validation of the data compared to the original data source (for example, the medical record) where possible. Analytic advancements such as natural language processing, big data analytics, and artificial intelligence, can support this evolution. These techniques can be applied to validating observed patterns in data and inferences or conclusions drawn from associations, as data are received, to ensure high quality data are used for measurement.

We are seeking feedback on the goal of aligning data needed for quality measurement with interoperability requirements and the strengths and limitations of this approach. We are also seeking feedback on the importance of and approaches to supporting inclusion of PGHD and other currently non-standardized data. We also welcome comment on approaches for testing data quality and validity.

(b) Redesigning Quality Measures To Be Self-Contained Tools

We are considering approaches for including quality measures that take advantage of standardized data and interoperability requirements that have expanded flexibility and functionality compared to CMS’ current eCQMs. We are considering defining and developing dQM software as end-to-end measure calculation solutions that retrieve data from primarily FHIR-based resources maintained by providers, payers, CMS, and others; calculate measure score(s), and produce reports. In general, we believe to optimize the use of standardized and interoperable data, the software solution for dQMs should do the following:

• Have the flexibility to support calculation of single or multiple quality measure(s).
• Perform three functions—obtain data via automated queries from a broad set of digital data sources (initially from EHRs, and in the future from claims, PRO, and PGHD); calculate the measure score according to measure logic; and generate measure score report(s).
• Be compatible with any data source systems that implement standard interoperability requirements.
• Exist separately from digital data source(s) and respect the limitations of the functionality of those data sources.
• Be tested and updated independently of the data source systems.
• Operate in accordance with health information protection requirements under applicable laws and comply with governance functions for health information exchange.
• Have the flexibility to be deployed by individual health systems, health IT vendors, data aggregators, and health plans; and/or run by CMS depending on the program and measure needs and specifications.
• Be designed to enable easy installation for supplemental uses by medical professionals and other non-technical end-users, such as local calculation of quality measure scores or quality improvement.
• Have the flexibility to employ current and evolving advanced analytic approaches such as natural language processing.
• Be designed to support pro-competitive practices for development, maintenance, and implementation, as well as diffusion of quality measurement and related quality
improvement and clinical tools through, for example, the use of open-source core architecture.

We seek comment on these suggested functionalities and other additional functionalities that quality measure tools should ideally have particularly in the context of the possible expanding availability of standardized and interoperable data (for example, standardized EHR data available via FHIR-based APIs).

We are also interested whether and how this more open, agile strategy may facilitate broader engagement in quality measure development, the use of tools developed for measurement for local quality improvement, and/or the application of quality tools for related purposes such as public health or research. (c) Building a Pathway to Data Aggregation in Support of Quality Measurement

Using multiple sources of collected data to inform measurement would reduce data fragmentation (or, different pieces of data regarding a single patient stored in many different places). Additionally, we are considering expanding and establishing policies and processes for data aggregation and measure calculation by third-party aggregators that include, but are not limited to, HIEs and clinical registries. Health IT vendors that meet the requirements of a Qualified Clinical Data Registries (QCDRs) and qualified registries that report quality measures for eligible clinicians in the MIPS program are potential examples at section IV.A.3.g. of this proposed rule and can also support measure reporting. We seek feedback on aggregation of data from multiple sources to inform measurement and potential policy considerations. We also seek feedback on the role data intermediaries can and should play in CMS quality measure reporting in collaboration with providers, and how we can best facilitate and enable aggregation.

(d) Potential Future Alignment of Measures Across Reporting Programs, Federal and State Agencies, and the Private Sector

We are committed to using policy levers and working with stakeholders to solve the issue of interoperable data exchange and to transition to full digital quality measurement. We are considering the future potential development and multi-staged implementation of a common portfolio of dQMs across our regulated programs, agencies, and private payers. This common portfolio would require alignment of: (1) Measure concepts and specifications including narrative statements, measure logic, and value sets; and (2) the individual data elements used to build these measure specifications and calculate the measure logic. Further, the required data elements would be limited to standardized, interoperable data elements to the fullest extent possible; hence, part of the alignment strategy will be the consideration and advancement of data standards and implementation guides for key data elements. We would coordinate closely with quality measure developers, federal and state agencies, and private payers to develop and to maintain a cohesive dQM portfolio that meets our programmatic requirements and that fully aligns across federal and state agencies and payers to the extent possible.

We intend for this coordination to be ongoing and allow for continuous refinement to ensure quality measures remain aligned with evolving healthcare practices and priorities (for example, PROs, disparities, and care coordination), and track with the transformation of data collection, alignment with health IT module updates including capabilities and standards adopted by ONC (for example, standards to enable APIs). It would focus on the quality domains of safety, timeliness, efficiency, effectiveness, equity, and patient-centeredness. It would leverage several existing federal and public-private efforts including our Meaningful Measures 2.0 Framework; the Federal Electronic Health Record Modernization (Department of Defense and Veterans Affairs [DoD/VA]); the Agency for Healthcare Research and Quality’s Clinical Decision Support Initiative; the Centers for Disease Control and Prevention’s Adapting Clinical Guidelines for the Digital Age initiative; Core Quality Measure Collaborative, which convenes stakeholders from America’s Health Insurance Plans (AHIP), CMS, National Quality Forum (NQF), provider organizations, private payers, and consumers and develops consensus on quality measures for provider specialties; and the NQF-convened Measure Applications Partnership (MAP), which recommends measures for use in public payment and reporting programs. We would coordinate with HL7’s ongoing work to advance FHIR resources in critical areas to support patient care and measurement such as social determinants of health. Through this coordination, we would identify which existing measures could be used or evolved to be used as dQMs, in recognition of current healthcare practice and priorities.

This multi-stakeholder, joint federal, state, and industry effort, made possible and enabled by the pending advances towards true interoperability, would yield a significantly improved quality measurement enterprise. The success of the dQM portfolio would be enhanced by the degree to which the measures achieve our programmatic requirements for measures as well as the requirements of other agencies and payers.

We seek feedback on initial priority areas for the dQM portfolio given evolving interoperability requirements (for example, measurement areas, measure requirements, tools, and data standards). We also seek to identify opportunities to collaborate with other federal agencies, states, and the private sector to adopt standards and technology-driven solutions to address our quality measurement priorities across sectors.

(5) Solicitation of Comments

As noted previously, we seek input on the future development of the following:

(a) Definition of Digital Quality Measures

We are seeking feedback on the following as described in section IV.A.1.c. of this proposed rule:

• Do you have feedback on the dQM definition?
• Does this approach to defining and deploying dQMs to interface with FHIR-based APIs seem promising? We also welcome more specific comments on the attributes or functions to support such an approach of deploying dQMs.

(b) Use of FHIR for Current eCQMs

We are seeking feedback on the following as described in section IV.A.1.c. of this proposed rule:

• Do you agree that a transition to FHIR-based quality reporting can reduce burden on health IT vendors and providers? Please explain if you do not agree.
• Would access to near-real-time quality measure scores benefit your practice? How so?
• What parts of the current CMS QRDA IGs cause the most burden (please explain the primary drivers of burden)?

141 Calendar Year (CY) 2021 Physician Fee Schedule Final Rule: Finalized (New and Updated) Qualified Clinical Data Registry (QCDR) and Qualified Registry Policies. https://www.fedic.gov/1362/QCDR%20Ann%20Updates%20%202021%20Final%20Rule%20Fact%20Sheet.pdf.
our quality measurement priorities and across sectors.

Commenters should consider provisions in the CMS Interoperability and Patient Access final rule (85 FR 25510), CMS CY 2021 PFS final rule (85 FR 84472), and the ONC 21st Century Cures Act final rule (85 FR 25642).

We plan to continue working with other agencies and stakeholders to coordinate and to inform any potential transition to dQMs by 2025. While we will not be responding to specific comments submitted in response to this Request for Information in the CY 2022 PFS final rule, we will actively consider all input as we develop future regulatory proposals or future subregulatory policy guidance. Any updates to specific program requirements related to quality measurement and reporting provisions would be addressed through separate and future notice-and-comment rulemaking, as necessary.

d. Closing the Health Equity Gap in CMS Clinician Quality Programs—Request for Information (RFI)

Persistent inequities in health care outcomes exist in the United States, including among Medicare patients. In recognition of persistent health disparities and the importance of closing the health equity gap, we request information on revising several related CMS programs to make reporting of health disparities based on social risk factors and race and ethnicity more comprehensive and actionable for hospitals, providers, and patients. The following is part of an ongoing effort across CMS to evaluate appropriate initiatives to reduce health disparities. Feedback will be used to inform the creation of a future, comprehensive, RFI focused on closing the health equity gap in CMS programs and policies (86 FR 25554 through 25561).

Belonging to a racial or ethnic minority group; living with a disability; being a member of the lesbian, gay, bisexual, transgender, and queer (LGBTQ+) community; living in a rural area; or being under the poverty level, is often associated with worse health outcomes. Such disparities in health outcomes are the result of number of factors, but importantly for CMS programs, although not the sole determinant, poor access and provision of lower quality health care contribute to health disparities. For instance, numerous studies have shown among Medicare beneficiaries, racial and ethnic minority individuals often receive lower quality of care, report lower experiences of care, and experience more frequent hospital readmissions and procedural complications.

We are committed to achieving equity in health care outcomes for Medicare beneficiaries by supporting providers in quality improvement activities to reduce health inequities, enabling them to make more informed decisions, and promoting provider accountability for health care disparities. For the purposes of this rule, we are using a definition of equity established in Executive Order 13983, issued on January 25, 2021, as “the consistent and...
Framework\textsuperscript{162} also include elimination of racial and ethnic disparities as central principles. Our efforts aimed at closing the health equity gap to date have included providing transparency of health disparities, supporting providers with evidence-informed solutions to achieve health equity, and reporting to providers on gaps in quality as follows: 

- The CMS Mapping Medicare Disparities Tool which is an interactive map which identifies areas of disparities and is a starting point to understand and investigate geographic, racial and ethnic differences in health outcomes for Medicare patients.\textsuperscript{163} 
- The Racial, Ethnic, and Gender Disparities in Health Care in Medicare Advantage Stratified Report, which highlights racial and ethnic differences in health care experiences and clinical care, compares quality of care for women and men, and looks at racial and ethnic differences in quality of care among women and men separately for Medicare Advantage plans.\textsuperscript{164} 
- The Rural-Urban Disparities in Health Care in Medicare Report which details rural-urban differences in health care experiences and clinical care.\textsuperscript{165} 
- The Standardized Patient Assessment Data Elements for certain post-acute care Quality Reporting Programs, which now includes data reporting for race and ethnicity and preferred language, in addition to screening questions for social needs (84 FR 42536 through 42588). 
- The CMS Innovation Center’s Accountable Health Communities Model which includes standardized collection of health-related social needs data. 

- The Guide to Reducing Disparities which provides an overview of key issues related to disparities in readmissions and reviews set of activities which can help hospital leaders reduce readmissions in diverse populations.\textsuperscript{166} 
- The CMS Disparity Methods which provide hospital-level confidential results stratified by dual eligibility for condition-specific readmission measures currently included in the Hospital Readmissions Reduction Program (see 84 FR 42496 through 42500 for a discussion of using stratified data in additional measures). 

These programs are informed by reports by the National Academies of Science, Engineering and Medicine (NASEM)\textsuperscript{167} and the Office of the Assistant Secretary for Planning and Evaluation (ASPE)\textsuperscript{168} which have examined the influence of social risk factors on several of our quality programs. In this RFI, we discuss initiatives specific to further bridging the health equity gap within the MIPS track of the Quality Payment Program. In Appendix 2: Improvement Activities of this proposed rule, we discuss a proposed improvement activity titled “create and implement an anti-racism plan”. This improvement activity acknowledges it is insufficient to gather and analyze data by race, and document disparities within different population groups. Rather, it emphasizes systemic racism is the root cause for differences in health outcomes between socially defined racial groups. Further, we also propose to modify five existing improvement activities to address health equity. We note that some improvement activities within our current Inventory already aim to improve equity. We believe further modifying them can more explicitly link the activity to health equity without changing the core activity. In other cases, our proposals to modify an activity fundamentally shifts the activity to focus on health equity specifically.

Additionally, in section IV.A.3.e.(2) of this proposed rule, we are proposing to update the complex patient bonus formula. We specifically refer to ASPE’s second report, Social Risk and Performance in Medicare’s Value-Based Purchasing Programs, which was publicly-released in May 2020.\textsuperscript{169} The second report builds on the analyses included in the initial report and provides additional insight for addressing risk factors under MIPS and other value-based payment programs. More specifically, the report has a 3-

\begin{footnotesize}
\footnotesize
\end{footnotesize}
longed strategy approach to: Measure and report quality; set high, fair quality standards; and reward and support better outcomes for beneficiaries with social risk. As a part of this 3-pronged strategy, the report supports use of the complex patient bonus in MIPS, explaining that it is well supported because this policy gives additional points to clinicians with a higher share of medically and socially complex patients and does not lower the standard of care. Hence, although ASPE’s reports to Congress support the use of a complex patient bonus at the final score level, we respond to other findings reported in other literature studies by identifying ways to make the complex patient bonus more targeted for clinicians caring for high risk and complex patients and to mitigate differences in resources that affect MIPS scores. Hence, the proposed formula is based on standardized scores and to reward only those clinicians who fall in higher quintiles in order to focus the bonus on those serving a higher proportion of more complex and vulnerable patients.

Lastly, we acknowledge that small practices within the MIPS program often face challenges in many ways. More specifically, as noted in section IV.A.3.e.(2) of this proposed rule, the Quality Payment Program gives an advantage to large organizations because such organizations have more resources invested in the infrastructure required to track and report measures to MIPS (82 FR 53776). In response to the feedback on the potential burden on small practices, we have established special policies available for small practices including the small practice bonus and special scoring policies. For example, in the CY 2018 QPP final rule (82 FR 53682 through 53683), we established a significant hardship exception for small practices for the Promoting Interoperability performance category. To further alleviate the burden on small practices and reduce this disparity between larger and small practices, we propose in section IV.A.3.d.(4) to automatically redistribute the Promoting Interoperability performance category weight for any small practice that does not submit data for the performance category, and in section IV.A.3.e.(2), we propose different redistribution weights for small practices.

We are committed to advancing health equity by improving data collection to better measure and analyze disparities across programs and policies.170 We have been considering, among other things, expanding our efforts to provide stratified data for additional social risk factors and measures, optimizing the ease-of-use of the results, enhancing public transparency of equity results, and building towards provider accountability for health equity. We are seeking public comment on two potential future expansions of the CMS Disparity Methods, including: (1) Future potential stratification of quality measure results by race and ethnicity, and (2) improving demographic data collection.

(1) Future Potential Stratification of Quality Measure Results by Race and Ethnicity

The Administration’s Executive Order on Advancing Racial Equity and Support for Underserved Communities Through the Federal Government directs agencies to assess potential barriers that underserved communities and individuals may face to enrollment in and access to benefits and services in federal programs. As summarized previously, studies have shown that among Medicare beneficiaries, racial and ethnic minority persons often experience worse health outcomes, including more frequent hospital readmissions and procedural complications. We are considering expanding the disparity methods to include stratification of the condition/procedure-specific readmission measures by race and ethnicity. The 1997 Office of Management and Budget (OMB) Revisions to the Standards for the Collection of Federal Data on Race and Ethnicity, outlines the racial and ethnic categories which may potentially be used for reporting the disparity methods, which we note are intended to be considered as social and cultural, and not biological or genetic.171 The 1997 OMB Standard lists five minimum categories of race: (1) American Indian or Alaska Native; (2) Asian; (3) Black or African American; (4) Native Hawaiian or Other Pacific Islander; (5) and White. In the OMB standards, Hispanic or Latino is the only ethnicity category included, and since race and ethnicity are two separate and distinct concepts, persons who report themselves as Hispanic or Latino can be of any race.172

Another example, the “Race & Ethnicity—CDC” code system in PHIN Vocabulary Access and Distribution System (VADS)173 permits a much more granular structured recording of a patient’s race and ethnicity with its inclusion of over 900 concepts for race and ethnicity. The recording and exchange of patient race and ethnicity at such a granular level can facilitate the accurate identification and analysis of health disparities based on race and ethnicity. Further, the “Race & Ethnicity—CDC” code system has a hierarchy that rolls up to the OMB minimum categories for race and ethnicity and, thus, supports aggregation and reporting using the OMB standard. ONC includes both the CDC and OMB standards in its criterion for certified health IT products.174 For race and ethnicity, a certified health IT product must be able to express both detailed races and ethnicities using any of the 900 plus concepts in the “Race & Ethnicity—CDC” code system in the Public Health Information Network (PHIN) Vocabulary Access and Distribution Systems (VADS), as well as aggregate each one of a patient’s races and ethnicities to the categories in the OMB standard for race and ethnicity. This approach can reduce burden on providers recording demographics using certified products.

Self-reported race and ethnicity data are the gold standard for classifying an individual according to race or ethnicity. However, CMS currently does not consistently collect self-reported race and ethnicity for the Medicare program, but instead gets the data from the Social Security Administration (SSA) and the data accuracy and comprehensiveness have proven challenging despite capabilities in the marketplace via certified health IT products. Historical inaccuracies in federal data systems and limited collection classifications have also contributed to the limited quality of race and ethnicity information in our administrative data systems.175 In recent decades, to address these data quality

172 https://www.census.gov/topics/population/hispanic-origin/about.html.

174 See https://www.healthit.gov/test-method/demographics.

issues, we have undertaken numerous initiatives, including updating data taxonomies and conducting direct mailings to some beneficiaries to enable more comprehensive racial and ethnic identification. 176 177 Despite those efforts, studies reveal varying data accuracy in identification of racial and ethnic groups in Medicare administrative data, with higher sensitivity for correctly identifying white and Black individuals, and lower sensitivity for correctly identifying individuals of Hispanic ethnicity or of Asian-Pacific Islander (API) and American Indian/Alaskan Native race. 178 Incorrectly classified race or ethnicity may result in overestimation or underestimation in the quality of care received by certain groups of beneficiaries.

We continue to work with public and private partners to better collect and leverage data on social risk to improve our understanding of how these factors can be better measured in order to close the health equity gap. Among other things, we developed an Inventory of Resources for Standardized Demographic and Language Data Collection 179 and supported collection of specialized International Classification of Disease, 10th Edition, Clinical Modification (ICD–10–CM) codes for describing the socioeconomic, cultural, and environmental determinants of health, and sponsored several initiatives to statistically estimate race and ethnicity information when it is absent. 180 The Office of the National Coordinator for Health Information Technology (ONC) included social, psychological, and behavioral standards in the 2015 Edition health information technology certification criteria (2015 Edition), providing interoperability standards (LOINC [Logical Observation Identifiers Names and Codes] and SNOMED CT [Systematized Nomenclature of Medicine—Clinical Terms]) for financial strain, education, social connection and isolation, and others. Additional stakeholder efforts underway to expand capabilities to capture additional social determinants of health data elements include the Gravity Project to identify and harmonize social risk factor data for interoperable electronic health information exchange for EHR fields, as well as proposals to expand the ICD–10 (International Classification of Diseases, Tenth Revision) z-codes, the alphanumeric codes used worldwide to represent diagnoses. 181

While development of sustainable and consistent programs to collect data on social determinants of health can be considerable undertakings, we recognize that another method to identify better race and ethnicity data is needed in the short term to address the need for improved reporting of important social determinants of health. In working with our contractors, two algorithms have been developed to indirectly estimate the race and ethnicity of Medicare beneficiaries (as described further in the next section). We believe that using indirect estimation can help to overcome the current limitations of demographic information and enable timelier reporting of equity results until longer term collaborations to improve demographic data quality across the health care sector materialize. The use of indirect estimated race and ethnicity for conducting stratified reporting does not place any additional collection or reporting burdens on hospitals as these data are derived using existing administrative and census-linked data.

Indirect estimation relies on a statistical imputation method for inferring a missing variable or improving an imperfect administrative variable using a related set of information that is more readily available. 182 Indirectly estimated data are most commonly used at the population level (such as the hospital or health plan-level) where aggregated results form a more accurate description of the population than existing, imperfect data sets. These methods often estimate race and ethnicity using a combination of other data sources which are predictive of self-identified race and ethnicity, such as language preference, information about race and ethnicity in our administrative records, first and last names matched to validated lists of names correlated to specific national origin groups, and the racial and ethnic composition of the surrounding neighborhood. Indirect estimation has been used in other settings to support population-based equity measurement when self-identified data are not available. 183

As described earlier, we previously supported the development of two such methods of indirect estimation of race and ethnicity among Medicare beneficiaries. One indirect estimation approach developed by our contractor uses Medicare administrative data, first name and surname matching, derived from the U.S. Census and other sources, with beneficiary language preference, state of residence, and the source of the race and ethnicity code in Medicare administrative data to reclassify some beneficiaries as Hispanic or API. 184 In recent years, we have also worked with another contractor to develop a new approach, the Medicare Bayesian Improved Surname Geocoding (MBISG), which combines Medicare administrative data, first and surname matching, geocoded residential address linked to the 2010 U.S. Census, and uses both Bayesian updating and multinomial logistic regression to estimate the probability of belonging to each of six racial/ethnic groups. 185

The MBISG model is currently used to conduct the national, contract-level, stratified reporting of Medicare Part C and D performance data for Medicare Advantage Plans by race and

---

Validation testing reveals concordance of 0.88–0.95 between indirectly estimated and self-reported race and ethnicity among individuals who identify as White, Black, Hispanic and API for the MBISG version 2.0 and concordance with self-reported race and ethnicity of 0.96–0.99 for these same groups for MBISG version 2.1.\(^\text{188}\) The algorithms under consideration are considerably less accurate for individuals who self-identify as American Indian/Alaskan Native or multiracial.\(^\text{189}\) Indirect estimation can be a statistically reliable approach for calculating population-level equity results for groups of individuals (such as the hospital-level) and is not intended, nor being considered, as an approach for inferring the race and ethnicity of an individual.

However, despite the high degree of statistical accuracy of the indirect estimation algorithms under consideration, there remains the small risk of unintentionally introducing measurement bias. For example, if the indirect estimation is not as accurate in correctly estimating race and ethnicity in certain demographics or populations it could lead to some bias in the method results. Such bias might result in slight overestimation or underestimation of the quality of care received by a given group. We feel this amount of bias is considerably less than would be expected if stratified reporting was conducted using the race and ethnicity currently contained in our administrative data. Indirect estimation of race and ethnicity is envisioned as an intermediate step, filling the pressing need for more accurate demographic information for the purposes of exploring inequities in service delivery, while allowing for other approaches, as described in the next section, for improving demographic data collection.

**Improving Demographic Data Collection**

Currently self-reported race and ethnicity data are the gold standard for classifying an individual according to race or ethnicity. The CMS Quality Strategy outlines our commitment to strengthening infrastructure and data systems by ensuring that standardized demographic information is collected to identify disparities in health care delivery outcomes.\(^\text{190}\) Collection and sharing of a standardized set of social, psychological, and behavioral data by clinicians, including race and ethnicity, using electronic data definitions which permit nationwide, interoperable health information exchange, can significantly enhance the accuracy and robustness of our equity reporting.\(^\text{191}\) This could potentially include expansion to additional social factors, such as language preference and disability status, where accuracy of administrative data is currently limited. We are mindful that additional resources, including data collection and staff training may be necessary to ensure that conditions are created whereby all patients are comfortable answering all demographic questions, and that individual preferences for non-response are maintained.

We note that clinicians participating in the Medicare Promoting Interoperability Program must use certified EHR technology (CEHRT) that has been certified to the 2015 Edition of health IT certification criteria. As noted previously, the certification criterion for Demographics under the 2015 Edition (at 45 CFR 170.315(a)(5)) supports collection of data using both the OMB standards for collecting data on race and ethnicity as well as the more granular “Race & Ethnicity—CDC” standard. In the 2020 ONC 21st Century Cures Act final rule, ONC also adopted a new framework for the core data set which certified health IT products must exchange, called the United States Core Data for Interoperability (USCDI) (85 FR 25569). The USCDI incorporates the demographic data and associated code sets finalized for the 2015 Edition certification criteria.

As noted previously, ONC also finalized a certification criterion in the 2015 Edition which supports a certified health IT products ability to collect social, psychological, and behavioral data (at 45 CFR 170.315(a)(15)). However, this functionality is not included as part of the certified EHR technology required by the Promoting Interoperability performance category. While the technical functionality exists to achieve the gold standard of data collection, we understand challenges and barriers exist in using the technologies with these capabilities.

We are interested in learning about, and are soliciting comments on, current data collection practices by hospitals to capture demographic data elements (such as race, ethnicity, sex, sexual orientation and gender identity (SOGI), language preference, tribal membership, and disability status). Further, we are interested in potential challenges facing clinicians with collecting a minimum set of demographic data elements in alignment with national data collection standards (such as the standards finalized by the Affordable Care Act\(^\text{192}\)) and standards for interoperable exchange (such as the United States Core Data for Interoperability incorporated into certified health IT products as part of the 2015 Edition of health IT certification criteria\(^\text{193}\)).

Advancing data interoperability through collection of a minimum set of demographic data collection, and incorporation of this demographic information into quality measure specifications, has the potential for improving the robustness of the disparity method results, potentially permitting reporting using more accurate, self-reported, information, such as race and ethnicity, and expanding reporting to additional dimensions of equity, including stratified reporting by disability status. Therefore, based on our current and newly proposed policies, we seek comments on other efforts we can take within the MIPS program to further bridge the equity gap. We plan to continue working with ASPE, clinicians, the public, and other key stakeholders on this important issue to identify policy solutions to achieve the

---

\(^{192}\) https://minorityhealth.hhs.gov/assets/pdf/checkered/1/Fact_Sheet_Section_4302.pdf.

goals of attaining health equity for all patients and minimizing unintended consequences. We look forward to receiving feedback on these topics and note for readers that responses to the RFI will not directly impact payment decisions. We also note our intention for additional RFI or rulemaking on this topic in the future. While we will not be responding to specific comments submitted in response to this Request for Information in the CY 2022 PFS final rule, we will actively consider all input as we develop future regulatory proposals or future subregulatory policy guidance.

2. Definitions

At § 414.1305, we are proposing definitions of the following terms:

- Collection type (revision).
- Meaningful EHR user for MIPS (revision).
- MIPS determination period (revision).
- MIPS eligible clinician (revision).
- Multispecialty group (addition).
- MVP Participant (addition).
- Population health measure (addition).
- QCDR measure (addition).
- Single specialty group (addition).
- Special status (addition).
- Subgroup (addition).
- Submission type (revision).

These terms and definitions are discussed in detail in the relevant sections of this proposed rule.

3. MIPS Program Details

a. MIPS Eligibility

(1) MIPS Eligible Clinician Definition

In the CY 2017 Quality Payment Program final rule (81 FR 77040 through 77041), we defined a MIPS eligible clinician at § 414.1305, as identified by a unique billing TIN and NPI combination used to assess performance, as any of the following (excluding those identified at § 414.1310(b)): A physician (as defined in section 1861(r) of the Act); a PA, NP, CNS (as such terms are defined in section 1861(aa)(5) of the Act); and registered dietician or nutrition professional; and a group that includes such clinicians. We established at § 414.1310(b) and (c) that the following are excluded from this definition per the statutory exclusions defined in section 1848(q)(1)(A) and (q)(1)(C)(vi) of the Act, we established at § 414.1310(b)(2) that eligible clinicians (as defined at § 414.1305) who are not MIPS eligible clinicians have the option to voluntarily report measures and activities for MIPS. Additionally, we established at § 414.1310(d) that in no case will a MIPS payment adjustment apply to the items and services furnished during a year by eligible clinicians who are not MIPS eligible clinicians, as described in § 414.1310(b) and (c), including those who voluntarily report on applicable measures and activities specified under § 414.1310(b)(2) and (c), (including those who voluntarily report on applicable measures and activities specified under MIPS. In this proposed rule, we are proposing to amend § 414.1305 to revise the definition of a MIPS eligible clinician, as identified by a unique billing TIN and NPI combination used to assess performance, to include certified nurse-midwives (as defined in section 1861(gg)(2) of the Act) and clinical social workers (as defined in section 1861(hh)(1) of the Act).

Section 1848(q)(1)(C)(ii) of the Act provides the Secretary with discretion, beginning with the 2021 MIPS payment year, to specify additional eligible clinicians (as defined in section 1848(k)(3)(B) of the Act) as MIPS eligible clinicians. Such clinicians may include physical therapists, occupational therapists, or qualified speech-language pathologists; qualified audiologists (as defined in section 1861(ii)(3)(B) of the Act); clinical psychologist (as defined by the Secretary for purposes of section 1861(ii) of the Act); and registered dietitian or nutrition professional; and a group that includes such clinicians. In this proposed rule, we are proposing to amend § 414.1305 to revise the definition of a MIPS eligible clinician, as identified by a unique billing TIN and NPI combination used to assess performance, to include certified nurse-midwives (as defined in section 1861(gg)(2) of the Act) and clinical social workers (as defined in section 1861(hh)(1) of the Act). The new definition would mean any of the following (excluding those identified at § 414.1310(b)): A physician (as defined in section 1861(r) of the Act); a PA, NP, CNS (as such terms are defined in section 1861(aa)(5) of the Act); a certified registered nurse anesthetist (as defined in section 1861(bb)(2) of the Act); beginning with the 2021 MIPS payment year, a physical therapist, occupational therapist, qualified speech-language pathologist; qualified audiologist (as defined in section 1861(ii)(3)(B) of the Act); clinical psychologist (as defined by the Secretary for purposes of section 1861(ii) of the Act); and registered dietitian or nutrition professional; and a group that includes such clinicians.
In order to assess whether these additional eligible clinicians (certified nurse-midwives and clinical social workers) could successfully participate in MIPS, we evaluated whether there would be sufficient measures and activities applicable and available for each of the additional eligible clinician types. We finalized in the CY 2018 Quality Payment Program final rule (82 FR 53780), that having sufficient measures for the quality performance category, means having sufficient measures applicable and available that we can calculate a quality performance category percent score for the MIPS eligible clinician because at least one quality measure is applicable and available to the clinician. For the improvement activities performance category, we believe that all MIPS eligible clinicians will have sufficient activities applicable and available, as they are broadly applicable. We focused our analysis on the quality and improvement activities performance categories because these performance categories require submission of data. For the Promoting Interoperability performance category, we do not believe that clinical social workers would have sufficient and available measures available. We refer readers to section IV.A.3.d.(4)(h) of this proposed rule, where we are proposing a policy to automatically assign a zero percent weighting for the Promoting Interoperability performance category for the clinical social workers. However, for the certified nurse-midwives we do believe they would have sufficient and available measures as many of them have participated in the Medicaid EHR Incentive Program and have experience with the adoption or use of CEHRT (81 FR 77243). Therefore, the certified nurse-midwives score would not be reweighted for the Promoting Interoperability performance category. However, it should be noted that if a clinician believes they are under undue hardship they may apply for a Hardship Application. We did not focus as part of our analysis on the cost performance category because we are only able to assess cost performance for a subset of eligible clinicians—specifically, those who are currently eligible as a result of not meeting any of the current exclusion criteria. We do not believe there are cost measures that would apply to the care that clinical social workers or certified nurse-midwives tend to provide. The current set of episode-based measures in the cost performance category focuses on inpatient and primary care. Therefore, we anticipate the cost category would be reweighted for the majority of these clinician types. The impact of the cost performance category for these additional eligible clinicians would continue to be considered but is currently not a decisive factor for successful participation in MIPS. From our analysis, we found that improvement activities would generally be applicable and available for each of the additional eligible clinician types. For the quality performance category, we found that the additional eligible clinician types would have sufficient MIPS quality measures applicable and available. Since the CY 2019 PFS final rule, we have increased the quality measures that we believe are applicable to clinical social workers to 15 quality measures, which includes 2 outcome measures and 8 high priority measures. In the CY 2021 PFS final rule (85 FR 85069 through 85071), we finalized a Clinical Social Worker Specialty Measure Set. For certified nurse-midwives we believe there are 7 quality measures which includes 2 outcome measures and 5 high priority measures available for reporting in performance year 2022. In Appendix 1, Table Group BA of this proposed rule, we are proposing a Certified Nurse-Midwives Specialty Set. In addition, we received correspondence from the clinical social workers national associations requesting to be included in MIPS. Finally, amending the definition of a MIPS eligible clinician to include clinical social workers and certified nurse-midwives would align with §414.1305 definition of an eligible clinician utilized by MIPS APMs for eligibility determinations. We request comments on our proposal to amend §414.1305 to modify the definition of a MIPS eligible clinician, as identified by a unique billing TIN and NPI combination used to assess performance, to mean any of following (excluding those identified at §414.1310(b)): For the 2019 and 2020 MIPS payment years, a physician (as defined in section 1861(r) of the Act); a PA, NP, or CNS (as such terms are defined in section 1861(aa)(5) of the Act); a certified registered nurse anesthetist (as defined in section 1861(bb)(2) of the Act); for the 2021 through 2023 MIPS payment years, a physical therapist, occupational therapist, qualified speech-language pathologist; qualified audiologist (as defined in section 1861(bb)(2)(B) of the Act); clinical psychologist (as defined by the Secretary for purposes of section 1861(ii)(9) of the Act); and registered dietician or nutrition professional; for the 2024 MIPS payment year and future years, a certified nurse-midwives (as defined in section 1861(1g)(2) of the Act); clinical social workers (as defined in section 1861(hh)(1) of the Act); and a group that includes such clinicians. (2) MIPS Performance Period In the CY 2019 PFS final rule (83 FR 59745 through 59747) we finalized to amend §414.1320(d)(1) that for purposes of the 2022 MIPS payment year and future years, the performance period for the quality and cost performance categories would be the full calendar year (January 1 through December 31) that occurs 2 years prior to the applicable MIPS payment year. In addition, we finalized at §414.1320(d)(2) that for purposes of the 2022 MIPS payment year and future years, the performance period for the improvement activities performance category would be a minimum of a continuous 90-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year. In the CY 2021 PFS final rule (85 FR 84873), we finalized the performance period for the quality and cost performance categories at §414.1320(d)(1) as follows: Beginning with the 2023 MIPS payment year, the performance period for the quality and cost performance categories is the full calendar year (January 1 through December 31) that occurs 2 years prior to the applicable MIPS payment year, except as otherwise specified for administrative claims-based measures in the MIPS final list of quality measures described in §414.1330(a)(1). However, the quality, cost, and improvement activities performance period for the 2022 MIPS payment year, formerly at §414.1320(d), was inadvertently deleted, and the amended language regarding administrative claims measures was not expressly retroactive. We recognize that the application of this policy for the 2020 MIPS performance period would be retroactive. To the extent that the application of this policy for the 2020 MIPS performance period would be retroactive, section 1871(e)(1)(A)(ii) of the Act provides for retroactive application of a substantive change to an existing policy when the Secretary determines that failure to apply the policy change retroactively would be contrary to the public interest. We believe that failure to reinstate the inadvertently deleted language retroactively would be contrary to the public interest because the performance period establishes the timespan for the
Medicare Part B submission, both an eligible for MIPS. Once we receive a did not submit Medicare Part B quality practices, we now recognize that this for MIPS eligible clinicians in small requiring an election for assessment as a group but believed this would be greater of the two. We considered performance category score that is the and as individuals and apply the quality calculating the quality performance submitted, that we intended on only Medicare Part B claims were in circumstances where small practices participating in MIPS as part of a virtual group, because clinicians signal their intent to be scored as a virtual group through the virtual group election process. We request public comments on our proposal.

b. Transforming MIPS: MIPS Value Pathways

(1) Overview

We are moving to MIPS Value Pathways (MVPs) to improve value, reduce burden, inform patient choice in selecting clinicians, and reduce barriers to facilitate movement into APMs (84 FR 40732 through 40734 and 85 FR 84844 through 84845). We intend to promote high value care by paying for health care services by linking performance on cost, quality, and the patient’s experience of care. The MVP framework will move MIPS forward on the path to value by connecting the MIPS performance categories, better informing and empowering patients to make decisions about their healthcare, and by helping clinicians to achieve better outcomes using robust and accessible healthcare data and interoperability.

Stakeholders have supported the MVP framework and our MVP guiding principles, which aim to reduce complexity and burden, move towards more meaningful measurement, capture the patient voice, and move to higher value care (84 FR 62946 and 85 FR 84845). We believe MVP reporting will reduce selection burden with choosing MIPS quality measures and improvement activities to submit; reduce reporting burden by requiring submission of fewer MIPS quality measures than the traditional MIPS participation method; and further align across performance categories the measures and activities identified by specialists and patients as being meaningful and relevant. We believe MVPs developed in coordination with stakeholders with an established process in which clinician and patient perspectives are considered (83 FR 84850) can result in more meaningful performance data, reduced complexity
of the MIPS program, and lowered clinician burden to participate. MVPs will make MIPS more meaningful by allowing a more cohesive participation experience; by standardizing performance measurement of a specialty, medical condition, or episode of care; and reducing the siloed nature of the traditional MIPS participation experience. We intend for MVPs to drive value and help clinicians and practices prepare to take on and manage financial risk, as in Advanced APMs, as they build out their quality infrastructure components (measurement tracking, performance improvement processes, interoperability and data information systems) that align with the MIPS performance categories and gain experience with cost measurement (84 FR 40733).

Performance measure reporting for specific populations, such as in MVPs, encourages practices to build an infrastructure with capabilities to compile and analyze population health data, a critical capability in assuming and managing risk. The experience with MVPs, in which there is aligned measurement of quality (of care and experience of care) and cost, continuous improvement/innovation within the practice, and efficient management and transfers of information will help clinicians deliver higher value care and remove barriers to APM participation. Combining linked performance measures and activities with more standardization of measures in MVPs will provide the data that can better assist patients in comparing clinician performance and selecting clinicians from which to seek care.

Further, MVPs will provide multispecialty groups a way to report performance information which is meaningful to various specialties and teams within the group through the proposed future subgroup reporting option discussed in section IV.A.3.b.(3) of this proposed rule. Multispecialty groups, especially those groups with many specialties and clinicians, often provide an array of services that may not be captured in a single set of measures or in a single MVP. Subgroup reporting would allow increased comprehensiveness of multispecialty group performance data as more services, including specialty services, can be represented since a group and subgroup may be able to report more than one MVP. The subgroup performance data would also assist patients in selecting clinicians because the data would be more relevant and specific to the care provided by clinicians in the subgroup. We refer readers to section IV.A.3.b.(3) of this proposed rule for our proposals on MVP subgroup reporting.

Under traditional MIPS, we understand clinicians and their administrative staff spend time and resources sifting through large inventories of measures and activities and depending upon how their practice decides to participate, may ultimately submit unrelated measures and activities. While we have attempted to streamline this process through the development of quality specialty sets and user-friendly tools on our website (see measure selection tool at https://qpp.cms.gov/mips/explore-measures?tab=qualityMeasures&py=2020#measures), we still hear concerns from stakeholders about not having relevant measures and activities (January 7, 2021 Town Hall (85 FR 74729 through 74730) feedback). MVPs are being developed to focus on a given specialty, condition, and/or episode of care (85 FR 84851). As more MVPs become available, we intend to continue to offer tools to clinicians that meet the real needs of the users, based on human-centered design considerations that will be helpful as they select and submit MVPs, such as including MVPs in the MIPS shopping cart. MVPs would also bring the opportunity for clinicians to participate as subgroups, which would address the issue that exists under traditional MIPS of unrelated multispecialty group performance reporting. Subgroups formed within a multispecialty group would be able to submit performance measures and activities that are specific to their services and the associated patient conditions or health priorities.

Additionally, clinician performance data, which is more meaningful to the services provided by subgroup participants, will be more readily available to be used by clinicians to improve quality and value of their services. As more clinicians and applicable MVPs, the performance data available to patients will expand, and in the future, information for specialists in multispecialty groups will become more available on our Compare Tools, enabling patients to make more informed choices for their care.

We continue our efforts to improve the healthcare of Medicare patients by allowing clinicians to focus on providing care for their patients and report on measures and activities that best reflect their care. As we propose MVP implementation policies, we are considering the critical factors that will contribute to and demonstrate MVP success and the characteristics of the overall MVP portfolio. We look forward to continuing to work with stakeholders to improve the program and implement the vision of MVPs.

(2) MVP Framework and Implementation Considerations

As discussed in the CY 2020 PFS proposed and CY 2021 PFS final rules (84 FR 40732 through 40734, 85 FR 50279 and 85 FR 84844 through 84845 respectively), our MVP framework calls for linking the MIPS quality, cost, and improvement activities performance categories with a foundation of the Promoting Interoperability and population health claims-based measures. We are considering how to best implement an MVP portfolio that balances our MVP goals for transformative change and our five MVP guiding principles (85 FR 84845) within current capabilities. We note there are constraints related to the ability to implement significant program changes including statutory restrictions on the structure of MIPS, and limitations of the current quality and cost measure inventory.

(a) MVP Transition

Stakeholders have urged us to allow sufficient transition time for MVP implementation (85 FR 84859). We recognize that the complete transition to MVPs should account for clinicians’ readiness for change, the current state of measure development, CMS’s operational limitations, and stakeholder capacity for developing and implementing MVPs. We refer readers to our 2022 PFS Proposed Rule Timeline: Transition from Traditional MIPS to MVPs graphic at https://qpp-cms-prod-content.s3.amazonaws.com/uploads/1501/2022%20PFS%20Proposed%20Rule%20MVP%20Timeline%20Graphic.pdf and section IV.A.3.b.(2)(d) of this proposed rule for discussion of our MVP transition timeline which outlines our response to stakeholder concerns about adequate transition time and our plans for a gradual incremental transition to MVPs.

Stakeholders have largely supported our MVP goals, but a few have voiced concerns regarding whether our goals to drive value, reduce burden, and derive comparative data can be achieved via the MVP framework (85 FR 84845 through 84847). We have received comments stating MVPs should utilize more innovative approaches (85 FR 194)
Regarding utilization of innovative approaches, we note that the statutory requirements at section 1848 of the Act may constrain our ability to adopt certain changes. These requirements include but are not limited to: The use of four MIPS performance categories (quality, cost, improvement activities and Promoting Interoperability); setting the performance threshold; the call for measures and annual quality measure selection process; and the prescribed performance category weights.

Conversely, the statute does provide limited flexibilities in some other areas, so we are interested in exploring any existing MIPS flexibilities that will assist us in implementing MVPs. As we begin MVP implementation, the portfolio of MVPs will be developed with a focus on our end goals while adhering to statutory requirements.

We request public comment on innovative ideas that can help achieve our desired MVP results. MVPs aim to improve value, reduce burden, help patients compare clinician performance to inform patient choice in selecting clinicians, and reduce barriers to movement into APMs.

Additional performance measures that support targeted MVP clinical areas may be needed to develop MVPs for all clinicians and to ensure they have meaningful measures, which include the patient perspective, care outcomes, and to support linkages between cost and quality. In section IV.A.3.d.(2)(c) of this proposed rule, we seek comment on challenges we encounter, and ways to ensure that stakeholder-developed cost measures meet certain standards and are consistent with the goals of MIPS and MVPs. Additionally, in section IV.A.1.(d) of this proposed rule, we discuss our request for information on closing the health equity gap in CMS clinician quality programs, potential future stratification of quality measures, and request comments on other efforts we can take within the MIPS program to further bridge the health equity gap.

While we aim to shift towards the ideal MVP state, we have data submission limitations slowing our ability to reach our objective of reporting burden reduction. Ultimately, we envision that the future goal of the Quality Payment Program, particularly with MIPS and MVPs, is to ensure there is more granular data available for patients, clinicians, and other stakeholders. We envision an end state where technology will allow for the submission of discrete data elements. CMS will be able to calculate measure performance for clinicians, subgroups, and groups, rather than having measure performance aggregated and calculated at a group or subgroup level prior to reporting. We anticipate more granular data will be available for patients, clinicians, and other stakeholders through an approach of future mandatory subgroup reporting (as discussed in section IV.A.3.b.(3)(h) of this proposed rule). We also look forward to broad use of standards-based APIs that leverage the FHIR standard within EHRs (as discussed in section IV.A.3.d.(4)(i) of this proposed rule) and the creation and use of QMIs (as discussed in section IV.A.1.c.(5) of this proposed rule). See section IV.A.1.c. of this proposed rule for our Advancing to Digital Quality Measurement and the Use of Fast Healthcare Interoperability Resources (FHIR®) in Physician Quality Programs RFI, which addresses: (1) A refined definition of digital quality measures, (2) the use of FHIR® for eCQMs, and (3) changes under consideration to advance digital quality measurement with the intent of transitioning to digital quality measures by 2025.

We held a Town Hall meeting on January 7, 2021 (recording available at https://www.youtube.com/watch?v=7CjQeuD3eFE&feature=youtu.be) to obtain stakeholder feedback on MVP considerations for MVP design and implementation (85 FR 74729 through 74730). We have received commenter concerns from previous MVP rulemaking and MIPS MVP Town Hall about fragmented care under specialty-focused MVPs with a few commenters voicing support for a care-coordination focus. We do not want to restrict MVP development to only the concepts already presented. For example, we envision that some MVPs would be reported primarily by a single specialty and other MVPs would include measures and activities relevant to a broad range of clinicians. We are interested in MVPs that target a focused episode of care, as well as MVPs that measure the patient journey and care experience longitudinally. We would like to explore how MVPs could best measure the value of multi-disciplinary team-based care.

See section IV.A.3.b.(4)(b)(i)(A) of this proposed rule, for discussion of MVP development areas and broad and team-based holistic MVP approaches.

Our approach to developing the portfolio of MVPs must balance objectives for having MVPs available for the diverse range of MIPS eligible clinicians, the variety of health conditions affecting Medicare patients, and the patient's needs for relevant, meaningful information. We seek stakeholder feedback on the types of MVPs and quality and cost measures required to meet those objectives.

We request public comment on the concepts outlined above.

(b) MVP Guiding Principles

(i) Overview of the Guiding Principles

In the CY 2021 PFS final rule (85 FR 84845 through 84849), we updated the MVP guiding principles from the CY 2020 PFS proposed rule (84 FR 40734) to incorporate RFI comments and the evolution of the MVP framework.

The guiding principles for MVPs are as follows:

1. MVPs should consist of limited, connected complementary sets of measures and activities that are meaningful to clinicians. This will reduce clinician burden, align scoring, and lead to sufficient comparative data.

2. MVPs should include measures and activities that result in providing comparative performance data, which is valuable to patients and caregivers in evaluating clinician performance and making choices about their care. MVPs will enhance this comparative performance data as they allow subgroup reporting that comprehensively reflects the services provided by multispecialty groups.

3. MVPs should include measures selected using the Meaningful Measures approach and, wherever possible, the patient voice must be included, to encourage performance improvements in high priority areas.

4. MVPs should reduce barriers to APM participation by including measures that are part of APMs where feasible, and by linking cost and quality measurement.

5. MVPs should support the transition to digital quality measures.

(ii) Implementation of MVP Guiding Principles and Practical Considerations

The MVP guiding principles will help move us towards our goals of transforming healthcare. Stakeholders have supported the guiding principles and have indicated their interest in further understanding how we intend to implement the MVP Guiding Principles (85 FR 84845). As we introduce MVPs and address operational policies, we are focused on the guiding principles and the concrete steps needed to implement the principles at both the individual MVP level and the MVP portfolio level. We acknowledge certain tensions between our intent to simplify MIPS through increased performance measurement standardization versus clinician's desire for flexibility and choice of performance measure and
activities. We also acknowledge tensions between our intent to obtain comparable clinician performance data and include meaningful measures for all clinician types and specialties while minimizing burden. We want to provide patients with valuable and comparable clinician performance data to assist patients and caregivers when selecting a clinician or group. At the same time, we must consider clinician burden and performance measurement aspects such as measure reliability and attribution methodologies. The availability of the subgroup reporting option, proposed in section IV.A.3.b.(3) of this proposed rule, would move in the direction of facilitating more comprehensive performance data for multidisciplinary groups.

We want to connect cost measures to quality measures and improvement activities in newly developed MVPs as stated in guiding principle 1 (85 FR 84849 through 84854). However, as we look to develop MVPs for all MIPS eligible clinicians, we are hampered by the limited availability of cost measures. Also, the siloed cost measures and quality measures development processes can present a degree of challenge in forming cohesive measure sets in MVPs as cost and quality measures are often developed independently of one another, addressing different patient populations and care conditions. Because improving value requires the ability to measure quality and cost of care, we are concerned with the limited number of cost measures currently available. We are proposing five cost measures for implementation into MIPS in section IV.A.3.d.(2)(b) of this proposed rule. We also want to expand our ability to have cost measures available for MVPs. We refer readers to section IV.A.3.d.(2)(c) of this proposed rule, which discusses our proposal for external cost measure development by stakeholders.

Given these tensions and challenges, we plan to continue balancing the MVP framework approaches and our incremental MVP introduction while focusing on developing goals and considerations of current and future developments to help us implement the MVP guiding principles.

(iii) Implementing MVP Guiding Principles

In this rule we propose several policies that begin to implement the MVP guiding principles. We also outline several challenges to implementing the guiding principles and, in multiple sections of this rule, request public comment to guide us in future rulemaking.

We are proposing seven initial MVPs in section IV.A.3.b.(4)(c) of this proposed rule for implementation in CY 2023 performance period. The proposed MVPs contain related cost and quality measures and improvement activities. The proposed MVPs also limit the number of quality measures and improvement activities from which clinicians would choose to report and require fewer reported quality measures than in traditional MIPS. Both cost and population health measures are calculated from claims data and do not have to be submitted by clinicians. The proposed MVPs represent concrete progress toward implementing the guiding principles.

For example:

- Requiring the submission of fewer quality measures and a lessened measure selection effort reduces clinician burden.
- Hearing from stakeholders ensures that measures are relevant to clinicians.
- The limited numbers of cost and quality measures in an MVP will support greater numbers of clinicians being scored on the same measures, leading to improved comparative data.
- The MVPs address a Meaningful Measure domain and contain measures that are clinically appropriate to the clinicians and care settings for whom the MVP is focused.

In section IV.A.3.b.(5) of this proposed rule, we implement the guiding principle concept to “align scoring” by proposing MVP scoring policies that mirror traditional MIPS scoring in MVPs while moving away from earlier transitional policies that may have masked performance differences or inflated performance scores. Our scoring policies aim to spur improvements, drive higher value care, and promote fairness. We propose to maintain scoring policies finalized in traditional MIPS for MVPs to leverage meaningful scoring policies and retain stable scoring for APM Participants.

The subgroup reporting option outlined in section IV.A.3.b.(3) of this proposed rule operationalizes guiding principle 2 and, as noted above, will increase the number of clinicians reporting and better serve specialty clinicians who want to be scored on performance measures relevant to their specialty and services provided. Public reporting of MVP and subgroup information as proposed in section IV.A.3.b.(3)(g) of this rule will further guiding principle 2 goal of providing comparative information that is valuable to patients and caregivers.

We are proposing innovative approaches to measuring value that might include APM performance measurement approaches and using a single patient population both for MVP cost and quality measures in the future.

We have also discussed our intent to provide more robust clinician performance data feedback for MVP submissions (84 FR 40733 through 40734). Receiving more meaningful feedback through MVPs would help prepare clinicians to meet APM goals for managing patient populations. While clinicians support more robust data feedback, the current timing of data submission after the performance year ends is a barrier to providing more timely data feedback to clinicians during the performance year. As we move to dQMs and utilization of standards-based APIs to retrieve data from provider data sources, earlier, more frequent reporting, and more granular data (as in subgroup reporting) may be possible without additional clinician burden, allowing us to provide more timely clinician performance data feedback. See section IV.A.3.b.(5)(d) of this proposed rule for a discussion of MVP clinician data feedback.

During our January 7, 2021, MVP Town Hall meeting we sought feedback on how to best coordinate and align MVPs and APMs (85 FR 74729 through 74730). A few Town Hall commenters suggested that MVPs serve as a long-term performance-based option to improve physicians’ experience in MIPS and as an on-ramp for clinicians from MIPS to APMs. A few commenters supported the development of MVPs for areas where APMs are absent, with a few stakeholders supporting an initial focus on developing MVPs around existing specialty measures sets before transitioning the MVP into a bridge for clinicians who do not have an applicable APM. We also received a comment that there may be scenarios in which it may be challenging to use the same measures in an MVP as an APM, as the commenter stated APM participants have more legal flexibility and APM models often use Innovation Center waiver authority (section 1115A of the Act). We continue to explore the ideal MVP relationship with APMs, and how to best drive value and align performance measurement given differences in payment, performance measurement methods (such as prospective and retrospective measure attribution), patient population (all payer versus fee-for-service), and data submission.

While the proposals in this proposed rule referenced above demonstrate important progress toward realizing the MVP guiding principles, challenges remain for CMS and stakeholders in
developing a portfolio of MVPs that fully implement the guiding principles and achieve our vision for MVPs. As we propose to introduce MVPs and implement our guiding principles, we continue to strive to fully implement MVPs and the overall portfolio to drive value, obtain comparative performance data, and elevate the patient voice while reducing clinician burden.

(c) MVP Participant

(i) MVP Participant Definition

As we look ahead to implementing MVPs, we believe it is important to clearly define who can participate in MIPS through MVPs. We believe that defining MVP participation will help stakeholders better understand how our policies affect them, as well as provide clarity and simplicity for readers.

At §414.1305 we have previously finalized definitions for a MIPS eligible clinician, group, and APM Entity. While we are not proposing to change these definitions, and are using these existing terms, we seek to clarify who can participate in MVPs. We are proposing a new opportunity for clinicians to participate in MVPs, as a subgroup. We refer readers to section IV.A.3.b.(3) and §414.1305 of this proposed rule, where we provide the definition for a subgroup. In addition, we believe it would be helpful to distinguish the types of groups that participate in MIPS, and how they could participate in MVPs. Therefore, we refer readers to section IV.A.3.b.(3) and §414.1305 of this proposed rule, where we propose definitions for single specialty group, multispecialty group, and special status, to provide further clarity for stakeholders as they seek to understand how they can participate in MVPs.

In keeping with MVPs broader aim of cohesive participation, at §414.1305 we are proposing the term MVP Participant to mean: An individual MIPS eligible clinician, multispecialty group, single specialty group, subgroup, or APM Entity that is assessed on an MVP in accordance with §414.1365 for all MIPS performance categories. For the CY 2025 MIPS performance period/2027 MIPS payment year and future years, MVP Participant means an individual MIPS eligible clinician, single specialty group, subgroup, or APM Entity that is assessed on an MVP in accordance with §414.1365 for all MIPS performance categories. The proposed definition of MVP Participant accounts for the gradual transition to requiring multispecialty groups to form subgroups if they want to report MVPs. We believe this is important because multispecialty groups report on the same set of measures, which may not be relevant or meaningful to all specialists that participate within the multispecialty group, to make improvements in the care they provide to patients. We refer readers to section IV.A.3.b.(2)(d)(ii) of this proposed rule for discussion of subgroup implementation, including multispecialty groups forming subgroups to report MVPs beginning with the CY 2025 MIPS performance period/2027 MIPS payment year. Table 30 serves to summarize our proposals, specifically which MVP Participants can report an MVP in the future:

<table>
<thead>
<tr>
<th>Who Can Report MVPs</th>
<th>CY 2023- CY 2024 MIPS Performance Period</th>
<th>Individual MIPS eligible clinicians, single specialty groups, multispecialty groups*, subgroups, and APM Entities.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>CY 2025 MIPS Performance Period, and Future Years</td>
<td>Individual MIPS eligible clinicians, single specialty groups, subgroups*, and APM Entities.</td>
</tr>
</tbody>
</table>

*Multispecialty Groups would be required to report as subgroups in order to report MVPs beginning with the CY 2025 MIPS performance period/2027 MIPS payment year.

We recognize that in some limited instances, there are specific policy proposals that are more narrow or expansive than the term MVP Participant allows for. In those cases, we will continue to clarify which specific participants a given policy applies to, rather than using the new term. For example, if we have policies regarding what is required during subgroup registration, as discussed below, we would specify that these policies would be specific to subgroups rather than use the term MVP Participants. In another example, in section IV.A.3.b.(5)(b)(iv) of this proposed rule, we propose Promoting Interoperability performance category scoring policies that apply to individual MIPS eligible clinicians, groups, and APM Entities, but do not apply to subgroups. In this example, we would clarify that the policy applies to MVP Participants, except subgroups. In addition, if we determine a given policy proposal is too broad, regardless of whether they are single specialty or multispecialty, we may simply refer to them as groups. We believe stakeholders would welcome the simplicity that using the term MVP Participant would provide. It is an important step forward for the program that would promote clarity and consistency of policy drafting and compliance by stakeholders. We request public comment on the proposal.

(ii) Opt-In Participants, Voluntary Participants, and Virtual Groups

As discussed above, we are proposing that for the implementation of MVPs, certain clinicians would not be able to participate. These include, voluntary reporters, opt-in eligible clinicians, and virtual groups, who would have their participation in MVPs delayed. We refer readers to section IV.A.3.b.(3)(d)(iv)(C) of this proposed rule for discussion of the participation rates of opt-in and voluntary participants. Similar to our request for comments on whether Opt-In and voluntary participants should be allowed to join subgroup reporting in a future state, we also request comment on whether opt-in participants, voluntary participants, and virtual groups should be allowed to report MVPs as MVP Participants in a future state.

(d) MVP and Subgroup Implementation Timeline

Since the finalization of the MIPS Value Pathways framework through the CY 2020 PFS final rule (84 FR 62946 through 62949), stakeholders have provided feedback on our implementation timeline through multiple methods, including public comment through rulemaking, meetings, and the MVP Town Hall that held in January 2021. Associated resources related to the MVP Town Hall are available for stakeholder review through the Quality Payment Program Resource Library are available at https://qpp.cms.gov/resources/webinars.

Through the MVP Town Hall, we have heard stakeholders encourage MVPs be implemented through a
gradual process that provides MVP participants and third party intermediaries with time to adapt to the changes in policy, requirements, and programming updates that would need to occur in technological systems. Therefore, we believe it is appropriate to delay the implementation and availability of the proposed MVPs, described in Appendix 3: MVP Inventory of this proposed rule until the 2023 performance period/2025 MIPS payment year of the MIPS program. We propose at § 414.1365(a)(1), that for the 2023 MIPS performance period/2025 MIPS payment year, and future years, we use MVPs included in the MIPS final inventory of MVPs established by CMS through rulemaking to assess performance for the quality, cost, improvement activities, and Promoting Interoperability performance categories.

In addition to proposing a timeline in which MVPs would be first available, we also believe it is important to be transparent with the agency’s current vision and request public comment on the timing of how long MVP reporting should be voluntary, the transition to mandatory MVP reporting, and the timing for when we should sunset traditional MIPS.

While we have heard from stakeholders their request for us to maintain both reporting methods, traditional MIPS and MIPS Value Pathways, we believe it is not a feasible option long term, because of the operational burden, complexity, and costs associated with simultaneously maintaining both versions of the program.

We have also heard from stakeholders (through the MVP Town Hall and from Health Affairs195) the importance in continuing this shift to value through MVPs, and doing so by providing as much transparency as possible. We agree, and believe that providing transparency with our thinking (in terms of a transition timeline) and seeking public comment will serve to provide stakeholders with important information to make informed decisions about their eventual transition to MVP reporting. We believe it is critical to establish a timeline for the awareness of all stakeholders (such as MVP participants, third party intermediaries, and health systems) so they can plan their work accordingly to coincide with this timeline.

As such, we outline a timeline in which MVP implementation could occur. As stated above, we are proposing at § 414.1365(a) that the first year MVP reporting be available is the CY 2023 MIPS performance period/2025 MIPS payment year. Based on the discussion above, we are proposing for the CY 2023 MIPS performance period/2025 MIPS payment year, MVP reporting is voluntary. We request comments on this proposal.

Through the remainder of the timeline outlined in Table 31, we seek to lay out our thinking for the future of the MIPS program, for purposes of transparency, and to request public comment. We believe moving forward with voluntary MVP reporting in the initial years would provide MVP participants sufficient time to prepare for mandatory MVP reporting. Therefore, as outlined below, we are considering MVP reporting would be voluntary for the CY 2023 through the CY 2027 MIPS performance periods/2025 through the 2029 MIPS payment years. Furthermore, we plan for potential future mandatory MVP reporting to coincide with the sunset of traditional MIPS.

### Table 31: MVP Implementation Timeline

<table>
<thead>
<tr>
<th><strong>MVP Implementation Timeline</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Proposal:</strong></td>
</tr>
<tr>
<td>CY 2023 MIPS Performance Period</td>
</tr>
<tr>
<td><strong>For Future Consideration:</strong></td>
</tr>
<tr>
<td>CY 2024- CY 2027 MIPS Performance Periods</td>
</tr>
<tr>
<td>End of CY 2027 MIPS Performance Period and Corresponding Data Submission Period</td>
</tr>
<tr>
<td>CY 2028 MIPS Performance Period, and Future Years</td>
</tr>
</tbody>
</table>

As previously described, maintaining both traditional MIPS and MVPs is not a feasible long-term approach for the agency. As such, we are thinking of sunsetting traditional MIPS by the end of the CY 2027 performance period/2029 MIPS payment year. We would like to note that we are not proposing the timeframe in which MVP reporting would no longer be voluntary (by the end of the CY 2027 performance period/2029 MIPS payment year), and the future sunset of traditional MIPS at this time; any proposal to sunset traditional MIPS would be made in future rulemaking. Our discussion of the MVP implementation timeline is an effort to be transparent with our long-term vision of the MIPS program.

We request public comments on this incremental timeline to transition to mandatory MVP reporting, including the timing of the sunset of traditional MIPS. Specifically, are there concerns with this timeline? Is there an alternative timeline we should consider and why? In addition, what factors should CMS monitor to determine stakeholders readiness to sunset traditional MIPS and transition to MVPs? We understand that some clinicians who participate in MIPS practice in highly specialized clinical

---

areas and subspecialties, where they may believe there is not an MVP applicable to their highly specialized practice. Therefore, we also request comment on what should happen in instances where highly specialized clinicians cannot identify an applicable and relevant MVP.

We request public comments on this approach.

(ii) Subgroup Implementation Timeline

In the CY 2021 PFS final rule (85 FR 84645), we signaled our intent to implement subgroup reporting by finalizing modifications to the MVP guiding principles. We refer readers to section IV.A.3.b.(3) of this proposed rule for detailed discussion of subgroup proposals; and to section IV.A.3.b.(3)(c) of this proposed rule and § 414.1305 for the definitions of groups, multispecialty groups, single specialty groups, and subgroups.

From our understanding, groups may be made up of a single specialty or of multiple specialties. We do not believe that single specialty groups, should be required to form subgroups in order to report MVPs. In this scenario, we believe that a single specialty group would be able to report on the same set of relevant and applicable measures for all clinicians within the group, and would be able to ascertain results that may lead to improvements in the patient care provided. Therefore, for now, we do not anticipate the need to require single specialty groups to form subgroups in order to report an MVP.

The intent of the subgroup reporting proposals is to move away from large multispecialty groups reporting on the same set of measures, which may not be relevant or meaningful to all specialists that participate within a multispecialty group. In addition, we have heard from stakeholders over the past few years that large multispecialty groups tend to submit data that is not necessarily representative of all the clinicians that make up that group. For example, a group from a large hospital system, may include various specialties such as primary care, oncology, surgery, anesthesia, and radiology that submit data to CMS on primary care quality measures. We are concerned that these type of group submissions do not accurately reflect the performance of all clinicians within the group, and does not provide all clinicians with results that lead to quality improvement in the care provided. In addition, we do not believe that the other specialties within the group can make data-driven improvements in the quality of patient care provided, when only primary care measure data is submitted to CMS; and the results of that data submission is only relevant to the primary care clinicians. From the patient and caregiver perspective, only receiving information on primary care measures when searching for a specialist is not helpful. Data submitted at the subgroup level would provide increased data granularity that patients and caregivers could use in making data-driven decisions regarding the involvement of specialists in their care. In addition, we believe that transitioning multispecialty groups to subgroup reporting will address some of the inherent gaming risks that are apparent when we have multi-specialty groups report on measures that are not necessarily representative of the care provided by all clinicians within the group, where clinicians in a group may rely on the performance of other clinicians (of a different specialty) within the group to meet quality reporting requirements. We anticipate that multispecialty groups would need some time to familiarize and prepare themselves for subgroup reporting.

We refer readers to section IV.A.3.b.(2)(c)(i) of this proposed rule, where we discuss the proposed MVP Participant definition. Through the proposed MVP Participant definition, multispecialty groups and single specialty groups may report as groups or choose to form subgroups to report MVPs for the CY 2023 and CY 2024 performance period/2025 and 2026 MIPS payment year. We believe that the delayed implementation of subgroups for the CY 2023 MIPS performance period/2025 MIPS payment year provides third party intermediaries with sufficient time to adapt to the changes in policy, requirements, and programming updates that would need to occur in technological systems to support subgroup reporting. We encourage the early adoption of subgroup reporting to allow groups to gain experience with the future state of the program.

In addition, beginning with the CY 2025 MIPS performance period/2027 MIPS payment year, we propose through the MVP Participant definition to no longer allow multispecialty groups to report MVPs. This would mean that if a multispecialty group would like to report MVPs, beginning with the CY 2025 MIPS performance period/2027 MIPS payment year, they could only do so if they form subgroups. We believe this 2-year span of time would give multispecialty groups time to familiarize themselves and prepare for subgroup reporting. We strongly encourage multispecialty groups to monitor the implementation of MVPs to determine when to adopt subgroup reporting and transition to MVPs prior to the CY 2025 MIPS performance period/2027 MIPS payment year. We encourage groups to adopt MVP and subgroup reporting as early as possible to provide some time to work through any inadvertent operational issues they may encounter as MVP participants prepare for the future of the MIPS program. While we understand that groups may choose between MVP reporting and continuing to participate through traditional MIPS, we highly encourage groups to submit via subgroups if applicable in the first few years of MVP reporting. We believe early adoption of MVPs and subgroup reporting is important for stakeholders, as this would allow clinicians to acclimate to MVP reporting in the event we sunset traditional MIPS in the future.

We understand that some clinicians practice utilizing a team-based care approach, through a multispecialty group. We believe that MVP reporting can continue to foster the utilization of team-based care through subgroup reporting. As such, we describe in section IV.A.3.b.(4)b)(i)(A) of this proposed rule, that MVPs may be developed to reflect the team-based care approach used during an episode of care. A proposed timeline to implement subgroup reporting is outlined in Table 32.
As we continue to expand the portfolio of MVPs available over the next few years, MIPS eligible clinicians, groups, and APM entities that do not have a relevant MVP for reporting could continue to report through traditional MIPS. We plan to sunset the implementation of an appropriate portfolio of MVPs that are relevant to specialists that participate in the MIPS program. Until that time, there may be instances where some clinicians in a multispecialty group may have a relevant MVP available for reporting, while other clinicians within that same multispecialty group may not. In this scenario, the clinicians within the multispecialty group that have an MVP available may form a subgroup to report the MVP, while the group continues to report traditional MIPS. We refer readers to section IV.A.3.b.(3) of this proposed rule for additional discussion of subgroup proposals.

We believe there is a need for multispecialty groups to transition to subgroup reporting in order to align with the goals of MVP reporting. That is, to provide more direct attribution of quality measure data and results to all clinicians that participate in the program rather than relying on quality reporting results that can only be attributed to a few clinicians within the group. This direct attribution would lead to more valuable, meaningful, and actionable results that contribute to patient care and improvement. We refer readers to sections IV.A.3.b.(3) and IV.A.3.b.(4)(d) of this proposed rule for a detailed discussion of subgroup proposals and MVP reporting requirement proposals.

(e) Subgroups Reporting the APM Performance Pathway (APP)

In the CY 2021 PFS final rule (85 FR 84659 through 84666), we finalized the availability of the APM Performance Pathway beginning with the CY 2021 performance period. Specifically, we finalized that individual MIPS eligible clinicians who are participants in MIPS APMs may report through the APP at the individual level (85 FR 84860). Furthermore, we finalized that groups and APM Entities may report through the PFS final rule (84 FR 62946 through 62949), stakeholders provided feedback, specifically questioning what incentives would MVP Participants have to report on MVPs, when they have the choice to report traditional MIPS instead. We have heard these questions raised through multiple methods, including public comment through rulemaking, meetings, and the MVP Town Hall that was held in January 2021. Through this rule, we have proposed MVP policies that we believe act as catalysts to encourage MVP Participants to transition to MVP reporting. This includes reduced reporting requirements, as described in section IV.A.3.b.(4)(d) of this proposed rule, allowing MVP Participants to report on a smaller, more cohesive subset of measures and activities that are relevant to a given clinical topic, condition, procedure, or episode of care. In addition, as described in section IV.A.3.b.(4)(d) of this proposed rule, we propose to provide MVP Participants who report on MVPs with enhanced performance feedback that allows for meaningful comparison to similar clinicians and provides more useful information to make improvements in the care provided.

Additionally, we understand that clinicians have other requirements that must be met to maintain their licensure and as appropriate board certification status. In many instances, clinicians must comply with Continuing Medical Education (CME) requirements and/or Maintenance of Certification (MOC) requirements. We believe that any alignment between what clinicians must do to maintain their licenses/board certifications and reporting MVPs would be beneficial by reducing burden in terms of the various requirements clinicians must comply with. Therefore, in some cases, it seems possible that offering CME credit or credit towards MOC could be connected with MVPs. We encourage accrediting organizations such as specialty societies, to work with MVP submitters and consider whether CME credit or credit towards MOC could be offered for reporting MVPs. We believe by allowing clinicians to receive CME credit for MVP reporting, there is potential for there to be a reduction in the administrative burden clinicians face when trying to balance meeting CMS program requirements with the requirements of medical licensing or certification.

Proposing incentives for clinicians to report on MVPs in lieu of traditional MIPS may encourage early adoption of MVPs and allows those clinicians to gain experience with the future state of the program. We believe that creating incentives to report MVPs may help MVP participants familiarize themselves with MVP reporting requirements, particularly in cases where clinicians identify an available MVP as relevant to their practice.

(ii) Public Reporting of MVP Data

We have heard from stakeholders who expressed hesitancy to partake in the initial transition to MVP reporting citing concerns with what results may be publicly reported. We refer readers to
section IV.A.3.i. of this proposed rule for discussion of public reporting proposals related to MVP data and subgroup reporting.

(3) Subgroup Composition

(a) Overview

In the CY 2021 PFS final rule, we finalized updates to MVP guiding principles (85 FR 84844 through 84849), including the addition of subgroup reporting to enhance comparative performance data, and MVP development criteria and process (85 FR 84845 through 84849) that guide MVP implementation. Through this proposed rule, we are proposing to establish subgroup reporting as an option for MVP Participants and for those individuals and entities who choose to report the APP. In this section, we propose: (1) Definitions for subgroup reporting, single specialty group, multispecialty group, and special status designation; (2) subgroup eligibility requirements; and (3) application of low-volume threshold and special status designations for subgroups. In this section, we also have a request for information on the future direction of subgroup reporting. Additionally, we refer readers to section IV.A.3.b.(4) of this proposed rule, where we detail our proposals on: (1) Subgroup reporting requirements; (2) subgroup election process; and (3) subgroup identification. In section IV.A.3.b.(3) of this proposed rule, we detail our proposals on subgroup scoring.

(b) Background

Section 1848(q)(1)(D)(i) of the Act requires that the Secretary establish and apply a process that includes features of the provisions of section 1848(m)(3)(C) of the Act for group practice reporting for the quality performance category and provides that the Secretary may establish such a process for the other MIPS performance categories. At § 414.1305, a group is defined as a single TIN with two or more eligible clinicians (including at least one MIPS eligible clinician), as identified by their individual NPI, who have reassigned their billing rights to the TIN. In the CY 2021 PFS final rule, we finalized updates to MVP guiding principles (85 FR 84844 through 84849), including the addition of subgroup reporting to enhance comparative performance data, and MVP development criteria and process (85 FR 84849 through 84853) that guide MVP implementation. In section IV.A.3.b.(2)(d)(ii) of this proposed rule, we propose to allow voluntary MVP reporting beginning with the CY 2023 MIPS performance period/2025 MIPS payment year and are considering mandatory MVP reporting to coincide with the sunset of traditional MIPS beginning with the CY 2028 MIPS performance period/2030 MIPS payment year. We believe one important element of transitioning to MVPs is allowing clinicians the ability to report and be assessed on measures and activities which are meaningful to their practice. Currently, within the MIPS program, we offer clinicians many opportunities to participate, including as an individual and as a group; we have found most clinicians choose the group reporting option. We anticipate some groups may consist of clinicians who all practice under a single-specialty or clinical focus and are able to successfully select an MVP whose measures and activities are applicable and meaningful to all or a significant majority of their patients or practice. On the other hand, some groups encompass 20 or more different specialties, contain many clinicians, and often provide an array of services that may not be captured in a single set of measures or in a single MVP. For instance, we estimated in the CY 2021 PFS final rule RIA that among the 863,627 clinicians who submitted data, 510,057 were in practices with more than 100 clinicians (85 FR 85019). This represents 59 percent of the total MIPS eligible clinician population estimated for the CY 2023 payment year using 2019 submissions data (85 FR 85019).

In the 2017 Quality Payment Program final rule (81 FR 77058), commenters had noted interest in CMS providing additional flexibility to allow clinicians to submit information that would represent reporting for some portion, but not the entirety, of a group or TIN. In the CY 2018 Quality Payment Program final rule (82 FR 53593), we stated that in future rulemaking we intend to explore the feasibility of establishing group-related policies which would permit participation in MIPS at a subgroup level and create such functionality through a new identifier. Prior to the introduction of MVPs, in the CY 2019 PFS proposed rule (83 FR 35891), we again acknowledged the overarching themes from stakeholders that we should make an option available to groups which would allow a portion of a group to report as a separate subgroup on measures and activities which are more applicable to the subgroup and be assessed and scored accordingly based on the performance of the subgroup. We solicited comments on specific options and questions for implementation of subgroup level reporting in future years.

However, as we noted in the CY 2019 PFS final rule (83 FR 59742), because there are numerous operational challenges with implementing a subgroup option, we did not propose any changes to our established reporting policies regarding the use of a subgroup identifier.

In the CY 2020 PFS proposed rule (84 FR 40740 through 40741), we sought comment on MVP policies for multispecialty practices. Overall, we heard from commenters that subgroup reporting should be offered as an additional reporting option where subgroup reporting would provide more specific information for patients and clinicians rather than having multispecialty groups report on multiple MVPs at the group level. We also sought comment in the CY 2020 PFS proposed rule (84 FR 40740 through 40741) on whether we should use an approach in which groups submitted data on multiple MVPs reflecting their diverse specialties as an alternative to subgroup reporting to more comprehensively capture the range of items and services furnished by a group practice. Several commenters voiced concerns related to tradeoffs between the burden of reporting multiple MVPs and having more comprehensive performance data. Many commenters urged CMS to allow for subgroups and did not see reporting on multiple MVPs by the entire group as an alternative to subgroup reporting. Some commenters recommended allowing subgroup reporting in lieu of MVPs, while others recommended subgroup reporting for either the traditional MIPS program rules or for MVPs. A few commenters recommended steps we could take to identify subgroups, including creating a subgroup identifier allowing the formation of subgroups through an election process at the Quality Payment Program website (qpp.cms.gov) that would function similarly to CMS Web Interface or CAHPS for MIPS registration. A few commenters suggested that allowing subgroup reporting may be necessary to implement MVPs and help groups, particularly multispecialty practices, meet data completeness criteria.

Additionally, in response to our request for comment on whether we could use the MVP approach as an alternative to subgroup reporting to more comprehensively capture the range of items and services furnished by a group practice, we heard concerns that subgroup reporting may deter group practices from utilizing a team approach to patient care, may make practices more competitive, may not improve care for patients, and may increase errors,
costs, stress, and administrative burdens to implementation across various departments. In considering these concerns, we have continued to work towards meaningful subgroup reporting that balances the hurdles of a new reporting option with the benefits of more comprehensive and granular data available for patients and clinicians. We held the MVP Town Hall on January 7, 2021 (85 FR 74729) and publicly shared the MVP Town Hall Preparation Guide (https://app-cm-prod-content.s3.amazonaws.com/uploads/1233/MVP%20Town%20Hall%20Preparation%20Guide.pdf) to aid MVP Town Hall participants in understanding the direction we may take with MVPs and subgroups. We sought public comment on the MVP Town Hall topics and the approaches outlined in the MVP Town Hall Preparation Guide (recording available at https://www.youtube.com/watch?v=7CjQeuD3eEE&feature=youtu.be).

Overall, several commenters supported the option of voluntary subgroup reporting and recognized the value for patient care and research. Several commenters suggested CMS to allow sufficient time for CMS and stakeholders to make software changes (that include coding, development, testing, production, training, and education tasks) to support subgroup reporting, ultimately recommending CMS to slow down implementation. Additionally, we have solicited comment from stakeholders beginning in the CY 2018 PFS proposed rule (82 FR 30027) through the MVP Town Hall (85 FR 74729) on the ways in which participation in MIPS at the subgroup level could be established. In considering stakeholder feedback—in conjunction with the introduction of MVPs, technical innovations, and working through operational issues within CMS—we are ready to propose subgroup reporting. We acknowledge some clinicians in multispecialty groups are currently not able to report as a team for the measures that are meaningful to them because the group reports on behalf of all clinicians within the practice. Even with the introduction of MVP reporting, we anticipate this problem could persist if subgroup reporting is not offered as a reporting option for MIPS. Therefore, subgroup reporting would provide an avenue for clinical teams within a larger group to be able to submit MVPs that are clinically relevant to them. It would also be a first step in allowing for more granular clinician information to be made available to patients.

We thank commenters for their feedback. After considering the feedback, in section IV.A.3.b.(2)(d)(ii) of this rule, we propose voluntary subgroup reporting in MIPS beginning with the CY 2023 MIPS performance period/2025 MIPS payment year for MIPS eligible clinicians and groups who participate in MIPS through MVP reporting. As discussed in section IV.A.3.b.(3)(d)(iv)(B) of this proposed rule, APM Entities can report to MIPS through MVPs but may not break out into subgroups. As discussed in section IV.A.3.b.(2)(d)(ii) of this proposed rule, we are proposing that beginning in the CY 2025 MIPS performance period/2027 MIPS payment year, multispecialty groups would be required to form subgroups in order to report MVPs.

(c) Definitions of a Single Specialty Group, Multispecialty Group, Subgroup, and Special Status

A group is currently defined at §414.1305 as a single TIN with two or more eligible clinicians (including at least one MIPS eligible clinician), as identified by their individual NPI, who have reassigned their billing rights to the TIN. As discussed in section IV.A.3.b.(9)(d)(ii) of this proposed rule, we are proposing new characteristics of the group to determine eligibility and special status of the clinicians in the subgroup. To provide clarity, we are proposing definitions for single specialty groups, multispecialty groups, subgroups, and special status.

(i) Proposed Single Specialty and Multispecialty Groups Definitions

We propose to add to §414.1305 to include that a single specialty group is a group as defined at §414.1305 that consists of one specialty type as identified by eligible clinicians in the Medicare Provider Enrollment, Chain, and Ownership System (PECOS) (https://pecos.cms.hhs.gov/). We believe that using clinician specialty information from PECOS would allow us to align data sources and create greater consistency within the program given that PECOS specialty information is publicly reported on Care Tools.196 We refer readers to our comment solicitation in section IV.A.3.b.(3)(h)(iv) of this proposed rule, where we request information on the threshold that subgroups would have to meet in order to be defined as a single specialty (such as having at least 75 percent of clinicians sharing the same specialty in a subgroup).

We also propose to add to §414.1305 to include that a multispecialty group is a group as defined at §414.1305 that consists of two or more specialty types as identified by eligible clinicians in the Medicare Provider Enrollment, Chain, and Ownership System (PECOS). We refer readers to our comment solicitation in section IV.A.3.b.(3)(h)(iv) of this proposed rule, where we request information on setting the threshold that subgroups would have to meet in order to be defined as a multispecialty group. Beginning in the CY 2025 MIPS performance period/CY 2027 MIPS payment year and discussed in section IV.A.3.b.(2)(d)(ii) of this proposed rule, multispecialty groups would be required to form subgroups in order to report MVPs.

Additionally, we recognize that individual eligible clinicians may practice or be a part of multiple specialties as a part of their scope of practice and that eligible clinicians may have more than one specialty designation in PECOS. These clinicians could participate in multiple subgroups and report on multiple MVPs or clinicians could join a subgroup that is most applicable to their scope of practice and report on one MVP. We anticipate that at a future time when subgroup reporting is mandatory, that there will need to be criteria to determine which specialty is a primary specialty of clinicians. At this time, we do not have limitations on which specialty will be considered the primary specialty. However, we refer readers to section IV.A.3.b.(3)(h)(iv) of this proposed rule, where we request information on the identification of a primary specialty in scenarios where an eligible clinician may have more than one.

We request public comment on these proposals.

(ii) Proposed Subgroup Definition

We propose to define a subgroup at §414.1305 as a subset of a group which contains at least one MIPS eligible clinician and is identified by a combination of the group TIN, the subgroup identifier, and each eligible clinician’s NPI. Groups would identify their affiliated subgroups, and those subgroups would submit data on the MVPs which are clinically meaningful to MIPS eligible clinicians within a subgroup or their patients. We propose at §414.1318(b) to state that except as provided under §414.1317(b), each MIPS eligible clinician in the subgroup receives a final score based on the subgroup’s combined performance assessment. Additionally, we propose to amend §414.1310(e)(1) to state that except as provided under §§414.1315(a)(2), 414.1317(b), 196 https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/About-Physician-Compare-An-Overview.
414.1318(b), and 414.1370(f)(2) each MIPS eligible clinician in the group receives a final score based on the group’s combined performance assessment. With the inclusion of the exception provided under §414.1318(b), this would allow for an exception for subgroups to receive a final score based on the subgroup’s combined performance.

We note that in these proposed additions to and amendments of the regulation text, we refer to the final score instead of the MIPS payment adjustment factor (or additional MIPS payment adjustment factor) because we believe this phrasing is more precise. It is possible that more than one final score could be associated with a TIN/NPI for a performance period, and in those situations, we apply a final score hierarchy for purposes of determining the MIPS payment adjustment for that TIN/NPI (see, for example, the discussion in the CY 2021 PFS final rule (85 FR 84917 through 84919)). We believe allowing and, beginning with the CY 2025 MIPS performance period/CY 2027 MIPS payment year, requiring subgroup reporting for MVPs would offer clinicians the opportunity to participate in MIPS more meaningfully and would allow patients to have more granular and meaningful information when selecting an eligible clinician.

Measuring performance at the subgroup level would still allow for groups to practice team-based care, with groups having the ability to self-define which clinicians participate in which subgroups. Team-based health care is defined by the National Academy of Medicine as “the provision of health services to individuals, families, and/or their communities by at least two health providers who work collaboratively with patients and their caregivers—to the extent preferred by each patient—to accomplish shared goals within and across settings to achieve coordinated, high-quality care.” 197 As discussed in section IV.A.3.b.(3)(d)(iii) of this proposed rule, we request comments on how to establish criteria around the composition of subgroups; criteria may include clinical relevance, scope of care, and patient population.

As discussed in section IV.A.3.b.(2)(d)(ii) of this proposed rule, MIPS eligible clinicians in groups who do not have an MVP available and applicable to their practice would participate in MIPS through group reporting or as an individual. If their group reports through traditional MIPS or an MVP, the clinicians could receive their group’s score, if their group submits data. If the group chooses not to report, a MIPS eligible clinician can report as an individual and receive their individual score. While subgroup reporting of MVPs would be voluntary through the CY 2024 MIPS performance period/CY 2026 MIPS payment year, groups will continue to report to MIPS for the eligible clinicians (as identified by NPI) under their TIN, including clinicians reporting through subgroups, which is discussed in section IV.A.3.b.(2)(d)(i) of this proposed rule.

We request public comment on this proposal.

(iii) Proposed Special Status Definition

In the CY 2018 Quality Payment Program final rule, we finalized definitions for special status determinations for ambulatory surgical center (ASC)-based MIPS eligible clinicians, hospital-based MIPS eligible clinicians, Health Professional Shortage Areas (HPSA), hospital-based MIPS eligible clinicians, non-patient facing MIPS eligible clinicians, rural area, or small practice status and codified at §414.1305 definitions for each (82 FR 53479 through 53586). We often refer informally to these as “special status”; however, we have not previously defined what “special status” means. Therefore, we propose to add to §414.1305 and define that special status means that a MIPS eligible clinician: (1) Meets the definition of an ASC-based MIPS eligible clinician; (2) is in a HPSA or rural area. We believe that defining special status will help clinicians better understand the application of subgroup policies.

We request public comment on this proposal.

(d) Subgroup Eligibility

As described in section IV.A.3.b.(3)(c)(ii) of this proposed rule, we are proposing voluntary subgroup reporting for clinicians beginning with the CY 2023 MIPS performance period/CY 2025 MIPS payment year and to define subgroup as a subset of a group which contains at least one MIPS eligible clinician and is identified by a combination of the group TIN, the subgroup identifier, and each eligible clinician’s NPI. During the MVP Town Hall held in January 2021 (85 FR 74729 to 74730), stakeholders expressed concern about creating separate eligibility criteria and associated policies which would lead to confusion and additional burden for clinicians in subgroups and associated groups. These stakeholders recommended that eligibility for subgroup reporting be based on group eligibility. Additionally, during the initial years of MVP implementation, we recognize that there may be an inadequate number of MVPs available for clinicians to participate as subgroups. Therefore, in this proposed rule, we are proposing: (1) Application of a low-volume threshold; (2) application of special status designation; and (3) subgroup inclusions and exclusions. Additionally, we seek comment on subgroup composition and limitations.

(i) Proposed Application of Low-Volume Threshold

We considered whether a low-volume threshold for clinicians participating in subgroup reporting should be calculated at the group or subgroup level. In consideration of stakeholder feedback and to minimize changes in eligibility determination for clinicians, we believe it would be optimal to determine the low-volume threshold for clinicians participating in a subgroup at the group level. As we implement subgroup reporting and as clinicians and groups familiarize themselves with this new participation option, we believe we should limit the complexity of the program to the extent that is feasible.

At §414.1305, one of the ways we determine MIPS eligibility is by defining how the low-volume threshold is applied to individual clinicians and groups. We determine eligibility for MIPS during two different eligibility periods, which include an assessment of: (1) Those who have provided services less than or equal to $90,000; (2) those who provide services to Part B-enrolled individuals; and (3) those who provide services to Part B-enrolled individuals (83 FR 59735) provided by the clinician and group during that time-period. Therefore, we propose at §414.1318(a)(1) that except as provided under §414.1318(a)(2), for a MIPS payment year, determinations of meeting the low-volume threshold criteria and special status for subgroups are determined at the group level as provided under §§414.1305 and 414.1310.

We request public comment on this proposal. As MVPs continue to evolve, we anticipate increased opportunities for clinician participation in subgroups,
and we also request feedback from stakeholders if we should reevaluate, in the future, MIPS eligibility for clinician participation in subgroups at the subgroup level.

(ii) Proposed Application of Special Status Designation

Groups in MIPS could have their data submission requirements and scoring affected by special statuses outside of their underlying eligibility for MIPS. Each of these special statuses, described in section IV.A.3.b.(3)(c)(i) of this proposed rule, are determined at the time of eligibility determinations.

We propose at § 414.1318(a)(1) for a MIPS payment year, determinations of meeting the low-volume threshold criteria and special status, as defined at § 414.1305, for subgroups is determined at the group level as provided under § 414.1310. We believe it is necessary to explain how status determinations would work in the context of subgroup reporting. For example, a large, multispecialty group may include subgroups of clinicians that meet the requirements for small practice status, or non-patient facing status, or facility-based status. While we are concerned some existing groups could have subgroups that could be eligible at the subgroup level for special status designation as described in section IV.A.3.b.(3)(c)(i) of this proposed rule, we do not believe that this determination should be made at the subgroup level at this time. We want to deter construction of subgroups that would inappropriately create special status exemptions, such as subgroups of 15 or fewer clinicians in a large group. Overall, we believe this should help limit the complexity of the program as we implement this new participation option.

Additionally, at this time, we are not planning to establish limits on the number of subgroups that a clinician can be part of. For example, a primary care clinician who is part of a multispecialty group may choose to participate in a subgroup. This subgroup may choose to report through two MVPs because they believe both were relevant to the scope of care provided by the clinicians in their subgroup and under this example, the subgroup would be allowed to report and be assessed on both MVPs if they choose to do so.

While we acknowledge the potential for clinicians to participate in multiple subgroups for reporting MVPs, we also recognize the burden for groups to submit data for an unlimited number of subgroups for each clinician, but we anticipate this will be an uncommon scenario. For instance, we do not anticipate that a group of 20 specialties would want to form 100 subgroups and be assessed on all the applicable MVPs. We believe clinician participation in subgroup reporting will be based on the scope of clinical care provided or a relevant specialty type and clinicians would not use subgroup reporting to game the MIPS program. We will monitor the ways in which clinicians form subgroups and will revisit this issue in future rulemaking if we discover that clinician participation in multiple subgroups is not what we intended.

We request public comments on this proposal.

(iii) Subgroup Composition Limitations

We are not proposing to require any criteria for the composition of subgroups at this time; however, as discussed in section IV.A.3.b.(3)(i) of this proposed rule, we are seeking comment on criteria that we could consider in the future, such as in the CY 2023 PFS rulemaking cycle. In developing the voluntary subgroup reporting proposal, we also considered whether we should limit the opportunity for clinicians to participate as a subgroup based on certain characteristics for the first year of voluntary subgroup reporting and in the future under mandatory subgroup reporting. As we have noted in this section of the rule, many stakeholders requested that we create an opportunity to participate via subgroups and suggested that participation in subgroups would allow clinicians across different specialties within a practice to report.

We considered whether we should limit the composition of a subgroup to clinicians of the same specialty or a related specialty. We are also aware clinicians providing patient care as part of a clinical team may practice in different locations under the same group (TIN) and may be interested in reporting through different subgroups. These clinicians may practice in specific clinical settings, such as dialysis centers or urgent care settings, and may use different third-party intermediaries, such as different EHR vendors or qualified registries. Alternatively, we considered if we should establish limits on the size of a subgroup, such as setting minimum and maximum thresholds for the number of clinicians that could participate as a subgroup. Similarly, we considered establishing a threshold where 75 percent of the eligible clinicians in a group or subgroup would have to be of the same specialty or a related specialty to report a given MVP, and thus form a subgroup.

We also considered if we should establish criteria based on the number of clinicians practicing in a group, specialty mix assessed through analyzing previous billing patterns within a group, practice location, type of clinical setting, patient population, or scope of care provided. Additionally, we also considered establishing restrictions on the type of clinicians who can report a given MVP. In considering these potential restrictions, we are concerned we would be unable to anticipate the different methods by which groups may wish to utilize subgroup reporting without seeking public comment on the best approach.

As MVPs evolve and subgroup reporting becomes mandatory in the future, we plan to explore the options for establishing criteria for composition of subgroups. We recognize that MVPs will continue to be developed by the time subgroup reporting is mandatory for MVP reporting by multispecialty groups and that there will be clinicians in multispecialty groups who do not have an available MVP, and thus, would be unable to form subgroups. We believe it is valuable for multispecialty group practices to gain experience with subgroup reporting while MVPs continue to be developed. We also note that as described below in this section, APM Entities cannot be broken down into subgroups because APM Entities are often composed of multiple TINs.

We refer readers to section IV.A.3.b.(4)(d) of this proposed rule for additional details on MVP and subgroup reporting requirements for APM Entities.

Therefore, we request comment from stakeholders on the options for multispecialty groups to participate as subgroups for reporting MVPs for the first year of voluntary subgroup reporting, beginning in the CY 2023 MIPS performance period/2025 MIPS payment year. We also request feedback from stakeholders on whether restrictions should be applied in the future for the composition of subgroups and any associated criteria that need to be established without needlessly limiting flexibility for clinicians involved in team-based care. We request public comment on the criteria which should be used to define what types of groups are required to report more than one MVP.

(iv) Proposed Subgroup Inclusions and Exclusions

(aa) Background

We recognize MIPS eligible clinicians participating in subgroups may be part of a group that has a portion of its
Clinicians participating in MIPS as part of a virtual group, MIPS APM, or clinicians that do not attain QP or Partial QP status in an Advanced APM. Eligible clinicians may participate in MIPS if they meet at least one of the low-volume threshold criteria and choose to opt-in to MIPS reporting (83 FR 50740). Eligible clinicians (as defined at § 414.1305) who are not MIPS eligible, have the option to voluntarily report on applicable measures and activities for MIPS and these clinicians will not be subject to MIPS payment adjustment (81 FR 77041). Additionally, Partial QPs in Advanced APMs will have the option to elect whether or not to report under MIPS, which determines whether or not they will be subject to MIPS payment adjustments (81 FR 77062). We believe eligible clinicians in MIPS APMs, clinicians that do not attain QP or Partial QP status in Advanced APMs, or who are opt-in eligible may desire to participate as subgroups for reporting MVPs and may meet the proposed criteria for definition of a subgroup as described in section IV.A.3.b.(3)(c)(ii) of this proposed rule.

(bb) Proposed Subgroup Eligibility—Participants in MIPS APMs

In the CY 2021 PFS final rule (85 FR 84860), we finalized a policy to allow groups and APM Entities to report through the APP on behalf of their constituent MIPS eligible clinicians. We believe that an APM Entity should not be eligible to form subgroups for reporting MVPs or the APP because APM Entities are often composed of multiple TINs and may use multiple EHR systems. We believe that the definition of a subgroup consisting of one TIN, as proposed in section IV.A.3.b.(3)(c)(ii) of this rule, would not include APM Entities comprised of more than one TIN, which would result in exclusion of APM Entities from forming subgroups for reporting MVPs or the APP. We anticipate that eligible clinicians in APM Entities comprised of multiple TINs could choose to form subgroups through their affiliated TIN. We refer readers to section IV.A.3.b.(4)(d)(vi)(B) of this rule where we seek comment on whether there are strategies that CMS should consider to allow the formation of subgroups for clinicians in APM Entities comprised of multiple billing TINs. We also note that, in cases where an APM Entity is itself comprised of a single TIN, the single TIN could form subgroups under the TIN, rather than under the APM Entity ID.

(cc) Proposed Subgroup Exclusions—Opt-In Eligible Clinicians and Voluntary Participants

Based on historical data, a significantly low number of clinicians have utilized the following participation options in MIPS: Virtual groups; opt-in eligible clinicians; and voluntary reporters. For example, if the number of opt-in eligible clinicians remains the same as estimated in the CY 2021 PFS final rule (85 FR 85015), we anticipate that an estimated 0.3 percent of the total number of MIPS eligible clinicians would fit into this category. We believe that there are several operational considerations, such as implementation burden for stakeholders and CMS, value of subgroup reporting for these clinicians versus burden, scoring policies, etc. that must be addressed prior to allowing clinicians in these categories to participate as subgroups for reporting MVPs. Additionally, we believe that the definition of a subgroup consisting of one TIN, as proposed in section IV.A.3.b.(3)(c)(ii) of this rule, would not be applicable for clinicians in a virtual group because a virtual group is a combination of two or more TINs, resulting in exclusion of clinicians in virtual groups from participating as subgroups for reporting MVPs.

Therefore, beginning in the CY 2023 MIPS performance period/2025 MIPS payment year, we are proposing at § 414.1318(a)(2) that an individual clinician or group electing to participate in MIPS as an eligible clinician in accordance with § 414.1310(b)(1)(iii)(A) or § 414.1310(b)(2) is not eligible to participate as a subgroup. As we consider transitioning to MVPs and retiring traditional MIPS, we will revisit subgroup eligibility for opt-in eligible clinicians, voluntary participants and clinicians in virtual groups in future years. We also seek feedback from stakeholders on whether clinicians in these categories should be allowed to form subgroups in future years, and if there are additional criteria that should be established.

We seek public comment on this proposal.

(e) Subgroup Examples

In Appendix 3: MVP Inventory of this proposed rule, we are proposing seven MVPs for implementation in the CY 2023 MIPS performance period/2025 MIPS payment year. We have provided examples below to show how eligible clinicians could choose to participate as subgroups for reporting MVPs if these MVPs are finalized. These examples are not intended to be exhaustive of the eligible clinician types that could participate as subgroup.

Example 1: A group is composed of all anesthesiologists. In this example, all the clinicians in the group have the same primary specialty designation, which is an example for a single-specialty group. We would not anticipate that they would wish to form subgroups but could report the Patient Safety and Support of Positive Experiences with Anesthesia MVP as a group.

Example 2: Table 33 illustrates an example of subgroup reporting for a group consisting of anesthesiologists, orthopedic surgeons, and certified registered nurse anesthetists (CRNAs). In this example, the group could form a total of three subgroups. The anesthesiologists and CRNAs could form either one or two subgroups for reporting the proposed Patient Safety and Support of Positive Experiences with Anesthesia MVP as described in Table G: Proposed Patient Safety and Support of Positive Experiences with Anesthesia MVP Beginning with the CY 2023 MIPS Performance Period/2025 MIPS Payment Year of Appendix 3: MVP Inventory of this proposed rule. We believe the measures and activities included in this MVP would be most applicable to clinicians who provide anesthesia services to patients within the surgical setting, are considered anesthesiologists, or are other qualified anesthesia professionals. For instance, the anesthesiologists and the CRNAs could form separate subgroups for reporting on applicable measures and activities in the MVP. Alternatively, the CRNAs and the anesthesiologists could report on the applicable measures and activities in the MVP as one subgroup if this aligns better with how the subgroup would practice and they all report the same measures and activities. The orthopedic surgeons in the group could then form a separate subgroup to report the applicable measures and activities in the proposed Improving Care for Lower Extremity Joint Repair MVP.

(f) Third-Party Intermediaries for Subgroup Reporting

As described in section IV.A.3.h.(2)(b) of this proposed rule, we are proposing at § 414.1400(a)(1) for third-party intermediaries to implement MVPs and subgroup reporting options for MIPS eligible clinicians starting with the CY 2023 MIPS performance period/CY 2025 MIPS payment year. Since subgroups will be implemented concurrently with MVPs, we believe that it is important that all third-party intermediaries support subgroup reporting in order for clinicians to meaningfully report MVPs. We refer readers to section IV.A.3.h.(2)(b) of this proposed rule for
additional details on requirements for third-party intermediaries supporting MVPs and subgroups.

(g) Public Reporting of Subgroup Performance Information

As described in section IV.A.3.i.(1) of this proposed rule, we propose to delay public reporting of subgroup performance information by an additional year. Our proposal would result in the public reporting of subgroup performance information beginning with the CY 2024 MIPS performance period/2026 MIPS payment year and each performance period/MIPS payment year thereafter. We refer readers to section IV.A.3.i.(1) of this proposed rule for additional details on the proposed policies related to public reporting of subgroup performance information on the compare tool.

(h) Future Vision of Subgroups

(i) Overview

Given the delay of subgroup and MVP implementation until the CY 2023 MIPS performance period/2025 MIPS payment year, we recognize there are additional policy nuances which need to be worked through during future rulemaking, and we would like to share our vision and request information to help us craft policy solutions. We believe team-based care is an essential element to providing high-quality care to patients and acknowledge some of the subgroup policies may be construed to create competition within groups. It is not our intention to create this competition, rather, we believe as MVPs continue to be created and evolve, this will also include MVPs that are focused on team-based care for some specialties. We share this vision below along with a request for information on the future of subgroup reporting. We welcome feedback and potential alternatives ideas we could consider ensuring the success of subgroup and MVP reporting.

(ii) Vision for Data Granularity

Ultimately, we envision that a future goal of the Quality Payment Program, particularly with MIPS and MVPs, is to ensure there is more granular data available for patients, clinicians, and other stakeholders. We envision an end state where technology will allow for the submission of discrete data elements and allow us to calculate measure performance for clinicians, subgroups, groups, and APM Entities, rather than having measure performance aggregated and calculated at a group or subgroup level prior to reporting. We anticipate more granular data will be available for patients, clinicians, and other stakeholders through a three-pronged approach of mandatory subgroup reporting, broad use of standards-based APIs that leverage the FHIR standard within EHRs (as discussed in section IV.A.1.c.(4)(a) of this proposed rule), and the creation and use of DQMs (as discussed in section IV.A.1.c.(2) of this proposed rule). We believe this would give patients specific and meaningful information which can better inform their choices when selecting a clinician and offer more targeted feedback to clinicians. We request information on the vision for data granularity.

(iii) Sunsetting Traditional MIPS

Given our goals for increasing the level of data that is available to clinicians and patients, we envision a future state where all multispecialty groups would participate in MIPS through subgroup reporting. As additional MVPs are developed and eligible clinicians are given the opportunity to report on MVPs, including reporting via subgroups, we believe that clinicians will have even more meaningful ways to participate in MIPS at a more discrete level. As discussed in section IV.A.3.b.(2)(d) of this proposed rule, we are considering retiring traditional MIPS, where it would no longer be available by the CY 2028 MIPS performance period/2030 MIPS payment year but would make any proposal to do so in a future rulemaking.

If we sunset traditional MIPS beginning in the 2028 MIPS performance period/2030 MIPS payment year, we anticipate that groups, particularly large multispecialty groups, would have had the opportunity to gradually ramp up their reporting on MVPs, gaining a few years of experience reporting on more than one MVP. This allows for clinicians to be assessed on information that is clinically meaningful to their scope of practice and to publicly report that information. At a high-level, if we finalize the proposal as described in section IV.A.3.b.(2)(d)(ii) of this rule, we anticipate that multispecialty groups would report more than 1 MVP beginning in the CY 2025 MIPS performance period/2027 MIPS payment year. We believe that clinicians in multispecialty groups should be assessed on measures and activities that are related to the scope of care that they provide. We believe that in order to meet the goals of MVPs and provide enhanced performance feedback to clinicians and to ensure more granular information is publicly available for patients, we believe that diagnostic categories should form subgroups to report additional information. Additionally, we do not believe that there will be an MVP that will be applicable to all types of clinicians within multispecialty groups. We refer readers to section IV.A.3.b.(2)(d) of this rule for additional details on the proposed timeline for MVPs and subgroup implementation.

(iv) Limiting Subgroup Composition to Single-Specialty

We are also considering placing limits around how clinicians can participate and be assessed as subgroups, particularly if clinician participation in subgroups must be restricted to a single specialty. As a central part of the MVP goals, we believe that the value of subgroup reporting would be for clinicians to be assessed and scored on measures and activities that are applicable to their scope of care while also allowing patients to have greater access to clinician information. We are concerned that if do not place limitations on how subgroups can be constructed, subgroups could be formed in a way that would result in different types of clinicians assessed on measures that are only applicable to a small subset. We believe that without establishing limitations to subgroup composition prior to implementation, we would not meet the desired programmatic goals of MVPs and in many ways would replicate our concerns with the current state with traditional MIPS. One approach we could consider would be to limit clinicians in multispecialty groups to participate through single-specialty subgroups. Under this approach, we would determine specialty designation as defined by PECOS and are considering if it is feasible for this to be determined at the time of MIPS eligibility determination. We recognize many clinicians have more than one specialty designation in PECOS and may even have multiple PECOS profiles, which contain different specialty designations. We also recognize for many clinician types, the primary specialty designation is related to their clinical degree and not to the type of care they provide (such as PAs, NPs, etc.). To account for differences in care, we could set a threshold to be met in order for a subgroup to be considered a single-specialty subgroup. To align with other thresholds in the Quality Payment Program, such as the requirements for facility-based and hospital-based clinicians, we are considering requiring that 75 percent of clinicians in a subgroup have the same PECOS primary specialty designation or specialty codes on Medicare Part-B. If this threshold were met, it would mean that 75 percent of clinicians in subgroup would need to have the same
primary specialty designation. We believe that this would offer simplicity for clinicians and help assure that clinicians are being assessed with like clinicians within their subgroup on the same measures and activities.

For instance, if anesthesiologists are a part of multispecialty group, we anticipate a future state where the anesthesiologists would form a subgroup and report the Patient Safety and Support of Positive Experiences with Anesthesia MVP if it is finalized (detailed in this proposed rule under Table G: Proposed Patient Safety and Support of Positive Experiences with Anesthesia MVP Beginning with the CY 2023 MIPS Performance Period/2025 MIPS Payment Year in Appendix 3: MVP Inventory). Under this scenario, the scope of applicable measures in the MVP is narrow and we anticipate that this MVP would be appropriate for limited clinician types, thus a single-specialty subgroup. In another example, if the Optimizing Chronic Disease Management MVP (detailed in Appendix 3: MVP Inventory of this proposed rule) is finalized, we could anticipate that a group that included family physicians and cardiologists could form two subgroups, one single-specialty subgroup each for the family physicians and cardiologists, with each subgroup reporting the Optimizing Chronic Disease Management MVP. In this scenario, the family physician subgroup and cardiology subgroup would both be reporting on the same MVP, but they could be selecting different measures/activities from within the MVP as applicable to their scope of practice, as the Optimizing Chronic Disease Management MVP is more broadly applicable to a wider range of clinicians.

We do recognize that there may be issues that need to be resolved with this approach. We have concerns about some of the limitations of PECOS, especially for clinician types such as PAs and NPs, whose specialty in PECOS is not related to the scope of care they provide but rather the degree received. We believe that all clinician types are essential to team-based care and request comment on ways to comprehensively categorize clinician specialty. We believe setting a high but not absolute threshold would allow additional flexibilities for subgroups to accurately reflect the care they provide. We do have concerns that this may leave gaps in data because it would not require everyone under a given specialty to report together, may exclude clinicians given the limitations intrinsic to the PECOS system and Medicare Part-B claims data, and could result in clinicians being unable to report in a subgroup based on their specialty designation. For future consideration, we seek comment on setting a threshold for single-specialty subgroups and ways to overcome our concerns. We would also like to consider potential approaches to validating and auditing specialty information. Specialty information could be validated at the time of eligibility determination, during subgroup and MVP registration, or even through attestation. We seek comment on ways we can validate specialty information in a low burden, streamlined manner for future consideration.

Alternatively, we are considering whether subgroup composition could be determined by a different data source. We are interested in ways that we could provide guardrails for subgroups that do not use PECOS or use PECOS information to categorize specialties into specialty families or teams of clinicians who practice in relevant specialties for a given MVP. For ease of readability, we will refer to this concept as specialty families for the remainder of this discussion. Under this alternative, we anticipate that during the subgroup and MVP registration period, a practice administrator or the clinicians in a particular subgroup would attest that the clinicians in a subgroup practice similar scopes of care. We welcome feedback on how specialty families could be identified and what criteria would need to be established for us to set requirements on subgroup formation. For example, specialty families could be constructed similarly to how the Aligned Other Payer Medical Home Model defines primary care focus through identifying multiple specialties to include the following Physician Specialty Codes: 01 General Practice; 08 Family Medicine; 11 Internal Medicine; 16 Obstetrics and Gynecology; 37 Pediatric Medicine; 38 Geriatric Medicine; 50 Nurse Practitioner; 89 Clinical Nurse Specialist; and 97 Physician Assistant. As a third alternative, we have also considered whether we should analyze claims data to identify the primary clinician specialty based on their billing patterns. We believe that this could be a way to help validate subgroup composition for clinicians who practice in more than one specialty. We request comment on these three approaches to setting limitations around the composition of subgroups for future consideration.

As an alternative to establishing limits on how subgroups could be formed, we are also considering adding to the MVP specifications an approved list of specialties and clinician types permitted to report each MVP. Instead of directly limiting the composition of the subgroup, this would limit who can report a given MVP. We believe this option offers additional benefit of not being specific to subgroup reporting but possibly standardizing MVP reporting and impacting clinicians and groups as well. We believe this approach may also promote team-based care and further ensure that MVPs are relevant to those who report them. However, we do have concerns this could have unforeseen consequences in that certain MVPs may be appropriate for specialties not on the designated list, and we would not want to inadvertently place artificial limitations on how clinicians provide care and report to MIPS. We also request comment on this approach for our future consideration.

(v) Request for Information on the Future Vision of Subgroup Reporting

As we look towards future rulemaking, we also request feedback on:

- If the determination of specialty composition should be made during the MVP registration process, as discussed in section IV.A.3.b.(4)(f) of this proposed rule.
- Additional approaches we should consider to incentivize team-based care as we move towards MVP and subgroup implementation.
- If there are other approaches or data sets, in addition to PECOS, that should be considered to classify the scope of care clinicians provide.
- If individual clinicians or groups should attest to their specialty during MVP and subgroup registration.
- If there may be ways to group clinicians in like specialties who may provide similar care and would be interested in reporting the same measures and activities under a given MVP.

- If we should establish criteria or set a threshold for groups to be deemed multispecialty.
- If there are concepts other than specialty that could demonstrate that a subgroup is composed of clinicians that provide care relevant to the MVP the subgroup intends to report.

Overall, we request public comments on how subgroups should be structured, assessed, and scored in a future state as clinicians gain familiarity with the program, more MVPs are developed, and technological advancements allow for low-burden reporting.
(4) MVP Requirements

(a) Overview

In the CY 2020 PFS final rule (84 FR 62948), we finalized at § 414.1305 that MIPS Value Pathway means a subset of measures and activities established through rulemaking. We describe our vision for MVPs to connect the four performance categories while using a foundational layer of population health claims-based measures and interoperability, on which to build, quality, cost, and improvement activity linkages. In the CY 2021 PFS final rule (85 FR 84849 through 84850), we finalized a set of MVP development criteria and a process to receive MVP candidates from stakeholders. Through this proposed rule, we are proposing to establish additional MVP related policies to support the implementation and availability of MVPs. In this section, we propose: (1) Refinements to the MVP development criteria; (2) a maintenance process for established MVPs; (3) MVP reporting requirements; and (4) the MVP registration process.

(b) MVP Development and Maintenance

(i) MVP Development and Maintenance

(A) General MVP Structure

From the time the CY 2021 PFS final rule published, we have solicited feedback from several stakeholders who have submitted MVP candidates for CMS consideration utilizing the MVP candidate solicitation process (85 FR 84854 through 84856). Through this feedback, we have understood that the quality and patient improvement priorities of specialists may differ based on the way they practice. There are clinicians who practice utilizing a team-based approach, involving several clinicians of different specialties working together and for that reason, find quality reporting that reflects that approach more meaningful. Team-based health care is defined by the National Academy of Medicine as “the provision of health services to individuals, families, and/or their communities by at least two health providers who work collaboratively with patients and their caregivers—to the extent preferred by each patient—to accomplish shared goals within and across settings to achieve coordinated, high-quality care.” Mitchell, P., M. Wynia, R. Golden, B. McNellis, S. Okun, C.E. Webb, V. Rohrbach, and I. Von Kohorn. 2012. Core principles & values of effective team-based health care. NAM Perspectives. Discussion Paper, National Academy of Medicine, Washington, DC. https://doi.org/10.31478/201210c.

focus on a limited number of procedures. For these reasons, we believe there are various ways to approach MVP development, and the method utilized would be dependent on the topic measured by the MVP. One method is to construct MVPs in a manner that is broad, for example, addressing cancer care comprehensively versus the creation of MVPs for each unique diagnosis of cancer care. Another method is to construct MVPs in a more granular manner, for example, addressing a specific procedure, such as hip and knee arthroplasty. A third approach is to structure MVPs in a manner that reflects a team-based healthcare model. This approach considers the patient’s care from a holistic perspective, involving various clinicians as needed. One such example is around surgical care, which involves several clinician types, such as surgeons and anesthesiologists. We believe this approach captures the patient experience and outcomes in a manner that is meaningful, that would result in patient improvement. In the CY 2021 PFS final rule (85 FR 84850), we finalized MVP development criteria that accounts for the development of MVPs collaboratively by multiple specialties for this reason. We believe that the team-based healthcare model has an impact to patient outcomes and encourage the use of this approach, as feasible, when developing MVPs.

In section IV.A.3.b.(4)(b)(ii) of this proposed rule, we discuss a proposed maintenance process for MVPs. In instances where an MVP is initially implemented, for example, to address a specific procedure and there is opportunity to evolve the MVP over time to reflect the team-based healthcare model, we would strongly encourage that transition. However, we do understand there is not a “one size fits all” MVP structure that is suitable for all specialties and believe the use of one of the structure methodologies is appropriate for MVP development.

(B) Selection of Measures and Improvement Activities Within an MVP

As described above, in the CY 2021 PFS final rule (85 FR 84849 through 84850), we established a set of criteria for use in the development and selection of MVPs. Specifically, we had finalized that we were not prescriptive on the number of quality measures that are included in an MVP (85 FR 84850). Through this rulemaking, we are proposing requirements for MVPs, and discuss the allowance of clinician choice in selecting which quality measures and improvement activities to report, as described in detail below in section IV.3.b.(4)(d) of this proposed rule. We believe that it is important to provide clarity in our expectations of the number of quality measures and improvement activities that are available for an MVP Participant to choose.

Generally, an MVP should include a sufficient number of quality measures and improvement activities to allow MVP Participants to select measures and report them to meet the reporting requirements outlined in section IV.3.b.(4)(d) of this proposed rule. To the extent feasible, MVPs should include a maximum of 10 quality measures and 10 improvement activities, to offer MVP Participants some choice without being overwhelming. However, we understand that the total number of measures and activities available in an MVP would depend on the MVP structure. For example, in Appendix 3: MVP Inventory, we are proposing the Optimizing Chronic Disease Management MVP that includes 9 quality measures and 12 improvement activities. Chronic disease can broadly encompass several conditions; therefore, we have selected measures and improvement activities that are closely aligned to the topic and offer clinicians some choice. We refer readers to Appendix 3: MVP Inventory for discussion of our proposed MVPs.

(aa) Requirement of Outcomes or High Priority Measures

In section IV.3.b.(4)(d)(ii) of this proposed rule, we propose MVP quality reporting requirements, that are similar to the requirements of traditional MIPS under § 414.1335. We discuss a proposal to require the reporting of one outcome measure or high priority measure (if an outcome measure is not available). Accordingly, we believe it is important to modify the previously finalized MVP development criteria (85 FR 84849 through 84850), where we describe the criteria for including quality measures in an MVP. We believe we need to update the criteria to ensure MVPs are developed in a manner that accounts for this proposed quality reporting requirement.

(AA) Proposed Outcomes Measures Requirement

Therefore, we propose that beginning with the CY 2022 MIPS performance period/2024 MIPS payment year, MVPs must include at least one outcome measure that is relevant to the MVP topic, so MVP Participants are measured on outcomes that are meaningful to the
Participants are measured on high priority measures that are meaningful to the care they provide. In addition, beginning with the CY 2022 MIPS performance period/2024 MIPS payment year, each MVP that is applicable to more than one clinician specialty should include at least one outcome measure that is relevant to each clinician specialty included. This is important since MVPs are proposed to be constructed in a manner that may include one or more clinician specialties, as described above in section IV.3.b.(4)(b)(A) of this proposed rule, and there should be outcome measures included in the MVP that are relevant to each clinician specialty.

We anticipate over the next few years, there may be opportunities where outcomes-based measures are developed and can be reported utilizing the administrative claims collection type. For example, in the CY 2021 PFS final rule (85 FR 85049 through 85051), we finalized the Risk-standardized complication rate (RSCR) following elective primary total hip arthroplasty (THA) and/or total knee arthroplasty (TKA) for Merit-based Incentive Payment Systems (MIPS) outcome-based administrative claims measure. In addition, in Appendix 1: MIPS Quality Measures of this proposed rule, we propose at Table A.4. the Risk-Standardized Acute Unplanned Cardiovascular-Related Admission Rates for Patients with Heart Failure for the Merit-based Incentive Payment System, which is also an outcome-based administrative claims measure. We propose to allow the inclusion of outcomes-based administrative claims measures within the quality component of an MVP. We believe these measures can be used to meet the outcome measure requirement discussed under the MVP reporting requirements in section IV.A.3.b.(4)(d)(ii) of this proposed rule. We request comments on these proposals.

(bb) Encouragement To Include Patient-Centered Measures

In the CY 2021 PFS final rule (85 FR 84550), we finalized MVP development criteria that takes into consideration the patient voice. Specifically, we finalized MVP development and selection criteria that considers the inclusion of (to the extent feasible), patient-reported outcome measures, patient experience measures, and/or patient satisfaction measures. Through interactions with stakeholders and presentations, we have referred to these measures as patient-centered measures.

We clarify that we are not proposing any revisions to our previously finalized policy, however, we believe it is important that we rely on a consistent understanding of patient-centered measures.

We acknowledge that our existing portfolio of patient reported outcome measures is limited and may not be applicable to all specialties and subspecialties. We continue to encourage stakeholders to utilize our established pre-rulemaking processes, such as the Call for Measures, described in the CY 2020 PFS final rule (84 FR 62953 through 62955) to develop patient reported outcome measures relevant to their specialty. In addition, we encourage measure stewards of new and existing quality measures in MIPS to consider updating their measures to include the patient centered approach through the measure maintenance cycle or the development of new measures.

(cc) Requirements for QCDR Measures Considered for an MVP

In the CY 2021 PFS final rule (85 FR 84557 through 84559), we finalized that QCDR measures that were approved in the previous year may be considered for inclusion within an MVP. In addition, we finalized at § 414.1400(b)(3)[v](C)(4) that QCDR measures should be fully tested at the clinician level prior to the QCDR measure being included in an MVP. We refer readers to the CY 2021 PFS final rule (85 FR 84857 through 84859) for the specific policies that were previously finalized. Through this proposed rule, we seek to clarify when we would expect a QCDR to prove that their QCDR measure is fully tested before it is implemented within an MVP. QCDRs must self-nominate as a QCDR and submit QCDR measures for CMS consideration in the 60-day self-nomination period that begins on July 1st of the calendar year prior to the applicable performance period and ending on September 1 of the same year. In order to determine whether a QCDR measure may be finalized within an MVP, we will need to receive QCDR measure testing data for review by the end of the self-nomination period, that is no later than September 1 of the year prior to the applicable performance period.
period. We encourage, as feasible, that QCDRs share testing data for their fully tested QCDR measures at the time of MVP candidate submission which may be prior to the September 1st deadline. If a QCDR is unable to submit testing data to demonstrate that their QCDR measure is fully tested at the clinician level by end of the self-nomination period (September 1st) or does not otherwise meet our requirements, we will not finalize the inclusion of the QCDR measure within an MVP.

(C) Foundational Layer

In the CY 2020 PFS final rule (84 FR 62947 through 62948), we establish that the implementation of a foundational population health care measure set using administrative claims-based quality measures that can be broadly applied to communities or populations can result in MVPs that provide more uniformity in how the program measures population health, reduce clinician reporting burden, focuses on important public health priorities, and increases the value of MIPS performance data. In addition, we discuss our beliefs that interoperability is also a foundational element that would apply to all clinicians, regardless of MVP, for whom the Promoting Interoperability performance category is required. Furthermore, we also discuss the importance of the integration of population health measures and Promoting Interoperability measures into MVPs, as they provide a degree of standardization across all clinician types and promotes an infrastructure on which to assess and improve value-based care.

(aa) Population Health Measure

In the CY 2021 PFS final rule, we discuss the inclusion of population health measures calculated from administrative claims-based data as a part of the foundational layer of MVPs, in an effort to improve patient outcomes, reduce reporting burden and costs, and better align with clinician quality improvement efforts. We refer readers to the CY 2021 PFS final rule (85 FR 84856 through 84857) where we discuss population health. Through this proposed rule, we propose: (1) To define the term population health measure; and (2) update the population health measure inventory.

(AA) Proposed Definition

In the 2020 CMS Quality Measure Development Plan—2020 Population Health Environmental Scan and Gap Analysis Report (https://www.cms.gov/files/zip/2020-mdp-population-health-e-scan.zip), we conducted an environmental scan to identify gaps in population health measurement within MIPS, specifically for use in the foundational layer of MVPs. Through this environmental scan and gap analysis, we have settled on a definition of “population health measure”. In addition, as described in the “Roadmap for Promoting Health Equity and Eliminating Disparities”: https://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=86046, developed by the National Quality Forum, health equity continues to be a priority for the agency, we believe it is important to include the measurement of health disparities when measuring population health.

In this proposed rule, we propose to codify this at § 414.1305, such that a population health measure means a quality measure that indicates the quality of a population or cohort’s overall health and well-being, such as, access to care, clinical outcomes, coordination of care and community services, health behaviors, preventive care and screening health equity, or utilization of health services. We request comments on this proposal.

(bb) Population Health Measures Inventory

In the CY 2021 PFS final rule (85 FR 84849 through 84850), as a part of the MVP development criteria, we had finalized that MVPs must include the full set of Promoting Interoperability measures. Any updates made to the set of Promoting Interoperability measures through traditional MIPS will apply to the MVPs. Therefore, we refer readers to section IV.A.3.d.(4) of this proposed rule where we discuss Promoting Interoperability performance category proposed policies and updates.

(D) Health Equity Measures in MVPs—Request for Information (RFI)

In section IV.A.1.c.(5)(d) of this proposed rule, we discuss our request for information on closing the health equity gap in CMS clinician quality programs, describing our current efforts as an agency, and asking specifically what other efforts can we take within the MIPS program to further bridge the equity gap. We believe there is potential to address health equity specifically through MVPs. As described in Appendix 3: The MVP Inventory, we are proposing improvement activities related to health equity in all 7 proposed MVPs. We also believe there is value in including quality measures that capture health equity in each MVP. However, in evaluating our current measure inventory, we acknowledge that we lack the availability of health equity measures. We intend on prioritizing the development of health equity measures through future cycles of measure development, and would also encourage stakeholders to do the same by utilizing our established processes, such as the Call for Measures: https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityMeasures/Pre-Rulemaking, to develop health equity measures for consideration of the MIPS program and potential inclusion in an MVP. Health equity continues to be a high priority for the agency and for the MIPS program. We envision a future state where health equity measures would be included in all MVPs. We request information on the following:

• Should health equity measures be developed in a manner to be broadly
applicable to the various specialties and subspecialties that participate in MIPS?

- Is there value in the development of more specialty-specific health equity measures?
- Considering MIPS and MVPs includes several specialties and subspecialties, what factors should be considered when developing a health equity measure?
- Should we include a health equity measure in the foundational layer of all MVPs, as a required measure, in the future? If not, why not?

(ii) Proposed Maintenance Process for MVPs

We believe it is important that we implement a maintenance process for established MVPs. Independent of the implementation of MVPs, the individual measures typically undergo annual updates and maintenance for several reasons. These updates may include technical coding updates, changes to clinical guidelines, or modifications to various aspects of the measure specification (such as the numerator or denominator). It will be important that we monitor when changes are made to individual measures to ensure that the updated measure is relevant and should be maintained within the MVP.

Therefore, beginning with the CY 2023 MIPS performance period/2024 MIPS payment year, we propose an annual maintenance process for finalized MVPs. In order to ensure that various stakeholder perspectives are also considered, we propose a solicitation process to solicit stakeholder recommendations for potential updates to established MVPs. Under this proposal, beginning in January of the year prior to the performance period, stakeholders could submit their recommendations to revise established MVPs. We would accept stakeholder input on a rolling basis. Any changes to MVPs would be addressed through future notice and comment rulemaking, for example, suggesting the addition or removal of a quality measure or improvement activity. If changes are made to existing individual measures and activities, they would be made under the traditional MIPS performance category policies and criteria for measures and activities and those changes would be reflected within the MVP. We would be unable to communicate with a stakeholder about whether or not their recommendations are accepted ahead of rulemaking.

Additional logistical information, such as where to submit recommendations would be provided through the QPP resource library and listserv messaging, prior to the opening of the solicitation process. However, CMS would consult with the stakeholders who originally nominated the MVP about any publicly recommended changes to that MVP. We would be unable to communicate with a stakeholder whether or not their recommendations would be accepted ahead of rulemaking and CMS would ultimately decide whether updates to the established MVPs should be made. To be clear, the annual maintenance process for finalized MVPs would be separate from the new MVP candidate solicitation process that was described in the CY 2021 PFS final rule (85 FR 84854 through 84856). We request comments on these proposals.

(c) Establishing a Portfolio of MVPs

In this proposed rule, we are proposing seven MVPs on the following topics: Rheumatology, Stroke Care, Ischemic Heart Disease, Chronic Disease Management, Emergency Medicine, Lower Extremity Joint Repair, and Anesthesia. We refer readers to Appendix 3: MVP Inventory for a full description of each MVP, proposal rationale, and where we are soliciting comments.

We anticipate that the portfolio of MVPs would continue to grow over the next few years. Through the review of data received through MIPS reporting for the 2019 performance period, we have identified the ten specialties who have the most participants in the MIPS program. These specialties include primary care, emergency medicine, diagnostic radiology, anesthesiology, cardiology, obstetrics and gynecology, orthopedic surgery, psychiatry, general surgery, and ophthalmology. We believe it is important to develop MVPs that address these specialties, amongst the other specialties that participate in the program. We are, however, aware of the limited availability of relevant cost measures for all specialties and subspecialties and intend to address this concern through this proposed rule. We also refer readers to section IV.A.3.b.(4)(b)(ii)(B)(aa)(AA) of this proposed rule, that there may be instances where MVPs are developed to include outcomes-based administrative claims measures within the quality component of an MVP, where those measures are not considered to be population-health based. In such instances, we believe it would be appropriate to allow MVP Participants to select to be calculated on the outcomes-based administrative claims measure, at the time of MVP registration, and to allow that measure to meet the outcome measure requirement of MVP quality reporting.

In addition, we have concerns about the ability of small practices to report all required measures in the MVP quality performance category when they select Medicare Part B claims measures as a collection type. In such instances, an MVP includes fewer than 4 Medicare Part B claims measures, an MVP Participant in
a small practice would need to report an additional collection type which would add reporting burden. We are concerned that small practices do not have the same resources to meet the quality reporting requirement of 4 measures if the MVP does not include 4 Medicare Part B claims measures. We want to establish policy that does not penalize a small practice for submitting an MVP. Therefore, we propose at §414.1365(c)(1)(i) that paragraph §414.1365(c)(1), does not apply to a small practice that reports on an MVP that includes fewer than 4 Medicare Part B claims measures, provided that the small practice reports each such measure that is applicable.

We request comments on these proposals. We refer readers to section IV.A.3.b.(5)(b)(ii) of this proposed rule for details on the MVP quality scoring proposals.

(iii) Proposed Cost Reporting Requirements in MVPs

As MVPs are implemented and available for reporting, each MVP would only include cost measures that are relevant and applicable to the MVP topic. Therefore, the number of cost measures in a given MVP may vary depending on the clinical topic of the MVP. An MVP may include the episode-based cost measures that are relevant to the topic, total per capita cost measure (TPCC), and/or Medicare Spending Per Beneficiary Clinician (MSPB Clinician) measure. As such, we propose at §414.1365(c)(2) that an MVP Participant is scored on the cost measures included in the MVP they select and report. To be clear, MVP Participants would not submit data for the cost measures; they would be calculated by CMS using administrative claims data, as in traditional MIPS. We request comments on this proposal.

In addition, we refer readers to section IV.A.3.b.(5)(b)(ii) of this proposed rule for details on the MVP cost scoring proposals.

(iv) Proposed Improvement Activity Requirements in MVPs

Similar to the quality performance category within MVPs, we also believe the improvement activities performance category should provide clinicians with an opportunity to select from a subset of improvement activities within an MVP that are relevant to the clinical topic being measured. Therefore, at §414.1365(c)(3), we propose that MVP Participant who reports an MVP, must report one of the following: Two medium weighted improvement activities; one high-weighted improvement activity; or participation in a certified or recognized patient-centered medical home (PCMH) or comparable specialty practice as described at (82 FR 53652) and at §414.1380(b)(3)(ii). We note that these proposed MVP improvement activity requirements are reduced in comparison to what is required in traditional MIPS (82 FR 53652) under which we generally require two high-weighted activities, one high-weighted and two medium-weighted activities, four medium-weighted activities, or participation in a certified or recognized patient-centered medical home (PCMH) or comparable specialty practice. We believe reduced reporting requirements are necessary to support adoption of and reduce burden for implementation of MVPs. We request comments on this proposal and refer readers to section IV.A.3.b.(5)(b)(iii) of this proposed rule for proposals related to MVP improvement activities scoring and discussion of why improvement activities are double-weighted under MVP reporting.

(v) Proposed Reporting Requirements for the Foundational Layer

(A) Promoting Interoperability

(aa) Proposed Reporting Requirements

As described in the CY 2021 PFS final rule (85 FR 84849 through 84853), all MVPs should include the entire set of Promoting Interoperability measures, as a part of the foundational layer. We do not intend to establish different reporting requirements for Promoting Interoperability for MVPs from what is established under traditional MIPS. Therefore, we propose at §414.1365(c)(4)(i) that an MVP Participant, is required to meet the Promoting Interoperability performance category reporting requirements described at §414.1375(b). We request comments on this proposal and refer readers to section IV.A.3.b.(5)(b)(iv) of this proposed rule for details on the proposals for MVP Promoting Interoperability scoring and reweighting.

(bb) Subgroup Limitations

As noted in section IV.A.3.b.(3) of this proposed rule, we believe that subgroups should be assessed using subgroup level data to the extent that it is operationally feasible. However, through the MVP Town Hall (85 FR 84846), we heard from stakeholders that some clinicians would need additional time to resolve operational challenges, including challenges related to configuring systems. Given these operational challenges, as well as other considerations specific to the Promoting Interoperability performance category, we believe that each subgroup should submit their affiliated group’s data for the Promoting Interoperability performance category and receive a score based on that data. We acknowledge that requiring each subgroup to submit their affiliated group’s data could result in duplicative reporting of the same data if their affiliated group also reports as a group for the Promoting Interoperability performance category. However, we believe that this approach is the most appropriate way to address the operational challenges identified by stakeholders and other issues specific to the Promoting Interoperability performance category. For instance, requiring clinicians to report Promoting Interoperability by subgroup may initially disincentivize clinicians from choosing to report MVPs as it may exacerbate the reporting burden and use of resources by a smaller cohort of clinicians. Furthermore, the Promoting Interoperability measures are applicable to many clinician types and are not designed to be specialty specific like the quality measures, therefore, it is unclear whether an advantage of assessing Promoting Interoperability performance on a subgroup of clinicians exists. Other performance categories include specialty specific measures, where assessment of performance at the subgroup level may be more meaningful. Therefore, we propose at §414.1365(c)(4)(i)(A) that for the CY 2023 and 2024 MIPS performance periods/2025 and 2026 MIPS payment years, to require an MVP Participant that is a subgroup to submit its affiliated group’s data for the Promoting Interoperability performance category. The submission of the affiliated group’s data would be on the subgroup’s behalf. If the affiliated group chooses to report as a group for the Promoting Interoperability performance category, the group still would be required to submit its own data separately and pursuant to the reporting rules for groups.

Alternatively, we considered proposing that for the 2023 and 2024 MIPS performance periods/2025 and 2026 MIPS payment years that each subgroup would be required to submit either their affiliated group’s data or their subgroup data for the Promoting Interoperability performance category. We considered requiring subgroups to indicate whether they would be submitting data for the Promoting Interoperability performance category at the group or subgroup level. However, we believe that the advantages of
reporting Promoting Interoperability performance category data at the subgroup level are not clear at this time and such a proposal, may introduce additional and unnecessary complexity.

In a future state, we could reassess whether subgroups should be required to submit subgroup level performance data for the Promoting Interoperability performance category. We refer readers to section IV.A.1.c.(5) of this proposed rule for details on the Digital Quality Measurement Blueprint and the Fast Healthcare Interoperability Resources (FHIR)-standard. Some subgroups may prefer to have the ability to report Promoting Interoperability performance category data at the subgroup level.

We request public comment on whether subgroups should be allowed or required to submit subgroup level performance data for the Promoting Interoperability performance category beginning with the performance period in 2023/2025 MIPS payment year, or in the future. We also request comment on any concerns that clinicians may encounter in reporting on Promoting Interoperability measures for a subgroup using technology certified to the existing certification criteria for reporting and capturing this information at § 170.315(g)(1) and (2). In addition, we request public comment on the aforementioned issues that would give us a better understanding on whether we should reconsider subgroup reporting in the future.

As previously discussed in the CY 2020 PFS proposed rule (84 FR 40734), in future years we may consider customizing the Promoting Interoperability measures in each MVP and we are seeking comment on how the Promoting Interoperability performance category could evolve in the future to meet our goal of greater cohesion between the MIPS performance categories. We believe that eligible clinicians could benefit from more targeted approaches to assessing the meaningful use of certified EHR technology which aligns with clinically relevant MVPs cutting across the MIPS performance categories.

For instance, we may consider how measures in the Promoting Interoperability performance category could align with specific MVPs. We may also consider developing Promoting Interoperability measures which are better tailored to specific MVPs, or that seek to assess the use of health IT associated with reporting measures in other categories and could be paired with these measures under an MVP. Finally, we may consider whether existing Promoting Interoperability measures could be tailored to specific populations addressed under an MVP.

We invite comment on these concepts, as well as other suggestions for how the Promoting Interoperability performance category could align with the MVP framework in the future.

(B) Population Health Measures

As described in the CY 2017 Quality Payment Program final rule (81 FR 77130 through 77136) we had received public comment that not all population health measures are applicable or attributable to all specialties. In order to mitigate this concern, at § 414.1365(c)(4)(ii), we propose that an MVP Participant is scored on 1 population health measure in accordance with paragraph § 414.1365(d)(1). To be clear, the population health measure calculation does not contribute to the required reporting of four quality measures, as described at § 414.1365(c)(1) and in section IV.A.3.b.(4)(d)(ii) of this proposed rule. Since the aforementioned population health measures are administrative claims based, they do not require data submission from clinicians. Therefore, it is important that an election period is established in which MIPS eligible clinicians, groups, subgroups, and APM entities would identify which MVP and population health measure they intend to report. We refer readers to the proposed registration process below and intend to provide additional guidance through subregulatory means.

In crafting our proposal, we also considered the alternative where we wouldn’t require MVP participants to select which population health measure to be calculated on. Under this alternative, we would require and calculate both population health measures and apply the higher score to the quality score. While we thought this approach would reduce some of the burden associated with requiring this selection at the time of MVP registration, we ultimately decided to propose to allow MVP participants to select which population health measure to be calculated on. As discussed above, this selection process is being proposed in an effort to mitigate some of the previously stated concerns stakeholders had with these measures.

We request comment on our proposal as discussed above and refer readers to section IV.A.3.b.(5) of this proposed rule for details on the scoring of population health measures.

(vi) Subgroup Reporting

(A) Subgroup Reporting Overview

As discussed in section IV.A.3.b.(3) of this proposed rule, subgroup reporting would provide an avenue for clinician teams within a larger group to be able to submit MVPs that are clinically relevant to them and would be a first step in allowing more granular clinician information to be made available to patients. To generate more clinically relevant and granular information about clinician performance, we believe that subgroups should be assessed using subgroup level data to the extent that it is operationally feasible. We anticipate more granular data would be available for patients, clinicians, and other stakeholders through a three-pronged approach of mandatory subgroup reporting, broad use of standards-based APIs that leverage the FHIR standard and the creation and use of dQMs as discussed in section IV.A.1.c.(5) of this proposed rule. We believe that subgroups should report data for the quality and improvement activities performance categories as a subgroup. The cost performance category does not require data submission; however, as described in section IV.A.3.b.(5)(b)(ii) of this proposed rule, we believe cost data should be assessed at the subgroup level as well.

(B) Proposed Subgroup Reporting Limits

As described in section IV.A.3.b.(2)(d)(i) of this proposed rule, we are proposing voluntary reporting of MVPs as a gradual approach to prepare stakeholders through the transition plan for MIPS before eventually requiring reporting through an MVP or the APP. As a part of the transition, we discuss our intention to continue to offer reporting through traditional MIPS at the group level, as discussed in section IV.A.3.b.(4)(d), to allow clinicians and groups additional time to continue reporting in traditional MIPS while we work expand the inventory of MVPs over the next few years.

While we intend to allow for this flexibility through the transition, we believe that groups should only form subgroups if they are reporting through an MVP or the APP and not through traditional MIPS. As such, we propose at § 414.1318(c)(2) that individual eligible clinicians that elect to participate in MIPS as a subgroup will have their performance assessed at the subgroup level across all of the MIPS performance categories based on an MVP in accordance with § 414.1365, and on the APP in accordance with § 414.1367, as applicable. Subgroups that are MVP Participants must adhere to an election process described in § 414.1365(b). This includes MVP Participants who choose to report on an MVP as a subgroup. We believe
encouraging the subgroup reporting in MVPs is an important step to help MVP Participants transition to MVP reporting
in the future.

As stated in the CY 2021 PFS final rule (85 FR 84846), we envisioned subgroup reporting would be
implemented for multispecialty groups reporting MVPs. A subset of a TIN could form a subgroup if they are part of
the same TIN, but could not form a subgroup if they are part of different TINs. For example, a group consisting of
a single billing TIN that contains a number of participants in the same APM Entity, could form a subgroup to report
an MVP or the APP. However, an APM Entity could not select eligible clinicians who are part of different
TINs, based on their specialty, and report as a single subgroup. We refer
readers to section IV.A.3.b.(2)(e) of this proposed rule, where we discuss
subgroups reporting the APP. Due to operational and technical issues
described above, we do not believe it is feasible to permit MIPS eligible
clinicians in multiple TINs to form a subgroup to report MVPs or the APP.
We request public comment on whether there are strategies we should consider to enable formation of subgroups
comprised of MIPS eligible clinicians from multiple billing TINS to report
MVPs or the APP.
We request public comment on this proposal.

(vii) Proposed MVP Reporting Requirements Summary

Table 34 summarizes the proposed MVP reporting requirements:

<table>
<thead>
<tr>
<th>Quality Performance Category*</th>
<th>Improvement Activities Performance Category*</th>
<th>Cost Performance Category</th>
</tr>
</thead>
<tbody>
<tr>
<td>An MVP Participant selects 4 quality measures, 1 must be an outcome measure (or a high priority measure if an outcome is not available or applicable).</td>
<td>MVP Participant selects: Two medium weighted improvement activities OR One high weighted improvement activity. OR Participates in a certified or recognized patient-centered medical home (PCMH) or comparable specialty practice, as described at (82 FR 53652) and at § 414.1380(b)(3)(ii)</td>
<td>An MVP Participant, is scored on the cost measures that are included in the MVP that they select and report.</td>
</tr>
</tbody>
</table>

As applicable, an administrative claims measure, that is outcome-based, may be selected at the time of MVP registration to meet the outcome measure requirement.

Foundation Layer (MVP agnostic)

Population Health Measures*

An MVP Participant selects 1 population health measure, at the time of MVP registration, to be scored on. The results are added to the quality performance category score.

Promoting Interoperability (PI) Performance Category

An MVP Participant is required to meet the Promoting Interoperability performance category requirements at § 414.1375(b).

*Indicates MVP Participant may select measures and/or improvement activities.

(e) Third Party Intermediaries Reporting MVPs

We believe it is also important to ensure that third party intermediaries have the capabilities to support MVPs. We refer readers to section IV.A.3.h. of this proposed rule for proposals related to requiring third party intermediaries to support MVP and subgroup reporting.

(f) MVP Participant Registration

We strive to limit administrative burden and offer as much flexibility as possible. With this principle in mind, we propose steps that an MVP Participant must take to inform CMS of their participation and submission options, with certain exceptions for when the method of collection requires

   performance period or we do not have any discretion (such as in virtual groups). We believe that a registration process would be easiest and the most efficient option for MVP Participants and CMS to accurately capture: (1) MVP selection; (2) population health measure selection; (3) administrative claim-based quality measure selection; and (4) subgroup participation.

(i) Proposed Registration Timeline

(A) General Timeline

We considered whether registration should occur at the time of data submission (as described at § 414.1325(e)) or at a specific point during the performance period (for example, by July 1 of the applicable performance period to coincide with the CAHPS for MIPS registration period (81 FR 77072)). On January 7, 2021, we held the MVP Town Hall (85 FR 74729) and publicly shared the MVP Town Hall Preparation Guide, as well as these two potential options and solicited feedback from stakeholders.

This first option would require registering at the time of performance data submission because: It would provide clinicians additional time and flexibility to submit the identification information; better account for TIN/NPI changes during the performance period; allow third-party intermediaries time to accommodate reporting; streamline...
reporting; minimize burden; allow time to review APM participation lists and confirm QP status in order to determine the clinicians to be included in subgroups. Many commenters supported this. A few commenters recommended that the election process take place during the performance period in conjunction with the CAHPS for MIPS registration process and stated that the increased burden associated in enrolling clinicians in a subgroup during the performance period was worth it for subgroups to be scored on administrative claims quality measures and cost measures specific to their subgroup.

We also considered the second option: Having the registration window coincide with performance data submission given that this would provide the additional time and flexibility for clinicians and practices to identify the clinicians in a subgroup. Even though this option would not require a prior registration process to identify clinicians in a subgroup and would allow groups to internally account for clinicians joining or leaving their group throughout the performance period, it would also have significant tradeoffs such as not allowing enough time for CMS to provide enhanced performance feedback as proposed in section IV.A.3.b.(5)(d) of this proposed rule. We are also concerned that this option would result in subgroups that are assessed on less information due to insufficient operational time for CMS to pull and reconcile claims data and CAHPS beneficiary sampling for the subgroup that informs performance measurement of the subgroup. Furthermore, this option would also require clinicians in subgroups to be assessed on the overall group’s administrative claims quality measures and cost measures instead of the subgroup’s performance on those measures; this means that if subgroups would be interested on the subgroup level for claims data and CAHPS, this would delay feedback and scoring.

In consideration of stakeholder feedback and to ensure timelines are feasible for CMS and stakeholders alike, we believe the first option is more appropriate—a registration period that begins on April 1st and ends November 30th of the applicable performance period (h). Therefore, we propose at §414.1365(b)(1), that to report an MVP, an MVP Participant must register for the MVP, and if applicable, as a subgroup during a period that begins on April 1 and ends on November 30 of the applicable CY performance period or a later date specified by CMS. Under this proposal, to report the CAHPS for MIPS survey associated with an MVP, a group, subgroup, or APM entity must complete their registration by June 30 of such performance period or a later date specified by CMS.

We believe the benefits of aligning MVP, MVP population health measure, and subgroup registration during the performance period, outweigh the limitations of performance period registration. Through the MVP town hall, we have heard stakeholders indicate that a registration period that is held during the performance period is limiting because it provides clinicians with less time to decide which MVP they would like to report or make changes to their selection. However, we believe that this would encourage clinicians to identify important MVP topics early on in the performance period, in which they can focus their quality improvement efforts on. Also, this would allow us sufficient time to identify clinician participation in subgroups and provide more granular meaningful subgroup performance feedback to inform quality improvement and patient choice resulting in clinician assessment on more information relevant to their subgroups, such as targeted administrative claims quality measures and cost measures. In addition, we believe that the proposed registration period would allow more flexibility in the creation of subgroups that represent clinical alignment and to add or remove clinicians from the subgroup, or otherwise, make changes to their participation status in subgroups, before the end of the registration period.

We request public comment on our proposals as discussed above.

(B) Exception for MVP Participants That Want To Report the CAHPS for MIPS Survey Measure

Currently, as finalized in the CY 2017 Quality Payment Program final rule (81 FR 77072), groups that register to administer the CAHPS for MIPS survey measure prior to the registration deadline could cancel their registration or change their CAHPS for MIPS survey selection before the close of registration on June 30th. In this proposed rule, we propose at §414.1365(b)(1) that in order for an MVP Participant to report the CAHPS for MIPS survey measure associated with an MVP, a group, subgroup, or APM entity would need to register by the same deadline as the CAHPS for MIPS registration, which is June 30 of the applicable 12-month performance period (61 FR 77072).

Under this proposal, clinicians participating in subgroups or groups reporting on the CAHPS for MIPS survey measure within an MVP would be unable to make any changes to their participation in the CAHPS for MIPS survey beginning July 1 of the applicable performance period. We note that clinicians in subgroups who do not intend to report the CAHPS for MIPS measure would still be able to make changes to their participation status in subgroups before the registration period ends on November 30th.

We request public comment on these proposals.

(ii) Proposed MVP Participant Registration Requirements

We believe there are certain elements of information that are important to include at the time of MVP registration. Specifically, we propose at §414.1365(b)(2)(ii) and (ii), that at the time of registration, an MVP Participant must submit the following information, as applicable: (1) Each MVP Participant must select an MVP, 1 population health measure included in the MVP, and if applicable, any outcomes-based administrative claims measure on which the MVP Participant intends to be scored; (2) Each subgroup must submit a list of each TIN/NPI associated with the subgroup which identifies each individual eligible clinician NPI in the applicable subgroup for the group TIN and a plain language name for the subgroup. The following subsections discuss each of these elements.

(A) MVP Selection

To accurately capture who is participating in MVP reporting, it is important to establish the use of identifiers to identify what is intended to be reported, and by whom. We intend to publish a list of MVPs that have been finalized in rulemaking in the prior year, with identifiers available for a given performance period on the QPP Resource Library, prior to the start of the registration period, along with registration guidance. Therefore, we propose that the MVP Participants must select a specific MVP, at the time of registration, as described at proposed §414.1365(b)(2)(i). Under this proposal, MVP Participants would not be able to submit or make changes to the MVPs they select after the close of the registration period, and therefore, would not be allowed to report on an MVP they did not register for. We request comments on this proposal.

In addition, for our consideration for future rulemaking, we request public comment on whether MVP Participants would be interested in the ability to select multiple MVPs at the time of registration. If so, we would like to
understand what value MVP Participants might find with this allowance. Specifically, we would like to know if MVP Participants believe they will likely report on multiple MVPs. Also, we would like to know if MVP Participants would want to submit data on multiple MVPs. We also refer readers to section IV.A.3.b.(3)(h) of this proposed rule, where we discuss a similar comment request for subgroups.

(B) Population Health Measure Selection

Similarly, we plan to publish a list of the population health measures that have been finalized for a given performance period on the QPP Resource Library. We plan for this to occur prior to the start of the registration period, along with posting registration guidance. As proposed in section IV.A.3.b.(4)(d)(V)(B) of this proposed rule, we propose that MVP Participants who report an MVP, must submit one population health measure of their choice from the list of finalized population health measures within the foundational layer of the MVPs. The two proposed and previously finalized population health measures are both administrative claims-based, and do not require physical data submission by clinicians. Therefore, in order for this selection to be tracked, we propose at § 414.1365(b)(2)(i) that the MVP Participant must select any outcomes-based administrative claims measures on which the MVP Participant intends to be scored. As proposed in section IV.A.3.b.(4)(d)(ii) above in this proposed rule and at § 414.1365(c)(1), an MVP Participant must select and report 4 quality measures, including 1 outcome measure (or, if an outcome measure is not available, 1 high priority measure), included in the MVP. As applicable, an outcomes-based administrative claims measure, may be selected at the time of MVP registration to meet the outcome measure requirement (excluding the population health measures required under § 414.1365(c)(4)(i))

We request comments on this proposal.

(D) Subgroup Participants

As part of the registration process, to accurately capture all the clinicians participating in a subgroup, we propose at § 414.1365(b)(2)(i) that each subgroup must submit: (1) A list of each TIN/NPI identifier associated with the subgroup, which should identify each individual eligible clinician NPI in the applicable subgroup for the group TIN; and (2) the subgroup’s name in a plain language manner.

We believe that the subgroup names would help communicate the specialty, location, or other relevant information which would be displayed on the Compare Tools, helping stakeholders differentiate between subgroups. We plan to provide additional guidance for the template in subregulatory guidance for the nomenclature of subgroups and intend to provide a template and guidance to clinicians and practices on the use of plain language for naming subgroups. For example, a subgroup which consists of oncologists in the Mayberry location of one overall group TIN who chooses to report the Oncology MVP could be called Mayberry Oncology. We considered an alternative option to allow flexibility for groups to choose their own naming convention for subgroups.

Upon successful registration submission, we would assign a unique subgroup identifier. This subgroup identifier would be separate from the individual NPI identifier, the group TIN identifier, and the MVP identifier, discussed in this proposed rule. We would maintain the same identifier year over year, as applicable. In scenarios where a subgroup’s makeup changes, which will be identified at the time of registration, we will issue the subgroup a new identifier. We believe this identifier is also needed to allow third-party intermediaries to capture and submit performance data for clinicians participating in subgroup reporting as discussed in section IV.A.3.h.(2)(b) of this proposed rule.

We request public comment on these proposals. Additionally, we request feedback on if there are any additional operational considerations or recommendations for the implementation of this policy for future consideration.

(iii) Summary of the Overall Proposed Registration Process

Table 35 presents a comprehensive perspective of the overall proposed registration timeline:

BILLING CODE 4120–01–P
Table 35: Proposed Registration Process for MVP and Subgroup Elections Beginning with the CY 2023 MIPS Performance Period

<table>
<thead>
<tr>
<th>Date</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>April 1st of the applicable performance period, or a later date specified by CMS</td>
<td>MVP Participants may begin to register for MVP reporting.</td>
</tr>
</tbody>
</table>
| June 30th of the applicable performance period, or a later date specified by CMS | Groups, subgroups, APM entities, who intend to report the CAHPS for MIPS Survey Measure through an MVP, must submit:  
  - MVP selection and population health measure selection  
  - As applicable, select an outcomes-based administrative claims measure that is associated with an MVP.  
  - As applicable, each subgroup must submit a list of each TIN/NPI associated with the subgroup.  
  - As applicable, each subgroup must submit a plain language name for the subgroup.  
  - Separately register through the MIPS registration system by June 30th to participate in the CAHPS for MIPS Survey. |
| November 30th of the applicable performance period, or a later date specified by CMS | The registration period closes. New registrations or changes to registration would not be accepted after November 30th. MVP Participants cannot make any changes to registration of:  
  - MVP selection  
  - Population health measure selection  
  - As applicable, the selection of an outcomes-based administrative claims measure associated with the MVP  
  - As applicable, the list of each TIN/NPI associated with the subgroup.  
  - As applicable, subgroup participation (including the subgroup’s plain language name). |

Table 36 presents a crosswalk of the various clinician types, the information expected at the time of registration, and a reminder of the MVP reporting requirements if our proposals are finalized as proposed.

\*Multispecialty Groups would be required to form subgroups to report an MVP. We refer readers to § 414.1305 for the definitions of MVP Participant, single specialty group, multispecialty group, and subgroup.
In general, in this proposed rule, we propose to score MVPs similar to policies established for traditional MIPS, including without limitation the methodology to score MVP Participants based on their performance on measures and activities in the four performance categories; performance standards for each of the performance categories; calculation of achievement and improvement scores; and calculation of the final score. We strive to ensure our methodology to convert the scores of activities and measures into a final score balances the statutory requirements and goals of the program with the ease of use, stability, and meaningfulness to MIPS eligible clinicians (83 FR 59840).

Our proposed scoring methodology would allow for accountability and alignment across the performance categories and minimizes burden on MIPS eligible clinicians (85 FR 50305). We believe these proposed scoring policies would ensure the meaningful evaluation of performance of MVP Participants based on measures and activities in the MVP. Several of the proposed MVP specific scoring policies would support our identified goal to simplify the program by offering MVPs that link clinically relevant measures and activities, which are meaningful to clinicians, patients, and the program.

We propose at § 414.1365(d)(1) that an MVP Participant that is not an APM Entity is scored on measures and activities included in the MVP in accordance with paragraphs § 414.1365(d)(1) through § 414.1365(d)(3)(d)(3). We also propose at § 414.1365(d)(1) that an MVP Participant that is an APM Entity is scored on measures and activities included in the MVP in accordance with § 414.1317(b). Additionally, we propose at § 414.1365(d)(2) that unless otherwise indicated in § 414.1365(d), the performance standards described at § 414.1380(a)(1)(i) through (iv) apply to the measures and activities included in the MVP. Lastly, we propose at § 414.1365(d)(3) that an MVP Participant is scored under MIPS in four performance categories.

We request public comments on these proposals.

In sections IV.A.3.b.(5)(b) and IV.A.3.b.(5)(c) we propose scoring policies for MVPs that address scoring population health measures within the quality performance category, scoring an outcomes-based administrative claims measure selected as an outcome measure at the time of registration, scoring only the cost measures specified in the MVP for the cost performance category, assigning 20 points for each medium-weighted and 40 points for each high-weighted improvement activity in the improvement performance category, scoring subgroups on the Promoting Interoperability performance category using the affiliated group score, circumstances in which we would reweight performance categories within an MVP, and application of the complex patient bonus to MVPs. We also propose using enhanced performance feedback in MVPs.

As discussed in section IV.A.3.b.(5)(b), we propose scoring policies that apply to MVP Participants. We do not anticipate the need for separate scoring policies for MVPs that might be reported by a single specialty, for example a group of specialists that perform the procedure addressed by an MVP, or for MVPs that could be reported by multiple specialties engaged in team-based care; we believe all scoring policies would apply in each scenario.

(b) Performance Category Scores

(i) Scoring the Quality Performance Category in MVPs

We propose to maintain scoring policies finalized in traditional MIPS for MVPs to leverage meaningful scoring policies and retain stable scoring for MVP Participants. We refer readers to § 414.1380(b)(1)(i) for details on our policies for scoring performance on quality measures for traditional MIPS (81 FR 77276 through 77307, 82 FR 53694 through 53701, 83 FR 59841 through 59856, 84 FR 63011 through 63019, and 85 FR 84904 through 84906). Our proposed policies for scoring quality in traditional MIPS are described in further detail in section IV.A.3.e.(1)(c) of this proposed rule. We refer readers to section IV.A.3.e.(1)(c)(iii) of this proposed rule for our proposals to remove the 3-point floor for Class 1 and Class 2 measures for the 2024 MIPS payment year for traditional MIPS, and for Class 4 measures (new measures) to provide a score from 5 to 10 points in the first two performance periods a measure is used in MIPS. We propose to align with these policies as well to maintain consistency between MVPs and traditional MIPS.

We propose at § 414.1365(d)(3)(i) that, except as provided in paragraphs (d)(3)(i)(A)(1) and (B), the quality performance category score for MVP Participants is calculated in accordance with § 414.1380(b)(1) based on measures included in the MVP.

(B) Population Health Measures

Population health measures are administrative claims measures that are part of the foundational layer of MVPs, as described in section IV.A.3.b.(4)(b)(i)(C)(aa) of this proposed rule. As proposed in section IV.A.3.b.(4)(b)(ii)(B) of this proposed rule, MVP Participants would select a population health measure during the registration process. We would score the selected measure as proposed at § 414.1365(d)(3)(i). Since we are proposing to adopt our scoring policies used in traditional MIPS for MVPs, we would exclude the measure from the total achievement points and the total available points if the administrative claims measure does not have a benchmark or meet the case minimum requirement in accordance with § 414.1365(d)(3)(i)(A)(1). We propose at § 414.1365(d)(3)(i)(A)(1) that except as provided in paragraph (d)(3)(i)(A)(1) each selected population health measure that does not have a benchmark or meet the case minimum requirement is excluded from the MVP participant’s total measure achievement points and total available measure achievement points.

We are concerned about the ability of subgroups to meet the case minimum for an administrative claims measure but are interested in including population health measures in the subgroup’s score for the MVP. We propose at § 414.1365(d)(3)(i)(A)(1) that subgroups are scored on each selected population health measure that does not have a benchmark or meet the case minimum requirement based on their affiliated group score, if available. We believe this is appropriate because we believe it is important for subgroups to be scored on population health measures, and we believe that the groups score will be reflective of the subgroup’s performance on population health measures. We also propose at § 414.1365(d)(3)(i)(A)(1) if the subgroup’s affiliated group score is not available, each such measure is excluded from the subgroup’s total measure achievement points and total available measure achievement points.

We request public comments on this proposal.

We note that we are also concerned about scoring individual clinicians on population health measures. Because population health measures have measured the quality of a population or cohort’s overall health and well-being, we historically have required a minimum reliable standard of 0.4 which for most measures equates to a high case minimum in order to be
scored. We believe it will be common that a solo practitioner, or an individual clinician that is part of a group but chooses to be scored as an individual clinician will not be scored on population health measures. In these scenarios, we would remove the population health measure from the denominator in accordance with § 414.1380(b)(1)(i)(A)(2)(ii). Historically, we have not combined performance for the individual clinician with performance from the group and therefore have concerns with using the group score for individual clinicians who cannot be scored for population health measures. We understand there may be concerns from stakeholders on scoring individual clinicians on broad population health measures. However, we request comment on approaches to scoring individual clinicians on population health measures given the importance of these measures.

We request public comments on this proposal.

(C) Outcomes-Based Administrative Claims Measures

We want to clarify that MVPs may include outcomes-based administrative claims measures that are identified as outcome measures but are not population health measures as defined at § 414.1305. As described in section IV.A.3.b.(4)(f)(ii)(C) of this proposed rule, clinicians will be able to select outcomes-based administrative claims measures as their required outcome measure during MVP registration, if an outcomes-based administrative claims measure is available within the MVP. For example, if a clinician selects an outcomes-based administrative claims measure during registration to be used as an outcome measure and submits three additional measures, and the outcomes-based administrative claims measure has a benchmark and meets the case minimum, all four measures will be scored. If the clinician selects an outcomes-based administrative claim measure to fulfill their outcome measure requirement, and the outcomes-based administrative claims measure does not meet the benchmark or meet the case minimum. Therefore, we propose at § 414.1365(d)(3)(i)(B) that MVP Participants receive zero measure achievement points for each selected outcomes-based administrative claims measure that does not have a benchmark or meet the case minimum requirement. This scoring aligns with our proposal at IV.A.3.e.(1)(c) of this proposed rule to score Class 2 measures in traditional MIPS. If the clinician selects the outcomes-based administrative claims measure, which can be calculated and submits more than three measures, including an additional outcome measure, scores from the highest four measures will be used to determine the quality performance category score.

Below is an example of scoring for a MIPS eligible clinician who selects an outcomes-based administrative claims measure as the required outcome measure, does not meet case minimum for the measure, and does not submit an additional outcome measure to meet the outcome measure requirement:

- **Measure #1**: 10/10 points.
- **Measure #2**: 10/10 points.
- **Measure #3**: 10/10 points.
- **Outcomes-based administrative claims measure: Does not meet case minimum, no other outcome measure submitted**: 0/10 points.

- **Total quality performance category points**: 30/40.

We request comment on this proposal.

(D) Scoring for MVP Participants That Do Not Meet the Quality Performance Category Requirements

We believe it is important that MVP Participants submit the required quality measures specified in the MVP they selected to report. For traditional MIPS, we implemented a validation process to determine if measures are available and applicable (81 FR 77290 through 77291, and 82 FR 30108 through 30109). We have received feedback from stakeholders that this process may be confusing for clinicians. We do not believe we need a validation process to determine the availability and applicability of measures for MVP Participants because MVPs will focus on a condition or specialty, and we believe MVPs will be selected and reported because of the MVP applicability to their practice and patients.

(E) Scoring Example

Table 37 includes examples of scoring within the quality performance category for MVPs. Quality scoring example #1 includes a group that reports four measures and has one population health measure automatically calculated for them and receives 2 percentage points for improvement scoring for an MVP. For quality scoring example #2, the group is a small practice who reports all the Medicare Part B claims measures in an MVP. Because there are only three Medicare Part B claims measures available in this example, the group has a reduced denominator, so the group is not penalized for not reporting four quality measures specified in MVP reporting requirements. The second example also includes 2 percentage points for improvement scoring.

(ii) Scoring the Cost Performance Category in MVPs

We propose to use the methodology established for traditional MIPS to score the cost performance category for MVPs, including the proposed revisions to that methodology described in section IV.A.3e.(1)(d) of this proposed rule. We refer readers to § 414.1380(b)(2)(i) through (v) for our policies to score the cost performance category for traditional MIPS based on achievement and improvement when the case minimum specified under § 414.1350(c) is met or exceeded and CMS has determined a benchmark. We propose at § 414.1365(d)(3)(ii) that the cost performance category score is calculated based on the submission of high- and medium-weighted improvement activities by assigning 10 points for each high-weighted improvement activity and 20 points for each high-weighted improvement activity. We refer readers to § 414.1380(b)(3) for details on scoring the improvement activities performance category for traditional MIPS. Additionally, we refer the reader to §§ 414.1317(b)(3) and 414.1380, which indicates that MIPS eligible clinicians participating in APMs receive a score of at least 50 percent in the improvement activities performance category. As a result, APM entities that report an MVP will receive an improvement activities performance category score of at least 50 percent.

We believe we should continue scoring high-weighted and medium-weighted improvement activities that support the linked activities and measures specified within the MVP using a similar scoring methodology. However, for MVPs, we are proposing to assign 20 points for each medium-weighted improvement activity and 40 points for each high-weighted improvement activity to align with the reporting requirements proposed in section IV.A.3b.(4)(d)(iv) of this proposed rule, that require that MVP Participants report on one high-weighted improvement or two medium-weighted improvement activities. We believe that this would help to incentivize clinicians to report on MVPs versus traditional MIPS by reducing reporting burden, since fewer submissions are required to receive a full score.

Therefore, we propose at § 414.1365(d)(3)(iii) that the improvement activities performance category score is calculated based on the submission of high- and medium-weighted improvement activities. We are also proposing that MVP Participants would receive 20 points for each medium-weighted improvement activity and 40 points for each high-weighted improvement activity required under § 414.1360 on which data is submitted in accordance with § 414.1325 or for participation in a certified or recognized patient-centered medical home (PCMH) or comparable specialty practice, as described at § 414.1380(b)(3)(ii). Therefore, to receive a score of 40 points, or full credit, an MVP Participant must submit one high-weighted improvement activity or two medium-weighted improvement activities included in the MVP.

We request public comments on this proposal.

(iii) Scoring the Improvement Activities Performance Category in MVPs

Under traditional MIPS, we scored improvement activities by assigning each improvement activity a weight, either high-weight or medium-weight, and by assigning 10 points for each medium-weighted improvement activity and 20 points for each high-weighted improvement activity. We refer readers to § 414.1380(b)(3) for details on scoring the improvement activities performance category for traditional MIPS. Additionally, we refer the reader to §§ 414.1317(b)(3) and 414.1380, which indicates that MIPS eligible clinicians participating in APMs receive a score of at least 50 percent in the improvement activities performance category. As a result, APM entities that report an MVP will receive an improvement activities performance category score of at least 50 percent.

We believe we should continue scoring high-weighted and medium-weighted improvement activities that support the linked activities and measures specified within the MVP using a similar scoring methodology. However, for MVPs, we are proposing to assign 20 points for each medium-weighted improvement activity and 40 points for each high-weighted improvement activity to align with the reporting requirements proposed in section IV.A.3b.(4)(d)(iv) of this proposed rule, that require that MVP Participants report on one high-weighted improvement or two medium-weighted improvement activities. We believe that this would help to incentivize clinicians to report on MVPs versus traditional MIPS by reducing reporting burden, since fewer submissions are required to receive a full score.

Therefore, we propose at § 414.1365(d)(3)(iii) that the improvement activities performance category score is calculated based on the submission of high- and medium-weighted improvement activities. We are also proposing that MVP Participants would receive 20 points for each medium-weighted improvement activity and 40 points for each high-weighted improvement activity required under § 414.1360 on which data is submitted in accordance with § 414.1325 or for participation in a certified or recognized patient-centered medical home (PCMH) or comparable specialty practice, as described at § 414.1380(b)(3)(ii). Therefore, to receive a score of 40 points, or full credit, an MVP Participant must submit one high-weighted improvement activity or two medium-weighted improvement activities included in the MVP.

We request public comments on this proposal.

(iv) Scoring the Promoting Interoperability Performance Category in MVPs

We propose to use the scoring methodology established for the Promoting Interoperability performance category in traditional MIPS, and as proposed to be revised in section IV.A.3d.(4) of this proposed rule, for MVP Participants, except for subgroups who would be scored based on their
affiliated group’s Promoting Interoperability performance category data. The Promoting Interoperability performance category is a foundational layer of MVPs that uses limited, connected complementary sets of measures that are meaningful to clinicians. The scoring methodology for the Promoting Interoperability performance category recognizes the importance of promoting adoption and use of CEHRT to support quality improvement, interoperability, and patient engagement and provides an important approach to scoring that we propose to use for MVPs. We propose at § 414.1365(d)(3)(iv) to calculate the Promoting Interoperability performance category score for an MVP Participant using the methodology at § 414.1380(b)[4], except as provided at § 414.1365(d)(3)(iv)[A].

As discussed in section IV.A.3.b.(4), we proposed at § 414.1365(c)(4)[ii][A] to require subgroups to submit their affiliated group’s data for the Promoting Interoperability performance category. We propose at § 414.1365(d)(3)(iv)[A] that if a subgroup does not submit its affiliated group’s data for the Promoting Interoperability performance category, the subgroup will receive a score of zero for the Promoting Interoperability performance category.

We request public comments on these proposals.

(v) Facility-Based Scoring

We believe facility-based MIPS eligible clinicians and groups should have the same opportunities to submit MVPs as other MIPS eligible clinicians and groups. Please refer to 83 FR 59856 through 59865, regulation text at § 414.1380(e), and section IV.A.3.e.(2)[b][v] of this proposed rule for our finalized and proposed policies for facility-based scoring. We propose at § 414.1365(e)(3) if an MVP Participant, that is not an APM Entity, is eligible for facility-based scoring. We propose at § 414.1365(e)(3) that for an MVP Participant that is a subgroup, any reweighting applied to its affiliated group’s data for the Promoting Interoperability performance category, the subgroup will receive a score of zero for the Promoting Interoperability performance category.

We request public comments on these proposals.

(A) General Performance Category Weights

We propose at § 414.1365(e)(1) to use the performance category weights established for traditional MIPS and described at § 414.1380(c)(1) to calculate the final score for an MVP Participant that is not an APM Entity. We also propose at § 414.1365(e)(1) to use the performance category weights established for an MVP Participant that is an APM Entity. We refer readers to section IV.A.3.d.5(c) of this proposed rule where we propose additions to the regulation text at § 414.1317(b)(2). We request public comments on these proposals.

(B) Flexibility for Weighting Performance Categories

(aa) Reweighting Performance Categories for MVPs

For MVP Participants, we are proposing reweighting policies that generally align with our current policies for traditional MIPS with a few minor modifications. We propose at § 414.1365(e)(2)(ii) that for an MVP Participant that is not an APM Entity, a scoring weight different from the weights described at § 414.1380(c)(1) will be assigned to a performance category, and its weight as described at § 414.1380(c)(1) will be redistributed to another performance category or categories, in the circumstances described at § 414.1380(c)(2)[ii][A](2) through (9), and § 414.1380(c)(2)[ii][C]. We also propose at § 414.1365(e)(2)(ii) that for an MVP Participant that is an APM Entity, the performance category weights will be redistributed in accordance with § 414.1317(b) (see section IV.A.3.d.5(c) of this proposed rule for further information on proposed additions to the regulation text at § 414.1317(b)(2)).

As discussed in section IV.A.3.b.(5)[b][i] of this proposed rule, for MVP Participants, we do not believe there will be cases where no measures in the quality performance category are available and applicable and can be scored. Therefore, we do not believe the traditional MIPS policy for reweighting the quality performance category as specified at § 414.1380(c)(2)[ii][A](1) should be applicable to MVP Participants. We believe MVP Participants should select an MVP with four quality measures which can be scored based on achievement (unless clinicians report the Medicare Part B collection type and fewer than four measures are included in the MVP for that reporting option). We do not believe we should reweight the quality performance category if no quality measures in the MVP can be scored.

We propose at § 414.1365(e)(2)(ii) that for an MVP Participant that is a subgroup, any reweighting applied to its affiliated group will also be applied to the subgroup. In addition, we propose at § 414.1365(e)(2)(ii) that if reweighting is not applied to the affiliated group, the subgroup may receive reweighting independent of the affiliated group in the following circumstances. We believe a subgroup may be subject to extreme and uncontrollable circumstances that do not impact the entire affiliated group. For example, a subgroup might represent a single practice location that is affected by a natural disaster, while the affiliated group’s other practice locations are not affected. Accordingly, we propose at § 414.1365(e)(2)(ii) that a subgroup may submit an application to CMS demonstrating that it was subject to extreme and uncontrollable circumstances and receive reweighting in accordance with § 414.1380(c)[2][ii][A](6) and (c)[2][ii][C][2]. Under this proposal, we propose that in the event that a subgroup submits data for a performance category, the scoring weight described at § 414.1380(c)(1) would be applied and its weight would not be redistributed.

We are also concerned that subgroups, independent of their affiliated groups, may be subject to data that are inaccurate, unusable or otherwise compromised. We propose to add at § 414.1365(e)(2)(iii)(B) that, a subgroup will receive reweighting if CMS determines, based on information known to the agency prior to the beginning of the relevant MIPS payment year, that data for the subgroup are inaccurate, unusable or otherwise compromised due to circumstances outside of the control of the subgroup and its agents, in accordance with § 414.1380(c)(2)[ii][A](9) and (c)[2][ii][C][10].

We request public comments on these proposals.

(C) Redistributing Performance Category Weights

We propose to redistribute the performance category weights for MVPs in accordance with the redistribution policies we propose for traditional MIPS in section IV.A.3.e.(2)[b][iii] of this proposed rule. We propose at
§ 414.1365(e)(2)(iii) that for an MVP Participant that is not an APM Entity, a scoring weight different from the weights described at § 414.1380(c)(1) will be assigned to a performance category, and its weight as described at § 414.1380(c)(1) will be redistributed to another performance category or categories, in accordance with § 414.1380(c)(2)(iii). We also propose at § 414.1365(e)(2)(iii) that for an MVP Participant that is an APM Entity, the performance category weights will be redistributed in accordance with § 414.1317(b) (see section IV.A.3.d.(5)(c) of this proposed rule for further information on proposed additions to the regulation text at § 414.1317(b)(2)).

We request public comments on these proposals.

(D) Complex Patient Bonus

We refer the reader to § 414.1380(c)(3) and section IV.A.3.e.(2)(a) of this proposed rule for our previously established and proposed policies on applying a complex patient bonus. We propose at § 414.1365(e)(4) to add a complex patient bonus to the final score for an MVP Participant in accordance with § 414.1380(c)(3).

We request public comments on these proposals.

(E) Scoring Example

Table 38 includes an example of calculation of the final score for MVPs. The example continues the example #1 from the quality scoring example in Table 37.

We note that the small practice bonus may constitute a larger proportion of the quality performance category score as compared with MIPS eligible clinicians reporting under traditional MIPS with a quality performance category denominator of 60 points, where the small practice bonus would add 10 percent to the quality performance category score. In cases where the quality performance category denominator is 50 points, as a result of 4 quality measures and one population health measure, a small practice bonus of 6 points would add 12 percent to the quality performance category score. We note that within traditional MIPS the quality performance category denominator can sometimes be less than 60 points (in cases where there are not 6 quality measures are relevant to the MIPS clinician, for example), and therefore, the small practice bonus is sometimes greater than 10 percent. We believe this variability is appropriate and believe that modifying the value of the small practice bonus for MVPs would cause unnecessary confusion.

<td>Group receives a score of 80%, or 24/30 points in the final score (see Table 37 for quality category scoring). This includes 4 required measures and population health measures. Subgroup score is unique to subgroup</td>
<td>Group attests to 2 medium weighted activities, receives 40 performance category points and 15 points toward the final score Subgroup score is unique to subgroup</td>
<td>Group meets case minimum for 1 of 2 cost measures included in the MVP. Score 22 of 30 points in the final score Subgroup score is unique to subgroup</td>
</tr>
</tbody>
</table>

**Foundational Layer (MVP agnostic)**

**Population Health Measures**

Group selects population health measure A, case minimum is met and measure is included in the quality category score. Subgroup score is unique to subgroup

**Promoting Interoperability (PI) Performance Category**

Group scores 20/25 points on Promoting Interoperability performance category in the final score Subgroup submits and is scored on the affiliated group’s Promoting Interoperability performance category data

**Final Score:**

\[
\text{Quality Performance Category Score (24 points) + Improvement Activities Performance Category Score (15 points) + Cost Performance Category Score (22 points) + Promoting Interoperability Performance Category Score (20 points) + Complex Patient Bonus (4 points) = Final Score 85 points}
\]
(d) Enhanced Performance Feedback in MVPs

(i) Background

In the CY 2018 Quality Payment Program final rule (82 FR 53799 through 53801), we finalized that under section 1848(q)(12)(A)(i) of the Act, on an annual basis, we will provide confidential feedback to MIPS eligible clinicians and groups on their performance. Currently, in traditional MIPS, clinicians are not required to submit data throughout the performance period. Instead, data is submitted through the submission period that follows the performance period, as described at § 414.1325(e). In addition, current performance feedback includes measure-level performance data and scores, activity-level scores, and category comparison.

In the CY 2020 PFS final rule, we indicated a commitment to the transformation of MIPS to allow for streamlined, cohesive reporting through MVPs that would result in enhanced and timely feedback (84 FR 62945). Through previous rulemaking cycles, we have heard from stakeholders that clinicians are interested in receiving feedback reports from CMS throughout the year rather than annually to allow clinicians to review and make improvements where appropriate. Other stakeholders have expressed interest in receiving feedback which includes comparative data to other practices of similar size, location, and specialty. Stakeholders have indicated this is also key to put performance in perspective, particularly if performance evaluation and payment adjustments are contingent on the performance of other clinicians (84 FR 63057 through 63058).

(ii) Proposed Enhanced Performance Feedback in MVPs

A goal of enhanced performance feedback would be to compare similar clinicians to one another. For example, we could compare clinicians within a group or subgroup that practice in similar ways. We considered two options for providing enhanced performance feedback. The first option is to provide comparative performance feedback, comparing the performance of like clinicians who report on the same MVP, which provides more granular comparison than the current performance feedback under traditional MIPS. This method does not require clinicians to submit data earlier than they currently do. In addition, we anticipate that we could provide comparative performance feedback at the time of annual performance feedback. The second option is to provide performance feedback during the performance period. We acknowledge stakeholders would like to receive more timely and actionable feedback during the performance period. However, there are complexities that need mitigation to pursue this option. These complexities include requiring clinicians to submit data earlier than they currently do. In addition, we propose providing enhanced performance feedback during the performance period, and requiring a significant investment of resources, including both time and money for CMS, third party intermediaries, and clinicians.

Therefore, beginning with the CY 2023 performance period, we propose the first option described—to include comparative performance feedback within the annual performance feedback we provide for MVP Participants, comparing the performance of similar clinicians who report on the same MVP. The comparative feedback would only be available to those who report on MVPs, and would be incorporated into the annual performance feedback that we currently provide in traditional MIPS.

We request public comments on this proposal.

(iii) Request for Information for Future Consideration

As described in the CY 2020 PFS proposed rule (84 FR 40733 through 40734), stakeholders have requested that they be provided with actionable feedback. To gain a better understanding, we request comments from stakeholders to elaborate on what they consider to be “actionable”. Would this include CMS identifying in the annual performance feedback areas of improvement based on how a clinician scores on a measure? Is there an unintended burden to stakeholders such as third party intermediaries and EHR vendors associated with receiving “actionable” feedback? For example, this could include financial burden from system changes or operational burden on changes to workflows.

We request public comments on the above.

b. APM Performance Pathway

(1) Overview

In the CY 2021 PFS final rule (85 FR 84859), we finalized the APM Performance Pathway (APP), which was designed to provide a predictable and consistent MIPS reporting option to reduce reporting burden and encourage continued APM participation. The APP is available for reporting by any submitter type, with the exception of Virtual Groups.

(2) MIPS Performance Category Scoring

(a) Quality Performance Category

In the CY 2021 PFS final rule, we finalized our proposal to use the measures listed in Table 39 for purposes of quality performance category scoring for the APP.
In the CY 2021 PFS final rule, we finalized the inclusion of the CMS Web Interface as an option for Shared Savings Program ACOs to report quality for the 2021 performance period only, with such quality reporting option no longer available beginning with the CY 2022 performance period. However, since the CY 2021 PFS final rule, we have received stakeholder feedback that the transition away from reporting the CMS Web Interface measures to the reporting of eCQMs/MIPS CQMs is more technologically difficult for some ACOs than originally anticipated, particularly under the extraordinary circumstances of the PHE for COVID–19. In light of this feedback, we are proposing to extend the CMS Web Interface as a means of reporting quality under the APP for Shared Savings Program ACOs for performance years 2022 and 2023.

Under this proposal, for performance year 2022, Web Interface reporting would work in the same manner as for performance year 2021, where ACOs would have the option of reporting either the CMS Web Interface, the APP eCQM/MIPS CQM measure set, or both.

In addition, we are proposing that for the 2023 performance year, we would only score Web Interface submissions for ACOs that have also submitted at least one eCQM/MIPS CQM measure from the APP measure set. While we understand that there may be barriers to ACOs transitioning away from the CMS Web Interface along the timeline.
originally contemplated, we believe it is important to continue to encourage and incent that transition. By extending the CMS Web Interface for the 2022 and 2023 performance years, as proposed, we would give ACOs additional time to familiarize themselves with the eCQM/MIPS CQM measures and the data aggregation and submission processes. However, we believe that by also proposing to limit the continued use of the CMS Web Interface in the 2023 performance year only to those ACOs that also attempt an eCQM/MIPS CQM submission, we would continue to move these ACOs and their ACO participants towards CMS’ goal of more complete and uniform reporting requirements for all MIPS participants.

We note that for both performance year 2022 and performance year 2023, ACOs would continue to have the opportunity to report on both the eCQMs/MIPS CQMs and the CMS Web Interface measures, and to have their MIPS quality performance category score based on the higher submission. We believe these proposed policies will help to encourage ACOs to move towards eCQM/MIPS CQM reporting in a low-risk environment where they will have the opportunity to continue to rely on measures reported through the CMS Web Interface for purposes of quality performance scoring as they become familiar with the eCQM/MIPS CQM submission and scoring process.

We seek comment on these proposals. For the CY 2021 MIPS performance period, we limited the use of the Risk-standardized, All-cause Unplanned Admissions for Multiple Chronic Conditions for ACOs (MCC for ACOs) measure to ACOs because, at that time, we were still investigating the question of whether it would be appropriate to include the Risk-standardized, All-cause Unplanned Admissions of Multiple Chronic Conditions for MIPS (MCC for MIPS) measure in the generally applicable MIPS quality measure set. However, we are proposing to add the MCC for MIPS measure into the MIPS quality measure set beginning with the CY 2022 MIPS performance period, as discussed in Appendix 1 of this proposed rule.

We are also proposing to replace the MCC for ACOs measure with the MCC for MIPS measure within the APP beginning with the 2022 MIPS performance period. This change would continue our transition towards alignment of quality measure data reported by MIPS eligible clinicians who are not participants in APMs and those who are, as discussed in the CY 2021 PFS final rule (85 FR 84859). We believe the MCC for MIPS measure is a valuable tool in assessing quality performance, with no additional reporting burden, and is therefore an asset to the APP measure set as well. By replacing the MCC for ACOs measure with the MCC for MIPS measure, we would have the opportunity to capture performance on this measure for additional MIPS eligible clinicians who are not participants in ACO-based APMs.

We also believe it is important to remove the MCC for ACOs measure from the APP in order to reduce the potential for confusion around performance scores and feedback for MIPS eligible clinicians who might otherwise have been scored on both measures with differing results.

We seek comment on our proposal to include the measures listed in Table 40 in the quality measure set for the APP for the 2022 MIPS performance period.

---

*ACOs will have the option to report via Web Interface for the 2022 & 2023 MIPS performance periods only.

---

\(^{202}\) We note that Statin Therapy for the Prevention and Treatment of Cardiovascular Disease (Quality ID# 438); Depression Remission at Twelve Months (Quality ID# 370), and Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention (Quality ID# 236) do not have benchmarks and are therefore not scored for FY 2022; they are, however, required to be reported in order to complete the Web Interface dataset.

Quality Payment Program final rule (82 FR 53626 through 53641) for our previously established policies regarding the quality performance category.

In this proposed rule, we propose to:

- Maintain the data completeness criteria threshold of at least 70 percent for 2021 and 2022 MIPS performance periods (2023 and 2024 MIPS payment years), and increase the data completeness criteria threshold to at least 80 percent for the 2023 MIPS performance period (2025 MIPS payment year).
- Extend the availability of the CMS Web Interface as a collection and submission type for the 2022 MIPS performance period.
- Make changes to the MIPS quality measure set as described in Appendix 1 of this proposed rule, including addition of new measures, updates to specialty sets, removal of existing measures, and substantive changes to existing measures.
- Establish criteria for determining whether a measure change is considered substantive starting with 2022 MIPS performance period.
• Beginning with the 2021 MIPS performance period CAHPS for MIPS survey, Medicare Shared Savings Program (Shared Savings Program) Accountable Care Organizations (ACOs) are required to administer the CAHPS for MIPS Survey and report via the Alternative Payment Model (APM) Performance Pathway (APP). We are proposing refinements to our policies for administration of the CAHPS for MIPS survey to align with certain policies that previously applied to the CAHPS for ACOs survey.

(b) Data Submission Criteria

(i) Submission Criteria for Quality Measures Excluding the CMS Web Interface and CAHPS for MIPS

In the CY 2017 QPP final rule, we established the submission criteria for quality measures (excluding the CMS Web Interface measures and the CAHPS for MIPS survey measure) at § 414.1335, which requires a MIPS eligible clinician, group, or virtual group that is reporting on Qualified Clinical Data Registry (QCDR) measures, MIPS clinical quality measures (MIPS CQMs), electronic CQMs (eCQMs), or Medicare Part B claims measures to submit data on at least 6 measures, including at least 1 outcome measure (81 FR 77110 through 77114). If an applicable outcome measure is not available, then a MIPS individual eligible clinician, group, or virtual group would report on 1 other high priority measure. If there are fewer than 6 measures that apply to a MIPS eligible clinician, group, or virtual group, then reporting on each applicable measure is required. For MIPS eligible clinicians, groups, and virtual groups that report on a specialty or subspecialty measure set (as designated in the MIPS final list of quality measures established by CMS through rulemaking), they are required to submit data on at least 6 measures within the set, including at least 1 outcome measure. If an applicable outcome measure is not available, then a MIPS individual eligible clinician, group, or virtual group would report on 1 other high priority measure. If a specialty or subspecialty measure set contains fewer than 6 measures or if fewer than 6 measures within the measure set apply to a MIPS eligible clinician, group, or virtual group, then reporting on each applicable measure is required. In addition to the assessment of performance based on submitted data for at least 6 measures (all measures if there are fewer than 6 measures that are applicable), performance is also assessed on administrative claims measures. CMS automatically evaluates and calculates administrative claims measures for individual MIPS eligible clinicians, groups, and virtual groups if the case minimum requirement of the measure is met.

With each year of program implementation, we continue to assess means for creating a more cohesive and meaningful participation experience in MIPS that improves value and reduces clinician burden. As the program evolves, we want to enable a seamless transition from participation in traditional MIPS to the preliminary onset of voluntary participation in MVPs to the required participation in MVPs. Transitioning from traditional MIPS to MVPs improves the participation experience of MIPS by having the program be more relevant to a clinician’s scope of practice and meaningful to patient care. One element that we assessed in preparation for the transition from traditional MIPS to MVPs regards the utilization of outcomes-based administrative claims measures to reduce the reporting burden under MIPS, particularly the allowance of outcome-based administrative claims measures to be applied as the required outcome measure requirement under traditional MIPS (in general, 6 measures, including 1 outcome measure and MVPs (in general, 4 measures as outlined in section IV.A.3.b.(4)(d)(ii) of this proposed rule).

Since the inception of MIPS under the Quality Payment Program starting with the 2017 MIPS performance period, we established administrative claims measures that are automatically evaluated and calculated for individual MIPS eligible clinicians, groups, and virtual groups if the case minimum requirement of the measure is met (81 FR 77130 through 77136). With CMS conducting the assessment and calculations of administrative claims measures, the reporting burden for individual MIPS eligible clinicians, groups, and virtual groups is reduced (81 FR 77134). A subset of the administrative claims measures are outcome-based measures (and in some cases, are also population health measures), which focus on the improvement of patient health outcomes. As more outcome-based administrative claims measures are implemented in MIPS, we would like to further reduce the reporting burden by allowing such measures (not applicable to administrative claims measures that are considered population health measures) to fulfill the outcome measure requirement, when applicable. For the 2023 MIPS performance period, we are proposing the following outcome-based administrative claims measure under MIPS: Risk-Standardized Acute Unplanned Cardiovascular-Related Admission Rates for Patients with Heart Failure for the Merit-based Incentive Payment System (see Table Group A of Appendix 1 of this proposed rule).

In section IV.A.3.b.(4)(d)(ii) of this proposed rule, we are proposing at § 414.1365(c)(1) to allow an administrative claims measure that is outcome-based (not applicable to administrative claims measures that are population health measures), if applicable, to be selected at the time of MVP registration as a measure to meet the outcome measure requirement starting with the 2023 MIPS performance period. The outcomes-based administrative claims measure would be applicable and relevant to the specific MVP, and as a result, included as 1 of the measures available within an MVP. Once an outcomes-based administrative claims measure is selected during the MVP registration process, the measure would meet the outcome-based measure reporting requirement and count as 1 of the 4 minimum required measures if the MVP Participants meet the case minimum requirement for the administrative claims measure; otherwise, the administrative claims measure would receive a score of zero points and the MVP Participants would not meet the minimum reporting requirement of 4 measures. However, if the MVP Participants select an outcomes-based administrative claims measure available within the MVP and report on 4 measures, the MVP Participants would meet the minimum reporting requirement of 4 measures if it was determined that the case minimum requirement for the outcomes-based administrative claims measure was not met. We believe that such approach reduces reporting burden and allows for a more cohesive and meaningful participation experience that focuses on measures that are more relevant to a clinician’s scope of practice while preventing gaming/misuse of selecting an outcomes-based administrative claims measures to be assessed and scored on for purposes of MVP participation.

As we analyzed the allowance and utilization of outcome-based administrative claims measures (not applicable to administrative claims measures that are population health measures) to be applied to fulfill the outcome measure requirement within traditional MIPS, it became apparent that the implementation of such a policy would pose challenges and obstacles. We assessed 3 options. For the first
option, we assessed the potential implementation of outcomes-based administrative claims measures to fulfill the outcome requirement utilizing a registration system, similar to the proposal for MVPs. For traditional MIPS, a registration process would require the individual MIPS eligible clinicians, groups, and virtual groups to select an outcome-based administrative claims measure to be calculated and scored to fulfill the outcome measure requirement as part of the 6 minimum required measures. Prior to an individual MIPS eligible clinician, group, or virtual group making such an election via a registration process, it would be imperative for a registration process to only permit an individual MIPS eligible clinician, group, or virtual group to register if eligible (meets case minimum requirement) for an outcome-based administrative claims measure (not applicable to administrative claims measures that are population health measures) to be calculated and scored. Such registration process would need to be able to identify which individual MIPS eligible clinicians, groups, and virtual groups would be eligible for an outcome-based administrative claims measure to fulfill the outcome measure requirement as part of the required minimum of 6 measures, which would prevent the potential for gaming and enable individual MIPS eligible clinicians, groups, and virtual groups to know in advance of the submission period if they would need to report on a minimum of 5 measures instead of a minimum of 6 measures; we believe that this approach would reduce burden.

In addition, for cases in which the case minimum of the outcomes-based administrative claims measure would not be met and therefore, could not be calculated, we have considered whether the denominator should be reduced and performance assessment and scoring would be based on 5 measures instead of 6 measures (or less measures if, initially, there were fewer than 6 applicable measures or fewer than 6 measures available within a measure set), which would reduce the reporting burden under traditional MIPS. However, we recognize that if our policy—an election process, via a registration system, to have an outcome-based administrative claims measure as 1 of the required minimum of 6 measures—includes an element for a denominator reduction, we believe that our policy would pose the potential risk for gaming. We would want to prevent the potential for gaming by knowingly selecting an outcome-based administrative claims measures during registration that is not applicable to a practice or specialty, which would result in not meeting the case minimum requirement to be calculated and scored on such measure, and thus, having performance assessed on 5 measures instead of 6 measures (or less measures if, initially, there were fewer than 6 applicable measures or fewer than 6 measures available within a measure set).

As we assessed such approach, we believed that there would not be sufficient parameters/safeguards to ensure that only individual MIPS eligible clinicians, groups, and virtual groups eligible for an outcome-based administrative claims measure calculation would be able to register. We would seek to prevent the potential for gaming by minimizing the number of individual MIPS eligible clinicians, groups, and virtual groups not eligible for an outcome-based administrative claims measure calculation to make such election. However, as we conducted our assessment, we determined that it would not be technically possible to develop a registration system based on applicable outcomes based administrative claims measure data for the applicable performance period to identify if a MIPS eligible clinician, group, or virtual group is eligible for an outcome-based administrative claims measure calculation given that such data would not be readily available until several months after the end of an applicable MIPS performance period. Without having an ability to identify MIPS eligible clinicians, groups, and virtual groups eligible for an outcome-based administrative claims measure calculation for registration purposes based on data from the applicable performance period in order to prevent gaming, we believed that the implementation of a policy to allow for an outcome-based administrative claims measure to be applied as 1 of the minimum required measures, which would prevent us from meeting the minimum of 6 required measures, would pose risk to the integrity of the program. For this second option, we assessed the potential for automatically calculating an outcome-based administrative claims measure, if applicable, for individual MIPS eligible clinicians, groups, and virtual groups participating in traditional MIPS. For the implementation of such a policy, we would use the status quo of requiring the submission of the minimum of 6 measures (or less measures if fewer than 6 measures were applicable or fewer than 6 measures available within a measure set) (81 FR 77100 through 77114) in addition to automatically calculating an applicable outcome-based administrative claims measure. We would calculate a score for a total of 7 measures (6 required measures and outcome-based administrative claims measure), but performance for the quality performance category would be based on 6 measures with the highest score, which would include an outcome-based measure.

For option 2, we would not be reducing the reporting burden given that the reporting requirements would remain as status quo, but instead of us applying all administrative claims to all MIPS eligible clinicians as an addition to their quality performance category denominator, we would be replacing the outcome measure requirement, with an available outcomes-based administrative claims measure, if it can be applied. Under this approach, we would not be able to objectively decipher the intent of a MIPS eligible clinician, group, or virtual group (without a formal process to signify an election) as to whether or not they would want to have the outcome-based administrative claims measure automatically calculated and applied as 1 of the 6 minimum required measures. To not objectively know the intention of a MIPS eligible clinician, group, or virtual group, the following scenario could arise under option 2. For example, a MIPS eligible clinician, group, or virtual group submitted 5 measures, it is unclear if it was intentional to only submit 5 measures with the expectation that the MIPS eligible clinician, group, or virtual group sought to be exempted from the outcomes-based administrative claims measure or if the submission of 5 measures was a result of a MIPS eligible clinician, group, or virtual group of not meeting the minimum of 6 required measures and thus, receive zero points for 1 of the 6 required measures.

After assessing the first 2 aforementioned options, we assessed a third option that would address concerns regarding the first 2 options. For option 3, we assessed the utilization of historical data (for example, previous MIPS performance period data) given that applicable performance period data would not be readily available to be included as part of a registration process. The use of historical data for an outcome-based administrative claims measure as the means for eligibility determinations within a registration system would only permit individual MIPS eligible clinicians, groups, and virtual groups identified as eligible for the calculation of an outcome-based administrative claims measure. This option would allow an individual MIPS eligible clinician, group, or virtual
group to select the application of an outcome-based administrative claims measure during a registration process, which would allow CMS to identify the individual MIPS eligible clinicians, groups, and virtual groups electing to have such measure applied as 1 of the minimum-required 6 measures that meets the outcome-based measure requirement. We believe that historical data would be able to adequately and reliably identify individual MIPS eligible clinicians, groups, and virtual groups eligible for an outcome-based administrative claims measure calculation, which we anticipate could be available during the applicable MIPS performance period, as technically feasible. We believe that by providing this historical information to individual MIPS eligible clinicians, groups, and virtual groups would provide pertinent information to make a determine if they would be selecting an outcome-based administrative claims measure during a registration process to be applied as 1 of the minimum-required 6 measures. We believe this approach could minimize gaming and individual MIPS eligible clinicians, groups, and virtual groups would know that they would need to select a minimum of 5 (instead of 6) other measures to meet the reporting requirements for the quality performance category. The potential drawback to this option is it would only be available for individual MIPS eligible clinicians, groups, and virtual groups who participated in MIPS for a prior performance period, so not all clinicians would benefit under this option. However, if technically feasible, the utilization of historical data from the outcome-based administrative claims measure would be able to reduce the reporting burden and would align with the similar proposed process for MVPs. Although we are not making a proposal for the implementation of such policy, we would like to obtain feedback from stakeholders regarding how the automatic calculation of an outcome-based administrative claims measure and have it applied as 1 of the minimum 6 required measures, particularly the outcome-based measure requirement, and if such option is a policy that would be advantage for them as they participate in traditional MIPS. We actively seek the engagement of our stakeholders as we assess means for reducing the reporting burden and enhance the experience of participating in traditional MIPS.

Thus, we are seeking public comment on the means for being able to implement such a policy. Are there other options that we should consider in determining how to implement such a policy? Are there other ways we would be able to identify which individual MIPS eligible clinicians, groups, and virtual groups are eligible for an outcomes-based administrative measure calculation to ensure that only those that are eligible are able make such an election? Should we consider the use of historical data that would allow the predetermination and identification of MIPS eligible clinicians, groups, and virtual groups eligible for an outcome-based administrative claims measure? How would we be able to determine if a MIPS eligible clinician, group, or virtual group would like to have an automatic calculation of an outcome-based administrative claims measure conducted on their behalf outside of a registration process? Are there other challenges that we should be aware of as we continue to assess a means for developing and implementing such a policy?

(c) Data Completeness Criteria

(i) 2021 MIPS Performance Period (2023 MIPS Payment Year)

In the CY 2020 PFS final rule, we established the data completeness criteria at § 414.1340(a)(3) and § 414.1340(b)(3) for the 2020 MIPS performance period (2022 MIPS payment year), which determined that MIPS eligible clinicians and groups submitting quality measures data on QCDR measures, MIPS CQMs, eCQMs, or Medicare Part B claims measures must submit data on at least a 70 percent of the MIPS eligible clinician or group’s patients that meet the measure’s denominator criteria, regardless of payer. In regard to the data completeness criteria established for Medicare Part B claims measures for the 2020 MIPS performance period (2022 MIPS payment year), we found that the policy established at § 414.1340(b)(3) erroneously reflected the data completeness criteria only applicable to QCDR measures, MIPS CQMs, and eCQMs, which requires data submission to pertain to patients that meet the measure’s denominator criteria, regardless of payer (all-payer). It is not possible for Medicare Part B claims data to include all-payer patients; the submission of data for Medicare Part B claims measures can only account for Medicare Part B patients. Since the implementation of MIPS, the data completeness criteria for Medicare Part B claims measures has pertained to the applicable Medicare Part B patients seen during an applicable MIPS performance period. The issue with the policy established at § 414.1340(b)(3) in the CY 2020 PFS final rule for Medicare Part B claims measures only pertains to the type of patient population for data submission purposes and not the threshold established for data completeness of at least 70 percent. Thus, we are proposing to modify the data completeness threshold criteria established at § 414.1340(b)(3) for the 2020 MIPS performance period (2022 MIPS payment year) retroactively, effective January 1, 2020, in accordance with section 1871(e)(1)(A)(ii) of the Act. We believe that failure to apply the change retroactively would be contrary to the public interest because it would require individual eligible clinicians, groups, and virtual groups to meet data completeness criteria (the submission of patient data for all-payers) for Medicare Part B claims measures that is not possible. We believe that it is imperative for individual eligible clinicians, groups, and virtual groups to be certain as to the true criteria used to measure data completeness for Medicare Part B claims measures. For the 2021 MIPS performance period (2023 MIPS payment year), we are proposing to modify the data completeness criteria established at § 414.1340(b)(3) to be as follows: MIPS eligible clinicians and groups submitting quality measures data on Medicare Part B claims measures must submit data on at least 70 percent of the applicable Medicare Part B patients seen during the performance period to which the measure applies for MIPS payment year 2022.

In the CY 2021 PFS proposed and final rules, we inadvertently omitted a proposal that would have otherwise extended our existing policy to determine the data completeness criteria for the 2021 MIPS performance period (2023 MIPS payment year); we only included a reference to the data completeness criteria of at least 70 percent for the 2021 MIPS performance period (2023 MIPS payment year) as it relates to the scoring policies for class 1 measures as outlined in Table 49 of the CY 2021 PFS proposed and final rules (85 FR 50309 and 85 FR 84906). Thus, we are proposing to establish the data completeness criteria for the 2021 MIPS performance period (2023 MIPS payment year) retroactively, effective January 1, 2021, in accordance with section 1871(e)(1)(A)(ii) of the Act. We believe that failure to apply the change retroactively would be contrary to the public interest because it could be construed as permitting the submission of incomplete, inaccurate, or otherwise compromised data, which would have a detrimental effect on the performance data used for calculating MIPS payment.
adjustments and public reporting. For the 2021 MIPS performance period (2023 MIPS payment year), we are proposing: At § 414.1340(a)(3) to maintain the data completeness criteria threshold of at least 70 percent, in which MIPS eligible clinicians and groups submitting quality measures data on QCDR measures, MIPS CQMs, or eCQMs would need to submit data on at least 70 percent of the applicable Medicare Part B patients seen during the 2021 MIPS performance period to which the measure applies for MIPS payment year 2024.

We believe that it is imperative to establish the data completeness criteria for the 2023 MIPS payment year in this proposed rule and any failure to apply the updated data completeness criteria retroactively would be contrary to the public interest as such omission presents ambiguity and a potential notion for an array of interpretations. We believe that it is in the public interest to retroactively apply the updated data completeness threshold as it would ensure that all MIPS eligible clinicians participating in MIPS for the 2021 MIPS performance period (2023 MIPS payment year), whether at the individual, group, or virtual group levels, would be aware that there is a definitive data completeness criteria for the 2021 MIPS performance period and any data submitted for the quality performance category would need to meet the data completeness criteria. We believe that such approach would: Establish the data completeness criteria prior to the timeframe in which data submission would occur (first 3 months of CY 2022), which would enable MIPS eligible clinicians participating in MIPS at the individual, group, or virtual group levels to prepare their data submission to meet the updated data completeness criteria; and ensure that all data submitted for the quality performance category would meet the same criteria (that is, specific data completeness threshold of at least 70 percent of a MIPS eligible clinician or group’s patient population that meets the measure’s denominator criteria for QCDR measures, MIPS CQMs, and eCQMs; or specific data completeness threshold of at least 70 percent of the applicable Medicare Part B patients seen during the 2021 MIPS performance period for Medicare Part B claims measures) versus an unspecified, interpretive data completeness threshold that could result in various threshold ranges and inconsistent reported patient populations such as portion of submitted data be a representative of all patient (all-payer) data while the remaining portion of submitted data be a representative of only Medicare patient data, which would provide data integrity, usability, and reliability to assess the performance of MIPS eligible clinicians at the individual, group, or virtual group level in a manner that is consistent and enable performance data to be comparable to the applicable historical benchmarks that have been established for the various measures.

(ii) 2022 MIPS Performance Period (2024 MIPS Payment Year)

In the CY 2017 and CY 2018 Quality Payment Program final rules, we note that we would increase the data completeness criteria threshold over time (81 FR 77121 and 82 FR 53632). Starting with the 2020 MIPS performance period (2021 MIPS payment year), we increased the data completeness criteria from at least 60 percent to at least 70 percent and as noted above, we are proposing to maintain the data completeness criteria threshold of at least 70 percent for the 2021 MIPS performance period (2022 MIPS payment year). We continue to believe that it is important to incrementally increase the data completeness criteria as MIPS eligible clinicians, groups, and virtual groups gain experience with MIPS. However, with the COVID–19 PHE that started during the 2020 MIPS performance period (2021 MIPS payment year) and continued into the 2021 MIPS performance period (2023 MIPS payment year), we believe that it would be appropriate to continue to maintain the data completeness criteria of at least 70 percent for the 2022 MIPS performance period (2024 MIPS payment year) as healthcare systems across the country have been overwhelmed and strained by the COVID–19 PHE.

In order to not place further undue burden as MIPS eligible clinicians, groups, and virtual groups navigate through the COVID–19 pandemic, we are proposing:

- At § 414.1340(a)(3) to maintain the data completeness criteria threshold of at least 70 percent for the applicable Medicare Part B patients seen during the 2021 MIPS performance period for Medicare Part B claims measures.

We believe that the incorporation of higher data completeness thresholds in future years would ensure more accurate assessment of a MIPS eligible clinician’s performance on quality measures and avoid any selection bias. We have strongly encouraged all MIPS eligible clinicians to perform the quality actions associated with the quality measures on their patients. The data submitted for each measure is expected to be representative of the individual MIPS eligible clinician, group, or virtual group’s overall performance for that measure. The data completeness threshold of less than 100 percent is intended to reduce burden and accommodate operational issues that may arise during data collection during the initial years of the program.

Since the inception of the program, we have provided notice to MIPS eligible clinicians, groups, and virtual groups in order for them to take the necessary steps to prepare for higher data completeness thresholds in future years. In a similar manner, we are providing advance notice that we intend to increase the data completeness criteria threshold for the 2023 MIPS performance period (2025 MIPS payment year). We are proposing: At § 414.1340(a)(4) to increase the data completeness criteria threshold from at least 70 percent to at least 80 percent, in which MIPS eligible clinicians and groups submitting quality measures data on QCDR measures, MIPS CQMs, eCQMs, or Medicare Part B claims measures would need to submit data on at least a 80 percent of the applicable Medicare Part B patients seen during the 2022 MIPS performance period (2023 MIPS payment year); and

- At § 414.1340(b)(3) to maintain the data completeness criteria threshold of at least 70 percent, in which MIPS eligible clinicians and groups submitting quality measures data on Medicare Part B claims measures must submit data on at least 70 percent of the applicable Medicare Part B patients seen during the 2022 MIPS performance period to which the measure applies for MIPS payment year 2024.

(iii) 2023 MIPS Performance Period (2025 MIPS Payment Year)

We believe that the incorporation of higher data completeness thresholds in future years would ensure more accurate assessment of a MIPS eligible clinician’s performance on quality measures and avoid any selection bias. We have strongly encouraged all MIPS eligible clinicians to perform the quality actions associated with the quality measures on their patients. The data submitted for each measure is expected to be representative of the individual MIPS eligible clinician, group, or virtual group’s overall performance for that measure. The data completeness threshold of less than 100 percent is intended to reduce burden and accommodate operational issues that may arise during data collection during the initial years of the program.

Since the inception of the program, we have provided notice to MIPS eligible clinicians, groups, and virtual groups in order for them to take the necessary steps to prepare for higher data completeness thresholds in future years. In a similar manner, we are providing advance notice that we intend to increase the data completeness criteria threshold for the 2023 MIPS performance period (2025 MIPS payment year). We are proposing: At § 414.1340(a)(4) to increase the data completeness criteria threshold from at least 70 percent to at least 80 percent, in which MIPS eligible clinicians and groups submitting quality measures data on QCDR measures, MIPS CQMs, eCQMs, or Medicare Part B claims measures would need to submit data on at least a 80 percent of the applicable Medicare Part B patients seen during the 2022 MIPS performance period (2023 MIPS payment year); and

- At § 414.1340(b)(3) to maintain the data completeness criteria threshold of at least 70 percent, in which MIPS eligible clinicians and groups submitting quality measures data on Medicare Part B claims measures must submit data on at least 70 percent of the applicable Medicare Part B patients seen during the 2022 MIPS performance period to which the measure applies for MIPS payment year 2024.

We believe that the incorporation of higher data completeness thresholds in future years would ensure more accurate assessment of a MIPS eligible clinician’s performance on quality measures and avoid any selection bias. We have strongly encouraged all MIPS eligible clinicians to perform the quality actions associated with the quality measures on their patients. The data submitted for each measure is expected to be representative of the individual MIPS eligible clinician, group, or virtual group’s overall performance for that measure. The data completeness threshold of less than 100 percent is intended to reduce burden and accommodate operational issues that may arise during data collection during the initial years of the program.

Since the inception of the program, we have provided notice to MIPS eligible clinicians, groups, and virtual groups in order for them to take the necessary steps to prepare for higher data completeness thresholds in future years. In a similar manner, we are providing advance notice that we intend to increase the data completeness criteria threshold for the 2023 MIPS performance period (2025 MIPS payment year). We are proposing: At § 414.1340(a)(4) to increase the data completeness criteria threshold from at least 70 percent to at least 80 percent, in which MIPS eligible clinicians and groups submitting quality measures data on QCDR measures, MIPS CQMs, eCQMs, or Medicare Part B claims measures would need to submit data on at least a 80 percent of the applicable Medicare Part B patients seen during the 2022 MIPS performance period (2023 MIPS payment year); and
criteria threshold from at least 70 percent to at least 80 percent, in which MIPS eligible clinicians and groups submitting quality measures data on Medicare Part B claims measures must submit data on at least 80 percent of the applicable Medicare Part B patients seen during the 2023 MIPS performance period to which the measure applies for MIPS payment year 2025. We believe that MIPS eligible clinicians, groups, and virtual groups would be provided with adequate time to prepare for the data completeness criteria threshold to increase.

We seek public comment on our proposals to maintain the data completeness criteria threshold of at least 70 percent for the 2021 and 2022 MIPS performance periods (2021 and 2024 MIPS payment years), and increase the data completeness criteria threshold from at least 70 percent to at least 80 percent for the 2023 MIPS performance period (2025 MIPS payment year).

(d) Groups and Virtual Groups Reporting via the CMS Web Interface

At § 414.1335(a)(2), the CMS Web Interface measures is a collection type in which groups and virtual groups with 25 or more eligible clinicians are able to report data on a set of pre-determined quality measures. For the 2021 MIPS performance period, the total number of CMS Web Interface measures required to complete reporting on is 10 CMS Web Interface measures (83 FR 59713 through 79715 and 59756). In the CY 2021 PFS final rule, at § 414.1325(c)(1) et seq., the CMS Web Interface was sunset and removed as an available collection and submission type under MIPS starting with the 2022 MIPS performance period (85 FR 84870). In addition, starting with the 2022 MIPS performance period, the definition of the terms collection type and submission type would no longer include the CMS Web Interface measures as an available option. It was our belief that the sunset and removal of the CMS Web Interface as a collection and submission type starting with the 2022 MIPS performance period would reduce the potential burden experienced by groups and virtual groups during the COVID–19 PHE. Based on the public comments received during the notice-and-comment rulemaking process for the CY 2021 PFS proposed rule, we believed that the 1-year delay to sunset and remove the CMS Web Interface as a collection and submission type would provide stakeholders utilizing the CMS Web_interface sufficient time to prepare and transition to an alternative collection and/or submission type starting with the 2022 MIPS performance period.

However, following the close of the submission period for the 2020 MIPS performance period (March 31, 2021), stakeholders utilizing the CMS Web Interface contacted CMS to convey concerns regarding the technological challenges and resource limitations they face that would prevent them from being able to adequately transition to implementing and utilizing an alternative collection and/or submission type starting with the 2022 MIPS performance period. Also, they emphasized that some practices around the country continue to endure a fiscal impact resulting from the COVID–19 pandemic and would need additional time to prepare for a transition to an alternative collection and/or submission type. They indicated that if the availability of the CMS Web Interface was extended for an additional year (the 2022 MIPS performance period), they would have sufficient time to address technological challenges such as the implementation of processes to aggregate data within one EHR system or across multiple EHR systems to align with the reporting requirements of another collection type (that is, MIPS CQMs or eCQMs), build and integrate new health IT infrastructures and systems, implement workflows, and train staff on new health IT systems.

We recognize that an adequate and sufficient timeframe is a critical factor in the success of a group or virtual group transitioning to an alternative collection and/or submission type, particularly with such transition occurring amidst the mitigation of the COVID–19 pandemic. It seems that as CMS Web Interface users began the actualization of preparing and taking steps to transition to utilizing a different collection and/or submission type, the timeframe identified by most CMS Web Interface users (starting with the 2022 MIPS performance period) during the notice-and-comment rulemaking process for the CY 2021 PFS proposed rule, which is in keeping with our policy to sunset the CMS Web Interface starting with the 2022 MIPS performance period, would not have provided an adequate or sufficient timeframe for CMS Web Interface users to fully transition to an alternative collection and/or submission type. In considering the concerns expressed by CMS Web Interface users such as the technological challenges that they would need to overcome, their inability to update systems and workflows in time for the 2022 MIPS performance period, and the fiscal implications they endure from mitigating and responding the COVID–19 PHE, we believe it is appropriate to reduce the burden of groups and virtual groups at this juncture and postpone the sunset of the CMS Web Interface by extending the availability of the CMS Web Interface as a collection and submission type for the 2022 MIPS performance period. We recognize that groups and virtual groups are on a continuum with regard to technological readiness for transitioning to a different collection type, but we believe that the availability of the CMS Web Interface for the 2022 MIPS performance period would reduce burden by providing additional time, and enable more groups and virtual groups to be able to successfully transition to another collection type by the start of the 2023 MIPS performance period. Moreover, we want to ensure that groups utilizing the CMS Web Interface are prepared to participate in MIPS as it evolves from traditional MIPS to MVPs, in which such groups could begin voluntary participation in an MVP as the availability of MVPs become an option starting with the 2023 MIPS performance period.

We are proposing at § 414.1325(c)(1) et seq. to sunset the CMS Web Interface measures as a collection type/submission type starting with the 2023 performance period. Specifically, at § 414.1305, we are proposing to modify the definition of the terms collection type and submission type to remove the CMS Web Interface measures as an available option starting with the CY 2022 MIPS performance period/2024 MIPS payment year. We are proposing to modify the definition of “collection type” to mean a set of quality measures with comparable specifications and data completeness criteria, as applicable, including, but not limited to: Electronic clinical quality measures (eCQMs); MIPS clinical quality measures (MIPS CQMs); QCDR measures; Medicare Part B claims measures; for the CY 2017 through 2022 MIPS performance periods/2019 through 2024 MIPS payment years, CMS Web Interface measures; the CAHPS for MIPS Survey; and administrative claims measures. We are proposing to modify the definition of “submission type” to mean the mechanism by which the submitter type submits data to CMS, including, but not limited to: Direct; log in and upload; log in and attest; Medicare Part B claims; and for the CY 2017 through 2022 MIPS performance periods/2019 through 2024 MIPS payment years, the CMS Web Interface.

For the 2022 MIPS performance period, the total number of CMS Web Interface measures required to complete reporting on would be 10 CMS Web Interface measures.
Interface measures (83 FR 59713 through 79715 and 59756). In Table Group B of Appendix 1 of this proposed rule, we are proposing modifications to the CMS Web Interface measures and in Table Group D of Appendix 1 of this proposed rule, we are proposing substantive changes to the CMS Web Interface measures. We believe that it is necessary for the CMS Web Interface measures to be updated to reflect applicable substantive changes for the 2022 MIPS performance period given that the CMS Web Interface measures have remained the same for 3 consecutive (2019, 2020, and 2021) MIPS performance periods.

We solicit public comment on our proposals: To extend the availability of the CMS Web Interface as a submission and collection type for the 2022 MIPS performance period, which would sunset and remove the collection and submission type under MIPS starting with the 2023 performance period; and update the CMS Web Interface measures with substantive changes for the 2022 MIPS performance period as outlined in Table Group B of Appendix 1 of this proposed rule.

(e) Selection of MIPS Quality Measures

Previously finalized MIPS quality measures can be found in the CY 2021 PFS final rule (85 FR 85045 through 85377); CY 2020 PFS final rule (84 FR 63205 through 63513); CY 2019 PFS final rule (83 FR 60097 through 60365); CY 2018 Quality Payment Program final rule (82 FR 53966 through 54174); and in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77816). Proposed changes to the MIPS quality measure set as described in Appendix 1 of this proposed rule, include the following: Addition of new measures; updates to specialty sets; removal of existing measures, and substantive changes to existing measures. For the 2022 MIPS performance period, we are proposing a measure set of 195 MIPS quality measures.

The new MIPS quality measures proposed for inclusion in MIPS for the 2022 performance period and future years are found in Table Group A of Appendix 1 of this proposed rule. For the 2022 MIPS performance period, we are proposing 5 new MIPS quality measures, which includes 2 administrative claims measures. Also, in Table Group AA of Appendix 1, we outline 1 potential new MIPS quality measure, the COVID–19 Vaccination by Clinicians measure, which we intend to propose in a future rulemaking cycle.

We refer readers to section IV.A.3.d.(1)(f) of this proposed rule for our request for information pertaining to the COVID–19 Vaccination by Clinicians measure specifications.

In addition to the establishment of new individual MIPS quality measures, we also develop and maintain specialty measure sets to assist MIPS eligible clinicians with selecting quality measures that are most relevant to their scope of practice. Our proposals for modifications to existing specialty sets and new specialty sets are outlined in Table Group B of Appendix 1 of this proposed rule. Specialty sets may include: New measures, previously finalized measures with modifications, previously finalized measures with no modifications, the removal of certain previously finalized quality measures, or the addition of existing MIPS quality measures. Please note that the specialty and subspecialty sets are not inclusive of every specialty or subspecialty.

On January 7, 2021, we announced that we would be accepting recommendations for potential new specialty measure sets or revisions to existing specialty measure sets for year 6 of MIPS under the Quality Payment Program.203 These recommendations were based on the MIPS quality measures finalized in the CY 2020 PFS final rule, the 2020 Measures Under Consideration list, and provides recommendations to add or remove the current MIPS quality measures from existing specialty sets, or provides recommendations for the creation of new specialty sets. All specialty set recommendations submitted for consideration were addressed and vetted, and as a result, the recommendations that we agree with are being proposed in this proposed rule.

In addition to establishing new individual MIPS quality measures and modifying existing specialty sets and new specialty sets as outlined in Tables Group A and Group B of Appendix 1 of this proposed rule, we refer readers to Table Group C of Appendix 1 of this proposed rule for a list of quality measures and rationales for removal. For the 2022 MIPS performance period, we are proposing to remove 19 MIPS quality measures: 1 MIPS quality measure that is duplicative to another current MIPS quality measure; 9 MIPS quality measures that do not align with the Meaningful Measure Initiative; 5 MIPS quality measures that are no longer stewarded or maintained; and 4 MIPS quality measures that are under the topped out lifecycle. We have continuously communicated to stakeholders our desire to reduce the number of process measures within the MIPS quality measure set. We believe our proposal to remove the quality measures outlined in Table Group C will lead to a more parsimonious inventory of meaningful, robust measures in the program, and that our approach to remove measures should occur through an iterative process that will include an annual review of the quality measures to determine whether they meet our removal criteria.

Lastly, MIPS quality measures with proposed substantive changes can be found in Table Group D of Appendix 1 of this proposed rule. We are proposing substantive changes to 84 MIPS quality measures. On an annual basis, we review the established MIPS quality measure inventory to consider updates to the measures. Possible updates to measures may be minor or substantive. Section 1848(g)(2)(D)(i)(III)(cc) of the Act requires all substantive measure changes to be proposed and identified through notice-and-comment rulemaking. In the CY 2017 Quality Payment Program final rule (81 FR 77137), we determined that substantive changes to measures (that is, measure specifications, measure title, and domain modifications) would be identified during the rulemaking process while maintenance changes that do not substantively change the intent of the measure (that is, updated diagnosis and procedure codes, definitions, and changes to patient population exclusions) would not be included in the rulemaking process.

We are not proposing any changes to our current approach of identifying substantive measures changes during the rulemaking process. However, in order to more precisely distinguish between substantive measure changes and non-substantive measure changes, we are proposing to consider the following criteria for determining whether a measure change is substantive starting with 2022 MIPS performance period:

- Whether the change causes the measure to be more stringent;
- Whether the change modifies the collection and/or submission types applicable to the measure;
- Whether the change impacts the clinical action and/or outcome of the measure;
- Whether the change increases the burden of the measure;
- Whether the change modifies the premise and/or objective of the measure;

203 Listserv messaging was distributed through the Quality Payment Program Listserv on January 7, 2021, entitled: "CMS is Soliciting Stakeholder Recommendations for Potential Consideration of New Specialty Measure Sets and/or Revisions to the Existing Specialty Measure Sets for the 2022 Program Year of MIPS."
• Whether the change modifies the scope of the measure (such as patient population eligible for the measure or measurement period); and
• Other relevant criteria as may be identified by CMS on a case-by-case basis.

We note that any substantive change made to a measure would be proposed and identified through notice-and-comment rulemaking. For a substantive change to a measure, we only intend to propose and identify the substantive change as applicable to the appropriate elements (that is, only include substantive changes if it is applicable to the measure specifications, collection type(s), measure description, measure title, etc.) of the measure through notice-and-comment rulemaking. For example, if there is a substantive change to a measure in the measure specifications that changes the premise/overarching objective (that is, a screening measure that is changed to include treatment and follow-up) and/or clinical action of the measure, such substantive change would be proposed and identified through notice-and-comment rulemaking. We do not believe that it is necessary to propose or identify through notice-and-comment rulemaking changes to a measure that do not meet any of the above substantive change criteria for measures (for example, a modification to the title or domain that do not change or impact any element of the measure). We generally consider such changes to be non-substantive and would be published in subregulatory guidance (that is, release notes that are not applicable to a measure). We believe that it is important to provide a clear delineation of substantive changes to be included in a rulemaking process versus our previous approach, which generally included any changes made to measure specifications, measure titles, and domain modifications (81 FR 77137). We found that many changes made to measures based on our previous approach were not substantive in nature and should not be classified as substantive changes. Thus, we believe that establishing the substantive change criteria for measures provides further clarity as to what we consider a substantive change, particularly as it relates to how a change affects and/or impacts a measure. We note that measures identified as having a substantive change would generally have an update to their applicable benchmark. For measures that meet the data completeness criteria, but do not a benchmark or meet case minimum (class 2 measures), they would be scored in accordance to our proposed scoring policy as outlined in section IV.A.3.e.(1)(c)(iii)(B) of this proposed rule.

In addition, we intend to align the utilization of terminology across CMS programs when appropriate and applicable for consistency purposes. Since the implementation of MIPS, we have referenced the term patient reported outcome as a type of measure, which is similar, but not exact to a measure type categorization reference in the CMS Blueprint. In order to align the categorization reference of such measure type under MIPS with the CMS Blueprint terminology, we are modifying how the term is referenced as a measure type under MIPS and will reference such measure type as patient-reported outcome-based performance measure (PRO–PM) starting with the 2022 MIPS performance period. We believe that such modification does not have any substantive implications, but is merely a minor technical change of semantics that enables the utilization of consistent terminology across CMS programs when referencing such measure type.

We seek public comment on our proposal to establish measure substantive change criteria that would be utilized by CMS to identify such measures.

(f) Request for Information Regarding the COVID–19 Vaccination by Clinicians Measure

As of July 7, 2021, the Centers for Disease Control and Prevention (CDC) reported that there are 33,582,352 cases of coronavirus disease 2019 (COVID–19) and 603,656 deaths caused by COVID–19 at the time of publication of this proposed rule and subject to change. In 2020, COVID–19 was the third leading cause of death in the United States, exceeded only by cancer and heart disease. Widespread vaccination to prevent COVID–19 will be critically important to stemming the morbidity and mortality caused by this disease. Three vaccines have received the FDA emergency use authorization (EUA) for the prevention of COVID–19 (Pfizer-BioNTech, Moderna, and Janssen) as of July 7, 2021. The EUA allows the Pfizer-BioNTech, Moderna, and Janssen COVID–19 vaccines to be distributed in the United States. As of July 7, 2021, 331,651,464 vaccine doses have been administered. To address this urgent public health emergency, CMS began the development of the COVID–19 Vaccination by Clinicians measure for MIPS, which would assess the percentage of patients aged 18 years and older seen for a visit during the measurement period who have ever completed or reported having ever completed a COVID–19 vaccination series. The measure would be reported by MIPS eligible clinicians as a MIPS CQM to determine the percentage of patients seen for a visit during the measurement period who have ever completed or reported having ever completed a COVID–19 vaccination series, either from the submitting MIPS eligible clinician or another MIPS eligible clinician. The measure as specified (see Table Group AA of Appendix 1 of this proposed rule) allows clinicians to determine a patient’s vaccination status and deliver a vaccine dose, if possible and appropriate. The measure is intended to capture whether or not clinicians take an appropriate step to ensure that their patients are vaccinated. Patients receiving hospice care at any time during the measurement period would be excluded from the patient population of measure. The measure allows for an exception if the COVID–19 vaccination series was not administered, as documented by a MIPS eligible clinician, due to patient contraindication, or vaccine availability. Between November of 2020 and January of 2021, we solicited feedback on the measure from measure-specific multi-stakeholder expert workgroups, specifically the Measure Application Partnership (MAP) coordinated through the National Quality Forum. While the MAP agreed that the COVID–19 Vaccination by Clinicians measure could be an important tool to: Support vaccine uptake by collecting valuable information from the field, provide feedback to clinicians, and help identify where to conduct targeted education and outreach to limit the spread of infections, the MAP expressed concerns regarding the following elements of the measure: The patient population that would be assessed to measure performance (the inclusion of assessing patients who received 1 dose of a COVID–19 vaccine versus only assessing patients who received a complete COVID–19 vaccination series), and lack of available evidence and clinical guidance for vaccine

administration (the feasibility of implementing the measure given the limited vaccine supply and availability, and the potential inconsistencies and discrepancies derived from the novelty of data collection and reporting for COVID vaccinations). We seek to mitigate such issues by obtaining further information and feedback from additional stakeholders. We intend to utilize the obtained information and feedback to inform measure specification improvements that would be implemented for a future performance period.

Specifically, we are seeking feedback on the following questions. Should the measure assess whether or not patients completed a COVID–19 vaccination series to capture provision of effective clinical care and why? Given that there are differences in the age ranges for patients eligible to receive the various COVID–19 vaccinations (Moderna and Janssen COVID–19 vaccines are authorized for patients ages 18 years and older; Pfizer-BioNTech COVID–19 vaccine is authorized for patients ages 12 and older; and future COVID–19 vaccines may be approved for other age ranges that are implemented after the publication of this proposed rule), is 18 years and older an appropriate initial age threshold for this measure? Given the current COVID–19 PHE and the intent of the measure, should this measure be mandatory for reporting in a future year? If this measure would be mandated as a required measure for reporting purposes under MIPS, what issues or concerns would need to be considered and/or mitigated regarding the implementation of the measure in a future year? What are the potential unintended consequences associated with the potential future implementation of the measure as specified in Table Group AA of Appendix 1 of this proposed rule and applicable measure specifications? What are the feasibility challenges and barriers to implementing the measure? What are the potential options and/or recommendations that we should consider to address and/or mitigate the feasibility challenges and barriers to be expected during the 2022 MIPS performance period that could be improved upon for the 2023 MIPS performance period? If this measure would be mandated, how would the collection of the measure data be useful after the 2023 MIPS performance period?

(g) Quality Data Submission Criteria

(i) CAHPS for MIPS Background

As part of the CY 2021 PFS final rule (85 FR 84718), we finalized the policy requiring Medicare Shared Savings Program (Shared Savings Program) Accountable Care Organizations (ACOs) to report quality data via the Alternative Payment Model (APM) Performance Pathway (APP). Beginning with the 2021 MIPS performance period, Shared Savings Program ACOs are required to field the Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS survey as part of the APP. We previously established in the CY 2019 PFS final rule that MIPS quality benchmarks will be based on collection type, from all available sources, including MIPS eligible clinicians and APM Entities, to the extent feasible, during the applicable baseline or performance period (83 FR 59842). Given that Shared Savings Program ACOs will now be required to field the CAHPS for MIPS survey as part of the APP, we note that beginning with the 2022 MIPS performance period CAHPS for MIPS survey, the CAHPS for MIPS benchmarks will be calculated based on summary survey measure (SSM) scores from MIPS groups and APM entities (including Shared Savings Program ACOs) that fielded the CAHPS for MIPS Survey in the applicable baseline or performance period. Furthermore, the CAHPS for MIPS SSM scores will be adjusted for patient case-mix using a single case-mix adjustment model that incorporates data from both MIPS groups and APM entities (including Shared Savings Program ACOs) that fielded the CAHPS for MIPS Survey.

Beginning with the 2022 MIPS performance period/2024 MIPS payment year for the CAHPS for MIPS survey, to further support the alignment of CAHPS for MIPS sampling and scoring procedures between Shared Savings Program ACOs and MIPS groups, we are proposing to adopt certain policies that had been part of the CAHPS for ACOs survey administration process, but have not previously been a part of CAHPS for MIPS. These policies fall into 3 broad categories: Sampling, case mix adjustment, and scoring; for policies related to certified survey vendors rendering the CAHPS for MIPS survey for subgroups, please see section IV.A.3.h. of this rule. We are requesting comment on the following proposals related to CAHPS for MIPS.

(ii) CAHPS for MIPS Sampling Specifications

The CAHPS for MIPS Survey is administered to a sample of eligible patients for all Shared Savings Program ACOs and for those MIPS groups that elect the measure. Prior to drawing the sample, patients are excluded from the pool of potential survey recipients (called the sampling frame) for a number of reasons, including if they are known to have died or are known to be institutionalized. Currently, patients are considered institutionalized if 100 percent of their primary care charges are associated with an institutionalized setting during the sampling period. Starting in the 2018 performance period, the CAHPS for ACOs survey additionally flagged patients as institutionalized if their last primary care visit during the sampling period was associated with an institutional setting. This change (called the “last primary care visit rule”) was made to better identify and exclude from the sample, patients likely to be institutionalized at the time the survey is fielded, and by extension, to improve response rates on the survey. This was of particular importance for a few Shared Savings Program ACOs for which large portions of their assigned beneficiaries are in nursing homes. Analysis of the 2020 performance period CAHPS for MIPS sample found that among the 100 MIPS groups that fielded the survey, less than 1 percent of the survey sample would be lost, on average, due to the application of this additional criterion to identify institutionalized patients. Of the groups fielding the survey in 2020 performance period, only 1 would have been excluded from participating in the survey as a result of falling below the minimum sampling threshold due to the expanded definition of institutionalization. Given these findings, which suggest a minimal impact on MIPS group sample sizes and eligibility to field the survey, we propose beginning with the 2022 MIPS performance period for the CAHPS for MIPS survey to add the “last primary care visit rule” as an additional exclusion to sampling for the CAHPS for MIPS survey. We expect that this change will better identify and exclude from the sample those patients likely to be institutionalized at the time the survey is fielded, and by extension, will improve response rates on the survey. Other CMS programs perform CAHPS surveys to gather information on patient experience in a variety of health
Program ACOs are fielding the CAHPS Asian language surveys have been mix adjustment model has historically reporting. The CAHPS for MIPS case-mix adjustment model has historically associated with specific response patterns to a number of survey items that contribute to summary survey measures. In particular, Asian language survey respondents are generally less likely to use responses at the extremes of the scales, which tends to result in lower overall scores compared to patients who respond to English-language surveys. Therefore, it is important to retain use of Asian language survey as a case-mix adjustor for Shared Savings Program ACOs, and also appropriate to include it in the case-mix adjustment model for MIPS groups should Asian language surveys be completed for these groups in the future. Analysis of 2019 performance period CAHPS for MIPS data found that adding the Asian language survey case-mix adjustor and pooling data from MIPS groups and Shared Savings Program ACOs for the purposes of case-mix adjustment had only a minimal impact on mean scores for MIPS groups, with scores increasing slightly as a result.

(iv) Scoring CAHPS for MIPS Summary Survey Measures

The CAHPS for MIPS survey contains 10 summary survey measures (SSMs). Of these, 8 are benchmarked and scored, while the other 2 (Health Status and Functional Status and Access to Specialists) are unscored and included for informational purposes only. The latter 2 measures had previously been scored, but were changed to unscored starting with the 2018 performance period (82 FR 53720). While Health Status and Functional Status was changed to unscored because it assesses underlying characteristics of a group's patient population and is less of a reflection of patient experience of care with the group, the Access to Specialists SSM was changed to unscored due to historically low reliability and response rates. At the same time this change was made (2018 performance period), a shorter, streamlined version of the CAHPS for MIPS Survey was implemented (82 FR 53632). Since the implementation of the shortened survey, which included a reduction in the number of survey items that make up the Access to Specialists SSM, response rates and reliability for this SSM have improved dramatically, with over 80 percent of MIPS groups achieving acceptable reliability on this SSM in 2018, 2019, and 2020 performance period(s), compared to less than 20 percent in 2017 performance period. Therefore, because CMS no longer has analytic concerns about scoring the measure, we propose beginning with the 2022 MIPS performance period for the CAHPS for MIPS survey to once again benchmark and score the Access to Specialists measure, which would mean there would be 9 SSMs included in the CAHPS for MIPS scoring process, with 1 SSM remaining unscored.

We request comments on these proposed changes to the CAHPS for MIPS policies and scoring process.

(2) Cost Performance Category

(a) Background

We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules, and the CY 2019, CY 2020, and CY 2021 PFS final rules (81 FR 77162 through 77177, 82 FR 53641 through 53648, 83 FR 59765 through 59776, 84 FR 62959 through 62979, and 85 FR 84877 through 84881, respectively) for a description of the statutory basis and existing policies pertaining to the cost performance category.

In this proposed rule, we are proposing to add 5 new episode-based measures to the cost performance category beginning with the 2022 performance period, and to update the operational list of care episode and patient condition groups and codes. Additionally, we are proposing a new process for stakeholders to develop cost measures for MIPS. Finally, we are proposing to establish criteria for determining whether a cost measure change is considered substantive starting with the 2022 MIPS performance period. These proposals are discussed in more detail in the following sections.

(b) Addition of Episode-Based Measures

(i) Background

Under § 414.1350(a), we specify cost measures for a performance period to assess the performance of MIPS eligible clinicians on the cost performance category. We will continue to evaluate cost measures that are included in MIPS on an ongoing basis and anticipate that measures could be added, modified, or removed through rulemaking as measure development continues. Any substantive changes to a measure would be proposed for adoption in future years through notice and comment rulemaking, following review by the Measure Applications Partnership (MAP). The MAP is a multi-stakeholder partnership that provides guidance to
Applications

Priorities/Partnership/Measure

www.qualityforum.org/Setting

information is available at

in federal health programs—more CMS on performance measures for use in federal health programs—more information is available at https://www.qualityforum.org/Setting_Priorities/Partnership/Measure_Applications_Partner.asp. The MAP provides an additional opportunity for an interdisciplinary group of stakeholders to provide feedback on whether they believe the measures under consideration are applicable to clinicians and complement program-specific statutory and regulatory requirements. Through its Measure Selection Criteria, the MAP focuses on selecting high-quality measures that address the National Quality Strategy (NQS)'s three aims of better care, healthy people/communities, and affordable care, as well as fill critical measure gaps and increase alignment among programs.

We would take all comments and feedback from both the public comment period and the MAP review process into consideration as part of the ongoing performance evaluation process. Some modifications to measures used, as the cost performance category might incorporate changes that would not substantively change the measure. Examples of such non-substantive changes may include updated telehealth service codes, diagnosis or procedure codes or risk adjustors. While we address such changes on a case-by-case basis, we generally believe these types of maintenance changes are distinct from substantive changes to measures that result in what are considered new or different measures. However, as described in section 7 of the Blueprint for the CMS Measures Management System Version 16.0 (https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment- Instruments/MMS/Downloads/Blueprint.pdf), if substantive changes to these measures become necessary, we expect to follow the pre-rulemaking process for new measures, including resubmission to the Measures Under Consideration (MUC) list and consideration by the MAP.

In section IV.A.3.d.(2)(b)(ii) of this proposed rule, we have summarized the timeline for measure development, including stakeholder engagement activities undertaken by the measure development contractor, an entity that oversees the development, implementation and maintenance of cost measures in accordance with a contract with CMS. In sections IV.A.3.d.(2)(b)(iii) through IV.A.3.d.(2)(b)(vii) of this proposed rule, we summarize the new measures that would be included in the cost performance category for the CY 2022 performance period and future performance periods. For the new chronic condition episode-based measures, we provide detail about the measure framework, which lets attributed clinicians or clinician groups know the cost of care that is clinically related to their management of a patient’s chronic condition during an episode of care (“episode”).

(ii) Overview of Measure Development Timeline for New Episode-Based Measures

We develop episode-based measures to represent the cost to Medicare and beneficiaries for the items and services furnished during an episode. Episode-based measures are developed to compare clinicians on the basis of the cost of care that is clinically related to their treatment and management of a patient and provided during the episode’s timeframe. Specifically, we define cost based on the allowed amounts on Medicare claims, which include both Medicare trust fund payments and any applicable beneficiary deductible and coinsurance amounts.

The measure development contractor has continued to seek extensive stakeholder feedback during measure development, building on the processes outlined in the CY 2018 QPP final rule (82 FR 53644 through 53645) and discussed in detail in the CY 2019 PFS final rule (83 FR 59767 through 59769). These processes include the measure development contractor convening multiple panels for different purposes, conducting national field testing of the developed measures, and seeking input from clinicians and stakeholders through engagement activities. The technical expert panel (TEP) serves a high-level advisory role and provides guidance to the measure development contractor on the overall direction of development; clinical subcommittees provide the measure development contractor with recommendations on the measures to prioritize for development within specific clinical areas and on the scope for the measures; and measure-specific clinician expert workgroups provide the measure development contractor recommendations on clinical specifications for each measure. More information about the measure development process for the 5 measures we are proposing to include is available in the measure development process document located on the MACRA Feedback Page at https://www.cms.gov/feedback/document/macra-cmft-ecbm-process-2020.pdf. Summaries of the clinical subcommittee and clinician expert workgroup meetings organized by measure development contractor are also available on the MACRA Feedback Page under the “Wave 3 MACRA cost measure development (2019–2020)” section located at https://www.cms.gov/Medicare/Quality-Payment-Program/Quality-Payment-Program/Give-Feedback.

We provided stakeholders an opportunity to review their performance under the new episode-based measures through national field testing, from August 17, 2020, to September 18, 2020. Clinicians and clinician groups meeting a minimum threshold of episodes for each measure could review their field test report and an episode-level file with detailed information to understand the types of services that comprise a large or small share of their episode costs. In response to stakeholder input from previous field-testing periods, the field test reports were changed to a portable document format (PDF) and distributed through the Quality Payment Program portal, which clinicians routinely access to review their MIPS performance feedback reports. In addition, stakeholders could review a number of supporting documents, including draft measure specifications, an overview of the development process, a fact sheet and frequently asked questions (FAQ) document and summary statistics on each of the measures. These documents were available through the MACRA Feedback Page (https://www.cms.gov/Medicare/Quality-Payment-Program/Quality-Payment-Program/Give-Feedback). A summary of stakeholder feedback from the field testing period is also available on the website (https://www.cms.gov/Medicare/Quality-Payment-Program/Quality-Payment-Program/Give-Feedback).

During field-testing, the measure development contractor also collected person and family engagement (PFE) input from patients with lived experience of the condition in question. The measure development contractor summarized input about their experience of care, including clinicians who were part of their care team, the types of services they received, and areas they identified for improvement in their care. For more information, we refer readers to the Summary of Person and Family Engagement (PFE) and Input for Wave 3 Episode-Based Cost Measure Development, which summarizes PFE input that the measure development contractor gathered for the measures (https://www.cms.gov/files/document/summary-person-and-family-engagement.pdf).
to engage clinicians and stakeholders, conducting extensive outreach activities. These activities included general informational email blasts, targeted email outreach to specialty societies, hosting office hours to gather information on additional opportunities for participation and outreach, and posting a pre-recorded MACRA Cost Measures Field Testing Webinar to provide information about the measure development process and field test reports (available at https://app.cms.gov/resources/webinars).

(iv) New Episode-Based Measures for CY 2022 and Future Performance Periods

In this section of the proposed rule, we discuss the 5 new episode-based measures, which we propose to add for the CY2022 and future performance periods. These measures are listed in Table 41. The acute inpatient medical condition and procedural measures are based on the previous established framework for episode-based measures, which we described in detail in the CY 2019 PFS final rule (83 FR 59767 through 59773). Chronic condition episode-based measures expand on the previously established framework for episode-based measures to address unique factors inherent to the continuous nature of chronic disease care management. In section IV.A.3.d.(2)(b)(vi) of this proposed rule, we provide detail about the proposed episode definition and attribution methodology for chronic condition episode-based measures. After chronic condition episodes are defined and attributed to a clinician group and, or individual clinician, we include items and services furnished during the episode that are clinically related to the care and management of a patient’s chronic condition. Items and services may include treatment and diagnostic services, ancillary items (such as medical nutrition therapy and refining and maintenance of a portable pump for diabetes), services directly related to treatment, and those furnished as a consequence of care. The two chronic condition measures specified in this proposed rule are calculated using claims data from Medicare Parts A, B, and D. Part D costs are included to account for the full range of treatment options used to manage chronic conditions. As with Part A and B payment standardization, Part D costs are standardized to facilitate meaningful comparisons of resource use within the

market-based Medicare Part D program by accounting for non-clinical variation in costs. For more detail, the Part D payment standardization methodology is available at https://resdac.org/articles/cms-price-payment-standardization-overview. The Medicare Parts A and B payment standardization methodology is available at https://resdac.org/articles/cms-price-payment-standardization-overview.

Similar to other episode-based measures, chronic condition measures include features intended to ensure a more accurate comparison of costs across clinicians. First, we stratify the patient population captured by the measure into smaller, clinically similar patient cohorts. For example, the Diabetes measure separates patients with type 1 and type 2 diabetes, and the risk adjustment model is assessed at the level of each stratification to ensure that only patients with similar case mixes are compared to each other. We note that the term “stratification” will be used to describe a portion of a group in relation to the cost performance category and that such term is synonymous with the term “episode sub-group” used in the cost measure specification documents and other documents related to the cost performance category. In general, unless otherwise indicated, the term “episode sub-group” used in the cost measure specification documents and other documents related to the cost performance category has a different meaning than the term “subgroup” that we propose to define under § 414.1305 in this proposed rule. Second, we standardize episode costs to limit observed differences in costs to those that may result from health care delivery choices. Third, we exclude unique groups of patients from episodes where it may be unreasonable to compare the costs of these patients to the whole cohort. Last, the measures account for patient characteristics that can influence spending and are outside of a clinician’s control using risk adjustment. For example, the risk adjustment model is run separately for patients with and without enrollment in a Part D drug plan to account for differences in costs that we might observe between patients enrolled in Part D and those who are not. In addition, the risk adjustment model for chronic condition episode-based measures specified in this rule account for a patient’s status as a dual Medicare and Medicaid enrollee. This was based on testing demonstrating that dual status had a notable impact on performance for the two measures. For more information on the chronic condition episode-based measure framework, we refer readers to the Chronic Condition Cost Measure Framework located at https://www.cms.gov/files/document/chronic-condition-cost-measure-framework-poster.pdf.

The proposed specifications for all 5 proposed episode-based measures are available at https://www.cms.gov/Medicare/Quality-Payment-Program/Quality-Payment-Program/Give-Feedback. The specifications documents for each measure consist of a methods document that describes the steps for constructing the measure and a measure codes list file that contains the medical codes used in that methodology. First, the methods document provides details about components of episode-based measures: Identifying patients receiving care, defining an episode-based measure, attributing episodes to clinicians and clinician groups, assigning costs, defining exclusions, risk adjusting, and calculating measure score. For each measure component, the methods document provides detailed methodology describing each logic step involved in constructing the measure. For the chronic condition episode-based measures, the specifications also include an appendix to the methods document which provides additional detail on particular components of the measure construction framework, including the sub-grouping methodology, episode construction and calculation, and attribution to individual clinicians. Second, the measure codes list contains the codes used in the measure specifications, including the episode triggers, attribution, sub-groups, assigned items and services, exclusions, and risk adjustors.

More information about the five proposed episode-based measures is available in the measure justification forms, the national summary data report, and the national summary data report addendum with risk adjustment regression results. These documents are available through the MACRA Feedback Page (https://www.cms.gov/Medicare/Quality-Payment-Program/Quality-Payment-Program/Give-Feedback).

We seek public comment on the proposed episode-based measures, which are listed in Table 41.
In this section of the proposed rule, we discuss the attribution methodology for the episode-based measures. In the CY 2020 PFS final rule (84 FR 62962), we established at § 414.1350(b)(8) that beginning with the 2020 performance period, each cost measure is attributed according to the measure specifications for the applicable performance period. For the proposed acute inpatient medical condition and procedural episode-based measures, we refer readers to the proposed measure specifications for the attribution methodology, available at https://www.cms.gov/Medicare/Quality-Payment-Program/Quality-Payment-Program/Give-Feedback. For the proposed chronic condition measures, we would use a new attribution framework for identifying and confirming a clinician-patient relationship, which we discuss below. For further detail regarding the specific attribution methodology for the proposed Asthma/COPD and Diabetes measures, we refer readers to the measure specifications for each measure, available at https://www.cms.gov/Medicare/Quality-Payment-Program/Quality-Payment-Program/Give-Feedback.

For chronic condition episode-based measures, we would attribute episodes to the clinician group that renders the services that constitute a trigger event, which is identified by the occurrence of two claims billed in close proximity by the same clinician group. Both claims must have a diagnosis code indicating the chronic disease captured by the measure (for example, type 1 or type 2 diabetes for the Diabetes episode-based measure). The first claim must have an evaluation and management (E/M) code for primary care services and the second claim must have either another E/M code for primary care services or a condition-related HCPCS/CPT code for procedure codes related to the treatment or management of the chronic condition. The trigger event opens a year-long attribution window from the date of the initial E/M primary care service, during which the same clinician group could reasonably be considered responsible for managing the patient’s chronic disease. The initiation of the attribution window at the onset of the trigger event ensures that costs are attributed only after the start of the clinician-patient relationship. We may extend the initial attribution window and the clinician group’s responsibility by another year each time we see additional E/M codes for primary care services or condition-related HCPCS/CPT codes for procedure codes related to the treatment or management of the chronic condition that indicate an ongoing clinician-patient relationship. Therefore, the resulting total attribution window can span multiple years and vary in length for different patients. Because the total attribution window can span multiple performance periods, we measure it incrementally and periodically by dividing it into segments of episodes, which we assess in the performance period in which they conclude. Dividing the total attribution window into episodes allows us to assign costs during the time-period in which the clinician group is responsible for the patient’s chronic condition care management.

After we identify the attributed clinician group as described in the previous paragraph, we would attribute the episode to individual clinician(s). For individual clinicians, we would attribute episodes to each MIPS eligible clinician within an attributed clinician group that renders at least 30 percent of qualifying services during the episode. Qualifying services include E/M codes for primary care services or condition-related HCPCS/CPT codes with a relevant chronic condition diagnosis. We employ two additional checks to confirm the qualifying clinician’s role in the ongoing management of the patient’s chronic condition. First, we check to ensure that the qualifying clinician(s) have rendered at least one E/M code for primary care services or condition-related HCPCS/CPT code with a relevant diagnosis within 1 year prior to or on the episode start date. This ensures that clinicians are not attributed an episode before they have their first encounter with the patient. Second, we check whether the clinician(s) have written at least 2 condition-related prescriptions on different days to two different patients during the performance period plus one-year lookback period. The use of these prescription billing patterns ensures that we are capturing the clinicians actually involved in providing ongoing chronic care management, rather than clinicians who may have only refilled a patient’s prescription once, as a courtesy. MIPS eligible clinicians within an attributed clinician group that render at least 30 percent of qualifying services and meet the two additional checks are considered for attribution. The individual clinician’s performance is based on all of the episodes attributed to the individual clinician, whereas the clinician group’s performance is based on all of the episodes attributed to the clinician group. If a single episode is attributed to multiple clinicians in a single clinician group, the episode is only counted once toward the clinician group’s performance. Additional detail for this attribution methodology is available in the proposed measures specifications for the Diabetes and Asthma/COPD measures located on the MACRA Feedback Page at https://www.cms.gov/Medicare/Quality-Payment-Program/Quality-Payment-Program/Give-Feedback.

To illustrate the proposed attribution rules for chronic condition episode-based measures, we are providing an example of a clinical scenario where 3 MIPS eligible clinicians (A, B, and C) are part of the same clinician group. A patient with type 2 diabetes presents to the clinician group to receive services related to their condition. Clinician A bills an initial E/M code for primary care services related to the patient’s diabetes (for example, an office/outpatient visit related to the patient’s diabetes). During a follow-up appointment two weeks later, Clinician A bills a HCPCS/CPT code for tests related to the patient’s diabetes. We consider the occurrence of these two services to constitute a trigger event.

indicating the start of a clinician-patient relationship. This trigger event opens a one-year attribution window from the date of the initial E/M service and the clinician group that rendered the trigger event services would be attributed the Diabetes episode. If in this example, there were a total of 10 clinically related services captured during the episode, and Clinician A rendered 5 of those services, Clinician B rendered 2, and Clinician C rendered 3 of those services, then Clinicians A and C would be considered for attribution since they would have rendered at least 30 percent of qualifying services for the patient. Clinician B would not be considered for attribution. Before attributing the episode to Clinicians A and C, we check (i) whether the clinicians billed at least 1 E/M code for primary care services or condition-related HCPCS/CPT code with a relevant diabetes diagnosis within 1 year prior to or on the episode start date and (ii) whether they wrote 2 diabetes-related prescriptions on different days for 2 different patients during the performance period plus a one-year lookback period. Assuming Clinician A met these two checks and Clinician C did not, then only Clinician A would be attributed this Diabetes episode. This episode would count towards the Diabetes measure’s case minimum for Clinician A, but not for Clinicians B or C. At the group reporting level, the episode would be included in the calculation of the clinician group’s measure score and would count towards the measure’s case minimum for the clinician group.

(v) Discussion of MAP Recommendations for New Episode-Based Measures
In this section of the rule, we discuss the results of the 2020–2021 MAP review cycle for the 5 measures we are proposing and address the points raised by the MAP. Following the measure development process, we describe in section IV.A.3.d.(2)(b)(ii) of this proposed rule, the MAP Clinician Workgroup and the MAP Coordinating Committee reviewed the 5 measures in January 2021. The MAP conditionally supported Melanoma Resection and Colon and Rectal Resection contingent on NQF endorsement. We intend to submit these 2 measures to a future NQF endorsement cycle, as we have done with other cost measures. For example, the MAP in the 2018–2019 review cycle had recommended “do not support with potential for mitigation” for the total per capita cost measure. This measure was endorsed by NQF in December 2020. For the Asthma/COPD and Diabetes measures, the MAP raised two points for further evaluation. The first point is to evaluate the relationship between condition-specific costs and global patient costs, as the MAP was concerned that there may be tension between these types of costs. We tested the correlation between the episode-based measures and NQF #3575 total per capita cost, a population-based cost measure that assesses the overall costs of care. The correlation results show a moderately positive correlation between Asthma/COPD and Diabetes and the total per capita cost measure, indicating that clinicians who have lower costs for the specific care of asthma/COPD and diabetes tend to also have lower overall global costs. These results suggest that there is no concern that high quality care results in higher episode-specific costs and lower overall costs. These results also show that there is no redundancy between the measures; for instance, a correlation of 1 would indicate duplication across the episode-based and population-based cost measures. The results of this correlation testing are available at https://www.cms.gov/files/document/testing-updates-wave-3.pdf.

For the Asthma/COPD and Diabetes measures, the MAP’s second point was to evaluate the potential for actionability, providing the example of the connection between upstream medical interventions and downstream costs. The MAP’s recommendations note that this example was clarified as cost measures do not attempt to dictate clinician practice; that would be outside of their scope. Rather, the cost measures aim to fairly capture costs related to a clinician’s care and account for factors outside of their influence. Regarding the overall actionability, we selected these measures to develop based on the evidence from the literature and input from clinical experts which identified the care and management of asthma, COPD, and diabetes as important in the goal of making care affordable, due to their prevalence and costliness, and the nature of the care as clinicians can make

Across the 3 measures, the MAP noted the following mitigation points:

1. Explore the correlations between the cost measure and quality measures; and
2. NQF endorsement. For the Asthma/COPD and Diabetes measures, the MAP noted the following points:

(1) Explore the concern that good care may result in higher episode costs but with global cost savings; and
(2) Evaluate the connection between upstream interventions and downstream cost savings. For the Sepsis measure, the MAP’s recommendation was contingent on an analysis into the potential for gaming associated with the over-diagnosis of sepsis. For all 3 measures, the MAP noted that should testing data show that the measure appropriately assesses episode-based cost and can be used alongside quality measures, the measures would be valuable to add to the program. The MAP’s final recommendations are available at http://www.qualityforum.org/Publications/2021/03/MAP_2020-2021_Considerations_for_Implementing_Measures_Final_Report_-_Clinicians_Hospitals_and_PAC-LTC.aspx.

We appreciate the MAP’s review and their comments regarding the measures. We believe that we have addressed the mitigating factors by sharing additional testing information and clarifying the measure construction and intent at the MAP Coordinating Committee meeting on January 25, 2021.

The first mitigation factor common to the Asthma/COPD, Diabetes, and Sepsis episode-based measures is to explore the correlations with quality measures to address concerns about the potential for care stunting. We presented empirical testing results to the MAP Coordinating Committee on January 25, 2021. The MAP’s concern about care stunting would be evidenced by a strong, inverse cost-quality correlation between cost and quality measures; that result would indicate that good performance on cost would be associated with poor performance on quality and that variation in cost is solely reflecting variation in quality. We do not see this relationship in any of the correlations. The correlation results instead indicate a modest and generally positive correlation between the 3 cost measures and related quality measures demonstrating that there is variation in cost, regardless of quality level. These results suggest that performance on these 3 episode-based measures can be improved without negatively impacting quality. More information on the results of this exploration of the relationship between cost and quality measures is available in the supplemental testing document at https://www.cms.gov/files/document/testing-updates-wave-3.pdf.

The second mitigation factor common to the Asthma/COPD, Diabetes, and Sepsis episode-based measures is NQF endorsement. We intend to submit these measures to a future NQF endorsement cycle, as we have done with other cost measures. For example, the MAP in the 2018–2019 review cycle had recommended “do not support with potential for mitigation” for the total per capita cost measure. This measure was endorsed by NQF in December 2020.
care decisions that reduce the likelihood of high costs. For example, opportunities for clinicians to take action in the Asthma/COPD episode-based measure identified through an environmental scan; clinician input, and input from persons with lived experience of the conditions include enhancing education programs, support, and care continuity; providing appropriate medication and encouraging adherence to these medications; promoting pulmonary rehabilitation through physical activity and exercise; and encouraging smoking cessation. For the Diabetics episode-based measure, actions to decrease the likelihood of high costs include providing self-management education and support, providing appropriate medication, screening for other impairments, and encouraging adherence to preventive treatment guidelines.

The MAP noted a mitigation point for the Sepsis measure to explore a concern related to over-diagnosis of sepsis which could result in potential gaming of the measure. The variation in diagnosis coding has been considered extensively throughout development, including by the Sepsis clinician expert workgroup convened by the measure development contractor. The specifications reflect these careful considerations by defining a homogenous patient cohort while retaining the breadth of coverage needed to address coding issues. The measure uses a risk adjustment approach and exclusions to ensure fair comparisons, for example by adjusting for source of infection and source of admission (to account for patients transferred from another facility), and stratifying the patient population based on severity (with and without septic shock). As such, the measure construction itself is designed to capture costs accurately to compare clinician cost performance. We also tested the relationship between cost measure performance and types of variation in coding, such as the attributed clinician’s share of episodes triggered by MS–DRGs 870–872 for sepsis and share of episodes out of all hospitalizations for the year 2015. 24 MS–DRGs for other infectious disease. The results of these correlations show no meaningful relationship between cost measure scores and coding patterns, addressing the concern about the impact of diagnosis coding on measure scores.

We appreciate the MAP’s comment that the Asthma/COPD, Diabetes, and Sepsis measures would be valuable to add to MIPS, should testing data show that the measures appropriate assess costs. We believe that the extensive empirical testing throughout and after development (beyond the testing referenced in this section), national field testing, and engagement with clinician experts and incorporation of the patient voice demonstrate that the measures appropriately capture costs related to the care of these conditions. For more testing information, see https://www.cms.gov/files/document/testing-updates-wave-3.pdf.

(vi) Proposed Revisions to the Operational List of Care Episode and Patient Condition Groups and Codes

Section 1848(r) of the Act specifies a series of steps and activities for the Secretary to undertake to involve the physician, practitioner, and other stakeholder communities in enhancing the infrastructure for cost measurement, including for purposes of MIPS and APMs. Section 1848(r)(2) of the Act requires the development of care episode and patient condition groups, and classification codes for such groups, and provides for care episode and patient condition groups to account for a target of one-half of expenditures under Parts A and B (with this target increasing over time as appropriate). Sections 1848(r)(2)(E) through (G) of the Act require the Secretary to post on the CMS website a draft list of care episode and patient condition groups and codes for solicitation of input from stakeholders, and subsequently, post an operational list of such groups and codes. Section 1848(r)(2)(H) of the Act requires that not later than November 1 of each year (beginning with 2018), the Secretary shall, through rulemaking, revise the operational list as the Secretary determines may be appropriate, and that these revisions may be based on experience, new information developed under section 1848(n)(9)(A) of the Act, and input from physician specialty societies and other stakeholders.

In December 2016, we published the Episode-Based Measure Development for the Quality Payment Program (https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/Draft-list-of-episode-groups-and-trigger-codes-December-2016.zip) and requested input on a draft list of care episode and patient condition groups and codes as required by sections 1848(r)(2)(E) and (F) of the Act. In accordance with section 1848(r)(2)(G) of the Act, in January 2018, we posted an operational list of 8 care episode groups and patient condition groups, which is available at https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/2018-Operational-List-of-Care-Episode-and-Patient-Condition-Codes.zip. Under section 1848(r)(5)(A)(iii) of the Act, to evaluate the resources used to treat patients with respect to care episode and patient condition groups, the Secretary shall, as the Secretary determines appropriate, conduct an analysis of resource use with respect to care episode and patient condition groups. In accordance with this section, we used the 8 care episode groups and patient condition groups included in the operational list as the basis for the 8 episode-based measures that were finalized for use in MIPS in the CY 2019 PFS final rule (83 FR 59767 through 59773). In the CY 2020 PFS final rule (84 FR 62968 through 62969), in accordance with section 1848(r)(2)(H) of the Act, we revised the operational list beginning with CY 2020 to include 10 additional care episode and patient condition groups, which served as the basis for the 10 additional episode-based measures that were refined based on extensive stakeholder input and finalized for use in MIPS in that same final rule (84 FR 62970). The operational list as revised in the CY 2020 PFS final rule is available at https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html.

Under section 1848(r)(2)(H) of the Act, we are proposing to revise the operational list beginning with CY 2022 to include 5 new care episode and patient condition groups, based on input from clinician specialty societies and other stakeholders. These 5 care episode and patient condition groups were included in the draft list that to posted in December 2016 and refined on extensive stakeholder input as described in section IV.A.3.d.(2)(b)(ii) of this rule. The codes and logic used to define these episode groups are available on our MACRA Feedback Page at https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html. These care episode and patient condition groups serve as the basis for the 5 new episode-based measures that we are proposing for the performance category in section IV.A.3.d.(2)(b)(iii) of this rule. We request comments on our proposal to revise the operational list to include these 5 new care episode and patient condition groups.

(vii) Reliability and Case Minimum

In this section of the rule, we discuss the case minima for the 5 proposed cost
measures, weighing up considerations of reliability standards, the tradeoffs between accuracy and reliability, and the implications of increasing case minima on the extent to which the measure can apply to clinicians participating in MIPS. Reliability is a metric that evaluates the extent that variation in a measure comes from clinician performance ("signal") rather than random variation ("noise"). Higher reliability suggests that a measure is effectively capturing differences between the clinician and their peer cohort.

In the CY 2017 Quality Payment Program final rule (81 FR 77169 through 77171), we identified reliability levels between 0.4 to 0.7 as moderate and reliability levels above 0.7 as high. In the CY 2017 Quality Payment Program final rule, we also identified a threshold of 0.4 for mean reliability to be applied for measures in the cost performance category to ensure moderate reliability. This aligned with the reliability threshold applied to measures under the Value Modifier program and previous analyses of reliability.\footnote{207 We appreciate the concerns commenters had raised that this may be too low and as we noted in the CY 2017 Quality Payment Program final rule (81 FR 77169 through 77171), we continue to work on developing measures with the highest level of reliability that is feasible within the MIPS program and have since continued to monitor the overall scientific evidence on reliability. There are many different interpretations of reliability and what these values represent. Studies have pointed to various standards to indicate sufficient, adequate, moderate, or good reliability across healthcare and other disciplines with performance measures and different methods of estimating reliability.\footnote{208 Mathematica, Inc., “Memorandum: Reporting Period and Reliability of AHRC, CMS 30-Day and HAC Quality Measures—Revised,” http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/hospital-value-based-purchasing/downloads/hvbp_measure_reliability.pdf.}\footnote{209 Portney, L.G. and Watkins, M.P. (2000) Foundations of clinical research: Applications to practice. 2nd Edition, Prentice Hall Health, Upper Saddle River.}\footnote{210 Landis, J. Richard, and Gary G. Koch. “The Measurement of Observer Agreement for Categorical Data.” Biometrics 33, no. 1 (1977): 159–74. Access online: https://doi.org/10.2307/2529310.}\footnote{211 Koo, Terry K., and Mai Y. Li. “A Guideline of Selecting and Reporting Intraclass Correlation Coefficients for Reliability Research.” Journal of Chiropractic Medicine 15, no. 2 (2016): 155–63. https://doi.org/10.1016/j.jcm.2016.02.012.}\footnote{212 Adams, J.L., Mehrotra, A., Thomas, J.W. and E.A. McGlynn, “Physician Cost Profiling—Reliability and Risk of Misclassification,” New England Journal of Medicine 362 (2010): 1014–21.}

monitor the evaluation and standards applied throughout the measure endorsement processes, and note that the endorsement standards state there is no minimum threshold for reliability.\footnote{As such, we believe that the 0.4 threshold for mean reliability continues to be appropriate for moderate reliability. Under section 1848(f)(5)(A) of the Act, to evaluate the resources used to treat patients (with respect to care episode and patient condition groups), the Secretary shall, as the Secretary determines appropriate, conduct an analysis of resource use (with respect to care episodes and patient condition groups of such patients) using codes reported on claims. Our approach to cost measurement focuses on defining clinically homogenous patient conditions and care episodes. This ensures that these measures accurately compare clinician performance without the results being solely driven by clinical differences across episodes. While limiting the measure scope to the maximum number improves the accuracy of assessing cost performance, this also reduces the number of episodes per clinician. Fewer episodes per clinician results in lower reliability compared with global population measures. However, episode-based measures balance this concern using selective service assignment; only including the costs of services that are clinically related to the condition or procedure in the measures’ cost calculation improves reliability by keeping the “signal” while reducing the “noise.”\footnote{213 Adams, John L., The Reliability of Provider Profiling: A Tutorial, Santa Monica, CA: RAND Corporation, 2009. https://www.rand.org/pubs/technical_reports/TR653.html.}\footnote{214 Taber, Keith S. “The Use of Cronbach’s Alpha When Developing and Reporting Research Instruments in Science Education.” Research in Science Education 48, no. 6 (2017): 1273–96. https://doi.org/10.1007/s11165-016-9602-2.}\footnote{215 The National Quality Forum (NQF) reviews and endorses reliability for TINs and TIN/NPIs at our request.\footnote{For example, Sandhu AT, Do R, Lam J, et al. Development of the Elective Outpatient Percutaneous Coronary Intervention Episode-Based Cost Measure. Circ Cardiovasc Qual Outcomes. Mar 2021;14(4):e006461.}}

As such, we continue to evaluate cost measures on a broader range of testing, along with the details of measure construction. For this reason, we continue to caution against placing too much emphasis on reliability results in isolation as we noted in the CY 2018 Quality Payment Program proposed rule (82 FR 30050 through 30051).

As we discussed in the CY 2018 Quality Payment Program proposed rule (82 FR 30050 through 30051), while a higher case minimum generally improves measure reliability, these incremental increases must be considered against decreases in the coverage of the measure. There are several important implications for clinicians and the program. Increasing the case minimum reduces the number of clinicians that can have their performance assessed by that measure. This can limit the applicability of episode-based measures to larger group practices with sufficient case volume, leaving smaller practices and individual practitioners to be assessed only with population-based cost measures. In addition, for measures to have the potential to improve performance, they should apply to as many clinicians as can be reliably measured. Finally, it is important to recall that clinicians receive a cost performance category score which incorporates their scores across all applicable cost measures. Adding more measures that can be used in a category score increases the amount of data used to calculate the category score, which may improve the precision of overall assessment of cost performance. Additional measures also allows us to evaluate clinicians’ cost category performance across a broader range of their care practice. We examined the reliability of the 5 proposed episode-based measures, and Table 42 presents the percentage of TINs and TIN/NPIs that meet the 0.4 reliability threshold and the mean reliability for TINs and TIN/NPIs at our proposed case minimum for each of the episode-based measures. We previously established at § 414.1350(c)(4) a case minimum of 10 episodes for procedural episode-based measures and at
§ 414.1350(c)(5) a case minimum of 20 episodes for acute inpatient medical condition episode-based measures in the CY 2019 PFS final rule (83 FR 59773 through 59774). For both the proposed Melanoma Resection procedural measure and the Sepsis acute inpatient medical condition measure, we found that the mean reliability for groups and individual clinicians exceeds 0.4 and that the majority of groups and individual clinicians meet the 0.4 reliability threshold when applying the established case minimum for the respective measure types. For the Colon and Rectal Resection procedural measure, at the established 10-episode case minimum for procedural measures, we found that the mean reliability does not exceed 0.4 for individual clinicians and that the majority of groups and individual clinicians do not meet the 0.4 reliability threshold. However, as displayed in Table 42, when the measure’s case minimum is raised to 20 episodes, the mean reliability exceeds 0.4 for both groups and individual clinicians, and the majority of groups and individual clinicians meet the 0.4 reliability threshold. As such, we propose to raise the case minimum for the Colon and Rectal Resection procedural measure to 20 episodes, and corresponding revisions to § 414.1350(c)(6), a case minimum of 20 episodes. At a 20-episode case minimum, the mean reliability for both measures exceeds 0.4 for both groups and individual clinicians, and the majority of groups and individual clinicians meet the 0.4 reliability threshold. We believe that calculating the episode-based measures with these case minimums would accurately and reliably measure the performance of a large number of clinicians and clinician group practices.

### TABLE 42: Percent of TINs and TIN/NPIs that Meet 0.4 Reliability Threshold

(c) Proposed Process for Cost Measure Development by Stakeholders

(i) Background

Since 2017, we have conducted extensive stakeholder engagement to develop episode-based measures that cover a wide range of procedures, conditions, and specialties. This measure development process, as described in the CY 2019 PFS final rule (83 FR 59770), involves the measure development contractor convening hundreds of clinician experts to provide information to prioritize, conceptualize, and specify clinically refined cost measures and conducting national field testing on an 18-month timeline. The process involves engagement activities conducted by the measure development contractor to solicit expert input for measure development, gather feedback from individuals with lived experiences of the conditions in question, and collect stakeholder feedback on draft measure specifications that can inform how the measures can be improved.

This approach follows CMS’ standardized approach for developing, implementing, and maintaining measures. There are currently 18 episode-based measures in the cost performance category (CY 2020 PFS final rule (84 FR 62979)) with 5 more proposed to be added in this rule. There are also 2 global or population-based measures, the Medicare Spending per Beneficiary Clinician measure and the total per capita cost measure which were most recently refined in the CY 2020 PFS final rule (84 FR 62969 through 62977).

Many stakeholders have expressed support for episode-based measurement and for a process that prioritizes clinician involvement (as noted in the CY 2018 QPP final rule (82 FR 53645)). In the CY 2021 PFS final rule (85 FR 84879), we noted that commenters expressed interest in expanding the limited inventory of cost measures available to assess cost performance applicable to specialties. Commenters believed that additional episode-based measures would address gaps in cost performance assessment for various specialties. Expanding the range of procedures, conditions, and specialties would enable more MIPS eligible clinicians from different specialties and sub-specialties to have their cost performance assessed under clinically relevant episode-based measures. An increase in the range of cost measures available in MIPS that can be linked with quality measures and improvement activities in future MVPs would support the assessment of clinician value in providing specific types of care.

A process outside of the current development process that would allow stakeholders to develop cost measures could expand the inventory of episode-based measures. However, this process must ensure that any cost measures developed are consistent with the goals of MIPS, align with CMS priorities, and consistent with the Meaningful Measures Framework (more information...
about the Meaningful Measures Framework can be found at https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityInitiativesGenInfo/MMF/General-info-Sub-Page. Episode-based measures developed by stakeholders that meet the standards and criteria we propose below for selecting measures would contribute to the target of an estimated 50 percent of expenditures under Parts A and B, as described in section 1848(r)(2)(D)(i)(I) of the Act.

We propose to establish a process, beginning in CY 2022, for the development of cost measures by stakeholders that would ensure that the cost performance category has consistency across measures. The sections below outline the proposals for the measure prioritization criteria, standards for measure construction, pre-rulemaking submission process and development support, which altogether would comprise our proposed process of cost measure development by stakeholders.

(ii) Measure Prioritization Criteria

As described in section IV.A.3.d.(2)(b)(ii) of this rule, the current process for prioritizing cost measures for development involves the measure development contractor identifying candidate clinical areas and episode groups informed by a TEP, patient and family engagement perspective, and clinician stakeholders. Criteria reflecting TEP input have guided strategic decisions and informed clinical subcommittees’ considerations for measure prioritization. These criteria include:

• Clinical coherency of measure concept (to ensure valid comparisons across clinicians).
• Impact and importance to MIPS (including cost coverage, clinician coverage, and patient coverage).
• Opportunity for performance improvement.
• Alignment with quality measures and improvement activities to ensure meaningful assessments of value.

To inform cost measure development by stakeholders, we propose to apply these criteria to an environmental scan to identify a list of priority areas and suggested measures for development. This would ensure that measures developed by stakeholders align with program needs, while also providing flexibility for stakeholders to apply their own clinical expertise when identifying the most important areas for value improvement within the criteria listed above. Stakeholders who choose to develop cost measures can access the Blueprint for the CMS Measures Management System at https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/MMSS-Blueprint and the Meaningful Measures Framework at https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityInitiativesGenInfo/MMF/General-info-Sub-Page for further information.

We seek public comment on the proposed measure prioritization criteria, as well as priority areas for future episode-based measure development, such as specialties, types of clinical care, or specific conditions or procedures that would support proposed or future MVPs.

(iii) Standards for Measure Construction

Our current rigorous cost measure development process has included a series of standards that ensure measures are effective in assessing clinician cost performance within MIPS. These standards have been developed and vetted over time by a standing TEP and further refined through discussions with clinical subcommittees and clinician expert workgroups convened by the measure development contractor around areas of care and specific measures, respectively. For further detail, we refer readers to our detailed discussion of the measure development process and framework in response to stakeholder comments in the CY 2019 PFS final rule (83 FR 59770). To ensure that cost measures developed by stakeholders meet the same standards applied during the current measure development and testing process, we propose to apply the following standards when considering stakeholder-developed measures:

• Measures must assign services that accurately capture the role of attributed clinicians.
• Measures must have clear, ex ante attribution to clinicians.
• Measures must be based on episode definitions that have clinical face validity and are consistent with practice standards.
• Measures’ construction methodology must be readily understandable to clinicians.
• Measures must hold clinicians accountable for only the costs they can reasonably influence.
• Measures must convey clear information on how clinicians can alter their practice to improve measured performance.
• Measures must demonstrate variation to help distinguish quality of care across individual clinicians.
• Measure specifications must allow for consistent calculation and reproducibility using Medicare claims data.

To implement these standards and to meet the methodology requirements of section 1848(r)(5) of the Act, we believe that it is necessary to ensure that measures within the cost performance category are consistent and share the same key features. Specifically, cost measures must be based on a standard set of measure components informed by the standards outlined above. These include: (1) Episode definition based on trigger codes that determine the patient cohort; (2) attribution; (3) service assignment; (4) exclusions; and (5) risk adjustment.

Regarding item (1) episodes must be defined based on trigger codes for services, which are identifiable on Medicare claims, indicate the occurrence of the episode, and determine the patient cohort. Trigger codes must be based on services, and can incorporate diagnosis and other service information to define an episode. The patient cohort may be stratified into mutually exclusive stratifications (or “episode sub-groups”) for meaningful clinical comparison to ensure that measures fairly compare clinicians with similar patient case-mix. Regarding item (2), episodes must be attributed to MIPS eligible clinician groups and clinicians who render the trigger services and are responsible for the patient’s care and management. It is important that the attribution methodology allows for the most appropriate clinicians who have a significant role in a patient’s care to be attributed and receive actionable feedback on their performance.

Regarding item (3), all services that are clinically related to the attributed clinician’s role in managing patient care must be included. This includes cases where the clinician can influence the frequency or intensity of services. The measure must include enough services to allow the measure to demonstrate that it captures variation in clinician performance. To address any potential concern around care stinting, the measure must cover a sufficiently long timeframe and broad enough services to capture downstream services. This includes expected follow-up care, rehabilitation, post-acute care (required if inpatient hospitalizations are included) and other support services, as well as complications, readmissions, and other consequences of care. Clinically unrelated services must not be assigned to the measure. Regarding item (4), measures must include applicable exclusions, which can be applied to the patient cohort or the episodes. Certain patients must be
excluded for data cleaning or to ensure completeness of data. For example, patients who do not have Medicare as their primary payer or were not continuously enrolled in Medicare Parts A and B and not C must be excluded as we would not be able to observe their complete care. Certain episodes must be excluded to improve episode homogeneity and to remove unique groups of patients from the measure in cases where it may be impractical or unreasonable to compare the costs of caring for these patients to the costs of caring for the measure cohort as a whole. Regarding item (5), measures must be adjusted for patient risk. Risk adjustment aims to isolate variation in clinician costs to only the costs that clinicians can reasonably influence by accounting for risk factors. The determination of an appropriate risk adjustment approach should be based on empirical testing. A base risk adjustment model must include standard risk adjustors (Hierarchical Condition Category [HCC] codes, interaction variables for certain comorbidities, age, disability status, end-stage renal disease status, recent use of institutional long-term care), as well as additional measure-specific risk factors. Finally, measures must include payment standardized claims data. We have outlined in section IV.A.3.d.(2)(b)(iv) of this proposed rule a new methodological framework for assessing the cost of care for chronic conditions. This new chronic condition framework meets all the standards we outline above, and could serve as a basis for chronic condition measures developed by stakeholders that would ensure consistency with other MIPS measures. We propose to apply the standards for measure construction and measure components outlined above when considering stakeholder-developed measures to ensure that these measures follow the same standards as cost measures currently used in MIPS. We seek public comment on our proposed standards for measure construction and measure components, as well as changes that stakeholders may encounter in the development of cost measures along with any resources that would assist stakeholders in development. (iv) Cost Measure Submission to the Measures Under Consideration (MUC) List and Development Support We propose that cost measures developed by stakeholders for potential use in MIPS would undergo the pre-rulemaking process described in section 1890(Aa) of the Act. More details on the pre-rulemaking process can be found at https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityMeasures/Pre-Rulemaking. As with the process for the call for quality measures, we propose that the submission process for cost measures developed by stakeholders would begin with a Call for Cost Measures, where stakeholders would be invited to submit their candidate cost measures. We refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53635 through 53637) for details on the process for quality measure submissions and selection. During the Call for Cost Measures period, we would organize webinars and office hours to provide stakeholders with information about the process and be available to answer questions. We would also provide templates of written materials, such as the measure codes lists for stakeholders to use. At the end of this period, stakeholders would submit their candidate measures for review by completing the required data fields required for submission to the MUC list and if approved, measures would be placed on the final MUC List, which we publicly post on December 1 of every year. Measures submitted to the MUC List must be fully specified and tested for reliability and validity. Submissions to the MUC List must include all required information and would be reviewed against a set of inclusion criteria identified below to determine whether they should be considered for use in MIPS. The inclusion criteria for cost measures developed by stakeholders are based on the criteria outlined in the MUC List submission template as well as relevant criteria that the MIPS quality performance category follows as indicated in the CY 2020 PFS final rule (84 FR 62953 through 62954). For purposes of our review, we propose that stakeholders who wish to submit measures must submit measure specification information, testing results, and related research to address the following inclusion criteria: • Applicable: There is clinical coherence that measures will demonstrate that stakeholders may encounter in the development of cost measures along with any resources that would assist stakeholders in development. • Feasible: Measures use Medicare claims data; there is a high degree of data completeness and limited frequency of missing data. • Scientifically acceptable: Measures are clinically valid assessments of cost performance; testing is available for reliability at different case minima; beta testing and statistical testing are conducted. • Not be duplicative of existing measures: Measures assess opportunities and gaps based on CMS priorities and goals; there is an assessment of duplicate measures to see which would be the better measure. • Fully developed: Measures are fully developed and ready for implementation at the time of submission. • Consistent: The measure is constructed using a methodology to assess resource use that is consistent with sections 1848(f)(2) through (5) of the Act, consistent with other MIPS cost measures. • Fulfill a clinical performance gap: Environmental scans and literature reviews show evidence for measures, performance gaps, and opportunities for improvement; there is evidence for measures’ impact and importance to MIPS. We seek comments on this proposed approach, and challenges stakeholders may encounter in the development of cost measures.

(d) Substantive Changes Criteria for Cost Measures

On an annual basis, we review the MIPS measures that have been adopted and consider updates to the cost measures. Changes to measures are an important part of the measure maintenance process to ensure that measures are continuing to function as intended, and may be substantive or non-substantive. Section 1848(q)(2)(I)(II)(cc) of the Act requires all substantive changes to quality measures to be proposed and identified through notice-and-comment rulemaking. Although this section of the Act does not establish this requirement for cost measures, we believe that similar considerations should apply to cost measures. As discussed in prior rulemaking, examples of non-substantive changes to cost measures include maintenance changes such as updated diagnosis or procedure codes or changes to existing exclusions to the patient populations or definitions, while substantive changes to a measure are changes that result in what are considered new or different measures (83 FR 59767 and 84 FR 62961). As we evaluate existing cost measures to determine whether such measures need to be updated, we believe that it is important to establish criteria for determining whether a measure change is substantive. Thus, we are proposing to establish several criteria for determining whether a cost measure change is substantive starting with the 2nd MIPS performance period. The criteria include, but are not limited to, the following:
• Whether the change modifies the premise and/or objective of the measure;
• Whether the change modifies the scope of the measure (such as patient population eligible for the measure or a new category of costs); and
• Whether the change to the measure calculation significantly impacts how a measure is assessed.

Certain changes to a measure may affect multiple elements of a measure, requiring an overall assessment of the measure's scope and objectives. The following are some examples of potential substantive and non-substantive changes:

- **Measure objective:** The measure objective refers to what is being assessed; in general, changes to the measure objective would be considered substantive. The question of what is being assessed can generally be thought of as: What type of care is the measure assessing, who is providing this care, and who is in the patient cohort.

Specifically, under this criterion, a change to the measure objective could include updates to the triggering logic, measure exclusions, attribution rules, or other aspects of the specifications. While the effect of such changes may also be relevant while considering whether the change is substantive or not, the effect is secondary to the intention behind changes to the measure. Consider the following example: A hypothetical episode-based measure focuses on major joint repair, and is updated to cover all joint procedures by adding a range of trigger codes. This likely would be a substantive change, as the measure would be evaluating different joints and procedures than the initial measure objective.

- **Types of Costs being Assessed:** In general, new rules about which costs are being captured by a measure would be considered substantive if they change which categories or types of costs are included in a measure, and non-substantive if they merely refine how an existing category is captured. For example, a change to an episode-based measure’s service assignment rules which adds a new category of costs (for example, adding Part D costs to a measure that did not previously include any Part D costs) likely would be a substantive change. By contrast, a measure update to reflect new codes for existing types of codes, for instance, where a code is split into sub-codes for greater granularity, likely would be considered non-substantive.

- **Risk Adjustment:** The purpose of risk adjustment is to account for factors outside of the clinician’s or clinician group’s reasonable influence. In certain cases, it is necessary to make changes to the risk adjustment model and/or individual risk adjustors to ensure that the risk adjustment approach is working as intended. Generally, changes to risk adjustment variables and the mechanics of the regression would be considered non-substantive, if they continue to give effect to the measure’s intent. However, some changes to the risk adjustment approach may be substantive, such as changes to the type of risk adjustors used (for example, the addition of non-claims-based variables when the model previously only used claims-based data), or changes to the stratification that modify the interpretation of what the measure score represents.

We note that there are degrees in any evaluation of whether a change is substantive. For instance, there may be important differences in the effect of adding one service or code compared to a suite of services and codes that we would also consider as part of determining whether a change is substantive or not. We believe the proposed substantive change criteria for cost measures would help us to determine whether a change to a cost measure should be made through notice-and-comment rulemaking before it is implemented in MIPS. We seek public comment on our proposed criteria for determining whether a change to a cost measure is substantive.

(3) Improvement Activities Performance Category

(a) Background

For previous discussions on the general background of the improvement activities performance category, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77177 through 77178), the CY 2018 Quality Payment Program final rule (82 FR 53648 through 53661), the CY 2019 PFS final rule (83 FR 59776 through 59777), the CY 2020 PFS final rule (84 FR 62980 through 62990), and the CY 2021 PFS final rule (85 FR 84881 through 84886). We also refer readers to 42 CFR 414.1305 for the definition of improvement activities and attestation, §414.1320 for the performance period, §414.1325 for the data submission requirements, §414.1355 for the improvement activity performance category generally, §414.1360 for data submission criteria, and §414.1380(b)(3) for improvement activities performance category scoring.

In this proposed rule, beginning with the CY 2022 performance period and future years, we propose: (1) To revise the MIPS Value Pathway requirements for the 50 percent threshold to address subgroups; (2) to revise timeframe for improvement activities nominated during a public health emergency; (3) to revise the required criteria for improvement activity nominations received through the Annual Call for Activities; (4) to suspend activities that raise possible safety concerns or become obsolete from the program when this occurrence happens outside of the rulemaking process; (5) to add 7 new improvement activities, modify 15 existing improvement activities, and remove 6 previously adopted improvement activities for the CY 2022 performance period and future years; (6) to revise the “Drug Cost Transparency to include requirements for use of real-time benefit tools” improvement activity; and (7) to add the COVID-19 “Clinical Data Reporting with or without Clinical Trial” improvement activity for CY 2022 performance period and future years.

(b) Group Reporting

In the CY 2020 PFS final rule (84 FR 62981 through 62988), we revised §414.1360(a)(2) to state that, beginning with the 2020 performance year, each improvement activity for which groups and virtual groups submit a yes response in accordance with paragraph (a)(1) of this section must be performed by at least 50 percent of the NPIs billing under the group’s TIN or virtual group’s TINs, as applicable; and the NPIs must perform the same activity during any continuous 90-day period within the same performance year.

In the CY 2021 PFS final rule (85 FR 84844 through 84849), we finalized to update the MIPS Value Pathways guiding principle #2 as follows: “2. MVPs should include measures and activities that would result in providing comparative performance data that is valuable to patients and caregivers in evaluating clinician performance and making choices about their care; MVPs will enhance this comparative performance data as they allow subgroup reporting that comprehensively reflects the services provided by multispecialty groups.”

In this proposed rule, we are proposing the details of subgroup reporting for MVPs. We refer readers to section IV.A.3.b. of this proposed rule for further details. In order to implement group requirements in relation to subgroup reporting, we need to modify our policy regarding group reporting for improvement activities. We continue to believe that a 50 percent threshold is achievable and appropriate because, if a group or virtual group has implemented an improvement activity, that activity should be recognized and adopted throughout much of the practice to improve clinical practice,
Care delivery, and outcomes. Similarly, we believe that it makes sense to allow subgroups to perform and attest to their improvement activities separately and apply the 50 percent threshold within their subgroup. Our policy codified at § 414.1360 does not currently include a subgroup option. Therefore, we are proposing to revise § 414.1360(a)(2) to state that, beginning with the 2022 performance year, each improvement activity for which groups and virtual groups submit a yes response in accordance with paragraph (a)(1) of this section must be performed by at least 50 percent of the NPIs that are billing under the group’s TIN or virtual group’s TIN or that are part of the subgroup, as applicable; and the NPIs must perform the same activity during any continuous 90-day period within the same performance year.

We receive many inquiries through the Quality Payment Program help desk requesting clarification on how to apply the 50 percent threshold to groups. Many commenters requested that their groups be allowed to account for the 50 percent threshold by specialty or as a subgroup as they have more in common when considering applicable improvement activities. The Quality Payment Program help desk tracks, documents, and resolves inquiries submitted by MIPS eligible clinicians and groups. Stakeholders may submit inquiries to the help desk via 1–866–288–8292 (Monday–Friday 8 a.m.–8 p.m. ET) or email QPP@cms.hhs.gov. We believe the ability to attest to improvement activities at the subgroup level responds to this stakeholder concern, as this proposal, if finalized, would allow eligible clinicians the ability to compose subgroups by specialty for reporting MVPs.

For example, if a TIN that includes 100 clinicians and decides that they will be participating in MIPS as a group, at least 50 percent (in this example, at least 50 clinicians) would need to attest to the same improvement activity for a continuous 90 days within the current performance year. However, if among this group, there are 30 clinicians that represent the orthopedic specialty, they may decide to form a subgroup to report measures and activities, more closely linked to their improvement goals. We refer readers to section IV.A.3.b. of this proposed rule for requirements when forming a subgroup. If the 30 clinicians that represent the orthopedic specialty register as a subgroup, at least 15 of these orthopedic clinicians would be required to complete an improvement activity for the required performance period at some point during the performance year to receive full credit for the subgroup. The 70 clinicians from the original group would need at least 50 percent (in this example, at least 35 clinicians) to complete a given improvement activity for this group to receive credit for the improvement activity.

We request public comments on our proposal.

(c) Improvement Activities Inventory

(i) Annual Call for Activities

In the CY 2017 Quality Payment Program final rule (81 FR 77190), for the transition year of MIPS, we implemented the initial improvement activities Inventory (81 FR 77817 through 77830) consisting of approximately 95 activities. We took several steps to ensure the Inventory was inclusive of activities in line with statutory and program requirements. We discussed that we had numerous interviews with highly performing organizations of all sizes, conducted an environmental scan to identify existing models, activities, or measures that met all or part of the improvement activities performance category, including the patient-centered medical homes, the Transforming Clinical Practice Initiative (TCPI), CAHPS surveys, and AHRQ’s Patient Safety Organizations. In addition, we reviewed the CY 2016 PFS final rule with comment period (80 FR 70886) and the comments received in response to the MIPS and APMs RFI regarding the improvement activities performance category.

For Year 2, we provided an informal process for submitting new improvement activities or modifications for potential inclusion in the comprehensive improvement activities Inventory for the Quality Payment Program Year 2 and future years through subregulatory guidance (https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Annual-Call-for-Measures-and-Activities-for-MIPS_Overview-Factsheet.pdf). In the CY 2018 Quality Payment Program final rule (82 FR 53656 through 53659), for Year 3 and future years, we finalized a formal Annual Call for Activities process for adding possible new activities or providing modifications to the current activities in the improvement activities Inventory that included establishing the required criteria; rather, it was compiled via stakeholder input, an environmental scan, MIPS and APMs RFI comments, and subsequent working sessions with AHRQ and ONC and additional communications with CDC, SAMHSA, and HRSA. In the CY 2018 Quality Payment Program final rule (82 FR 53656 through 53659), we finalized a formal Annual Call for Activities process for adding possible new activities or providing modifications to the current activities in the improvement activities Inventory that included establishing the required criteria. In the CY 2019 PFS final rule (83 FR 59778 through 59779), we adopted 1 new criterion and removed a criterion from the improvement activities nomination criteria. We also clarified our considerations in selecting improvement activities. In this proposed rule, we are proposing: (1) Changes to the timeframe for improvement activities nomination during a public health emergency (PHE); (2) 2 new improvement activities criteria; (3) to increase the minimum required minimum number of criteria that must be met for improvement activities nominations; and (4) to separate required from optional criteria for improvement activities nominations. These proposals are discussed in detail in section IV.A.3.d.(3)(c) of this proposed rule.

(aa) Proposed Changes to the Timeframe for Nominating New Improvement Activities During a Public Health Emergency

In the CY 2021 PFS final rule (85 FR 84882 through 84883), we finalized an exception stating that during public health emergencies (PHE) stakeholders...
can nominate improvement activities outside of the established Annual Call for Activities timeframe. Instead of only accepting nominations and modifications submitted February 1st through July 1 each year, we adopted a policy to accept nominations for the duration of the PHE as long as the improvement activity is still relevant. No other aspects of the Annual Call for Activities process was affected (for example, criteria for nominating improvement activities, considerations for selection of improvement activities, or weighting policies would all still apply). We noted that we continue to believe it is important for stakeholders to be able to comment on improvement activities. Therefore, any improvement activity related to the PHE considered for inclusion in the Inventory would need be finalized through rulemaking.

In 2020, we proposed using interim final rules with comment period (IFCs) to propose necessary policies due to the PHE for COVID–19, including adding and modifying the COVID–19 Clinical Data Reporting with or without Clinical Trial (IA, ERP 3) for implementation in the same year. However, we want to be clear that we are not limited to IFCs and those vehicles may not be the most timely or feasible for a particular situation. In a typical year, we use various fiscal and calendar year rules to implement policy (for example, the IPPS, Inpatient Psychiatric Facility Prospective Payment System (IPF PPS), OPPS, etc. rules). In order to best operationalize our policy for improvement activities nominated during a PHE, we are proposing to modify our policy such that these nominations should be submitted by January 5th, of the year in which the activity is targeted for implementation unless otherwise specified by CMS, in order to maximize the chance that a potential improvement activity could be implemented in the same year via the most timely rulemaking vehicle.

We request public comments on this proposal.

(bb) Currently Adopted Criteria

In the CY 2017 Quality Payment Program final rule (81 FR 77190 through 77195), we discussed guidelines for the selection of improvement activities. In the CY 2018 Quality Payment Program final rule, we formalized the Annual Call for Activities process for Year 3 and future years and added additional criteria: stakeholders should apply 1 or more of the below criteria when submitting nominations for improvements (82 FR 53660). In addition, in the CY 2019 PFS final rule (83 FR 59779) we finalized to add a “public health emergency as determined by the Secretary” and in the CY 2021 PFS final rule (85 FR 84883 through 84884) we finalized to add “Include activities which can be linked to existing and related MIPS quality and cost measures, as applicable and feasible” to the criteria below.

- Relevance to an existing improvement activities subcategory (or a proposed new subcategory);
- Importance of an activity toward achieving improved beneficiary health outcomes;
- Importance of an activity that could lead to improvement in practice to reduce health care disparities;
- Aligned with patient-centered medical homes;
- Focus on meaningful actions from the person and family’s point of view;
- Support the patient’s family or personal caregiver;
- Representative of activities that multiple individual MIPS eligible clinicians or groups could perform (for example, primary care, specialty care);
- Feasible to implement, recognizing importance in minimizing burden, especially for small practices, practices in rural areas, or in areas designated as geographic HPSAs by HRSA;
- Evidence supports that an activity has a high probability of contributing to improved beneficiary health outcomes;
- Include activities which can be linked to existing and related MIPS quality and cost measures, as applicable and feasible;
- Include a public health emergency as determined by the Secretary; or
- CMS is able to validate the activity.

(cc) Proposed 2 New Criteria

In addition to the aforementioned considerations, when considering improvement activities for possible inclusion in MIPS, we propose 2 new criteria beginning with the CY 2022 Annual Call for Activities MIPS improvement activities: (1) Should not duplicate other improvement activities in the Inventory; and (2) should drive improvements that go beyond standard clinical practices. Regarding the first proposed criterion, we believe that there should not be duplication in the Inventory as clinicians could get double credit for doing the same activity. As discussed in the CY 2017 Quality Payment Program final rule (81 FR 77185), while the minimum reporting period for one improvement activity is 90 days, the maximum frequency with which an improvement activity may be reported would be once during the 12-month performance period. It is important that stakeholders review the current Inventory to ensure there is not a broader improvement activity that clinicians could attest to for the same activity. Regarding the second proposed criterion, we believe that improvement activities should drive improvements that go beyond standard clinical practices and should be innovative, to have the potential for significant patient benefit when clinicians learn and implement the activities.

We request public comments on our proposals.

(dd) Proposed Minimum Requirement

We have received feedback from stakeholders through the Annual Call for Activities process and during the CY 2021 PFS rulemaking process that the nomination acceptance process is unclear, stakeholders are frustrated by nominating improvement activities that are not accepted, and our reasoning for not accepting their nomination is not clear.

Our current policy requires that stakeholders apply a minimum of 1 or more of the established criteria when submitting a nomination through the Annual Call for Activities process for a new improvement activity (82 FR 53660). Through past Annual Call for Activities, we have found that many of the nominations that we receive meet the minimum 1 criterion, but are not appropriate for inclusion in the Inventory for other reasons. We often receive submissions describing practices that are standard and submissions that are too specific to a particular specialty. We believe that when evaluating nominations, we should use multiple factors in deciding on the selection of submitted improvement activities, not all of which can be listed upfront. Ultimately, we must rely on our internal processes and expertise in determining whether or not a nominated improvement activity meets the criteria and needs of the program. However, in an effort to increase transparency, we have reevaluated our criteria and believe there are a number of significant criteria that improvement activity proposals should meet to be included in the Inventory. Therefore, beginning with nominations submitted during the 2022 nomination period for the Annual Call for Activities, we are proposing to increase the number of criteria stakeholders are required to meet when submitting an activity proposal, from a minimum of 1 to 8 criteria, which includes the 2 proposed criteria in section IV.A.3.d(3)c(c)(B)(cc) of this proposed rule should they be finalized.

We believe that the following 8 criteria, 6 of which are on the current list and 2 of which are proposed (in
nominations, but not all. Meeting 1 or more of the optional factors may increase a nomination’s chances of being added to the Inventory. The proposed optional factors are:

1. Alignment with patient-centered medical homes (82 FR 53660);
2. Support for the patient’s family or personal caregiver (82 FR 53660);
3. Responds to a public health emergency as determined by the Secretary (83 FR 59779);
4. Addresses improvements in practice to reduce health care disparities (82 FR 53660);
5. Focus on meaningful actions from the person and family’s point of view (82 FR 53660); and
6. Representative of activities that multiple individual MIPS eligible clinicians or groups could perform (for example, primary care, specialty care) (82 FR 53660).

We request public comments on our proposal.

(C) Improvement Activity Removal

In the CY 2020 PFS final rule (84 FR 62988 through 62990), we finalized the factors for consideration in removing improvement activities. We stated that we would fully examine each activity prior to removal and that commenters would have an opportunity to provide their input during notice-and-comment rulemaking.

(aa) Proposed Improvement Activity Suspension Policy

A circumstance has come to our attention that requires we examine the specifics of the improvement activities removal of activities policy in relation to the performance period. Following the publication of the CY 2021 PFS proposed rule, we became aware that the underlying program for 1 of the improvement activities in the Inventory had expired on March 31, 2020. Therefore, clinicians could no longer complete the activity from April 1 through December 31, 2020. To avoid any potential confusion or incorrect attestation, we removed this activity in the CY 2021 PFS final rule (85 FR 84885). This occurrence alerted us to the potential that other activities could become obsolete or be impacted by clinical practice guideline changes that affect the activity and could potentially result in patient harm, and that we may not learn about this information during the rulemaking timeframes. Because changes made in rulemaking do not apply until the following performance year, this timing could affect an improvement activity that needs to be urgently addressed.

As a result, beginning with the 2022 performance period, we are proposing that in the case of an improvement activity for which there is a reason to believe that the continued collection raises possible patient safety concerns or is obsolete, we would promptly suspend the improvement activity and immediately notify clinicians and the public through the usual communication channels, such as listservs and Web postings. We would then propose to remove or modify the improvement activity as appropriate in the next rulemaking cycle.

We request public comments on our proposal.

(ii) Changes to the Improvement Activities Inventory

(A) Background

In the CY 2018 Quality Payment Program final rule (82 FR 53660), we finalized that we would establish improvement activities through notice-and-comment rulemaking. We refer readers to Table H in the Appendix of the CY 2017 Quality Payment Program final rule (81 FR 77177 through 77199), Tables F and G in the Appendix of the CY 2018 Quality Payment Program final rule (82 FR 54175 through 54229), Tables A and B in the Appendix 2 of the CY 2019 PFS final rule (83 FR 60286 through 60303), Tables A, B, and C in the Appendix 2 of the CY 2020 PFS final rule (84 FR 63514 through 63538), and Tables A, B, and C in the Appendix 2 of the CY 2021 PFS final rule (85 FR 85370 through 85377) for our previously finalized improvement activities Inventory. We also refer readers to the Quality Payment Program website under Explore Measures and Activities at https://qpp.cms.gov/mips/explore-measures?tab=improvement Activities&py=2020 for a complete list of the current improvement activities. In this proposed rule, we are proposing to add 7 new improvement activities, modify 15 existing improvement activities, and remove 6 previously adopted improvement activities for the CY 2022 performance period and future years. We refer readers to the below and Appendix 2 of this proposed rule for more details.

(B) Proposed Changes to Adopted Improvement Activities

(aa) Proposed Changes to the “Drug Cost Transparency To Include Requirements for Use of Real-Time Benefit Tools” Improvement Activity

In the CY 2020 PFS final rule (84 FR 63515), we adopted IA_BE_25, titled “Drug Cost Transparency to include requirements for use of real-time benefit
tools” beginning with the 2020 performance year and for subsequent years. This activity description reads as follows: To receive credit for this improvement activity, MIPS eligible clinicians must attest that their practice provides counseling to patients and/or their caregivers about the costs of drugs and the patients’ out-of-pocket costs for the drugs. If appropriate, the clinician must also explore with their patients the availability of alternative drugs and patients’ eligibility for patient assistance programs that provide free medications to people who cannot afford to buy their medicine. One source of information for pricing of pharmaceuticals could be a real-time benefit tool (RTBT), which provides to the prescriber, real-time patient-specific formulary and benefit information for drugs, including cost-sharing for a beneficiary. (CMS finalized in the Modernizing Part D and Medicare Advantage to Lower Drug Prices and Reduce Out of Pocket Expenses final rule (84 FR 23832, 23863) that beginning January 1, 2021 Medicare Part D plans will be required to implement one or more RTBT(s).) Thus, this activity allows a real-time benefit tool (RTBT) to be one source of information for pricing of pharmaceuticals, which provides to the prescriber, real-time patient-specific formulary and benefit information for drugs, including cost-sharing for a beneficiary.

The 2021 Consolidated Appropriations Act (H.R. 116–133, Pub. L. 116–260) B included section 119 in Division CC entitled “Increasing the use of real-time benefit tools to lower beneficiary costs.” Subsection (c) of section 119 includes a provision called “Inclusion of Use of Real-Time Electronic Information in Shared Decision-Making Under MIPS.” This provision amended section 1848(q)(2)(B)(iii)(IV) of the Act by adding text noting that this subcategory shall include as an activity, for performance periods beginning on or after January 1, 2022, use of a real-time benefit tool as described in section 1860D–4(o) of the Act. In addition, the Secretary may establish this activity as a standalone or as a component of another activity.

In accordance with this statutory requirement, in this proposed rule, we propose to modify this improvement activity such that beginning with the CY 2022 performance year and for subsequent years, the activity would require use of an RTBT. As previously finalized, use of an RTBT was optional. We refer readers to Appendix 2 of this proposed rule for additional details.

We request public comments on our proposal.

(b) Proposed Changes to the COVID–19 Clinical Data Reporting With or Without Clinical Trial (IA_ERP_3) Improvement Activity

We refer readers to the March 31st IFC for COVID–19 (85 FR 19276 through 19277) and September 2nd COVID–19 IFC (85 FR 54848 through 54851) for a regulatory history of this improvement activity. In the September 2nd COVID–19 IFC (85 FR 54848 through 54851), we extended the modified COVID–19 Clinical Data Reporting with or without Clinical Trial improvement activity through the CY 2021 performance period due to the continued COVID–19 infection we were experiencing nationwide. We anticipated the need for COVID–19 clinical trials and data collection/sharing through registries to continue through CY 2021 at which time we would reassess whether there remains a need for additional data sharing or if preventive measures and clinical treatments have advanced to the point where these type of data are not needed.

In this proposed rule, we are proposing to extend the COVID–19 Clinical Data Reporting with or without Clinical Trial improvement activity for CY 2022 performance period and future years due to continued COVID–19 infections we are experiencing nationwide and the need for further research. Clinicians will continue to treat beneficiaries with COVID–19, and we anticipate the need for COVID–19 clinical trials and data collection/sharing through registries to continue through CY 2022 and future years. Each year, we intend to reassess whether there remains a need for additional data sharing or if preventive measures and clinical treatments have advanced to the point where these type of data are not needed. We believe it is important for eligible clinicians to be able to attest to this improvement activity if it is still pertinent. Further, we believe that participation in this improvement activity is likely to result in improved outcomes by improving the collection of data clinicians use for the care of their patients as they monitor and manage COVID–19. We will continue to reassess whether there remains a need for additional data sharing or if preventive measures and clinical treatments have advanced to the point where these type of data are not needed and would discontinue the activity through notice-and-comment rulemaking as needed. We also refer readers to Appendix 2 of this proposed rule for details on our proposals to add 7 new improvement activities, modify 15 previously adopted improvement activities, and remove 6 previously adopted improvement activities.

We request public comments on our proposal.

(4) Promoting Interoperability Performance Category

(a) Background

Section 1848(q)(2)(A) of the Act includes the meaningful use of certified electronic health record technology (CEHRT) as a performance category under the MIPS. As required by sections 1848(q)(2) and (5) of the Act, the four performance categories of the MIPS shall be used in determining the MIPS final score for each MIPS eligible clinician. In general, MIPS eligible clinicians will be evaluated under all four of the MIPS performance categories, including the Promoting Interoperability performance category.

(b) Promoting Interoperability Performance Category Performance Period

As finalized in the CY 2021 PFS final rule at § 414.1320(g)(1) (85 FR 84886), for the 2024 MIPS payment year, and each subsequent MIPS payment year, the performance period for the Promoting Interoperability performance category is a minimum of any continuous 90-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year. Thus, for the 2024 MIPS payment year, the performance period for the Promoting Interoperability performance category is a minimum of any continuous 90-day period within CY 2022, up to and including the full CY 2022 (January 1, 2022 through December 31, 2022). We stated that we believe this would be an appropriate performance period because it would offer stability and consistency for MIPS eligible clinicians reporting for the Promoting Interoperability performance category. We are not proposing any changes to the Promoting Interoperability performance category period that we established under § 414.1320(g)(1) (85 FR 84886).

(c) Promoting Interoperability Performance Category Measures for MIPS Eligible Clinicians

(i) Proposed Changes to the Query of Prescription Drug Monitoring Program Measure Under the Electronic Prescribing Objective

(A) Measure Background

We have adopted a Query of Prescription Drug Monitoring Program (PDMP) measure under the Electronic Prescribing objective. For background
on this measure, we refer readers to the CY 2019 PFS final rule (83 FR 59800 through 59803) and the CY 2020 PFS final rule (84 FR 62992 through 62994). In the CY 2021 PFS final rule (85 FR 84887 through 84888), we finalized that the Query of PDMP measure will remain optional and eligible for 10 bonus points for the CY 2021 performance period/2023 MIPS payment year.

(B) State PDMPs’ Progress and Previous Stakeholder Feedback

In the CY 2020 and CY 2021 PFS final rules (84 FR 62992 through 62994 and 85 FR 84887 through 84888), we described the concern expressed by stakeholders that they believed it was premature for the Promoting Interoperability performance category to require the Query of PDMP measure and score it based on performance. Feedback received from health IT vendors and MIPS eligible clinicians expressed that flexibility in the measure presents unintended challenges such as significant burden associated with IT system design and additional development needed to accommodate the measure and any future changes to it.

We understand that there is wide variation across the country in how health care providers are implementing and integrating PDMP queries into health IT and clinical workflows, and that it could be burdensome for health care providers if we were to narrow the measure to specify a single approach to PDMP–EHR integration at this time. At the same time, we have heard extensive feedback from EHR developers that effectively incorporating the ability to count the number of PDMP queries in the EHR would require more robust measurement specifications. These stakeholders stated that health IT developers may face significant cost burdens if they either fully develop numerator and denominator calculations for all the potential use cases and are required to change the specification at a later date.

Stakeholders have noted that the cost of additional development will likely be passed on to health care providers without additional benefit as this development would be solely for the purpose of calculating the measure rather than furthering the clinical goal of the measure (for public comments discussed in last year’s final rule, we refer readers to 85 FR 84887 through 84888).

In support of efforts to expand the use of PDMPs, there are currently a number of federal activities underway aimed at developing a more robust and standardized approach to EHR–PDMP integration, federal partners, including the CDC and ONC, and private sector stakeholders, are focused on developing and refining standard-based approaches to enable effective integration into clinical workflows, exploring emerging technical solutions to enhance access and use of PDMP data, and providing technical resources to a variety of stakeholders to advance and scale the interoperability of health IT systems and PDMPs. Moreover, a number of enhancements to PDMPs are occurring across the country, including enhancements to RxCheck, which is a federally supported interstate exchange hub for PDMP data.219 The ONC Interoperability Standards Advisory describes monitoring of current and emerging standards related to PDMP and opioid use disorder (OUD) data capture and exchange that would allow a provider to request a patient’s medication history from a state PMDP and for PDMP data to be exchanged between systems and states.220 We believe these standards and technical approaches are likely to rapidly reach maturity to support exchange across health care system stakeholders.

The SUPPORT for Patients and Communities Act (Pub. L. 115–271), enacted in 2018, is an important investment in combating the opioid epidemic. Several of the provisions of the SUPPORT for Patients and Communities Act address opioid use disorder prevention, recovery, and treatment, including legislative changes specific to the Medicare and Medicaid programs intended to increase access to evidence-based treatment and follow-up care. Specifically, with respect to PDMPs, the SUPPORT for Patients and Communities Act included new requirements and federal funding for PDMP enhancement, integration, and interoperability, and established mandatory use of PDMPs by certain Medicaid providers to help reduce opioid misuse and overprescribing and to help promote the overall effective prevention and treatment of opioid use disorder beginning in October of 2021.

(C) Proposed Measure Changes

Given current efforts to improve the technical foundation for EHR–PDMP integration, the continued implementation of the SUPPORT for Patients and Communities Act (in particular, its provisions specific to Medicaid providers and qualified

PDMPs), our ongoing review of alternative measure approaches, and stakeholder concerns about the current readiness across states for implementation of the existing measure, we believe that at least 1 more year is needed prior to potentially requiring the Query of PDMP measure.

While we appreciate the concerns that stakeholders have shared, we continue to believe that this measure can play an important role in helping to address the opioid crisis. By integrating PDMP data into the health record, health care providers can improve clinical decision making by utilizing this information to identify potential opioid use disorders, inform the development of care plans, and develop effective interventions. Maintaining it as an optional measure with bonus points signals to the MIPS eligible clinician and vendor community that this is an important measure to address a current gap that can help spur development and innovation in order to reduce barriers and challenges.

Therefore, we are proposing to maintain the Electronic Prescribing Objective’s Query of PDMP measure as optional and worth 10 bonus points for the CY 2022 performance period/2024 MIPS payment year. We seek comments on this proposal.

(D) Health IT Updates and Measure Direction

Given recent progress in a variety of areas, we believe that there is now a clearer trajectory forward to potentially requiring the Query of PDMP measure. These developments include updated requirements for certified health IT, standards development activities around PDMPs, and other projects which can more tangibly inform future policy changes. For example, under final policies recently adopted in the CY 2021 PFS final rule (85 FR 84815 through 84828), participants in the Medicare Promoting Interoperability Program for eligible hospitals and critical access hospitals (CAHs) and the Promoting Interoperability performance category are scheduled to begin using certified EHR technology incorporating application programming interfaces (APIs) based on HL7® FHIR® standard version Release 4 in CY 2023 consistent with updates to certified health IT which were finalized in the “21st Century Cures Act: Interoperability, Information Blocking, and the ONC Health IT Certification Program” final rule (hereinafter referred to as the “ONC 21st Century Cures Act Final rule”), published in the May 1, 2020 Federal Register (85 FR 25642 through 25961, 219 https://www.pdmpassist.org/RxCheck. 220 https://www.healthit.gov/isa/allows-a-provider-request-a-patients-medication-history-a-state-prescription-drug-monitoring.
25740). Updates to 2015 Edition health IT certification criteria in the ONC 21st Century Cures Act final rule also incorporated NCPDP SCRIPT standard version 2017071 for electronic prescribing. The availability of both standardized APIs and updated standards for e-prescribing within certified health IT could serve as a stepping stone to future technical approaches that enable more seamless exchange of data between CEHR and PDMP systems. A number of recent efforts have sought to improve interoperability between EHRs and PDMPs. In 2020, ONC completed work to map the NCPDP SCRIPT standard version 2017071, the Prescription Monitoring Information eXchange (PMIX) standard version 2, and the 2015 American Society for Automation in Pharmacy (ASAP) Prescription Monitoring Program Web Service standard version 2.1A to the Health Level Seven International (HL7®) Fast Healthcare Interoperability Resources (FHIR®) standard version Release 4.

ONC also began work in partnership with the CDC, the Department of Justice’s Bureau of Justice Assistance, and the eHealth Exchange to develop a prototype to pilot an innovative technical solution for the delivery of patient medication histories across state lines via HL7® FHIR®. The eHealth Exchange is a network of networks that is active in all 50 states connecting federal and non-federal healthcare organizations to improve patient care and public health. To date, the prototype has been successfully tested in several states. Early prototype testing used synthetic data to evaluate system capacity to send and receive a patient’s medication history request and response. The goal of the project is to allow any provider who is live on the eHealth Exchange to use that existing connection to query a patient’s record on the RxCheck Hub, which routes the query to individual state PDMPs who are also live on RxCheck. This solution will enable health care providers to query PDMPs via existing connections to health information exchange (HIE) networks as a way to: (1) Leverage existing technology; (2) Reduce burden associated with multiple, disparate system interfaces and workflows; and (3) Allow for the exchange and full integration of data within allowable law from the point of exchange for medication reconciliation, allergy checks, and other forms of clinical decision support.

Based upon these developments, which are advancing enhanced certified functionality, effective functional data exchange, and the use of open, mature standards, we believe there is a much better informed roadmap for achieving better integration between PDMPs and EHRs with enhanced interoperability of controlled prescription data across states and systems. We believe that as these activities develop, they can help to address some of the previous concerns raised by stakeholders around this measure, and we will continue to work with ONC to monitor these activities.

While we believe the Query of PDMP measure is very important to avoid and address the over-prescribing of opioids, we also recognize that some states and systems may not be ready at this time to effectively exchange this data. In light of further work in this area and our stated goals for increasing the impact of this measure, we are seeking stakeholder comment on plans for requiring the Query of PDMP measure in the Promoting Interoperability performance category in the near future. To advance in this direction with both transparent proposals and informed guidance, we request public comment on the future direction for the measure, specifically:

• To what degree would all MIPS eligible clinicians be prepared to report on the current Query of PDMP measure (Yes/No response) in the near future? What additional considerations would need to be addressed before transitioning to a version of the measure that requires the submission of a numerator/denominator?
• Would changes to the Query of PDMP measure be necessary to accommodate other technical approaches that may be implemented in the future, such as exchange of information with a PDMP or with multiple PDMPs using HL7® FHIR®?
• What, if any, exclusions should be made available as part of the measure’s specifications with regard to MIPS eligible clinicians?
• When will state PDMPs be ready to effectively exchange data with provider systems using HL7® FHIR® to support this measure? What are the most common standards and approaches used to access PDMP data through provider systems currently?
• What technical considerations exist for intrastate vs. interstate PDMP queries? How could health information exchange networks play a role in expanding access to PDMP data?

(ii) Proposed Changes to the Provide Patients Electronic Access to Their Health Information Measure Under the Provider to Patient Exchange Objective

(A) Background

In the CY 2019 PFS final rule (83 FR 59812 through 59815), we renamed the Patient Electronic Access Objective to the Provider to Patient Exchange Objective, which includes the Provide Patients Electronic Access to Their Health Information measure. For more information about the Provide Patients Electronic Access to Their Health Information measure, we refer readers to the following preamble discussions in prior rulemaking: 84 FR 62995 and 62999 through 63000, 83 FR 59812, 82 FR 53674, 81 FR 77228, 80 FR 62841 through 62851, 77 FR 54007, and 75 FR 44353.

(B) Proposed Data Availability Requirement for MIPS Eligible Clinicians

The Provide Patients Electronic Access to Their Health Information measure requires, for at least one unique patient seen by the MIPS eligible clinician: (1) The patient (or the patient-authorized representative) is provided timely access to view online, download, and transmit his or her health information; and (2) the MIPS eligible clinician ensures the patient’s health information is available for the patient (or patient-authorized representative) to access using any application of their choice that is configured to meet the technical specifications of the Application Programming Interface (API) in the MIPS eligible clinician’s CEHR (84 FR 62999–63000 and 82 FR 53674). We are proposing to modify this measure to require MIPS eligible clinicians to ensure that patient health information remains available to the patient (or patient-authorized representative) to access indefinitely and using any application of their choice that is configured to meet the technical specifications of the API in the MIPS eligible clinician’s CEHR. MIPS eligible clinicians would be required to ensure this information remains available indefinitely (that is, not merely for a defined period of time). The proposed requirement would apply beginning with the performance period in 2022, and would include all patient health information from encounters on or after January 1, 2016.

Currently, the Provide Patients Electronic Access to Their Health Information measure does not specify how long MIPS eligible clinicians are required to make patient data available, or to ensure that patient data remain
available to patients in the event that a MIPS eligible clinician switches EHR vendors (81 FR 77228). In an effort to minimize stakeholder burden, we want to align the date under our proposal for making information about encounters available with the date of service start date (January 1, 2016) as finalized in the Patient Access and Interoperability final rule (85 FR 25528), and as proposed for the Promoting Interoperability Program for eligible hospitals and CAHs in the FY 2022 IPPS/LTCI proposed rule (86 FR 25631). As an alternative to our proposal, we considered different encounter start dates, such as encounters on or after January 1, 2012, or encounters on or after January 1, 2019. We believe, however, that a requirement for MIPS eligible clinicians to ensure patient health information remains available indefinitely, as well as an encounter start date of January 1, 2016, would provide the most benefit to patients when accessing their health information as compared to the burden and costs to MIPS eligible clinicians implementing these proposed requirements.

We are seeking public comment on our proposal to modify the Provide Patients Electronic Access to Their Health Information measure under the Provider to Patient Exchange objective.

The Promoting Interoperability performance category for eligible clinicians has been an important mechanism for encouraging health care data exchange. But in an attempt to reduce burden, we previously stated our intention to propose in future rulemaking to remove the Public Health and Clinical Data Exchange objective and measures no later than CY 2022 (83 FR 59816). In response to these comments, we stated that we will continue to monitor the data we compile specific to the public health reporting requirements and take the commenters’ concerns into consideration related to future actions (83 FR 59816).

Effective responses to public health events, such as the COVID–19 pandemic, require fast, accurate exchange of data between health care providers and federal, state, and local public health agencies (PHAs). Health care providers collect these data for patient care and PHAs need them to protect the public, whether to track an outbreak, initiate contact tracing, find gaps in vaccine coverage, or pinpoint the source of a foodborne outbreak.

While our current approach has encouraged health care systems to stand up some of these capabilities, significant gaps remain, and absent stronger incentives it will be difficult to stand up the comprehensive data exchange needed for future public health response. Thus, we believe that a more assertive approach is needed.

(B) Proposed Modifications to the Reporting Requirements for the Public Health and Clinical Data Exchange Objective

In this section, we are proposing to require two of the measures associated with the Public Health and Clinical Data Exchange objective, beginning with the performance period in CY 2022: Immunization Registry Reporting; and Electronic Case Reporting. These two measures would put PHAs on better footing for future health threats and a long-term COVID–19 pandemic recovery by strengthening two important public health functions: (1) Vaccine uptake; and (2) case surveillance. Requiring these measures would enable automated case reporting for fast public health response; and local and national visibility on immunization uptake so PHAs can tailor vaccine distribution strategies.

(aa) Immunization Registry Reporting Measure

Immunizations are considered one of the ten great public health achievements and have resulted in declines in cases, hospitalizations, deaths, and health care costs associated with vaccine preventable diseases.222 The benefits and value of immunizations are realized when public policy, health systems, and community-based intervention efforts are working in coordination. Ensuring the coordination of these efforts can achieve high immunization coverage is dependent on the availability of timely, accurate, and complete information on vaccinations received by individuals in a population.

Immunization registries (also called immunization information systems, or IIS) are powerful tools that allow collaboration between vaccine providers and public health agencies and enable coordination of population-based interventions. Immunization registries are confidential, population-based, computerized systems that record all vaccination doses administered by participating health care providers for individuals residing within a particular jurisdiction. At the point of clinical care, an immunization registry can provide consolidated immunization histories to assist vaccine providers in determining appropriate patient vaccinations. At the population level, immunization registries provide data on vaccination coverage assessment and program operations and in guiding public health action to improve vaccination rates.

Currently, 50 states, the District of Columbia, eight island territories, and three cities (New York City, Philadelphia, and San Diego) operate an immunization registry. CDC provides technical assistance and nationwide leadership to all state immunization registries to ensure the optimal use of immunization registries for determining vaccination coverage at local, state, and national levels. Immunization registries already have connections in place to capture administered doses in real-time for a substantial portion of the population, a process accelerated over the last 10 years by the Medicare and Medicaid Promoting Interoperability Programs. According to data from the most recent CDC IIS Annual Report (2019) available, immunization registries currently hold demographics and immunization data on 95 percent of

optimize the use of immunization registries as a result of family doctors. More complete data in their interactions, including with their patients, benefit by increasing the COVID–19 vaccination response because it would improve the data quality of records in immunization registries and facilitate use of immunization registries for clinical decision support and tracking of vaccine administration and distribution.

We believe that making the Immunization Registry Reporting measure required would increase the reporting of immunization data by health care providers to public health agencies. Making the measure required is also critical for the public health response to COVID–19 vaccination coverage because it would provide a better view of the vaccines administered and distributed at national, state, and local levels. This is a function immunization registries currently provide for all public vaccines. Any additional data that registries to determine who has not been vaccinated, pockets of under vaccination, and identifying where interventions should be focused for routine and emergency response vaccines. Requiring the measure would reduce the regulatory and administrative burden health care providers experience when exchanging information with immunization registries.

We are not proposing any changes to the description of the measure including any of the exclusions that we established in CY 2019 PFS final rule at 83 FR 59815 through 59817.

(b) Electronic Case Reporting

Health care providers are required by state law to report certain diseases and conditions, a process called case reporting, which provides PHAs with data on approximately 120 diseases and conditions of public health significance.224 Case reporting is a vital and longstanding tool that PHAs use to prevent the spread of infectious diseases. Case reporting serves as early notification to PHAs for potential outbreaks and includes information that enables PHAs to start contact tracing and other prevention measures. Case reports also include critical clinical information that would not be included in electronic disease surveillance or laboratory reporting, and can help to illuminate the impact of comorbidities, treatments, and variable access to care. Information from the case reports can be used to further work on social determinants of health and ensure equal access to preventative care across populations. Electronic case reporting is the automated, real-time, bidirectional exchange of case report information between EHRs and PHAs. Electronic case reporting uses standard codes to trigger the transfer of relevant clinical data to PHAs for case investigation and follow-up. As of March 2021, most states do not require electronic submission of case reports as part of their regulations and case reporting often occurs through outdated manual methods (for example, fax, email, or printed forms). This results in delays, underreporting, and incomplete or inaccurate case data. Manual case reporting also imposes burdens on health care providers, taking staff time away from patients and complicating the process of public health reporting requirements without imposing additional burden and disrupting the clinical workflow. This automated data exchange facilitates faster and more efficient disease tracking, case management, and contact tracing. Electronic case reporting provides more timely and complete data than manual reporting, including data on demographics, comorbidities, immunizations, medications, occupation, and other treatments.

Recent efforts by the CDC have sought to significantly improve the effectiveness of electronic case reporting through eCR Now, a strategic initiative that allows for rapid adoption and implementation of electronic case reporting for COVID–19 (https://www.cdc.gov/coronavirus/2019-ncov/hcp/electronic-case-reporting.html). As part of this initiative, CDC and its partners have developed an eCR Now FHIR® application (app) to establish electronic case reporting capability in EHR systems. EHR vendors can also implement the eCR functionality within their products to accomplish this reporting. The initiative also supports an electronic case reporting infrastructure that is helping to advance interoperability. This infrastructure supports the transmission of electronic case reports to a shared service platform, and not directly to a PHA, which means that any health care provider that has established an electronic case reporting connection also has a connection with every state PHA, many large local health departments, and some territories. This promotes nationwide interoperability and increases the availability of data for patients who may be traveling or spending time away from their home state. For example, if a patient is a resident of one state but seeks care in another state, this infrastructure will automatically route the case report to both states that would have jurisdiction over this report. This increases inter-jurisdictional reporting, allowing for more seamless case investigation at the national level. The interoperable infrastructure and the use of a standard data format also reduces the variability of case report forms across conditions and jurisdictions, streamlining reporting forms for EHR vendors and health care providers.

As a result of the CDC effort to scale up eCR Now for COVID–19, all 50 states, the District of Columbia, Puerto Rico and 12 large local jurisdictions have connected to the shared services platform and are currently receiving electronic case reports, with more than 8,800 healthcare facilities on board and 8.6 million reports for COVID–19.

224 CSTE State Reportable Condition Assessment page: https://www.cste.org/page/SRCA.
received by PHAs as of June 28, 2021.\textsuperscript{225} The eCR infrastructure is designed to rapidly scale for PHEs, such as COVID–19, and it is enabled to currently support data transmission for 99 reportable and notifiable conditions. While these are significant advancements, the piecemeal approach of encouraging adoption of these tools by individual health care providers has not been an effective or efficient means to quickly scale this effort nationally as has been needed for the COVID–19 PHE response.

We believe the uneven adoption of electronic case reporting creates a public health vulnerability. We are proposing to make the Electronic Case Reporting measure a required measure under the Public Health and Clinical Data Exchange objective of the Promoting Interoperability performance category beginning with the performance period in CY 2022. For more information about the Electronic Case Reporting measure, we refer readers to the preamble discussion in prior rulemaking at 81 FR 77229. We believe making this a required measure would accelerate development of electronic case reporting capabilities in EHR systems, reduce health care administrative burden of complying with state-mandated disease reporting requirements, provide regulatory clarity for EHR vendors, and improve the timeliness, completeness, and utility of case report data for PHAs. We believe that requiring the Electronic Case Reporting measure would be feasible and beneficial for MIPS eligible clinicians. This change would encourage EHR vendors to make electronic case reporting available to their customers, which would make adoption of this capability relatively straightforward for MIPS eligible clinicians. To meet the CEHTR definition when reporting on this measure, in our EHR Incentive Program Stage 3 and Modifications to Meaningful Use in 2015 through 2017 final rule (80 FR 62870 through 62885) we established that health care providers are required to use a health IT module certified to the “Transmission to public health agencies—electronic case reporting” certification criterion at 45 CFR 170.315(j)(5) that relates to how the health IT uses structured data within an EHR to trigger or indicate the generation of an electronic initial case report.\textsuperscript{226}

They may then transmit the report in the manner specified by the case reporting requirements of the entity to which they are transmitting a report.

We believe that requiring the Electronic Case Reporting measure would not only provide certainty to EHR vendors and facilitate an organized and industry-wide rollout of electronic case reporting capabilities, but would also help health care providers reduce their public health reporting burden. We are not proposing any changes to the description of the Electronic Case Reporting measure and the exclusions that we established in the CY 2019 PFS final rule at 83 FR 59815 through 59817 will remain available.

(cc) Proposed Scoring of the Public Health and Clinical Data Exchange Objective

We are proposing that beginning with the performance period in CY 2022, a MIPS eligible clinician would receive 10 points for the Public Health and Clinical Data Exchange objective if they report a “yes” response for each of the following required measures: Immunization Registry Reporting; and Electronic Case Reporting. In the event that a MIPS eligible clinician is able to claim an exclusion for one or more of these required measures, we are proposing they would receive 10 points for the objective if they report a “yes” response for one measure and claim an applicable exclusion for which they qualify for the remaining measure. If the MIPS eligible clinician fails to report on any one of the two measures required for this objective or reports a “no” response for one or more of these measures, we are proposing that the MIPS eligible clinician would receive a score of zero for the Public Health and Clinical Data Exchange objective, and a total score of zero for the Promoting Interoperability performance category. If an MIPS eligible clinician claims applicable exclusions for which they qualify for both required measures, we propose to redistribute the points associated with the objective to the Provider to Patient Exchange objective.

We are proposing to retain the Public Health Registry Reporting, Clinical Data Registry Reporting, and Syndromic Surveillance Reporting measures, and to make them optional and available for bonus points beginning with the performance period in CY 2022. For more information about these measures, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77229) and the EHR Incentive Program Stage 3 and Modifications to Meaningful Use in 2015 through 2017 final rule (80 FR 62818 through 62825). We are proposing a MIPS eligible clinician may earn 5 bonus points if they report a “yes” response for either the Public Health Registry Reporting measure or the Clinical Data Registry Reporting measure or the Syndromic Surveillance Reporting measure. Reporting on more than one of these optional measures would not yield additional bonus points.

In connection with our proposal to make these measures optional, we are proposing to remove the three exclusions that we established in the CY 2019 PFS final rule at 83 FR 59815 through 59817 for the Public Health Registry Reporting measure, Clinical Data Registry Reporting measure, and the Syndromic Surveillance Reporting measure.

We are seeking comment on these proposals.

(d) SAFER Guides

(i) Background

ONC developed and released the Safety Assurance Factors for EHR Resilience (SAFER Guides) in 2014, and later updated them in 2016. This series of nine user guides support the ability of health care providers to address EHR safety.\textsuperscript{227} Collectively, the SAFER Guides help health care organizations at all levels, from small practices to multi-system chains and tertiary care facilities, to conduct self-assessments to optimize the safety and safe use of EHRs in the three areas listed in Table 43. The SAFER Guides are intended to be utilized by EHR users, developers, patient safety organizations, and those who are concerned with optimizing the safe use of health IT. Completing a self-assessment using the SAFER Guides is one of the first steps MIPS eligible clinicians can take to support a “culture of safety” within their organization, and ensure they are responsible operators of technology tools, including certified health IT products, which they utilize in the delivery of care. The SAFER Guides are based on the best evidence available at the time of publication, which included a literature review, expert opinion, and field-testing at a wide range of health care organizations, from small ambulatory care practices to large health systems.

In the case of system disruption, failure, natural disaster, the SAFER Guides provide recommended safety practices during planned or unplanned EHR unavailability, where end users are unable to access all or part of their EHR. Also included are back-up procedures to

\textsuperscript{225} Healthcare Facilities in Production for COVID–19 Electronic Case Reporting (CDC).

\textsuperscript{226} For more information about this certification criterion, please see the Certification Companion Guide at https://www.healthit.gov/topic/safety/safer-guides.

\textsuperscript{227} https://www.healthit.gov/topic/safety/safer-guides.

(ii) Proposed New SAFER Guides Measure

We are proposing to add a new SAFER Guides measure to the Protect Patient Health Information objective, beginning with the CY 2022 performance period/2024 MIPS payment year. For this measure, we are proposing that a MIPS eligible clinician must attest to having conducted an annual self-assessment using the High Priority Practices Guide (available at https://www.healthit.gov/topic/safety/safer-guides), at any point during the calendar year in which the performance period occurs, with one “yes/no” attestation statement accounting for the complete self-assessment using the guide. We propose that this measure would be required, but it would not be scored, and that reporting “yes” or “no” would not affect the total number of points earned for the Promoting Interoperability performance category. We believe this measure would further enable the electronic exchange of health information to improve the quality of care, such as promoting care coordination, as described in section 1848(o)(2)(A)(ii) of the Act. We are also proposing to add corresponding regulatory text for this measure at §414.1375(b)(2)(iii)(C).

In order to complete a “self-assessment” using the High Priority Practices Guide, we would expect that each MIPS eligible clinician would complete a review and mark the associated checkboxes (fully, partially, or not implemented) of recommended practices included at the beginning of the Guide. Detailed worksheets with the rationales for, and examples of how, to implement each recommended practice follows the checklist section of the Guide. These worksheets also include likely sources of information the practice can turn to in order to complete their assessment of a recommended practice, as well as fillable note fields to record follow-up actions.

We understand that every organization faces unique circumstances, and will implement a particular practice differently. As a result, some of the specific examples in the SAFER Guides for recommended practices may not be applicable to every organization. We note that a “self-assessment” does not require an organization to confirm that it has implemented “fully in all areas” each practice described in a particular SAFER guide, nor will an organization be scored on how many of the practices the organization has fully implemented. Rather, the intent of this proposed requirement is for MIPS eligible clinicians to regularly assess their progress and status on important facets of patient safety.

The recommended practices in the SAFER Guides are intended to be useful for all EHR users. However, we recognize that the individuals responsible for the proposed annual assessment may vary across organizations. An optimal team for completing an annual review of the SAFER Guides might include clinicians (including physicians, nurses, pharmacists, and allied health staff), and the technical staff responsible for implementing and maintaining a practice’s EHR as well as data connections with external partners (for example, an HIE). Regarding the frequency of completing the self-assessment for the High Priority Practices Guide, we are proposing that a MIPS eligible clinician must attest to completing their assessment using the High Priority Practices Guide on an annual basis, following an initial completion of the assessment (some clinicians may have already completed an assessment using the SAFER Guides prior to implementation of this requirement, if finalized). We would expect MIPS eligible clinicians to revisit this assessment to determine whether any changes have occurred for their organization. We believe that requiring MIPS eligible clinicians to periodically review this self-assessment as proposed would support a stronger culture of change management within organizations, and would assist organizations in actively understanding and addressing potential safety vulnerabilities, which may significantly impact an organization’s safety posture. We recognize that organizations may be at different stages in their progress towards assessing patient safety vulnerabilities, and that MIPS eligible clinicians vary in the resources that they could devote to an annual review of the High Priority Practices Guide. Gathering this information may be time consuming for some, and others may not have the expertise available on staff to complete all of the requirements. For MIPS eligible clinicians with less experience in these areas, we note that there are a number of resources available, which

may be able to assist with completing a self-assessment.

We are inviting public comment on these proposals.

(e) Incrementation of the Numerator and Denominator for Promoting Interoperability Performance Category Measures

In the CY 2019 PFS final rule (83 FR 59799), we summarized a comment we received in response to proposals we had made in the CY 2019 PFS proposed rule concerning the measures for the Promoting Interoperability performance category beginning with the performance period in 2019. The commenter indicated that for some measures, MIPS eligible clinicians and group practices should be able to get credit for actions that are taken outside of the 90-day performance period. We responded to the comment by stating that since the inception of the Quality Payment Program, we have limited the ability to increment the numerator and denominator of measures to actions occurring during the performance period chosen, with the exception of the Security Risk Analysis measure, for which the relevant actions may occur any time during the calendar year. We now understand that our response to this comment may have caused confusion, and we wish to clarify our response. Instead of referring to the inception of the Quality Payment Program, we should have stated that the measures we proposed beginning with the performance period in 2019 would limit the ability to increment the numerator and denominator to actions occurring during the performance period chosen, with the exception of the Security Risk Analysis measure, for which the relevant actions may occur any time during the calendar year.

(f) Changes to the Scoring Methodology for the 2022 Performance Period

For ease of reference, Table 44 lists the objectives and measures for the Promoting Interoperability performance category for the performance period in CY 2022 as revised to reflect the proposals made in this proposed rule. Table 45 lists the 2015 Edition certification criteria required to meet the objectives and measures.

Table 46 reflects the scoring methodology for the Promoting Interoperability performance category for the performance period in CY 2022, if the proposed changes discussed earlier in this section are adopted as final, including the continuation of the optional Query of PDMP measure worth 10 bonus points for CY 2022, changes to the Provide Patients Electronic Access to Their Health Information Measure under the Provider to Patient Exchange objective, the adoption of a SAFER Guides measure, and modified requirements for the Public Health and Clinical Data Exchange objective.
attestation statements finalized for MIPS rule (81 FR 77028 through 77035). The requirements, we refer readers to the CY CEHRT. For further discussion on these clinician’s implementation and use of representations about a MIPS eligible three statements containing specific information blocking, which consist of category to support the prevention of Promoting Interoperability performance attestation requirements for the codified at § 414.1375(b)(3)(ii) these provisions, we established and certified EHR technology. To implement compatibility or interoperability of the functionality) to limit or restrict the willfully taken action (such as to disable functionality) to limit or restrict the clinician has not knowingly and willfully take action (such as to disable functionality) to limit or restrict the compatibility or interoperability of the certified EHR technology. • Statement B: Implemented technologies, standards, policies, practices, and agreements reasonably calculated to ensure, to the greatest extent practicable and permitted by law, that the certified EHR technology was, at all relevant times: (1) Connected in accordance with applicable law; (2) compliant with all standards applicable to the exchange of information, including the standards, implementation specifications, and certification criteria adopted at 45 CFR part 170; (3) Implemented in a manner that allowed for timely access by patients to their electronic health information; and (4) Implemented in a manner that allowed for the timely, secure, and trusted bi-directional exchange of structured electronic health information with other health care providers (as defined by 42 U.S.C. 300jj[3]), including unaffiliated providers, and with disparate certified EHR technology and health IT vendors. • Statement C: Responded in good faith and in a timely manner to requests to retrieve or exchange electronic health information, including from patients, health care providers (as defined by 42 U.S.C. 300jj[3]), and other persons, regardless of the requestor’s affiliation or technology vendor. Section 4004 of the 21st Century Cures Act added section 3022 to the Public Health Service Act (PHSA) (the “PHSA information blocking provision.”), which describes practices by health care providers, health IT developers, and HIEs and networks, that constitute information blocking, and provides for civil monetary penalties and other disincentives for those who engage in information blocking.

In the ONC 21st Century Cures Act final rule published in the May 1, 2020 Federal Register, ONC finalized a definition of information blocking and identified reasonable and necessary activities (“exceptions”) that do not constitute information blocking (85 FR 25642). For health care providers (as defined in 42 U.S.C. 300jj), information blocking means a practice that, except as required by law or covered by an exception, is likely to interfere with access, exchange, or use of electronic health information; and if conducted by a health care provider, such provider knows that such practice is unreasonable and is likely to interfere with, prevent, or materially discourage access, exchange, or use of electronic health information (45 CFR 171.103).

The 21st Century Cures Act provides for civil monetary penalties for any individual or entity that is a developer, network, or exchange that has committed information blocking (see section 3022(b)(2)(A) of the PHS Act). Regarding health care providers, the 21st Century Cures Act provides that “Any [health care provider] determined by the [HHS] Inspector General to have committed information blocking shall be referred to the appropriate agency to be subject to appropriate disincentives using authorities under applicable

* Signifies a proposal made in this CY 2022 PFS proposed rule.
federal law, as the Secretary sets forth through notice and comment rulemaking” (section 3022(b)(2)(B) of the PHSA).

(ii) Proposed Changes to the Attestation Statements

Although there could be some degree of overlap between conduct described in the attestation statements under § 414.1375(b)(3)(ii) and conduct that could be considered information blocking under section 3022 of the PHSA and ONC's implementing regulations at 45 CFR 171.103, it is important to note these are separate and distinct authorities. For instance, the ONC 21st Century Cures Act final rule finalized a definition for what constitutes information blocking, and exceptions to information blocking that are not reflected in the previously finalized attestation statements under § 414.1375(b)(3)(ii). While we previously stated in the 2017 QPP final rule that these attestation statements did not impose “unnecessary or unreasonable requirements” on health care providers (81 FR 77029), after careful review of these attestation statements in light of the information blocking regulations at 45 CFR part 171, we believe that statements B and C are no longer necessary. Thus, beginning with the performance period in CY 2022, we are proposing to no longer require statements B and C. We believe that the similarities between practices described under statements B and C, and the practices that could constitute information blocking under section 3022 of the PHSA and ONC’s implementing regulations will create confusion for stakeholders. To this point, the practices that could constitute information blocking under 45 CFR part 171 are much broader than those described in the attestation statements. We discuss specific instances of potential confusion below.

Statement B requires attestation to a series of statements regarding the use of certified technology and a designated manner for implementing certified technology. For instance, attestations to the implementation of technology compliant with the standards for certified health IT at 45 CFR part 170, and use of functionality to support health information exchange with other health care providers. However, as noted above, the definition of information blocking finalized in the ONC 21st Century Cures Act final rule is not specific to, nor limited to the use of certified technology, which is compliant with certain standards or the use of certain functionality. Under the ONC 21st Century Cures Act final rule, a health care provider may still be determined to have engaged in practices likely to interfere with access, exchange, or use of electronic health information (information blocking) regardless of whether they are using certified technology.

Regarding statement C, we stated in the 2017 QPP final rule that “technical, legal, and other practical constraints may prevent a health care provider from responding to some requests to access, exchange, or use electronic health information in a health care provider’s certified EHR technology” (81 FR 77033). Subsequently, in the ONC 21st Century Cures Act final rule, ONC established a set of reasonable and necessary activities that are not considered information blocking when responding to a request for EHI. The reasonable and necessary activities established under the ONC 21st Century Cures Act final rule now provide more specific direction to health care providers when responding to a request for EHI than the general “technical, legal, and other practical constraints,” which we described in the CY 2017 QPP final rule. Accordingly, we believe that continuing to require statement C may introduce confusion for those health care providers who are obligated to comply with the regulations finalized in the ONC 21st Century Cures Act final rule when responding to a request for EHI.

In order to distinguish the attestation required by section 106(b)(2)(A) of MACRA from information blocking under section 3022 of the PHSA, we are proposing to modify the headings of §§ 414.1375(b)(3) and (b)(3)(ii), add § 414.1375(b)(3)(iii), and modify the definition of “meaningful EHR user for MIPS” under § 414.1305 to specify that the clinician does not knowingly and willfully take action (such as to disable functionality) to limit or restrict the compatibility or interoperability of CEHRT, which reflects the language used in section 106(b)(2)(A) of MACRA. In addition, as discussed, we are proposing to no longer require attestation statements B and C beginning with the performance period in CY 2022, and we are proposing corresponding regulatory text amendments at § 414.1375(b)(3)(ii) and (iii). We made a similar proposal for the Medicare Promoting Interoperability Program in the FY 2022 IPPS/LTCPPS proposed rule (86 FR 25639 through 25641).

We invite public comment on our proposal.

(h) Additional Considerations

(i) Reweighting the Promoting Interoperability Performance Category for MIPS Eligible Clinicians in Small Practices

We previously established under § 414.1380(c)(2)(i)(C)(9) a significant hardship exception for MIPS eligible clinicians in small practices as defined in § 414.1305. In the CY 2018 Quality Payment Program final rule (82 FR 53682 through 53683), we established that we will reweight the Promoting Interoperability performance category to zero percent of the MIPS final score for MIPS eligible clinicians who qualify for this hardship exception. We established that a MIPS eligible clinician seeking to qualify for this exception must submit an application to us demonstrating that there are overwhelming barriers that prevent them from complying with the requirements for the Promoting Interoperability performance category, and that the exception is subject to annual renewal. In the CY 2018 Quality Payment Program final rule (82 FR 53579 through 53581), we also established that we will determine the size of small practices by utilizing claims data. This policy was further modified in the CY 2019 PFS final rule (83 FR 59727 through 59730) so that beginning with the 2021 MIPS payment year, a small practice is a TIN consisting of 15 or fewer eligible clinicians during the MIPS determination period.

In the CY 2018 Quality Payment Program proposed rule (82 FR 30076), we stated that we believed that special consideration should be available for MIPS eligible clinicians in small practices based on concerns previously identified by commenters, including small practices not being able to afford the upfront investments (including investments in EHR technology), and small practices not adopting EHRs due to the administrative and financial burden. Although some commenters requested that we automatically apply a hardship exception to clinicians in small practices, at the time we disagreed and stated that we believed that many small practices will be able to successfully report for the Promoting Interoperability performance category (82 FR 53683).

We have been monitoring the submission of data for the Promoting Interoperability performance category by small practices and individual clinicians who are part of a small practice, and the numbers remain low despite the no-cost technical assistance we offered small practices through the Small, Underserved, and Rural Support Initiative. Data from CY 2019 revealed
that of the 49,278 clinicians in small practices who were scored as an individual for MIPS, 84 percent of them did not submit Promoting Interoperability performance category data and did not apply for a small practice hardship exception application even though they may have qualified for the exception. Among clinicians who did not qualify for Promoting Interoperability performance category reweighting, only 29 percent of small practices compared to 61 percent of practices with more than 15 clinicians billing under the practice’s TIN submitted data for the Promoting Interoperability performance category. Although we had expected many small practices would be able to successfully report data for the Promoting Interoperability performance category, we are concerned to see such low numbers of them either reporting data or applying for the small practice hardship exception, as such inaction would result in a score of zero for this performance category.

We want to support small practices and help them successfully participate in MIPS. As our analysis of the data suggests that successfully participating in the Promoting Interoperability performance category may be particularly challenging for small practices, we are proposing a modification of our policy. Beginning with the CY 2022 performance period/ CY 2024 MIPS payment year, we are proposing to no longer require an application for clinicians and small practices seeking to qualify for the small practice hardship exception and reweighting. We are proposing instead to assign a weight of zero percent to the Promoting Interoperability performance category and redistribute its weight to another performance category or categories (as discussed further in section IV.A.3.e. of this proposed rule) in the event no data is submitted for any of the measures for the Promoting Interoperability performance category by or on behalf of a MIPS eligible clinician in a small practice. We are proposing that if data is submitted for a MIPS eligible clinician in a small practice, they would be scored on the Promoting Interoperability performance category like all other MIPS eligible clinicians, and the performance category would be given the weight prescribed by section 1848(q)(5)(E) of the Act. We are proposing the small practice significant hardship exception still would be subject to annual renewal, and we would verify whether a practice meets the definition of a small practice under § 414.1305 on an annual basis. We are proposing corresponding revisions to § 414.1380(c)(2)(i)(C)(9).

While we are proposing this policy at this time, it is not our intention that this policy be in place for the long term, but rather only for a few years, as we would like to increase participation of small practices in the Promoting Interoperability performance category. We would like to facilitate small practices successfully reporting data for the Promoting Interoperability performance category and are therefore seeking comment on potential options to increase small practice participation in the future. We are also seeking comment on why small practices that have not successfully reported for the Promoting Interoperability performance category not applied for the small practice hardship exception. Are practices choosing not to apply due to the requirement that they must have overwhelming barriers that prevent them from complying with the requirements for the Promoting Interoperability performance category? Is there confusion about what would be considered an overwhelming barrier? Are they aware that the small practice hardship exception is available? We are also interested in hearing about barriers that exist that prevent the adoption of CEHRT and/or the ability to submit Promoting Interoperability performance category measures. Are small practices wanting to adopt CEHRT but lack the resources?

Have practices previously adopted CEHRT but face barriers in upgrading to the edition of certified health IT currently required to meet the CEHRT definition for the Quality Payment Program? Alternatively, have these practices consciously chosen not to adopt CEHRT because of impending retirement or other factors? Are there other policies that we could pursue to remove barriers to or incentivize participation in the Promoting Interoperability performance category by small practices?

We are proposing that in the case of an APM Entity that also meets the definition of a small practice, we would continue applying the Promoting Interoperability performance category reporting and exception requirements at the group level, as described at § 414.1317. However, if the APM Entity is composed of a single TIN which itself meets the definition of a small practice, all TINs within the APM Entity (that is, the single TIN) would be eligible for this exception, and therefore the Promoting Interoperability performance category would be reweighted for the APM Entity and the performance category reweighting described above would be applied.

We are seeking comments on this proposal.

(ii) Nurse Practitioners, Physician Assistants, Clinical Nurse Specialists, and Certified Registered Nurse Anesthetists

We established a policy at § 414.1380(c)(3)(i)(A)(5) for the performance period(s) 2017 through 2021 under section 1848(q)(5)(F) of the Act to assign a weight of zero to the Promoting Interoperability performance category in the MIPS final score if there are not sufficient measures applicable and available to NPs, PAs, CRNAs, and CNs. We will assign a weight of zero only in the event that an NP, PA, CRNA, or CNS does not submit any data for any of the measures specified for the Promoting Interoperability performance category, but if they choose to report, they will be scored on the Promoting Interoperability performance category like all other MIPS eligible clinicians and the performance category will be given the weighted prescribed by section 1848(q)(5)(E) of the Act.

As in past years, we intend to use data from prior performance periods to further evaluate the participation of NPs, PAs, CRNAs, and CNs in the Promoting Interoperability performance category and consider for subsequent years whether the measures specified for this category are applicable and available to these MIPS eligible clinicians. We have analyzed the data submitted for the 2017 performance period for the Promoting Interoperability performance category and have discovered that the vast majority of MIPS eligible clinicians submitted data as part of a group. Although we are pleased that MIPS eligible clinicians utilized the option to submit data as a group, it does limit our ability to analyze data at the individual NPI level. For the 2017 performance period, approximately 4 percent of MIPS eligible clinicians who are NPs, PAs, CRNAs, or CNs submitted data individually for MIPS, and more than two-thirds of them did not submit data for the Promoting Interoperability performance category. For the 2018 performance period, we reported that of the MIPS eligible clinicians who are NPs, PAs, CRNAs, or CNs and submitted data individually, approximately 34 percent submitted data for the Promoting Interoperability performance category. However, after further review and the refinement of our analytics it was revealed that the percentage was not 34 percent but was 24 percent of MIPS eligible clinicians.
who are NPs, PAs, CRNAs, or CNSSs that submitted data individually for the Promoting Interoperability performance category. For the 2019 performance period, of the MIPS eligible clinicians who are NPs, PAs, CRNAs, or CNSSs and submitted data individually, approximately 30 percent submitted data individually for the Promoting Interoperability performance category, a modest increase from 2018. We continued our reweighting policy in 2020 although we do not yet have data from submissions for the CY 2020 performance period and do not expect it to be available prior to the release of this proposed rule.

We believe that having these clinician types using CEHRT and submitting data for the Promoting Interoperability performance category is important for increased interoperability and data exchange. We are exploring the possibility that these clinician types are able to submit data but are choosing not due to our current reweighting policies. In the future we may use other factors besides the submission data to determine whether to continue to reweight the Promoting Interoperability performance category for these clinicians. We are requesting comments as to whether these clinician types are using CEHRT and are able to submit data on the measures for the Promoting Interoperability performance category.

While we are encouraged by the increasing numbers of NPs, PAs, CRNAs, and CNSSs submitting data for the Promoting Interoperability performance category, we believe that the low numbers warrant the continued reweighting the Promoting Interoperability performance category for NPs, PAs, CRNAs, and CNSSs for the performance period in 2022. Thus, we are proposing to continue the existing policy for the 2022 performance period/2024 MIPS payment year and are proposing to revise §414.1380(c)(2)(i)(A)(5), which is being redesignated as §414.1380(c)(2)(i)(A)(4)(ii), to reflect this proposal.

We request comments on this proposal.

(iii) Physical Therapists, Occupational Therapists, Qualified Speech-Language Pathologists, Qualified Audiologists, Clinical Psychologists, and Registered Dieticians or Nutrition Professionals

In the CY 2020 PFS final rule (84 FR 63003 through 63004), we adopted a policy at §414.1380(c)(2)(i)(A)(4) to apply the same policy we adopted for NPs, PAs, CRNAs, and CNSSs to other types of MIPS eligible clinicians who are NPPs (physical therapists, occupational therapists, qualified speech-language pathologist, qualified audiologists, clinical psychologists, and registered dieticians or nutrition professionals) for the performance period in 2020. We stated that because many of these clinician types were or are not eligible to participate in the Medicare or Medicaid Promoting Interoperability Program, we have little evidence as to whether there are sufficient measures applicable and available to them under the Promoting Interoperability performance category. We extended this policy for the performance period in 2021 (85 FR 84995). As these clinicians were first eligible to participate in 2020, we do not have data to rely on to modify our current policy and do not anticipate it being available prior to the release of this proposed rule. Therefore, we are proposing to continue the existing policy of reweighting the Promoting Interoperability performance category for physical therapists, occupational therapists, qualified speech-language pathologist, qualified audiologists, clinical psychologists, and registered dieticians or nutrition professionals for the 2022 performance period/2024 MIPS payment year. We propose to revise §414.1380(c)(2)(i)(A)(4), which is being redesignated as §414.1380(c)(2)(i)(A)(4)(i), to reflect this proposal.

We request comments on this proposal.

(iv) Clinical Social Workers and Certified Nurse-Midwives

In section IV.A.3.a. of this proposed rule, we are proposing to add clinical social workers and certified nurse-midwives to the definition of a MIPS eligible clinician. These clinician types were not eligible to participate in the Medicare Promoting Interoperability Program to earn incentive payments for meaningful use of CEHRT or receive reduced Medicare payments for failing to meaningfully use CEHRT. Clinical social workers were not eligible for Medicaid EHR incentive payments and thus may lack experience with the adoption or use of CEHRT. Certified nurse-midwives were eligible for the Medicaid EHR incentive payments, and the majority did earn incentives. For the CY 2022 performance period/CY 2024 MIPS payment year, we are proposing to apply the same Promoting Interoperability reweighting policy we adopted previously for NP s, PAs, CNSSs, CRNAs, and other types of MIPS eligible clinicians to clinical social workers as we believe that there may not be sufficient Promoting Interoperability performance category measures that are applicable and available to clinical social workers. We would assign a weight of zero only in the event that a clinical social worker does not submit data for any of the measures specified for the Promoting Interoperability performance category. We are proposing to add §414.1380(c)(2)(ii)(A)(4)(iii) to reflect this proposal for clinical social workers.

We believe there are sufficient measures applicable and available to certified nurse-midwives under the Promoting Interoperability performance category because of their experience with the Medicaid Promoting Interoperability Program. Many of them have adopted CEHRT and earned a Medicaid incentive payment, and the measures for the Medicaid Promoting Interoperability Program generally are the same or slightly modified versions of the Promoting Interoperability performance category measures. Thus, we are not proposing to apply the same Promoting Interoperability reweighting policy we adopted previously for NPs, PAs, CNSSs, CRNAs, and other types of MIPS eligible clinicians to certified nurse-midwives. However, we are requesting comment on whether there are in fact sufficient measures applicable and available to certified nurse-midwives under the Promoting Interoperability performance category, and whether barriers exist that prevent certified nurse-midwives from complying with the requirements of the Promoting Interoperability performance category and may warrant reweighting. Like other types of MIPS eligible clinicians, a certified nurse-midwife may be able to qualify for a significant hardship exception from and reweighting of the Promoting Interoperability performance category under the existing policies at §414.1380(c)(2)(ii)(C), depending on their circumstances.

We request comments on this proposal.

(i) Technical Corrections to the Regulations

In the CY 2019 PFS final rule (83 FR 59798 through 59817), we adopted objectives and measures for the Promoting Interoperability performance category that would apply beginning with the performance period in 2019. The requirement for MIPS eligible clinicians to report on these objectives and measures can be found under §414.1375(b)(2). In the CY 2021 PFS rulemaking, we inadvertently neglected to update this provision of the regulation text, although our intention was a continuation of the policy we established for the 2021 and 2022 MIPS
payment years. We are proposing a technical correction to § 414.1375(b)(2)(ii) to specify that the reporting requirements apply beginning with the 2021 MIPS payment year. We request comments on this proposal.

(j) Requests for Information

(i) Request for Information on Additional Objectives Adopting FHIR®-Based API Standards

Fast Healthcare Interoperability Resources (FHIR®) (http://hl7.org/fhir) is a free and open-source standards framework (in both commercial and government settings) created by Health Level Seven International (HL7®) that establishes a common language and process for all health IT, it allows systems to communicate and information to be shared seamlessly with a lower burden on stakeholders. Through the HL7® FHIR® standard, cost and burden for health care providers and patients are reduced since it simplifies implementation without sacrificing information integrity, establishes fast, efficient, and flexible health data exchange as a stand-alone standard or combined with existing standards. Essentially, HL7’s FHIR® standard framework provides an interoperable platform for a variety of health care data by defining a standard way to structure this information as ‘resources’ and allows the developer-friendly automated data-exchange to occur via APIs. The use of APIs utilizing the FHIR® standard has the potential to improve data exchange by providing consistent security, performance, scalability, and structure to all users. Given the progress of such emerging health IT innovation standards to promote interoperability at large, we see increased adoption of approaches utilizing the latest HL7® FHIR® standard as an opportunity to consider how these approaches can support other program goals.

In the CY 2021 PFS final rule, we finalized alignment of the CEHRT definition for the Promoting Interoperability programs with updates to 2015 Edition certification criteria as finalized in the ONC 21st Century Cures Act final rule. As part of the ONC 21st Century Cures Act final rule, ONC finalized a new certification criterion “Standardized API for patient and population services” at 45 CFR 170.315(g)(10) which supports the availability in certified health IT of an API using the FHIR® Release 4 standard and other implementation specifications. We noted that technology certified to this criterion will be used to support the API requirements in the Provide Patients Access to their Health Information objective. Regarding the bi-directional HIE measure finalized for MIPS eligible clinicians in the CY 2021 PFS final rule (85 FR 84888 through 84893), we also noted that the standards-based API criterion at 45 CFR 170.315(g)(10) could be used to support connections to an HIE in order to complete the measure’s actions.

We are seeking comments on our intention to align additional Promoting Interoperability performance category objectives with approaches utilizing HL7® FHIR® standard Release 4-based API functionality (or the appropriately evolved standard), specifically targeting the Health Information Exchange as well as the Public Health and Clinical Data Exchange objectives. Throughout this ongoing developmental process, we are partnering with ONC and continuing to strengthen collaboration on the implementation of the 21st Century Cures Act final rule.

We are interested in public comments on how these two program objectives could be furthered through the use of FHIR®-based API solutions. Specifically, we are interested in the following questions:

• To what degree are stakeholders currently using or interested in using APIs to exchange information in support of the numerator/denominator measures under the HIE objective? What revisions to the measures under the HIE objective should CMS explore to facilitate use of standards-based APIs in health IT modules certified under the 2015 Edition Cures Update?

• How could technical approaches utilizing the FHIR® standard enhance existing data flows required under the public health measures? What are promising FHIR®-based approaches to public health reporting use cases that ONC and CMS should explore for potential future consideration as part of the Promoting Interoperability performance category and the ONC Health IT Certification Program?

• To what degree are PHAs and individual states currently exploring API-based approaches to conducting public health registry reporting? What other factors do stakeholders see as critical factors to adopting FHIR®-based approaches?

• What potential policy and program changes in CMS and other HHS programs could reduce health care provider and health IT developer burden related to measures under the Health Information Exchange and the Public Health and Clinical Data Exchange objectives?

(ii) Request for Information on a Patient Access Outcomes Measures

The evolution of EHRs has created a greater and more seamless flow of information within a digital health care infrastructure which allows for comprehensive records to be made available wherever and whenever they are needed in the clinical setting. These advances have led to: (1) Improved patient care; (2) increased patient participation; (3) improved care coordination; (4) greater practice efficiencies and cost savings; and (5) improved diagnostics and patient outcomes. Much research effort has been dedicated to looking at the implementation of health IT in practice settings with its wide array of potential benefits, but equally important to the success of this EHR-advancement is better understanding the patient’s role as an active end-user as well.

Several large, nationally representative surveys have been completed annually in order to collect and evaluate the public’s access and use of health information. One of these endeavors operated by the National Cancer Institute (with support from ONC) is The Health Information National Trends Survey (HINTS) that produces a plethora of key utilization data specifically pertaining to consumers’ access and use of their online medical records via patient portals. The HINTS results point to an overall year-over-year rise in the number of Americans who are not only accessing their medical records online (from 51 percent in 2018 to 58 percent in 2019) but are increasingly doing so to perform meaningful actions such as to view lab test results, transmit their data to a third-party, and to securely message their health care provider. While sources like the HINTS survey are revealing preferential trends, habits, and other key utilization points, the data also show some strong barriers associated with patients accessing CEHRT and continue to stress the need for further work in understanding these users’ access outcomes.

We believe a strong partnership between EHR vendors, health care providers, and beneficiary users’ outcomes is critical to improving the future of health care and furthering interoperability. Therefore, we are seeking comments surrounding changes

to the Promoting Interoperability performance category and related efforts which could better target patient access outcomes related to use of patient portals or third-party application(s). This request for information is an opportunity to garner general interest, solicit stakeholder feedback on how to best evaluate issues of patient behavior, and to explore additional key outcome variables to capture for measurement.

Specifically, we are looking for feedback on the following questions:

• What do stakeholders believe would be useful ways to measure patients’ access to their electronic health information using health IT methods such as patient portals and/or third-party applications? What actionable figures related to users’ medical record behavior, including but not limited to, the frequency of logins, number of messages sent, or lab results viewed could be captured?

• How effectively is the Promoting Interoperability performance category currently measuring the use of health IT-enabled processes to improve patient outcomes? What measures in the current performance category are most relevant to patient outcomes?

• Should we consider requiring health care providers to maintain a record of third-party applications which patients have used to access their patient health information through APIs incorporated within certified technology so that this information could be used to assess patient usage of these applications?

• What are specific technologies, capabilities, or system features (beyond those currently addressed in the Promoting Interoperability performance category) that can increase patient utilization of tools to access their health information? How do these technologies and features support improved access or usability within EHR systems and other applications (for instance, alternate authentication technologies that can simplify consumer logon)? How could CMS reward health care providers for higher adoption rates and use of these available technologies?

• What are key administrative processes that could benefit from more efficient electronic workflows? How could CMS measure and reward participating MIPS eligible clinicians for either greater uptake of patient portal access or subsequent health outcomes?

(iii) Request for Information on Clinical Notes

OpenNotes is an international movement aimed to spread and study the effects of transparent communication among patients, families, and clinicians. With more than 50 million patients in the U.S. and Canada having gained access to their clinical notes, the push for patient engagement and transparent communication continues to grow. Alongside this movement, “Clinical notes” have been regarded as highly desirable data necessary for the interoperable exchange of health information and patient access. Comprised of structured and unstructured data, clinical notes may include the assessment, diagnosis, plan of care and evaluation of plan, patient teaching, and other relevant data (85 FR 25674).

While the ability to share clinical notes has been previously supported for certified health IT in different ways, ONC took additional steps to ensure this important patient information is available as part of the recent ONC 21st Century Cures Act final rule (85 FR 25674 through 25677). In the rule, ONC finalized eight types of “clinical notes” required under the USCDI version 1: (1) Discharge Summary Note; (2) History & Physical; (3) Progress Note; (4) Consultation Note; (5) Imaging Narrative; (6) Laboratory Report Narrative; (7) Pathology Report Narrative; and (8) Procedure Note. As previously discussed in the CY 2021 PFS final rule (85 FR 84825), we finalized to align the CEHRT definition under the Promoting Interoperability performance category with the timelines established under the ONC 21st Century Cures Act final rule for implementation of the 2015 Edition Cures Update. This alignment includes updates to several certification criteria to refer to the USCDI and the expanded support for clinical notes specified in the USCDI version 1 standard and updated certification criteria incorporating the USCDI include the “view, download, and transmit” criterion at 45 CFR 170.315(e)(1), and the “Standardized API for patient and population services” criterion at 45 CFR 170.315(g)(10). Once EHR developers and MIPS eligible clinicians have completed implementation of these updates, certified health IT required for participation in the Promoting Interoperability performance category will support availability of clinical notes as part of the data set made available to patients under the Provide Patients Access to their Health Information measure. According to the policy finalized in the CY 2021 PFS final rule, MIPS eligible clinicians may begin using updated technology as soon as it is available from their vendors (effective upon the effective date of the CY 2021 PFS final rule), with updated technology being required for performance periods beginning in CY 2023.

Under this RFI, we are seeking stakeholder feedback on changes we can make that will better support the goals of the OpenNotes movement to ensure that clinical notes are widely available to patients. Given the implementation of updates to certified technology described above that support the Provide Patients Access to their Health Information measure, are there additional changes to this measure, or other program guidance, which could further facilitate ensuring clinical notes are available to patients consistent with the goals of the OpenNotes movement? We are also seeking feedback on the development of a required and independently scored measure for the Promoting Interoperability performance category to allocate points for the use of “clinical note” types supported by certified health IT. Finally, we are seeking comment on the types of clinical notes that are commonly sought, but not easily accessible to patients. We included a similar RFI under the Medicare Promoting Interoperability Program in the FY 2022 IPPS/LTCH proposed rule (86 FR 25654).

(5) APM Entity Level Participation for MIPS Eligible Clinicians Participating in MIPS APMs

(a) Overview

In the CY 2021 PFS final rule (85 FR 84896), we finalized our policy to terminate the APM scoring standard effective January 1, 2021, and to retain certain APM Entity group reporting policies that were established and finalized for reporting and scoring under MIPS beginning with the CY 2021 MIPS performance period. Therefore, we redesignated, in part, the regulation that describes APM Entity group determinations, from §414.1370(e) to §414.1317, and titled that section “APM Entity Groups.”

(b) APM Entity Level Reporting of Facility-Based Measures

In the CY 2021 PFS final rule (85 FR 84896), we finalized a policy to allow APM Entities to report to traditional MIPS using the same quality measures available to other groups, according to all applicable MIPS program scoring policies. It has been brought to our attention that we did not make it clear

233 https://www.opennotes.org/about/.
whether APM Entities may be eligible for facility-based scoring. We would like to clarify that because facility-based measures are not submitted, but rather collected by CMS using group-level participation scores used for the Hospital Value Based Purchasing Program, it would be impossible for CMS to calculate a score for a facility-based measure that represents the performance of an APM Entity. Therefore, facility-based scoring is not available to APM Entities under MIPS quality scoring rules, as described at § 414.1330. We note that participants in APM Entities that are eligible for facility-based scoring at the individual or group level would still be eligible to receive these scores for purposes of individual or group MIPS scoring.

(c) APM Entity Performance Category Weights

In the CY 2021 PFS final rule (85 FR 84899), we finalized a policy to weight the cost performance category at zero percent of the final score for APM Entities in MIPS APMs. We codified the weight of the cost performance category at § 414.1317(b)(2), but we did not discuss in the CY 2021 PFS final rule how the weight that otherwise would have applied to the cost performance category will be redistributed among the other performance categories. For purposes of clarity, we propose to add to § 414.1317(b)(2) that the performance category reweighting scenariosunder § 414.1380(c)(2) apply to an APM Entity. Because APM Entities are participating in traditional MIPS and generally are being scored according to traditional MIPS scoring rules at § 414.1380 unless otherwise specified, the performance category reweighting scenarios under § 414.1380(c)(2) are applicable to APM Entities. Using the 2021 MIPS performance period/2023 MIPS payment year as an example, if the cost performance category is the only performance category weighted at zero percent for an APM Entity, the performance category weights would be as follows under § 414.1380(c)(2)(ii)(E): Quality 55 percent, cost zero percent, improvement activities 15 percent, and promoting interoperability 30 percent. If both cost and promoting interoperability are weighted at zero percent, then quality would be 85 percent and improvement activities would be 15 percent. For the remaining reweighting scenarios for the 2021 MIPS performance period/2023 MIPS payment year, we refer readers to Table 6 under § 414.1380(c)(2)(ii)(E). The reweighting scenarios applicable to APM Entities for the 2022 MIPS performance period/2024 MIPS payment year can be found in Table 7 under § 414.1380(c)(2)(ii)(F). We refer readers to section IV.A.3.e.(2)(a) of this proposed rule where we propose to apply the reweighting policy finalized for the 2022 MIPS performance period/2024 MIPS payment year at § 414.1380(c)(2)(ii)(F) to the 2025 MIPS payment year and each subsequent MIPS payment year. In the event we establish additional reweighting scenarios, they would also apply to APM Entities.

d. MIPS Final Score Methodology

(1) Performance Category Scores

(a) Background

For the CY 2022 performance period/2024 MIPS payment year, we intend to continue to build on the scoring methodology we finalized for prior years. The scoring methodology allows for accountability and alignment across the performance categories and minimizes burden on MIPS eligible clinicians. We are updating many of our scoring policies, focusing on removing transition policies. Specifically, we are proposing to—

• Change certain terminology related to scoring.
• Amend our scoring flexibility policy to include quality measures with omitted or deactivated codes in the finalized measure specifications.
• Implement benchmarking and topped out scoring policies that are responsive to potential low reporting rates for the CY 2020 performance period/2022 MIPS payment year due to the national PHE for COVID–19 and establishing a benchmark when measures are suppressed in the baseline period.
• Amend policies for scoring quality measures based on achievement and measures that do not meet case minimum or have a benchmark and introduce scoring policies for new measures.
• Amend the minimum case requirement policy.
• End the high priority and end to end reporting bonuses in the quality performance category.
• Continue improvement scoring in the quality performance category.
• Implement a scoring flexibility policy for changes that impact cost measures during the performance period.
• Revise certain provisions of the regulation text for the Promoting Interoperability performance category.

We are not proposing changes to scoring policies for the improvement activities performance category.

We have maintained our approach to MIPS eligible clinicians are scored against performance standards for each performance category and receive a final score, comprised of their performance category scores, and calculated according to the final score methodology. We refer readers to § 414.1380 for policies on scoring.

(b) Terminology Updates

We are proposing updates to § 414.1380 in an effort to more clearly and concisely capture previously established policies. These proposed updates are not intended to be substantive in nature, but rather to bring more clarity to the regulatory text. We are proposing to change the term “performance category percent score” to “performance category score” in § 414.1380(b)(1)(vi)(C) and (E) related to improvement scoring.

§ 414.1380(b)(1)(vii) related to scoring the quality performance category score,
§ 414.1380(b)(2)(ii) and (v) related to scoring the cost performance category,
§ 414.1380(c) and (c)(2)(ii)(A) on calculating the final score and final score reweighting, and
§ 414.1380(e)(6)(iv) and (v) related to facility-based scoring. Again, these changes are not intended to change the underlying policies reflected in the regulation text. Initially, the quality and cost performance categories used the term “performance category percent score” because those categories had improvement scoring and have a slightly different approach to calculation than the Promoting Interoperability and improvement activities performance category. However, the terms “performance category percent score” and “performance category score” have been used in the same way. For that reason, we are proposing to consolidate our language and use only the latter aforementioned term.

c. Scoring the Quality Performance Category for the Following Collection Types: Medicare Part B Claims Measures, eCQMs, MIPS CQMs, QCQR Measures, the CAHPS for MIPS Survey Measure and Administrative Claims Measures

We refer readers to § 414.1380(b)(1) for our policies regarding quality measure benchmarks, calculating total measure achievement and measure bonus points, calculating the quality performance category percent score, including achievement and improvement points, and the small practice bonus (81 FR 77276 through 77308, 82 FR 53716 through 53748, 83 FR 50984 through 50991, 84 FR 34730 through 34731, 85 FR 63011 through 63018, 85 FR 84898 through 84913). We propose to amend policies...
finalized in prior years to simplify scoring in MIPS as we transition to MVPs.

(i) Scoring Flexibility for Changes That Impact Quality Measures During the Performance Period or Prior to Implementation

We refer readers to CY 2018, CY 2019, and CY 2021 Quality Payment Program final rules (82 FR 53714 through 53716, 83 FR 59845 through 59847, and 85 FR 84899 through 84901 respectively) and § 414.1380(b)(1)(vii)(A) for our previously establish scoring flexibilities policy.

In the CY 2018 Quality Payment Program Final rule (82 FR 53714 through 53716), we finalized that, beginning with the 2018 MIPS performance period, we will assess performance on measures considered significantly impacted by ICD–10 coding changes during the performance period based only on the first 9 months of the 12-month performance period.

We noted that we believe that 9 months of data is sufficient to assess performance when 12 months of data is not available. We finalized that we would publish a list of measures requiring 9 months of data on the CMS website by October 1st of the performance period if technically feasible, but no later than the beginning of the data submission period (for example, January 2, 2021 for the 2020 performance period) (82 FR 53716). We refer readers to § 414.1380(b)(1)(viii) for more on our policy for scoring flexibility for ICD–10 changes.

In the CY 2019 Quality Payment Program final rule (83 FR 59845 through 59847), we finalized policies beginning with the 2019 performance period/2021 MIPS payment year to reduce the total available measure achievement points from the quality performance category by 10 points for MIPS eligible clinicians for each measure submitted that is significantly impacted by clinical guideline changes or other changes when we believe adherence to the guidelines in the existing measures could result in patient harm or otherwise no longer be comparable to a historic benchmark. We wanted the flexibility to respond to instances in which the clinical evidence and guidelines change and approved measures no longer reflect the most up-to-date clinical evidence and could even result in a practice that is harmful to patients. We finalized expanding the list of reasons that a quality measure may be impacted during the performance period in addition to revising when we would allow scoring of the measure with a performance period truncation (to 9 months of data) or the complete suppression of the measure if 9 months of data are not available.

In the CY 2021 Quality Payment Program final rule, we finalized a consolidation of the CY 2018 and CY 2019 scoring flexibilities policy that allowed, beginning with the 2021 performance period/2023 MIPS payment year, truncation of the performance period or suppression of a quality measure if CMS determines that revised clinical guidelines, measure specifications or codes impact clinician’s ability to submit information on the measure or may lead to potentially misleading results. Based on the timing of the changes to clinical guidelines, measure specifications or codes, we would assess the measure on 9 months of data, and if 9 consecutive months of data are not available, we would suppress the measure by reducing the total available measure achievement points from the quality performance category by 10 points for each measure submitted that is impacted (85 FR 84899 through 84901).

In previous rules, we noted that we believe that there may be instances when there are changes after the final approval of quality measures including changes to the measure specification, or updates to coding that may lead to misleading results (85 FR 84899).

Additionally, we believe that there may be instances in which there is an inadvertent omission of codes, or inclusion of deactivated codes in the measure specifications that do not have the correct status. Typically, codes that are contained within the measure specifications either have a reimbursable status or a non-reimbursable status that still allows processing for purposes of quality reporting programs. We have encountered instances where CMS has been alerted that codes have inadvertently received an inactive status which results in the associated codes being suppressed and stored in the National Claims History (NCH) database and therefore not available for quality purposes. As the measure specifications are considered technical documents that include several fields such as, but not limited to: the numerator, denominator, measure description, denominator exclusions, clinical guidance statements, and codes relevant to how the measure should be captured. The measure specifications are finalized and published in coordination with the final rule, and prior to the start of the performance period. An inadvertent omission or inclusion of inactive codes in the measure specifications, may result in misleading results by affecting clinicians who submit the measure. In these instances, implementation errors could lead to misleading performance rates by failure to reflect accurate numerator and/or denominator values for calculation of the measure. These are not changes that occur during the performance period, but errors that would affect the performance period.

It recently came to our attention through Help Desk inquiries that Medicare Administration Carriers (MACs) were rejecting 2021 Part B Claims submissions for Quality Measure ID (QID) 001: Hemoglobin A1c (HbA1c) Poor Control (>9%) and QID 117 Diabetes: Eye Exam due to an inactive status for certain CPT II codes. The omission of these claims from the total denominator population of the measure could skew scores and lead to misleading results. We believe suppression of the measures is consistent with current § 414.1380(b)(1)(vii)(A). Information on the suppression of the Part B claims collection type of these measures for the 2021 MIPS performance period/2023 MIPS payment year was announced via the QPP listserv on July 1st, 2021. For more information please refer to our website qpp.cms.gov.

We propose to amend § 414.1380(b)(1)(vii)(A) to clarify our intended policy on instances in which we become aware of changes to the active or payable status of the codes and/or implementation errors included in the measure specifications as finalized that would lead to misleading results. Accordingly, we propose to revise § 414.1380(b)(1)(vii)(A) to change “significant changes” to “significant changes or errors” and to include the omission of codes or inclusion of inactive or inaccurate codes to provide that for each measure that is submitted, if applicable, and impacted by significant changes or errors prior to the applicable data submission deadline at § 414.1325(e), performance is based on consistent with current data for 9 consecutive months of the applicable CY performance period, if such data are not available or CMS determines that they may result in patient harm or misleading results, the measure is excluded from a MIPS eligible clinician’s total measure achievement points and total available measure achievement points. For purposes of paragraph (b)(1)(vii)(A), “significant changes or errors” means changes to or errors in a measure that are outside the control of the clinician and its agents and that CMS determines may result in patient harm or misleading results. Significant changes or errors include, but are not limited to,
changes to codes (such as ICD–10, CPT, or HCPCS codes) or the active status of codes, the inadvertent omission of codes, or inclusion of inactive or inaccurate codes; changes to clinical guidelines; or measure specifications. We will publish on the CMS website a list of all measures scored under paragraph (b)(1)(vii)(A) as soon as technically feasible, but by no later than data submission deadline at § 414.1325(e)(1).

We invite public comments on our proposal to provide scoring flexibilities in response to account for errors included in the finalized measures.

(iii) Quality Measure Benchmarks

We refer readers to the CY 2017, CY 2018, CY 2019, CY 2020, and CY 2021 Quality Payment Program final rules (81 FR 77277 through 77282, 82 FR 53699 through 53718, 83 FR 59841 through 59842, 84 FR 63014 through 63016, and 85 FR 84901 through 84904) for our previously established benchmarking policies.

In the CY 2017 QPP final rule (81 FR 77277 through 77282), we finalized that we would use performance in the baseline period to set benchmarks for the quality performance category, with the exception of new quality measures, quality measures that lack historical data, or where we do not have comparable data from the baseline period, for which we would set the benchmarks using performance in the performance period. We defined the baseline period to be the 12-month CY that is 2 years prior to the performance period for the MIPS payment year. For example, for the CY 2022, the baseline period two performance periods prior would be the CY 2020 performance period (81 FR 77277). Additionally, we further clarified that CMS can establish benchmarks either by the applicable baseline or performance period in the CY 2019 PFS final rule (83 FR 59842), where we finalized the terminology change amending § 414.1380(b)(1)(ii) to remove the mention of each individual benchmark and instead state that benchmarks will be based on collection type, from all available sources, including MIPS eligible clinicians and APMs, to the extent feasible, during the applicable baseline or performance period.

Because of the flexibility provided to MIPS eligible clinicians to allow for no data submission for the 2020 performance period (https://qpp-cmprod-content.s3.amazonaws.com/uploads/1190/2020%20MIPS%20Automatic%20EC%20Fact%20Sheet.pdf), we may not have as representative of a sample of data as we would have had without the national PHE for COVID–19. Therefore, we want to revisit our benchmarking policy for the 2022 performance period/2024 MIPS payment year similarly to how we revisited the benchmarking policy for the 2021 performance period/2023 MIPS payment year (85 FR 84901 through 84902). We anticipate that we may have a gap in our data due to receiving fewer submissions for CY 2020, which could skew the benchmarking results. We believe this gap in data could result in different distributions of scores from what we normally see; thus, skewing the benchmarks when using CY 2020 data as the baseline for the CY 2022 performance period/2024 MIPS payment year. Additionally, we anticipate that only those not experiencing a hardship will submit data, thus skewing benchmarks much higher than normal. We ultimately, did not finalize this proposal for CY 2021 because analysis of the submitted data from the CY 2019 performance period/2021 payment period showed that it was suitable for use in calculating benchmarks. However, as we know from the events of 2020, we anticipate that the effects of the national PHE for COVID–19 may be more significant for the CY 2022 performance period.

For this reason, we consider two benchmarking options for the CY 2022 performance period/2024 MIPS payment year. We propose to use performance period benchmarks for the CY 2022 performance period/2024 MIPS payment year in accordance with § 414.1380(b)(1)(ii). As discussed in the CY 2021 PFS final rule (85 FR 84902), this would mean that benchmarks for the CY 2022 performance period/2024 MIPS payment year are based on the actual data submitted during the CY 2022 performance period. Last year, we received comments supportive of our proposal to use performance period benchmarks citing that the performance period benchmarks would capture any changes in care due to the national PHE for COVID–19 and avoid unfairly penalizing practices for variation in performance compared to data from prior to the national PHE for COVID–19 (85 FR 84902 through 84903). We also received comments that opposed the use of performance period benchmarks, as clinicians would not have advance notice of performance targets. As a result, we are also considering and seeking feedback as an alternative to performance period benchmarks, utilizing the historic benchmarks from the CY 2021 MIPS performance period (which are based on submissions for CY 2019 MIPS performance period/2021 MIPS payment year) for the CY 2022 performance period/2024 MIPS payment year. We believe that this option would allow clinicians to continue to receive advance notice for quality performance category measures so that MIPS eligible clinicians can set a clear performance goal for these measures for the CY 2022 performance period/2024 MIPS payment year. However, we remain concerned that utilizing outdated data could also potentially result in distributions of scores used for benchmarks that no longer reflect the standard of care especially as care changes in response to the public health emergency.

Additionally, any new or substantially changed measures in the CY 2022 performance period/2024 MIPS payment year will lack a benchmark, as would measures that were suppressed in the CY 2019 performance period/2021 MIPS payment year alternate baseline period. We will analyze the CY 2020 performance period data and compare the distribution of the CY 2020 performance period data to that of previous years to assess if we can in fact use data from the CY 2020 performance period for benchmarks for the CY 2022 performance period/2024 MIPS payment year and if not, evaluate the suitability of the alternatives.

Additionally, we propose to expand the definition of the baseline period. In instances in which a measure is suppressed 2 performance periods prior in the standard baseline period and cannot be used to calculate a benchmark, we propose to use the data from 3 performance periods prior to calculate benchmarks in the event that a performance period benchmark cannot be calculated. This would mean that for the CY 2022 performance period/2024 MIPS payment year, if a measure was suppressed in the 2020 performance period and a performance period benchmark could not be calculated using the 2021 performance period data because it was not reported by 20 different clinicians or groups that met data completeness and case minimum requirements, we would calculate a benchmark from performance period data from CY 2019. If a measure had undergone a substantive change or was also suppressed in the baseline period 3 performance periods prior, we would not use it to calculate benchmarks and the measure would be subject to our scoring policies for class 2 measures. We would not use benchmarks calculated from performance periods more than 3 performance periods prior. We believe it is important to continue using the most up-to-date
data to drive clinical quality improvement. We believe that this policy will reduce burden to clinicians and allow them to continue to have performance targets in the event that a measure is suppressed.

We invite public comments on our intent to use performance period benchmarks for the CY 2022 performance period and to expand the baseline period to 3 performance periods prior for measures that are suppressed two performance periods prior. Table 47 reflects a summary of the benchmarking hierarchy as a result of this proposal.

### TABLE 47: Quality Performance Category: Proposed Benchmarking Hierarchy

<table>
<thead>
<tr>
<th>Policy Hierarchy</th>
<th>Baseline period used to calculate Benchmark</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Historical Baseline Period: Two Performance Periods prior to the applicable performance period</td>
<td>A benchmark can be calculated from the historical baseline period defined as two performance periods prior to the applicable performance period.</td>
</tr>
<tr>
<td>2</td>
<td>Performance Period Benchmark</td>
<td>A benchmark cannot be calculated from the historical baseline period, but 20 or more clinicians report on a measure and meet or exceed the case minimum of 20 cases during the performance period.</td>
</tr>
<tr>
<td>3</td>
<td>Alternate Historical Baseline Period: Three Performance periods prior to the applicable performance period</td>
<td>A measure is suppressed in the historical baseline period two years prior to the applicable performance period and a performance period benchmark cannot be calculated, but a benchmark can be calculated from the alternate historical baseline period defined as three performance periods prior to the applicable performance period can be calculated because the measure had not undergone a substantive change in the time since the data was collected or been suppressed in the baseline period.</td>
</tr>
<tr>
<td>4</td>
<td>No baseline: Subject to class 2 scoring policy</td>
<td>A benchmark cannot be calculated from the historical baseline period, the performance period, or the alternate baseline period.</td>
</tr>
</tbody>

(iii) Assigning Quality Measure Achievement Points

We refer readers to § 414.1380(b)(1)(i) for more details on our policies for scoring performance on quality measures (81 FR 77276 through 77307, 82 FR 53694 through 53701, 83 FR 59841 through 59856, 84 FR 63011 through 63019, and 85 FR 84906 through 84907).

(A) Scoring Measures Based on Achievement

We previously established at § 414.1380(b)(1)(i) a global 3-point floor for each scored quality measure, as well as each administrative claims measure. MIPS eligible clinicians receive between 3 and 10 measure achievement points for each submitted measure that can be reliably scored against a benchmark, which requires meeting the case minimum and data completeness requirements. In the CY 2017 Quality Payment Program final rule (81 FR 77282), we established that measures with a benchmark based on the performance period (rather than on the baseline period) would continue to receive between 3 and 10 measure achievement points for performance periods after the first transition year. For measures with benchmarks based on the baseline period, we stated that we would revisit the 3-point floor in future years. For the 2021 performance period/2023 MIPS payment year, we maintained the application of the 3-point floor for each measure that can be reliably scored against a benchmark.

For the 2022 performance period/2024 MIPS payment year, we propose to remove 3-point floor for each measure that can be reliably scored against the benchmark and score the measure from 1 to 10 points. We are scoring from 1–10 for clinicians with a performance rate greater than 0% for non-inverse measures or lesser than 100 percent for inverse measures in accordance with our original intent outlined in the CY 2017 Quality Payment Program final rule (81 FR 77282). As we move towards the MVP framework discussed the CY 2021 PFS final rule (85 FR 84904), we are moving towards a simplified scoring standard in which we can score quality measures from 1 to 10 for measures in MVPs and as such will amend the MIPS program to begin promoting this alignment. As a result, we previously discussed that we would wait until there is further policy development that transitioning MIPS to its mature state. Additionally, we believe that transitioning MIPS to its mature state will serve as a transition period to allow clinicians to adjust to the simplified scoring standard that we will be using in MVPs.

Accordingly, we propose to revise § 414.1380(b)(1)(i) to add beginning the 2023 MIPS payment year, MIPS eligible clinicians will receive between 1 and 10 measure achievement points (including partial points) for each measure required under § 414.1335 on which data is submitted in accordance with § 414.1325 that has a benchmark at paragraph (b)(1)(ii) of this section, and meets the data completeness requirement at paragraph (b)(1)(iii) of this section, and meets the case minimum requirement at paragraph (b)(1)(iii) of this section, and meets the data completeness requirement at § 414.1340.

We invite public comment on our proposal to remove the 3-point floor for each measure that can be reliably scored against a benchmark for the 2022 performance period/2024 MIPS payment year.
(B) Scoring Measures That Do Not Meet Case Minimum, Data Completeness, and Benchmark Requirements

We refer readers to § 414.1380(b)(1)(i)(A) and (B) for more on our scoring policies for a measure that is submitted but is unable to be scored because it does not meet the required case minimum, does not have a benchmark, or does not meet the data completeness requirement (84 FR 63012).

In the 2017 QPP final rule (81 FR 77288) and the 2018 QPP final rule (82 FR 53727), we identified “classes of measures” which were intended to characterize measures for the ease of discussion. Class 1 measures are measures that can be scored based on performance because they have a benchmark, meet the case minimum and data completeness requirements. Class 2 measures are measures that cannot be scored based on performance because they do not have a benchmark or do not meet the case minimum which is generally 20 cases. Class 3 measures are measures that do not meet the data completeness requirement. We also noted that policies for Class 2 and Class 3 measures would not apply to measures submitted with the CMS Web Interface or administrative claims-based measures.

We propose to modify how we score these measures within MIPS, as we consider policies for transitioning to MVPs. For class 2 measures, for the 2022 performance period/2024 MIPS payment year, we propose to remove special scoring policies for measures that meet the data completeness requirement but do not have a benchmark, due to fewer than 20 individual clinicians or groups adequately reporting the measure, or meet the case minimum requirement except in the case of small practices, for which we will maintain the 3-point floor. Practices of other sizes will now receive zero points.

As we move to MVPs, we are seeking to simplify scoring by removing transition policies. To encourage complete and meaningful reporting, we cannot continue to award measure achievement points for measures that cannot be reliably scored against a benchmark. In a quality measurement program such as MIPS, it is imperative that we are able to reliably measure performance on clinical quality measures to achieve the goals of the program and incentivize clinicians that are providing the high-quality care. However, we remain concerned that it may be harder to reach case minimums for smaller practices and as such are maintaining the three-point floor policy for small practices. We believe that measure selection that is better reflective of the care most commonly provided in a practice will increase the value of the program by allowing us to score for achievement in clinical quality and subsequently drive changes in performance on clinical quality measures.

Measure benchmarks are posted in advance of the MIPS performance period and can be used to drive clinician measure selection. While not all measures relevant to a clinician’s practice may have a historic benchmark posted, clinicians have the option to make informed decisions about their participation in the MIPS program. Additionally, we believe that while clinicians do not have control over the case volume and mix that their practices treat, under normal circumstances, they can anticipate which measures would be most reflective of the care generally provided by said practices. Scoring 3 points for class 2 measures was established as a policy during the transition years of the program, when the performance threshold was 3 points and scoring 3 points for quality would help clinicians transitioning to the program without receiving scores for poor performance. The intent of the policy was to provide time for clinicians to acclimate to the scoring standard before being held fully accountable for their participation in the program (81 FR 77287). As we believe we have provided sufficient time for clinicians to acclimate to our reporting requirements and scoring practices, we believe that we can hold clinicians accountable for their meaningful participation in the program.

We remain concerned about that case minimums and the availability of a benchmark are in some instances out of the control of the clinician, but believe that clinician choice of measure allows us to move forward with this option. We note that we also have policies in place to account for the calculation of a performance period benchmark if a historical benchmark is unavailable. Simulations of the effects of this policy show minimal effects of removing the 3-point floor as described above, with only a 0.4 point decrease in median quality performance category score and 0.2 point decrease in mean performance quality performance category score when compared to a baseline score that maintains the previously finalized class 2 measure scoring policy (section VII.F.18 of this proposed rule). We considered other approaches to address this issue such as a denominator reduction for class 2 measures; however, we remain concerned over the potential for gaming under this approach, such as where a clinician only selects class 2 measures resulting in their quality performance category score being reweighted.

We do not want this policy to discourage the reporting of new measures in the program because they may lack a benchmark or fail to meet the case minimum requirement. For this reason, we are proposing a 5-point floor for new measures in the program for all collection types for their first 2 years in the program, as well as a new class for these measures. Measures in either their first or second performance period in the program will be classified as class 4 measures. Measures that can be reliably scored against a benchmark because they meet data completeness requirement can have a performance period benchmark calculated, and meet case minimum requirements will be considered class 4a and scored from 5 to 10 measure achievement points. In the event that a measure cannot be reliably scored against a benchmark because it lacks a benchmark or does not meet case minimum, but meets the data completeness requirement, it will be considered class 4b and receive a score of 5. Measures that cannot be scored because they do not meet the data completeness requirement will remain subject to the class 3 measure policy and receive a score of 0 for clinicians other than small practices, while small practices will continue to receive 3 points.

We believe that a 5-point floor for new measures will allow us to introduce new, applicable measures into the program, by reducing the burden to clinicians in selecting them. We believe that this policy is responsive to stakeholder concerns that new measures run the risk of lacking enough data to have a benchmark and clinicians earning only 3 points according to the current policy on measures that cannot be reliably scored against a benchmark. We believe that the possibility of earning 5 points for a measure that lacks a benchmark would not unfairly penalize clinicians who report on new measures. Additionally, clinicians have the possibility of earning up to 10 points with the lowest possible score of 5. The 5-point floor will only be in place for a measure’s first 2 years in the program to ease their transition, and will be scored in accordance with policies for standard class 1, 2, and 3 measures thereafter, to maintain a simplified scoring methodology. In the CY 2017 Quality Payment Program final rule, we received comments of support on our proposal to provide a scoring floor for new measures.
measures citing that a scoring floor for new measures would encourage clinicians to report new measures and prevent gaming. Commenters were also supportive of other approaches to reducing the burden of reporting new measures such as reducing the weight of new measures in the performance category score (81 FR 77281).

Accordingly, we propose to revise § 414.1380(b)(1)(i)(A)(1) to provide that except as provided in paragraph (b)(1)(i)(A)(2) and (3) of this section, for the 2017 through 2021 CY performance periods/2019 through 2023 MIPS payment years, MIPS eligible clinicians receive 3 measure achievement points for each submitted measure that meets the data completeness requirement, but does not have a benchmark or meet the case minimum requirement. Beginning within the CY 2022 performance period/2024 MIPS payment year, MIPS eligible clinicians other than small practices receive 0 measure achievement points for each such submitted measures and small practices receive 3 measure achievement points.

We also propose to add the policy for new measures at § 414.1380(b)(1)(i)(C)(1) to provide that beginning with the CY 2022 performance period/2024 MIPS payment year, MIPS eligible clinicians receive between 5 and 10 measure achievement points (including partial points) for each measure required under § 414.1335 on which data is submitted in accordance with § 414.1325 that has a benchmark at paragraph (b)(1)(ii) of this section, meets the case minimum requirement at paragraph (b)(1)(iii) of this section, and meets the data completeness requirement at § 414.1340. We also propose to add a policy at § 414.1380(b)(1)(i)(C)(2) to provide that for purposes of this section “new measures” means a quality measure this is in its first 2 years in the program.

We invite public comments on our proposal to modify the special scoring policies for measures that meet the data completeness requirement but do not have a benchmark or meet the case minimum requirement for the MIPS 2024 payment year and to introduce a 5-point scoring floor for new measures in for their first 2 years in the program. Table 48 reflects a summary of our proposed policies.

*The Class 2 and 3 measure scoring policies are not applicable to Web Interface and administrative claims-based measures.

**We refer readers to § 414.1335(a)(3) for our policy on data completeness.
(iv) Scoring for MIPS Eligible Clinicians That Do Not Meet Quality Performance Category Criteria

In the CY 2018 Quality Payment Program final rule (82 FR 53732), we finalized that, beginning with the 2019 performance period/2021 MIPS payment year, we will validate the availability and applicability of quality measures only with respect to the collection type that a MIPS eligible clinician utilizes for the quality performance category for a performance period, and only if a MIPS eligible clinician collects via claims only, MIPS CQMs only, or a combination of MIPS CQMs and claims collection types. We will not apply the validation process to any data collection type that the MIPS eligible clinician does not utilize for the quality performance category for the performance period. We sought comment on how to modify the validation process for the 2019 performance period/2021 MIPS payment year when clinicians may submit measures collected via multiple collection types.

In the CY 2019 PFS final rule (83 FR 59847), we finalized a proposal to modify our validation process to provide that it only applies to MIPS CQMs and the claims collection type, regardless of the submitter type chosen. For example, this policy would not apply to eCQMs even if they are submitted by a registry. We noted that a MIPS eligible clinician may not have available and applicable quality measures. If we are unable to score the quality performance category, then we may reweight the clinician’s score according to the reweighting policies.

In this year’s rule, we are proposing to modify our validation process to provide that it only applies to MIPS CQMs or the Part B claims collection type, but it will not apply in instances when a MIPS eligible clinician submits for both collection types. Currently, very few reporters report for a combination of Part B claims and MIPS CQMs. In CY 2020, of submissions with less than 6 measures, only 0.08 percent of individual submissions and 0.3 percent of group submissions included a combination of Part B claims and other submission types.

In CY 2019, of submissions with less than 6 measures, only 0.094 percent of individual submissions and 0.07 percent of group submissions included a combination of Part B claims and other submission types. We see that reporting using both collection types is an option very few clinicians have chosen to utilize, and consequently believe that the associated costs for validation of a combination of the both the Part B claims based and MIPS CQM collection types is too great in these instances. To align with this reality that very few clinicians submit data in this manner, we are proposing to update our policy.

We invite public comments on our proposal to modify our validation process to provide that it only applies to MIPS CQMs or the claims collection type and not a combination of the two.

(v) Assigning Measure Achievement Points for Topped Out Measures

We refer readers to § 414.1380(b)(1)(iv) for our previously finalized policies regarding the identification of topped out measures and § 414.1380(b)(1)(iv)(B) for our finalized policies regarding the scoring of topped out measures. Under § 414.1380(b)(1)(iv), we will identify topped out measures in the benchmarks published for each Quality Payment Program year. Under § 414.1380(b)(1)(iv)(B), beginning with the 2021 MIPS payment year, measure benchmarks (except for measures in the CMS Web Interface) that are identified as topped out for 2 or more consecutive years will receive a maximum of 7 measure achievement points beginning in the second year the measure is identified as topped out (82 FR 53726 through 53727).

We noted in the CY 2021 PFS proposed rule (85 FR 50307) that we intended to use performance period benchmarks for the 2021 performance period/2021 MIPS payment year, which would mean we would not be able to publish measures that are topped out prior to the 2021 MIPS performance period. As discussed in that proposed rule (85 FR 50309), this also means we would not be able to identify those that have been topped-out for 2 or more consecutive years for purposes of the topped out scoring of 7 measure achievement points. As we are intending to use performance period benchmarks again for the 2022 performance period/2024 MIPS payment year, these problems would occur again. We believe it is still important to retain a topped-out scoring cap of 7 measure achievement points so that clinicians have incentives to pick alternate measures that are not topped out. We also believe that if a measure is not topped out in the 2022 performance period benchmark, then it should have the ability to achieve up to 10 measure achievement points.

In this year’s proposed rule, we are proposing to use performance period benchmarks again and subsequently need to the topped out measure lifecycle to account for this. Therefore, in the event that we finalize the use of performance period benchmarks for the CY 2022 performance period/2024 MIPS payment year, as an exception from the general rule at § 414.1380(b)(1)(iv)(B), we propose at paragraph (b)(1)(iv)(B)(f) to provide that for the CY 2022 MIPS performance period/2024 MIPS payment year, MIPS eligible clinicians receive no more than 7 measure achievement points for each measure (except for measures in the CMS Web Interface) for which the applicable benchmark is identified as topped out for 2 or more consecutive years based on the historical benchmarks published for the CY 2021 MIPS performance period and continues to be identified as topped out based on the performance period benchmarks published for the CY 2022 MIPS performance period/2024 MIPS payment year.

We believe these two criteria collectively would provide clinicians the information to know prior to the CY 2022 performance period/2024 MIPS payment year which measures would have the topped-out scoring applied but would also account for the scenario where a measure is no longer topped out. We would not limit the number of measure achievement points for measures that have not been topped out for at least 2 years as published in the 2021 MIPS performance period/2023 MIPS payment year historical benchmarks.

We invite public comments on our proposal to apply the 7 measures achievement point cap to measures that meet the two criteria.

(vi) Minimum Case Requirements

We refer readers to § 414.1380(b)(1)(iii) for our previous finalized policies regarding case minimum requirements for the quality performance category, which establishes the case minimum requirement threshold at 20 cases for quality measures, with the exception of administrative claims-based measures in the MIPS final list of quality measures described in § 414.1330(a)(1). As more measures are introduced under MIPS, there may be measures, similar to the administrative claims-based measures, that warrant a different case minimum requirement from the other quality measures. In Table Group A of Appendix 1 of this proposed rule, we are proposing to add the following quality measure starting with the 2022 MIPS performance period: Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO–PM), which uses a comprehensive and parsimonious set.
of 11 patient-reported items to assess the broad scope of primary care. In order to achieve the appropriate reliability of the measure—the survey results (adequate number of surveys to provide an accurate representation of the MIPS eligible clinician, group, subgroup, virtual group, and APM Entity), for each MIPS eligible clinician, group, subgroup, virtual group, and APM Entity, a minimum of 30 PCPCM PROM instruments per clinician are needed for submission of this measure. For MIPS eligible groups, subgroups, virtual groups, and APM Entities with 5 or more clinicians, a minimum of 150 PCPCM PROM instruments per TIN for each site/location associated with the clinicians’ part of the group, subgroups, virtual groups, and APM Entities are needed for submission of this measure. For TINs with a composition of multiple specialty practices at one site/location, a minimum of 150 PCPCM PROM instruments per specialty practice within a TIN are needed for submission of this measure. If the MIPS eligible group, subgroup, virtual group, and APM Entity with 5 or more clinicians encompasses multiple sites/locations, each site/location would need to meet the PCPCM PROM instruments requirements as noted above. To allow for the reliable implementation of PCPCM PROM instruments under MIPS, such measure requires a case minimum that exceeds 20 cases.

With more measures being introduced under MIPS that warrant differing case minimum requirements (other than administrative claims-based measures), we are proposing to modify our minimum case requirements policy that would broaden the type of measures (to not only include administrative claims-based measures) having an exception for meeting the minimum case requirement threshold of 20 cases and provide for a measure-specific case minimum requirement for measures identified and determined on a case-by-case basis by CMS. For each measure with a measure-specific case minimum, the minimum case requirement is specified in the annual list of MIPS measures. Specifically, we are proposing to amend §414.1380(b)(1)(iii) to reflect that, except as otherwise specified in the MIPS final list of quality measures described in §414.1330(a)(1), the minimum case requirement is 20 cases.

We seek public comment on our proposal to modify the minimum case requirement policy that expands the exception to meeting the minimum case requirement threshold of 20 cases to measures identified and determined by CMS.

We request feedback on our proposal.

(vii) Incentives To Report High-Priority Measures

We refer readers to §414.1380(b)(1)(v)(A) for our previously finalized policies regarding incentives to report high priority measures. In the CY 2017 Quality Payment Program final rule (81 FR 77293), we established the scoring policies for high priority measure bonus points to encourage the selection of additional high-priority and outcome measures that impact beneficiaries and were closely aligned to our measurement goals. In the CY 2019 PFS final rule (83 FR 59850), we discontinued awarding measure bonus points to CMS Web Interface reporters for reporting high priority measures since CMS Web Interface reporters have no choice in measures.

We stated in the CY 2019 PFS proposed and final rules (83 FR 39590, 59851) that as part of our move towards fully implementing high-value measures, we believe that bonus points for high priority measures for all collection types may no longer be needed. We noted in the CY 2019 PFS final rule (83 FR 59851) that measure bonus points were created as transition policies which were not meant to continue through the life of the program. We believe with the finalized framework for transforming MIPS through MVPs (84 FR 62948), we will find ways in the future to emphasize high priority measures without needing to incentivize with bonus points.

In this proposed rule, we propose to end the high-priority measure bonus points. As we move to MVPs we are simplifying our scoring by ending transition policies that were established in the initial years of the program. We have signaled for many years now that this policy was temporary and would be removed from the program. As we transition to a new state, we anticipate that there will no longer be a need to incentivize high-priority measures by usage of bonus points in MIPS and MVPs as we increase the share of high-priority measures in the program.

We propose to end measure points for reporting high priority measures beginning the 2022 performance period/2024 MIPS payment year. Accordingly, we propose to revise §414.1380(b)(1)(v)(A) to provide that for the 2017 through 2021 performance periods/2019 through 2023 MIPS payment years, MIPS eligible clinicians receive 2 measure bonus points for each outcome and patient experience measure that has a bonus point for each other high priority measure. Beginning with the 2019 performance period/2021 MIPS payment year, MIPS eligible clinicians do not receive such measure bonus points for CMS Web Interface measures. Beginning in the 2022 performance period/2024 MIPS payment year, MIPS eligible clinicians will no longer receive measure bonus points.

We invite public comments on our proposal to end measure points for reporting high priority measures beginning the 2022 performance period/2024 MIPS payment year.

(viii) Incentives To Use CEHRT To Support Quality Performance Category Submissions

Section 1848(q)(5)(B)(iii)(I) of the Act requires the Secretary to encourage MIPS eligible clinicians to report on applicable quality measures through the use of CEHRT and qualified clinical data registries. Section 1848(q)(5)(B)(iii)(II) of the Act requires that the Secretary shall treat such clinicians as satisfying the applicable clinical quality measures reporting requirement described in section 1848(o)(2)(A)(iii) of the Act if they report such measures through the use of such EHR technology for a given performance period. In the CY 2017 Quality Payment Program final rule (81 FR 77297), we established the measure bonus point and bonus cap for using CEHRT for end-to-end electronic reporting. We refer readers to §414.1380(b)(1)(v)(B) for our previously finalized policies regarding measure bonus points for end-to-end electronic reporting. We believe that with the framework for transforming MIPS through MVPs discussed in the CY 2020 PFS proposed rule (84 FR 40739) and the CY 2021 PFS proposed rule (85 FR 50279 through 50285), we will find ways to encourage the use of CEHRT for reporting quality measures without needing to incentivize the use of CEHRT for end-to-end electronic reporting. As noted in the CY 2018 Quality Payment Program final rule (82 FR 53636), we encouraged stakeholders to consider electronically specifying their quality measures as eCQMs, to encourage clinicians and groups to move towards the utilization of electronic reporting. As noted in the CY 2019 PFS final rule (83 FR 59851), bonus points were created as transition policies which were not meant to continue through the life of the program.

In this proposed rule, we propose to end measure bonus points for end-to-end electronic reporting. As we move to MVPs we are simplifying scoring by removing many of the transition policies that we established in the early years of the program. We believe it is imperative
to remove transition policies in order to develop a stronger MVP program and promote alignment between MIPS and MVPs. As stated in previous rulemaking, we are working to develop ways to encourage the use of CEHRT for electronic reporting without offering measure bonus points. Measure bonus points act to introduce scoring inflation into the program and preclude our ability to accurately compare clinicians’ clinical quality. As the program works to focus on the quality of care provided to beneficiaries, we intend to score for performance on measures and not for reporting. Additionally, we believe that we can fulfill the statutory requirement at sections 1848(q)(5)(B)(ii)(I) of the Act to encourage the usage of certified electronic health record technology (CEHRT), through other means. As a program and across the Department of Health and Human Services, we are working towards the goal of all measures within MIPS being digital by 2025 through a movement towards the inclusion of more digital quality measures (dQMs), emphasizing approaches to electronic data sharing that utilize the FHIR standard. As part of these approaches we intend to further leverage the use of electronic reporting from CEHRT for all quality measurement completed in the MIPS program including measurement and reporting facilitated by third party intermediaries such as QCDRs and plan to further address this issue through rulemaking in future years. We are also giving preference to dQMs including eCQMs in our annual call for measures. More information on dQMs and the FHIR standard is available in section IV.A of this proposed rule, information on the call for measures and CMS measurement needs and priorities is available at https://app-cm-prod-content.s3.amazonaws.com/uploads/1313/2021%20Call%20for%20Measures%20and%20Activities%20Toolkit.zip, and https://www.cms.gov/files/document/cms-measurement-priorities-and-needs.pdf, respectively. Furthermore, over the past few years, we have reduced the availability and limited who can submit data for the Medicare Part B claims collection type to only small practices. We note that the Medicare Part B claims collection type is not an electronic means of submission. We invited comments on other methods we can use to encourage the use of CEHRT for electronic reporting.

Accordingly, we proposed to add the policy at § 414.1380(b)(1)(v)(B) to provide that for the 2017 through 2021 performance period/2019 through 2023 MIPS payment years, MIPS eligible clinicians receive 1 measure bonus point for each measure (except claims-based measures) submitted with end-to-end electronic reporting for a quality measure under certain criteria determined by the Secretary. Beginning in the 2022 performance period/2024 MIPS payment year, MIPS eligible clinicians will no longer receive measure bonus points for submitting using end-to-end electronic reporting.

We invited public comments on our proposal to end measure bonus points for end-to-end electronic reporting beginning in the 2022 performance period/2024 MIPS payment year.

(9) Improvement Scoring for the MIPS Quality Performance Category Score

We refer readers to § 414.1380(b)(1)(vi)(C)(4) for more on our policy stating that for the 2020 through 2023 MIPS payment years, for the purpose of improvement scoring, we will assume quality performance category achievement percent score of 30 percent in the previous year if a MIPS eligible clinician earned a quality performance category score less than or equal to 30 percent in the previous year.

In this proposed rule, we propose to continue our previously established policy for improvement scoring for the 2022 performance period/2024 MIPS payment year and to revise § 414.1380(b)(1)(vi)(C)(4) to remove the phrase “2020 through 2023 MIPS payment years” and adding in its place the phrase “beginning the 2018 performance period/2020 MIPS payment year” to indicate that for each MIPS payment year after 2020, we will assume a quality performance category achievement percent score of 30 percent in the previous year if a MIPS eligible clinician earned a quality performance category score less than or equal to 30 percent in the previous year.

Specifically, for the 2022 performance period/2024 MIPS payment year, we would compare the MIPS eligible clinician’s quality performance category achievement percent score for the 2022 MIPS performance period/2024 MIPS payment year to an assumed quality performance category achievement percent score of 30 percent if the MIPS eligible clinician earned a quality performance category score less than or equal to 30 percent for the 2021 performance period/2023 MIPS payment year.

We invite public comments on our proposal to assume a quality performance category achievement percent score of 30 percent in the previous year if a MIPS eligible clinician earned a quality performance category score less than or equal to 30 percent in the previous year for the 2022 performance period/2024 MIPS payment year.

(d) Cost Performance Category

(i) Scoring Flexibility for Changes That Impact Cost Measures During the Performance Period

We refer readers to § 414.1380(b)(2) for our policies regarding scoring for the cost performance category and to previous rules where these policies were finalized, including the CY 2017 Quality Payment Program final rule (81 FR 77308 through 77311), the CY 2018 Quality Payment Program final rule (82 FR 53748 through 53752), the CY 2019 PFS final rule (83 FR 59856), and the CY 2021 PFS final rule (86 FR 84777 through 84860). In § 414.1380(b)(2)(v), we finalized that a cost performance category score is not calculated if a MIPS eligible clinician or group is not attributed any cost measures for the performance period because the clinician or group has not met the minimum case volume specified by CMS for any of the cost measures or a benchmark has not been created for any of the cost measures that would otherwise be attributed to the clinician or group.

We have identified that there is a need for additional flexibility in calculating the scores for cost measures to account for the impact of changing conditions that are beyond the control of MIPS eligible clinicians and groups. This flexibility would allow us to ensure that clinicians are not impacted negatively when performance is affected not due to the care provided, but due to external factors. Thus, beginning with the 2022 MIPS performance period/2024 MIPS payment year, we propose a policy to provide scoring flexibility in instances where changes during a performance period impede the effective measurement of resource use. We believe that there may be instances when there are rapid or unprecedented changes to the delivery of healthcare services that are reflected in administrative claims data used to calculate cost measures. An example of the type of external factor that could affect cost measurement is the PHE for COVID–19. We refer readers to section IV.A.3.e.(2)(b)(ii)(A) of this proposed rule, where we summarize our assessment of the impact of COVID–19 on the calculation of cost measure scores for the 2020 performance period.

In this discussion, we conclude that due to the unique and rapid changes to healthcare in the COVID–19 pandemic, which significantly affected service utilization and the underlying data used...
to calculate cost measures, we cannot reliably calculate scores for the cost measures that adequately capture and reflect clinician performance for 2020. This example demonstrates that the assessment of costs could be impeded by substantial changes to clinical practice and service utilization, and result in misleading or inaccurate results.

We will determine whether such external changes impede the effective measurement of resource use by considering factors including: The extent and duration of the changes, and the conceptual and empirically tested relationship between the changes and each measure’s ability to accurately capture clinician cost performance. Empirical testing could include assessing whether there are rapid or unprecedented changes to patient care volume or case mix, and the extent to which this could lead to misleading or inaccurate results. We note that substantial changes in service utilization may not impede our ability to accurately calculate a cost measure score. Consider for example the case of a hypothetical measure that includes the cost of a series of procedures to treat the condition being measured. Due to advances in clinical knowledge, the procedures are declared to no longer be appropriate to treat the condition during a performance period. This would hypothetically lead to rapid and substantial changes in the services captured in the measure in that performance period; however, these changes would not necessarily lead to misleading or inaccurate results as the measure would be appropriately capturing the costs of care for that condition and appropriately reflecting changes in clinician practice. We would assess this empirically for each measure, as we believe that even widespread external changes to service utilization could have a range of different impacts across measures as they focus on diverse types of care. For example, a hypothetical national shortage of blood products may lead to the suspension of elective surgeries which may not affect the care patterns for a particular outpatient screening or preventative care procedure, meaning that a hypothetical measure focused on capturing clinician cost performance. We seek comments on this proposal.

For our previously established policies regarding scoring the Promoting Interoperability performance category, we refer readers to § 414.1375 and the CY 2017 Quality Payment Program final rule (81 FR 77199 through 77245), the CY 2018 Quality Payment Program final rule (82 FR 53663 through 53688), the CY 2019 PFS final rule (83 FR 59785 through 59820), and the CY 2021 PFS final rule (85 FR 84886 through 84895) for our previously established policies regarding the Promoting Interoperability (formerly the advancing care information) performance category.

In the CY 2019 PFS final rule, we established a new performance-based scoring methodology for the Promoting Interoperability performance category that applies beginning with the 2019 performance period/2021 MIPS payment year (83 FR 59787 through 59796). The scoring methodology is codified at § 414.1380(b)(4)(ii); however, the regulation text refers only to the 2021 and 2022 MIPS payment years, and does not mention subsequent years. We are proposing to revise § 414.1380(b)(4)(ii) for consistency with the previously established policy, by indicating that the methodology applies beginning with the 2019 MIPS performance period/2021 MIPS payment year and continuing to subsequent years. We are proposing to revise § 414.1380(b)(4)(ii) to remove “for the 2021 and 2022 payment years” and add in its place “beginning with the 2019 performance period/2021 MIPS payment year” and remove the word “six” to provide that beginning with the 2021 performance period/2021 MIPS payment year, a MIPS eligible clinician’s Promoting Interoperability performance category score equals the sum of the scores for each of the required measures and any applicable bonus scores, not to exceed 100 points.

In addition, for the 2020 performance period/2022 MIPS payment year, each optional measure in the Promoting Interoperability performance category was worth five bonus points (84 FR 63003), and for the 2021 performance period/2023 MIPS payment year, each optional measure was worth ten bonus points (85 FR 84894). In section IV.3.d.(4)(c).1. of this proposed rule, we are proposing that the Query of Prescription Drug Monitoring Program measure would be worth 10 bonus points, and in section IV.3.d.(4)(c)3 of this proposed rule, we are proposing that submission of a “yes” for the Public Health Registry Reporting measure or the Clinical Data Registry Reporting measure or the Syndromic Surveillance Reporting measure would be worth 5 bonus points. To reflect these policies, we are proposing a change to
§ 414.1380(b)(4)(iii)(C) to reflect that the optional measures are worth five or ten bonus points, as specified by CMS.

We invite public comments on our proposal to make these revisions.

(2) Calculating the Final Score

For a description of the statutory basis and our policies for calculating the final score for each MIPS eligible clinician, we refer readers to § 414.1380(c) and the discussion in the CY 2017 and CY 2018 Quality Payment Program final rules, and the CY 2019, CY 2020, and CY 2021 PFS final rules (81 FR 77319 through 77329, 82 FR 53769 through 53785, 83 FR 59868 through 59878, 84 FR 63020 through 63031, 85 FR 84908 through 84917 respectively) on final score calculations, performance category weights, reweighting the performance categories, and the complex patient bonus.

As described in more detail in the following sections, we:

• Propose to continue doubling the complex patient bonus for the CY 2021 MIPS performance period/CY 2023 MIPS payment year, as was previously finalized with a cap of 10 bonus points for the CY 2020 MIPS performance period/CY 2022 MIPS payment year (85 FR 50311).

• Propose to revise the complex patient bonus formula, which currently provides a bonus to all MIPS eligible clinicians, groups, virtual groups, and APM entities who submit data for at least one MIPS performance category, so that beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year the complex patient bonus better target clinicians who treat a higher caseload of more complex and high-risk patients.

• Request comment on potential circumstances where we may not be able to reliably calculate a score for any of the cost measures as described under § 414.1380(c)(2)(i)(A)(2). Additionally, we note that we are reweighting the cost performance category for the CY 2020 MIPS performance period/CY 2022 MIPS payment year because we have concluded there are not sufficient measures and activities applicable and available for us to score any clinicians on performance due to the national PHE for COVID–19.

• Propose to continue performance category weight redistribution policies finalized for the CY 2022 MIPS performance period/CY 2024 MIPS payment year.

• Propose policies for redistributing the weight of the performance categories for small practices.

• Clarify how our application-based and automatic extreme and uncontrollable circumstances policies intersect.

• Propose a new policy to determine the MIPS final score for clinicians and groups who are eligible for facility-based measurement.

(a) Complex Patient Bonus

(i) Background

Section 1848(q)(1)(G) of the Act requires us to consider risk factors in our MIPS scoring methodology. Specifically, it provides that the Secretary, on an ongoing basis, shall, as the Secretary determines appropriate and based on an individual’s health status and other risk factors, assess appropriate adjustments to quality measures, cost measures, and other measures used under MIPS; and assess and implement appropriate adjustments to payment adjustments, final scores, scores for performance categories, or scores for measures or activities under MIPS. In doing so, the Secretary is required to take into account the relevant studies conducted under section 2(d) of the Improving Medicare Post-Acute Care Transformation Act of 2014 (IMPACT Act) (Pub. L. 113–185, October 6, 2014) and, as appropriate, other information, including information collected before completion of such studies and recommendations.

In the CY 2018 Quality Payment Program final rule, under the authority in section 1848(q)(1)(G) of the Act, we established at § 414.1380(c)(3) a complex patient bonus of up to 5 points to be added to the final score for the 2020 MIPS payment year (82 FR 53771 through 53776). In subsequent rulemaking, we continued the complex patient bonus at § 414.1380(c)(3) for the 2021, 2022, and 2023 MIPS payment years (83 FR 59870, 84 FR 63023, and 85 FR 84910, respectively).

Additionally, we finalized for the 2022 MIPS payment year at § 414.1380(c)(3)(iv) that the complex patient bonus will be calculated under the existing formulas in paragraphs (c)(3)(i) and (ii), and the resulting numerical value will then be multiplied by 2 (85 FR 84911 through 84913). We refer readers to these final rules for additional details on the background, statutory authority, policy rationale, and previously finalized calculation of the complex patient bonus.

We intended for this bonus to serve as a short-term strategy to address the impact patient complexity may have on MIPS scoring while we continue to work with stakeholders on methods to account for patient risk factors. The overall goal, when considering a bonus for complex patients, is two-fold: (1) To protect access to care for complex patients and provide them with excellent care; and (2) to avoid placing MIPS eligible clinicians who care for complex patients at a potential disadvantage while we review the completed studies and research to address the underlying issues. We used the term “patient complexity” to consider a multitude of factors that describe and have an impact on patient health outcomes; such factors include the health status and medical conditions of patients, and social risk factors. We believe as the number and intensity of these factors increase for a single patient, the patient may require more services, more clinician focus, and more resources to achieve health outcomes similar to those who have fewer factors.

In developing the policy for the complex patient bonus, we assessed whether there was a MIPS performance discrepancy by patient complexity using two well-established indicators in the Medicare program: Medical risk as measured through Hierarchical Condition Category (HCC) risk scores, and social risk as measured through the proportion of patients that is dually eligible for Medicare and Medicaid (82 FR 53771 through 53776).

(ii) Complex Patient Bonus for the CY 2021 MIPS Performance Period/CY 2023 MIPS Payment Year

In this section of the proposed rule, we are proposing to modify the complex patient bonus for the CY 2021 MIPS performance period/CY 2023 MIPS payment year in response to the PHE for COVID–19. In the CY 2020 PFS final rule, we finalized a policy to continue the complex patient bonus for the CY 2020 performance period/CY 2022 MIPS payment year (84 FR 63021 through 63023). However, due to the national PHE for COVID–19 during performance period 2020, we noted in the CY 2021 PFS proposed rule that we need to re-evaluate the previously established policy for the complex patient bonus for the CY 2020 MIPS performance period/CY 2022 MIPS payment year (85 FR 50311).

We refer readers to the CY 2021 PFS proposed rule (85 FR 50311 through 50313) for further details on how the PHE for COVID–19 impacts care delivery both directly and indirectly. We acknowledged there are direct effects of COVID–19 for those patients who tested positive for SARS–CoV–2 and indirect effects of COVID–19 for other patients whose care was impacted because of the PHE, including increased complexity and barriers such as postponing care, accessing care in a different way (for example, via telecommunications), and disruptions to...
lab results and medications, which are not accounted for in our existing final score calculations using these complexity indicators.

Considering both these direct and indirect effects, we finalized § 414.1380(c)(3)(iv) (85 FR 84913), under which the complex patient bonus is calculated for the CY 2022 MIPS payment year pursuant to the existing formulas in paragraphs (c)(3)(i) and (ii), and the resulting numerical value is then multiplied by 2 but cannot exceed 10.0. The doubled numerical value (subject to the 10-point cap) is added to the final score.

We believe we have made significant progress against COVID–19. As noted by the Centers for Disease Control and Prevention (CDC), the number of COVID–19 cases is predicted to decrease through the week of July 17th, 2021 in the United States and territories. As of June 1, 2021, the number of daily new cases in the United States is at a similar level compared to the number of daily new cases during this time last year.236 While we are encouraged by these results, we believe that there may be some residual direct and indirect effects from the PHE that could affect the CY 2021 MIPS performance period/CY 2023 MIPS payment year. In particular, for the first quarter, we had high COVID cases in multiple regions.237 Additionally, we cannot quantify the effect of beneficiaries who delayed care because of the PHE and are now seeking care. Because of the concerns of the direct and indirect effects of the COVID–19 PHE, we propose to continue doubling the complex patient bonus as described at § 414.1380(c)(3)(iv) for the CY 2023 MIPS payment year, and we propose corresponding revisions to the regulation text at § 414.1380(c)(3)(iv).

The doubled numerical value (subject to the 10-point cap) would be added to the final score. Since the COVID–19 cases and deaths have decreased throughout the year, we considered applying a smaller multiplier (like 1.5 for a cap of up to 7.5 points) or to not apply a multiplier at all. However, we believe doubling the complex patient bonus is appropriate given the continuation of the national PHE for COVID–19 into the 2021 MIPS performance period, the potential direct and indirect effects of COVID–19 on care delivery and care postponement, and additional uncertainties. We seek comment on this proposal and whether a different multiplier should be applied as we plan to consider the options based on public comment.

(iii) Complex Patient Bonus Beginning With the CY 2022 MIPS Performance Period/CY 2024 MIPS Payment Year

(A) Complex Patient Bonus Background and Analysis

As discussed in the CY 2021 PFS final rule (85 FR 84908), we intended the complex patient bonus as a short-term solution to address the impact patient complexity may have on MIPS scoring. However, during the development of the CY 2021 PFS final rule, we did not have sufficient information available to develop a long-term solution to account for patient risk factors in MIPS that we could include as a finalized policy for the CY 2021 MIPS performance period/CY 2023 MIPS payment year. In the CY 2020 PFS proposed and final rules, we considered whether newly available data from the Quality Payment Program still supported the complex patient bonus at the final score level (84 FR 40793 through 40795). More specifically, within the data analysis, we did not observe a consistent linear relationship for any reporting type or complexity measure, HCC risk score or dual proportion (84 FR 63021 through 63023). However, we only had a few years of data and believed more recent data may bring different results than the findings we explained in detail in the CY 2020 PFS final rule. We refer readers to the CY 2020 PFS final rule for further details on the methodology and findings (84 FR 63021 through 63023).

Further, section 1848(q)(1)(G) of the Act requires us to consider the relevant studies conducted under section 2(d) of the IMPACT Act and, as appropriate, other information, including information collected before completion of such studies and recommendations. The HHS Assistant Secretary for Planning and Evaluation (ASPE) completed its first report in December 2016, which examined the effect of individuals’ socioeconomic status on quality, resource use, and other measures under the Medicare program, and included analyses of the effects of Medicare’s current value-based payment programs on clinicians serving socially at-risk beneficiaries and simulations of potential policy options to address these issues. ASPE’s second report, Social Risk and Performance in Medicare’s Value-Based Purchasing Programs, was released in June 2020, which builds on the analyses included in the initial report and provides additional insight for addressing risk factors in MIPS and other value-based payment programs.238 More specifically, the report has a 3-pronged strategy approach to: Measure and report quality; set high, fair quality standards; and reward and support better outcomes for beneficiaries with social risk. As a part of this 3-pronged strategy, the report supports use of the complex patient bonus in MIPS, explaining that it is well supported because this policy gives additional points to clinicians with a higher share of medically and socially complex patients and does not lower the standard of care. Further, the report suggested that we should not include the complex patient bonus within the final score that is publicly reported to ensure that patients can see the true clinician performance. Based on the ASPE report’s suggestion, in the future we expect to also publicly report the final score without the complex patient bonus included. We noted in the CY 2021 PFS final rule (85 FR 84909) that as we continue to review the findings from the report, we intend to consider its recommendations, along with any updated data that would become available, for future rulemaking.

Under § 414.1380(c)(3), the complex patient bonus is calculated as follows. For MIPS eligible clinicians and groups: [The average HCC risk score assigned to beneficiaries (under the HCC risk adjustment model established by CMS under section 1853(a)(1) of the Act) seen by the MIPS eligible clinician or seen by clinicians in a group] + [the dual eligible ratio × 5]. For APM entities and virtual groups: [The beneficiary weighted average HCC risk score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation within the APM entity or virtual group, respectively] + [the average dual eligible ratio for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation, within the

237Ibid.
patterns and/or resource limitations between urban versus rural counties. The second study 242 found CMS–HCC risk scores provide utility in predicting which patients are expected to be more costly. However, the results also suggested there are systematic differences in the risk adjustment model’s predictive capabilities in rural versus urban populations, as rural beneficiaries in the Tyler Malone, Denise Kirk et al. study generally had greater health care utilization even after controlling for risk scores. In conclusion, both studies suggested Medicare provider payment models using CMS–HCC risks scores may underestimate the costs associated with treatment of rural beneficiaries.

While ASPE’s reports to Congress support the use of a complex patient bonus at the final score level, we also acknowledge the findings reported in the published literature by identifying ways to make the complex patient bonus more targeted for clinicians caring for high risk and complex patients and to mitigate differences in resources that affect MIPS scores. Once it became available, we reviewed the 2018 MIPS actual data to see if we could replicate the findings and identify some structural issues within the current complex patient bonus formula. We describe the findings below. We also note that the analyses reported in the Johnston KJ, Wienen TL et al. studies include all MIPS eligible clinicians irrespective of whether they submitted data, while our data analyses with 2018 actual scored MIPS data were restricted to MIPS clinicians who submitted data. We restricted our analyses to MIPS eligible clinicians who submit MIPS data because under current policy as established at § 414.1380(c)(3), the MIPS eligible clinician must engage in, that is submit data for, at least one MIPS performance category for the applicable performance period for the MIPS payment year to receive the complex patient bonus. Our analysis of 2018 actual MIPS data was further limited to MIPS eligible clinicians scored as individuals or groups because the HCC and dual proportion individual data elements were not available for virtual groups and APM Entities at the time of our analysis.

For our updated analysis, we used actual 2018 MIPS scored data to evaluate whether the complex patient bonus sufficiently supports MIPS eligible clinicians scored as a group or individual who submit data and treat high risk and medically complex patients. We grouped the MIPS eligible clinicians into quintiles based on the complex patient bonus points they would receive. Quintiles were created by first ranking the actual complex patient bonus scores from lowest to highest for MIPS eligible clinicians who submitted data and were scored as an individual or group. All clinicians who received the same group score had the same complex patient bonus scores.

Then, five groupings were created, each containing 20 percent of the MIPS eligible clinicians in our analysis. We found that MIPS final scores, prior to assigning the complex patient bonus points, were substantially lower for clinicians in the top two quintiles for the complex patient bonus compared to clinicians in the lower quintiles for the complex patient bonus when we refined the analysis by examining the HCC and dual proportion quintiles separately, we observed a similar pattern.

Currently, the complex patient bonus is awarded to all eligible clinicians meaning those who have submitted data for at least one MIPS performance category or are facility-based, even clinicians serving beneficiaries with below-average dual proportion or HCC scores. Given our updated analysis showed that the MIPS performance of clinicians in the top two quintiles for each risk indicator, HCC and dual proportion, is substantially affected by the complexity of their patients among clinicians who submitted data and were scored as individuals and groups, we compared the respective contributions of the two risk indicators to the total points assigned. We found that approximately 55 percent of the points assigned are for the HCC risk indicator component and 45 percent for the dual proportion risk indicator component. However, we also observed that the additional points attributable to a one standard deviation increase in dual proportion were greater than those attributable to a similar increase in the HCC score.

In summary, our updated analyses using actual 2018 MIPS scored data found that clinicians who have a higher share of complex patients have lower final scores, on average, prior to the assignment of the complex patient bonus than other clinicians. Additionally, our analyses showed that there is little evidence of association between the complex patient risk indicators (HCC and dual proportion) and MIPS final scores among the clinicians with a lower share of complex patients. We also noted, based on the above analysis using actual 2018 MIPS

scored data for clinicians scored as individuals and groups examined separately, the median raw final scores for engaged clinicians in the calculated top complex patient bonus quintile were more than 10 points less than the median raw final score of those in the bottom complex patient bonus quintile. Specifically, the median raw final scores for engaged clinicians in the top complex patient bonus quintile were 82.33 for groups and 60.76 for individuals compared to median raw scores of 94.36 for groups and 81.28 for individuals in the lowest quintile. Additionally, when we compared the median raw final scores for engaged clinicians in the calculated middle complex patient bonus quintile to the highest quintile, we still observed a difference in median raw final scores of greater than 10 points for both individuals and groups. Table 49 shows 2018 median MIPS raw final scores for the engaged individuals and groups within the lowest, middle and highest complex patient bonus (CPB) quintiles.

**TABLE 49: 2018 Median MIPS Raw Final Scores for Engaged Individuals and Groups by Complex Patient Bonus Quintile**

</table>

Furthermore, we found that, while the two risk indicators, dual proportion and HCC risk score, are correlated substantially, each has a different scale. For example, the dual proportion has a natural upper bound of 1 whereas the HCC risk score does not. The distribution of each risk indicator around its mean and median is also different. Given these findings, we have identified areas within the complex patient bonus that can be improved. Most importantly, the current complex patient bonus formula gives bonus points to clinicians not adversely affected by social risk and medical risk of their patients and does not sufficiently account for clinicians who treat patients who are high-risk and/or medically complex.

**(B) Proposed Updates to the Complex Patient Bonus Beginning With the CY 2022 MIPS Performance Period/CY 2024 MIPS Payment Year**

Based on the ASPE report and our analyses, we are proposing to revise the complex patient bonus by—(1) limiting the bonus to clinicians who have a median or higher value for at least one of the two risk indicators (HCC and dual proportion); (2) standardizing the distribution of the two risk indicators so that the policy can target clinicians who have a higher share of socially and/or medically complex patients; and (3) providing one overall complex patient bonus cap at 10 bonus points. To accomplish this, we include five separate proposals to update our complex patient bonus for the CY 2022 MIPS performance period/CY 2024 MIPS payment years and future MIPS performance periods/MIPS payment years. We note that in section IV.A.3.e.(2)(a)(iii)(B) of this proposed rule, we use the term “clinician(s)” to generally refer to those individuals and entities that these proposals apply to, including MIPS eligible clinicians, groups, subgroups, APM entities, and virtual groups. First, we propose to add to §414.1380(c)(3) that, similar to our current policy, beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, provided that a MIPS eligible clinician, group, subgroup, virtual group or APM entity submits data for at least one MIPS performance category for the applicable performance period for the MIPS payment year, a complex patient bonus will be added to the final score for the MIPS payment year, if applicable, as described in paragraph (c)(3)(v) through (c)(3)(viii). Second, we propose at §414.1380(c)(3)(v) that beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment years, the complex patient bonus is limited to MIPS eligible clinicians, groups, subgroups, APM entities, and virtual groups with a risk indicator at or above the risk indicator calculated median. Third, we propose the revised formulas at §414.1380(c)(3)(vi). For MIPS eligible clinicians, groups, and subgroups, the complex patient bonus components are calculated as follows for the specific risk indicators: medical complex patient bonus component = 1.5 + 4* the standardized score for each risk indicator calculated median. Fourth, we propose the revised formulas at §414.1380(c)(3)(vii). For APM entities and virtual groups, the complex patient bonus components are calculated as follows for the specific risk indicators: medical complex patient bonus component = 1.5 + 4* the standardized score for each risk indicator calculated median. Finally, we propose at §414.1380(c)(3)(viii) that beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment years,
the complex patient bonus cannot exceed 10.0 and cannot be below 0.0.

(aa) Continuing the Requirement To Submit Data and To Use the Same Risk Indicators

Under the first proposal, beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment years, we are proposing to continue the requirement to submit data for at least one MIPS performance category for the applicable performance period for the MIPS payment year for a MIPS eligible clinician, group, subgroup, virtual group or APM entity to receive a complex patient bonus added to the final score for the MIPS payment year, if applicable, as described in paragraphs (c)(3)(v) through (viii).

As discussed below in section IV.A.3.e.(2)(a)[(ii)(B)(cc)] of this proposed rule, the proposals at § 414.1380(c)(3)(vi) and (vii) include complex patient bonus components within the formulas proposed beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year to account for social and medical risk, while still using our current established risk indicators of dual proportion and HCC risk scores, respectively. We also continue to believe that applying this bonus at the final score is appropriate because caring for complex and vulnerable patients can affect all aspects of a practice and not just specific performance categories.

(bb) Cutoff at the Median for Complex Patient Bonus Beginning With the CY 2022 MIPS Performance Period/CY 2024 MIPS Payment Year

Beginning with the CY 2018 MIPS performance period/CY 2020 MIPS payment year, a complex patient bonus was added to the final score for the MIPS payment year for all MIPS eligible clinicians, groups, virtual groups and APM entities if they submitted data for at least one MIPS performance category for the applicable performance period for the MIPS payment year (§ 414.1380(c)(3)). We did not include any requirement that clinicians had to attain a certain threshold to receive the complex patient bonus. Under the second proposal, we are proposing at § 414.1380(c)(3)(v), beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment, the complex patient bonus is limited to MIPS eligible clinicians, groups, subgroups, APM entities, and virtual groups with a risk indicator at or above the median dual proportion calculated median. This proposal limits the component for social risk to clinicians with a dual proportion value at or above the median dual proportion, and it limits the component for medical risk to clinicians with an HCC score value at or above the median HCC score. Those at or above the median for a risk indicator will get complex bonus points for that risk indicator component. To ensure the points are impactful and provided specifically to clinicians treating higher numbers of medically and socially complex patients, we propose to provide bonus points beginning at the respective calculated medians.

Both medical and social factors within the newly proposed methodology, discussed in section IV.A.3.e.(2)(a)[(iii)(B)(cc)] of this proposed rule, would have separate medians and distributions calculated to provide more transparent bonuses to directly target those clinicians who treat a higher caseload of high-risk and complex patients. Both the dual proportion and the HCC risk indicators attributed to each clinician will be calculated in the same manner as under our current policy (for more information about the current policy, see the CY 2018 Quality Payment Program final rule (82 FR 30135)).

To determine the median for the respective risk indicator (HCC and dual proportion), we propose to use the risk indicators associated with the final score assigned to a clinician from the prior performance period for all engaged MIPS clinicians, which means those who have submitted data for at least one MIPS performance category or are facility-based. We would also use this same final score distribution to determine the standardized score discussed in section IV.A.3.e.(2)(a)[(ii)(B)(cc)] of this proposed rule. These statistics would be applied to the applicable performance period values of the risk indicators for each clinician to calculate the social and medical risk component scores for the MIPS performance period. For example, the median from the CY 2021 performance period would be compared to the CY 2022 MIPS performance period risk indicator values to determine who would be eligible for a CY 2022 MIPS performance period/CY 2024 MIPS payment year complex patient bonus. We believe we need a prospective determination of the median, and standardized score from a prior performance period where the final scores are already resolved.

In our proposal, only those clinicians with risk indicator scores at or above the median for either one or both risk indicators would receive complex patient bonus points. Based on this proposed rule’s regulatory impact analysis (see section VII.F.17 of this proposed rule), we estimate 64 percent of clinicians would receive a complex patient bonus because there is not 100 percent overlap in the clinicians that are at or above the median for both risk indicators. Approximately 36.3 percent of engaged clinicians would not receive any complex patient bonus points, as they are below the median for both the HCC risk score and the dual proportion. We believe this number is appropriate as we would be targeting the complex patient bonus points to clinicians treating a higher caseload of highly complex patients.

Additionally, the complex patient bonus points would be more impactful as the difference in awarded bonus points between those with high caseloads of complex patients and those with low caseloads, would be greater. We believe establishing a cutoff point at the median, as opposed to the mean, is appropriate given the median is less impacted by outlier cases since the median is simply the middle value. We considered whether to use the mean, instead of the proposed median, but estimated that would result in about 50 percent of clinicians no longer receiving any complex patient bonus points because outliers could increase the mean.

We acknowledge that alternate approaches could be used to target the bonus at clinicians with higher caseloads of complex patients. For example, we could consider using a different distribution of risk indicator scores, such as one from an earlier performance period, so clinicians could know their scores in advance, or through using a distribution that includes individual clinician scores and counts group scores, APM Entity scores, virtual group scores, and, starting in the CY 2023 MIPS performance period/CY 2025 MIPS payment year, subgroup scores only once, so the group, APM Entity, virtual group, or subgroup score is not weighted by the number of clinicians in the group, APM Entity, virtual group, or subgroup. We could also consider building risk benchmarks based on our current quality measure benchmark methodology (81 FR 77282 and 82 FR 53718) to determine the number of complex patient bonus points. Under that methodology, risk indicator scores higher than the decile in which the median risk factor lies would receive complex patient bonus points and all of the clinicians in the top decile would receive 5 points for each risk indicator. We request comments on alternate approaches for calculating the complex patient bonus.
Under the third proposal, we propose at § 414.1380(c)(3)(vi) that beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, for MIPS eligible clinicians, groups, and subgroups, the complex patient bonus components are calculated as follows for the specific risk indicators: Medical complex patient bonus component = 1.5 + 4* associated HCC standardized score calculated with the average HCC risk score assigned to beneficiaries (pursuant to the HCC risk adjustment model established by CMS under section 1833(a)(1) of the Act) seen by the MIPS eligible clinician or seen by clinicians in a group or subgroup; social complex patient bonus component = 1.5 + 4* associated dual proportion standardized score. The components are added together to calculate one overall complex patient bonus. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score – risk indicator mean)/risk indicator standard deviation. For example, we would use the mean and standard deviation from the CY 2021 MIPS performance period and the component assigned in the CY 2022 MIPS performance period to determine the clinician’s standard score for the CY 2022 MIPS performance period/CY 2024 MIPS payment year. Under the fourth proposal, we also propose at § 414.1380(c)(3)(vii), beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment years, for APM entities and virtual groups, the complex patient bonus components are calculated as follows for the specific risk indicators: Medical complex patient bonus component = 1.5 + 4* the beneficiary weighted average HCC risk standardized score of all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation within the APM entity or virtual group, respectively; social complex patient bonus component = 1.5 + 4* the average dual proportion standardized standard deviation for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation, within the APM entity or virtual group, respectively. The components are added together to calculate one overall complex patient bonus. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score – risk indicator mean)/risk indicator standard deviation. The mean and standard deviation statistics will be used along with the performance period values of the risk indicators for each clinician to calculate the standardized score used to calculate the social and medical risk component scores for the MIPS payment year. For example, if the raw dual proportion score calculated for a clinician is 0.25, the dual proportion mean (from the prior performance period) is 0.23, and the dual proportion standard deviation (from the prior performance period) is 0.15, the clinician’s standardized score would be (0.25 – 0.23)/0.15 = 0.13. We believe that the standardized score calculation is appropriate as it is typically used to understand how far the raw risk indicator scores fall from the mean. We note that those with a mean score would have a standardized score of zero, and those with a standardized score of 1 are one standard deviation above the mean. Those below the mean would have a negative standardized score. The proposed formulas would also provide bonus points to clinicians who have a negative risk indicator standardized score and fall between the calculated median and mean for the respective risk indicator and to those who fall at or above the mean and thus have a positive risk indicator standardized score. As noted in section IV.A.3.e.(2)(a)(iii)(B)(cc) of the proposed rule, at § 414.1380(c)(3)(vi) and (vii), the new bonus components would use respective means to calculate standardized scores to then calculate and provide bonus points for clinicians with risk indicators, HCC and dual proportion, at or above the median, to capture medical and social risk separately. For each of the two component calculations, higher standardized scores above the mean would be associated with more bonus points. For example, a clinician with a standardized score of zero (the mean value) for each risk indicator, HCC and dual proportion, would receive bonus points for each component that is equivalent to the constant, additive factor within the new formula, 1.5. The proposed formulas acknowledge complexity without creating a large cliff between bonus points above the median and those who have a marginally higher caseload of complex patients. The bonus, as proposed, would increase proportionally with the increased number of complex patients a clinician is treating and/or the degree of patient complexity. For example, we would not want to provide those who fall at the mean 1.5 bonus points, and then provide 10 bonus points to those who only have only a slightly higher caseload. Hence, we intend to incorporate a standardized score multiplied by 4 to ensure the score gets proportionally higher as complexity increases.

The additive factor of 1.5 ensures that all clinicians at or above the mean for the social complex patient bonus calculation, based on dual proportion, would receive at least 1.5 complex patient bonus points and all clinicians at or above the mean for the medical complex patient bonus calculation, based on HCC risk score, would receive at least 1.5 complex patient bonus points. Further, the additive factor of 1.5 would allow clinicians between the median and mean to still receive complex patient bonus points. For example, if the dual proportion risk indicator median is 0.2 and the dual proportion risk indicator mean is 0.23, a clinician with an associated standardized score of 0.1 standard deviations below the mean, but still above the median, the clinician would receive a complex patient bonus equal to 1.5 + 4 * (−0.1) which equals 1.1 for the dual proportion component. If the dual proportion risk indicator calculated for a clinician falls below the median, they would receive zero complex patient bonus points for the dual proportion component. Based on the standardized score calculation, if the dual proportion risk indicator calculated for a clinician falls above the mean, they would receive complex patient bonus component points greater than the additive factor of 1.5 for the dual proportion component.

We believe this formula avoids a major complex patient bonus points cliff created by providing the clinicians right above the cutoff point significant bonus points compared to the clinicians right below the cutoff point (who do not receive any complex patient bonus points). We acknowledge those who fall below the median will no longer receive any complex patient bonus points, per proposal at § 414.1380(c)(3)(v) that for the CY 2022 MIPS performance period/CY 2024 MIPS payment years and future MIPS performance periods/MIPS payment years, the complex patient bonus is limited to MIPS eligible clinicians, groups, subgroups, APM entities, and virtual groups with a risk
When we originally established the complex patient bonus policy in the CY 2018 Quality Payment Program final rule (82 FR 53774), we finalized at §414.1380(c)(3)(iii) that the complex patient bonus cannot exceed 5.0. At that time, our data analysis estimated a decrease in simulated scores of 5.4 points (for individuals who report 6 or more quality measures) and 4.5 points (for groups) from the top quartile to the bottom quartile for the average patient HCC risk scores and 4.8 points (using HCC risk score standardized score) and the medical risk component is 1.5 + 4 * 0.25 = 2.5. The two complex patient bonus components are then added together to total 9 complex patient bonus points for this clinician. Had the total been above 10 bonus points, the 10-point cap would have applied and the clinician would have received 10 complex patient bonus points added to their final MIPS score.

We seek feedback on whether we should use the multiplier of 4 and cap of 10 bonus points a clinician can have applied and the clinician would have received 10 complex patient bonus points added to their final MIPS score.

In summary, we propose the five separate proposals for the CY 2022 MIPS performance period/CY 2024 MIPS payment year and future MIPS performance periods/MIPS payment years as follows:

- To revise §414.1380(c)(3), by adding, beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, provided that a MIPS eligible clinician, group, subgroup, virtual group or APM entity submits data for at least one MIPS performance category for the applicable performance period for the MIPS payment year, a complex patient bonus will be added to the final score for the MIPS payment year, if applicable, as described in paragraphs (c)(3)(v) through (viii).
- At §414.1380(c)(3)(v), beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, we propose the complex patient bonus is limited to MIPS eligible clinicians, groups, subgroups, APM entities, and virtual groups with a risk indicator at or above the risk indicator calculated median.
- At §414.1380(c)(3)(vii), beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, we proposed for MIPS eligible clinicians, groups, and subgroups, the complex patient bonus components are calculated as follows for the specific risk indicators:

  - Medical complex patient bonus component = 1.5 + 4 * associated HCC standardized score calculated with the average HCC risk score assigned to beneficiaries (under the HCC risk adjustment model established by CMS pursuant to section 1853(a)(1) of the Act) seen by the MIPS eligible clinician or seen by clinicians in a group or subgroups; social complex patient bonus component = 1.5 + 4 * associated dual proportion standardized score. The components are added together to calculate one overall complex patient bonus.

  - A standardized score for each
risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score – risk indicator mean)/risk indicator standard deviation.

• At § 414.1380(c)(3)(vii), we propose that beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, for APM entities and virtual groups, the complex patient bonus components are calculated as follows for the specific risk indicators: Medical complex patient bonus component = 1.5 + 4 * the beneficiary weighted average HCC risk standardized score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation within the APM entity or virtual group, respectively; social complex patient bonus component = 1.5 + 4 * the average dual proportion standardized score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation, within the APM entity or virtual group, respectively. The components are added together to calculate one overall complex patient bonus. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score – risk indicator mean)/risk indicator standard deviation.

• At § 414.1380(c)(3)(viii), beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, we propose the complex patient bonus cannot exceed 10.0 and cannot be below 0.0.

We seek comments on these proposals including the different aspects of the updated complex patient bonus formulas, such as the additive and multiplicative components, the cutoff point (the median), and the 10-point overall cap. For all of the reasons described above in sections IV.A.3.e.(2)[a][iii], IV.A.3.e.(2)[a][iii][A] and (B), and IV.A.3.e.(2)[a][iii][B][aa] through (dd) of this rule, we have proposed such policies. However, we did also consider the alternative of continuing the use of the complex patient bonus formulas, as previously finalized at § 414.1380(c)(3)(i) and (ii), along with the 5.0 point cap as previously finalized at § 414.1380(c)(3)(iii) for the CY 2022 MIPS performance period/CY 2024 MIPS payment year, for APM entities and virtual groups which rely on complete TIN participation, within the APM entity or virtual group, respectively. The components are added together to calculate one overall complex patient bonus. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score – risk indicator mean)/risk indicator standard deviation.

(ii) Flexibility for Weighting Performance Categories

Under section 1848(q)(5)(F) of the Act, if there are not sufficient measures and activities applicable and available to each type of MIPS eligible clinician involved, the Secretary shall assign different scoring weights (including a weight of zero) for each performance category based on the extent to which the category is applicable to the type of MIPS eligible clinician involved and for each measure and activity with respect to each performance category based on the extent to which the measure or activity is applicable and available to the type of MIPS eligible clinician involved.

Under section 1848(q)(5)(B)(i) of the Act, in the case of a MIPS eligible clinician who fails to report on an applicable measure or activity that is required to be reported by the clinician, the clinician must be treated as achieving the lowest potential score applicable to such measure or activity. In this scenario of failing to report, the MIPS eligible clinician generally would receive a score of zero for the measure or activity, which would contribute to the final score for that MIPS eligible clinician. Under certain circumstances, however, a MIPS eligible clinician who fails to report could be eligible for an assigned scoring weight of zero percent and a redistribution of the performance category weights. For a description of our existing policies for reweighting performance categories, please refer to § 414.1380(c)(2) and the CY 2021 PFS final rule (83 FR 84914 through 84916).

Section 1848(q)(5)(F) of the Act specifies weights for the performance categories included in the MIPS final score: In general, 30 percent for the quality performance category; 30 percent for the cost performance category; 25 percent for the Promoting Interoperability performance category; and 15 percent for the improvement activities performance category. For more of the statutory background and descriptions of our current policies, we refer readers to the CY 2017 through CY 2018 Quality Payment Program final rules, and CY 2019 through CY 2021 PFS final rules (81 FR 77320 through 77329, 82 FR 53779 through 53785, 83 FR 59870 through 59878, and 84 FR 62950 through 62959, 85 FR 8498 through 84908, respectively). Table 50 summarizes the weights established in prior rulemaking (85 FR 84913) for each performance category for the CY 2022 MIPS performance period/CY 2024 MIPS payment year and each subsequent MIPS payment year.

(A) Reweighting the Cost Performance Category

Under § 414.1380(c)(2)(i)(A), we will assign a different weight to a performance category and redistribute its prescribed weight to another performance category or categories in certain circumstances where we determine there are not sufficient measures and activities applicable and available under section 1848(q)(5)(F) of the Act. For the cost performance category, this includes circumstances where we cannot reliably calculate a score for the cost measures which adequately captures and reflects the performance of a MIPS eligible clinician (see §414.1380(c)(2)(i)(A)(2)). In the CY 2018 Quality Payment Program final rule (82 FR 53780), for the cost performance category, we noted in the
proposed rule we had stated that we continue to believe having sufficient measures applicable and available means that we can reliably calculate a score for the cost measures which adequately captures and reflects the performance of a MIPS eligible clinician, and that MIPS eligible clinicians who are not attributed enough cases to be reliably measured should not be scored for the cost performance category. We noted (82 FR 53780) we had established a policy in the CY 2017 Quality Payment Program final rule that if a MIPS eligible clinician is not attributed enough cases for a measure (in other words, has not met the required case minimum for the measure), or if a measure does not have a benchmark, then the measure will not be scored for that clinician (81 FR 77323). We stated (82 FR 53780) if we do not score any cost measures for a MIPS eligible clinician in accordance with this policy, then the clinician would not receive a cost performance category percent score. In this section of the proposed rule, we are requesting comments on potential circumstances where we may not be able to reliably calculate a score for any of the cost measures which adequately captures and reflects the performance of a MIPS eligible clinician, and may assign a different weight to the cost performance category and redistribute its prescribed weight to another performance category or categories. We are interested in comments on circumstances that could affect all MIPS eligible clinicians, as well as those that could affect a subset of MIPS eligible clinicians or individual MIPS eligible clinicians. The cost performance category reweighting provision at § 414.1380(c)(2)(ii)(A)(2) is distinct from the measure suppression policy proposed in section IV.A.3.e.(1)(d)(i) of this proposed rule, as it applies to the performance category as a whole and not on a measure-by-measure basis.

In the CY 2021 PFS final rule (85 FR 84880), we responded to commenters’ concerns regarding the potential for COVID–19 to impact cost measures, noting various features of the cost measures could allow us to calculate cost measures without penalizing practices in COVID–19 hotspots, and policies were in place to account for circumstances when a cost measure cannot be reliably calculated to adequately capture and reflect clinician performance. First, we noted service assignment allows the episode-based measures to capture the cost of services clinically related to the triggering event for the episode, reducing the likelihood of the measures to capture costs resulting from high volumes of COVID–19 treatment services. Then, we noted the measures are adjusted for clinical risk to account for different levels of care beneficiaries may require due to comorbidities, disability, age, and other risk factors (including clinical characteristics based on the beneficiary’s recent medical history) to ensure attributed clinicians are not penalized for factors beyond their influence. Finally, we noted the cost measures use standardized claims to account for differences in Medicare payments for the same services across health care providers, removing the effect of regional differences in health care costs and the payment standardization process removes the 20 percent increase in the IPPS relative weight under the CARES Act for individuals diagnosed with COVID–19. After the publication of the CY 2021 PFS final rule, we continued to monitor the cost measures to determine whether we could reliably calculate the cost measures for the 2020 performance period. Due to the claims run-out period, there is an inherent delay between the time at which we can observe trends in claims and when we can test for potential impact on cost measures, to ensure that the data included in our analyses reflect final claims for all services in episodes. In addition, a drop-in service utilization early in 2020 would only affect the amount of information available to risk adjust for patient clinical factors for episodes beginning in the second half of the year as the episode-based measures use a 120-day look back period during which we look for HCC indicators. When considering these factors, along with the length of the episode windows for the measures and the need to include as many episodes in our study as possible, we had to complete our monitoring and assessment after the end of the CY 2020 MIPS performance period.

Based on our analyses using the full year of data from 2020, we considered many factors and concluded we cannot reliably calculate scores for the cost measures that adequately capture and reflect clinician performance due to the unique changes to healthcare in the COVID–19 pandemic. Our analyses showed substantial decreases in service utilization in 2020 compared to 2019 across all care settings. This can affect risk adjustment and the ability to adequately reflect clinician performance on cost measures. Since we look for diagnosis information in a beneficiary’s claims history during a lookback period before the start of the episode to capture HCC indicators and other clinical risk factors used in risk adjustment, a decrease in service utilization means that there are fewer claims from which we can identify risk adjustors. There was a systematic decrease in the ratio of the number of HCCs identified for risk adjustment in 2020 compared to 2019 in the second half of the year across all the measures. We note this finding coincides with when we observed the steepest drops in service utilization due to the length of the lookback period. There was also a systematic decrease in the ratio of the number of episodes in 2020 compared to 2019. This indicates the overall decrease in service utilization is indeed reflected in fewer episodes being triggered and demonstrates the wide-ranging impact of COVID–19 across the range of care that the cost measures capture. Separately from the decrease in service utilization, our analyses demonstrate that episodes with COVID–19 diagnoses generally have higher observed, payment-standardized costs than episodes without COVID–19 diagnoses. These differences are also present when comparing risk-adjusted costs for episodes with and without COVID–19 diagnoses. This shows despite service assignment rules for episode-based measures, beneficiaries diagnosed with COVID–19 had higher payment-standardized costs of care which was not sufficiently accounted for through risk adjustment or other features of cost measures.

Because we determined we cannot reliably calculate scores for the cost measures that adequately capture and reflect the performance of MIPS eligible clinicians, we announced via email communication (subject: CMS Reweighting 2020 MIPS Cost Performance Category) on May 20, 2021, in accordance with § 414.1380(c)(2)(ii)(A)(2), we will assign a weight of 0 percent to the cost performance category for the CY 2020 MIPS performance period/CY 2022 payment year and redistribute the prescribed weight of 15 percent to another performance category or categories, as established at § 414.1380(c)(2)(ii)(D). We note as with all measures, we continue to monitor the evolving impact of COVID–19.

We recognize there may be additional circumstances where we may not be able to reliably calculate a score for any of the cost measures within the cost performance category that adequately captures and reflects the performance of a MIPS eligible clinician, which could include external factors beyond the control of clinicians. Similar to the Measure Suppression Factors discussed.
in the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25473), such external factors may include significant national shortages or rapid or unprecedented changes in: (1) Healthcare personnel; (2) medical supplies, equipment, or diagnostic tools or materials; or (3) patient case volumes or patient case mix. We request comment on whether these external factors should inform our future decision-making on whether to reweight the cost performance category under § 414.1380(c)(2)(i)(A)(2). We also request comment on whether there are other external factors we should consider, or other circumstances in general that could affect our ability to reliably calculate a score for the cost performance category as described under § 414.1380(c)(2)(i)(A)(2).

(iii) Redistributing Performance Category Weights

In the CY 2017 through CY 2018 Quality Payment Program final rules, and CY 2019 through CY 2021 PFS final rules (81 FR 77325 through 77329, 82 FR 53783 through 53785, 83 FR 59876 through 59878, 84 FR 63027 through 63031, and 85 FR 84914 through 84916), and at § 414.1380(c)(2)(ii), we established policies for redistributing the weights of the performance categories in the event that a scoring weight different from the generally applicable weight is assigned to a category or categories.

In CY 2021 PFS final rule, we finalized a policy for redistributing the performance category weights for the CY 2022 MIPS performance period/CY 2024 MIPS payment year and noted that we planned to revisit our redistribution policies in future rulemaking and may consider redistributing more weight to the cost performance category after clinicians have more experience with cost being weighted at 30 percent (85 FR 84914). While we still intend to redistribute more weight to the cost performance category in future years, we believe it would be beneficial to establish the redistribution policies for the CY 2023 MIPS performance period/CY 2025 MIPS payment year and future years to provide as much notice as possible to clinicians and other stakeholders. Hence, we propose to apply the redistribution policy finalized for the 2022 MIPS performance period/2024 MIPS payment year at § 414.1380(c)(2)(ii)(C/F) to the 2025 MIPS payment year and each subsequent MIPS payment year, and we propose corresponding revisions to § 414.1380(c)(2)(ii)(E). We still plan to revisit our redistribution policies in future rulemaking after clinicians have more experience with cost being weighted at 30 percent and gain more experience with our newly proposed MVPs. Our proposed redistribution policies for the 2023 MIPS payment year and each subsequent MIPS payment year are included in Table 51. We note that not all the redistribution scenarios described in Table 51 would apply to MIPS eligible clinicians in small practices, so we also propose at § 414.1380(c)(2)(ii)(F) an exception for a new paragraph (G) which applies to small practices. Please refer to Table 52 for the proposed redistribution policy for small practices.

We request public comment on this proposal.

(A) Redistributing Performance Category Weight for Small Practices

Clinicians and groups who work in small practices are a crucial part of the health care system. The Quality Payment Program provides options designed to make it easier for these clinicians and groups to report on performance and quality and participate in advanced alternative payment models for incentives. We have heard directly from clinicians in small practices that they face unique challenges related to financial and other resources, environmental factors, and access to health information technology. We heard from many commenters that the Quality Payment Program gives an advantage to large organizations because such organizations have more resources invested in the infrastructure required to track and report measures to MIPS (82 FR 53776). In response to the feedback on the potential burden on small practices, we have established special policies available for small practices including the small practice bonus and special scoring policies. For example, in the CY 2018 QPP final rule (82 FR 53682 through 53683), we established a significant hardship exception for small practices for the
Promoting Interoperability performance category.

In this section of the proposed rule, we discuss how we would redistribute the Promoting Interoperability performance category weight for small practices. Within the reweighting policy for the CY 2022 MIPS performance period/CY 2024 MIPS payment year, the Promoting Interoperability performance category weight is redistributed fully to the quality performance category, unless the quality performance category is weighted at zero percent. In general, our reweighting policies have emphasized the quality performance category over the improvement activities performance category. We have noted it is important to prioritize performance on measures that show a variation in performance such as quality measures, rather than the activities under the improvement activities performance category, which are based on attestation of completion (85 FR 84918). We believe this helps reduce incentives to not report measures for the quality performance category in circumstances when a clinician may be able to report but chooses not to do so. However, given stakeholder input and recently published literature, we believe there could be other reasons why a small practice would not report quality measures. One recent article stated that physicians in larger group practices, multispecialty practices, or participating through alternative payment models had higher MIPS scores, possibly reflecting such practices’ greater infrastructure and resources to collect, analyze, and report measures to CMS. We have also heard directly from clinicians in small practices that they face unique challenges related to financial and other resources and access to health information technology. Many commenters have shared their belief that the Quality Payment Program gives an advantage to large organizations because such organizations have more resources invested in the infrastructure required to track and report measures to MIPS (82 FR 53776). Indeed, 85 percent of clinicians who are not engaged with MIPS (who do not submit data) are clinicians in small practices (85 FR 85018), which we believe may be due to their limited resources. Given infrastructure and resource limitations within small practices, we believe it is appropriate to place more emphasis on a performance category that poses a reduced reporting burden such as the improvement activities performance category.

We propose that for small practices, as defined at § 414.1305, the Promoting Interoperability performance category weight for small practices (85 FR 85018), which we believe may be due to their limited resources. Given infrastructure and resource limitations within small practices, we believe it is appropriate to place more emphasis on a performance category that poses a reduced reporting burden such as the improvement activities performance category. We propose that for small practices, as defined at § 414.1305, when the Promoting Interoperability performance category is reweighted, the quality performance category will be weighted at 40 percent, the cost performance category will be weighted at 30 percent, and the improvement activities performance category will be weighted at 30 percent. When both the cost performance category and the Promoting Interoperability performance category are reweighted, the quality performance category will be weighted at 50 percent and the improvement activities performance category will be weighted at 50 percent. We plan to revisit this redistribution policy in future rulemaking and may consider redistributing more weight to the cost performance category after clinicians have more experience with cost being weighted at 30 percent.

We anticipate that our proposal noted in the two rows in Table 52 will greatly assist small practices by providing further flexibilities to help with our goal of increasing engagement across the MIPS program and to be able to meet the MIPS requirements. Beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, we propose at § 414.1330(c)(2)(ii)(G) redistribution policies for small practices, as shown in Table 52.

We request public comment on this proposal.

(iv) MIPS Reweighting Based on Extreme and Uncontrollable Circumstances

(A) MIPS Applications for Reweighting for the CY 2021 MIPS Performance Period/CY 2023 MIPS Payment Year Based on Extreme and Uncontrollable Circumstances

We anticipate that the national PHE for COVID–19 will continue through CY 2021. Therefore, we remind clinicians that the application-based extreme and uncontrollable circumstances policy, as described in §414.1380(c)(2)(i)(A)(6) and (c)(2)(i)(C)(2), will be available for the CY 2021 performance period/CY 2023 MIPS payment year (85 FR 84916 through 84917). Please refer to https://qpp.cms.gov/about/covid19?py=2021 for details. The application allows clinicians, groups, and virtual groups significantly impacted by the PHE for COVID–19 to request reweighting for any or all MIPS performance categories. Under this policy, if a clinician, group, or virtual group submits a reweighting application and also submits data for a performance category for which an application was submitted, the data submission will override the application, and the clinician, group, or virtual group will be scored on the data submitted.

Additionally, if an application is submitted for one performance category only, and data is submitted for the other 2 performance categories, only the performance category for which the application was submitted will be reweighted and the other performance categories will be scored. We believe this approach maintains a balance of encouraging participation in the Quality Payment Program while still providing for flexibility in weighting the performance categories for those who have been affected by the national PHE for COVID–19. Please refer to https://qpp.cms.gov/about/covid19?py=2021 for more information.

(B) MIPS Reweighting Based on Extreme and Uncontrollable Circumstances; Automatic and Application-Based Policies Clarification

Under the application-based extreme and uncontrollable circumstances policy codified at § 414.1380(c)(2)(i)(A)(6) for the quality, cost, and improvement activities performance categories and at §414.1380(c)(2)(i)(C)(2) for the promoting interoperability performance category, clinicians who are subject to extreme and uncontrollable circumstances may submit an application to CMS to request reweighting of a performance category or categories. We also established an automatic extreme and uncontrollable circumstances policy at §414.1380(c)(2)(i)(A)(6) for the quality, cost, and improvement activities performance categories and at §414.1380(c)(2)(i)(C)(2) for the promoting interoperability performance category, under which we automatically reweight the performance categories for clinicians who are located in an area affected by extreme and uncontrollable circumstances as identified by us.

Based on stakeholder inquiries, we recognize not all stakeholders understand how individual MIPS eligible clinicians who are eligible for reweighting under the automatic extreme and uncontrollable circumstances policy and who also submit an application for reweighting based on extreme and uncontrollable circumstances are affected by the intersection of these policies. Currently, under both the application-based and automatic extreme and uncontrollable circumstances policies, if a MIPS eligible clinician who is located in an area affected by extreme and uncontrollable circumstances as identified by CMS submits data for any of the MIPS performance categories by the applicable submission deadline for the MIPS performance period, they will be scored on each performance category for which they submit data, and the performance category will not be reweighted to zero percent in the final score. Under the automatic extreme and uncontrollable circumstances policy, the other performance categories for which data was not submitted will remain reweighted to zero percent (82 FR 53898, 83 FR 59874). Additionally, as described in the CY 2019 PFS final rule (83 FR 59874), under the automatic extreme and uncontrollable circumstances policy, a MIPS eligible clinician who is located in an area affected by extreme and uncontrollable circumstances as identified by CMS submits data for any of the MIPS performance categories by the applicable submission deadline for the MIPS performance period, they will be scored on each performance category for which they submit data, and the performance category will not be reweighted to zero percent in the final score. Under the automatic extreme and uncontrollable circumstances policy, the other performance categories for which data was not submitted will remain reweighted to zero percent (82 FR 53898, 83 FR 59874).

Additionally, as described in the CY 2019 PFS final rule (83 FR 59874), under the automatic extreme and uncontrollable circumstances policy, a MIPS eligible clinician who is located in an area affected by extreme and uncontrollable circumstances as identified by CMS will not be scored on the cost performance category. As we stated in the CY 2019 PFS final rule (83 FR 59874), if a MIPS eligible clinician is located in an affected area, we would assume the clinician does not have sufficient cost measures applicable to him or her and assign a weight of zero percent to that category in the final score, even if we receive administrative claims data that would enable us to calculate the cost measures for that clinician.

The following example is intended to illustrate the intersection of the automatic and application-based extreme and uncontrollable circumstances policies. A MIPS eligible clinician who is located in an area affected by extreme and uncontrollable circumstances as identified by CMS and eligible for the automatic extreme and uncontrollable circumstances policy submits an application for reweighting based on extreme and uncontrollable circumstances. The application requests reweighting for the Promoting Interoperability performance category, and the clinician submits data for the quality and improvement activities performance categories. The clinician will be scored on the quality and improvement activities performance categories because they submitted data for those categories; the cost performance category is reweighted to zero percent under the automatic extreme and uncontrollable circumstances policy, as discussed above; and the Promoting Interoperability performance category is also reweighted to zero percent under the automatic extreme and uncontrollable circumstances policy.

The application for reweighting was not needed in this example to reweight the Promoting Interoperability performance category.

(v) Redistributing Performance Category Weights for Facility-Based Measurement

(A) Background

In the CY 2018 Quality Payment Program final rule, we established facility-based measurement under section 1848(q)(2)(C)(ii) of the Act which provides that the Secretary may use measures used for payment systems other than for physicians, such as measures for inpatient hospitals, for purposes of the quality and cost performance categories (82 FR 53752 through 53767). Scoring under facility-based measurement was available for clinicians beginning with the CY 2019 MIPS performance period/CY 2021 MIPS payment year. We established facility-based measurement to better align incentives between facilities and the MIPS eligible clinicians who provide services there (82 FR 53753). For more background on facility-based measurement, we refer readers to both the CY 2018 Quality Payment Program final rule (82 FR 53752 through 53767) and the CY 2019 PFS final rule (83 FR 59856 through 59867).

(B) Redistribution of Performance Category Weights Under Facility-Based Measurement

In the CY 2019 PFS final rule, we established that clinicians and groups would not need to elect or opt-in to...
facility-based measurement, but instead we would automatically apply facility-based measurement to MIPS eligible clinicians and groups who are eligible for facility-based measurement and who would benefit by having a higher combined quality and cost performance category score (83 FR 59863). In this same final rule, we finalized policies for redistributing weight among the performance categories for the 2019 MIPS performance period/2021 MIPS payment year under § 414.1380(c)(2)(ii)(C). Under those redistribution policies, if the cost performance category is redistributed to zero percent of the final score, its weight is redistributed entirely to the quality performance category, unless the quality performance category is redistributed to zero percent, in which case the quality and cost performance category weights would be redistributed to the improvement activities and Promoting Interoperability performance categories. A clinician or group could have the weight of the cost performance category redistributed because they did not meet the case minimum for any of the measures in the cost performance category. Because facility-based measurement always includes both the quality and cost performance categories, it is possible a clinician or group would be scored on the cost performance category under facility-based measurement but not outside of facility-based measurement. There are two common scenarios for a facility-based clinician or group which could occur in the 2019 MIPS performance period/2021 MIPS payment year. In the first scenario, a facility-based clinician or group meets the case minimum for at least one cost performance category measure and receives a cost performance category percent score as defined at § 414.1380(b)(2). The respective quality and cost scores would be multiplied by the available points in the quality performance category (45 points) and the available points in the cost performance category (15 points) to determine the combined contribution of the quality performance category and the cost performance category to the final score out of the available 60 points. In the second scenario, a facility-based clinician or group does not meet the case minimum for any cost performance category measure and the cost performance category weight is redistributed to the quality performance category so the quality performance category score alone determines the score out of the available 60 points. Table 53 shows these two scenarios.

### TABLE 53: Two Scenarios for a Facility-based Clinician or Group which Could occur under current policy

<table>

</tr>
<tr>
<td>75%</td>
<td>N/A (no cost measures met case minimum)</td>
<td>(60 points x 0.75) = 45</td>
</tr>
</tbody>
</table>

In the CY 2020 PFS final rule, we established a redistribution policy for the CY 2020 MIPS performance period/CY 2022 MIPS payment year at § 414.1380(c)(2)(ii)(D), for scenarios when the cost performance category weight is redistributed to the Promoting Interoperability performance category, as well as to the quality performance category (84 FR 63028). Under this policy, the weights of the combined quality and cost performance categories could be different for a clinician or group under facility-based measurement and outside of facility-based measurement in circumstances in which the clinician or group was not scored on the cost performance category outside of facility-based measurement, but was scored on all other performance categories. Table 54 shows the scenario in which the combined weights of the quality and cost performance categories differ if cost is included, which occurs when the cost performance category is redistributed and all other categories are scored.

### TABLE 54: Scenario in which the Combined Weights of the Quality and Cost Performance Categories Differ if Cost is Included

<td>55</td>
<td>0</td>
<td>15</td>
<td>30</td>
<td>55</td>
</tr>
</tbody>
</table>

We established similar redistribution policies for CY 2021 MIPS performance period/CY 2023 MIPS payment year and CY 2022 MIPS performance period/CY 2024 MIPS payment year at § 414.1380(c)(2)(ii)(E) and (F) in that same rule (84 FR 63029 through 63031), which also described situations where the combined weight of the cost and quality performance categories was not always consistent. For more on the background and proposed policies related to redistribution of performance categories, please see section IV.A.3.e.(2)(b)(iii) of this proposed rule. Based on inquiries we received from clinicians who were eligible for facility-based measurement, we believe our policy for determining the combined quality and cost performance category scores via facility-based measurement and outside of facility-based measurement is not ideal because it could result in a facility-based clinician or group receiving a lower final score.
than they would otherwise receive outside of facility-based measurement. We considered whether this more complex consideration of the scores and the weights in the performance categories necessitated a reconsideration of an opt-in requirement for facility-based measurement. However, we believe that establishing such a requirement would create administrative burden for clinicians and groups.

Instead of adding an opt-in requirement, we propose a new policy to determine the MIPS final score for clinicians and groups who are eligible for facility-based measurement. We propose at §414.1380(e)(6)(vi)(B) that beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, the MIPS quality and cost performance category scores will be based on the facility-based measurement scoring methodology unless a clinician or group receives a higher MIPS final score through another MIPS submission. Under this proposed policy, we would calculate two final scores for clinicians and groups who are facility-based. One score would be based on the clinician or group’s performance and the weights of the performance categories if facility-based measurement did not apply, and the other would be based on the application of facility-based measurement. The example below shows how this proposed policy would apply for a facility-based group that did not meet the case minimum for any of the cost measures but was scored on all other performance categories.

<table>
<thead>
<tr>
<th>Scenario</th>
<th>Quality Points/available points</th>
<th>Cost points/available points</th>
<th>Improvement Activities points/available points</th>
<th>Promoting Interoperability points/available points</th>
<th>Final Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>Facility-based</td>
<td>26/30</td>
<td>27/30</td>
<td>15/15</td>
<td>20/25</td>
<td>88/100</td>
</tr>
<tr>
<td>Not facility-based</td>
<td>52/55</td>
<td>0/0</td>
<td>15/15</td>
<td>24/30</td>
<td>91/100</td>
</tr>
</tbody>
</table>

As a result of this proposed policy, the group in this example would receive a final score on the basis of their performance outside of facility-based measurement because they have obtained a higher final score through the combination of their submitted quality measures, submitted improvement activities and submitted promoting interoperability measures.

We request comments on this proposal.

f. MIPS Payment Adjustments

(1) Background

For our previously established policies regarding the final score used to determine MIPS payment adjustments, we refer readers to the CY 2021 PFS final rule (85 FR 84917 through 84926), CY 2020 PFS final rule (84 FR 63031 through 63045), CY 2019 PFS final rule (83 FR 59878 through 59894), CY 2018 Quality Payment Program final rule (82 FR 53785 through 53799) and CY 2017 Quality Payment Program final rule (81 FR 77329 through 77343). In this proposed rule, we are proposing: (1) To select the mean as our methodology for calculating the performance threshold; (2) to establish the performance threshold for the 2024 MIPS payment year using 2019 MIPS payment year data; (3) to establish the additional performance threshold for exceptional performance for the 2024 MIPS payment year; and (4) to update the scoring hierarchy to include subgroups. In addition, we are including information about our expected timeframe for providing MIPS performance feedback to clinicians for the performance period in 2020.

(2) Establishing the Performance Threshold

Under section 1848(q)(6)(D)(i) of the Act, for each year of MIPS, the Secretary shall compute a performance threshold with respect to which the final scores of MIPS eligible clinicians are compared for purposes of determining the MIPS payment adjustment factors under section 1848(q)(6)(A) of the Act for a year. The performance threshold for a year must be either the mean or median (as selected by the Secretary, and which may be reassessed every 3 years) of the final scores for all MIPS eligible clinicians for a prior period specified by the Secretary.

Section 1848(q)(6)(D)(ii) of the Act included a special rule for the initial 2 years of MIPS, which requires the Secretary, prior to the performance period for such years, to establish a performance threshold for purposes of determining the MIPS payment adjustment factors under section 1848(q)(6)(A) of the Act and an additional performance threshold for purposes of determining the additional MIPS payment adjustment factors under section 1848(q)(6)(C) of the Act, each of which shall be based on a period prior to the performance period and take into account data available for performance on measures and activities that may be used under the performance categories and other factors determined appropriate by the Secretary. Section 51003(a)(1)(D) of the Bipartisan Budget Act of 2018 (Pub. L. 115–123, February 9, 2018) amended section 1848(q)(6)(D)(i) of the Act to extend the special rule to apply for the initial 5 years of MIPS instead of only the initial 2 years of MIPS.

In addition, section 51003(a)(1)(D) of the Bipartisan Budget Act of 2018 added a new clause (iv) to section 1848(q)(6)(D) of the Act, which includes an additional special rule for the third, fourth, and fifth years of MIPS (the 2021 through 2023 MIPS payment years). This additional special rule provides, for purposes of determining the MIPS payment adjustment factors under section 1848(q)(6)(A) of the Act, in addition to the requirements specified in section 1848(q)(6)(D)(ii) of the Act, the Secretary shall increase the performance threshold for each of the third, fourth, and fifth years to ensure a gradual and incremental transition to the performance threshold described in section 1848(q)(6)(D)(i) of the Act (as estimated by the Secretary) with respect to the sixth year (the 2024 MIPS payment year) to which the MIPS applies.

We have applied these special rules for the past 5 years to provide for a gradual and incremental transition to the year 6 performance threshold. For further information on established...
In the CY 2020 PFS final rule (84 FR 63031 through 63037) at § 414.1405(b)(7) and (8), we finalized the performance thresholds for the 2022 and 2023 MIPS payment years at 45 and 60 points, respectively, an increase of 15 points each year until the 2024 MIPS payment year, for which we estimated that the performance threshold would be 74.01 points. We believe that this approach effectively provided for a gradual and incremental transition to the performance threshold we had estimated for the 2024 MIPS payment year, as required by the statute.

Beginning with the 2024 MIPS payment year, section 1848(q)(6)(D)(i) of the Act requires the performance threshold to be the mean or median (as selected by the Secretary) of the final scores for all MIPS eligible clinicians with respect to a prior period specified by the Secretary. That section also provides that the Secretary may reassess the selection of the mean or median every three years. Thus, we considered whether to use the mean or median as the methodology for determining the performance threshold. We would use this methodology to determine a performance threshold for each of the following three years: The 2024 MIPS payment year, 2025 MIPS payment year, and 2026 MIPS payment year. We would then reassess and establish the methodology (mean or median) that we would use for each of the next 3 years (2027 MIPS payment year, 2028 MIPS payment year, and 2029 MIPS payment year). At the time of publication of this proposed rule, we have final score data from the 2017 MIPS performance period/2019 MIPS performance year through the 2019 MIPS performance period/2021 MIPS payment year to use in our assessment of whether to use the mean or median as our methodology for the next 3 years.

From our review of the available data, we have identified the mean and median final scores for each of the 2019 through 2021 MIPS payment years, as shown in Table 57. These six values represent all available prior year mean and median final scores that could be utilized for the 2024 MIPS payment year performance threshold.

### TABLE 56: Performance Thresholds for the 2019 MIPS Payment Year through 2023

<tr>
<td>Difference in PT</td>
<td>N/A</td>
<td>12 points</td>
<td>15 points</td>
<td>15 points</td>
<td>15 points</td>
</tr>
</tbody>
</table>

In the CY 2019 PFS final rule (83 FR 59880 through 59883), the CY 2020 PFS final rule (84 FR 63031 through 63037), and the CY 2021 PFS final rule (85 FR 84919 through 84923), we codified the performance thresholds for each of the first 5 years of MIPS at § 414.1405(b)(4), (5), (6), (7), and (8) as presented in Table 56.

### As shown in Table 57, using the median final score gives a possible range of performance thresholds from 89.71 points to 99.63 points. Given our performance threshold of 60 points in year 5, these values would result in an increase of 29.71 points to 39.63 points for year 6. Selecting the median of final scores as our methodology would, at a minimum, nearly double the annual increase in the performance threshold of 15 points that we had from year 2 to year 5 of the program. Section 1848(q)(6)(D)(iv) of the Act required that we increase the performance threshold for each of the third, fourth, and fifth years of MIPS to ensure a gradual and incremental transition to the performance threshold we estimated with respect to the sixth year of MIPS. In prior rules we estimated the year six performance threshold to be 74.01 points and used this estimate to determine how to gradually raise the performance threshold (83 FR 59881, 84 FR 63032, 84 FR 40802). Although section 1848(q)(6)(D)(iv) of the Act does not require this approach for the sixth year and subsequent years of MIPS, we believe that it is appropriate to set the performance threshold at a level that is in line with our previous estimates for year 6. We believe that continuing the gradual and incremental increase into year 6 would provide consistency to our stakeholders. After evaluating the possible values shown in Table 57, we believe that using the mean as our methodology would continue this approach.

### TABLE 57: Possible Values for the 2024 MIPS Payment Year Performance Threshold

<table>
<thead>
<tr>
<th>Threshold</th>
<th>2019 MIPS Payment Year</th>
<th>2020 MIPS Payment Year</th>
<th>2021 MIPS Payment Year</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mean</td>
<td>74.65 Points</td>
<td>87 Points</td>
<td>85.61 Points</td>
</tr>
<tr>
<td>Median</td>
<td>89.71 Points</td>
<td>99.63 Points</td>
<td>92.30 Points</td>
</tr>
</tbody>
</table>

As shown in Table 57, using the mean final score as the methodology would yield a possible range of performance thresholds from 74.65 points to 85.61 points (rounded to 75 points and 86 points respectively). Given our performance threshold of 60 points in year 5, these values would result in an increase of 15 points to 26
points for year 6. Given these values and our annual performance threshold increases of 15 points for years 2 to 5 of the program, 75 is the value that is most consistent with the gradual and incremental approach that we have elected to continue. Therefore, we are proposing at § 414.1405(g) that for each of the 2024, 2025, and 2026 MIPS payment years, the performance threshold is the mean of the final scores for all MIPS eligible clinicians from a prior period as specified under § 414.1405(b). This methodology will be used for MIPS payment years 2024 through 2026 of the program after which we will reassess the methodology for MIPS payment years 2027 through 2029.

In addition to selecting the methodology (mean or median), section 1848(q)(6)(D)(i) of the Act also requires us to specify a prior period from which we would use the final scores for all MIPS eligible clinicians to calculate the mean or median. As shown in Table 57, the mean final scores are 74.65, 87, and 85.61 points for MIPS payment years 2019 through 2021 respectively. In previous rules (83 FR 59881, 84 FR 63032), we used the MIPS payment year 2019 mean final score to estimate a performance threshold during the next 3 years and the rounded mean final score of 75 points as the year 6 performance threshold. When we establish the performance threshold for future MIPS payment years in future rulemaking, we will reassess using the mean final score for MIPS payment year 2019 as mean final scores for subsequent years become available. We request comments on these proposals, as well as the alternative methodology of the median that we considered but did not propose. Additionally, we request comments on calculating the performance threshold using an alternative year’s final scores that we considered but did not propose.

(3) Additional Performance Threshold for Exceptional Performance

Section 1848(q)(6)(D)(ii) of the Act requires the Secretary to compute, for each year of the MIPS (beginning with the 2019 MIPS payment year and ending with the 2024 MIPS payment year), an additional performance threshold for purposes of determining the additional MIPS payment adjustment factors for exceptional performance under section 1848(q)(6)(C) of the Act. For each such year, the Secretary shall apply either of the following methods for computing the additional performance threshold:

1. The threshold shall be the score that is equal to the 25th percentile of the range of possible final scores above the performance threshold determined under section 1848(q)(6)(D)(i) of the Act; or
2. The threshold shall be the score that is equal to the 25th percentile of the actual final scores for MIPS eligible clinicians with final scores at or above the performance threshold with respect to the prior period described in section 1848(q)(6)(D)(i) of the Act.

As stated above, with a proposed performance threshold of 75 points for the 2024 MIPS payment year based on final scores for the 2019 MIPS payment year, the calculation methods in section 1848(q)(6)(D)(ii) of the Act give us two possible options for where we can set the additional performance threshold for MIPS payment year 2024. The first calculation method (described in section 1848(q)(6)(D)(i) of the Act),
using the range of possible final scores above the proposed performance threshold for the 2024 MIPS payment year, yields a value of 81.26 points (the 25th percentile of the range of 75.01 to 100). The calculation is as follows: 75.01 + [(100–75.01) * 0.25] = 81.26.

The second calculation method (described in section 1848(q)(6)(D)(ii)(II) of the Act), the 25th percentile of the actual final scores for the 2019 MIPS payment year at or above the proposed performance threshold for the 2024 MIPS payment year, yields a value of 88.94. For the second calculation method, we would apply the 25th percentile calculation of (n+1)p/100 to the 2019 MIPS payment year final score data that are at or above 75.

We considered using each of these methods, but we do not believe that it would be appropriate to lower the additional performance threshold to 81.26 points from its present value of 85 points. Maintaining or increasing the additional performance threshold likely would serve as a greater incentive to clinicians to continue to improve their performance on the MIPS measures and activities and to achieve exceptional performance. We believe that an additional performance threshold of 88.94 points rounded to 89 points is appropriate. This is an increase of 4 points from the prior year, which we believe would be a gradual increase. Therefore, using the second calculation method described above, we are proposing at § 414.1405(d)(7) to set the additional performance threshold for the 2024 MIPS payment year at 89 points.

We request comments on these proposals as well as the alternative additional performance thresholds listed that we considered but did not propose.

(4) Example of Adjustment Factors

Figure A provides an illustrative example of how various final scores would be converted to a MIPS payment adjustment factor and potentially an additional MIPS payment adjustment factor, using the statutory formula and based on our proposed policies for the 2024 MIPS payment year. In Figure A, the performance threshold is set at 75 points. The applicable percentage is 9 percent for the 2024 MIPS payment year. The MIPS payment adjustment factor is determined on a linear sliding scale from zero to 100, with zero being the lowest possible score which receives the negative applicable percentage (negative 9 percent for the 2024 MIPS payment year) and resulting in the lowest payment adjustment, and 100 being the highest possible score which receives the highest positive applicable percentage and resulting in the highest payment adjustment. However, there are two modifications to this linear sliding scale. First there is an exception for a final score between zero and one-fourth of the performance threshold (zero and 18.75 points based on the proposed performance threshold of 75 points for the 2024 MIPS payment year). All MIPS eligible clinicians with a final score in this range would receive the lowest negative applicable percentage (negative 9 percent for the 2024 MIPS payment year). Second, the linear sliding scale line for the positive MIPS payment adjustment factor is adjusted by the scaling factor, which cannot be higher than 3.0.

If the scaling factor is greater than zero and less than or equal to 1.0, then the MIPS payment adjustment factor for a final score of 100 would be less than or equal to 9 percent. If the scaling factor is above 1.0 but is less than or equal to 3.0, then the MIPS payment adjustment factor for a final score of 100 would be greater than 9 percent.

Only those MIPS eligible clinicians with a final score equal to 75 points (which is the proposed performance threshold) would receive a neutral MIPS payment adjustment. Because the performance threshold is 75 points, we anticipate that more clinicians will receive a positive adjustment than a negative adjustment and that the scaling factor would be less than 1 and the MIPS payment adjustment factor for each MIPS eligible clinician with a final score of 100 points would be less than 9 percent.
Table 59 illustrates the changes in payment adjustment based on the final policies from the CY 2021 PFS final rule (85 FR 84923 through 84925) for the 2023 MIPS payment year and the proposed policies for the 2024 MIPS payment year, as well as the applicable percent required by section 1848(q)(6)(B) of the Act.

Figure A: Illustrative Example of MIPS Payment Adjustment Factors Based on Final Scores and Performance Threshold and Additional Performance Threshold for the 2024 MIPS Payment Year

Note: The adjustment factor for final score values above the performance threshold is illustrative. For MIPS eligible clinicians with a final score of 100, the adjustment factor would be 9 percent times a scaling factor greater than zero and less than or equal to 3.0. The scaling factor is intended to ensure budget neutrality, but cannot be higher than 3.0. MIPS eligible clinicians with a final score of at least 89 points would also receive an additional adjustment factor for exceptional performance. The additional adjustment factor starts at 0.5 percent, cannot exceed 10 percent, and is also multiplied by a scaling factor that is greater than zero and less than or equal to 1. MIPS eligible clinicians at or above the additional performance threshold will receive the amount of the adjustment factor plus the additional adjustment factor. This example is illustrative as the actual payment adjustments may vary based on the distribution of final scores for MIPS eligible clinicians.

(5) Final Score Hierarchy Used in Payment Adjustment Calculation

In the CY 2021 PFS final rule (85 FR 84917 through 84919), we modified the final score hierarchy that applies when more than one final score is associated with a TIN/NPI, as displayed in Table 60. Beginning with the 2021 performance period/2023 MIPS payment year, if a TIN/NPI has a virtual group final score associated with it, we use the virtual group final score to determine the MIPS payment adjustment. If a TIN/NPI does not have a virtual group final score associated with it, we use the highest available final score associated with the TIN/NPI to determine the MIPS payment adjustment.

</tr>
<tr>
<td>TIN/NPI has an APM Entity final score, an APP final score, a group final score, and/or an individual final score, but is not in a virtual group.</td>
<td>The highest of the available final scores.</td>
</tr>
</tbody>
</table>

In section IV.A.3.b.(3) of this proposed rule, we are proposing policies applicable to subgroups, including a definition of a subgroup at § 414.1305 as a subset of a group which contains at least one MIPS eligible.
We previously established in the CY 2017 Quality Payment Program final rule (81 FR 77363 through 77364), and further revised in the Quality Payment Program provisions in the CY 2019 and

To revise and redesignate existing paragraph at § 414.1400(a)(2) through (a)(2)(i) to proposed paragraphs § 414.1400(b)(1)(i) and (c)(1) through (c)(1)(i) to state the following:

- To state at proposed § 414.1400(b)(1)(i), beginning with the CY 2021 MIPS performance period/2023 MIPS payment year, QCDRs and qualified registries must be able to submit data for all of the following MIPS performance categories:
  - Quality, except:
    - The CAHPS for MIPS survey, and
    - For qualified registries, QCDR measures.
  - Improvement activities; and
  - Promoting Interoperability, if the eligible clinician, group, virtual group, or subgroup is using CEHRT, unless:
    - The third party intermediary’s MIPS eligible clinicians, groups, virtual groups, or subgroups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(4)(i) through (iii) or (c)(2)(i)(C)(i) through (v) or (c)(2)(i)(C)(9).
  - To state at proposed § 414.1400(c)(1), beginning with the CY 2021 MIPS performance period/2023 MIPS payment year, health IT vendors must be able to submit data for the MIPS performance categories as follows:
    - To state at proposed § 414.1400(c)(1)(i) through (c)(1)(i)(B), health IT vendors that support MVPs must be able to submit data for all of the MIPS performance categories:
      - Quality, except:
        - The CAHPS for MIPS survey, and
        - QCDR measures.
      - Improvement activities; and
      - To revise and redesignate existing paragraph at § 414.1400(a)(2)(i) through (c)(1)(i)(C) to proposed paragraph § 414.1400(c)(1)(i)(C) state, Promoting Interoperability, if the eligible clinician, group, virtual group, or subgroup is using CEHRT, unless:
        - The third party intermediary’s MIPS eligible clinicians, groups, virtual groups, or subgroups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(4)(i) through (iii) or (c)(2)(i)(C)(i) through (v) or (c)(2)(i)(C)(9).
        - To revise and redesignate existing paragraph at § 414.1400(a)(2)(ii) to proposed paragraph § 414.1400(c)(1)(i)(ii) to state, health IT vendors that do not support MVPs must be able to submit data for at least one of the MIPS performance categories described in paragraphs (a)(2)(i)(A) through (C) of this section.
        - To state at proposed § 414.1400(c)(1)(i)(ii) through (c)(1)(i)(iv), health IT vendors that support MVPs must be able to submit data for at least one of the MIPS performance categories described in paragraphs (a)(2)(i)(A) through (C) of this section.
        - To state at proposed § 414.1400(c)(1)(i)(iii) to proposed paragraph § 414.1400(c)(1)(i)(vii) to state, if a QCDR meets the criteria at paragraph (a)(5) as proposed paragraph (a)(5).
        - To redesignate paragraph (a)(5) as paragraph (a)(3).

We request public comment on our proposals.

(b) Proposed Reorganization for Requirements Related QCDR and Qualified Registries Self-Nomination

We are proposing to consolidate and redesignate the existing language at § 414.1400(b)(1) and (c)(1) to proposed § 414.1400(b)(2) to reference both QCDR and qualified registries. We are proposing this consolidation to provide clarity and alignment with the aforementioned proposals and consolidate the duplicative criteria of QCDRs and qualified registries. As discussed below, we are also proposing to consolidate and redesignate the performance feedback requirements previously at existing § 414.1400(b)(1) and (c)(1) to § 414.1400(b)(3)(iii). We propose to state at § 414.1400(b)(2), Self-nomination. For the 2018 and 2019 performance periods/2020 and 2021 MIPS payment years, entities seeking to qualify as a QCDR or qualified registry must self-nominate September 1 until November 1 of the CY preceding the applicable performance period. For the 2020 MIPS performance period/2022 MIPS payment year and future years, entities seeking to qualify as a QCDR or qualified registry must self-nominate during a 60-day period during the CY preceding the applicable performance period (beginning no earlier than July 1 and ending no later than September 1). Entities seeking to qualify as a QCDR or...
qualified registry for a performance period must provide all information required by CMS at the time of self-nomination and must provide any additional information requested by CMS during the review process. For the 2019 MIPS performance period/2021 MIPS payment year and future years, existing QCDRs and qualified registries that are in good standing may attest that certain aspects of their previous year’s approved self-nomination have not changed and will be used for the applicable performance period.

We also propose removing the last two sentences of existing § 414.1400(b)(1), which are duplicative with existing § 414.1400(b)(3)(iii). We propose consolidating this language with existing paragraph (b)(3)(iii). We request public comment on our proposals.

(c) Proposed Reorganization for Requirements Related to QCDR and Qualified Registries Conditions for Approval

We refer readers to existing § 414.1400(b)(2) for QCDR conditions for approval and existing § 414.1400(c)(2) for qualified registries conditions for approval. In this proposed rule, we are proposing the following in order to better organize, consolidate the duplicative criteria of QCDRs and qualified registries, and refer to both “QCDR and qualified registry” instead of one or the other:

• We propose to redesignate existing paragraph (b)(2) to proposed paragraph (b)(3) and revising the paragraph heading as, Conditions for approval.

• We also propose updating the reference to both QCDR and qualified registry in proposed paragraph (b)(3).

• We propose to revise to include both QCDR and qualified registry and redesignate existing paragraph (b)(2)(i) to proposed paragraph (b)(3)(i).

• We propose to revise and redesignate existing paragraph (b)(2)(ii) to proposed paragraph (b)(3)(ii). We also propose to extend our policy for collaboration. For more information on this proposal, please refer to section “collaboration of entities to become a QCDR and proposal to extend policy for collaboration of entities to become a qualified registry” below at section IV.A.3.h.(3)(a)(ii) of this proposed rule.

• As discussed above, we are proposing to consolidate and redesignate the performance feedback requirements previously at existing § 414.1400(b)(1) and (c)(1) to § 414.1400(b)(3)(iii). Furthermore, to consolidate similar performance feedback requirements, we also propose to revise and redesignate existing paragraph (b)(2)(iii) to proposed paragraph (b)(3)(iii) to state, beginning with the 2021 MIPS performance period/2023 MIPS payment year, require the QCDR or qualified registry must to provide performance feedback to their clinicians and groups at least 4 times a year, and provide specific feedback to their clinicians and groups on how they compare to other clinicians who have submitted data on a given measure within the QCDR or qualified registry. Exceptions to this requirement may occur if the QCDR or qualified registry submits notification to CMS within the reporting period promptly within the month of realization of the impending deficiency and provides sufficient rationale as to why they do not believe they would be able to meet this requirement (for example, if the QCDR does not receive the data from their clinician until the end of the performance period).

• We propose to consolidate and redesignate paragraphs (b)(2)(iv) and (c)(2)(iii) in their entirety, into a new paragraph (b)(3)(v), and to correct a typographical error in which the word “MIPS” was omitted in the first sentence.

• We propose to consolidate and redesignate paragraphs (b)(2)(v) and (c)(3)(iv), in their entirety, into a new paragraph (b)(3)(vi).

We invite public comment on our proposals.

(d) Proposed Reorganization for Requirements Related to QCDR Measures

(i) Proposed Reorganization for Requirements Related to QCDR Measures for the Quality Performance Category

We refer readers to existing language at § 414.1400(b)(3) for QCDR measures for the quality performance category. We currently define “QCDR measure” at existing § 414.1400(b)(3). We recognize that the QCDR measure definition is referred to throughout our policies and that it is not specific to § 414.1400(b)(3) or third party intermediaries. Therefore, to provide further clarity and to better align with the current policy, we propose moving the QCDR measure definition to the definitions section at § 414.1305. We are also proposing the following revisions to better organize regulation text at § 414.1400(b)(4) and to update cross-references to correspond to the new section numbers as reflected in this proposed rule:

• We propose to redesignate paragraphs (b)(3)(i), (b)(3)(ii)(A), and (b)(3)(ii)(B) to definitions at § 414.1305.

• We propose to revise and redesignate existing paragraphs at (b)(3)(iii) to proposed paragraphs (b)(4)(i) to state, for the 2018 MIPS performance period/2020 MIPS payment year and future years, at the time of self-nomination an entity seeking to become a QCDR must submit the following information for any measure it intends to submit for the payment year:

++ For MIPS quality measures, the entity must submit specifications including: Name/title of measures, NQF number (if NQF-endorsed), descriptions of the denominator, numerator, and when applicable, denominator exclusions, risk adjustment variables, and risk adjustment algorithms. In addition, no later than 15 calendar days following CMS approval of any QCDR measure specifications, the entity must publicly post the measure specifications for that QCDR measure (including the CMS-assigned QCDR measure ID) and provide CMS with a link to where this information is posted.

• We also propose adding a header to state, “QCDR measure submission requirements”. We believe adding a heading will help readers clearly distinguish QCDR measure self-nomination requirements.

• We propose moving existing paragraph at (b)(3)(iii) in its entirety to proposed paragraph (b)(4)(ii) and adding a header to state, “QCDR measure submission requirements”. We believe adding a header will help readers clearly distinguish QCDR measure submission requirements.

• We propose moving existing paragraphs at (b)(3)(iv) through (vi)(C)(i) in its entirety, to proposed paragraph (b)(4)(iii) through (vi)(C)(i) of the proposed rule.

• We propose to revise and redesignate existing paragraph at (b)(3)(v)(C)(ii) to proposed paragraph (b)(4)(iii)(A)(3).

• We propose to revise and redesignate existing paragraph at (b)(3)(v)(C)(i) to proposed paragraph (b)(4)(ii)(A)(3)(j) to state, to be included in an MVP for the 2022 MIPS performance period/2024 MIPS payment year and future years, a QCDR measure must be fully tested.

• We propose moving existing paragraph at (b)(3)(vii) in its entirety, to proposed paragraph (b)(4)(iv).

(ii) Proposed Reorganization for Requirements Related to QCDR Measure Approval Criteria

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77374 through 77375) and the Quality Payment Program provisions in the CY 2020 PFS final rule (84 FR
We propose reorganize and make minor updates to the existing requirements at § 414.1400(b)(3)(v) to proposed § 414.1400(b)(4)(iii). We propose to reorganize the existing requirements so that QCDR measure approval at § 414.1400(b)(3)(v) is discussed before QCDR measure considerations at § 414.1400(b)(3)(iv). Therefore, we propose the following revisions:

- To revise and redesignate existing paragraph (b)(3)(v) “QCDR measure requirement for approval include” to proposed paragraph (b)(4)(iii)(A) and add a heading to state, “QCDR measure approval criteria”. We believe adding a heading will help readers clearly distinguish QCDR measure approval criteria. We also propose to include the following updates:
  - Move existing paragraph (b)(3)(v)(A) in its entirety to proposed paragraph (b)(4)(iii)(A)(1).
  - Move existing paragraph (b)(3)(v)(B) in its entirety to proposed paragraph (b)(4)(iii)(A)(2).
  - Revise existing paragraphs (b)(3)(v)(C) and (b)(3)(v)(C)(1) to state, beginning with the 2022 MIPS performance period/2024 MIPS payment year, all QCDR measures must meet face validity. To be approved for the 2023 MIPS performance period/2025 MIPS payment year, all QCDR measures must be must meet face validity for the initial MIPS payment year for which it is approved. For subsequent years, all QCDR measures must be fully developed and tested, with complete testing results at the clinician level, prior to submitting the QCDR measure at the time of self-nomination.
  - Move existing paragraph (b)(3)(v)(D) in its entirety to proposed paragraph (b)(4)(iii)(A)(4).
  - Move existing paragraph (b)(3)(v)(E) in its entirety to proposed paragraph (b)(4)(iii)(A)(5).

We invite public comment on our proposals.

(iii) Proposed Reorganization for Requirements Related to QCDR Measure Considerations for Approval

We refer readers to the Quality Payment Program provisions in the CY 2019 PFS final rule (84 FR 63198 through 63199), where we finalized existing § 414.1400(b)(3)(iv) “QCDR measure considerations for approval”. We propose to reorganize and make minor updates to the language at existing § 414.1400(b)(3)(iv) to proposed § 414.1400(b)(4)(iii)(B). We propose to reorganize the existing requirements so that QCDR measure approval at § 414.1400(b)(3)(v) is discussed before QCDR measure considerations at § 414.1400(b)(3)(iv).

We also propose to redesignate existing § 414.1400(b)(3)(vi) to proposed § 414.1400(b)(4)(iii)(C). Specifically, we propose the following revisions:

- To revise and redesignate existing paragraph (b)(3)(iv) “QCDR measure considerations for approval include” to proposed paragraph (b)(4)(iii)(C) “QCDR measure considerations for approval include, but are not limited to”.
  - Move existing paragraph (b)(3)(iv)(A) in its entirety to proposed paragraph (b)(4)(iii)(C)(1).
  - Move existing paragraph (b)(3)(iv)(B) in its entirety to proposed paragraph (b)(4)(iii)(C)(2).
  - Move existing paragraph (b)(3)(iv)(C) in its entirety to proposed paragraph (b)(4)(iii)(C)(3).
  - Move existing paragraph (b)(3)(iv)(D) in its entirety to proposed paragraph (b)(4)(iii)(C)(4).
  - Move existing paragraph (b)(3)(iv)(E) in its entirety to proposed paragraph (b)(4)(iii)(C)(5).
  - Move existing paragraph (b)(3)(iv)(F) in its entirety to proposed paragraph (b)(4)(iii)(C)(6).
  - Move existing paragraph (b)(3)(iv)(G) in its entirety to proposed paragraph (b)(4)(iii)(C)(7).
  - Revise and consolidate existing paragraph (b)(3)(iv)(G)(1) to proposed paragraph (b)(4)(iii)(C)(7)(i) to state that QCDR link their QCDR measures as feasible to at least one cost measure, improvement activity, or an MVP at the time of self-nomination.
  - Move existing paragraph (b)(3)(iv)(H) in its entirety to proposed paragraph (b)(4)(iii)(C)(7)(iii).
  - Move existing paragraph (b)(3)(iv)(L) in its entirety to proposed paragraph (b)(4)(iii)(C)(7)(vii).

We invite public comment on our proposals.

(iv) QCDR Measure Rejection Criteria

We refer readers to the existing requirements at § 414.1400(b)(3)(vii). We propose reorganizing existing requirements at § 414.1400(b)(3)(vii) to proposed § 414.1400(b)(4)(iv). Therefore, we propose the following revisions:

- To revise and redesignate existing paragraph (b)(3)(vii) “QCDR measure rejection criteria” to proposed paragraph (b)(4)(iv) and add a heading to state, QCDR measure rejection criteria. We believe adding a heading will help readers clearly distinguish measure rejection criteria.

We also propose to include the following updates:

- To move existing paragraph (b)(3)(vii) to proposed paragraph (b)(4)(iv) to state, QCDR measure rejection criteria. Beginning with the 2020 MIPS performance period/2022 MIPS payment year, QCDR measure rejection considerations include, but are not limited to.
  - Move existing paragraphs (b)(3)(vii)(A) through (L) in their entirety to proposed (b)(4)(iv)(A) through (L).

We invite public comment on our proposals.

(e) Proposed Reorganization for Requirements Related to Remedial Action and Termination of Third Party Intermediaries

We refer readers to § 414.1400(f), the CY 2017 Quality Payment Program final rule (81 FR 77548), CY 2019 PFS final rule (83 FR 59908 through 59910), the CY 2020 PFS final rule (84 FR 63077 through 63080), and the CY 2021 PFS final rule (85 FR 84930 through 84937) for previously finalized policies for remedial action and termination of third party intermediaries. With the proposed updates being made at § 414.1400, we propose to redesignate the following sections:

- We propose to redesignate current paragraph (f) as paragraph (e) and to update cross-references to correspond to the new section numbers as reflected in this proposed rule.
- We also propose to redesignate current paragraph (g) as paragraph (f) and to update cross-references to correspond to the new section numbers as reflected in this proposed rule.

We invite public comment on our proposals.

(2) Third Party Intermediaries General Requirements

We refer readers to previously established § 414.1400(a) and the CY 2017 Quality Payment Program final
rule (81 FR 77363 through 77364), and as further revised in the CY 2019 PFS final rule (83 FR 60088), CY 2020 PFS final rule (84 FR 63049 through 63052), CY 2021 PFS final rule (85 FR 84926 through 84947) for our established policy regarding the types of MIPS data that third party intermediaries may submit.

In this proposed rule, we are proposing new requirements in alignment with our proposals in section IV.A.3.b. of this proposed rule to adopt MVPs and subgroups.

(i) Proposed New Requirement for Third Party Intermediaries To Support MVPs and the APP

As described in the Quality Payment Program provisions finalized in the CY 2021 PFS final rule (85 FR 84849), MVPs should include measures and activities from the quality, cost, improvement activities, and Promoting Interoperability performance categories. As described in section IV.A.3.b. of this proposed rule, we discuss our proposals related to furthering our transition to MIPS Value Pathways (MVPs). As MVPs are implemented, proposed beginning with the 2023 MIPS performance period/2025 MIPS payment year, we expect that all third party intermediaries submit data for quality, improvement activities, and promoting interoperability, we believe they would have the experience needed to support MVP and APP reporting.

Therefore, we propose to create a new requirement at §414.1400(b)(1)(i) to state that, beginning with the 2023 MIPS performance period/2025 MIPS payment year, QCDRs and qualified registries must support MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data. QCDRs and qualified registries may also support the APP. Additionally, we propose to create a new requirement at §414.1400(c)(1)(i) to state that beginning with the 2023 MIPS performance period/2025 MIPS payment year, Health IT vendors must support MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data. Health IT vendors may also support the APP.

Based on historical participation, we are aware that some third party intermediaries (QCDRs and qualified registries) support a single specialty or subspecialty, while others support multiple specialties. Therefore, we believe that it is not appropriate to require all third party intermediaries to be able to support all MVPs that are implemented in the program. Rather, the third party intermediaries should identify and support MVPs that are relevant to the clinicians and groups that they support. We do not believe that CMS-approved survey vendors will be able to support MVP reporting, because they are historically limited, in that they only support the CAHPS for MIPS Survey Measure.

As proposed in section IV.A.3.b. of this proposed rule, MVPs would start with the 2023 MIPS performance period/2025 MIPS payment year. We believe this delay in implementation would allow third party intermediaries sufficient time for programming and system preparation for MVP reporting success. We request comment on our proposals.

(ii) Proposed Requirements for All Third Party Intermediaries To Support Subgroup Reporting

As proposed in section IV.A.3.b.(3) of this proposed rule, subgroup reporting would allow clinicians in multispecialty practices to participate in MIPS more meaningfully. Since subgroups would be implemented concurrently with MVPs, it is important that third party intermediaries have the capability to support subgroup reporting of MVPs. As described above, we believe QCDRs, qualified registries, and Health IT vendors would have the capacity to support MVP and APP reporting.

In this proposed rule, we propose to require QCDRs, qualified registries, and Health IT vendors to support subgroup reporting, beginning with the 2023 MIPS performance period/2025 MIPS payment year. Therefore, we propose to revise §414.1400(a)(1) to state that MIPS data may be submitted on behalf of a MIPS eligible clinician, group, virtual group, subgroup or APN Entity by any of the following third party intermediaries: QCDR; qualified registry; Health IT vendor; or CMS-approved survey vendor. We believe it is imperative for all third party intermediaries to be able to support subgroup reporting as we envision that to be the future of the program.

While the CAHPS for MIPS survey vendors cannot support MVPs or the APP, we believe they can support the reporting of the CAHPS for MIPS measure within an MVP and the APP, if a subgroup decides to report on that measure. Due to the limited experience, CAHPS for MIPS survey vendors have in quality reporting, we do not believe it is feasible for them to support MVP reporting since MVP reporting would mean working with reporting across the performance categories and the use of several collection types for quality.
reporting. However, there may be instances where the CAHPS for MIPS survey measure may be included in an MVP. For example, in the Optimizing Chronic Conditions Management MVP, as described in Appendix 3: MVP Inventory, of this proposed rule. In such instances, if groups or subgroups would like to report this measure, they should be able to utilize a CAHPS for MIPS survey vendor to do so. We believe it is important that all third party intermediaries support subgroup reporting in order to support meaningful quality reporting. We understand that there may be a level of burden to third party intermediaries that are required in supporting subgroup reporting by requiring them to support another clinician type. However, we believe that requiring third party intermediaries to support subgroup reporting will allow for clinicians to participate in a manner that is more meaningful. We note that as proposed in section IV.A.3.b.(4)(f) of this proposed rule, subgroups would have to register through the MVP participant registration process. Third party intermediaries would need to be able to track the subgroup identifiers and support the data submission process accordingly.

We request comments on our proposal.

(c) Request for Comment on Third Party Intermediaries That Derive Data From CEHRT

For third party intermediaries that will be submitting quality measure data on behalf of MIPS eligible clinicians, we believe that EHR systems will be able to provide measure results for a set of providers that are part of a subgroup where required for subgroup reporting. We note that the existing CEHRT definition for eligible clinicians at §414.1305 includes the 45 CFR 170.315(c)(4) “Clinical quality measures—filter” as an optional element. This criterion requires health IT to be able to filter CQM results at both patient and aggregate levels. Moreover, a Health IT Module must be able to filter by a single proposed data element (for example, provider type) or a combination of any of the data elements. Historically, the “Clinical quality measures—filter” at 45 CFR 170.315(c)(4)” (CQM-filter) criterion has been applicable for certified health IT modules supporting quality measurement for participants in certain APMs.

We believe technology certified to this optional criterion could support subgroup reporting via third party intermediaries that derive data from CEHRT by ensuring that an EHR can produce CQM results filtered for a specific group of provider NPIs that are part of a subgroup. These filtered CQM results could then be shared with a third party intermediary, which provides this data for reporting to CMS. However, we also believe health IT developers are offering non-certified functionality that can effectively support reporting of measure results for a subgroup. As a result, we are not proposing any changes at this time to the language in the CEHRT definition for eligible clinicians regarding the “optional” status of technology certified to the CQM-filter criterion.

We are interested in general feedback from stakeholders on the current capabilities of third party intermediaries that derive data from CEHRT to successfully receive and transmit data to CMS for CQMs based on subgroups; capabilities of EHR systems to support subgroup reporting, including reporting facilitated by third party intermediaries, and whether requiring the adoption of technology certified to the CQM-filter criterion would help to support subgroup reporting; and challenges which entities may face in meeting requirements to report on subgroups when deriving data from CEHRT. We request feedback on this topic.

(3) New Requirements for Both Qualified Clinical Data Registries (QCDRs) and Qualified Registries (a) Background

We refer readers to §§ 414.1305 and 414.1400, the CY 2017 Quality Payment Program final rule (81 FR 77362 through 77390), the CY 2018 Quality Payment Program final rule (82 FR 53806 through 53819), the CY 2019 PFS final rule (83 FR 59894 through 59910), the CY 2020 PFS final rule (84 FR 63049 through 63080), the May 8th COVID–19 IFC (85 FR 27594 through 27595), and the CY 2021 PFS final rule (85 FR 84926 through 84947). We identified a number of QCDRs and qualified registries that have continued to self-nominate to become a third party intermediary for the MIPS program, but have not submitted clinician, group or virtual group data to CMS. As the MIPS program continues to mature, we wish to reduce the number of vendors that self-nominate to become a qualified vendor, but do not actively participate in the MIPS program. We believe that maintaining these vendors who do not actively participate does not provide a benefit to the MIPS program, rather it creates stakeholder confusion by including these vendors in our qualified postings.

We are proposing a two-tiered approach to solve this issue. First, we propose to create a new requirement at §414.1400(b)(3)(vii) to require QCDRs and qualified registries that have never submitted data since the inception of MIPS (2017 MIPS performance period/2019 MIPS payment year) through the 2020 MIPS performance period/2022 MIPS payment year, to submit a participation plan as part of their self-nomination for CY 2023. Exceptions to this requirement may occur if data is received for the 2021 MIPS performance period/2023 MIPS payment year. Under this scenario, QCDRs and qualified registries would not need to submit a participation plan for CY 2023 of the self-nomination period. If they do not submit data, their participation plan must be submitted as part of self-nomination for CY 2023 and must be accepted by CMS to continue to be an approved QCDR or qualified registry.

Secondly, we propose to codify a new requirement at paragraph (b)(3)(viii) to state, beginning with the 2024 MIPS performance period/2026 MIPS payment year, a Qualified Registry that was approved but did not submit any MIPS data for either of the
2 years preceding the applicable self-nomination period must submit a participation plan for CMS’s approval. For example, for the 2024 MIPS performance period/2026 MIPS payment year, vendors will be required to have submitted performance data for the 2021 and 2022 MIPS performance periods/2023 and 2024 MIPS payment years. Under this proposal, the participation plan must explain the QCDR’s or qualified registry’s detailed plans about how the vendor intends to encourage clinicians to submit MIPS data to CMS through the third party intermediary on behalf of clinicians or groups. The vendor must also explain why they should still be allowed to participate as a qualified vendor. We note that this proposed participation plan was modeled off of the current requirement for QCDR measure participation at existing § 414.1400(b)(3)(iv)(f)(1) (redesignated to proposed § 414.1400(b)(4)(iii)(i)(B)(10)(l)(j)). We request comments on this proposal.

(ii) Collaboration of Entities To Become a QCDR and Proposal To Extend Policy For Collaboration of Entities To Become a Qualified Registry

(A) Background

In the CY 2017 Quality Payment Program final rule (81 FR 77377), we finalized to allow collaboration of entities to become a QCDR based on our experience with the qualifying entities wishing to become QCDRs for performance periods. We stated that we believed our previously finalized policy supporting entity collaboration should be continued under MIPS. Therefore, we discussed that an entity that may not meet the criteria of a QCDR solely on its own, but could do so in conjunction with another entity and would be eligible for qualification through collaboration with another entity. Additionally, we finalized at § 414.1400(b)(2)(ii), specifically for QCDRs, that if the entity uses an external organization for purposes of data collection, calculation, or transmission, it must have a signed, written agreement with the external organization that specifically details the responsibilities of the entity and the external organization. The written agreement must be effective as of September 1 of the year preceding the applicable performance period. For example, an entity, such as a specialty society, that needs technical support may partner with an outside entity such as a health IT vendor to qualify as a qualified registry. We request comments on this proposal.

(iii) Data Validation Audit and Targeted Audit Requirements

(A) Information Required at the Time of Self-Nomination

In the CY 2017 Quality Payment Program final rule (81 FR 77366 through 77367; 81 FR 77383 through 77384) we discussed our expectation for QCDRs and qualified registries to conduct validation on the data they intend to submit for the MIPS performance period. We also discussed that the full self-nomination process would require the following: A submission of basic information, a description of the process the QCDR and qualified registry will use for completion of a targeted audit of a subset of data prior to submission, the provision of a data validation plan along with the results of the executed data validation plan by May 31 of the year following the performance period. Additionally, in the Quality Payment Program provisions in the CY 2021 PFS final rule (85 FR 84930 through 84937; 85 FR 84944 through 84947) at existing § 414.1400(b)(2)(iv) and (v) and § 414.1400(c)(2)(iii) and (iv), we finalized the data validation audit requirements as condition for approval. While we did finalize the requirements for the data validation audits as condition for approval, we did not codify the requirements for QCDR and qualified registries to submit data validation plan during self-nomination along with the results of the executed data validation plan by May 31 of the year following the performance period. In order to provide clarification and to better align with the previously finalized policy (81 FR 77366 through 77367; 81 FR 77383 through 77384), we propose to codify the following revisions. As stated in previous policies (81 FR 77366 through 77367; 81 FR 77383 through 77384), QCDRs and qualified registries are required to submit the results of their data validation plan to CMS by May 31 of the year following the performance period. Therefore, we propose to codify at § 414.1400(b)(3)(v)(c)(1) to state that QCDRs and qualified registries must conduct validation on the data they intend to submit for the applicable MIPS performance period, and provide the results of the executed data validation plan by May 31st of the year following the performance period. Furthermore, QCDRs and qualified registries are required to submit their data validation plan explaining their process of data validation submission annually during self-nomination, and it must be approved by CMS for before use. To provide further clarity and to better align with the existing policy (81 FR 77366 through 77367; 81 FR 77383 through 77384), we also propose to codify a new requirement at § 414.1400(b)(3)(iv) to state that, beginning with the CY 2023 MIPS performance period/2025 MIPS payment year, the QCDR or qualified registry must submit a data validation plan annually, at the time of self-nomination, for CMS’s approval, and may not change the plan once approved, without the prior approval of the agency.

As discussed above we propose to codify at § 414.1400(b)(3)(iv) to provide further clarity to better align with previous policies. Therefore, we propose to reorganize at § 414.1400(b)(2)(iv) though (viii) to better align with the above changes. We propose with the following revisions:

- We propose to revise and redesignate existing paragraph (b)(2)(iv) to proposed paragraph (b)(3)(v) to state, that beginning with the 2021 MIPS
performance period/2023 MIPS payment year, the QCDR or qualified registry must conduct annual data validation audits in accordance with this paragraph (b)(3)(v).

- We propose to revise and redesignate existing paragraph (b)(2)(iv)(A) to proposed paragraph (b)(3)(vi)(A) to state that, if a data validation audit under paragraph (b)(3)(v) identifies one or more deficiency or data error, the QCDR or qualified registry must conduct a targeted audit into the impact and root cause of each such deficiency or data error for that MIPS payment year.

- We propose to revise and redesignate existing paragraph (b)(2)(v)(vii) to proposed paragraph (b)(3)(vi) to state that beginning with the 2021 MIPS performance period/2023 MIPS payment year, the QCDR or qualified registry must conduct targeted audits in accordance with this paragraph (b)(3)(vi).

- We propose to revise and redesignate existing paragraph (b)(2)(v) to proposed paragraph (b)(3)(vi) to state that beginning with the 2023 MIPS performance period/2025 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for any of the 2017 through 2021 MIPS performance periods/2019 through 2023 MIPS payment years must submit a participation plan for CMS’s approval. This participation plan must include the QCDR’s detailed plans and changes to encourage eligible clinicians and groups to submit data on the low-reported QCDR measure for purposes of the MIPS program.

- We propose to revise and redesignate existing paragraph (b)(2)(vii) to proposed paragraph (b)(4)(viii) to state that beginning with the 2024 MIPS performance period/2026 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for either of the 2 years preceding the applicable self-nomination period must submit a participation plan for CMS’s approval.

(4) New Requirements Specific to QCDRs

(a) Background

We refer readers to § 414.1400(b), the CY 2017 Quality Payment Program final rule (81 FR 77374 through 77375), the CY 2018 Quality Payment Program final rule (82 FR 53813 through 53814), the CY 2019 PFS final rule (83 FR 59900 through 59906), the CY 2020 PFS final rule (84 FR 63070 through 63074), the May 2020 COVID-19 PFS (85 FR 27594 through 27595), and the CY 2021 PFS final rule (84937 through 84944) for where we previously finalized standards and criteria for QCDRs, specifically QCDR measure requirements. In this section, we propose to update policies related to QCDR measure rejections.

(b) QCDR Measures

(i) QCDR Measure Rejections

(A) Proposed New QCDR Measure Rejection Criteria

We refer readers to the Quality Payment Program provisions in the CY 2020 PFS final rule (84 FR 63070 through 63073) at § 414.1400(b)(3)(vii) where we have previously adopted QCDR measure rejection criteria. In this proposed rule, we are proposing to add two new criteria: (1) QCDR does not have permission to use a QCDR measure; and (2) QCDR not approved or not in good standing. These are discussed in more detail below.

(aa) QCDR Does Not Have Permission To Use a QCDR Measure

In the CY 2018 Quality Payment Program final rule (82 FR 53813 through 53814), we discussed that beginning with the 2018 performance period and for future program years, QCDR vendors may seek permission from another QCDR to use an existing measure that is owned by the other QCDR. We noted that the QCDR measure owner (QCDR vendor) would still own and maintain the QCDR measure, but would allow other QCDRs to utilize their measure with proper notification. We intended for this policy to help reduce the number of QCDR measures that are similar in concept or clinical topic, or duplicative of other QCDR measures that are being approved. Additionally, in the Quality Payment Program provisions in the CY 2020 PFS final rule (84 FR 63070 through 63073) at § 414.1400(b)(3)(vii), we finalized the QCDR measure rejection criteria considerations. We noted that these considerations would help to ensure that QCDR measures are meaningful and measurable. Although we finalized the QCDR measure rejection criteria, we did not codify that QCDRs may seek permission from another QCDR to use an existing measure that is owned by another QCDR. In order to provide further clarity to the existing policies (82 FR 53813 through 53814; 84 FR 63070 through 63073), we propose to codify a new requirement and add a rejection criterion at § 414.1400(b)(4)(iv)(M) to state, a QCDR does not have permission to use a QCDR measure owned by another QCDR for the applicable performance period. We request comment on this proposal.

(bb) QCDR Not Approved or Not in Good Standing

Additionally, if a QCDR measure owner is not approved or is not in good standing, any QCDR measures associated with that QCDR would also not be approved. We believe it is important to have an approved QCDR measure owner for all approved QCDR measures. This would ensure that there is active involvement by the QCDR measure owner so that any potential measure issues can be mitigated during the specified MIPS performance period. For example, any mid-year guideline changes or measure questions would need to be immediately clarified to avoid negative impacts to clinicians such as the inability to construct a benchmark due to an error in the measure specifications. Therefore, we propose to codify another rejection criterion at § 414.1400(b)(4)(iv)(N) to state that, if a QCDR measure owner is not approved during a given self-nomination period, any associated QCDR measures with that QCDR would also not be approved. We request comment on this proposal.

We have received inquiries from stakeholders on what can be done in circumstances when an active QCDR wishes to use an inactive QCDR’s measure. We are interested in feedback from stakeholders on what should be done in such circumstances. For example, what should happen if "QCDR A" is using "QCDR B’s" measures in a given performance period and "QCDR B" is terminated mid performance period? Alternatively, what if "QCDR A" is using a measure from "QCDR B" and "QCDR B" decides not to self-nominate for the subsequent performance period? While "QCDR A" could partner with "QCDR B" as described at § 414.1400(b)(3)(ii), are there other policy options we should consider to minimize impact to the MIPS eligible clinician who has selected the QCDR measure for reporting? We seek comment on the above circumstances.

(5) Remedial Action and Termination of Third Party Intermediaries

We refer readers to § 414.1400(f), the CY 2017 Quality Payment Program final rule (81 FR 77548), the CY 2019 PFS final rule (83 FR 59908 through 59910), the CY 2020 PFS final rule (84 FR 63077 through 63080), and the CY 2021 PFS final rule (85 FR 84930 through 84937) for previously finalized policies for remedial action and termination of third party intermediaries.
We recognize that under this proposal, we would be further delaying the release of performance information for improvement activities and Promoting Interoperability measures and attestations reported via MVP. Because of this, as a potential incentive, we also considered whether to delay public reporting of quality and cost performance categories.
measure information reported via MVP by 1 additional year, for a total of 3 years. We request comments on our proposal to delay public reporting of new improvement activities and Promoting Interoperability measures and attestations reported via MVP by 1 year, as well as any feedback on alternate approaches we should consider spurring clinicians to report performance data on MVPs while making performance data available for patients on the compare tool. We propose to amend this MVP public reporting policy at § 414.1395(c)(2) to state CMS does not publicly report any MVP data on new improvement activities or Promoting Interoperability measure, objective, or activity included in an MVP for the first year in which it is included in the MVP. We also propose to amend § 414.1395(c)(1) to state that CMS does not publicly report any data on new quality or cost measure for the first 2 years in which it is in the program, after which CMS evaluates the measure to determine whether it is suitable for public reporting under § 414.1395(b). Currently, § 414.1395(c) refers to these quality and cost measures as “first year measures”. We are proposing to change “first year measures” to “new measures”.

The introduction of MVPs and subgroup reporting in MIPS, provides for new types of performance information that are available for public reporting, provided they meet the public reporting standards. Currently, we display information on profile pages at the individual clinician and group level, since this is the level of information we provide for and at which patients and caregivers search for on the compare tool. To ensure that patients and caregivers have access to subgroup performance information, we propose creating a separate workflow from the established ones for individuals and groups, since we only display information at the level at which it was publicly reported. That is, we only publicly report individual-level performance information on individual clinician profile pages and group-level performance information on group profile pages. We do not publicly report group-level performance information on individual profile pages or individual-level information on group profile pages, as doing so would not be truly representative of either the group’s or individual’s own performance, and we do not want to mislead website users. Instead, we would link from the individual or group profile page to the corresponding subgroup performance information. That is, we propose to create a subgroup public reporting workflow, in which we would indicate with plain language on an individual profile page that the clinician reports performance information as part of a subgroup or on a group profile page that the group has subgroups for purposes of performance information and then link to that subgroup’s performance information. Future user testing would determine how to best display and put in plain language subgroup performance information. Subgroup performance information would also be available on http://data.medicare.gov/.

Subgroups represent a new type of reporting for MIPS, that is available for clinicians reporting on MVPs or via the APP. For this reason, we also propose to delay all subgroup-level public reporting for 1 year, including measures, activities and attestations across the quality, cost, improvement activities, and Promoting Interoperability performance categories in order to encourage clinician participation in subgroups without the risk of displaying subgroup performance information as clinicians familiarize themselves with the option of subgroup reporting. This would only be a one-time delay in public reporting of subgroup-level information. That is, we would not publicly report any CY 2023 subgroup-level measure, attestation, or activity performance information; this information would be available for public reporting beginning with CY 2024 performance period. We would publicly report PY 2024 subgroup performance information and for each performance year thereafter if the information meets our established public reporting standards. Since we are moving toward more granular level performance information, we believe delaying subgroup public reporting by 1 year provides an incentive for subgroup participation and experience. As an alternative, we also considered a 1-year public reporting delay of performance information for all new subgroups each performance year, as technically feasible. For example, subgroups that begin in CY 2023 are not eligible for public reporting until CY 2024, subgroups that begin in CY 2024 are not eligible for public reporting until CY 2025, and so on for each subsequent year. Another alternative we considered was to publicly report all subgroup performance information without delay and provide new subgroups the opportunity to opt-out, during the preview period, of having their performance information publically reported for their first year. Some subgroups may want to have their performance information publicly reported and having an overall 1-year delay may be a disincentive to subgroup participation. We seek comment on these considerations. We note that MIPS performance category and composite final scores for MIPS eligible clinicians participating in MVPs will continue to be publicly reported for those participating in subgroups, as required under section 1848(q)(A)(ii) of the Act and finalized at § 414.1395(a)(1)(ii), and will not be delayed by 1 year for public reporting.

We also seek comment on additional factors that we should consider as we look to expand the availability of MVP and subgroup data on the compare tools. For example, should there be a certain threshold of MVPs available, or clinicians participating in MVPs prior to public reporting? For public reporting of subgroups, are there factors we should consider to make this information usable to the patient but reflective of the subgroups characteristics and composition? Should we test an indicator of MVP participation for compare tool profile pages to see if this is useful information for patients making healthcare decisions? We seek comment on this proposal and additional ways public reporting may encourage MVP participation.

(2) Publicly Reporting APM Performance Pathway Information In the CY 2021 Quality Payment Program final rule, we finalized to establish an APM performance pathway (APP) beginning in the 2021 MIPS performance year. This is an optional MIPS reporting and scoring pathway for MIPS eligible clinicians who participate in MIPS APMs. We also note that since APP participants are MIPS eligible clinicians, their MIPS performance category and composite final scores will be publicly reported as required under section 1848(q)(A)(ii) of the Act and finalized at § 414.1395(a)(1)(ii).

In the CY 2017 Quality Payment Program final rule, we finalized, as technically feasible, to use ACO profile pages as a guide to publicly reporting more APM data (81 FR 77398). Currently, groups who participate in an ACO have an indicator showing their participation as well as a link to the ACO profile page with available performance information. User testing has shown that website users find the ACO information meaningful and displayed in a user-friendly way. For this reason, we plan to continue this approach for APM performance information, including that which comes in via the APP, as technically feasible. We also seek comment on...
alternative ways to publicly report performance information reporting via APPs and additional considerations to publicly reporting this information.

(3) Facility Affiliations

Compare tool profile pages for clinicians currently provide demographic information, including names, addresses, phone numbers, medical specialties, APM affiliations, Medicare assignment status, board certifications, education and residency, gender, and group and hospital affiliations. User testing consistently shows that Medicare patients and caregivers find value in these types of information. For hospital affiliations, website users have consistently noted the importance of understanding up front the relationships clinicians may have with facilities where they perform services when searching for a clinician. Specifically, patients and caregivers have noted during user testing that hospital affiliation is important to them, since looking for a clinician to perform a procedure at a hospital or want to know the hospitals a clinician could potentially admit them if needed. Linking from the clinician profile page to their affiliated hospital page has provided a seamless experience for patients and caregivers, as they do not need to separately search for clinicians and hospitals; rather, they can navigate to a hospital profile page directly from the clinician’s profile page.

With these user testing findings in mind, and because the Compare Tools include information on a number of other types of facilities beyond hospitals, we believe it would benefit patients and caregivers to also be able to navigate from clinician profile pages to profile pages for other types of facilities such as: IRFs; LTCHs; SNFs; IPFs; HHAs; hospices; and dialysis facilities.

Expanding the types of clinician-facility affiliations, beyond hospital affiliation, publicly reported would allow us to provide additional information about clinicians with or without any hospital affiliation but who are affiliated with other types of facilities. User testing with patients and caregivers has shown that facility affiliations not only for hospitals but also for IRFs, LTCHs, SNFs, IPFs, HHAs, hospices, and dialysis facilities would be helpful to their healthcare decision-making. Specifically, we propose adding affiliations to clinician profile pages for each of the following types of facilities, pending the results of user testing, as applicable and technically feasible: IRFs; LTCHs; SNFs; IPFs; HHAs; hospices; and dialysis facilities. User testing will determine how to best display these affiliations on compare tool clinician profile pages. To determine clinician affiliations to these facilities, we would use claims data the same way we do to display the hospital affiliations currently available on clinician profile pages (77 FR 69165). We build the clinician-hospital affiliations based on observing a clinician practicing at a given hospital caring for at least three different Medicare patients on three different dates of service in the preceding 6 months, as documented in Medicare claims. We would use similar criteria for determining additional facility affiliations. Clinicians can email the Quality Payment Program Service Center at QPP@cms.hhs.gov if they believe their facility affiliations are displayed incorrectly. We seek comment on the proposal to add affiliations to clinician profile pages for each of the following types of facilities and link to the specific facility’s page on the compare tool: IRFs; LTCHs; SNFs; IPFs; HHAs; hospices; and dialysis facilities. Further, we also seek comment on whether there should be a limit on the number of procedures done or conditions treated at a given facility to determine clinician-facility affiliations.

(4) Utilization Data Request for Information

Under section 104(e) of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA), beginning with 2016, the Secretary is required to integrate utilization data information on Physician Compare. To satisfy section 104(e) of the MACRA, we previously implemented a policy to begin to include utilization data in a downloadable format in late 2017 using the most currently available data, and previously finalized that the specific codes to be included would be determined via data analysis and reported at the eligible clinician level (80 FR 71130). We finalized to continue to include utilization data in the downloadable database (81 FR 77398). This information continues to be available today on www.data.cms.gov/ provider-data.

To date, we have gathered utilization data for procedures from physician/supplier Medicare Part B non-institutional claims on certain services and procedures and published it in the public use file (PUF) file entitled “Physician and Other Supplier Data.” These data are useful to the healthcare industry, healthcare researchers, and other stakeholders who can accurately interpret these data and use them in meaningful analyses. However, this information is presented in a technical way that is not easily accessible or usable by patients, who do not frequently visit data.cms.gov or understand medical procedure coding. This information also does not provide detail on the specific conditions clinicians treat, though in select cases it may be inferred by the clinicians and researchers reviewing this information.

Section 10331(b)(3) of the Affordable Care Act requires that for public reporting, to the extent practicable, to include processes to assure that the data made available provides a robust and accurate portrayal of a clinician’s performance. In our efforts to continue to provide patients and caregivers with meaningful information to make informed healthcare decisions, we believe utilization data may also have a place on clinician and group profile pages, if presented in a consumer-friendly way. We envision utilization data on patient-facing profile pages providing two main areas of benefit. The first is allowing for more granular clinician searches, so that patients not only find specific types of clinicians but also those clinicians experienced in performing specific types of procedures and/or treating specific conditions. The second is providing categories of utilization data in a more plain language display that is usable to patients and their caregivers. In summary, utilization data could provide information to Medicare patients and their caregivers on the specific diagnoses clinicians treat and the frequency with which certain services or procedures are performed by a clinician or group and/or which types of clinicians do not provide certain services.

For example, someone with severe arthritis of the knee may want to search for an orthopedic surgeon who specifically does knee replacements. The way the clinician search works currently would only show results for “orthopedic surgeons” generally, that is, the patient would not see which of these clinicians specialize in this procedure, and likely would need to spend time calling clinicians to ascertain more detail. This could similarly be the case for finding a clinician who focuses on treatment of a certain condition. We believe indicating which clinicians focus on certain procedures or conditions would relieve some of this patient burden, as it would yield more specific search results. There are a number of factors that could influence how procedure- and condition-specific information is
determined, which is why we are seeking comment on this topic in several areas.

For display purposes, we may wish to apply a minimum experience level, such as the number of times a clinician performed a procedure or treated a condition, before a clinician profile is annotated to indicate experience with the condition or procedure. Regarding the methods in which we would identify clinician volume of procedures conducted or treat specific conditions, we would need to set a threshold for making these assertions. We have considered several options. The threshold could be based on the number of times a clinician has performed a procedure or treated a condition within a certain time-period, or the proportion of the clinician’s practice that is represented by the procedure or condition. Alternatively, thresholds may be devised based on ranking clinicians compared to their peers (specialty and geography may be considered when defining peers) in volume of procedures performed or frequency with which they treat each condition.

We note too that these approaches utilize Medicare claims data only. That is, these data would not include procedures performed or conditions treated for patients who have other types of insurance, since this information is not available. We also acknowledge that this utilization data only represents the care provided to Medicare beneficiaries and clinicians offer care to those with other forms of insurance. This disclaimer could be added to any data that may be publicly reported. We seek comment on these approaches and whether there are any additional ones we should consider.

Additionally, because the Compare Tools utilize a location-based search, national or local thresholds may be appropriate. For example, clinicians in urban centers may specialize in a small number of procedures that they perform on a weekly basis, while a clinician in a rural area might be the most experienced at a given procedure, but not have comparable volume to the urban clinician who practices a very narrow scope. We seek comment on these considerations as well as if there are others.

We also seek comment on the potential types of utilization data that, if publicly reported, could help Medicare patients and their caregivers make informed healthcare decisions, as well as on technical considerations for presenting a specific affiliation between clinicians and diagnoses and/or procedures. Specifically, we seek comment on:

- The types of conditions and procedures that would most benefit patients’ clinician searches;
- Important features and considerations for clinician searches by conditions or procedures;
- The lookback period for Medicare claims in order to identify a clinician’s volume of procedures balancing frequency with recent experience (for example, 6 months, 1 year, 2 years);
- Clinician specialties or conditions with special considerations (for example, non-patient facing clinicians);
- The maximum number of conditions treated or procedures performed to display on a given clinician’s profile page; and
- Methods to set a threshold of treatment volume to display that a clinician commonly performs a procedure or treats a condition. For example, the threshold could be: (1) The number of times a clinician treated a condition or performed a procedure; (2) the total scope that a condition or treatment represents in a clinician’s practice; or (3) the clinician’s rank—either overall among all clinicians or among a subset of clinicians—in the number of times that clinician treated a condition or performed a procedure.
- Any other factors or considerations not listed above.

4. Overview of the APM Incentive Program

(a) Overview

Under the Quality Payment Program, eligible clinicians who are Qualifying APM Participants (QPs) for a year are eligible to receive an APM Incentive Payment in the corresponding payment year for payment years 2019 through 2024. In the CY 2017 Quality Payment Program final rule (81 FR 77480 through 77489), we finalized at § 414.1450(d) that this payment is made based on the clinician’s QP status in the QP Performance Period that is 2 years prior (for example, the 2021 payment will correspond to the 2019 performance year), and at § 414.1450(b)(1) that the payment is equal to 5 percent of the estimated aggregate payments for covered professional services in the base period (the year between the QP performance and payment years).

We also finalized at § 414.1450(c)(1) (82 FR 31729) that the APM Incentive Payment would go to the TIN associated with the Advanced APM Entity through which an eligible clinician becomes a QP during the QP Performance Period. In 2019, our first year of making APM Incentive Payments, we learned that the amount of the payment in the QP Performance Period (during which QP status is attained) and the QP payment year (during which APM Incentive Payments are issued) creates challenges to disbursing the payment for some QPs in a routine and efficient manner. Consistent with section 1833(z) of the Act, QP status is determined for, and connected to, an eligible clinician (identified by their NPI) for the QP payment year based on their Advanced APM participation during the QP Performance Period. We do not believe that changes in a QP’s practice or TIN in the interim year between the QP determination and the QP payment year should affect a QP’s ability to receive the APM Incentive Payment. To address some of the unanticipated challenges we encountered in disbursing the APM Incentive Payments, in the CY 2021 PFS final rule, we finalized a hierarchy, codified at § 414.1450, that, based on our experience and lessons learned in making payments in 2019, would provide more ways to identify an appropriate TIN to which we can make the APM Incentive Payment when a QP has experienced changes in their practice or TIN since the performance year in which they attained QP status.

(c) APM Incentive Payment Recipient

In the 2021 PFS final rule (85 FR 84472), we revised our approach to identifying the TIN or TINs to which we make the APM Incentive Payment, and established a process that enables QPs to provide more ways to identify an appropriate TIN or TINs. The process for those QPs to update their information, as well as a preliminary list of TINs to whom it may be applicable, is included in a Public Notice published annually in the Federal Register.

We explained in the CY 2021 PFS final rule that the revised approach would involve looking at a QP’s relationship with TINs at different, specified periods in time, as well as considering the relationships such TINs have with certain APM Entities and Advanced APMs. We stated that we believe this revised approach enables us to more appropriately identify TINs with which QPs currently have relationships to receive other Medicare payments, and through which the QPs likely would anticipate receiving their APM Incentive Payments. We noted that, when the QP is no longer affiliated with the TIN through which they achieved QP status, this approach would prioritize identifying an alternate TIN with which the QP is affiliated at the time the APM Incentive Payment is made to which it would be appropriate to make the payment. The approach we adopted...
also serves to reduce uncertainty for QPs as they anticipate their APM Incentive Payments, as well as potential delays in our ability to make their payments.

To improve and expand the ways we identify the TIN(s) to which we make the APM Incentive Payment for a QP in a timely and efficient manner, we finalized a policy to sequentially apply a decision hierarchy and codified the hierarchy in § 414.1450(c). We apply the hierarchy by beginning at the first step, and if we are unable to identify one or more TINs with which the QP has a current affiliation at this step, we move to the next and successive steps of the hierarchy until we do identify one or more TINs with which the QP is affiliated.

As discussed in the CY 2021 PFS Final rule, if we identify more than one TIN at the applicable step in the hierarchy, we divide the APM Incentive Payment proportionally between the QP’s TINs based on the relative paid amount for Part B professional services that are billed through each of the TINs. We propose to clarify that, when we divide the APM incentive payment between two or more TINs, we apportion the APM incentive payment among TINs based on the share of total payments for covered professional services made to each TIN in the same base year that we use to calculate the APM incentive payment for the year. To calculate the APM incentive payment, we sum the total estimated aggregate payments for covered professional services for a QP for each TIN, which is based on claims submitted for covered professional services, as codified at § 414.1450(b)(1) through (3). We propose to codify this policy at § 414.1450(c).

In the course of making APM Incentive Payments during CY 2022 PFS final rule, we explored the possibility of expanding our search at each step of the hierarchy at § 414.450(c) to identify potential payee TINs that are associated with the QP during the QP payment year. Based on our findings, we believe expanding our search in this way would enable us to make payments earlier in the calendar year and reduce the number of QP NPIs for whom we cannot identify a payee TIN using our hierarchy, and thus, rely on our Public Notice to request additional information. Therefore, we now propose to revise the hierarchy at § 414.1450(c) so that, using the criterion described in each step of our current regulation, we would first seek to identify a TIN associated with the QP during the base year, and if no such TIN is identified in the base year, we would then seek to identify a TIN associated with the QP during the payment year. We have found in many instances that there are changes in enrollment information in PECOS for a QP over the span of 2 years between the QP performance period and payment year. By using enrollment information for the QP during the payment year, we are more likely to identify an appropriate TIN to which to make the APM incentive payment hierarchy. Under the proposal, applying the steps in the APM incentive payment hierarchy, we would make the APM Incentive Payment to one or more solvent TINs associated with the QP, identified by paid Medicare Part B claims for covered professional services and associated PECOS enrollment information during the base period, and if no such TIN is identified, we would make the payment to such TINs associated with QP during the payment year, according to this section. If no such TIN or TINs can be identified at a particular step, we would move to the next and successive steps listed in § 414.1450(c)(1) through (8) until we identify one or more solvent TIN or TINs with which the QP is associated, and then would make the APM Incentive Payment to any such TIN(s). If more than one TIN is identified at a step based on paid claims during the applicable year, either the base year or payment year, as we explain earlier and propose to codify in the regulation under § 414.1450(c), we divide the APM Incentive Payment proportionately among such TINs according to the relative totals for Part B covered professional services to each TIN in same the base year we use to calculate the APM incentive payment.

We propose, for each step in the APM incentive payment decision hierarchy, we would first search for a payment TIN or TINs associated with the QP during the base period. If no such TIN is found during the base year, we would search for any TIN or TINs that are similarly situated with respect to the criterion at that step in the hierarchy and associated with the QP during the payment year. If such a TIN or TINs are found, we would make the APM incentive payment to such TIN or TINs. We would continue at each step in the hierarchy to first attempt to identify the relevant base year TIN or TINs associated with the QP because we believe such TINs are more likely to be associated with the APM Entity through which the QP attained their QP status during the QPs performance period. However, if no such TIN is found in the base year, we would proceed at that step to search for a TIN or TINs with which the QP is associated in the payment year.

We believe this approach creates the greatest opportunity to identify and pay an appropriate TIN as efficiently and early as possible during the payment year. The proposed change would maintain the current hierarchy while adding a sub-step at each level in which we would conduct our search based on more current enrollment information. The proposed change would allow for the identification of an appropriate TIN or TINs at each step by first checking the base year, and then checking the payment year before moving on to the next step in the process. We believe that by maintaining the current hierarchy we would continue to incent Advanced APM participation by prioritizing making payments to TINs affiliated with Advanced APMs, even if they are not in the same Advanced APM Entity through which QP status originally was achieved. For example, we anticipate that many eligible clinicians who earned QP status in 2020 through a practice participating in the CPC+ model would join the new Primary Care First (PCF) model in 2022.

In the event the eligible clinician’s CPC+ participant TIN is no longer active, our proposed modification to the hierarchy would enable us to pay the APM Incentive Payment to a TIN participating in the PCF model in 2022. We continue to believe it would be appropriate to first identify the relevant base year TIN or TINs at each step in of the hierarchy because we believe those TINs are more likely to be associated with the APM Entity through which the QP attained their QP status during the QPs performance period. However, if no TIN is found in the base year, we would proceed to identify any TINs associated with the QP in the payment year; and then use the same process for the subsequent steps in the hierarchy until we identify one or more TINs associated with the QP at a particular step for a particular year (base year or payment year). We believe this approach will be a more efficient and expeditious way to identify a TIN or TINs to which to make the APM incentive payment for QPs.

We seek comment on this proposal to amend our APM Incentive Payment decision hierarchy to include an additional attempt to identify and pay, at each step, one or more solvent TINs associated with the QP during the payment year when no such TIN is identified for the QP in the base year.
c. Advanced APMs

1. Qualifying APM Participant Determination

a. General Overview:

In the CY 2017 Quality Payment Program final rule (81 FR 77439 through 77445), we finalized our policy at § 414.1425(b) for Qualifying APM Participant (QP) determinations. For the purposes of making QP determinations, an eligible clinician must be present on the Participation List of an APM Entity in an Advanced APM on one of the “snapshot dates” (March 31, June 30, or August 31) for the QP Performance Period. An eligible clinician included on a Participation List on any one of such dates is included in the APM Entity group even if that eligible clinician is not included on that Participation List at one of the prior- or later-listed dates. We perform QP determinations for the eligible clinicians in an APM entity group three times during the QP Performance Period using claims data for services furnished from January 1 through each of the respective QP snapshot dates. An eligible clinician can be determined to be a QP only if the eligible clinician appears on the Participation List on a snapshot date and makes QP determinations at the APM Entity group level based on participation in the Advanced APM. For eligible clinicians who appear on a Participation List in more than one APM Entity, but do not to achieve QP status based on any APM Entity level determinations, we make QP determinations at the individual level as described in § 414.1425(c)(4).

Likewise, for eligible clinicians on an Affiliated Practitioner list for an Advanced APM we make QP determinations at the individual level three times during the QP Performance Period using claims data for services furnished from January 1 through each of the respective QP determination snapshot dates as described in § 414.1425(b)(2).

b. QP thresholds and Partial QP thresholds

Section 1833(z)(2)(B) of the Act describes the thresholds for the level of participation in Advanced APMs required for an eligible clinician to become a QP for a year. The Medicare Option, based on Part B payments for covered professional services or counts of patients furnished covered professional services under Part B, is applicable beginning in the payment year 2019. The All-Payer Combination Option, which uses the Medicare Option, as well as an eligible clinician’s participation in Other Payer Advanced APMs, is applicable beginning in the payment year 2021. In the CY 2017 Quality Payment Program final rule (81 FR 77439 through 77449) we finalized our policy for the Medicare Option as codified at § 414.1430(a) and the All-Payer Option at § 414.1430(b).

Section 114 of division CC of the CCA amended section 1833(z)(2)(B) of the Act with regard to payment years 2023 and 2024 (which correspond respectively to performance years 2021 and 2022), specifically by freezing for such years the applicable payment amount and patient count thresholds used to make determine an eligible clinician’s QP determinations status. Specifically, the CAA amended section 1833(z)(2)(B) of the Act to continue the QP payment amount thresholds that apply in payment years 2021 and 2022 to payment years 2023 and 2024. Additionally, the CAA, 2021 amended section 1833(z)(2)(D) of the Act to require that, for payment years 2023 and 2024, the Secretary use the same percentage criteria for the QP patient count threshold that are applied in payment year 2022. As such, the Medicare Option QP thresholds payment years 2023 and 2024 (for performance years 2021 and 2022) will remain at 50 percent for the payment amount method and 35 percent for the patient count method. The CAA also amended section 1848(q)(1)(C)(iii) of the Act to extend the Partial QP thresholds that are established for payment years 2021 and 2022 through payment year 2024. Therefore, the Partial QP thresholds for payment years 2023 and 2024 (performance years 2021 and 2022) will remain at 40 percent for the payment amount method and 25 percent for the patient count method. For performance years beginning with 2023 (corresponding to payment years beginning with 2025) the statute prescribes the QP thresholds for the payment amount method, and the QP thresholds we established for the patient count method at § 414.1430 will take effect. Specifically, for performance years beginning with 2023, the Medicare Option QP thresholds will be 75 percent for the payment amount method and 50 percent for the patient count method. The Partial QP thresholds under the Medicare Option will be 50 percent for the payment amount method and 35 percent for the patient count method.

Under the All-Payer Combination Option, the QP thresholds for performance years 2021 and 2022 (corresponding to payment years 2023 and 2024) will be 50 percent for the payment amount method and 35 percent for the patient count method. The Partial QP thresholds for performance years 2021 and 2022 will be 40 percent for the payment amount method and 25 percent for the patient count method. In order to become a QP through the All-Payer Combination Option, eligible clinicians must first meet certain threshold percentages under the Medicare Option. For performance years 2021 and later (corresponding to payment year 2023 and later), the minimum Medicare Option threshold an eligible clinician must meet for the All-Payer Combination Option is 25 percent for the payment amount method or 20 percent under the patient count method.
V. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501 et seq.), we are required to publish a 60-day notice in the Federal Register and solicit public comment before a “collection of information” requirement is submitted to the Office of Management and Budget (OMB) for review and approval. For the purposes of the PRA and this section of the preamble, collection of information is defined under 5 CFR 1320.3(c) of OMB’s implementing regulations. To fairly evaluate whether an information collection should be approved by OMB, PRA section 3506(c)(2)(A) requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our burden estimates.
- The quality, utility, and clarity of the information to be collected.
- Our effort to minimize the information collection burden on the affected public, including the use of automated collection techniques.

We are soliciting public comment on each of the required issues under section 3506(c)(2)(A) of the PRA for the following information collection requirements.

A. Wage Estimates

To derive average costs, we used data from the U.S. Bureau of Labor Statistics’ May 2020 National Occupational Employment and Wage Estimates for all salary estimates (http://www.bls.gov/oes/current/oes_nat.htm). In this regard, Table 64 presents the mean hourly wage, the cost of fringe benefits and overhead (calculated at 100 percent of salary), and the adjusted hourly wage.

For the CY 2019 and CY 2020 PFS final rules, we used the BLS wage for “Physicians and Surgeons” (occupation code 29–1060) to estimate the cost for Physicians. In BLS’ most recent set of occupational wage rates (dated May 2020) they have discontinued this occupation in their wage data. As a result, in order to estimate the burden for Physicians, we are using a rate of $217.32/hr which is the average of the following BLS occupations and adjusted wage estimates.

</table>

As indicated, we BLS’ hourly wage estimates by a factor of 100 percent. This is necessarily a rough adjustment, both because fringe benefits and overhead costs vary significantly from employer to employer, and because methods of estimating these costs vary widely from study to study. Nonetheless, we believe that doubling the hourly wage to estimate total cost is a reasonably accurate estimation method.
B. Proposed Information Collection Requirements [ICRs]

1. ICRs Requiring Certain Manufacturers To Report Drug Pricing Information for Part B (§§ 414.802 and 414.806)

Pending our finalization of the following provisions, the proposed changes will be subject to the standard PRA process under OMB control number 0938–0921 (CMS–10110). The standard PRA process includes the publication of the 60- and 30-day Federal Register notices that will provide the public with opportunities for public review and comment. We expect to publish the 60-day notice shortly after the publication of the CMS–1751–F final rule.

The new provisions at §§ 414.802 and 414.806 would implement new statutory requirements under sections 1847A and 1927 of the Act, as amended by section 401 of Division CC, Title IV of the CAA, 2021 (for the purposes of this section of this proposed rule, hereinafter is referred to as “section 401”), which requires manufacturers without a Medicaid drug rebate agreement to report ASP information to CMS for calendar quarters beginning on January 1, 2022, for drugs or biologicals payable under Medicare Part B and described in sections 1842(o)(1)(C), (E), (F) or (G) or 1881(b)(14)(B) of the Act, including items, services, supplies, and products that are payable under Part B as a drug or biological. Specifically, to implement the new reporting requirements for manufacturers without Medicaid drug rebate agreements, we are proposing to modify: (1) The definition of drug at § 414.802; and (2) the regulations describing civil money penalties at § 414.806. The new requirements will improve the accuracy of reported payment limits and limit the use of WAC-based pricing.

For the purposes of section 401’s new reporting requirements, for manufacturers without Medicaid drug rebate agreements, confidentiality requirements appear in section 1847A(f)(2)(D) of the Act which states that the ASP data are confidential and shall not be disclosed by the Secretary in a form which discloses the identity of a specific manufacturer or wholesaler, prices charged for drugs by such manufacturer or wholesaler, except—as the Secretary determines to be necessary to carry out this section, to permit the Comptroller General to review the information provided, and to permit the Director of the Congressional Budget Office to review the information provided.

For manufacturers with Medicaid drug rebate agreements, confidentiality requirements appear in section 1927(b)(3)(D) of the Act which states that the ASP data are confidential and shall not be disclosed by the Secretary in a form which discloses the identity of a specific manufacturer or wholesaler, prices charged for drugs by such manufacturer or wholesaler, except—as the Secretary determines to be necessary to carry out this section, to permit the Comptroller General to review the information provided, and to permit the Director of the Congressional Budget Office to review the information provided.

The burden associated with these requirements is the time and effort required by manufacturers of drugs and biologicals payable under Medicare Part B to prepare and submit the required ASP data to CMS. We have previously estimated the burden associated with ASP reporting requirements for manufacturers with Medicaid drug rebate agreements. Because section 401 extends the ASP reporting requirements to manufacturers without Medicaid drug rebate agreements, we are updating our burden estimates to account for the additional manufacturers who will now be required to report ASP data to us.

As described in section III.D.1. of this proposed rule, in considering whether to exclude repackagers from the reporting requirements at section 1847A(f)(2) of the Act, we conducted analyses to estimate: (1) The proportion of repackaged products in our existing ASP data; (2) the number of new ASP submissions we can expect as a result of the new reporting requirements under section 401; and (3) the proportion of those (new) submissions that involve repackaged products.

Based on our existing ASP data, 547 manufacturers (respondents) report ASP data to us. Of these, 331 respondents have products for which they are required to submit ASP data, and 216 respondents have products for which they currently submit ASP data voluntarily, but will now be required to do so under section 1847A(f)(2) of the Act. (331 + 216 = 547)

We also estimate that under the new reporting requirements of section 401, a total of 568 respondents have products for which they will now be required to report ASP data to us. The 568 includes the 216 respondents (above) and 361 respondents who have products (identified by us) for which they will now be required to submit ASP data under section 1847A(f)(2) of the Act and did not previously voluntarily submit these data to us. There were 9 respondents who voluntarily submitted ASP data for some, but not all, of their products identified in our analysis. (216 + 361 – 9 overlap = 568)

We estimate a total of 740 respondents will report ASP data to us. This includes the 547 respondents who currently submit ASP data to us (voluntarily, or as currently required), and the 361 respondents who have products (identified by us) for which they will now be required to submit ASP data under section 1847A(f)(2) of the Act and did not previously voluntarily submit these data to us. However, there were 168 respondents who currently are required to submit ASP data to us, or who voluntarily submit ASP data to us, for whom we identified additional products that they did not previously submit ASP data, and will now be required to submit ASP data for these additional products under the new reporting requirements of section 401. (547 + 361 – 168 overlap = 740)

These respondents submit ASP data four times per year for a total of 2,960 submissions (740 respondents × 4 submissions/year).

Based on our experience with ASP data reporting, we continue to estimate that the time associated with reviewing, record keeping, and third-party disclosure for ASP data reporting is 13 hours: 10 hours to review instructions and search existing data resources and 3 hours to gather the data, compile the data, submit via electronic media and upload to the automated system. This estimate includes labor costs for respondents to extract data from their information systems and to compile and submit the ASP data, including signature, to CMS via the internet-based automated system and electronic media. This estimate also includes the cost of the compact disc (CD) and overnight mail service used to report the data, time to review instructions, search existing data resources, gather the data needed, and complete and review the information collection.

Based on these analyses and assumptions, we estimate an annual burden of 38,480 hours (2,960 submissions × 13 hours per response) at a cost of $1,495,332.80 (38,480 hr × $38.86/hr), rounding to $1,495,333.

We welcome comment on the likely costs or savings manufacturers from this provision.

2. ICRs Regarding the Medicare Shared Savings Program (Sections VII.F.8.a. and b.)

Section 1899(e) of the Act provides that chapter 35 of title 44 U.S.C., which includes such provisions as the PRA, shall not apply to the Shared Savings Program. Accordingly, we are not setting out burden under the authority of the PRA. Please refer to sections VII.F.8.a. and b. of this proposed rule for a discussion of the impacts associated with this rule’s proposed changes to the Shared Savings Program’s quality reporting requirements, beneficiary assignment methodology, repayment mechanism requirements, requirements for disclosure of prior participation in the Shared Savings Program by the ACO, ACO participants, and ACO providers/suppliers, requirements for ACOs to submit sample ACO participant agreements and executed ACO participant agreements to CMS, and beneficiary notification requirements.

3. ICRs Regarding the Medicare Ground Ambulance Data Collection System (§ 414.626)

Section 1834(f)(17) of the Act requires that the Secretary develop a ground ambulance data collection system that collects cost, revenue, utilization, and other information determined appropriate by the Secretary with respect to providers of services and suppliers of ground ambulance services (ground ambulance organizations). Section 1834(f)(17)(1) of the Act states that the PRA does not apply to the collection of information required under section 1834(f)(17) of the Act. Accordingly, this collection of information section does not set out any burden for the proposed provisions. Please see section VII. of this preamble for a discussion of the estimated impacts.

4. ICRs Regarding the Medicare Diabetes Prevention Program (MDPP) Expanded Model (§§ 410.79, 414.84, 424.205, and 424.502)

In section III.L. of this proposed rule, we propose policies necessary to shorten the Medicare Diabetes Prevention Program (MDPP) services period to one (1) year on a prospective basis, amend and update the amount of the performance payments for the Core Sessions and Core Maintenance Sessions, and make changes to eliminate the ongoing maintenance phase for MDPP beneficiaries who start MDPP set of services on or after January 1, 2022. In addition, we propose to add a provision to waive the provider enrollment Medicare application fee for all organizations enrolling in Medicare as MDPP suppliers during the MDPP expanded model. We expect the proposed policies will increase the number of eligible organizations willing to enroll as MDPP suppliers. We also anticipate that the shortened service period will make MDPP more marketable to beneficiaries in that their time committed is reduced and less intimidating with a 12-month vs 24-month service period. We anticipate the shortened MDPP services period will reduce the recordkeeping burden for suppliers. Section 1115A(d)(3) of the Act exempts Innovation Center model tests and expansions, which include the MDPP expanded model, from the provisions of the PRA. Accordingly, this collection of information section does not set out any burden for the proposed provisions. Please see section VII. of this preamble for a discussion of the estimated impacts.

5. ICRs for Prepayment and Post-payment Definitions, Documentation Request Timeframes, and Payment Denials for Noncompliance with Documentation Requests (§§ 405.902, 405.903, 405.929, and 405.930)

In section III.N.2. of this proposed rule, we are proposing to: (1) Define key terms including “additional documentation request,” “additional documentation,” “post-payment medical review,” and “prepayment medical review”; (2) codify contractors’ authority to request additional documentation for prepayment and post-payment review within established timeframes; (3) codify timeframes for response to requests for documentation; (4) codify result of a failure to comply with prepayment or post-payment documentation request(s) by a provider or supplier, specifically denial of payment. The codification of contractor authority to request additional documentation for post-payment reviews, associated timeframes, and resulting denials for failure to comply with these requests is not subject to the PRA per 5 CFR 1320.3(h)(9). The request for additional documentation would be on a case-by-case basis using non-standardized follow-up questions. With regard to the (1) definitions for “additional documentation” and “additional documentation request,” “post-payment medical review,” and “prepayment medical review,” (2) the codification of contractor authority to request additional documentation for pre-payment reviews; (3) the associated provider and supplier timeframes for providing additional documentation from the pre-payment reviews; and (4) possible denials for failure to comply with these requests, we do not expect that these proposals, if finalized, would affect our information collection burden estimates because these policies do not require providers or suppliers to submit any more documentation to CMS than what is already approved by OMB under control number 0939–0069 (CMS–10417). The proposed regulations simply codify certain requirements by clarifying definitions, timeframes, and results for noncompliance.

6. ICRs Regarding the Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D Drug Under a Prescription Drug Plan or an MA–PD Plan (§ 423.160(a))

Pending our finalization of the following provisions, the proposed changes will be subject to the standard PRA process under OMB control number 0938–1396 (CMS–10755) to give
stakeholders optimal opportunity to comment on our proposed burden for this provision, given how dynamic the burden for EPCS is. The standard PRA process includes the publication of 60- and 30-day Federal Register notices that will provide the public with opportunities for public review and comment. We expect to publish the 60-day notice shortly after the publication of the final rule.

The purpose of this proposal is to continue to implement section 2003 of the SUPPORT for Patients and Communities Act, which requires that the prescribing of a Schedule II, III, IV, or V controlled substance under Medicare Part D be done electronically in accordance with an electronic prescription drug program beginning January 1, 2021, subject to any exceptions, which HHS may specify. We refer readers to the CY 2021 PFS final rule (85 FR 84472) for our previously finalized requirements and burden for the first phase of implementing this statutory mandate, which required prescribers to use the NCPDP SCRIPT 20170717 standard for Electronic Prescription for Controlled Substances (EPCS) prescription transmissions. The purpose of this proposed rule is to propose delaying the date for CMS to begin taking compliance actions, proposing certain exceptions to the mandate, and proposing a compliance threshold.

In the CY 2021 PFS final rule, we estimated that the one-time burden to implement this provision would be 828,750 hours (165,750 prescribers * 6 hr) at a cost of $36,418,590 (994,500 hr * $36.62/hr). We arrived at the estimate of 165,750 prescribers having to implement EPCS based on the 425,000 Part D prescriber practices, and decreasing that amount by 60 percent to account for the 60 percent of prescriber practices that likely already had EPCS in place by January 1, 2021. Based on our current PDE data, we estimate that 70 percent of Part D prescribers already conduct EPCS,245 which would leave 30 percent of Part D prescribers that would have to implement EPCS, if we did not propose any exceptions to this mandate. We also propose that long term care facilities will have an extension until January 1, 2025 along with the following exceptions to the EPCS mandate: (1) For prescriptions issued when the prescriber and dispensing pharmacy are the same entity; (2) cases where prescribers issue only a small number of Part D; (3) cases where a prescriber’s NCPDP database address is in a geographic service area of an emergency or disaster declared by a federal, state or local government entity; and (4) cases where a prescriber has received a CMS-approved waiver. These exceptions will result in fewer prescribers being required to conduct EPCS.

Based on our PDE data, we believe that these exceptions will substantially decrease the number of prescribers having to implement EPCS as a result of this regulation. We have listed the exceptions and the estimated number of prescribers falling under each exception in the Table 67.246 We do not anticipate that our proposal to include a compliance threshold of 70 percent will have any material impact on the impact of this provision. The reason for this is that based on our PDE data and conversations with prescribers, we believe that the 30 percent or less of the time that prescribers are not e-prescribing is because they are unable to e-prescribe, so they would have applied for a waiver. Although there are sometimes scenarios where beneficiaries may request that their prescriptions not be transmitted electronically, it appears as though those circumstances are not enough to make a material impact, since beneficiaries often change their views when they are given countervailing reasons that the prescriptions should be transmitted via EPCS.

</tbody>
</table>

* This information is based on PDE data pulled on April 6, 2021.

Table 67 gives our estimate of the number of prescribers affected by our proposed exceptions broken down by the type of exception. As shown in Table 67, we estimate that our exceptions will exempt approximately 582,664 prescribers from the EPCS requirement, which constitutes approximately 38 percent of prescribers.

245 This information is based on PDE data pulled on April 6, 2021.

246 This information is based on PDE data pulled on April 6, 2021.

247 This information is based on PDE data pulled on April 6, 2021.

since there are an estimated 1,548,221 Part D prescribers 247 (582,664/1,548,221). Since the number of exempted prescribers from this mandate far exceeds the number of prescribers who currently do not e-prescribe controlled substances in Part D, we do not expect that the total number of Part D prescribers who electronically prescribe controlled substances will increase following our implementation of this mandate. As a result, we do not believe there will be a measurable impact to the prescriber community as a whole, should this provision be finalized, as proposed.

However, for individual prescribers who have to implement this mandate,
we expect that the implementation costs will be the same amounts that we finalized in the CY 2021 PFS final rule. Based on the modeling that we have seen, we have found that EHR companies provide the initial set-up of e-prescribing software free of charge, provided the prescribers pay the per transaction cost of $1.88 mentioned in the CY 2021 PFS final rule. Based on the comments received on our CY2021 PFS proposed rule, we understand that implementing EPCS can lead to technological glitches, and then fixing those issues. We understand that the EHR companies remedy the issues free of charge. However, we also understand that such fixes take time away from the medical office staff. We estimate that such fixes would take the staff approximately 1 extra hour from the estimate given in our CY 2020 PFS proposed rule, when averaged across all prescribers. As a result, we have changed our one-time burden estimate of e-prescribing set-up from 5 hours to 6 hours per provider, which means a total of 994,500 hours (165,750 prescribers * 6 hr) at a cost of $36,617,490 (994,500 hr * $36.82/hr), since we anticipate that this work would be completed by an Administrative Support Worker. In this regard, the impact of this rule is plus 1 hour per response, plus 165,750 hours (165,750 prescribers × 1 hr/response), and $6,102,915 (165,750 hr * $36.82/hr).

We have proposed that prescribers have the ability to apply for a waiver from the EPCS requirement, should they be facing circumstances beyond their control that prevent them from e-prescribing, and these circumstances are not the result of a natural disaster or public health emergency. Due to the high prevalence of EPCS, the miniscule compliance actions that we are proposing for non-compliance, and the number of prescribers that we expect to exempt from the mandate, we only expect to receive about 100 attestations per year. Although we proposed certain fields be in this attestation, these were minimal, and there was no accompanying documentation required. (Note, as outlined in section II.Q. of this final rule, to meet the standard for a waiver, prescribers must provide documentation showing the existence of a circumstance beyond their control and that such a circumstance prevents them from conducting EPCS.) We expect that each attestation would take 10 minutes (0.1667 hr) for a prescriber at $210.44/hr to complete. In aggregate, CMS estimates an annual burden for filling out attestations of 16.67 hours (100 attestations × 0.1667 hr) at a cost of $3,508.04 (16.67 hr × $210.44/hr). In addition, we solicit comment on any other potential information collection implications.

7. ICRs Regarding Open Payments Proposals Included in the CY 2022 PFS (42 CFR Part 403)

The following requirement and burden changes will be submitted to OMB for approval under control number 0938–1237 (CMS–10495). The following estimates burden changes to the Open Payments final rule at §§ 403.900 through 403.914 as proposed by this proposed rule.

a. Payment Context Field for Teaching Hospitals

The proposed mandatory context field is a new requirement for reporting entities submitting and attesting to records that are attributed to teaching hospitals only. The field will be a freeform text entry. We estimate that for each applicable manufacturer and applicable group purchasing organization (GPO), the inclusion of this field for collection and reporting activities will average an additional 6 total hours. The applicable instrument for these activities in the current PRA package is the “General-Research-Ownership Submission Data Elements.”

At the support staff cost per FTE of $42.40/hr, this would increase costs by $254.40 (6 hr × $42.40/hr) per applicable manufacturer or applicable GPO submitting teaching hospital records. However, because we anticipate fewer disputes due to this proposed field, we believe it will decrease dispute resolution by 2 total hours for support staff at $42.40/hr respectively, reducing costs by $84.80 (2 hr × $42.40/hr) per applicable manufacturer and applicable GPO. This results in a net increase in burden for each applicable manufacturer and applicable GPO submitting teaching hospital records of $169.60 ($254.40 – $84.80). In Program Year (PY) 2019, 794 applicable manufacturers and applicable GPOs submitted at least one teaching hospital record, meaning the increase in burden will be a total of 3,176 hours (4 hours × 794 reporting entities) at a cost of $42.40/hr or a total of $1,343,852 (3,176 × $42.40).

In addition, we estimate this proposal would reduce teaching hospital dispute resolution estimates by 2 hours per support staff FTE at $37.82/hr or $75.64 (2 hr × $37.82/hr) per teaching hospital with records attributed to them. In PY 2019, 1,202 hospitals had record attributed to them, so for teaching hospitals we estimate a total burden reduction of 2,404 hours at a cost of $90,819.28 (2,404 × $37.82).

In aggregate, we estimate an annual burden of 772 hours (3,176 – 2,404) at a cost of $43,743.12 ($134,662.40 – $90,819.28).

b. Optional Annual Recertification

The annual recertification is voluntary for applicable manufacturers or applicable group purchasing organizations. We approximate that 15 percent of applicable manufacturers and group purchasing organizations, or 240 reporting entities (0.15 [1,595 applicable manufacturers and applicable GPOs]) will complete and submit the proposed optional annual recertification. We anticipate that it will be a simple check box form to be included in the AM (Attestation) and GPO (Attestation) Annual IC Requirement and the “Attestation and Assumptions Screen Shots” Instrument in the existing PRA.
by reporting entities every year, and these records will simply either be reported as research records instead, or not delayed at all. Therefore, we anticipate a negligible burden for this proposal.

f. Short Term Loans (§ 403.902)

This proposal is merely a clarification of an existing requirement in regulation text. The purpose of this language is to clarify that the exemption for short-term loans from reporting requirements only applies for loans of less than 91 cumulative days per calendar year. In other words, multiple short-term loans in a calendar year would still meet reporting requirements if they add up to 91 days or greater. We do not believe this proposal will change reporting behavior, and therefore do not anticipate an increase in burden.

g. Remove General Ownership Records

Currently the Open Payments system allows for a reporting entity to submit either a general record with a nature of payment category of ownership, or an ownership and investment interest record. For Program Years 2015–2019, approximately 92 applicable manufacturers and GPOs reported records with the nature of payment category of ownership. Since reporting these general records as ownership records will require the addition of two additional pieces of information, we anticipate that it will take these 92 entities an additional 3 hours at $42.40/hr to report the two extra fields. In aggregate, we estimate an added annual burden of 276 hours (92 entities × 3 hr/response) at a cost of $11,702 (276 hr × $42.40/hr). This would be included in the AM (Data collection and submission) and Applicable GPO (Data Collection and Submission) IC requirements and the “Open Payments User Guide” Instrument in the existing PRA package.

h. Updated Contact Information (§ 403.908(c)(3))

This proposal creates a requirement for reporting entities to keep their contact information up to date with CMS. The ability to communicate with a reporting entity is important because CMS may need to contact the entity in the case of perceived issues with the records. Applicable manufacturers and applicable GPOs will only be required to update their contact information if the two contacts provided become obsolete due to a change in the organization. This will only apply to entities that do not have records to report for 2 years after a program year in which they reported. Therefore, we anticipate that it will only affect approximately 30 applicable manufacturers and applicable group purchasing organizations. We estimate that it would take 0.5 hours at $42.40/hr to update the contact information. In aggregate, we estimate an added annual burden of 15 hours (30 entities × 0.5 hr/response) at a cost of $636 (15 hr × $42.40/hr). This would be included in the AM (Data collection and submission) and Applicable GPO (Data Collection and Submission) IC requirements and the “Open Payments User Guide” Instrument in the existing PRA package.

8. The Quality Payment Program (QPP) (42 CFR Part 141 and Section IV. of This Proposed Rule)

The following QPP-specific ICRs reflect this rule’s proposed policy changes as well as adjustments to the policies that have been finalized in the CY 2017 and 2018 Quality Payment Program Final rules (81 FR 77008 and 82 FR 53568, respectively), the CY 2019, CY 2020 and CY 2021 PFS final rules (83 FR 59452, 84 FR 62568 and 85 FR 84472, respectively).

(a) Background

(1) ICRs Associated With MIPS and Advanced APMs

There is a series of ICRs associated with the Quality Payment Program, including for MIPS and Advanced APMs. The MIPS ICRs consist of: Registration for virtual groups (see section V.B.8.b of this proposed rule); QC DR self-nomination applications and other requirements (see section V.B.8.c.2 of this proposed rule); qualified registry self-nomination applications and other requirements (see section V.B.8.c.3 of this proposed rule); CAHPS survey vendor applications (see section V.B.8.c.4 of this proposed rule); Health IT vendors (see section V.B.8.c.5 of this proposed rule); Open Authorization credentialing and token request process (see section V.B.8.d of this proposed rule); Quality Payment Program Identity Management Application Process (see section V.B.8.e.3 of this proposed rule); quality performance category data submission by Medicare Part B claims collection type (see section V.B.8.e.4 of this proposed rule), QC DR and MIPS CQM collection type (see section V.B.8.e.5 of this proposed rule), eCQM collection type (see section V.B.8.e.6 of this proposed rule), MVP Quality submission (see section V.B.8.e.(7)(a)(iii) of this proposed rule), and CMS Web Interface collection type (see section V.B.8.e.(8) of this proposed rule); CAHPS for MIPS survey beneficiary participation (see section V.B.8.e.(9) of this proposed rule); group registration for CMS Web Interface (see section V.B.8.e.(10) of this proposed rule); group registration for CAHPS for MIPS survey (see section V.B.8.e.(11) of this proposed rule); MVP registration (see section V.B.8.e.(7)(a)(i) of this proposed rule); subgroups registration (see section V.B.8.e.(7)(a)(ii) of this proposed rule); and call for quality measures (see section V.B.8.1 of this proposed rule); reweighting applications for Promoting Interoperability and other performance categories (see section V.B.8.g of this proposed rule).

Promoting Interoperability performance category data submission (see section V.B.8.g.(3) of this proposed rule); call for Promoting Interoperability measures (see section V.B.8.h of this proposed rule); improvement activities performance category data submission (see section V.B.8.i of this proposed rule); nomination of improvement activities (see section V.B.8.j of this proposed rule); nomination of MVPs (see section V.B.8.k of this proposed rule); and opt-out of Physician Compare for voluntary participants (see section V.B.8.o of this proposed rule).

The ICRs for Advanced APMs consist of: Partial Qualifying APM Participant (QP) election (see section V.B.8.m of this proposed rule); Other Payor Advanced APM identification: Payer Initiated and Eligible Clinician Initiated Processes (sections V.B.8.n.(1) and V.B.8.n.(2) of this proposed rule); and submission of data for QP determinations under the All-Payer Combination Option (section V.B.8.n.(3) of this proposed rule).

(2) Summary of Quality Payment Program Changes: MIPS

The following 10 MIPS ICRs show changes in burden due to the proposed policies in this rule: (1) QC DR self-nomination applications; (2) Qualified Registry self-nomination applications; (3) Quality performance category data submission by Medicare Part B Claims collection type; (4) Quality performance category data submission by QC DR and MIPS CQM collection type; (5) Quality performance category data submission by eCQM collection type; (6) Group registration for CMS Web Interface; (7) CMS Web Interface submission burden; (8) Reweighting applications for Promoting Interoperability and other performance categories; (9) Promoting Interoperability performance category data submission; and (10) Nomination of improvement activities. In aggregate, we estimate the proposed policies will result in a net decrease in burden of 84,803 hours and $4,053,151 for the CY 2021 MIPS payment year compared to the CY 2019 MIPS payment year. New eligible clinician participants in Advanced APMs who become QPs would be excluded from MIPS reporting requirements and payment adjustments, and as such, unlikely to report under MIPS; while some current Advanced APM participants may end participation such as APM Entities who can elect whether to report to MIPS. Second, it is difficult to predict what Partial QPs, who can elect whether to report to MIPS, will do in the CY 2022 MIPS performance period/2024 MIPS payment year compared to the CY 2019 MIPS performance period/2021 MIPS payment year, and therefore, the actual number of Advanced APM participants and how they elect to submit data may be different than our estimates. We are not making any changes or adjustments to the following ICRs: Registration for virtual groups; CAHPS survey vendor applications; Quality Payment Program Identity Management Application Process; group registration for CAHPS for MIPS survey; CAHPS for MIPS survey beneficiary participation; Open Authorization (OAuth) Credentialing and Token Request Process; nomination of MVPs; call for Promoting Interoperability measures; and improvement activities performance category data submission. See section V.B.8. of this proposed rule for a summary of the ICRs, the overall burden estimates, and a summary of the assumption and data changes affecting each ICR.

The accuracy of our proposed estimates of the total burden for data submission under the quality, Promoting Interoperability, and improvement activities performance categories may be impacted due to two primary reasons. First, we are unable to predict with absolute certainty who will be a QP for the CY 2022 MIPS performance period/2024 MIPS payment year. New eligible clinician participants in Advanced APMs who become QPs would be excluded from MIPS reporting requirements and payment adjustments, and as such, unlikely to report under MIPS; while some current Advanced APM participants may end participation such that the APM Entity’s eligible clinicians would not be QPs for a year based on § 414.1425(c)(5), and thus be required to report under MIPS. Second, it is difficult to predict what Partial QPs, who can elect whether to report to MIPS, will do in the CY 2022 MIPS performance period/2024 MIPS payment year, and therefore, the actual number of Advanced APM participants and how they elect to submit data may be different than our estimates. However, we believe our estimates are the most appropriate given the available data.
We acknowledge a recent JAMA article (Khullar, et al., 2021) which includes new data on the burden involved in submitting data for the Quality Payment Program. We have chosen not to include this data in our estimates because of the small sample size included (30 TINs, half of which are APM participants, which we do not include in our estimates). In addition, the article does not indicate the time spent per activity involved in submissions for MIPS, so we are unable to determine if the totals in the article represent only the activities relevant for regulatory burden or separate the totals for the individual ICRs. We seek comment on our assumptions for estimating the burden for clinicians submitting data for the Quality Payment Program.

(3) Summary of Quality Payment Program Changes: Advanced APMs

For these ICRs (identified above under, "ICRs Associated with MIPS and Advanced APMs"), the changes to currently approved burden estimates are adjustments based on updated projections for the CY 2022 MIPS performance period/2024 MIPS payment year. We are not proposing any changes to the Other Payer Advanced APM identification: Eligible Clinician Initiated Process and submission of Data for QP determinations under the All-Payer Combination Option ICRs.

(4) Framework for Understanding the Burden of MIPS Data Submission

Because of the wide range of information collection requirements under MIPS, Table 70 presents a framework for understanding how the organizations permitted or required to submit data on behalf of clinicians vary across the types of data, and whether the clinician is a MIPS eligible clinician or other eligible clinician voluntarily submitting data, MIPS APM participant, or an Advanced APM participant. As shown in the first row of Table 70, MIPS eligible clinicians and other clinicians voluntarily submitting data will submit data either as individuals, groups, or virtual groups for the quality, Promoting Interoperability, and improvement activities performance categories. Note that virtual groups are subject to the same data submission requirements as groups, and therefore, we will refer only to groups for the remainder of this section unless otherwise noted. We want to note that we have included subgroups to Table 70 due to the proposed introduction of subgroups for clinicians choosing to report MVPs or the APP in the CY 2023 MIPS performance period/2025 MIPS payment year described in section IV.A.3.b.(2)(d)(ii) of this rule. Because MIPS eligible clinicians are not required to submit any additional information for assessment under the cost performance category, the administrative claims data used for the cost performance category is not represented in Table 70.

For MIPS eligible clinicians participating in MIPS APMS, the organizations submitting data on behalf of MIPS eligible clinicians will vary between performance categories and, in some instances, between MIPS APMs. As discussed in section IV.A.3.c. of this proposed rule, for clinicians in APM Entities, the APM Performance Pathway is available for both ACO and non-ACOs to submit quality data. Due to data limitations and our inability to determine who would use the APM Performance Pathway versus the traditional MIPS submission mechanism for the CY 2022 MIPS performance period/2024 MIPS payment year, we assume ACO APM Entities will submit data through the APM Performance Pathway, using the CMS Web Interface option, and non-ACO APM Entities would participate through traditional MIPS, thereby submitting as an individual or group rather than as an entity.

For the Promoting Interoperability performance category, group TINs may submit data on behalf of eligible clinicians in MIPS APMS, or eligible clinicians in MIPS APMS may submit data individually. For the improvement activities performance category, we will assume no reporting burden for MIPS APM participants. In the CY 2017 PFS final rule, we described that for MIPS APMS, we compare the requirements of the specific MIPS APM with the list of activities in the improvement activities Inventory and score those activities in the same manner that they are otherwise scored for MIPS eligible clinicians (81 FR 77185). Although the policy allows for the submission of additional improvement activities if a MIPS APM receives less than the maximum improvement activities performance category score, to date all MIPS APM have qualified for the maximum improvement activities score. Therefore, we assume that no additional submission will be needed.

Eligible clinicians who attain Partial QP status may incur additional burden if they elect to participate in MIPS, which is discussed in more detail in the CY 2018 PFS final rule (82 FR 53841 through 53844).
The policies finalized in the CY 2017 and CY 2018 Quality Payment Program final rules, the CY 2019, CY 2020 and CY 2021 PFS final rules, and continued in this proposed rule create some additional data collection requirements not listed in Table 70. These additional data collections, some of which are currently approved by OMB under the control numbers 0938–1314 (Quality Payment Program, CMS–10621) and 0938–1222 (CAHPS for MIPS, CMS–10450), are as follows:

TABLE 70: Clinicians or Organizations Submitting MIPS Data on Behalf of Clinicians, by Type of Data and Category of Clinician*

<table>
<thead>
<tr>
<th>Category of Clinician</th>
<th>Type of Data Submitted</th>
<th>Type of Data Submitted</th>
<th>Other Data Submitted on Behalf of MIPS Eligible Clinicians</th>
</tr>
</thead>

</tr>
<tr>
<td></td>
<td>Certain types of MIPS eligible clinicians are automatically eligible for a zero percent weighting for the Promoting Interoperability performance category.</td>
<td>Clinicians who submit an application and are approved for significant hardship or other exceptions are also eligible for a zero percent weighting.</td>
<td>MIPS APMs do not submit information.</td>
</tr>
<tr>
<td></td>
<td>Each MIPS eligible clinician in the APM Entity reports data for the Promoting Interoperability performance category through either group TIN or individual reporting. [The burden estimates for this final rule assume group TIN-level reporting].</td>
<td>CMS will assign the same improvement activities performance category score to each APM Entity based on the activities involved in participation in the MIPS APM.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

* Because the cost performance category relies on administrative claims data, MIPS eligible clinicians are not required to provide any additional information, and therefore, the cost performance category is not represented in this table.

a Submissions by the ACO are not included in burden estimates for this proposed rule because quality data submissions to fulfill requirements of the Shared Savings Program are not subject to the PRA. Section 1899 (42 U.S.C. 1395iii) states that the Shared Savings Program is not subject to the PRA.

b Both group TIN and individual clinician Promoting Interoperability data will be accepted. If both group TIN and individual scores are available for the same APM Entity, CMS will use the higher score for each TIN/NPI. The TIN/NPI scores are then aggregated for purposes of calculating the APM Entity score.

c The burden estimates for this proposed rule assume no improvement activities performance category reporting burden for APM participants because we assume the MIPS APM model provides a maximum improvement activity score. APM Entities participating in MIPS APMs receive an improvement activities performance category score of at least 50 percent (§ 414.1380) and do not need to submit improvement activities data unless the CMS-assigned improvement activities scores are below the maximum improvement activities score.

d Virtual group participation is limited to MIPS eligible clinicians, specifically, solo practitioners and groups consisting of 10 eligible clinicians or fewer.
Additional ICRs Related to MIPS Third-Party Intermediaries (See Section V.B.8.c).

- Self-nomination of new and returning QCDRs (81 FR 77507 through 77508, 82 FR 53906 through 53906, and 83 FR 59998 through 60000) (OMB 0938–1314).
- Self-nomination of new and returning registries (81 FR 77507 through 77508, 82 FR 53906 through 53906, and 83 FR 59998 through 53906) (OMB 0938–1314).
- Approval process for new and returning CAHPS for MIPS survey vendors (82 FR 53906) (OMB 0938–1222).

Additional ICRs Related to the Data Submission and the Quality Performance Category (See Section V.B.8.e).

- CAHPS for MIPS survey completion by beneficiaries (81 FR 77509, 82 FR 53916 through 53917, and 83 FR 60008 through 60009) (OMB 0938–1222).
- Quality Payment Program Identity Management Application Process (82 FR 53914 and 83 FR 60003 through 60004) (OMB 0938–1314).

Additional ICRs Related to the Promoting Interoperability Performance Category (See Section V.B.8.f).

- Reweighting Applications for Promoting Interoperability and other performance categories (82 FR 53918 and 83 FR 60011 through 60012) (OMB 0938–1314).

Additional ICRs Related To Call for New MIPS Measures and Activities (See Sections V.B.8.f, V.B.8.h, V.B.8.j, and V.B.8.k).

- Nomination of improvement activities (82 FR 53922 and 83 FR 60017 through 60018) (OMB 0938–1314).
- Call for new Promoting Interoperability measures (83 FR 60014 through 60015) (OMB 0938–1314).
- Call for MIPS quality measures (83 FR 60011 through 60011) (OMB 0938–1314).
- Nomination of MVPs (OMB 0938–1314).

Additional ICRs Related to MIPS (See Section V.B.8.o).

- Opt out of performance data display on Physician Compare for voluntary reporters under MIPS (82 FR 53924 through 53925 and 83 FR 60022) (OMB 0938–1314).

Additional ICRs Related to APMs (See Sections V.B.8.m and V.B.8.n).

- Partial QP Election (81 FR 77512 through 77513, 82 FR 53922 through 53923, and 83 FR 60018 through 60019) (OMB 0938–1314).
- Other Payer Advanced APM determinations: Payer Initiated Process (82 FR 53923 through 53924 and 83 FR 60019 through 60020) (OMB 0938–1314).
- Other Payer Advanced APM determinations: Eligible Clinician Initiated Process (83 FR 53924 through 60020) (OMB 0938–1314).
- Submission of Data for All-Payer QP Determinations (83 FR 60021) (OMB 0938–1314).

b. ICRs Regarding the Virtual Group Election (§ 414.1315)

This rule is not proposing any new or revised collection of information requirements or burden related to the virtual group election. The virtual group election requirements and burden are currently approved by OMB under control number 0938–1314 (CMS–10652). Consequently, we are not proposing any changes under that control number.

c. ICRs Regarding Third-Party Intermediaries (§ 414.1400)

In section IV.A.3.h. of this rule, we propose multiple changes to the third-party intermediary regulations at § 414.1400. Specifically, we are proposing: (1) Requirement for third-party intermediaries to submit MIPS data for APM Entities; (2) requirement for QCDRs and qualified registries to support MVPs and the APP; (3) requirement for all QCDRs and qualified registries to support subgroup reporting; (4) requirements for approved QCDRs and qualified registries that have not submitted performance data; and (5) new QCDR measure rejection criteria. The proposed burden associated with each of these topics are discussed separately below for qualified registries, QCDRs, and survey vendors.

(1) Background

Under MIPS, the quality, Promoting Interoperability, and improvement activities performance category data may be submitted via relevant third-party intermediaries, such as qualified registries, QCDRs, and health IT vendors. Data on the CAHPS for MIPS survey, which counts as either one quality performance category measure, or towards an improvement activity, can be submitted via CMS-approved survey vendors. Entities seeking approval to submit data on behalf of clinicians as a qualified registry, QCDR, or survey vendor must complete a self-nomination process annually.\(^\text{249}\) The processes for self-nomination for entities seeking approval as qualified registries and QCDRs are similar with the exception that QCDRs have the option to nominate QCDR measures for approval for the reporting of quality performance category data. Therefore, differences between QCDRs and qualified registry self-nomination are associated with the preparation of QCDR measures for approval.

(2) QCDR Self-Nomination Applications

The proposed requirements and burden associated with this rule’s data submission changes related to QCDRs will be submitted to OMB for approval under control number 0938–1314 (CMS–10621). As explained below, in this rule we propose to: Adjust the number of self-nomination applications based on current data (from 82 to 90), change the number of QCDR measures submitted for consideration by each QCDR at the time of self-nomination (from 2 to 12), and adjust the average time required to submit information for each QCDR measure (from 2.5 hours to 0.75 hours).

(a) Self-Nomination Process and Other Requirements

In section IV.A.3.h.(1) of this rule, we are proposing reorganization and consolidation of § 414.1400 generally. We assume that this proposal does not change the existing requirements for third-party intermediaries during the self-nomination process. Therefore, we are not revising our burden estimates related to these proposals. We refer readers to § 414.1400 which states that QCDRs interested in submitting MIPS data to us on behalf of a MIPS eligible clinician, group, or virtual group will need to complete a self-nomination process to be considered for approval to do so. We also refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77507 through 77508), CY 2018 Quality Payment Program final rule (82 FR 53906 through 53906), CY 2019 PFS final rule (83 FR 59998 through 60000), the CY 2020 PFS final rule (84 FR 63116 through 63121) and the CY 2021 PFS final rule (85 FR 84964 through 84969) for our previously finalized requirements and burden for self-nomination of QCDRs and nomination of QCDR measures.

In section IV.A.3.h.(2)(a) of this rule, we propose to: Add APM Entities to § 414.1400(a)(1), and expand the general...
workflows for submission of MVPs and administrative changes to their existing intermediaries would need to make this process because of this proposal.

simplified or full self-nomination for their quality measures to their APMs. Additionally, QCDRs, qualified registries and health IT vendors are required under existing § 414.1400(a)(1) to submit data for the quality, improvement activities, and Promoting Interoperability performance categories in MIPS. Therefore, we anticipate no additional steps being added to the self-nomination process as a result of this proposal for third-party intermediaries to submit MIPS data on behalf of APM Entities, and to support measures and activities in MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data. For this proposed rule, we assume that there will be no impact on the time required for QCDRs to complete either the simplified or full self-nomination process because of the above proposals. Additionally, we are proposing to require QCDRs, qualified registries, and third-party intermediaries to submit data for QCDRs that have never submitted data since the inception of MIPS (CY 2017 MIPS performance period/2020 MIPS payment year). We refer readers to section VII.C.17.f.(2)(f) of this proposed rule where we discuss our impact analysis.

In section IV.A.3.h.(3)(a)(iii) of this rule, to provide further clarity and to better align with the existing policy (81 FR 77366 through 77384; 81 FR 77383 through 77384), we are proposing to codify QCDRs, and qualified registries must conduct validation on the data they intend to submit for the applicable MIPS performance period and provide the results of the executed data validation plan by May 31st of the year following the performance period. Additionally, we are proposing to codify a new requirement at § 414.1400(b)(3)(iv) to state that, beginning with the CY 2023 MIPS performance period/2025 MIPS payment year, the QCDR or qualified registry must submit a data validation plan annually, at the time of self-nomination, for CMS’ approval, and may not conduct the plan once approved, without the prior approval of the agency. We anticipate that this proposal does not make any changes to the existing data validation requirements for QCDRs and qualified registries. Through this proposal, CMS is codifying the finalized policies related to data validation for QCDRs and qualified registries in previous rules. We are not revising our burden estimates as a result of the above proposal and the associated burden was captured in the CY 2017 PFS final rule (82 FR 59998 through 59999) and the CY 2019 PFS final rule (83 FR 59998 through 59999) and submitted to OMB for approval under control number 0938–1314 (CMS–10621).

In section IV.A.3.h.(4) of this rule, we are proposing to codify new requirements that if a QCDR measure owner is not an approved active QCDR for a given self-nomination period, that QCDR measure will not be available for use. Additionally, we propose to codify a new requirement in section IV.A.3.h.(1)(d)(iv) and add a rejection criterion at § 414.1400(b)(4)(vi)(M) to state, a QCDR does not have permission to use a QCDR measure owned by another QCDR for the applicable performance period. It was finalized in the CY 2018 PFS final rule (83 FR 53813) that beginning with the CY 2018 MIPS performance period/2026 MIPS payment year, QCDR vendors may seek permission from another QCDR to use an existing measure that is owned by the other QCDR. Additionally, in the CY 2020 PFS final rule (85 FR 63070 through 63073), we finalized the QCDR measure rejection criteria.
considerations. Specifically, we stated that all previously approved QCDR measures and new QCDR measures would be reviewed on an annual basis (as a part of the QCDR measure review process that occurs after the self-nomination period closes on September 1st) to determine whether they are appropriate for the program. In the CY 2020 PFS final rule, we indicated to stakeholders that as information becomes available in future years, we will revisit our assumptions to better reflect the impact of these requirements on QCDRs and the quantity of measures annually (84 FR 63118 through 63119).

As discussed in the CY 2019 PFS final rule (83 FR 60000) and CY 2020 PFS final rule (84 FR 63118), we are not accounting for QCDR measure licensing costs as part of our burden estimate. Based on the number of QCDR measures submitted at the time of self-nomination for the CY 2021 MIPS performance period/2023 MIPS payment year, we assume that 82 QCDRs will submit 984 measures for consideration in the CY 2022 MIPS performance period/2024 MIPS payment year, approximately 12 measures per QCDR, on average. We anticipate that out of the 984 measures, 820 measures would be existing or borrowed measures, approximately 10 measures submitted per QCDR self-nomination application. The remaining 104 measures would be new measures, approximately 2 measures on average per QCDR.

Using the above assumption that each QCDR submitting measures for approval during the self-nomination process will submit approximately 12 measures (10 existing or borrowed measures + 2 new measures), we estimate an increase of 10 measures from the currently approved estimate of 2 measures per QCDR. The estimated increase in the total number of measures submitted by a QCDR at the time of self-nomination is due to the inclusion of the existing or borrowed QCDR measures in our assumptions. Additionally, we anticipate that less information is needed for a QCDR to submit an existing or borrowed measure for approval, therefore, we estimate that the time needed for a QCDR to submit an existing or borrowed measure is 0.5 hours, independent of the selection of the simplified or full self-nomination process. Consistent with our assumption in the CY 2020 PFS final rule (84 FR 63119), we continue to estimate that each QCDR will require 2 hours to submit a new QCDR measure for approval, independent of the selection of the simplified or full self-nomination process. To account for the difference in the time for submission of new vs existing QCDR measures for approval, we are using the weighted average to estimate the time required for QCDR measure submission at the time of self-nomination. Therefore, we assume that the weighted average of the time required for each QCDR to submit a new or existing or borrowed measure for approval during the self-nomination process is 0.75 hours [(12 new measures × 2 hours) + (10 existing or borrowed measures × 0.5 hours)/total # of measures (12)]. Based on the above assumptions, we are proposing to revise our estimates in the amount of time required for a QCDR to submit measures during the self-nomination process from a total of 2 hours to approximately 0.75 hours, a decrease of 1.5 hours from the currently approved estimated burden per QCDR measure submission.

In the CY 2019 PFS final rule, we estimated that it would take 0.5 hours and 3 hours for a QCDR to submit all the required information during the simplified and full self-nomination process, respectively (83 FR 59999). Based on our experience with the full amount of time needed for QCDRs during the 2020 self-nomination period, we assume that the estimated time of 3 hours per QCDR for a full self-nomination process is an overestimate and are proposing to revise our estimated time required for the QCDR full-self-nomination process to 2.5 hours, a decrease of 0.5 hours. We are not making any adjustments in the amount of time needed for simplified self-nomination process.

Based on the trends noticed in the number of QCDRs that submit applications for self-nominations and consistent with our assumptions in the CY 2021 PFS final rule (85 FR 84965), we estimate that 90 QCDRs will submit applications for consideration during the self-nomination process for the CY 2022 MIPS performance period/2024 MIPS payment year, an increase of 8 applications from the currently approved estimate of 82. For QCDRs that submit measures as part of their self-nomination process, while simultaneously accounting for the estimated increase in the number of existing or borrowed QCDR measures submitted with the self-nomination application and the decrease in the estimated time for the QCDR full-nomination process, we are proposing to revise our estimated time for the QCDR self-nomination process to a minimum of 9.5 hours (0.5 hours for the simplified self-nomination process + (12 measures × 0.75 hr/measure for QCDR measure submission) and a minimum of 11.5 hours (2.5 hours for the full self-nomination process + (12 measures × 0.75 hr/measure for QCDR measure submission)], an increase of 4 hours at a cost of $380.88 (4 hr × $95.22/hr) and 3.5 hours at a cost of $333.27 (3.5 hr × $95.22/hr) from the currently approved burden per respondent estimate in the CY 2021 PFS final rule (85 FR 84965).

Consistent with our assumptions in the CY 2021 PFS final rule (85 FR 84967), based on the number of targeted audits received for the 2020 self-nomination period, we estimate that 20 QCDRs will submit targeted audits for the CY 2022 MIPS performance period/2024 MIPS payment year, an increase of 3 from the currently approved estimate of 17 QCDRs submitting targeted audits in the CY 2021 PFS final rule. Using the currently approved unchanged burden per respondent estimate, the proposed estimated burden associated with QCDRs completing targeted audits will range from 100 hours (20 audits × 5 hr/audit) at a cost of $9,522 (20 audits × $476.10/audit) for the simplified self-nomination process to 200 hours (20 audits × 10 hr/audit) at a cost of $19,044 (20 audits × $952.20/audit) for the full self-nomination process (see Table 68 for the cost per audit). We assume that this would adjust our burden estimates for targeted audits by +15 hours (+3 respondents × 5 hr/audit) at a cost of $1,428.30 (15 hrs × $95.22/hr) and +30 hours (+3 respondents × 10 hr/audit) at a cost of $2,856.60 (30 hrs × $95.22/hr) for the simplified and full self-nomination process, respectively. Based on the assumptions discussed in this section, we provide an estimate of the total annual burden associated with a QCDR self-nominating to be considered “qualified” to submit quality measures results and numerator and denominator data on behalf of MIPS eligible clinicians.

As shown in Table 71, we assume that the staff involved in the QCDR self-nomination process will continue to be computer systems analysts or their equivalent, who have an average labor rate of $95.22/hr. Using the change in the number of respondents and the estimated time per respondent for QCDRs that submit measures for approval during the self-nomination process, the proposed annual burden for the simplified and full-self nomination process will range from 855 hours (90 QCDRs × 9.5 hr) to 1,035 hours (90 QCDRs × 11.5 hr) at a cost ranging from $81,413 (855 hr × $95.22/hr) and $98,553 (1,035 hr × $95.22/hr), respectively.

As shown in Table 71, combined with our proposed adjusted estimate of annual burden for targeted audits and the proposed burden for submission of participation plans, we are proposing to
revise our estimated burden for the QCDR self-nomination process, ranging from 985 hours [855 hr (90 QCDRs × 9.5 hr) + 100 hr (20 audits × 5 hr) + 30 hr (10 participation plans × 3 hr)] at a cost of $93,792 [$81,414 (855 hr × $95.22/hr) + $9,522 (20 audits × $476.10/audit)] for a simplified self-nomination process to 1,265 hours [1,035 hr (90 QCDRs × 11.5 hr) + 200 hr (20 audits × 10 hr) + 30 hr (10 participation plans × 3 hr)] at a cost of $120,454 [$98,553 (1,035 hr × $95.22/hr) + $19,044 (20 audits × $952.20/audit) + $2,857 (30 hr × $95.22/hr) for the full self-nomination process.

As shown in Table 72, for the CY 2022 MIPS performance period/2024 MIPS payment year, independent of the proposed change to our per response time estimate, the estimated increase in 8 respondents from the currently approved 82 respondents to 90 results in an increase of between +76 hours (+8 respondents × 9.5 hrs/respondent) and +92 hours (+8 respondents × 11.5 hrs/respondent) for the simplified self-nomination process and +92 hours (+8 respondents × 11.5 hrs/respondent) for the full self-nomination process) at a cost of between +$7,237 (+8 respondents × $904.60/respondent) and +$8,760 (+8 respondents × $1,095.03/respondent) for the full self-nomination process) (see Table 71 for the cost per QCDR).

Accounting for the proposed change in time required for the QCDR self-nomination process results in an adjustment of between +328 hours (82 respondents × +4 hr for the simplified self-nomination process or also referred to as minimum burden) at a cost of +$31,232 [82 respondents × $380.88 (+4 hr × $95.22/hr/respondent)] and +287 hours (82 respondents × 3.5 hr for the full self-nomination process or also referred to as maximum burden) at a cost of +$27,328 (82 respondents × $333.27/hr/respondent). The reason for the increase in minimum burden compared to the maximum burden is due to an increase in the change in the number of hours required for the simplified self-nomination process compared to the increase in the number of hours for the full self-nomination process.

In aggregate, as shown in Table 72, when these impacts are combined with the proposed estimate for targeted audits and participation plans discussed above, the net impact ranges between +449 hours (76 hr (+8 respondents × 9.5 hrs/respondent) × 6 hrs/audit) + 15 hr (+3 targeted audits × 5 hrs/audit) + 30 hr (10 participation plans × 3 hr/plan) + 328 hr (82 respondents × 4 hr) at a cost of +$42,754 ($7,237 + $1,428 + $2,857 + $31,232) for the simplified self-nomination process (also referred to as minimum burden) and +439 hours (92 hr (+8 respondents × 11.5 hrs/respondent) × 10 hrs/audit) + 30 hr (+3 targeted audits × 10 hrs/audit) + 30 hr (10 participation plans × 3 hr/plan) + 287 hr (82 respondents × 3.5 hr) at a cost of +$41,802 ($8,760 + $1,095.03 + $2,857 + $2,857 + $27,328) for the full self-nomination process (also referred to as maximum burden) for the CY 2022 MIPS performance period/2024 MIPS payment year.

| TABLE 71: Estimated Burden for QCDR Self-Nomination and QCDR Measure Submission |
|---------------------------------|-----------------|-----------------|
| # of QCDR Simplified Self-Nomination Applications submitted (a) | 90 | 0 |
| # of QCDR Full Self-Nomination Applications submitted (b) | 0 | 90 |
| **Total Applications** | 90 | 90 |
| Annual Hours Per QCDR for Simplified Process (c) | 9.5 | 9.5 |
| Annual Hours Per QCDR for Full Process (d) | 11.5 | 11.5 |
| **Annual Hours for Self-nomination (e) = (a) * (c) and (b) * (d)** | 855 | 1,035 |
| **# of Hours per Completion of Targeted Audit (e)** | 5 | 10 |
| **Annual Hours for Completion of 20 Targeted Audits (f)** | 100 | 200 |
| **# of Hours per Submission of Participation Plan (g)** | 3 | 3 |
| **Annual Hours for Submission of 10 Participation Plans (h)** | 30 | 30 |
| **Total Annual Time (Hours) (i)** | 985 | 1,265 |
| **Cost Per Simplified Process Per QCDR (j) = (a) * $95.22/hr** | $904.60 | $904.60 |
| **Cost Per Full Process Per QCDR (k) = (d) * $95.22/hr** | $1,095.03 | $1,095.03 |
| **Cost Per Targeted Audit (l) = (c) * $476.10** | $476.10 | $952.20 |
| **Cost Per Participation Plan (m) = (g) * $285.70** | $285.70 | $285.70 |
| **Total Annual Cost (l) = (a) * (h) + (b) * (i) + (j) * 20 + (k) * 10** | $93,792 | $120,454 |

(b) QCDR Measure Requirements

In the CY 2018 Quality Payment Program final rule (82 FR 53813 through 53814), we discussed that beginning with the 2018 performance period and for future program years, QCDR vendors may seek permission from another QCDR to use an existing measure that is owned by the other QCDR. Additionally, in the CY 2020 Quality Payment Program rule (84 FR 63070 through 63073) we finalized the QCDR measure rejection criteria considerations.

In section IV.A.3.h.(4)(a)(i)(A)(aa) of this rule, we are proposing to codify a new requirement and add a rejection criterion that a QCDR does not have permission to use a QCDR measure owned by another QCDR for the applicable performance period. Additionally, we are proposing to codify new requirements that if a QCDR measure owner is not an approved active QCDR for a given self-nomination period, that QCDR measure will not be available for use. The inactive QCDR measure owner has the option to transfer ownership of the QCDR measure to an active QCDR or agree upon terms set forth with the active QCDR allowing co-ownership of the QCDR measure. We refer readers to section IV.A.3.h.(4)(a)(i)(A) of this rule for additional details on the proposed policies for transfer of ownership of QCDR measures. This proposal is to codify the existing requirements for the QCDR self-nomination process. We are not proposing to revise our burden estimates as result of this proposal because we assume that there would not be additional requirements for QCDRs to submit at the time of self-nomination. This is part of the measure specification requirements for QCDRs which submit measures for approval during the self-nomination process.

(3) Qualified Registry Self-Nomination Process and Other Requirements

The requirements and burden associated with this rule’s data submission changes related to qualified registries will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to § 414.1400 which states that qualified registries interested in submitting MIPS data to us on behalf of MIPS eligible clinicians, groups, or virtual groups need to complete a self-nomination process to be considered for approval to do so. We also refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77507 through 77508), CY 2018 Quality Payment Program final rule (82 FR 53906 through 53908), CY 2019 PFS final rule (83 FR 59997 through 59998), CY 2020 PFS final rule (84 FR 63114 through 63116) and the CY 2021 PFS final rule (85 FR 84967 through 85 FR 84969) for more information about the measure and the requirements for MIPS eligible clinicians to submit data for the quality, improvement activities, and promoting interoperability performance categories in MIPS. Additionally, QCDRs, qualified registries, and health IT vendors are required under existing § 414.1400(a)(1) to submit data for the quality, improvement activities, and promoting interoperability performance categories in MIPS. Like our discussion for QCDRs above, we anticipate no additional steps being added to the qualified registry self-nomination process as a result of this proposal for third party intermediaries to submit MIPS data on behalf of APM Entities, and to support measures and activities and third-party intermediaries that are applicable to the MVP participants on whose behalf they submit MIPS data. For this proposed rule, we assume that there will be no impact on the time required for qualified registries to complete either the simplified or full self-nomination process because of the above proposals. Additionally, we are proposing to require QCDRs, qualified registries, health IT vendors, and CAHPS for MIPS survey vendors to support subgroup reporting, beginning with the CY 2023 MIPS performance period/2025 MIPS payment year. We anticipate that at the time of self-nomination, qualified registries would be using a checkbox to indicate their compliance for the proposed requirement to support data submission
for subgroups beginning with the CY 2023 MIPS performance period/2025 MIPS payment year. We assume that this would not impact the overall time estimated for qualified registries to submit their information at the time of self-nomination. Therefore, we are not proposing to make any adjustments in the time required for qualified registries during the simplified or full self-nomination process because of this proposal. However, we anticipate that third-party intermediaries would need to make administrative changes to their existing workflows for submission of MVPs and APP data for clinicians participating as subgroups beginning with the CY 2023 MIPS performance period/2025 MIPS payment year. We refer readers to section VII.C.17.f.(2)(f) of this rule where we discuss our impact analysis.

Based on previous trends for the number of self-nominations for qualified registries received during the 2020 self-nomination period for the CY 2021 MIPS performance period/2023 MIPS payment year and consistent with our assumptions in the CY 2021 PFS final rule (85 FR 84967), we anticipate an increase in the number of submissions from qualified registries for the CY 2022 MIPS performance period/2024 MIPS payment year. Therefore, we estimate that we will receive 210 nomination applications from qualified registries for the CY 2022 MIPS performance period/2024 MIPS payment year, an increase of 27 from the currently approved estimate of 183. Based on our estimates in the CY 2021 PFS final rule (85 FR 84967), we are proposing to adjust the estimated number of qualified registries that will submit targeted audits for the CY 2022 MIPS performance period/2024 MIPS payment year. Similar to our assumptions in the CY 2021 PFS final rule (85 FR 84967) and based on the number of targeted audits received from qualified registries for the CY 2019 MIPS performance period/2021 MIPS payment year, we estimate 63 qualified registries would be required to conduct targeted audits, an increase of 7 from the currently approved estimate of 56. Therefore, we estimate the total impact associated with qualified registries completing targeted audits will range from 315 hours (63 registries × 5 hours/audit) at a cost of $29,994 (63 registries × $476.10/audit) to 630 hours (63 registries × 10 hours/audit) at a cost of $59,989 (63 registries × $952.20/audit) for the simplified and full self-nomination process, respectively (see Table 71 for the cost per audit). We assume that this would adjust our burden estimates for targeted audits by +35 hours (+7 respondents × 5 hr/audit) at a cost of $3,332.70 (35 hrs × $95.22/hr) and +70 hours (+7 respondents × 10 hr/audit) at a cost of $6,665.40 (70 hrs × $95.22/hr) for the simplified and full self-nomination process, respectively. Using our currently approved time per response estimate of 3 hours, the resulting adjustment in burden for QCDRs and qualified registries to submit CAPs is 30 hours (10 respondents × 3 hrs/respondent) at a cost of $2,857 (30 hours × $95.22/hr). In section IV.A.3.h.5(a)(1) of this proposed rule, we are proposing new requirements for approved QCDRs and qualified registries that have not submitted performance data. First, we are proposing to create a new requirement at paragraph § 414.1400(h)(3)(vii) to require QCDRs and qualified registries that have never submitted data since the inception of MIPS (CY 2017 MIPS performance period/2019 MIPS payment year) through the CY 2020 MIPS performance period/2022 MIPS payment year, to submit a participation plan as part of their self-nomination for CY 2023. Exceptions to this requirement may occur if data is received for the CY 2021 MIPS performance period/2023 MIPS payment year. Under this scenario, QCDRs and qualified registries would not need to submit a participation plan for the 2023 self-nomination process. If the QCDRs and qualified registries did not submit data, their participation plan must be submitted as part of self-nomination for 2023 MIPS self-nomination period and must be accepted by CMS to continue to be an approved QCDR or qualified registry. We are also proposing to codify a new requirement that, beginning with the CY 2024 MIPS performance period/2026 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for either of the 2 years preceding the applicable self-nomination period must submit a participation plan for CMS’ approval. Under this proposal, the participation plan must explain the QCDR and/or qualified registry’s detailed plans about how the vendor intends to encourage clinicians to submit MIPS data to CMS through the third-party intermediary on behalf of clinicians or groups. The vendor must also explain why they should still be allowed to participate as a qualified vendor.

Based on our review of the existing list of approved qualified registries that did not submit performance data since the inception of MIPS (CY 2017 MIPS performance period/2019 MIPS payment year), we estimate that 19 qualified registries will submit participation plans for the CY 2023 MIPS self-nomination period. Similar to our assumptions used for submission of a CAP in the CY 2021 PFS final rule (85 FR 84968), we anticipate that the effort involved in developing a participation plan including the proposed policies specified in this rule and submitting it to CMS is likely to be no more than 3 hours for a computer systems analyst at a rate of $95.22/hr. For the CY 2023 MIPS performance period/2025 MIPS payment year, we estimate an annual burden of 57 hours (3 hr × 19 participation plans) at a cost of $5,428 (57 hr × $95.22/hr) for qualified registries to develop and submit a participation plan.

As stated above, based on the number of self-nominations received for the CY 2021 MIPS performance period/2023 MIPS payment year, we are proposing to adjust the estimated number of qualified registries that would self-nominate for the CY 2023 performance period to 210, an increase of 27 from the currently approved estimate of 183 in the CY 2021 PFS final rule (85 FR 84968). In the CY 2019 PFS final rule, we estimated that it would take 3 hours for a qualified registry to submit all the required information during the full self-nomination process (83 FR 59998). Based on our experience with the self-nomination process, we believe that the number of fields needed to be submitted for a qualified registry are fewer than those needed for a QCDR. We assume that our previous assumption of 3 hours is an overestimate. Therefore, we propose to revise our estimated time required for a qualified registry submitting a full-self-nomination process to 2 hours, a decrease of 1 hour. We assume that the staff involved in the qualified registry self-nomination process will continue to be computer systems analysts or their equivalent, who have an average labor rate of $95.22/hr. Using the change in estimated burden per respondent time, associated with the self-nomination process range from a minimum of 0.5 hours to a maximum of 2 hours, we estimate that the annual burden will range from 105 hours (210 qualified registries × 0.5 hr) to 420 hours (210 qualified registries × 2 hr) at a cost ranging from $9,998 (105 hr × $95.22/hr) and $39,992 (420 hr × $95.22/hr), respectively (see Table 73). Combined with our estimates of burden associated with completing targeted audits and developing and submitting participation plans and corrective action plans, our total burden estimate ranges from 507 hours (105 hr (210 qualified registries × 0.5 hr) + 57 hr (105 hr + 90 participation plans × 3 hr/participation plan)
+ 315 hr (63 targeted audits × 5 hours/audit) + 30 hr (10 CAPs × 3 hr) at a cost of $48,277 [$9,998 (105 hr × $95.22/hr) + $5,428 (57 hr × $95.22/hr) + $29,994 (63 registries × $476.10/audit) + $2,857 (30 hours × $95.22/hr) for the simple self-nomination process (see minimum burden in Table 73 below) and full self-nomination process (see maximum burden in Table 73) respectively.

Based on the assumptions discussed in this section, we provide a proposed estimate of the total annual burden associated with a qualified registry self-nominating to be considered “qualified” to submit quality measures results and numerator and denominator data on MIPS eligible clinicians.

As shown in Table 74, for the CY 2022 MIPS performance period/2024 MIPS payment year, independent of the proposed change to our per response time estimate, the estimated increase in 27 respondents from the currently approved 183 respondents to 210 results in an increase of between +13.5 hours (+27 respondents × 0.5 hrs/respondent) at a cost of +$1,285 (13.5 hours × $95.22/hr) and +54 hours (+27 respondents × 2 hrs/respondent) at a cost of +$5,142 (54 hours × $95.22/hr). Accounting for the proposed change in time required for the qualified registry self-nomination process results in an adjustment of 0 hours for the simplified self-nomination process and −183 hours (183 respondents × −1 hours) at a cost of −$17,425 (−183 hours × $95.22/hr) for the full self-nomination process.

When the above impacts are combined with the proposed estimates for targeted audits, participation plans and corrective action plans discussed above, the net impact ranges between +106 hours [13.5 hr (+27 respondents × 0.5 hrs/respondent) + 0 hr + 35 hr (+7 audits × 5 hr/audit) + 57 hr (+19 participation plans × 3 hr/plan) + 0 hr] at $10,046 [(+$1,286 (13.5 hours × $95.22/hr) + $0 + $3,333 (35 hrs × $95.22/hr) + $5,428 (+57 hr × $95.22/hr) + $0)] for the simplified self-nomination process and −2 hours [(54 hr (+27 respondents × 2 hrs/respondent) −183 hr (183 respondents × −1 hours) + 70 hr (+7 audits × 10 hr/audit) + 57 hr (+19 participation plans × 3 hr) + 0 hr)] at a cost of −$190 [(+$5,142 (54 hours × $95.22/hr) −$17,425 (−183 hours × $95.22/hr) + $6,665 (70 hrs × $95.22/hr) + $5,428 (+57 hr × $95.22/hr) + $0)] for the full self-nomination process for the CY 2022 MIPS performance period/2024 MIPS payment year.

(4) Survey Vendor Requirements

In section IV.A.3.h(2)(b)(ii) of this rule, we are proposing to require CAHPS for MIPS survey vendors to support subgroup reporting, beginning with the CY 2023 MIPS performance period/2025 MIPS payment year. Because of this proposal, we anticipate no additional steps being added to the requirements for CAHPS for MIPS survey vendors to submit a participation form and assume there will be no impact on the time required for the survey vendors. Therefore, we are not proposing to make any adjustments in the time required for CAHPS survey vendors to submit the because of this proposal. The requirements and burden for CAHPS survey vendors to submit data for eligible clinicians are currently approved by OMB under control number 0938–1222 (CMS–10450). Consequently, we are not proposing any changes under that control number.

e. ICRs Regarding Quality Data Submission (§§ 414.1318, 414.1325, 414.1335, and 414.1365)

(1) Background

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77502 through 77503), CY 2018 Quality Payment Program final rule (82 FR 53908 through 53912), CY 2019 PFS final rule (83 FR 60000 through 60003), CY 2020 PFS final rule (84 FR 63121 through 63124), and the CY 2021 PFS final rule (85 FR 84970 through 84974) for our previously finalized requirements for data submission for the quality performance category.

Under our current policies, two groups of clinicians must submit quality data under MIPS. Those who submit as MIPS eligible clinicians and those who submit data voluntarily but are not subject to MIPS payment adjustments. Clinicians are ineligible for MIPS payment adjustments if they are newly enrolled to Medicare; are QPs; are partial QPs who elect to not participate in MIPS; are not one of the clinician types included in the definition for MIPS eligible clinician; or do not exceed the low-volume threshold as an individual or as a group.

(2) Changes and Adjustments to Quality Performance Category Respondents

To determine which QPs should be excluded from MIPS, we used the Advanced APM payment and patient percentages from the APM Participant List for the final snapshot date for the 2019 QP performance period. From this data, we calculated the QP determinations as described in the Qualifying APM Participant (QP) definition at § 414.1305 for the CY 2022 MIPS performance period/2024 MIPS payment year. Due to data limitations, we could not identify specific clinicians who have not yet enrolled in APMs, but who may become QPs in the future CY 2022 MIPS performance period/2024 MIPS payment year (and therefore will no longer need to submit data to MIPS); hence, our model may underestimate or overestimate the number of respondents.

In the CY 2019 PFS final rule, we finalized limiting the Medicare Part B claims collection type to small practices beginning with the CY 2019 MIPS performance period/2021 MIPS payment year and allowing clinicians in small practices to report Medicare Part B claims as a group or as individuals (83 FR 59752). As in the CY 2021 PFS final rule, we continue to use CY 2019 MIPS performance period/2021 MIPS payment year data to estimate the number of respondents in the CY 2022 PFS proposed rule.

There may be an undercount in submissions due to the PHE for COVID–19, because of the automatic extreme and uncontrollable circumstances policy, and application-based policy that allowed clinicians to elect not to submit during the submission period for the CY 2019 MIPS performance period/2021 MIPS payment year that we are using to inform our burden estimates. Despite this limitation, we believe the data from the CY 2019 MIPS performance period/2021 MIPS payment year is still the best data source available as it most accurately reflects the impacts of policies finalized in previous rules and trends toward increased group reporting.

In section IV.A.3.d.(1)(d) of this rule, we are proposing to continue the CMS Web Interface measures as a collection type for the CY 2022 MIPS performance period/2024 MIPS payment year. Additionally, we are proposing to sunset the CMS Web Interface measures as a collection type/submission type starting with the CY 2023 MIPS performance period/2025 MIPS payment year. In the CY 2021 PFS final rule (85 FR 84981), we finalized the sunset of CMS Web Interface as a collection type for the CY 2022 MIPS
performance period/2024 MIPS payment year. We refer readers to the CY 2021 PFS final rule for discussion on our assumptions for the CY 2022 MIPS performance period/2024 MIPS payment year, where we estimated a burden of zero due to our assumption that all Web Interface respondents will alternately utilize either the MIPS CQM and QCDR or eCQM collection types. Based on the number of groups that submitted quality performance data via the CMS Web Interface in the CY 2019 MIPS performance period/2021 MIPS payment year, we are not able to ascertain what alternative collection type(s) the groups would elect. In order to estimate the number of groups that will select each of these collection types, we first clustered the number of groups which submitted data via the CMS Web Interface collection type during the CY 2019 MIPS performance period/2021 MIPS payment year by practice size (between 25 and 49 clinicians, between 50 and 99 clinicians, etc.). Then, for each cluster, we allocated these groups to each of the MIPS CQM and QCDR and eCQM collection types based on the percent of TINs that submitted MIPS data via these two collection types. For example, of the 1,629 TINs with a practice size of 25 to 49 clinicians which submitted data for the CY 2019 MIPS performance period/2021 MIPS payment year, 1,066 (65 percent) submitted data via the MIPS CQM and QCDR collection type and 563 (35 percent) submitted data via the eCQM collection type. We applied these percentages to the 7 TINs with a practice size of 25 to 49 clinicians which submitted data via the CMS Web Interface collection type for the CY 2019 MIPS performance period/2021 MIPS payment year to estimate that 4 (7 TINs × 0.56) would elect to submit data via the MIPS CQM and QCDR collection type and the remaining 3 (7 TINs × 0.44) would elect to submit data via the eCQM collection type. In total, beginning with the CY 2023 MIPS performance period/2025 MIPS payment year, we estimate that 64 of the 114 groups that submitted data via the CMS Web Interface collection type for the CY 2019 MIPS performance period/2021 MIPS payment year will submit quality data via the MIPS CQM and QCDR collection type and 50 groups will now submit quality data via the eCQM collection type. Note that the 114 groups is an increase of 114 from our currently approved estimate of 0 groups in the CY 2022 performance period/2024 MIPS payment year. We also performed this analysis to determine the number of clinicians that would be affected and would need to submit quality data via an alternate collection type beginning with the CY 2023 performance period/2025 payment year. In total, of the estimated 45,599 individual clinicians affected by this provision, we estimate that 11,432 would submit quality data as part of a group via the MIPS CQM and QCDR collection type and 34,167 would submit quality data as part of a group via the eCQM collection type. These estimates are reflected in Tables 78 and 80 and the associated changes in burden are reflected in Tables 79 and 81. In aggregate, as discussed in section V.B.8.p of this proposed rule, we estimate the provision to sunset the CMS Web Interface measures as a collection type/submission type will result in a net decrease in quality performance data reporting burden while acknowledging the additional financial impacts on clinicians as discussed in section VII.F.17.f.(2)(a) of the Regulatory Impact Analysis. We assume that 100 percent of ACO APM Entities will submit quality data to CMS as required under their models. While we do not believe there is additional reporting for ACO APM entities, consistent with assumptions used in the CY 2020 and CY 2021 PFS final rules (84 FR 63122 and 85 FR 89472), we include all quality data voluntarily submitted by MIPS APM participants made at the individual or TIN-level in our respondent estimates. As stated in section V.B.8.e.(2) of this proposed rule, we assume non-ACO APM Entities will participate through traditional MIPS and submit as an individual or group rather than as an entity. To estimate who will be a MIPS APM participant in the CY 2022 MIPS performance period/2024 MIPS payment year, we used the Advanced APM payment and patient percentages from the APM Participant List for the final snapshot date for the 2019 QP performance period. We elected to use this data source because the overlap with the data submissions for the CY 2019 MIPS performance period/2021 MIPS payment year enabled the exclusion of Partial QPs that elected to not participate in MIPS and required fewer assumptions as to who is a QP or not. Based on this information, if we determine that a MIPS eligible clinician will not be scored as a MIPS APM, then their reporting assumption is based on their reporting as a group or individual for the CY 2019 MIPS performance period/2021 MIPS payment year.

Our burden estimates for the quality performance category do not include the burden for the quality data that APM Entities submit to fulfill the requirements of their APMs. The burden is excluded from this collection of information section but is discussed in the regulatory impact analysis section of this proposed rule because sections 1899(e) and 1115A(d)(3) of the Act (42 U.S.C. 1395jjj(e) and 1315a(d)(3), respectively) state that the Shared Savings Program and the testing, evaluation, and expansion of Innovation Center models tested under section 1115A of the Act (or section 3021 of the Affordable Care Act) are not subject to the PRA.250 Tables 72, 73, and 74 explain our revised estimates of the number of organizations (including groups, virtual groups, and individual MIPS eligible clinicians) submitting data on behalf of clinicians segregated by collection type. Table 75 provides our estimated counts of clinicians that will submit quality performance category data as MIPS individual clinicians or groups in the CY 2022 and 2023 MIPS performance periods/2024 and 2025 MIPS payment years based on data from the CY 2019 MIPS performance period/2021 MIPS payment year.

For the CY 2022 MIPS performance period/2024 MIPS payment year, respondents will have the option to submit quality performance data category via Medicare Part B claims, direct, and log in and upload submission types, and Web Interface. For the CY 2023 MIPS performance period/2025 MIPS payment year, respondents would no longer have the option to submit quality performance category data via the Web Interface. We estimate the burden for collecting data via collection type: Medicare Part B claims, QCDR and MIPS CQMs, eCQMs, and the CMS Web Interface. We believe that, while estimating burden by submission type may be better aligned with the way clinicians participate with the Quality Payment Program, it is more important to reduce confusion and enable greater transparency by maintain consistency with previous rulemaking.

For the CY 2023 MIPS performance period/2025 MIPS payment year, we propose in section IV.A.3.b.(2)(d) of this rule that clinicians in MIPS would have the option to submit measures and activities in MVPs. We refer readers to section IV.A.3.b.(4) of this rule for additional details on the proposed reporting requirements for MVPs. For the quality performance category of MVPs, we assume that MVP Participants would choose to report via the Medicare Interoperability performance category data, which is outside the requirements of their APMs.

250Our estimates do reflect the burden on MIPS APM participants of submitting Promoting Interoperability performance category data, which is outside the requirements of their APMs.
Part B claims, QCDR, MIPS CQMs, and eCQMs collection type. Table 87 of this rule includes the estimated burden for collecting data for the quality performance category of MVPs.

As shown in Table 75, using participation data from the CY 2019 MIPS performance period/2021 MIPS payment year, combined with the estimate of QPs for the CY 2022 MIPS performance period/2024 MIPS payment year, we estimate a total of 625,703 clinicians will submit quality data as individuals or groups in each of the CY 2022 and 2023 MIPS performance periods/2024 and 2026 MIPS payment years, a decrease of 25,811 clinicians when compared to our estimate of 651,514 clinicians in the CY 2021 PFS final rule (85 FR 84972). For the CY 2022 performance period/2024 MIPS payment year, we estimate 28,252 clinicians will submit as part of groups via the CMS Web Interface. Compared to the CY 2022 MIPS performance period/2024 MIPS payment year burden estimated in the CY 2021 PFS final rule (85 FR 84972), these are decreases from the estimates of 29,273, 295,941, and 326,300 for Medicare Part B claims, MIPS CQM and QCDR, eCQM, and an increase of 44,385 for the CMS Web Interface collection types, respectively. These adjustments are due to the availability of updated data from the CY 2019 MIPS performance period/2021 MIPS payment year and the delay in sunsetting the CMS Web Interface from the CY 2022 MIPS performance period/2024 MIPS payment year to the CY 2023 MIPS performance period/2025 MIPS payment year, these are decreases of 44,385 for the CMS Web Interface collection types, respectively.

Because MIPS eligible clinicians may submit data for multiple collection types for a single performance category, the estimated numbers of individual clinicians and groups to collect via the various collection types are not mutually exclusive and reflect the occurrence of individual clinicians or groups that collected data via multiple collection types during the 2019 MIPS performance period/2021 MIPS payment year. We captured the burden of any eligible clinician that may have historically collected via multiple collection types, as we assume they will continue to collect via multiple collection types and that our MIPS scoring methodology will take the highest score where the same measure is submitted via multiple collection types.

Table 76 uses methods similar to those described to estimate the number of clinicians that will submit data as individual clinicians via each collection type in the CY 2022 and CY 2023 MIPS performance periods/2024 and 2025 MIPS payment years. For the CY 2022 MIPS performance period/2024 MIPS payment year, we estimate that approximately 25,427 clinicians will submit data as individuals for the Medicare Part B claims collection type; 28,863 clinicians will submit data as individuals or as part of groups for the MIPS CQM and QCDR collection type; 273,819 clinicians will submit data as individuals or as part of groups via eCQM collection types; and 44,385 clinicians will submit as part of groups via the CMS Web Interface.

QCDownload and eCQM collection types, respectively.

As shown in Table 76, for the CY 2023 MIPS performance period/2025 MIPS payment year, we estimate that approximately 25,427 clinicians will submit data as individuals using the Medicare Part B claims collection type; approximately 36,456 clinicians will submit data as individuals using MIPS CQM and QCDr collection type; and approximately 36,401 clinicians will submit data as individuals using eCQMs collection type. Based on performance data from the CY 2019 MIPS performance period/2021 MIPS payment year, these are decreases of −3,846, −4,884, and −5,854 respondents from the currently approved estimates of 29,273, 41,340, and 42,255 for the Medicare Part B claims, MIPS CQM and QCDr, and eCQM collection types, respectively.

Consistent with the policy finalized in the CY 2018 Quality Payment Program final rule that for MIPS eligible clinicians who collect measures via Medicare Part B claims, MIPS CQM, eCQM, or QCDr collection types and submit more than the required number of measures (82 FR 53735 through 54736), we will score the clinician on the required measures with the highest assigned measure achievement points and thus, the same clinician may be counted as a respondent for more than one collection type. Therefore, our columns in Table 76 are not mutually exclusive.

Table 77 provides our estimated counts of groups or virtual groups that will submit quality data on behalf of clinicians for each collection type in the CY 2022 and 2023 MIPS performance period/2024 and 2025 MIPS payment years. We assume that clinicians that submitted quality data as groups in the CY 2019 MIPS performance period/2021 MIPS payment year will continue to submit quality data either as groups or virtual groups for the same collection types as they did as a group or TIN within a virtual group for the CY 2022 and 2023 MIPS performance periods/2024 and 2025 MIPS payment years. Specifically, for the CY 2022 MIPS performance period/2024 MIPS payment year we estimate that 11,529 groups and virtual groups will submit data for the MIPS CQM and QCDr collection type on behalf of 243,169 clinicians; 8,127 groups and virtual groups will submit for eCQM collection type on behalf of 339,109 eligible clinicians. These are decreases of −1,170 and −861 respondents from the currently approved estimates of 11,604, and 8,220 groups and virtual groups for the MIPS CQM and QCDr collection types respectively. The reason for the difference in estimated number of respondents from the estimates for the CY 2022 MIPS performance period/2024 MIPS payment year described above, is due to the sunset of the CMS Web Interface as a collection type and the implementation of MVPs beginning with the CY 2023 MIPS performance period/2025 MIPS payment year. As the data does not exist for APM performance pathway or MIPS quality measures for non-ACO APM entities, we assume non-ACO APM Entities would participate through traditional MIPS and base our estimates on submissions received in the CY 2019 MIPS performance period/2021 MIPS payment year.
The burden associated with the submission of quality performance category data have some limitations. We believe it is difficult to quantify the burden accurately because clinicians and groups may have different processes for integrating quality data submission into their practices’ workflows. Moreover, the time needed for a clinician to review quality measures and other information, select measures applicable to their patients and the services they furnish, and incorporate the use of quality measures into the practice workflows is expected to vary along with the number of measures that are potentially applicable to a given clinician’s practice and by the collection type. For example, clinicians submitting data via the Medicare Part B claims collection type need to integrate the capture of quality data codes for each encounter whereas clinicians submitting via the eCQM collection types may have quality measures automated as part of their EHR implementation.

We believe the burden associated with submitting quality measures data will vary depending on the collection type selected by the clinician, group, or third-party. As such, we separately estimated the burden for clinicians, groups, and third parties to submit quality measures data by the collection type used. For the purposes of our burden estimates for the Medicare Part B claims, MIPS CQM and QCDR, and eCQM collection types, we also assume that, on average, each clinician or group will submit 6 quality measures. For the CY 2023 MIPS performance period/2024 MIPS payment year we refer readers to section IV.A.3.b.(4) of the rule for the changes related to MVP and subgroup reporting requirements. In terms of the quality measures available for clinicians and groups to report for the CY 2022 MIPS performance period/2024 MIPS payment year, we are proposing that the total number of quality measures will be 195. The new MIPS quality measures proposed for inclusion in MIPS for the CY 2022 MIPS performance period/2024 MIPS payment year and future years are found in Table Group A of Appendix 1; MIPS quality measures with proposed substantive changes can be found in Table Group D of Appendix 1; and MIPS quality measures proposed for removal can be found in Table Group C of Appendix 1. These proposed measures are stratified by collection type in Table 78, as well as counts of new, removed, and substantively changed measures.

| TABLE 77: Estimated Number of Groups and Virtual Groups Submitting Quality Performance Category Data by Collection Type on Behalf of Clinicians |

*A measure may be specified under multiple collection types but will only be counted once in the total.

For the CY 2022 MIPS performance period/2024 MIPS payment year, we are proposing a net reduction of 15 quality measures across all collection types compared to the 209 measures finalized for the CY 2021 MIPS performance period/2023 MIPS payment year (85 FR 84974). Specifically, as discussed in section IV.A.3.c.(1)[d], we are proposing to add 2 new administrative claims outcome measures, remove 19 quality measures, and make substantive updates to 84 quality measures. We do not anticipate that our proposal to remove these measures will increase or decrease the reporting burden on clinicians and groups as respondents generally are still required to submit quality data for 6 measures. For the change in associated burden related to the proposals introducing MVP and subgroup reporting beginning in the CY 2023 MIPS performance period/2025 MIPS payment year, we refer readers to Table 87 of this section.

The following proposed burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77501 through 77504), CY 2018 Quality Payment Program final rule (82 FR 53912), CY 2019 PFS final rule (83 FR 60004 through 60005), CY 2020 PFS final rule (84 FR 63124 through 63126) and the CY 2021 PFS final rule (85 FR 84975 through 84976) for our previously finalized requirements and burden for quality data submission via the Medicare Part B claims collection type.

As noted in Table 76, based on data from the CY 2019 MIPS performance period/2021 MIPS payment year, we assume that 28,252 individual clinicians will collect and submit quality data via the Medicare Part B claims collection type. This rule is proposing to adjust the number of Medicare Part B claims respondents from the currently approved estimate of 29,273 to 28,252 (a decrease of 1,021) based on more recent data and our methodology of accounting only for clinicians in small practices who submitted such claims data in the CY 2019 MIPS performance period/2021 MIPS payment year rather than all clinicians who submitted quality data codes to us for the Medicare Part B claims collection type.

As shown in Table 79, consistent with our currently approved per response time figures, we believe that the start-up cost for a clinician’s practice to review measure specifications is 7 hours, consisting of 3 hours at $114.24/hr for a medical and health services manager, 1 hour at $217.32/hr for a physician, 1 hour at $48.16/hr for an LPN, 1 hour at $95.22/hr for a computer systems analyst, and 1 hour at $40.02/hr for a billing and posting clerk. We are not revising our currently approved per response time estimates.

As shown in Table 79, considering both data submission and start-up requirements for our adjusted number of clinicians, the estimated time (per clinician) ranges from a minimum of 7.15 hours (0.15 hr + 7 hr) to a maximum of 14.2 hours (7.2 hr + 7 hr). In this regard the total annual time for the CY 2022 MIPS performance period/2024 MIPS payment year ranges from 202,002 hours (7.15 hr × 28,252 clinicians) to 401,178 hours (14.2 hr × 28,252 clinicians). The estimated annual cost (per clinician) ranges from $758 [(0.15 hr × $95.22/hr) + (3 hr × $114.24/hr) + (1 hr × $48.16/hr) + (1 hr × $40.02/hr)] to a maximum of $1,429 [(7.2 hr × $95.22/hr) + (3 hr × $114.24/hr) + (1 hr × $48.16/hr) + (1 hr × $40.02/hr)]. The total annual cost for the CY 2022 MIPS performance period/2024 MIPS payment year ranges from a minimum of $21,407.105 (28,252 clinicians × $758) to a maximum of...
As shown in Table 79, for purposes of calculating total burden associated with the Claims collection type for the CY 2023 MIPS performance period/2025 MIPS payment year only the maximum burden is used. The decrease in the number of annual respondents results in an estimated total annual time of 361,061 hours (14.2 hr × 25,427 clinicians) for the CY 2023 MIPS performance period/2025 MIPS payment year. Using the currently approved unchanged estimate for cost per respondent, the total annual cost for the CY 2023 MIPS performance period/2025 MIPS payment year is $36,335,692 (25,427 clinicians × $1,429 per respondent).

Table 79 summarizes our proposed estimated range of total annual burden associated with clinicians submitting quality data via Medicare Part B claims for both the CY 2022 and 2023 MIPS performance periods/2024 and 2025 MIPS payment years.

As shown in Table 76, using the unchanged currently approved hours per respondent, we estimate that the burden per respondent for quality data submission using the Medicare Part B Claims collection type would range from $758 to $1,429. The decrease in number of respondents from 29,273 to 28,252 results in a total adjustment of 7,300 hours (1,021 respondents × 7.15 hr/respondent) at a cost of $167,945 (1,021 respondents × $758/respondent) and 14,499 hours (1,021 respondents × 14.2 hr/respondent) at a cost of $1,257,748 (1,021 respondents × $1,429/respondent). For purposes of calculating total burden associated with the proposed rule as shown in Tables 113, 114, 115, and 116, only the maximum burden is used.

As shown in Table 80, for purposes of calculating total burden associated with the CY 2023 MIPS performance period/2025 MIPS payment year only the maximum burden is used. Using the unchanged currently approved hours per respondent, we estimate that the burden per respondent for quality data submission using the Medicare Part B Claims collection type would range from $758 to $1,429. The decrease in number of respondents from 29,273 to 25,427 results in a total adjustment of 54,616 hours (1,021 respondents × 14.2 hr/respondent) at a cost of $5,294,729 (1,021 respondents × $1,429/respondent). For purposes of calculating total burden associated with the proposed rule as shown in Tables 113, 114, 115, and 116, only the maximum burden is used.
(5) Quality Data Submission by Individuals and Groups Using MIPS CQM and QCDR Collection Types

The following requirement and burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77504 through 77505), CY 2018 Quality Payment Program final rule (82 FR 53912 through 53914), CY 2019 PFS final rule (83 FR 60005 through 60006), CY 2020 PFS final rule (84 FR 63127 through 63128), CY 2021 PFS final rule (85 FR 84977 through 84979) for our previously finalized requirements and burden for quality data submission via the MIPS CQM and QCDR collection types. For the change in associated burden for quality data submission related to the proposals introducing MVP and subgroup reporting beginning in the CY 2023 MIPS performance period/2025 MIPS payment year, we refer readers to Table 87.

As noted in Tables 72, 73, and 74, and based on data from the CY 2019 MIPS performance period/2021 MIPS payment year, for the CY 2022 MIPS performance period/2024 MIPS payment year, we assume that 279,247 clinicians will submit quality data as individuals or groups using MIPS CQM or QCDR collection types; 52,036 clinicians will submit as individuals and the remaining 279,223 clinicians will submit as members of 11,527 groups and virtual groups. This is an increase of 10,696 individuals and a decrease of 32 groups from the estimates of 41,340 individuals and the 11,559 groups provided in the CY 2021 PFS final rule (85 FR 84977). Given that the number of measures required for clinicians and groups is the same, we expect the burden to be the same for each respondent collecting data via MIPS CQM or QCDR, whether the clinician is participating in MIPS as an individual or group.

Under the MIPS CQM and QCDR collection types, the individual clinician or group may either submit the quality measures data directly to us, log in and upload a file, or utilize a third-party intermediary to submit the data to us on the clinician’s or group’s behalf.

We estimate that the burden associated with the QCDR collection type is similar to the burden associated with the MIPS CQM collection type; therefore, we discuss the burden for both together below. For MIPS CQM and QCDR collection types, we estimate an additional time for respondents (individual clinicians and groups) to become familiar with MIPS quality measure specifications and, in some cases, specialty measure sets and QCDR measures. Therefore, we believe that the burden for an individual clinician or group to review measure specifications and submit quality data is total of 9 hours at a cost of $922.76 per response. This consists of 3 hours at $95.22/hr for a computer systems analyst (or their equivalent) to submit quality data along with 2 hours at $114.24/hr for a medical and health services manager, 1 hour at $95.22/hr for a computer systems analyst, 1 hour at $48.16/hr for a LPN, 1 hour at $40.02/hr for a billing clerk, and 1 hour at $217.32/hr for a physician to review measure specifications. Additionally, clinicians and groups who do not submit data directly will need to authorize or instruct the qualified registry or QCDR to submit quality measures’ results and numerator and denominator data on quality measures to us on their behalf. We estimate that the time and effort associated with authorizing or instructing the quality registry or QCDR to submit this data will be approximately 5 minutes (0.083 hours) at $95.22/hr for a computer systems analyst at a cost of $7.90 (0.083 hr × $95.22/hr). Overall, we estimate 9,083 hr/response (3 hr + 2 hr + 1 hr + 1 hr + 1 hr + 0.083 hr) at a cost of $922.76/response [(3 hr × $95.22/hr) + (2 hr × $114.24/hr) + (1 hr × $217.32/hr) + (1 hr × $95.22/hr) + (1 hr × $48.16/hr) + (1 hr × $40.02/hr) + (0.083 hr × $95.22/hr)].

For the CY 2022 MIPS performance period/2024 MIPS payment year, in aggregate, we estimate a burden of 472,643 hours [9,083 hr/response × (40,507 clinicians submitting as individuals + 11,527 groups submitting via QCDR or MIPS CQM on behalf of individual clinicians or 52,036 responses)] at a cost of $48,016,739 (52,036 responses × $922.76/response).

For the CY 2023 MIPS performance period/2025 MIPS payment year, in aggregate, we estimate a burden of 425,787 hours [9,083 hr/response × (36,456 clinicians submitting as individuals + 10,432 groups submitting via QCDR or MIPS CQM on behalf of individual clinicians or 46,877 responses)] at a cost of $43,256,221 (46,877 responses × $922.76/response). Based on these assumptions, we have estimated in Table 81 the burden for these submissions.

(6) Quality Data Submission by Clinicians and Groups: eCQM Collection Type

The following requirement and burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77505 through 77506), CY 2018 Quality Payment Program final rule (82 FR 53914 through 53915), CY 2019 PFS final rule (83 FR 60006 through 60007), CY 2020 PFS final rule (84 FR 63128 through 63130) and the CY 2021 PFS final rule (85 FR 84979 through 84980) for our previously finalized requirements and burden for quality data submission via the eCQM collection types. For the change in associated burden for quality data submission related to the proposals introducing MVP and subgroup reporting beginning in the CY 2023 MIPS performance period/2025 MIPS payment year, we refer readers to Table 87 of this section.

Based on CY 2019 MIPS performance period/2021 MIPS payment year data, for the CY 2022 MIPS performance period/2024 MIPS payment year, we assume that 322,392 clinicians will elect to use the eCQM collection type: 40,446 clinicians are expected to submit eCQMs as individuals; and 8,127 groups and virtual groups are expected to submit eCQMs on behalf of the remaining 273,819 clinicians. This is a decrease of 2,109 individuals and 27 groups from the estimates of 42,555 individuals and 8,154 groups provided in the CY 2021 PFS final rule (85 FR 84979). We expect the burden to be the same for each respondent using the eCQM collection type, whether the clinician is participating in MIPS as an individual or group.

Under the eCQM collection type, the individual clinician or group may either submit the quality measures data directly to us from their eCQM, log in and upload a file, or utilize a third-party intermediary to derive data from their CEHRT and submit it to us on the clinician’s or group’s behalf.

To prepare for the eCQM collection type, the clinician or group must review the quality measures on which we will be accepting MIPS data extracted from eCQMs, select the appropriate quality measures, extract the necessary clinical data from their CEHRT, and submit the necessary data to a QCDR/qualified registry or use a health IT vendor to submit the data on behalf of the clinician or group. We assume the burden for collecting quality measures data via eCQM is similar for clinicians and groups who submit their data directly to us from their CEHRT and clinicians and groups who use a health IT vendor to submit the data on their behalf. This includes extracting the necessary clinical data from their CEHRT and submitting the necessary data to a QCDR/qualified registry.

We estimate that it will take no more than 2 hours at $95.22/hr for a computer systems analyst to submit the actual data file. The burden will also involve becoming familiar with MIPS quality measure specifications. In this regard, we estimate it will take 6 hours for a clinician or group to review measure specifications. Of that time, we estimate 2 hours at $114.24/hr for a medical and health services manager, 1 hour at $217.32/hr for a physician, 1 hour at $95.22/hr for a computer systems analyst, 1 hour at $48.16/hr for an LPN, and 1 hour at $40.02/hr for a billing clerk. Overall, we estimate a cost of $812.76/response [(2 hr × $95.22/hr) + (2 hr × $114.24/hr) + (1 hr × $217.32/hr) + (1 hr × $95.22/hr) + (1 hr × $48.16/hr) + (1 hr × $40.02/hr)].

For the CY 2022 MIPS performance period/2024 MIPS payment year, in aggregate, we estimate a burden of 388,584 hours [8 hr × 48,573 (40,446 clinicians + 8,127 groups and virtual groups) at a cost of $39,812,374 (48,573 responses × $819.64/response). For the CY 2023 MIPS performance period/2025 MIPS payment year, in aggregate, we estimate a burden of 350,186 hours [8 hr × 43,773 (36,401 clinicians + 7,372 groups and virtual groups) at a cost of $35,878,102 (43,773 responses × $819.64/response). Based on these assumptions, we have estimated in Table 83 the burden for these submissions.

We refer readers to Table 87 for our previously finalized requirements and burden for quality data submission via the eCQM collection types. For the change in associated burden for quality data submission related to the proposals introducing MVP and subgroup reporting beginning in the CY 2023 MIPS performance period/2025 MIPS payment year, we refer readers to Table 87 of this section.

Based on CY 2019 MIPS performance period/2021 MIPS payment year data, for the CY 2022 MIPS performance period/2024 MIPS payment year, we assume that 322,392 clinicians will elect to use the eCQM collection type: 40,446 clinicians are expected to submit eCQMs as individuals; and 8,127 groups and virtual groups are expected to submit eCQMs on behalf of the remaining 273,819 clinicians. This is a decrease of 2,109 individuals and 27 groups from the estimates of 42,555 individuals and 8,154 groups provided in the CY 2021 PFS final rule (85 FR 84979). We expect the burden to be the same for each respondent using the eCQM collection type, whether the clinician is participating in MIPS as an individual or group.

Under the eCQM collection type, the individual clinician or group may either submit the quality measures data directly to us from their eCQM, log in and upload a file, or utilize a third-party intermediary to derive data from their CEHRT and submit it to us on the clinician’s or group’s behalf.

To prepare for the eCQM collection type, the clinician or group must review the quality measures on which we will be accepting MIPS data extracted from eCQMs, select the appropriate quality measures, extract the necessary clinical data from their CEHRT, and submit the necessary data to a QCDR/qualified registry or use a health IT vendor to submit the data on behalf of the clinician or group. We assume the burden for collecting quality measures data via eCQM is similar for clinicians and groups who submit their data directly to us from their CEHRT and clinicians and groups who use a health IT vendor to submit the data on their behalf. This includes extracting the necessary clinical data from their CEHRT and submitting the necessary data to a QCDR/qualified registry.

We estimate that it will take no more than 2 hours at $95.22/hr for a computer systems analyst to submit the actual data file. The burden will also involve becoming familiar with MIPS quality measure specifications. In this regard, we estimate it will take 6 hours for a clinician or group to review measure specifications. Of that time, we estimate 2 hours at $114.24/hr for a medical and health services manager, 1 hour at $217.32/hr for a physician, 1 hour at $95.22/hr for a computer systems analyst, 1 hour at $48.16/hr for an LPN, and 1 hour at $40.02/hr for a billing clerk. Overall, we estimate a cost of $812.76/response [(2 hr × $95.22/hr) + (2 hr × $114.24/hr) + (1 hr × $217.32/hr) + (1 hr × $95.22/hr) + (1 hr × $48.16/hr) + (1 hr × $40.02/hr)].

For the CY 2022 MIPS performance period/2024 MIPS payment year, in aggregate, we estimate a burden of 388,584 hours [8 hr × 48,573 (40,446 clinicians + 8,127 groups and virtual groups) at a cost of $39,812,374 (48,573 responses × $819.64/response). For the CY 2023 MIPS performance period/2025 MIPS payment year, in aggregate, we estimate a burden of 350,186 hours [8 hr × 43,773 (36,401 clinicians + 7,372 groups and virtual groups) at a cost of $35,878,102 (43,773 responses × $819.64/response). Based on these assumptions, we have estimated in Table 83 the burden for these submissions.
As shown in Table 84, using the unchanged currently approved hours per respondent burden estimate, the decrease of 1,897 respondents from 50,470 to 48,573 for the CY 2022 MIPS performance period/2024 MIPS payment year results in a total decrease of -15,176 hours at a cost of -$1,544,857. For CY 2023 MIPS performance period/2025 MIPS payment year, using the unchanged currently approved hours per respondent burden estimate, the decrease of 6,697 respondents from 50,470 to 43,773 results in a total decrease of -53,574 hours at a cost of -$5,488,883.

(7) ICRs Regarding Burden for MVP Reporting

Section IV.A.3.b.(2)(d) of this rule describes proposals related to implementing MVPs beginning with the CY 2023 MIPS performance period/2025 MIPS payment year. The MVPs would include the Promoting Interoperability performance category as a foundational element and incorporate population health claims-based measures, as feasible, along with the relevant measures and activities in the quality, cost, and improvement activities performance categories. For the CY 2023 MIPS performance period/2025 MIPS payment year, CMS is proposing an inventory of seven MVPs included in Appendix 3: MVP Inventory of this rule to assess performance across MVPs for the quality, cost, improvement activities, and Promoting Interoperability performance categories. Additionally, in section IV.A.3.b.(2)(c)(i) of this rule, we propose to use the term “MVP Participant” to refer to clinicians who would choose to participate in MIPS for reporting MVPs.

The following new ICRs reflect the burden associated with the first year of data collection related to the proposed implementation of MVPs and subgroup reporting in the CY 2023 MIPS performance period/2025 MIPS payment year as described in section IV.A.3.b.(2)(d) of this rule. The proposed requirements and burden associated with the implementation of MVPs and subgroups will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

While MVP respondents report on all performance categories, we believe that for purposes of data submission, the burden for clinicians submitting information for the Promoting Interoperability and improvement activities performance categories of MVPs will be consistent with the currently approved estimated burden per respondent for clinicians submitting data for these performance categories in traditional MIPS. We acknowledge that clinicians participating through MVPs will have fewer requirements to meet for the improvement activity performance categories described in section IV.A.3.b.(4)(d)(iv) of this proposed rule. We assume that these requirement changes will not significantly lower the burden for clinicians reporting MVPs. Therefore, we will not add additional ICRs to capture the burden for the Promoting Interoperability and Improvement Activity performance categories.

For this rule, we are proposing to create a separate ICR for estimating the burden associated with data submission for the Quality performance category of MVPs. We considered whether we should have a separate ICR to estimate burden for submission of measures and activities in the Promoting Interoperability performance category of MVPs. Based on our assumption above that the burden for clinicians submitting information for these performance categories of MVPs will be consistent with the currently approved estimated burden per respondent for clinicians submitting data in traditional MIPS, we anticipate that the separate ICRs would not be of value to clinicians.

We seek comment on our proposal to distinctly estimate burden only for data submission in the Quality performance category of MVPs and whether we should revise the MVP submission ICR to include all the four MIPS performance categories and whether our assumptions on Promoting Interoperability and Improvement Activities should be modified for MVPs.

(a) Burden for MVP Quality Submission

In section IV.A.3.b.(2)(d)(ii) of this rule, we propose to implement voluntary MVP reporting beginning with the CY 2023 MIPS performance period/2025 MIPS payment year. If this proposal is finalized, clinicians participating in MIPS would have the option to voluntarily submit data using MVPs starting with the CY 2023 MIPS performance period/2025 MIPS payment year. While we recognize the implementation of MVPs in MIPS will result in a burden for registration, we also assume that MVP reporting will result in a decline in burden for MVP participants due to proposed changes in the MVP reporting requirements described in section IV.A.3.b.(4)(d) of this rule. We anticipate that the clinicians choosing to participate in MIPS for reporting MVPs would need to select from a reduced inventory of measures and activities for the quality and improvement activities performance categories. This reduction in burden is described in the quality, improvement activities and Promoting Interoperability performance categories sections below.

For the ICRs related to MVP participants, we used the MIPS submission data from the CY 2021 MIPS performance period/2023 MIPS payment year. Based on our review of the proposed inventory of 7 MVPs in Appendix 3: MVP Inventory of this rule and the existing submission trends in MIPS for the measures and activities included in these MVPs, we anticipate that 10 percent of the clinicians who participate in traditional MIPS in the CY 2022 MIPS performance period/2024 MIPS payment year will report MVPs in the CY 2023 MIPS performance period/2025 MIPS payment year. Given that MVPs are now, voluntary, and represent a reduction in burden per response, we believe that we should be conservative.
in estimating the number of clinicians submitting through MVPs during the initial year. Given that MVPs are a new mechanism available for clinicians, we believe that initial participation numbers will be relatively low. In an effort to be conservative in our estimate of burden reduction due to MVP reporting and reflect the anticipate low uptake by clinicians in the first year of MVP availability, we assume that a total of 10 percent of MIPS submitters will become MVP participants in the CY 2023 MIPS performance period/2025 MIPS payment year.

As described in section IV.A.3.b.(2)(d)(ii) of this rule, beginning with the CY 2023 MIPS performance period/2025 MIPS payment year, we are proposing voluntary subgroup reporting within MVPs limited to clinicians reporting the MVP or the APP. We recognize the implementation of subgroups for clinicians to participate in MVP and APP reporting in MIPS will result in additional burden. We believe that subgroup participation option would allow clinicians in certain specialties and subspecialties to report on measures and activities meaningful to the scope of care provided. We anticipate that public reporting of subgroup performance information would allow patients to identify clinicians in multispecialty groups that are representative of the care specific to their clinical condition. Clinician participation in subgroups is new to MIPS and we do not have any historical participation data to estimate the submission burden for clinicians who would choose to participate as subgroups for reporting the MVP or the APP. We refer readers to section IV.A.3.b.(3) of this proposed rule for details on the proposals related to subgroup composition.

We anticipate that the subgroup reporting option would increase reporting and allow clinicians in specialties to report on measures and activities meaningful to their practice. Due to the delay in implementation of subgroup reporting in the CY 2023 MIPS performance period/2025 MIPS payment year, we anticipate that there is an adequate amount of time for clinicians that historically participate in MIPS to determine if they would be able to participate as subgroups for reporting on the measures and activities in an MVP. However, due to the limited number of MVPs available for clinicians to choose, the additional burden involved in reporting, and also given the voluntary option to participate as subgroups for reporting the MVPs or the APP, we anticipate that a relatively small number of clinicians would choose to participate as subgroups in the CY 2023 MIPS performance period/2025 MIPS payment year. Therefore, we assume there will be 20 subgroups reporters in the CY 2023 MIPS performance period/2025 MIPS payment year. We assume that more clinicians will choose to participate as subgroups in future years. We seek comment on our MVP and subgroup reporting assumptions for the CY 2023 MIPS performance period/2025 MIPS payment year.

(i) Burden for MVP Registration: Individuals, Groups and APM Entities

Beginning with the CY 2023 MIPS performance period/2025 MIPS payment year, we propose that clinicians interested in participating in MIPS through MVP reporting would be required to complete an annual registration process described in section IV.A.3.b.(4)(f) of this rule. At the time of registration, MVP participants would need to select a specific MVP, a population health measure and if administrative claims measures are included in the selected MVP, the MVP participants would also need to choose an applicable administrative claims measure in the MVP. We refer readers to section IV.A.3.b.(4)(f) of this rule for additional details on MVP registration requirements.

Due to the delay in implementation of MVPs in the CY 2023 MIPS performance period/2025 MIPS payment year, we anticipate that there is an adequate amount of time for clinicians that historically participate in MIPS to determine if the measures and activities in an MVP are applicable to the scope of care provided. In Table 85, we estimate that the registration process for clinicians choosing to submit MIPS data for the measures and the activities in an MVP would require 0.25 hours of a computer systems analyst’s time, similar to the currently approved burden of group registration process for CMS Web Interface finalized in the CY 2021 PFS final rule (85 FR 84983) for the CY 2023 MIPS performance period/2025 MIPS payment year. We assume that the staff involved in the MVP registration process will mainly be computer systems analysts or their equivalent, who have an average labor cost of $95.22/hour.

As discussed above, based on data from the CY 2019 MIPS performance period/2021 MIPS payment year, we assume that approximately 10 percent of the clinicians that currently participate in MIPS will submit data for the measures and activities in an MVP. Note that we apply this 10 percent calculation after adding the clinicians who begin submitting though the CQM and eCQM collection types due to the proposed sunset of Web Interface in the CY 2023 MIPS performance period/2025 MIPS payment year. For the CY 2023 MIPS performance period/2025 MIPS payment year, we assume that a total of 25,798 submissions would be received for the measures and activities included in MVPs. This total includes our estimate of 20 subgroup reporters that will also be reporting MVPs in addition to MVP reporters who currently participate in MIPS. Therefore, we assume that the total number of individual clinicians, groups, subgroups and APM Entities to complete the MVP registration process is 12,918. We estimate that the total cost to clinicians participating as individuals and groups associated with the MVP registration process will be approximately $307,513. Table 85 includes our burden assumptions related to the MVP registration process for clinicians participating in MIPS for reporting MVPs as individuals, groups, subgroups, and APM Entities.
(ii) Burden for Subgroup Registration

We propose to add a separate ICR to estimate the burden associated with subgroup registration to capture the proposed subgroup registration requirements in section IV.A.3.b.(4)(f)(ii)(D) of this rule. In section IV.A.3.b.(3)(c)(ii) of this rule, we propose to define a subgroup at § 414.1305 as a subset of a group, as identified by a combination of the group TIN, the subgroup identifier, and each eligible clinician’s NPI. In addition to the burden for MVP registration process described above, clinicians who choose to form subgroups for reporting the MVPs or the APP would need to submit a list of each TIN/NPI associated with the subgroup and a plain language name for the subgroup in a manner specified by CMS, described in section IV.A.3.b.(4)(f)(ii)(D) of this rule.

As discussed above, we estimate that clinicians would choose to form 20 subgroups for reporting the measures and activities in MVPs. Additionally, we estimate that clinicians who choose to participate as subgroups for reporting MVPs would require a minimum of 0.5 hours per subgroup respondent to submit the proposed requirements for subgroup registration. We assume that the staff involved in the subgroup registration process will mainly be computer systems analysts or their equivalent, who have an average labor cost of $95.22/hr.

As all subgroups will report MVPs, the burden associated with subgroup quality reporting will be included with the MVP quality reporting ICR. Burden associated with subgroup submissions for Promoting Interoperability and improvement activities will be included with those ICRs.

(iii) Burden for MVP Quality Performance Category Submission

In the CY 2017 PFS final rule (81 FR 77100 through 77114), we established the submission criteria for quality measures (excluding the CMS Web Interface measures and the CAHPS for MIPS survey measure) at § 414.1335, which requires a MIPS eligible clinician, group, or virtual group that is reporting on Qualified Clinical Data Registry (QC DR) measures, MIPS clinical quality measures (MIPS CQMs), electronic CQMs (eCQMs), or Medicare Part B claims measures to submit data on at least six measures, including at least one outcome measure. As discussed in section IV.A.3.b.(4)(d)(ii) of this proposed rule, we propose that except as provided in paragraph

</tbody>
</table>
§ 414.1365(c)(1)(i). An MVP Participant must select and report 4 quality measures, including 1 outcome measure (or, if an outcome measure is not available, 1 high priority measure, included in the MVP. The decrease in the number of required measures in the quality performance category from 6 to 4 is a two-thirds reduction in the number of measures needed for eligible clinicians to submit data for the quality performance category in MVPs described in Appendix 3: MVP Inventory of this proposed rule. Therefore, we estimate that the time for submitting the measures in the MVP quality performance category will, on average, take two-thirds of the currently approved burden per respondent for the quality performance category as it does to complete a MIPS quality submission through the CQM, eCQM, and Claims submission types.

As described above in this section of the proposed rule, we estimate that 10 percent of the clinicians who participated in MIPS for the CY 2019 MIPS performance period/2021 MIPS payment year would submit data for the quality performance category of MVPs beginning with the CY 2023 MIPS performance period/2025 MIPS payment year. We anticipate that there will be 20 subgroups reporters in the CY 2023 MIPS performance period/2025 MIPS payment year. As shown in Table 87, we estimate that approximately 2,825 clinicians would submit data for the MVP quality performance category, approximately 5,210 clinicians and 10 subgroups will submit data using MIPS CQM and QCDR collection type; and approximately 4,862 clinicians and 10 subgroups will submit data using eCQMs collection type. We want to note that we used the same methodologies used in sections V.B.8.e.(4), V.B.8.e.(5) and V.B.8.e.(6) to estimate the quality submission burden for each collection type. As shown in Table 87, for the clinicians and subgroups submitting data for the MVP quality performance category, we estimate a burden of 26,670 hours (9.44 hr × 2,825 clinicians) at a cost of $2,691,329 (2,825 respondents × 952.68/ respondent) for the Medicare Part B claims collection type, 31,163 hours [5.97 hr × 5,220 (5,210 + 10)] at a cost of $3,211,216 (5,220 × 615.18/ respondent) for the MIPS CQM and QCDR collection type, and 25,822 hours [5.3 hr × 4,872 (4,862 + 10) respondents] at a cost of $2,662,191 (4,872 × 546.43/ respondent) for the eCQM collection types.

BILLING CODE 4120–01–C

(8) Quality Data Submission via CMS Web Interface

The proposed requirements and burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

Background

In the CY 2021 PFS final rule, we finalized our policy to sunset the CMS Web Interface measures as a collection type/submission type starting with the CY 2022 MIPS performance period/2024 MIPS payment year. As a result of this provision, for the CY 2022 MIPS performance period/2024 MIPS payment year, we estimated a burden of zero due to our assumption that all Web Interface respondents will alternately utilize either the MIPS CQM and QCDR or eCQM collection types (85 FR 84981).

In section IV.A.3.d.(1)(d) of this rule, we are proposing to continue the CMS Web Interface measures as a collection type for the CY 2022 MIPS performance period/2024 MIPS payment year. Additionally, we are proposing to sunset the CMS Web Interface measures as a collection type for the CY 2023 MIPS performance period/2025 MIPS payment year. For this proposed rule, we are providing a burden estimate for the CY 2022 and CY 2023 MIPS performance periods/2024 and 2025 MIPS payment years.

For the CY 2022 MIPS performance period/2024 MIPS payment year, we assume that 114 groups will submit quality data via the CMS Web Interface based on the number of groups who completed 100 percent of reporting quality data via the Web Interface in the CY 2019 MIPS performance period/2021 MIPS payment year.

The proposed estimated burden associated with the group submission requirements is the time and effort associated with submitting data on a sample of the organization’s
beneficiaries that is prepopulated in the CMS Web Interface. Our proposed burden estimate for submission includes the time (61 hours and 40 minutes or 61.67 hours) needed for each group to populate data fields in the web interface with information on approximately 248 eligible assigned Medicare beneficiaries and submit the data (we will partially pre-populate the CMS Web Interface with claims data from their Medicare Part A and B beneficiaries). The patient data either can be manually entered, uploaded into the CMS Web Interface via a standard file format, which can be populated by CEHRT, or submitted directly. Each group must provide data on 248 eligible assigned Medicare beneficiaries (or all eligible assigned Medicare beneficiaries if the pool of eligible assigned beneficiaries is less than 248) for each measure. In aggregate, we estimate a burden for the CY 2022 MIPS performance period/2024 MIPS payment year of 7,030 hours (114 groups × 61.67 hr) at a cost of $669,432 (114 groups × $5,872.21/group). For the CY 2023 MIPS performance period/2025 MIPS payment year, we propose to revise our estimated burden to zero due to our assumption that with the proposed policy to sunset the CMS Web Interface as a collection type, all Web Interface respondents will alternately utilize either the MIPS CQM and QCDR or eCQM collection types. Based on the assumptions discussed in this section, Table 88 summarizes the proposed estimated burden for groups submitting to MIPS via the CMS Web Interface.

(9) Beneficiary Responses to CAHPS for MIPS Survey

This rule does not propose any new or revised collection of information requirements or burden related to the CAHPS for MIPS survey. The CAHPS for MIPS survey requirements and burden are currently approved by OMB under control number 0938–1222 (CMS–10450). Consequently, we are not proposing any changes under that control number.

(10) Group Registration for CMS Web Interface

The proposed requirements and burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

In the CY 2021 PFS final rule, we finalized to sunset the CMS Web Interface measures as a collection type/submission type starting with the CY 2022 MIPS performance period/2024 MIPS payment year. As a result, we estimated that there would be zero hours and $0 burden for group registration for the CMS Web Interface for the CY 2022 MIPS performance period/2024 MIPS payment year (85 FR 84984). As discussed in section IV.A.3.d.(1)(d) of this proposed rule, we are proposing to continue the CMS Web Interface measures as a collection type for the CY 2022 MIPS performance period/2024 MIPS payment year. We are also proposing to sunset the CMS Web Interface as a collection type starting with the CY 2023 MIPS performance period/2025 MIPS payment year.

Groups interested in participating in MIPS using the CMS Web Interface for the first time must complete an online registration process. After first time registration, groups will only need to opt out if they are not going to continue to submit via the CMS Web Interface. In Table 90, we estimate that the registration process for groups under MIPS involves approximately 0.25 hours at $95.22/hr for a computer.
systems analyst (or their equivalent) to register the group.

Because we are finalizing to sunset the CMS Web Interface beginning with the CY 2023 MIPS performance period/2025 MIPS payment year, it is possible that fewer groups will elect to register to submit quality data for the first time in the performance year prior to the collection type/submission type no longer being available; however, we currently have no data with which to estimate what the associated reduction may be. Consistent with our assumptions in the CY 2021 PFS final rule (85 FR 84983), we continue to assume that approximately 90 groups will elect to use the CMS Web Interface for the first time during the CY 2022 MIPS performance period/2024 MIPS payment year. As shown in Table 90, we estimate a burden of 22.5 hours (90 new registrations × 0.25 hr/registration) at a cost of $2,142 (22.5 hr × $95.22/hr).

<table>
<thead>
<tr>
<th>TABLE 90: Estimated Burden for Group Registration for CMS Web Interface</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Burden Estimate</strong></td>
</tr>
<tr>
<td>Number of New Groups Registering for CMS Web Interface (a)</td>
</tr>
<tr>
<td>Annual Hours Per Group (b)</td>
</tr>
<tr>
<td>Total Annual Hours (c) = (a) * (b)</td>
</tr>
<tr>
<td>Labor rate for a computer systems analyst (d)</td>
</tr>
<tr>
<td>Total Annual Cost (e) = (a) * (d)</td>
</tr>
</tbody>
</table>

As shown in Table 91, the proposed estimated increase in the number of groups registering for the CMS Web Interface collection type to submit the MIPS data and the estimated increase in burden per respondent results in adjustment to the total time burden of +22.5 hours (+90 respondents × 0.25 hr/respondent) at a cost of $2,142 for the CY 2022 MIPS performance period/2024 MIPS payment year. For the CY 2023 MIPS performance period/2025 MIPS payment year, our proposed burden estimate is $0.

(11) Group Registration for CAHPS for MIPS Survey

This rule is not proposing any new or revised collection of information requirements or burden related to the group registration for the CAHPS for MIPS Survey. The CAHPS for MIPS survey requirements and burden are currently approved by OMB under control number 0938–1222 (CMS–10450). Consequently, we are not proposing any changes under that control number.

f. ICRs Regarding the Call for MIPS Quality Measures

This rule is not proposing any new or revised collection of information requirements or burden related to the call for MIPS quality measures. However, outside of the rulemaking process we are replacing the existing tool for stakeholders beginning with the 2021 Annual Call for Measures. To account for the updated tool (MERIT), we are proposing to revise our currently approved burden estimates. The updated tool and revised burden will be submitted to OMB under control number 0938–1314 (CMS–10621).

Beginning with the 2021 Annual Call for Measures, we replaced the customary Office of the National Coordinator (ONC) Issue Tracking System Jira platform that stakeholders used to submit candidate quality measure specifications and all supporting data files for CMS review with the MUC Entry/Review Information Tool (MERIT). For the ONC Issue Tracking System Jira platform used by stakeholders, the approved estimated time for a practice
administrator to identify, propose, and link to a quality measure is 0.9 hours for a clinician to identify, propose, link to quality measure, and complete the Peer Review Journal Article form is 4.6 hours (0.6 hours to identify, propose, and link to quality measure (84 FR 63132) and 4 hours to complete the Peer Review Journal Article Form (84 FR 63133), with a total estimated time of 5.5 hours per quality measure submission. Based on the stakeholder experience with the updated tool and additional information collected at the time of submission, we estimate that it would add approximately 1.5 hours for the practice administrator at $114.24/hr and 0.5 hours at $217.32/hr for a clinician to identify, propose, and link the quality measure, and reduce approximately 2 hours at $217.32/hr for a clinician to complete the Peer Review Journal Article Form, resulting in a new estimated time of 2.4 hours for a practice administrator and 3.1 hours for a clinician, and an unchanged total estimated time of 5.5 hours per quality measure submission. In order to account for the implementation of the MERIT tool starting with the 2021 Annual Call for Measures, we propose to revise the estimated time required for a practice administrator to identify, propose, and link to a quality measure to 2.4 hours (from 0.9 hr) and a clinician to identify, propose, link to quality measure, and complete the Peer Review Journal Article Form to 3.1 hours (from 4.6 hr), resulting in a total estimated time of 5.5 hours per quality measure submission. Based on the number of submissions received during the CY 2020 Call for Quality Measures process, we anticipate receiving the same number of 28 submissions during the CY 2021 Call for Quality Measures process (84 FR 63132).

Although the total estimated time of 5.5 hours for completing a quality measure submission using the MERIT tool (see Table 92) is the same estimated time as the ONC Issue Tracking System Jira platform, we need to account for the changes to the individual components of the estimated time required by a practice administrator and clinician using the MERIT tool. Consistent with our assumptions in the CY 2021 PFS final rule (85 FR 84984), we estimate an annual burden of 154 hours (28 submissions × 5.5 hr/measure). Thus, we are proposing to adjust our estimated annual burden from $30,197 (28 submissions × (0.9 hr × $110.74/hr) + (4.6 hr × $212.78/hr)) to $26,541 (28 measures × [(2.4 hr × $114.24/hr) + (3.1 hr × $217.32/hr)]) a difference of −$3,656.

| # of New Quality Measures Submitted for Consideration (a) | 28 |
| # of Hours per Practice Administrator to Identify, Propose and Link Measure (b) | 2.4 |
| # of Hours per Clinician to Identify and Link Measure (c) | 1.1 |
| # of Hours per Clinician to Complete Peer Review Article Form (d) | 2 |
| Annual Hours Per Response (c) = (b) + (c) + (d) | 5.5 |
| Total Annual Hours (f) = (a)×(e) | 154 |
| Cost to Identify and Submit Measure (@ practice administrator’s labor rate of $114.24/hr) * 2.4 hr = (g) | $274.20 |
| Cost to Identify Quality Measure and Complete Peer Review Article Form (@ clinician’s labor rate of $217.32/hr) * 3.1 hr = (h) | $673.69 |
| Total Annual Cost Per Submitted Measure (i) | $947.89 |
| *Total Annual Cost (j) = (a)×(i) | $26,541 |

*Due to burden for certain activities being estimated in fractions of hours, totals may not reflect the sum of individual rows due to rounding.

(1) Background

For the CY 2022 MIPS performance period/2024 MIPS payment year, clinicians and groups can submit Promoting Interoperability data through direct, log in and upload, or log in and attest submission types. With the exception of submitters who elect to use the log in and attest submission type for the Promoting Interoperability performance category, which is not available for the quality performance category, we anticipate that individuals and groups will use the same data submission type for the both of these performance categories and that the clinicians, practice managers, and computer systems analysts involved in supporting the quality data submission will also support the Promoting Interoperability data submission process. The following burden estimates show only incremental hours required above and beyond the time already accounted for in the quality data submission process. Although this analysis assesses burden by performance category and submission type, we emphasize that MIPS is a consolidated program and submission analysis, and decisions are expected to be made for the program as a whole.

(2) Reweighting Applications for Promoting Interoperability and Other Performance Categories

The requirements and burden associated with this rule’s data submission will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53918 through 53919), CY 2019 PFS final rule (83 FR 60011 through 60012), CY 2020 PFS final rule (84 FR 63134 through 63135), and the CY 2021 PFS final rule (85 FR 84984 through 84985) for our previously finalized requirements and burden for reweighting applications for Promoting Interoperability Data (§§ 414.1375 and 414.1380).

TABLE 92: Estimated Burden for Call for Quality Measures
Interoperability and other performance categories.

As established in the CY 2017 and CY 2018 Quality Payment Program final rules, MIPS eligible clinicians who meet the criteria for a significant hardship or other type of exception may submit an application requesting a zero percent weighting for the Promoting Interoperability, quality, cost, and/or improvement activities performance categories under specific circumstances (81 FR 77240 through 77243, 82 FR 53680 through 53686, and 82 FR 53783 through 53785). Respondents who apply for a reweighting for the quality, cost, and/or improvement activities performance categories have the option of applying for reweighting for the Promoting Interoperability performance category on the same online form. We assume that respondents applying for a reweighting of the Promoting Interoperability performance category due to extreme and uncontrollable circumstances will also request a reweighting of at least one of the other performance categories simultaneously and not submit multiple reweighting applications.

Table 93 summarizes the burden for clinicians to apply for reweighting the Promoting Interoperability performance category to zero percent due to a significant hardship exception or as a result of a decertification of an EHR. Based on the number of reweighting applications received by March, 2021 for the CY 2020 MIPS performance period/2024 MIPS payment year, we assume 20,192 respondents (eligible clinicians or groups) will submit a request for reweighting the Promoting Interoperability performance category to zero percent due to a significant hardship or EHR decertification and an additional 22,635 respondents will submit a request to reweight one or more of the quality, cost, Promoting Interoperability, or improvement activities performance categories due to an extreme or uncontrollable circumstance. For the CY 2022 MIPS performance period/2024 MIPS payment year, we estimate that a total of 42,797 reweighting applications would be submitted. This is a decrease of 9,302 respondents compared to our currently approved estimate of 52,099 respondents (85 FR 84984). This decrease is likely due to the proposal in section IV.A.3.e.(2)(b)(iii)(A) of this rule to automatically reweight the Promoting Interoperability performance category for small practices who previously had to apply for reweighting. For the CY 2020 MIPS performance period/2024 MIPS payment year, 13,894 respondents requested reweighting due to significant hardship for small practices. Similar to the data used to estimate the number of respondents in the CY 2021 PFS final rule, our respondent estimate includes a significant number of applications submitted as a result of a data issue CMS was made aware of and is specific to a single third-party intermediary. While we do not anticipate similar data issues to occur in each performance period, we do believe future similar incidents may occur and are electing to use this data without adjustment to reflect this belief. We assume that, out of our total respondent count of 42,797 above, we estimate that 22,605 respondents (eligible clinicians or groups) will submit a request for reweighting the Promoting Interoperability performance category to zero percent due to extreme and uncontrollable circumstances, insufficient internet connectivity, lack of control over the availability of CEHRT, or as a result of a decertification of an EHR.

In the CY 2021 PFS final rule (85 FR 84984) we discussed that, beginning with the CY 2019 MIPS performance period/2021 MIPS payment year, APM Entities may submit an extreme and uncontrollable circumstances exception application for all four performance categories and applicable to all MIPS eligible clinicians in the APM Entity group. As discussed above in this section of this proposed rule, due to data limitations and our inability to determine who would use the APP versus the traditional MIPS submission mechanism for the 2022 MIPS performance period/2024 MIPS payment year, we assume ACO APM Entities will submit data through the APP and non-ACO APM Entities would participate through traditional MIPS, thereby submitting as an individual or group rather than as an entity. Therefore, we limited our analysis to ACOs that were eligible for an exception due to extreme and uncontrollable circumstances during the 2020 MIPS performance period/2022 MIPS payment year and elected not to report quality data. Based on this data, we estimate that 30 APM Entities will submit an extreme and uncontrollable circumstances exception application for the CY 2022 MIPS performance period/2024 MIPS payment year. Combined with our aforementioned estimate of 42,797 eligible clinicians and groups, the total estimated number of respondents for the CY 2022 MIPS performance period/2024 MIPS payment year is 42,827.

Consistent with our assumptions in the CY 2021 PFS final rule (85 FR 84984–84985), we continue to estimate it will take 0.25 hours for a computer system analyst to complete and submit the application. As shown in Table 93, we estimate an annual burden of 10,707 hours (42,827 applications × 0.25 hr/ application) and $1,019,521 (10,707 hr × $95.22/hr).

TABLE 93: Estimated Burden for Reweighting Applications for Promoting Interoperability and Other Performance Categories

(3) Submitting Promoting Interoperability Data

The requirements and burden associated with this rule’s data submission will be submitted to OMB for approval under control number 0938–10621.

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77509 through 77511), CY 2018 Quality Payment Program final rule (82 FR 53919 through 53920), CY 2019 PFS final rule (83 FR 60013 through 60014), CY 2020 PFS final rule (84 FR 63135 through 63137), and the CY 2021 PFS final rule (85 FR 84985 through 84987) for our previously finalized requirements and burden for submission of data for the Promoting Interoperability performance category.

We did not propose any changes to our current criteria for automatic reweighting of the Promoting Interoperability performance category for certain MIPS eligible clinicians or MIPS eligible clinicians who have experienced a significant hardship or decertification of an EHR. In section IV.A.3.d.(4)(d)(ii) of this proposed rule, we proposed the additional requirement that MIPS eligible clinicians must attest to conducting an annual assessment of the High Priority Guides of the SAFER Guides beginning with the 2022 performance period. Clinicians will complete this attestation by checking a box when they submit their promoting interoperability performance category data. We estimate that this requirement will add an additional minute to the time it takes to complete the submission of promoting interoperability data. We also proposed to modify the Provide Patients Electronic Access to Their Health Information measure to require MIPS eligible clinicians to ensure that patient health information remains available to the patient (or patient-authorized representative) to access indefinitely. The proposed requirement would apply beginning with the performance period in 2022, and would include all patient health information from encounters on or after January 1, 2016. We do not believe this proposal will impact the burden of Promoting Interoperability data submission. Therefore, we are not revising the currently approved burden per respondent estimate.

As shown in Table 95, based on data from the CY 2019 MIPS performance period/2021 MIPS payment year, we estimate that a total of 51,647 respondents consisting of 40,172 individual MIPS eligible clinicians and 11,475 groups and virtual groups will submit Promoting Interoperability data. Since our CY 2021 PFS final rule estimated 53,636 respondents, this represents a decrease of 1,989 respondents (51,647 respondents – 53,636 active respondents).

We assume that MIPS eligible clinicians previously scored under the APM scoring standard, as described in the CY 2020 PFS final rule, will continue to submit Promoting Interoperability data (84 FR 63006) in a similar way through the APP. As a result, we do not anticipate any change in burden. Each MIPS eligible clinician in an APM Entity reports data for the Promoting Interoperability performance category through either their group TIN or individual reporting. Sections 1899 and 1115A of the Act (42 U.S.C. 1395jj and 42 U.S.C. 1315a, respectively) state that the Shared Savings Program and the testing, evaluation, and expansion of Innovation Center models are not subject to the PRA. However, in the CY 2019 PFS final rule, we established that MIPS eligible clinicians who participate in the Shared Savings Program are no longer limited to reporting for the Promoting Interoperability performance category through their ACO participant TIN (83 FR 59822 through 59823). Burden estimates for this proposed rule assume group TIN-level reporting as we believe this is the most reasonable assumption for the Shared Savings Program, which requires that ACOs include full TINs as ACO participants. As we receive updated information which reflects the actual number of Promoting Interoperability data submissions submitted by Shared Savings Program ACO participants, we will update our burden estimates accordingly.
As discussed in section IV.A.3.b.(2)(d)(ii) of this proposed rule, we will be introducing subgroup reporting in CY 2023 MIPS performance period/2025 MIPS payment year. As we discussed above in this section of the proposed rule, we estimate that there will be 20 subgroup submissions in CY 2023 MIPS performance period/2025 MIPS payment year, each of which will have burden related to the submission of Promoting Interoperability data. We have included this burden in Table 96.

### Table 95: Estimated Number of Respondents to Submit Promoting Interoperability Performance Data on Behalf of Clinicians in CY 2022

<table>

<td>-1,989</td>
</tr>
</tbody>
</table>

With the inclusion of the additional minute (0.02 hr) to attest to conducting an annual assessment of the High Priority Guides of the SAFER Guides, we are proposing to update our estimate of the time required for an individual or group to submit Promoting Interoperability data from 2.67 hours to 2.69 hours (2.67 hr + 0.02 hr). As shown in Table 97, the total burden estimate for submitting data on the specified Promoting Interoperability objectives and measures is estimated to be 138,930 hours (51,647 respondents × 2.69 incremental hours for a computer analyst’s time above and beyond the physician, medical and health services manager, and computer system’s analyst time required to submit quality data) and $13,228,915 (138,930 hr × $95.22/hr).

h. ICRs Regarding the Nomination of Promoting Interoperability (PI) Measures

This rule is not proposing any new or revised collection of information requirements or burden related to the nomination of Promoting Interoperability measures. The requirements and burden are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not proposing any changes under that control number.

i. ICR Regarding Improvement Activities Submission (§§ 414.1305, 414.1355, 414.1360, and 414.1365)

The following proposed requirements and burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621). We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77511 through 77512), CY 2018 Quality Payment Program final rule (82 FR 53920 through 53922), CY 2019 PFS final rule (83 FR 60015 through 60017), CY 2020 PFS final rule (84 FR 63138 through 63140) and the CY 2021 PFS final rule (85 FR 84987 through 84989) for our previously finalized requirements and burden for submission of data for the improvement activities performance category.

In section IV.A.3.d.(3) of this rule, we are proposing to: (1) Revise group reporting requirements for the 50 percent threshold to address subgroups; (2) add 7 new improvement activities, modify 15 existing improvement activities, and remove 6 previously adopted improvement activities for the CY 2022 MIPS performance period/2024 MIPS payment year and future years; (3) revise the “Drug Cost Transparency to include requirements for use of real-time benefit tools” improvement activity; and (4) add the COVID–19 “Clinical Data Reporting with or without Clinical Trial” improvement activity for CY 2022 MIPS performance period/2024 MIPS payment year and future years. Additionally, we are proposing to adjust our currently approved burden estimates based on more recent data.

Specifically, we are proposing to revise § 414.1360(a)(2) to state that, beginning with the CY 2023 MIPS performance period/2025 MIPS payment year, each improvement activity for which groups and virtual groups submit a yes response in accordance with paragraph (a)(1) of this section must be performed by at least 50 percent of the NPIs that are billing under the group’s TIN or virtual group’s TINs or that are part of the subgroup, as applicable, and the NPIs must perform the same activity during any continuous 90-day period within the same performance year. In section
IV.A.3.d.(3)(b) of this rule, we discussed stakeholder requests through the Quality Payment Program help desk to apply the 50 percent threshold to a portion of clinicians in a group. We anticipate that clinicians would find applicable and meaningful activities specific to practice size, specialty, or practice setting. Therefore, we assume that the proposal to apply the 50 percent minimum threshold to clinicians who submit for the improvement activity performance category as part of groups, virtual groups, or choose to participate as subgroups beginning with the CY 2023 MIPS performance period/2025 MIPS payment year would not present additional complexity or burden.

We do not believe the proposed changes to the improvement activities inventory will impact time or financial burden on stakeholders because MIPS eligible clinicians are still required to submit the same number of activities and the per response time for each activity is uniform. Therefore, we are not proposing to revise the estimated time of 5 minutes (per response) currently approved for improvement activities submission.

As represented in Table 100, based on data from the CY 2019 MIPS performance period/2021 MIPS payment year, we estimate that a total of 81,562 respondents consisting of 63,845 individual clinicians and 17,717 groups will submit improvement activities during the 2022 MIPS performance period/2024 MIPS payment year. Since our currently approved burden sets out 79,927 respondents, this represents an increase of 1,635 respondents (81,562 respondents – 79,927 active respondents). This is an increase of 1,242 individuals and 393 groups from the estimates of 62,603 individuals and 17,324 groups provided in the CY 2021 PFS final rule due to availability of updated data (85 FR 50362).

As discussed in sections V.B.8.e. and V.B.8.g.(3) of this proposed rule regarding our estimate of clinicians and groups submitting data for the quality and Promoting Interoperability performance categories, we are proposing to update our estimates for the number of clinicians and groups that will submit improvement activities data based on projections of the number of eligible clinicians that were not QPs or participating in an ACO in the CY 2019 MIPS performance period/2021 MIPS payment year but will be QPs in the CY 2022 MIPS performance period/2024 MIPS payment year, and will therefore not be required to submit improvement activities data.

<td>+1,635</td>
</tr>
</tbody>
</table>

*Currently approved by OMB under control number 0938-1314 (CMS-10621).

As discussed in section IV.A.3.b.(2)(d)(ii) of this proposed rule, we are proposing subgroup reporting in the CY 2023 MIPS performance period/2025 MIPS payment year. As we discussed in section V.B.8.e.(7)(a) of this proposed rule, we estimate that there will be 20 subgroup reporters in the CY 2023 MIPS performance period/2025 MIPS payment year, each of which will have burden related to the submission of improvement activities. We have included this burden in Table 101.
Consistent with the CY 2021 PFS final rule, we continue to estimate that the per response time required per individual or group is 5 minutes for a computer system analyst to submit by logging in and manually attesting that certain activities were performed in the form and manner specified by CMS with a set of authenticated credentials (84 FR 63140).

As shown in Table 102, we estimate an annual burden of 6,797 hours (81,562 responses × 5 minutes/60) and $647,210 (6,797 hr × $95.22/hr)) in CY 2022 MIPS performance period/2024 MIPS payment year.

As shown in Table 103, with the introduction of subgroup reporting in the CY 2023 MIPS performance period/2025 MIPS payment year, we estimate an annual burden of 6,799 hours (81,582 responses × 5 minutes/60) and $647,401 (6,799 hr × $95.22/hr)).
39514 Federal Register / Vol. 86, No. 139 / Friday, July 23, 2021 / Proposed Rules

As shown in Table 104, using our unchanged currently approved per respondent burden estimate, the increase of 1,635 in the number of respondents results in an adjustment of 136 hours (1,635 responses × 5 minutes/hr) at a cost of $12,973 (136 hr × $95.22/hr).

j. ICRs Regarding the Nomination of Improvement Activities (§ 414.1360)

The proposed requirements and burden associated with this rule’s data submission will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53922), CY 2019 PFS final rule (83 FR 60017 through 60018), CY 2020 PFS final rule (84 FR 63141) and the CY 2021 PFS final rule (85 FR 84989 through 85 FR 84990) for our previously finalized requirements and information collection burden for the nomination of improvement activities.

In section IV.A.3.d.(3)(c)(i)(B) of this rule, we are proposing: (1) To revise the required criteria for improvement activity nominations received through the Annual Call for Activities; (2) changes to the timeline for improvement activities nomination during a public health emergency (PHE); and (3) to suspend activities that become obsolete or impacted by clinical practice guideline changes from the program when this occurrence happens outside of the rulemaking process.

In section IV.A.3.d.(3)(c)(i)(B)(cc) of this rule, we are proposing 2 new criteria that beginning with the CY 2022 Annual Call for Activities MIPS improvement activities: (1) Should not duplicate other improvement activities in the Inventory and (2) should drive improvements that go beyond purely common clinical practices.

Additionally, we are proposing to increase the number of criteria stakeholders are required to meet when submitting an activity proposal from a minimum of 1 to all 8 criteria, which includes the two new proposed criteria. We believe that this proposal would provide clearer guidance to stakeholders when submitting a nomination for an improvement activity. In the CY 2021 PFS final rule, we estimated that it would require 0.6 hours for a medical and health services manager or equivalent and 0.4 hours for a physician to link the nominated improvement activity to existing and related cost and quality measures (85 FR 84989). Given that our current approved estimated time per respondent to nominate an improvement activity is 3 hours (1.8 hours for a medical and health services manager or equivalent and 1.2 hours for a physician), we assume that the proposed new requirement to meet all 8 criteria would require approximately 1 hour at $114.24/hr for a medical and health services manager to identify and submit an activity and 0.4 hours at a rate of $217.32/hr for a clinician to review each activity. Combined with our currently approved burden estimate, we propose to revise our estimate to 2.8 hours at $114.24/hr for a medical and health services manager or equivalent and 1.6 hours at $217.32/hr for a physician to nominate an improvement activity. This represents a change of +1 hour (2.8 hr × 1.8 hr) for a medical and health services manager or equivalent and +0.4 hours (2 hr × 1.6 hr) for a physician and an overall increase of 1.4 hours. We considered whether we should double our estimates for nomination of an improvement activity to 6 hours. Since only 2 of the required

</tbody>
</table>
8 criteria are new, we assume that stakeholders are familiar with the existing criteria and would not need additional time to review but would need the additional time to verify and confirm if the considered activity meets all the 8 criteria. We seek comment on our proposed estimate to revise the time for nomination of an improvement activity to 4.4 hours and if there are additional burden implications that we should consider for above proposals to revise the criteria.

In the CY 2021 PFS final rule, we finalized an exception stating that during public health emergencies (PHE) stakeholders can nominate improvement activities outside of the established Annual Call for Activities timeframe (85 FR 84989). Instead of only accepting nominations and modifications submitted February 1st through July 1 each year, we would accept nominations for the duration of the PHE as long as the improvement activity is still relevant. No other aspects of the Annual Call for Activities process would be affected (for example, criteria for nominating improvement activities, considerations for selection of improvement activities, or weighting policies would all still apply). In section IV.A.3.d.(3)(c)(i)(B) of this rule, we are proposing to clarify that in order to implement a new improvement activity for a PHE during the same year as the nomination, the nomination would need to be received no later than January 5th of the nomination year to be included in a rule for notice-and-comment rulemaking during that fiscal or calendar year, a necessary precursor to implementation if it were to be finalized, as described above.

We believe this proposal will not affect our currently approved burden estimates since we assume that the number of nominations will not change, but it would make an activity available for reporting to clinicians in the same performance year it was intended to be implemented. Similar to our assumptions in the CY 2021 PFS final rule (85 FR 84989), we expect additional nominations may be received as a result of this change. However, we do not have any data with which to estimate what the additional number may be. As a result, we are not making any proposed revisions to our currently approved burden estimate.

In section IV.A.3.d.(3)(c)(i)(C)(aa) of this rule, we are proposing that beginning with the CY 2022 MIPS performance period/2024 MIPS payment year we are proposing that for each improvement activity that is in the Inventory, if applicable, and impacted by significant changes or errors prior to the applicable data submission deadline, it will be removed from the program as soon as possible. In the CY 2020 PFS final rule (84 FR 62988 through 62990), we finalized the factors for consideration in removing improvement activities. Following the publication of the CY 2021 PFS proposed rule, the improvement activities team became aware that clinicians could no longer complete the activity from April 1 through December 31, 2020, because one of the improvement activities in the Inventory had expired on March 31, 2020. We do not anticipate any burden for stakeholders because of the above proposal as described, the proposed policy does not change requirements for the nomination of improvement activities. This proposal would help avoid stakeholder confusion and ensure the accuracy of the available activities in the Inventory. Therefore, we are not proposing to revise our estimated burden due to the above proposed policy.

Additionally, consistent with our assumptions in the CY 2021 PFS final rule (85 FR 84990) we continue to use our currently approved assumption that we will receive 31 nominations of new or modified activities which will be evaluated for the Improvement Activities Under Consideration (IAUC) list for possible inclusion in the CY 2023 Improvement Activities Inventory. The 2021 Annual Call for Activities ends on July 1, 2021; assuming updated information is available, we will update our estimate in the final rule.

As shown in Table 105, accounting for the change in burden per respondent estimate due to the provision to require all the 8 criteria for nomination of an improvement activity as described above in this section, we propose to revise our estimated annual information collection burden to 136 hours (31 nominations × 4.4 hr/nomination) at a cost of $20,695 (31 × [(2.8 hr × $114.24/hr) + (1.6 hr × $217.32/hr)])

Table: Estimated Burden for Nomination of Improvement Activities

| # of Nominations of New Improvement Activities (a) | 31 |
| # of Hours Per Medical and Health Services Manager to Identify and Nominate Activity (b) | 2.8 |
| # of Hours Per Physician to Identify Activity (c) | 1.6 |
| Annual Hours Per Respondent (d) = (b) + (c) | 4.4 |
| Total Annual Hours (e) = (a) * (d) | 136 |
| Cost to Identify and Submit Activity (medical and health services manager’s labor rate of $114.24/hr) (f) = $114.24/hr * (b) | $319.87 |
| Cost to Identify Improvement Activity (physician’s labor rate of $210.44/hr) (g) = $217.32/hr * (c) | $347.71 |
| Total Annual Cost Per Respondent (h) = (f) + (g) | $667.58 |
| Total Annual Cost (i) = (a) * (h) | $20,695 |

As shown in Table 106, using our unchanged estimate of the number of activities nominated, the increase in the burden per nomination results in a change of 43 hours (31 nominations × 1.4 hr/nomination) at a cost of $6,492 (31 activities × [(1 hr × $114.24/hr) + (0.4 hr × $217.32/hr)])
k. Nomination of MVPs

This rule does not propose any new or revised collection of information requirements or burden related to the nomination of MVPs for inclusion in the Quality Payment Program. The requirements and burden are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not proposing any changes under that control number.

l. ICRs Regarding the Cost Performance Category (§ 414.1350)

The cost performance category relies on administrative claims data. The Medicare Parts A and B claims submission process (OMB control number 0938–1197; CMS–1500 and CMS–1490S) is used to collect data on cost measures from MIPS eligible clinicians. MIPS eligible clinicians are not required to provide any documentation by CD or hardcopy. Moreover, the proposed policies in this rule do not result in the need to add or revise or delete any claims data fields. Consequently, we are not proposing any changes under that control number.

m. ICRs Regarding Partial QP Elections (§§ 414.1310(b) and 414.1430)

This rule does not propose any new or revised collection of information requirements related to the Partial QP Elections to participate in MIPS as a MIPS eligible clinician. However, we are proposing to adjust our currently approved burden estimates based on updated projections for the CY 2022 MIPS performance period/2024 MIPS payment year. The proposed adjusted burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

As shown in Table 107, based on our predictive QP analysis for the 2022 QP performance period/2024 payment year, which accounts for historical response rates in the CY 2020 MIPS performance period/2022 MIPS payment year, we propose to revise our estimate that 150 APM Entities and 100 eligible clinicians (representing approximately 9,000 Partial QPs) will make the election to participate as a Partial QP in MIPS, a total of 250 elections which is a decrease of 50 from the 300 elections that are currently approved by OMB under the aforementioned control number. We continue to estimate it will take the APM Entity representative or eligible clinician 15 minutes (0.25 hr) to make this election. In aggregate, we propose to revise our estimated annual burden to 63 hours (250 respondents × 0.25 hr/election) and $5,999 (63 hr × $95.22/hr).

### Table 106: Change in Estimated Burden for Nomination of Improvement Activities

</tr>
<tr>
<td>Labor rate for computer systems analyst (d)</td>
</tr>
<tr>
<td>Total Annual Cost (e) = (c) × (d)</td>
</tr>
</tbody>
</table>

As shown in Table 108, using our unchanged currently approved per respondent burden estimate, the proposed decrease in the number of Partial QP elections results in an adjustment of 12.5 hours (−50 elections × 0.25 hr) at a cost of −$1,191 (−12.5 hr × $95.22/hr) (85 FR 84991).
TABLE 108: Adjusted Burden for Partial QP Election

TABLE 109: Estimated Burden for Other Payer Advanced APM Identification Determinations: Payer-Initiated Process

<table>
<thead>
<tr>
<th>Burden Estimate</th>
</tr>
</thead>
<tbody>
<tr>
<td># of other payer payment arrangements (3 Medicaid, 3 Medicare Advantage Organizations, 1 remaining other payers) (a)</td>
</tr>
<tr>
<td>Total Annual Hours Per other payer payment arrangement (b)</td>
</tr>
<tr>
<td>Total Annual Hours (c) = (a) * (b)</td>
</tr>
<tr>
<td>Labor rate for a computer systems analyst (d)</td>
</tr>
<tr>
<td>Total Annual Cost (c) = (c) * (d)</td>
</tr>
</tbody>
</table>

As shown in Table 109, using our unchanged currently approved per respondent burden estimate, the proposed decrease in the number of payer-initiated requests from 800 to 150 results in an adjustment of -650 hours ($65 requests × 10 hr) at a cost of $61,893 ($650 hr × $95.22/hr) (85 FR 84992).
This rule does not propose any new or revised collection of information requirements or burden related to the Eligible-Clinician Initiated Process. However, we are proposing to adjust our currently approved burden estimates based on updated projections for the CY 2022 MIPS performance period/2024 MIPS payment year. As mentioned above, the new and adjusted burden will be submitted to OMB for approval. As shown in Table 111, based on the actual number of requests received in the 2020 QP performance period, we estimate that in CY 2022 for the 2023 QP performance period, 15 Eligible-Clinician Initiated request for Other Payer Advanced APM determinations will be submitted, a decrease of 135 from the 150 total requests currently approved by OMB under the aforementioned control number. We continue to estimate it will take 10 hours for a computer system analyst per arrangement submission. We propose to revise our estimated annual burden to 150 hours (15 submissions × 10 hr/ submission) and $14,283 (150 hr × $95.22/hr).

As shown in Table 112, using our unchanged currently approved per respondent burden estimate, the proposed decrease in the number of eligible clinician-initiated requests from 150 to 15 results in an adjustment of −1,350 hours (−135 requests × 10 hr) at a cost of −$128,547 (−1,350 hr × $95.22/hr) (85 FR 84993).
(3) Submission of Data for QP Determinations Under the All-Payer Combination Option (§ 414.1440)

This rule does not propose any new or revised collection of information requirements related to the Submission of Data for QP Determinations under the All-Payer Combination Option. The requirements and burden are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not proposing any changes under that control number.

o. ICRs Regarding Voluntary Participants Election To Opt-Out of Performance Data Display on Physician Compare (§ 414.1395)

This rule does not propose any new or revised collection of information requirements related to the election by voluntary participants to opt-out of public reporting on Physician Compare. However, we are proposing adjustments to our currently approved burden estimates based on data from the CY 2019 MIPS performance period/2021 MIPS payment year. The proposed adjusted burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53924 through 53925), CY 2019 PFS final rule (83 FR 60022), CY 2020 PFS final rule (84 FR 63145 through 63146) and the CY 2021 PFS final rule (85 FR 84993) for our previously finalized requirements and burden for voluntary participants to opt-out of public reporting on Physician Compare.

In the CY 2021 PFS final rule (85 FR 84993), we estimated that 10 percent of the clinicians and groups who voluntarily participate in MIPS would opt out of public reporting. Based on the number of opt-out eligible clinicians who chose to opt-out of public reporting in the CY 2019 MIPS performance period/2021 MIPS payment year, we propose to revise our estimates. We anticipate that 0.1 percent of the total clinicians and groups who will voluntarily participate in the CY 2022 MIPS performance period/2024 MIPS payment year will also elect not to participate in public reporting. This results in a total of 38 (0.001 × 37,934 voluntary MIPS participants) clinicians and groups, a decrease of 3,448 from the currently approved estimate of 3,486. Voluntary MIPS participants are clinicians that are not QPs and are expected to be excluded from MIPS after applying the eligibility requirements set out in the CY 2019 PFS final rule but have elected to submit data to MIPS. As discussed in the RIA section of the CY 2019 PFS final rule, we continue to estimate that 33 percent of clinicians that exceed one (1) of the low-volume criteria, but not all three (3), will elect to opt-in to MIPS, become MIPS eligible, and no longer be considered a voluntary reporter (83 FR 60050).

Table 113 shows that for these voluntary participants, we continue to estimate it will take 0.25 hours for a computer system analyst to submit a request to opt-out. In aggregate, we estimate an annual burden of 9.5 hours (38 requests × 0.25 hr/request) and $904 (9.5 hr × $95.22/hr).

<table>

</tr>
</tbody>
</table>

As shown in Table 108, using our unchanged currently approved per respondent burden estimate, the decrease of 3,448 opt outs by voluntary participants results in an adjustment of −862 hours (−3,448 requests × 0.25 hr) at a cost of $–82,079 (−862 hr × $95.22/hr).
Table 115 summarizes this proposed rule’s total burden estimates for the Quality Payment Program for both the CY 2022 and CY 2023 MIPS performance periods/2024 and 2025 MIPS payment years. In the CY 2021 PFS final rule, the total estimated burden for the CY 2022 MIPS performance period/2024 MIPS payment year was 1,473,741 hours at a cost of $144,034,968 (85 FR 84994). Accounting for updated wage rates and the subset of all Quality Payment Program ICRs discussed in this rule compared to the CY 2021 PFS final rule, the total estimated annual burden of continuing policies and information set forth in the CY 2021 PFS final rule into the CY 2022 MIPS performance period/2024 MIPS payment year was 1,473,741 hours at a cost of $144,034,968 (85 FR 84994). The difference of -40,982 hours (43,821 hours – 84,803 hours) and -4,166,021 ($4,411,707 – $8,577,728) between this estimate and the total burden shown in Table 115 is the reduction in burden associated with impacts of the policies proposed for the CY 2023 MIPS performance period/2025 MIPS payment year. These policy changes include the proposals to sunset the CMS Web Interface measures as a collection type/submission type and to implement a new information collection for MVPs and subgroups.

We have included Table 115 to assist in understanding these differences. Note that the difference between the burden estimates for the CY 2022 and 2023 MIPS performance periods/2024 and 2025 MIPS payment years is entirely due to the proposed policies to introduce MVP and subgroup reporting and sunset the CMS Web Interface measures as a collection type/submission type beginning in the CY 2023 MIPS performance period/2025 MIPS payment year.

C. Summary of Annual Burden Estimates for Proposed Changes
D. Submission of Comments

We have submitted a copy of this rule to OMB for its review of the rule’s proposed information collection requirements and burden. The requirements are not effective until they have been approved by OMB.

To obtain copies of the supporting statement and any related forms for the proposed collections previously discussed, please visit CMS’s website at https://www.cms.gov/RegulationsandGuidance/Legislation/PaperworkReductionActof1995/PRAListing.html, or call the Reports Clearance Office at (410) 786–1326.

We invite public comments on the proposed information collection requirements and burden. If you wish to comment, please submit your comments electronically as specified in the DATES and ADDRESSES sections of this proposed rule and address to (CMS–1751–P) and where applicable the ICR’s CFR citation, CMS ID number, and OMB control number.

VI. Response to Comments

Because of the large number of public comments we normally receive on Federal Register documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the DATES section of this preamble, and, when we proceed with a subsequent document, we will respond to the comments in the preamble to that document.

VII. Regulatory Impact Analysis

A. Statement of Need

In this proposed rule, we are proposing to make payment and policy changes under the Medicare PFS and required statutory changes under the Consolidated Appropriations Act, 2016 and sections 2003 and 2005 of the SUPPORT for Patients and Communities Act of 2018. We are also proposing changes to payment policy and other related policies for Medicare Part B. In addition, if finalized, this proposed rule would make modest revisions to certain Medicare provider and supplier enrollment regulatory provisions and add already existing provider and supplier requirements pertaining to prepayment and post-payment review activities.

This proposed rule is necessary to make policy changes under Medicare fee-for-service and to address various provider and supplier enrollment issues. Therefore, we include a detailed Regulatory Impact Analysis (RIA) to assess all costs and benefits of available regulatory alternatives and explain the selection of these regulatory approaches that we believe adhere to statutory requirements and, to the extent feasible, maximize net benefits.

B. Overall Impact

We examined the impact of this rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (February 2, 2013), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104–4), Executive Order 13132 on Federalism (August 4, 1999), and the Congressional Review Act (5 U.S.C. 804(2)).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). An RIA must be prepared for major rules with economically significant effects ($100 million or more in any 1 year). We estimated, as discussed in this section, that the PFS provisions included in this proposed

| TABLE 120: Proposed Annual Requirements and Burden Estimates |
|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|
| **Regulation Section(s) Under Title 42 of the CFR** | **OMB Control Number** | **Respondents** | **Total Annual Responses** | **Burden per Response (hours)** | **Total Annual Time (hours)** | **Labor Cost ($/hr)** | **Total Cost ($)** |
| §§ 414.802 and 414.806 (Requiring Certain Manufacturers to Report Drug Pricing Information for Part B)** | 0938-0921 | 740 | 2,960 | 13 | 38,180 | 38.86 | 1,495,333 |
| § 423.160(a) (Electronic Prescribing for Controlled Substances for a Covered Part D Drug Under a Prescription Drug Plan or an MA–P[D] Plan)** | 0938-1396 | 100 | 100 | 0.1667 | 16.67 | 210.44 | 3,508 |
| Part 403 (Open Payments Proposals included in the CY 2022 PFS) | 0938-1237 | 2,398 | 2,398 | Varies | 1,263 | Varies | 64,561 |
| **TOTAL** | **123,138** | **1,739** | **varies** | **-22,647.33** | **varies** | **-4,752,038** |

*The finalized requirements and burden will be submitted to OMB using the standard PRA process.

**Averages the CY 2022 and CY 2023 MIPS performance period burden changes over the 2-year 2024 and 2025 MIPS payment years.
rule would redistribute more than $100 million in 1 year. Therefore, we estimate that this rulemaking is "economically significant" as measured by the $100 million threshold, and hence also a major rule under the Congressional Review Act. Accordingly, we prepared an RIA that, to the best of our ability, presents the costs and benefits of the rulemaking. The RFA requires agencies to analyze options for regulatory relief of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. Most hospitals, practitioners and most other providers and suppliers are small entities, either by nonprofit status or by having annual revenues that qualify for small business status under the Small Business Administration standards. (For details, see the SBA’s website at http://www.sba.gov/content/table-small-business-size-standards (refer to the 620000 series)). Individuals and states are not included in the definition of a small entity.

The RFA requires that we analyze regulatory options for small businesses and other entities. We prepare a regulatory flexibility analysis unless we certify that a rule would not have a significant economic impact on a substantial number of small entities. The analysis must include a justification concerning the reason action is being taken, the kinds and number of small entities the rule affects, and an explanation of any meaningful options that achieve the objectives with less significant adverse economic impact on the small entities.

Approximately 95 percent of practitioners, other providers, and suppliers are considered to be small entities, based upon the SBA standards. There are over 1 million physicians, other practitioners, and medical suppliers that receive Medicare payment under the PFS. Because many of the affected entities are small entities, the analysis and discussion provided in this section, as well as elsewhere in this proposed rule is intended to comply with the RFA requirements regarding significant impact on a substantial number of small entities.

In addition, section 1102(b) of the Act requires us to prepare an RIA if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 603 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area for Medicare payment regulations and has fewer than 100 beds. Medicare does not pay rural hospitals for their services under the PFS; rather, the PFS pays for physicians’ services, which can be furnished by physicians and NPPs in a variety of settings, including rural hospitals. We did not prepare an analysis for section 1102(b) of the Act because we determined, and the Secretary certified, that this proposed rule will not have a significant impact on the operations of a substantial number of small rural hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 also requires that agencies assess anticipated costs and benefits on state, local, or tribal governments or on the private sector before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. In 2021, that threshold is approximately $158 million. This proposed rule will impose no mandates on state, local, or tribal governments or on the private sector.

Executive Order 13132 establishes certain requirements that an agency must meet when it issues a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on state and local governments, preempts state law, or otherwise has federalism implications. Since this proposed rule does not impose any costs on state or local governments, the requirements of Executive Order 13132 are not applicable.

We prepared the following analysis, which together with the information provided in the rest of this preamble, meets all assessment requirements. The analysis explains the rationale for and purposes of this proposed rule; details the costs and benefits of the rule; analyzes alternatives; and presents the measures we would use to minimize the burden on small entities. As indicated elsewhere in this proposed rule, we discussed a variety of changes to our regulations, payments, or payment policies to ensure that our payment systems reflect changes in medical practice and the relative value of services, and implementing statutory provisions. We provide information for each of the policy changes in the relevant sections of this proposed rule. We are unaware of any relevant federal rules that duplicate, overlap, or conflict with this proposed rule. The relevant sections of this proposed rule contain a description of significant alternatives if applicable.

C. Changes in Relative Value Unit (RVU) Impacts

1. Resource-Based Work, PE, and MP RVUs

Section 1848(c)(2)(B)(ii)(II) of the Act requires that increases or decreases in RVUs may not cause the amount of expenditures for the year to differ by more than $20 million from what expenditures would have been in the absence of these changes. If this threshold is exceeded, we make adjustments to preserve budget neutrality.

Our estimates of changes in Medicare expenditures for PFS services compared payment rates for CY 2021 with payment rates for CY 2022 using CY 2020 Medicare utilization. The payment impacts described in this proposed rule reflect averages by specialty based on Medicare utilization. The payment impact for an individual practitioner could vary from the average and would depend on the mix of services he or she furnishes. The average percentage change in total revenues will be less than the impact displayed here because practitioners and other entities generally furnish services to both Medicare and non-Medicare patients. In addition, practitioners and other entities may receive substantial Medicare revenues for services under other Medicare payment systems. For instance, independent laboratories receive approximately 83 percent of their Medicare revenues from clinical laboratory services that are paid under the Clinical Laboratory Fee Schedule (CLFS).

The PFS update adjustment factor for CY 2022, as required by section 1848(d)(19) of the Act, is 0.00 percent before applying other adjustments. In addition, section 101 of Division N of the CAA provided a 3.75 percent increase in PFS payment amounts for services furnished on or after January 1, 2021, and before January 1, 2022 and required that the increase shall not be taken into account in determining PFS payment rates for subsequent years. The expiration of this 3.75 percent increase in payment amounts will result in the CY 2022 conversion factor being calculated as though the 3.75 percent increase for the CY 2021 conversion factor had never been applied.

To calculate the CY 2022 PFS conversion factor (CF), we took the CY 2021 conversion factor without the 1-year 3.75 percent increase provided by the CAA and multiplied it by the budget neutrality adjustment required as described in the previous paragraphs. We estimate the CY 2022 PFS CF to be 33.5848 which reflects the budget
neutrality adjustment under section 1848(c)(2)(B)(ii)(II) of the Act, the 0.00 percent update adjustment factor specified under section 1848(d)(19) of the Act, and the expiration of the 3.75 percent increase for services furnished in CY 2021, as provided in the CAA. We estimate the CY 2022 anesthesia CF to be 21.0442 which reflects the same overall PFS adjustments with the addition of anesthesia-specific PE and MP adjustments.

Table 123 shows the payment impact of the policies contained in this proposed rule on PFS services, should CMS finalize this rule as proposed. To the extent that there are year-to-year changes in the volume and mix of services provided by practitioners, the actual impact on total Medicare revenues will be different from those shown in Table 123 (CY 2022 PFS Estimated Impact on Total Allowed Charges by Specialty). The following is an explanation of the information represented in Table 123.

- **Column A (Specialty):** Identifies the specialty for which data are shown.
- **Column B (Allowed Charges):** The aggregate estimated PFS allowed charges for the specialty based on CY 2020 utilization and CY 2021 rates. That is, allowed charges are the PFS amounts for covered services and include coinsurance and deductibles (which are the financial responsibility of the beneficiary). These amounts have been summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty.
- **Column C (Impact of Work RVU Changes):** This column shows the estimated CY 2022 impact on total allowed charges of the changes in the work RVUs, including the impact of changes due to potentially misvalued codes.
- **Column D (Impact of PE RVU Changes):** This column shows the estimated CY 2022 impact on total allowed charges of the changes in the PE RVUs.
- **Column E (Impact of MP RVU Changes):** This column shows the estimated CY 2022 impact on total allowed charges of all the changes in the MP RVUs.
- **Column F (Combined Impact):** This column shows the estimated CY 2022 impact on total allowed charges of the changes in the PE RVUs.

</table>
The estimated impacts also reflect decreases due to continued implementation of previously finalized code-level reductions that are being phased in over several years. For independent laboratories, it is important to note that these entities receive approximately 83 percent of their Medicare revenues from services that are paid under the CLFS. As a result, the estimated 2 percent decrease for CY 2021 is only applicable to approximately 17 percent of the Medicare payment to these entities. We often receive comments regarding the changes in RVUs displayed on the specialty impact table (Table 123), including comments received in response to the proposed valuations. We remind stakeholders that although the estimated impacts are displayed at the specialty level, typically the changes are driven by the valuation of a relatively small number of new and/or potentially misvalued codes. The percentage changes in Table 123 are based upon aggregate estimated PFS allowed charges summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty, and compared to the same summed total from the previous calendar year. Therefore, they are averages, and may not necessarily be representative of what is happening to the particular services furnished by a single practitioner within any given specialty. To illustrate how impacts can vary within specialties, we created a public use file that models the expected percentage change in total RVUs per practitioner. Using CY 2020 utilization data, Total RVUs change between -1 percent and 1 percent. Other specialties exhibit more variation in changes in total RVUs per practitioner. For example, for diagnostic testing facilities, 32 percent of IDTFs would experience a 5 percent or more decrease in Total RVUs, but these suppliers represent only 28 percent of Total RVUs for this specialty. Meanwhile, one percent of IDTFs would experience 10 percent or more increases in Total RVUs and these suppliers account for 28 percent of Total RVUs for this specialty.

b. Impact

We often receive comments regarding the changes in RVUs displayed on the specialty impact table (Table 123), including comments received in response to the proposed valuations. We remind stakeholders that although the estimated impacts are displayed at the specialty level, typically the changes are driven by the valuation of a relatively small number of new and/or potentially misvalued codes. The percentage changes in Table 123 are based upon aggregate estimated PFS allowed charges summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty, and compared to the same summed total from the previous calendar year. Therefore, they are averages, and may not necessarily be representative of what is happening to the particular services furnished by a single practitioner within any given specialty. To illustrate how impacts can vary within specialties, we created a public use file that models the expected percentage change in total RVUs per practitioner. Using CY 2020 utilization data, Total RVUs change between -1 percent and 1 percent. Other specialties exhibit more variation in changes in total RVUs per practitioner. For example, for diagnostic testing facilities, 32 percent of IDTFs would experience a 5 percent or more decrease in Total RVUs, but these suppliers represent only 28 percent of Total RVUs for this specialty. Meanwhile, one percent of IDTFs would experience 10 percent or more increases in Total RVUs and these suppliers account for 28 percent of Total RVUs for this specialty.

b. Impact

Column F of Table 123 displays the estimated CY 2022 impact on total allowed charges, by specialty, of all the RVU changes. A table showing the estimated impact of all of the changes on total payments for selected high volume procedures is available under “downloads” on the CY 2022 PFS proposed rule website at http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/. We selected these procedures for sake of illustration from among the procedures most commonly furnished by a broad spectrum of specialties. The change in both facility rates and the nonfacility rates are shown. For an explanation of facility and nonfacility PE, we refer readers to Addendum A on the CMS website at http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/.

D. Effect of Proposed Changes Related to Telehealth Services

Before the PHE for COVID–19, approximately 15,000 fee-for-service Medicare beneficiaries received a Medicare telemedicine service each
Early Data from the Start of the Covid-19 Pandemic

E. Effect of Changes Related to Services Furnished in Whole or in Part by PTAs and OTAs

As discussed in section II.H., we are proposing revisions to the current de minimis policy for services furnished in whole or in part by PTAs/OTAs that we finalized in CY 2020 PFS final rule (84 FR 62702 through 62708) under which the CQ or CO modifier would apply when the PTA or OTA furnished more than 10 percent of a service or a 15-minute unit of service. Beginning January 1, 2022, CMS will apply a 15 percent reduction to the payment amount for a physical or occupational therapy service when the CQ/CO modifier is applied to the service. Our proposed revision to the policy would allow the PT/OT to bill without the CQ/CO modifier for the final 15-minute unit (in a multi-unit billing scenario) when the PT/OT meets the billing threshold of 8 minutes, which is when the minutes are greater than the midpoint (7.5 minutes) of the 15-minute unit, regardless of any minutes provided by the PTA/OTA for that final unit.

Under our proposal, the PT/OT services would not be inadvertently discounted as the result of any “left- over” minutes provided by the PTA/OTA when the therapist provides enough minutes on his or her own to meet the billing threshold amount. In these scenarios, the PTA’s/OTA’s minutes are considered immaterial for the purposes of billing. For example, if the PT/OT provided 23 minutes of a 15-minute service and the PTA/OTA provided another 8 minutes of the same service—three units of service can be billed for the 43 total minutes (38 minutes remaining). Here, one full 15-minute unit of service is billed without the CQ/CO modifier for the PT/OT service with 8 minutes remaining, and one full unit of service is billed with the CQ/CO modifier for the PTA/OTA service with 5 minutes remaining. Under the proposed policy, the third unit is billed without the CQ/CO modifier because the 8 minutes provided by the PT/OT meets the billing threshold amount. However, under our current de minimis policy, the 5 minutes provided by the PTA/OTA is more than 10 percent (it is 38 percent of the total service) and therefore, we do not anticipate any significant increase in utilization.

The estimated cost impact on overall Medicare services is unclear, though these changes would largely maintain current policies and access to the specific mental health services that are available to beneficiaries during the PHE. By requiring that a modifier be appended to the claim to identify that the service was furnished via audio-only communication technology, we will be able to closely monitor utilization and address any potential concerns regarding overutilization through future rulemaking.

Section 123 of the CAA removed the geographic and site of service restrictions for telehealth services furnished for the purpose of diagnosis, evaluation, or treatment of a mental health disorder, and requires that a physician or practitioner furnish an in-person, non-telehealth service to a beneficiary within 6 months prior to the first time the physician or practitioner furnishes a telehealth service to the beneficiary, and thereafter, at intervals as specified by the Secretary. Section 125 of the CAA created a new Medicare provider type—the rural emergency hospital, effective beginning in CY 2023—and added rural emergency hospitals to the list of eligible telehealth originating sites at section 1834(m)(4)(C)(ii) of the Act.

As discussed in section II.D. of this proposed rule, we are proposing to require that, as a condition of payment for a telehealth service described in section 1834(m)(7) of the Act, the billing physician or practitioner must have furnished an in-person, non-telehealth service to the beneficiary within the 6-month period before the date of service of a telehealth service as specified in section 1834(m)(7)(B)(i) of the Act. We are also seeking comment on whether the required in-person, non-telehealth service could also be furnished by another physician or practitioner of the same specialty and same subspecialty within the same group as the physician or practitioner who furnishes the telehealth service. Given that the removal of the geographic and site of service restrictions for telehealth will expand the availability of mental health services, we anticipate that utilization of these mental health services will be comparable to observed utilization for mental health services during the COVID–19 PHE.

With regard to our proposal to retain all services added to the Medicare telehealth services list on a Category 3 basis until the end of CY 2023, we believe our proposals would provide clarity to the stakeholder community but will have a negligible impact on PFS expenditures. For example, services that have already been added to the permanent telehealth services list are furnished via telehealth, on average, less than 0.1 percent of the time they are reported. The statutory payment requirements for Medicare telehealth services under section 1834(m) of the Act, such as the originating site requirements related to geographic location and site of service, have limited increases in utilization outside of the COVID–19 PHE; however, we believe there is value in allowing physicians to furnish services added to the Medicare telehealth services list on a category 3 basis, and for patients to receive broader access to this care through telehealth. Additionally, for services added to the Medicare telehealth list on a Category 3 basis, outside of the circumstances of the PHE for COVID–19, all of the statutory restrictions under section 1834(m) of the Act will also apply to these services; therefore, we do not anticipate any significant increase in utilization.

251 Medicare Beneficiary Use of Telehealth Visits: Early Data from the Start of the Covid-19 Pandemic (hlth.gov)
percent) meaning the CQ/CO modifier is applied to the third and final unit of service.

Under our current de minimis policy, under which the CQ/CO modifier is applied whenever the PTA/OTA provides more than 10 percent of a service whether or not the PT/OT furnishes enough of the service to bill for it without the portion furnished by the PTA/OTA, stakeholders have expressed concern that the PT/OT has a financial incentive not to have the PTA/OTA provide any additional minutes, regardless of the individual patient’s needs, when those minutes of service would lead to a reduced payment for a unit of a service. There may be a cost implication to our proposal as fewer billing scenarios may result in application of the CQ/CO modifiers and consequent payment reduction. However, we believe that basing our proposed policy on a “midpoint rule” in which the PT/OT provides enough minutes on their own (8 or more minutes) to bill for the final unit of a billing scenario could eliminate the PT’s/OT’s financial incentive to not provide appropriate therapy to an individual patient when it is furnished by the PTA/OTA. On the other hand, if we were to continue with our de minimis standard to apply to all billing scenarios for PTA/OTA services that exceed the 10 percent standard, we are uncertain how to gauge the overall costs of this policy because of the possible altered PT/OT behavioral change that is due to the financial incentives built into that policy as discussed above.

F. Other Provisions of the Regulation

1. Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs)

In section III.A. of this proposed rule, we make multiple proposals related to RHCs and FQHCs. In terms of estimated impacts to the Medicare program, Payment for Attending Physician Services Furnished by RHCs or FQHCs to Hospice Patients as required by section 132 of the CAA, 2021 and Concurrent Billing for CCM and Transitional Care Management TCM Services for RHCs and FQHCs will have negligible impact to Medicare spending.

Section 130 requires that all independent RHCs are now subject to the per-visit limit (which is also referred to as “cap”) and phases in an increase in the statutory payment cap over an 8-year period. The cap in CY 2021, for services furnished after March 31, is set at $100 per visit, then at $126 per visit in 2022; at $139 per visit in 2023; at $152 per visit in 2024; at $152 per visit in 2025; at $165 per visit in 2026; at $178 per visit in 2027; and at $190 per visit in 2028. Beyond 2028 the limit is updated by the applicable Medicare Economic Index (MEI).

This provision also controls the annual rate of growth in payments to certain provider-based RHCs whose payments are currently higher than the payment limit. Each year, but for services provided after March 31 in 2021, the payment limit shall be set at the greater of: (1) The RHC per visit amount from the prior year, increased by the percentage increase in the applicable MEI; and (2) the cap limits applicable to each year as described above.

In order to be eligible for this “grandfathering” policy, the RHC must have been based in a hospital with fewer than 50 beds and enrolled in Medicare as of December 31, 2019.

Section 2 of H.R. 1868, enacted on April 14, 2021, made technical corrections to section 130. First, for an RHC that is hospital-based and whose parent hospital has fewer than 50 beds, the date by which the RHC must be Medicare-certified, in order to be grandfathered, is changed from December 31, 2019 to December 31, 2020. Next, a clinic that is owned by a hospital with fewer than 50 beds and that submitted certain applications (received by Medicare) for certification as a Medicare RHC prior to the end of 2020 is to be grandfathered, and its clinic-specific cap is to be set based on its 2021 cost per visit. Lastly, a grandfathered RHC must continue to be owned by a hospital with fewer than 50 beds; if the parent hospital exceeds 50 beds, the RHC will lose its grandfathered status.

Table 122 are the FY estimates (in millions) for the impact of section 130, which improves payments to RHCs. These providers are currently paid an all-inclusive rate (AIR) for all medically necessary medical and mental health services, and qualified preventive health services furnished on the same day (with some exceptions). The AIR is subject to a payment limit, except for certain provider-based RHCs that have an exception to the payment limit. The RHC payment limit per visit for calendar year (CY) 2021 is $87.52, which is 1.4 percent higher than the CY 2020 payment limit of $86.31.

In section III.B. of this proposed rule, we discuss that we are proposing to revise the regulatory requirement that an RHC or FQHC mental health visit must be a face-to-face (that is, in person) encounter between an RHC or FQHC patient and an RHC or FQHC practitioner to also include encounters furnished through interactive, real-time telecommunications technology, but only when furnishing services for the purposes of diagnosis, evaluation, or treatment of a mental health disorder.

According to our analysis of Medicare Part B claims data for services furnished via Medicare telehealth under the PFS during the PHE, use of telehealth for many professional services spiked in utilization around April 2020 and diminished over time, but not to pre-pandemic levels. In contrast, Medicare claims data suggests that for mental health services both permanently and temporarily added to the Medicare Telehealth list, subsequent to April 2020, the trend is toward maintaining a steady state of usage over time. Given the expanded availability of mental health services at RHCs and FQHCs, we do anticipate that this policy will increase spending, however, we are not certain of the magnitude of this increase, since it is not clear at this time how or whether trends related to utilization of communication technology during the PHE will continue after such a time that the PHE were to end. While the estimated cost impact of this proposal is unclear, the proposed requirement that a modifier be appended to the claim to identify that the service was furnished via audio-only communication technology would allow us to closely monitor utilization and address any potential concerns.
regarding overutilization through future rulemaking.

2. Requiring Certain Manufacturers To Report Drug Pricing Information for Part B (§§ 414.802 and 414.806)

This provision implements new statutory requirements under sections 1847A and 1927 of the Act, as amended by section 401 of the CAA (for the purposes of this section of this proposed rule, hereinafter referred to as “section 401”). These new requirements will improve the accuracy of reported payment limits and limit the use of WAC-based pricing.

As described in section III.D.1. of this proposed rule, in considering whether to exclude repackagers from the reporting requirements at section 1847A(f)(2) of the Act, we conducted two analyses to estimate: (1) The proportion of repackaged products in our existing ASP data; (2) the number of new ASP submissions we can expect as a result of the new reporting requirements under section 401; and (3) the proportion of those (new) submissions that involve repackaged products.

Additionally, while we believe it will impact reporting volume and payment limits under section 1847A of the Act for many billing and payment codes, we are unable to estimate the magnitude of these effects for the following reasons. We estimate: (1) 361 non-reporting manufacturers (of either single source or multiple source drugs) will now be required to report ASP data under section 1847A(f)(2) of the Act; and (2) 6114 products payable under Part B that these non-reporting manufacturers sell. However, we do not know which Healthcare Common Procedure Coding System (HCPCS) code payments will be impacted by these 6114 products, nor do we know the sales volume of these 6114 products. Because this information is used to calculate volume-weighted ASP payment limits, we are unable to quantitatively estimate the economic impacts of this provision (that is, the likely costs or savings) on beneficiaries, the government, and other stakeholders. (We note that the economic impacts on manufacturers, as a result of the information collection requirements of this provision is discussed in section V. of this proposed rule.)

For single source drugs, these changes may result in lower payment limits because, typically, the WAC plus 3 percent is higher than ASP plus 6 percent. This then translates to cost savings for both the government and beneficiaries, who will pay coinsurance on a lesser amount. However, for the reason stated previously, we are unable to predict the magnitude of this effect.

Similarly, payment limits for multiple source drugs could increase or decrease, and we are unable to predict the direction or magnitude of specific or aggregate effects at this time.

We do not anticipate that this provision of this proposed rule would necessitate the revision of existing Medicaid Drug Rebate Agreements.

We welcome comment on (1) the likely costs or savings to beneficiaries, the government, and other stakeholders and (2) other related impacts of this provision.

3. Determination of ASP for Certain Self-Administered Drug Products

a. Anticipated Effects

This provision implements new statutory requirements under section 1847A(g) of the Act, as amended by section 405 of the CAA 2021, (for the purposes of this section of this proposed rule, hereinafter referred to as “section 405”). As identified by the OIG studies discussed in section III.D.2. of this proposed rule, the CMS payment-limit determination under section 1847A of the Act includes all versions of a product marketed under a single FDA approval, and consistent with section 1847A(b)(5) of the Act, the payment-limit determination does not exclude products based on packaging. Thus, the volume-weighted, average-ASP determination can include self-administered versions that may lead to increased program and beneficiary costs because of distorted ASP-based payment limits. In particular, the OIG studies identified two billing and payment codes that included self-administered NDCs. The OIG study determined that as a result of the inclusion of these NDCs in the calculation of the ASP payment limit, Medicare payment amounts remained inflated in 2017 and 2018, causing the program and its beneficiaries to pay an additional $497 million during this period. Since 2014, current payment methodology has resulted in an additional $173 million in Medicare beneficiary coinsurance for these two NDCs. (See OIG’s July 2020 report titled, “Loophole in Drug Payment Rule Continues To Cost Medicare and Beneficiaries Hundreds of Millions of Dollars,” available at https://oig.hhs.gov/oei/reports/OEI-BL-20-00100.asp.)

Implementation of the proposed regulatory changes has the potential to result in decreased payment limits for identified billing and payment codes that could, in turn, substantially reduce Medicare and beneficiary expenditures, as described in the OIG study. Since section 1847A(g)(3) of the Act requires CMS to implement the required payment changes beginning on July 1, 2021, these potential savings may be observed within the year.

By adding sections 1847A(g)(1) and (2) of the Act, section 405 also directs the OIG to conduct future studies with same or similar methodologies to those in the July 2020 report and directs CMS to apply the lesser of payment methodology to the applicable billing and payment codes. This has the potential to result in additional savings to the program and beneficiaries if additional products are identified by these periodic OIG studies.

b. Expected Benefits

Codifying the provisions set forth by section 405 would permit CMS to apply the lesser of payment methodology at section 1847(g)(2) of the Act to billing and payment codes identified by future OIG studies (described in section III.D.2. of this proposed rule). This provision addresses distorted payment limits for these products and may result in payment amounts that are better aligned with versions of these products that are payable under Part B (for example, versions that are usually not self-administered). Although we are unable to quantify the total magnitude of the potential savings, these changes have the potential to substantially reduce program expenditures and beneficiary coinsurance.

4. Appropriate Use Criteria

Section 1834(q)(2) of the Act, as added by section 218(b) of the Protecting Access to Medicare Act (PAMA), established a program to promote the use of appropriate use criteria (AUC) for applicable imaging services furnished in an applicable setting.

In the CY 2019 PFS final rule (83 FR 59452), we performed a comprehensive regulatory impact analysis for this program. In this proposed rule, we are proposing to begin the payment penalty phase of the program on the later of January 1, 2023 or the January 1 of the year after the year in which the PHE for COVID–19 ends. Because, under our proposals, the payment penalty phase will be further delayed, we are updating the estimates for incremental changes from the regulatory impact analysis from the CY 2019 PFS final rule. Since we are not proposing new policy requirements nor do we have sufficient reason to change any of the assumptions made in the RIA finalized in the CY 2019 PFS (83 FR 60034 through 60044).
we are only updating the analysis to reflect 2019 Medicare claims data (updated from 2014). We identify four incremental changes from the CY 2019 PFS final rule estimates due to updated claims data: (1) Impact of required AUC consultations by ordering professionals; (2) impact to Medicare beneficiaries; (3) process efficiencies to potentially offset the estimated burden on Medicare beneficiaries; and (4) impact on transmitting orders for advanced diagnostic imaging services. Each of these incremental changes results in a lower estimate.

a. Impact of Required AUC Consultations by Ordering Professionals

As discussed in detail in the CY 2019 PFS final rule (83 FR 60035 through 60037), the annual impact estimate of consultations by ordering professionals was $70,001,700. In our estimates, we calculated the burden for auxiliary personnel to consult AUC under the direction of an ordering professional and the burden for ordering professionals to perform the consultation directly. We estimated that 90 percent of consultations would be performed by a medical assistant (occupation code 31–9092) and 10 percent of consultations would be performed by a general practitioner (occupation code 29–1062). We estimated that 43,181,818 2-minute consultations occur annually.

Using 2019 Medicare claims data as our basis for the analysis, we propose to change the methodology used to determine the volume of consultations and propose to use more granular data that will reduce potential double-counting of advanced diagnostic imaging services. For example, an imaging service furnished in an outpatient hospital department could have two claims associated with that service. There could be a claim from the facility and a claim from the physician that interprets that imaging service. In the CY 2019 RIA (83 FR 60034 through 60044) we were concerned that the estimate of 43,181,818 consultations may be an overestimate because it took into account total claims. For this CY 2022 RIA, we propose to change the method of counting the total number of advanced diagnostic imaging services that will be furnished under the AUC program which will correspond to the total number of consultations.

Using the Integrated Data Repository we identified Medicare claims using the following parameters: (1) 2019 Date of service; (2) claim lines containing one of the procedures identified in CR10481 and CR11268 at https://www.cms.gov/Regulations-and-Guidance/Guidance/Transmittals/2018Downloads/R2040OTN.pdf and https://www.cms.gov/files/document/r2040otn.pdf, respectively; and (3) claims types of outpatient or practitioner. Claims were then separated based on the setting in which the imaging service was furnished and further by claim type. Using only services billed on the professional claim type, the total number of consultation lines containing one of the identified procedure codes was included to total 30,359,901 advanced diagnostic imaging services estimated to be subject to the AUC program. By using this combination, we believe we can reduce the risk of double-counting services to obtain a more accurate estimate of total number of diagnostic imaging services subject to the AUC program. Therefore, this analysis will use the estimate of 30,359,901 AUC consultations.

Using the May 2020 BLS mean hourly wages, we update our estimates for a medical assistant (occupation code 31–9092) with mean hourly wage of $17.75 and 100 percent fringe benefits for 90 percent of consultations (910,797 hours) to be $30,511,701 (910,797 hours × $33.50/hour). The operation for general practitioner is no longer listed on the BLS so, instead, we update our estimate using the occupation code for general internal medicine physician (29–1216) with mean hourly wage of $101.42 and 100 percent fringe benefits for 10 percent of consultations (101,200 hours) to be $20,527,408 (101,200 hours × $101.42/hour). The updated total annual estimated fringe benefit cost of consultations is $51,039,109, for an incremental change (reduction) of $18,962,591.

b. Impact to Medicare Beneficiaries

In the CY 2019 PFS final rule, we estimated that the additional 2-minute consultation would impact the Medicare beneficiary when their advanced diagnostic imaging service is ordered by the ordering professional by introducing additional time to their office visit. For this update, we used the updated number of consultations calculated above from claims data, as well as the May 2020 BLS mean hourly wage. To estimate this annual cost, we multiplied the annual burden of 1,011,997 hours by the BLS occupation code that represents all occupations in the BLS (00–0000) as mean hourly wage plus 100 percent fringe ($54.14/hr) for a total estimate of $54,789,518 per year for an incremental change (reduction) of $13,211,482. We also estimated that, over time, process efficiency improvements may be implemented. We assumed that 50 percent of practices implemented an improvement process that streamlined AUC consultation so Medicare beneficiaries spent the same amount of time in the physician’s office regardless of whether an advanced diagnostic imaging service was ordered. The updated estimate that such an improvement process could offset the estimated burden on Medicare beneficiaries by $27,394,759 annually for an incremental change (reduction) of $6,605,741.

c. Impact on Transmitting Orders for Advanced Diagnostic Imaging Services

In the CY 2019 PFS final rule, we estimated that including AUC consultation information on the order for an advanced diagnostic imaging service to the furnishing professional or facility is estimated as the additional 5 minutes spent by a medical secretary (occupation code 43–6013). To update this estimate, we use the May 2020 mean hourly wage of $18.75 plus 100 percent fringe benefits to transmit the order for the advanced diagnostic imaging service. In aggregate, we assumed in the CY 2019 PFS final rule that 40,000,000 advanced diagnostic imaging services are ordered annually. We propose to update that number to match the total number of AUC consultations proposed earlier in this RIA to 30,359,901, so the updated total annual burden to communicate additional information in the order is estimated as $94,495,192 ($18.75/hr × 2 × 0.083 hr × 30,359,901 orders) for an incremental change (reduction) of $20,044,808.

d. Impact on Furnishing Professionals and Facilities

As described in the CY 2019 PFS final rule, we identified an estimated 174,064 furnishing professionals (comprising radiologists, ASCs, IDTFs and hospitals) and assumed that every identified furnishing professional will choose to update their processes for the purposes of the AUC program in the same way by purchasing an automated solution to report AUC consultation information which was estimated to cost $10,000 for each furnishing professional. We update this cost to account for inflation and therefore the updated estimated cost is $10,636.07 ($10,000 adjusted for inflation to 2021 dollars) for a total estimated one-time update cost of $1,851,356,888.48 (174,064 × $10,636.07).

e. Appropriate Use Criteria for Advanced Diagnostic Imaging Services

As described in the CY 2019 PFS final rule, we assumed that there may be some savings to the Medicare program due to the AUC program requirements.
and potential decreases in inappropriate utilization of advanced diagnostic imaging services. This assumption was based on literature describing prior experiences with clinical decision support in a pilot project conducted in Minnesota, a retrospective cohort study on evidence-based clinical decision support for lumbar MRI, brain MR and sinus CT and local implementation of clinical decision support, and we estimated that savings may account for $700,000,000 savings per year.

f. Summary of Delay-Attributable Changes and Discounted Rates

Table 125 summarizes the substantive changes from the CY 2019 PFS final rule to the CY 2022 PFS proposed rule impact estimates. The effect of a 3-year delay is approximated by applying 3 years’ worth of discounting at 7 percent or 3 percent discount rates (Circular A–4, https://www.whitehouse.gov/sites/whitehouse.gov/files/omb/assets/regulatory_matters_pdf/a-4.pdf).

5. Proposal To Remove Select National Coverage Determinations (NCDs)

We are proposing to remove two older NCDs that no longer contain clinically pertinent and current information or that involve items or services that are used infrequently by beneficiaries. Generally, proactively removing obsolete or unnecessary NCDs removes barriers to innovation and reduces burden for stakeholders and CMS. The two NCDs fall into two impact categories. First, eliminating an NCD for items and services that were previously covered means that the item or service will no longer be automatically covered by Medicare. Instead, the coverage determinations for those items and services will be made by Medicare Administrative Contractors (MACs). Second, if the previous national coverage determination barred coverage for an item or service under title XVIII, MACs would now be able to cover the item or service if the MAC determines that such action is appropriate under the statute. We believe that allowing local contractor flexibility in these cases better serves the needs of the Medicare program and its beneficiaries since we believe the future utilization for items and services within these policies will be limited, each affecting less than one percent of the Medicare FFS population.

For the one NCD where we are proposing to go from limited coverage to MAC discretion, claims data from 2019 shows that less than one percent of Medicare FFS population is affected.

Specifically, we provide coverage with limitations for enteral nutrition and parenteral nutrition therapy under NCD 180.2, where in 2019 CMS paid 1,643,739 Medicare FFS claims for 83,551 unique beneficiaries totaling CMS payments of $356,228,606. While we have claims data available for 2020, the data shows a decrease in claims, unique beneficiaries and total amount paid by CMS. We believe this may be due in part to the COVID–19 pandemic; however, we do not have any information to be able to say that conclusively. The change could be due to other factors not examined here. We estimate there will be de minimis change to 2022 payments, compared to 2019 or 2020 because, as discussed in section III.F. of the proposed rule, local contractors have proposed LCDs that, if finalized, would provide parenteral and enteral nutrition coverage for certain Medicare beneficiaries. Therefore, we believe that removing this NCD would not result in significant changes to payments.

For the one non-covered NCD proposed to be eliminated, Positron Emission Tomography (PET) Scans under NCD 220.6, we would not expect to find historical claims data for the non-oncologic uses of PET at issue. We broadly noncover non-oncologic indications of PET, in other words, we believe that removing this NCD would not result in significant changes to payments.
beneficiaries. As discussed in section III.F. of this proposed rule, the NCD allows coverage for diagnostic PET imaging for oncologic uses not already determined by an NCD, to be made at the discretion of local MACs. We believe that extending local contractor discretion for non-oncologic indications of PET provides an immediate avenue to potential coverage in appropriate candidates and provides a framework that better serves the needs of the Medicare program and its beneficiaries. For clarity, we are not proposing to change any other subsections of 220.6. Thus, the NCDs listed at 220.6.1 through 220.6.20 would not be changed by this proposal.

6. Pulmonary Rehabilitation, Cardiac Rehabilitation and Intensive Cardiac Rehabilitation

As discussed in section III.H., Pulmonary Rehabilitation (PR), Cardiac Rehabilitation (CR) and Intensive Cardiac Rehabilitation (ICR), of this proposed rule we are proposing largely conforming changes throughout §§ 410.47 (PR) and 410.49 (CR/ICR). These changes are intended to ensure consistency and accuracy in terminology, definitions and requirements where appropriate across PR and CR/ICR conditions of coverage. Specific to PR, we are proposing to remove the requirement for direct physician-patient contact related to the periodic review of the patient’s treatment plan because such interaction within the PR program is not necessary for all patients and can be specified, as needed, in individualized treatment plans (ITPs). We are also proposing to add coverage of PR for beneficiaries who were hospitalized with a COVID–19 diagnosis and experience persistent symptoms, including respiratory dysfunction, for at least 4 weeks after hospital discharge.

In assessing the impact of these proposals, we note that the proposed expansion of PR coverage may increase utilization. Based on the low utilization rate discussed below, we do not believe the other proposed revisions will significantly impact utilization and the Medicare program.

To estimate the potential increase from the proposed expansion of coverage for PR, we searched the literature for articles that evaluated the utilization rate of PR for the currently eligible diagnosis of chronic obstructive pulmonary disease (COPD) in order to determine the historical utilization trends of this service.

Nishi et al. (2016) investigated the number of Medicare beneficiaries with COPD who received PR from January 1, 2003 to December 31, 2012. Their results included both individuals who had experienced hospitalizations for COPD and those who were outpatients only. The number of unique patients with COPD who initially participated in PR during the study period was 2.6 percent in 2003 (before conditions of coverage at § 410.47 were established) and 2.88 percent in 2012 (after conditions of coverage at § 410.47 were established).252 In 2019, Spitzer, et al. published an article based on Medicare claims data from 2012, finding that 2.7 percent of eligible Medicare beneficiaries received PR within 12 months of hospitalization with COPD.253 Using claims data from fee-for-service Medicare beneficiaries hospitalized for COPD in 2014, Lindemauer et al. (2020) reported that only 3 percent initiated PR within 1 year of their hospital discharge.254 Taken together, this data informs us that utilization of PR in the Medicare population is very low, and that the majority of patients who avail themselves of this service do so, post hospitalization.

There are limitations to applying this data to identify the utilization rate of PR to the conditions of coverage specified at § 410.47. Most notably, some of these studies included patients whose services were billed with non-PR respiratory therapy codes (G0237, G0238 and G0239), instead of only patients whose services were billed with the PR code (G0424). But the authors also limited patient inclusion to those with a principal or secondary COPD diagnosis, so we believe this suggests that 3 percent is an upper bound for the utilization of PR currently in Medicare beneficiaries. Given that participation in PR has remained steady for many years, we do not expect this pattern to change. As such, for the purposes of this analysis, we assume that 3 percent of eligible beneficiaries under the proposed expansion of coverage (hospitalized with COVID–19 and experiencing persistent symptoms, including respiratory dysfunction, for at least 4 weeks after discharge) will participate in PR.

To identify the eligible beneficiaries under our proposal, we first identify the number of beneficiaries hospitalized with COVID–19 using the Preliminary Medicare COVID–19 Data Snapshot.255 At the time of writing, the Snapshot included data from January 1, 2020 to March 20, 2021, and identified 1,141,592 total COVID–19 hospitalizations for Medicare beneficiaries. The Snapshot indicates that 18 percent of these patients expired so we reduce this number by 18 percent to 936,105 beneficiaries. A paper published by the Tony Blair Institute for Global Change256 states that the Covid Symptom Study led by King’s College London indicated that about 10 percent of survey participants reported symptoms (including shortness of breath and other symptoms like fatigue, headache and loss of smell) beyond a four-week recovery period. Using this information we estimate that the patient population we are proposing to expand PR coverage to, those who were hospitalized with a COVID–19 diagnosis and experienced persistent symptoms, including respiratory dysfunction, for at least 4 weeks after hospital discharge, to be 93,611 beneficiaries (936,105 × 0.10). Based on our assumption of utilization above, 3 percent, for the newly proposed covered patient population, we estimate 2,808 beneficiaries will receive PR (93,611 × 0.03).

Medicare covers PR for a maximum of 72 sessions. Using 2018 and 2019 Medicare claims data from the Chronic Conditions Data Warehouse (CCW), beneficiaries on average completed 14 sessions of PR. If we assume patients eligible based on our proposed expansion of coverage would participate, on average, in the same number of sessions, we estimate the proposed expansion of coverage will increase PR utilization by 39,312 sessions annually (2,808 beneficiaries × 14 average sessions completed per beneficiary).

Claims for PR are submitted using CPT code G0424. Our analysis of Medicare claims data indicates that 97.54 percent of PR sessions are billed under the Hospital OPPS at $55.66 (national average price) for an estimated total of $2,134,279 (39,312 PR sessions (national average price) for an estimated total of $2,134,279 (39,312 PR sessions × $55.66). The remaining 2.46
percent of PR sessions are billed under the PFS, with 2.12 percent of PR sessions furnished in a physician’s office which has a national average price of $30.36 and 0.34 percent billed by a physician when PR was furnished in a hospital outpatient department which has a national average price of $13.96. Taken together, the estimated total for this remaining 2.46 percent of PR sessions is $27,168 ((39,312 PR sessions × 0.0212 × $30.36) + (39,312 PR sessions × 0.0034 × $13.96)). We estimate the total added cost to the Medicare program of this proposed expansion of coverage to be $2,161,447 ($2,134,279 + $27,168) annually during and immediately following the public health emergency (PHE) for COVID–19. As hospitalizations and COVID–19 cases decline, we expect the annual impact to decrease because eligible patient populations will likely decrease, however we are unable to estimate the longer term impact of our proposals due to the unpredictable nature of the PHE and the lack of long term data on COVID–19.

7. Medical Nutrition Therapy

As discussed in section III.I., Medical Nutrition Therapy (MNT), of this proposed rule, we are proposing to remove the restriction that patients only be referred to MNT by the treating physician and update the glomerular filtration rate (GFR) eligibility for patients with chronic kidney disease. We do not anticipate any significant increase in utilization of MNT services resulting from our proposed revisions. Despite various policy changes that could have improved use, such as increasing payment via adding work RVUs to MNT codes in 2006, approving MNT for telehealth coverage in 2005 and including registered dieticians (RDs) and nutrition professionals as telehealth distant site providers, and waiving out-of-pocket costs to beneficiaries, MNT participation remains under 2 percent of eligible beneficiaries. Based on an analysis of Medicare claims data from 2018, 2019, 2020, we identify the utilization rate of MNT services among eligible beneficiaries to be between 1.5 and 1.8 percent.

Although MNT is covered by many state Medicaid programs and private insurers, use is low in the US.257

The Academy of Nutrition and Dietetics recognizes that research specific to the underuse of MNT services is scant.260 Anecdotal reports and related research on diabetes self-management training point to a multitude of reasons why utilization of the MNT services benefit have remained low. These potential barriers include lack of awareness of MNT by patients and clinicians, inconsistent coverage for MNT services by non-Medicare payers, patient travel and time issues to receive the services and lack of availability of services from RDs who may perceive the process of Medicare enrollment/insurance credentialing and billing as being burdensome and complex.263 Of about 100,000 RDs in the US, only 1,589 submitted Medicare fee-for-service MNT claims in 2017. One study revealed that less than half of RDs providing MNT services in an ambulatory care setting indicated they were not Medicare providers due to reasons such as perceived low reimbursement rates, not providing MNT to Medicare eligible patients, not knowing how to become a Medicare provider, and providing MNT to Medicare patients for diagnoses not covered by Medicare.262

Our proposed revisions may increase beneficiary access to the MNT benefit and reduce primary care physician burden since we are proposing that referrals can come from other physicians and not only from the physician treating the patient for their diabetes or kidney disease; although, as discussed above, we do not expect the changes to make a significant impact on the Medicare program. We do not anticipate increased administrative burden as documentation in the medical record of any referred service is already a part of discharge planning in the hospital setting. The proposed changes to the GFR requirements are to conform our regulation to updated clinical

257 https://www.eatrightpro.org/payment/nutrition-services/medicaid/medicaid-and-rds
263 Ibid.
Performance Pathway or APP for performance years 2022 and 2023.

For performance year 2022: An ACO would be required to report on either:
(a) The ten CMS Web Interface measures and administer a CAHPS for MIPS survey and CMS would calculate the two claims based measures included under the APP, or
(b) The three eCQM/MIPS CQM measures and administer a CAHPS for MIPS survey and CMS would calculate the two claims based measures included under the APP. If an ACO selects this option, meets the data completeness at § 414.1340 and the case minimum requirement at § 414.1380 for all three eCQM/MIPS CQM measures, and achieves a quality performance score equivalent to or higher than the 30th percentile on at least one measure in the APP measure set, the ACO would meet the quality performance standard used to determine eligibility for shared savings and to avoid maximum shared losses, if applicable, for that performance year. If an ACO chooses this option, its performance on all six measures in the APP measure set would be used for purposes of MIPS scoring under the APP. If an ACO decides to report both the ten CMS Web Interface measures and the three eCQM/MIPS CQM measures, it would receive the higher of the two quality scores for purposes of the MIPS Quality performance category.

If an ACO does not report any of the ten CMS Web Interface measures or any of the three eCQM/MIPS CQM measures and does not administer a CAHPS for MIPS survey under the APP, the ACO will not meet the quality performance standard.

For performance year 2023: An ACO would be required to report on either:
(a) The ten CMS Web Interface measures and at least one eCQM/MIPS CQM measure and administer a CAHPS for MIPS survey and CMS would calculate the two claims based measures included under the APP or
(b) The three eCQM/MIPS CQM measures and administer a CAHPS for MIPS survey and CMS would calculate the two claims based measures included under the APP. If an ACO selects this option, meets the data completeness requirement at § 414.1340 and the case minimum requirement at § 414.1380 for all three eCQM/MIPS CQM measures, and achieves a quality performance score equivalent to or higher than the 30th percentile on one measure in the APP measure set, the ACO would meet the quality performance standard used to determine eligibility for shared savings and to avoid maximum shared losses, if applicable, for that performance year. If an ACO chooses this option, its performance on all six measures in the APP measure set would be used for purposes of MIPS scoring under the APP. If an ACO decides to report both the ten CMS Web Interface measures and the three eCQM/MIPS CQM measures, it would receive the higher of the two quality scores for purposes of the MIPS Quality performance category.

If an ACO does not report at least one eCQM/MIPS CQM measure the ACO would not meet the quality performance standard.

Absent the related proposal analyzed above to reduce the performance standard to the 30th percentile MIPS Quality performance category score, the proposed changes to the quality reporting requirements, including the accommodation to continue the availability of the CMS Web Interface as a reporting mechanism under the APP would have likely provided an easier path for a meaningful subset of ACOs that would have otherwise faced difficulty meeting the quality threshold previously established in rulemaking for PY 2023. However, we estimate that nearly all such ACOs would already meet the lower 30th percentile performance standard in PY 2023 without the additional reporting flexibility. Of the relatively few, remaining ACOs, that we estimate would fail to meet the proposed lower 30th percentile performance standard, we estimate that about half (on average) would meet the quality performance standard as a result of the proposed quality reporting flexibility, and thereby further increase shared savings payments to ACOs by about $20 million in PY 2023.

b. Modifications to Other Shared Savings Program Requirements

We do not anticipate a material aggregate impact for the other changes we are proposing related to the Shared Savings Program, specifically: revisions to the definition of primary care services used in the Shared Savings Program’s beneficiary assignment methodology (section III.J.2. of this proposed rule); revisions to the repayment mechanism arrangement policy, including changes to the calculation and recalculation of repayment mechanism amounts (section III.J.3. of this proposed rule); revision of the requirements concerning disclosure of prior participation in the Shared Savings Program by the ACO, ACO participants, and ACO providers/suppliers, and revisions to Shared Savings instruments to reduce the frequency and circumstances under which ACOs submit sample ACO participant agreements and executed ACO participant agreements to CMS (section III.I.4. of this proposed rule); and revisions to the beneficiary notification requirement as it applies to ACOs under prospective assignment and ACOs under preliminary prospective assignment with retrospective reconciliation (section III.J.5. of this proposed rule).

However, as we note in section III.J.3. of this proposed rule, lower required repayment mechanism amounts could reduce costs for ACOs in fees charged by financial institutions for letters of credit and by insurance companies for surety bonds. We estimate that such relief, in total for all participating ACOs, could be worth $2 to $4 million annually under the proposed approach (assuming a reduction of approximately $196 million in repayment mechanism amounts, in aggregate) and $3 to $6 million annually under the second, alternative option (assuming a reduction of approximately $322 million in repayment mechanism amounts, in aggregate).

We also note that the proposed revisions to the definition of primary care services used in the assignment methodology may have differing effects on a subset of participating ACOs, for example by changing the competing ACO to which a beneficiary ultimately is assigned, for a small subset of beneficiaries. We do not anticipate such ACO-level changes would result in a net impact on program spending overall.

9. Medicare Ground Ambulance Data Collection System

In section III.K. of this proposed rule, we propose a series of changes to the Medicare Ground Ambulance Data Collection System including the proposed change to the data collection period and data reporting period for selected ground ambulance organizations in year 3, proposed revisions to the timeline for when the payment reduction for failure to report will begin and when the data will be publicly available, and proposed revisions to the Medicare Ground Ambulance Data Collection Instrument.

While we believe that these changes and clarifications will be well received by the ground ambulance stakeholders, we do not believe that these changes would have any substantive impact on the cost or time associated with completing the Medicare Ground Ambulance Data Collection Instrument. We note that the overall length of the Medicare Ground Ambulance Data Collection Instrument is the same as previously finalized (84 FR 62888) with these changes. Additionally, some of the
instructions which we propose to add are intended to improve clarity and may therefore reduce the time the ground ambulance organizations spend addressing the questions.

10. Medicare Diabetes Prevention Program Expanded

a. Effects of Proposals Relating to the Medicare Diabetes Prevention Program Expanded Model

(1) Effects on Beneficiaries

We propose to modify certain Medicare Diabetes Prevention Program (MDPP) expanded model policies to: (1) Allow CMS to remove the ongoing maintenance phase (months 13–24) of the MDPP set of services for those beneficiaries who started their first core session on or after January 1, 2022; (2) update the performance payments for the MDPP set of services in the core and core maintenance performance periods; and (3) waive the Medicare provider enrollment application fee for all organizations enrolling as MDPP suppliers on a prospective basis. These proposed changes will have a positive impact on beneficiaries’ health by increasing the capacity of MDPP eligible organizations to enroll in Medicare as MDPP suppliers and increasing access to the MDPP set of services to beneficiaries. Eligible beneficiaries receive these services as preventive services, which require no copays or cost sharing. These proposed changes address MDPP supplier and beneficiary needs based upon all available monitoring and evaluation data. The proposed changes are also responsive to stakeholder comments.

(2) Effects on the Market

Currently, more than 1,000 organizations nationally are eligible to become MDPP suppliers based on their preliminary or full CDC Diabetes Prevention Recognition Program (DPRP) status. However, only 27 percent of eligible organizations are participating in MDPP. We anticipate that the removal of the second year of the MDPP set of services will make MDPP attractive and feasible to more MDPP eligible organizations. Not only does a 12-month MDPP service period align with that of the CDC’s National DPP and the DPP model test, our data show that only 10 percent of enrolled MDPP participants continue with the Ongoing Maintenance phase sessions (Year 2), and the majority are reaching their weight loss milestone within the first 6 months of the set of MDPP services. Stakeholders commented that the second year of MDPP, or the ongoing maintenance phase, is cost prohibitive due to the

(3) Burden Related to Information Collection Requirements—No Impact

(a) Supplier Standards

MDPP suppliers may encounter the Medicare enrollment fee during the following Medicare provider enrollment transactions: Initial enrollment, revalidation (every 5 years for MDPP), or the addition of a new practice location. The provider/supplier enrollment fee for Calendar Year 2021 is $462 per beneficiary. MDPP suppliers may submit a written request to CMS for a hardship exception to the application fee in accordance with §424.514, many would not qualify and the hardship application process would simply add more burden on the organization. We have heard from the CDC as well as other stakeholders that the enrollment fee is a potential barrier to eligible MDPP suppliers who would not otherwise enroll in Medicare for MDPP. Approximately 39 percent of our current suppliers are non-traditional suppliers that serve their local communities and play a critical role in enrolling more diverse, equitable, and inclusive cohorts of Medicare beneficiaries to MDPP. These non-traditional suppliers include, but are not limited to YMCAs, county health departments, community health centers, and non-profit organizations that focus on health education, and otherwise would neither enroll nor be able to enroll as a Medicare supplier at all if it were not for MDPP. They often serve as trusted sources of health information for their communities. However, they also represent a large number of eligible organizations who have not enrolled in Medicare as MDPP suppliers. We anticipate that waiving the enrollment fee along with the other programmatic adjustments are likely to result in more MDPP suppliers, increased beneficiary access to MDPP services, and an ongoing reduction of the incidence of diabetes in eligible Medicare beneficiaries, in both urban and rural communities.

In April 2020, CMS waived all provider enrollment application fees as part of the COVID–19 Emergency Declaration Blanket Waivers for Health Care Providers. As a result, we saw an increase in MDPP supplier enrollment. We believe that granting a permanent waiver of the fee for MDPP suppliers to extend beyond the COVID–19 Emergency Declaration Blanket Waiver, along with the other proposed change to MDPP, may stimulate MDPP supplier enrollment and enhance the MDPP evaluation. We propose waiving the Medicare provider enrollment fee beyond COVID–19 Emergency Declaration Blanket Waivers for Health Care Providers because the enrollment fee creates a potential barrier to MDPP supplier enrollment, beneficiary access to the program, and subsequently, our ability to evaluate MDPP. Specifically, we propose, to waive the enrollment fee as described in section 1866(j)(2)(C)(i) and (ii) of the Act during the MDPP expanded model test phase.

(b) Payment for MDPP Services

Our regulations at §414.84 specify the payments MDPP suppliers may be eligible to receive, payments for
furnishing MDPP services, and meeting performance targets related to beneficiary weight loss and/or attendance. MDPP suppliers are paid by CMS by submitting claims for MDPP beneficiaries using claim form CMS-1500 (https://www.cms.gov/Medicare/CMS-Forms/CMS-Forms/Downloads/CMS1500.pdf). As a condition for payment, claims submitted by MDPP suppliers must be for services furnished to eligible beneficiaries in accordance with § 414.84(b) and (c). We have streamlined the proposed performance payments so that they are easier to understand and suppliers receive larger payments for participants reaching attendance and weight loss performance-based milestones. For example, the proposed attendance-based performance payments are based on a standardized per-session rate, paid after the 1st, 4th, and 9th sessions attended during the core sessions interval, and after attending the two (2) sessions during each of the core maintenance intervals. We have increased performance payments for beneficiary achievement of the 5 percent weight loss goal as well as continued attendance during the core maintenance intervals. Although the proposed maximum payment of $661 over a 1-year service period is less than the current maximum payment of $704 under the original 2-year payment structure, we believe eliminating the second year and its associated payments will result in a financially sustainable expanded model.

Increasing the first year MDPP payment amounts should not negatively affect a supplier’s performance (for example, participants’ weight loss). The increase to the payment amounts are not applied until after the 4th core session and the largest payments to suppliers are still driven by weight loss achievement. Further, in order to maintain CDC Diabetes Prevention Recognition Program (DPRP) recognition status, which is required to be an MDPP supplier, certain levels of performance metrics (for example, weight loss) must be satisfied. There is no evidence that eliminating the second year maintenance sessions, shortening the MDPP services period to 1 year, will have any negative effects on performance.

(b) Sensitivity Analysis

Since the cost to suppliers for delivering the MDPP set of services is generally unknown, how utilization of the expanded model will be affected by the proposed changes is highly uncertain. Table 127 shows the 10-year impact estimates (in millions) for different levels of additional beneficiary participation as a result of the proposed changes:

<table>
<thead>
<tr>
<th>Additional Beneficiaries Per Year</th>
<th>10-year Estimated Impact</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>$0.5</td>
</tr>
<tr>
<td>500 (assumption used in best estimate)</td>
<td>-$0.9</td>
</tr>
<tr>
<td>1,000</td>
<td>-$2.3</td>
</tr>
<tr>
<td>1,500</td>
<td>-$3.7</td>
</tr>
</tbody>
</table>

Finally, higher projected savings are associated with increases in beneficiary participation, while no additional beneficiaries would result in an estimated cost.

(b) Alternatives Considered

No alternatives were considered. The 2-year MDPP service period has depressed interest in MDPP among would-be MDPP suppliers. These proposed actions address stakeholder comments on the barriers to MDPP expanded model success. If we do not take action, we will not be able to scale MDPP as intended, impacting Medicare beneficiary access to this expanded model. Reducing the MDPP from a 24- to a 12-month services period, increasing the year 1 performance payments, and waiving the Medicare provider enrollment application fee not
only better aligns the expanded model with the evidence that helped certify the DPP model test initially, but it will encourage eligible organizations to enroll as MDPP suppliers.

c. Impact on Beneficiaries

This change will have a positive impact on eligible MDPP beneficiaries, as it better aligns with the CDC’s National DPP, giving both the participants and the coaches similar messaging around this program, regardless of payer. MDPP suppliers often offer the MDPP set of services to mixed cohorts, or classes with participants who are not eligible for MDPP, but who are enrolled in a National DPP cohort. Since MDPP generally follows the CDC’s National DPP and aligns its expanded model with the CDC’s DPRP Standards, it is confusing to participants, coaches, and staff when talking about a 2-year set of services to its eligible Medicare participants when the non-Medicare participants have a 1-year program. Finally, reducing the MDPP service period from 2 years to 1 year allows more cohorts to start and finish MDPP during the expanded model initial period of performance, which ends in March 2023.

d. Estimating Regulatory Familiarization Costs

Given that we tried to align this rule as much as possible with the CDC DPRP Standards, there should be minimal regulatory familiarization costs. This rule impacts only enrolled MDPP suppliers and eligible beneficiaries who have started the MDPP expanded model or are interested in MDPP.

11. Medicare Provider and Supplier Enrollment Changes—Provider Enrollment

As explained in section III.N. of this proposed rule, we propose changes to three of our existing revocation reasons:

- We propose to expand § 424.535(a)(2) to permit revocation based on the OIG exclusion of an individual serving in an administrative or management services role for the provider/supplier, such as a billing specialist, accountant, or human resources specialist.
- We propose to expand § 424.535(a)(13) to permit revocation of a physician’s or other eligible professional’s enrollment if he or she surrenders his/her Drug Enforcement Administration (DEA) certificate of registration in response to an order to show cause.

- We propose to revise the factors in § 424.535(a)(8)(ii) (which permits revocation based on a pattern or practice of submitting non-compliant claims) to better enable CMS to target shorter periods of non-compliant billing.

We believe that all three of these changes would result in an increase in the number of revocations that CMS imposes. However, we believe this number will be rather small. We currently impose only a limited number of revocations under §§ 424.535(a)(2), (a)(13), and (a)(8). Accordingly, since our expansion of these three revocation reasons would be fairly modest, we do not foresee more than a very slight increase in revocations thereunder.

Table 128 outlines the number of revocations we estimate would ensue under our proposed revocation expansions. These numbers only account for additional revocations stemming from our changes:

<table>
<thead>
<tr>
<th>Revocation Reason</th>
<th>Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>§ 424.535(a)(2)</td>
<td>5</td>
</tr>
<tr>
<td>§ 424.535(a)(13)</td>
<td>5</td>
</tr>
<tr>
<td>§ 424.535(a)(8)(ii)</td>
<td>5</td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td><strong>15</strong></td>
</tr>
</tbody>
</table>

Internal CMS data indicates that the average provider/supplier that would be affected by these regulatory expansions receives roughly $50,000 in Medicare payments each year. (We used a similar $50,000 annual payment estimate for our provider enrollment provisions in the CY 2020 PFS final rule) (84 FR 62560)). Providers/suppliers revoked under our proposed revocation expansions would thus not receive these payments. Hence, multiplying our $50,000 estimate by the revocation totals in Table 128 results in a projected $50,000 annual payment estimate for payments each year. (We used a similar payment Reviews

In section III.N.2. of this proposed rule, we are proposing to: (1) Define key terms including “additional documentation,” “additional documentation request,” “post-payment medical review,” and “prepayment medical review;” (2) codify contractors’ authority to request additional documentation for prepayment and post-payment review within established timeframes; (3) codify timeframes for response to requests for documentation; and (4) codify result of a failure to comply with prepayment or post-payment documentation request(s) by a provider or supplier, specifically denial of payment. We do not believe these proposals involve any additional impact or burden on providers, suppliers, or states; however, we welcome feedback from stakeholders regarding the potential costs of these proposals.

The proposed regulations would incorporate already established key terms and definitions as well as processing requirements pertaining to prepayment and post-payment medical review into regulation. Although placing this information in regulation could improve provider and supplier understanding of the medical review process and their responsibilities in complying with our review contractor’s requests, the proposed regulations represent no change to medical review requirements. As such, we do not anticipate any change in the number of prepayment medical reviews, post-payment medical reviews or the number of additional documentation requests made by contractors.

13. Effect of Proposed Modifications to Medicare Coverage for Opioid Use Disorder (OUD) Treatment Services Furnished by Opioid Treatment Programs (OTPs)

As discussed in section III.O of this proposed rule, we are proposing to allow OTPs to continue to furnish the therapy and counseling portions of the weekly bundles, as well as any additional counseling or therapy that is billed using the add-on code, using audio-only telephone calls rather than via two-way interactive audio-video communication technology in cases...
where audio/video communication is not available to the beneficiary after the conclusion of the PHE for COVID–19, provided all other applicable requirements are met.

We believe the Part B cost impact of this proposal would be minimal, since payment for therapy and counseling is included in the bundled payment regardless of the modality used to deliver it and we do not expect that this proposal would increase the frequency at which medically necessary counseling and therapy services are billed using the counseling and therapy add-on code (HCPCS code G2080).

However, we are also proposing to require that when these services are furnished using audio-only technology, practitioners certify that they had the capacity to furnish the services using two-way audio/video communication technology, but instead, used audio-only technology because audio/video communication technology was not available to the beneficiary. We believe this proposed change would facilitate broader access to these services for beneficiaries.

Additionally, as discussed in section III.O. of this proposed rule, the FDA recently announced the approval of a new, higher dose naloxone hydrochloride nasal spray product used to treat opioid overdose and that the newly approved product delivers 8mg of naloxone. In the CY 2021 PFS final rule (85 FR 84683 through 84685), we finalized payment for HCPCS code G2215 (Take-home supply of nasal naloxone (provision of the services by a Medicare-enrolled Opioid Treatment Program); List separately in addition to code for primary procedure). HCPCS code G2215 was priced based on an assumption of a typical case in which the beneficiary would be provided with a box of two 4mg nasal spray products. At the time of drafting this proposed rule, we do not yet have any available pricing information for this newly approved product. However, in order to be able to make payment to OTPs under Medicare for this product, we are proposing to create a new G-code describing a take-home supply of this higher dose naloxone hydrochloride nasal spray product. Since pricing information is unavailable for this new product at the time of drafting this proposed rule, the estimated cost impact is unclear at this time, however, we believe utilization would be low based on CY 2021 data received so far for HCPCS code G2215.

14. Physician Self-Referral Update

The physician self-referral law provisions are discussed in section III.P. of this proposed rule.

As discussed in section III.P. of this proposed rule, we are proposing to amend the provisions of § 411.354(c)(2) identifying unbroken chains of financial relationships that constitute “indirect compensation arrangements” to ensure that a long-standing prohibition on certain per-unit of service compensation formulas for determining charges for the rental of office space and equipment remains within the ambit of the law. This provision, which was inadvertently omitted when the definition of “indirect compensation arrangement” was revised in the December 2, 2020 final rule entitled “Modernizing and Clarifying the Physician Self-Referral Regulations” (85 FR 77492), is necessary to protect against potential abuses such as overutilization and anti-competitive behavior. We believe that most parties have continued to comply with the regulatory provisions on per-unit of service compensation formulas for the rental of office space and equipment as they have done since the requirements became effective on October 1, 2009. In response to stakeholder inquiries, we are also proposing to add provisions to assist stakeholders in identifying the individual unit to be analyzed under the provisions of § 411.354(c)(2)(ii)(A)(i) through (iii) and proposed § 411.354(c)(2)(ii)(A)(iv). We believe that the clarity provided by this proposal would facilitate compliance without adding burden.

As discussed in section III.P. of this proposed rule, we are proposing to permit the use of the exception for preventive screening tests, immunizations, and vaccines at § 411.355(h) for COVID–19 vaccines even when they are not subject to CMS-mandated frequency limits, provided that all other requirements of the exception are satisfied. We believe that this proposal would ensure that the physician self-referral law would not impede the availability of critically important COVID–19 vaccines for Medicare and other patients.

As discussed in section III.P. of this proposed rule, we are proposing regulatory updates related to the process for publication of the Code List for Certain Designated Health Services (the Code List). Specifically, we would update the Code List each calendar quarter. We would provide public notification on the CMS website in advance of an update, followed by a 30-day public comment period. We would provide information on the CMS website regarding the process for submitting public comments through www.regulations.gov, and address all public comments on the Code List on the CMS website. In addition, instead of publishing in the PFS final rule, we would publish the Code List solely on the CMS website. Finally, we would revise the definition of “List of CPT/HCPCS Codes” at §411.351 by updating the URL that indicates where the Code List is published on the CMS website. We believe that these proposals would make available the most recent updates in a timelier manner and allow easier access to the most up-to-date Code List.

15. Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D Drug under a Prescription Drug Plan or an MA–PD Plan (section 2004 of the PHLRT Act)

In addition to the cost reflected in the Collection of Information section of this proposed rule, we expect that there would be an additional burden for CMS to award and work with a CMS contractor to develop a process for reviewing the PDE data to assess prescriber compliance with the regulatory provision and review and process prescriber attestations. Based on similar contracts, and conversations with the industry, we have estimated the costs of (A) development of operational strategy for the new program, (B) reviewing PDE data, and (C) prescriber case work. We solicit stakeholder feedback on this estimate and all our assumptions.

(A) Development of policy: We estimate that it would take our contractor a week of work, 40 hours, to develop the strategy for how the contractor will process the prescriber attestations. We estimate that it would an operations manager and compliance officer working together at a combined hourly wage of $193.60/hr ($120.90/hr + $72.70/hr) would need a full 40-hour work week to operationalize this aspect of it. Therefore, the aggregate cost would be $7,744 (40 hr * $193.60/hr).

(B) Since systems already exist to collect the appropriate PDE data, our contractor would only have to review the data for compliance with the EPCS mandate. We therefore estimate that it would take 2 computer systems analyst each working at $95.22/hr, a week and a half of work, 30 hours. Therefore, the aggregate cost is $5,713.20 (30 hr * $95.22/hr).

(C) We estimate that it would take 4 administrative support workers each working at $36/hr for 40 hours to generate the letters and disseminate them to the appropriate prescriber.
which means that it would cost our contractor $2,209.20/year (60 hr * $36.82/hr) in administrative support costs. We estimate that it would be the full-time job of a customer service representative working at $37.02/hr to field prescriber inquiries about the disseminated letters. Thus, we expect that our contractor will spend $77,001.60 ($37.02/hr * 40 * 52) on the salary of the customer service representative for this task.

The aggregate impact for our contractor is 200 hours at a cost of $92,668. We seek comment on the accuracy of this burden estimate and on any measures that CMS can take to decrease the impact of this provision, while maintaining its utility and implementing the statutory mandate.

16. Open Payments

a. Payment Context Field for Teaching Hospitals

This proposal is for a mandatory freeform text context field. We have created this proposal at the request of stakeholders, particularly after conversations with teaching hospitals. The teaching hospitals confirmed that the majority of their disputes arise because of a lack of information within the record and an inability to attribute it to the correct area within their large organization, not the inaccuracy of the record itself. The benefit of this field is to give better context to the records attributed to teaching hospitals and thereby reduce the number of disputes. For this reason, we also believe it will also increase goodwill between the program’s stakeholders. The cost of that reporting entities will need to collect an additional piece of information, which will increase burden. We do not believe this burden will be great because compared to physician covered recipient payments, the number of teaching hospital payments is much lower. In addition, we have given flexibility to this field so that the reporting entity can choose which piece of information is most appropriate and can be something that they already collect, such as a check number or name of the department in the hospital.

b. Optional Annual Recertification

The optional annual recertification is at the request of reporting entities and will increase the availability of communication to CMS. The burden associated with this action is low because it will be a low-effort process only completed by the entities who choose to do so.

c. Defining a Physician-Owned Distributorship

Since the program began in 2013, we have heard feedback that physician-owned distributorship (PODs) should be better represented in the data because the conflict of interest potentially created by PODs is at the heart of the program. We created this new definition due to the lack of an existing definition of a POD that would be appropriate for the program. Though this is a new definition, it will only be a subset of the existing definitions of applicable manufacturer and applicable group purchasing organization. “Applicable manufacturer—POD” and “Group purchasing organization—POD” are already “business type” choices when registering in the Open Payments system. Therefore, this definition will not alter existing regulations beyond requiring PODs to identify themselves as such.

d.Disallowing Record Deletion Without Reason

We believe there is not currently language to prevent an applicable manufacturer or applicable group purchasing organization from submitting and attesting to records, then deleting the records to prevent publication. This action would be contrary to the spirit of transparency of the program. To help ensure compliance with this requirement, we are also adding a new field that will allow entities to communicate the reason for the deletion to CMS. Since the entities will have attested to the accuracy and completeness of these records, we believe it is appropriate to confirm the reason for the deletion. We have not perceived the behavior of inappropriate deletions within the data and do not believe it will increase burden beyond the additional field when deleting a record. We are preemptively closing a potential loophole.

e. Disallow Publication Delays of General Payments

The statute requires that delays are “made pursuant to product research or development agreements and clinical investigations” (1126G(c)(1)(E) of the Act). A small number of general payments are delayed annually, which we are unable to verify meet this requirement. Research payments contain the appropriate fields to ensure that the statutory provisions are being met. We do not believe that it will be a burden for the reporting entity to either be reported as research payments or not delayed.

f. Short-Term Loans

Short-term loans are not required to be reported, but they must be shorter than 91 days to meet the exception. This proposal does not create burden because it only clarifies that those 90 days must be the cumulative total for a year, which is already outlined in subregulatory guidance. We do not anticipate that this will change reporting behavior but want to explain the exception more clearly within the text of the final rule.

g. Remove General Ownership Records

Ownership records have special rules for reporting outlined in the statute (section 1126G(a)(2) of the Act), which are not included in the format for general records. However, there is currently a general record for reporting ownership and investment interest (Nature of Payment = 11). We anticipate a small burden for the approximately 92 reporting entities who have previously used the general nature of payment category in order to fill out the different fields in the ownership record. This burden will allow the records to meet statutory mandates.

h. Updated Contact Information

Open Payments conducts regular compliance-related outreach to reporting entities when it encounters data that may not meet program requirements. We have found that the two contacts provided by applicable manufacturers and group purchasing organizations often become obsolete, especially if a company has not updated its contact information during the recertification process. It is crucial for the integrity of the data that we have the ability to contact entities in the case of irregularities. Additionally, we believe that ensuring informal communications from CMS will reduce burden since it may prevent more formal compliance actions if the entity is unresponsive due to outdated contact information. However, we do not believe this is an issue for the majority of reporting entities, nor do we believe that keeping the contact information updated will create a large burden.

17. Updates to the Quality Payment Program

In section IV.A. of this proposed rule, we included our proposed policies for the Quality Payment Program. In this section, we first present the overall and incremental impacts to the number of expected QPs and associated APM Incentive Payments. In the following sections, we estimate the overall and incremental impacts to the total MIPS eligible population and the payment impacts by practice size for the 2022
MIPS performance period based on various proposed policies, including to modify MIPS eligibility, the MIPS final score and the performance threshold and additional performance threshold as discussed in sections IV.A.3.a.(1) and IV.A.3.f. of this proposed rule.

This RIA uses the 2019 MIPS performance period submissions that were used for the CY 2021 PFS final rule RIA (85 FR 83011 through 85023). The submissions for the 2020 MIPS performance period were not available in time to incorporate into this model and to assess whether the data for 2020 can be used to effectively predict future performance. For the 2020 performance year, we applied the MIPS automatic extreme and uncontrollable circumstances policy to all individual MIPS eligible clinicians and allowed for extreme and uncontrollable applications due to the COVID-19 Public Health Emergency (PHE) (https://app.cms.gov/resources/covid19/py=2020). Due to these extreme and uncontrollable circumstances policy, not all clinicians or groups may have submitted performance category data for the 2020 MIPS performance period. We will evaluate for the final rule whether it is appropriate to use the 2020 performance period data and whether adjustments would need to be made if CY 2020 performance category submissions data are used.

We ran two RIA models: A baseline and proposed policies RIA model. The aim of the baseline model is to reflect the CY 2022 performance period/2024 MIPS payment year if this proposed rule did not take effect, and therefore, reflects previously finalized policies for the CY 2022 performance period/CY 2024 MIPS payment year. Select examples of the baseline policies scheduled to start in the CY 2022 MIPS performance period/CY 2024 MIPS payment year include the removal of the Web Interface as a collection type and the change in the performance category weights. Our baseline model used the performance threshold and additional performance threshold of the CY 2021 MIPS performance period/2023 MIPS payment year since those values were not previously defined for the CY 2022 MIPS performance period/2024 MIPS payment year. The aim of the proposed policies model is to estimate the incremental effect of the proposed policies for the CY 2022 performance period/CY 2024 MIPS payment year on MIPS eligibility, MIPS final scores, and payment adjustments. Select examples of the proposed policies include, the inclusion of new MIPS eligible clinician types, the inclusion of the Web Interface as a collection type, the change in performance threshold and additional performance threshold, and the new complex patient bonus. Refer to section VII.F.17.d.(2) of this proposed rule for the detailed methods on how we integrated the policies into the baseline and proposed policies models.

a. Estimated APM Incentive Payments to QPs in Advanced APMs and Other Payer Advanced APMs

For payment years from 2019 through 2024, through the Medicare Option, eligible clinicians who have a sufficient percentage of their Medicare Part B payments for covered professional services or Medicare patients through Advanced APMs will be QPs in the applicable QP performance period for a year. These QPs will receive a lump-sum APM Incentive Payment equal to 5 percent of their estimated aggregate paid amounts for Medicare covered professional services furnished during the calendar year immediately preceding the payment year. Beginning in payment year 2021, in addition to the Medicare Option, eligible clinicians may become QPs through the All-Payer Combination Option. The All-Payer Combination Option allows eligible clinicians to become QPs by meeting the QP payment amount or patient count threshold through a pair of calculations that assess a combination of both Medicare Part B covered professional services furnished or patients through Advanced APMs and Other Payer Advanced APMs. Eligible clinicians who become QPs for a year are not subject to MIPS reporting requirements and payment adjustments. Eligible clinicians who do not become QPs, but meet a lower threshold to become Partial QPs for the year, may elect to report to MIPS and, if they elect to report, would then be scored under MIPS and receive a MIPS payment adjustment. Partial QPs are not eligible to receive the APM Incentive Payment.

If an eligible clinician does not attain either QP or Partial QP status, and does not meet any another exemption category, the eligible clinician would be subject to MIPS, would report to MIPS, and would receive the corresponding MIPS payment adjustment. Beginning in payment year 2026, the update to the PFS CF for services that are furnished by clinicians who achieve QP status for a year is 0.75 percent, while the update to the PFS CF for services that are furnished by clinicians who do not achieve QP status for a year is 0.25 percent. In addition, MIPS eligible clinicians would receive positive, neutral, or negative MIPS payment adjustments to payment for their Part B PFS services in a payment year based on performance during a prior performance period. Although the statute establishes overall payment rate and procedure parameters until 2026 and beyond, this impact analysis covers only the 2024 MIPS payment year of the Quality Payment Program.

Overall, we estimate that for the 2022 Quality Payment Program period between 225,000 and 290,000 eligible clinicians will become QPs, therefore be excluded from MIPS, and qualify for the lump sum APM incentive payment in Payment Year 2024 based on 5 percent of their Part B paid amounts for covered professional services in the preceding year. These paid amounts for QPs are estimated to be between approximately $12.000 million and $15.000 million in total for the 2022 performance year. The analysis for this proposed rule used the 2020 third snapshot participation file. We based APM Incentive Payment Amounts on paid amounts with service dates of January 1, through September 30, 2020. We multiplied the calculated amounts by 1.5 to approximate payment amounts for the full calendar year. We estimate that the total lump sum APM Incentive Payments will be approximately $600–750 million for the 2024 Quality Payment Program payment year.

In section VII.F.17.a. of this proposed rule, we projected the number of eligible clinicians that will be QPs, and thus excluded from MIPS, using several sources of information. First, the projections are anchored in the most recently available public information on Advanced APMs. The projections reflect Advanced APMs that will be operating during the 2022 QP Performance Period, as well as some Advanced APMs anticipated to be operational during the 2022 QP Performance Period. The projections also reflect an estimated number of eligible clinicians that would attain QP status through the All-Payer Combination Option. We note that the Kidney Care Choices Model and the Radiation Oncology Model have been included in our analysis as we anticipate that the model will be Advanced APMs in 2022. The following APMs are expected to be Advanced APMs for the 2022 QP Performance Period:

- Bundled Payments for Care Improvement Advanced Model;
- Comprehensive Care for Joint Replacement Payment Model (CEHRT Track);
- Global and Professional Direct Contracting Model;
- Global and Professional Direct Contracting Model;
• Kidney Care Choices Model
  (Kidney Care First: Professional Option and Global Option);
• Maryland Total Cost of Care Model
  (Care Redesign Program; Maryland Primary Care Program);
• Medicare Shared Savings Program
  (Basic Track Level E, and the ENHANCED Track);
• Oncology Care Model (Two-Sided Risk Arrangements);
• Primary Care First (PCF) Model;
• Radiation Oncology model; and,
• Vermont All-Payer ACO Model
  (Vermont Medicare ACO Initiative).
We used the Participation Lists and Affiliated Practitioner Lists, as applicable, (see 81 FR 77444 through 77445 for information on the APM Participant Lists and QP determinations) on the 2020 third snapshot participation file to estimate the number of QPs, total Part B paid amounts for covered professional services, and the aggregate total of APM Incentive Payments for the 2022 QP Performance Period. We examined the extent to which Advanced APM participants would meet the QP Thresholds of having at least 50 percent of their Part B covered professional services or at least 35 percent of their Medicare beneficiaries furnished Part B covered professional services through the APM Entity.

b. Impact for the CY 2021 MIPS Performance Period/2023 MIPS Payment Year

In section IV.A.3.e.(2)[a][ii] of this proposed rule, we proposed to double the complex patient bonus, and to increase its cap to 10 points. We expect this proposed policy to result in the median bonus to increase by 3 points, thus increasing MIPS final scores at the median by 3 points. We do not know the effects of the PHE for COVID–19 and its effect on MIPS performance in 2021, so we did not recreate the analysis and payment distributions with the updated bonus for the 2021 MIPS performance period (85 FR 85012 through 85019). Directionally, the increase in complex patient bonus points will result in smaller payment adjustments for three reasons. First, the resulting increase in final scores will reduce the budget neutral pool. Second, the increase in complex patient bonus points will increase the number of clinicians with scores above the performance threshold or additional performance threshold, meaning more clinicians will share in the budget neutral pool and additional $500 million for exceptional performance and potentially lowering the scaling factor that is applied to the MIPS payment adjustment and additional payment adjustment. Third, the average scores of those receiving a positive or additional adjustment will be higher, which means the adjustment rates for clinicians that have scores above the performance threshold or additional performance threshold will be lower.

c. Estimated Number of Clinicians Eligible for MIPS Eligibility for the 2022 MIPS Performance Period/2024 MIPS Payment Year

(1) Methodology To Assess MIPS Eligibility

(a) Clinicians Included in the Model

To estimate the number of MIPS eligible clinicians for the 2022 MIPS performance period and the effect of the proposed policies in this proposed rule, we ran two models as described in section VII.F.17.c.: a baseline model and proposed policies model.
For the baseline and proposed policies models, we used the same eligibility files and approach as described in the CY 2021 PFS final rule (85 FR 85013), which resulted in the inclusion of 1.6 million clinicians who had PFS claims from October 1, 2018 to September 30, 2019 as well as additional clinicians associated with a group who had at least one PFS claim from October 1, 2019 through December 31, 2019. We used the same exclusion criteria to exclude clinicians from our MIPS eligibility assessment as described in the CY 2021 PFS final rule RIA (85 FR 85013), with the following model updates:

(1) In both the baseline and proposed policies models, we excluded practitioners in Next Generation ACOs because the Next Generation ACO model ends in the CY 2021 MIPS performance period.

(2) In both the baseline and proposed policies models, to determine which clinicians in the initial population of 1.6 million clinicians should be excluded as QPs, we used Advanced APM payment and patient percentages from the APM Participant List for the final snapshot date for the 2019 QP performance period. We elected to use this data source because the APM participant list for the 2019 final snapshot can reliably be used for RIA projections. From this data, we calculated the QP and Partial QP determinations as described in section of IV.A.4.c.(1)[b] of this proposed rule for the 2022 QP performance period for both models.

(3) In the proposed policies model, we included in our estimated MIPS eligible population for the CY 2022 performance period/2024 payment year clinical social workers and certified nurse-midwives as proposed in section IV.A.3.a.(1) of this proposed rule.

(4) In the proposed policies model, we are integrating the proposal that starting with the CY2022 MIPS performance period/2024 MIPS payment year, small practices, excluding virtual groups, must submit data as a group in any performance category to indicate that they wish to be scored as a group for Medicare Part B claims. This affects eligibility because previously a single Medicare Part B claims submission, without any other submission, started a group score. Once a group score is created, a clinician who was individually excluded from MIPS for being under the low-volume threshold, may now be eligible if the group exceeds the low-volume threshold. This proposed policy is described at section IV.A.3.a. of this rule.

(b) Assumptions Related To Applying the Low-Volume Threshold Exclusion

The low-volume threshold policy may be applied at the individual (TIN/NPI) or group (TIN) levels based on how data are submitted or at the APM Entity level if the clinician is part of an APM Entity in a MIPS APM (hereafter, a MIPS APM Entity) that elects to submit to MIPS. A clinician or group that exceeds at least one but not all three low-volume threshold criteria may become MIPS eligible by electing to opt-in and subsequently submitting data to MIPS, thereby getting measured on performance and receiving a MIPS payment adjustment.

For the proposed policies model, we describe below the estimated MIPS eligibility status and the associated PFS allowed charges of clinicians in the initial population of 1.6 million clinicians. We present in section VII.F.17.c.(1)[c] the incremental impact of the proposed policies from the baseline model for the CY 2022 performance period/2024 payment year on the MIPS eligible clinician population and their associated PFS allowed charges. We applied the same assumptions presented in the CY 2021 PFS final rule RIA to apply the low-volume threshold and to understand whether clinicians participate as a group, virtual group, APM entity, or as individuals (85 FR 85013 through 85016), except for three modifications. We assumed only individuals or APM TINs that exceeded the low-volume threshold would receive an APM performance threshold score consistent with the policy as finalized in the CY 2021 PFS final rule (85 FR 39547 Federal Register / Vol. 86, No. 139 / Friday, July 23, 2021 / Proposed Rules
We assumed APM TINs that qualified for opt-in and submitted data as a TIN would also be eligible. Finally, we did not consider clinicians in groups as MIPS eligible clinicians and start a group score for clinicians in small practices with only Medicare Part B claims submissions to reflect the proposed policy at section IV.A.3.a. of this rule.

For the proposed policies model, we estimate approximately 212,000 clinicians will be MIPS eligible because they exceed the low volume threshold as individuals and are not otherwise excluded. These clinicians may ultimately choose to participate in MIPS as an individual, group, virtual group or APM entity. We identify these clinicians as having “required eligibility” in Table 129. We estimate approximately 595,000 additional MIPS eligible clinicians will be eligible because they belong to an APM entity, group or virtual group that meets the low-volume threshold and submits to MIPS. These clinicians are identified as having “group eligibility” in Table 129. Finally, we estimate about 3,000 clinicians would be eligible through “opt-in eligibility” through the “opt-in” policy for a total MIPS eligible clinician population of approximately 810,000. This leads to an associated $67 billion allowed PFS charges estimated to be included in the 2022 performance period/2024 payment year.
Furthermore, we estimate there will be approximately 412,000 clinicians who are not MIPS eligible, but could be if their practice decides to participate or they elect to opt-in. We describe this group as “Potentially MIPS eligible” in Table 129. These clinicians would be included as MIPS eligible in the unlikely scenario in which all group practices elect to submit data as a group, or clinicians in a group that does not submit are eligible to opt-into MIPS individually and choose to do so. This assumption is important because it quantifies the maximum number of MIPS eligible clinicians. When this unlikely scenario is modeled, we estimate the MIPS eligible clinician population could be as high as 1.2 million clinicians.

* Estimated MIPS Eligible Population
** This table does not include clinicians impacted by the automatic extreme and uncontrollable policy. (approximately 6,000 clinicians and $527 million in PFS allowed charges). It also excludes CPC+, NextGen and submitters with one or more categories identified as being suppressed as a result of bad data.
*** Allowed charges estimated using 2019 dollars. Low-volume threshold is calculated using allowed charges. MIPS payment adjustments are applied to the paid amount.
Finally, we estimate approximately 101,000 clinicians would not be MIPS eligible because they and their group are below the low-volume threshold on all three criteria and another approximately 304,000 would not be MIPS eligible because they are categorically excluded regardless of volume or submission activity.

Eligibility among many clinicians is contingent on submission to MIPS as a group, virtual group or election to opt-in, therefore we will not know the number of MIPS eligible clinicians who submit until the submission period for the 2022 MIPS performance period is closed. For this proposed policies model analysis, we use the estimated population of 809,625 MIPS eligible clinicians described above.

(c) Estimated Impact of the Proposed Policies on MIPS Eligibility and PFS Allowed Charges

We illustrate in Table 130 how the proposed policy to add clinical social workers and certified nurse-midwives as MIPS eligible clinician types as proposed in section IV.A.3.a.(1) of this proposed rule affects the estimated number of MIPS eligible clinicians. The first row presents the estimates from the RIA baseline model with the number of individuals that would be MIPS eligible clinicians for the 2022 MIPS performance period/2024 MIPS payment year if this proposed rule did not take effect. The second row presents estimates from the RIA proposed policies model with the incremental impact of adding the two new MIPS eligible clinician types on the number of MIPS eligible clinicians for the CY 2022 MIPS performance period/2024 MIPS payment year. As shown in Table 130, the proposed policy to add clinical social workers and certified nurse-midwives as MIPS eligible clinician types leads to a small increase in the number of MIPS eligible clinicians (1.1 percent increase) and a minimal increase in the PFS allowed charges (0.1 percent increase) for the CY 2022 performance period/2024 payment year.

d. Estimated Impacts on Payments to MIPS Eligible Clinicians for the CY 2022 Performance Period/2024 Payment Year

(1) Summary of Approach

In sections IV.A.3.d., IV.A.3.e. and IV.A.3.f. of this proposed rule, we present several provisions which impact the measures and activities that impact the performance category scores, final score calculation, and the MIPS payment adjustment. We discuss these changes in more detail in section VII.F.17.d. of this RIA as we describe our methodology to estimate MIPS payments for the CY 2022 performance period/2024 payment year. We then present the impact of the overall proposed policies on the CY 2022 performance period/2024 payment year and then compare select metrics to the baseline model, which only incorporates previously finalized policies for the CY 2022 performance period/2024 payment year. By comparing the baseline model to the proposed policies model, we are able to estimate the incremental impact of the proposed policies for the CY 2022 performance period/2024 payment year.

The payment impact for a MIPS eligible clinician is based on the clinician’s final score, and MIPS eligible clinicians can participate as an individual, group, virtual group, or APM Entity in the four MIPS performance categories: Quality, cost, improvement activities, and Promoting Interoperability. As discussed in section VII.F.17. of this proposed rule, we generally used the most recently available submissions data from the Quality Payment Program which is data submitted for the 2019 MIPS performance period. For the cost performance category, we used the same data as the CY 2020 PFS final rule (84 FR 63169).

The estimated payment impacts presented in this proposed rule are averages by practice size weighted by Medicare utilization. The payment impact for a MIPS eligible clinician will vary from the average and would depend on the measure submissions, scores and their performance. The average percentage change in total revenues that clinicians earn would be less than the impact displayed here because MIPS eligible clinicians generally furnish services to both Medicare and non-Medicare patients; this program does not impact payment from non-Medicare patients. In addition, MIPS eligible clinicians may receive Medicare revenues for services under other Medicare payment systems, such as the Medicare FQHC PPS, that would not be affected by MIPS payment adjustment factors.

(2) Methodology To Assess Impact

To estimate participation in MIPS for the CY 2022 performance period/2024 MIPS payment year for this proposed rule, we generally used 2019 MIPS performance period data for both the baseline and proposed policies models. Our baseline and proposed policies scoring models included the 801,013 and 809,625 estimated MIPS eligible
To estimate the impact of MIPS policies on MIPS eligible clinicians, we generally used the 2019 MIPS performance period submissions data, including data submitted for the quality, improvement activities, and Promoting Interoperability performance categories. We supplemented this information with the most recent data available for CAHPS for MIPS and CAHPS for ACOs, testing data for the revised total per capita cost measure and Medicare Spending Per Beneficiary (MSPB) clinician measures which were finalized in the CY 2020 PFS final rule (84 FR 62969 through 62977), testing data for the new episode cost measures, administrative claims data for the new quality performance category measures, and other data sets. We calculated a hypothetical final score for the 2022 MIPS performance period/2024 MIPS payment year for the baseline and proposed policies scoring models for each MIPS eligible clinician using score estimation for quality, cost, Promoting Interoperability, and improvement activities performance categories, where each are described in detail in the following subsections.

(a) Methodology To Estimate the Quality Performance Category Score

We estimated the quality performance category score using a methodology like the one described in the CY 2021 PFS final rule (85 FR 85016 through 85017) for baseline and proposed policies RIA models for the CY 2022 MIPS performance period/2024 payment year.

For the baseline policies RIA model, which does not reflect the proposed policies for CY 2022 MIPS performance period/2024 payment year, we made the following modifications to reflect the previously finalized policies for the CY 2022 performance period/2024 payment year for the quality performance category:

(1) As previously finalized in the CY 2021 PFS final rule, we removed the Web Interface as a collection type in MIPS and through the APP for the CY 2022 performance period/2024 MIPS payment year (85 FR 84870 and 85 FR 84843). Although the Web Interface is proposed to be reinstated for groups for the CY 2022 MIPS performance period/2024 MIPS payment year and ACOs for CY 2022 MIPS performance period/2024 MIPS payment year and CY 2023 MIPS performance period/2025 MIPS payment year as discussed in sections IV.A.3.d.(1)(d) and IV.A.3.c.(2)(a), respectively, the baseline model is attempting to capture the CY 2022 MIPS performance period/2024 MIPS payment year as if this proposal did not exist. Therefore, the baseline model does not incorporate the Web Interface as a collection type for groups and ACOs.

(2) As discussed in section IV.A.3.e.(1)(c)(iv) of this proposed rule, we proposed to use performance period benchmarks for the CY 2022 performance period in accordance with § 414.1380(b)(1)(ii) as opposed to a historical benchmark. Therefore, we used 2019 MIPS performance period benchmarks calculated from the CY 2019 MIPS submissions data because the performance data for this analysis came primarily from the 2019 MIPS performance period.

(3) As discussed in section IV.A.3.e.(1)(c)(vi) of this proposed rule, we proposed to extend the 3-point floor for each measure that can be reliably scored against a benchmark and score the measure from 1 to 10 points. As described in section IV.A.3.e.(1)(c)(vi) of this proposed rule, we also proposed to make the following changes: (1) Remove the special scoring policy of scoring 3 points for class 2 measures, except for clinicians in small practices; (2) introduce a 5-point floor for new measures for their first two performance periods that meet data completeness and can be reliably scored against a benchmark (class 4a measures); and (3) introduce 5 points for new measures in their first two performance periods that meet data completeness, but cannot be reliably scored against a benchmark because they lack a benchmark or do not meet case minimum in the program (class 4b measures). We incorporated these scoring changes into our proposed policies model. Because we are using 2019 MIPS performance period data, we assume that measures new to the 2018 and 2019 MIPS performance periods could qualify as class 4 measures.

(4) As discussed in sections IV.A.3.e.(1)(c)(vi) and IV.A.3.e.(1)(c)(vii) of this proposed rule, we also propose to end measure bonus points for reporting high priority measures and for submitting end-to-end electronic reporting beginning in the 2022 MIPS performance period. We incorporated these scoring changes into our proposed rule model for all MIPS collection types.

(5) As discussed in section IV.A.3.d.(1)(d), we are proposing to extend Web Interface measures for the CY 2022 performance period/2024 MIPS payment year for groups and virtual groups using the existing 10 CMS Web Interface measures. To estimate the impact of this proposed policy, we used the same methodology described in the CY 2021 PFS final rule (85 FR 85016 through 85017) using 2019 MIPS submissions data.

(6) Finally, we are also proposing to extend the CMS Web Interface as a means of reporting quality under the APM Performance Pathway for Shared Savings Program ACOs for the CY 2022 and CY 2023 MIPS performance periods and 2024 and 2025 MIPS payment years as described in section IV.A.3.c.(2)(a) of

265 Data submitted to MIPS for the 2018 MIPS performance period data was used for the improvement score for the quality performance category. We also incorporated some additional data sources when available to represent more current data.

266 Data downloaded on April 9 2021 from https://qpp.cms.gov/resources/resource-library.
this proposed rule. Under the proposal, for the CY 2022 and CY 2023 MIPS performance periods and 2024 and 2025 MIPS payment years, Web Interface reporting would work in the same manner as for performance year 2021, where ACOs would have the option of reporting either the CMS Web Interface, the APP eCQM/MIPS CQM measure set, or both. To estimate the impact of this proposed policy, we used the same methodology described in the CY 2021 PFS final rule RIA (85 FR 85016 through 85017) when Web Interface was retained for the APP.

(b) Methodology To Estimate the Cost Performance Category Score

We estimated the cost performance category score using a similar methodology described in the CY 2020 PFS final rule (84 FR 63169) with the modifications to the baseline and the proposed policies RIA model described in this section.

In the baseline policies RIA model, we refined our methodology for developing benchmarks to better reflect the previously finalized policy in CY 2017 Quality Payment Program final rule (81 FR 77308 through 77309). We did not estimate cost improvement scoring that starts in the 2022 MIPS performance period/2024 MIPS payment year as previously finalized at § 414.1380(a)(1)(i) and in the CY 2019 PFS final rule (83 FR 58956) since we did not have sufficient data to conduct improvement scoring, which requires 2 years of cost data to model.

In the proposed policies RIA model, we modified the baseline model to incorporate the proposal to add five new episode-based cost performance category measures in the CY 2022 MIPS performance period/2024 payment year as described in section IV.A.3.d.(2) of this proposed rule, by using claims data from January 1, 2019 to December 31, 2019. Cost measures were scored if the clinicians or groups met or exceeded the case volume: 10 Episodes for Melanoma Resection to align with the reporting case minimum for procedural cost measures currently in use in MIPS, 20 episodes for Sepsis to align with the reporting case minimum for acute inpatient condition cost measures currently in use in MIPS, 20 episodes for Diabetes and Asthma/COPD as used in field testing for these chronic measures, and 20 episodes for Colon Resection. These newly proposed cost episode-based measures were calculated for both the TIN/NPI and the TIN.

(c) Methodology To Estimate the Facility-Based Measurement Scoring

For the baseline model, we estimated the facility-based score using the scoring policies finalized in the CY2018 Quality Payment Program final rule (82 FR 53763) and the methodology described in the CY 2020 PFS final rule (84 FR 63169). For the proposed policies model, we used the methodology proposed for the CY 2022 MIPS performance period/2024 MIPS payment year as discussed in section IV.A.3.e.(2)(b)(v)(B) of this proposed rule. We propose at § 414.1380(e)(vi) that beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, the MIPS facility quality and cost performance category scores will be based on the facility-based measurement scoring methodology unless a clinician or group receives a higher MIPS final score through another MIPS submission. Therefore, if a MIPS eligible clinician or a group is eligible for facility-based measurement, but they participate in MIPS as an individual or group, we used the higher final score between the facility-based scoring and MIPS submission-based scoring.

(d) Methodology To Estimate the Promoting Interoperability Performance Category Score

For the baseline RIA model, we used the CY 2019 MIPS Promoting Interoperability performance period data submissions data to estimate CY 2022 MIPS performance for the Promoting Interoperability performance category. We made the following two modifications to the 2019 performance period scoring to reflect the previously finalized policy changes between the CY 2019 and CY 2021 performance periods:

(1) We doubled the bonus points for clinicians who submitted the PDMP measure as described in section IV.A.3.d.(4)(c)(i) of this proposed rule; and

(2) We did not incorporate the Verily Opioid Treatment Agreement measure data, a measure that was finalized in the CY 2019 performance period (83 FR 59807) but removed in the CY 2020 performance period (84 FR 62994). We retained the PDMP bonus for the baseline model for continuity between the CY 2021 and 2022 performance periods and for consistency since bonuses for the quality performance category were retained for the baseline as well. Because we lacked data on who submitted the finalized Health Information Exchange bi-directional exchange measure for the CY 2021 performance period and how these clinicians would score, we only used past reporting on the existing Health Information Exchange Objective measures to estimate CY 2022 Promoting Interoperability performance.

For the proposed rule model, we considered the following policy proposals as potential modifications to the baseline RIA model:

(1) In section IV.A.3.d.(4)(c)(ii) of this proposed rule, we proposed for the PDMP measure to remain optional and at 10 points. Modifications were not made to reflect this proposed policy in the proposed policies model since the baseline model already incorporated this policy.

(2) In section IV.A.3.d.(4)(c)(iii) of this rule, we proposed to require two of the measures associated with the Public Health and Clinical Data Exchange Objective, beginning with the CY 2022 performance period: Immunization Registry Reporting; and Electronic Case Reporting. Because we lacked data, we did not integrate this requirement into our proposed rule model.

(3) In section IV.A.3.d.(4)(b)(i) of this rule, we proposed to automatically reweight the Promoting Interoperability performance category to another performance category and assigned a weight of zero only in the event a small practice did not submit any data for any of the measures specified for the Promoting Interoperability performance category. This policy was implemented in the proposed policies model.

(4) In section IV.A.3.d.(4)(h)(ii) of this proposed rule, we proposed to reweight the Promoting Interoperability performance category for clinical social workers. This policy was implemented in the proposed policies model.

(5) In section IV.A.3.d.(4)(d) of this proposed rule, we proposed the additional requirement that eligible clinicians must attest to conducting an annual assessment of the High Priority Guides of the SAFER Guides beginning with the 2022 MIPS performance period. This policy was not implemented in the proposed policies model as it does not affect eligibility or payment. We included this policy in our burden calculations in section V.B.8.g.(3) of this rule.

(e) Methodology To Estimate the Improvement Activities Performance Category Score

For the baseline model, we modeled the improvement activities performance category score based on CY 2019 MIPS performance period data and APM participation identified in section VII.F.17.c.(1) of this proposed rule. For clinicians and groups not participating in a MIPS APM, we used the CY 2019 submissions improvement activities...
score. We did not model the policy finalized in the CY 2020 performance period (84 FR 62980) to require a minimum threshold of 50 percent of clinicians in a group to complete an improvement activity for the group to receive credit since we did not have data to determine the proportion of clinicians in a group that completed the improvement activity. We continued to apply the methodology described in the CY 2020 PFS final rule (84 FR 63170) to assign an improvement activities performance category score. For the APM participants identified in section VII.F.17.c.(1) of this proposed rule, we assigned an improvement activity performance category score of 100 percent.

For the proposed policies model, we did not make modifications to the baseline model to reflect the proposed policies in section IV.A.3.d.(3) of this proposed rule since we did not have the data to model those changes.

(f) Methodology To Estimate the Complex Patient Bonus Points

In section IV.A.3.e.(2)(a)[iii][B] of this proposed rule, we proposed to continue the complex patient bonus, with updates, for the CY 2022 MIPS performance period/2024 payment year. For the baseline RIA model, we used the complex patient bonus information calculated for the 2019 performance period data for the 2022 MIPS performance period/2024 payment year, as was previously done in the CY 2021 PFS final rule (85 FR 85017).

For the proposed policies RIA model, we calculated the complex patient bonus using the calculation proposed in section IV.A.3.e.(2)(a)[iii][B][cc] of this proposed rule for the CY 2022 performance period/2024 payment year. In section IV.A.3.e.(2)(a)[iii][B][aa] of this proposed rule, we propose updates to the complex patient bonus for the CY 2022 performance period/2024 payment year and future MIPS performance periods/payment years to account for social and medical complexity, while still using our current established indicators of dual proportion and HCC risk scores, respectively. Consistent with the proposed policy for the 2022 performance period, our proposed policies RIA model calculated and applied the separate risk indicator complex patient bonus components methodology with a single overall cap described in section IV.A.3.e.(2)(a)[iii][B][dd] of this proposed rule.

(g) Methodology To Estimate the Final Score

We did not propose any changes for how we calculated the MIPS final score. Our baseline and proposed policies RIA models assigned a final score for each TIN/NPI by multiplying each estimated performance category score by the corresponding performance category weight, adding the products together, multiplying the sum by 100 points, adding the complex patient bonus, and capping at 100 points.

For the baseline policies RIA model, we applied the performance category weights and redistribution weights finalized in the CY 2021 PFS final rule (85 FR 84913 through 84916).

For the proposed policies RIA model, we proposed to modify the redistribution policy for small practices. Therefore, we applied redistribution weights proposed in section IV.A.3.e.(2)[b][iii][A] of this proposed rule.

For both models, after adding any applicable bonus for complex patients, we reset any final scores that exceeded 100 points to equal 100 points. For MIPS eligible clinicians who were assigned a weight of zero percent for any performance category, we redistributed the weights according to section IV.A.3.e.(2)[b][ii] of this proposed rule.

(h) Methodology to Estimate the MIPS Payment Adjustment

For the baseline and proposed policies RIA models, we applied the hierarchy as finalized in the CY 2021 PFS final rule (85 FR 84917 through 84919) to determine which final score should be used for the payment adjustment for each MIPS eligible clinician when more than one final score is available. We then calculated the parameters of an exchange function in accordance with the statutory requirements related to the linear sliding scale, budget neutrality, minimum and maximum adjustment percentages, and additional payment adjustment for exceptional performance (as proposed under § 414.1405).

For the baseline policies model, we applied the performance threshold and additional performance thresholds finalized for the CY 2021 performance period/2023 payment year (85 FR 84923), of 60 and 85, respectively. For the proposed policies model, we used the performance threshold of 75 points as proposed in section IV.A.3.f.(2) and the additional performance threshold of 89 points as proposed in section IV.A.3.f.(3). We used these resulting parameters to estimate the positive or negative MIPS payment adjustment based on the estimated final score and the paid amount for covered professional services furnished by the MIPS eligible clinician. As discussed in the CY 2021 PFS final rule RIA (85 FR 85013), we adjusted the paid amount of non-engaged clinicians to equal their proportion of paid amount prior to the PHE for COVID–19 for the baseline and proposed policies RIA models.

(3) Impact of Payments by Practice Size

As we shift from previous MIPS transition policies by removing bonuses from the quality performance category and increasing the performance threshold and the additional performance threshold, we observe large changes between the baseline and proposed policies RIA models.

First, we observe an increase in the funds available for redistribution due to the increase in clinicians with final scores below the performance threshold. The baseline model estimates $428 million would be redistributed through budget neutrality and that $500 million would be distributed to MIPS eligible clinicians for exceptional performance. The mean and median final scores for the baseline model are 78.13 and 82.59, respectively. Our proposed policies model estimates that $587 million would be redistributed through budget neutrality. For clinicians who meet or exceed the additional performance threshold, an additional $425 million was estimated to be distributed. The mean and median final scores for the proposed policies model are 75.86 and 80.30, respectively.

In the proposed model, the estimated bonus for exceptional performance is less than the $500 million of available funding because the maximum additional payment adjustment for clinicians with exceptional performance reached 10 percent. As finalized in the 2017 QPP final rule (81 FR 77339 through 77340), we stated the maximum additional payment adjustment would be 10 percent, which is established by the statute, and that it would be multiplied by a scaling factor that cannot exceed 1.0. We reached the maximum additional payment adjustment allowed of 10 percent because the additional performance threshold is higher, and fewer clinicians performed above this higher additional performance threshold while a greater percentage of clinicians performed below the additional performance threshold. As a result, fewer clinicians were sharing the funds available through the additional bonus for exceptional performance.
Second, we observe an increase in the maximum positive payment adjustment. The baseline model estimates the maximum positive MIPS payment adjustment based on the budget neutral pool at 1.5 percent and the maximum positive MIPS additional payment adjustment for exceptional performance at 5.1 percent, for a combined maximum payment adjustment of 6.6 percent. The proposed policies model estimates the maximum MIPS positive payment adjustment based on the budget neutral pool at 4.0 percent and the maximum positive additional MIPS payment adjustment for exceptional performance bonus at 10.0 percent for a combined maximum payment adjustment of 14.0 percent.

Finally, we no longer observe large differences in performance across practice sizes due to the shift from MIPS transition policies. Table 131 shows the overall impact of the payment adjustments by practice size and based on whether clinicians are expected to submit data to MIPS for the proposed policies model. We estimate performance under the proposed policies will be similar across all practice sizes. The smallest proportion of clinicians receiving a positive or neutral payment adjustment is among clinicians in practices with 16 to 24 clinicians compared to other sized practices among those who submit data. Table 131 also shows that overall 67.5 percent of MIPS eligible clinicians that participate in MIPS are expected to receive positive or neutral payment adjustments. In Table 132, we present the overall impact of the baseline and the proposed policies models among clinicians who submit data to assess the incremental impact of the proposed policies. The overall proportion of clinicians receiving a positive or neutral payment adjustment decreases from 91.7 percent to 67.5 percent with the implementation of the proposed policies that shift away from MIPS transition policies. Among clinicians who receive a positive payment adjustment in the baseline model and receive a negative payment adjustment in the proposed policies model, only 30 percent receive a negative payment adjustment greater than 1 percent. In addition, we no longer observe a disproportionate number of clinicians in small practices receiving a negative payment adjustment when implementing the proposed policies.

For the CY 2022 performance period/2024 payment year, we have policies targeted towards small practices including special scoring policies to minimize burden and facilitate small practice participation in MIPS or APMs, which we describe in section VII.F.17.f.(2)(e) of this proposed rule. The intention of the proposed policies is to provide a more equitable participation process and reduce the disparity in performance between clinicians in large and small practices. These findings and proposed policies reflect movement away from the transition policies implemented during the early years of MIPS and how MIPS is focusing on value rather than primarily on engagement. However, non-engagement by not submitting data to MIPS among clinicians in small practices is still a concern. Among those who we estimate would not submit data to MIPS, 85 percent are in small practices (23,056 out of 27,108 clinicians who do not submit data). We intend to continue working with stakeholders to improve engagement in MIPS among clinicians in small practices.

We want to highlight we are using 2019 MIPS performance period submissions data to simulate a 2022 MIPS performance period final score, and it is likely that there will be changes that we cannot account for at this time, including services and payments disrupted by the PHE for COVID–19 or clinicians changing behavior in response to the performance thresholds increased for the 2022 performance period/2024 payment year to avoid a negative payment adjustment. It should also be noted that the estimated number of clinicians who do not submit data to MIPS may be an overestimate of non-engagement in MIPS for the CY 2022 MIPS performance period/2024 payment year. This is because the PHE for COVID–19 may have resulted in fewer clinicians submitting data to MIPS or more clinicians electing to apply for the extreme and uncontrollable circumstances policies due to the PHE for COVID–19 for the 2019 MIPS performance period. Therefore, engagement levels in MIPS for the CY 2022 performance period/2024 payment year may differ from these reported estimates. We also note this participation data is generally based off participation for the 2019 performance period, which is associated with the 2019 performance period/2021 payment year and had a performance threshold of 30 points, and that participation may change for the 2022 performance period/2024 payment year when the performance threshold is 75 points.

Finally, the combined impact of negative and positive adjustments and the additional positive adjustments for exceptional performance as a percent of paid amount among those that do not submit data to MIPS was not the maximum negative payment adjustment of 9 percent possible because some MIPS eligible clinicians that do not submit data to MIPS receive a non-zero score for the cost performance category, which utilizes administrative claims data and does not require separate data submission to MIPS.

NOTE: Results of this model may change significantly if more clinicians apply for the application-based extreme and uncontrollable circumstances policy exception in CY 2021 because of the PHE for COVID-19.

*Practice size is the total number of TIN/NPIs in a TIN.

** 2019 data used to estimate 2022 performance period/2024 payment year payment adjustments. Payments estimated using 2019 dollars trended to 2024.

***The percentage represents the total adjustments after taking all the positive adjustments and subtracting the negative adjustments for all MIPS eligible clinicians in the same respective practice size.

****Includes facility-based clinicians cost and quality data are submitted through hospital programs.
We are proposing for the CY 2023 MIPS Performance Period to begin transitioning to MIPS Value Pathways (MVPs) and introduce subgroup reporting in the CY 2023 MIPS performance period/2025 payment year. As described in section IV.A.3.b.2(d) of the proposed rule, the first step in the transition plan for MVPs and subgroup reporting is to be voluntary, where eventually MVPs and subgroups will become required. Additionally, subgroups, if applicable, will have the option to report an APP. Since MVP and subgroup reporting will only begin in the CY 2023 MIPS performance period/2025 payment year, we do not have the data to report who would select MVP and who would report through subgroup in the first year and how these clinicians will score. For this regulatory impact analysis, we assume clinicians who elect to use MVPs and subgroups for reporting to MIPS will perform similarly to how they performed through traditional MIPS because the scoring policies are similar. As discussed in section V.B.8.e.(7)a of this proposed rule, for the purposes of estimating burden associated with the proposal to implement MVP and subgroup reporting, we assume that 10 percent of MIPS eligible clinicians in the CY 2022 MIPS performance period/2024 payment year will report as MVP participants in the CY 2023 MIPS performance period/2025 payment year. In addition, we assume that there will be 20 subgroup reporters in the CY 2023 MIPS performance period/2025 payment year. We anticipate a per respondent reduction of 3 hours and $412 dollars per CQM/QCDR quality submission, 3 hours and $336 per eCQM quality submission, and 5 hours and $717 per claims quality submission. Overall, we estimate a net reduction in burden of $7,463,145 in the quality performance category ICRs due to the introduction of MVP and subgroup reporting in the CY 2023 MIPS Performance Period/2025 payment year. We refer readers to section V.B.8.e.(7)d(iii) of the proposed rule for further discussion of burden associated with MVPs and subgroups.

f. Additional Impacts from Outside Payment Adjustments

(1) Burden Overall

In addition to policies affecting the payment adjustments, we are proposing several policies that have an impact on burden in the CY 2022 and CY 2023 MIPS performance periods/2024 and 2025 payment years. In section V.B.8 of this proposed rule, we outline estimates of the costs of data collection that includes both the effect of proposed policy updates and adjustments due to the use of updated data sources. For each proposal included in this regulation which impacts our estimate of collection, the incremental burden for each is summarized in Table 133. We also provide proposed additional burden discussions that we are not able to quantify.

</tr>
</tbody>
</table>
As discussed in section IV.A.3.d.(1)(d) of this proposed rule, we are proposing to continue the use of the CMS Web Interface measures as a collection type for groups and virtual groups with 25 or more eligible clinicians for the CY 2023 MIPS performance period/2024 MIPS payment year. We are also proposing to sunset the CMS Web Interface measures as a collection type for groups and virtual groups with 25 or more eligible clinicians starting with the CY 2023 MIPS performance period/2025 MIPS payment year.

As discussed in section IV.A.3.d.(1)(e), we are proposing to add the following two new administrative claims measures beginning in the 2022 MIPS performance period and for future performance periods: (1) Risk-Standardized Acute Unplanned Cardiovascular-Related Admission Rates for Patients with Heart Failure for the Merit-based Incentive Payment System; and (2) Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions. We acknowledge there are administrative burdens and related financial costs associated with each administrative claims measure that clinicians, groups, and organizations may experience. In summary, we are acknowledging that while there are no data submission requirements per §414.1325(a)(2)(i) for administrative claim measures, there may be associated costs for clinicians and group practices to monitor new administrative claim measures; however, we are unable to quantify that impact.

(c) Modifications to the Improvement Activities Inventory

As discussed in section IV.A.3.d.(3)(c)(ii) of this proposed rule, we are proposing the removal of 7 previously adopted improvement activities, modification of 15 existing improvement activities, and adoption of 5 new improvement activities. We refer readers to Appendix 2 of this proposed rule for further details. We do not believe these proposed changes to the inventory will impact time or financial burden. In summary, we are acknowledging that while there are no data submission requirements per §414.1325(a)(2)(i) for administrative claim measures, there may be associated costs for clinicians and group practices to monitor new administrative claim measures; however, we are unable to quantify that impact.

As discussed in section IV.A.3.c.(2)(a), we are proposing to extend the CMS Web Interface as a means of reporting quality under the APP for Shared Savings Program ACOs for the CY 2022 MIPS performance period/2024 payment year and the CY 2023 MIPS performance period/2025 payment year.

As discussed in section IV.A.3.c.(2)(b), we are proposing to add the following two new administrative claims measures beginning in the 2022 MIPS performance period and for future performance periods: (1) Risk-Standardized Acute Unplanned Cardiovascular-Related Admission Rates for Patients with Heart Failure for the Merit-based Incentive Payment System; and (2) Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions. We acknowledge there are administrative burdens and related financial costs associated with each administrative claims measure that clinicians, groups, and organizations may experience. In summary, we are acknowledging that while there are no data submission requirements per §414.1325(a)(2)(i) for administrative claim measures, there may be associated costs for clinicians and group practices to monitor new administrative claim measures; however, we are unable to quantify that impact.
policies, would continue to perform the same activities under the policies in this proposed rule because previously finalized improvement activities continue to apply for the current and future years unless otherwise modified per rulemaking (82 FR 54175). Most of the improvement activities in the Inventory remain unchanged for the CY 2022 MIPS performance period.

(d) Stakeholders Nominating Improvement Activities

In section IV.A.3.d.(3)(c)(i)(B) of this rule, we are proposing: (1) To revise the required criteria for improvement activity nominations received through the Annual Call for Activities; (2) changes to the timeline for improvement activities nomination during a public health emergency (PHE); and (3) to suspend activities that become obsolete or impacted by clinical practice guideline changes from the program when this occurrence happens outside of the rulemaking process.

With regard to the proposal to clarify the timeline for an improvement activity nominated during the PHE, we believe this proposal will not affect our currently approved burden estimates since we believe that the number of nominations will not change, but it would make activity available for reporting to clinicians in the same performance year it was intended to be implemented. In section IV.A.3.d.(3)(c)(i)(B)(aa) of this rule, we are proposing that in order to implement a new improvement activity for a PHE during the same year as the nomination, the nomination would need to be received no later than January 5th of the nomination year to be included in a rule for notice-and-comment rulemaking during that fiscal or calendar year, a necessary precursor to implementation if it were to be finalized. As described in section V.B.8.j of this rule, we expect additional nominations may be received as a result of this proposal, but we do not have any data with which to estimate what the additional number may be. As a result, we are not making any proposed revisions to our currently approved burden estimate.

Regarding the proposal to suspend activities that become obsolete or impacted by clinical practice guideline changes from the program when this occurrence happens outside of the rulemaking process, we do not anticipate additional burden for stakeholders because of the proposal described above as the proposed policy does not change requirements for the nomination of improvement activities.

As described in section IV.A.3.d.(3)(c)(ii)(B) of this rule, due to the proposals to add two new criteria and to increase the number of criteria stakeholders are required to meet when submitting an activity proposal from a minimum of 1 to all 8 criteria, which includes the two new proposed criteria, we propose to revise our estimated annual information collection burden for nomination of improvement activities to 136 hours (31 nominations × 4.4 hr/nomination) at a cost of $20,355 ($31 × [(2.8 hr × $114.24/hr) + (1.6 hr × $210.44/hr)])

(e) Impact on Small Practices

As described in section VII.F.17.d.(3) of this proposed rule RIA, we found 85 percent of clinicians who did not submit data to MIPS were in small practices. However, the estimated number of MIPS eligible clinicians who do not submit data, including those in small practices, may be smaller in the CY 2022 performance period/2024 payment year since more clinicians may choose to submit data after the PHE for COVID–19. CMS is committed to identifying flexibilities and options to help clinicians in small practices participate meaningfully and successfully in MIPS. Specifically, CMS made several proposals to support clinicians in small practices once they engage with MIPS in the quality, improvement activities and Promoting Interoperability performance categories for the CY 2022 performance period/2024 payment year. Based on our RIA model findings described in section VII.F.17.d.(3) of this proposed rule, the proposed policies for the CY 2022 performance period/2024 payment year led to clinicians in small practices no longer disproportionately receiving negative payment adjustments compared to clinicians in larger sized practices. Therefore, the combination of the special scoring policies for clinicians in small practices is expected to positively affect this group of clinicians and will hopefully encourage and improve future engagement in MIPS among clinicians in small practices.

(f) Impact on Third Party Intermediaries

In section IV.A.3.h. of this rule, we are proposing multiple changes to the third-party intermediary regulations at §414.1400. Specifically, we are proposing: (1) Reorganization and consolidation of §414.1400 generally; (2) expanding the general participation requirements of third-party intermediaries to third party intermediaries reporting MIPS on behalf of APM Entities in order to align reporting requirements for all participants in MIPS; (3) beginning with the CY 2023 MIPS performance period/2025 payment year, QCDRs and qualified registries must support MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data. Health IT vendors must support MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data; (4) require QCDRs, qualified registries, health IT vendors, and CAHPS for MIPS survey vendors to support subgroup reporting, beginning with the CY 2023 MIPS performance period/2025 payment year; (5) require QCDRs and qualified registries that have never submitted data since the inception of MIPS (CY 2017 MIPS performance period/2019 payment year) through the 2020 MIPS performance period/2022 payment year, to submit a participation plan as part of their self-nomination for CY 2023; (6) beginning with the 2024 MIPS performance period/2026 payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for either of the 2 years preceding the applicable self-nomination period must submit a participation plan for CMS' approval; (7) beginning with the CY 2023 MIPS performance period/2025 payment year, the QCDR or qualified registry must submit a data validation plan annually, at the time of self-nomination, for CMS' approval, and may not change the plan once approved, without the prior approval of the agency; and (8) add a rejection criterion to state that a QCDR does not have permission to use a QCDR measure owned by another QCDR for the applicable performance period. Additionally, to provide further clarification of our current policy (84 FR 63070 through 63073), we are proposing to state, if a QCDR measure owner is not an approved active QCDR for a given self-nomination period, that QCDR measure will not be available for use. The inactive QCDR measure owner has the option to transfer ownership of the QCDR measure to an active QCDR and agree upon terms set forth with the active QCDR allowing co-ownership of the QCDR measure.

With regard to the reorganization and consolidation of § 414.1400 generally, we do not anticipate this to require any additional effort for affected entities as the proposal is to allow CMS to reorganize the existing information. For the requirements related to expanding the general participation requirements of third-party intermediaries to third party intermediaries reporting MIPS on behalf of APM Entities in order to align reporting requirements for all
participants in MIPS, we do not propose to revise our burden estimates as this requirement is not different from how third-party intermediaries currently submit data for the quality, improvement activities and Promoting Interoperability performance categories in MIPS on behalf of individual eligible clinicians and groups.

As previously discussed in section IV.A.3.h.(2)(b)(i) of this rule, we are proposing to require QCDRs, qualified registries, health IT vendors, and CAHPS for MIPS survey vendors to support subgroup reporting, beginning with the CY 2023 MIPS performance period/2025 payment year. During the MVP Town Hall held in January 2021 (85 FR 74729), we heard from third-party intermediaries that they are confident that they can make the necessary updates to allow for subgroup reporting, if they have enough time. A few vendors suggested that we add subgroup reporting to the existing CEHRT requirements. Given our proposal described in section IV.A.3.h.(2)(b)(i) of this rule to delay the implementation of subgroup reporting option to the CY 2023 MIPS performance period/2025 payment year, we assume that the proposed delay would give these entities adequate time to make the necessary updates. We assume that there will be no additional burden that third-party intermediaries will incur to implement the subgroup reporting option. We anticipate that there may be administrative burden associated with changes in workflows to the existing systems for submission of subgroup data for the CY 2023 MIPS performance period/2025 payment year. However, given that each of these entities and their information technology systems are unique, we are unable to quantify the burden for these entities to capture and submit data on behalf of clinicians who may choose to participate as subgroups.

We do not anticipate a significant impact to QCDRs and qualified registries resulting from the finalized proposal to require QCDRs and qualified registries to conduct an annual data validation audit and if one or more deficiencies or data errors are identified also conduct targeted audits. First, we are not revising our burden estimates because the finalized data validation requirements are similar to existing expectations which we have already accounted for the associated burden as stated in the CY 2017 Quality Payment Program final rule (81 FR 77383 through 77384) and the CY 2019 PFS final rule (83 FR 6948 through 6990). Second, we believe that the proposed requirements for conduct of the data validation audits are aligned with methods and procedures which stakeholders currently utilize.

As discussed in section IV.A.3.h.(3)(a)(i) of this rule, due to the proposal to require QCDRs and qualified registries that have never submitted data since the inception of MIPS (CY 2017 MIPS performance period/2019 payment year) through the CY 2020 MIPS performance period/2022 payment year to submit a participation plan as part of their self-nomination for CY 2023 MIPS performance period, we refer readers to section V.B.8.c.(2) of this rule for details on the adjusted burden.

As discussed in section V.B.8.c.(2) of this rule, due to the proposal related to new rejection criteria for QCDR measures, we estimate that the annual burden will range from 855 hours (90 QCDRs × 9.5 hr) to 1,035 hours (90 QCDRs × 11.5 hr) at a cost ranging from $81,413 (855 hr × $95.22/hr) and $98,553 (1,035 hr × $95.22/hr).

(g) Assumptions & Limitations

We note several limitations to our estimates of clinicians’ MIPS eligibility and participation, negative MIPS payment adjustments, and positive payment adjustments for the CY 2022 performance year/2024 payment year. Due to the PHE for COVID–19, we are aware that there may be changes in health care delivery and billing patterns that will impact results for the 2022 performance year/2024 payment year that we are not able to model with our historic data sources. The scoring model results presented in this proposed rule assume that CY 2019 Quality Payment Program data submissions and performance are representative of CY 2022 Quality Payment Program data submissions and performance. The estimated performance for the CY 2022 performance year/2024 payment year using CY 2019 Quality Payment Program data may be underestimated because the performance threshold to avoid a negative payment adjustment for the CY 2022 MIPS performance period/2021 MIPS payment year was significantly lower (30 out of 100 points) than the performance threshold for the 2022 performance year/2024 payment year (75 out of 100). We anticipate clinicians may submit more performance categories to meet the higher performance threshold to avoid a negative payment adjustment.

In our MIPS eligible clinician assumptions, we assumed that clinicians who elected to opt-in in the CY 2019 Quality Payment Program and subsequently opted to submit data in CY 2020, and subsequently elected to opt-in in the CY 2022 performance year/2024 payment year. It is difficult to predict whether clinicians will elect to opt-in to participate in MIPS with the proposed policies.

There are additional limitations to our estimates in addition to the limitations described throughout the methodology sections: (1) To the extent that there are year-to-year changes in the data submission, volume and mix of services provided by MIPS eligible clinicians, the actual impact on total Medicare revenues will be different from those shown in Table 129; and (2) our cost data does not overlap with CY 2019 so we may not be capturing performance for all clinicians. Due to the limitations described, there is considerable uncertainty around our estimates that is difficult to quantify.

G. Alternatives Considered

This proposed rule contains a range of policies, including some provisions related to specific statutory provisions. The preceding preamble provides descriptions of the statutory provisions that are addressed, identifies those policies when discretion has been exercised, presents rationale for our policies and, where relevant, alternatives that were considered. For purposes of the payment impact on PFS services of the policies contained in this proposed rule, we presented the estimated impact on total allowed charges by specialty.

1. Alternatives Considered for Utilization Data in PFS Ratesetting

As discussed earlier in this section IIC.1 (Changes in Relative Value Unit (RVU) Impacts), our estimates of changes in Medicare expenditures for PFS services compared payment rates for CY 2021 with payment rates for CY 2022 using CY 2020 Medicare utilization. As an alternative to using CY 2020 data, we considered using CY 2019 utilization data for the purposes of determining the proposed CY 2022 RVUs, as well as in determining the proposed CY 2022 budget neutrality adjustment and conversion factor. We considered using CY 2019 data due to the PHE for COVID–19, which has impacted the delivery of health care services over the past 18 months. Increases in remote delivery of services to reduce risk of exposure to both practitioner and patients, as well as postponement of elective procedures have resulted in a change to service utilization patterns across Medicare FFS payment systems. Specific to the PFS, overall service utilization decreased by approximately 20 percent in CY 2020 compared to CY 2019, which caused us to question whether CY 2020 data is the
best available data to use for CY 2022 ratesetting.

In order to determine if lower overall utilization in CY 2020 would result in differential impacts on specialties and practitioners, we modeled the PFS ratesetting process using CY 2019 utilization data. We found that the use of CY 2020 as opposed to CY 2019 data in establishing payment rates had relatively little differential impacts on payment, despite the approximately 20 percent decrease in overall service utilization. Table 134 illustrates specialty-specific impacts using CY 2019 data.

</table>
The majority of specialties experienced shifts of less than a percent when we used CY 2019 data, as opposed to CY 2020 data, as displayed in Table 123, as the basis for setting rates. Several specialties shifted by approximately one percent. We did not detect a pattern of specialties that were notably affected by the choice of claims data, either positively or negatively. While Pediatrics shifted from a 1 percent impact when we used CY 2020 claims data to a 5-payment impact when we used CY 2019 claims data, this shift is likely due to the smaller amount of allowed charges associated with the Pediatrics specialty.

We analyzed the percentage change in total RVUs per practitioner. Using CY 2019 utilization data, total RVUs change between -1 percent and 1 percent for 53 percent of practitioners, representing more than 48 percent of the changes in total RVUs for all practitioners, similar to the results we found when using CY 2020 claims data. We noted in regard to the specialty impacts in Table 123 that the proposed clinical labor pricing update will have a significant effect on the valuation of many services. We have occasionally implemented significant updates based on new data through a phased transition across several calendar years.

For example, we utilized a 4-year transition for the market-based supply and equipment pricing update which will conclude in CY 2022. We considered, as an alternative, the use of a similar 4-year transition to implement the clinical labor pricing update that could smooth out the increases and decreases caused by the pricing update for affected stakeholders. We noted in regard to the specialty impacts in Table 123 that the proposed clinical labor pricing update will have a significant effect on the valuation of many services. We have occasionally implemented significant updates based on new data through a phased transition across several calendar years.

2. Alternatives Considered for Clinical Labor Pricing Update

As discussed in the PE section of this rule (section II.B. of this proposed rule), we are proposing to update the clinical labor pricing for CY 2022, in

The CY 2021 PFS CF to be 33.6184 which reflects a budget neutrality adjustment under section 1848(c)(2)(B)(ii)(II) of the Act, which we estimated to be −0.04 using CY 2019 data, the 0.00 percent update adjustment factor specified under section 1848(d)(19) of the Act, and the expiration of the 3.75 percent fee schedule payment increase for CY 2021 provided by the CAA. The anesthesia CF, which reflects the same overall PFS adjustments with the addition of anesthesia-specific PE and MP adjustments, would shift by a similar magnitude as the PFS CF. Thus, the estimated PFS CF and anesthesia CF using CY 2019 data is slightly higher compared to using claims data for CY 2020 with an estimated difference of 0.0336 (a little less than three and half cents).

</table>
services is prohibited, physicians and NPPs would only be able to bill for visits they furnish in their entirety under their own NPI. Such a policy would be administratively simple, and reduce the likelihood of paying significantly more than the actual resource costs incurred. When physicians and practitioners furnish services in facility settings, they do not ordinarily incur the cost of clinical staff or other PE costs involved in furnishing the services. When the physician bills for an E/M visit, in accordance with section 1833(a)(1)(N) of the Act, the Medicare Part B payment is equal to 80 percent of the payment basis under the PFS which, under section 1848(a)(1) of the Act, is the lesser of the actual charge or the full fee schedule amount for the service. In contrast, if the NPP bills for it, in accordance with section 1833(a)(1)(O) of the Act, the Medicare Part B payment is equal to 80 percent of the lesser of the actual charge or 85 percent of the fee schedule rate. Because of this payment differential and the lower resource costs associated with E/M visits performed partly by a physician and partly by an NPP, it could be argued that the physician should not be able to bill for such a visit and be paid at the higher fee schedule amount. However, our understanding is that longstanding clinical practice relies substantially upon shared visits between physicians and NPPs in facility settings. To avoid the potential disruption in this common medical practice approach, we did not choose to propose to disallow billing for split (or shared) visits and we are instead seeking comment to confirm current practice patterns and whether there is a need for this kind of split billing, and how often.

We also considered, but did not propose, several alternatives for how to define the substantive portion of split (or shared) visit. We considered proposing to define "substantive portion" as any face-to-face portion of the split (or shared) visit, consistent with our current definition. We do not believe it would be appropriate to consider just any portion of the visit—with or without direct patient contact—as a substantive portion. For instance, we do not believe it would be appropriate to consider a brief or trivial interaction, with or without direct patient contact, such as where the physician merely "pokes their head" into the room, to be a substantive portion of the visit. We do not believe it would be appropriate to permit a physician to bill for a visit if they do not substantially participate in the visit, given that physicians are paid under the PFS at a higher rate than NPPs. Therefore, we are proposing to define "substantive portion" as more than half of the total time spent by the physician or NPP.

Another alternative we considered, but did not propose, was to utilize the medical decision making (MDM) to define substantive portion. We did not choose this approach because MDM is not easily attributed to a single physician or NPP when the work is shared, because MDM is not necessarily quantifiable and can depend on patient characteristics (for example, risk). We believe that time is a more precise factor than MDM to use as a basis for deciding which practitioner performs the substantive portion of the visit. We believe that using the time spent by each practitioner furnishing the split (or shared) visit would provide a more precise metric than potentially finding a way to parse MDM between the physician and the NPP.

We also considered defining substantive portion as performance of the history and/or physical exam, which are key components of certain E/M services. Given recent changes in the CPT E/M Guidelines, history and physical exam are no longer necessarily included in all E/M visits, because for office/
outpatient E/M visits, the visit level can now be selected based on either MDM or time, and history and exam are performed only as medically appropriate. Also, the CPT Editorial Panel is considering removing history and physical exam as key visit components for institutional visits, similar to the changes already made for office/outpatient E/M visits. Accordingly, defining “substantive portion” as any key component including history or exam is not a viable approach.

Lastly, we considered not defining substantive portion in this proposed rule and instead leaving determinations regarding the substantive portion to MAC and/or medical review discretion. However, this approach would impose a significant burden on MACs to assess individual cases and could lead to too much regional variation in payment. We seek public comment to help inform what we consider to be the “substantive portion” of a split (or shared) visit in institutional settings and assist us in consideration of our proposed definition of “substantive portion.”

We considered disallowing split (or shared) billing in critical care, skilled nursing facility (SNF) and nursing facility (NF) visits, as well as new patient and initial patient visits. We require certain SNF/NF visits to be provided entirely by a physician, but we believe we should allow shared visit billing for other visits that can be shared in these settings. (We refer readers to our Conditions of Participation in 42 CFR 414.802 for information regarding the SNF/NF visits that are required to be performed in their entirety by a physician. That regulation requires that certain SNF/NF visits must be furnished directly and solely by a physician). However, we believe current clinical practice generally allows sharing of critical care visits by appropriately trained and qualified practitioners, and we are seeking comment on this belief and this alternative considered. We proposed to allow split (or shared) visit billing in critical care because we believe the practice of medicine has evolved towards a more team-based approach to care, and greater integration in the practice of physicians and NPPs, particularly when care is furnished by practitioners in the same group in the facility setting. Given this evolution in medical practice, the concerns that may have been present when we issued the manual instructions may no longer be as relevant. We understand that there have been changes in the practice of medicine over the past several years, some facilitated by the advent of EHRs and other systems, toward a more team-based approach to care. There has also been an increase in alternative payment models that employ a more team-based approach to care.

We are proposing to allow split (or shared) visits for both new and established patients as well as initial and subsequent visits. After conducting an internal review, including consulting our medical officers, we believe that the practice of medicine has evolved toward a more team-based approach to care, and greater integration in the practice of physicians and NPPs, particularly when care is furnished by practitioners in the same group in the facility setting. Given this evolution in medical practice, the concerns that may have been present when we issued the manual instructions may no longer be as relevant. We understand that there have been changes in the practice of medicine over the past several years, some facilitated by the advent of EHRs and other systems, toward a more team-based approach to care. There has also been an increase in alternative payment models that employ a more team-based approach to care.

We considered whether to implement the flexibility afforded by the statute. However, implementing the flexibility afforded by the statute could potentially lead to a gap in the ASP reporting requirements, meaning that ASPs could be distorted to the extent that certain sales are carved out of the reporting requirement through the use of repackagers.

As discussed previously in this regulatory impact analysis, we are unable to quantitatively estimate the impacts of this provision. We welcome comments on our approach, and on the alternative relative to: (1) The likely costs or savings (to manufacturers, beneficiaries, the government, and other stakeholders); and (2) any other related impacts of this provision.

5. Alternatives Considered for the MDPP Expanded Model Emergency Policy

For the MDPP Expanded Model Emergency Policy, no alternatives were considered. The 2-year MDPP service period has depressed interest in MDPP among would-be MDPP suppliers. These proposed actions address stakeholder comments on the barriers to MDPP expanded model success. If we do not take action, we will not be able to scale MDPP as intended, impacting Medicare beneficiary access to this program. Reducing the MDPP from a 24- to a 12-month service period, increasing the year 1 performance payments, and waiving the Medicare provider enrollment application fee not only better aligns the model with the evidence that helped certify the DPP model test initially, but it will encourage eligible organizations to enroll as MDPP suppliers.

6. Alternatives Considered for the Quality Payment Program

For purposes of the payment impact on the Quality Payment Program, we view the performance threshold as a critical factor affecting the distribution of payment adjustments. We ran a separate proposed policies RIA model based on the actual mean for the CY 2019 performance period/2021 payment year with a performance threshold of 86 and an additional performance threshold of 92 points, which are potential values that may be used for the CY 2022 performance period/2024 payment year. The model with a performance threshold of 86 and additional performance threshold of 92 has the same mean and median final score as our proposed policies RIA model since the performance threshold does not change the final score. We estimate that $885 million would be redistributed through budget neutrality.
For clinicians who meet or exceed the additional performance threshold, an additional $294 million was distributed. The maximum positive payment adjustment would be 15.5 percent prior to the maximum additional payment adjustment and 25.5 percent after considering the MIPS maximum positive payment adjustment and the additional MIPS payment adjustment for exceptional performance. In addition, 70.3 percent of MIPS eligible clinicians would receive a negative payment adjustment among those that submit data.

We report the findings for the baseline RIA model which describes the impact for the 2022 MIPS performance period/2024 MIPS payment year if this regulation did not exist. The baseline RIA model has a final score mean of 78.13 and median of 82.59. We estimate that $428 million would be redistributed through budget neutrality. There would be a maximum payment adjustment of 6.6 percent after considering the MIPS payment adjustment and the additional MIPS payment adjustment for exceptional performance. In addition, 8.3 percent of MIPS eligible clinicians would receive a negative payment adjustment among those that submit data.

**H. Impact on Beneficiaries**

We do not believe these provisions will have a negative impact on beneficiaries given overall PFS budget neutrality.

1. Requiring Certain Manufacturers To Report Drug Pricing Information for Part B (§§ 414.802, 414.806)

Section 1927(b)(3)(A)(iii) of the Act requires manufacturers with a Medicaid drug rebate agreement to report ASP data consistent with the information required for such reporting at section 1847A of the Act. Some manufacturers without Medicaid drug rebate agreements voluntarily submit ASP data for their single source drugs or biologics that are payable under Part B, however other manufacturers without Medicaid drug rebate agreements do not voluntarily submit such data. Without manufacturer reported ASP data, CMS cannot calculate the ASP payment limit, and consequently, payment is typically based on Wholesale Acquisition Cost (WAC).

Consistent with section 1847A(c)(3) of the Act and our regulations at § 414.804(a)(2), the ASP is net of price concessions. However, consistent with the definition of WAC at section 1847A(c)(6)(B) of the Act, the WAC is net of price concessions and is thus nearly always, and sometimes significantly, higher than ASP. Drugs with payment allowances based on WAC may have greater “spreads” between acquisition costs and payment than drugs for which there is an ASP-based payment allowance, which, in turn, may: (1) Incent the use of the drug based on its spread rather than on purely clinical considerations; (2) result in increased payments under Medicare Part B; and (3) result in increased beneficiary cost sharing. This provision implements new statutory requirements under sections 1847A and 1927 of the Act, as amended by section 401 of Division CC, Title IV of the CAA, 2021. These new requirements will improve the accuracy of reported payment limits and limit the use of WAC-based pricing.

For single source drugs, these changes may result in lower payment limits because, typically, the WAC plus 3 percent is higher than ASP plus 6 percent. This then translates to cost savings for both the government and beneficiaries, who will pay coinsurance on a lesser amount. However, for the reason stated earlier in this regulatory impact analysis (see section VII.G.4. of this proposed rule), we are unable to predict the magnitude of this effect.

Similarly, payment limits for multiple source drugs could increase or decrease, and we are unable to predict the direction or magnitude of specific or aggregate effects at this time.

We welcome comment on: (1) The likely costs or savings to beneficiaries; and (2) other related impacts of this provision.

2. Determination of ASP for Certain Self-Administered Drug Products

Although we are unable to quantify the total magnitude of the potential savings, these changes have the potential to substantially reduce program expenditures and beneficiary coinsurance. The OIG’s July 2020 report (discussed in section III.D.2. of this proposed rule) determined that the inclusion of self-administered versions of certolizumab and abatacept in their respective volume-weighted, average ASPs, alone, has resulted in $173 million in additional Medicare beneficiary coinsurance between 2014 and 2018.

The proposed regulatory changes have the potential to result in decreased payment limits for identified billing and payment codes and could, in turn, substantially reduce beneficiary coinsurance. Since section 405 of Division CC, Title IV of the CAA, 2021 directs CMS to implement the statutory changes at section 1847A(3) of the Act beginning on July 1, 2021, these potential savings may be observed within the year.

We welcome comment on: (1) The likely costs or savings to beneficiaries; and (2) other related impacts of this provision.

3. Medicare Diabetes Prevention Program Expanded Model Emergency Policy

This change will have a positive impact on eligible MDPP beneficiaries, as it better aligns with the CDC’s National DPP, giving both the participants and the coaches similar messaging around this program, regardless of payer. MDPP suppliers often offer the MDPP set of services to mixed cohorts, or classes with participants who are not eligible for MDPP, but who are enrolled in a National DPP cohort. Since MDPP generally follows the CDC’s National DPP and aligns its program with the CDC’s DPPF Standards, it is confusing to participants, coaches, and staff when talking about a 2-year program to its eligible Medicare participants when the non-Medicare participants have a 1-year program. Finally, reducing the MDPP service period from 2 years to one (1) year allows more cohorts to start and finish MDPP during the expanded model initial period of performance, which ends in March 2023.

4. Quality Payment Program

There are several changes in this rule that are expected to have a positive effect on beneficiaries. In general, we believe that many of these changes, including the MVP and subgroup proposals if finalized will lead to meaningful feedback to beneficiaries on the type and scope of care provided by clinicians. Additionally, beneficiaries could use the publicly reported information on clinician performance in subgroups to identify and choose clinicians in multispecialty groups relevant to their care needs. Consequently, we anticipate this will improve the quality and value of care provided to Medicare beneficiaries. For example, several of the new measures include patient-reported outcome-based measures, which may be used to help patients make more informed decisions about treatment options. Patient-reported outcome-based measures provide information on a patient’s health status from the patient’s point of view and may also provide valuable insights on factors such as quality of life, functional status, and overall disease experience, which may not otherwise be available through routine clinical data collection. Patient-reported outcome-based measured are factors
frequently of interest to patients when making decisions about treatment.

K. Estimating Regulatory Familiarization Costs

If regulations impose administrative costs on private entities, such as the time needed to read and interpret this rule, we should estimate the cost associated with regulatory review. Due to the uncertainty involved with accurately quantifying the number of entities that will review the rule, we assumed that the total number of unique commenters on this year’s proposed rule will be the number of reviewers of last year’s rule. We acknowledge that this assumption may understate or overstate the costs of reviewing this rule. It is possible that not all commenters will review this year’s rule in detail, and it is also possible that some reviewers will choose not to comment on the rule. For these reasons we thought that the number of commenters would be a fair estimate of the number of reviewers of last year’s rule. We welcome any comments on the approach in estimating the number of entities which will review this rule.

We also recognized that different types of entities are in many cases affected by mutually exclusive sections of this rule, and therefore for the purposes of our estimate we assume that each reviewer reads approximately 50 percent of the rule. We are seeking comments on this assumption.

Using the wage information from the BLS for medical and health service managers (Code 11–9111), we estimate that the cost of reviewing this rule is $114.24 per hour, including overhead and fringe benefits. Assuming an average reading speed, we estimate that it would take approximately 8.0 hours for the staff to review half of this rule. For each facility that reviews the rule, the estimated cost is $913.92 (8.0 hours \times $114.24). Therefore, we estimated that the total cost of reviewing this regulation is $36,764,260 ($885.92 \times 40,227 reviewers on last year’s proposed rule).

J. Accounting Statement

As required by OMB Circular A–4 (available at http://www.whitehouse.gov/omb/circulars/a004/a-4.pdf), in Tables 132 and 133 (Accounting Statements), we have prepared an accounting statement. This estimate includes growth in incurred benefits from CY 2021 to CY 2022 based on the FY 2022 President’s Budget baseline.

K. Conclusion

The analysis in the previous sections, together with the remainder of this preamble, provided an initial Regulatory Flexibility Analysis. The previous analysis, together with the preceding portion of this preamble, provides an RIA. In accordance with the provisions of Executive Order 12866, this regulation was reviewed by the Office of Management and Budget.

List of Subjects

42 CFR Part 403

Grant programs—health, Health insurance, Hospitals, Intergovernmental relations, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 405

Administrative practice and procedure, Diseases, Health facilities, Health insurance, Health professions, Medical devices, Medicare, Reporting and recordkeeping requirements, Rural areas, X-rays.

42 CFR Part 410

Diseases, Health facilities, Health professions, Laboratories, Medicare, Reporting and recordkeeping requirements, Rural areas, X-rays.

42 CFR Part 411

Diseases, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 414

Administrative practice and procedure, Biologics, Diseases, Drugs, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 415

Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 423

Administrative practice and procedure, Emergency medical services, Health facilities, Health maintenance organizations (HMO), Health professionals, Medicare, Penalties, Privacy, Reporting and recordkeeping requirements.

42 CFR Part 424

Emergency medical services, Health facilities, Health professions, Medicare Reporting and recordkeeping requirements.
42 CFR Part 425

Administrative practice and procedure, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services proposes to amend 42 CFR chapter IV as set forth below:

PART 403—SPECIAL PROGRAMS AND PROJECTS

1. The authority citation for part 403 continues to read as follows:

Authority: 42 U.S.C. 1302, and 1395hh.

2. In §403.902:

a. Amend the definition of “Ownership or investment interest” by adding paragraphs (3)(vi) and (vii);

b. Add the definition of “Physician-owned distributorship” in alphabetical order; and

c. Revise the definition of “Short term medical supply or device loan”.

The additions and revision read as follows:

§403.902 Definitions.

* * * * *

Ownership or investment interest

* * * * *

(3) * * *:

(vi) A titular ownership or investment interest that excludes the ability or right to receive the financial benefits of ownership or investment, including, but not limited to, the distribution of profits, dividends, proceeds of sale, or similar returns on investment; or

(vii) An interest in an entity that arises from an employee stock ownership plan (ESOP) that is qualified under section 401(a) of the Internal Revenue Code of 1986.

* * * * *

Physician-owned distributorship, for the purposes of determining the existence of a reportable ownership or investment interest under this subpart, means an entity that:

(1) Meets the definition of an applicable manufacturer or applicable group purchasing organization as defined in this section, and

(2) Meets at least one of the following two conditions:

(i) Has a minimum of 5 percent direct or indirect ownership or investment interest in the applicable manufacturer or applicable group purchasing organization held by a physician or a physician’s immediate family member, or

(ii) A physician or a physician’s immediate family member receives compensation from the applicable manufacturer or group purchasing organization in the form of a commission, return on investment, profit sharing, profit distribution, or other remuneration directly or indirectly derived from the sale or distribution of devices by the applicable manufacturer or group purchasing organization in which the physician or physician’s immediate family member has ownership.

(3) This physician owned distributor definition does not apply for purposes of any other laws or regulations, including, but not limited to, section 1877 of the Act, the regulations at 42 CFR part 411, subpart J, section 1128B of the Act, or the regulations at 42 CFR 1001.952.

Short term medical supply or device loan means the loan of a covered device or a device under development, or the provision of a limited quantity of medical supplies for a short-term trial period, not to exceed a loan period of 90 cumulative days per calendar year or a quantity of 90 cumulative days of average daily use per calendar year, to permit evaluation of the device or medical supply by the covered recipient.

* * * * *

3. Amend §403.904 by adding paragraph (a)(3) to read as follows:

§403.904 Reports of payments or other transfers of value to covered recipients.

(a) * * *

(3) An applicable manufacturer or applicable group purchasing organization that has reported payments or transfers of value under the scope of this section may not remove, delete, or alter any record(s) unless an error is discovered in the information that had been furnished, or the record is otherwise believed to meet exceptions for reporting.

* * * * *

4. Amend §403.908 by revising paragraph (c)(3) and adding paragraph (c)(4) to read as follows:

§403.908 Procedures for electronic submission of reports.

* * * * *

(c) * * *

(3) During registration, applicable manufacturers and applicable group purchasing organizations must name two points of contact with appropriate contact information. These points of contact must be updated for 2 years following record submission.

(4) An applicable manufacturer or applicable group purchasing organization that meets the definition of physician-owned distributorship as defined in §403.902 must identify its status as a physician-owned distributorship when registering or recertifying.

* * * * *

PART 405—FEDERAL HEALTH INSURANCE FOR THE AGED AND DISABLED

5. The authority citation for part 405 continues to read as follows:

Authority: 42 U.S.C. 263a, 405(a), 1302, 1320b–12, 1395x, 1395y(a), 1395ff, 1395hh, 1395kk, 1395rr, and 1395ww(k).

6. Amend §405.902 by adding the definitions of “Additional documentation”, “Additional documentation request (ADR)”, “Post-payment medical review”, and “Prepayment medical review” in alphabetical order to read as follows:

§405.902 Definitions.

Additional documentation means any information requested by a contractor when conducting a prepayment review or post-payment review.

Additional documentation request (ADR) means a contractor’s initial documentation request in reviewing claims selected for prepayment review or post-payment review.

* * * * *

Post-payment medical review (or post-payment review) means a review that occurs after payment is made on the selected claim to determine whether the initial determination for payment was appropriate.

Prepayment medical review (or prepayment review) means a review that occurs before an initial determination for payment is made on the selected claim to determine whether payment should be made.

* * * * *

7. Add §405.903 to read as follows:

§405.903 Prepayment review.

(a) A contractor may select a claim(s) for prepayment review.

(b) In conducting a prepayment review, a contractor may issue additional documentation requests to a provider or supplier.

(1) A provider or supplier will be provided 45 calendar days to submit additional documentation in response to a contractor’s request, except as stated in paragraph (b)(2) and (c) of this section.

(2) A contractor may accept documentation received after 45-calendar days for good cause. Good cause means situations such as natural disasters, interruptions in business practices, or other extenuating circumstances that the contractor deems
§ 405.929 Post-payment review.

(a) A contractor may select a claim(s) for post-payment review, which is conducted under the reopening authority in § 405.989.

(b) In conducting a post-payment review, a contractor may issue an additional documentation request to a provider or supplier.

1. A provider or supplier will be provided 30 calendar days to submit additional documentation in response to a contractor’s request, except as stated in paragraph (b)(2) and (c) of this section.

2. A provider or supplier will be provided 45 calendar days to submit additional documentation in response to a contractor’s request, except as stated in paragraph (b)(2) and (c) of this section.

(c) A provider or supplier will be provided 30 calendar days to submit additional documentation in response to a UPIC’s request for additional documentation. A UPIC may accept documentation received after 30 calendar days for good cause. Good cause means situations such as natural disasters, interruptions in business practices, or other extenuating circumstances that the UPIC deems good cause in accepting the documentation.

(d) The outcome of a contractor’s review will result in either no change to the initial determination or a revised determination under § 405.984.

§ 405.930 Failure to respond to additional documentation request.

If a contractor gives a provider or supplier notice and time to respond to an additional documentation request and the provider or supplier does not provide the additional documentation in a timely manner, the contractor has authority to deny the claim.

10. Amend § 405.986 by revising paragraph (a) introductory text to read as follows:

§ 405.986 Good cause for reopening.

(a) Establishing good cause for reopening. Good cause may be established when—

11. Amend § 405.2411 by—

(a) Revising paragraph (b)(2);

(b) Redesignating paragraph (b)(3) as (4); and

(c) Adding a new paragraph (b)(3).

The revision and addition read as follows:

§ 405.2411 Scope of benefits.

(b) * * * * * * * *

(2) Covered when furnished during a Part A stay in a skilled nursing facility only when provided by a physician, nurse practitioner, physician assistant, certified nurse midwife or clinical psychologist employed or under contract with the RHC or FQHC at the time the services are furnished;

(3) Inclusive of hospice attending physician services, and are covered when furnished during a patient’s hospice election only when provided by an RHC/FQHC physician, nurse practitioner, or physician assistant designated by the patient at the time of hospice election as his or her attending physician and employed or under contract with the RHC or FQHC at the time the services are furnished; and

* * * * * * * *

12. Amend § 405.2446 by revising paragraph (c) to read as follows:

§ 405.2446 Scope of services.

(c) FQHC services are covered when provided in outpatient settings only, including a patient’s place of residence, which may be a skilled nursing facility or a nursing facility, other institution used as a patient’s home, or are hospice attending physician services furnished during a hospice election.

* * * * * * * *

13. Amend § 405.2462 by—

(a) Redesignating paragraphs (c) through (g) as paragraphs (e) through (i), respectively;

(b) Revising paragraphs (a) through (c), and

(c) Adding new paragraph (d); and

d. In newly redesignated paragraph (e) introductory text, by removing the reference to “paragraph (d)” and adding in its place the reference to “paragraph (f)

The revisions and additions read as follows:

§ 405.2462 Payment for RHC and FQHC services.

(a) Payment to independent RHCs that are authorized to bill under the reasonable cost system. (1) RHCs that are authorized to bill under the reasonable cost system are paid on the basis of an all-inclusive rate, subject to a payment limit per visit determined in paragraph (b) of this section, for each beneficiary visit for covered services. This rate is determined by the Medicare Administration Contractor (MAC), in accordance with this subpart and general instructions issued by CMS.

The amount payable by the MAC for a visit is determined in accordance with paragraphs (j)(1) and (2) of this section.

(b) RHC payment limit per visit. (1) In establishing limits on payment for rural health clinic services provided by rural health clinics the limits for services provided prior to April 1, 2021:

(i) In 1988, after March 31, at $46 per visit; and

(ii) In a subsequent year (before April 1, 2021), at the limit established for the previous year increased by the percentage increase in the Medicare Economic Index (MEI) (as defined in section 1842(i)(3) of the Act) applicable to primary care services (as defined in section 1842(i)(4) of the Act) furnished as of the first day of that year.

(2) In establishing limits on payment for rural health services furnished on or after April 1, 2021, by rural health clinics or any rural health clinic that is enrolled on or after January 1, 2021, under section 1866(j) of the Act, the limit for services provided:

(i) In 2021, after March 31, at $100 per visit;

(ii) In 2022, at $113 per visit;

(iii) In 2023, at $126 per visit;

(iv) In 2024, at $139 per visit;

(v) In 2025, at $152 per visit;

(vi) In 2026, at $165 per visit;

(vii) In 2027, at $178 per visit; and

(viii) In 2028, at $190 per visit.

(ix) In a subsequent year, at the limit established for the previous year increased by the percentage increase in MEI applicable to primary care services furnished as of the first day of such year.

(3) In establishing limits on payment for rural health services furnished on or after April 1, 2021, by provider-based rural health clinics as described in
The amount payable by the MAC for a
visit is determined in accordance with paragraphs (i)(1) and (2) of this section.
(3) Prior to April 1, 2021, an RHC, described in paragraph (c)(1) of this section, is paid on the basis of an all-
inclusive rate and is not subject to a payment limit per visit. Described in paragraphs (b)(1) and (2) of this part for each beneficiary visit for covered services when in a hospital with less than 50 beds as determined in
§412.105(b) of this chapter. This all-
inclusive rate is determined by the MAC, in accordance with this subpart and general instructions issued by CMS.

(i) Face-to-face encounter (or, for mental health disorders only, an encounter that meets the requirements under paragraph (b)(3) of this section) between an RHC patient and one of the following:

* * * * *

(b) * * *

(3) Visit—Mental health. A mental health visit is a face-to-face encounter or an encounter furnished using interactive, real-time, audio and video telecommunications technology or audio-only interactions in cases where the patient is not capable of, or does not consent to, the use of video technology for the purposes of diagnosis, evaluation or treatment of a mental health disorder between an RHC or FQHC patient and one of the following:

* * * * *

15. Amend §405.2466 by revising paragraph (b)(1)(iv) to read as follows:

§405.2466 Annual reconciliation.
* * * * *

(b) * * *

(1) * * *

(iv) For RHCs and FQHCs, payment for pneumococcal, influenza, and COVID–19 vaccine and their administration is 100 percent of Medicare reasonable cost.

* * * * *

16. Amend §405.2469 by revising paragraph (d) to read as follows:

§405.2469 FQHC supplemental payments.
* * * * *

(d) Per visit supplemental payment. A supplemental payment required under this section is made to the FQHC when a covered face-to-face encounter or an encounter furnished using interactive, real-time, audio and video telecommunications technology or audio-only interactions in cases where beneficiaries do not wish to use or do not have access to devices that permit a two-way, audio/video interaction for the purposes of diagnosis, evaluation or treatment of a mental health disorder occurs between a MA enrollee and a practitioner as set forth in §405.2463.

PART 410—SUPPLEMENTARY MEDICAL INSURANCE (SMI) BENEFITS

17. The authority citation for part 410 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395m, 1395hh, 1395rr, and 1395ddd.

18. Amend §410.33 by revising paragraphs (c), (g)(6)(i), (g)(6)(ii), (g)(6)(ii), (g)(6)(ii), (g)(6)(ii), (g)(6)(ii), (g)(9) to read as follows:

§405.2463 What constitutes a visit.

(a) * * *

(1) * * *
§ 410.33 Independent diagnostic testing facility.
* * * * *
(c) Nonphysician personnel. (1) Except as otherwise stated in paragraph (c)(2) of this section, any nonphysician personnel used by the IDTF to perform tests must demonstrate the basic qualifications to perform the tests in question and have training and proficiency as evidenced by licensure or certification by the appropriate State health or education department. In the absence of a State licensing board, the technician must be certified by an appropriate national credentialing body. The IDTF must maintain documentation available for review that these requirements are met.
(2) For services that do not require direct or in-person beneficiary interaction, treatment, or testing, any nonphysician personnel used by the IDTF to perform the tests must meet all applicable State licensure requirements for doing so. If there are any applicable State licensure requirements, the IDTF must maintain documentation available for review that these requirements are met.
* * * * *
(g) * * *
(6) * * *
(i) Except as otherwise stated in paragraph (g)(6)(ii) of this section, have a comprehensive liability insurance policy of at least $300,000 per location that covers both the place of business and all customers and employees of the IDTF. The policy must be carried by a nonrelative-owned company. Failure to maintain required insurance at all times will result in revocation of the IDTF’s billing privileges retroactive to the date the insurance lapsed. IDTF suppliers are responsible for providing the contact information for the issuing insurance agent and the underwriter. In addition, the IDTF must—
(A) Ensure that the insurance policy must remain in force at all times and provide coverage of at least $300,000 per incident; and
(B) Notify the CMS designated contractor in writing of any policy changes or cancellations.
(ii) Paragraph (g)(6)(i) of this section does not apply to IDTFs that only perform services that do not require direct or in-person beneficiary interaction, treatment, or testing.

§ 410.37 Colorectal cancer screening tests: Conditions for and limitations on coverage.
* * * * *
(j) Effective January 1, 2022, colorectal cancer screening tests include a planned screening flexible sigmoidoscopy or screening colonoscopy that involves the removal of tissue or other matter or other procedure furnished in connection with, as a result of, and in the same clinical encounter as the screening test.

§ 410.47 Pulmonary rehabilitation program: Conditions of coverage.
* * * *
(a) * * *
Individualized treatment plan means a written plan tailored to each individual patient that includes all of the following:
(i) A description of the individual’s diagnosis.
(ii) The type, amount, frequency, and duration of the items and services furnished under the plan.
(iii) The goals set for the individual under the plan.
Medical director means the physician who oversees the pulmonary rehabilitation program at a particular site.

Supervising physician means a physician that is immediately available and accessible for medical consultations and medical emergencies at all times and services are being furnished to individuals under pulmonary rehabilitation programs.

§ 410.47 Covered conditions. Medicare Part B covers pulmonary rehabilitation for beneficiaries:
(i) With moderate to very severe COPD (defined as GOLD classification II, III, and IV), when referred by the physician treating the chronic respiratory disease;
(ii) Who were hospitalized with a COVID–19 diagnosis and experience persistent symptoms, including respiratory dysfunction, for at least four weeks after hospital discharge;
(iii) Additional medical indications for coverage for pulmonary
rehabilitation may be established through a national coverage determination (NCD).

(2) Components. Pulmonary rehabilitation must include all of the following components:

(i) Physician-prescribed exercise during each pulmonary rehabilitation session.

(ii) Education or training that is closely and clearly related to the individual’s care and treatment which is tailored to the individual’s needs and assists in achievement of goals toward independence in activities of daily living, adaptation to limitations and improved quality of life. Education must include information on respiratory problem management and, if appropriate, brief smoking cessation counseling.

(iii) Psychosocial assessment.

(iv) Outcomes assessment.

(v) An individualized treatment plan detailing how components are utilized for each patient. The individualized treatment plan must be established, reviewed, and signed by a physician every 30 days.

(3) Settings. (i) Medicare Part B pays for pulmonary rehabilitation in the following settings:

(A) A physician’s office.

(B) A hospital outpatient setting.

(ii) All settings must have the following:

A physician immediately available and accessible for medical consultations and emergencies at all times when items and services are being furnished under the program. This provision is satisfied if the physician meets the requirements for direct supervision for physician office services at §410.26 of this subpart; and for hospital outpatient services at §410.27 of this subpart.

(B) The necessary cardio-pulmonary, emergency, diagnostic, and therapeutic life-saving equipment accepted by the medical community as medically necessary (for example, oxygen, cardiopulmonary resuscitation equipment, and defibrillator) to treat chronic respiratory disease.

(c) Medical director standards. The physician responsible for a pulmonary rehabilitation program is identified as the medical director. The medical director, in consultation with staff, is involved in directing the progress of individuals in the program and must possess all of the following:

(1) Expertise in the management of individuals with respiratory pathophysiology.

(2) Cardiopulmonary training in basic life support or advanced cardiac life support.

(3) Be licensed to practice medicine in the State in which the pulmonary rehabilitation program is offered.

(d) Supervising physicians. Physicians acting as the supervising physician must possess all of the following:

(1) Expertise in the management of individuals with respiratory pathophysiology.

(2) Cardiopulmonary training in basic life support or advanced cardiac life support.

(3) Be licensed to practice medicine in the State in which the pulmonary rehabilitation program is offered.

(e) Limitations on coverage. The number of pulmonary rehabilitation sessions are limited to a maximum of 2 1-hour sessions per day for up to 36 sessions over up to 36 weeks with the option for an additional 36 sessions over an extended period of time if approved by the Medicare Administrative Contractor.

(f) Limitations on coverage. (1) Cardiac rehabilitation: The number of cardiac rehabilitation sessions are limited to a maximum of 2 1-hour sessions per day for up to 36 sessions over up to 36 weeks with the option for an additional 36 sessions over an extended period of time if approved by the Medicare Administrative Contractor.

(2) Intensive cardiac rehabilitation: Intensive cardiac rehabilitation sessions are limited to 72 1-hour sessions (as defined in section 1848(b)(5) of the Act), up to 6 sessions per day, over a period of up to 18 weeks.

22. Amend §410.59 by—

a. In paragraph (a), revising the definition of “Medical director”, revising paragraph (i) in the definition of “Outcomes assessment”, and revising the definition of “Physician-prescribed exercise”; and

b. Revising paragraphs (b)(1) introductory text, (b)(2) paragraph heading and introductory text, (b)(2)(ii), (b)(3)(i) introductory text, (d) paragraph heading and introductory text, (e) paragraph heading and introductory text, and (f).

The revisions read as follows:

§410.49 Cardiac rehabilitation program and intensive cardiac rehabilitation program: Conditions of coverage.

(a) * * *

Medical director means the physician who oversees the cardiac rehabilitation or intensive cardiac rehabilitation program at a particular site.

Outcomes assessment * * *

(i) Evaluations, based on patient-centered outcomes, which must be measured by the physician or program staff at the beginning and end of the program. Evaluations measured by program staff must be considered by the physician in developing and/or reviewing individualized treatment plans.

Physician-prescribed exercise means aerobic exercise combined with other types of exercise (such as strengthening and stretching) as determined to be appropriate for individual patients by a physician.

§410.59 Outpatient occupational therapy services: Conditions.

(a) * * *

(4) * * *

(ii) Cardiac risk factor modification, including education, counseling, and behavioral intervention, tailored to the individual’s needs.

(3) * * *

(i) Medicare Part B pays for cardiac rehabilitation and intensive cardiac rehabilitation in the following settings:

* * * * *

(d) Medical director standards. The physician responsible for a cardiac rehabilitation program or intensive cardiac rehabilitation program is identified as the medical director. The medical director, in consultation with staff, is involved in directing the progress of individuals in the program and must possess all of the following:

* * *

(e) Supervising physician standards. Physicians acting as the supervising physician must possess all of the following:

* * *

(f) Limitations on coverage. (1) Cardiac rehabilitation: The number of cardiac rehabilitation sessions are limited to a maximum of 2 1-hour sessions per day for up to 36 sessions over up to 36 weeks with the option for an additional 36 sessions over an extended period of time if approved by the Medicare Administrative Contractor.

(2) Intensive cardiac rehabilitation: Intensive cardiac rehabilitation sessions are limited to 72 1-hour sessions (as defined in section 1848(b)(5) of the Act), up to 6 sessions per day, over a period of up to 18 weeks.

22. Amend §410.59 by—

a. Revising paragraph (a)(4)(iii)(B); and

b. Adding paragraphs (a)(4)(iv) and (v).

The revision and additions read as follows:
15-minute timed code, a portion of a unit of service separately from the part furnished by the occupational therapist such that the minutes for that portion of a service (or unit of a service) furnished by the occupational therapist assistant exceed 10 percent of the total minutes for that service (or unit of a service).

(iv) Paragraph (a)(4)(iii)(B) of this section does not apply when determining whether the prescribed modifier applies to the last 15-minute unit of a service billed for a patient on a treatment day when the occupational therapist provides more than the midpoint of a 15-minute timed code, that is, 8 or more minutes, regardless of any minutes for the same service furnished by the occupational therapy assistant.

(v) Where there are two remaining 15-minute units to bill of the same service, and the occupational therapist and occupational therapy assistant each provided between 9 and 14 minutes of the service with a total time of at least 23 minutes and no more than 28 minutes, one unit of the service is billed with the prescribed modifier for the minutes furnished by the occupational therapist assistant and one unit is billed without the prescribed modifier for the service provided by the occupational therapist.

■ 24. Amend § 410.67 by—

a. In paragraph (b), revising paragraphs (3) and (4) in the definition of “Opioid use disorder treatment service”;

b. Revising paragraphs (d)(4)(ii) and (iii), and (d)(5);

c. Adding paragraph (d)(6).

The revisions and addition read as follows:

§ 410.67 Medicare coverage and payment of Opioid use disorder treatment services furnished by Opioid treatment programs.

(a) * * * * * * *

(b) * * * * Opioid use disorder treatment service * * *

(3) Substance use counseling by a professional to the extent authorized under State law to furnish such services including services furnished via two-way interactive audio-video communication technology, as clinically appropriate, and in compliance with all applicable requirements. During a Public Health Emergency, as defined in § 400.200 of this chapter, or for services furnished after the end of such emergency, in cases where audio/video communication technology is not available to the beneficiary, the counseling services may be furnished using audio-only telephone calls if all other applicable requirements are met.

(4) Individual and group therapy with a physician or psychologist (or other mental health professional to the extent authorized under State law), including services furnished via two-way interactive audio-video communication technology, as clinically appropriate, and in compliance with all applicable requirements. During a Public Health Emergency, as defined in § 400.200 of this chapter, or for services furnished after the end of such emergency, in cases where audio/video communication technology is not available to the beneficiary, the therapy services may be furnished using audio-only telephone calls if all other applicable requirements are met.

§ 410.67 Medicare coverage and payment of Opioid use disorder treatment services furnished by Opioid treatment programs. * * * * * * *

(3) Substance use counseling by a professional to the extent authorized under State law to furnish such services including services furnished via two-way interactive audio-video communication technology, as clinically appropriate, and in compliance with all applicable requirements. During a Public Health Emergency, as defined in § 400.200 of this chapter, or for services furnished after the end of such emergency, in cases where audio/video communication technology is not available to the beneficiary, the counseling services may be furnished using audio-only telephone calls if all other applicable requirements are met.

(4) Individual and group therapy with a physician or psychologist (or other mental health professional to the extent authorized under State law), including services furnished via two-way interactive audio-video communication technology, as clinically appropriate, and in compliance with all applicable requirements. During a Public Health Emergency, as defined in § 400.200 of this chapter, or for services furnished after the end of such emergency, in cases where audio/video communication technology is not available to the beneficiary, the therapy services may be furnished using audio-only telephone calls if all other applicable requirements are met.
§ 410.74 Physician assistants’ services.

(a) * * *

(2) Prior to January 1, 2022, furnishes services that are billed by the employer of a physician assistant; and

* * * * *

27. Amend § 410.78 by—

a. Revising paragraph (a)(3); and

b. Adding paragraphs (b)(3)(xiii) and (xiv), and (b)(4)(iv)(D).

The revision and additions read as follows:

§ 410.78 Telehealth services.

(a) * * *

(3) Interactive telecommunications system means, except as otherwise provided in this paragraph, multimedia communications equipment that includes, at a minimum, audio and video equipment permitting two-way, real-time interactive communication between the patient and distant site physician or practitioner. For services furnished for purposes of diagnosis, evaluation, or treatment of a mental health disorder to a patient in their home, interactive telecommunications may include two-way, real-time audio-only communication technology if the distant site physician or practitioner is technically capable to use an interactive telecommunications system as defined in the previous sentence, but the patient is not capable of or does not consent to, the use of video technology. A modifier designated by CMS must be appended to the claim for services described in this paragraph to verify that these conditions have been met.

* * * * *

(b) * * *

(3) * * *

(xiii) A rural emergency hospital (as defined in section 1861(kkk)(2) of the Act), for services furnished on or after January 1, 2023.

(xiv) The home of a beneficiary for the purposes of diagnosis, evaluation, and/ or treatment of a mental health disorder for services furnished on or after the first day after the end of the PHE as defined in our regulation at § 400.200. Payment will not be made for a telehealth service furnished under this paragraph unless the physician or practitioner has furnished an item or service in person, without the use of telehealth, for which Medicare payment was made (or would have been made if the patient were entitled to, or enrolled for, Medicare benefits at the time the item or service is furnished) within 6 months prior to the initial telehealth service and within 6 months of any subsequent telehealth service.

* * * * *

28. Amend § 410.79 by—

a. Revising paragraph (e)(1)(ii); and

b. Removing the second duplicate paragraph (c)(3)(ii); and

c. Revising paragraph (e)(3)(v)(C).

The revisions read as follows:

§ 410.79 Medicare Diabetes Prevention Program expanded model: Conditions of coverage.

* * * * *

(c) * * *

(1) * * *

(ii) An MDPP beneficiary is eligible for the first ongoing maintenance session interval only if the beneficiary:

(A) Starts his or her first core session on or before December 31, 2021;

(B) Attends at least one in-person core maintenance session during the final core maintenance session interval; and

(C) Achieves or maintains the required minimum weight loss at a minimum of one in-person core maintenance session during the final core maintenance session interval.

* * * * *

(e) * * *

(3) * * *

(v) * * *

(C) Beneficiaries who began the set of MDPP services between January 1, 2021 and December 31, 2021 and who are in the second year of the set of MDPP services as of the start of an applicable 1135 waiver event, whose in-person sessions are suspended due to the applicable 1135 waiver event, and who elect not to continue with MDPP services virtually, may restart the ongoing maintenance session interval in which they were participating at the start of the applicable 1135 waiver event or may resume with the most recent attendance session of record.

* * * * *

29. Amend § 410.105 by—
a. Revising paragraph (d)(3)(ii); and
b. Adding paragraphs (d)(3)(iii) and (iv).

The revision and additions read as follows:

§410.105 Requirements for coverage of CORF services.

(a) Chronic renal insufficiency means the stage of renal disease associated with a reduction in renal function not severe enough to require dialysis or transplantation (glomerular filtration rate [GFR] 15–59 ml/min/1.73m²).

§410.132 Medical nutrition therapy.

(a) Conditions for coverage of MNT services. Medicare Part B pays for MNT services provided by a registered diettian or nutrition professional as defined in §410.134 when the beneficiary is referred for the service by a physician.

(b) Parts (a) and (b) paid by Medicare Part B when the beneficiary is referred for the service by a physician, as defined in §410.134 when the beneficiary is referred for the service by a physician.

(ii) Except as provided in paragraph (d)(3)(iii) of this section, furnishes a portion of a service, or in the case of a 15-minute timed code, a portion of a unit of service, separately from the part furnished by the physical or occupational therapist such that the minutes for that portion of a service (or unit of a service) exceed 10 percent of the total time for that service (or unit of a service).

(iii) Paragraph (d)(3)(ii) of this section does not apply when determining whether the prescribed modifier applies to the last 15-minute unit of a service billed for a patient on a treatment day when the physical or occupational therapist provides more than the midpoint of a 15-minute timed code, that is, 8 or more minutes, regardless of any minutes for the same service furnished by the physical therapist assistant or occupational therapy assistant.

(iv) Where there are two remaining 15-minute units to bill of the same service and the physical therapist and the physical therapist assistant or the occupational therapist and the occupational therapy assistant, as applicable, each provided between 9 and 14 minutes, with a total time of at least 23 minutes, one unit of the service is billed with the prescribed modifier for the minutes furnished by the physical therapist assistant or occupational therapy assistant and one unit is billed without the prescribed modifier for the service provided by the physical therapist or occupational therapist.

30. Amend §410.132 by—

a. Revising the definition of “Chronic renal insufficiency”; and

b. Removing the definition of “Treating physician”.

The revision reads as follows:

§410.130 Definitions.

(a) Chronic renal insufficiency means the stage of renal disease associated with a reduction in renal function not severe enough to require dialysis or transplantation (glomerular filtration rate [GFR] 15–59 ml/min/1.73m²).

31. Amend §410.132 by revising paragraphs (a), (b)(5), and (c) to read as follows:

§410.150 To whom payment is made.

(b) * * *

(15)(i) Prior to January 1, 2022, to the qualified employer of a physician assistant for professional services furnished by the physician assistant and for services and supplies provided incident to his or her services. Payment is made to the employer of a physician assistant regardless of whether the physician assistant furnishes services under a W–2, employer-employee employment relationship, or whether the physician assistant is an independent contractor who receives a 1099 reflecting the relationship. Both types of relationships must conform to the appropriate guidelines provided by the Internal Revenue Service. A qualified employer is not a group of physician assistants that incorporate to bill for their services. Payment is made only if no facility or other provider charges or is paid any amount for services furnished by a physician assistant.

(ii) Effective on or after January 1, 2022, payment is made to a physician assistant for professional services furnished by a physician assistant in all settings in both rural and nonrural areas and for services and supplies furnished incident to those services. Payment is made only if no facility or other provider charges, or is paid, any amount for the furnishing of professional services of the physician assistant.

32. Amend §410.152 by revising paragraphs (l) introductory text and (l)(5) to read as follows:

§410.152 Amounts of payment.

(l) Amount of payment: Preventive services. Except as provided otherwise in this paragraph, Medicare Part B pays 100 percent of the Medicare payment amount established under the applicable payment methodology for the furnished by a provider or supplier for the following preventive services:

(a) 80 percent for CY 2022.

(b) 85 percent for CY 2023 through 2026.

(c) 90 percent for 2027 through 2029.

(d) 100 percent beginning January 1, 2030.

33. Amend §411.351 by revising the definition of “List of CPT/HCPCS Codes” to read as follows:

§411.351 Definitions.

List of CPT/HCPCS Codes means the list of CPT and HCPCS codes that identifies those items and services that are designated health services under section 1877 of the Act or that may qualify for certain exceptions under section 1877 of the Act. It is updated each calendar quarter and posted on the CMS website at https://www.cms.gov/Medicare/Fraud-and-Abuse/PhysicianSelfReferral/List_of_Codes.

34. The authority citation for part 411 continues to read as follows:

35. Amend §411.351 by revising the definition of “List of CPT/HCPCS Codes” to read as follows:

§411.351 Definitions.

List of CPT/HCPCS Codes means the list of CPT and HCPCS codes that identifies those items and services that are designated health services under section 1877 of the Act or that may qualify for certain exceptions under section 1877 of the Act. It is updated each calendar quarter and posted on the CMS website at https://www.cms.gov/Medicare/Fraud-and-Abuse/PhysicianSelfReferral/List_of_Codes.

36. Amend §311.354 by—

a. Revising paragraphs (c)(2)(ii)(A)(2) and (3); and

b. Adding paragraph (c)(2)(ii)(A)(4); and

c. Revising paragraph (c)(2)(ii)(B).

The revisions and addition read as follows:

PART 411—EXCLUSIONS FROM MEDICARE AND LIMITATIONS ON MEDICARE PAYMENT

34. The authority citation for part 411 continues to read as follows:

35. Amend §411.351 by revising the definition of “List of CPT/HCPCS Codes” to read as follows:

§411.351 Definitions.

List of CPT/HCPCS Codes means the list of CPT and HCPCS codes that identifies those items and services that are designated health services under section 1877 of the Act or that may qualify for certain exceptions under section 1877 of the Act. It is updated each calendar quarter and posted on the CMS website at https://www.cms.gov/Medicare/Fraud-and-Abuse/PhysicianSelfReferral/List_of_Codes.

36. Amend §311.354 by—

a. Revising paragraphs (c)(2)(ii)(A)(2) and (3); and

b. Adding paragraph (c)(2)(ii)(A)(4); and

c. Revising paragraph (c)(2)(ii)(B).

The revisions and addition read as follows:
§ 411.354 Financial relationship, compensation, and ownership or investment interest.

* * * * *

(c) * * *

(2) * * *

(ii) * * *

(A) * * *

(2) Is calculated using a formula that includes the physician’s referrals to the entity furnishing designated health services as a variable, resulting in an increase or decrease in the amount of compensation that positively correlates with the number or value of the physician’s referrals to the entity;

(3) Is calculated using a formula that includes other business generated by the physician for the entity furnishing designated health services as a variable, resulting in an increase or decrease in the amount of compensation per unit that positively correlates with the physician’s generation of other business for the entity; or

(4) Is payment for anything other than services personally performed by the physician (or immediate family member).

(B) For purposes of applying paragraph (c)(2)(iii)(A) of this section:

(1) A positive correlation between two variables exists when one variable decreases as the other variable increases, or one variable increases as the other variable increases.

(2) The individual unit is:

(i) Time, where the compensation paid to the physician (or immediate family member) is based solely on the period of time during which the services are provided.

(ii) Service, where the compensation paid to the physician (or immediate family member) is based solely on the service provided.

(iii) Time, where the compensation paid to the physician (or immediate family member) is not based solely on the period of time during which a service is provided or based solely on the service provided.

(3) Services that are personally performed by a physician (or immediate family member) do not include services that are performed by any person other than the physician (or immediate family member), including, but not limited to, the referring physician’s (or immediate family member’s) employees, independent contractors, group practice members, or persons supervised by the physician (or the immediate family member).

* * * * *

§ 411.355 General exceptions to the referral prohibition related to both ownership/investment and compensation.

* * * * *

(h) Preventive screening tests and vaccines. (1) Preventive screening tests and vaccines that meet the following conditions:

(i) The preventive screening test or vaccine is listed on the List of CPT/HCPCS Codes as a code to which the exception in this paragraph (h) is applicable.

(ii) The preventive screening test or vaccine is covered by Medicare.

(iii) The preventive screening test or vaccine is subject to a CMS-mandated frequency limit.

(2) During such period as the vaccine is not subject to a CMS-mandated frequency limit, paragraph (b)(1)(iii) of this section does not apply to a COVID-19 vaccine identified on the List of CPT/HCPCS Codes as a code to which the exception in this paragraph (h) is applicable.

* * * * *

PART 414—PAYMENT FOR PART B MEDICAL AND OTHER HEALTH SERVICES

§ 414.64 Payment for medical nutrition therapy.

(a) Payment under the physician fee schedule. Medicare payment for medical nutrition therapy is made under the physician fee schedule in accordance with subpart B of this part. Payment to nonphysician professionals, as specified in paragraph (b) of this section, is 80 percent (or 100 percent if such services are recommended with a grade of A or B by the United States Preventive Services Task Force for any indication or population and are appropriate for the individual) or the lesser of the actual charges or 85 percent of the physician fee schedule amount.

* * * * *

§ 414.84 Payment for MDPP Services.

* * * * *

(b) * * *

(1) * * *

(i) For a first core session furnished January 1, 2022 through December 31, 2022 the amount is $26.

* * * * *

(2) * * *

(i) For the fourth core session furnished January 1, 2022 through December 31, 2022 the amount is $78.

* * * * *

(3) * * *

(i) For the ninth core session furnished January 1, 2022 through December 31, 2022 the amount is $130.

* * * * *

(4) * * *

(i) * * *

(A) For a second core maintenance session January 1, 2022 through December 31, 2022 the amount is $106.

* * * * *

(ii) * * *

(A) For a second core maintenance session January 1, 2022 through December 31, 2022 the amount is $52.

* * * * *

(5) Performance Goal 5: Attends two ongoing maintenance sessions and maintains the required minimum weight loss during an ongoing maintenance session interval. For an MDPP beneficiary who attends his or her first core session on or before December 31, 2021, CMS makes a performance payment to an MDPP supplier if an MDPP beneficiary attends two ongoing maintenance sessions during an ongoing maintenance session interval, achieves attendance at that second ongoing maintenance session upon attendance at an ongoing maintenance session furnished by that supplier, and achieves or maintains the required minimum weight loss as measured in-person during an ongoing maintenance session furnished during the applicable ongoing maintenance session interval. CMS makes this performance payment to an MDPP supplier only once per MDPP beneficiary per ongoing maintenance session interval. The amount of this performance payment is determined as follows:

• f. In paragraph (b)(3)(ii) by removing the reference “CY 2018” and adding in its place the reference “CY 2022”;

• g. Revising paragraph (b)(4)(i)(A);

• h. In paragraphs (b)(4)(i)(B) and (b)(4)(ii)(B) by removing the reference “CY 2018” and adding in its place the reference “CY 2022”;

• i. Revising paragraph (b)(4)(i)(A); and

• j. Revising paragraphs (b)(5), (b)(6)(i), (b)(7)(i) and (ii), and (c).

The revisions read as follows:

§ 414.84 Payment for MDPP Services.

* * * * *

(b) * * *

(1) * * *

(i) For a first core session furnished January 1, 2022 through December 31, 2022 the amount is $26.

(4) * * *

(i) * * *

(A) For a second core maintenance session January 1, 2022 through December 31, 2022 the amount is $106.

* * * * *

(ii) * * *

(A) For a second core maintenance session January 1, 2022 through December 31, 2022 the amount is $52.

* * * * *

(5) Performance Goal 5: Attends two ongoing maintenance sessions and maintains the required minimum weight loss during an ongoing maintenance session interval. For an MDPP beneficiary who attends his or her first core session on or before December 31, 2021, CMS makes a performance payment to an MDPP supplier if an MDPP beneficiary attends two ongoing maintenance sessions during an ongoing maintenance session interval, achieves attendance at that second ongoing maintenance session upon attendance at an ongoing maintenance session furnished by that supplier, and achieves or maintains the required minimum weight loss as measured in-person during an ongoing maintenance session furnished during the applicable ongoing maintenance session interval. CMS makes this performance payment to an MDPP supplier only once per MDPP beneficiary per ongoing maintenance session interval. The amount of this performance payment is determined as follows:
(i) For a second ongoing maintenance session furnished in interval 1 (months 13–15 of the MDPP services period), January 1, 2022 through December 31, 2022 the amount is $52.

(ii) For a second ongoing maintenance session furnished in interval 2 (months 16–18 of the MDPP services period), January 1, 2022 through December 31, 2022 the amount is $52.

(iii) For a second ongoing maintenance session furnished in interval 3 (months 19–21 of the MDPP services period), January 1, 2022 through December 31, 2022 the amount is $53.

(iv) For a second ongoing maintenance session furnished in interval 4 (months 22–24 of the MDPP services period), January 1, 2022 through December 31, 2022 the amount is $53.

(v) For a second ongoing maintenance session furnished during a subsequent year. The performance payment amount specified in this paragraph, adjusted as specified in paragraph (d) of this section.

(6) * * *

(i) For a core session or core maintenance session, as applicable, furnished January 1, 2022 through December 31, 2022 the amount is $189.

(7) * * *

(i) For a core session or core maintenance session, as applicable, furnished January 1, 2022 through December 31, 2022 the amount is $26.

(ii) For a core session or core maintenance session, as applicable, furnished during a calendar year subsequent to CY 2018. The performance payment amount specified in this paragraph, adjusted as specified in paragraph (d) of this section.

§ 414.626 Data reporting by ground ambulance organizations.

(1) Within 30 days of the date that CMS notifies a ground ambulance organization under paragraph (c)(3) of this section that it has selected the ground ambulance organization to report data under this section, the ground ambulance organization must select a data collection period that corresponds with its annual accounting period and provide the start date and, if applicable, before his condition of payment, the MDPP services furnished by an eligible coach, or on after his or her coach eligibility start date and, if applicable, before his or her coach eligibility end date. As a condition of payment, the MDPP supplier must report the NPI of the coach who furnished the session on the claim for the MDPP session. The amount of the bridge payment is determined as follows:

(a) Misrepresentation. Section 1847A(d)(4)(A) specifies the penalties associated with misrepresentations in the reporting of the manufacturer’s average sales price for a drug as defined at §414.802.

(b) Failure to provide timely information or the submission of false information. (1) For a manufacturer that has entered into and has in effect a rebate agreement under section 1927 of the Act, section 1927(b)(3)(C) of the Act specifies the penalties associated with a manufacturer’s failure to submit timely information or the submission of false information.

(2) For a manufacturer that has not entered into and does not have in effect a rebate agreement under section 1927 of the Act, sections 1847A(d)(4)(B) and (C) of the Act specify the penalties associated with a manufacturer’s failure to submit timely information or the submission of false information.

§ 414.904 Average sales price as the basis for payment.

(4) Payment adjustment for certain drugs for which there is a self-administered version. (i) In general. Except as provided in paragraphs (d)(4)(ii) and (iii) of this section, if the Inspector General identifies a drug or biological product in a study described in section 1847A(g)(1) of the Act, the Secretary must apply the payment limit for the applicable billing and payment code as specified in paragraph (d)(4)(iv) of this section, beginning with the first day of the second quarter after such study is publicly available. The methodology described in this paragraph will be recalculated each quarter thereafter, except when conditions described in paragraph (d)(4)(ii) are met.

(ii) Exception. The adjustment described in paragraph (d)(4)(ii) of this section does not apply to the payment limit for a billing and payment code for a quarter if, at the time that ASP calculations are finalized for such quarter, the drug in the dosage form described by the billing and payment code is included by the FDA on the drug shortage list in effect under section 506E of the Federal Food, Drug, and Cosmetic Act.

§ 414.806 Penalties associated with misrepresentation and the failure to submit timely and accurate ASP data.

(i) For a second ongoing maintenance session furnished in interval 1 (months 13–15 of the MDPP services period), January 1, 2022 through December 31, 2022 the amount is $52.

(ii) For a second ongoing maintenance session furnished in interval 2 (months 16–18 of the MDPP services period), January 1, 2022 through December 31, 2022 the amount is $52.

(iii) For a second ongoing maintenance session furnished in interval 3 (months 19–21 of the MDPP services period), January 1, 2022 through December 31, 2022 the amount is $53.

(iv) For a second ongoing maintenance session furnished in interval 4 (months 22–24 of the MDPP services period), January 1, 2022 through December 31, 2022 the amount is $53.

(v) For a second ongoing maintenance session furnished during a subsequent year. The performance payment amount specified in this paragraph, adjusted as specified in paragraph (d) of this section.

§ 414.806 Penalties associated with misrepresentation and the failure to submit timely and accurate ASP data.

(a) Misrepresentation. Section 1847A(d)(4)(A) specifies the penalties associated with misrepresentations in the reporting of the manufacturer’s average sales price for a drug as defined at §414.802.

(b) Failure to provide timely information or the submission of false information. (1) For a manufacturer that has entered into and has in effect a rebate agreement under section 1927 of the Act, section 1927(b)(3)(C) of the Act specifies the penalties associated with a manufacturer’s failure to submit timely information or the submission of false information.

(2) For a manufacturer that has not entered into and does not have in effect a rebate agreement under section 1927 of the Act, sections 1847A(d)(4)(B) and (C) of the Act specify the penalties associated with a manufacturer’s failure to submit timely information or the submission of false information.
§ 414.1300 Basis and scope.

(a) * * *

(2) Section 1848(k)—Quality Reporting System.

(3) Section 1848(m)—Incentive Payments for Quality Reporting.

* * * * *

■ 46. Amend § 414.1305 by—

a. Revising the definitions of “Collection type” and “Meaningful EHR user for MIPS”;

■ b. In the definition of “MIPS determination period”, revising paragraph (2);

■ c. In the definition of “MIPS eligible clinician”, revising the introductory text, paragraph (2) introductory text, and adding paragraph (3);

■ d. Adding the definitions of “Multispecialty group”, “MVP participant”, “Population health measure”, “QCDR measure”, “Single specialty group”, “Special status” and “Subgroup” in alphabetical order; and

■ e. Revising the definition of “Submission type”.

The revision and additions read as follows:

§ 414.1305 Definitions.

Collection type means a set of quality measures with comparable specifications and data completeness criteria, as applicable, including, but not limited to: electronic clinical quality measures (eCQMs); MIPS clinical quality measures (MIPS CQMs); QCDR measures; Medicare Part B claims measures; for the CY 2017 through 2022 MIPS performance periods/2019 through 2024 MIPS payment years, CMS Web Interface measures; the CAHPS for MIPS survey; and administrative claims measures.

Meaningful EHR user for MIPS means a MIPS eligible clinician who possesses CEHRT, uses the functionality of CEHRT, reports on applicable objectives and measures specified for the Promoting Interoperability performance category for a performance period in the form and manner specified by CMS, does not knowingly and willfully take action (such as to disable functionality) to limit or restrict the compatibility or interoperability of CEHRT, and engages in activities related to supporting providers with the performance of CEHRT.

MIPS determination period means:

§ 414.1310 Basis and scope.

(2) Subject to § 414.1310(b)(1)(iii), an individual eligible clinician, group, or APM Entity group that is identified as not exceeding the low-volume threshold or as having special status, as applicable, during the first segment of the MIPS determination period will be identified as such for the applicable MIPS payment year regardless of the results of the second segment of the MIPS determination period. An individual eligible clinician, group, or APM Entity group for which the unique billing TIN and NPI combination is established during the second segment of the MIPS determination period will be assessed based solely on the results of such segment.

MIPS eligible clinician as identified by a unique billing TIN and NPI combination used to assess performance, means any of the following (except as excluded under § 414.1310(b)):

(2) For the 2021 through 2023 MIPS payment years:

(3) For the 2024 MIPS payment year and future years:

(i) A clinician described in paragraph (2) of this definition;

(ii) A clinical social worker (as defined in section 1861(hh)(1) of the Act);

(iii) A certified nurse midwife (as defined in section 1861(gg)(2) of the Act); and

(iv) A group that includes such clinicians.

Multispecialty group means a group that consists of two or more specialty types as identified by eligible clinicians in the Medicare Provider Enrollment, Chain, and Ownership System (PECOS).

MVP participant means an individual MIPS eligible clinician, multispecialty group, single-specialty group, subgroup, or APM Entity that is assessed on an MVP in accordance with § 414.1365 for all MIPS performance categories. For the FY2025 MIPS performance period/2027 MIPS payment year and future years, MVP Participant means an individual MIPS eligible clinician, single-specialty group, subgroup, or APM Entity that is assessed on an MVP in accordance with § 414.1365 for all MIPS performance categories.

Population health measure means a quality measure that indicates the quality of a population or cohort’s overall health and well-being, such as access to care, clinical outcomes, coordination of care and community services, health behaviors, preventive care and screening, health equity, or utilization of health services.

QCDR measure means a quality measure that is submitted by a QCDR and approved by CMS under § 414.1400. QCDR measures consist of:

(1) Measures that are not included in the MIPS final list of quality measures described in § 414.1330(a)(1) for the applicable MIPS payment year; and

(2) Measures that are included in the MIPS final list of quality measures described in § 414.1330(a)(1) for the applicable MIPS payment year, but have undergone substantive changes, as determined by CMS.

Single-specialty group means a group that consists of one specialty type as identified by eligible clinicians in the PECOS.

Special status means that a MIPS eligible clinician:

(1) Meets the definition of an ASC-based MIPS eligible clinician, facility-based MIPS eligible clinician, hospital-based MIPS eligible clinician, non-patient facing MIPS eligible clinician, or is in a small practice; or
(2) Is located in an HPSA or rural area.

Subgroup means a subset of a group which contains at least one MIPS eligible clinician and is identified by a combination of the group TIN, subgroup identifier, and each eligible clinician’s NPI.

Submission type means the mechanism by which the submitter type submits data to CMS, including, but not limited to:
(1) Direct;
(2) Log in and upload;
(3) Log in and attest;
(4) Medicare Part B claims; and
(5) For the CY 2017 through 2022 MIPS performance periods/2019 through 2024 MIPS payment years, the CMS Web Interface.

§ 414.1310 Applicability.
(a) * * *

(b) * * *

47. Amend § 414.1310 by revising paragraph (e)(1) to read as follows:

§ 414.1310 Applicability.
(a) * * *

(e) * * *

(1) Except as provided under §§ 414.1315(a)(2), 414.1317(b), 414.1318(b), and 414.1370(f)(2) each MIPS eligible clinician in the group receives a final score based on the group’s combined performance assessment.

48. Amend § 414.1317 by revising paragraph (b)(2) to read as follows:

§ 414.1317 APM Entity groups.
(a) * * *

(b) * * *

(2) Performance category weights. The cost performance category weight is zero percent of the final score for an APM Entity. The performance category reweighting scenarios under § 414.1380(c)(2) apply to an APM Entity.

49. Section 414.1318 is added to subpart O to read as follows:

§ 414.1318 Subgroups.
(a) Eligibility and special status. (1) General. Except as provided under paragraph (a)(2) of this section, for a MIPS payment year, determinations of meeting the low-volume threshold criteria and special status for subgroups are determined at the group level in accordance with §§ 414.1305 and 414.1310.

(2) Exclusions. An individual eligible clinician or group that elects to participate in MIPS as a MIPS eligible clinician in accordance with § 414.1310(b)(iii)(A) or § 414.1310(b)(2) is not eligible to participate in a subgroup.

(b) Final score. Except as provided under § 414.1317(b), each MIPS eligible clinician in the subgroup receives a final score based on the subgroup’s combined performance assessment.

(c) Subgroup reporting requirements. For individual eligible clinicians to participate in MIPS as a subgroup, all of the following requirements must be met:

(1) Individual eligible clinicians that elect to participate in MIPS as a subgroup must aggregate their quality and improvement activities performance data across the subgroup’s identifier.

(2) Individual eligible clinicians that elect to participate in MIPS as a subgroup will have their performance assessed at the subgroup level across all the MIPS performance categories based on an MVP in accordance with § 414.1365 and on the APM Performance Pathway in accordance with § 414.1367, as applicable.

Subgroups that are MVP Participants must adhere to an election process described in § 414.1365(b).

50. Amend § 414.1320 by—

(a) Revising paragraph (d) through (g) as paragraphs (e) through (h).

(b) Adding a new paragraph (d). The addition reads as follows:

§ 414.1320 MIPS performance period.
(a) * * *

(d) For purposes of the 2022 MIPS payment year, the performance period for:

(1) The quality and cost performance categories are the full calendar year (January 1 through December 31) that occurs 2 years prior to the applicable MIPS payment year.

(2) The improvement activities performance categories are a minimum of a continuous 90-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year.

51. Amend § 414.1325 by revising paragraph (c)(1) to read as follows:

§ 414.1325 Data submission requirements.
(a) * * *

(c) * * *

(1) For the quality performance category, the direct; login and upload; Medicare Part B claims (beginning with the CY 2019 MIPS performance period/2021 MIPS payment year, for small practices only); and, for the CY 2017 through 2022 MIPS performance periods/2019 through 2024 MIPS payment years, CMS Web Interface (for groups consisting of 25 or more eligible clinicians or a third party intermediary submitting on behalf of a group) submission types.

(b) * * *

§ 414.1340 Data completeness criteria for the quality performance category.
(a) * * *

(3) At least 70 percent of the MIPS eligible clinician or group’s patients that meet the measure’s denominator criteria, regardless of payer for MIPS payment years 2022, 2023, and 2024.

(4) At least 80 percent of the MIPS eligible clinician or group’s patients that meet the measure’s denominator criteria, regardless of payer for MIPS payment year 2025.

52. Amend § 414.1340 by—

(a) Revising paragraph (a)(6);

(b) Adding paragraph (a)(7);

(c) Revising paragraph (b)(3); and

(d) Adding paragraph (b)(4).

The revisions and additions read as follows:

§ 414.1340 Data completeness criteria for the quality performance category.
(a) * * *

53. Amend § 414.1350 by revising paragraph (c)(4) and adding paragraph (c)(6) to read as follows:

§ 414.1350 Cost performance category.
(a) * * *

(c) * * *

(4) For the procedural episode-based measures specified beginning with the 2019 performance period, the case minimum is 10, unless otherwise specified for individual measures. Beginning with the 2022 performance period, the case minimum for Colon and Rectal Resection procedural episode-based measure is 20 episodes.

54. Amend § 414.1360 by revising paragraph (a)(2) to read as follows:

§ 414.1360 Data submission criteria for the improvement activities performance category.
(a) * * *

(2) Groups and virtual groups.

Beginning with the 2022 performance year, each improvement activity for which groups and virtual groups submit a yes response in accordance with paragraph (a)(1) of this section must be performed by at least 50 percent of the
NPIs that are billing under the group’s TIN or virtual group’s TINs or that are part of the subgroup, as applicable; and
the NPIs must perform the same activity during any continuous 90-day period within the same performance year.

§ 414.1365 MIPS Value Pathways.

(a) General. (1) Beginning with the CY 2023 MIPS performance period/2025 MIPS payment year, CMS uses MVPs included in the MIPS final inventory of MVPs established by CMS through rulemaking to assess performance for the quality, cost, improvement activities, and Promoting Interoperability performance categories.

(b) MVP/Subgroup registration. (1) To report an MVP, an MVP Participant must register for the MVP, and if applicable, as a subgroup during a period that begins on April 1 and ends on November 30 of the applicable CY performance period or a later date specified by CMS. To report the CAHPS for MIPS survey associated with an MVP, a group, subgroup or APM Entity must complete their registration by June 30 of such performance period or a later date specified by CMS.

(2) At the time of registration, the MVP Participant must submit the following information, as applicable:

(i) Each MVP Participant must select an MVP, 1 population health measure included in the MVP, and any outcomes-based administrative claims measure on which the MVP Participant intends to be scored.

(ii) Each subgroup must submit a list of each TIN/NPI associated with the subgroup and a plain language name for the subgroup.

(c) MVP reporting requirements. (1) Quality. Except as provided in paragraph (c)(1)(i) of this section, an MVP Participant must select and report, if applicable, 4 quality measures, including 1 outcome measure (or, if an outcome measure is not available, 1 high priority measure), included in the MVP, excluding the population health measure required under paragraph (c)(4)(ii) of this section.

(ii) Paragraph (c)(1) of this section does not apply to a small practice that reports on an MVP that includes fewer than 4 Medicare Part B claims measures, provided that the small practice reports each such measure that is applicable.

(2) Cost. An MVP Participant is scored on the cost measures included in the MVP that they select and report.

(3) Improvement activities. An MVP Participant who reports an MVP, must report one of the following:

(i) Two medium-weighted improvement activities;

(ii) One high-weighted improvement activity;

(iii) Participation in a certified or recognized patient-centered medical home (PCMH) or comparable specialty practice, as described at \(\text{s}414.1380(b)(3)(ii)\).

(4) Foundational layer—Promoting interoperability. An MVP Participant is required to meet the Promoting Interoperability performance category reporting requirements described at §414.1375(b).

(A) For the CY 2023 and 2024 performance periods/2025 and 2026 MIPS payment years, an MVP Participant that is a subgroup is required to submit its affiliated group’s data for the Promoting Interoperability performance category.

(B) [Reserved]

(ii) Population health measures. Each MVP Participant is scored on 1 population health measure in accordance with paragraph (d)(1) of this section.

(d) MVP scoring—General. An MVP Participant that is not an APM Entity is scored on measures and activities included in the MVP in accordance with paragraphs (d)(1) through (3) of this section. An MVP Participant that is an APM Entity is scored on measures and activities included in the MVP in accordance with §414.1317(b).

(2) Performance standards. Unless otherwise indicated in this paragraph (d), the performance standards described at §414.1380(a)(1)(i) through (iv) apply to the measures and activities included in the MVP.

(3) Performance categories. An MVP Participant is scored under MIPS in four performance categories.

(i) Quality performance category. Except as provided in paragraphs (d)(3)(i)(A)(1) and (B) of this section, the quality performance category score for MVP Participants is calculated in accordance with §414.1380(b)(1) based on measures included in the MVP.

(A) Population health measures. Except as provided in paragraph (d)(3)(i)(A)(1) of this section, each selected population health measure that does not have a benchmark or meet the case minimum requirement is excluded from the MVP participant’s total measure achievement points and total available measure achievement points.

(B) [Reserved]

(e) Final score calculation. The final score is calculated for an MVP Participant using the methodology at §414.1380(b)(2)(i) through (v) and the cost measures included in the MVP that they select and report.

(iii) Improvement activities performance category. The improvement activities performance category score is calculated based on the submission of high- and medium-weighted improvement activities. MVP Participants will receive 20 points for each medium-weighted improvement activity and 40 points for each high-weighted improvement activity required under §414.1380 on which data is submitted in accordance with §414.1325 or for participation in a certified or recognized patient-centered medical home (PCMH) or comparable specialty practice, as described at §414.1380(b)(3)(ii).

(iv) Promoting interoperability performance category. The Promoting Interoperability performance category score is calculated for an MVP Participant using the methodology at §414.1380(b)(4), except as provided in paragraph (d)(3)(iv)(A) of this section.

(A) If a subgroup does not submit its affiliated group’s data for the Promoting Interoperability performance category, the subgroup will receive a score of zero for the Promoting Interoperability performance category.

(B) [Reserved]

(e) Final score calculation. The final score is calculated for an MVP Participant using the methodology at §414.1380(c), unless otherwise indicated in this paragraph (e).

(1) MVP performance category weights. For an MVP Participant that is not an APM Entity, the final score is calculated using the performance category weights described at §414.1380(c)(1). For an MVP Participant that is an APM Entity, the final score is calculated using the performance category weights described at §414.1317(b).
(2) Reweighting MVP performance categories. For an MVP Participant that is not an APM Entity, in accordance with paragraph (e)(2)(iii) of this section, a scoring weight different from the weights described at §414.1380(c)(1) will be assigned to a performance category, and its weight as described at §414.1380(c)(1) will be redistributed to another performance category or categories, in the circumstances described at §414.1380(c)(2)(i)(A)(2) through (9) and §414.1380(c)(2)(i)(C). For an MVP Participant that is an APM Entity, the performance category weights will be redistributed in accordance with §414.1317(b).

(ii) Subgroups. For an MVP Participant that is a subgroup, any reweighting applied to its affiliated group will also be applied to the subgroup. In addition, if reweighting is not applied to the affiliated group, the subgroup may receive reweighting in the following circumstances independent of the affiliated group: (A) A subgroup may submit an application to CMS demonstrating that it was subject to extreme and uncontrollable circumstances and receive reweighting in accordance with §414.1380(c)(2)(i)(A)(6) and §414.1380(c)(2)(i)(C)(2). In the event that a subgroup submits data for a performance category, the scoring weight described at §414.1380(c)(1) would be applied and its weight would not be redistributed. (B) A subgroup will receive reweighting if CMS determines, based on information known to the agency prior to the beginning of the relevant MIPS payment year, that data for the subgroup are inaccurate, unusable or otherwise compromised due to circumstances outside of the control of the subgroup and its agents, in accordance with §414.1380(c)(2)(i)(A)(9) and §414.1380(c)(2)(i)(C)(10). (iii) Reweighting scenarios. For an MVP Participant that is not an APM Entity, a scoring weight different from the weights described at §414.1380(c)(1) will be assigned to a performance category, and its weight as described at §414.1380(c)(1) will be redistributed to another performance category or categories, in accordance with §414.1380(c)(2)(ii). For an MVP Participant that is an APM Entity, the performance category weights will be redistributed in accordance with §414.1317(b).

(3) Facility-based scoring. If an MVP Participant that is not an APM Entity, is eligible for facility-based scoring, a facility-based score also will be calculated in accordance with §414.1380(e).

(4) Complex patient bonus. A complex patient bonus will be added to the final score for an MVP Participant in accordance with §414.1380(c)(3).

§56. Amend §414.1375 by—

(a) Revising paragraphs (b)(2)(ii); (b) Revising paragraphs (b)(3) introductory text and (b)(3)(ii) introductory text; and (c) Adding paragraph (b)(3)(iii).

The revisions and additions read as follows:

§414.1375 Promoting Interoperability (PI) performance category.

* * * * * * * * * * (b) * * * * * * * * (2) * * *

(ii) Beginning with the 2021 MIPS payment year:

(A) Report that the MIPS eligible clinician completed the actions included in the Security Risk Analysis measure during the year in which the performance period occurs;

(B) For each required measure, as applicable, report the numerator (of at least one) and denominator, or yes/no statement, or an exclusion for each measure that includes an option for an exclusion; and

(C) Beginning with the 2024 MIPS payment year, report that the MIPS eligible clinician completed the actions included in the SAFER Guides measure during the year in which the performance period occurs.

(3) Engaging in activities related to supporting providers with the performance of CEHRT; support for health information exchange and the prevention of information blocking: actions to limit or restrict the compatibility or interoperability of CEHRT.

* * * * * * * * * * * * * * (i) Measure achievement points. For the CY 2017 through 2021 performance periods/2019 through 2023 MIPS payment years, MIPS eligible clinicians receive between 3 and 10 measure achievement points (including partial points) for each measure required under §414.1335 on which data is submitted in accordance with §414.1325 that has a benchmark at paragraph (b)(1)(ii) of this section, meets the case minimum requirement at paragraph (b)(1)(iii) of this section, and meets the data completeness requirement at §414.1340 and for each administrative claims-based measure that has a benchmark at paragraph (b)(1)(iii) of this section and meets the case minimum requirement at paragraph (b)(1)(v) introductory text, and (b)(1)(i)(A)(1); (b)(1)(i)(A)(2); (b)(1)(i)(A)(3); and (b)(1)(i)(C).

(b) Adding paragraphs (b)(1)(i)(A)(3) and (b)(1)(i)(C).

(c) Revising paragraphs (b)(1)(i)(iii) and (b)(1)(i)(v)(B).

(d) Revising paragraphs (b)(1)(v)(A) introductory text and (b)(1)(v)(B) introductory text;

(e) Adding paragraph (b)(1)(v)(B)(i)(ii).

(g) Adding paragraphs (b)(2)(v)(A) and (b);

(h) Revising paragraph (b)(4)(ii) introductory text and (b)(4)(ii)(C);

(i) Revising the table in paragraph (c) introductory text;

(j) Revising paragraph (c)(2)(i)(A)(4);

(k) Removing and reserving paragraph (c)(2)(i)(A)(5);

(l) Revising paragraphs (c)(2)(i)(C)(9), (c)(2)(ii)(A) and (c)(2)(ii)(F);

(m) Adding paragraph (c)(2)(ii)(G);

(n) Revising paragraph (c)(3);

(o) Revising paragraph (e)(6)(iv) through (vi).

The revisions and additions read as follows:

§414.1380 Scoring.

* * * * * * * * (b) * * * * * * * * (1) * * * * (i) Measure achievement points. For the CY 2017 through 2021 performance periods/2019 through 2023 MIPS payment years, MIPS eligible clinicians receive between 3 and 10 measure achievement points (including partial points) for each measure required under §414.1335 on which data is submitted in accordance with §414.1325 that has a benchmark at paragraph (b)(1)(ii) of this section, meets the case minimum requirement at paragraph (b)(1)(iii) of this section, and meets the data completeness requirement at §414.1340 and for each administrative claims-based measure that has a benchmark at paragraph (b)(1)(iii) of this section and meets the case minimum requirement at paragraph (b)(1)(vii)(A), (b)(2)(iii) introductory text and (b)(2)(v) introductory text;

(a) Revising paragraphs (b)(1)(i)(A) introductory text, and (b)(1)(i)(A)(1); (b) Revising paragraphs (b)(1)(i)(A)(3) and (b)(1)(i)(C).

(c) Revising paragraphs (b)(1)(i)(iii) and (b)(1)(i)(v)(B);

(d) Revising paragraphs (b)(1)(v)(A) introductory text and (b)(1)(v)(B) introductory text;

(e) Adding paragraph (b)(1)(v)(B)(i)(ii);

(g) Adding paragraphs (b)(2)(v)(A) and (b);

(h) Revising paragraph (b)(4)(ii) introductory text and (b)(4)(ii)(C);

(i) Revising the table in paragraph (c) introductory text;

(j) Revising paragraph (c)(2)(i)(A)(4);

(k) Removing and reserving paragraph (c)(2)(i)(A)(5);

(l) Revising paragraphs (c)(2)(i)(C)(9), (c)(2)(ii)(A) and (c)(2)(ii)(F);

(m) Adding paragraph (c)(2)(ii)(G);

(n) Revising paragraph (c)(3);

(o) Revising paragraph (e)(6)(iv) through (vi).

The revisions and additions read as follows:

§414.1385 Scoring.

* * * * * * * * (b) * * * * * * * * (1) * * * *
clinicians receive zero measure achievement points for each measure required under § 414.1335 on which no data is submitted in accordance with § 414.1325. MIPS eligible clinicians that submit data in accordance with § 414.1325 on a greater number of measures than required under § 414.1335 are scored only on the required measures with the greatest number of measure achievement points. Beginning with the CY 2019 performance period/2021 MIPS payment year, MIPS eligible clinicians that submit data in accordance with § 414.1325 on a single measure via multiple collection types are scored only on the data submission with the greatest number of measure achievement points.

(A) * * *

(1) Except as provided in paragraphs (b)(1)(i)(A)(2) and (3) of this section, for the CY 2017 through 2021 MIPS performance periods/2019 through 2023 MIPS payment years, MIPS eligible clinicians receive 3 measure achievement points for each submitted measure that meets the data completeness requirement, but does not have a benchmark or meet the case minimum requirement. Beginning with the CY 2022 performance period/2024 MIPS payment year, MIPS eligible clinicians other than small practices receive 2 measure achievement points for each such measure, and small practices receive 3 measure achievement points for each such measure.

* * * * *

(2) Beginning with the CY 2022 performance period/2024 MIPS payment year, MIPS eligible clinicians receive no more than 7 measure achievement points for each measure (except for measures in the CMS Web Interface) for which the applicable benchmark is identified as topped out for 2 or more consecutive years based on the historical benchmarks published for the CY 2021 MIPS performance period and continues to be identified as topped out based on the performance period benchmarks published for the CY 2022 MIPS performance period.

(B) Except as provided in paragraph (b)(1)(iv)(B)(1) of this section, beginning with the 2021 MIPS payment year, each measure (except for measures in the CMS Web Interface) for which the benchmark for the applicable collection type is identified as topped out for 2 or more consecutive years receives no more than 7 measure achievement points in the second consecutive year it is identified as topped out, and beyond.

(1) For the CY 2022 MIPS performance period/2024 MIPS payment year, MIPS eligible clinicians receive 1 measure bonus point for each measure (except for measures in the CMS Web Interface) for which the applicable benchmark is identified as topped out for 0 or 1 consecutive years based on the historical benchmarks published for the CY 2021 MIPS performance period and continues to be identified as topped out for 0 or 1 consecutive years based on the performance period benchmarks published for the CY 2022 MIPS performance period.

(C) New measures. (1) Beginning with the CY 2022 performance period/2024 MIPS payment year, MIPS eligible clinicians receive between 5 and 10 measure achievement points (including partial points) for each measure required under § 414.1335 on which data is submitted in accordance with § 414.1325 that has a benchmark at paragraph (b)(1)(ii) of this section, meets the case minimum requirement at paragraph (b)(1)(iii) of this section, and meets the data completeness requirement at § 414.1340.

(2) For purposes of this section, “new measure” means a quality measure that is in its first 2 years in the program.

(iii) Minimum case requirements. Except as otherwise specified in the MIPS final list of quality measures described in § 414.1330(a)(1), the minimum case requirement is 20 cases.

(iv) * * *

(B) Except as provided in paragraph (b)(1)(iv)(B)(1) of this section, beginning with the 2021 MIPS payment year, each measure (except for measures in the CMS Web Interface) for which the benchmark for the applicable collection type is identified as topped out for 2 or more consecutive years receives no more than 7 measure achievement points in the second consecutive year it is identified as topped out, and beyond.

(1) For the CY 2022 MIPS performance period/2024 MIPS payment year, MIPS eligible clinicians receive 1 measure bonus point for each measure (except for measures in the CMS Web Interface) for which the applicable benchmark is identified as topped out for 0 or 1 consecutive years based on the historical benchmarks published for the CY 2021 MIPS performance period and continues to be identified as topped out for 0 or 1 consecutive years based on the performance period benchmarks published for the CY 2022 MIPS performance period.

(C) The improvement percent score is assessed at the performance level for the quality performance category and included in the calculation of the quality performance category score as described in paragraph (b)(1)(vii) of this section.

* * * * *

(D) Beginning with the CY 2018 performance period/2020 MIPS payment year, we will assume a quality performance category achievement percent score of 30 percent if a MIPS eligible clinician earned a quality performance category score less than or equal to 30 percent in the previous year.

* * * * *

(E) For the purpose of improvement scoring methodology, the term “improvement percent score” means the score that represents improvement for the purposes of calculating the quality performance category score as described in paragraph (b)(1)(vii) of this section.

* * * * *

(vii) Quality performance category score. A MIPS eligible clinician’s quality performance category score is the sum of all the measure achievement points assigned for the measures required for the quality performance category criteria plus the measure bonus points in paragraph (b)(1)(v) of this section. The sum is divided by the sum of total available measure achievement points. The improvement percent score in paragraph (b)(1)(vi) of this section is added to that result. The quality performance category score cannot exceed 100 percentage points.

(A) For each measure that is submitted, if applicable, and impacted by significant changes or errors prior to the applicable data submission deadline at § 414.1325(e), performance is based on data for 9 consecutive months of the applicable CY performance period. If such data are not available or CMS determines that they may result in patient harm or misleading results, the measure is excluded from a MIPS eligible clinician’s total measure achievement points and total available measure achievement points.

For purposes of this paragraph (b)(1)(vii)(A), “significant changes or errors” means changes to or errors in a measure that are outside the control of the clinician and its agents and that CMS determines may result in patient harm or misleading results. Significant changes or errors include, but are not limited to, changes to codes (such as ICD–10, CPT,
or HCPCS codes) or the active status of codes, the inadvertent omission of codes or inclusion of inactive or inaccurate codes, or changes to clinical guidelines or measure specifications. CMS will publish on the CMS website a list of all measures scored under this paragraph (b)(1)(vii)(A) as soon as technically feasible, but no later than the data submission deadline at § 414.1325(e)(1).

(ii) Beginning with the 2024 MIPS payment year, if data used to calculate a score for a cost measure are impacted by significant changes during the performance period, such that calculating the cost measure score would lead to misleading or inaccurate results, then the affected cost measure is excluded from the MIPS eligible clinician’s or group’s cost performance category score. For purposes of this paragraph (b)(2)(v)(A), “significant changes” are changes external to the care provided, and that CMS determines may lead to misleading or inaccurate results. Significant changes include, but are not limited to, rapid or unprecedented changes to service utilization, and will be empirically assessed by CMS to determine the extent to which the changes impact the calculation of a cost measure score that reflects clinician performance.

(iii) A cost performance category score is not calculated if a MIPS eligible clinician or group is not attributed any cost measures for the performance period because the clinician or group has not met the minimum case volume specified by CMS for any of the cost measures or a benchmark has not been created for any of the cost measures that would otherwise be attributed to the clinician or group.

For the 2019 MIPS payment year:

Final score = \( [(\text{quality performance category score} \times \text{quality performance category weight}) + (\text{cost performance category score} \times \text{cost performance category weight}) + (\text{improvement activities performance category score} \times \text{improvement activities performance category weight}) + (\text{Promoting Interoperability performance category score} \times \text{Promoting Interoperability performance category weight})] \times 100 + \text{the complex patient bonus} + \text{the small practice bonus} \), not to exceed 100 points.

For the 2020 MIPS payment year:

Final score = \( [(\text{quality performance category score} \times \text{quality performance category weight}) + (\text{cost performance category score} \times \text{cost performance category weight}) + (\text{improvement activities performance category score} \times \text{improvement activities performance category weight}) + (\text{Promoting Interoperability performance category score} \times \text{Promoting Interoperability performance category weight})] \times 100 + \text{the complex patient bonus} + \text{the small practice bonus} \), not to exceed 100 points.

Beginning with the 2021 MIPS payment year:

Final score = \( [(\text{quality performance category score} \times \text{quality performance category weight}) + (\text{cost performance category score} \times \text{cost performance category weight}) + (\text{improvement activities performance category score} \times \text{improvement activities performance category weight}) + (\text{Promoting Interoperability performance category score} \times \text{Promoting Interoperability performance category weight})] \times 100 + \text{the complex patient bonus} \), not to exceed 100 points.

*BILLING CODE 4120–01–C

(3) Complex patient bonus. For the CY 2020, 2021, 2022, and 2023 MIPS payment years and associated performance periods, provided that a MIPS eligible clinician, group, virtual group or APM Entity submits data for at least one MIPS performance category for the applicable performance period for the MIPS payment year, a complex patient bonus will be added to the final score for the MIPS payment year, as stated in paragraphs (c)(3)(i) through (c)(3)(iv) of this section. Beginning with the CY 2022 MIPS performance period/ CY2024 MIPS payment year, provided that a MIPS eligible clinician, group, subgroup, virtual group or APM Entity submits data for at least one MIPS performance category for the applicable performance period for the MIPS payment year, a complex patient bonus will be added to the final score for the MIPS payment year, as stated in paragraphs (c)(3)(i) through (c)(3)(iv) of this section.

(i) For the CY 2020, 2021, 2022, and 2023 MIPS payment years and associated performance periods, for MIPS eligible clinicians and groups, the complex patient bonus is calculated as follows: [The beneficiary weighted average HCC risk score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation within the APM Entity or virtual group, respectively] × [the average dual eligible ratio for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation, within the APM Entity or virtual group, respectively, × 5].

(ii) For the CY 2020, 2021, 2022, and 2023 MIPS payment years and associated performance periods, for APM Entities and virtual groups, the complex patient bonus is calculated as follows: [The beneficiary weighted average HCC risk score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation within the APM Entity or virtual group, respectively] × [the average dual eligible ratio for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation, within the APM Entity or virtual group, respectively, × 5].

(iii) For the 2020, 2021, 2022, and 2023 MIPS payment years and associated performance periods, the complex patient bonus cannot exceed 5.0 except as provided in paragraph (c)(3)(iv) of this section.

(iv) For the 2022 and 2023 MIPS payment years and associated performance periods, the complex patient bonus is calculated pursuant to paragraphs (c)(3)(i) and (ii) of this section, and the resulting numerical value is then multiplied by 2.0. The complex patient bonus cannot exceed 10.0.

(v) Beginning with the CY 2022 MIPS performance period/CY2024 MIPS payment year, the complex patient bonus is limited to MIPS eligible clinicians, groups, subgroups, APM Entities, and virtual groups with a risk indicator at or above the risk indicator calculated median.

(vi) Beginning with the CY2022 MIPS performance period/CY2024 MIPS payment year, for MIPS eligible clinicians, groups, and subgroups, the complex patient bonus components are calculated as follows for the specific risk indicators: Medical complex patient bonus component = 1.5+4* associated HCC standardized score calculated with the average HCC risk score assigned to beneficiaries (pursuant to the HCC risk adjustment model established by CMS pursuant to section 1853(a)(1) of the Act) seen by the MIPS eligible clinician or seen by clinicians in a group or subgroup; social complex patient bonus component = 1.5+4* associated dual proportion standardized score. The components are added together to calculate one overall complex patient bonus. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score – risk indicator mean)/risk indicator standard deviation.

(vii) Beginning with the CY2022 MIPS performance period/CY2024 MIPS payment year, for APM Entities and
virtual groups, the complex patient bonus components are calculated as follows for the specific risk indicators: Medical complex patient bonus component = 1.5+4* the beneficiary weighted average HCC risk standardized score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation within the APM Entity or virtual group, respectively; social complex patient bonus component = 1.5+4* the average dual proportion standardized score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation, within the APM Entity or virtual group, respectively. The components are added together to calculate one overall complex patient bonus. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score – risk indicator mean)/risk indicator standard deviation. (vi) Use of score from facility-based measurement. The MIPS quality and cost performance category scores will be based on the facility-based measurement scoring methodology described in paragraph (e)(6) of this section unless: (A) For the CY 2019 MIPS performance period/2021 MIPS payment year, through the CY 2021 MIPS performance period/2023 MIPS payment year, a clinician or group receives a higher combined MIPS quality and cost performance category score through another MIPS submission. (B) Beginning with the CY 2022 MIPS performance period/2024 MIPS payment year, a clinician or group receives a higher MIPS final score through another MIPS submission. 58. Amend § 414.1395 by revising paragraph (c) to read as follows: § 414.1395 Public reporting. (c) New measures and activities. (1) CMS does not publicly report any data on new quality or cost measure for the first 2 years in which it is in the program, after which CMS evaluates the measure to determine whether it is suitable for public reporting under paragraph (b) of this section. (2) CMS does not publicly report any MVP data on new improvement activity or Promoting Interoperability measure, objective, or activity included in an MVP for the first year in which it is included in the MVP.

59. Revise § 414.1400 to read as follows: § 414.1400 Third party intermediaries. (a) General. (1) MIPS data may be submitted on behalf of a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity by any of the following third party intermediaries: (i) QCDR; (ii) Qualified registry; (iii) Health IT vendor; or (iv) CMS-approved survey vendor. (2) Third party intermediary approval criteria. (i) To be approved as a third party intermediary, an entity must agree to meet the applicable requirements of this section, including, but not limited to, the following: (A) A third party intermediary’s principle place of business and retention of any data must be based in the U.S. (B) If the data is derived from CEHRT, a QCDR, qualified registry, or health IT vendor must be able to indicate its data source. (C) All data must be submitted in the form and manner specified by CMS. (D) If the clinician chooses to opt-in in accordance with § 414.1310, the third party intermediary must be able to transmit that decision to CMS. (E) The third party intermediary must provide services throughout the entire performance period and applicable data submission period. (F) Prior to discontinuing services to any MIPS eligible clinician, group, virtual group, subgroup, or APM Entity during a performance period, the third party intermediary must support the transition of such MIPS eligible clinician, group, virtual group, subgroup, or APM Entity to an alternate third party intermediary, submitter type, or, for any measure on which data has been collected, collection type according to a CMS approved a transition plan. (ii) The determination of whether to approve an entity as a third party intermediary for a MIPS payment year may take into account: (A) Whether the entity failed to comply with the requirements of this section for any prior MIPS payment year for which it was approved as third party intermediary; and (B) Whether the entity provided inaccurate information regarding the requirements of this subpart to any eligible clinician. (iii) Beginning with the 2023 MIPS payment year, third party intermediaries must attend and complete training and support sessions in the form and manner, and at the times, specified by CMS. (3) All data submitted to CMS by a third party intermediary on behalf of a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity must be certified by the third party intermediary as true, accurate, and complete to the best of its knowledge. Such certification must be made in a form and manner and at such time as specified by CMS. (b) Additional requirements for QCDRs and qualified registries—(1) General. (i) Beginning with the CY 2021 MIPS performance period/2023 MIPS payment year, QCDRs and qualified registries must be able to submit data for all of the following MIPS performance categories:
(A) Quality, except:
(1) The CAHPS for MIPS survey; and
(2) For qualified registries, QCDR measures;
(B) Improvement activities; and
(C) Promoting Interoperability, if the eligible clinician, group, virtual group, or subgroup is using CEHRT, unless:
(1) The third party intermediary’s MIPS eligible clinicians, groups, virtual groups, or subgroups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(4)(i) through (iii) or (c)(2)(i)(C)(1) through (7) or (c)(2)(i)(C)(9).
(2) [Reserved]
(ii) Beginning with the 2023 MIPS performance period/2025 MIPS payment year, QCDRs and qualified registries must support the APP.
(3) Conditions for approval.
(i) Beginning with the 2023 MIPS performance period/2025 MIPS payment year, QCDRs and qualified registries must support the APP.
(ii) Beginning with the 2023 MIPS performance period/2025 MIPS payment year, QCDRs and qualified registries must support the APP.
(iii) Beginning with the 2023 MIPS performance period/2025 MIPS payment year, QCDRs and qualified registries must support the APP.
(iv) Beginning with the 2023 MIPS performance period/2025 MIPS payment year, QCDRs and qualified registries must support the APP.
(v) Beginning with the 2023 MIPS performance period/2025 MIPS payment year, QCDRs and qualified registries must support the APP.
(vi) Beginning with the 2023 MIPS performance period/2025 MIPS payment year, QCDRs and qualified registries must support the APP.
(3) Calculation of reporting and performance rates.
(4) Verification that only the MIPS quality measures and QCDR measures, as applicable, that are relevant to the performance period will be used for MIPS submission.
(5) A form and manner by and a deadline specified by CMS, the QCDR or qualified registry must report the results of each data validation audit, including the overall data deficiencies or data error rate, the types of deficiencies or data errors discovered, the percentage of clinicians impacted by any deficiency or error, and, how and when each deficiency or data error type was corrected.

E. The QCDR or qualified registry must conduct each data validation audit using a sampling methodology that meets the following requirements:
(1) Uses a sample size of at least 3 percent of the TIN/NPIs for which the QCDR or qualified registry will submit data to CMS, except that if a 3 percent sample size would result in fewer than 10 TIN/NPIs, the QCDR or qualified registry must use a sample size of at least 10 TIN/NPIs, and if a 3 percent sample size would result in more than 50 TIN/NPIs, the QCDR or qualified registry may use a sample size of 50 TIN/NPIs.
(2) Uses a sample that includes at least 25 percent of the patients of each TIN/NPI in the sample, except that the sample for each TIN/NPI must include a minimum of 5 patients and does not need to include more than 50 patients.
(3) Each QCDR or qualified registry data validation audit must include the following:
(1) Verification of the eligibility status of each eligible clinician, group, virtual group, subgroup, opt-in participant, and voluntary participant.
(2) Verification of the accuracy of TINs and NPIs.
(3) Calculation of reporting and performance rates.
(4) Verification that only the MIPS quality measures and QCDR measures, as applicable, that are relevant to the performance period will be used for MIPS submission.
(5) In a form and manner by and a deadline specified by CMS, the QCDR or qualified registry must report the results of each data validation audit, including the overall data deficiencies or data error rate, the types of deficiencies or data errors discovered, the percentage of clinicians impacted by any deficiency or error, and, how and when each deficiency or data error type was corrected.
(1) QCDRs and qualified registries must conduct validation on the data they intend to submit for the MIPS performance period and provide the results of the executed data validation plan by May 31st of the year following the performance period.
(2) [Reserved]
(vi) Beginning with the 2021 MIPS performance period/2023 MIPS payment year, the QCDR or qualified registry must conduct targeted audits in accordance with this paragraph (b)(3)(vi).
(A) A data validation audit under paragraph (b)(3)(v) of this section identifies one or more deficiency or data error, the QCDR or qualified registry must conduct a targeted audit into the impact and root cause of each such

D. The QCDR or qualified registry must conduct data validation audits in accordance with this paragraph (b)(3)(v) of this section.

C. The QCDR or qualified registry must conduct data validation audits in accordance with this paragraph (b)(3)(v) of this section.

B. The QCDR or qualified registry must conduct data validation audits in accordance with this paragraph (b)(3)(v) of this section.

A. The QCDR or qualified registry must conduct data validation audits in accordance with this paragraph (b)(3)(v) of this section.

The QCDR or qualified registry must conduct data validation audits in accordance with this paragraph (b)(3)(v) of this section.
deficiency or data error for that MIPS payment year.

(B) The QCDR or qualified registry must conduct any required targeted audits for the MIPS payment year and correct any deficiencies or data errors identified through such audit prior to the submission of data for that MIPS payment year.

(C) The QCDR or qualified registry must conduct the targeted audit using the sampling methodology that meets the requirements described in paragraph (b)(3)(V)(E) of this section. The sample for the targeted audit must not include data from the sample used for the data validation audit in which the deficiency or data error was identified.

(D) In a form and manner and by a deadline specified by CMS, the QCDR or qualified registry must report the results of each targeted audit, including the overall deficiency or data error rate, the types of deficiencies or data errors discovered, the percentage of clinicians impacted by each deficiency or data error, and how and when each deficiency or data error type was corrected.

(vii) For the 2023 MIPS performance period/2025 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for any of the 2019 through 2023 MIPS payment years must submit a participation plan for CMS’s approval. The participation plan must include the QCDR and/or qualified registry’s detailed plans about how the QCDR or qualified registry intends to encourage clinicians to submit MIPS data to CMS through the QCDR or qualified registry.

(viii) Beginning with the 2024 MIPS performance period/2026 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for either of the 2 years preceding the applicable self-nomination period must submit a participation plan for CMS’s approval. This participation plan must include the QCDR’s and/or qualified registry’s detailed plans about how the QCDR or qualified registry intends to encourage clinicians to submit MIPS data to CMS through the QCDR or qualified registry.

4. QCDR measures for the quality performance category—

(i) QCDR measure self-nomination requirements.

For the 2018 MIPS performance period/2020 MIPS payment year and future years, at the time of self-nomination an entity seeking to become a QCDR must submit the following information for any measure it intends to submit for the payment year.

(A) For MIPS quality measures, the entity must submit specifications including the MIPS measure IDs and specialty-specific measure sets, as applicable.

(B) For QCDR measures, the entity must submit for CMS-approval measure specifications including: Name/title of measures, NQF number (if NQF-endorsed), descriptions of the denominator, numerator, and when applicable, denominator exceptions, denominator exclusions, risk adjustment variables, and risk adjustment algorithms. In addition, no later than 15 calendar days following CMS approval of any QCDR measure specifications, the entity must publicly post the measure specifications for that QCDR measure (including the CMS-assigned QCDR measure ID) and provide CMS with a link to where this information is posted.

(ii) QCDR measure submission requirements. A QCDR must include the CMS-assigned QCDR measure ID when submitting data on any QCDR measure to CMS.

(iii) QCDR measure approval criteria.

(A) QCDR measure requirements for approval are:

(1) QCDR measures that are beyond the measure concept phase of development.

(2) QCDR measures that address significant variation in performance.

(3) Beginning with the 2022 MIPS performance period/2024 MIPS payment year, all QCDR measures must meet face validity. To be approved for the 2023 MIPS performance period/2025 MIPS payment year, all QCDR measures must meet face validity for the initial MIPS payment year for which it is approved. For subsequent years, all QCDR measures must be fully developed and tested, with complete testing results at the clinician level, prior to submitting the QCDR measure at the time of self-nomination.

(i) To be included in an MVP for the 2022 MIPS performance period/2024 MIPS payment year and future years, a QCDR measure must be fully tested.

(ii) [Reserved]

(4) Beginning with the 2022 MIPS performance period/2023 MIPS payment year, QCDRs are required to collect data on a QCDR measure, appropriate to the measure type, prior to submitting the QCDR measure for CMS consideration during the self-nomination period.

(5) Beginning with the 2020 MIPS performance period/2022 MIPS payment year, CMS may provisionally approve the individual QCDR measures for 1 year with the condition that QCDRs address certain areas of significant variation in performance. The CMS will approve the measure for subsequent years if CMS determines that the QCDR measure meets the QCDR measure requirements and considerations.

(B) The QCDR or qualified registry intends to encourage QCDR’s and/or qualified registry’s participation plan for CMS’s approval.

(C) The QCDR or qualified registry intends to encourage participation plan for CMS’s approval.

(D) In a form and manner and by a deadline specified by CMS, the QCDR or qualified registry must report the results of each targeted audit, including the overall deficiency or data error rate, the types of deficiencies or data errors discovered, the percentage of clinicians impacted by each deficiency or data error, and how and when each deficiency or data error type was corrected.

(vii) For the 2023 MIPS performance period/2025 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for any of the 2019 through 2023 MIPS payment years must submit a participation plan for CMS’s approval. The participation plan must include the QCDR and/or qualified registry’s detailed plans about how the QCDR or qualified registry intends to encourage clinicians to submit MIPS data to CMS through the QCDR or qualified registry.

(viii) Beginning with the 2024 MIPS performance period/2026 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for either of the 2 years preceding the applicable self-nomination period must submit a participation plan for CMS’s approval. This participation plan must include the QCDR’s and/or qualified registry’s detailed plans about how the QCDR or qualified registry intends to encourage clinicians to submit MIPS data to CMS through the QCDR or qualified registry.

The QCDR or qualified registry must conduct the targeted audit using the sampling methodology that meets the requirements described in paragraph (b)(3)(V)(E) of this section. The sample for the targeted audit must not include data from the sample used for the data validation audit in which the deficiency or data error was identified.

In a form and manner and by a deadline specified by CMS, the QCDR or qualified registry must report the results of each targeted audit, including the overall deficiency or data error rate, the types of deficiencies or data errors discovered, the percentage of clinicians impacted by each deficiency or data error, and how and when each deficiency or data error type was corrected.

(iii) QCDR measure approval criteria.

(A) QCDR measure requirements for approval are:

(1) QCDR measures that are beyond the measure concept phase of development.

(2) QCDR measures that address significant variation in performance.

(3) Beginning with the 2022 MIPS performance period/2024 MIPS payment year, all QCDR measures must meet face validity. To be approved for the 2023 MIPS performance period/2025 MIPS payment year, all QCDR measures must meet face validity for the initial MIPS payment year for which it is approved. For subsequent years, all QCDR measures must be fully developed and tested, with complete testing results at the clinician level, prior to submitting the QCDR measure at the time of self-nomination.

(i) To be included in an MVP for the 2022 MIPS performance period/2024 MIPS payment year and future years, a QCDR measure must be fully tested.

(ii) [Reserved]

(4) Beginning with the 2022 MIPS performance period/2023 MIPS payment year, QCDRs are required to collect data on a QCDR measure, appropriate to the measure type, prior to submitting the QCDR measure for CMS consideration during the self-nomination period.

(5) Beginning with the 2020 MIPS performance period/2022 MIPS payment year, CMS may provisionally approve the individual QCDR measures for 1 year with the condition that QCDRs address certain areas of significant variation in performance. The CMS will approve the measure for subsequent years if CMS determines that the QCDR measure meets the QCDR measure requirements and considerations.
measure that did not meet benchmarking thresholds is still important and relevant to a specialist’s practice, that the QCDR may develop and submit a QCDR measure participation plan for our consideration. This QCDR measure participation plan must include the QCDR’s detailed plans and changes to encourage eligible clinicians and groups to submit data on the low-reported QCDR measure for purposes of the MIPS program.

(ii) [Reserved]

(C) Beginning with the 2021 MIPS performance period/2023 MIPS payment year, QCDR measures may be approved for 2 years, at CMS discretion by attaining approval status by meeting QCDR measure considerations and requirements. Upon annual review, CMS may revoke a QCDR measure’s second year approval, if the QCDR measure is found to be: Topped out; duplicative of a more robust measure; reflects an outdated clinical guideline; or if the QCDR self-nominating the QCDR measure is no longer in good standing.

(iv) QCDR measure rejection criteria.

Beginning with the 2020 MIPS performance period/2022 MIPS payment year, QCDR measure rejection considerations include, but are not limited to:

(A) QCDR measures that are duplicative or identical to other QCDR measures or MIPS quality measures that are currently in the program.

(B) QCDR measures that are duplicative or identical to MIPS quality measures that have been removed from MIPS through rulemaking.

(C) QCDR measures that are duplicative or identical to quality measures used under the legacy Physician Quality Reporting System (PQRS) program, which have been retired.

(D) QCDR measures that meet the topped out definition as described at §414.1305.

(E) QCDR measures that are process-based, with consideration to whether the removal of the process measure impacts the number of measures available for a specific specialty.

(F) Whether the QCDR measure has potential unintended consequences to a patient’s care.

(G) Considerations and evaluation of the measure’s performance data, to determine whether performance variance exists.

(H) QCDR measures that split a single clinical practice or action into several QCDR measures.

(I) QCDR measures that are “check-box” with no actionable quality action.

(J) QCDR measures that do not meet the case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive years.

(K) QCDR measures with clinician attribution issues, where the quality action is not under the direct control of the reporting clinician.

(L) QCDR measures that focus on rare events or “never events” in the measurement period.

(M) QCDR does not have permission to use a QCDR measure owned by another QCDR for the applicable performance period.

(N) If a QCDR measure owner is not approved or is not in good standing, any associated QCDR measures will not be approved.

(c) Additional requirements for Health IT vendors. (1) Beginning with the CY 2021 MIPS performance period/2023 MIPS payment year, health IT vendors must be able to submit data for the MIPS performance categories as follows:

(i) Health IT vendors that support MVPs must be able to submit data for all of the MIPS performance categories:

(A) Quality, except:

(1) The CAHPS for MIPS survey; and

(2) QCDR measures;

(B) Improvement activities; and

(C) Promoting Interoperability, if the eligible clinician, group, virtual group, or subgroup is using CEHRT, unless:

(1) The third party intermediary’s MIPS eligible clinicians, groups, virtual groups, or subgroups fall under the reweighting policies at §414.1380(c)(2)(i)(A)(4)(ii) through (iii) or (c)(2)(ii)(C)(1) through (7) or (c)(2)(ii)(C)(9).

(ii) [Reserved]

(ii) Health IT vendors that do not support MVPs must be able to submit data for at least one of the MIPS performance categories described in paragraphs (c)(1)(i) of this section.

(iii) Beginning with the 2023 MIPS performance period/2025 MIPS payment year, Health IT vendors must support MVPs that are applicable to the MVP participant on whose behalf they submit MIPS data. Health IT vendors may also support the APP.

(ii) [Reserved]

(d) Additional requirements for CMS-approved survey vendors. (1) CMS-approved survey vendors may submit data on the CAHPS for MIPS survey for the MIPS quality performance category.

(2) Entities seeking to be a CMS-approved survey vendor for any MIPS performance period must submit a survey vendor application to CMS in a form approved by CMS for each MIPS performance period for which it wishes to transmit such data.

The application and any supplemental information requested by CMS must be submitted by deadlines specified by CMS. For an entity to be a CMS-approved survey vendor, it must meet the following criteria:

(3) The entity must have sufficient experience, capability, and capacity to accurately report CAHPS data, including:

(i) At least 3 years of experience administering mixed-mode surveys (that is, surveys that employ multiple modes to collect data), including mail survey administration conducted by survey administration via Computer Assisted Telephone Interview (CATI);

(ii) At least 3 years of experience administering surveys to a Medicare population;

(iii) At least 3 years of experience administering survey data to CMS.

(iv) Experience administering surveys in English and at least one other language for which a translation of the CAHPS for MIPS survey is available;

(v) Use equipment, software, computer programs, systems, and facilities that can verify addresses and phone numbers of sampled beneficiaries, monitor interviewers, collect data via CATI, electronically administer the survey and schedule callbacks to beneficiaries at varying times of the day and week, track fielded surveys, assign final disposition codes to reflect the outcome of data collection of each sampled case, and track cases from mail surveys through telephone follow-up activities; and

(vi) Employment of a program manager, information systems specialist, call center supervisor and mail center supervisor to administer the survey.

(4) The entity has certified that it has the ability to maintain and transmit quality data in a manner that preserves the security and integrity of the data.

(5) The entity has successfully completed, and has required its subcontractors to successfully complete, vendor training(s) administered by CMS or its contractors.

(6) The entity has submitted a quality assurance plan and other materials relevant to survey administration, as determined by CMS, including cover letters, questionnaires and telephone scripts.

(7) The entity has agreed to participate and cooperate, and has required its subcontractors to participate and cooperate, in all oversight activities related to survey administration conducted by CMS or its contractors.

(8) The entity has sent an interim survey data file to CMS that establishes...
the entity’s ability to accurately report CAHPS data.

e) Remedial action and termination of third party intermediaries. (1) If CMS determines that a third party intermediary has ceased to meet one or more of the applicable criteria for approval, has submitted a false certification under paragraph (a)(3) of this section, or has submitted data that are inaccurate, unusable, or otherwise compromised, CMS may take one or more of the following remedial actions after providing written notice to the third party intermediary:

(i) Require the third party intermediary to submit a corrective action plan (CAP) by a date specified by CMS. The CAP must address the following issues, unless different or additional information is specified by CMS:

(A) The issues that contributed to the non-compliance.

(B) The impact to individual clinicians, groups, or virtual groups, regardless of whether they are participating in the program because they are MIPS eligible, voluntary participating, or opting in to participating in the MIPS program.

(C) The corrective actions to be implemented by the third party intermediary to ensure that the non-compliance has been resolved and will not recur in the future.

(D) The detailed timeline for achieving compliance with the applicable requirements.

(ii) Publicly disclose the entity’s data error rate on the CMS website until the data error rate falls below 3 percent.

(2) CMS may immediately or with advance notice terminate the ability of a third party intermediary to submit MIPS data on behalf of a MIPS eligible clinician, group, or virtual group for one or more of the following reasons:

(i) CMS has grounds to impose remedial action;

(ii) CMS has not received a CAP within the specified time period or the CAP is not accepted by CMS;

(iii) The third party intermediary fails to correct the deficiencies or data errors by the date specified by CMS.

(3) Contains data inaccuracies affecting the third party intermediary’s total clinicians may lead to remedial action/termination of the third party intermediary for future program year(s) based on CMS discretion.

(4) For purposes of paragraph (e) of this section, CMS may determine that submitted data are inaccurate, unusable, or otherwise compromised, including but not limited to, if the submitted data:

(i) Includes, without limitation, TIN/NPI mismatches, formatting issues, calculation errors, or data audit discrepancies.

(ii) [Reserved]

(l) Auditing of entities submitting MIPS data. Any third party intermediary must comply with the following procedures as a condition of its qualification and approval to participate in MIPS as a third party intermediary.

(1) The entity must make available to CMS the contact information of each MIPS eligible clinician or group on behalf of whom it submits data. The contact information must include, at a minimum, the MIPS eligible clinician or group’s practice phone number, address, and, if available, email.

(2) The entity must retain all data submitted to CMS for purposes of MIPS for 6 years from the end of the MIPS performance period.

(3) For the purposes of auditing, CMS may request any records or data retained for the purposes of MIPS for up to 6 years from the end of the MIPS performance period.

60. Amend § 414.1405 by adding paragraphs (b)(9), (d)(7) and (g) to read as follows:

§ 414.1405 Payment.

* * * * *

(b) * * *

(9) Pursuant to the methodology established at paragraph (g) of this section, the performance threshold for the 2024 MIPS payment year is 75 points. The prior period used to determine the performance threshold is the 2019 MIPS payment year.

* * * * *

(d) * * *

(7) The additional performance threshold for the 2024 MIPS payment year is 89 points.

* * * * *

(g) Performance threshold methodology. For each of the 2024, 2025, and 2026 MIPS payment years, the performance threshold is the mean of the final scores for all MIPS eligible clinicians from a prior period as specified under paragraph (b) of this section.

61. Amend § 414.1430 by—

a. Revising paragraph (a)(1)(iii); and

b. Adding paragraph (a)(1)(iv).

The revision and addition read as follows:

§ 414.1430 Qualifying APM participant determination: QP and partial QP thresholds.

(a) * * *

(1) * * *

(iii) 2023 and 2024: 50 percent

(iv) 2025 and later: 75 percent

* * * * *
practitioner performing the split (or shared) visit.

(b) Conditions of payment. For purposes of this section, the following conditions of payment apply: (1) **Substantive portion of split (or shared) visit.** In general, payment is made to the physician or nonphysician practitioner who performs the substantive portion of the split (or shared) visit.

(2) **Medical record documentation.** Documentation in the medical record must identify the physician and nonphysician practitioner who performed the visit. The individual who performed the substantive portion of the visit (and therefore bills for the visit) must sign and date the medical record.

(3) **Claim modifier.** The designated modifier must be included on the claim to identify that the service was a split (or shared) visit.

**PART 424—CONDITIONS FOR MEDICARE PAYMENT**

- 67. The authority for part 424 continues to read as follows:
  - **Authority:** 42 U.S.C. 1302 and 1395hh.

- 68. Amend §424.205 by—
  - a. Redesignating paragraphs (b)(5) and (6) as paragraphs (b)(6) and (7), respectively; and
  - b. Adding new paragraph (b)(5):

**§ 424.205 Requirements for Medicare Diabetes Prevention Program suppliers.**

- (b) * * * * * * * * * *

- (5) The Medicare provider enrollment application fee does not apply to all Medicare Diabetes Prevention Program (MDPP) suppliers that submit an enrollment application on or after January 1, 2022.

- 69. Amend §424.502 by revising the definition of “Institutional provider” to read as follows:

**§ 424.502 Definitions.**

- * * * * * * * * * *

**Institutional provider** means any provider or supplier that submits a paper Medicare enrollment application using the CMS–855A, CMS–855B (not payable by a federal health care services personnel furnishing services or administrative or management services personnel furnishing services payable by a federal health care program, of the provider or supplier is—

- 70. Amend §424.530 by revising paragraphs (a)(2) introductory text and (a)(11)(i) to read as follows:

**§ 424.530 Denial of enrollment in the Medicare program.**

- (a) * * * *

- (2) **Provider or supplier conduct.** The provider or supplier, or any owner, managing employee, authorized or delegated official, medical director, supervising physician, or other health care or administrative or management services personnel furnishing services payable by a federal health care program, of the provider or supplier is—

- (e) **Reversal of revocation.** If the revocation was due to adverse activity (sanction, exclusion, or felony) against the provider’s or supplier’s owner, managing employee, authorized or delegated official, medical director, supervising physician, or other health care or administrative or management services personnel furnishing services payable by a federal health care program, the revocation may be reversed if the provider or supplier terminates and submits proof that it has terminated its business relationship with that individual within 30 days of the revocation notification.
§ 424.545 [Amended]

72. Amend § 424.545 in paragraph (b) by removing the reference “§ 405.374” and adding in its place the reference “§ 424.546.”

73. Add § 424.546 to read as follows:

§ 424.546 Deactivation rebuttals.

(a) Rebuttal submittal period. (1) If a provider or supplier receives written notice from CMS or its contractor that the provider’s or supplier’s billing privileges program has been deactivated under § 424.540, the provider or supplier has 15 calendar days from the date of the written notice to submit a rebuttal to CMS as permitted under § 424.545(b).

(2) CMS may, at its discretion, extend the 15-day time-period referenced in paragraph (a)(1) of this section.

(b) Rebuttal requirements. A rebuttal submitted pursuant to this section and § 424.545(b) must:

(1) Be in writing.

(2) Specify the facts or issues about which the provider or supplier disagrees with the deactivation’s imposition and/or the effective date, and the reasons for disagreement.

(3) Submit all documentation the provider or supplier wants CMS to consider in its review of the deactivation.

(4) Be submitted in the form of a letter that is signed and dated by the individual supplier (if enrolled as an individual physician or nonphysician practitioner), the authorized official or delegated official (as those terms are defined in 42 CFR 424.502), or a legal representative (as defined in 42 CFR 498.10). If the legal representative is an attorney, the attorney must include a statement that he or she has the authority to represent the provider or supplier; this statement is sufficient to constitute notice of such authority. If the legal representative is not an attorney, the provider or supplier must file with CMS written notice of the appointment of a representative; this notice of appointment must be signed and dated by, as applicable, the individual supplier, the authorized official or delegated official, or a legal representative.

(c) Submission of agreements. The ACO must submit an executed ACO participant agreement for each ACO participant that it requests to add to its list of ACO participants in accordance with § 425.118. The agreements may be submitted in the form and manner set forth in § 425.204(c)(6) or as otherwise specified by CMS.

74. The authority citation for part 425 continues to read as follows:

Authority: 42 U.S.C. 1302, 1306, 1395hh, and 1395jj.

75. Amend § 425.116 by revising paragraph (c) to read as follows:

§ 425.116 Agreements with ACO participants and ACO providers/suppliers.

* * * * *

(c) Submission of agreements. The ACO must submit an executed ACO participant agreement for each ACO participant that it requests to add to its list of ACO participants in accordance with § 425.118. The agreements may be submitted in the form and manner set forth in § 425.204(c)(6) or as otherwise specified by CMS.

76. Amend § 425.204 by—

■ a. Revising paragraphs (b), (c)(6), (f)(4)(ii)(A) and (B), (f)(4)(iii) introductory text, and (f)(4)(iii)(A); and

■ b. Adding paragraph (f)(4)(iv).

The revisions and addition read as follows:

§ 425.204 Content of the application.

* * * * *

(b) Prior participation. Upon request by CMS during the application cycle, the ACO must submit information regarding prior participation in the Medicare Shared Savings Program by the ACO, its ACO participants, or its ACO providers/suppliers, including such information as may be necessary for CMS to determine whether to approve an ACO’s application in accordance with § 425.224(b).

(c) * * * * *

(6) Upon request by CMS during the application cycle or at any point during an agreement period, the ACO must submit documents demonstrating that its ACO participants, ACO providers/suppliers, and other individuals or entities performing functions or services related to ACO activities are required to comply with the requirements of the Shared Savings Program. Upon receipt of such a request, the evidence to be submitted must include, without limitation, sample or form agreements and, in the case of ACO participant agreements, the first and signature page(s) of each executed ACO participant agreement. CMS may request all pages of an executed ACO participant agreement to confirm that it conforms to the sample form agreement submitted by the ACO. The ACO must certify that all of its ACO participant agreements comply with the requirements of this part.

* * * * *

(v)(A) An ACO that established a repayment mechanism to support its participation in a two-sided model beginning on July 1, 2019, January 1, 2020 or January 1, 2021, may elect to decrease the amount of its repayment mechanism amount for performance year 2022, as recalculated pursuant to paragraph...
§ 425.400 General.

(c)(2)(i) For the performance year starting on January 1, 2021:

(A) CPT codes:

(1) G2062 and G2063 (codes for principal care management services).

(2) 99441, 99442, and 99443 (codes for non-complex chronic care management).

(3) 99491 through 99493 (codes for evaluation and management of a patient).

(4) 99453 (code for assessment of and planning for patients with cognitive impairment).

(B) HCPCS codes:

(1) G0402 (code for the Welcome to Medicare visit).

(2) G0438 and G0439 (codes for the annual wellness visits).

(3) G0442 (code for alcohol misuse screening service).

(4) G0443 (code for alcohol misuse counseling service).

(5) G0444 (code for annual depression screening service).

(6) G0463 (code for services furnished in ETA hospitals).

(7) G0506 (code for chronic care management).

(8) G2010 (code for the remote evaluation of patient video/images).

(9) G2012 and G2252 (codes for virtual check-in).

(10) G2058 (code for non-complex chronic care management).

(11) G2063 and G2064 (codes for principal care management services).

§ 425.512 by—

(a) * * *

(b) Adding paragraph (a)(2)(iii).

The revision and addition read as follows:

§ 425.312 by—

(b) * * *

(iii) In the case of an ACO that has selected prospective assignment with retrospective reconciliation, the ACO or ACO participant providing each fee-for-service beneficiary with a standardized written notice prior to or at the primary care visit of the performance year in the form and manner specified by CMS.

(iv) In the case of an ACO that has selected prospective assignment, by the ACO or ACO participant providing each prospectively assigned beneficiary with a standardized written notice prior to or at the first primary care visit of the performance year in the form and manner specified by CMS.

§ 425.400 General.

(c)(2)(i) For the performance year starting on January 1, 2022:

(A) CPT codes:

(1) G2063 (code for principal care management services).
§ 425.512 Determining the ACO quality performance standard for performance years beginning on or after January 1, 2021.

(a) * * *

(2) For the first performance year of an ACO’s first agreement period under the Shared Savings Program, if the ACO reports data via the APP and meets the data completeness requirement at § 414.1340 of this chapter and the case minimum requirement at § 414.1380 of this chapter on the measures specified in this paragraph (a)(2) for the applicable performance year, the ACO will meet the quality performance standard.

(i) For performance year 2022. The ten CMS Web Interface measures or the three eCQM/MIPS CQM measures, and the CAHPS for MIPS survey.

(ii) For performance year 2023. The ten CMS Web Interface measures and at least one eCQM/MIPS CQM measure or the three eCQM/MIPS CQM measures, and the CAHPS for MIPS survey.

(iii) For performance year 2024 and subsequent performance years. The three eCQM/MIPS CQM measures and the CAHPS for MIPS survey.

(3) For performance year 2021—(i) Except as specified in paragraph (a)(2) of this section, CMS designates the quality performance standard as the ACO reporting via the APP established under § 414.1367 of this chapter and the case minimum requirement at § 414.1380 of this chapter either:

(A) According to the method of submission established by CMS, including at least one eCQM/MIPS CQM measure, and achieving a quality performance score that is equivalent to or higher than the 30th percentile of the performance benchmark on at least one measure in the APP measure set.

(ii) If an ACO does not report any of the ten CMS Web Interface measures or any of the eCQM/MIPS CQM measures, and does not administer a CAHPS for MIPS survey under the APP, the ACO will not meet the quality performance standard.

(5) For performance year 2023—(i) Except as specified in paragraph (a)(2) of this section, CMS designates the quality performance standard as the ACO reporting via the APP established under § 414.1367 of this chapter either:

(A) According to the method of submission established by CMS, including at least one eCQM/MIPS CQM measure, and achieving a quality performance score that is equivalent to or higher than the 30th percentile of the performance benchmark on at least one measure in the APP measure set.

(B) The three eCQM/MIPS CQM measures in the APP measure set, meeting the data completeness requirement at § 414.1340 of this chapter and the case minimum requirement at § 414.1380 of this chapter for all three eCQM/MIPS CQM measures, and achieving a quality performance score equivalent to or higher than the 30th percentile of the performance benchmark on at least one measure in the APP measure set.

(ii) If an ACO does not report any of the three eCQM/MIPS CQM measures, and does not administer a CAHPS for MIPS survey under the APP, the ACO will not meet the quality performance standard.

(b) * * *

(2) * * *

(i) For performance years 2021 through 2023, the ACO’s minimum quality performance score is set to the equivalent of the 30th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring for the relevant performance year.

(ii) For performance year 2024 and subsequent performance years, the ACO’s minimum quality performance score is set to the equivalent of the 40th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

(3) * * *

(i) For performance years 2021 and 2022, if the ACO reports quality data via the APP and meets data completeness and case minimum requirements, CMS will use the higher of the ACO’s quality performance score or the equivalent of the 30th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

(ii) For performance year 2023, if the ACO reports quality data via the APP, including at least one eCQM/MIPS CQM measure, and meets data completeness and case minimum requirements, CMS will use the higher of the ACO’s quality performance score or the equivalent of the 30th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

(iii) For performance year 2024 and subsequent performance years, if the ACO reports quality data via the APP and meets data completeness and case minimum requirements, CMS will use the higher of the ACO’s quality performance score or the equivalent of the 40th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

Dated: July 9, 2021.

Xavier Becerra,
Secretary, Department of Health and Human Services.

Note: The following appendices will not appear in the Code of Federal Regulations.
### Table A: New Quality Measures Proposed for the CY 2022 MIPS Performance Period/2024 MIPS Payment Year and Future Years

#### A.1. Intravesical Bacillus-Calmette Guerin for Non-muscle Invasive Bladder Cancer

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF # / eCQM NQF #:</td>
<td>N/A</td>
</tr>
<tr>
<td>Quality #:</td>
<td>TBD</td>
</tr>
<tr>
<td>Description:</td>
<td>Percentage of patients initially diagnosed with non-muscle invasive bladder cancer and who received intravesical Bacillus-Calmette-Guerin (BCG) within 6 months of bladder cancer staging.</td>
</tr>
<tr>
<td>Measure Steward:</td>
<td>Oregon Urology</td>
</tr>
<tr>
<td>Numerator:</td>
<td>All patients initially diagnosed with T1, Tis or high grade Ta non-muscle invasive bladder cancer and a qualified encounter in the measurement period.</td>
</tr>
<tr>
<td>Exclusions:</td>
<td></td>
</tr>
<tr>
<td>Measure Type:</td>
<td>Process</td>
</tr>
<tr>
<td>Measure Domain:</td>
<td>Effective Clinical Care (section 1848(s)(1)(B)(i) of the Act)</td>
</tr>
<tr>
<td>High Priority Measure:</td>
<td>No</td>
</tr>
<tr>
<td>Collection Type:</td>
<td>eCQM Specifications</td>
</tr>
<tr>
<td>Measure-Specific Case Minimum/Performance Period:</td>
<td>N/A for this measure</td>
</tr>
</tbody>
</table>

#### Rationale:
