We are proposing this measure because it addresses a gap in care for patients diagnosed with bladder cancer. Treatment at this stage (non-muscle invasive) can help prevent invasion into the muscle layer which leads to potential bladder removal and additional chemotherapy and/or radiation treatment. It was reviewed by the 2016 National Quality Forum (NQF) Measure Application Partnership (MAP) with a recommendation to refine to address concerns what populations would be included or excluded from the measure. The measure was updated according to MAP feedback by redefining the eligible patient population and exclusions.

The measure steward indicated that bladder cancer is ranked 10th for new cancer cases in 2020 and is the 9th leading cause of cancer death in the United States. There were an estimated 81,400 new cases in 2020 and 17,980 estimated deaths in 2020. Early detection (discovery of cancer in situ or localized to the primary site) is found in 85 percent of the patients, and with these there is a 5-year survival rate of 95.8 percent for in situ and 69.2 percent for localized. National Comprehensive Cancer Network (NCCN) Guidelines for Bladder Cancer (version 6.2020) defines intravesical Bacillus-Calmette-Guerin (BCG) as Category 1 Treatment for Ta - high grade, T1 and Tis non-muscle invasive bladder cancer. Most public data reflect prophylactic or adjuvant use of intravesical therapy with the goal of preventing recurrence or delaying progression to a higher grade or stage. Intravesical BCG has been shown to be an effective prophylaxis to prevent bladder cancer recurrences following transurethral resection of a bladder tumor (TURBT). The NCCN Bladder Cancer Panel Members recommend BCG as the preferred option over Mitomycin C for adjuvant treatment of high-grade lesions (Ta). BCG is also standard therapy for Primary Tis. Most T1 lesions are high risk and are similarly treated with adjuvant intravesical therapy with BCG being a Category 1 recommendation. (NCCN guidelines 6.2020).

Based on research of the available information presented to the MAP, we believe the measure is evidence-based and represents an important clinical practice. Note: Refer to https://ecqi.healthit.gov/ecqm/ep/2022/cms646v2 for information on this measure.

| Measure-Specific Case Minimum/Performance Period:   | N/A for this measure                                                         |                  |            |               |                 |            |              | | |

**Measure Type:** Intermediate Outcome  
**Measure Domain:** Effective Clinical Care (section 1848(s)(1)(B)(i) of the Act)  
**High Priority Measure:** Yes  
**Collection Type:** MIPS CQMs Specifications  
**Measure-Specific Case Minimum/Performance Period:** N/A for this measure

**Rationale:** We are proposing this measure because it represents an intermediate outcome for maintenance hemodialysis patients and may incentivize clinicians to evaluate their vascular access with potential to reduce infection, mortality, and hospitalization rates. Long-term catheter use is associated with higher mortality rate than use of an arteriovenous fistula. The measure was evaluated by the MAP and it was conditionally supported pending NQF endorsement. While we agree with the MAP that NQF endorsement of measures is preferred, NQF endorsement is not a requirement for measures to be considered for MIPS if the measure has an evidence-based focus as required by section 1848(q)(2)(D)(v) of the Act. The measure steward indicated, per their analysis of Consolidated Renal Operations in a Web enabled Network (CROWNWeb) data from January 2016 - December 2016, that the physician-level mean percentage of patient-months with a long-term catheter was 9.7 percent (SD=9.0 percent). Distribution: Min=0 percent, 1st quartile=4.5 percent, median=8.3 percent, 3rd quartile=12.7 percent, Max=100 percent. Reliability testing included 7,921 – 8,508 clinicians per month with moderate inter-unit reliability of 0.602 indicating that 60.2 percent of the variation in the annual long-term catheter rate can be attributed to between-practitioner differences in performance (signal) and about 39.8 percent to the within-practitioner variation (noise).

Based on research of the available information presented to the MAP, we believe the measure is evidence-based and represents an important clinical practice.

**Note:** Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=91911.
### A.3. Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM)

<table>

</tr>
<tr>
<td>Quality #:</td>
<td>TBD</td>
</tr>
<tr>
<td>Description:</td>
<td>The Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM) uses the PCPCM PROM (a comprehensive and parsimonious set of 11 patient-reported items) to assess the broad scope of primary care. Unlike other primary care measures, the PCPCM PRO-PM measures the high value aspects of primary care based on a patient’s relationship with the clinician or practice. Patients identify the PCPCM PROM as meaningful and able to communicate the quality of their care to their clinicians and/or care team. The items within the PCPCM PROM are based on extensive stakeholder engagement and comprehensive reviews of the literature.</td>
</tr>
<tr>
<td>Measure Steward:</td>
<td>The American Board of Family Medicine</td>
</tr>
<tr>
<td>Numerator:</td>
<td>The target population is all active patients in a practice during the performance reporting period. A patient is defined as active if the patient has had a documented interaction with the practice within 12 months of their birth month within the measurement period. The PCPCM PROM is the same for all patients, regardless of age. Because the PCPCM PROM applies to all patients and is not particular to a clinical encounter, it is administered once a year to each patient during their birth month. The target population is defined the same, regardless of unit of analysis (clinician, practice, or system). The numerator is the sum of all PCPCM PROM scores for active patients. 1. My practice makes it easy for me to get care. 2. My practice is able to provide most of my care. 3. In caring for me, my doctor considers all the factors that affect my health. 4. My practice coordinates the care I get from multiple places. 5. My doctor or practice knows me as a person. 6. My doctor and I have been through a lot together. 7. My doctor or practice stands up for me. 8. The care I get takes into account knowledge of my family. 9. The care I get in this practice is informed by knowledge of my community. 10. Over time, my practice helps me to stay healthy. 11. Over time, my practice helps me to meet my goals.</td>
</tr>
<tr>
<td>Denominator:</td>
<td>The denominator is the total number of complete PCPCM PROM instruments received in the reporting period. A completed PROM instrument is defined as a PROM instrument for which the patient has responded to at least 8 of 11 items. The target population is all active patients in a practice during the performance reporting period. A patient is defined as active if the patient has had a documented interaction with the practice during the measurement period. The PCPCM PROM is the same for all patients, regardless of age. Because the PCPCM PROM applies to all patients and is not particular to a clinical encounter, it is administered once a year to each patient during their birth month. The target population is defined the same, regardless of unit of analysis (clinician, practice, or system).</td>
</tr>
<tr>
<td>Exclusions:</td>
<td>None</td>
</tr>
<tr>
<td>Measure Type:</td>
<td>Patient-Reported Outcome-Based Performance Measure</td>
</tr>
<tr>
<td>Measure Domain:</td>
<td>Person and Caregiver-centered Experience and Outcomes (section 1848(j)(1)(B)(iv) of the Act)</td>
</tr>
<tr>
<td>High Priority Measure:</td>
<td>Yes</td>
</tr>
<tr>
<td>Collection Type:</td>
<td>MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Measure-Specific Case Minimum/Performance Period:</td>
<td>For each MIPS eligible clinician, group, subgroup*, virtual group, and APM Entity, a minimum of 30 PCPCM PROM instruments per clinician are needed for submission of this measure. All valid survey results (as defined in the specification) should be included in the aggregate score. For MIPS eligible groups, subgroups*, virtual groups, and APM Entities with 5 or more clinicians, a minimum of 150 PCPCM PROM instruments per TIN for each site/location associated with the clinicians part of the group, subgroups, virtual groups, and APM Entities are needed for submission of this measure. For TINs with a composition of multiple specialty practices at one site/location, a minimum of 150 PCPCM PROM instruments per specialty practice within a TIN are needed for submission of this measure. If the MIPS eligible group, subgroup*, virtual group, and APM Entity with 5 or more clinicians encompasses multiple sites/locations, each site/location would need to meet the PCPCM PROM instruments requirements as stated.</td>
</tr>
<tr>
<td>Rationale:</td>
<td>We are proposing this measure because assessment of patient experience of care is a critical element of quality care and captures the voice of the patient which is an important component of delivering high-value primary care. There are currently a limited number of patient experience measures within the MIPS quality measure set. The original measure was evaluated by the NQF MAP and received conditional support pending NQF endorsement. While we agree with the MAP that NQF endorsement of measures is preferred, NQF endorsement is not a requirement for measures to be considered for MIPS if the measure has an evidence-based focus as required by section 1848(q)(2)(D)(v) of the Act. Based on research of the available information presented to the MAP, evidence demonstrates a strong connection between patient experience of care and traditional health care outcomes, such as improved intermediate outcomes, greater adherence to recommended treatment, and reduced use of health care services. This measure addresses the Meaningful Measurement Area of Patient’s Experience of Care and the MIPS high-priority category of Outcomes.</td>

A4. Risk-Standardized Acute Unplanned Cardiovascular-Related Admission Rates for Patients with Heart Failure for the Merit-based Incentive Payment System

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF #/ eCOM NQF #;</td>
<td>NQF # 3612</td>
</tr>
<tr>
<td>Quality #;</td>
<td>TBD</td>
</tr>
<tr>
<td>Description:</td>
<td>Annual risk-standardized rate of acute unplanned cardiovascular-related admissions among Medicare Fee-for-Service (FFS) patients aged 65 years and older with heart failure (HF) or cardiomyopathy.</td>
</tr>
<tr>
<td>Measure Steward:</td>
<td>Centers for Medicare &amp; Medicaid Services</td>
</tr>
</tbody>
</table>

The outcome for this measure is the number of acute cardiovascular-related admissions per 100 person-years at risk for admission during the measurement year. Time at risk is calculated as the number of days a patient is alive, from the start of the measurement period or first visit, until heart transplantation, LVAD implantation, or home inotropic therapy; enrollment in hospice; death; or the end of the measurement period.

Time not considered at risk and excluded: Days spent in a hospital, SNF, or acute rehabilitation facility; 10 days following discharge from a hospital, SNF, or acute rehabilitation facility; and Time during and after LVAD implantation, home inotropic therapy, or heart transplantation.

The measure has several outcome exclusions: Planned admissions; Admissions from a skilled nursing facility (SNF) or acute rehab facility; Admissions within 10 days of discharge from a hospital, SNF, or acute rehab; Admissions after patient has entered hospice; Admissions before first visit to provider if no prior year visit; Admissions at time of or following LVAD implantation, home inotropic therapy, or heart transplant.

The measure includes Medicare FFS beneficiaries ≥65 years of age with at least one inpatient principal diagnosis for heart failure/cardiomyopathy, or at least two outpatient or inpatient heart failure/cardiomyopathy diagnoses in any coding position (e.g., primary or secondary position) within the two years prior to the measurement year.

- Beneficiaries must be enrolled full-time in Medicare Part A and B during the year prior to measurement and during the measurement period. Additionally, the cohort excludes: Patients with internalized left ventricular assist devices (LVADs); Patients with heart transplants; Patients on home inotropic therapy; Patients on hospice for any reason; Patients with end-stage renal disease (ESRD) – defined as chronic kidney disease stage 5 or on dialysis.

Provider types included for measurement: (vetted by TEP and Clinician Committee): Primary care providers (PCPs): CMS designates PCPs as physicians who practice internal medicine, family medicine, general medicine, or geriatric medicine, and non-physician providers, including nurse practitioners, certified clinical nurse specialists, and physician assistants; Cardiologists: Cardiologists are covered by the measure because they provide overall coordination of care for patients with HF and manage the conditions that put HF patients at risk for admission due to acute cardiovascular-related conditions.

Outcome attribution: We begin by assigning each patient to the clinician most responsible for the patient’s care, based on the pattern of outpatient visits with PCPs and relevant specialists. The patient can be assigned to a PCP, a cardiology, or can be left unassigned. A patient who is eligible for attribution is assigned to a cardiology if they have 2 or more visits with a single cardiologist, regardless of how many visits that patient has with a PCP. There are two scenarios where a patient can be assigned to a PCP.

- First, if the patient has seen the PCP at least once but has no visits with a cardiologist, the patient is assigned to the PCP.
- Second, if the patient has seen the PCP more than 2 or more times and has only one visit with a cardiologist, the patient is assigned to the PCP. If the patient has 1 visit each with a cardiologist and a PCP, the patient is assigned to the cardiologist. If the patient has 1 visit with a cardiologist and no visit with a PCP, the patient is assigned to the cardiologist.
- Finally, the patient will be unassigned if they had no visits with a PCP or cardiologist. Patients are then assigned at the Taxpayer Identification Number (TIN) level, which includes solo clinicians and groups of clinicians who have chosen to report their quality under a common TIN. Patients follow their clinician to the TIN designated by the clinician (i.e., they are assigned to their clinician’s TIN). Patients assigned at the individual clinician-level, therefore, continue to be unassigned at the TIN level.

Numerator Exclusions: The measure does not include the following types of admissions in the outcome because they do not reflect the quality of care provided by ambulatory care clinicians who are managing the care of HF patients: Planned admissions (utilizes the adapted planned admission algorithm (APA) to identify and exclude admissions that are planned); Admissions that likely do not reflect the quality of heart failure management provided by ambulatory clinicians including: Admissions that occur within 10 days of discharge from a hospital, skilled nursing facility, or acute rehabilitation facility (“10-day buffer period”); Admissions that occur while patients are enrolled in Medicare’s hospice benefit; Admissions that occur prior to the first visit with the assigned clinician. Admissions on the date or after any of the following: LVAD implantation, home inotropic therapy, or heart transplant (censored at the time of transition to advanced care).
<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Denominator Exclusions: The measure excludes: 1. Patients without continuous enrollment in Medicare Parts A and B for the duration of the measurement period. 2. Patients who (or until death), were ever in hospice during the year prior to the measurement year or in hospice at the start of the measurement period. 3. Patients who have had no Evaluation &amp; Management (E&amp;M) visits to a MIPS eligible clinician. 4. Patients who have had a heart transplant, been on home inotropic therapy, or who have had a left ventricular assist device (LVAD) placed.</td>
<td></td>
</tr>
</tbody>
</table>

| Measure Type: | Outcome |
| Measure Domain: | Effective Clinical Care (section 1848(s)(B)(i) of the Act) |
| High Priority Measure: | Yes |
| Collection Type: | Administrative Claims |
| Measure-Specific Case Minimum/Performance Period: | MIPS eligible clinicians, groups, subgroups*, virtual groups, and APM Entities / 21 case minimum / 1 year performance period (January 1st – December 31st) |

*Subgroups are only available through MVP reporting. All measure-specific criteria must be met by the subgroup.

Rationale:

We are proposing this administrative claims outcome measure as HF is a leading cause of hospitalization in the United States and a major source of disease burden among the elderly population. Approximately 5.7 million adults in the United States have HF, costing the United States $30.7 billion each year, which includes the cost of health care services, medications for treatment, and missed days of work. The toll on patients is also great, with high rates of hospitalization and mortality; nearly half of people with HF die within 5 years of their diagnosis. Patients with chronic HF are vulnerable to a range of complications that may put them at risk for hospitalization, including worsening of HF symptoms and destabilization due to other conditions, such as respiratory disease or infection. To expand the list of available reporting options for clinicians, we are proposing this HF measure for use in the MIPS program, as it is an administrative claims measure, which has no reporting burden. Another version of this measure specified for Accountable Care Organizations (ACOs), “Risk-standardized Acute Admission Rates for Patients with Heart Failure” (ACO-37, NQF ID 2886) was previously used in the CMS Medicare Shared Savings Program, initially for accountability and currently as an informational measure. We used the ACO-37 measure in the Shared Savings Program ACO quality measure set until 2019 and since 2019 has provided ACOs with their performance on the measure in quarterly claims-based reports for ACOs to use in quality improvement activities.

The HF measure was evaluated by the NQF MAP who did not recommend for rulemaking with potential for mitigation citing NQF endorsement and an analysis of the appropriateness of the risk adjustment for clinicians with higher caseloads of patients with more complicated or severe heart failure. While we agree with the MAP that NQF endorsement of measures is preferred, NQF endorsement is not a requirement for measures to be considered for MIPS if the measure has an evidence-based focus as required by section 1848(q)(2)(D)(v) of the Act. While the measure raises concerns that the risk adjustment may not adequately account for advanced heart failure stages, based on research of the available information presented to the MAP, we believe the measure is evidence-based and represents an important clinical practice and has provided valuable information for other programs.

Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at http://www.qualityforum.org/WorkArea/linkit.aspx?Linkidentifier=id&ItemID=94650.

### A.5. Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF # / eCQM NQF #</td>
<td>N/A</td>
</tr>
<tr>
<td>Quality #</td>
<td>TBD</td>
</tr>
<tr>
<td>Description</td>
<td>Annual risk-standardized rate of acute, unplanned hospital admissions among Medicare Fee-for-Service (FFS) patients aged 65 years and older with multiple chronic conditions (MCCs).</td>
</tr>
<tr>
<td>Measure Steward</td>
<td>Centers for Medicare &amp; Medicaid Services</td>
</tr>
</tbody>
</table>

The outcome for this measure is the number of acute, unplanned hospital admissions per 100 person-years at risk for admission during the measurement period.

**Time Period**

The outcome includes inpatient admissions to an acute care hospital during the measurement year.

**Excluded Admissions**

This measure does not include the following types of admissions in the outcome because they do not reflect the quality of care provided by ambulatory care clinicians who are managing the care of MCC patients:

1. Planned hospital admissions.
2. Admissions that occur directly from a skilled nursing facility (SNF) or acute rehabilitation facility.
3. Admissions that occur within a 10-day “buffer period” of time after discharge from a hospital, SNF, or acute rehabilitation facility.
4. Admissions that occur after the patient has entered hospice.
5. Admissions related to complications from procedures or surgeries.
6. Admissions related to accidents or injuries.
7. Admissions that occur prior to the first visit with the assigned clinician or clinician group.

To identify planned admissions, the measure adopted an algorithm CORE previously developed for CMS’s hospital readmission measures, CMS’s Planned Readmission Algorithm Version 4.0. In brief, the algorithm uses the procedure codes and principal discharge diagnosis code on each hospital claim to identify planned admissions. A few specific, limited types of care are always considered planned (for example, major organ transplant, rehabilitation, and maintenance chemotherapy). Otherwise, a planned admission is defined as a non-acute admission for a scheduled procedure (for example, total hip replacement or cholecystectomy). Admissions for an acute illness are never considered planned.

To identify complications of procedures or surgeries, we use the Agency for Healthcare Research and Quality’s (AHRQ’s) Clinical Classifications Software (CCS), which clusters diagnoses into clinically meaningful categories using International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM) or International Classification of Diseases, Tenth Revision, and Clinical Modification (ICD-10-CM) codes. We exclude the following 23 CCS categories:

1. 145: Intestinal obstruction without hernia
2. 237: Complication of device; implant or graft
3. 238: Complications of surgical procedures or medical care
4. 257: Other aftercare
5. 2601 E Codes: Cut/pierce
6. 2602 E Codes: Drowning/submersion
7. 2604 E Codes: Fire/burn
8. 2605 E Codes: Firearm
9. 2606 E Codes: Machinery
10. 2607 E Codes: Motor vehicle traffic (MVT)
11. 2608 E Codes: Pedal cyclist; not MVT
12. 2609 E Codes: Pedestrian; not MVT
13. 2610 E Codes: Transport; not MVT
14. 2611 E Codes: Natural/environment
15. 2612 E Codes: Overexertion
16. 2613 E Codes: Poisoning
17. 2614 E Codes: Struck by; against
18. 2615 E Codes: Suffocation
19. 2616 E Codes: Adverse effects of medical care
20. 2618 E Codes: Other specified and classifiable
21. 2619 E Codes: Other specified; NFC
22. 2620 E Codes: Unspecified
23. 2621 E Codes: Place of occurrence

**Numerator**

- b) Accidents or injuries
  - 5. 2601 E Codes: Cut/pierce
  - 6. 2602 E Codes: Drowning/submersion
  - 7. 2604 E Codes: Fire/burn
  - 8. 2605 E Codes: Firearm
  - 9. 2606 E Codes: Machinery
  - 10. 2607 E Codes: Motor vehicle traffic (MVT)
  - 11. 2608 E Codes: Pedal cyclist; not MVT
  - 12. 2609 E Codes: Pedestrian; not MVT
  - 13. 2610 E Codes: Transport; not MVT
  - 14. 2611 E Codes: Natural/environment
  - 15. 2612 E Codes: Overexertion
  - 16. 2613 E Codes: Poisoning
  - 17. 2614 E Codes: Struck by; against
  - 18. 2615 E Codes: Suffocation
  - 19. 2616 E Codes: Adverse effects of medical care
  - 20. 2618 E Codes: Other specified and classifiable
  - 21. 2619 E Codes: Other specified; NFC
  - 22. 2620 E Codes: Unspecified
  - 23. 2621 E Codes: Place of occurrence

**Person-time at risk**

Persons are considered at risk for hospital admission if they are alive, enrolled in Medicare FFS, and not in the hospital during the measurement period. In addition to time spent in the hospital, we also exclude from at-risk time:

1. Time spent in a SNF or acute rehabilitation facility.
2. The time within 10 days following discharge from a hospital, SNF, or acute rehabilitation facility.
3. Time after entering hospice care.

**Citations**

---

\[261\] This proposed quality measure is a Population Health measure.
The cohort is comprised of patients whose combinations of chronic conditions put them at high risk of admission and whose admission rates could be lowered through better care. This definition reflects NQF’s “Multiple Chronic Conditions Measurement Framework,” which defines patients with MCCs as people “having two or more concurrent chronic conditions that...act together to significantly increase the complexity of management, and affect functional roles and health outcomes, compromise life expectancy, or hinder self-management.” [1]

The specific inclusion criteria are as follows.

- Patient is alive at the start of the measurement period and has two or more of nine chronic disease groups in the year prior to the measurement period. Chronic conditions, except for diabetes, are defined using CMS’s Chronic Conditions Data Warehouse (CCW). For diabetes, we used the diabetes cohort definition from the Accountable Care Organization (ACO) diabetes admission measure developed by CORE (v2018a ACO-36) as opposed to the definition used in CCW; CCW includes diagnoses for secondary and drug-induced diabetic conditions that are not the focus of the MIPS MCC admission measure.

1. Acute myocardial infarction (AMI),
2. Alzheimer’s disease and related disorders or senile dementia,
3. Atrial fibrillation,
4. Chronic kidney disease (CKD),
5. Chronic obstructive pulmonary disease (COPD) or asthma,
6. Depression,
7. Diabetes,
8. Heart failure, and
9. Stroke or transient ischemic attack (TIA).

- Patient is aged ≥65 years at the start of the year prior to the measurement period.
- Patient is a Medicare FFS beneficiary with continuous enrollment in Medicare Parts A and B during the year prior to the measurement period.

Provider types included for measurement

- Primary care providers (PCPs): CMS designates PCPs as physicians who practice internal medicine, family medicine, general medicine, or geriatric medicine, and non-physician providers, including nurse practitioners, certified clinical nurse specialists, and physician assistants.
- Relevant specialists: Specialists covered by the measure are limited to those who provide overall coordination of care for patients with MCCs and who manage the chronic diseases that put the MCC patients in the measure at risk of admission. These specialists were chosen with input from our Technical Expert Panel (TEP) and include cardiology, pulmonology, nephrology, neurology, endocrinology, and hematologist/oncologists.

Outcome attribution

We begin by assigning each patient to the clinician most responsible for the patient’s care, based on the pattern of outpatient visits with PCPs and relevant specialists. The patient can be assigned to a PCP, a relevant specialist, or can be left unassigned.

- A patient who is eligible for attribution can be assigned to a relevant specialist only if the specialist has been identified as “dominant”. A specialist is considered “dominant” if they have two or more visits with the patient, as well as at least two more visits than any primary care provider or other relevant specialist.
- There are two scenarios where a patient can be assigned to a PCP. First, the patient must have seen at least one PCP. The patient will then be assigned to the PCP with the highest number of visits if there are no relevant specialists who are considered “dominant”. Second, if the patient has had more than one visit with a relevant specialist, no “dominant” specialist has been identified, and has two or more visits with the patient, they will be assigned to that PCP.
- Finally, the patient will be unassigned if they only saw non-relevant specialists, if the patient has not seen a PCP and no “dominant” specialist can be identified, or if the patient has not had more than one visit with any individual PCP.

Patients are then assigned at the Taxpayer Identification Number (TIN) level, which includes solo clinicians and groups of clinicians who have chosen to report their quality under a common TIN.

- Patients “follow” their clinician to the TIN designated by the clinician (i.e. they are assigned to their clinician's TIN). Patients unassigned at the individual clinician-level, therefore, continue to be unassigned at the TIN level.

Rationale:

We are proposing this risk-standardized hospital admission rate administrative claims outcome measure as patients with MCCs are at high risk for hospital admission, often for potentially preventable causes, such as exacerbation of pulmonary disease. Evidence from several Medicare demonstration projects suggests that care coordination results in decreased hospital admission rates among high-risk patients. In addition, studies have shown that the types of ambulatory care clinicians this measure targets (for example, primary care providers and specialists caring for patients with MCCs) can influence admission rates through team-based and enhanced access to care, found specifically in the patient-centered medical home (PCMH) model of interventions, and broadly through increased primary care supply and continuity of care. To expand the list of available reporting options for clinicians, we are proposing the MCC measure for use in the MIPS program, as it is an administrative claims measure, which has no reporting burden.

This measure was evaluated by the NQF MAP in 2019, who did not support for rulemaking with potential for mitigation, including applying the measure to clinician groups, not to individual clinicians, a higher reliability threshold (e.g., 0.7; 3), consideration of patient preference and selection as a method of attribution and NQF endorsement. While we agree with the MAP that NQF endorsement of measures is preferred, NQF endorsement is not a requirement for measures to be considered for MIPS if the measure has an evidence-based focus as required by section 1848(q)(2)(D)(v) of the Act. This measure has been submitted for endorsement as part of the fall 2020 NQF cycle. The measure developer indicated the measure will be used for clinician group reporting with a mean reliability score for groups of >15 clinicians with at least 18 MCC patients at 0.873. While the developer indicated that the patient attestation is not yet available for testing, based on research of the available information presented at the MAP, we believe the measure is evidence-based and represents an important clinical practice addressing a large Medicare patient population.

Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=91911.
TABLE Group AA: COVID-19 Vaccination by Clinicians

In addition to the new quality measures in Table Group A, we are seeking comment on one quality measure for potential future inclusion within MIPS. We refer readers to section IV.A.3.d.(1)(f) of this proposed rule for our request for information pertaining to the COVID-19 Vaccination by Clinicians measure specifications.

**AA.1. SARS-CoV-2 Vaccination by Clinicians**

We are proposing this measure for comment as it represents a promising effort to advance measurement of vaccination for an evolving pandemic.

On December 19, 2020, the Advisory Committee on Immunization Practice (ACIP) made an interim recommendation on the use of the Moderna COVID-19 vaccine for people ages 18 and older. Earlier that month, on December 12, ACIP also granted use of the Pfizer-BioNTech COVID-19 vaccine for people ages 16 and older, as an interim recommendation. The benefits of both vaccines were classified as high certainty (Type 1) based on the Grading of Recommendations, Assessment, Development and Evaluation (GRADE) evidence assessment. On February 28, 2021 ACIP issued an interim recommendation for use of the Janssen COVID-19 vaccine in persons aged ≥18 years for the prevention of COVID-19. The benefit for this single dose vaccine was classified as moderate certainty (Type 2) based on the GRADE evidence assessment. Future versions of the measure will be updated as more evidence and guidelines emerge.

**Rationale:**
This measure would add value to the MIPS quality measure set by providing visibility into an important intervention to limit COVID-19 infections. In addition, collecting information on severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) vaccination coverage and providing feedback to clinicians, will facilitate performance benchmarking and drive quality improvement. Vaccination coverage will reduce transmission of COVID-19 and the associated mortality and morbidity.

This measure was reviewed by the NQF MAP, who recommended conditional support for future rulemaking contingent on us bringing the measure back to MAP once the specifications are further refined. We are considering an expedited process for this measure recognizing the importance of a vaccine during a public health emergency and are exploring the inclusion of pediatric hospitals within this COVID-19 vaccination measure. Based on research of the available information presented to the MAP, we believe the measure is evidence-based and represents an important clinical topic.

**Note:** Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=94650.
TABLE Group B: New Specialty Measures Set Proposed for Addition and Modifications to Previously Finalized Specialty Measures Sets Proposed for the CY 2022 MIPS Performance Period/2024 MIPS Payment Year and Future Years

We are proposing to add one new specialty measures set: Certified Nurse Midwife. This set is proposed to be added based in part on the proposed expanded definition of the MIPS eligible clinician to include certified nurse midwife under Section IV.A.3.a. of this proposed rule. Note: Clinical Social Work is also being proposed as a MIPS eligible clinician type under Section IV.A.3.a. of this proposed rule. See Table B.7 for the proposed changes to the previously finalized Clinical Social Work specialty set.

We are proposing to modify the previously finalized specialty measures sets below based upon review of updates made to existing quality measure specifications, proposed the addition of new measures for inclusion in MIPS, and considered the feedback provided by specialty societies. There may be instances where the quality measures within a specialty set remain static, but the individual measures have proposed substantive changes described in Table Group D. In the first column, existing measures with substantive changes described in Table Group D are noted with an asterisk (*), core measures that align with Core Quality Measure Collaborative (CQMC) core measure set(s) are noted with the symbol (§), and high priority measures are noted with an exclamation point (!). In addition, the Indicator column includes a “high priority type” in parentheses after each high priority indicator (!) to represent the regulatory definition of high priority measures. In addition, electronic clinical quality measures (eCQMs) that are National Quality Forum (NQF) endorsed are shown in Table Group B as follows: NQF # / eCQM NQF #.

The definition of high priority at §414.1305 includes an outcome (including intermediate-outcome and patient-reported outcome), appropriate use, patient safety, efficiency, patient experience, care coordination, or opioid-related quality measure.

It should be noted that in the 2021 PFS final rule (85 FR 84870), the CMS Web Interface measures as a collection type would sunset starting with the CY 2022 MIPS performance period; however, in section IV.A.3.d.(l)(d) of this proposed rule, we are proposing to extend the availability of the CMS Web Interface measures as a collection type for the 2022 MIPS performance period and sunset the CMS Web Interface measures starting with the CY 2023 MIPS performance period. Therefore, we are proposing to modify the CMS Web Interface Measure Specifications collection type as outlined in the applicable measures within the B tables. In conjunction with seeking public comment on the proposal to extend the availability of the CMS Web Interface measures as a collection type, we are seeking public comment on the modifications proposed for the CMS Web Interface Measure Specifications collection type given that the CMS Web Interface Measure Specifications collection type has generally remained the same for three consecutive (CY 2019, CY 2020, and CY 2021) MIPS performance periods.
B.1. Allergy/Immunology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Allergy/Immunology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Allergy/Immunology specialty set.

</tbody>
</table>
B.4a. Cardiology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Cardiology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Cardiology specialty set.

B.7. Clinical Social Work

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Clinical Social Work specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Clinical Social Work specialty set.

<td>American College of Rheumatology</td>
</tr>
</tbody>
</table>

We propose to include this measure in the Dermatology specialty set as it is clinically relevant to this clinician type. Previous stakeholder feedback resulted in an expanded list of acceptable medications, proposed in Table D.20, which now cover the broader dermatological patient population. With this expansion, and the clinical relevance to this clinician type, we propose to add to the Dermatology specialty set.
### B.9. Dermatology

**PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE DERMATOLOGY SET**

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates (made to existing quality measure specifications), the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

### B.11. Emergency Medicine

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Emergency Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Emergency Medicine specialty set.

<td>MIPS CQMs Specifications</td>
<td>Patient-Reported Outcome-Based Performance Measure</td>
<td>Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM): The Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM) uses the PCPCM PROM (a comprehensive and parsimonious set of 11 patient-reported items) to assess the broad scope of primary care. Unlike other primary care measures, the PCPCM PRO-PM measures the high value aspects of primary care based on a patient’s relationship with the provider or practice. Patients identify the PCPCM PROM as meaningful and able to communicate the quality of their care to their clinicians and/or care team. The items within the PCPCM PROM are based on extensive stakeholder engagement and comprehensive reviews of the literature.</td>
<td>The American Board of Family Medicine</td>
<td>We propose to include this measure in the Family Medicine specialty set as it is clinically relevant to this clinician type. This measure assesses the element of patient experience in care quality within the broad scope of primary care. Capturing the voice of the patient is an important component of delivering high-value primary care which is a focus of family medicine. Therefore, given the expansive purview of this specialty and applicability of this component in improving patient care, we propose the inclusion of this measure within the Family Medicine specialty set. See Table A.3 for rationale.</td>
<td></td>
</tr>

## B.13. Family Medicine

### PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE FAMILY MEDICINE SET

Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

<table>
<thead>
<tr>
<th>Measure Title and Description</th>
<th>Measure Steward</th>
<th>Rationale for Removal</th>
</tr>
</thead>
<tbody>
<tr>
<td>Urinary Incontinence: Plan of Care for Urinary Incontinence in Women Aged 65 Years and Older: Percentage of female patients aged 65 years and older with a diagnosis of urinary incontinence with a documented plan of care for urinary incontinence at least once within 12 months.</td>
<td>National Committee for Quality Assurance</td>
<td>This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.</td>
</tr>
<tr>
<td>Falls: Risk Assessment: Percentage of patients aged 65 years and older with a history of falls that had a risk assessment for falls completed within 12 months.</td>
<td>National Committee for Quality Assurance</td>
<td>This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.</td>
</tr>
<tr>
<td>Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented: Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure and a recommended follow-up plan is documented, as indicated, if blood pressure is pre-hypertensive or hypertensive.</td>
<td>Centers for Medicare &amp; Medicaid Services</td>
<td>This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.</td>
</tr>
<tr>
<td>Psoriasis: Tuberculosis (TB) Prevention for Patients with Psoriasis, Psoriatic Arthritis and Rheumatoid Arthritis on a Biological Immune Response Modifier: Percentage of patients, regardless of age, with psoriasis, psoriatic arthritis and/or rheumatoid arthritis on a biological immune response modifier whose providers are ensuring active tuberculosis prevention either through negative standard tuberculosis screening tests or are reviewing the patient’s history to determine if they have had appropriate management for a recent or prior positive test</td>
<td>American Academy of Dermatology</td>
<td>This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.</td>
</tr>
<tr>
<td>Pain Brought Under Control Within 48 Hours: Patients aged 18 and older who report being uncomfortable because of pain at the initial assessment (after admission to palliative care services) who report pain was brought to a comfortable level within 48 hours.</td>
<td>National Hospice and Palliative Care Organization</td>
<td>This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.</td>

B.14. Gastroenterology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Gastroenterology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Gastroenterology specialty set.

<td>Centers for Medicare &amp; Medicaid Services</td>
<td>This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.</td>
</tr>
</tbody>
</table>
In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the General Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed General Surgery specialty set.

### Definitions
- **Geriatrics**: The branch of medicine concerned with the care of the aged. It includes the study of the physiological, psychological, and social aspects of aging.
- **Elder Maltreatment Screen and Follow-Up Plan**: A tool designed to identify and respond to elder maltreatment.
- **Use of High-Risk Medications in Older Adults**: Measures the percentage of patients 65 years of age and older who were ordered at least two of the same high-risk medications.
- **Dementia**: A chronic, progressive brain disorder that affects memory, thinking, language, behavior, and the ability to perform everyday tasks.
- **Depression Remission at Twelve Months**: The percentage of adolescent patients 12 to 17 with major depression or dysthymia who achieved remission 12 months (~60 days) after an index event date.

#### PREVIOUSLY FINALIZED MEASURES IN THE HOSPITALISTS SET

- **Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Neprilysin Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD):** Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) < 40% who were prescribed ACE inhibitor or ARB or ARNI therapy either within a 12-month period when seen in the outpatient setting OR at each hospital discharge.

- **Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD):** Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) < 40% who were prescribed beta-blocker therapy either within a 12-month period when seen in the outpatient setting OR at each hospital discharge.

- **Advance Care Plan:** Percentage of patients aged 65 years and older who have an advance care plan or surrogate decision maker documented in the medical record or documentation in the medical record that an advance care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an advance care plan.

- **Prevention of Central Venous Catheter (CVC) - Related Bloodstream Infections:** Percentage of patients, regardless of age, who undergo central venous catheter (CVC) insertion for whom CVC was inserted with all elements of maximal sterile barrier technique, hand hygiene, skin preparation and, if ultrasound is used, sterile ultrasound techniques followed.

B.19. Internal Medicine

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Internal Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Internal Medicine specialty set.

<td>MIPS CQMs Specifications</td>
<td>Patient-Reported Outcome-Based Performance Measure</td>
<td>Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM): The Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM) uses the PCPCM PROM (a comprehensive and parsimonious set of 11 patient-reported items) to assess the broad scope of primary care. Unlike other primary care measures, the PCPCM PROM-PM measures the high value aspects of primary care based on a patient’s relationship with the provider or practice. Patients identify the PCPCM PROM as meaningful and able to communicate the quality of their care to their clinicians and/or care team. The items within the PCPCM PROM are based on extensive stakeholder engagement and comprehensive reviews of the literature.</td>
<td>The American Board of Family Medicine</td>
<td>We propose to include this measure in the Internal Medicine specialty set as it is clinically relevant to this clinician type. This measure assesses the element of patient experience in care quality within the broad scope of primary care. Capturing the voice of the patient is an important component of delivering high-value primary care which is a focus of internal medicine. Therefore, given the expansive purview of this specialty and applicability of this component in improving patient care, we propose the inclusion of this measure within the Internal Medicine specialty set. See Table A.3 for rationale.</td>
<td></td>
</tr>

### B.20. Interventional Radiology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Interventional Radiology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Interventional Radiology specialty set.

<td>Communication and Care Coordination</td>
<td>Closing the Referral Loop: Receipt of Specialist Report: Percentage of patients with referrals, regardless of age, for which the referring provider receives a report from the provider to whom the patient was referred.</td>
<td>Centers for Medicare &amp; Medicaid Services</td>
<td>This measure is being proposed for removal from this specialty set beginning with the 2024 MIPS payment year. Specialty specific coding was not added to this quality measure for the 2022 performance period. In addition, the measure’s limited existing mental behavioral health coding has resulted in limited submissions of this measure historically. Therefore, this measure has minimal eligibility for this clinician type, and we propose to remove it.</td>
</tr>
</tbody>
</table>
### B.22. Nephrology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Nephrology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Nephrology specialty set.

### B.24. Neurosurgical

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Neurosurgical specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Neurosurgical specialty set.

B.25. Nutrition/Dietician

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Nutrition/Dietician specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Nutrition/Dietician specialty set.

B.27b. Radiation Oncology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Radiation Oncology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Radiation Oncology specialty set.

### B.30. Otolaryngology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Otolaryngology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Otolaryngology specialty set.

B.31. Pathology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Pathology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Pathology specialty set.

B.34. Physical Therapy/Occupational Therapy

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Physical Therapy/Occupational Therapy specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Physical Therapy/Occupational Therapy specialty set.

### B.35. Plastic Surgery

#### PREVIOUSLY FINALIZED MEASURES IN THE PLASTIC SURGERY SET

| Indicator | NQF # / eCQM ID | Quality # | CMS eCQM ID | Collection Type | Measure Type | National Quality Strategy Domain | Measure Title and Description | Measure Steward |
|-----------|-----------------|-----------|-------------|-----------------|-------------|-----------------------------------|------------------------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|
| N/A / N/A | N/A             | 358       | N/A         | MIPS CQMs Specifications | Process     | Person and Caregiver-Centered Experience and Outcomes | Patient-Centered Surgical Risk Assessment and Communication: Percentage of patients who underwent a non-emergency surgery who had their personalized risks of postoperative complications assessed by their surgical team prior to surgery using a clinical data-based, patient-specific risk calculator and who received personal discussion of those risks with the surgeon. | American College of Surgeons |

#### MEASURES PROPOSED FOR ADDITION TO THE PLASTIC SURGERY SET

| Indicator | NQF # / eCQM ID | Quality # | CMS eCQM ID | Collection Type | Measure Type | National Quality Strategy Domain | Measure Title and Description | Measure Steward |
|-----------|-----------------|-----------|-------------|-----------------|-------------|-----------------------------------|------------------------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|
| N/A / N/A | N/A             | 128       | CMS69vl0   | Medicare Part B Measure Specifications, eCQM Specifications, MIPS CQMs Specifications | Process     | Community/Population Health      | Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan: Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous 12 months AND who had a follow-up plan documented if most recent BMI was outside of normal parameters. | Centers for Medicare & Medicaid Services | We propose to include this measure in the Plastic Surgery specialty set as it is clinically relevant to this clinician type. Stakeholders commented, and we agreed, that this is a measure consistently reported by their MIPS eligible clinicians. BMI does impact plastic surgery outcomes, therefore, is clinically relevant to the Plastic Surgery specialty set. |
### B.35. Plastic Surgery

#### PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE PLASTIC SURGERY SET

Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

</table>
**B.37. Preventive Medicine**

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Preventive Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Preventive Medicine specialty set.

B.40. Skilled Nursing Facility

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Skilled Nursing Facility specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Skilled Nursing Facility specialty set.

B.44. Urology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Urology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Urology specialty set.

#### TABLE Group C: Previously Finalized Quality Measures Proposed for Removal in the CY 2022 MIPS Performance Period/2024 MIPS Payment Year and Future Years

In this proposed rule, we propose to remove 19 previously finalized quality measures from the MIPS Program for the 2022 MIPS performance period/2024 MIPS payment year and future years. These measures are discussed in detail below. Our measure removal criteria was discussed in the CY 2019 PFS final rule (83 FR 59763 through 59765).

Further considerations are given in the evaluation of the measure’s performance data, to determine whether there is or no longer is variation in performance. As discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763), additional criteria that we use for the removal of measures also includes extremely topped out measures, which means measures that are topped out with an average (mean) performance rate between 98-100 percent. Beginning with the 2020 MIPS performance period/2022 MIPS payment year, we also refer readers to the CY 2020 PFS final rule (84 FR 62957 through 62959) for additional quality measure removal criteria.
TABLE Group C: Previously Finalized Quality Measures Proposed for Removal in the CY 2022 MIPS Performance Period/2024 MIPS Payment Year and Future Years

### C.1. Age-Related Macular Degeneration (AMD): Dilated Macular Examination

<table>
<thead>
<tr>

<tr>
<td>CMS eCQM ID:</td>
<td>N/A</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Effective Clinical Care</td>
</tr>
<tr>
<td>Collection Type:</td>
<td>Medicare Part B Claims Specifications, MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Measure Description:</td>
<td>Percentage of patients aged 50 years and older with a diagnosis of age-related macular degeneration (AMD) who had a dilated macular examination performed which included documentation of the presence or absence of macular thickening or geographic atrophy or hemorrhage AND the level of macular degeneration severity during one or more office visits within the 12 month performance period.</td>
</tr>
<tr>
<td>Measure Steward:</td>
<td>American Academy of Ophthalmology</td>
</tr>
<tr>
<td>High Priority Measure:</td>
<td>No</td>
</tr>
<tr>
<td>Measure Type:</td>
<td>Process</td>
</tr>
</tbody>
</table>

**Rationale for Removal**

We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure has reached the end of the topped out lifecycle. Given this measure’s continued topped out status (82 FR 53640), we believe it has a limited opportunity to improve clinical outcomes. The topped out status is based on the current MIPS benchmarking data located at [https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1275/2021%20MIPS%20Quality%20Benchmarks.zip](https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1275/2021%20MIPS%20Quality%20Benchmarks.zip).

**In the Circumstance the Measure is Retained**

There are no substantive changes or specialty set movement proposed for this measure.

### C.2. Diabetic Retinopathy: Communication with the Physician Managing Ongoing Diabetes Care

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF #: / eCQM NQF #:</td>
<td>N/A / N/A</td>
</tr>
<tr>
<td>Quality #:</td>
<td>019</td>

<td>CMS142v10</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Communication and Care Coordination</td>
</tr>
<tr>
<td>Collection Type:</td>
<td>eCQM Specifications, MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Measure Description:</td>
<td>Percentage of patients aged 18 years and older with a diagnosis of diabetic retinopathy who had a dilated macular or fundus exam performed with documented communication to the physician who manages the ongoing care of the patient with diabetes mellitus regarding the findings of the macular or fundus exam at least once within 12 months.</td>
</tr>
<tr>
<td>Measure Steward:</td>
<td>American Academy of Ophthalmology</td>
</tr>
<tr>
<td>High Priority Measure:</td>
<td>Yes</td>
</tr>
<tr>
<td>Measure Type:</td>
<td>Process</td>
</tr>
</tbody>
</table>

**Rationale for Removal**

We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure does not align with the Meaningful Measures Initiative. This is a process measure that is a standard of care requiring only that results were communicated, which by itself may not have a meaningful direct impact on patient care as no follow-up or confirmation of care coordination is required. Additionally, the MIPS CQMs Specifications collection type is in the third year of the topped out lifecycle (82 FR 53640).

**In the Circumstance the Measure is Retained**

There are no substantive changes or specialty set movement proposed for this measure.
### C.3. Perioperative Care: Selection of Prophylactic Antibiotic – First OR Second-Generation Cephalosporin

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF #: cQMS NQF #:</td>
<td>0248 - N/A</td>
</tr>
<tr>
<td>Quality #:</td>
<td>023</td>
</tr>
<tr>
<td>CMS cQM ID:</td>
<td>N/A</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Patient Safety</td>
</tr>
<tr>
<td>Collection Type:</td>
<td>Medicare Part II Claims Specifications, MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Measure Description:</td>
<td>Percentage of surgical patients aged 18 years and older undergoing procedures with the indications for a first or second-generation cephalosporin prophylactic who had an order for a first or second-generation cephalosporin for antimicrobial prophylaxis.</td>
</tr>
<tr>
<td>Measure Steward:</td>
<td>American Society of Plastic Surgeons</td>
</tr>
<tr>
<td>High Priority Measure:</td>
<td>Yes</td>
</tr>
<tr>
<td>Measure Type:</td>
<td>Process</td>
</tr>
</tbody>
</table>

**Rationale for Removal**
We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because the measure steward will not be further reviewing or updating the measure specifications. In addition, this measure has reached the end of the topped out lifecycle (82 FR 53640). Given this measure’s continued topped out status, we believe it has a limited opportunity to improve clinical outcomes and the measure has become standard of care. The topped out status is based on the current MIPS benchmarking data located at [https://gpp-cm-prod-content.s3.amazonaws.com/uploads/11275/2021%20MIPS%20Quality%20Benchmarks.zip](https://gpp-cm-prod-content.s3.amazonaws.com/uploads/11275/2021%20MIPS%20Quality%20Benchmarks.zip). In the Circumstance the Measure is Retained: There are no substantive changes or specialty set movement proposed for this measure.

### C.4. Perioperative Care: Venous Thromboembolism (VTE) Prophylaxis (When Indicated in ALL Patients)

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF #: cQMS NQF #:</td>
<td>N/A - N/A</td>
</tr>
<tr>
<td>Quality #:</td>

<td>Patient Safety</td>
</tr>
<tr>
<td>Collection Type:</td>
<td>Medicare Part II Claims Specifications, MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Measure Description:</td>
<td>Percentage of surgical patients aged 18 years and older undergoing procedures for which venous thromboembolism (VTE) prophylaxis is indicated in all patients, who had an order for Low Molecular Weight Heparin (LMWH), Low-Dose Unfractionated Heparin (LDH), adjusted-dose warfarin, fondaparinux or mechanical prophylaxis to be given within 24 hours prior to incision time or within 24 hours after surgery end time.</td>
</tr>
<tr>
<td>Measure Steward:</td>
<td>American Society of Plastic Surgeons</td>
</tr>
<tr>
<td>High Priority Measure:</td>
<td>Yes</td>
</tr>
<tr>
<td>Measure Type:</td>
<td>Process</td>
</tr>
</tbody>
</table>

**Rationale for Removal**
We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because the measure steward will not be further reviewing or updating the measure specifications. In addition, this measure has reached the end of the topped out lifecycle (82 FR 53640). Given this measure’s continued topped out status, we believe it has a limited opportunity to improve clinical outcomes and the measure has become standard of care. The topped out status is based on the current MIPS benchmarking data located at [https://gpp-cm-prod-content.s3.amazonaws.com/uploads/11275/2021%20MIPS%20Quality%20Benchmarks.zip](https://gpp-cm-prod-content.s3.amazonaws.com/uploads/11275/2021%20MIPS%20Quality%20Benchmarks.zip). In the Circumstance the Measure is Retained: There are no substantive changes or specialty set movement proposed for this measure.

### C.5. Coronary Artery Bypass Graft (CABG): Preoperative Beta-Blocker in Patients with Isolated CABG Surgery

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF #: cQMS NQF #:</td>
<td>N/A - N/A</td>
</tr>
<tr>
<td>Quality #:</td>
<td>044</td>
</tr>
<tr>
<td>CMS cQM ID:</td>
<td>N/A</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Effective Clinical Care</td>
</tr>
<tr>
<td>Collection Type:</td>
<td>MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Measure Description:</td>
<td>Percentage of isolated Coronary Artery Bypass Graft (CABG) surgeries for patients aged 18 years and older who received a beta-blocker within 24 hours prior to surgical incision.</td>
</tr>
<tr>
<td>Measure Steward:</td>
<td>Centers for Medicare &amp; Medicaid Services</td>
</tr>
<tr>
<td>High Priority Measure:</td>
<td>No</td>
</tr>
<tr>
<td>Measure Type:</td>
<td>Process</td>
</tr>
</tbody>
</table>

**Rationale for Removal**
We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because the measure has reached the end of the topped out lifecycle (82 FR 53640) and has a high performance rate of 96.08 percent for the MIPS CQMs Specifications collection type. Given this measure’s continued topped out status, we believe it has a limited opportunity to improve clinical outcomes and should be a standard of care. The average performance rate and topped out status is based on the current MIPS benchmarking data located at [https://gpp-cm-prod-content.s3.amazonaws.com/uploads/11275/2021%20MIPS%20Quality%20Benchmarks.zip](https://gpp-cm-prod-content.s3.amazonaws.com/uploads/11275/2021%20MIPS%20Quality%20Benchmarks.zip). In the Circumstance the Measure is Retained: There are no substantive changes or specialty set movement proposed for this measure.
### C.6. Urinary Incontinence: Plan of Care for Urinary Incontinence in Women Aged 65 Years and Older

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF # / eCQM NQF #:</td>
<td>N/A / N/A</td>
</tr>
<tr>
<td>Quality #:</td>
<td>050</td>
</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>N/A</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Person and Caregiver-Centered Experience and Outcomes</td>
</tr>
<tr>
<td>Collection Type:</td>
<td>Medicare Part B Claims Specifications, MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Measure Description:</td>
<td>Percentage of female patients aged 65 years and older with a diagnosis of urinary incontinence with a documented plan of care for urinary incontinence at least once within 12 months.</td>
</tr>
<tr>
<td>Measure Steward:</td>
<td>National Committee for Quality Assurance</td>
</tr>
<tr>
<td>High Priority Measure:</td>
<td>Yes</td>
</tr>
<tr>
<td>Measure Type:</td>
<td>Process</td>
</tr>
</tbody>
</table>

**Rationale for Removal**

We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure does not align with the Meaningful Measures Initiative as it splits a clinical process into individual quality measures. In order to align with the Meaningful Measures Initiative, we plan to maintain measure Q048: Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older. We recognize measure Q048 does not quantify the completion of plan of care but includes the assessment for the presence or absence of urinary incontinence within a broader patient population. Measure Q050 is limited to patients that were screened positive for urinary incontinence which results in an incomplete patient population being evaluated; whether screened for urinary incontinence or being voluntarily verbalized by the patient. We believe as a stand-alone measure it is not a true reflection of the quality of care being given, but only reflects care to a subpopulation of patients with documented urinary incontinence. To truly ensure quality of care for these patients, we believe that clinicians should engage patients and perform this assessment for all denominator eligible patients at risk for the presence or absence of urinary incontinence. Additionally, the Medicare Part B Claims Specifications collection type is at the end of the topped out lifecycle (82 FR 53640).

**In the Circumstance the Measure is Retained**

We would update the denominator eligible encounters to add coding for Physical Therapy MIPS eligible clinician type and add the measure to the Physical Therapy/Occupational Therapy specialty measure set.

### C.7. Hematology: Myelodysplastic Syndrome (MDS) and Acute Leukemias: Baseline Cytogenetic Testing Performed on Bone Marrow

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF # / eCQM NQF #:</td>
<td>N/A / N/A</td>
</tr>
<tr>
<td>Quality #:</td>
<td>067</td>
</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>N/A</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Effective Clinical Care</td>
</tr>
<tr>
<td>Collection Type:</td>
<td>MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Measure Description:</td>
<td>Percentage of patients aged 18 years and older with a diagnosis of myelodysplastic syndrome (MDS) or an acute leukemia who had baseline cytogenetic testing performed on bone marrow.</td>
</tr>
<tr>
<td>Measure Steward:</td>
<td>American Society of Hematology</td>
</tr>
<tr>
<td>High Priority Measure:</td>
<td>No</td>
</tr>
<tr>
<td>Measure Type:</td>
<td>Process</td>
</tr>
</tbody>
</table>

**Rationale for Removal**

We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program at the measure steward’s request as it is no longer being maintained for inclusion.

**In the Circumstance the Measure is Retained**

There are no substantive changes or specialty set movement proposed for this measure.
### C.8. Hematology: Chronic Lymphocytic Leukemia (CLL): Baseline Flow Cytometry

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>

<td>N/A</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Effective Clinical Care</td>
</tr>
<tr>
<td>Collection Type:</td>
<td>MIPS eCOMs Specifications</td>
</tr>
<tr>
<td>Measure Description:</td>
<td>Percentage of patients aged 18 years and older, seen within a 12-month reporting period, with a diagnosis of chronic lymphocytic leukemia (CLL) made at any time during or prior to the reporting period who had baseline flow cytometry studies performed and documented in the chart.</td>
</tr>
<tr>
<td>Measure Steward:</td>
<td>American Society of Hematology</td>
</tr>
<tr>
<td>High Priority Measure:</td>
<td>No</td>
</tr>
<tr>
<td>Measure Type:</td>
<td>Process</td>
</tr>
<tr>
<td>Rationale for Removal</td>
<td>We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program at the measure steward’s request as it is no longer being maintained for inclusion.</td>
</tr>
<tr>
<td>In the Circumstance the Measure is Retained</td>
<td>There are no substantive changes or specialty set movement proposed for this measure.</td>
</tr>
</tbody>
</table>

### C.9. Melanoma: Continuity of Care – Recall System

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF # / eCQM NQF #:</td>
<td>N/A / N/A</td>
</tr>
<tr>
<td>Quality #:</td>
<td>137</td>
</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>N/A</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Communication and Care Coordination</td>
</tr>
<tr>
<td>Collection Type:</td>
<td>MIPS eCOMs Specifications</td>
</tr>
</tbody>
</table>
| Measure Description: | Percentage of patients, regardless of age, with a current diagnosis of melanoma or a history of melanoma whose information was entered, at least once within a 12 month period, into a recall system that includes:  
- A target date for the next complete physical skin exam, AND  
- A process to follow up with patients who either did not make an appointment within the specified timeframe or who missed a scheduled appointment. |
| Measure Steward: | American Academy of Dermatology |
| High Priority Measure: | Yes |
| Measure Type: | Structure |
| Rationale for Removal | We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure does not align with the Meaningful Measures Initiative as the measure is not advancing quality care but offers performance by simply establishing a recall system. Despite this structure supporting patient care, it does not measure quality care that directly impacts patients. We believe this measure is not providing a meaningful impact to quality improvement. |
| In the Circumstance the Measure is Retained | There are no substantive changes or specialty set movement proposed for this measure. |

### C.10. Oncology: Medical and Radiation - Plan of Care for Pain

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF # / eCQM NQF #:</td>

<td>American Society of Clinical Oncology</td>
</tr>
<tr>
<td>High Priority Measure:</td>
<td>Yes</td>
</tr>
<tr>
<td>Measure Type:</td>
<td>Process</td>
</tr>
<tr>
<td>Rationale for Removal</td>
<td>We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure does not align with the Meaningful Measures Initiative as it splits a clinical process into individual quality measures. In order to align with the Meaningful Measures Initiative, we plan to maintain measure Q143: Oncology: Medical and Radiation – Pain Intensity Quantified. We recognize measure Q144 does not quantify the completion of a plan of care but includes the assessment of pain for patients undergoing cancer treatment. Measure Q144 is limited to those patients that were screened positive for pain; whether screened for pain or being voluntarily verbalized by the patient. We believe as a stand-alone measure it is not a true reflection of the quality of care being given, but only reflects care to a subpopulation of oncology patients with documented pain. To truly ensure quality of care for these patients, we believe that clinicians should engage all denominator eligible patients and perform this assessment to identify the presence of pain in patients undergoing cancer treatment.</td>
</tr>
<tr>
<td>In the Circumstance the Measure is Retained</td>
<td>There are no substantive changes or specialty set movement proposed for this measure.</td>
</tr>
</tbody>
</table>
C.11. Falls: Risk Assessment

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF # / eCQM NQF #:</td>
<td>0101 / N/A</td>
</tr>
<tr>
<td>Quality #:</td>
<td>154</td>
</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>N/A</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Patient Safety</td>
</tr>
<tr>
<td>Collection Type:</td>
<td>Medicare Part B Claims Specifications, MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Measure Description:</td>
<td>Percentage of patients aged 65 years and older with a history of falls that had a risk assessment for falls completed within 12 months.</td>
</tr>
<tr>
<td>Measure Steward:</td>
<td>National Committee for Quality Assurance</td>
</tr>
<tr>
<td>High Priority Measure:</td>
<td>Yes</td>
</tr>
<tr>
<td>Measure Type:</td>
<td>Process</td>
</tr>
</tbody>
</table>

Rationale for Removal: We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure has reached the end of the topped out lifecycle (82 FR 53640). Given this measure’s continued topped out status, we believe it has a limited opportunity to improve clinical outcomes. The topped out status is based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1275/2021%20MIPS%20Quality%20Benchmarks.zip. In the Circumstance the Measure is Retained: There are no substantive changes or specialty set movement proposed for this measure.

C.12. Radiology: Stenosis Measurement in Carotid Imaging Reports

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF # / eCQM NQF #:</td>
<td>0507 / N/A</td>
</tr>
<tr>
<td>Quality #:</td>
<td>195</td>
</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>N/A</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Effective Clinical Care</td>
</tr>
<tr>
<td>Collection Type:</td>
<td>Medicare Part B Claims Specifications, MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Measure Description:</td>
<td>Percentage of final reports for carotid imaging studies (neck magnetic resonance angiography [MRA], neck computed tomography angiography [CTA], neck duplex ultrasound, carotid angiogram) performed that include direct or indirect reference to measurements of distal internal carotid diameter as the denominator for stenosis measurement.</td>
</tr>
<tr>
<td>Measure Steward:</td>
<td>American College of Radiology</td>
</tr>
<tr>
<td>High Priority Measure:</td>
<td>No</td>
</tr>
<tr>
<td>Measure Type:</td>
<td>Process</td>
</tr>
</tbody>
</table>

Rationale for Removal: We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure has reached the end of the topped out lifecycle (82 FR 53640) and has a high performance rate of 95.62 percent for the Medicare Part B Claims Specifications collection type and 97.47 percent for the MIPS CQMs Specifications collection type. Given this measure’s continued topped out status, we believe it has a limited opportunity to improve clinical outcomes. The average performance rate and topped out status is based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1275/2021%20MIPS%20Quality%20Benchmarks.zip. In the Circumstance the Measure is Retained: There are no substantive changes or specialty set movement proposed for this measure.

C.13. Radiology: Reminder System for Screening Mammograms

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF # / eCQM NQF #:</td>
<td>0099 / N/A</td>
</tr>
<tr>
<td>Quality #:</td>
<td>225</td>
</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>N/A</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Communication and Care Coordination</td>
</tr>
<tr>
<td>Collection Type:</td>
<td>Medicare Part B Claims Specifications, MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Measure Description:</td>
<td>Percentage of patients undergoing a screening mammogram whose information is entered into a reminder system with a target due date for the next mammogram.</td>
</tr>
<tr>
<td>Measure Steward:</td>
<td>American College of Radiology</td>
</tr>
<tr>
<td>High Priority Measure:</td>
<td>Yes</td>
</tr>
<tr>
<td>Measure Type:</td>
<td>Structure</td>
</tr>
</tbody>
</table>

Rationale for Removal: We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure does not align with the Meaningful Measures Initiative as it represents a structure measure rather than a measure that supports direct patient care. In addition, the performance on the MIPS CQMs Specifications collection type is extremely high and unvarying, making this measure extremely topped out for this collection type as discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763). The average performance rate for this measure is 98.37 percent for the MIPS CQMs Specifications collection type. The average performance rate is based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1275/2021%20MIPS%20Quality%20Benchmarks.zip. In the Circumstance the Measure is Retained: There are no substantive changes or specialty set movement proposed for this measure.
C.14. Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF # / eCQM NQF #:</td>
<td>N/A / N/A</td>
</tr>
<tr>
<td>Quality #:</td>
<td>317</td>
</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>CMS22v10</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Community/Population Health</td>
</tr>
<tr>
<td>Collection Type:</td>
<td>Medicare Part B Claims Specifications, eCQM Measure Specifications, MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Measure Description:</td>
<td>Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is pre-hypertensive or hypertensive.</td>
</tr>
<tr>
<td>Measure Steward:</td>
<td>Centers for Medicare &amp; Medicaid Services</td>
</tr>
<tr>
<td>High Priority Measure:</td>
<td>No</td>
</tr>
<tr>
<td>Measure Type:</td>
<td>Process</td>
</tr>
</tbody>
</table>

Rationale for Removal

We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure does not align with the Meaningful Measures Initiative as it is low-bar and a frequently performed assessment. This is a process measure that only requires a blood pressure to be taken and if abnormal a follow-up plan of care be documented; however, the documented follow-up includes referring the patient to a primary care physician and does require confirmation of follow-up. Additionally, the measure does not strive to ensure adequate control of blood pressure as patients with an active diagnosis of hypertension are excluded from the denominator eligible patient population. While screening patients for high blood pressure is an important piece of quality care, it is the controlling of high blood pressure which reduces patient clinical risks and truly drives positive patient outcomes. This quality action is already available in measure Q236: Controlling High Blood Pressure.

In the Circumstance the Measure is Retained

We would update the description to replace ‘pre-hypertensive’ with ‘elevated’.

Additionally, the definition for all collection types would be revised to reflect 2017 ACC/AHA guidelines; including, changing blood pressure classifications, relevant thresholds, and applicable interventions. The eCQM Measure Specifications collection type would be revised to have the logic apply to exceptions based on blood pressure classification to more accurately capture a patient declining applicable intervention(s). This measure would also be removed from the Thoracic Surgery specialty measure set.

C.15. Psoriasis: Tuberculosis (TB) Prevention for Patients with Psoriasis, Psoriatic Arthritis and Rheumatoid Arthritis on a Biological Immune Response Modifier

<table>
<thead>
<tr>

</tr>
<tr>
<td>Measure Description:</td>
<td>Percentage of patients, regardless of age, with psoriasis, psoriatic arthritis and/or rheumatoid arthritis on a biological immune response modifier whose providers are ensuring active tuberculosis prevention either through negative standard tuberculosis screening tests or are reviewing the patient’s history to determine if they have had appropriate management for a recent or prior positive test.</td>
</tr>
<tr>
<td>Measure Steward:</td>
<td>American Academy of Dermatology</td>
</tr>
<tr>
<td>High Priority Measure:</td>
<td>No</td>
</tr>
<tr>
<td>Measure Type:</td>
<td>Process</td>
</tr>
</tbody>
</table>

Rationale for Removal

We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure is duplicative to measure Q176: Tuberculosis Screening Prior to First Course Biologic Therapy because we are proposing in Table D.20 substantive changes to measure Q176 that would broaden the denominator by including an expanded list of biologic therapies that capture much of the denominator patient population for this measure.

In the Circumstance the Measure is Retained

We would update the denominator to include only those patients who are on a biologic immune response modifier prescribed within the current measurement period. There is no specialty set movement proposed for this measure.
### C.16. Pain Brought Under Control Within 48 Hours

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF # / eCQM NQF #:</td>
<td>0209 / N/A</td>
</tr>
<tr>
<td>Quality #:</td>
<td>342</td>
</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>N/A</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Person and Caregiver-Centered Experience and Outcomes</td>
</tr>
<tr>
<td>Collection Type:</td>
<td>MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Measure Description:</td>
<td>Patients aged 18 and older who report being uncomfortable because of pain at the initial assessment (after admission to palliative care services) who report pain was brought to a comfortable level within 48 hours.</td>
</tr>
<tr>
<td>Measure Steward:</td>
<td>National Hospice and Palliative Care Organization</td>
</tr>
<tr>
<td>High Priority Measure:</td>
<td>Yes</td>
</tr>
<tr>
<td>Measure Type:</td>
<td>Outcome</td>
</tr>
</tbody>
</table>

**Rationale for Removal**

We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because it does not align with the Meaningful Measures Initiative. This measure should be a standard of care given it represents a central pillar of quality palliative care by supporting effective pain management for patients. As currently specified, this measure only assesses if pain was brought to a comfortable level within 48 hours of the initial assessment and does not ensure treatment is aligned with patient goals, a plan of care for the duration of palliative care, and current guidelines; additionally, it may not be feasible dependent upon the medication and delivery method (i.e., procedural versus oral medication administration). It is important to incorporate shared-decision making and patient engagement while in palliative care, which may not always align with the time constraint of the measure.

**In the Circumstance the Measure is Retained**

There are no substantive changes or specialty set movement proposed for this measure.

### C.17. Pelvic Organ Prolapse: Preoperative Screening for Uterine Malignancy

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF # / eCQM NQF #:</td>
<td>N/A / N/A</td>
</tr>
<tr>
<td>Quality #:</td>
<td>429</td>
</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>N/A</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Patient Safety</td>
</tr>
<tr>
<td>Collection Type:</td>
<td>Medicare Part B Claims Specifications, MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Measure Description:</td>
<td>Percentage of patients who are screened for uterine malignancy prior to vaginal closure or obturator surgery for pelvic organ prolapse.</td>
</tr>
<tr>
<td>Measure Steward:</td>
<td>American Urogynecologic Society</td>
</tr>
<tr>
<td>High Priority Measure:</td>
<td>Yes</td>
</tr>
<tr>
<td>Measure Type:</td>
<td>Process</td>
</tr>
</tbody>
</table>

**Rationale for Removal**

We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure does not align with the Meaningful Measures Initiative as it does not show meaningful measurement. The limited patient population and adoption of the quality measure does not allow for the creation of benchmarks to provide a meaningful impact to quality improvement.

**In the Circumstance the Measure is Retained**

There are no substantive changes or specialty set movement proposed for this measure.

### C.18. Proportion of Patients Sustaining a Urinary Bladder Injury at the Time of Pelvic Organ Prolapse Repair

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF # / eCQM NQF #:</td>
<td>N/A / N/A</td>

<tr>
<td>CMS eCQM ID:</td>
<td>N/A</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Patient Safety</td>
</tr>
<tr>
<td>Collection Type:</td>
<td>MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Measure Description:</td>
<td>Percentage of patients undergoing pelvic organ prolapse repairs who sustain an injury to the ureter recognized either during or within 30 days after surgery.</td>
</tr>
<tr>
<td>Measure Steward:</td>
<td>American Urogynecologic Society</td>
</tr>
<tr>
<td>High Priority Measure:</td>
<td>Yes</td>
</tr>
<tr>
<td>Measure Type:</td>
<td>Outcome</td>
</tr>
</tbody>
</table>

**Rationale for Removal**

We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure does not align with the Meaningful Measures Initiative as it is duplicative in denominator patient population to measure Q432: Proportion of Patients Sustaining a Bladder Injury at the Time of any Pelvic Organ Prolapse Repair with the quality action being completed concurrently. Additionally, the limited patient population and adoption of the quality measure does not allow for the creation of benchmarks to provide a meaningful impact to quality improvement.

**In the Circumstance the Measure is Retained**

There are no substantive changes or specialty set movement proposed for this measure.
TABLE Group D: Previously Finalized Quality Measures with Substantive Changes Proposed for the CY 2022 MIPS Performance Period/2024 MIPS Payment Year and Future Years

NOTE: Electronic clinical quality measures (eCQMs) that are National Quality Forum (NQF) endorsed are shown in Table D as follows: NQF # / eCQM NQF #.

The D Tables within the NPRM provide the substantive changes proposed for the quality measures in CY 2022. The changes that are made to the denominator codes sets are generalizations of the revisions communicated from the measure stewards to CMS. Additionally, International Classification of Diseases Tenth Edition (ICD-10) and Current Procedural Terminology (CPT) codes that are identified as invalid for CY 2022 may not be identified within the NPRM due to the availability of these changes to the public. If coding revisions to the denominator are impacted due to the timing of 2022 CPT and ICD-10 updates and assessment of these codes inclusion by the Measure Steward, these changes may be postponed until CY 2023. The 2022 Quality Measure Release Notes provide a comprehensive, detailed reference of exact codes changes to the denominators of the quality measures. The Quality Measure Release Notes are available for each of the collection types in the Quality Payment Program Resource Library at https://qpp.cms.gov/about/resource-library.

In addition to the proposed substantive changes, there may be changes to the coding utilized within the denominator that are not considered substantive in nature, but we believe are important to communicate to stakeholders. These changes align with the scope of the current coding; however, this will expand or contract the current eligible population, therefore, review the current year measure specification and the 2022 Quality Measure Release Notes or the eCQM Technical Release Notes once posted to review all coding changes. Language has also been added, to all applicable 2022 quality measure specifications, in the form of an ‘Instructions Note’, to clarify that telehealth encounters are allowed for determination of denominator eligibility. Only in the instance telehealth encounters have not been previously allowed as denominator eligible, will the D table corresponding to that measure reflect an update to the denominator allowing for telehealth encounters in the ‘Substantive Change’ cell.

It should be noted that in the 2021 PFS final rule (85 FR 84870), the CMS Web Interface Measures Specifications collection type would sunset starting with the CY 2022 MIPS performance period; however, in section IV.A.3.d.(1)(d) of this proposed rule, we are proposing to extend the availability of the CMS Web Interface measures as a collection type for the 2022 MIPS performance period and sunset the CMS Web Interface measures starting with the CY 2023 MIPS performance period. Therefore, we are proposing substantive changes to the CMS Web Interface Measure Specifications collection type as outlined in the applicable measures within the D tables. In conjunction with seeking public comment on the proposal to extend the availability of the CMS Web Interface measures as a collection type, we are seeking public comment on the substantive changes proposed for the CMS Web Interface Measure Specifications collection type given that the CMS Web Interface Measure Specifications collection type has generally remained the same for three consecutive (CY 2019, CY 2020, and CY 2021) MIPS performance periods.
### D.1 Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%)

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF #:</td>
<td>0059 / N/A</td>
</tr>
<tr>
<td>Quality #:</td>
<td>001</td>
</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>CMS122v10</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Effective Clinical Care</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>Medicare Part B Claims Measure Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>Percentage of patients 18-75 years of age with diabetes who had hemoglobin A1c &gt; 9.0% during the measurement period.</td>
</tr>
</tbody>
</table>

**Substantive Change:**

- **Updated denominator exclusion:** For the eCQM Specifications collection type: Revised:
  1. Exclude patients who are in hospice care for any part of the measurement period.
  2. Exclude patients 66 and older who are living long term in an institution for more than 90 consecutive days during the measurement period.
  3. Exclude patients 66 and older with an indication of frailty for any part of the measurement period who meet any of the following criteria:
     - Advanced illness with two outpatient encounters during the measurement period or the year prior
     - OR advanced illness with one inpatient encounter during the measurement period or the year prior
     - OR taking dementia medications during the measurement period or the year prior

**Added:**

1. Exclude patients receiving palliative care during the measurement period.

- **Updated denominator exclusion:** For the CMS Web Interface Measure Specifications collection type: Revised: Patients age 66 and older in Institutional Special Needs Plans (SNP) or residing in long-term care with a POS code 32, 33, 34, 54 or 56 for more than 90 consecutive days during the measurement period.

- **Updated denominator confirmation:** For the CMS Web Interface Measure Specifications collection type: Revised: Determine if the patient has an active diagnosis of diabetes during the measurement period OR an active diagnosis of diabetes during the year prior.
  - If the patient has an active diagnosis of diabetes in the medical record, select “Yes”

- **Updated numerator note:** For the Medicare Part B Claims Measure Specifications collection type: Added: To assess the age for exclusions, the patient’s age at the end of the measurement period should be used.

- **Updated guidance:** For the CMS Web Interface Measure Specifications collection type: Added: Do not include HbA1c levels reported by the patient.

**Rationale:**

We propose that the denominator exclusion language be updated for all collection types, except for the CMS Web Interface Measure Specifications collection type, to add an exclusion for patients receiving palliative care, as this patient population is not appropriate for the clinical quality action being assessed. Additionally, for the eCQM Specifications collection type language was added to clarify timing for those exclusions that have an age-related component. For the eCQM Specifications collection type, the term ‘overlaps’ was removed and replaced with plain language for clarity and the denominator exclusion for frailty or advanced illness was revised to update how these patients will be captured.

We propose to revise the denominator note for the MIPS CQMs Specifications collection type, the numerator note for the Medicare Part B Claims Measure Specifications collection type, and the denominator guidance for the CMS Web Interface Measure Specifications collection type to clarify the timing for those exclusions that have an age-related component.

We propose to update the denominator exclusion language for the CMS Web Interface Measure Specifications collection type, for the measure, long-term care will be defined as patients staying more than 90 consecutive days at the long-term care facility versus any 90 days within the performance period. Additionally, the denominator confirmation was updated to clarify that the diagnosis should be active during the performance period or year prior. We propose to update the guidance for the CMS Web Interface Measure Specifications collection type to ensure that patient reported HbA1c levels should not be utilized for quality action assessment for the purposes of this measure.
### D.2 Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Neprilysin Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD)

<table>

<td>eCQM Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12-month period who also have a prior MI or a current or prior LVEF &lt; 40% who were prescribed beta-blocker therapy.</td>
</tr>
<tr>
<td>Substantive Change:</td>
<td>Updated definition: For the eCQM Specifications collection type: Added: LVEF &lt; 40% corresponds to qualitative documentation of moderate dysfunction or severe dysfunction (LVSD). The LVSD may be determined by quantitative or qualitative assessment, which may be current or historical. Examples of a quantitative or qualitative assessment may include an echocardiogram: 1) that provides a numerical value of LVSD or 2) that uses descriptive terms such as moderately or severely depressed left ventricular systolic function. Any current or prior ejection fraction study documenting LVSD can be used to identify patients. Updated denominator logic: For the eCQM Specifications collection type: Revised: Myocardial Infarction timing logic to use the start date for the myocardial infarction. Updated value set/coding: For the eCQM Specifications collection type: Revised: &quot;Coronary Artery Disease No MI&quot; (2.16.840.1.113883.3.526.3.369) to remove coding related to Dressler's Syndrome. Updated denominator note: For the MIPS CQMs Specifications collection type: Added: Submission Criteria 1: LVEF &lt; 40% corresponds to qualitative documentation of moderate dysfunction or severe dysfunction (LVSD). The LVSD may be determined by quantitative or qualitative assessment, which may be current or historical. Examples of a quantitative or qualitative assessment may include an echocardiogram: 1) that provides a numerical value of LVSD or 2) that uses descriptive terms such as moderately or severely depressed left ventricular systolic function. Any current or prior ejection fraction study documenting LVSD can be used to identify patients.</td>
</tr>
<tr>
<td>Steward:</td>
<td>American Heart Association</td>
</tr>
<tr>
<td>High Priority Measure:</td>
<td>No</td>
</tr>
<tr>
<td>Measure Type:</td>
<td>Process</td>
</tr>
<tr>
<td>Rationale:</td>
<td>We propose to update the eCQM Specifications collection type definition section to align the measure language with the logic to allow for qualitative or quantitative documentation of moderate or severe LVSD. We propose to update the denominator logic for the eCQM Specifications collection type to use the start date for the myocardial infarction. This will ensure those patients without a documented myocardial infarction and date within the medical record will be captured within the measure denominator as these patients would be appropriate for the denominator eligible patient population. Additionally, we propose to remove ‘Dressler’s Syndrome’ from the &quot;Coronary Artery Disease No MI&quot; value set for the eCQM Specifications collection type as this is not a conclusive diagnosis to indicate coronary artery disease and therefore, not appropriate for this value set.</td>
</tr>
</tbody>
</table>

### D.6 Appropriate Treatment for Upper Respiratory Infection (URI)

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF / eCQM NQF #:</td>
<td>0069 / N/A</td>
</tr>
<tr>
<td>Quality #:</td>
<td>065</td>
</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>CMS154v10</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Efficiency and Cost Reduction</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>eCQM Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>Percentage of episodes for patients 3 months of age and older with a diagnosis of upper respiratory infection (URI) that did not result in an antibiotic dispensing event.</td>
</tr>
</tbody>
</table>

#### Substantive Change:

**Updated denominator exclusion:** For the eCQM Specifications collection type:

Revised:
1. Exclude URI episodes when the patient had hospice care for any part of the measurement period.
2. Exclude URI episodes when the patient had an active prescription of antibiotics in the 30 days prior to the episode date, including the episode date up until the time of the encounter.

**Updated logic and logic definitions:** For the eCQM Specifications collection type: Revised: logic so definitions point to the encounter as a basis for evaluating other clinical data.

**Updated value set/coding:** For the eCQM Specifications collection type: Added: value sets "Observation care discharge day management", "Home Healthcare Services", "Medical Disability Exam", and "Observation".

**Updated denominator:** For the MIPS CQMs Specifications collection type: Added: Home Health setting and coding for Work Related or Medical Disability Evaluation services.

**Updated denominator exclusion:** For the MIPS CQMs Specifications collection type: Revised: URI episodes when the patient had an active prescription of antibiotics (Table 1) in the 30 days prior to the episode date.

#### Rationale:

We propose to update the eCQM Specifications collection type denominator exclusion to remove the term ‘overlapping’ and replace with plain language for clarity and to ensure consistency in implementation. Additionally, we propose to revise the denominator exclusion to align with the logic regarding the timing of the active prescription and the encounter for the purposes of this exclusion. We propose to update the CQM Specifications collection type logic so that the definitions point to the encounter as a basis for evaluation of other clinical data as this will align with the measure intent and ensure appropriate time intervals for implementation. Additionally, we propose to add value sets to the eCQM Specifications collection type as these value sets are appropriate and applicable to this measure’s denominator eligibility.

We propose to revise the MIPS CQMs Specifications collection type denominator exclusion to clarify that all patients with active antibiotic prescriptions up to the time of the encounter should be excluded from the denominator eligible patient population. Additionally, we propose to update the denominator eligible coding to include home visits and disability evaluation services as these are appropriate and applicable clinical settings.

In the event the proposed substantive change(s) are finalized, for the MIPS CQMs Specifications collection type, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.
D.7 Appropriate Testing for Pharyngitis

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF # / eCQM NQF #:</td>
<td>N/A / N/A</td>
</tr>
<tr>
<td>Quality #:</td>
<td>066</td>
</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>CMS146v10</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Efficiency and Cost Reduction</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>eCQM Specifications / MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>The percentage of episodes for patients 3 years and older with a diagnosis of pharyngitis that resulted in an antibiotic dispensing event and a group A streptococcus (strp) test.</td>
</tr>
</tbody>
</table>

**Substantive Change:**
- Updated denominator exclusion: For the eCQM Specifications collection type: Revised:
  1. Exclude episodes where the patient is taking antibiotics in the 30 days prior to the episode date, or had an active prescription on the episode date.
  2. Exclude episodes where the patient is in hospice care for any part of the measurement period.
- Updated denominator exclusion: For the MIPS CQMs Specifications collection type: Revised:
  1. Exclude episodes where the patient is taking antibiotics (Table 1) in the 30 days prior to the episode date, or had an active prescription on the episode date.

**Rationale:**
We propose to update the eCQM Specifications collection type denominator exclusions to clarify timing of exclusion criteria and to remove the term "overlap" and replace with plain language for clarity and to ensure consistency in implementation. We propose to update the eCQM Specifications collection type logic so that the definitions point to the encounter as a basis for evaluating other clinical data.

D.8 Acute Otitis Externa (AOE): Systemic Antimicrobial Therapy – Avoidance of Inappropriate Use

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF # / eCQM NQF #:</td>
<td>0654 / N/A</td>
</tr>
<tr>
<td>Quality #:</td>
<td>093</td>
</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>N/A</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Efficiency and Cost Reduction</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>Medicare Part B Claims Measure Specifications / MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>Percentage of patients aged 2 years and older with a diagnosis of AOE who were not prescribed systemic antimicrobial therapy.</td>
</tr>
</tbody>
</table>

**Substantive Change:**
- Modified collection type: MIPS CQMs Specifications collection type

**Rationale:**
We propose to remove the Medicare Part B Claims Measure Specifications collection type as it has reached the end of the topped out lifecycle as finalized in 82 FR 53640. However, the benchmarking data continues to show a gap for the MIPS CQMs Specifications collection type, as such, the measure will be retained for this collection type.
### D.9 Prostate Cancer: Avoidance of Overuse of Bone Scan for Staging Low Risk Prostate Cancer Patients

<table>
<thead>
<tr>

</tr>
<tr>
<td>Rationale:</td>
<td>We propose to update the MIPS CQMs Specifications collection type to remove the gender specificity from the denominator criteria to ensure a complete patient population. Additionally, we propose to revise the measure instructions and denominator note for the MIPS CQMs Specifications collection type to reflect the update in measure submission frequency from once per episode to once per performance period utilizing the most recent risk assessment for purposes of denominator eligibility, as this is more aligned with the measure intent as well as bringing all collection types into alignment.</td>

<td>CMS147v11</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Community/Population Health</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>Medicare Part B Claims Measure Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>Percentage of patients aged 6 months and older for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.</td>
</tr>
<tr>
<td>Substantive Change:</td>
<td>Updated guidance: For the eCQM Specifications collection type: Added: Patient self-report for procedures as well as immunizations should be recorded in 'Procedure, Performed' template or 'Immunization, Administered' template in QRDA-1. Updated value set/coding: For the eCQM Specifications and CMS Web Interface Measure Specifications collection types: Removed: &quot;Previous Receipt of Influenza Vaccine&quot; (2.16.840.1.113883.3.526.3.1185) value set.</td>
</tr>
<tr>
<td>Steward:</td>
<td>National Committee for Quality Assurance</td>
</tr>
<tr>
<td>High Priority Measure:</td>
<td>No</td>
</tr>
<tr>
<td>Measure Type:</td>
<td>Process</td>
</tr>
<tr>
<td>Rationale:</td>
<td>We propose to update the eCQM Specifications collection type in order to accurately capture those patients who had previously received the influenza immunization. The current logic definition does not capture the date of immunization receipt nor does it ensure the patient was assessed during the flu season and is not fully aligned with measure intent. Therefore, the value set “Previous Receipt of Influenza Vaccine” will be removed from the measure and the guidance section will be updated to outline the process for capturing those patients who have previously received the influenza immunization for the purposes of this measure. Additionally, the value set “Previous Receipt of Influenza Vaccine” will be removed from CMS Web Interface Measure Specifications collection type to align with the eCQM Specifications collection type, however, this will not impact the numerator of the measure. Medical record documentation of previous receipt of the influenza vaccine during the flu season will still suffice for completion of the quality action, though this value set will no longer be available for mapping purposes.</td>
</tr>
</tbody>
</table>
### D.11 Pneumococcal Vaccination Status for Older Adults

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Measure Specifications</td>
<td>Percentage of patients 65 years of age and older who have ever received a pneumococcal vaccine.</td>
</tr>
<tr>
<td>MIPS CQMs Specifications</td>
<td>For the MIPS CQMs Specifications collection type: Revised:patient age changed to 66 years of age or older.</td>
</tr>
<tr>
<td>Medicare Part B Claims</td>
<td>For the Medicare Part B Claims Specifications collection type: Revised: Patients aged 66 years on date of encounter.</td>
</tr>
</tbody>
</table>

**Substantive Change:**

- The measure description is revised from 'Percentage of patients 65 years of age and older who have ever received a pneumococcal vaccine' to: Percentage of patients 66 years of age and older who have ever received a pneumococcal vaccine.

- The measure denominator exclusion is revised to read: For the eCQM Specifications collection type: Exclude patients who are in hospice care for any part of the measurement period.

- Updated measure numerator: For all collection types: Patients who received a pneumococcal vaccination on or after their 60th birthday and before the end of the measurement period.

- Updated measure denominator: Patients aged > 66 years on date of encounter.

- The measure numerator options are revised to read: For the MIPS CQMs Specifications and the Medicare Part B Claims Measurement Specifications collection types:

  - Performance Met: Pneumococcal vaccine administered on or after patient’s 60th birthday and before the end of the measurement period.

  - Performance Not Met: Pneumococcal vaccine was not administered on or after patient’s 60th birthday and before the end of the measurement period.

- The measure numerator criteria is revised to read: For the MIPS CQMs Specifications and the Medicare Part B Claims Measurement Specifications collection types: Patients aged 66 years of age and older have received one or more pneumococcal vaccinations.

- The measure denominator criteria is revised to read: For the MIPS CQMs Specifications and the Medicare Part B Claims Measurement Specifications collection types: Patients 66 years of age and older with a visit during the measurement period.

- The measure denominator exclusion is revised to read: For the MIPS CQMs Specifications and the Medicare Part B Claims Measurement Specifications collection types: Patients aged 66 years or older have received one or more pneumococcal vaccinations.

- The measure numerator note is revised to read: For the MIPS CQMs Specifications and the Medicare Part B Claims Measurement Specifications collection types: This measure assesses whether patients 66 years of age or older have received one or more pneumococcal vaccinations.

- The measure denominator note is revised to read: For the MIPS CQMs Specifications and the Medicare Part B Claims Measurement Specifications collection types: The measure provides credit for adults 66 years of age and older who have received the PPSV23 vaccine on or after the patient’s 60th birthday.

**Rationale:**

We propose to update the measure description, initial patient population, denominator, denominator criteria, and denominator note (as applicable) for all collection types to assess patients aged 66 years and older as this allows time for clinicians to administer the pneumococcal vaccination in accordance with current Advisory Committee on Immunization Practices (ACIP) recommendations. Additionally, the numerator for all collection types is proposed to be revised to assess for the administration of the pneumococcal vaccine on or after the patients 60th birthday and before the end of the measurement period or documentation of medical reason(s) for not administering the pneumococcal vaccine.

We propose to update the eCQM Specifications collection type denominator exclusion to remove the term 'overlaps' and replace with plain language for clarity and to ensure consistency in implementation. Additionally, we propose to update the value sets for the eCQM Specifications collection type to reflect the updates to the measure to align with current ACIP recommendations that all adults age 65 years and older receive one dose of the 23-valent pneumococcal polysaccharide vaccine (PPSV23). The MIPS CQMs Specifications and Medicare Part B Claims Measure Specifications collection type will also be updated to only allow for the PPSV23 vaccine to suffice for numerator compliance.

We propose to update the numerator options for the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types to allow for the receipt of the pneumococcal vaccine on or after the patient’s 60th birthday or the documentation of medical reasons, such as an adverse reaction, to meet the quality action of this measure as it better aligns with current ACIP recommendations. Additionally, we propose to update the MIPS CQMs Specifications and the Medicare Part B...
### D.12 Breast Cancer Screening

<table>

<tbody>
<tr>
<td>NQF # / eCQM NQF #:</td>
<td>2372 / N/A</td>
</tr>
<tr>
<td>Quality #:</td>
<td>112</td>
</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>CMS125v10</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Effective Clinical Care</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>Medicare Part B Claims Measure Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>Percentage of women 50 - 74 years of age who had a mammogram to screen for breast cancer in the 27 months prior to the end of the measurement period.</td>
</tr>
</tbody>
</table>

**Substantive Change:**

- **Updated denominator exclusion:** For the eCQM Specifications collection type:
  - **Revised:**
    1. Exclude patients who are in hospice care for any part of the measurement period.
    2. Exclude patients 66 and older with an indication of frailty for any part of the measurement period who meet any of the following criteria:
      - Advanced illness with two outpatient encounters during the measurement period or the year prior
      - OR advanced illness with one inpatient encounter during the measurement period or the year prior
      - OR taking dementia medications during the measurement period or the year prior
  - **Added:**
    1. Exclude patients receiving palliative care during the measurement period.

- **Updated denominator guidance:** For the CMS Web Interface Measure Specifications collection type:
  - **Revised:**
    1. Patients age 66 and older in Institutional Special Needs Plans (SNP) or residing in long-term care with a POS code 32, 33, 34, 54 or 56 for more than 90 consecutive days during the measurement period.

- **Updated denominator note:** For the MIPS CQMs Specifications collection type:
  - **Added:** To assess the age for exclusions, the patient’s age at the end of the measurement period should be used.

- **Updated denominator exclusion:** For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types:
  - **Added:** Palliative care services used by patient any time during the measurement period

- **Updated denominator guidance:** For the CMS Web Interface Measure Specifications collection type:
  - **Added:** To assess the age for exclusions, the patient’s age at the end of the measurement period should be used.

- **Updated numerator note:** For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types:
  - **Added:** Patient reported mammograms, when recorded in the medical record, are acceptable for meeting the numerator.

- **For the Medicare Part B Claims Measure Specifications collection type:**
  - **Added:** To assess the age for exclusions, the patient’s age on the date of the encounter should be used.

### Rationale:

- **We propose that the denominator exclusion language be updated for all collection types to add an exclusion for patients receiving palliative care, as this patient population is not appropriate for the clinical quality action being assessed. Additionally, for the eCQM Specifications collection type language was added to clarify timing for those exclusions that have an age-related component. For the eCQM Specifications collection type, the term ‘overlaps’ was removed and replaced with plain language for clarity and the denominator exclusion for frailty or advanced illness was revised to update how these patients will be captured.**

- **We propose to revise the denominator note for the MIPS CQMs Specifications collection type, the numerator note for the Medicare Part B Claims Measure Specifications collection type, and the denominator guidance for the CMS Web Interface Measure Specifications collection type to clarify the timing for those exclusions that have an age-related component. Additionally, we propose to add a numerator note to the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types to allow for patient self-report as this is appropriate to avoid overtreatment.**

- **We propose to update the denominator exclusion language for the CMS Web Interface Measure Specifications collection type, for the measure, long-term care will be defined as patients staying more than 90 consecutive days at the long-term care facility versus any 90 days within the performance period.**

<tr>
<td>Current Collection Type:</td>
<td>MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>The percentage of episodes for patients ages 3 months and older with a diagnosis of acute bronchitis/bronchiolitis that did not result in an antibiotic dispensing event.</td>
</tr>
<tr>
<td>Substantive Change:</td>
<td>Updated denominator exclusion: Revised: Acute bronchitis/bronchiolitis episodes when the patient had a new or refill prescription of antibiotics (Table 1) in the 30 days prior to the episode date. Updated numerator instructions: Removed: Ticarcillin clavulanate and Erythromycin sulfisoxazole from Table 1 - Antibiotic Medications</td>
</tr>
<tr>
<td>Steward:</td>
<td>National Committee for Quality Assurance</td>
</tr>
<tr>
<td>High Priority Measure:</td>
<td>Yes</td>
</tr>
<tr>
<td>Measure Type:</td>
<td>Process</td>
</tr>
</tbody>
</table>

**Rationale:**

We propose to revise the denominator exclusion to clarify that all patients with active antibiotic prescriptions up to the time of the encounter should be excluded from the denominator eligible patient population. We propose to update Table 1 – Antibiotic Medications to ensure the list includes current and appropriate medications for the purposes of this measure.

In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.
## D.15 Diabetes: Eye Exam

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>

</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>CMS13lvl0</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Effective Clinical Care</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>Medicare Part B Claims Measure Specifications</td>
</tr>
</tbody>
</table>

### Current Measure Description:

Percentage of patients 18-75 years of age with diabetes and an active diagnosis of retinopathy overlapping the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or diabetics with no diagnosis of retinopathy overlapping the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or in the 12 months prior to the measurement period.

The measure description is revised to read: For all collection types: Percentage of patients 18-75 years of age with diabetes and an active diagnosis of retinopathy in any part of the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or diabetics with no diagnosis of retinopathy in any part of the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or in the 12 months prior to the measurement period.

### Updated denominator exclusion: For the eCQM Specifications collection type:

- **Revised:**
  1. Exclude patients who are in hospice care for any part of the measurement period.
  2. Exclude patients 66 and older with an indication of frailty for any part of the measurement period who meet any of the following criteria:
     - Advanced illness with two outpatient encounters during the measurement period or the year prior
     - OR advanced illness with one inpatient encounter during the measurement period or the year prior
     - OR taking dementia medications during the measurement period or the year prior

- **Added:**
  1. Exclude patients receiving palliative care during the measurement period.

### Updated denominator note: For the MIPS CQMs Specifications collection type: Added:

- To assess the age for exclusions, the patient's age at the end of the measurement period should be used.

### Updated denominator exclusion: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types:

- **Added:**
  1. Palliative care services provided to patient any time during the measurement period

### Updated measure numerator note: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types:

- **Added:**
  To assess the age for exclusions, the patient's age at the date of the encounter should be used.

| Steward: | National Committee for Quality Assurance |
| High Priority Measure: | No |
| Measure Type: | Process |
| Rationale: | We propose to update the description of the measure to remove the term 'overlaps' and replace with plain language for clarity and to ensure consistency in implementation. Additionally, we propose to update the numerator for the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types to remove the terms 'overlaps' and 'overlapping' and replace with plain language for clarity and to ensure consistency in implementation. We propose that the denominator exclusion language be updated for all collection types to add an exclusion for patients receiving palliative care, as this patient population is not appropriate for the clinical quality action being assessed. Additionally, for the eCQM Specifications collection type language was added to clarify timing for those exclusions that have an age-related component. For the eCQM Specifications collection type, the term 'overlaps' was removed and replaced with plain language for clarity and the denominator exclusion for frailty or advanced illness was revised to update how these patients will be captured. |
Additionally, we propose to update the guidance for the eCQM Specifications collection type and numerator note for the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types to allow for the use of artificial intelligence as it is applicable and clinically appropriate for numerator compliance for this measure.

We propose to revise the denominator note for the MIPS CQMs Specifications collection type and the numerator note for the Medicare Part B Claims Measure Specifications collection type to clarify the timing for those exclusions that have an age-related component.

### D.16 Diabetes: Medical Attention for Nephropathy

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>

<td>National Quality Strategy Domain:</td>
<td>Effective Clinical Care</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>eCQM Specifications / MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>The percentage of patients 18-75 years of age with diabetes who had a nephropathy screening test or evidence of nephropathy during the measurement period</td>
</tr>
</tbody>
</table>

**Substantive Change:**

**Updated denominator exclusion: For the eCQM Specifications collection type:**

**Revised:**

1. Exclude patients who are in hospice care for any part of the measurement period.
2. Exclude patients 66 and older with an indication of frailty for any part of the measurement period who meet any of the following criteria:
   - Advanced illness with two outpatient encounters during the measurement period or the year prior
   - OR advanced illness with one inpatient encounter during the measurement period or the year prior
   - OR taking dementia medications during the measurement period or the year prior

**Added:**

1. Exclude patients receiving palliative care during the measurement period.

**Updated value set/coding:**

**Updated denominator note:**

For the MIPS CQMs Specifications collection type: Added: To assess the age for exclusions, the patient’s age at the end of the measurement period should be used.

**Updated denominator exclusion:**

For the MIPS CQMs Specifications collection types:

**Added:**

1. Patients who use palliative care services any time during the measurement period

**Steward:**

National Committee for Quality Assurance

**High Priority Measure:**

No

**Measure Type:**

Process

**Rationale:**

We propose that the denominator exclusion language be updated for all collection types to add an exclusion for patients receiving palliative care, as this patient population is not appropriate for the clinical quality action being assessed. Additionally, for the eCQM Specifications collection type language was added to clarify timing for those exclusions that have an age-related component. For the eCQM Specifications collection type, the term ‘overlaps’ was removed and replaced with plain language for clarity and the denominator exclusion for frailty or advanced illness was revised to update how these patients will be captured. Additionally, we propose to update the “kidney transplant” value set to remove coding related to kidney transplant donors as it would be appropriate for these patients to still receive a screening for nephropathy.

We propose to revise the denominator note for the MIPS CQMs Specifications collection type to clarify the timing for those exclusions that have an age-related component.

</table>

#### Current Collection Type:

- Medicare Part B Claims Measure Specifications
- eCQM Specifications
- CMS Web Interface Measure Specifications
- MIPS QCs Specifications

#### Current Measure Description:

The measure description is revised to read: For the CMS Web Interface Measure Specifications collection type:

- Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of the eligible encounter.

The measure guidance is revised to read: For the eCQM Specifications collection type:

- The intent of the measure is to screen for depression in patients who have never had a diagnosis of depression or bipolar disorder prior to the eligible encounter used to evaluate the numerator. Patients who have ever been diagnosed with depression or bipolar disorder will be excluded from the measure.

- A depression screen is completed on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan must be documented on the date of the encounter, such as referral to a provider for additional evaluation, pharmacological interventions, or other interventions for the diagnosis or treatment of depression.

- The measure does not require documentation of a specific score, just whether results of the normalized and validated depression screening tool used are considered positive or negative. Each standardized screening tool provides guidance on whether a particular score is considered positive for depression.

- This eCQM is a patient-based measure. Depression screening is required once per measurement period, not at all encounters.

- Screening Tools:
  - An age-appropriate, standardized, and validated depression screening tool must be used for numerator compliance.
  - The name of the age-appropriate standardized depression screening tool utilized must be documented in the medical record.
  - The depression screening must be reviewed and addressed by the provider filling the code, on the date of the encounter.
  - Positive pre-screening results indicating a patient is at high risk for self-harm should receive more urgent interventions as determined by the provider practice.
  - The screening should occur during a qualifying encounter or up to 14 days prior to the date of the qualifying encounter.
  - The measure assesses the most recent depression screening completed either during the eligible encounter or within the 14 days prior to that encounter. Therefore, a clinician would not be able to complete another screening at the time of the encounter to count towards a follow-up, because that would serve as the most recent screening. In order to satisfy the follow-up requirement for a patient screening positively, the eligible clinician would need to provide one of the aforementioned follow-up actions, which does not include use of a standardized depression screening tool.

- Follow-Up Plan:
  - The follow-up plan must be related to a positive depression screening, for example: "Patient referred for psychiatric evaluation due to positive depression screening."

- Examples of follow-up plan include but are not limited to:
  - Referral to a practitioner or program for further evaluation for depression, for example, referral to a psychiatrist, psychologist, social worker, mental health counselor, or other mental health service such as family or group therapy, support group, depression management program, or other service for treatment of depression
  - Other interventions designed to treat depression such as behavioral health evaluation, psychotherapy, pharmacological interventions, or additional treatment options

- Should a patient screen positive for depression:
  - A clinician should only order pharmacological intervention when appropriate and after sufficient diagnostic evaluation.
  - However, for the purposes of this measure, additional screening and assessment during the qualifying encounter will not qualify as a follow-up plan.
  - A clinician should opt to complete a suicide risk assessment when appropriate and based on individual patient characteristics.

- For the CMS Web Interface Measure Specifications collection type:

A depression screen is completed on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan must be documented on the date of the encounter, such as referral to a provider for additional evaluation, pharmacological interventions, or other interventions for the treatment of depression.

This is a patient-based measure. Depression screening is required once per measurement period, not at all encounters. This measure does not require documentation of a specific score, just whether results of the normalized and validated depression screening tool used are considered positive or negative. Each standardized screening tool provides guidance on whether a particular score is considered positive for depression.

The intent of the measure is to screen for depression in patients who have never had a diagnosis of depression or bipolar disorder prior to the eligible encounter used to evaluate the numerator. Patients who have ever been diagnosed with depression or bipolar disorder will be excluded from the measure.

- Screening Tools:
  - An age-appropriate, standardized, and validated depression screening tool must be used for numerator compliance.
  - The name of the age-appropriate standardized depression screening tool utilized must be documented in the medical record.
  - The depression screening must be reviewed and addressed by the provider filling the code, on the date of the encounter. Positive pre-screening results indicating a patient is at high risk for self-harm should receive more urgent intervention.

<td>* Only order pharmacological intervention when appropriate and after sufficient diagnostic evaluation. However, for the purposes of this measure, additional screening and assessment during the qualifying encounter will not qualify as a follow-up plan.</td>
</tr>
<tr>
<td>* Opt to complete a suicide risk assessment when appropriate and based on individual patient characteristics. However, for the purposes of this measure, a suicide risk assessment or additional screening using a standardized tool will not qualify as a follow-up plan.</td>
<td></td>
</tr>
<tr>
<td>Updated guidance denominator: For the CMS Web Interface Measure Specifications collection type: Revised:</td>
<td>The intent of the measure is to screen for depression in patients who have never had a diagnosis of depression or bipolar disorder prior to the eligible encounter used to evaluate the numerator. Patients who have ever been diagnosed with depression or bipolar disorder will be excluded from the measure.</td>
</tr>
<tr>
<td>Updated numerator instructions are revised to read: For the MIPS CJMs Specifications and the Medicare Part B Claims Measure Specifications collection types:</td>
<td>The measure numerator instructions are revised to read: For the MIPS CJMs Specifications and the Medicare Part B Claims Measure Specifications collection types:</td>
</tr>
<tr>
<td>Numerator Instructions:</td>
<td>A depression screen is completed on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan must be documented on the date of the encounter, such as referral to a provider for additional evaluation, pharmacological interventions, or other interventions for the treatment of depression. This is a patient-based measure. Depression screening is required once per measurement period, not at all encounters. An age-appropriate, standardized, and validated depression screening tool must be used for numerator compliance. The name of the age-appropriate standardized depression screening tool utilized must be documented in the medical record. This measure does not require documentation of a specific score, just whether results of the normalized and validated depression screening tool used are considered positive or negative. Each standardized screening tool provides guidance on whether a particular score is considered positive for depression. The depression screening must be reviewed and addressed by the provider on the date of the encounter. Positive pre-screening results indicating a patient is at high risk for self-harm should receive more urgent intervention as determined by the provider practice. The screening should occur during a qualifying encounter or up to 14 days prior to the date of the qualifying encounter. The measure assesses the most recent depression screening completed either during the eligible encounter or within the 14 days prior to that encounter. Therefore, a clinician would not be able to complete another screening at the time of the encounter to count towards a follow-up, even if that would serve as the most recent screening. In order to satisfy the follow-up requirement for a patient screening positively, the eligible clinician would need to provide one of the aforementioned follow-up actions, which does not include use of a standardized depression screening tool. Should a patient screen positive for depression, a clinician should:</td>

<th>Steward:</th>
<th>Centers for Medicare &amp; Medicaid Services</th>
</tr>
</thead>
<tbody>
<tr>
<td>High Priority Measure:</td>
<td>No</td>
</tr>
<tr>
<td>Measure Type:</td>
<td>Process</td>
</tr>
</tbody>
</table>

**Rationale:**

We propose to update the eCQM Specifications and CMS Web Interface Measure Specifications collection types guidance section to remove the requirement for an in-office review of the assessment as it is appropriate to allow this to be completed via telehealth encounter, clarify requirements as only documentation of a negative or positive depression screening is needed to align with the intent of the measure, and revise the numerator compliant follow-up plans based on stakeholder feedback to ensure clinical appropriateness.

We propose to update the CMS Web Interface Measure Specification collection type description, guidance sections, definitions, and numerator sections to provide clarity as to what constitutes a follow-up plan. Additionally, language throughout the measure specification was updated allowing for alignment with clinical workflow. The measure assesses the most recent depression screening completed either during the encounter or up to 14 days prior to that encounter. Therefore, a clinician would not be able to complete another screening to count towards a follow-up, since that would serve as the most recent screening. To satisfy the follow-up requirement for a patient screening positively, the eligible clinician would need to provide one of the aforementioned follow-up actions, which does not include use of a standardized depression screening tool. Additionally, suicide risk assessments have been removed as a numerator compliant follow-up plan option as this should be completed when appropriate and based on the assessment by the clinician regarding the severity of the patient’s symptoms of depression at the time of depression screening. We also propose to update the measure language and denominator exclusions to reflect that this measure is screening of depression for patients who have not been previously diagnosed or have an active diagnosis of depression or bipolar disorder. This preventive measure assesses screening and follow up plan for patients that are screened positive for depression. The denominator exception was revised in order to streamline the language.

We propose to update the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types numerator instructions to clarify requirements as only documentation of a negative or positive depression screening is needed to align with the intent of the measure and revise instructions for the numerator compliant follow-up plans based on stakeholder feedback to ensure clinical appropriateness.
## D.19 Oncology: Medical and Radiation - Pain Intensity Quantified

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>QOF / eCQM NFQ #</td>
<td>0384 / 0384e</td>

</tr>
<tr>
<td>Current Collection Type</td>
<td>eCQM Specifications</td>
</tr>
<tr>
<td>Current Measure Description</td>
<td>Percentage of patient visits, regardless of patient age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy in which pain intensity is quantified.</td>
</tr>
</tbody>
</table>

**The measure guidance is revised to read:** For the eCQM Specifications collection type: This eCQM is an episode-based measure. An episode is defined as each eligible encounter for patients with a diagnosis of cancer who are also currently receiving chemotherapy or radiation therapy during the measurement period. For patients receiving radiation therapy, pain intensity should be quantified at each radiation treatment management encounter where the patient and physician have a face-to-face or telehealth interaction. Due to the nature of some applicable coding related to radiation therapy (e.g., delivered in multiple fractions), the billing date for certain codes may or may not be the same as the face-to-face or telehealth encounter date. In this instance, for the reporting purposes of this measure, the billing date should be used to pull the appropriate patients into the initial population. It is expected, though, that the numerator criteria would be performed at the time of the actual face-to-face or telehealth encounter during the series of treatments. A lookback (retrospective) period of 7 days, including the billing date, may be used to identify the actual face-to-face or telehealth encounter, which is required to assess the numerator. Therefore, pain intensity should be quantified during the face-to-face or telehealth encounter occurring on the actual billing date or within the 6 days prior to the billing date. For patients receiving chemotherapy, pain intensity should be quantified at each face-to-face or telehealth encounter with the physician while the patient is currently receiving chemotherapy. For purposes of identifying eligible encounters, patients "currently receiving chemotherapy" refers to patients administered chemotherapy on the same day as the encounter or during the 30 days before the date of the encounter AND during the 30 days after the date of the encounter. Pain intensity should be quantified using a standard instrument, such as a 0-10 numerical rating scale, visual analog scale, a categorical scale, or pictorial scale. Examples include the Faces Pain Rating Scale and the Brief Pain Inventory (BPI). This version of the eCQM uses QICM version 5.5. Please refer to the eCQI resource center (https://ecqi.healthit.gov/qdm) for more information on the QCM.

**Updated value set coding:** For the eCQM Specifications collection type: Removed: "Chemotherapy Administration" (2.16.840.1.113883.3.526.3.1027) and coding for neurofibromatosis from value set "Cancer" (2.16.840.1.113883.3.526.3.1010).

**Updated denominator criteria:** For the MIPS CQMs Specifications collection type: Removed: Submission criteria one coding related to neurofibromatosis.

**Updated instructions:** For the MIPS CQMs Specifications collection type: Revised: NOTE: For patients receiving radiation therapy, pain intensity should be quantified at each radiation treatment management encounter, where the patient and physician have a face-to-face or telehealth interaction. Due to the nature of some applicable coding related to the radiation therapy (e.g., delivered in multiple fractions), the billing date for certain codes may or may not be the same as the face-to-face or telehealth encounter date. In this instance, for the reporting purposes of this measure, the billing date should be used to pull the appropriate patients into the initial population. It is expected, though, that the numerator criteria would be performed at the time of the actual face-to-face or telehealth encounter during the series of treatments. A lookback (retrospective) period of 7 days, including the billing date, may be used to identify the actual face-to-face or telehealth encounter, which is required to assess the numerator. Therefore, pain intensity should be quantified during the face-to-face or telehealth encounter occurring on the actual billing date or within the 6 days prior to the billing date. For patients receiving chemotherapy, pain intensity should be quantified at each face-to-face or telehealth encounter with the physician while the patient is currently receiving chemotherapy. For purposes of identifying eligible encounters, patients "currently receiving chemotherapy" refers to patients administered chemotherapy on the same day as the encounter or during the 30 days before the date of the encounter AND during the 30 days after the date of the encounter.

**Steward:** American Society of Clinical Oncology

**High Priority Measure:** Yes

**Measure Type:** Process

**Rationale:** We propose to revise the eCQM Specifications guidance section to align the statement regarding timing of chemotherapy to ensure alignment with the logic timing constraints and added language for telehealth encounters as they are appropriate for inclusion for assessment of quality action completion. Additionally, we propose to remove topical chemotherapy from the "Chemotherapy Administration" value set and neurofibromatosis from the "Cancer" (2.16.840.1.113883.3.526.3.1010) value set as these patient populations are not appropriate for inclusion within the initial patient population for the purposes of clinical quality action assessment. Additionally, the denominator criteria was revised to clarify the timing of the chemotherapy and align with the intent of the measure. We propose to update the MIPS CQMs Specifications collection type instructions to add clarity in timing of chemotherapy and ensure alignment throughout the measure specification in accordance with measure intent.
D.20 Tuberculosis Screening Prior to First Course Biologic Therapy

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>

<td>National Quality Strategy Domain:</td>
<td>Effective Clinical Care</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>If a patient has been newly prescribed a biologic disease-modifying anti-rheumatic drug (DMARD) therapy, then the medical record should indicate TB testing in the preceding 12-month period.</td>
</tr>
</tbody>
</table>

**Substantive Change:**
- Updated denominator instructions: Revised:
  - Patients are considered to be receiving a first course of therapy using a biologic DMARD only if they have been prescribed DMARD biologic therapy during the measurement period and also have not been prescribed DMARD biologic therapy in the 15 months preceding the encounter where DMARD biologic therapy was newly started. Biologic DMARD therapy includes:
  - Guselkumab (Tremfya), Infliximab-axxq (Avsola), Ixekizumab (Taltz), Upadacitinib (RINVOQ)
- Revised denominator criteria: Added: coding for federally qualified health center (FQHC) visit.

**Steward:** American College of Rheumatology

**High Priority Measure:** No

**Measure Type:** Process

**Rationale:** We propose to update the denominator instructions to include a 15-month lookback period in response to stakeholder feedback to align with clinical workflow for more established patients and to add clarity regarding the denominator eligible patient population. Additionally, the medications list was updated to align with current DMARD medications available to treat rheumatic disease.

D.21 Rheumatoid Arthritis (RA): Periodic Assessment of Disease Activity

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF # / eCQM NQF #:</td>
<td>2523 / N/A</td>

<tr>
<td>Current Collection Type:</td>
<td>Medicare Part B Claims Measure Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>Percentage of visits for patients aged 18 years and older with documentation of a current functional outcome assessment using a standardized functional outcome assessment tool on the date of the encounter AND documentation of a care plan based on identified functional outcome deficiencies on the date of the identified deficiencies.</td>
</tr>
<tr>
<td>Substantive Change:</td>
<td>Updated numerator definition: Added: EAT-10: A Swallowing Screening Tool, Health Partners Hearing Assessment and Tinneti Performance Oriented Mobility Assessment (POMA) as eligible standardized tools. Revised: Standardized Tool definition note to include speech and language capacity. Functional Outcome Deficiencies – Impairment or loss of function related to musculoskeletal/neuromusculoskeletal capacity, including but are not limited to: restricted flexion, extension and rotation, back pain, neck pain, pain in the joints of the arms or legs, and headaches OR Impairment or loss of function related to speech and language capacity, including but not limited to: swallowing, hearing, and balance disorders</td>
</tr>
<tr>
<td>Steward:</td>
<td>Centers for Medicare &amp; Medicaid Services</td>
</tr>
<tr>
<td>High Priority Measure:</td>
<td>Yes</td>
</tr>
<tr>
<td>Measure Type:</td>
<td>Process</td>
</tr>
<tr>
<td>Rationale:</td>
<td>We propose to remove the Medicare Part B Claims Measure Specifications collection type as it has reached the end of the topped out lifecycle as finalized in 82 FR 53640. However, the benchmarking data continues to show a gap for the MIPS CQMs Specifications collection type, as such, the measure will be retained for this collection type. We propose to update the numerator definition to include concepts of swallowing, hearing, and balance to the measure as it is appropriate to assess this patient population for impairment or loss of function and create a follow-up plan of care based upon any identified loss of function or impairment. In the circumstance the Medicare Part B Claims Measure Specifications collection type is not finalized for removal, all finalized substantive changes will be reflected within this collection type specification.</td>
</tr>
</tbody>
</table>
### D.25 Cataracts: 20/40 or Better Visual Acuity within 90 Days Following Cataract Surgery

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>

We propose to update the measure description to align language across Focus on Therapeutic Outcomes, Inc. (FOTO) measures in order to provide clarity to clinicians.
### D.28 Preventive Care and Screening: Tobacco Use; Screening and Cessation Intervention

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF #: eCQM NQF #:</td>
<td>0028 / 0028e</td>
</tr>
<tr>
<td>Quality#:</td>
<td>226</td>
</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>CMS138v10</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Community/Population Health</td>
</tr>
</tbody>
</table>

#### Current Collection Type:
Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 12 months AND who received tobacco cessation intervention if identified as a tobacco user.

Three rates are reported:
- Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention if identified as a tobacco user.
- Percentage of patients aged 18 years and older who were identified as a tobacco user who received tobacco cessation intervention.
- Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention if identified as a tobacco user.

**Substantive Change:**
- The measure description is revised to read: For the eCQM Specifications collection type: Percentage of patients aged 18 years and older who were screened for tobacco use one or more times during the measurement period AND who received tobacco cessation intervention if identified as a tobacco user.

Three rates are reported:
- Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period.
- Percentage of patients aged 18 years and older who were identified as a tobacco user who received tobacco cessation intervention.
- Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention if identified as a tobacco user.

**Updated guidance:**
- For the eCQM Specifications collection type: Revised: To satisfy the intent of this measure, a patient must have at least one tobacco use screening during the measurement period. If a patient has multiple tobacco use screenings during the measurement period, only the most recent screening, which has a documented status of tobacco user or tobacco non-user, will be used to satisfy the measure requirements.

**Updated value set/coding:**
- For the eCQM Specifications and CMS Web Interface Measure Specifications collection type: Removed: passive smoker from "Tobacco User" (2.16.840.1.113883.3.526.3.1170) value set.

The measure instructions are revised to read: For the MIPS CQMs Specifications collection types: This measure is to be submitted a minimum of once per performance period for patients seen during the performance period. This measure is intended to reflect the quality of services provided for preventive screening for tobacco use. This measure may be submitted by Medicare Part B Claims eligible clinicians who provided the measure-specific denominator coding. For implementation of the measure, the denominator eligible encounter should be used to determine if the numerator action for the tobacco cessation intervention was performed within the 12 month look back period from the date of the denominator eligible encounter.

This measure will be calculated with 3 performance rates:
1) Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period.
2) Percentage of patients aged 18 years and older who were identified as a tobacco user who received tobacco cessation intervention.
3) Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention if identified as a tobacco user.

For the Medicare Part B Claims Measure Specifications collection types:
This measure is to be submitted a minimum of once per performance period for patients seen during the performance period. This measure is intended to reflect the quality of services provided for preventive screening for tobacco use.

<tr>
<td>Measure, the denominator eligible encounter should be used to determine if the numerator action for the tobacco cessation intervention was performed within the 12 month look back period from the date of the denominator eligible encounter. This measure may be submitted by Merit-based Incentive Payment System (MIPS) eligible clinicians who provided the measure-specific denominator coding. This measure will be calculated with 3 performance rates: 1) Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period 2) Percentage of patients aged 18 years and older who were identified as a tobacco user who received tobacco cessation intervention on the date of the encounter or within the previous 12 months 3) Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention if identified as a tobacco user on the date of the encounter or within the previous 12 months</td>
<td></td>
</tr>
</tbody>
</table>

Updated submission criteria: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Added: The language “on the date of the encounter or within the previous 12 months” to submission criteria 2 and 3.

Updated numerator: For the eCQM Specifications collection types: Revised: NUMERATOR (SUBMISSION CRITERIA 3): Patients who were screened for tobacco use at least once within the measurement period AND who received tobacco cessation intervention if identified as a tobacco user. For the MIPS CQMs Specifications, Medicare Part B Claims Measure Specifications, and CMS Web Interface Measure Specifications collection types: Revised: NUMERATOR (SUBMISSION CRITERIA 1): Patients who were screened for tobacco use at least once within the measurement period AND who received tobacco cessation intervention if identified as a tobacco user on the date of the encounter or within the previous 12 months NUMERATOR (SUBMISSION CRITERIA 2): Patients who received tobacco cessation intervention on the date of the encounter or within the previous 12 months. NUMERATOR (SUBMISSION CRITERIA 3): Patients who were screened for tobacco use at least once within the measurement period AND who received tobacco cessation intervention if identified as a tobacco user on the date of the encounter or within the previous 12 months.

Updated numerator note: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised: Replaced "12 months" with "the measurement period" for submission criteria 1 and 3. Added: The language "on the date of the encounter or within the previous 12 months" to submission criteria 2 and 3 in reference to tobacco cessation intervention.

Updated guidance numerator note: For the CMS Web Interface Measure Specifications collection type: Updated: Revised language to reflect that the tobacco screening is once per performance period and tobacco cessation intervention if necessary must be completed during the encounter or previous 12 months.

Updated numerator options: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised: Submission Criteria 2: Performance Met: Patient identified as a tobacco user received tobacco cessation intervention on the date of the encounter or within the previous 12 months (counseling and/or pharmacotherapy). Denominator Exception: Documentation of medical reason(s) for not providing tobacco cessation intervention on the date of the encounter or within the previous 12 months (e.g., limited life expectancy, other medical reason). Performance Not Met: Patient identified as tobacco user did not receive tobacco cessation intervention on the date of the encounter or within the previous 12 months (counseling and/or pharmacotherapy), reason not given. Submission Criteria 3: Denominator Exception: Documentation of medical reason(s) for not providing tobacco cessation intervention on the date of the encounter or within the previous 12 months if identified as a tobacco user (e.g., limited life expectancy, other medical reason). |

Steward: [National Committee for Quality Assurance](https://www.ncqa.org) |

High Priority Measure: Yes |

Measure Type: Process |

Rationale: We propose to update the language for the MIPS CQMs Specifications, the Medicare Part B Measure Specifications, and CMS Web Interface Measure Specifications collection types to clarify the timing for tobacco use screening and tobacco cessation intervention for those patients identified as tobacco users. The intent of the measure is to ensure all patients are screened for tobacco use on an annual basis (each performance period) and receive tobacco cessation intervention, if identified as a tobacco user on the date of the encounter or within the previous 12 months.

We propose to update the eCQM Specifications collection type to reflect that both the tobacco use screening and tobacco use intervention for those patients identified as tobacco users should occur annually (each performance period). We understand that causes a slight misalignment between the different collection types, which is due to the annual update timeline differences between the collection types. This misalignment will be reviewed in future annual update cycles. Additionally, we propose to update the eCQM Specifications and CMS Web Interface Measure Specifications collection type to "Tobacco User" value set to remove passive smoker coding as these patients are not appropriate for inclusion in the tobacco user identified patient population as they do not meet the intent of the measure and the clinical quality action would not be applicable to them.

In the event the proposed substantive change(s) are finalized for the CMS Web Interface Measure Specifications collection type, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of the substantive changes. Under MIPS, the CMS Web Interface measures are scored in comparison to quality measure benchmarks established under the Medicare Shared Savings Program. The benchmarks established for the CMS Web Interface measures are based on historical data. If a benchmark is able to be established for a CMS

**Current Measure Description:**
Percentage of patients 18-85 years of age who had a diagnosis of hypertension overlapping the measurement period or the year prior to the measurement period, and whose most recent blood pressure was adequately controlled (<140/90 mmHg) during the measurement period.

**Substantive Change: The measure description is revised to read:** For all collection types: Percentage of patients 18-85 years of age who had a diagnosis of essential hypertension starting before and continuing into, or starting during the first six months of the measurement period, and whose most recent blood pressure was adequately controlled (<140/90 mmHg) during the measurement period.

**Updated denominator exclusion:** For the eCQM Specifications collection type:
1. Exclude patients who are in hospice care for any part of the measurement period.
2. Exclude patients 66 and older with an indication of frailty for any part of the measurement period who meet any of the following criteria:
   - Advanced illness with two outpatient encounters during the measurement period or the year prior
   - OR advanced illness with one inpatient encounter during the measurement period or the year prior
   - OR taking dementia medications during the measurement period or the year prior
3. Patients 66 - 80 years of age with at least one claim/encounter for frailty during the measurement period AND either one acute inpatient encounter with a diagnosis of advanced illness or two outpatient, observation, ED or nonacute inpatient encounters on different dates of service with an advanced illness diagnosis during the measurement period or the year prior to the measurement period.
4. Patients 81 years of age and older with at least one claim/encounter for frailty during the measurement period.

**Revised:**
Logic to allow ESRD encounter to be on or before the end of the measurement period.

**For the CMS Web Interface Measure Specifications collection type:**
1. Patients age 66 and older in Institutional Special Needs Plans (SNP) or residing in long-term care with a POS code 32, 33, 34, 54 or 56 for more than 90 consecutive days during the measurement period.
2. Patients 66 - 80 years of age with at least one claim/encounter for frailty during the measurement period AND a dispensed medication for dementia during the measurement period or the year prior to the measurement period.
3. Patients 66 - 80 years of age with at least one claim/encounter for frailty during the measurement period AND either one acute inpatient encounter with a discharge diagnosis of advanced illness or two outpatient, observation, ED or nonacute inpatient encounters on different dates of service with an advanced illness diagnosis during the measurement period or the year prior to the measurement period.

**Updated value set/coding:** For the eCQM Specifications and CMS Web Interface Measure Specifications collection types:
- Revised: "Pregnancy" (2.16.840.1.113883.3.526.3.378) value set to more accurately capture pregnancy state.

**Logic to allow recording of blood pressure readings:**
- Do not include BP readings:
  - Taken during an acute inpatient stay or an ED visit
  - Taken on the same day as a diagnostic test or diagnostic or therapeutic procedure that requires a change in diet or change in medication on or one day before the day of the test or procedure, with the exception of fasting blood tests.
  - Taken by the patient using a non-digital device such as with a manual blood pressure cuff and a stethoscope.

- If no blood pressure is recorded during the measurement period, the patient's blood pressure is assumed "not controlled."

- If there are multiple blood pressure readings on the same day, use the lowest systolic and the lowest diastolic reading as the most recent blood pressure reading.

**This eCQM is a patient-based measure.**

This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (https://ecqi.healthit.gov/qdm) for more information on the QDM.

**The measure initial patient population is revised to read:** For the eCQM Specifications and CMS Web Interface Measure Specifications collection types: Patients 18-85 years of age who had a visit and diagnosis of essential hypertension starting before and continuing into, or starting during the first six months of the measurement period.
Updated denominator exclusion: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types:

Added: Palliative care services given to patient any time during the measurement period.

Updated denominator confirmation: For the CMS Web Interface Measure Specifications collection type: Revised:

The language to reflect the diagnosis for essential hypertension must start before and continue into, or start during the first six months of the measurement period.

Updated denominator guidance: For the CMS Web Interface Measure Specifications collection type: Added: To assess the age for exclusions, the patient's age at the end of the measurement period should be used.

Updated denominator note: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types:

Revised: The diagnosis of essential hypertension must be present some time between 1 year prior to the measurement period and the first six months of the measurement period (January 1, 2021 - June 30, 2022).

For the MIPS CQMs Specifications collection type:

Added: To assess the age for exclusions, the patient's age at the end of the measurement period should be used.

The measure instructions note, numerator note, and narrative guidance are revised to read: For the MIPS CQMs Specifications, Medicare Part B Claims Measure Specifications, and CMS Web Interface Measure Specifications collection types:

In reference to the numerator element, only blood pressure readings performed by a clinician or a remote monitoring device are acceptable for numerator compliance with this measure. This includes blood pressures taken in person by a clinician and blood pressures measured remotely by electronic monitoring devices capable of transmitting the blood pressure data to the clinician. Blood pressure readings taken by a remote monitoring device and conveyed by the patient to the clinician are also acceptable. It is the clinician's responsibility and discretion to confirm the remote monitoring device used to obtain the blood pressure is considered acceptable and reliable and whether the blood pressure reading is considered accurate before documenting it in the patient's medical record.

Do not include BP readings:

• Taken during an acute inpatient stay or an ED visit
• Taken on the same day as a diagnostic test or diagnostic or therapeutic procedure that requires a change in diet or change in medication on or one day before the day of the test or procedure, with the exception of fasting blood tests. BP readings taken on the same day that the member receives a common low-intensity or preventive procedure are eligible for use. For example, the following procedures are considered common low intensity or preventive (this list is just for reference, and is not exhaustive):
  • Vaccinations
  • Injections (e.g., allergy, vitamin B-12, insulin, steroid, toradol, Depo-Provera, testosterone, lidocaine).
  • TB test.
  • IUD insertion.
  • Eye exam with dilating agents.
  • Wart or mole removal.
• Taken by the patient using a non-digital device such as with a manual blood pressure cuff and a stethoscope.

If no blood pressure is recorded during the measurement period, the patient's blood pressure is assumed "not controlled."

If there are multiple blood pressure readings on the same day, use the lowest systolic and the lowest diastolic reading as the most recent blood pressure reading.

Updated numerator note: For the Medicare Part B Claims Measure Specifications collection type: Added: To assess the age for exclusions, the patient's age on the date of the encounter should be used.

Steward:
National Committee for Quality Assurance

High Priority Measure: Yes

Measure Type: Intermediate Outcome

We propose to update the measure description to remove the term 'overlapping' and add clarity to the timing associated with the hypertension diagnosis. We propose that the denominator exclusion language be updated for all but the CMS Web Interface Measure Specifications collection type to add an exclusion for patients receiving palliative care, an this patient population is not appropriate for the clinical quality action being assessed. Additionally, for the eCQM Specifications collection type language was added to clarify timing for those exclusions that have an age-related component. For the eCQM Specifications collection type, the term 'overlaps' was removed and replace with plain language for clarity and the denominator exclusion for frailty or advanced illness was revised to update how these patients will be captured.

We propose to update the CMS Web Interface Measure Specifications collection type denominator exclusions language to clarify that, for the measure, long-term care will be defined as patients staying more than 90 consecutive days at the long-term care facility versus any 90 days within the performance period. Additionally for the CMS Web Interface Measure Specifications collection type denominator exclusions, we propose to update the ages for the frailty and advanced illness exclusions and add an exclusion specific to those patients 81 years and older to ensure the appropriate patients are being assessed for the quality action.

We propose to update the eCQM Specifications and CMS Web Interface Measure Specifications collection types “Pregnancy” value set to more accurately capture the state of pregnancy to ensure the denominator exclusion is being applied to the correct patient population and revised the logic for the end stage renal disease (ESRD) encounter to align with the intent of the measure. Additionally, we propose to update the “Kidney Transplant” value set to remove coding related to kidney transplant donor as it
would be appropriate for these patients to still be assessed for blood pressure control if diagnosed with essential hypertension. We propose to revise the eCQM Specifications guidance section to provide clarification that patient obtained blood pressure readings captured via non-digital devices are not acceptable for this measure as they may not provide an accurate reading and therefore do not meet the intent of the measure, as well as the addition of clarifying language for what suffices as an acceptable blood pressure reading. Additionally, we propose to update the initial patient population for the eCQM Specifications collection type to align with clarification for the timing of the hypertension diagnosis.

We propose to update the MIPS CQMs Specifications, Medicare Part B Claims Measure Specifications, and CMS Web Interface Measure Specifications collection types denominator, denominator note, and denominator confirmation to align with clarification for the timing of the hypertension diagnosis. Additionally for the MIPS CQMs Specifications, the Medicare Part B Claims Measure Specifications, and the CMS Web Interface Measure Specifications collection types, we propose to update the instructions note, numerator note, and narrative guidance to better clarify acceptable blood pressure readings for the purposes of clinical quality action assessment and examples of low intensity or preventive procedures that would not preclude the use of a blood pressure reading from that day or the day prior. We propose to revise the denominator note for the MIPS CQMs Specifications collection type, the numerator note for the Medicare Part B Claims Measure Specifications collection type, and the denominator guidance for the CMS Web Interface Measure Specifications collection type to clarify the timing for those exclusions that have an age-related component.

<td>Current Measure Description:</td>
<td>Percentage of patients 65 years of age and older who were ordered at least two of the same high-risk medications.</td>
</tr>
</tbody>
</table>

| Substantive Change: |

**Current Measure**

- **Measurement Period:** 30 Use
- **Collection Type:** Percentage of patients 65 years of age and older who were ordered at least two of the same high-risk medications.

**Measure Description:**

The measure description is revised to read:

For the eCQM Specifications collection type:

- Percentage of patients 65 years of age and older who were ordered at least two high-risk medications from the same drug class.
- Three rates are reported:
  1. Percentage of patients 65 years of age and older who were ordered at least two high-risk medications from the same drug class, except for appropriate diagnoses.
  2. Total rate (the sum of the two numerators divided by the denominator, deduplicating for patients in both numerators).
  3. Total rate (the sum of the two previous numerators, deduplicated).

For the MIPS CQMs Specifications collection type:

- Percentage of patients 65 years of age and older who were ordered at least two high-risk medications from the same drug class.

**Updated definition:** For the eCQM Specifications collection type: Added: Index prescription start date. The start date of the earliest prescription ordered for a high-risk medication during the measurement period.

**Updated denominator exclusion:** For the eCQM Specifications collection type: Added: Exclude patients whose Index prescription start date is revised.

**Updated logic and logic definitions:** For the eCQM Specifications collection type: Updated: For the MIPS CQMs Specifications collection type:

1. Exclude patients who did have a diagnosis of schizophrenia, schizoaffective disorder, or bipolar disorder on or between January 1 of the year prior to the measurement period and the Index Prescription Start Date (IPSD) for antipsychotics.
2. For patients with two or more benzodiazepine prescriptions ordered, exclude patients who did have a diagnosis of seizure disorders, rapid eye movement sleep behavior disorder, benzodiazepine withdrawal, ethanol withdrawal, or severe generalized anxiety disorder on or between January 1 of the year prior to the measurement period and the IPSD for benzodiazepines.

**Updated instructions:** For the MIPS CQMs Specifications collection type: Added:

- This measure will be calculated with 2 performance rates:
  1. Percentage of patients 65 years of age and older who were ordered at least two high-risk medications from the same drug class, except for appropriate diagnoses.
  2. Total rate (the sum of the two previous numerators, deduplicated).

**Updated numerator exclusion:** For the eCQM Specifications collection type: Added: Rate 2: For patients with two or more antipsychotic prescriptions ordered, exclude patients who did have a diagnosis of schizophrenia, schizoaffective disorder, or bipolar disorder on or between January 1 of the year prior to the measurement period and the Index Prescription Start Date (IPSD) for antipsychotics.

- For patients with two or more benzodiazepine prescriptions ordered, exclude patients who did have a diagnosis of seizure disorders, rapid eye movement sleep behavior disorder, benzodiazepine withdrawal, ethanol withdrawal, or severe generalized anxiety disorder on or between January 1 of the year prior to the measurement period and the IPSD for benzodiazepines.

**Updated denominator criteria:** For the MIPS CQMs Specifications collection type: Added: Submission Criteria 2

**Updated denominator exclusion:** For the MIPS CQMs Specifications collection type: Added: Submission Criteria 1:

- Patients receiving palliative care during the measurement period.

**Current Measure Description:**

- **Measurement Period:** 30 Use
- **Collection Type:** Percentage of patients 65 years of age and older who were ordered at least two of the same high-risk medications.
<table>

</thead>
<tbody>
<tr>
<td><strong>The measure numerator is revised to read:</strong> For the MIPS CQMs Specifications collection type:</td>
<td><strong>Numerator (Submission Criteria 1):</strong> Patients ordered at least two high-risk medications from the same drug class during the measurement year. <strong>Numerator (Submission Criteria 2):</strong> Patients with at least two orders of high-risk medications from the same drug class (i.e., antipsychotics and benzodiazepines), except for appropriate diagnoses.</td>
</tr>
<tr>
<td><strong>Updated numerator definition:</strong> For the MIPS CQMs Specifications collection type: Revised:</td>
<td><strong>Numerator (Submission Criteria 1):</strong> Definitions: The intent of the measure is to assess if the eligible clinician ordered high-risk medication(s). The intent of the numerator is to assess if the patient has either been ordered: • At least two high-risk medications from the same drug class (grouped by row) in Table 1 on different dates of service, or • At least two high-risk medications from the same drug class (grouped by row) in Table 2 on different dates of service, where the sum of days supply exceeds 90 days. If the patient had a high-risk medication previously prescribed by another provider, they would not be counted towards the numerator unless the submitting provider also ordered a high-risk medication for them from the same drug class. <strong>Cumulative Medication Duration</strong> – an individual’s total number of medication days over a specific period; the period counts multiple prescriptions with gaps in between, but does not count the gaps during which a medication was not dispensed. To determine the cumulative medication duration, determine first the number of the Medication Days for each prescription in the period: the number of doses divided by the dose frequency per day. Then add the Medication Days for each prescription without counting any days between the prescriptions. For example, there is an original prescription for 30 days with 2 refills for thirty days each. After a gap of 3 months, the medication was ordered again for 60 days with 1 refill for 60 days. The cumulative medication duration is $(30 \times 3) + (60 \times 2) = 210$ days over the 10 month period. <strong>Table 1 - High-Risk Medications at any dose or duration:</strong> <strong>Removed:</strong> Orphenadrine from Anticholinergics, first-generation antihistamines. <strong>Revised:</strong> Anticholinergics – Dicyclomine, oral short-acting. <strong>Added:</strong> Nonbenzodiazepine hypnotics – Eszopiclone, Zolpidem, Zaleplon. <strong>Table 2 - High-Risk Medications With Days Supply Criteria</strong> <strong>Removed:</strong> Nonbenzodiazepine hypnotics <strong>Added:</strong> Numerator (Submission Criteria 2): Definitions: The intent of the numerator is to assess if the patient has been ordered at least two high-risk medications from the same drug class (grouped by row) in Table 3 on different dates of service. The intent of the measure is to assess if the submitting provider ordered the high-risk medication(s). If the patient had a high-risk medication previously prescribed by another provider, they would not be counted towards the numerator unless the submitting provider also ordered a high-risk medication for them from the same drug class. <strong>Index Prescription Start Date</strong> - the start date of the earliest prescription ordered for a high-risk medication during the measurement period. <strong>Table 3 - High-Risk Medications: Antipsychotics, first (conventional) and second (atypical) generation and Benzodiazepines, long, short, and intermediate acting.</strong> <strong>Updated numerator instructions:</strong> For the MIPS CQMs Specifications collection type: Revised: <strong>Added:</strong> Submission Criteria 2: <strong>VERSE MEASURE:</strong> A lower calculated performance rate for this measure indicates better clinical care or control. The &quot;Performance Not Met&quot; numerator option for this measure is the representation of the better clinical quality or control. Submitting that numerator option will produce a performance rate that trends closer to 0%, as quality increases. For inverse measures a rate of 100% means all of the denominator eligible patients did not receive the appropriate care or were not in proper control. A high-risk medication is identified by: • A prescription for medications classified as high risk at any dose and for any duration listed in Table 3. <strong>Updated numerator note:</strong> For the MIPS CQMs Specifications collection type: Removed: numerator note.</td>

### D.31 Weight Assessment and Counseling for Nutrition and Physical Activity for Children and Adolescents

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Updated measure analytic:</strong> For all collection types: Revised: performance rate 1 will be utilized for benchmarking purposes.</td>
<td></td>
</tr>
</tbody>
</table>

**Steward:** National Committee for Quality Assurance

**High Priority Measure:** Yes

**Measure Type:** Process

**Rationale:**

We propose to restructure all of the collection types to introduce new performance rates based upon the American Geriatric Society Beers Criteria and expert panel recommendations, with performance rate one being utilized for benchmarking purposes as it is more comprehensive in assessment and aligns across the collection types. These revisions allow for the inclusion of antipsychotics and benzodiazepines to ensure alignment with most recent recommendations. The description for the measure is being updated for all collection types to align with the revisions in the measure and reflect the restructuring within multiple components of the specifications. Additionally, there will be multiple performance rates: three performance rates for the eCQM Specifications collection type and two performance rates for the MIPS CQMs Specifications collection type. We propose that the denominator exclusion language be updated for all collection types to add an exclusion for patients receiving palliative care, as this patient population is not appropriate for the clinical quality action being assessed. For the eCQM Specifications collection type, the term ‘overlaps’ was removed and replaced with plain language for clarity and consistency in implementation. The eCQM Specifications collection type’s value sets were revised to add and remove drug classes and the logic for the non-benzodiazepine hypnotics was revised to remove the 90-day supply criterion to align with the American Geriatric Society Beers Criteria guidelines.

We propose to revise the MIPS CQMs Specifications collection type to add a second performance rate and submission criteria as the measure is restructured to align with the American Geriatric Society Beers Criteria guidelines. Additionally, the medication tables have been revised to align with the current guidelines and intent of the measure revisions. Multiple components of the MIPS CQMs Specifications collection type were updated to align with revised structure and the American Geriatric Society Beers Criteria guidelines to ensure consistent language throughout and alignment with the measure intent.

| **Current Measure Description:** | The measure denominator exclusion is revised to read: Exclude patients who are in hospice care for any part of the measurement period. The measure guidance is revised to read: Numerator criteria includes evidence of receipt of the recommended vaccine or the following: -- DTaP: Adverse reaction to the DTaP or Td vaccine; or encephalopathy due to DTaP or Td vaccination -- Polio (IPV) vaccine: Adverse reaction to the IPV vaccine, streptomycin, polymyxin B, or neomycin -- MMR Vaccination: Immunodeficiency, HIV, lymphoreticular cancer, multiple myeloma, or leukemia; adverse reaction to neomycin; history of measles, mumps, or rubella; or a seropositive result for the antigens -- Hib: Adverse reaction to the Hib vaccine -- Hepatitis B: Seropositive result for the antigen, adverse reaction to the hepatitis B vaccine, adverse reaction to common baker’s yeast, or a history of hepatitis B illness -- Chicken pox (varicella zoster): Seropositive result for the antigen; immunodeficiency, HIV, lymphoreticular cancer, multiple myeloma, or leukemia; adverse reaction to neomycin; or a history of varicella zoster -- Pneumococcal: Adverse reaction to the pneumococcal vaccine -- Hepatitis A: Seropositive result for the antigen, adverse reaction to the hepatitis A vaccine, or a history of hepatitis A illness -- Rotavirus: Adverse reaction to the rotavirus vaccine, severe combined immunodeficiency, or a history of intussusception -- Influenza: Adverse reaction to the influenza vaccine; immunodeficiency, HIV, lymphoreticular cancer, multiple myeloma, or leukemia; or adverse reaction to neomycin The measure allows a grace period by measuring compliance with these recommendations between birth and age two. This eCQM is a patient-based measure. 

### Substantive Change:

- The measure denominator exclusion is revised to read: Exclude patients who are in hospice care for any part of the measurement period.
- The measure guidance is revised to read:
  - Numerator criteria includes evidence of receipt of the recommended vaccine or the following:
    - DTaP: Adverse reaction to the DTaP or Td vaccine; or encephalopathy due to DTaP or Td vaccination
    - Polio (IPV) vaccine: Adverse reaction to the IPV vaccine, streptomycin, polymyxin B, or neomycin
    - MMR Vaccination: Immunodeficiency, HIV, lymphoreticular cancer, multiple myeloma, or leukemia; adverse reaction to neomycin; history of measles, mumps, or rubella; or a seropositive result for the antigens
    - Hib: Adverse reaction to the Hib vaccine
    - Hepatitis B: Seropositive result for the antigen, adverse reaction to the hepatitis B vaccine, adverse reaction to common baker’s yeast, or a history of hepatitis B illness
    - Chicken pox (varicella zoster): Seropositive result for the antigen; immunodeficiency, HIV, lymphoreticular cancer, multiple myeloma, or leukemia; adverse reaction to neomycin; or a history of varicella zoster
    - Pneumococcal: Adverse reaction to the pneumococcal vaccine
    - Hepatitis A: Seropositive result for the antigen, adverse reaction to the hepatitis A vaccine, or a history of hepatitis A illness
    - Rotavirus: Adverse reaction to the rotavirus vaccine, severe combined immunodeficiency, or a history of intussusception
    - Influenza: Adverse reaction to the influenza vaccine; immunodeficiency, HIV, lymphoreticular cancer, multiple myeloma, or leukemia; or adverse reaction to neomycin
- The measure allows a grace period by measuring compliance with these recommendations between birth and age two.
- This eCQM is a patient-based measure.

### Updated logic and logic definitions:

- **Added:** influenza LAIV vaccination as numerator compliant.

### Steward:

- National Committee for Quality Assurance

### High Priority Measure:

- No

### Measure Type:

- Process

### Rationale:

We propose to remove the term ‘overlaps’ from the denominator exclusion and replace with plain language for clarity and consistency in implementation. The measure guidance is updated to reflect the intent of the measure and clarify the criteria for numerator compliance more accurately. Additionally, we propose to update the logic and logic definitions to include the influenza LAIV vaccination to align with current clinical guidelines.
### D.33 Ultrasound Determination of Pregnancy Location for Pregnant Patients with Abdominal Pain

<table>
<thead>
<tr>

<td>Effective Clinical Care</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>Medicare Part B Claims Measure Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>Percentage of pregnant female patients aged 14 to 50 who present to the emergency department (ED) with a chief complaint of abdominal pain or vaginal bleeding who receive a trans-abdominal or trans-vaginal ultrasound to determine pregnancy location.</td>
</tr>
<tr>
<td>Substantive Change:</td>
<td>Updated denominator criteria: Revised: Patient has any emergency department encounter during the performance period with Place of Service Indicator 23 (The claim form Place of Service field must indicate emergency department) OR Patient encounter during the performance period (CPT)</td>
</tr>
<tr>
<td>Rationale:</td>
<td>We propose to update the denominator criteria to capture all patients with an encounter with a Place of Service indicator 23 to ensure that all applicable patients are being assessed for the quality action as it is appropriate for those patients who meet all other denominator criteria and are seen at any emergency department encounter. In the circumstance the Medicare Part B Claims Measure Specifications collection type is not finalized for removal, all finalized substantive changes will be reflected within this collection type specification.</td>
</tr>
</tbody>
</table>

### D.34 Biopsy Follow-Up

<table>
<thead>
<tr>

<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Quality#:</td>
<td>265</td>
</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>N/A</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Communication and Care Coordination</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>Percentage of new patients whose biopsy results have been reviewed and communicated to the primary care/referring physician and patient.</td>
</tr>
<tr>
<td>Substantive Change:</td>
<td>The measure denominator note is revised to read: *Signifies that this CPT Category I code is a non-covered service under the Medicare Part B Physician Fee Schedule (PFS). These non-covered services should be counted in the denominator population for MIPS CQMs. Only the first biopsy results for new patients should be reported for this measure. Do not include specimens sent for debridement.</td>
</tr>
<tr>
<td>Rationale:</td>
<td>We propose to update the denominator note to clarify which biopsy, if multiple biopsies are performed, should be utilized for assessment of the clinical quality action and that only new patients should be reported for the purposes of this measure.</td>
</tr>
</tbody>
</table>

### D.35 Dementia: Cognitive Assessment

<td>eCQM Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>Percentage of patients, regardless of age, with a diagnosis of dementia for whom an assessment of cognition is performed and the results reviewed at least once within a 12-month period.</td>
</tr>
<tr>
<td>Substantive Change:</td>
<td>Updated logic and logic definitions: Revised: dementia and qualifying encounter logic to clarify timing of during the measurement period.</td>
</tr>
<tr>
<td>Rationale:</td>
<td>We propose to revise the technical definition names and logic to provide clarity and ensure alignment with measure intent.</td>
</tr>
</tbody>
</table>
D.3c Parkinson’s Disease: Psychiatric Symptoms Assessment for Patients with Parkinson’s Disease

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF #/eCQM NQF #:</td>
<td>N/A/N/A</td>
</tr>
<tr>
<td>Quality #:</td>
<td>290</td>
</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>N/A</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Effective Clinical Care</td>
</tr>
</tbody>
</table>

Current Collection Type: MIPS CQMs Specifications

Current Measure Description: Percentage of all patients with a diagnosis of Parkinson’s Disease [PD] who were assessed for psychiatric symptoms once in the past 12 months.

Updated Measure Description:

The measure title is revised from 'Parkinson’s Disease: Psychiatric Symptoms Assessment for Patients with Parkinson’s Disease’ to: Assessment of Mood Disorders and Psychosis for Patients with Parkinson’s Disease.

The measure description is revised to read: Percentage of all patients with a diagnosis of Parkinson’s Disease [PD] who were assessed for depression, anxiety, apathy, AND psychosis once during the measurement period.

Updated denominator criteria: Removed: coding related to Hospital Inpatient Services.

The measure numerator is revised to read: Patients who were assessed for depression, anxiety, apathy, AND psychosis once during the measurement period.

Substantive Change:

Psychosis: includes hallucinations, illusions, delusions, paranoia

Updated numerator instructions:

Added:
- For Depression: Patient Health Questionnaire 2 (PHQ2), Patient Health Questionnaire 9 (PHQ9), Montgomery-Asberg Depression Rating Scale (MADRS)
- For Anxiety: Parkinson Anxiety Scale (PAS)

Removed:
- For Impulse Control Disorder (9): Questionnaire for Impulsive-Compulsive Disorders in Parkinson’s Disease-Rating Scale (QUIP-RS) Minnesota Impulsive Disorders Interview

Updated numerator note: Removed: the Numerator Note.

The measure numerator options are revised to read:
- Performance Met: Depression, anxiety, apathy, AND psychosis assessed
- Performance Not Met: Depression, anxiety, apathy, AND psychosis not assessed

Steward: American Academy of Neurology

High Priority Measure: No

Measure Type: Process

Rationale:

We propose to update the measure to lessen the requirements necessary for numerator compliance to balance quality patient care and clinician burden based upon feedback and recommendations from the measure steward’s expert work group. The measure title, description, numerator, and numerator options will have updates to align with the proposed change to the measure’s clinical quality action requirement. We propose to remove Hospital Inpatient Services from the denominator criteria as patients seen in the inpatient setting are not appropriate in the denominator eligible patient population for the clinical quality action being assessed, as this is to address care for patients seen during outpatient encounters. Additionally, we propose to revise the numerator definition to more clearly define what “assessed” means for the purposes of this measure and what components are included within the term “psychosis”. We propose to revise the list of tools available for use in the Parkinson’s disease patient population to align with current availability and applicability. We propose to remove the numerator note to align with the updated time frame to ensure annual assessment.
### D.37 Parkinson’s Disease: Cognitive Impairment or Dysfunction Assessment for Patients with Parkinson’s Disease

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF # / eCQM NQF #:</td>
<td>N/A / N/A</td>
</tr>
<tr>
<td>Quality #:</td>
<td>291</td>
</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>N/A</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Effective Clinical Care</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>Percentage of all patients with a diagnosis of Parkinson’s Disease [PD] who were assessed for cognitive impairment or dysfunction once in the past 12 months.</td>
</tr>
</tbody>
</table>

**Substantive Change:**

- **The measure title is revised from 'Parkinson’s Disease: Cognitive Impairment or Dysfunction Assessment for Patients with Parkinson’s Disease' to: Assessment of Cognitive Impairment or Dysfunction for Patients with Parkinson’s Disease.**
- **The measure description is revised to read:** Percentage of all patients with a diagnosis of Parkinson’s Disease [PD] who were assessed for cognitive impairment or dysfunction once during the measurement period.
- **Updated denominator criteria:** Removed: coding related to Hospital Inpatient Services.
- **The measure numerator is revised to read:** Patients (or care partner as appropriate) who were assessed for cognitive impairment or dysfunction once during the measurement period.
- **The measure numerator definition is revised to read:** Assessed – Is defined as a discussion with the patient or care partner or use of a screening tool OR referral to neuropsychologist for testing.
- **Updated numerator instructions:** Added: Neuro-QoL and Patient-Reported Outcomes Measurement Information System (PROMIS).
- **Updated numerator note:** Removed: the Numerator Note.
- **Updated numerator options:** Added:
  - Denominator Exception: Patient or care partner decline assessment
- **Denominator Exception:** On date of encounter, patient is not able to participate in assessment or screening, including non-verbal patients, delirious, severely aphasic, severely developmentally delayed, severe visual or hearing impairment and for those patients, no knowledgeable informant available.

**Rationale:**

We propose to update the measure’s title to remove redundancy in wording. We propose to remove Hospital Inpatient Services from the denominator criteria as patients seen in the inpatient setting are not appropriate for inclusion within the denominator eligible patient population for the clinical quality action being assessed, as this is to address cares for patients seen during outpatient encounters. We propose to update the measure numerator and numerator definition to include the care partner within the assessment of the clinical quality action as patients who have severe cognitive impairment may be unable to accurately respond to questions, leaving clinicians to rely on care partners for accurate information. We propose to add the PROMIS and Neuro-QoL (Quality of Life) to the list of tools in the numerator instructions as these are applicable to the intent of the measure. Additionally, we propose to update the numerator options to add denominator exceptions as the measure steward’s expert work group felt it was important not to penalize clinicians for patients/care partners who are unable to participate in or decline the assessment. Additionally, we propose to update the description and numerator to reflect that the quality action should be completed annually to ensure timely capture of cognitive impairment or dysfunction. To align with these revisions, we propose to remove the numerator note.
### D.38 Parkinson’s Disease: Rehabilitative Therapy Options

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF # / eCQM NQF #:</td>
<td>N/A / N/A</td>
</tr>
<tr>
<td>Quality #:</td>
<td>293</td>
</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>N/A</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Communication and Care Coordination</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>Percentage of all patients with a diagnosis of Parkinson’s Disease (or caregiver(s), as appropriate) who had rehabilitative therapy options (i.e., physical, occupational, and speech therapy) discussed once in the past 12 months.</td>
</tr>
</tbody>
</table>

**Substantive Change:**

- The measure title is revised from 'Parkinson’s Disease: Rehabilitative Therapy Options' to: Rehabilitative Therapy Referral for Patients with Parkinson’s Disease.
- The measure description is revised to read: Percentage of all patients with a diagnosis of Parkinson’s Disease who were referred to physical, occupational, speech, or recreational therapy once during the measurement period.
- Updated denominator criteria: Added: Physical and Occupational Therapy, Speech Language Pathology
- The measure numerator is revised to read: Patients who were referred to physical, occupational, speech, or recreational therapy once during the measurement period.
- Updated numerator note: Removed: the Numerator Note.
- The measure numerator options is revised to read:
  - Performance Met: Referral to physical, occupational, speech, or recreational therapy
  - Denominator Exception: Patient and/or care partner decline referral
  - Denominator Exception: Clinician determines patient does not require referral
  - Denominator Exception: Patient already receiving physical/occupational/speech/recreational therapy during the measurement period
- Performance Not Met: Patient not referred, reason not otherwise specified

**Rationale:**

We propose to update the measure title to remove redundancy in wording. We propose to update the measure description and numerator to include recreational therapy as it is clinically relevant and can be beneficial to the Parkinson’s disease patient population. We propose to update and expand the denominator coding to include additional MIPS eligible clinician types as this measure may be appropriate to their scope of care. We propose to remove the numerator note to align with the updated timeframe to ensure annual assessment. Additionally, we propose to update the numerator options to align with the addition of recreational therapy as numerator compliant and allowing for denominator exceptions for those patients that decline a referral, do not need a referral based on the stage of the disease, or for those patients who are already receiving one or more of the services, as clinicians should not be penalized in these situations.
### D.39 Initiation and Engagement of Alcohol and Other Drug Dependence Treatment

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF # / eCQM NQF #:</td>
<td>N/A / N/A</td>
</tr>
<tr>
<td>Quality #:</td>
<td>305</td>
</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>CMS137v10</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Effective Clinical Care</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>eCQM Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>Percentage of patients 13 years of age and older with a new episode of alcohol or other drug abuse or (AOD) dependence who received the following. Two rates are reported. a. Percentage of patients who initiated treatment including either an intervention or medication for the treatment of AOD abuse or dependence within 14 days of the diagnosis. b. Percentage of patients who engaged in ongoing treatment including two additional interventions or a medication for the treatment of AOD abuse or dependence within 34 days of the initiation visit. For patients who initiated treatment with a medication, at least one of the two engagement events must be a treatment intervention.</td>
</tr>
<tr>
<td>Substantive Change:</td>
<td>Updated initial patient population: Revised: logic for timing associated with the timing of the first dependence diagnosis. Updated numerator logic: Revised: timing attribute associated with orders of medications to 'authorDatetime'. The measure denominator exclusion is revised to read: 1. Exclude patients with a negative diagnosis history, defined as an encounter or medication treatment for a diagnosis of alcohol, opioid or other drug abuse or dependence in the 60 days prior to the first episode of alcohol or drug dependence. 2. Exclude patients who are in hospice care for any part of the measurement period.</td>
</tr>
<tr>
<td>Rationale:</td>
<td>We propose to revise the denominator exclusion to more accurately represent the intent to exclude patients with prior and recent history of substance abuse treatment as this patient population is not appropriate for the clinical quality action being assessed. The term 'overlaps' was removed from the denominator exclusion and replaced with plain language for clarity and consistency in implementation. We propose to revise the logic for the timing associated with the first dependence diagnosis timing to align with the intent of the measure to correctly capture all diagnoses during the measurement period through November 14. We propose to update the value set for &quot;Medication, Order&quot; to use 'authorDatetime' as this is the preferred timing attribute. We propose to revise the anchor for age calculations of the stratifications to align with those within the initial patient population for alignment.</td>
</tr>
</tbody>
</table>

### D.40 Cervical Cancer Screening

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF # / eCQM NQF #:</td>
<td>N/A / N/A</td>
</tr>
<tr>
<td>Quality #:</td>
<td>309</td>
</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>CMS124v10</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Effective Clinical Care</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>eCQM Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>Percentage of women 21-64 years of age who were screened for cervical cancer using either of the following criteria: * Women age 21-64 who had cervical cytology performed within the last 3 years * Women age 30-64 who had cervical human papillomavirus (HPV) testing performed within the last 5 years</td>
</tr>
<tr>
<td>Substantive Change:</td>
<td>Updated denominator exclusion: Revised: Exclude patients who are in hospice care for any part of the measurement period. Added: Exclude patients receiving palliative care during the measurement period. Updated value set/coding: Updated: replaced &quot;Congenital absence of cervix (disorder)&quot; (&quot;SNOMEDCT Code (37687000)&quot;) with &quot;Congenital or Acquired Absence of Cervix&quot; (2.16.840.1.113883.3.464.1.1003.111.12.1016) value set.</td>
</tr>
<tr>
<td>Rationale:</td>
<td>We propose that the denominator exclusion language be updated for all collection types to add an exclusion for patients receiving palliative care, as this patient population is not appropriate for the clinical quality action being assessed and the term 'overlaps' was removed and replaced with plain language for clarity and consistency in implementation. We propose to update the value sets for the denominator exclusion to include acquired absence of cervix as this patient population is not appropriate for the clinical quality action being assessed.</td>
</tr>
</tbody>
</table>
### D.41 Chlamydia Screening for Women

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF # / eCQM NQF #:</td>
<td>N/A / N/A</td>

<tr>
<td>National Quality Strategy Domain:</td>
<td>Community/Population Health</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>eCQI Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>Percentage of women 16-24 years of age who were identified as sexually active and who had at least one test for chlamydia during the measurement period.</td>
</tr>
<tr>
<td>Substantive Change:</td>
<td><strong>Updated denominator exclusion: Revised:</strong> Exclude patients whose who are in hospice care for any part of the measurement period.</td>
</tr>
<tr>
<td></td>
<td><strong>Updated value set: Added:</strong> Clutton’s joints “Diagnoses Used to Indicate Sexual Activity” value set.</td>
</tr>
<tr>
<td><strong>Steward:</strong></td>
<td>National Committee for Quality Assurance</td>
</tr>
<tr>
<td><strong>High Priority Measure:</strong></td>
<td>No</td>
</tr>
<tr>
<td><strong>Measure Type:</strong></td>
<td>Process</td>
</tr>
<tr>
<td><strong>Rationale:</strong></td>
<td>We propose to remove the term “overlaps” and replace with plain language for clarity and consistency in implementation. We propose to update the “Diagnoses Used to Indicate Sexual Activity” value set to align with coding utilized in other programs, however, this code set will undergo further refinements in future years.</td>
</tr>
</tbody>
</table>

### D.42 Falls: Screening for Future Fall Risk

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>

<td>CMS139v10</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Patient Safety</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>eCQM Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>Percentage of patients 65 years of age and older who were screened for future fall risk during the measurement period.</td>
</tr>
<tr>
<td>Substantive Change:</td>
<td><strong>Updated denominator exclusion: For the eCQM Specifications collection type: Revised:</strong> Exclude patients who are in hospice care for any part of the measurement period.</td>
</tr>
<tr>
<td></td>
<td><strong>Updated denominator exclusion: For the CMS Web Interface Measure Specifications collection type: Removed:</strong> Exclude patients who were assessed to be non-ambulatory during the measurement period.</td>
</tr>
<tr>
<td></td>
<td><strong>Updated denominator guidance: For the CMS Web Interface Measure Specifications collection type: Removed:</strong> Denominator Exclusion, count as non-ambulatory only if non-ambulatory at the most recent encounter during the measurement period (i.e., patient is not ambulatory, bed ridden, immobile, confined to chair, wheelchair bound, dependent on helper pushing wheelchair, independent in wheelchair or minimal help in wheelchair).</td>
</tr>
<tr>
<td><strong>Steward:</strong></td>
<td>National Committee for Quality Assurance</td>
</tr>
<tr>
<td><strong>High Priority Measure:</strong></td>
<td>Yes</td>
</tr>
<tr>
<td><strong>Measure Type:</strong></td>
<td>Process</td>
</tr>
<tr>
<td><strong>Rationale:</strong></td>
<td>We propose for the eCQM Specifications collection type to remove the term ‘overlaps’ from the denominator exclusion and replace with plain language for clarity and consistency in implementation.</td>
</tr>
<tr>
<td></td>
<td>We proposed for the CMS Web Interface Measure Specifications collection type to remove the denominator exclusion for non-ambulatory patients to address implementation challenges as there is a lack of available documentation for a non-ambulatory status. Additionally, the denominator guidance has been updated to reflect this revision.</td>
</tr>
</tbody>
</table>
### D.43 Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF # / eCQM NQF #:</td>
<td>1525 / N/A</td>
</tr>
<tr>
<td>Quality #:</td>
<td>326</td>
</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>N/A</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Effective Clinical Care</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>Medicare Part B Claims Measure Specifications / MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>Percentage of patients aged 18 years and older with nonvalvular atrial fibrillation (AF) or atrial flutter who were prescribed warfarin OR another FDA-approved oral anticoagulant drug for the prevention of thromboembolism during the measurement period.</td>
</tr>
</tbody>
</table>

**Substantive Change:**

**Modified collection type:** MIPS CQM Specifications collection type.

**The measure description is revised to read:** Percentage of patients aged 18 years and older with atrial fibrillation (AF) or atrial flutter who were prescribed an FDA-approved oral anticoagulant drug for the prevention of thromboembolism during the measurement period.

**Updated denominator exclusion: Added:**

1. Patients with moderate or severe mitral stenosis
2. Patients with mechanical prosthetic heart valve

**Steward:**

American Heart Association

**High Priority Measure:**

No

**Measure Type:**

Process

**Rationale:**

We propose to remove the Medicare Part B Claims Measure Specifications collection type as it has reached the end of the topped out lifecycle as finalized in 82 FR 53640. However, the benchmarking data continues to show a gap for the MIPS CQMs Specifications collection type, as such, the measure will be retained for this collection type.

We propose to revise the measure description to align with the language revisions in the measure to no longer explicitly state the valve types. We propose to add denominator exclusions that align with language revisions to remove those patients for whom the clinical quality action being assessed would not be appropriate.

In the circumstance the Medicare Part B Claims Measure Specifications collection type is not finalized for removal, all finalized substantive changes will be reflected within this collection type specification.
### D.44 Maternity Care: Elective Delivery or Early Induction Without Medical Indication at < 39 Weeks (Overuse)

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF / eCQM NQF #:</td>
<td>N/A / N/A</td>
</tr>
<tr>
<td>Quality #:</td>
<td>335</td>
</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>N/A</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Patient Safety</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>Percentage of patients, regardless of age, who gave birth during a 12-month period who delivered a live singleton at &lt; 39 weeks of gestation completed who had elective deliveries by cesarean section (C-section), or early inductions of labor, without medical indication.</td>
</tr>
</tbody>
</table>

#### Substantive Change:

- **The measure title is revised from 'Maternity Care: Elective Delivery or Early Induction Without Medical Indication at < 39 Weeks (Overuse)' to: Maternity Care: Elective Delivery (Without Medical Indication) at < 39 Weeks (Overuse)***

- **The measure description is revised to read:** Percentage of patients, regardless of age, who gave birth during a 12-month period, delivered a live singleton at < 39 weeks of gestation, and had elective deliveries (without medical indication) by cesarean birth or induction of labor.

- **The measure numerator options are revised to read:**
  - **Performance Met:** Elective delivery (without medical indication) by cesarean birth or induction of labor performed (<39 weeks of gestation)
  - **Denominator Exception:** Medical indication for delivery by cesarean birth or induction of labor (<39 weeks of gestation)

- **Updated performance calculation: Revised:** Measure analytic was updated to be inverse.

#### Steward:
- Centers for Medicare & Medicaid Services

#### High Priority Measure:
- Yes

#### Measure Type:
- Outcome

#### Rationale:
- We propose to update the measure analytic to be inverse to better align with the intent of the measure as this is an overuse measure. We propose to update the measure title, description, and numerator options to align with the revision in analytic as a lower calculated performance rate will now indicate better clinical care for the purposes of this measure.

- In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.
### D.45 Maternity Care: Postpartum Follow-up and Care Coordination

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF # / eCQM NQF #:</td>
<td>N/A / N/A</td>
</tr>
<tr>
<td>Quality #:</td>
<td>336</td>
</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>N/A</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Communication and Care Coordination</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>Percentage of patients, regardless of age, who gave birth during a 12-month period who were seen for postpartum care before or at 8 weeks of giving birth and received the following at a postpartum visit: breast-feeding evaluation and education, postpartum depression screening, postpartum glucose screening for gestational diabetes patients, family and contraceptive planning counseling, tobacco use screening and cessation education, healthy lifestyle behavioral advice, and an immunization review and update.</td>
</tr>
<tr>
<td>Substantive Change:</td>
<td>The measure description is revised to read: Percentage of patients, regardless of age, who gave birth during a 12-month period who were seen for postpartum care before or at 12 weeks of giving birth and received the following at a postpartum visit: breast-feeding evaluation and education, postpartum depression screening, postpartum glucose screening for gestational diabetes patients, family and contraceptive planning counseling, tobacco use screening and cessation education, healthy lifestyle behavioral advice, and an immunization review and update.</td>
</tr>
<tr>
<td>Rationale:</td>
<td>We propose to update the timeframe for the postpartum care visit from before or at 8 weeks of giving birth to before or at 12 weeks of giving birth, which is reflected in revisions to multiple components of the measure for alignment. This revision aligns with American College of Obstetricians and Gynecologists (ACOG) guidance and better aligns with current clinical workflows. This also ensures a more complete patient population is addressed to drive quality care.</td>
</tr>
</tbody>
</table>

### D.46 HIV Medical Visit Frequency

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF # / eCQM NQF #:</td>
<td>2079 / N/A</td>
</tr>
<tr>
<td>Quality #:</td>
<td>340</td>
</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>N/A</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Efficiency and Cost Reduction</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>Percentage of patients, regardless of age with a diagnosis of HIV who had at least one medical visit in each 6 month period of the 24 month measurement period, with a minimum of 60 days between medical visits.</td>
</tr>
<tr>
<td>Substantive Change:</td>
<td>The measure denominator note is revised to read: In order to determine denominator eligibility, patients should be diagnosed with HIV during the first 3 months of the 24-month measurement period or have a diagnosis prior to the 24-month measurement period. The 24-month measurement period is defined as the 24 months prior to and including the date of the first qualifying encounter during the performance period (i.e., January 1, 2022 through December 31, 2022). Performance of the measure is met when there is at least one medical visit in each 6 month interval with 60 days between denominator eligible encounters for patients with HIV within the 24-month measurement period.</td>
</tr>
<tr>
<td>Rationale:</td>
<td>We propose to revise the denominator note to clarify the 24-month period to ensure alignment with the measure intent and consistency in implementation.</td>
</tr>
</tbody>
</table>
### D.47 Total Knee Replacement: Shared Decision-Making: Trial of Conservative (Non-surgical) Therapy

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NCQF/NCQF #</td>
<td>N/A / N/A</td>
</tr>
<tr>
<td>Quality</td>
<td>350</td>
</tr>
<tr>
<td>CMS CQM ID</td>
<td>N/A</td>
</tr>
<tr>
<td>National Quality Strategy Domain</td>
<td>Communication and Care Coordination</td>
</tr>
<tr>
<td>Current Collection Type</td>
<td>MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Current Measure Description</td>
<td>Percentage of patients regardless of age undergoing a total knee replacement with documented shared decision-making with discussion of conservative (non-surgical) therapy (e.g., non-steroidal anti-inflammatory drug (NSAIDs), analgesics, weight loss, exercise, injections) prior to the procedure.</td>
</tr>
<tr>
<td>Rationale</td>
<td>The measure title is revised from 'Total Knee Replacement: Shared Decision-Making: Trial of Conservative (Non-surgical) Therapy' to: Total Knee or Hip Replacement: Shared Decision-Making: Trial of Conservative (Non-surgical) Therapy. The measure description is revised to read: Percentage of patients regardless of age undergoing a total knee or total hip replacement with documented shared decision-making with discussion of conservative (non-surgical) therapy (e.g., non-steroidal anti-inflammatory drug (NSAIDs), analgesics, weight loss, exercise, injections) prior to the procedure. Updated Instructions: Revised: This measure is to be submitted each time a procedure for total knee or total hip replacement is performed during the performance period. Updated Denominator: Added: Total hip replacement.</td>
</tr>
<tr>
<td>Steward</td>
<td>American Association of Hip and Knee Surgeons</td>
</tr>
<tr>
<td>High Priority Measure</td>
<td>Yes</td>
</tr>
<tr>
<td>Measure Type</td>
<td>Process</td>
</tr>
</tbody>
</table>

**Substantive Change:** We propose to update the measure to include total hip replacements as denominator eligible as the clinical quality action being assessed is applicable to this procedure as well. This will ensure that a broader patient population is being assessed as it is important to for the patient and clinician to engage in shared decision making to ensure that joint replacement therapy is the best treatment option. Multiple components of the measure will be updated to reflect the additional procedure of total hip replacement.

In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.

### D.48 Total Knee Replacement: Venous Thromboembolic and Cardiovascular Risk Evaluation

</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Effective Clinical Care</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>eCQM Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>Percentage of children 6-12 years of age and newly dispensed a medication for attention-deficit/hyperactivity disorder (ADHD) who had appropriate follow-up care. Two rates are reported. a) Percentage of children who had one follow-up visit with a practitioner with prescribing authority during the 30-Day Initiation Phase. b) Percentage of children who remained on ADHD medication for at least 210 days and who, in addition to the visit in the Initiation Phase, had at least two additional follow-up visits with a practitioner within 270 days (9 months) after the Initiation Phase ended.</td>
</tr>
<tr>
<td>Substantive Change:</td>
<td>Updated denominator exclusion: Revised: For all denominators: Exclude patients who are in hospice care for any part of the measurement period. The measure guidance is revised to read: This eCQM is a patient-based measure. This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (<a href="https://ecqi.healthit.gov/qdm">https://ecqi.healthit.gov/qdm</a>) for more information on the QDM. The measure numerator is revised to read: Numerator 1: Patients who had at least one visit with a practitioner with prescribing authority within 30 days after the IPSD. Numerator 2: Patients who had at least one visit with a practitioner with prescribing authority during the Initiation Phase, and at least two follow-up visits during the Continuation and Maintenance Phase. Updated performance calculation: Revised: Performance Rate 2 will be used for benchmarking purposes.</td>
</tr>
<tr>
<td>Steward:</td>
<td>National Committee for Quality Assurance</td>
</tr>
<tr>
<td>High Priority Measure:</td>
<td>No</td>
</tr>
<tr>
<td>Measure Type:</td>
<td>Process</td>
</tr>
<tr>
<td>Rationale:</td>
<td>We propose to remove the term ‘overlaps’ from the denominator exclusion and replace with plain language for clarity and consistency in implementation. We propose to update the guidance to remove the language regarding how cumulative medication duration is calculated as this is outdated and no longer in alignment with the measure intent. We propose to revise the numerator language to allow for telehealth visits as these are appropriate for inclusion when assessing for the clinical quality action. We propose to update the performance calculation for the measure to utilize the performance rate for submission criteria 2 as this is more indicative of quality care during and after the Initiation Phase. In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.</td>
</tr>
</tbody>
</table>
D.51 Depression Remission at Twelve Months

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF # / eCQM NQF #:</td>
<td>0710 / 0710e</td>
</tr>
<tr>
<td>Quality #:</td>
<td>370</td>
</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>CMS159v10</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Effective Clinical Care</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>eCQM Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>The percentage of adolescent patients 12 to 17 years of age and adult patients 18 years of age or older with major depression or dysthymia who reached remission 12 months (+/- 60 days) after an index event date.</td>
</tr>
</tbody>
</table>

Substantive Change:

Updated logic definitions: For the eCQM Specifications collection type: Revised: timing of denominator exclusion elements; 'Global "ToDate" [element] on or before end of "Measurement Assessment Period". Updated denominator criteria: For all collection types: Added: coding for mental and behavioral health MIPS eligible clinicians to both submission criteria.

Updated initial population: For the CMS Web Interface Measure Specifications collection type: Revised: Adolescent patients 12 to 17 years of age and adult patients 18 years of age or older with a diagnosis of major depression or dysthymia and an initial Patient Health Questionnaire-9 item version (PHQ-9) or Patient Health Questionnaire-9 Modified for Teens and Adolescents (PHQ-9M) score greater than nine during the index event. Patients may be assessed using PHQ-9 or PHQ-9M on the same day or up to 7 days prior to the encounter (index event). Updated guidance: For the CMS Web Interface Measure Specifications collection type: Added: When a baseline assessment is conducted with PHQ 9M, the follow-up assessment can use either a PHQ 9M or PHQ 9.

Updated denominator exclusion: For the CMS Web Interface Measure Specifications collection type: Added: Patients with a diagnosis of personality disorder emotionally labile.

Steward: Minnesota Community Measurement
High Priority Measure: Yes
Measure Type: Outcome
Rationale: We propose to update the eCQM Specifications collection type to revise the timing of the denominator exclusion elements to ensure the full 12 months + 60 days after the index event date is allowed in order to align with the measure intent and language. We propose to expand the denominator eligible encounters for all collection types to include mental and behavioral health MIPS eligible clinicians as this measure is applicable to their scope of care.

We propose to update the CMS Web Interface Measure Specifications collection type as the measure steward believes that allowing flexibility for the timeframe in which a PHQ-9 PHQ-9M can be obtained will accommodate pre-visit planning or distribution of a PHQ-9 PHQ-9M tool prior to the encounter (office visit, psychiatry or psychotherapy visit, telephone or online encounter). The intent of this change includes the following principles:

1. The patient must have the corresponding diagnosis at the time of the index encounter.
2. The patient must have completed the PHQ-9 PHQ-9M and have a score greater than 9.
3. That same PHQ-9 PHQ-9M is directly tied to and used during the index encounter.

We propose to revise the denominator exclusion language for the CMS Web Interface Measure Specifications collection type for a diagnosis of personality disorder to further clarify ensuring the correct patient population is being excluded from quality action assessment.

We propose to update the guidance for CMS Web Interface Measure Specifications collection type to add clarity regarding the assessment that may be used for the follow-up assessment for the purposes of meeting performance for this measure.

D.52 Closing the Referral Loop: Receipt of Specialist Report

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF # / eCQM NQF #:</td>
<td>N/A / N/A</td>
</tr>
<tr>
<td>Quality #:</td>
<td>374</td>
</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>CMS50v10</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Communication and Care Coordination</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>eCQM Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>Percentage of patients with referrals, regardless of age, for which the referring provider receives a report from the provider to whom the patient was referred.</td>
</tr>
</tbody>
</table>

Substantive Change:

The measure numerator note is revised to read: For the MIPS CQMs Specifications collection type: The consultant report that will successfully close the referral loop should be related to the first referral for a patient during the measurement period. If there are multiple consultant reports received by the referring provider which pertain to a particular referral, use the first consultant report to satisfy the measure. The provider to whom the patient was referred is responsible for sending the consultant report that will fulfill the communication. Note: this is not the same provider who would report on the measure.

Steward: Centers for Medicare & Medicaid Services
High Priority Measure: Yes
Measure Type: Process
Rationale: We propose to update the numerator note for the MIPS CQMs Specification collection type to add clarifying language that the first referral for a patient should be utilized for the purposes of assessing whether the referral loop was closed and the clinical quality action completed, as this aligns with the intent of the measure.
### D.53 Functional Status Assessment for Total Knee Replacement

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NOF / eCQM NOF #:</td>
<td>N/A / N/A</td>

</tbody>
</table>
### D.55 Functional Status Assessments for Congestive Heart Failure

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF / eCQM NQF #:</td>
<td>N/A / N/A</td>
</tr>
<tr>
<td>Quality#:</td>
<td>377</td>
</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>CMS90v11</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Person and Caregiver-Centered Experience and Outcomes</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>eCQM Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>Percentage of patients 18 years of age and older with congestive heart failure who completed initial and follow-up patient-reported functional status assessments.</td>
</tr>
</tbody>
</table>

**Substantive Change:**

The measure title is revised from 'Functional Status Assessments for Congestive Heart Failure' to: Functional Status Assessments for Heart Failure.

The measure description is revised to read: Percentage of patients 18 years of age and older with heart failure who completed initial and follow-up patient-reported functional status assessments.

The measure denominator exclusion is revised to read:

1. Exclude patients with severe cognitive impairment in any part of the measurement period.
2. Exclude patients who are in hospice care for any part of the measurement period.

The measure guidance is revised to read: Initial functional status assessment (FSA) and encounter: The initial FSA is an FSA that occurs two weeks before or during an encounter, in the 180 days or more before the end of the measurement period. Follow-up FSA: The follow-up FSA must be completed at least 30 days but no more than 180 days after the initial FSA. The same FSA instrument must be used for the initial and follow-up assessment.

This eCQM is a patient-based measure. This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (https://ecqi.healthit.gov/qdm) for more information on the QDM.

The measure initial patient population is revised to read: Patients 18 years of age and older who had two outpatient encounters during the measurement period and a diagnosis of heart failure that starts before and continues into the measurement period.

Updated logic and logic definitions: Updated: restructured the logic to ensure the patient meets the denominator criteria by 1) had multiple assessments in the year and that 2) there is sufficient time for them to have had repeat assessments in the year 3) there is sufficient time between assessments for their condition to have changed or for them to have responded to treatment (30-180 days).

**Steward:** Centers for Medicare & Medicaid Services

**High Priority Measure:** Yes

**Measure Type:** Process

**Rationale:**

We propose to remove the term ‘congestive’ from the measure title and description based upon the expert work group recommendations in order to align the language with the denominator eligible patient population to ensure all appropriate patients are included in the initial patient population. We propose to remove the term ‘overlaps’ from the denominator exclusion and numerator and replace with plain language for clarity and consistency in implementation. We propose to update the intent of the measure to clarify timing of the heart failure diagnosis and ensure alignment with the logic. Additionally, we propose to revise the logic to more clearly reflect relationships between the encounter and assessment(s), as identifying the first encounter without ensuring a relationship with an assessment does not meet the intent of the measure.

### D.56 Children Who Have Dental Decay or Cavities

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF / eCQM NQF #:</td>
<td>N/A / N/A</td>

</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>CMS75v10</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Community/Population Health</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>eCQM Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>Percentage of children, 6 months - 20 years of age, who have had tooth decay or cavities during the measurement period.</td>
</tr>
</tbody>
</table>

**Substantive Change:**

The measure description is revised to read: Percentage of children, 6 months - 20 years of age at the start of the measurement period, who have had tooth decay or cavities during the measurement period.

The measure denominator exclusion is revised to read: Exclude patients who are in hospice care for any part of the measurement period.

The measure numerator is revised to read: Children who had a diagnosis of cavities or decayed teeth in any part of the measurement period.

**Steward:** Centers for Medicare & Medicaid Services

**High Priority Measure:** Yes

**Measure Type:** Outcome

**Rationale:**

We propose to revise the measure description to be more explicit of the timing associated with the patient’s age. We propose to remove the term ‘overlaps’ from the denominator exclusion and numerator and replace with plain language for clarity and consistency in implementation.
### D.57 Primary Caries Prevention Intervention as Offered by Primary Care Providers, including Dentists

<table>

### D.58 Adherence to Antipsychotic Medications For Individuals with Schizophrenia

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>CMSeCQMID:</strong></td>
<td>N/A</td>
</tr>
<tr>
<td>Quality#:</td>
<td>383</td>
</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>N/A</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Patient Safety</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>Percentage of individuals at least 18 years of age as of the beginning of the performance period with schizophrenia or schizoaffective disorder who had at least two prescriptions filled for any antipsychotic medication and who had a Proportion of Days Covered (PDC) of at least 0.8 for antipsychotic medications during the performance period.</td>
</tr>
<tr>
<td>Substantive Change:</td>
<td>Updated denominator criteria: Added: Filled at least two prescriptions for any of the qualifying antipsychotic medications listed under “Denominator Note” during the performance period Added: outpatient mental health encounters occurring at federally qualified health centers for the ‘Patient encounter during the performance period determination Outpatient Setting Option 1’ Updated denominator note: Added: Lurateperone to ‘Atypical Antipsychotic Medications’</td>
</tr>
<tr>
<td>Steward:</td>
<td>Centers for Medicare &amp; Medicaid Services</td>
</tr>
<tr>
<td>High Priority Measure:</td>
<td>Yes</td>
</tr>
<tr>
<td>Measure Type:</td>
<td>Intermediate Outcome</td>
</tr>
<tr>
<td>Rationale:</td>
<td>We propose to add denominator criteria to ensure that only those patients who fill at least two prescriptions for any of the qualifying antipsychotic medications are included within the denominator eligible patient population as this aligns with the intent of the measure and protects clinicians from being held accountable for non-established patients. We propose to add outpatient mental health encounters occurring at FQHCs as denominator eligible as schizophrenia may be diagnosed at these encounters. This revision is not a reflection of any policy update and was made to allow those clinicians who bill exclusively through a FQHC to track their performance on the measure. This payment method is still not eligible for payment adjustments under MIPS. We propose to update the ‘Atypical Antipsychotic Medications’ to align with current Food and Drug Administration (FDA) approved treatments for adults with schizophrenia.</td>
</tr>
</tbody>
</table>

<tr>
<td><strong>National Quality Strategy Domain:</strong></td>
<td>Communication and Care Coordination</td>
</tr>
<tr>
<td><strong>Current Collection Type:</strong></td>
<td>Pathology reports based on biopsy and/or cytology specimens with a diagnosis of primary non-small cell lung cancer classified into specific histologic type or classified as non-small cell lung cancer not otherwise specified (NSCLC-NOS) with an explanation included in the pathology report.</td>
</tr>
<tr>
<td><strong>Current Measure Description:</strong></td>
<td>The measure description is revised to read: For all collection types: Pathology reports based on lung biopsy and/or cytology specimens with a diagnosis of primary non-small cell lung cancer classified into specific histologic type following the International Association for the Study of Lung Cancer (IASLC) guidance or classified as non-small cell lung cancer not otherwise specified (NSCLC-NOS) with an explanation included in the pathology report.</td>
</tr>
</tbody>
</table>
| **Substantive Change:** | 1. Do not use the term “large cell carcinoma”  
2. Do not use the term “AIS (adenocarcinoma in situ)” or “MIA (minimally invasive adenocarcinoma)” — if a noninvasive pattern is present in a small biopsy, the term “lepidic growth” should be used instead  
3. Do not use the term “BAC (bronchioloalveolar carcinoma)” All three recommendations must be followed in order for a case to be considered Met (ie if any one of these terms is present, the case is Not Met) |
| **Steward:**       | College of American Pathologists                                                                                                                                                                             |
| **High Priority Measure:** | Yes                                                                                                                                                                                                          |
| **Measure Type:**  | Process                                                                                                                                                                                                      |
| **Rationale:**    | We propose to revise the measure description to add clarity in alignment with the measure intent. We propose to update the numerator and numerator options to add guidance regarding what phrases should be avoided within the pathology reports to align with IASLC guidance and to clarify what is acceptable for numerator compliance. |

### D.61 Lung Cancer Reporting (Resection Specimens)

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>NQF / eCQM NQF #:</strong></td>
<td>N/A / N/A</td>

**IASLC Guidance:** The IASLC recommends the following regarding terminology for small biopsy and cytology specimens:
1. Do not use the term “large cell carcinoma”  
2. Do not use the term “AIS (adenocarcinoma in situ)” or “MIA (minimally invasive adenocarcinoma)” — if a noninvasive pattern is present in a small biopsy, the term “lepidic growth” should be used instead  
3. Do not use the term “BAC (bronchioloalveolar carcinoma)”  
All three recommendations must be followed in order for a case to be considered Met (ie if any one of these terms is present, the case is Not Met)  
IASLC Guidance: The IASLC recommends the following regarding terminology for small biopsy and cytology specimens:
1. Do not use the term “large cell carcinoma”  
2. Do not use the term “AIS (adenocarcinoma in situ)” or “MIA (minimally invasive adenocarcinoma)” — if a noninvasive pattern is present in a small biopsy, the term “lepidic growth” should be used instead

</tr>
<tr>
<td>Current Measure Description:</td>
<td>Pathology reports for primary malignant cutaneous melanoma that include the pT category and a statement on thickness, ulceration and mitotic rate.</td>
</tr>
</tbody>
</table>

#### Substantive Change:

The measure description is revised to read: For all collection types: Pathology reports for primary malignant cutaneous melanoma that include the pT category and a statement on thickness, ulceration and mitotic rate, peripheral and deep margin status and presence or absence of microsatellitosis for invasive tumors.

The measure instructions are revised to read: For all collection types: This measure is to be submitted each time a patient’s pathology report addresses specimens with a diagnosis of malignant cutaneous melanoma; however, only one quality-data code (QDC) per date of service for a patient is required. In instances where multiple specimens from different/unique lesions are submitted and resulted in a single report, each eligible specimen must be Met in order for the case to be considered Met (Denominator Exclusions and Denominator Exceptions are not considered eligible specimens). If any eligible specimen is Not Met, the quality data code for Not Met should be submitted for this report. This measure may be submitted by Merit-based Incentive Payment System (MIPS) eligible clinicians who perform the quality actions described in the measure based on the services provided and the measure-specific denominator coding.

The measure numerator is revised to read: For all collection types: Pathology reports for primary malignant cutaneous melanoma that include the pT category, thickness, ulceration and mitotic rate, peripheral and deep margin status and presence or absence of microsatellitosis for invasive tumors.

The measure numerator options are revised to read: For all collection types:

- **Performance Met:** Pathology report includes the pT category, thickness, ulceration and mitotic rate, peripheral and deep margin status and presence or absence of microsatellitosis for invasive tumors
- **Denominator Exception:** Documentation of medical reason(s) for not including pT Category, thickness, ulceration and mitotic rate, peripheral and deep margin status and presence or absence of microsatellitosis for invasive tumors (e.g., negative skin biopsies, insufficient tissue, or other documented medical reasons)
- **Performance Not Met:** Pathology report does not include the pT Category, thickness, ulceration and mitotic rate, peripheral and deep margin status and presence or absence of microsatellitosis for invasive tumors

Steward: College of American Pathologists

High Priority Measure: Yes

Measure Type: Process

Rationale: We propose to update the measure for all collection types to require to new data elements for numerator compliance to align with updated American Academy of Dermatology (AAD) guideline recommendations. This revision is reflected in the proposed description, numerator, and numerator options language revisions to ensure the measure is aligned with the current clinical recommendations. Additionally, we propose to revise the instructions for all collection types to clarify how to handle instances where there are multiple samples included within one report.
### D.63 One-Time Screening for Hepatitis C Virus (HCV) for Patients at Risk

<table>

</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Effective Clinical Care</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>MIPS CQMs Specifications</td>
</tr>
</tbody>
</table>
| Current Measure Description: | Percentage of patients aged 18 years and older with one or more of the following: a history of injection drug use, receipt of a blood transfusion prior to 1992, receiving maintenance hemodialysis, OR birthdate in the years 1945-1965 who received one-time screening for hepatitis C virus (HCV) infection.  

**Substantive Change:**

- The measure title is revised from *One-Time Screening for Hepatitis C Virus (HCV) for Patients at Risk* to: One-Time Screening for Hepatitis C Virus (HCV) for all Patients.

- The measure description is revised to read: Percentage of patients age >= 18 years who received one-time screening for hepatitis C virus (HCV) infection.

- The measure instructions are revised to read: This measure is to be submitted a minimum of once per performance period for all patients >= 18 years of age who were seen twice for any visits or who had at least one preventive visit within the 12-month performance period. This measure may be submitted by Merit-based Incentive Payment System (MIPS) eligible clinicians who perform the quality actions described in the measure based on the services provided and the measure-specific denominator coding.

- The measure denominator is revised to read: All patients >= 18 years of age who had at least one preventive visit OR were seen at least twice within the 12-month reporting period.

- **Updated denominator criteria:** Removed:
  - Patients who were born in the years 1945 to 1965
  - History of receiving blood transfusions prior to 1992
  - Receiving maintenance hemodialysis (CPT)
  - History of injection drug use

**Steward:**
American Gastroenterological Association

**High Priority Measure:**
No

**Measure Type:**
Process

**Rationale:**
We propose to update this measure to align with current clinical recommendations which no longer require at-risk conditions for HCV screening. The measure will be updated to require one-time HCV screening for all patients aged 18 years and older, in accordance with current clinical recommendations. We propose to revise the measure title, description, instructions, and denominator to reflect the removal of the at-risk criteria. Additionally, we propose to remove the at-risk criteria from the denominator criteria.

In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.
## D.64 Clinical Outcome Post Endovascular Stroke Intervention

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF # / eCQM NQF #:</td>
<td>N/A / N/A</td>
</tr>
<tr>
<td>Quality#:</td>
<td>409</td>
</tr>
<tr>

<td>N/A</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Effective Clinical Care</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>MIPS CQMs Specifications</td>
</tr>
</tbody>
</table>

### Current Measure Description:

Percentage of patients with a mRS score of 0 to 2 at 90 days following endovascular stroke intervention.

### Updated Instructions:

Revised: This measure is to be submitted a minimum of once per performance period for patients undergoing an endovascular stroke intervention procedure during the performance period. This measure is intended to reflect the success of the endovascular intervention inclusive of appropriate patient selection. This measure may be submitted by Merit-based Incentive Payment System (MIPS) eligible clinicians who perform the quality actions described in the measure based on the services provided and the measure specific denominator coding. Include only patients that have cerebrovascular accidents through September 18 of the performance period. This will allow the evaluation of clinical outcome 90 days after the cerebrovascular accident within the performance period. Assessment of the mRS between 75 and 105 days is considered acceptable for reporting this measure.

**Added:**

Unique to this measure is the Minimum Process of Care Performance Threshold Requirement. This measure based threshold requires that at least 90% of all eligible patients have an mRS score assessed 90 days following endovascular stroke intervention. Therefore, if the performance rate for Submission Criteria 1 is below 90%, the MIPS eligible clinician would not be able to meet the denominator of the Submission Criteria 2 and this measure CANNOT BE SUBMITTED. CMS anticipates the performance rate for Submission Criteria 2 will be calculated using 100% of patients that met performance in Submission Criteria 1.

This measure contains two submission criteria which together measure the outcome following an endovascular stroke intervention. Submission Criteria 1 evaluates whether an appropriate percentage of patients received the applicable clinical follow-up assessment using mRS. Submission Criteria 2 evaluates the rate of achieving an mRS score of 0 to 2 in those patients for whom an mRS score was obtained (during clinical follow-up, Submission Criteria 1). The rate of achieving an mRS of 0 to 2 at 90 days (Submission Criteria 2) can be used to compare this measure to performance prior to the 2021 performance year, when the measure had a single performance rate. For accountability reporting in the CMS MIPS program, the rate for Submission Criteria 2 is used for performance. For the purposes of submitting this measure Data Completeness has been determined in Submission Criteria 1.

**Updated:', JOIN performances: True**

**Substantive Change:**

*Updated denominator: Revised*

Submission Criteria 1: Percentage of patients with clinical follow-up and mRS score assessed at 90 days following endovascular stroke intervention.

Denominator (Submission Criteria 1): All patients with CVA undergoing endovascular stroke treatment.

Submission Criteria 2: Percentage of patients with Performance Met for Submission Criteria 1 with an mRS score of 0 to 2 assessed at 90 days following endovascular stroke intervention therapy.

**Updated denominator criteria: Revised**

Denominator (Submission Criteria 1)

- All patients
- Diagnosis for ischemic stroke
- Patient procedure (endovascular stroke treatment)

Denominator (Submission Criteria 2)

- Minimum Process of Care Threshold Requirement: At least 90% of all eligible patients had an mRS score assessed at 90 days following endovascular stroke intervention (GXXXX submitted for Submission Criteria 1)

**Updated numerator: Revised**

Numerator (Submission Criteria 1): Patients who received clinical follow-up and mRS score assessed at 90 days.

Numerator (Submission Criteria 2): Patients with Performance Met for Submission Criteria 1 with 90 day mRS score of 0-2.

**Updated numerator note: Added**

For the purposes of submitting this measure Data Completeness has been determined in Submission Criteria 1. The performance rate calculated for Submission Criteria 2 of this measure is calculated using the subset of patients identified in the Performance Met Numerator Option of Submission Criteria 1 (GXXXX).

**Updated numerator options:**

*Added:*

Numerator Options (Submission Criteria 1):

- Performance Met: Clinical follow-up and mRS score assessed at 90 days following endovascular stroke intervention
- Performance Not Met: Clinical follow-up and mRS score not assessed at 90 days following endovascular stroke intervention

**Revised:**

Numerator Options (Submission Criteria 2):

- Performance Met: Patients with 90 day mRS score of 0 to 2
### D.65 Door to Puncture Time for Endovascular Stroke Treatment

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NOF # / eCQM NOF #:</td>
<td>N/A / N/A</td>

<tr>
<td>CMS eCQM ID:</td>
<td>N/A</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Effective Clinical Care</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>Percentage of patients undergoing endovascular stroke treatment who have a door to puncture time of less than two hours.</td>
</tr>
<tr>
<td>Substantive Change:</td>
<td>The measure description is revised to read: Percentage of patients undergoing endovascular stroke treatment who have a door to puncture time of 90 minutes or less. The measure numerator is revised to read: Patients with CVA undergoing endovascular stroke treatment who have a door to puncture time of less than 90 minutes. Updated numerator options: Revised: To align with door to puncture time of 90 minutes or less.</td>
</tr>
<tr>
<td>Steward:</td>
<td>Society of Interventional Radiology</td>
</tr>
<tr>
<td>High Priority Measure:</td>
<td>Yes</td>
</tr>
<tr>
<td>Measure Type:</td>
<td>Intermediate Outcome</td>
</tr>
<tr>
<td>Rationale:</td>
<td>We propose to revise the measure to reflect an updated door to puncture time of 90 minutes or less to more closely align with Target Stroke (a national initiative organized by the American Heart Association/American Stroke Association) which has an initial goal of achieving a door-to-puncture time of no more than 60 minutes for at least 50 percent of acute ischemic stroke patients. Additionally, The Joint Commission has set an ambitious goal of 80 percent of patients treated within 1 hour for primary stroke centers. This revision will drive quality care for this patient population as every delay in time from onset to arterial puncture will result in significant decreases in likelihood of a good outcome.</td>
</tr>
</tbody>
</table>

### D.66 Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 2 Through 17 Years

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NOF # / eCQM NOF #:</td>
<td>N/A / N/A</td>
</tr>
<tr>
<td>Quality #:</td>
<td>416</td>
</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>N/A</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Efficiency and Cost Reduction</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>Medicare Part B Claims Measure Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>Percentage of emergency department visits for patients aged 2 through 17 years who presented with a minor blunt head trauma who had a head CT for trauma ordered by an emergency care provider who are classified as low risk according to the Pediatric Emergency Care Applied Research Network (PECARN) prediction rules for traumatic brain injury.</td>
</tr>
<tr>
<td>Substantive Change:</td>
<td>Updated numerator options: For all collection types: Added: Performance Met: Pediatric patient with minor blunt head trauma and PECARN prediction criteria are not assessed.</td>
</tr>
<tr>
<td>Steward:</td>
<td>American College of Emergency Physicians</td>
</tr>
<tr>
<td>High Priority Measure:</td>
<td>Yes</td>
</tr>
<tr>
<td>Measure Type:</td>
<td>Efficiency</td>
</tr>
<tr>
<td>Rationale:</td>
<td>We propose to add a Performance Met numerator option to this measure to ensure those patients without a documented PECARN prediction score are correctly submitted as a Performance Met. As the PECARN prediction should be assessed for all patients seen for minor blunt head trauma, those patients without a documented PECARN prediction score would not meet the intent of the measure.</td>
</tr>
</tbody>
</table>
### D.67 Osteoporosis Management in Women Who Had a Fracture

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF # / eCQM NQF #:</td>
<td>0053 / N/A</td>
</tr>
<tr>
<td>Quality #:</td>
<td>418</td>
</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>N/A</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Effective Clinical Care</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>Medicare Part B Claims Measure Specifications / MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>The percentage of women age 50–85 who suffered a fracture in the six months prior to the performance period through June 30 of the performance period and who either had a bone mineral density test or received a prescription for a drug to treat osteoporosis in the six months after the fracture.</td>
</tr>
</tbody>
</table>

Substantive Change: **The measure description is revised to read:** For all collection types: The percentage of women 50–85 years of age who suffered a fracture and who had either a bone mineral density (BMD) test or prescription for a drug to treat osteoporosis in the six months after the fracture.

**Updated denominator note:** For the MIPS CQMs Specifications collection type: Added: To assess the age for exclusions, the patient’s age at the end of the measurement period should be used.

**Updated denominator exclusion:** For all collection types: Added: Patients who receive palliative care services any time during the intake period through the end of the measurement year

**Updated numerator note:** For the Medicare Part B Claims Measure Specifications collection type: Added: To assess the age for exclusions, the patient’s age on the date of the encounter should be used.

Steward: National Committee for Quality Assurance

High Priority Measure: No

Measure Type: Process

Rationale: We propose to update the description for alignment with other programs. We propose that the denominator exclusion language be updated to add an exclusion for patients receiving palliative care, as this patient population is not appropriate for the clinical quality action being assessed. Additionally, the medications were updated for the Dementia medication list to include Donzepezil-memantine as this is an applicable medication for the purposes of the denominator exclusion. We propose to revise the denominator note for the MIPS CQMs Specifications collection type and the numerator note for the Medicare Part B Claims Measure Specifications collection type to clarify the timing for those exclusions that have an age-related component.

### D.68 Photodocumentation of Cecal Intubation

<table>
<thead>
<tr>
<th>Category</th>

<tr>
<td>Current Collection Type:</td>
<td>Medicare Part B Claims Measure Specifications / MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>The rate of screening and surveillance colonoscopies for which photodocumentation of at least two landmarks of cecal intubation is performed to establish a complete examination.</td>
</tr>
</tbody>
</table>

Substantive Change: **Modified collection type:** MIPS CQM Specifications collection type

Steward: American Society for Gastrointestinal Endoscopy

High Priority Measure: No

Measure Type: Process

Rationale: We propose to remove the Medicare Part B Claims Measure Specifications collection type as it has reached the end of the topped-out lifecycle as finalized in 82 FR 53640. However, the benchmarking data continues to show a gap for the MIPS CQMs Specifications collection type, as such, the measure will be retained for this collection type.

### D.69 Prevention of Post-Operative Nausea and Vomiting (PONV) – Combination Therapy

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF # / eCQM NQF #:</td>
<td>N/A / N/A</td>

<tr>
<td>Quality #:</td>
<td>430</td>
</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>N/A</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Patient Safety</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>Percentage of patients, aged 18 years and older, who undergo a procedure under an inhalational general anesthetic, AND who have three or more risk factors for post-operative nausea and vomiting (PONV), who receive combination therapy consisting of at least two prophylactic pharmacologic antiemetic agents of different classes preoperatively and/or intraoperatively.</td>
</tr>
</tbody>
</table>

Substantive Change: **Updated numerator definition:** Added: Propofol for induction and maintenance of anesthesia

Steward: American Society of Anesthesiologists

High Priority Measure: Yes

Measure Type: Process

Rationale: We propose to revise the numerator definition to add propofol as this is a commonly used prophylactic antiemetic and aligns with current clinical recommendations.
## D.70 Statin Therapy for the Prevention and Treatment of Cardiovascular Disease

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF # / eCQM NQF #:</td>
<td>X/A / N/A</td>
</tr>
<tr>
<td>Quality #:</td>
<td>438</td>
</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>CMS347v5</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Effective Clinical Care</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>eCQM Specifications</td>
</tr>
</tbody>
</table>

### Current Measure Description:
Percentage of the following patients - all considered at high risk of cardiovascular events - who were prescribed or were on statin therapy during the measurement period:

- Adults aged ≥ 21 years who were previously diagnosed with or currently have an active diagnosis of clinical atherosclerotic cardiovascular disease (ASCVD); OR
- Adults aged ≥ 21 years who have ever had a fasting or direct low-density lipoprotein cholesterol (LDL-C) level ≥ 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial or pure hypercholesterolemia; OR
- Adults aged 40-75 years with a diagnosis of diabetes with a fasting or direct LDL-C level of 70-189 mg/dL.

### Substantive Change:

#### The measure definition is revised to read: For the eCQM Specifications collection type:
Clinical atherosclerotic cardiovascular disease (ASCVD) includes:
- **Acute coronary syndrome**
- History of myocardial infarction
- Stable or unstable angina
- Coronary or other arterial revascularization
- Stroke or transient ischemic attack (TIA)
- Peripheral arterial disease of atherosclerotic origin
- Lipoprotein density cholesterol (LDL-C) result:
  - A fasting or non-fasting LDL-C laboratory test performed and direct or calculated test result documented in the medical record.
  - When both direct and calculated test results are available on the same day, the direct LDL-C test result should be used.

### Updated denominator exception:

**For the eCQM Specifications CMS Web Interface Measure Specifications collection types:**
- **Revised:** Patients with statin-associated muscle symptoms or an allergy to statin medication
- **Removed:** Patients with diabetes who have the most recent fasting or direct LDL-C laboratory test result < 70 mg/dL and are not taking statin therapy

### Additional Information:
- **Denominator exception:**
  - Documentation of medical reason(s) for not currently being a statin therapy user or receiving an order (prescription) for statin therapy (e.g., patients with statin-associated muscle symptoms or an allergy to statin medication therapy, patients who are receiving palliative or hospice care, patients with active liver disease or hepatic disease or insufficiency, and patients with end stage renal disease [ESRD]).
- **Removed:** Submission Criteria Three:
  - Documentation of patients with diabetes who have the most recent fasting or direct LDL-C laboratory test result < 70 mg/dL and are not taking statin therapy

### Additional Information:

**Updated denominator exclusion:** All collection types: Added: Timeframe of ‘at any time during the measurement period’ to all denominator exclusions.

### Additional Information:

**The measure guidance is revised to read:** For the eCQM Specifications collection type: Initial Population Guidance:
- The initial population covers three distinct populations. Use the following process to prevent counting patients more than once.
- Initial Population 1:
  - All patients who were previously diagnosed with or currently have an active diagnosis of clinical ASCVD, including an ASCVD procedure, before the end of the measurement period.
### Description

- **Initial Population 1 risk category**
  - If YES, meets Initial Population 1 risk category
  - If NO, screen for next risk category

- **Initial Population 2**
  - Patients aged ≥ 20 years at the beginning of the measurement period who have ever had a laboratory test result of LDL-C ≥ 190 mg/dL, or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia
  - If YES, meets Initial Population 2 risk category
  - If NO, screen for next risk category

- **Initial Population 3**
  - Patients aged 40 to 75 years at the beginning of the measurement period with an active diagnosis of Type 1 or Type 2 diabetes at any time during the measurement period
  - If YES, meets Initial Population 3 risk category
  - If NO, patient does NOT meet Initial Population criteria and is NOT eligible for measure inclusion

**Initial Population Guidance for Encounter**:
- In order for the patient to be included in the Initial Population, the patient must have ONE initial population-eligible visit, defined as follows: outpatient visit, initial or established office visit, face-to-face interaction, preventive care services, or annual wellness visit.

**LDL-C Laboratory test result options**:
- The measure can be reported for all patients with a documented LDL-C level recorded as follows:
  - To meet Initial Population 1:
    - There is no LDL-C result required.
    - To meet Initial Population 2:
      - If a patient has ANY previous laboratory result of LDL-C ≥ 190 mg/dL, report the highest value ≥ 190 mg/dL.
    - To meet Initial Population 3:
      - There is no LDL-C result required.
  - Numerator instructions and guidance:
    - Current statin therapy use must be documented in the patient's current medication list or ordered during the measurement period.
    - Only statin therapy meets the measure Numerator criteria (NOT other cholesterol lowering medications).
    - Prescription or order does not need to be linked to an encounter or visit; it may be called to the pharmacy.
    - Statin medication "samples" provided to patients can be documented as "current statin therapy" if documented in the medication list in heath medical record.
    - Patients who meet the denominator criteria for inclusion, but are not prescribed or using statin therapy, will NOT meet performance for this measure unless they have an allowable denominator exception. Patients with an allowable denominator exception should be removed from the denominator of the measure and reported as a valid exception.
    - There is only one performance rate calculated for this measure: the weighted average of the three populations.
  - Adherence to statin therapy is not calculated in this measure.

**Updated guidance/denominator confirmation**:
- For the CMS Web Interface Measure Specifications collection type:
  - Revised: Language within all of the guidance/confirmation sections was updated to reflect the changes to the initial patient populations.

**The measure initial patient population is revised to read**:
For the eCQM Specifications and CMS Web Interface Measure Specifications collection types:

- **Population 1**:
  - All patients who were previously diagnosed with or currently have an active diagnosis of clinical ASCVD, including an ASCVD procedure

- **Population 2**:
  - Patients aged ≥ 20 years at the beginning of the measurement period who have ever had a laboratory result of LDL-C ≥ 190 mg/dL, or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia

- **Population 3**:
  - Patients aged 40 to 75 years at the beginning of the measurement period with Type 1 or Type 2 diabetes

**Updated denominator**:
- For the eCQM Specifications collection type: Revised: Equals Initial Population
  - For the CMS Web Interface Measure Specifications collection types: Revised:
    - Population 1:
      - All patients who were previously diagnosed with or currently have an active diagnosis of ASCVD, including an ASCVD procedure
    - Population 2:
      - Patients aged ≥ 20 years at the beginning of the measurement period who have ever had laboratory result of LDL-C ≥ 190 mg/dL, or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia
    - Population 3:
      - Patients aged 40 to 75 years at the beginning of the measurement period with Type 1 or Type 2 diabetes

    - Only statin therapy meets the measure Numerator criteria (NOT other cholesterol lowering medications).
    - Prescription or order does not need to be linked to an encounter or visit; it may be called to the pharmacy.
    - Statin medication "samples" provided to patients can be documented as "current statin therapy" if documented in the medication list in health medical record.
    - Patients who meet the denominator criteria for inclusion, but are not prescribed or using statin therapy, will NOT meet performance for this measure unless they have an allowable denominator exception. Patients with an allowable denominator exception should be removed from the denominator of the measure and reported as a valid exception.
    - There is only one performance rate calculated for this measure: the weighted average of the three populations.
  - Adherence to statin therapy is not calculated in this measure.

**Updated guidance/denominator confirmation**:
- For the CMS Web Interface Measure Specifications collection type:
  - Revised: Language within all of the guidance/confirmation sections was updated to reflect the changes to the initial patient populations.

**The measure initial patient population is revised to read**:
For the eCQM Specifications and CMS Web Interface Measure Specifications collection types:

- **Population 1**:
  - All patients who were previously diagnosed with or currently have an active diagnosis of clinical ASCVD, including an ASCVD procedure

- **Population 2**:
  - Patients aged ≥ 20 years at the beginning of the measurement period who have ever had a laboratory result of LDL-C ≥ 190 mg/dL, or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia

- **Population 3**:
  - Patients aged 40 to 75 years at the beginning of the measurement period with Type 1 or Type 2 diabetes

**Updated denominator**:
- For the eCQM Specifications collection type: Revised: Equals Initial Population
  - For the CMS Web Interface Measure Specifications collection types: Revised:
    - Population 1:
      - All patients who were previously diagnosed with or currently have an active diagnosis of ASCVD, including an ASCVD procedure
    - Population 2:
      - Patients aged ≥ 20 years at the beginning of the measurement period who have ever had laboratory result of LDL-C ≥ 190 mg/dL, or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia
    - Population 3:
      - Patients aged 40 to 75 years at the beginning of the measurement period with Type 1 or Type 2 diabetes
The measure rate aggregation is revised to read: For the eCQM Specifications collection type: This measure is intended to have one reporting rate, which aggregates the following populations into a single performance rate for reporting purposes:

Population 1: All patients who were previously diagnosed with or currently have an active diagnosis of clinical ASCVD, including an ASCVD procedure, before the end of the measurement period.

Population 2: Patients aged ≥ 20 years at the beginning of the measurement period who have ever had a laboratory test result of LDL-C ≥ 190 mg/dL, or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia.

Population 3: Patients aged 40 to 75 years at the beginning of the measurement period with a diabetes diagnosis of Type 1 or Type 2 at any time during the measurement period.

For the purposes of this measure, a single performance rate can be calculated as follows:

Performance Rate = (Numerator 1 + Numerator 2 + Numerator 3) / (Denominator 1 - Denominator Exclusions 1 - Denominator Exceptions 1) + (Denominator 2 - Denominator Exclusions 2 - Denominator Exceptions 2) + (Denominator 3 - Denominator Exclusions 3)

Updated definition: For the MIPS CQMs Specifications collection type:

Updated:

Lipoprotein Density Cholesterol (LDL-C) result - A fasting or non-fasting LDL-C laboratory test performed and direct or calculated test result documented in the medical record. When both direct and calculated test results are available, the direct LDL-C test result should be used.

Added:

- Statin-Associated Muscle Symptoms (SAMS) - The 2018 ACC/AHA/MS Guideline (Grundy et al., 2019) includes the following SAMS: myalgias, myositis, myopathy, or statin-associated autoimmune myopathy. Patients who experience significant or repeated statin-associated muscle symptoms may prefer not to take or continue statin therapy and therefore may be removed from the denominator. The following ICD-10-CM codes are included in the Denominator Exception (G9781) to define SAMS: M60.9, M79.10.
- Zypitamag and Nikita to statin medication therapy list.

Revised:

Caduet and Vytorin to 'Fixed Dose Combination'.

For the CMS Web Interface Measure Specifications collection type:

Revised:

Statin therapy - Administration of one or more of a group of medications that are used to lower plasma lipoprotein levels in the treatment of hyperlipoproteinemia.

Table 1 - Statin Medication Therapy List (NOTE: List does NOT include dosage):

<table>
<thead>
<tr>
<th>Generic name</th>
<th>(Brand or trade name) and</th>
<th>Medication type, if applicable:</th>

Statin-Associated Muscle Symptoms (SAMS) - The 2018 ACC/AHA/MS Guideline (Grundy et al., 2019) includes the following SAMS: myalgias, myositis, myopathy, or statin-associated autoimmune myopathy. Patients who experience significant or repeated statin-associated muscle symptoms may prefer not to take or continue statin therapy and therefore may be removed from the denominator.

Updated denominator: For the MIPS CQMs Specifications collection type:

Revised: Submission Criteria:

1) All patients who were previously diagnosed with or currently have an active diagnosis of clinical ASCVD, including an ASCVD procedure.

2) Patients aged ≥ 20 years at the beginning of the measurement period who have ever had a laboratory test result of LDL-C ≥ 190 mg/dL, or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia.

3) Patients aged 40 to 75 years at the beginning of the measurement period with a diabetes diagnosis of Type 1 or Type 2 diabetes.

Updated denominator criteria is revised to read: For the MIPS CQMs Specifications collection type:

Updated:

Submission Criteria 1:

Revised:

- All patients, regardless of age
- Previously diagnosed or have an active diagnosis of clinical ASCVD, including ASCVD procedure.

Submission Criteria 2:

Revised:

- Patient aged ≥ 20 years at the beginning of the measurement period
- Any LDL-C laboratory test result ≥ 190 mg/dL
- History of or active diagnosis of familial hypercholesterolemia

Submission Criteria 3:

Removed:
### Measure: Cw·nmt Measw-e

**Category**: Current Collection Type: Quality

**Description**: Patient's highest fasting or direct LDL-C laboratory test result in the measurement period or two years prior to the beginning of the measurement period is 70 -189 mg/dL.

**Updated numerator guidance: For the CMS Web Interface Measure Specifications collection type: Revised**: These drugs may be used as a Denominator Exception if present in the patient's record accompanied by an appropriate conditional reason why the patient isn't taking the drug (e.g., statin-associated muscle symptoms or an allergy to statin medication).

- Documentation of statin therapy prescribed or being taken during the measurement period can be completed during a telehealth encounter.

**Steward:** Centers for Medicare & Medicaid Services

**High Priority Measure:** No

**Measure Type:** Process

---

### Rationale:

We propose to update the measure to align with 2018 American College of Cardiology (ACC)/American Heart Association (AHA) cholesterol guidelines and recommendations. These revisions are reflected in multiple components of the measure specifications for all collection types. The measure definitions and/or guidance sections for all collection types were revised to align with and add clarity to the revisions within the measure to align with current clinical guidelines and recommendations. We propose to remove the denominator exception found in submission criteria 3 for patients with diabetes not taking statin therapy who have the most recent fasting or direct LDL-C laboratory test result < 70 mg/dL, as it is no longer applicable as the denominator criteria was revised to remove LDL-C laboratory testing criteria. Additionally, we propose to add statin-associate muscle symptoms to the denominator exception for documentation of medical reason(s) for all submission criteria and all collection types as it would not be appropriate to prescribe statin therapy for this patient population.

We proposed to update the numerator guidance for the CMS Web Interface Measure Specifications collection type to allow for the documentation of statin therapies prescribed or taken during the measurement period to be completed during a telehealth encounter as this aligns with the intent of the measure and clinical workflow.

We propose to revise the statin medication therapy list for all collection types to reflect current clinical guidelines and recommendations. Additionally, we propose to update the denominator exclusions for all submission criteria and collection types to include a timing component in order to clarify when it must occur and for consistency in implementation.

---

### D.71 Appropriate Workup Prior to Endometrial Ablation

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF # / eCQM NQF #:</td>
<td>N/A / N/A</td>

<tr>
<td>CMS eCQM ID:</td>
<td>N/A</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Communication and Care Coordination</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>Percentage of patients, aged 18 years and older, who undergo endometrial sampling or hysteroscopy with biopsy and results are documented before undergoing an endometrial ablation.</td>
</tr>
</tbody>
</table>

**Substantive Change:**

- The measure denominator definition is revised to read: Index Date --Date of first endometrial ablation during the performance period.

- Updated denominator exclusion: Revised: Patients who had an endometrial ablation procedure during the 12 months prior to the index date (exclusive of the index date).

- The measure numerator is revised to read: Patients who received endometrial sampling or hysteroscopy with biopsy and results were documented during the 12 months prior to the index date (exclusive of the index date) of the endometrial ablation.

- The measure numerator options are revised to read: Performance Met: Endometrial sampling or hysteroscopy with biopsy and results documented during the 12 months prior to the index date (exclusive of the index date) of the endometrial ablation

- Performance Not Met: Endometrial sampling or hysteroscopy with biopsy and results not documented during the 12 months prior to the index date (exclusive of the index date) of the endometrial ablation

**Steward:** Centers for Medicare & Medicaid Services

**High Priority Measure:** Yes

**Measure Type:** Process

**Rationale:** We propose to revise the measure denominator definition to reference the first endometrial ablation as the index date. This change aligns with the measure intent as the timing of the quality action should be assessed based on the date of the endometrial ablation procedure. We propose to revise the denominator exclusion for clarity in timing of previous endometrial ablations that may suffice for this exclusion. Additionally, we propose to revise the numerator and numerator options for clarity in timing of the quality action as well as to align with the revised definition for Index Date to ensure alignment with measure intent.
### D.72 Appropriate Treatment for Patients with Stage I (T1c) - III HER2 Positive Breast Cancer

### D.78 Functional Status After Lumbar Fusion

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NQF # / eCQM NQF #:</td>
<td>N/A / N/A</td>
</tr>
<tr>
<td>Quality #:</td>
<td>469</td>
</tr>
<tr>
<td>CMS eCQM ID:</td>
<td>N/A</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Person and Caregiver-Centered Experience and Outcomes</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>MIPS CQMs Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>For patients 18 years of age and older who had a lumbar fusion procedure, functional status is rated by the patient as less than or equal to 22 OR an improvement of 30 points or greater on the Oswestry Disability Index (ODI version 2.1a) at one year (9 to 15 months) postoperatively.</td>
</tr>
</tbody>
</table>

#### The measure description is revised to read:
For patients 18 years of age and older who had a lumbar fusion procedure, functional status is rated by the patient as less than or equal to 22 OR an improvement of 30 points or greater on the Oswestry Disability Index (ODI version 2.1a) at one year (9 to 15 months) postoperatively.

#### Updated instructions: Revised: NOTE:
This measure is a target-based measure with two ways to meet the numerator; either a postoperative ODI score that is less than or equal to 22 OR an improvement of 30 points or greater from the preoperative to postoperative score. It is expressed as a proportion or rate. Patients having received a lumbar fusion procedure who are not assessed for functional status postoperatively remain in the denominator and are considered as not meeting the target. The measure intent is that MIPS eligible clinicians will submit all denominator eligible procedures for performance calculation.

#### The measure numerator is revised to read:
All eligible patients whose functional status is less than or equal to 22 OR an improvement of 30 points or greater on the Oswestry Disability Index (ODI Version 2.1a) patient reported outcome tool at one year (9 to 15 months) postoperatively.

#### Updated numerator definition: Revised:
- Preoperative Assessment Oswestry Disability Index (ODI version 2.1a): A preoperative ODI functional assessment score can be obtained from the patient any time up to three months preoperatively, inclusive of the date of the procedure. Assessment scores obtained more than three months before the procedure will not be used for measure calculation. If more than one preoperative ODI was obtained, use the ODI that is the most recent and prior to the procedure.
- Postoperative Assessment Oswestry Disability Index (ODI version 2.1a): A postoperative ODI functional assessment score can be obtained from the patient one year (9 to 15 months) after the date of procedure. Assessment scores obtained prior to nine months and after fifteen months postoperatively will not be used for measure calculation. If more than one postoperative ODI was obtained during the 9 to 15 months following the procedure, use the most recent score obtained during the allowable timeframe.

#### Substantive Change:
- Functional status was not measured by the Oswestry Disability Index (ODI Version 2.1a) at one year (9 to 15 months) postoperatively demonstrated an improvement of less than 30 points.

#### The measure numerator note is revised to read:
**NUMERATOR NOTE:** It is recommended that both a preoperative and postoperative tool be administered to the patient to increase the chance that one of the numerator targets will be met. The following situations are those in which the numerator target cannot be reached and Performance Not Met M1043 or G2143 is submitted.

- ODI is not administered postoperatively at one year (9 to 15 months)
- Functional status is measured using a different patient reported functional status tool or ODI version
- Postoperative ODI is administered less than 9 months or greater than 15 months (1 year window)
- Postoperative ODI is greater than 22 and no valid preoperative ODI to measure improvement
- Postoperative ODI was greater than 22 and preoperative ODI (to measure improvement) is administered beyond the three month timeframe prior to and including the date of procedure (e.g. 6 months before procedure)

#### The measure numerator options are revised to read:
- **Performance Met:** Functional status measured by the Oswestry Disability Index (ODI version 2.1a) at one year (9 to 15 months) postoperatively was less than or equal to 22 OR Functional status measured by the ODI version 2.1a within three months preoperatively AND at one year (9 to 15 months) postoperatively demonstrated an improvement of 30 points or greater.
- **Performance Not Met:** Functional status was not measured by the Oswestry Disability Index (ODI version 2.1a) at one year (9 to 15 months) postoperatively.
- **Performance Met:** Functional status measured by the Oswestry Disability Index (ODI version 2.1a) at one year (9 to 15 months) postoperatively was greater than 22 AND Functional status measured by the ODI version 2.1a within three months preoperatively AND at one year (9 to 15 months) postoperatively demonstrated an improvement of less than 30 points.

#### Steward:
Minnesota Community Measurement

#### High Priority Measure:
Yes

#### Measure Type:
Patient-Reported Outcome-Based Performance Measure

#### Rationale:
We propose to revise the numerator definition to clarify which assessment should be utilized if multiple assessments are administered. Additionally, we propose to update multiple components of the measure specifications to remove 'a change' and replace it with 'an improvement' as the intent of the measure is to assess if there was improvement in a patient's functional status.
### D.79 Functional Status After Primary Total Knee Replacement

<table>
<thead>
<tr>

<td>Measure Type:</td>
<td>Patient-Reported Outcome-Based Performance Measure</td>
</tr>
<tr>
<td>Rationale:</td>
<td>We propose to revise the numerator definition to clarify which assessment should be utilized if multiple assessments are administered.</td>
</tr>
</tbody>
</table>
Current Measure Description: For patients age 18 and older who had lumbar discectomy/laminectomy procedure, functional status is rated by the patient as less than or equal to 22 OR an improvement of 30 points or greater on the Oswestry Disability Index (ODI version 2.1a) at three months (6 to 20 weeks) postoperatively.

The measure description is revised to read: For patients age 18 and older who had lumbar discectomy/laminectomy procedure, functional status is rated by the patient as less than or equal to 22 OR an improvement of 30 points or greater on the Oswestry Disability Index (ODI version 2.1a) at three months (6 to 20 weeks) postoperatively.

The measure numerator is revised to read: All eligible patients whose functional status is less than or equal to 22 OR an improvement of 30 points or greater on the Oswestry Disability Index (ODI version 2.1a) at three months (6 to 20 weeks) postoperatively.

Updated numerator definition: Revised: Preoperative Assessment Oswestry Disability Index (ODI version 2.1a) - A preoperative ODI functional assessment score can be obtained from the patient any time up to three months preoperatively, inclusive of the date of the procedure. Assessment scores obtained more than three months before the procedure will not be used for measure calculation. If more than one preoperative ODI was obtained, use the ODI that is the most recent and prior to the procedure. Postoperative Assessment Oswestry Disability Index (ODI version 2.1a) - A postoperative ODI functional assessment score can be obtained from the patient three months (6 to 20 weeks) after the date of procedure. Assessment scores obtained prior to six weeks and after twenty weeks postoperatively will not be used for measure calculation. If more than one postoperative ODI was obtained during the 6 to 20 weeks following the procedure, use the most recent score obtained during the allowable timeframe. ODI can be obtained below or at the following link https://eprovide.mapi-trust.org/instruments/oswestry-disability-index.

Functional Status Target #2 - A patient who does not meet Functional Status Target #1 is assessed both preoperatively within 3 months prior to the procedure AND postoperatively at three months (6 to 20 weeks) after the procedure AND the improvement is greater than or equal to 30 points.

Updated instructions: Revised: NOTE: This measure is a target-based measure with two ways to meet the numerator: either a postoperative ODI score that is less than or equal to 22 OR an improvement of 30 points or greater from the preoperative to postoperative score. It is expressed as a proportion or rate. Patients having received a lumbar discectomy/laminectomy procedure who are not assessed for functional status postoperatively remain in the denominator and are considered as not meeting the target. The measure intent is that MIPS eligible clinicians will submit all denominator eligible procedures to be utilized for performance calculation.

The measure numerator note is revised to read: NUMERATOR NOTE: It is recommended that both a preoperative and postoperative be administered to the patient increasing chances that one of the numerator targets will be met. The following situations are those in which the numerator target cannot be reached and Performance Not Met M1049 or G2145 is submitted.

• ODI is not administered postoperatively at three months (6 to 20 weeks)
• Functional status is measured using a different patient reported functional status tool or ODI version
• Postoperative ODI is administered less than 6 weeks or greater than 20 weeks (3 month window)
• Postoperative ODI is greater than 22 and no valid preoperative ODI to measure improvement
• Postoperative ODI (to measure improvement) is administered beyond the three month timeframe prior to and including the date of procedure (e.g. 6 months before procedure)

The measure numerator options are revised to read:

Performance Met: Functional status measured by the Oswestry Disability Index (ODI version 2.1a) at three months (6 – 20 weeks) postoperatively was less than or equal to 22 OR Functional status measured by the ODI version 2.1a within three months preoperatively AND at three months (6 - 20 weeks) postoperatively demonstrated an improvement of 30 points or greater.

Performance Not Met: Functional status was not measured by the Oswestry Disability Index (ODI version 2.1a) at three months (6 - 20 weeks) postoperatively.

Performance Not Met: Functional status measured by the Oswestry Disability Index (ODI version 2.1a) at three months (6 – 20 weeks) postoperatively was greater than 22 AND Functional status measured by the ODI version 2.1a within three months preoperatively AND at three months (6 - 20 weeks) postoperatively demonstrated an improvement of less than 30 points.

Steward: Minnesota Community Measurement

High Priority Measure: Yes

Measure Type: Patient-Reported Outcome-Based Performance Measure

Rationale: We propose to revise the numerator definition to clarify which assessment should be utilized if multiple assessments are administered. Additionally, we propose to update multiple components of the measure specifications to remove ‘a change’ and replace it with ‘an improvement’ as the intent of the measure is to assess if there was improvement in a patient’s functional status.
### D.81 Appropriate Use of DXA Scans in Women Under 65 Years Who Do Not Meet the Risk Factor Profile for Osteoporotic Fracture

<table>
<thead>
<tr>

<td>CMS249v4</td>
</tr>
<tr>
<td>National Quality Strategy Domain:</td>
<td>Efficiency and Cost Reduction</td>
</tr>
<tr>
<td>Current Collection Type:</td>
<td>eCQM Specifications</td>
</tr>
<tr>
<td>Current Measure Description:</td>
<td>Percentage of female patients 50 to 64 years of age without select risk factors for osteoporotic fracture who received an order for a dual-energy x-ray absorptiometry (DXA) scan during the measurement period.</td>
</tr>
</tbody>
</table>

**Substantive Change:**

#### Updated denominator exclusion: Revised

The following risk factors may occur at any time in the patient's history or during the measurement period:
- Rheumatoid arthritis
- Hyperthyroidism
- Malabsorption Syndromes: celiac disease, inflammatory bowel disease, ulcerative colitis, Crohn's disease, cystic fibrosis, malabsorption
- Chronic liver disease
- Chronic malnutrition
- Osteoporotic fracture

The following risk factors may occur any time in the patient's history prior to the start of the measurement period but do not need to be active at the start of the measurement period:

- Documentation of history of hip fracture in parent
- Glucocorticoids (cumulative medication duration ≥ 90 days)

**Steward:** Centers for Medicare & Medicaid Services

**Measure Type:** Process

**Rationale:** We propose to revise the denominator exclusion to remove the dosage requirements associate with glucocorticoid usage calculation to more accurately capture patients with relevant exposure and to exclude patients who had an osteoporotic fracture at any point in time, based upon stakeholder feedback. This will ensure that only patients appropriate for the assessment of the quality action are being included within the initial patient population.

</tr>
<tr>
<td>Current Measure Description:</td>
<td>For patients 18 years of age or older who had a lumbar fusion procedure, leg pain is rated by the patient as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the Visual Analog Scale (VAS) Pain* scale at one year (9 to 15 months) postoperatively.</td>
</tr>
</tbody>
</table>

**Substantive Change:**

#### Updated numerator definition: Revised

- Preoperative Assessment VAS Pain - A preoperative VAS pain scale score can be obtained from the patient any time up to three months preoperatively, inclusive of the date of the procedure. Assessment scores obtained via a telephone screening or more than three months before the procedure will not be used for measure calculation. If more than one preoperative VAS was obtained, use the VAS that is the most recent and prior to the procedure.
- Postoperative Assessment VAS Pain - A postoperative VAS pain scale score can be obtained from the patient one year (9 to 15 months) after the date of procedure. Assessment scores obtained via a telephone screening or prior to 9 months and after 15 months postoperatively will not be used for measure calculation. If more than one postoperative VAS was obtained during the 9 to 15 months following the procedure, use the most recent score obtained during the allowable timeframe.

**Steward:** Minnesota Community Measurement

**Measure Type:** Patient-Reported Outcome-Based Performance Measure

**Rationale:** We propose to revise the numerator definition to clarify which assessment should be utilized if multiple assessments are administered.
### D.83 Urinary Symptom Score Change 6-12 Months After Diagnosis of Benign Prostatic Hyperplasia

Table A: Proposed New Improvement Activities for the MIPS CY 2022 Performance Period/2024 MIPS Payment Year and Future Years

<table>
<thead>
<tr>
<th>Proposed Activity ID:</th>
<th>IA_AHE_XX</th>
</tr>
</thead>
<tbody>
<tr>
<td>Proposed Subcategory:</td>
<td>Achieving Health Equity</td>
</tr>
<tr>
<td>Proposed Activity Title:</td>
<td>Create and Implement an Anti-Racism Plan</td>
</tr>
<tr>
<td>Proposed Activity Description:</td>
<td>Create and implement an anti-racism plan using the CMS Disparities Impact Statement or other anti-racism planning tools. The plan should include a clinic-wide review of existing tools and policies, such as value statements or clinical practice guidelines, to ensure that they include and are aligned with a commitment to anti-racism and an understanding of race as a political and social construct, not a physiological one. The plan should also identify ways in which issues and gaps identified in the review can be addressed and should include target goals and milestones for addressing prioritized issues and gaps. This may also include an assessment and drafting of an organization’s plan to prevent and address racism and/or improve language access and accessibility to ensure services are accessible and understandable for those seeking care. The clinician or practice can also consider including in their plan ongoing training on anti-racism and/or other processes to support identifying explicit and implicit biases in patient care and addressing historic health inequities experienced by people of color. More information about elements of the CMS Disparities Impact Statement is detailed in the template and action plan document at <a href="https://www.cms.gov/About-CMS/Agency-Information/OMH/Downloads/Disparities-Impact-Statement-508-rev102018.pdf">https://www.cms.gov/About-CMS/Agency-Information/OMH/Downloads/Disparities-Impact-Statement-508-rev102018.pdf</a>.</td>
</tr>
<tr>
<td>Proposed Weighting:</td>
<td>High</td>
</tr>
</tbody>
</table>
| Rationale: | This proposed activity aims to address systemic inequities, including systemic racism, as called for in Executive Order 13985: Advancing Racial Equity and Support for Underserved Communities Through the Federal Government, published January 20, 2021. This activity begins with the premise that it is important to acknowledge systemic racism as a root cause for differences in health outcomes between socially-defined racial groups.

We believe this activity has the potential to improve clinical practice or care delivery and is likely to result in improved outcomes, per the improvement activity definition at § 414.1305, because it supports clinicians in identifying health disparities and implementing processes to reduce racism and provide equitable quality health care. This activity is intended to help clinicians move beyond analyzing data to taking real steps to naming and eliminating the causes of the disparities identified. We also propose making this activity high-weighted because clinicians will need considerable time and resources to develop a thorough anti-racism plan that is informed by data, and to implement it throughout the practice or system. See the definition for high weighting in the CY 2019 PFS final rule (83 FR 59780 through 59781). |
| New Improvement Activity |
| Proposed Activity ID: | IA_AHE_XX |
| Proposed Subcategory: | Achieving Health Equity |
| Proposed Activity Title: | Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols |

Appendix 2: Improvement Activities

Note: In this proposed rule, for the 2022 MIPS performance/2024 MIPS payment year and future years, we are proposing to add 7 new improvement activities, modify 15 previously adopted improvement activities, and remove 6 previously adopted improvement activities. These proposals are discussed in detail below. We request comments on our proposals.
| Proposed Activity Description: | Create or improve, and then implement, protocols for identifying and providing appropriate support to: a) patients with or at risk for food insecurity, and b) patients with or at risk for poor nutritional status. (Poor nutritional status is sometimes referred to as clinical malnutrition or undernutrition and applies to people who are overweight and underweight.) Actions to implement this improvement activity may include, but are not limited to, the following:  
• Use Malnutrition Quality Improvement Initiative (MQii) or other quality improvement resources and standardized screening tools to assess and improve current food insecurity and nutritional screening and care practices.  
• Update and use clinical decision support tools within the clinician’s electronic medical record to align with the new food insecurity and nutrition risk protocols.  
• Update and apply requirements for staff training on food security and nutrition.  
• Update and provide resources and referral lists, and/or engage with community partners to facilitate referrals for patients who are identified as at risk for food insecurity or poor nutritional status during screening.  
Activities must be focused on patients at greatest risk for food insecurity and/or malnutrition—for example patients with low income who live in areas with limited access to affordable fresh food, or who are isolated or have limited mobility. |
<p>| Proposed Weighting: | Medium |
| Rationale: | Food insecurity is a widespread and worsening issue in the United States. Estimates indicate that the number of food insecure people in the United States increased from 35.2 million people (1 in 9 people) in 2019 to 45 million people (1 in 7 people) in 2020. Older adults are particularly at risk because of low income, mobility issues, dementia, and other factors such as social isolation. Food insecurity also disproportionately affects Black and Latinx households. Malnutrition is also widespread in the United States. Both food insecurity and malnutrition are associated with worse health outcomes and higher spending on healthcare. For example, adults who are malnourished at the time of hospitalization or surgery are more likely to have worse hospitalization, surgical, and recovery outcomes. The improvement activity fills a gap in the inventory, which does not currently include an improvement activity related to food insecurity or malnutrition. We believe this activity has the potential to improve clinical practice or care delivery and is likely to result in improved outcomes, because ameliorating food insecurity and malnutrition leads to better health outcomes. This activity creates an opportunity for clinicians to help address food insecurity and malnutrition, and provides the Malnutrition Quality Improvement Initiative as a resource. Evidence indicates that they can help patients by increasing enrollment in the Supplemental Nutrition Assistance Program (SNAP) (<a href="https://www.fns.usdagov/snap/supplemental-nutrition-assistance-program">https://www.fns.usdagov/snap/supplemental-nutrition-assistance-program</a>), which is associated with reduced food insecurity or connecting their patients to other community resources. This activity also creates an opportunity for clinicians to help address malnutrition by ensuring patients in need receive a detailed nutritional assessment and appropriate nutritional care. We propose weighting this activity medium, because this activity may be accomplished by providing literature and/or facilitating a conversation with a patient during a regular visit. The estimated level of effort for clinicians is comparable to other medium-weighted activities in the inventory, and less than that of high-weighted activities. See the definition of medium weighting in the CY 2019 PFS final rule (83 FR 59780 through 59781). |
| New Improvement Activity |
| Proposed Activity ID: | IA_BMH_XX |
| Proposed Subcategory: | Behavioral and Mental Health |</p>
<table>
<thead>
<tr>
<th>Proposed Activity Title:</th>
<th>Implementation of a Trauma-Informed Care (TIC) Approach to Clinical Practice</th>
</tr>
</thead>
</table>
| Proposed Activity Description: | Create and implement a plan for trauma-informed care (TIC) that recognizes the potential impact of trauma experiences on patients and takes steps to mitigate the effects of adverse events in order to avoid re-traumatizing or triggering past trauma. Actions in this plan may include, but are not limited to, the following:  
• Incorporate trauma-informed training into new employee orientation  
• Offer annual refreshers and/or trainings for all staff  
• Recommend and supply TIC materials to third party partners, including care management companies and billing services  
• Identify patients using a screening methodology  
• Flag charts for patients with one or more adverse events that might have caused trauma  
• Use ICD-10 diagnosis codes for adverse events when appropriate |
| Proposed Weighting: | Medium |
| Rationale: | We propose this activity because the psychological impact of trauma influences the clinical care needs of a large population in the United States and adopting a TIC approach can help all clinicians avoid retraumatizing affected patients and support providers and staff who have experienced trauma themselves. Research indicates that clinicians have a positive view of TIC but need more resources and support to apply the concepts to practice.  
For the purposes of this proposed improvement activity, trauma is the experience of a harmful or life-threatening event or series of events and their longer-term psychological impact, which can include development of post-traumatic stress disorder (PTSD) and changes to brain functioning and even genetics. Approximately 60 percent of men and 50 percent of women in the U.S. have experienced trauma in their lifetimes and 7-8 percent of the population will have PTSD at some point in their lives. Multi-generational trauma, whereby experiences that traumatized earlier generations, such as the genocide of Native American tribes, are passed down, impact many families and communities. Clinicians (and not just mental health clinicians) who take a TIC approach anticipate and avoid institutional processes and individual practices that are likely to retraumatize individuals who have histories of trauma. We believe this activity has the potential to improve clinical practice or care delivery and is likely to result in improved outcomes, because trauma-informed approaches in healthcare are associated with improved outcomes for patients.  
We propose weighting this activity medium, because this activity may be accomplished by conducting a training, providing resources, or incorporating new procedures into a clinician’s practice. The estimated level of effort for clinicians is comparable to other medium-weighted activities in the inventory, and less than that of high-weighted activities. See the definition of medium weighting in the CY 2019 PFS final rule (83 FR 59780 through 59781). |

### New Improvement Activity

<table>
<thead>
<tr>
<th>Proposed Activity ID:</th>

</thead>
<tbody>
<tr>
<td>Proposed Subcategory:</td>
<td>Behavioral and Mental Health</td>
</tr>
<tr>
<td>Proposed Activity Title:</td>
<td>Promoting Clinician Well-Being</td>
</tr>
<tr>
<td>Proposed Activity Description:</td>
<td>Develop and implement programs to support clinician well-being and resilience—for example, through relationship-building opportunities, leadership development plans, or...</td>
</tr>
</tbody>
</table>
creation of a team within a practice to address clinician well-being—using one of the following approaches:
- Completion of clinician survey on clinician well-being with subsequent implementation of an improvement plan based on the results of the survey.
- Completion of training regarding clinician well-being with subsequent implementation of a plan for improvement.

<table>
<thead>
<tr>
<th>Proposed Weighting</th>
<th>High</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rationale:</td>
<td>We believe this activity will help clinicians prioritize and improve their own well-being and the well-being of their staff and colleagues. Focusing on improving clinician well-being is especially critical now, given the stress that the COVID-19 public health emergency has exerted on clinicians. Many organizations, including the National Academies of Sciences, Engineering, and Medicine, have prioritized interventions to improve clinician well-being. Studies indicate that clinician burnout, including emotional exhaustion, depersonalization, and reduced personal accomplishment, is associated with poorer quality healthcare and reduced safety for patients. Studies also indicate that some interventions have been shown to reduce burnout and improve well-being. This improvement activity fills a gap because the inventory does not currently include an improvement activity related to clinician well-being. We believe this activity has the potential to improve clinical practice or care delivery and is likely to result in improved outcomes, because promoting clinician well-being and mitigating burnout leads to better quality health care and increased patient safety.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Proposed Activity ID:</th>
<th>IA_ERP_XX</th>
</tr>
</thead>
<tbody>
<tr>
<td>Proposed Subcategory:</td>
<td>Emergency Response and Preparedness</td>
</tr>
<tr>
<td>Proposed Activity Title:</td>
<td>Implementation of a Personal Protective Equipment (PPE) Plan</td>
</tr>
</tbody>
</table>
| Proposed Activity Description: | Implement a plan to acquire, store, maintain, and replenish supplies of personal protective equipment (PPE) for all clinicians or other staff who are in physical proximity to patients. In accordance with guidance from the Centers for Disease Control and Prevention (CDC) the PPE plan should address:
- Conventional capacity: PPE controls that should be implemented in general infection prevention and control plans in healthcare settings, including training in proper PPE use.
- Contingency capacity: actions that may be used temporarily during periods of expected PPE shortages.
- Crisis capacity: strategies that may need to be considered during periods of known PPE shortages. The PPE plan should address all of the following types of PPE:
- Standard precautions (e.g., hand hygiene, prevention of needle-stick or sharps injuries, safe waste management, cleaning and disinfection of the environment)
- Eye protection
- Gowns (including coveralls or aprons)
- Gloves
- Facemasks
- Respirators (including N95 respirators) |
| Proposed Weighting: | Medium |
| Rationale: | The COVID-19 pandemic illustrated the importance of maintaining adequate PPE supplies for caregivers. Especially early in the pandemic, inadequate PPE supplies reduced access to care and exposed healthcare workers to unnecessary risk. |
While clinicians may be following surge capacity procedures, they may not have a written plan for both preventing and preparing for surge capacity. In a survey conducted in mid-March of 2020, over 50 percent of physician practices cited a lack of supplies as an obstacle to caregiving. Also, in a 2009 survey of American College of Emergency Physician Disaster Medicine Section members, fewer than 75 percent of respondents indicated that their emergency department had a plan for responding to pandemic influenza and other infectious disease threats. This proposed improvement activity is based on the CDC guidelines for optimizing PPE supplies and aligns with World Health Organization guidelines.

We believe that including this improvement activity in the inventory would encourage formalizing the process for creating a PPE plan, training staff, and ensuring adequate PPE inventory. Thus, it has the potential to improve clinical practice or care delivery and is likely to result in improved outcomes, because both clinicians and their patients will be safer when responding to epidemics, reducing the transmission of viruses and allowing clinicians to provide patients with appropriate care because supplies are available.

We propose that this activity should be weighted as medium, because it may be accomplished by conducting a training, providing resources, or incorporating new procedures into a clinician’s practice. The estimated level of effort for clinicians is comparable to other medium-weighted activities in the inventory, and less than that of high-weighted activities. See the definition of medium weighting in the CY 2019 PFS final rule (83 FR 59780 through 59781).

</table>
| **Proposed Activity Description:** | Develop, implement, update, and maintain a preparedness plan for a laboratory intended to support continued or expanded patient care during COVID-19 or another public health emergency. The plan should address how the laboratory would maintain or expand patient access to health care services to improve beneficiary health outcomes and reduce healthcare disparities.

For laboratories without a preparedness plan, clinicians would meet with stakeholders, record minutes, and document a preparedness plan, as needed. The laboratory must then implement the steps identified in the plan and maintain them.

For laboratories with existing preparedness plans, clinicians should review, revise, or update the plan as necessary to meet the needs of the current PHE, implement new procedures, and maintain the plan.

Maintenance of the plan in this activity could include additional hazard assessments, drills, training, and/or developing checklists to facilitate execution of the plan. Participation in debriefings to evaluate the effectiveness of plans are additional examples of engagement in this activity. |
| **Proposed Weighting:** | Medium |
| **Rationale:** | The COVID-19 pandemic demonstrated a need for many laboratories to develop and implement protocols to respond to the public health emergencies, as an increase in demand (due to a surge in COVID testing) and reduced staffing (due to needing to maintain distancing and other factors, such as childcare becoming unavailable) compromised laboratory functioning.

We believe that including this improvement activity in the inventory would encourage formalizing, updating, and maintaining preparedness plans to better equip laboratories to address another public health emergency, as well as other disasters such as floods, fires, or other emergencies. Such a plan will allow laboratory staff to respond and |
Proposed Activity ID: IA_PSPA_XX

Proposed Subcategory: Patient Safety and Practice Assessment

Proposed Activity Title: Application of CDC’s Training for Healthcare Providers on Lyme Disease

Proposed Activity Description: Apply the Centers for Disease Control and Prevention’s (CDC) Training for Healthcare Providers on Lyme Disease using clinical decision support (CDS). CDS for Lyme disease should be built directly into the clinician workflow and support decision making for a specific patient at the point of care. Specific examples of how the guideline could be incorporated into a CDS workflow include but are not limited to: electronic health record (EHR) based prescribing prompts, order sets that require review of guidelines before prescriptions can be entered, and prompts requiring review of guidelines before a subsequent action can be taken in the record.

Proposed Weighting: Medium

Rationale: Lyme disease has a high burden of disease, with approximately 476,000 cases diagnosed and treated annually. Additionally, the places where Lyme disease is common is expanding. We believe that including this improvement activity in the inventory would increase knowledge about Lyme disease. The CDC has developed a training course to support clinicians in identifying and treating Lyme disease, and this course would provide foundational knowledge to incorporate Lyme disease diagnosis and treatment into the workflow using CDS. It has the potential to improve clinical practice and care delivery and is likely to result in improved outcomes; additional education to improve Lyme disease testing, ordering, and reporting systems are likely to improve patient care, reduce errors, and result in better Lyme disease-related outcomes.

We propose weighting this activity medium because this activity may be accomplished by conducting a training and incorporating new procedures into a clinician’s practice. The estimated level of effort for clinicians is comparable to other medium-weighted activities in the inventory, and less than that of high-weighted activities. See the definition of medium weighting in the CY 2019 PFS final rule (83 FR 59780 through 59781).

Table B: Proposed Changes to Previously Adopted Improvement Activities for the 2022 MIPS Performance Period/2024 MIPS Payment Year and Future Years

<table>
<thead>
<tr>
<th>Current Activity ID:</th>
<th>Current Improvement Activity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Current Subcategory:</td>
<td>Achieving Health Equity</td>
</tr>
<tr>
<td>Current Activity Title:</td>
<td>Engagement of new Medicaid patients and follow-up</td>
</tr>
<tr>
<td>Current Activity Description:</td>
<td>Seeing new and follow-up Medicaid patients in a timely manner, including individuals dually eligible for Medicaid and Medicare. A timely manner is defined as within 10 business days for this activity.</td>
</tr>
<tr>
<td>Current Weighting:</td>
<td>Medium</td>
</tr>
<tr>
<td>Proposed Change and Rationale:</td>
<td>This improvement activity was originally finalized in the CY 2017 Quality Payment Program final rule (81 FR 77825). The proposed modified activity would continue to address the important objective of providing timely care to Medicaid patients, but also expand the target population to include all patients who are underserved and may face barriers to timely access to appropriate care. We also propose modifying the description so that, instead of stating patients should receive follow-up in a “timely manner,” defined as within 10 business days, clinicians would use their own time-to-treat data (i.e., data measuring the time between clinician identifying a need for an appointment and the patient having a scheduled appointment) to ensure that patients receive follow-up within standard guidelines and create, implement and monitor an approach for improvement in engagement in care. We want to broaden the description, because the amount of time that is clinically relevant for a follow-up visit varies widely, and therefore, setting a specific definition of “timely manner” may not be clinically appropriate for all patients. The proposed modification acknowledges this variation and encourages clinicians to use their own time-to-treat data and standard practice guidelines to enhance engagement. The proposed modified activity describes that this approach to improving engagement in care may include screening for treatment barriers, especially transportation barriers, and providing resources to patients who need assistance, including access to federally-mandated Medicaid transportation benefits. Lack of suitable transportation can pose a barrier to accessing needed care for many underserved patients—particularly for those who are elderly, disabled, or low-income. As finalized in federal regulation (42 CFR 431.53 and 440.170), Medicaid beneficiaries are eligible for the non-emergency medical transportation benefit, which assures transportation to and from non-emergency medical care for those without other options. This activity is intended to encourage clinicians to direct Medicaid beneficiaries and other underserved patients to access resources to reduce barriers to their timely access of needed care and ultimately help them achieve better health outcomes.</td>
</tr>
<tr>
<td>Proposed Revised Activity Title</td>
<td>Enhance Engagement of Medicaid and Other Underserved Populations</td>

<td>MIPS Eligible Clinician Leadership in Clinical Trials or Community-Based Participatory Research (CBPR)</td>
</tr>
<tr>
<td>Current Activity Description:</td>
<td>MIPS eligible clinician leadership in clinical trials, research alliances or community-based participatory research (CBPR) that identify tools, research or processes that can focus on minimizing disparities in healthcare access, care quality, affordability, or outcomes.</td>
</tr>
<tr>
<td>Current Weighting:</td>
<td>Medium</td>
</tr>
<tr>
<td>Proposed Change and Rationale:</td>
<td>This improvement activity was originally finalized in the CY 2018 Quality Payment Program final rule (82 FR 54175). This proposed modification would add as an explicit option that the research could focus on addressing health-related social needs as drivers of health. Risks for health-related social needs are more acute and widespread in underserved communities. These risks are linked to worse health outcomes and addressing them can reduce costs. The modification would also change verbiage in ways that clarify the activity, but do not affect the intent of the activity. The health-related social needs included in the proposed modification are aligned with our Accountable Health Communities (AHC) Model (<a href="https://innovation.cms.gov/innovation-models/ahcm">https://innovation.cms.gov/innovation-models/ahcm</a>), which looks at the impact of identifying and addressing patients’ health-related social needs on their health outcomes. AHC has prioritized five areas of health-related social needs, namely: food insecurity, housing insecurity, transportation, utilities, and interpersonal safety. These areas were selected as priority, because there is high-quality evidence linking it with poor health or increased health care utilization and cost, there are community providers who can help meet the need, and health care providers are not yet comprehensively screening for or addressing these needs. We propose to modify this improvement activity to identify the same five health-related social needs prioritized in the AHC Model as potential areas of research. Criteria for selecting new improvement activities, which we are proposing to update in section IV.A.3.d.(3)(c)(i), align with those used for prioritizing health-related social needs. With this modification, this improvement activity would become more explicitly a part of our plan to help clinicians provide patient-centered care to patients who have complex and multi-faceted needs. We believe that participation in the modified version of this improvement activity would be more likely to result in improved outcomes, because it explicitly includes research into health-related social needs, which are central to understanding and addressing disparities in achieving positive health outcomes. We believe that we will achieve the objectives of the Quality Payment Program—specifically, to improve beneficiary population health, to improve the care received by Medicare beneficiaries, and to lower costs to the Medicare program—by helping address health-related social needs.</td>
</tr>
<tr>
<td>Proposed Revised Activity Description:</td>
<td>Lead clinical trials, research alliances, or community-based participatory research (CBPR) that identify tools, research, or processes that focus on minimizing disparities in healthcare access, care quality, affordability, or outcomes. Research could include addressing health-related social needs like food insecurity, housing insecurity, transportation barriers, utility needs, and interpersonal safety.</td>

<td>Use of certified EHR to capture patient reported outcomes</td>
</tr>
<tr>
<td>Current Activity Description:</td>
<td>In support of improving patient access, performing additional activities that enable capture of patient reported outcomes (e.g., home blood pressure, blood glucose logs, food diaries, at-risk health factors such as tobacco or alcohol use, etc.) or patient activation measures through use of certified EHR technology, containing this data in a separate queue for clinician recognition and review.</td>
</tr>
<tr>
<td>Current Weighting:</td>
<td>Medium</td>
</tr>
<tr>
<td>Proposed Change and Rationale:</td>
<td>This improvement activity was originally finalized in the CY 2017 Quality Payment Program final rule (81 FR 77825). We propose to modify the activity by replacing examples of patient reported outcomes with current industry standards — functional status, symptoms and symptom burden, health behaviors, and patient experience.</td>
</tr>
</tbody>
</table>
We also propose to include a definition for patient activation6 -- measures of patient involvement in their care -- to improve clarity of the activity.

Finally, we also propose to simplify the wording in ways that clarify the activity but do not affect the purpose. These proposed modifications would improve the accuracy, applicability, and clarity of the activity. We believe that participation in the modified version of this improvement activity would be more likely to result in improved outcomes, because it promotes clarity by providing more accurate and current industry standard patient reported outcomes.

Proposed Revised Activity Description:

To improve patient access, perform activities beyond routine care that enable capture of patient reported outcomes (e.g., related to functional status, symptoms and symptom burden, health behaviors, or patient experience) or patient activation measures (i.e., measures of patient involvement in their care) through use of certified electronic health record technology, and record these outcomes data for clinician review.

Proposed Revised Activity Description:

We propose to modify IA_BE_6 to include additional detail covering the unique content of IA_BE_13 and IA_PSPA_11. Specifically, we propose to add surveys such as CAHPS, advisory councils, and other mechanisms in the modified version of BE_6 as options for tools used for collecting the patient experience data.

We also propose to update the title of the improvement activity to better reflect the full scope of the revised activity description.

We also propose to add language that would encourage clinicians to consider the linguistic needs of their population, so that the satisfaction survey results can include the perspectives of patient groups who may not feel comfortable taking a survey in English.

Proposed Revised Title:

Regularly Assess Patient Experience of Care and Follow Up on Findings

Proposed Revised Activity Description:

Collect and follow up on patient experience and satisfaction data. This activity also requires follow-up on findings of assessments, including the development and implementation of improvement plans. To fulfill the requirements of this activity, eligible clinicians can use surveys (e.g., Consumer Assessment of Healthcare Providers and Systems Survey), advisory councils, or other mechanisms. Clinicians may consider implementing patient surveys in multiple languages, based on the needs of their patient population.
## Current Improvement Activity

</tr>
<tr>
<td>Current Weighting:</td>
<td>Medium</td>
</tr>
<tr>
<td>Proposed Change and Rationale:</td>
<td>This improvement activity was originally finalized in the CY 2017 Quality Payment Program final rule (81 FR 77825). We propose to combine this IA_BE_16 with the previously adopted IA_BE_17, IA_BE_18, IA_BE_20, and IA_BE_21 because of overlapping and duplicative content and to improve the applicability and ease of use of the inventory. The above previously adopted improvement activities included effective interventions for helping patients better engage in self-management. The previously adopted activity descriptions are as follows:</td>
</tr>
<tr>
<td></td>
<td>• IA_BE_17: Use tools to assist patients in assessing their need for support for self-management (e.g., the Patient Activation Measure or “How’s My Health”). (81 FR 77825)</td>
</tr>
<tr>
<td></td>
<td>• IA_BE_18: Provide peer-led support for self-management. (81 FR 77825)</td>
</tr>
<tr>
<td></td>
<td>• IA_BE_20: Provide condition-specific chronic disease self-management support programs or coaching or link patients to those programs in the community. (81 FR 77825)</td>
</tr>
<tr>
<td></td>
<td>• IA_BE_21: Provide self-management materials at an appropriate literacy level and in an appropriate language. (81 FR 77825)</td>
</tr>
<tr>
<td></td>
<td>We are proposing to change IA_BE_16 to include additional detail covering the unique content of IA_BE_17, IA_BE_18, IA_BE_20, and IA_BE_21. Specifically, we are proposing to add tools for self-management, peer-led support, provision of self-management materials, and retain the examples of evidence-based approaches patients better engage in self-management included in the original IA_BE_16: goal setting with structured follow-up, Teach back methods, action planning, assessment of need for self-management (e.g., the Patient Activation Measure), and motivational interviewing as options for tools and resources to provide patients as part of fulfilling the requirements for the activity. These tools and techniques could be particularly helpful for people with substance use disorders and individuals managing chronic physical conditions such as diabetes and heart disease.</td>
</tr>
<tr>
<td>Proposed Revised Activity Title:</td>
<td>Promote Self-management in Usual Care</td>
</tr>
<tr>
<td>Proposed Revised Activity Description:</td>
<td>To help patients self-manage their care, incorporate culturally and linguistically tailored evidence-based techniques for promoting self-management into usual care, and provide patients with tools and resources for self-management. Examples of evidence-based techniques to use in usual care include: goal setting with structured follow-up, Teach-back methods, action planning, assessment of need for self-management (e.g., the Patient Activation Measure), and motivational interviewing. Examples of tools and resources to provide patients directly or through community organizations include: peer-led support for self-management, condition-specific chronic disease or substance use disorder self-management programs, and self-management materials</td>

If appropriate, the clinician must also explore with their patients the availability of alternative drugs and patients’ eligibility for patient assistance programs that provide free medications to people who cannot afford to buy their medicine. One source of information for pricing of</td>
</tr>
</tbody>
</table>
Current Wei
Proposed Change and Rationale:
This improvement activity was originally finalized in the CY 2020 PFS final rule (84 FR 63539). In the CY 2020 PFS final rule (84 FR 63515), we adopted IA_BE_25, titled “Drug Cost Transparency to include requirements for use of real-time benefit tools” beginning with the 2020 performance year and for subsequent years. It allows a real-time benefit tool (RTBn) to be one source of information for pricing of pharmaceuticals, which provides to the prescriber real-time patient-specific formulary and benefit information for drugs, including cost-sharing for a beneficiary.

The 2021 Consolidated Appropriations Act (H.R. 116-133, Pub. L. 116-260) subtitle B included section 119 “Increasing the use of real-time benefit tools to lower beneficiary costs” subsection (c) “Inclusion of Use of Real-Time Electronic Information in Shared Decision-Making Under MIPS” amended Section 1848(q)(2)(B)(iii)(IV) of the Act by adding at the end the following new sentences: “This subcategory shall include as an activity, for performance periods beginning on or after January 1, 2022, use of a real-time benefit tool as described in section 1860D-4(o). The Secretary may establish this activity as a standalone or as a component of another activity.”

In response to this amendment, in this proposed rule, we propose to modify this improvement activity such that beginning with the 2022 MIPS performance period/2024 MIPS payment year and for subsequent years the activity would require use of RTBn in order to receive credit for this activity. As previously finalized, use of RTBn is optional.

We also propose to update the description in ways that clarify the activity, but do not affect the intent of the activity.

We believe that requiring RTBn would make this activity more likely to reduce the costs of care. As explained in the CY 2019 Modernizing Part D final rule (84 FR 23832), RTBnTs that are integrated with at least one prescriber's e-prescribing and electronic medical record systems can make beneficiaries-specific drug coverage and cost information visible to prescribers. Using RTBn thus allows the prescriber and patient, when appropriate, to choose among clinically acceptable alternatives while weighing costs. By making RTBn a requirement, this modification would also require prescribers to look for alternative drugs, in contrast to the existing activity where such comparisons are optional. We believe that furthering prescription price transparency is critical to lowering overall drug costs and patients' out-of-pocket costs and improving medication adherence. Additionally, it can help advance efforts to improve patient safety, quality of care, and efficiencies and cost savings in the delivery of care.

| Proposed Revised Activity Description: | Provide counseling to patients and/or their caregivers regarding: costs of medications using a real-time benefit tool (RTBn) which provides to the prescriber real-time patient-specific formulary and benefit information for drugs, including cost-sharing for a beneficiary |

| Current Activity ID: | IA CC 14 |
| Current Subcategory: | Care Coordination |
| Current Activity Title: | Practice improvements that engage community resources to support patient health goals |
| Current Activity Description: | Develop pathways to neighborhood/community-based resources to support patient health goals that could include one or more of the following:
- Maintain formal (referral) links to community-based chronic disease self-management support programs, exercise programs and other wellness resources with the potential for bidirectional flow of information; and provide a guide to available community resources.
- Including through the use of tools that facilitate electronic communication |
### Proposed Change and Rationale:

This improvement activity was originally finalized in the CY 2017 Quality Payment Program final rule (81 FR 77825). The previously adopted improvement activity includes screening as one option to assess patients specifically for social and legal needs. We propose to modify this improvement activity to instead require screening for a range of health-related social needs using evidence-based tools before and in addition to supporting connections to community resources. We believe that screening patients using evidence-based tools can help clinicians adopt a more systematic approach to addressing health related social needs among their patient population, including effective documentation and follow-up, and avoid missing patients who have such needs. Including screening in addition to supporting connections to community resources, represents a continuum of support that clinicians can provide to patients from within the health system.

We also propose to remove the promotion of systems for communication that have the “potential for bi-directional flow of information” and the option for using “tools that facilitate electronic communication between settings.” In many communities, the resources and programs that might best provide patients who have health-related social needs with support may not have the baseline technological capacity to engage with clinician groups in ways that eclipse basic forms of communication like phone and email.

We also propose to add an option for using electronic health records to document screening results, trigger follow-up, and analyze data to better tailor approaches. For practices that already have processes for enabling connections to community resources established, this option would allow continued improvement and provision of more streamlined and systematized support to patients in need.

The specific set of health-related social needs that clinicians might choose to prioritize remains part of the improvement activity, as does examples that were previously mentioned in the activity—for example, health-related legal needs. We believe that participation in the modified version of this improvement activity would be more likely to result in improved outcomes, because it requires clinicians to both screen for and address health related social needs, which are major contributors to health care access and health outcomes.

In light of the above list of proposed changes in this modification, we are also proposing to increase the weight for this activity from medium to high. Specifically, the modifications now require screening in addition to an activity that links patients to community resources. Previously, the activity required screening or linkages to community. Conducting screening then devoting clinical staff time to using that data to identify and disseminate appropriate community resource information to patients takes considerable time and resources. We are proposing to increase the weight for this activity from medium to high to reflect the additional effort required, per high-weight criteria finalized in the CY 2019 PFS final rule (83 FR 59780 through 59781).

### ProposedWeighting:

High

### Proposed Revised Activity Description:

Select and screen for the health-related social needs (HRSN) that are relevant for your patient population using tools that have been tested with underserved populations. If possible, use a screening tool that is health IT-enabled and includes standards-based, coded question/field for the capture of data. After screening, address HRSNs identified through at least one of the following:

- Update a guide to available community resources and provide it to patients who are found to be at risk in one or more HRSN area.
• Maintain formal (referral) links to key community resources and programs to strengthen the referral process, implementing closed-loop referrals where feasible; or
• Record findings of screening and trigger follow-up within the electronic health record (EHR); then analyze EHR data on patients with one or more HRsNs needed to identify and implement approaches to better serve their holistic needs through linkages with community resources.

HRSNs prioritized by your practice might include health-harming legal needs, which require both health and legal support to resolve, areas such as food and housing insecurity, or needs such as exercise, nutrition, or chronic disease self-management.

<tbody>
<tr>
<td>Current Subcategory:</td>
<td>Care Coordination</td>
</tr>
<tr>
<td>Current Activity Title:</td>
<td>PSH Care Coordination</td>
</tr>
</tbody>
</table>
| Current Activity Description: | Participation in a Perioperative Surgical Home (PSH) that provides a patient-centered, physician-led, interdisciplinary, and team-based system of coordinated patient care, which coordinates care from pre-procedure assessment through the acute care episode, recovery, and post-acute care. This activity allows for reporting of strategies and processes related to care coordination of patients receiving surgical or procedural care within a PSH. The clinician must perform one or more of the following care coordination activities:
- Coordinate with care managers/navigators in preoperative clinic to plan and implementation comprehensive post-discharge plan of care;
- Deploy perioperative clinic and care processes to reduce post-operative visits to emergency rooms;
- Implement evidence-informed practices and standardize care across the entire spectrum of surgical patients; or
- Implement processes to ensure effective communications and education of patients' post-discharge instructions. |
| Current Weighting: | Medium |
| Proposed Change and Rationale: | This improvement activity was originally finalized in the CY 2018 Quality Payment Program final rule (82 FR 54175). We are proposing to increase the weight for this activity from medium to high, because it came to our attention that the level of effort to complete this activity was better aligned to our high-weight criteria, which specifies that high-weight activities reflect high intensity activities, requiring significant investment of time and resources. This activity requires team-based, interdisciplinary care coordinated across multiple care settings and requires efforts to both plan for and implement the selected care coordination actions. We note that the activity description would remain the same. |
| Proposed Weighting: | High |

<tbody>
<tr>
<td>Current Subcategory:</td>
<td>Expanded Practice Access</td>
</tr>
<tr>
<td>Current Activity Title:</td>
<td>Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record</td>
</tr>
</tbody>
</table>
| Current Activity Description: | Provide 24/7 access to MIPS eligible clinicians, groups, or care teams for advice about urgent and emergent care (e.g., MIPS eligible clinician and care team access to medical record, cross-coverage with access to medical record, or protocol-driven nurse line with access to medical record) that could include one or more of the following:
- Expanded hours in evenings and weekends with access to the patient medical record (e.g., coordinate with small practices to provide alternate hour office visits and urgent care);
- Use of alternatives to increase access to care team by MIPS eligible clinicians and groups, such as e-visits, phone visits, group visits, home visits and alternate locations (e.g., senior centers and assisted living centers); and/or
- Provision of same-day or next-day access to a consistent MIPS eligible clinician, group or care team when needed for urgent care or transition management. |
| **Proposed Change and Rationale:** | This improvement activity was originally finalized in the CY 2017 Quality Payment Program final rule (81 FR 77825). We propose to remove references to a "consistent" MIPS eligible clinician, group or care team, because the requirement for a consistent clinician is unclear and unnecessary to achieve the activity's objectives. We also propose to limit the scope of the activity to "urgent care" only rather than both "urgent and emergent care," because emergent care would only require the activity's interventions when also urgent. We believe that participation in the modified version of this improvement activity would be more likely to result in improved outcomes, because the improved clarity will promote expanded access to MIPS eligible clinicians in urgent care settings. We believe that these modifications help clarify the nature and intent of this activity, and thus will help clinicians selecting it to improve access to care for their patients. |
| **Proposed Revised Activity Description:** | Provide 24/7 access to MIPS eligible clinicians, groups, or care teams for advice about urgent care (e.g., MIPS eligible clinician and care team access to medical record, cross-coverage with access to medical record, or protocol-driven nurse line with access to medical record) that could include one or more of the following:  
- Expanded hours in evenings and weekends with access to the patient medical record (e.g., coordinate with small practices to provide alternate hour office visits and urgent care),  
- Use of alternatives to increase access to care team by MIPS eligible clinicians and groups, such as e-visits, phone visits, group visits, home visits and alternate locations (e.g., senior centers and assisted living centers); and/or  
- Provision of same-day or next-day access to a MIPS eligible clinician, group or care team when needed for urgent care or transition management. |

| **Current Activity ID:** | IA_EPA_2  |
| **Current Subcategory:** | Expanded Practice Access  |
| **Current Activity Title:** | Use of telehealth services that expand practice access  |
| **Current Activity Description:** | Use of telehealth services and analysis of data for quality improvement, such as participation in remote specialty care consults or teleaudiology pilots that assess ability to still deliver quality care to patients.  |
| **Current Weighting:** | Medium  |

| **Proposed Change and Rationale:** | This improvement activity was originally finalized in the CY 2017 QPP final rule (81 FR 77825). We propose to shift the focus of the activity to developing standardized approaches for telehealth in their daily practice and away from the analysis of data to evaluate effectiveness. This proposed shift retains the objective of the original activity, namely, of improving health outcomes for patients utilizing telehealth services. We believe this proposed shift makes the activity more relevant, because while telehealth has become a routine part of health care during the COVID-19 pandemic and is perceived as effective by clinicians and patients, clinicians may not have implemented it in a standardized manner or as widely as possible due to the rapid adaptation needed during the pandemic. We believe that participation in the modified version of this improvement activity would be more likely to result in improved outcomes, because it promotes creation and implementation of standardized telehealth services, which can improve access and quality of care by offering another mode by which patients can interact with their care team.  |
| **Proposed Revised Activity Description:** | Create and implement a standardized process for providing telehealth services to expand access to care.  |

<p>| <strong>Current Activity ID:</strong> | IA_PM_6  |

QIOs |</p>
<table>
<thead>
<tr>
<th>Current Weighting:</th>
<th>Medium</th>
</tr>
</thead>
<tbody>
<tr>
<td>Proposed Change and Rationale:</td>
<td>This improvement activity was originally finalized in the CY 2017 Quality Payment Program final rule (81 FR 77825). We propose to add language that is more explicit about the improvement activity’s focus on using population health data analysis to assess the prevalence of inequities in a practice and community. Specifically, we propose to modify the activity description to specify that population health data analysis tools should be used to identify health inequities; clinicians should then assess the options for effective interventions to address those inequities. We also are proposing to add a requirement that clinicians create, refine, and implement an action plan to address inequities based on the data analysis conducted. We are also proposing to remove references to the Learning and Action Network, Quality Innovation Network, and National Coordinating Center as organizations that may identify tools or resources, because they may not be appropriate resources to support clinicians in assessing and addressing health disparities. Population health data analytic tools may be identified in a number of ways, and we seek to keep the activity broad in this manner. We also propose to replace the term “disparities” with “inequities” in both the title and description of the activity, which acknowledges structural problems like racism are inequities (i.e., state of being unfair) rather than using the term disparities, which is defined as being different or not at parity but does not clearly state the unjustness of the result. We are also proposing to modify the title to recognize that inequities in both health (i.e., status and outcomes) and health care (i.e., access, quality, and safety) may be addressed. With the proposed modifications, clinicians attesting to this improvement activity would need to first analyze inequities in their patient populations, and then use that data to identify and then address issues or gaps. We believe that participation in the modified version of this improvement activity would be more likely to result in improved outcomes, because it is more focused on a data-driven approach to population health analysis and requires practices to use this data to inform a formal action planning process to address them.</td>
</tr>
<tr>
<td>Proposed Revised Activity Title:</td>
<td>Use of Toolsets or Other Resources to Close Health and Health Care Inequities Across Communities</td>
</tr>
<tr>
<td>Proposed Revised Activity Description:</td>
<td>Address inequities in health outcomes by using population health data analysis tools to identify health inequities in the community and practice, and assess options for effective and relevant interventions such as Population Health Toolkit or other resources identified by the clinician, practice, or by CMS. Based on this information, create, refine, and implement an action plan to address and close inequities in health outcomes and/or health care access, quality, and safety.</td>
</tr>
</tbody>

<tr>
<th>Current Activity ID:</th>
<th>IA_PM_11</th>
</tr>
</thead>
<tbody>
<tr>
<td>Current Subcategory:</td>
<td>Population Management</td>
</tr>
<tr>
<td>Current Activity Title:</td>
<td>Implementation of regular reviews of targeted patient population needs, such as structured clinical case reviews, which includes access to reports that show unique characteristics of eligible clinician's patient population, identification of vulnerable patients, and how clinical treatment needs are being tailored, if necessary, to address unique needs and what resources in the community have been identified as additional resources.</td>
</tr>
<tr>
<td>Current Weighting:</td>
<td>Medium</td>
</tr>
<tr>
<td>Proposed Change and Rationale:</td>
<td>This improvement activity was originally finalized in the CY 2017 Quality Payment Program final rule (81 FR 77825). We propose to make explicit the acknowledgement that structural issues, like racism, are a root cause of many disparities in health outcomes across populations.</td>
</tr>
</tbody>
</table>
Specifically, we propose to modify the improvement activity to encourage clinicians to explore structural issues like racism explicitly and openly during their reviews of targeted patient population needs. We propose to remove reference to “vulnerable patients” and replace it with “underserved patients” to better clarify that there is nothing inherently vulnerable about a person. Instead, their poorer health outcomes are due to systemic failures within and beyond the health system—failures which leave the health needs of underserved communities unmet. We believe these additions would allow clinicians to gain perspective and ideas beneficial to their patients by specifically identifying underserved patients, related structural inequities such as those due to racism, and tailor treatment needs and identify community resources to address those problems.

We are also proposing to modify the description language in ways that clarify the activity, but do not change the intent.

We believe that participation in the modified version of this improvement activity would be more likely to result in improved outcomes, because it requires clinicians to implement regular reviews of patient population needs to identify and address the needs of underserved populations and connect those patients to resources in the community.

### Proposed Revised Activity Description:

Implement regular reviews of targeted patient population needs, such as structured clinical case reviews, which include access to reports that show unique characteristics of eligible clinician's patient population, identification of underserved patients, and how clinical treatment needs are being tailored, if necessary, to address unique needs and what resources in the community have been identified as additional resources. The review should consider how structural inequities, such as racism, are influencing patterns of care and consider changes to acknowledge and address them. Reviews should stratify patient data by demographic characteristics and health-related social needs to appropriately identify differences among unique populations and assess the drivers of gaps and disparities and identify interventions appropriate for the needs of the sub-populations.

| **Current Activity Description:**    | Measure and improve quality at the practice and panel level, such as the American Board of Orthopaedic Surgery (ABOS) Physician Scorecards, that could include one or more of the following:  
  - Regularly review measures of quality, utilization, patient satisfaction and other measures that may be useful at the practice level and at the level of the care team or MIPS eligible clinician or group (panel); and/or  
  - Use relevant data sources to create benchmarks and goals for performance at the practice level and panel level. |
| **Current Weighting:**               | Medium                                                                                                                                                                                           |
| **Proposed Change and Rationale:**  | This improvement activity was originally finalized in the CY 2017 Quality Payment Program final rule (81 FR 77825). We propose to modify this activity to include the opportunities for clinicians to fulfill this improvement activity by applying the quality, utilization, patient satisfaction, and other measures or quality improvement actions to address inequities in quality and outcomes for underserved populations, including racial, ethnic, and gender minorities. We also propose to improve the activity language in ways that clarify the activity, but do not affect its intent, including simplifying the first activity option by removing the language “that may be useful at the practice level and at the level of the care team or MIPS eligible clinician or group (panel),” since it is stated at the beginning of the description that these activities can take place at the practice and panel levels. We believe that participation in the modified version of this improvement activity would be more likely to result in improved outcomes, because clinicians who review these relevant data sources for particular underserved populations and create benchmarks and goals for improvement are likely to provide better quality and more equitable care. |
| **Proposed Revised Activity Description:** | Measure and improve quality at the practice and panel level, such as the American Board of Orthopaedic Surgery (ABOS) Physician Scorecards that could include one or more of the following:  
  - Regularly review measures of quality, utilization, patient satisfaction and other measures; and/or  
  - Use relevant data sources to create benchmarks and goals for performance at the practice or panel levels.  
Clinicians can apply the measurement and quality improvement to address inequities in quality and outcomes for underserved populations, including racial, ethnic, and/or gender minorities. |

<td>To receive credit for this improvement activity, a MIPS eligible clinician or group must: (1) participate in a COVID-19 clinical trial utilizing a drug or biological product to treat a patient with a COVID-19 infection and report their findings through a clinical data repository or clinical data registry for the duration of their study; or (2) participate in the care of patients diagnosed with COVID-19 and simultaneously submit relevant clinical data to a clinical data registry for ongoing or future COVID-19 research. Data should be submitted to the extent permitted by applicable privacy and security laws. Examples of COVID-19 clinical trials may be found on the U.S. National Library of</td>
</tr>
</tbody>
</table>

For purposes of this improvement activity, clinical data registries must meet the following requirements: (1) the receiving entity must declare that they are ready to accept data as a clinical registry; and (2) be using the data to improve population health outcomes. Most public health agencies and clinical data registries declare readiness to accept data from clinicians via a public online posting. Clinical data registries should make publicly available specific information on what data the registry gathers, technical requirements or specifications for how the registry can receive the data, and how the registry may use, re-use, or disclose individually identifiable data it receives. For purposes of credit toward this improvement activity, any data should be sent to the clinical data registry in a structured format, which the registry is capable of receiving. A MIPS eligible clinician may submit the data using any standard or format that is supported by the clinician’s health IT systems, including but not limited to, certified functions within those systems. Such methods may include, but are not limited to, a secure upload function on a web portal, or submission via an intermediary, such as a health information exchange. To ensure interoperability and versatility of the data submitted, any electronic data should be submitted to the clinical data registry using appropriate vocabulary standards for the specific data elements, such as those identified in the United States Core Data for Interoperability (USCDI) standard adopted in 45 CFR 170.213.

Weighting: High

Proposed Action and Rationale:
We previously adopted this improvement activity to the inventory for the 2020 and 2021 MIPS performance periods only in response to the PHE for COVID-19 and planned to reassess its need for the 2022 MIPS performance period/2024 MIPS payment year and future years. We are now proposing to continue this improvement activity for the 2022 MIPS performance period/2024 MIPS payment year and future years.

Despite increasing dissemination of COVID-19 vaccines, we anticipate that COVID-19 infections may continue to be prevalent in communities with low vaccine adoption and/or among groups (i.e., children) who do not yet have access to vaccines. Additionally, new variants of COVID may introduce additional challenges to the eradication and treatment of the illness. Due to these concerns, clinicians may likely continue to encounter COVID-19 patients, and therefore we anticipate the need for COVID-19 clinical trials and data collection/sharing through registries to continue through CY 2022 and future years. Each year we will reassess whether there remains a need for additional data sharing or if preventive measures and clinical treatments have advanced to the point where these type of data are not needed. We want eligible clinicians to be able to attest to this improvement activity if it is still pertinent. If this improvement activity becomes no longer needed, we will remove the activity through rulemaking. While COVID-19 continues to be a PHE and a great concern for clinicians, patients, and communities, we believe that continued participation in this improvement activity is likely to result in improved outcomes by improving the collection of data clinicians use for the care of their patients as they monitor and manage COVID-19.

We note that the activity description would remain the same.

TABLE C: Improvement Activities Proposed for Removal for the 2022 MIPS Performance Period/2024 MIPS Payment Year and Future Years

In this rule, we are proposing to remove six previously finalized improvement activity from the MIPS Program for the 2022 MIPS performance period/2024 MIPS payment year and future years. These improvement activities are discussed in detail below. Improvement activity removal factors are discussed in the MIPS CY 2020 final rule (84 FR 62568 through 63563).

clinical practice because it emphasizes the incorporation of new tools and techniques into routine care processes. We note that this proposed removal is made in conjunction with our proposal to change IA_BE_16 in Table B, as well as our proposals to remove IA_BE_17, IA_BE_18, and IA_BE_20 in Table C.
MVP Development Background

In the CY 2021 PFS final rule (85 FR 84849 through 84854), we finalized a set of criteria to be used in the development of MVPs. In addition, in section IV.A.3.b of this proposed rule, we discuss additional proposed MVP policies, including MVP reporting requirements and selection of measures and activities within an MVP.

This appendix includes seven proposed MVPs for implementation beginning with the CY 2023 MIPS performance period/2025 MIPS payment year. Each proposed MVP includes measures and activities from the quality performance category, improvement activities performance category, and the cost performance category that are relevant to the clinical theme of the MVP. In addition, as described in the CY 2021 PFS final rule (85 FR 84841) and section IV.A.3.b.(4)(b)(i)(C) of this proposed rule, all proposed MVPs include a foundational layer, which is comprised of population health measures and Promoting Interoperability performance category measures. We refer readers to section IV.A.3.b.(4)(b)(i) of this proposed rule for key considerations and overall development approach for proposing the MVPs included in this appendix. For additional details regarding the proposed annual maintenance process for MVPs, we refer readers to section IV.A.3.b.(4)(b)(ii) of this proposed rule.

MVP Development Performance Category Sources

The MVP tables proposed below contain a set of MIPS quality measures, QCDR measures, improvement activities, cost measures, and foundational measures based on clinical topics. For further reference, the sources of the measures and activities in the MVP tables are as follows:

- Existing MIPS quality measures considered in developing the MVPs are located in Appendix 1: MIPS Quality Measures of this proposed rule.
- Existing QCDR measures considered in developing the MVPs were based on the most recent publication of the 2021 QCDR Measure Specification file. The QCDR measures are listed in the 2021 QCDR Measure Specification file located in the QPP Resource Library. An updated list of 2022 QCDR measures will be available in December 2021.
- Improvement activities considered in developing the MVPs are located in the 2021 Improvement Activities Inventory and the 2021 MIPS Data Validation Criteria located in the QPP Resource Library.
- Existing cost measures considered in developing the MVPs are located in the CY 2020 PFS final rule (84 FR 62979).
- For further details on the proposed new episode-based cost measures, refer to section IV.A.3.d.(2)(b) of this proposed rule.
- For further details on the population health measures included in the foundational layer, refer to section IV.A.3.b.(4)(b)(i)(C)(a) of this proposed rule.
- Existing Promoting Interoperability measures adopted in prior rulemaking and included in the foundational layer are located in the QPP Resource Library. In addition, see section IV.A.3.d.(4)(c) for any proposed modifications to the existing Promoting Interoperability measures.

Please note that new quality and Promoting Interoperability measures proposed for inclusion in MIPS beginning with the CY 2022 MIPS performance period/2024 MIPS payment year are identified with a caret symbol (^) within the MVP tables in this appendix. In addition, existing quality measures and improvement activities with proposed revisions are identified with an asterisk (*) before the quality measure or improvement activity ID # within the MVP tables in this appendix. See Appendix 1: MIPS Quality Measures and Appendix 2: Improvement Activities for further details regarding the proposed substantive changes and revisions in this proposed rule.

Quality measures that are considered high priority are noted with an exclamation point (!) and outcome measures are noted with a double exclamation point (!!). Quality measure collection types are identified in parentheses after each quality measure title within each MVP table.

QCDR measures proposed in the MVP tables below are noted with a pound sign (#) to indicate that testing data is pending on or before September 1, 2021. In order to determine whether a QCDR measure may be finalized within an MVP, we will need to receive QCDR measure testing data for review by the end of the self-nomination period (i.e., no later than September 1 of the year prior to the applicable performance period). We strongly encourage that QCDRs share testing data for their fully tested QCDR measures at the time of MVP candidate submission, which may be prior to the September 1st deadline. If a QCDR is unable to submit testing data to demonstrate that their QCDR measure is fully tested by the end of the self-nomination period (September 1st), or otherwise does not meet our requirements, we will not finalize the inclusion of the QCDR measure within an MVP. We refer

---

268 See section IV.A.3.b.(2)(d) of this proposed rule for additional details regarding the MVP implementation timeline.
readers to section IV.A.3.b.(4)(b)(i) of this proposed rule for additional details regarding QCDR measures and selection of measures within an MVP.

In addition, consistent with Executive Order 13985, "Advancing Racial Equity and Support for Underserved Communities Through the Federal Government," each MVP includes improvement activities designed to advance health equity and address and eliminate barriers to care in underserved communities. Improvement activities that include a health equity component are noted with a tilde (~) before the improvement activity ID # within the MVP table. Improvement activity medium/high weight designations are identified in parentheses after each improvement activity. IA_PCMH is noted with a percent (%) before the improvement activity ID # within the MVP tables below to indicate that attestation to this improvement activity would provide full credit for the improvement activities performance category within the MVP.

Table A: Proposed Advancing Rheumatology Patient Care MVP Beginning with the CY 2023 MIPS Performance Period/2025 MIPS Payment Year

Rheumatic diseases are comprised of complex chronic autoimmune and inflammatory conditions that affect joints, bones, muscles, and organs, which may eventually lead to poor outcomes and disability in patients if not well-controlled. Timely and appropriate care is critically important to the long-term health of patients. The proposed Advancing Rheumatology Patient Care MVP focuses on the clinical theme of providing fundamental treatment and management of rheumatological conditions and is most applicable to clinicians who specialize in treating patients with rheumatologic conditions.

Quality Measures
Within the quality component of this MVP, we propose to include six MIPS quality measures and three QCDR measures, which promote the assessment and control of rheumatic diseases to reduce the risk of disability and disease-related complications. We reviewed the MIPS quality measure inventory and believe the following quality measures proposed within this MVP provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in treating patients with rheumatologic conditions:

- Q176: Tuberculosis Screening Prior to First Course Biologic Therapy: This MIPS quality measure addresses the aspect of screening for tuberculosis (TB) prior to prescribing a biologic disease-modifying anti-rheumatic (DMARD) therapy. This is especially important as patients administered DMARD therapy are at higher risk for TB infection.
- Q177: Rheumatoid Arthritis (RA): Periodic Assessment of Disease Activity: This MIPS quality measure is important for monitoring RA disease activity to facilitate timely and appropriate, optimal treatment for patients.
- Q178: Rheumatoid Arthritis (RA): Functional Status Assessment: This MIPS quality measure examines for evidence of symptoms that may limit or disrupt the patient’s quality of life.
- Q180: Rheumatoid Arthritis (RA): Glucocorticoid Management: This MIPS quality measure addresses the need to closely monitor patients who receive glucocorticoid as a part of their rheumatologic care, in order to avoid potential complications. Glucocorticoid therapy is highly effective treatment for relieving symptoms in patients with RA.
- ACR12: Disease Activity Measurements for Patients with PsA: This QCDR measure promotes regular assessment of functional limitations and disease activity for treatment planning and clinical decision making for patients with psoriatic arthritis (PsA).
- ACR14: Gout Serum Urate Target: This QCDR measure is an outcome that assesses the control of gout by assessing control of serum urate levels. This relevant measure helps clinicians evolve to patient-centered, evidence-driven best practices.
- ACR15: Safe Hydroxychloroquine Dosing: This QCDR measure addresses the need to closely monitor patients who receive dosing of hydroxychloroquine as a part of their rheumatologic care, in order to avoid potential complications.

Improvement Activities
Within the improvement activities component of this MVP, we propose to include 11 improvement activities that reflect actions and processes undertaken by clinicians who provide rheumatic care to patients. These improvement activities provide an opportunity for meaningful improvement and patient engagement for clinicians who specialize in treating patients with rheumatologic conditions. Therefore, the following improvement activities are proposed for inclusion in this MVP:

- IA_AHE_3: Promote use of Patient-Reported Outcome Tools: Utilization of patient-reported outcome tools often helps clinicians make decisions about the best course of care and which patients may benefit from a particular intervention.
- IA_BE_15: Engagement of patients, family, and caregivers in developing a plan of care: Patient engagement while developing a plan of care is a key element of general adherence to the overall care plan established by the clinician for the rheumatologic patient population.
- IA_PM_16: Implementation of medication management practice improvements: Reliable medication records are essential for the care of rheumatology patients, as medication-based therapies may consist of various classes of agents (for example, nonsteroidal anti-inflammatory drugs [NSAIDS], corticosteroids) to slow the progression of rheumatologic disease.

Additional improvement activities are included to offer clinician choice and to promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide additional
opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care for rheumatology patients:

- IA_BE_1: Use of certified EHR to capture patient reported outcomes
- IA_BE_4: Engagement of patients through implementation of improvements in patient portal
- IA_BMH_2: Tobacco use
- IA_BMH_4: Depression screening
- IA_EFA_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient’s Medical Record
- IA_EFA_2: Use of telehealth services that expand practice access
- IA_PSPA_6: Consultation of the Prescription Drug Monitoring Program
- IA_PSPA_28: Completion of an Accredited Safety or Quality Improvement Program

Cost Measures

Within the cost component of this MVP, we propose the Total Per Capita Cost (TPCC) measure because it captures the overall costs of care after establishing a primary care relationship, including the care provided by rheumatologists. The TPCC measure focuses on the ongoing management of rheumatology conditions and aligns with the intent of this MVP. We considered including the Medicare Spending Per Beneficiary (MSPB) Clinician measure, but ultimately did not include it because it only focuses on inpatient care. Currently, there are no applicable episode-based measures available, but one could be considered for development in the future. Refer to section IV.A.3.d.(2) of this proposed rule for details on the current cost measure development process and potential cost measure development process that could lead to an episode-based measure related to this MVP.
TABLE A: Proposed Advancing Rheumatology Patient Care MVP Beginning with the CY 2023 MIPS Performance Period/2025 MIPS Payment Year

As noted in the introduction of this appendix, we considered measures and improvement activities available within the MIPS inventory and selected those that we determined best fit the clinical concept of the proposed Advancing Rheumatology Patient Care MVP. We request comment on the measures and activities included in this MVP.

Table B: Proposed Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP Beginning with the CY 2023 MIPS Performance Period/2025 MIPS Payment Year

Cerebral infarction, or stroke, is the 9th most expensive condition treated in United States hospitals.\(^{273}\) According to the Centers for Disease Control and Prevention (CDC), “more than 80,000 Americans die of heart disease or stroke every year—one-third of all deaths.”\(^{274}\) The proposed Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP focuses on the clinical theme of providing fundamental prevention and treatment of those patients at risk for or that have had a stroke. This proposed MVP would be most applicable to clinicians who treat clinically varied patient types within the practice of neurology and vascular surgery.

Quality Measures

Within the quality component of this MVP, we propose to include nine MIPS quality measures, which focus on both stroke prevention and driving positive outcomes for the stroke patient population. We reviewed the MIPS quality measure inventory and believe the quality measures proposed within this MVP below provide a meaningful and comprehensive stroke prevention and intervention set.

This MVP includes the following measures that support the goal of reducing the risk of stroke:

- **Q236: Controlling High Blood Pressure:** This MIPS quality measure requires controlled blood pressure for patients diagnosed with hypertension which leads to better health outcomes including reducing the risk of stroke.
- **Q276: Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy AND Q438: Statin Therapy for the Prevention and Treatment of Cardiovascular Disease:** These MIPS quality measures were included to ensure patients at an increased risk of stroke receive the appropriate preventive medication regimen. The use of statin therapy reduces the risk of atherosclerotic cardiovascular disease (ASCVD). The use of an anticoagulant will reduce risk of thromboembolism occurring with atrial fibrillation which is associated with a greater risk of recurrent stroke, more severe disability, and mortality.
- **Q344: Rate of Carotid Artery Stenting (CAS) for Asymptomatic Patients, Without Major Complications (Discharged to Home by Post-Operative Day #2):** This MIPS quality outcome measure promotes appropriate selection of patients for this procedure by assessing percentage of patients discharged to home no later than post-operative day two. Patients at low risk for morbidity, with a surgeon who performs the procedure with a very low complication rate, achieve the benefit of reduction of long-term risk of stroke.
- **Q441: Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control):** This MIPS quality measure supports the mitigation of stroke risk for patients with established ischemic vascular disease with quality actions that promote blood pressure control, tobacco free status, patient use of daily aspirin, and use of statin which captures the clinical concepts represented in the Million Hearts® Initiative.
- **Q413: Door to Puncture Time for Endovascular Stroke Treatment:** This MIPS quality measure drives efficiency so that stroke patients are given the best chance of functional recovery by ensuring door to puncture time is less than 90 minutes.

For those patients who do suffer a stroke, this MVP drives timely treatment to drive quality and cultivate positive outcomes with the inclusion of the following measures:

- **Q187: Stroke and Stroke Rehabilitation: Thrombolytic Therapy:** This MIPS quality measure drives careful screening and timely treatment to promote better outcomes for patients with a stroke diagnosis.
- **Q109: Clinical Outcome Post Endovascular Stroke Treatment:** This MIPS quality measure utilizes the modified Rankin scale (mRs) to assess degree of disability or dependence in the daily activities of patients suffering a stroke. An mRs of 2 or less after endovascular therapy is considered an excellent outcome following a stroke.
- **Q413: Door to Puncture Time for Endovascular Stroke Treatment:** This MIPS quality measure drives efficiency so that stroke patients are given the best chance of functional recovery by ensuring door to puncture time is less than 90 minutes.

We understand that the two time-dependent measures (Q187 and Q413) may place small and rural practices at a disadvantage as they may not have the resources to implement rapid stroke response systems; however, MVPs allow for some clinician choice with regards to quality measure submission, which would allow those small and rural practices to select other quality measures to meet the quality reporting requirements described in section IV.A.3.b.(4)(d) of this proposed rule.

In conjunction with the aforementioned stroke and stroke prevention quality measures, we propose to include the following broadly applicable quality measure that is relevant to stroke care:

- **Q467: Advance Care Plan:** The inclusion of this MIPS quality measure captures the clinical interaction of documenting a patient’s voice for possible, future life-sustaining medical intervention. This engagement between the clinician (or clinician staff) and the patient allows the patient to be autonomous and communicate their ideal of clinical care that ensures coordinated care is implemented as documented in the patient’s medical record.

We considered including Q260: Rate of Carotid Endarterectomy (CEA) for Asymptomatic Patients, Without Major Complications (Discharged to Home by Post-Operative Day #2) within the MVP. However, we determined that Q344: Rate of Carotid Artery Stenting (CAS) for Asymptomatic Patients, Without Major Complications (Discharged to Home by Post-Operative Day #2) was more appropriate because CAS may be utilized more often in the asymptomatic patient population.

\(^{274}\)https://www.cdc.gov/chronicdisease/about/costs/index.htm#ref1
Additionally, trial results have shown CAS to be an effective CEA alternative for high-risk surgical patients, allowing the measure to indicate both appropriateness of use and overall outcome. Therefore, we believe the patient population for Q344 will be more encompassing; consequently, the inclusion of this measure will make this MVP more applicable to a broader set of clinicians and allow them to select the most meaningful quality measures.

**Improvement Activities**
Within the improvement activities component of this MVP, we propose to include nine improvement activities that reflect actions and processes undertaken by clinicians working to coordinate meaningful stroke care and prevention. We have reviewed the MIPS improvement activity inventory and believe the improvement activities proposed within this MVP provide an opportunity for meaningful improvement and patient engagement for clinicians who treat patients at risk for or who have had a stroke. Therefore, the following improvement activities are proposed for inclusion in this MVP:

- IA_PM_13: Chronic care and preventative care management for empaneled patients: This improvement activity reflects opportunities for clinicians to coordinate meaningful stroke care and prevention within an empaneled support network.
- IA_PM_15: Implementation of episodic care management practice improvements AND IA_BE_4: Engagement of patients through implementation of improvements in patient portal: Promotes patient engagement in their own care and provides an opportunity for the patient to connect with others recovering from or at risk for stroke to improve their outcomes.

Additional improvement activities are included to offer clinician choice and to promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide additional opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care for stroke patients:

- IA_BE_1: Use of certified EHR to capture patient reported outcomes
- IA_BE_24: Financial Navigation Program
- IA_CC_2: Implementation of improvements that contribute to more timely communication of test results
- IA_CC_13: Practice improvements for bilateral exchange of patient information
- IA_CC_17: Patient Navigator Program
- IA_PCMH: Implementation of Patient-Centered Medical Home model

**Cost Measures**
Within the cost component of this MVP, we propose the Intracranial Hemorrhage or Cerebral Infarction episode-based measure because it focuses on the costs related to inpatient clinicians’ treatment for the following types of stroke: intracerebral or subdural hemorrhage, and cerebral infarction. The TPCC measure was considered but not included in this MVP since the neurology specialty is excluded from the TPCC measure attribution. We considered including the MSPB Clinician measure but ultimately did not include it as it encompasses all inpatient care, rather than focusing on the specific costs related to stroke.
TABLE B: Proposed Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP
Beginning with the CY 2023 MIPS Performance Period/2025 MIPS Payment Year

As noted in the introduction of this appendix, we considered measures and improvement activities available within the MIPS inventory and selected those that we determined best fit the clinical concept of the proposed Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP. We request comment on the measures and activities included in this MVP.

</table>
Within the quality component of this MVP, we propose to include eight MIPS quality measures, which promote the management and risks associated with heart disease. We believe this MVP will support the improvement of patient symptoms with disease management and mitigation of clinical risk which contribute to heart disease. We reviewed the MIPS quality measure inventory and believe the following quality measures proposed within this MVP provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in treating patients with conditions related to heart disease conditions:

- **Q005: Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Nephrilysin Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD)**: This MIPS quality measure addresses the use of ACE, ARB, or ARNI pharmacological therapy to reduce the clinical symptoms of heart failure, reduce the risks of morbidity, and mortality.

- **Q007: Coronary Artery Disease (CAD): Beta-Blocker Therapy—Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVSD)**: This MIPS quality measure addresses the use of beta-blocker pharmacological therapy to reduce the potential of cardiovascular hospitalizations and revascularization intervention. Additionally, the use of this therapy may reduce angina symptoms for patients.

- **Q008: Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD)**: This MIPS quality measure addresses the use of beta-blocker pharmacological therapy to reduce the clinical symptoms of heart failure, reduce the risks of morbidity, and mortality.

- **Q213: Cardiac Rehabilitation Patient Referral from an Outpatient Setting**: This MIPS quality measure supports the use of cardiac rehabilitation, to support the reduction of morbidity and mortality, for patients that have experienced an event related to coronary artery disease. NQF 0642. Cardiac Rehabilitation Referral from an Inpatient Setting may be an option for this MVP for future program years. In order for this measure to be considered it would need to be available as a MIPS quality measure.

- **Q441: Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control)**: This MIPS quality measure supports the mitigation of risk for patients with established coronary artery disease (CAD) with quality actions that promote blood pressure control, tobacco free status, patient use of daily aspirin, and use of statin which captures the clinical concepts represented in the Million Hearts® Initiative. Despite the tides of the measure encompassing all ischemic vascular disease, this MIPS quality measure includes the coding to support patients specifically diagnosed with CAD.

In conjunction with the aforementioned heart disease specific measures, we propose to include the following broadly applicable quality measures that are relevant to heart disease care:

- **Q047: Advance Care Plan**: The inclusion of this MIPS quality measure captures the clinical interaction of documenting a patient’s voice for possible, future life-sustaining medical intervention. This engagement between the clinician (or clinician staff) and the patient allows the patient to be autonomous and communicate their ideal of clinical care that ensures coordinated care is implemented as documented in the patient’s medical record.

- **Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan**: This MIPS quality measure addresses the assessment of body mass index (BMI) and maintenance of a healthy body weight. Specifically, it will support the assessment and follow up plan for those patients identified with having a high BMI which is a risk factor of heart disease.

- **Q238: Use of High-Risk Medications in Older Adults**: This MIPS quality measure supports patient safety by assessing for the use of high-risk medications.

**Improvement Activities**

Within the improvement activities component of this MVP, we propose to include 11 improvement activities that reflect actions and processes undertaken by clinicians working to improve care for patients with heart disease. We have reviewed the MIPS improvement activity inventory and believe the improvement activity proposed within this MVP provides an opportunity for meaningful improvement and patient engagement for clinicians who specialize in managing risks and treating patients with heart disease. Therefore, the following improvement activity is proposed for inclusion within this MVP:

- **IA_BE_15: Engagement of patients, family and caregivers in developing a plan of care**: Drives the urgency of an “informed active patient” and the need to establish communication of healthcare goals and objectives with a proactive team for better health outcomes.

Additional improvement activities are included to offer clinician choice and to promote engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide additional

---

275 https://www.cdc.gov/heartdisease/facts.htm#:~:text=Heart%20Disease%20in%20the%20United%20States&text=Heart%20disease%20costs%20the%20United%20States%20about%20$219%20billion%20each%20year%20from%202014%20to%202015.

276 https://millionhearts.hhs.gov/learn-prevent/cost-consequences.html
opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care for patients experiencing symptoms of and/or managing heart disease:

- IA_BE_12: Use evidence-based decision aids to support shared decision-making
- IA_BE_24: Financial Navigation Program
- IA_BE_25: Drug Cost Transparency
- IA_CC_9: Implementation of practices/processes for developing regular individual care plans
- IA_CC_14: Practice improvements that engage community resources to support patient health goals
- IA_EPA_4: Additional improvements in access as a result of QIN/QIO TA
- IA_PM_14: Implementation of methodologies for improvements in longitudinal care management for high risk patients
- IA_PSPA_4: Administration of the AHRQ Survey of Patient Safety Culture
- IA_PSPA_7: Use of QCDR data for ongoing practice assessment and improvements
- IA_PSPA_30: PCI Bleeding Campaign

**Cost Measures**

Within the cost component of this MVP, we propose the Elective Outpatient Percutaneous Coronary Intervention (PCI) and ST Elevation Myocardial Infarction (STEMI) with PCI episode-based measures, as well as the TPCC measure. All three of these cost measures capture costs of care related to the practice of cardiology. The two episode-based measures assess costs related to PCI: the first, Elective Outpatient PCI, focuses on the specific outpatient procedure as a common procedure that is important for the treatment of stable and urgent coronary artery disease. The second, STEMI with PCI, focuses on inpatient care for severe heart attack. In addition, the TPCC measure assesses the total costs of care after identifying the start of a clinician-patient relationship, including cardiologists. The TPCC measure is appropriate given its broader focus on the ongoing costs of care, similar to the quality measures in this MVP. This range of cost measures aligns with the broad focus of the MVP to apply to clinicians providing care to patients with heart disease. We considered including the MSPB Clinician measure, but ultimately did not include it because it encompasses all inpatient care, rather than focusing on the specific costs related to cardiology.
TABLE C: Proposed Advancing Care for Heart Disease MVP Beginning with the CY 2023 MIPS Performance Period/2025 MIPS Payment Year

As noted in the introduction of this appendix, we considered measures and improvement activities available within the MIPS inventory and selected those that we determined best fit the clinical concept of the proposed Advancing Care for Heart Disease MVP. We request comment on the measures and activities included in this MVP.

Table D: Proposed Optimizing Chronic Disease Management MVP Beginning with the CY 2023 MIPS Performance Period/2025 MIPS Payment Year

Chronic disease represents 90% of the nation’s $3.8 trillion in annual health care expenditures for people with chronic and mental health conditions.²⁷ The proposed Optimizing Chronic Disease Management MVP focuses on the clinical theme of providing fundamental treatment and management of chronic disease such as diabetes, coronary artery disease, chronic obstructive disease, and major adult depression. This MVP would be most applicable to clinicians who treat clinically varied patient types with those chronic clinical conditions including but not limited to family practice, internist, or geriatric care.

**Quality Measures**

Within the quality component of this MVP, we propose to include nine MIPS quality measures which focus on a variety of chronic conditions that may impact overall patient health. There may be instances in which a patient could be diagnosed with multiple chronic conditions impacting everyday activities of daily living. In order to preserve clinician choice, we included quality measures that were determined to be priority areas within chronic disease management. We reviewed the MIPS quality measure inventory and believe the following quality measures proposed within this MVP provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in treating patients with chronic conditions:

- **Q06: Coronary Artery Disease (CAD): Antithrombotic (Antiplatelet) Therapy.** This MIPS quality measure addresses the use of antithrombotic therapy for patients diagnosed with CAD. Antithrombotic therapy use has shown to reduce the occurrence of vascular events for patients experiencing CAD.
- **Q107: Adult Major Depressive Disorder (MDD): Suicide Risk Assessment.** This MIPS quality measure supports assurance that a suicide risk assessment is completed once a patient has a new diagnosis or recurrent episode with MDD.
- **Q118: Coronary Artery Disease (CAD): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy - Diabetes or Left Ventricular Systolic Dysfunction (LVEF < 40%).** This MIPS quality measure addresses the use of ACE or ARB pharmacological therapy to reduce the clinical symptoms of heart failure, reduce the risks of morbidity and mortality in patients with CAD and/or diabetes.
- **Q119: Diabetes: Medical Attention for Nephropathy.** This MIPS quality measure supports screening for or evidence of nephropathy. High blood sugar levels in patients with diabetes put them at a higher risk of damaging their kidneys and causing chronic kidney disease, which can lead to kidney failure.
- **Q256: Controlling High Blood Pressure.** This MIPS quality measure promotes the quality action maintaining a patient blood pressure to maintain a systolic pressure of < 140 mmHg and diastolic pressure of < 90 mmHg. Controlling HBP will significantly reduce the risks of cardiovascular disease mortality and lead to better health outcomes like reduction of heart attacks, stroke, and kidney disease.
- **Q308: Optimal Asthma Control.** This MIPS quality composite measure evaluates pediatric and adult patients whose asthma is well-controlled as demonstrated by one of three age-appropriate patient reported outcome tools and assesses risk of exacerbation.
- **Q438: Statin Therapy for the Prevention and Treatment of Cardiovascular Disease.** The MIPS quality action represented within this quality measure is the prescription or maintenance of statin therapy. The use of statin therapy reduces the risk of atherosclerotic cardiovascular disease (ASCVD).

In conjunction with the aforementioned chronic disease management specific measures, we propose to include the following broadly applicable quality measures that are relevant to chronic disease management:

- **Q047: Advanced Care Plan.** The inclusion of this MIPS quality measure captures the clinical interaction of documenting a patient’s voice for possible, future life-sustaining medical intervention. This engagement between the clinician (or clinician staff) and the patient allows the patient to be autonomous and communicate their ideal of clinical care that ensures coordinated care is implemented as documented in the patient’s medical record.

**TBD: Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure.** This MIPS quality measure represents a comprehensive set of patient-clinician interaction assessments within the broad scope of primary care. This quality measure focuses on a patient’s relationship with the clinician or practice.

The following quality measures were considered for this proposed MVP but not included based on the rationale below:

- **Q052: Chronic Obstructive Pulmonary Disease (COPD). Long-Acting Inhaled Bronchodilator.** Long-Acting Inhaled Bronchodilator was considered; however, Q398 was selected because we believe the clinical concept represented within Q398 is more appropriate as it supports a broader age range of patients and promotes improved outcomes in asthma management.
- **Q321: Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS Clinician/Group Survey.** It was considered; however, we selected the newly proposed MIPS measure TBD: Person-Centered Primary Care Measure Performance Measure (PCCPM PRO-PM) because we want to capture the patient experience, but limit to one quality measure capturing patient voice.
- **Q370: Depression Remission at Twelve Months.** It was considered; however, Q107 was selected because we felt it was important to focus on suicide prevention as it is the 10th leading cause of death in the United States²⁸. Although we acknowledge it is important to work towards remission for those patients that suffer from depression, we believe that

ongoing suicide risk assessments for those patients with new or ongoing major depressive disorder is a more critical health priority.

Improvement Activities
Within the improvement activities component of this MVP, we propose to include 12 improvement activities that reflect actions and processes undertaken by clinicians working to optimize chronic disease management for their patient populations. We have reviewed the MIPS improvement activity inventory and believe the improvement activities proposed within this MVP provide an opportunity for meaningful improvement and patient engagement for clinicians who focus on a variety of chronic conditions that may impact overall patient health. Therefore, the following improvement activities are proposed for inclusion within this MVP:

- **IA_BE 4:** Engagement of patients through implementation of improvements in patient portal: Promotes the use of patient portals for the treatment of chronic disease, such as diabetes and leads to better medication adherence and overall chronic disease management.
- **IA_BE 21:** Improved Practices that Disseminate Appropriate Self-Management Materials: Promotes the use of clinical literature to inform patients of evidenced-based approaches to self-management for the treatment of chronic disease.
- **IA_CC 13:** Practice improvements for bilateral exchange of patient information: A core component of patient safety, contributing to the reduction of medication errors and patient harm. Additionally, bilateral exchange assists caregivers with relevant clinical decision support and enhances public health reporting initiatives.

Additional improvement activities are included to offer clinician choice and to promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide additional opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care for patients diagnosed with chronic conditions:

- **IA_AHE_3:** Promote use of Patient-Reported Outcome Tools
- **IA_BE_20:** Implementation of condition-specific chronic disease self-management support programs
- **IA_BE_22:** Improved practices that engage patients pre-visit
- **IA_CC_2:** Implementation of improvements that contribute to more timely communication of test results
- **IA_CC_12:** Care coordination agreements that promote improvements in patient tracking across settings
- **IA_CC_14:** Practice improvements that engage community resources to support patient health goals
- **IA_EPA_1:** Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record
- **IA_PCMH:** Implementation of Patient-Centered Medical Home model
- **IA_PSPA_19:** Implementation of formal quality improvement methods, practice changes or other practice improvement processes

Cost Measures
Within the cost component of this MVP, we propose the TPCC measure because it focuses on the total cost of primary care including ongoing care for major chronic comorbidities after identifying the start of a clinician-patient relationship. The TPCC measure aligns with the types of care being assessed by the quality measures and improvement activities within this MVP. We considered including the MSPB Clinician measure, but ultimately did not include it because the measure applies only to inpatient care and does not align with the types of care envisaged by this MVP. Currently, there are no applicable episode-based measures available for this MVP, but the addition and/or development of applicable episode-based measures could be considered in the future. Refer to section IV.A.3.d.(2) of this proposed rule for details on two chronic condition episode-based measures which focus on asthma/COPD and diabetes that are being proposed for use in the Cost performance category in this proposed rule and could be applicable to this MVP in a future rulemaking cycle.
TABLE D: Proposed Optimizing Chronic Disease Management MVP Beginning with the CY 2023 MIPS Performance Period/2025 MIPS Payment Year

As noted in the introduction of this appendix, we considered measures and improvement activities available within the MIPS inventory and selected those that we determined best fit the clinical concept of the proposed Optimizing Chronic Disease Management MVP. We request comment on the measures and activities included in this MVP.

Table E: Proposed Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP Beginning with the CY 2023 MIPS Performance Period/2025 MIPS Payment Year

Emergency Medicine treatment of high frequency pain conditions have considerable influence on healthcare quality and cost.279 There is significant variation in admission decision rates for conditions including chest pain and abdominal pain.279 Opportunities for advancement also exist for headache and back pain within the Emergency Department (ED), which identify significant clinician variation in opioid prescribing and imaging utilization for these clinical conditions.280 The measure topics addressed in this proposed MVP fall within the Center for Disease Control and Prevention (CDC) National Hospital Ambulatory Medical Care Survey (NHAMCS) 2017 ED Summary tables, which list the top eight principal reasons for visiting the ED.281 The proposed Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP focuses on important assessors of the care emergency clinicians provide to patients with undifferentiated high-risk conditions. By focusing on these specific measures and activities, emergency clinicians can reduce clinical variability, improve the quality of emergency care and potentially lower costs. This MVP would be most applicable to clinicians who treat clinically varied patient types within the ED.

Quality Measures

Within the quality component of this MVP, we propose to include five MIPS quality measures and five QCDR measures, which focus on chest pain, abdominal pain, headache, and back pain which promotes assessment of the undifferentiated high-risk conditions seen with high frequency and specific to emergency medicine clinicians. The chosen quality measures address complementary clinical care opportunities by assessing appropriate imaging utilization, laboratory testing, and medication prescribing. We reviewed the MIPS quality measure inventory and believe the following quality measures proposed within this MVP provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in treating patients in the ED:

• Q116: Avoidance of Antibiotic Treatment for Acute Bronchitis/Bronchiolitis: This MIPS quality measure promotes appropriate prescribing of antibiotics for patients with acute bronchitis. The overprescribing of antibiotics contributes to antibiotic drug resistance, potentially leading to patient harm.

• Q254: Ultrasound Determination of Pregnancy Location for Pregnant Patients with Abdominal Pain: This MIPS quality measure addresses the use of ultrasound for detection of ectopic pregnancy for pregnant patients presenting with abdominal pain or vaginal bleeding. Early ultrasound can shorten the time to diagnosis and reduce the associated morbidity with a delay in diagnosis.

• Q331: Adult Sinusitis Antibiotic Prescribed for Acute Viral Sinusitis (Overuse): This MIPS quality measure promotes appropriate prescribing of antibiotics for patients with viral sinusitis. The overprescribing of antibiotics contributes to antibiotic drug resistance, potentially leading to patient harm.

• Q415: Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 18 Years and Older: This MIPS quality measure promotes appropriate use of head CT utilization in the ED for adult patients that present with minor blunt head trauma. It ensures that clinicians are purposefully ordering these studies to reduce cost and unnecessary harm to the patient by limiting radiation exposure.

• ACEP21: Coagulation studies in patients presenting with chest pain with no coagulopathy or bleeding: This QCDR measure promotes appropriate care and testing for patients that present with chest pain. It ensures that clinicians are purposefully ordering these studies which may lead to significant reduction in resource utilization without any decrease in value of healthcare provided to the patient.

• ACEP50: ED Median Time From ED Arrival to ED departure for all Adult Patients: This QCDR measure promotes improving ED productivity and efficiency by expediting evaluation and treatment of new patients. When treatment times are prolonged, delays in care can occur and patients are put at risk for increased morbidity and mortality.

• ACEP52: Appropriate Emergency Department Utilization of Lumbar Spine Imaging for Atraumatic Low Back Pain: This QCDR measure addresses appropriate diagnostic imaging for patients presenting with low back pain. Diagnostic imaging does not reliably identify the cause of most back pain and does not improve clinical outcome or time to recovery. Unnecessary or routine imaging (X-ray, MRI, CT scans) for low back pain exposes patients to unnecessary harms such as radiation and referral for unnecessary treatment that increases healthcare costs.

• ECPR46: Avoidance of Opiates for Low Back Pain or Migraines: This QCDR measure promotes appropriate prescribing of opioids. Opioid pain medications are often inappropriately utilized for the treatment of migraine headaches and uncomplicated low back pain and over-prescribing of opioids has contributed to the opioid epidemic.

• ECPR55: Avoidance of Long-Acting (LA) or Extended-Release (ER) Opiate Prescriptions and Opiate Prescriptions for Greater Than 3 Days Duration for Acute Pain: This QCDR measure promotes appropriate prescribing of long-acting and extended-release opiates with the intent of reducing the potential for opioid use disorders. Poor prescribing practices and over-prescribing of opioids has contributed to the opioid epidemic. Long-acting opioid pain medications can increase the risk for physical dependence and opioid use disorders. This measure is intended to prevent inappropriate prescribing of opioids and reduce the associated potential for opioid use disorders.

In conjunction with the aforementioned ED specific measures, we propose to include the following broadly applicable quality measure that is relevant to care provided in the ED:

- \textbf{Q321: CAHPS for MIPS Clinician/Group survey:} This survey will provide direct input from patients and their experience regarding timely care, effective communication, shared decision making, care coordination, promotion of health and education, completion of health status/functionality, and courtesy of office staff.

\textbf{Improvement Activities}

Within the improvement activities component of this MVP, we propose to include 10 improvement activities that reflect actions and processes undertaken by clinicians working to improve care processes associated with undifferentiated high-risk conditions. We have reviewed the MIPS improvement activity inventory and believe the improvement activities proposed within this MVP provide an opportunity for meaningful improvement and patient engagement specific to emergency medicine clinicians. Therefore, the following improvement activities are proposed for inclusion within this MVP:

- \textbf{IA_PSPA 19: Implementation of formal quality improvement methods, practice changes or other practice improvement processes:} Provides opportunities to address the challenges presented by patients with undifferentiated high-risk conditions in the emergency healthcare setting.
- \textbf{IA_PSPA 20: Leadership engagement in regular guidance and demonstrated commitment for implementing practice improvement changes:} Encourages the development of innovative strategies for addressing patients with undifferentiated high-risk conditions in emergency room scenarios presenting with diagnostic uncertainty.

Additional improvement activities are included to offer clinician choice and to promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide additional opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care for patients seen by emergency medicine clinicians for assessment of undifferentiated high-risk conditions:

- \textbf{IA_BE_4: Engagement of patients through implementation of improvements in patient portal}
- \textbf{IA_BE_6: Collection and follow-up on patient experience and satisfaction data on beneficiary engagement}
- \textbf{IA_CC_2: Implementation of improvements that contribute to more timely communication of test results}
- \textbf{IA_CC_14: Practice improvements that engage community resources to support patient health goals}
- \textbf{IA_PSPA_1: Participation in an AHRQ-listed patient safety organization}
- \textbf{IA_PSPA_6: Consultation of the Prescription Drug Monitoring Program}
- \textbf{IA_PSPA_7: Use of QCDR data for ongoing practice assessment and improvements}
- \textbf{IA_PSPA_15: Implementation of Antimicrobial Stewardship Program (ASP)}

\textbf{Cost Measures}

Within the cost component of this MVP, we propose the MSPB Clinician measure because it applies to care received in the inpatient setting and covers a small share of emergency medicine clinicians. The TPCC measure was considered but not included in this MVP because the TPCC cost measure focuses on primary care and ongoing clinician-patient relationships, which is not the nature of emergency medicine care; in addition, the emergency medicine specialty is excluded from the TPCC measure attribution. Currently, there are no applicable episode-based measures available for this MVP, but one could be considered for development in the future. Refer to section IV.A.3.d.(2)(c) of this proposed rule for details on the current cost measure development process and potential cost measure development process that could lead to an episode-based measure related to this MVP.
As noted in the introduction of this appendix, we considered measures and improvement activities available within the MIPS inventory and selected those that we determined best fit the clinical concept of the proposed Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP. We request comment on the measures and activities included in this MVP.

Table F: Proposed Improving Care for Lower Extremity Joint Repair MVP Beginning with the CY 2023 MIPS Performance Period/2025 MIPS Payment Year

Arthritis and lower extremity (LE) fracture can be costly conditions and lead to increased pain and decreased functional ability. Osteoarthritis, hip, and lower extremity fractures have been identified within the top 20 most expensive conditions for hospital costs, 19,906 million, 5,628 million and 4,368 million in 2017 respectively. The proposed Improving Care for Lower Extremity Joint Repair MVP focuses on the clinical theme of providing fundamental treatment and management of patients with osteoarthritis and lower extremity surgical repair, such as fracture and total joint replacement, to ensure appropriate care and reduce costs. This MVP would be most applicable to clinicians who treat clinically varied patient types and who may also be assessed for, or who have undergone, lower extremity surgical repair, including pre- and post-operatively.

Quality Measures

Within the quality component of this MVP, we propose to include six MIPS quality measures, which promote assessment and treatment of care for patients with lower extremity orthopedic conditions, with emphasis on osteoarthritis and total joint repair/replacement. We have reviewed the MIPS quality measure inventory and believe the following quality measures proposed within this MVP provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in treating patients with osteoarthritis and LE joint repair. We decided to keep the focus on total hip and knee replacement because these procedures are directly applicable to the Medicare patient population. Therefore, the following measures are proposed:

- Q350: Total Knee Replacement: Shared Decision-Making: Trial of Conservative (Non-surgical) Therapy: This MIPS quality measure promotes care for non-surgical patients diagnosed with osteoarthritis with the potential to reduce overall healthcare costs associated with this chronic condition.
- Q351: Total Knee Replacement: Venous Thromboembolic and Cardiovascular Risk Evaluation: This MIPS quality measure promotes appropriate pre-operative evaluation for potential venous and cardiovascular complications and to help minimize surgical risk for patients undergoing a total joint repair.
- Q376: Functional Status Assessment for Total Hip Replacement: This MIPS quality measure is a patient-reported outcome measure, that addresses functional status assessment and improvement in patients that undergo a total hip replacement.
- Q470: Functional Status After Primary Total Knee Replacement: This MIPS quality measure is a patient-reported outcome measure, that addresses functional status assessment and improvement in patients that undergo a total knee replacement.
- Q482: Risk-standardized complication rate (RSCR) following elective primary total hip arthroplasty (THA) and/or total knee arthroplasty (TKA) for Merit-based Incentive Payment System: This MIPS quality measure is an administrative claims outcome measure that addresses lower extremity total joint surgery complications rates. As an administrative claims measure, there is no additional burden on the clinician for reporting.

In conjunction with the aforementioned lower extremity joint repair specific measures, we propose to include the following broadly applicable MIPS quality measure that are relevant to care provided by orthopedic clinicians:

- Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan: This MIPS quality measure addresses the assessment of body mass index (BMI) and maintenance of a healthy body weight. Specifically, it supports surgical or non-surgical patients diagnosed with osteoarthritis with potential to reduce overall healthcare costs and surgical risk associated with this chronic condition.

The following quality measures were considered for this proposed MVP but not included based on the rationale below:

- CCOM/E: Patient-Reported Pain and Function Improvement after APM Surgery; and CCOM/H: Patient-Reported Pain and Function Improvement after Total Hip Arthroplasty: were considered, however, these QCDR measures are robust outcome measures and would be applicable to orthopedic surgeons, testing requirements will not be completed in time to include within the MVP.
- Q217, Functional Status Change for Patients with Knee Impairments and Q218, Functional Status Change for Patients with Hip Impairments: were considered; however, these MIPS quality measures are more appropriate for clinicians providing rehabilitative services (i.e., physical therapy and occupational therapy).
- Q205: Communication with the Physician or Other Clinician Managing Ongoing Care Post-Fracture for Men and Women Aged 50 Years and Older: was considered; however, to allow for clinician choice in measure selection and to capture those patients who may need osteopathic care for fractures that may not require surgery.

Improvement Activities

Within the improvement activities component of this MVP, we propose to include 11 improvement activities that reflect actions and processes undertaken by clinicians focused on interventional strategies for the improvement of lower extremity joint repair. We have reviewed the MIPS improvement activity inventory and believe the improvement activities proposed within this MVP provide an opportunity for meaningful improvement and patient engagement for clinicians who specialize in treating patients with osteoarthritis and LE joint problems. Therefore, the following improvement activities are proposed for inclusion within this MVP:

- IA_CC: PSH Care Coordination: Contributes to the coordinated care of the patient required after a procedure such as a hip/knee replacement. The Perioperative Surgical Home (PSH) strives to provide the patient with the “right care, in the right place, at the right time” to ensure patient satisfaction while reducing complications and costs.
- IA_PSP: IV Access Procedure or Surgery Anticoagulation Medication Management: To address blood-clotting issues commonly associated with hip/knee replacement. Statistical data indicates that hip and knee replacements are a

commonly performed inpatient procedure with long recovery times that often incur sizable expenses in terms of hospitalization and rehabilitation.

Additional improvement activities are included to offer clinician choice and to promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide additional opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care for patients experiencing LE joint problems:

- IA_AHE_3: Promote use of Patient-Reported Outcome Tools
- IA_BE_6: Collection and follow-up on patient experience and satisfaction data on beneficiary engagement
- IA_BE_12: Use evidence-based decision aids to support shared decision-making
- IA_CC_7: Regular training in care coordination
- IA_CC_9: Implementation of practices/processes for developing regular individual care plans
- IA_CC_13: Practice improvements for bilateral exchange of patient information
- IA_PSPA_6: Consultation of the Prescription Drug Monitoring Program
- IA_PSPA_7: Use of QCDR data for ongoing practice assessment and improvements
- IA_PSPA_18: Measurement and improvement at the practice and panel level

**Cost Measures**

Within the cost component of this MVP, we propose the Elective Primary Hip Arthroplasty and Knee Arthroplasty episode-based measures because they evaluate the costs of care for clinicians performing elective hip arthroplasty and knee arthroplasty procedures. These two episode-based measures are closely linked to the quality measures within this MVP and help provide a holistic evaluation of the value of care for elective lower extremity joint repair. The TPCC measure was considered but not included in this MVP because the TPCC cost measure focuses on primary care and ongoing clinician-patient relationships, which is not the nature of orthopedic surgery care. In addition, the orthopedic surgery specialty is excluded from the TPCC measure attribution. We considered including the MSPB Clinician measure, but ultimately did not include it as it encompasses all inpatient care, rather than focusing on the specific costs related to lower extremity joint repair.
TABLE F: Proposed Improving Care for Lower Extremity Joint Repair MVP Beginning with the CY 2023 MIPS Performance Period/2025 MIPS Payment Year

As noted in the introduction of this appendix, we considered measures and improvement activities available within the MIPS inventory and selected those that we determined best fit the clinical concept of the proposed Improving Care for Lower Extremity Joint Repair MVP. We request comment on the measures and activities included in this MVP.

</table>

Clinicians within the profession of anesthesiology evaluate, monitor, and deliver patient care before, during, and after surgeries and/or procedures to ensure optimal patient outcomes. We believe that as the population ages, and the need for surgery and interventional procedures steadily increases, the anesthesiologist can play a significant role in delivering cost-effective health care without affecting the quality of care being delivered. Relative to overall disease healthcare burden, a total of 28%-32% of global disease comes from surgical diseases.\textsuperscript{29} The proposed Patient Safety and Support of Positive Experiences with Anesthesia MVP focuses on increasing quality of anesthesia care, improving postoperative outcomes, promoting patient safety, and enhancing satisfaction for patients receiving anesthesia. The measures are used for a variety of surgical procedures that anesthesiologists deliver care for, and are broadly applicable to anesthesiologists practicing within ambulatory, outpatient, and inpatient hospital settings. This MVP would be most applicable to clinicians who provide anesthesia services to patients within the surgical setting or who are considered anesthesiologists or other qualified anesthesia professionals.

**Quality Measures**

Within the quality component of this MVP, we propose to include five MIPS quality measures and three QCDR measures, which intend to drive the quality of care within an anesthesia episode and is based on guidelines that lead to better patient outcomes for both the adult and pediatric patient populations. The anesthesiology-related quality measures are inclusive of all phases of anesthesia care: pre, intra and postoperative, including coordination with the anesthesiologist’s surgical colleagues. We reviewed the MIPS quality measure inventory and believe the following quality measures proposed within this MVP provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in providing anesthesia services:

- **0430: Anesthesiology Smoking Abstinence:** This MIPS quality measure uses targeted interventions to encourage smoking cessation, which can be critically important in reducing surgical risks and preventing infection, ultimately leading to faster patient recovery and reduced costs. Smoking is a precursor to multiple health challenges including respiratory and cardiovascular diseases which may interfere with metabolic processes such as oxygen delivery and uptake and drug metabolism.

- **0477: Multimodal Pain Management:** This patient-centered MIPS quality measure assesses the effective peri- and postoperative pain management through the utilization of multimodal pain management. Optimal perioperative pain management improves patients’ function and rehabilitation after surgery. Additionally, this measure dissuades the use of opioids, which not only work primarily through a single mechanism, but can lead to a host of side effects that can be life threatening or lead to opioid abuse.

In conjunction with the MIPS quality measures specific to anesthesia, we propose to include the following QCDR measures that are relevant to reducing operative infection and incorporating the patient voice:

- **AO148: Patient-Reported Experience with Anesthesia:** This QCDR measure uses patient voice to assess a patient’s overall experience with anesthesia care helping to better understand the patient’s satisfaction and experience.

- **AO169: Intraoperative Antibiotic Redosing:** This QCDR measure addresses the importance of infection prevention by encouraging adequate and timely redosing of intraoperative antibiotics.

- **AO170: Prevention of Arterial Line Infection:** This QCDR measure addresses the appropriate use of sterile techniques which are essential to prevent costly and dangerous infections.

This MVP supports the vital practice of anesthesia care in protecting patient safety and mitigating patient risk. Reducing the risk of infection, pain management, post-operative management of nausea and vomiting, as well as patient and family engagement and satisfaction can all lead to the overall goal of better outcomes for patients undergoing surgery.

**Improvement Activities**

Within the improvement activities component of this MVP, we propose to include 11 improvement activities that reflect actions and processes undertaken by anesthesiologists to identify interventional strategies to promote positive patient experiences with anesthesia. We have reviewed the MIPS improvement activity inventory and believe the improvement activities proposed within this MVP provide an opportunity for meaningful improvement regarding complications associated with anesthesia, which may

include postoperative vomiting (POV), cardiovascular collapse, and respiratory depression. Therefore, the following improvement activities are proposed for inclusion in this MVP:

- **IA_PSPA_7:** Use of OCDR data for ongoing practice assessment and improvements: Promotes follow-up systems, tools, and/or strategies that could address complications often encountered after anesthesia.
- **IA_PSPA_20:** Leadership engagement in regular guidance and demonstrated commitment for implementing practice improvement changes: Promotes follow-up systems, tools, and/or strategies that could address complications often encountered after anesthesia.

Additional improvement activities are included to offer clinician choice and to promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide additional opportunities for clinicians to drive outcomes and improve quality of care for patients receiving anesthesia:

- **IA_BE_6:** Collection and follow-up on patient experience and satisfaction data on beneficiary engagement
- **IA_BE_22:** Improved practices that engage patients pre-visit
- **IA_BMH_2:** Tobacco use
- **IA_CC_2:** Implementation of improvements that contribute to more timely communication of test results
- **IA_CC_15:** PSH Care Coordination
- **IA_CC_19:** Tracking of clinician’s relationship to and responsibility for a patient by reporting MACRA patient relationship codes
- **IA_EPA_1:** Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record
- **IA_PSPA_1:** Participation in an AHRQ-listed patient safety organization
- **IA_PSPA_16:** Use of decision support and standardized treatment protocols

**Cost Measures**

Within the cost component of this MVP, we propose the MSPB Clinician measure because it focuses on clinicians providing inpatient care and applies to a small subset of anesthesiologists. The TPCC measure was considered but not included in this MVP because this cost measure focuses on primary care and ongoing clinician-patient relationships, which is not the nature of anesthesiology care; in addition, the anesthesiology specialty is excluded from the TPCC measure attribution. Currently, there are no applicable episode-based measures available, but one could be considered for development in the future. Refer to section IV.A.3.d.(2) of this proposed rule for details on the current cost measure development process and potential cost measure development process that could lead to an episode-based measures related to this MVP.
As noted in the introduction of this appendix, we considered measures and improvement activities available within the MIPS inventory and selected those that we determined best fit the clinical concept of the proposed Patient Safety and Support of Positive Experiences with Anesthesia MVP. We request comment on the measures and activities included in this MVP.

Electronic-Filing Requirements for Specified Returns and Other Documents; Proposed Rule
Electronic-Filing Requirements for Specified Returns and Other Documents

AGENCY: Internal Revenue Service

ACTION: Withdrawal of notice of proposed rulemaking; notice of proposed rulemaking.

SUMMARY: This document contains proposed regulations amending the rules for filing electronically and affects persons required to file partnership returns, corporate income tax returns, unrelated business income tax returns, withholding tax returns, and certain information returns, registration statements, disclosure statements, notifications, actuarial reports, and certain excise tax returns. The proposed amendments reflect changes made by the Taxpayer First Act of 2019 (TFA) and are consistent with the TFA’s emphasis on increasing electronic filing. This document also withdraws proposed regulations published in the Federal Register on May 31, 2018, amending the rules for determining whether information returns must be filed electronically.

DATES: Written or electronic comments must be received by September 21, 2021.

FOR FURTHER INFORMATION CONTACT: Concerning the proposed regulations, call Casey R. Conrad of the Office of the Associate Chief Counsel (Procedure and Administration), (202) 317–6844; concerning submission of comments or requests for a public hearing, call Regina Johnson, (202) 317–5177 (not toll-free numbers).

SUPPLEMENTARY INFORMATION:

Background

This document contains proposed amendments to the Regulations on Income Taxes (26 CFR part 1) under sections 1461 and 1474 of the Internal Revenue Code (Code), which provide that persons required to deduct and withhold tax are liable for such tax, and section 6050F of the Code, which requires persons to report information about financial transactions to the IRS; to the Regulations on Pension Excise Taxes (26 CFR part 54) under section 6011 of the Code, which requires persons to report information for certain excise taxes related to employee benefit plans; to the Regulations on Procedure and Administration (26 CFR part 301) under sections 1474, 6011, 6012, 6033, 6057, 6058, and 6059 of the Code for determining whether returns must be filed using magnetic media; and to the Regulations on Foundation and Similar Excise Taxes (26 CFR part 53) under section 6011 of the Code to remove the option—available to a person required to report certain excise taxes on Form 4720, Return of Certain Excise Taxes Under Chapters 41 and 42 of the Internal Revenue Code—to designate a Form 4720 filed by a private foundation or trust as that person’s return if the foundation is reporting the same information returns under sections 501(b)(4), 501(c)(3), or 509(a)(3) of the Code as are reported under chapter 42, and to incorporate Treasury Circular No. 93, Transmittal Letter 82–6, which provides guidance on use of electronic filing.

On March 25, 1986, the Secretary first published guidance under section 6011(e) with respect to the electronic filing requirement as § 301.6011–2 (TD 8081), which specified Forms 1042–S, 1099–INT, 1099–D, 1099–OID, 1099–E, and 5498–W2 as the information returns covered by the regulation that had to be filed electronically unless the person was granted a waiver or was a low-volume filer. The term “low-volume filers” was defined as persons not required to file, for any calendar year beginning on or after January 1, 1987, 250 or more of the specified returns (other than Forms 1099–DIV, Dividends and Distributions; 1099–PATR, Taxable Distributions Received from Cooperatives; 1099–NT, Interest Income; or 1099–OID, Original Issue Discount). For those four Forms 1099, the regulation provided a special rule that reduced the 250-return threshold to 50 and required that the four forms be aggregated for purposes of determining whether a person met the 50-return threshold. The regulation also provided that the Commissioner of Internal Revenue or his delegate (Commissioner) could prescribe by revenue procedure additional forms to be covered by the regulation.

Section 6011(e) was again amended in 1989 by section 7713, Title VII, of the Revenue Reconciliation Act of 1989 (1989 Act), Public Law 101–239, 103 Stat. 2394, to prohibit the Secretary from requiring any person to file returns electronically unless that person was required to file at least 250 returns during the calendar year. The 1989 Act also required the Secretary to consider the taxpayer’s ability to comply at reasonable costs with the regulation’s requirements.

On June 30, 1998, the Secretary promulgated amendments regulating electronic filing. Section 6011(e) of the Code (section 7713 of the 1989 Act, § 301.6011–2 (TD 8772), that removed the special rules related to the four Forms 1099 and
clarified that the 250-return threshold applied separately to each information return covered by §301.6011–2. The regulation also added Forms 499R–2/ W–2PR, W–2VL, W–2GU, and W–2AS as information returns covered by the regulation and removed Form 6248.

On August 5, 1997, the President signed into law the Taxpayer Relief Act of 1997, Public Law 105–34. Section 1224 of that Act amended §6011(e)(2) by adding a sentence that required the Secretary to promulgate regulations to require partnerships with over 100 partners to file returns electronically. On November 12, 1999, the Secretary promulgated regulations under section 6011(e) relating to this special rule for partnerships with more than 100 partners, §301.6011–3 (TD 8843), requiring partnerships with more than 100 partners to file partnership returns and all information required by the applicable forms and schedules electronically.

On April 29, 2002, the Secretary promulgated regulations under section 6011(e) (TD 8992) to add Form 1098–E as an information return covered by the regulation; on February 7, 2003, the Secretary promulgated regulations under section 6011(e) (TD 9102) to add Form 1098–T as an information return covered by the regulation.

On November 13, 2007, the Secretary promulgated regulations relating to the requirements for filing corporate income tax returns and returns of organizations required to file returns under section 6033 electronically under section 6011(e), §301.6011–5, §301.6033–4, and §301.6037–2 (TD 9363). The regulations specify that all returns required to be filed during the calendar year, including income tax returns, employment tax returns, excise tax returns, and information returns, are counted in determining whether a corporation or organization meets the 250-return threshold. Sections 301.6011–5 and 301.6037–2 apply to large corporations and S corporations, respectively, if the corporation is required to file at least 250 returns during the calendar year and the corporation reports total assets at the end of the corporation’s taxable year that equal or exceed $10 million on Schedule L of their Form 1120 ($10 million rule). Section 301.6033–4 applies to organizations required to file Form 990, Return of Organization Exempt From Income Tax, that have total assets of $10 million or more as of the end of the taxable year, and that are required to file at least 250 returns during the calendar year. It also applies to any organization (regardless of total assets) required to file Form 990–PF, Return of Private Foundation or Section 4947(a)(1) Trust Treated as Private Foundation, if the organization is required to file at least 250 returns during the calendar year.

Section 6011(e)(4) was added to the Code in 2010 by section 522, Title V, of the Hiring Incentives to Restore Employment (HIRE) Act, Public Law 111–147, 124 Stat. 71, to authorize the Secretary to require financial institutions that file returns with respect to withholding on foreign transfers to file those returns electronically regardless of the number. On January 28, 2013, the Secretary promulgated regulations under section 1474(f), §301.1474–1 (TD 9610), to require financial institutions defined in section 1471(d)(5) to electronically file Form 1042–S, Foreign Persons’ U.S. Source Income Subject to Withholding, regardless of the number of returns filed for the calendar year, but did not include in those regulations a requirement to electronically file Form 1042, Annual Withholding Tax Return for U.S. Source Income of Foreign Persons.

On March 10, 2014, the Secretary promulgated regulations under section 6011(e), §301.6011–2 (TD 9660), to add the Forms 1094 series and 1095 series as information returns covered by the regulation. And on December 19, 2016, the Secretary promulgated regulations under section 6011(e), §301.6011–2 (TD 9804), to remove the Form 1095 series and add Form 1095–B and Form 1095–C as information returns covered by the regulation.

On March 23, 2018, the President signed into law the Tax Technical Corrections Act of 2018 (TTCA), Public Law 115–141. Section 301, div. U, title III, of the TTCA added a new paragraph (5), Special rule for partnerships, to section 6011(e). Section 6011(e)(5)(A). Partnerships permitted to be required to file on magnetic media, authorized the Secretary to lower the electronic-filing threshold to 200 returns and statements for all partnerships filing returns and statements relating to calendar year 2018, reducing that number by 50 each year until 2023, when partnerships filing more than 20 returns and statements relating to 2022 or any subsequent calendar year could be required to file electronically. The TTCA also moved the rule authorizing the Secretary to require partnerships with more than 100 partners to file their returns electronically from section 6011(e)(2) to new section 6011(e)(5)(B). Partnerships also required to file on magnetic media. The Secretary did not promulgate regulations under section 6011(e) relating to the lower electronic-filing thresholds for partnerships.

On May 31, 2018, the Secretary promulgated regulations under section 6011(e) (83 FR 24948) amending §301.6011–2. The proposed regulations would have required that all information returns covered under that regulation, regardless of type, be included in determining whether the returns a person must file meet the 250-return threshold and the person must file the information returns electronically. The May 2018 proposed regulations also provided that corrected information returns would be required to be filed electronically if the corresponding original return was required to be filed electronically.

On July 1, 2019, the President signed into law the Taxpayer First Act of 2019 (TFA), Public Law 116–25. Section 2301 of the TFA amended section 6011(e) by adding new paragraph 5 that authorizes the Secretary to prescribe regulations that decrease, in accordance with the TFA, the number of returns a taxpayer may file without being required to file electronically. These amendments included changes to the special rule for partnerships. Section 2301 of the TFA moved the rule requiring partnerships with more than 100 partners to file returns electronically from section 6011(e)(5), titled “Partnerships required to file on magnetic media”, to new section 6011(e)(6). Section 3101 of the TFA amended section 6011 to require any charitable or other organization required to file an annual return that relates to any tax imposed by section 511 on unrelated business taxable income to file those returns in electronic form. Section 3101 of the TFA also amended section 6033 to require any organization required to file a return under section 6033 to file those returns in electronic form.

On November 19, 2020, the Secretary promulgated regulations under section 529A of the Code, which amended a regulation under section 6011(e) of the Code, §301.6011–2 (TD 9923), to add the Forms 5498–ESA, Coverdell ESA Contribution Information, 5498–QA, ABLE Account Contribution Information, and 5498–SA, HSA, Archer MSA, or Medicare Advantage MSA Information, as information returns covered by the regulation.

On December 20, 2019, the President signed into law the Setting Every Community Up for Retirement Enhancement Act of 2019 (SECURE Act), enacted as part of the Further Consolidated Appropriations Act, 2020, Public Law 116–94. Section 202 of the SECURE Act allows a group of plans to file a single aggregated annual
with respect to each contract entered into by that agency; and

(8) § 301.6721–1, Failure to file correct information returns, which provides the penalty for failure to file correct information returns;

(9) § 301.6011–3, Required use of electronic form for partnership returns, which prescribes standards for determining whether a partnership must file its partnership return electronically;

(10) § 301.6011–5, Required use of electronic form for corporate income tax returns, which prescribes standards for determining whether a corporation must file its corporate income tax returns electronically;

(11) § 1.6037–2, Required use of electronic form for income tax returns of electing small business corporations, which prescribes standards for determining whether an electing small-business corporation (S corporation) must file its S corporation return electronically;

(12) § 301.6037–2, Required use of electronic form for returns of electing small business corporations, which prescribes standards for determining whether an electing small-business corporation (S corporation) must file its S corporation return electronically;

(13) § 1.6033–4, Required filing in electronic form for returns by organizations required to file returns under section 6033, which prescribes standards for filing returns required to be filed electronically under § 301.6033–4;

(14) § 301.6033–4, Required filing in electronic form for returns by organizations required to file returns under section 6033, which prescribes standards for determining whether returns by organizations required to file a return under section 6033 must be filed electronically;

(15) § 53.6011–1, General requirement of return, statement or list, which requires persons subject to certain enumerated excise taxes under Chapter 42 of the Code to file a Form 4720 to accompany payment of those excise taxes;

(16) § 301.6057–3, Required use of electronic form for filing requirements relating to deferred vested retirement benefit, which prescribes standards for determining whether a registration statement required to be filed under section 6057(a) or a notification required to be filed under section 6057(b) must be filed electronically;

(17) § 301.6058–2, Required use of electronic form for filing requirements relating to deferred compensation, which prescribes standards for determining whether a return required to be filed under section 6058 with respect to an employee benefit plan must be filed electronically; and

(18) § 301.6059–2, Required use of electronic form for filing requirements relating to periodic report of actuary, which prescribes standards for determining whether an actuarial report required to be filed under section 6059 with respect to an employee benefit plan must be filed electronically.

The proposed regulations would also create the following new regulations that impose an electronic-filing requirement:

(1) § 301.6011–10, Certain organizations, including trusts, required to file unrelated business income tax returns in electronic form, which requires certain organizations, including trusts, to file their unrelated business income tax returns electronically;

(2) § 301.6011–11, Required use of electronic form for certain returns for tax-advantaged bonds, which prescribes standards for determining whether a return for credit payments to issuers of qualified bonds must be filed electronically;

(3) § 301.6011–12, Required use of electronic form for returns of certain excise taxes under chapters 41 and 42 of the Internal Revenue Code, which prescribes standards for determining whether an excise tax return on Form 4720 must be filed electronically;

(4) § 301.6011–13, Required use of electronic form for split-interest trust returns, which prescribes standards for determining whether an information return on Form 5227 must be filed electronically;

(5) § 301.6011–14, Required use of electronic form or other machine-readable form for material advisor disclosure statements, which prescribes standards for determining whether a material advisor disclosure statement on Form 8918 must be filed electronically or in other machine-readable form;

(6) § 301.6012–2, Required use of electronic form for income tax returns of certain political organizations, which prescribes standards for determining whether an income tax return on Form 1120–POL must be filed electronically;

(7) § 54.6011–3, Required use of electronic form for the filing requirements for the return for certain excise taxes related to employee benefit plans, which prescribes standards for determining whether an income tax return on Form 5330, Return of Excise Taxes Related to Employee Benefit Plans, must be filed electronically; and

(8) § 301.6011–15, Required use of electronic form for filing tax returns, which prescribes standards for determining whether an income tax

Explanation of Provisions
1. Scope of the Proposed Regulations for Filing Returns Electronically

These proposed regulations would impose electronic-filing requirements on persons required to file certain returns as authorized by the TFA by amending the following regulations:

(1) § 301.6011–2, Required use of electronic form, which prescribes standards for determining whether certain information returns must be filed electronically;

(2) § 1.6045–2, Furnishing statement required with respect to certain substitute payments, which requires persons to report certain substitute payments;

(3) § 1.6045–4, Information reporting on real estate transactions with dates of closing on or after January 1, 1991, which requires persons to report on real estate transactions;

(4) § 1.6050–0, Table of contents, which lists the major captions that appear in §§ 1.6050–1 and 1.6050–2;

(5) § 1.6050–1, Returns relating to cash in excess of $10,000 received in a trade or business, which requires persons to report information about these financial transactions to the IRS;

(6) § 1.6050–2, Returns relating to cash in excess of $10,000 received as bail by court clerks, which requires persons to report information about these financial transactions to the IRS;

(7) § 1.6050M–1, Information returns relating to persons receiving contracts from certain Federal executive agencies, which requires certain Federal executive agencies to report information with respect to each contract entered into by that agency;
return filed by a withholding agent on Form 1042 must be filed electronically. In addition, the proposed regulations would amend the following regulations regarding the filing requirements of withholding agents:

1. §1.1461–1, Payment and returns of tax withheld, which prescribes requirements for withholding agents to file returns with respect to U.S. source income of foreign persons;
2. §1.1471–0, Outline of regulation provisions for sections 1471 through 1474, which lists the major captions that appear in §§1.1471–1 through 1.1474–7 and §301.1474–1;
3. §1.1474–1, Liability for witheld tax and withholding agent reporting, which provides rules for withholding agents making payments under chapters 3 or 4 of the Code; and
4. §301.1474–1, Required use of electronic form for financial institutions filing Form 1042–S or Form 8966, which provides rules for withholding agents making payments under chapter 4 of the Code.

The regulations proposed in this document include reordering and renumbering of paragraphs when necessary for clarification and logic. In addition, cross references have been updated, and typographical, grammatical, and punctuation corrections have been made.

As many of these regulations imposing electronic-filing requirements also provide a waiver from electronically filing to any person who establishes undue hardship, the Treasury Department and the IRS request comments on how the hardship waiver procedures should be administered, including suggestions for revising the procedures for requesting, and criteria for granting, a hardship waiver.

2. Proposed §301.6011–2, Rules for Filing Certain Information Returns Electronically

These proposed regulations would amend §301.6011–2 as discussed in detail in the following sections 2.A through 2.G.

A. Additional Information Returns Required To Be Filed Electronically

i. Forms 1098–C and 1098–Q

Section 301.6011–2(b)(1) provides a list of information returns required to be filed electronically in accordance with §301.6011–2. Among those returns are three in the Form 1098 series: Form 1098, Mortgage Interest Statement; Form 1098–E, Student Loan Interest Statement; and Form 1098–T, Tuition Statement, added to §301.6011–2(b)(1) by, respectively, TD 8081 (March 25, 1986), TD 8992 (April 29, 2002), and TD 9029 (February 7, 2003). After those three forms were added to §301.6011–2(b)(1), the IRS created additional returns in the Form 1098 series: Form 1098–C, Contributions of Motor Vehicles, Boats, and Airplanes; and Form 1098–Q, Qualifying Longevity Annuity Contract Information. These two additional 1098 series forms, as well as the three currently listed in §301.6011–2(b), are all filed and furnished by larger organizations and institutions that generally electronically file returns even when not required to do so by §301.6011–2. Based on the size and sophistication of the entities that file these forms and the accessibility and availability of electronic filing, the Treasury Department and the IRS have determined that filers of Forms 1098–C and 1098–Q are unlikely to incur unreasonable costs to electronically file these returns. Thus, the proposed regulations would amend §301.6011–2(b)(1) to add Forms 1098–C and 1098–Q to the list of information returns covered by §301.6011–2(b).

ii. Forms 3921 and 3922

The proposed regulations would also amend §301.6011–2(b)(1) to add the Form 3921, Exercise of an Incentive Stock Option Under Section 422(b), and Form 3922, Transfer of Stock Acquired Through an Employee Stock Purchase Plan Under Section 423(c). These forms are filed and furnished by sophisticated taxpayers that generally electronically file returns even when not required to do so by §301.6011–2. Based on the sophistication of these filers and the accessibility and availability of electronic filing, the Treasury Department and the IRS have determined that filers of Forms 3921 and 3922 are unlikely to incur unreasonable costs to electronically file these returns.

iii. Form 1097–BTC

The proposed regulations would also amend §301.6011–2(b)(1) to add the Form 1097–BTC, Bond Tax Credit. This form is filed and furnished by bond issuers with respect to certain tax credit bonds. For the reasons discussed in this preamble, the Treasury Department and the IRS have determined that filers of Form 1097–BTC should not incur any unreasonable costs to electronically file this return. See section 2.2.D.

Aggregation of returns to determine whether the electronic-filing threshold is met. Proposed §301.6011–2 would allow for the aggregation of electronic filing requirements for Form 1097–BTC if hardship is shown in a request for waiver made in accordance with the regulation.

B. Form 8300 Required To Be Filed Electronically

Form 8300, Report of Cash Payments Over $10,000 Received in a Trade or Business, is a dual-purpose form, designed to meet both the section 6050I reporting requirement and, since January 1, 2002, a similar Bank Secrecy Act (BSA) reporting requirement found in 31 U.S.C. § 5313 and 31 CFR part 1030. Generally, any person in a trade or business who receives more than $10,000 in cash in a single transaction or related transactions must file Form 8300. The IRS uses the information on the Form 8300 for civil and criminal tax administration and compliance. The Financial Crimes Enforcement Network (FinCEN) relies on up-to-date Form 8300 filings for law enforcement, reporting, and statistical purposes. The instructions on Form 8300 state that filers can file the form either on paper with the IRS or electronically through FinCEN’s BSA E-Filing System.

Approximately 250,000 of the 300,000 Forms 8300 filed during each calendar year from 2015 to 2018 were filed on paper with the IRS. IRS employees manually input data from the paper-filed Forms 8300 into FinCEN’s BSA E-Filing System. This procedure requires significant resources to be spent on processing and data entry. Manual data entry can cause delays in the input and retrieval of data, affecting the timeliness of information available for law enforcement and other users to detect potential money laundering, terrorist financing, and other tax and financial fraud.

These proposed regulations would require filers who are required to file at least the applicable number of returns identified in paragraphs (b)(1) and (b)(2) of proposed §301.6011–2 during the calendar year to also file their Forms 8300 electronically, as directed by the form’s instructions. This requirement would increase the timeliness and accuracy of data entry, reduce postage costs, promote IT modernization efforts, reallocate IRS staff for priority assignments, and provide IRS criminal and civil investigators and other agencies with access to the data with up-to-date and accurate information.

Electronic filing would also protect against possible future disruption and delays in processing paper-filed Forms 8300. It is anticipated that the form will directly filers to use FinCEN’s BSA E-Filing System (https://bsafeiling.fincen.treas.gov/main.html), which is an internet-based secure system with no cost to the user. The only technical
requirement of the BSA E-Filing System is to have an internet connection for access to the system. Nonetheless, the proposed regulations would continue to allow the Commissioner to waive the requirement to file information returns electronically if the request for waiver demonstrates hardship. The principal factor in determining hardship will be the extent, if any, to which the cost of electronically filing Form 8300 exceeds the cost of filing Form 8300 on paper. The proposed regulations would also edit the example in § 1.60501(f)(2)(iv) to provide additional clarity for the rule illustrated in that example.

C. Amending the Electronic-Filing Threshold

Under section 6011(e)(1), the Secretary must prescribe regulations providing standards for determining which returns must be filed electronically. Section 6011(e)(2)(A), however, until it was amended by the TFA, prevented the Secretary from requiring any person to file returns electronically unless the person was required to file at least 250 returns during the calendar year. Section 2301 of the TFA amended section 6011(e), changing the statutory 250-return threshold to a decreasing number over several years, as set forth in new section 6011(e)(5). In accordance with section 2301 of the TFA, these proposed regulations would amend § 301.6011–2(b)(1)(i), which currently provides that no person is required to electronically file an information return covered under § 301.6011–2(b) unless the person is required to file 250 or more returns during the calendar year. The proposed amendments would remove references to the 250-return threshold in § 301.6011–2(c)(1)(i) and add a new paragraph (c)(3)(i) to § 301.6011–2 that, in accordance with the TFA, reduces the electronic-filing threshold for information returns covered under § 301.6011–2(b) from 250 to 100, for returns required to be filed during calendar year 2022, and from 100 to 10, for returns required to be filed during calendar years after 2022.

Information returns are generally required to be filed between January and March of the year following the calendar year to which such returns relate. See sections 6071(b) and (c). If a taxpayer has, for example, 13 employees in calendar year 2022 and is required to file Forms W–2 for those employees during calendar year 2023, that taxpayer would, under these proposed regulations, be required to file those 13 Forms W–2 electronically.

The proposed incremental step-down from 250 to 100 for information returns required to be filed during calendar year 2022, and then from 100 to 10 for information returns required to be filed after 2022, will allow the IRS time to ensure it has sufficient resources and updated programming to seamlessly handle and process the increased volume of electronically-filed information returns and the applications required to file those information returns electronically.

The Treasury Department and the IRS expect that by calendar year 2023 the IRS will be prepared to handle and process the anticipated increased volume of returns and applications, and that no further incremental step-down would be necessary if these proposed regulations are finalized and applicable to returns required to be filed during calendar year 2023. Consequently, persons required to file at least 10 information returns during the calendar year 2023 would be required to file those returns electronically. The Treasury Department and the IRS request comments on why persons required to file at least 10 information returns during the calendar year 2023 would not be able to file those returns electronically within that calendar year and whether the Treasury Department and the IRS should provide an incremental step-down to 100 for information returns required to be filed during calendar year 2023, and then from 100 to 10 for information returns required to be filed during calendar years after 2023.

D. Aggregation of Returns To Determine Whether the Electronic-Filing Threshold Is Met

Section 301.6011–2(c)(1)(iii) provides that each type of information return covered under § 301.6011–2(b) is considered separately for purposes of determining whether a person meets the 250-return electronic-filing threshold. Therefore, different types of information returns are not counted in the aggregate for purposes of determining whether a person is required to file a number of returns that equals or exceeds the 250-return electronic-filing threshold during the calendar year (non-aggregation rule).

These proposed regulations would remove the non-aggregation rule from § 301.6011–2(c)(1)(iii). Section 6011(e) does not prohibit the aggregation of information returns of different types in determining whether a person meets the electronic-filing threshold during a calendar year. When the regulations specifically providing for non-aggregation were published in 1998, electronic filing was still in the early stages of development and not as commonly used as it is today. Both the 250-return limitation that Congress had included in the 1989 amendment to section 6011(e) and the non-aggregation rule that the Secretary prescribed helped ensure that electronic-filing burdens and costs were appropriate, given the existing limits and accessibility to electronic-filing technology at that time.

Since that time, electronic filing has become more common, accessible, and economical, as evidenced by the prevalence of tax-return preparers and third-party service providers who offer return-preparation and electronic-filing services, by the availability of tax-return-preparation software, and by the numbers of returns already being filed electronically on a voluntary basis. In 2018, for example, approximately 98.5 percent of information returns were filed electronically. Moreover, electronic filing increases the IRS’s timeliness and accuracy in processing return information, which, in turn, provides faster and better customer service to taxpayers with respect to those returns.

In light of the prevalence of electronic filing and Congress’s enactment of the TFA, which significantly expanded the Secretary’s authority to prescribe regulations requiring persons to file returns electronically, the Treasury Department and the IRS have determined that the non-aggregation rule is no longer necessary and propose to remove it from § 301.6011–2(c). The proposed regulations would add a new paragraph (c)(6)(i) to § 301.6011–2 to provide that a person required to file original information returns of any type covered by § 301.6011–2(b)(1) and (b)(2) must count all those returns together to determine whether the person meets or exceeds the electronic-filing threshold for the relevant calendar year.

The proposed regulations do not include Forms 8300 in the aggregation rule, and no Form 8300 would be included in determining whether a person is required to file the applicable number of information returns. A Form 8300 generally must be filed within 15 days after a reportable payment of more than $10,000 is received. A filer may not know the number of Forms 8300 it will file in a calendar year until after the year is over, because the filer will not know how many cash transactions over $10,000 will occur during the year. On the other hand, other information returns described in § 301.6011–2(b)(1) and (2) do not need to be filed until after the calendar year of the event being reported. A filer of those other information returns will therefore know at the beginning of the calendar year whether the filer is required to file at
least the applicable number of those other information returns because those returns relate to the preceding calendar year. Thus, the Treasury Department and the IRS propose to require electronic filing of Forms 8300 only if the filer is required to file other information returns electronically.

Under these proposed regulations, filers would generally understand early in the calendar year their electronic-filing obligations for Forms 8300 without an unduly complex aggregation rule. In addition, these proposed regulations are consistent with the TFA’s emphasis on development, improvement, and expansion of modern technology (see, for example, “An Act To amend the Internal Revenue Code of 1986 to modernize and improve the Internal Revenue Service, and for other purposes” and “Subtitle B—Development of Information Technology” under “Title II—21st Century IRS”), and are within the Secretary’s expanded authority under the TFA to prescribe regulations requiring persons to file returns electronically.

E. Corrected Returns Must Be Filed in the Same Manner as the Original Return

Section 301.6011–2 provides that the non-aggregation rule applies separately to each type of corrected information return covered by § 301.6011–2(b) such that, for purposes of determining whether a person meets the 250-return electronic-filing threshold, corrected information returns are counted separately from original information returns, and each type of corrected information return is counted separately.

The Treasury Department and the IRS have determined that, to increase the IRS’s timeliness and accuracy in processing information returns, if persons are required to file original information returns electronically, they must file any corresponding corrected information returns electronically.

Likewise, if persons permitted to file information returns on paper file those information returns on paper, they must also file any corresponding corrected information returns on paper. As discussed in the next three paragraphs, this will increase the IRS’s efficiency in processing returns and should not cause taxpayers to incur unreasonable costs.

Paper information returns are generally filed at one of three different IRS Submission Processing Centers, depending on the filer’s legal residence (for individuals) or principal place of business (for entities). When the IRS receives paper returns, it must convert the return to an electronic-data record before it can use the information effectively. Electronic information returns, on the other hand, do not go through Submission Processing Centers; they are generally filed through the IRS’s Filing Information Returns Electronically (FIRE) system or Affordable Care Act Information Returns (AIRC) system, depending on the type of return.

Because the procedures for processing electronic returns and paper returns are different, when an original return is filed on paper and a corrected return is filed electronically shortly thereafter, the IRS may not have finished processing the original paper return before the electronic return is received. The IRS is thus not able to reconcile differences as quickly as when the original and corrected returns are filed in the same manner. Similar processing issues arise when an original return is filed electronically and the corrected return is filed on paper.

This proposed requirement will not result in a substantial increase in costs or burdens on taxpayers with respect to electronic filing because a filer who filed the original return electronically has the software necessary to file a corrected return electronically. Thus, the proposed regulations would add new paragraphs (c)(4)(ii)(A) and (c)(4)(ii)(B) to § 301.6011–2 to provide that corrected information returns must be filed electronically if the corresponding original return was required to be filed electronically, and that corrected returns must be filed on paper if the corresponding original return was permitted to be, and was, filed on paper. In addition, the proposed regulations would amend § 301.6721–1(a)(2)(ii), as discussed under section 5, Proposed § 301.6721–1, Rules Relating to Penalties for Failure to File Correct Information Returns, to provide that a failure to file a corrected information return in the same manner as the corresponding original will be deemed a failure to correct the corresponding original information return.

F. Special Electronic-Filing Threshold for Partnerships of Any Size

Section 2301 of the TFA amended the special rule for partnerships in section 6011(e)(5) to authorize the Secretary to reduce the electronic-filing threshold for partnerships required to file returns. The amended special rule for partnerships authorized the Secretary to reduce the electronic-filing threshold at an accelerated rate when compared to the general electronic-filing threshold, phasing in the rule for partnerships for returns required to be filed during calendar years after 2021.

These proposed regulations do not include a special electronic-filing threshold for partnerships because the final regulations are not expected to be applicable before the 2022 filing season, at which point the special rule for partnerships will be phased out. For all the reasons discussed in this preamble, the proposed regulations would reduce, for all persons, including partnerships, the electronic-filing threshold for information returns covered under § 301.6011–2(b) from 250 to 100, for returns required to be filed during calendar year 2022, and from 100 to 10, for returns required to be filed during calendar years after 2022. See section 2.C. Amending the electronic-filing threshold.

G. Special Electronic-Filing Rule for Partnerships Having More Than 100 Partners

Paragraph (6) of section 6011(e), as that section was amended by the TFA, provides, “Notwithstanding paragraph (2)(A), the Secretary shall require partnerships having more than 100 partners to file returns on magnetic media” (100-partner rule). The statute uses the general term “returns” without specifying the type of returns that must be filed electronically. But the legislative history of the Taxpayer Relief Act of 1997, which added the 100-partner rule to section 6011(e), mentions the rule’s application only with respect to partnerships returns. H.R. Rep. No. 105–220, at 675 (1997) (Conf. Rep.) (“The House bill provides generally that any partnership is required to provide the tax return of the partnership (Form 1065), as well as copies of the schedule[s] sent to each partner (Form K–1), to the Internal Revenue Service on magnetic media. An exception is provided for partnerships with 100 or fewer partners.”).

In accordance with this legislative history, the Secretary promulgated regulations in 1999, § 301.6011–3 (TD 8943), requiring partnerships with more than 100 partners to file partnership returns and all other information required by the applicable forms and schedules electronically.

In 2018, however, Congress enacted the TTCA and moved this 100-partner rule from section 6011(e)(2), where it appeared as flush language under the 250-threshold limitation, to a new subparagraph (B) under section 6011(e)(5), “Special rules for partnerships.” There is no legislative history to the 2018 TTCA that explains why Congress moved the 100-partner rule. But after the TTCA was enacted, the Joint Committee on Taxation describes the rule with respect to “returns,” rather than “tax return of the
partnership (Form 1065),” which is how the legislative history of the Taxpayer Relief Act of 1997 described it. Staff of the J. Comm. On Taxation, Technical Explanation of the Revenue Provisions of the House Amendment to the Senate Amendment to H.R. 1625, at 52 (JX–6–18) (“Present law requires that . . . . partnerships having more than 100 partners are required to file returns electronically.”). In 2019, a year after TTCA moved the 100-partner rule, Congress, in Title II of the TFA, under Subtitle D, “Expanded Use of Electronic Systems,” again moved the 100-partner rule to a new paragraph (6) under section 6011(e), “Partnerships required to file on magnetic media.” In light of the Joint Committee on Taxation’s referring to “returns” in general in describing this provision of the TTCA, the TFA’s emphasis on development, improvement, and expansion of modern technology, as discussed in this preamble, the TFA’s emphasis on electronic filing (see “Subtitle D—“Expanded Use of Electronic Systems” under Title II), and the accessibility and prevalence of electronic filing, the Treasury Department and the IRS propose to add a new paragraph (c)(3)(ii)(B) to § 301.6011–2 to require partnerships with more than 100 partners to file their information returns covered by § 301.6011–2(b) electronically, regardless of the number of information returns being filed.

3. Proposed § 1.6050I–0. Table of Contents, and § 1.6050I–1, Returns Relating to Cash in Excess of $10,000 Received in a Trade or Business

Section 1.6050I–1(e)(1) provides that Form 8300 must be filed with the IRS by the 15th day after the date cash in excess of $10,000 is received in a trade or business. Section 1.6050I–1(e)(3) provides that Form 8300 must be filed by mailing it to the address shown in the instructions on the form. For all the reasons discussed in this preamble, the proposed regulations would remove references to mailing Form 8300 to the IRS and require that the form be filed as directed by the form’s instructions. See section 2.B., Form 8300 required to be filed electronically; section 2.C., Amending the electronic-filing threshold; and section 2.D., Aggregation of returns to determine whether the electronic-filing threshold is met. The instructions to Form 8300 will explain how to file the form electronically. The proposed regulations would also update outdated citations in § 1.6050I–0 and § 1.6050I–1 that cross-reference to the regulations under Title 31 of the CFR and clarify the example in § 1.6050I–1(d)(2)(iv).

4. Proposed § 1.6050I–2, Returns Relating to Cash in Excess of $10,000 Received as Bail by Court Clerks

Section 1.6050I–2(c)(1)(i) provides that Form 8300 must be filed with the IRS by the 15th day after the date cash bail in excess of $10,000 is received. Section 1.6050I–2(c)(3)(i) provides that Form 8300 must be filed with the IRS office designated in the instructions on the form. For all the reasons discussed in this preamble, the proposed regulations would remove references to filing Form 8300 with a specific IRS office and require that the form be filed as directed by the form’s instructions. See section 2.B., Form 8300 required to be filed electronically; section 2.C., Amending the electronic-filing threshold; and section 2.D., Aggregation of returns to determine whether the electronic-filing threshold is met. The instructions to Form 8300 will explain how to file the form electronically.

5. Proposed § 301.6721–1, Rules Relating to Penalties for Failure To File Correct Information Returns

Paragraph (a)(2)(ii) of § 301.6721–1. Failure to file correct information returns, states that no penalty will be imposed solely by reason of failing to file electronically, except to the extent that a failure occurs with respect to more than 250 returns. In accordance with changes made to the 250-return threshold by section 2301 of the TFA, the proposed amendments to § 301.6721–1 would remove references to a 250-return threshold with respect to penalties for failure to file correct information returns.

Section 301.6721–1(a)(2)(ii) also states that the threshold requirements apply separately to original and corrected returns, such that a filer that files 300 returns on Form 1099–DIV and later files 70 corrected returns on Form 1099–DIV could file the corrected returns either on the prescribed paper form (because they fall below the 250-threshold requirement) or electronically. For the reasons discussed in this preamble, the Treasury Department and the IRS propose to remove this rule because they have determined that corrected returns should be filed electronically if the corresponding original returns were so filed. See section 2.E., Corrected returns must be filed in the same manner as the original return. These proposed regulations would thus amend § 301.6721–1(a)(2)(ii) to provide that a failure to file a corrected information return in the same manner as the corresponding original will be deemed a failure to correct the corresponding original information return such that the filer will not receive the benefit of a reduced penalty under § 301.6721–1(b) for that corrected information return.

6. Proposed § 301.6011–3, Rules for Filing Partnership Returns Electronically

Section 301.6011–3 prescribes standards for determining whether a partnership must file its partnership return electronically. In 2018, the TTCA amended section 6011(e) to authorize the Secretary to incrementally reduce, by regulation, the electronic-filing threshold for partnerships. When section 2301 of the TFA amended that particular statute again in 2019, to further reduce the electronic-filing threshold for partnerships, the Secretary had not yet promulgated regulations to implement that reduced-threshold rule for partnerships. As discussed in this preamble, these proposed regulations do not include a special electronic-filing threshold for partnerships because the final regulations are not expected to be applicable before the 2022 filing season, at which point the special rule for partnerships will be phased out. See section 2.F., Special electronic-filing threshold for partnerships of any size. For returns required to be filed during calendar years after 2021, section 2301 of the TFA authorizes the Secretary to reduce the electronic-filing threshold to 10 for all persons, including partnerships. These proposed regulations would amend § 301.6011–3(a) to reduce the electronic-filing threshold to 10 returns for any partnership, in accordance with section 6011(e), as amended by the TFA. In addition, for all the reasons discussed in this preamble, the proposed regulations would add a new paragraph (a)(5) to § 301.6011–3 that provides that all returns of any type, including partnership returns, excise-tax returns, employment-tax returns, and information returns (but not including schedules required to be attached to or included with a partnership return), are counted in the aggregate for purposes of determining whether a partnership of any size meets the electronic-filing threshold of 10 returns in a calendar year, and thus must file its partnership return electronically. See sections 2.D., Aggregation of returns to determine whether the electronic-filing threshold is met; and 2.G., Special electronic-filing rule for partnerships having more than 100 partners. These rules relating to the requirements for determining when a partnership is required to file its partnership return electronically do not
limit the application of any other statute affecting partnership returns that must be filed electronically, such as section 6033(n), which requires a partnership return filed by a section 501(d) apostolic organization to be filed electronically.

7. Proposed § 301.6011–5, Rules for Filing Corporate Income Tax Returns Electronically

Section 301.6011–5 prescribes standards for determining whether a corporation must file its income tax return electronically and requires large corporations to file the corporate income tax return electronically if the corporation is required to file during the calendar year at least 250 returns of any type. The regulation, however, applies only to those corporations that report total assets at the end of the corporate taxable year of $10 million or more on Schedule L of their Form 1120. Section 2301 of the TFA amended section 6011(e) to authorize the Secretary to prescribe regulations to reduce the number of returns that a person may be required to file during a calendar year before the Secretary may impose an electronic-filing requirement. These proposed regulations would remove references to the 250-return threshold and reduce the electronic-filing threshold for corporate income tax returns to 10, for returns required to be filed during calendar years after 2021, in accordance with section 6011(e), as amended by the TFA. In addition, the Treasury Department and the IRS propose to remove the $10 million rule, making the regulation applicable to all corporations regardless of reportable assets. The $10 million rule was never required by the Code; rather, the Treasury Department and the IRS prescribed the rule in 2007 to help ensure that electronic-filing burdens and costs were appropriate, given the existing limits and accessibility to electronic-filing technology at that time. With the current prevalence and accessibility of electronic filing even for small businesses, as well as the benefits of quicker return processing, the $10-million rule is no longer needed. Accordingly, the proposed regulations would require that any corporation required to file a corporate income tax return under § 1.6012–2, regardless of the corporation’s reported total assets at the end of its taxable year, file that return electronically if the corporation is required to file at least 10 returns of any type during calendar years after 2021. The proposed regulations would also update the example to reflect these changes. The proposed regulations do not change the existing rule in § 301.6011–5 that all returns of any type are counted in determining whether a corporation is required to file its income tax return electronically.

8. Proposed § 301.6037–2, Required Use of Electronic Form for Returns of Electing-Small Business Corporation

Section 301.6037–2 prescribes standards for determining whether an S corporation must file its S corporation return electronically. Section 301.6037–2 requires S corporations to file their corporate income tax return electronically if the corporation is required to file during the calendar year at least 250 returns of any type, but the regulation applies only to those S corporations that report total assets at the end of the corporation’s taxable year that equal or exceed $10 million on Schedule L of Form 1120–S.

Section 2301 of the TFA amended section 6011(e), authorizing the IRS to change the 250-return threshold to 10, for returns required to be filed during calendar years after 2021. These proposed regulations would remove references to the 250-return threshold and reduce the electronic-filing threshold for S corporations to 10 in accordance with section 6011(e), as amended by the TFA. In addition, the Treasury Department and the IRS propose to remove the $10 million rule for the same reasons that it is eliminating the rule for corporations. See section 7, Proposed § 301.6011–5, Rules for Filing Corporate Income Tax Returns Electronically. With the current prevalence and accessibility of e-filing, as well as the benefits of quicker processing of returns, the $10 million rule is no longer needed. Accordingly, the proposed regulations would require that any S corporation required to file an S-corporation return under § 1.6037–1, regardless of the corporation’s reported total assets at the end of its taxable year, file its income tax return electronically if the corporation is required to file at least 10 returns of any type during the calendar year. The proposed regulations would also update the example illustrating this rule to reflect these changes.

9. Proposed §§ 1.6033–4 and 301.6033–4, Required Filing in Electronic Form for Returns of Organizations Required To File Returns Under Section 6033

Section 1.6033–4 provides that the return of an organization that is required to be filed electronically under § 301.6033–4 must be filed in accordance with IRS revenue procedures, publications, forms, or instructions, including those posted electronically. Section 301.6033–4 provides that an organization required to file a return under section 6033 on Form 990 must file its Form 990 electronically if the organization is required to file during the calendar year at least 250 returns of any type and if the organization has total assets as of the end of the taxable year of $10 million or more. It also provides that any organization (regardless of total assets) required to file Form 990–PF must file its Form 990–PF electronically if it is required to file at least 250 returns of any type during the calendar year. In accordance with section 3101 of the TFA, these proposed regulations would amend §§ 1.6033–4 and 301.6033–4 to replace the term “magnetic media” with “in electronic form.” These proposed regulations would also amend § 301.6033–4 to remove any references to thresholds that establish a requirement to file electronically because the TFA now requires that any organization required to file a return under section 6033 must file such return in electronic form. Likewise, the proposed regulations would amend § 301.6033–4 by removing the following paragraphs: Paragraph (d)(1), which defines the term “magnetic media”; paragraph (d)(3), which defines the term “determination of 250 returns”; and paragraph (e), which illustrates by example how the 250 number is determined. In addition, the proposed regulations would remove § 301.6033–4(b), which provides that the Commissioner may grant waivers of the electronic-filing requirement.

Section 3101 of the TFA does not provide for any waiver of or alternate method to the electronic-filing requirements for returns required to be filed under section 6033. Accordingly, these proposed regulations would amend § 301.6033–4 by removing paragraph (b) that provides for a waiver of the requirements. Finally, these proposed regulations would amend § 301.6033–4(d)(2) to include Form 990–EZ, “Short Form Return of Organization Exempt From Income Tax,” as a return required to be filed under section 6033, clarifying that section 3101 of the TFA mandates that all returns required to be filed under section 6033 must be filed in electronic form.

10. Proposed § 53.6011–1(c), Deletion, Joint Filing of a Form 4720 Return

Section 3101(a) of the TFA amended section 6033(n) to provide that any exempt organization required to file a return under section 6033 must file such return in electronic form. Section 1.6033–2(a)(2) provides, under the
broad authority of section 6033(a)(1) (requiring every organization exempt from taxation under section 501(a) to file an annual return, stating specifically the items of gross income, receipts, and disbursements, and such other information for the purpose of carrying out the internal revenue laws as the Secretary may by forms or regulations prescribe), that every private foundation must file Form 990–PF, Return of Private Foundation, as its annual information return. In the case of a private foundation liable for tax under chapter 42, such information as is required by Form 4720 is to be furnished by the private foundation as part of its annual information return. See §1.6033–2(a)(2)(iii)(J). The preamble to the final regulations adding §1.6033–2(a)(2)(iii)(J) specifically noted that Form 4720, when filed by a private foundation, is part of the annual information return required to be filed under section 6033 as well as a tax return required to be filed under section 6011. Accordingly, Form 4720 filed by a private foundation as part of the Form 990–PF is a return required to be filed under section 6033 and is thus required to be filed in electronic form as a return required under section 6033(n). For the electronic-filing requirement for persons not described under section 509(a) as a private foundation, see section 16 of this preamble, Proposed §301.6011–12. Required Use of Electronic Form for Returns of Certain Excise Taxes Under Chapters 41 And 42 of the Internal Revenue Code.

If Form 4720 is filed by a private foundation (or by a trust described in section 4947(a)(2)) with respect to a transaction to which other persons are required to file under §53.6011–1(b) (persons liable for excise tax imposed by Chapters 41 and 42 of the Code), and if the other persons’ tax years are the same as the foundation’s or trust’s, §53.6011–1(c) allows the private foundation and such other persons to file a joint Form 4720, and, to the extent applicable, that form will be considered as the other persons’ return for purposes of complying with the filing requirement under §53.6011–1(b). This current regulatory permission to jointly file Form 4720, however, is incompatible with the requirement under section 6033(n) to file the return electronically. Accordingly, because the Form 4720 cannot be jointly filed in electronic form, the proposed regulations would delete §53.6011–1(c). Disqualified persons thus will no longer be able to meet their tax filing obligation under §53.6011–1(b) by the joint-filing process.

Notice 2021–01, 2021–2 I.R.B. 315 (January 11, 2021), announced the IRS’s intent to remove §53.6011–1(c) because the amendments the TFA made to sections 6104 (that any annual return required to be filed electronically under section 6033(n) must be made available by the Secretary to the public as soon as practicable in a machine-readable format) and 6033 rendered infeasible the ability for a private foundation and other persons to jointly file the same Form 4720 electronically. Notice 2021–01 was first released to the public on December 16, 2020, and substantially described the expected contents of the proposed amendments to §53.6011–1, in accordance with section 7805(b)(1)(C). Thus, the proposed changes to §53.6011–1 described in this section are proposed to apply retroactively as of January 1, 2021, as allowed by section 7805(b)(1)(C).

11. Proposed §301.6058–7, 3–26, Required Use of Electronic Form for Filing Requirements Relating to Deferred Vested Retirement Benefits

Section 6057(a) requires the plan administrator (within the meaning of section 414(g)(2) of each plan, to which the vesting standards of section 203 of the Employee Retirement Income Security Act of 1974 (ERISA) apply for a plan year, to file, within the time prescribed by regulations, a registration statement with the Secretary. The registration statement must set forth the following information relating to the plan: (1) The name of the plan; (2) the name and address of the plan administrator; (3) the name and identifying information of plan participants who separated from service covered by the plan and are entitled to deferred vested retirement benefits; and (4) the nature, amount, and form of deferred vested retirement benefits to which the plan participants are entitled. The form used to satisfy the reporting requirements under section 6057 is Form 8955–SSA. Annual Registration Statement Identifying Separated Participants with Deferred Vested Benefits.

Section 6057(b) provides that any plan administrator required to register under section 6057(a) must, within the time prescribed by regulations, also notify the Secretary of any change in the name of the plan or the name and address of the plan administrator, the termination of the plan, or the merger or consolidation of the plan with any other plan or its division into two or more plans.

Section 301.6057–3 provides that a registration statement required to be filed under section 6057(a) or a notification required to be filed under section 6057(b) must be filed electronically if the filer is required by the Code or regulations to file at least 250 returns during the calendar year that includes the first day of the plan year. For the reasons discussed in this preamble, and consistent with section 6011(e), as amended by the TFA, these proposed regulations would remove references to the 250-return threshold and would reduce the electronic-filing threshold to 10 for registration statements required to be filed under section 6057(a) and notifications required under section 6057(b) with respect to an employee benefit plan for any plan year that begins after December 31, 2021 (but only for filings with a filing deadline, not taking into account extensions, after July 31, 2022). See section 2.C., Amending the electronic-filing threshold.

12. Proposed §301.6058–7, 3–26, Required Use of Electronic Form for Filing Requirements Relating to Information Required in Connection With Certain Plans of Deferred Compensation

Section 6058(a) generally requires that every employer maintaining a pension, annuity, stock bonus, profit-sharing, or other funded plan of deferred compensation, or the plan administrator (within the meaning of section 414(g)(2) of the plan, file an annual return stating such information as the Secretary may by regulations prescribe with respect to the qualification, financial condition, and operations of the plan. The reporting requirement under section 6058(a) is satisfied by filing a return in the Form 5500 series. The Form 5500, Annual Return/Report of Employee Benefit Plan, the Form 5500–SF, Short Form Annual Return/Report of Small Employee Benefit Plan, and Form 5500–EZ, Annual Return of A One-Participant (Owners/Partners and Their Spouses) Retirement Plan or A Foreign Plan, make up the Form 5500 series.

Section 301.6058–2(a) provides that a return required to be filed under section 6058 with respect to an employee benefit plan must be filed electronically if the filer is required by the Code or regulations to file at least 250 returns during the calendar year that includes the first day of the plan year. For the reasons discussed in this preamble, and in accordance with section 6011(e), as amended by the TFA, these proposed regulations would remove references to the 250-return threshold and reduce the electronic-filing threshold to 10 for returns required to be filed under section 6058 with respect to an employee benefit plan for any plan year that begins after December 31, 2021 (but
only for filings with a filing deadline, not taking into account extensions, after July 31, 2022). See section 2.C., Amending the electronic-filing threshold. In addition, these proposed regulations would provide a cross reference, under §301.6058–2(d)(3), to alert taxpayers that information regarding each plan for which information is provided on an annual return satisfy to file the requirements under section 6058 is treated as a separate return for purposes of determining the electronic-filing threshold.

Under section 104 of ERISA, the plan administrator of a plan described in section 6058(a) of the Code that is also an employee benefit plan within the meaning of section 3(2) of ERISA must file an annual report on Form 5500, Annual Return/Report of Employee Benefit Plan, or Form 5500–SF, Short Form Annual Return/Report of Small Employee Benefit Plan (and all attachments to those forms, including Schedules SB and MB) electronically using the Department of Labor’s EFAST2 system, without regard to the number of returns the filer is required to file under the Code. The Department of Labor has advised the Treasury Department and the IRS that this proposed regulation does not affect the obligations of any person required to file an annual report electronically under 29 CFR 2520.104a–2 and section 104 of ERISA. An electronic filing on Form 5500 or Form 5500–SF also satisfies any obligation to file such a form under section 6011(e) of the Code. An employer that maintains a one-participant or foreign plan (which is not subject to section 104 of ERISA) or the plan administrator of the plan may satisfy the annual return filing requirements under section 6058(a) of the Code by filing a Form 5500–EZ, Annual Return of A One-Participant (Owners/Partners and Their Spouses) Retirement Plan or A Foreign Plan, which is required to be filed electronically using the Department of Labor’s EFAST2 system only if the employer or plan administrator is otherwise required to file using electronic form under section 6011.

13. Proposed §301.6059–2, Required Use of Electronic Form for Filing Requirements Relating to Periodic Report of Actuary

Section 6059(a) generally requires that a plan administrator (as defined in section 414(g)) of each defined benefit plan to which section 412 applies file the actuarial report described in section 6059(b) for the first plan year for which section 412 applies to the plan and for each third plan year thereafter (or more frequently if the Secretary determines that more frequent reports are necessary). The reporting requirements under section 6059(a) and (b) are satisfied by filing Schedule SB (Form 5500), Single Employer Defined Benefit Plan Actuarial Information and Schedule MB (Form 5500), Multiemployer Defined Benefit Plan and Certain Money Purchase Plan Actuarial Information. Section 301.6059–2 provides that an actuarial report required to be filed under section 6059 with respect to an employee benefit plan must be filed electronically if the filer is required by the Code or regulations to file at least 250 returns during the calendar year that includes the first day of the plan year. For the reasons discussed in this preamble, and in accordance with section 6011(e), as amended by the TFA, these proposed regulations would remove references to the 250-return threshold and would reduce the electronic-filing threshold to 10, for actuarial reports required to be filed under section 6059 with respect to an employee benefit plan for any plan year that begins after December 31, 2021 (but only for filings with a filing deadline, not taking into account extensions, after July 31, 2022). See section 2.C., Amending the electronic-filing threshold. The Department of Labor has advised the Treasury Department and the IRS that the electronic-filing threshold under section 6011(e) does not affect the obligations of a plan administrator or plan sponsor to file electronic forms using the Department of Labor a Schedule SB or Schedule MB as an attachment to the Form 5500, as required by 29 CFR 2520.104a–2 and section 104 of ERISA.

Section 3101(b)(2) of the TFA amended section 6011 to redesignate paragraph (b) as paragraph (i) and add new paragraph (h) that requires any organization required to file an annual return under section 6011 that relates to any tax imposed by section 511 to file such return in electronic form, effective for taxable years beginning after July 1, 2019. Section 3101 of the TFA does not provide for any waiver of or alternative method to the electronic-filing requirement for returns required to be filed under section 6011(h). The proposed regulations would add a new regulation under section 6011(h), §301.6011–10, in accordance with the TFA, to require any organization described in section 511(a)(2) subject to the tax under section 511(a)(1) or any trust described in section 511(b)(2) subject to the tax under section 511(b)(1) on their respective unrelated business taxable income to file their unrelated business income tax returns electronically.

15. Proposed §301.6011–11, Required Use of Electronic Form for Returns for Certain Tax-Advantaged Bonds

Under former sections 54AA and 6431(f) of the Code, issuers of qualified taxable bonds that provide a refundable federal tax credit payable directly to the issuer of the bond, such as build-America bonds, recovery zone economic development bonds, new clean renewable energy bonds, qualified energy conservation bonds, qualified zone academy bonds, and qualified school construction bonds, can elect to receive a direct payment from the federal government based upon a percentage of the interest payments on these bonds. Section 3.1 of Notice 2009–26, 2009–16 I.R.B. 833, 836 (April 20, 2009), and section 3 of Notice 2010–35, 2010–19 I.R.B. 660, 662 (May 10, 2010), provide that issuers of qualified bonds must submit a Form 8038–CP, Return for Credit Payments to Issuers of Qualified Bonds, to request payment of the amount of the credit within a prescribed time before or after each applicable interest payment date, depending on whether the bonds are fixed rate or variable rate. During 2013 to 2018, the IRS processed an average of $5 billion in direct payment requests; amounts paid on each return varied from less than $1,000 to more than $65 million. During 2019, state and local governments filed approximately 10,000 Forms 8038–CP in paper form. The IRS expects that it will continue to receive Forms 8038–CP from these issuers during the entire term of the bonds, which may be more than 20 years. The proposed regulations would require filers who are required to file at least 10 returns of any type during the calendar year to file their Forms 8038–CP electronically, as directed by the form’s instructions. This requirement would increase the timeliness and accuracy of processing these forms and promote IT modernization efforts. Proposed §301.6011–11 would also provide that the Commissioner may grant individual waivers of the e-filing requirement of this section in cases of undue hardship. The Treasury Department and the IRS anticipate issuing guidance that will set forth procedures whereby a taxpayer may request a hardship waiver for filing Form 8038–CP electronically.
16. Proposed § 301.6011–12, Required Use of Electronic Form for Returns of Certain Excise Taxes Under Chapters 41 and 42 of the Internal Revenue Code

Section 2301 of the TFA amended section 6011(e), changing the 250-return threshold to a 10-return threshold for returns required to be filed in calendar years after 2021. The proposed regulations would add a new regulation under section 6011(e), § 301.6011–12, that would require the electronic filing of Form 4720, Return of Certain Excise Taxes Under Chapters 41 and 42 of the Internal Revenue Code. The proposed regulations would require a person to file the Form 4720 electronically if that person is required to file at least 10 returns of any type during the calendar year. Proposed § 301.6011–12 would also provide that the Commissioner may grant individual waivers of the requirements of this section in cases of undue hardship. The Treasury Department and the IRS anticipate issuing guidance that will set forth procedures whereby a taxpayer may request a hardship waiver for filing Form 5227 electronically.

17. Proposed § 301.6011–13, Required Use of Electronic Form for Split-Interest Trust Returns

Section 2301 of the TFA amended section 6011(e), changing the 250-return threshold to a 10-return threshold for returns required to be filed in calendar years after 2021. The proposed regulations would add a new regulation under section 6011(e), § 301.6011–13, that would require the filing of Form 5227, Split-Interest Trust Information Return, electronically. Forms 5227 are filed by split-interest trusts to report the trust’s financial activities, including distributions to the beneficiaries. The proposed regulations would require a trust to file the Form 5227 electronically if the trust is required to file at least 10 returns of any type during the calendar year. Proposed § 301.6011–13 would also provide that the Commissioner may grant individual waivers of the requirements of this section in cases of undue hardship. The Treasury Department and the IRS anticipate issuing guidance that will set forth procedures whereby a taxpayer may request a hardship waiver for filing Form 5227 electronically.

18. Proposed § 301.6011–14, Required Use of Electronic Form for Other Machine-Readable Form for Material Advisor Disclosure Statements

The proposed regulations would add a new regulation under section 6011(e), § 301.6011–14, that would require the filing of Form 8918, Material Advisor Disclosure Statement, electronically or in other machine-readable form, in accordance with revenue procedures, publications, forms, instructions, or other guidance, including postings on the IRS.gov website. Section 6111 requires each material advisor with respect to any reportable transaction to make a return setting forth certain information with respect to the reportable transaction. Section 301.6011–3(d) clarifies that the return required to be filed under section 6111(a) is the Form 8918. Form 8918 is currently filed on paper and must be mailed to the Office of Tax Shelter Analysis in Ogden, Utah. The proposed regulations would require a material advisor to file the Form 8918 electronically or in other machine-readable form if the material advisor is required to file at least 10 returns of any type during the calendar year, in accordance with section 6011(e), as amended by section 2301 of the TFA. This requirement would increase the timeliness and accuracy of processing the data on Form 8918, reduce postage costs, and promote IT modernization efforts. Proposed § 301.6011–14 would also provide that the Commissioner may grant individual waivers of the requirements of this section in cases of undue hardship. The Treasury Department and the IRS anticipate issuing guidance that will set forth procedures whereby a taxpayer may request a hardship waiver for filing Form 8918 electronically.

19. Proposed § 301.6011–15, Required Use of Electronic Form for Withholding Tax Returns

The proposed regulations would add a new regulation under section 6011(e), § 301.6011–15, that would require the filing of Form 1042, Annual Withholding Tax Return for U.S. Source Income of Foreign Persons, electronically in accordance with revenue procedures, publications, forms, instructions, or other guidance, including postings on the IRS.gov website. Sections 1441 and 1442 require withholding agents to withhold tax from payments made to foreign persons with respect to certain U.S. source income and to report those payments and the tax withheld for each recipient. Section 1.1461–1(c) specifies that the reporting be on Form 1042–S, Foreign Persons’ U.S. Source Income Subject to Withholding. In addition, § 1.1461–1(b) requires withholding agents to make an annual income tax return on Form 1042 that reports the aggregate income paid and taxes withheld for the preceding calendar year. The IRS verifies the amount of withholding reported on Form 1042 and deposited with the IRS against amounts reported as withheld on Forms 1042–S. Form 1042–S is already required to be electronically filed to the extent provided under § 301.6011–2 for a withholding agent that is not a financial institution. But the Form 1042 is not required to be electronically filed. To increase the timeliness and accuracy of processing refunds and credits claimed by foreign persons that have amounts withheld and reported on Form 1042–S, proposed § 301.6011–15 would require Form 1042 filers—except for individuals, estates, or trusts—to file Form 1042 electronically if they are required to file 10 or more returns of any type during the calendar year, in accordance with section 6011(e), as amended by section 2301 of the TFA. Proposed § 301.6011–15 would also require partnerships with more than 100 partners to file their Forms 10422 electronically, regardless of the number of returns the partnership is required to file during the calendar year. Proposed § 301.6011–15 would also provide that the Commissioner may grant individual waivers of the requirements of this section in cases of undue hardship.

20. Proposed § 301.6012–2, Required Use of Electronic Form for Income Tax Returns of Certain Political Organizations

Section 2301 of the TFA amended section 6011(e), changing the 250-return threshold to a 10-return threshold for returns required to be filed in calendar years after 2021. The proposed regulations would add a new regulation under sections 6011(e) and 6012(a), § 301.6012–2, to require the filing of Form 1120–POL, U.S. Income Tax Return for Certain Political Organizations electronically. The Form 1120–POL is filed by political organizations, described in section 527 of the Code, to report income not specifically excluded from tax under section 527 and by exempt organizations subject to tax under section 527(f)(1) of the Code. The
proposed regulations would require an organization to file the Form 1120–POL electronically if the organization is required to file at least 10 returns of any type during the calendar year. Proposed § 301.6012–2 would also provide that the Commissioner may grant individual waivers of the requirements of this section in cases of undue hardship. The Treasury Department and the IRS anticipate issuing guidance that will set forth procedures whereby a taxpayer may request a hardship waiver for filing Form 1120–POL electronically.

21. Proposed § 54.6011–3, Required Use of Electronic Form for the Filing Requirements for the Return for Certain Excise Taxes Related to Employee Benefit Plans

The proposed regulations would add a new regulation under section 6011(e), § 54.6011–3, to require the filing of Forms 5330, Return of Excise Taxes Related to Employee Benefit Plans, electronically. Section 2301 of the TFA amended section 6011(e), changing the 250-return threshold to a 10-return threshold for returns required to be filed during calendar years after 2021. The proposed regulations would require a filer to file the Form 5330 electronically if the filer is required to file at least 10 returns of any type during the calendar year. Proposed § 54.6011–3 would also provide that the Commissioner may grant individual waivers of the requirements of this section in cases of undue hardship. The Treasury Department and the IRS anticipate issuing guidance that will set forth procedures whereby a taxpayer may request a hardship waiver for filing Form 5330 electronically.

22. Proposed § 1.1461–1, Payment and Returns of Tax Withheld

Section 1.1461–1 prescribes requirements for withholding agents to file information returns with respect to U.S. source income of foreign persons. Section 1.1461–1(c)(5) provides that a withholding agent that makes 250 or more Form 1042–S information returns for a taxable year must file those forms electronically as required under § 301.6011–2(b). The proposed regulations would amend § 1.1461–1 to remove paragraph (c)(5) because the electronic-filing requirement for Form 1042–S is contained in § 301.6011–2(b) and the 250-return threshold would no longer apply if the proposed amendments to § 301.6011–2 are finalized in a Treasury decision.

23. Proposed § 1.1474–1, Liability for Withheld Tax and Withholding Agent Reporting

Section 1.1474–1 provides rules for withholding agents making payments under chapter 4 of the Code. The first sentence in § 1.1474–1(e) provides that withholding agents that are not financial institutions and that are required to file 250 or more Forms 1042–S for a taxable year must file those forms electronically, referencing § 301.6011–2(b). The proposed regulations would amend § 1.1474–1 to remove the first sentence in § 1.1474–1(e) because the electronic-filing requirement for Form 1042–S is contained in § 301.6011–2(b) and the 250-return threshold would no longer apply if the proposed amendments to § 301.6011–2 are finalized in a Treasury decision.

24. Proposed § 301.1474–1, Required Use of Electronic Form for Financial Institutions Filing Form 1042, Form 1042–S, or Form 8966

These proposed regulations would amend § 301.1474–1 to add a requirement that a financial institution must file its Form 1042 electronically, without regard to the number of returns required to be filed during the calendar year, in accordance with section 6011(e)(4). The existing provision in § 301.1474–1(b), which provides that the Commissioner may grant individual waivers of the requirements of § 301.1474–1 in cases of undue hardship, would also apply to the proposed electronic-filing requirement relating to Form 1042.

25. Proposed § 1.6050M–1, Information Returns Relating to Persons Receiving Contracts From Certain Federal Executive Agencies

Section 1.6050M–1 requires federal executive agencies who enter into certain contracts, as defined under § 1.6050M–1(b)(2), to file information returns with respect to those contracts. Under § 1.6050M–1(d), the information returns must be filed on a quarterly basis; in addition, if the federal executive agency, on any October 1, expects to enter into 250 or more contracts during the one-year period beginning on October 1, it must file the information returns electronically.

Section 2301 of the TFA amended section 6011(e), authorizing the IRS to change the 250-return threshold to 10, for returns required to be filed during calendar years after 2021. For the reasons discussed in this preamble, and consistent with section 6011(e), as amended by the TFA, these proposed regulations would remove references to the 250-return threshold under § 1.6050M–1 and would reduce the electronic-filing threshold from 250 to 100, for information returns required to be filed during calendar year 2022, and from 100 to 10, for information returns required to be filed during calendar years after 2022.

Proposed § 1.6050M–1 would also provide that the Commissioner may grant individual waivers of the requirements of this section in cases of undue hardship.

Section 1.6045–4 requires a real estate reporting person to file information returns with respect to real-estate transactions. Section 1.6045–4(k) provides rules for filing these returns electronically. The form used to report these transactions is a form covered under § 301.6011–2(b)(1). Section 301.6011–2 provides the rules for electronically filing the forms listed in § 301.6011–2(b)(1). These proposed regulations would thus remove paragraph (k) from § 1.6045–4 because the electronic-filing requirement is contained in § 301.6011–2.

27. Withdrawal of May 2018 Proposed Regulations

In light of the TFA, the Treasury Department and the IRS withdraw the May 2018 proposed regulations under section 6011(e) because those proposed regulations interpret a provision of the Code that has been amended. The Treasury Department and the IRS have determined that the amendments made to section 6011(e) by the TFA require guidance to be issued by regulations. Withdrawing the proposed regulations and reissuing new proposed regulations ensure that all persons affected by the proposed regulations will have a meaningful opportunity to publicly comment.

Special Analyses

These regulations are not subject to review under section 6(b) of Executive Order 12866 pursuant to the Memorandum of Agreement (April 11, 2018) between the Treasury Department and the Office of Management and Budget regarding review of tax regulations.

Pursuant to the Regulatory Flexibility Act (5 U.S.C. chapter 6), it is hereby certified that this proposed rule, if finalized, will not have a significant economic impact on a substantial number of small entities. Although these rules may affect a substantial
number of small entities, for the reasons discussed in the following paragraphs, the economic impact is not significant. Under section 6011(e) of the Code and §§ 1.6050M–1, 301.6011–2, 301.6011–3, 301.6011–5, 301.6037–2, 301.6057–3, 301.6058–2, and 301.6059–2, filers are already required to file returns and statements electronically if, during a calendar year, they are required to file 250 or more returns. The eight proposed rules—§§ 1.6050M–1, 301.6011–2, 301.6011–3, 301.6011–5, 301.6037–2, 301.6057–3, 301.6058–2, and 301.6059–2—would lower the 250-return threshold as authorized by section 6011(e), as amended by section 2301 of the TFA. A filer may request that the IRS waive the electronic-filing requirement if the filer’s cost to comply with the rule would cause a financial hardship. The IRS routinely grants meritorious hardship waiver requests. Accordingly, the economic burden on the limited number of small entities that are not currently filing electronically will be slight; and small entities that would experience a hardship because of these seven proposed rules may seek a waiver.

Under section 6050I of the Code and §§ 1.6050I–1 and 1.6050I–2, filers are required to file Forms 8300 if, in the course of their trade or business, they receive more than $10,000 in cash in one transaction or in two or more related transactions. The proposed rule under § 301.6011–2(b)(3) would require filers of Forms 8300 to file those forms electronically if such filers are also required to file returns electronically under paragraphs (b)(1) and (b)(2) of § 301.6011–2. The Treasury Department and the IRS expect filers of Form 8300 to use FinCEN’s BSA E-Filing System, which is free, requiring only an internet connection. The economic impact on small entities should thus not be significant. Nonetheless, small entities that would experience a hardship because of this proposed rule may seek a hardship waiver.

Under section 6011(e)(4) of the Code and § 301.1474–1, financial institutions defined in section 1471(d)(5) of the Code already are required to electronically file Forms 1042–S. The proposed rule under § 301.1474–1(a) would extend this filing requirement to Forms 1042 filed by the same financial institutions. The economic impact on small entities should thus not be significant. Nonetheless, small entities that would experience a hardship because of this proposed rule may seek a hardship waiver.

Under section 6011(b) of the Code, as amended by section 3101 of the TFA, organizations required to file annual returns relating to any tax imposed by section 511 must file those returns in electronic form. The proposed regulation § 301.6011–10 implements this statutory requirement. The economic impact of the proposed regulation should thus be insignificant.

Under section 6033(n), as amended by section 3101 of the TFA, organizations required to file returns under section 6033 must file those returns in electronic form. The proposed regulations under §§ 1.6033–4, 53.6011–1, and 301.6033–4 implement this statutory requirement. The economic impact of these proposed regulations should thus be insignificant.

The seven proposed regulations under §§ 54.6011–3, 301.6011–11, 301.6011–12, 301.6011–13, 301.6011–14, 301.6011–15, and 301.6012–2 would require electronic filing for certain returns not currently required to be filed electronically. Because electronic filing has become more common, accessible, and economical, the economic impact of these proposed rules on small entities should be insignificant. But if the cost to comply with these electronic-filing requirements would cause a financial hardship, an entity may request a waiver. The IRS routinely grants meritorious hardship waiver requests. Accordingly, the burden on small entities affected by these rules will be slight.

Accordingly, it is hereby certified that these proposed regulations will not have a significant economic impact on a substantial number of small entities within the meaning of section 601(e) of the RFA.

Section 202 of the Unfunded Mandates Reform Act of 1995 requires that agencies assess anticipated costs and benefits and take certain other actions before issuing a final rule that includes any federal mandate that may result in expenditures in any one year by a state, local, or tribal government, in the aggregate, or by the private sector, of $100 million in 1995 dollars, updated annually for inflation. This regulation does not include any federal mandate that may result in expenditures by state, local, or tribal governments, or by the private sector in excess of that threshold.

Executive Order 13132 (titled Federalism) prohibits an agency from publishing any rule that has federalism implications if the rule either imposes substantial, direct compliance costs on state and local governments, and is not required by statute, or preempts state law, unless the agency meets the consultation and funding requirements of section 6 of the Executive Order. This rule does not have federalism implications and does not impose substantial direct compliance costs on state and local governments or preempt state law, within the meaning of the Executive Order.

Pursuant to section 7805(f) of the Code, this proposed regulation has been submitted to the Chief Counsel for the Office of Advocacy of the Small Business Administration for comment on its impact on small business.

Comments and Public Hearing

Before these proposed regulations are adopted as final regulations, consideration will be given to comments that are submitted timely to the IRS as prescribed in this preamble under the ADDRESSES section. The Treasury Department and the IRS request comments on all aspects of the proposed regulations. Any comments submitted will be available at www.regulations.gov or upon request.

The public hearing is being held by teleconference on September 22, 2021 at 10 a.m. EST. Requests to speak and outlines of topics to be discussed at the public hearing must be received by September 21, 2021. If no outlines are received by September 21, 2021, the public hearing will be cancelled. Requests to attend the public hearing must be received by 5:00 p.m. EST on September 20, 2021. The telephonic hearing will be made accessible to people with disabilities. Requests for special assistance during the telephonic hearing must be received by September 20, 2021.

Drafting Information

The principal author of these proposed regulations is Casey R. Conrad of the Office of the Associate Chief Counsel (Procedure and Administration). Other personnel from the Treasury Department and the IRS participated in the development of the regulations.

Statement of Availability of IRS Documents

Withdrawal of Proposed Regulations

Under the authority of 26 U.S.C. 7805, § 301.6011–2 and § 301.6721–1 of the notice of proposed rulemaking (REG–102951–16) that was published in the
Federal Register on Thursday, May 31, 2018 (83 FR 24948) is withdrawn.

Excise taxes, Pensions, Reporting and recordkeeping requirements.
26 CFR Part 301
Employment taxes, Estate taxes, Excise taxes, Gift taxes, Income taxes, Penalties, Reporting and recordkeeping requirements.

Proposed Amendments to the Regulations
Accordingly, 26 CFR parts 1, 53, 54 and 301 are proposed to be amended as follows:

PART 1—INCOME TAXES

Paragraph 1. The authority citation for part 1 is amended by adding the following entries in numerical order:

Authority: 26 U.S.C. 7805 * * *
Section 1.6033–4 also issued under 26 U.S.C. 6033. Section 1.6037–2 also issued under 26 U.S.C. 6037.

Par. 2. Section 1.1461–1 is amended by removing paragraph (c)(5) and revising paragraph (f) to read as follows:

§1.1461–1. Payment and returns of tax withheld.

(i) Applicability date. Except as provided in paragraph (c)(2)(iii) of this section, this section applies to returns required for payments made on or after [the date of publication of the Treasury decision adopting these rules as final regulations in the Federal Register]. For payments made before [Date of publication of the Treasury decision adopting these rules as final regulations in the Federal Register] and on or after January 1, 2022, see this section as in effect and contained in 26 CFR part 1, as revised April 1, 2021. For payments made before January 1, 2022, see this section as in effect and contained in 26 CFR part 1, as revised April 1, 2020.

Par. 3. Section 1.1471–0 is amended by revising the entries in the table of contents for § 1.1474–1(e) and (f) and § 301.1474–1(d)(1) and (e) to read as follows:

§1.1474–1 Liability for withheld tax and withholding agent reporting.

(e) Reporting in electronic form.

(j) Applicability date.

§301.1474–1 Required use of electronic form for financial institutions filing Form 1042, Form 1042–S, or Form 8966.

(d) Magnetic media or electronic form.

(e) Applicability date.

Par. 4. Section 1.1474–1 is amended by revising paragraphs (e) and (j) to read as follows:

§1.1474–1 Liability for withheld tax and withholding agent reporting.

(e) Reporting in electronic form. See §301.6011–2(b) of this chapter for the requirements of a withholding agent that is not a financial institution with respect to the filing of Forms 1042–S in electronic form. See §301.1474–1(a) of this chapter for the requirements applicable to a withholding agent that is a financial institution with respect to the filing of Forms 1042–S in electronic form.

(j) Applicability date. This section applies to returns required for payments made on or after [Date of publication of the Treasury decision adopting these rules as final regulations in the Federal Register]. For the rules that apply before [the date of publication of the Treasury decision adopting these rules as final regulations in the Federal Register] and on or after January 6, 2017, see this section as in effect and contained in 26 CFR part 1, as revised April 1, 2021.

Par. 5. Section 1.6033–4 is revised to read as follows:

§1.6033–4 Required filing in electronic form for returns by organizations required to file returns under section 6033.

(a) In general. The return of an organization that is required to be filed in electronic form under §301.6033–4 of this chapter must be filed in accordance with revenue procedures, publications, forms, instructions, or other guidance.

(b) Applicability date. The rules of this section apply for returns required to be filed for taxable years ending on or after [Date of publication of the Treasury decision adopting these rules as final regulations in the Federal Register].

Par. 6. Section 1.6037–2 is revised to read as follows:

§1.6037–2 Required use of electronic form for income tax returns of electing small business corporations.

(a) In general. The return of an electing small business corporation that is required to be filed electronically under §301.6037–2 of this chapter must be filed in accordance with Internal Revenue Service revenue procedures, publications, forms, or instructions, including those posted electronically.

(b) Applicability date. The rules of this section apply for returns required to be filed for taxable years ending on or after [Date of publication of the Treasury decision adopting these rules as final regulations in the Federal Register].

Par. 7. Section 1.6045–2 is amended by revising paragraphs (g)(2) and (l) to read as follows:

§1.6045–2 Furnishing statement required with respect to certain substitute payments.

(g) * * *

(2) Reporting in electronic form. For information returns filed after December 31, 1996, see §301.6011–2 of this chapter for rules relating to filing information returns in electronic form and for rules relating to waivers granted for undue hardship. A broker or barter exchange that fails to file a Form 1099 electronically, when required, may be subject to a penalty under section 6721 for each such failure. See paragraph (g)(4) of this section.

Par. 8. Section 1.6045–4 is amended by removing and reserving paragraph (k) and revising paragraph (s) to read as follows:

§1.6045–4 Information reporting on real estate transactions with dates of closing on or after January 1, 1991.

(s) Applicability date. This section applies for real estate transactions with dates of closing (as determined under paragraph (b)(2)(ii) of this section) that
occur on or after January 1, 1991. The amendments to paragraphs (b)(2)(i)(E), (b)(2)(ii) and (c)(2)(i) of this section apply to sales or exchanges of standing timber for lump-sum payments completed after May 28, 2009. The amendments to paragraph (m)(1) of this section apply to payee statements due after December 31, 2014. For payee statements due before January 1, 2015, § 1.6045–4(m)(1) (as contained in 26 CFR part 1, revised April 2013) shall apply. The removal of paragraph (k) of this section applies for information returns required to be filed during calendar years beginning after [Date of publication of the Treasury decision adopting these rules as final regulations in the Federal Register].

Par. 9. Section 1.6050I–0 is amended by revising the entry in the table of contents for § 1.6050I–1(d)(2)(ii) as follows:

§ 1.6050I–0 Table of contents.

* * * * *
(d) * * *
(2) * * *
(ii) Casinos exempt under 31 CFR 1010.970(c).
* * * * *

Par. 10. Section 1.6050I–1 is amended by:

1. Revising paragraphs (a)(3)(i), (c)(1)(iv), (d)(2)(i), (d)(2)(ii);
2. In paragraph (d)(2)(iv), designating the example as paragraph (d)(2)(iv)(A);
3. Revising newly designated paragraph (d)(2)(iv)(A) and adding paragraph (d)(2)(iv)(B);
4. Revising paragraphs (e)(1) and (e)(3)(i); and
5. Adding paragraph (h).

The revisions and additions read as follows:

§ 1.6050I–1 Returns relating to cash in excess of $10,000 received in a trade or business.

(a) * * *
(3) * * *
(ii) Exception. An agent who receives cash from a principal and uses all of the cash within 15 days in a cash transaction (second cash transaction) which is reportable under section 6050I or 5312 of title 31 of the United States Code and the regulations thereunder (31 CFR Chapter X), and who discloses the name, address, and taxpayer identification number of the principal to the recipient in the second cash transaction need not report the initial receipt of cash under this section.
* * * * *
(c) * * *
(1) * * *
(iv) Exception for certain loans. A cashier’s check, bank draft, traveler’s check, or money order received in a designated reporting transaction is not treated as cash pursuant to paragraph (c)(1)(ii)(B)(i) of this section if the instrument constitutes the proceeds of a loan from a bank (as that term is defined in 31 CFR Chapter X).
* * * * *
(d) * * *
(2) * * *
(i) In general. If a casino receives cash in excess of $10,000 and is required to report the receipt of such cash directly to the Treasury Department under 31 CFR 1021.310 or 1010.360 and is subject to the recordkeeping requirements of 31 CFR 1021.400, then the casino is not required to make a return with respect to the receipt of such cash under section 6050I and these regulations.

(ii) Casinos exempt under 31 CFR 1010.970(c). Under the authority of section 6050I(c)(1)(A), the Secretary may exempt from the reporting requirements of section 6050I casinos with gross annual gaming revenue in excess of $1,000,000 that are exempt under 31 CFR 1010.970(c) from reporting certain cash transactions to the Treasury Department under 31 CFR 1021.310 or 1010.360. The determination whether a casino which is granted an exemption under 31 CFR 1010.970(c) will be required to report under section 6050I will be made on a case by case basis, concurrently with the granting of such an exemption.
* * * * *
(iv) * * *
(A) Example. A and B are casinos having gross annual gaming revenue in excess of $1,000,000. C is a casino with gross annual gaming revenue of less than $1,000,000. Casino A receives $15,000 in cash from a customer with respect to a gaming transaction which the casino reports to the Treasury Department under 31 CFR 1021.310 and 1010.360. Casino B’s hotel division receives $15,000 in cash from a customer in payment for accommodations provided to that customer at Casino B’s hotel. Casino C receives $15,000 in cash from a customer with respect to a gaming transaction. Casino A is not required to report the transaction under section 6050I or these regulations because the exception for certain casinos provided in paragraph (d)(2)(i) of this section (casino exception) applies. Casino B’s hotel division is required to report under section 6050I and these regulations because the casino exception does not apply to the receipt of cash by a nongaming business division. Casino C is required to report under section 6050I and these regulations because the casino exception does not apply to casinos having gross annual gaming revenue of $1,000,000 or less which do not have to report to the Treasury Department under 31 CFR 1021.310 and 1010.360.

(B) [Reserved]
* * * * *
(e) * * *
(1) Time of reporting. The reports required by this section must be filed in accordance with the Form 8300 instructions and related publications by the 15th day after the date the cash is received. However, in the case of multiple payments relating to a single transaction (or two or more related transactions), see paragraph (b) of this section.
* * * * *
(3) * * *
(i) Where to file. A person making a return of information under this section must file Form 8300 in accordance with the form instructions and related publications.
* * * * *
(b) Applicability date. The rules of this section apply for returns required to be filed during calendar years beginning after [Date of publication of the Treasury decision adopting these rules as final regulations in the Federal Register].

Par. 11. Section 1.6050I–2 is amended by revising paragraphs (c)(1)(i), (c)(3)(i), and (f) to read as follows:

§ 1.6050I–2 Returns relating to cash in excess of $10,000 received as bail by court clerks.

* * * * *
(c) * * *
(1) * * *
(i) In general. The information return required by this section must be filed in accordance with the Form 8300 instructions and related publications. A copy of the information return required to be filed under this section must be retained for five years from the date of filing.
* * * * *
(3) * * *
(i) Where to file. Returns required by this section must be filed in accordance with the Form 8300 instructions and related publications. A copy of the information return required to be filed under this section must be retained for five years from the date of filing.
* * * * *
(f) Applicability date. The rules of this section apply for returns required to be filed during calendar years beginning after [Date of publication of the Treasury decision adopting these rules as final regulations in the Federal Register].

Par. 12. Section 1.6050M–1 is amended by revising paragraphs (d)(2), (d)(3), and (f) as follows:
§ 1.6050M–1 Information returns relating to persons receiving contracts from certain federal executive agencies.

(d) * * * *

(2) Form of reporting—(i) General rule concerning electronic filing. The information returns required by this section with respect to contracts of a federal executive agency for each calendar quarter must be made in one submission (or in multiple submissions if permitted by paragraph (d)(4) of this section). Except as provided in paragraph (d)(2)(iii) of this section, the required returns must be made in electronic form (within the meaning of § 301.6011–2(a)(1)) in accordance with any applicable revenue procedure or other guidance promulgated by the Internal Revenue Service for the filing of such returns under section 6050M.

(ii) Exceptions from electronic filing. Any federal executive agency that, on October 1, has a reasonable expectation of entering into, during the one-year period beginning on that date, fewer than 100 contracts subject to the reporting requirements under this section that are to be filed during the calendar year 2022, or fewer than 10 contracts subject to the reporting requirements under this section that are to be filed during the calendar years after 2022, may make the information returns required by this section for each quarter of that one-year period on the prescribed paper Form 8596 in accordance with the instructions accompanying such form.

(iii) Undue hardship. The Commissioner may grant waivers of the electronic-filing requirements of this section in cases of undue hardship. The principal factor in determining hardship will be the amount, if any, by which the cost of filing the return electronically in accordance with this section exceeds the cost of filing the return on paper. A request for a waiver must be made in accordance with applicable IRS revenue procedures, publications, forms, instructions, or other guidance, including postings to the IRS.gov website. The waiver will specify the type of filing (that is, a return required under paragraph (a) of this section) and the period to which it applies.

(3) Place of filing—(i) Returns in electronic form. Information returns made under this section in electronic form must be filed with the Internal Revenue Service in accordance with any applicable revenue procedure or other guidance promulgated by the Internal Revenue Service relating to the filing of returns under section 6050M.

(ii) Form 8596. Information returns made on paper Form 8596 must be filed with the Internal Revenue Service at the location specified in the instructions for that form.

(f) Applicability date—(1) Contracts required to be reported. Except as otherwise provided in this paragraph (f), this section applies to each federal executive agency with respect to its contracts entered into on or after January 1, 1989 (including any increase in amount obligated on or after January 1, 1989, that is treated as a new contract under paragraph (e) of this section).

(2) Contracts not required to be reported. A federal executive agency is not required to report—

(i) Any basic or initial contract entered into before January 1, 1989.

(ii) Any increase contract action occurring before January 1, 1989, that is treated as a new contract under paragraph (e) of this section, or

(iii) Any increase contract action that is treated as a new contract under paragraph (e) of this section if the basic or initial contract to which that contract action relates was entered into before January 1, 1989, and—

(A) The increase occurs before April 1, 1990, or

(B) The amount of the increase does not exceed $50,000.

(3) Illustration. (i) If federal executive agency enters into an initial contract on December 1, 1988, and the amount of money obligated under the contract is increased by $55,000 on April 15, 1990, then (A) there is no reporting requirement with respect to the contract when entered into on December 1, 1988, and (B) the April 15, 1990, increase, which is treated as a new contract under paragraph (e) of this section, is subject to the reporting requirements of this section because it is considered to be a new contract entered into on April 15, 1990.

(ii) If the $55,000 increase had occurred before April 1, 1990, there would have been no reporting requirement with respect to that increase.

(4) Filing requirements for contracts required to be reported. The amendments to paragraphs (d)(2) and (d)(3) of this section apply for information returns required to be filed during calendar years beginning after [Date of publication of the Treasury decision adopting these rules as final regulations in the Federal Register].

PART 53—FOUNDATION AND SIMILAR EXCISE TAXES

■ Par. 13. The authority citation for part 53 is amended by adding the following entry:

Authority: 26 U.S.C. 7805 * * * Section 53.6011–1 also issued under 26 U.S.C. 6011.
the cost of filing the return on paper. A request for a waiver must be made in accordance with applicable IRS revenue procedures, publications, forms, instructions, or other guidance, including postings to the IRS.gov website. The waiver will specify the type of filing (that is, a return required under §54.6011–1) and the period to which it applies.

(c) Failure to file. If a filer required to file the Form 5330 fails to file the report electronically when required to do so by this section, the filer is deemed to have failed to file the report. See generally section 6651(a)(1) for the penalty for the failure to file a tax return or to pay tax. For general rules relating to the failure to file tax return or to pay tax, see the regulations under 26 CFR 301.6651 (Regulations on Procedure and Administration).

(d) Meaning of terms. The following definitions apply for purposes of this section:

(1) Magnetic media or electronic form. The terms magnetic media or electronic form mean any media or form permitted under applicable regulations, revenue procedures, or publications. These generally include electronic filing, as well as magnetic tape, tape cartridge, diskette, and other media specifically permitted under the applicable regulations, procedures, publications, forms, instructions, or other guidance.

(2) Calculating the number of returns a filer is required to file—(i) In general. For purposes of this section, a filer is required to file at least 10 returns during a calendar year if the filer is required to file at least 10 returns of any type, including information returns (for example, Forms W–2 and Forms 1099), income tax returns, employment tax returns, and excise tax returns.

(ii) Definition of filer. For purposes of this section, the term filer means the person required to report the tax on the Form 5330. For general rules on who is required to report the tax on the Form 5330, see the Instructions to the Form 5330, see the Instructions to the Form 5330.

(e) Example. The following example illustrates the provisions of paragraph (d)(2) of this section:

(1) In 2022, Employer A (the plan sponsor and plan administrator of Plan B) is required to file Form 5330 for its nonexempt contribution under section 4972 to Plan B. During the 2023 calendar year, Employer A is required to file 20 returns (including 19 Forms 1099–R Distributions From Pensions, Annuities, Retirement, Profit-Sharing Plans, IRAs, Insurance Contracts, etc. and one Form 5500 series Annual Return/Report of the Employee Benefit Plan). Plan B’s plan year is the calendar year. Because Employer A is required to file at least 10 returns during the 2023 calendar year, Employer A must file the 2022 Form 5330 for Plan B electronically.

(2) [Reserved]

(f) Applicability date. The rules of this section apply for any Form 5330 required to be filed for taxable years ending on or after [Date of publication of the Treasury decision adopting these rules as final regulations in the Federal Register].

PART 301—PROCEDURE AND ADMINISTRATION

§ 301.1474–1 Required use of electronic form for financial institutions filing Form 1042, Form 1042–S, or Form 8966.

(a) Financial institutions filing certain returns. If a financial institution is required to file a Form 1042, Annual Withholding Tax Return for U.S. Source Income of Foreign Persons, (successor form) under § 1.1474–1(c) of this chapter, the financial institution must file the return information required by the applicable forms and schedules electronically. If a financial institution is required to file a Form 1042–S, Foreign Person’s U.S. Source Income Subject to Withholding, (or such other form as the IRS may prescribe) under § 1.1474–1(d) of this chapter, the financial institution must file the information required by the applicable forms and schedules electronically. Additionally, if a financial institution is required to file Form 8966, “FATCA Report,” (or such other form as the IRS may prescribe) to report certain information about U.S. accounts, substantial U.S. owners of foreign entities, or owner-documented FFIs as required under this chapter, the financial institution must file the required information in electronic form. Returns filed electronically must be made in accordance with applicable regulations, revenue procedures, publications, forms, instructions, and the IRS.gov internet site. In prescribing regulations, revenue procedures, publications, forms, and instructions, including those on the IRS.gov internet site, the Commissioner may direct the type of electronic filing.

(b) Undue hardship. The Commissioner may grant waivers of the requirements of this section in cases of undue hardship. The principal factor in determining hardship will be the amount, if any, by which the cost of filing the return electronically in accordance with this section exceeds the cost of filing the return on paper. A request for a waiver must be made in accordance with applicable IRS revenue procedures, publications, forms, instructions, or other guidance, including postings to the IRS.gov website. The waiver will specify the type of filing (that is, a return required under § 1.1474–1(c) or (d) of this chapter, or a Form 8966) and the period to which it applies.

(c) Failure to file. If a financial institution fails to file a Form 1042 electronically when required to do so by this section, the financial institution is deemed to have failed to file the return. (See section 6651 for the addition to tax for failure to file a return). In determining whether there is reasonable cause for failure to file the return under § 301.6651–1(c) and rules similar to the rules in § 301.6724–1(c)(3) (undue economic hardship related to filing information returns electronically) will apply. If a financial institution fails to file a Form 1042–S or a Form 8966 electronically when required to do so by this section, the financial institution is deemed to have failed to comply with the information reporting requirements under section 6721 of the Code. See section 6724(c) for failure to meet magnetic media requirements. In determining whether there is reasonable cause for failure to file the return,
§ 301.6651–1(c) and rules similar to the rules in § 301.6724–1(c)(3) (undue economic hardship related to filing information returns on magnetic media) will apply.

(d) * * * * (1) Magnetic media or electronic form. The terms magnetic media or electronic form mean any media or form permitted under applicable regulations, revenue procedures, or publications. These generally include electronic filing, as well as magnetic tape, tape cartridge, diskette, and other media specifically permitted under the applicable regulations, procedures, publications, forms, instructions, or other guidance.

(e) * * * * This section applies to any Form 1042 (or successor form) filed during calendar years beginning after [Date of publication of the Treasury decision adopting these rules as final regulations in the Federal Register].

§ 301.6611–2 Required use of electronic form.

(a) * * * * (1) Magnetic media or electronic form. The terms magnetic media or electronic form mean any media or form permitted under applicable regulations, revenue procedures or publications, or, in the case of returns filed with the Social Security Administration, Social Security Administration publications. These generally include electronic filing, as well as magnetic tape, tape cartridge, diskette, and other media specifically permitted under the applicable regulations, procedures, or publications.

(b) Returns required electronically. (1) If the use of Form 1042–S, Form 1094 series, Form 1095–B, Form 1095–C, Form 1097–BTC, Form 1098, Form 1098–C, Form 1098–E, Form 1098–Q, Form 1098–T, Form 1099 series, Form 3921, Form 3922, Form 5498 series, Form 8027, Form W–2G, or other forms prescribed under paragraph (b)(4) of this section treated as forms specified in this paragraph (b)(1) is required by the applicable regulations or revenue procedures for the purpose of making an information return, the information required by the form must be submitted electronically, except as otherwise provided in paragraph (c) of this section. Returns filed electronically must be made in accordance with applicable revenue procedures, publications, forms, or instructions.

(2) If the use of Form W–2 (Wage and Tax Statement), Form 499R–2W–2PR (Withholding Statement (Puerto Rico)), Form W–2V (U.S. Virgin Islands Wage and Tax Statement), Form W–2GU (Guam Wage and Tax Statement), Form W–2AS (American Samoa Wage and Tax Statement), or other forms prescribed under paragraph (b)(4) of this section as treated as forms specified in this paragraph (b)(2) is required for the purpose of making an information return, the information required by the form must be submitted electronically, except as otherwise provided in paragraph (c) of this section. Returns described in this paragraph (b)(2) must be made in accordance with applicable Social Security Administration procedures or publications (which may be obtained from the local office of the Social Security Administration).

(3) If a person is required to make a return for the purpose of section 6050I, and such person is required to file returns described in paragraphs (b)(1) and (2) of this section electronically, then such person must also file the information required by section 6050I on Form 8300 electronically. Returns described in this paragraph (b)(3) must be made in accordance with applicable IRS revenue procedures, publications, forms, instructions, or other guidance, including postings to the IRS.gov website.

(4) The Commissioner may prescribe by revenue procedure that additional forms are treated, for purposes of this section, as forms specified in paragraphs (b)(1) or (2) of this section. In addition, the Commissioner may exempt certain returns from the electronic requirements of this section through revenue procedures, publications, forms, instructions, or other guidance, including postings to the IRS.gov website.

(c) Applicable number-threshold—(1) In general. No person is required to file information returns electronically in a calendar year unless the person is required to file at least the applicable number of returns during that calendar year.

(2) Machine-readable forms. Returns made on a paper form under paragraph (c)(1) of this section must be machine-readable, as described in paragraph (a)(2) of this section, if applicable revenue procedures provide for a machine-readable paper form.

(3) Calculating the applicable number—(i) In general. For purposes of paragraph (c)(1) of this section, the applicable number is 100, for returns required to be filed during calendar year 2022, and 10, for returns required to be filed during calendar years after 2022.

(ii) Special rule for partnerships. Notwithstanding paragraph (c)(3)(i) of this section, a partnership with more than 100 partners is required to file its information returns covered under paragraph (b) of this section electronically.

(4) Calculating the number of returns—(i) Aggregation of returns. In calculating whether a person is required to file at least the applicable number of returns under paragraph (c)(3) of this section, all the information returns described in paragraphs (b)(1) and (b)(2) of this section required to be filed during the calendar year, are counted in the aggregate. Corrected information returns and information returns described in paragraph (b)(3) of this section are not taken into account in calculating whether a person is required to file at least the applicable number of returns.

(ii) Corrected returns. (A) If an original information return covered by paragraph (b) of this section is required to be filed electronically, any corrected information return corresponding to that original return must also be filed electronically.

(B) If an original information return is permitted to be filed on paper and is filed on paper, any corrected information return corresponding to that original return must be filed on paper.

(5) Examples. The provisions of paragraphs (c)(3) and (4) of this section are illustrated by the following examples:

(i) Example 1. During the 2023 calendar year, Company W is required to file 5 Forms 1099–INT, Interest Income, and 5 Forms 1099–DIV, Dividends and Distributions, for a total of 10 returns covered by paragraph (b) of this section. The applicable number for returns required to be filed during calendar year 2023 is 10. Because Company W is required to file the applicable number of returns covered by paragraph (c)(3)(i) of this section during the 2023 calendar year, Company W must file all its 2022 Forms 1099–INT and Forms 1099–DIV electronically.

(ii) Example 2. Same facts as paragraph (c)(5)(i) of this section [Example 1], except that Company W is required to file 6 Forms 1099–INT, Interest Income, and 2 Forms 1099–DIV, Dividends and Distributions, for a total of 8 returns covered by paragraph (b) of this section. The applicable number for returns required to be filed during calendar year 2023 is 10. Because Company W is required to file the applicable number of returns covered by paragraph (c)(3)(i) of this section during the 2023 calendar year, Company W must file all its 2022 Forms 1099–INT and Forms 1099–DIV electronically.
DIV and 1099–INT, Company W files 2 corrected Forms 1099–DIV and 4 corrected Forms 1099–INT. Because Company W electronically filed its original 2022 Forms 1099–DIV and 1099–INT, Company W must electronically file its corrected 2022 Forms 1099–DIV and 1099–INT.

(iii) Example 3. Same facts as paragraph (c)(5)(i) of this section (Example 1), except on May 16, 2023, Company W received cash in excess of $10,000 and must file a Form 8300 by May 31, 2023. Because Company W is required to file information returns covered under paragraphs (b)(1) and (2) of this section electronically during the 2023 calendar year, Company W must also file all its Forms 8300 electronically during the 2023 calendar year.

(iv) Example 4. Same facts as paragraph (c)(5)(i) of this section (Example 1), except Company W is not required to file any Forms 1099–INT during calendar year 2023. On December 19, 2022, Company W receives cash in excess of $10,000 and must file a Form 8300 by January 3, 2023. Because Company W is not required to file information returns covered under paragraphs (b)(1) and (b)(2) of this section electronically during the 2023 calendar year, Company W is not required to file this Form 8300 electronically.

(v) Example 5. During the 2023 calendar year, Partnership P, a partnership with 15 partners, is required to file 8 Forms 1099–MISC, Miscellaneous Income, and 5 Forms 1099–INT. The applicable number of returns required to be filed by partnerships during calendar year 2023 is 10. Because Partnership P is required to file at least the applicable number of returns covered by paragraph (b) of this section during the 2023 calendar year, Partnership P must electronically file all its 2022 Forms 1099–MISC and 1099–INT.

(6) * * *

(i) The Commissioner may grant waivers of the requirements of this section in cases of undue hardship. The principal factor in determining hardship will be the amount, if any, by which the cost of filing the return electronically in accordance with this section exceeds the cost of filing the return on paper. Notwithstanding the foregoing, if an employer is required to make a final return on Form 941, or a variation thereof, and expedites filing of Forms W–2, Forms 499–R–2/Forms W–2PR, Forms W–2VI, Forms W–2GU, or Form W–2AS is required, the unavailability of the specifications for electronic filing will be treated as creating a hardship (see §31.6071(a)–1(a)(3)(ii) of this chapter).

A request for a waiver must be made in accordance with applicable IRS revenue procedures, publications, forms, instructions, or other guidance, including postings on the IRS.gov website. The waiver will specify the type of filing (that is, a return required under paragraph (b) of this section) and the period to which it applies.

(ii) The Commissioner may supplement the provisions of paragraph (c)(6)(i) of this section through revenue procedures, publications, forms, instructions, or other guidance, including postings on the IRS.gov website.

* * * * *

(g) Applicability date. The rules of this section apply for information returns required to be filed during calendar years beginning after [Date of publication of the Treasury decision adopting these rules as final regulations in the Federal Register].

Par. 20. Section 301.6011–3 is amended by:

1. Revising the section heading.

2. Revising paragraphs (a), (b), and (d)(1).

3. Redesignating paragraph (d)(5) as (d)(6) and adding new paragraph (d)(5).

4. Revising newly redesignated paragraph (d)(6).

5. Revising paragraphs (e) and (f).

The revisions and addition read as follows:

§301.6011–3 Required use of electronic form for partnership returns.

(a) Partnership returns required electronically. (1) Except as otherwise provided in paragraph (b) of this section, a partnership required to file a partnership return pursuant to §1.6031(a)–1 of this chapter, must file the information required by the applicable forms and schedules electronically, if:

(i) The partnership is required by the Internal Revenue Code or regulations to file at least 10 returns (as described in paragraph (d)(5) of this section) during the calendar year, or

(ii) the partnership has more than 100 partners during the partnership’s taxable year.

(2) The Commissioner may direct the type of electronic filing and may also exempt certain returns from the electronic requirements of this section through revenue procedures, publications, forms, instructions, or other guidance, including postings on the IRS.gov website. Returns filed electronically must be made in accordance with the applicable revenue procedures, publications, forms, instructions, or other guidance.

(b) Undue hardship. The Commissioner may grant waivers of the requirements of this section in cases of undue hardship. The principal factor in determining hardship will be the amount, if any, by which the cost of filing the return electronically in accordance with this section exceeds the cost of filing the return on paper. A request for a waiver must be made in accordance with applicable IRS revenue procedures, publications, forms, instructions, or other guidance, including postings to the IRS.gov website. The waiver will specify the type of filing (that is, a return required under §1.6031(a)–1 of this chapter) and the period to which it applies.

* * * * *

(d) * * * (1) Magnetic media or electronic form. The terms magnetic media or electronic form mean any media or form permitted under applicable regulations, revenue procedures, or publications. These generally include electronic filing, as well as magnetic tape, tape cartridge, diskette, and other media specifically permitted under the applicable regulations, procedures, publications, forms, instructions, or other guidance.

* * * * *

(5) Calculating the number of returns. For purposes of this section, a partnership is required to file at least 10 returns if, during the calendar year ending with or within the taxable year of the partnership, the partnership is required to file at least 10 returns of any type, including income tax returns, employment tax returns, excise tax returns, and information returns (for example, Forms W–2 and Forms 1099, but not including schedules required to be included with a partnership return). In the case of a short-period return, a partnership is required to file at least the applicable number of returns if, during the calendar year in which the partnership’s short taxable year ends, the partnership is required to file at least the applicable number of returns of any type, including information returns (for example, Forms W–2 and Forms 1099, but not including schedules required to be included with a partnership return), income tax returns, employment tax returns, and excise tax returns.

(6) Partnerships with more than 100 partners. A partnership has more than 100 partners if, over the course of the partnership’s taxable year, the partnership had more than 100 partners, regardless of whether a partner was a partner for the entire year or whether the partnership had over 100 partners on any particular day in the year. For purposes of this paragraph (d)(6), however, only those persons having a direct interest in the partnership must be considered partners for purposes of determining the number of partners during the partnership’s taxable year.

(e) Examples. The following examples illustrate the provisions of this section. In the examples, the partnerships’ taxable year is the calendar year 2023 and the partnerships had fewer than 10
returns required to be filed during calendar year 2023:

(1) Example 1. Partnership P had five general partners and 90 limited partners on January 1, 2023. On March 15, 2023, 10 more limited partners acquired an interest in P. On September 29, 2023, the 10 newest partners sold their individual partnership interests to C, a corporation which was one of the original 90 limited partners. On December 31, 2023, P had the same five general partners and 90 limited partners it had on January 1, 2023. P had a total of 105 partners over the course of partnership taxable year 2023. Therefore, P must file its 2023 partnership return electronically.

(2) Example 2. Partnership Q is a general partnership that had 95 partners on January 1, 2023. On March 15, 2023, 10 partners sold their individual partnership interests to corporation D, which was not previously a partner in Q. On September 29, 2023, corporation D sold one-half of its partnership interest in equal shares to five individuals, who were not previously partners in Q. On December 31, 2023, Q had a total of 91 partners, and on no date in 2023 did Q have more than 100 partners. Over the course of the year, however, Q had 101 partners. Therefore, Q must file its 2023 partnership return electronically.

(3) Example 3. Partnership G is a general partnership with 100 partners on January 1, 2023. There are no new partners added to G in 2023. One of G’s partners, A, is a partnership with 53 partners. A is one partner, regardless of the number of partners A has. Therefore, G has 100 partners and is not required to file its 2023 partnership return electronically.

(4) Example 4. Same facts as paragraph (e)(3) of this section (Example 3), except partnership G is also required to file 9 Forms 1099–MISC during calendar year 2023 in addition to its 2022 partnership return. Because partnership G is required to file at least 10 returns of any type during calendar year 2023, partnership G must file its 2023 partnership return electronically.

(i) Applicability date. The rules of this section apply for partnership returns required to be filed during calendar years beginning after [Date of publication of the Treasury decision adopting these rules as final regulations in the Federal Register].

§ 301.6011–5 Required use of electronic form for corporate income tax returns.

(a) Corporate income tax returns required electronically. (1) A corporation must file a corporate income tax return on Form 1120, U.S. Corporation Income Tax Return, under § 1.6012–2 of this chapter must file its corporate income tax return electronically if the corporation is required by the Internal Revenue Code or regulations to file at least 10 returns (as defined in paragraph (d)(5) of this section) during the calendar year ending with or within the taxable year of the corporation.

(2) All members of a controlled group of corporations must file their corporate income tax returns electronically if the aggregate number of returns required to be filed by the controlled group of corporations is at least 10 (as defined in paragraph (d)(5) of this section) during the calendar year ending with or within the taxable year of the controlled group of corporations.

(3) The Commissioner may direct the type of electronic filing and may also exempt certain returns from the electronic requirements of this section through revenue procedures, publications, forms, instructions, or other guidance, including postings on the IRS.gov website. Returns filed electronically must be made in accordance with the applicable revenue procedures, publications, forms, instructions, or other guidance.

(b) Undue hardship. The Commissioner may grant waivers of the requirements of this section in cases of undue hardship. The principal factor in determining hardship will be the amount, if any, the cost of filing the return electronically in accordance with this section exceeds the cost of filing the return on paper. A request for a waiver must be made in accordance with applicable IRS revenue procedures, publications, forms, instructions, or other guidance, including postings to the IRS.gov website. The waiver will specify the type of filing (that is, a return required under § 1.6012–2 of this chapter) and the period to which it applies.

(c) (1) Magnetic media or electronic form. The terms magnetic media or electronic form mean any media or form permitted under applicable regulations, revenue procedures, or publications. These generally include electronic filing, as well as magnetic tape, tape cartridge, diskette, and other media specifically permitted under the applicable regulations, procedures, publications, forms, instructions, or other guidance.

(5) Calculating the number of returns. For purposes of this section, a corporation or controlled group of corporations is required to file at least 10 returns if, during the calendar year ending with or within the taxable year of the corporation or the controlled group, the corporation or the controlled group is required to file at least 10 returns of any type, including information returns (for example, Forms W–2 and Forms 1099), income tax returns, employment tax returns, and excise tax returns. In the case of a short-period return, a corporation is required to file at least 10 returns if, during the calendar year in which the corporation’s short taxable year ends, the corporation is required to file at least 10 returns of any type, including information returns (for example, Forms W–2 and Forms 1099), income tax returns, employment tax returns, and excise tax returns. If the corporation is a member of a controlled group, calculating the number of returns the corporation is required to file includes all returns required to be filed by all members of the controlled group during the calendar year ending with or within the taxable year of the controlled group.

(e) Example. The following example illustrates the provisions of this section:

(1) The taxable year of Corporation X, a fiscal-year taxpayer, ends on September 30. During the calendar year ending December 31, 2022, X was required to file one Form 1120, U.S. Corporation Income Tax Return, 6 Forms W–2, Wage and Tax Statement, 3 Forms 1099–DIV, Dividends and Distributions, one Form 940, Employer’s Annual Federal Unemployment (FUTA) Tax Return, and four Forms 941, Employer’s Quarterly Federal Tax Return. Because X is required to file 10 returns of any type during calendar year 2022, the calendar year that ended within its taxable year ending September 30, 2023, X is required to file its Form 1120 electronically for its taxable year ending September 30, 2023.

(2) [Reserved]

(f) Applicability date. The rules of this section apply for corporate income tax returns required to be filed during calendar years beginning after [Date of publication of the Treasury decision adopting these rules as final regulations in the Federal Register].

Par. 21. Section 301.6011–5 is amended by revising paragraphs (a), (b), (d)(1) and (5), (e), and (f) to read as follows:
§ 301.6011−10  Certain organizations, including trusts, required to file unrelated business income tax returns in electronic form.

(a) Unrelated business income tax returns required in electronic form. (1) Organizations, including trusts, subject to tax under section 511 that are required to file a return under § 1.6012−2(e) or 1.6012−3(a)(5) of this chapter to report gross income included in computing unrelated business taxable income, as defined in section 512, or that are otherwise required to file Form 990−T, Exempt Organization Business Income Tax Return (and proxy tax under section 6033(e)), are required to file that return in electronic form.

(2) Returns filed in electronic form must be filed in accordance with applicable revenue procedures, publications, forms, instructions, or other guidance.

(b) Failure to file. If an organization or trust fails to file an unrelated business income tax return in electronic form when required to do so by this section, the organization or trust is deemed to have failed to file the return. (See section 6651 for the addition to tax for failure to file a return.) In determining whether there is reasonable cause for failure to file the return, § 301.6651−1(c) will apply.

(c) Applicability date. The rules of this section apply for unrelated business income tax returns required to be filed during calendar years beginning after [date of publication of the Treasury decision adopting these rules as final regulations in the Federal Register].

Par. 23. Section 301.6011−11 is added to read as follows:

§ 301.6011−11  Required use of electronic form for certain returns for tax-advantaged bonds.

(a) Return for credit payments to issuers of qualified bonds. (1) An issuer of a qualified bond required to file a return for credit payments on Form 8038−CP, Return for Credit Payments to Issuers of Qualified Bonds, must file its return electronically if the issuer is required to file at least 10 returns during the calendar year.

(2) Returns filed electronically must be made in accordance with applicable revenue procedures, publications, forms, instructions, or other guidance.

(3) The Commissioner may provide an exemption from the electronic requirements of paragraph (a) of this section through revenue procedures, publications, forms, instructions, or other guidance.

(b) Other returns for tax-advantaged bonds. The Commissioner may prescribe by revenue procedure that additional forms for tax-advantaged bonds (as defined in § 1.150−1(b) of this chapter) required under the Internal Revenue Code, regulations, or other administrative guidance published by the Internal Revenue Service must be filed electronically if the issuer is required to file at least 10 returns during the calendar year.

(c) Undue hardship. The Commissioner may grant waivers of the requirements of this section in cases of undue hardship. The principal factor in determining hardship will be the amount, if any, by which the cost of filing the return electronically in accordance with this section exceeds the cost of filing the return on paper. A request for a waiver must be made in accordance with applicable IRS revenue procedures, publications, forms, instructions, or other guidance, including postings to the IRS.gov website. The waiver will specify the type of filing (that is, a return for credit payments on Form 8038−CP) and the period to which it applies.

(d) Meaning of terms. The following definitions apply for purposes of this section:

(1) Magnetic media or electronic form. The terms magnetic media or electronic form mean any media or form permitted under applicable regulations, revenue procedures, or publications. These generally include electronic filing, as well as magnetic tape, tape cartridge, diskette, and other media specifically permitted under the applicable regulations, procedures, publications, forms, instructions, or other guidance.

(2) Qualified bond. The term qualified bond means a tax-advantaged bond that is a taxable bond that provides a refundable federal tax credit payable directly to the issuer of the bond under former section 6431 or any other tax-advantaged bond (as defined in § 1.150−1(b) of this chapter) that provides a tax credit payment to issuers of such bonds similar to the credit provided with respect to interest on qualified bonds.

(3) Return for credit payments to issuers of qualified bonds. The term return for credit payments to issuers of qualified bonds means a Form 8038−CP, Return for Credit Payments to Issuers of Qualified Bonds or such other form prescribed by the Commissioner for the purpose of filling a return for credit payment with respect to a qualified bond.

(4) Calculating the number of returns. For purposes of this section, an issuer of a tax-advantaged bond is required to file at least 10 returns of any type, including information returns (for example, Forms W−2 and Forms 1099), income tax returns, employment tax returns, and excise tax returns.

(e) Applicability date. The rules of this section apply for tax-advantaged bond returns required to be filed after the later of December 31, 2021 or [Date of publication of the Treasury decision adopting these rules as final regulations in the Federal Register].

Par. 24. Section 301.6011−12 is added to read as follows:

§ 301.6011−12  Required use of electronic form for returns of certain excise taxes under Chapters 41 and 42 of the Internal Revenue Code.

(a) Excise tax returns required electronically. (1) Any person required to file an excise tax return on Form 4720, Return of Certain Excise Taxes Under Chapters 41 and 42 of the Internal Revenue Code, under § 53.6011−1 of this chapter must file its excise tax return electronically if the person is required by the Internal Revenue Code or regulations to file at least 10 returns (as defined in paragraph (d)(3) of this section) during calendar years after 2021.

(2) The Commissioner may direct the type of electronic filing and may also exempt certain returns from the electronic requirements of this section through revenue procedures, publications, forms, instructions, or other guidance, including postings on the IRS.gov website. Returns filed electronically must be made in accordance with the applicable revenue procedures, publications, forms, instructions, or other guidance.

(3) Paragraph (a)(1) of this section is not applicable to private foundations that are subject to the filing requirements of § 301.6033−4.

(b) Undue hardship. The Commissioner may grant waivers of the requirements of this section in cases of undue hardship. The principal factor in determining hardship will be the amount, if any, by which the cost of filing the return electronically in accordance with this section exceeds the cost of filing the return on paper. A request for a waiver must be made in accordance with applicable IRS revenue procedures, publications, forms, instructions, or other guidance, including postings to the IRS.gov website. The waiver will specify the type of filing (that is, a return required under § 53.6011−1 of this chapter) and the period to which it applies.

(c) Failure to file. If a person fails to file an excise tax return electronically when required to do so by this section, the person is deemed to have failed to
The terms magnetic media or electronic form mean any media or form permitted under applicable regulations, revenue procedures, or publications. These generally include electronic filing, as well as magnetic tape, tape cartridge, diskette, and other media specifically permitted under the applicable regulations, procedures, publications, forms, instructions, or other guidance.

(d) Meaning of terms. The following definitions apply for purposes of this section:

(1) Magnetic media or electronic form. The terms magnetic media or electronic form mean any media or form permitted under applicable regulations, revenue procedures, or publications. These generally include electronic filing, as well as magnetic tape, tape cartridge, diskette, and other media specifically permitted under the applicable regulations, procedures, publications, forms, instructions, or other guidance.

(2) Excise tax return. The term excise tax return means a Form 4720, Return of Certain Excise Taxes Under Chapters 41 and 42 of the Internal Revenue Code, along with all other related forms, schedules, and statements that are required to be attached to the Form 4720, including amended and superseding returns.

(3) Calculating the number of returns. For purposes of this section, a person is required to file at least 10 returns if, during the calendar year ending with or within the person’s taxable year, the person is required to file at least 10 returns of any type, including information returns (for example, Forms W-2 and Forms 1099), income tax returns, employment tax returns, and excise tax returns. In the case of a short-period return, a person is required to file at least 10 returns if, during the calendar year in which the person’s short taxable year ends, the person is required to file at least 10 returns of any type, including information returns (for example, Forms W-2 and Forms 1099), income tax returns, employment tax returns, and excise tax returns.

(e) Example. The following example illustrates the provisions of this section:

(1) During the calendar year ending December 31, 2021, Trust X was required to file one Form 5227, Split-Interest Trust Information Return, one Form 4720, Return of Certain Excise Taxes Under Chapters 41 and 42 of the Internal Revenue Code, and 10 Forms 1099-DIV, Dividends and Distributions. Because X is required to file 12 returns during the calendar year 2022, X is required to file its Form 5227 electronically for its taxable year ending December 31, 2022.

(f) Applicability date. The rules of this section apply for tax years beginning after [Date of publication of the Treasury decision adopting these rules as final regulations in the Federal Register].

§ 301.6011-13 Required use of electronic form for split-interest trust returns.

(a) Split-Interest Trust returns required electronically. (1) Any trust required to file an information return on Form 5227, Split-Interest Trust Information Return, under § 53.6011-1 of this chapter must file its return electronically if the trust is required by the Internal Revenue Code or regulations to file at least 10 returns (as defined in paragraph (d)(3) of this section) during the calendar year.

(2) The Commissioner may direct the type of electronic filing that may also exempt certain returns from the electronic requirements of this section through revenue procedures, publications, forms, instructions, or other guidance, including postings on the IRS.gov website. Returns filed electronically must be made in accordance with applicable revenue procedures, publications, forms, or instructions.

(b) Undue hardship. The Commissioner may grant waivers of the requirements of this section in cases of undue hardship. The principal factor in determining hardship will be the amount, if any, by which the cost of filing the return electronically in accordance with this section exceeds the cost of filing the return on paper. A request for a waiver must be made in accordance with applicable IRS revenue procedures, publications, forms, instructions, or other guidance, including postings on the IRS.gov website. The waiver will specify the type of filing (that is, a return required under § 53.6011-1 of this chapter) and the period to which it applies.

(c) Failure to file. If a trust fails to file an excise tax return electronically when required to do so by this section, the trust is deemed to have failed to file the return. (See section 6652 for the addition to tax for failure to file a return.) In determining whether there is reasonable cause for failure to file the return, § 301.6652-1(f) and rules similar to the rules in § 301.6724-1(c)(3) (undue economic hardship related to filing information returns electronically) will apply.

(d) Meaning of terms. The following definitions apply for purposes of this section:

(1) Magnetic media or electronic form. The terms magnetic media or electronic form mean any media or form permitted under applicable regulations, revenue procedures, or publications. These generally include electronic filing, as well as magnetic tape, tape cartridge, diskette, and other media specifically permitted under the applicable regulations, procedures, publications, forms, instructions, or other guidance.

(2) Split-Interest Trust return. The term split-interest trust return means a Form 5227, Split-Interest Trust Information Return, along with all other related forms, schedules, and statements that are required to be attached to the Form 5227, including amended and superseding returns.

(3) Calculating the number of returns. For purposes of this section, a trust is required to file at least 10 returns if, during the calendar year ending with or within the trust’s taxable year, the trust is required to file at least 10 returns of any type, including information returns (for example, Forms W-2 and Forms 1099), income tax returns, employment tax returns, and excise tax returns. In the case of a short-period return, a trust is required to file at least 10 returns if, during the calendar year in which the trust’s short taxable year ends, the trust is required to file at least 10 returns of any type, including information returns (for example, Forms W-2 and Forms 1099), income tax returns, employment tax returns, and excise tax returns.

(e) Example. The following example illustrates the provisions of this section:

(1) During the calendar year ending December 31, 2021, Trust X was required to file one Form 5227, Split-Interest Trust Information Return, one Form 4720, Return of Certain Excise Taxes Under Chapters 41 and 42 of the Internal Revenue Code, and 10 Forms 1099-DIV, Dividends and Distributions. Because X is required to file 12 returns during the calendar year 2022, X is required to file its Form 5227 electronically for its taxable year ending December 31, 2022.

(f) Applicability date. The rules of this section apply for Split-Interest Trust returns required to be filed during calendar years beginning after [Date of publication of the Treasury decision adopting these rules as final regulations in the Federal Register].
other machine-readable form. (1) Any material advisor required to file a return on Form 8918, Material Advisor Disclosure Statement, under §301.6111–3(a) of this chapter must file its return electronically or in other machine-readable form, in accordance with revenue procedures, publications, forms, instructions, or other guidance, including postings on the IRS.gov website, if the material advisor is required by the Internal Revenue Code or regulations to file at least 10 returns (as defined in paragraph (d)(3) of this section) during the calendar year.

(2) The Commissioner may direct the type of electronic or other machine-readable form through revenue procedures, publications, forms, instructions, or other guidance, including postings on the IRS.gov website. Returns filed electronically or in other machine-readable form must be made in accordance with applicable revenue procedures, publications, forms, instructions, or other guidance. The Commissioner may grant waivers of the requirements of this section in cases of undue hardship. The principal factor in determining hardship will be the amount, if any, by which the cost of filing the return electronically in accordance with this section exceeds the cost of filing the return on paper. A request for a waiver must be made in accordance with applicable IRS revenue procedures, publications, forms, instructions, or other guidance, including postings on the IRS.gov website, during its calendar year ending December 31, 2022. X is required to file its Form 8918 electronically or in other machine-readable form, in accordance with revenue procedures, publications, forms, instructions, or other guidance, including postings on the IRS.gov website, during its calendar year ending December 31, 2022.

(2) [Reserved]

(f) Applicability date. The rules of this section apply for Material Advisor Disclosure Statements required to be filed for taxable years ending on or after [the date of publication of the Treasury decision adopting these rules as final regulations in the Federal Register].

Par. 27. Section 301.6011–15 is added to read as follows:
§301.6011–15 Required use of electronic form for withholding tax returns.

(a) Withholding tax returns required electronically. (1) A withholding agent required to file an income tax return on Form 1042, Annual Withholding Tax Return for U.S. Source Income of Foreign Persons, under §1.1461–1 of this chapter must file its return electronically if the withholding agent is required by the Internal Revenue Code or regulations to file at least 10 returns (as defined in paragraph (d)(3) of this section) during the calendar year in which the Form 1042 is required to be filed. Notwithstanding the previous sentence, a withholding agent that is an individual, estate, or trust is not required to file its Form 1042 electronically.

(2) The Commissioner may direct the type of electronic filing and may also exempt certain returns from the electronic requirements of this section through revenue procedures, publications, forms, instructions, or other guidance, including postings on the IRS.gov website. Returns filed electronically must be made in accordance with the applicable revenue procedures, publications, forms, instructions, or other guidance.

(b) Undue hardship. The Commissioner may grant waivers of the requirements of this section in cases of undue hardship. The principal factor in determining hardship will be the amount, if any, by which the cost of filing the return electronically in accordance with this section exceeds the cost of filing the return on paper. A request for a waiver must be made in accordance with applicable IRS revenue procedures, publications, forms, instructions, or other guidance, including postings on the IRS.gov website. The waiver will specify the type of filing (that is, a return required under §1.1461–1 of this chapter) and the period to which it applies.

(c) Failure to file. If a withholding agent fails to file a withholding agent income tax return electronically when required to do so by this section, the withholding agent is deemed to have failed to file the return. (See section 6651 for the addition to tax for failure to file a return.) In determining whether there is reasonable cause for failure to file the return, §301.6651–1(c) and rules similar to the rules in §301.6724–1(c)(3) (undue economic hardship related to filing information returns electronically) will apply.

(d) Meaning of terms. The following definitions apply for purposes of this section:

(1) Magnetic media or electronic form. The terms magnetic media or electronic form mean any media or form permitted under applicable regulations, revenue procedures, or publications. These generally include electronic filing, as well as magnetic tape, tape cartridge, diskette, and other media specifically permitted under the applicable regulations, procedures, publications, forms, instructions, or other guidance.

(2) Machine-readable form. The term machine-readable form means any machine-readable form specifically permitted under applicable regulations, procedures, publications, forms, instructions, or other guidance.

(3) Material advisor disclosure statement. The term material advisor disclosure statement means a Form 8918, Material Advisor Disclosure Statement, along with all other related forms, schedules, and statements that are required to be attached to the Form 8918, including amended material advisor disclosure statements.

(4) Calculating the number of returns. For purposes of this section, a material advisor is required to file at least 10 returns if, during the calendar year ending with or within the material advisor’s taxable year, the material advisor is required to file at least 10 returns of any type, including information returns (for example, Forms W–2 and Forms 1099), income tax returns, employment tax returns, and excise tax returns.

(e) Example. The following example illustrates the provisions of this section: (1) During the calendar year ending December 31, 2022, Material Advisor X was required to file one Form 8918, Material Advisor Disclosure Statement, one Form 1040, U.S. Individual Income Tax Return, and 10 Forms 1099–NEC, Nonemployee Compensation. Because Material Advisor X is required to file 12 returns during the calendar year 2022, X is required to file its Form 8918 electronically or in other machine-readable form, in accordance with revenue procedures, publications, forms, instructions, or other guidance, including postings on the IRS.gov website, during its calendar year ending December 31, 2022.

(2) [Reserved]

Meaning of terms. The following definitions apply for purposes of this section:

(1) Magnetic media or electronic form. The terms magnetic media or electronic form mean any media or form permitted under applicable regulations, revenue procedures, or publications. These generally include electronic filing, as well as magnetic tape, tape cartridge, and diskette, and other media specifically permitted under the applicable regulations, procedures, publications, forms, instructions, or other guidance. The Commissioner may direct the type of electronic filing and may also exempt certain returns from the electronic requirements of this section through revenue procedures, publications, forms, instructions, or other guidance, including postings on the IRS.gov website. Returns filed electronically must be made in accordance with the applicable revenue procedures, publications, forms, instructions, or other guidance.

(2) Undue hardship. The Commissioner may grant waivers of the requirements of this section in cases of undue hardship. The principal factor in determining hardship will be the amount, if any, by which the cost of filing the return electronically in accordance with this section exceeds the cost of filing the return on paper. A request for a waiver must be made in accordance with applicable IRS revenue procedures, publications, forms, instructions, or other guidance, including postings on the IRS.gov website. The waiver will specify the type of filing (that is, a return required under §1.1461–1 of this chapter) and the period to which it applies.

(c) Failure to file. If a withholding agent fails to file a withholding agent income tax return electronically when required to do so by this section, the withholding agent is deemed to have failed to file the return. (See section 6651 for the addition to tax for failure to file a return.) In determining whether there is reasonable cause for failure to file the return, §301.6651–1(c) and rules similar to the rules in §301.6724–1(c)(3) (undue economic hardship related to filing information returns electronically) will apply.

(d) Meaning of terms. The following definitions apply for purposes of this section:

(1) Magnetic media or electronic form. The terms magnetic media or electronic form mean any media or form permitted under applicable regulations, revenue procedures, or publications. These generally include electronic filing, as well as magnetic tape, tape cartridge, and diskette, and other media specifically permitted under the applicable regulations, procedures, publications, forms, instructions, or other guidance. The Commissioner may direct the type of electronic filing and may also exempt certain returns from the electronic requirements of this section through revenue procedures, publications, forms, instructions, or other guidance, including postings on the IRS.gov website. Returns filed electronically must be made in accordance with the applicable revenue procedures, publications, forms, instructions, or other guidance.

(2) Undue hardship. The Commissioner may grant waivers of the requirements of this section in cases of undue hardship. The principal factor in determining hardship will be the amount, if any, by which the cost of filing the return electronically in accordance with this section exceeds the cost of filing the return on paper. A request for a waiver must be made in accordance with applicable IRS revenue procedures, publications, forms, instructions, or other guidance, including postings on the IRS.gov website. The waiver will specify the type of filing (that is, a return required under §1.1461–1 of this chapter) and the period to which it applies.
(a) Income tax returns of certain political organizations required electronically. (1) Any organization required to file an income tax return on Form 1120–POL, U.S. Income Tax Return for Certain Political Organizations, under § 1.6012–6 of this chapter must file its income tax return, along with all other related forms, schedules, and statements that are required to be attached to the Form 1120–POL, including amended and superseding returns, electronically if the organization is required by the Internal Revenue Code or regulations to file returns electronically. (2) The Commissioner may direct the type of electronic filing and may also exempt certain returns from the electronic requirements of this section through revenue procedures, publications, forms, instructions, or other guidance, including postings on the IRS.gov website. Returns filed electronically must be made in accordance with the applicable revenue procedures, publications, forms, instructions, or other guidance.

(b) Undue hardship. The Commissioner may grant waivers of the requirements of this section in cases of undue hardship. The principal factor in determining hardship will be the amount, if any, by which the cost of filing the return electronically in accordance with this section exceeds the cost of filing the return on paper. A request for a waiver must be made in accordance with applicable IRS revenue procedures, publications, forms, instructions, or other guidance, including postings to the IRS.gov website. The waiver will specify the type of filing (that is, a return required under § 1.6012–6 of this chapter) and the period to which it applies.

(c) Failure to file. If an organization fails to file an income tax return electronically when required to do so by this section, the organization is deemed to have failed to file the return. (See section 6651 for the addition to tax for failure to file a return.) In determining whether there is reasonable cause for failure to file the return, § 301.6651–1(c) and rules similar to the rules in § 301.6724–1(c)(3) (undue economic hardship related to filing information returns electronically) will apply.

(d) Meaning of terms. The following definitions apply for purposes of this section:

Example. The following example illustrates the provisions of this section:

(1) During the calendar year ending December 31, 2022, Organization X was required to file one Form 1120–POL, U.S. Income Tax Return for Certain Political Organizations, four (quarterly) Forms 8872, Political Organization Report of Contributions and Expenditures, two Forms W–2, Wage and Tax Statement, one Form 940, Employer's Annual Federal Unemployment (FUTA) Tax Return, and four Forms 941, Employer's Quarterly Federal Tax Return. Because X is required to file 12 returns during the calendar year, X is required to file its Form 1120–POL electronically for its taxable year ending December 31, 2022.

(2) [Reserved]

(f) Applicability date. The rules of this section apply for income tax returns required to be filed during calendar years beginning after [Date of publication of the Treasury decision adopting these rules as final regulations in the Federal Register].

Par. 28. Section 301.6012–2 is added to read as follows:

§ 301.6012–2 Required use of electronic form for income tax returns of certain political organizations.

(a) Income tax returns of certain political organizations required electronically. (1) Any organization required to file an income tax return on Form 1120–POL, U.S. Income Tax Return for Certain Political Organizations, under § 1.6012–6 of this chapter must file its income tax return, along with all other related forms, schedules, and statements that are required to be attached to the Form 1120–POL, including amended and superseding returns, electronically if the organization is required by the Internal Revenue Code or regulations to file at least 10 returns of any type during the calendar year.

(2) The Commissioner may direct the type of electronic filing and may also exempt certain returns from the electronic requirements of this section through revenue procedures, publications, forms, instructions, or other guidance, including postings on the IRS.gov website. Returns filed electronically must be made in accordance with the applicable revenue procedures, publications, forms, instructions, or other guidance.

(b) Undue hardship. The Commissioner may grant waivers of the requirements of this section in cases of undue hardship. The principal factor in determining hardship will be the amount, if any, by which the cost of filing the return electronically in accordance with this section exceeds the cost of filing the return on paper. A request for a waiver must be made in accordance with applicable IRS revenue procedures, publications, forms, instructions, or other guidance, including postings to the IRS.gov website. The waiver will specify the type of filing (that is, a return required under § 1.6012–6 of this chapter) and the period to which it applies.

(c) Failure to file. If an organization fails to file an income tax return electronically when required to do so by this section, the organization is deemed to have failed to file the return. (See section 6651 for the addition to tax for failure to file a return.) In determining whether there is reasonable cause for failure to file the return, § 301.6651–1(c) and rules similar to the rules in § 301.6724–1(c)(3) (undue economic hardship related to filing information returns electronically) will apply.

(d) Meaning of terms. The following definitions apply for purposes of this section:

Example. The following example illustrates the provisions of this section:

(1) During the calendar year ending December 31, 2022, Organization X was required to file one Form 1120–POL, U.S. Income Tax Return for Certain Political Organizations, four (quarterly) Forms 8872, Political Organization Report of Contributions and Expenditures, two Forms W–2, Wage and Tax Statement, one Form 940, Employer's Annual Federal Unemployment (FUTA) Tax Return, and four Forms 941, Employer's Quarterly Federal Tax Return. Because X is required to file 12 returns during the calendar year, X is required to file its Form 1120–POL electronically for its taxable year ending December 31, 2022.

(2) [Reserved]

(f) Applicability date. The rules of this section apply for income tax returns required to be filed during calendar years beginning after [Date of publication of the Treasury decision adopting these rules as final regulations in the Federal Register].

Par. 29. Section 301.6033–4 is revised to read as follows:

§ 301.6033–4 Required filing in electronic form for returns by organizations required to file returns under section 6033.

(a) Returns by organizations required to file returns under section 6033 in electronic form. (1) An organization required to file a return under section 6033 must file its return in electronic form.

(2) Returns filed in electronic form must be filed in accordance with applicable revenue procedures, publications, forms, instructions, or other guidance.

(b) Failure to file. If an organization required to file a return under section 6033 fails to file an information return in electronic form when required to do so by this section, the organization is deemed to have failed to file the return. (See section 6652 for the additional tax for failure to file a return.) In determining whether there is reasonable cause for failure to file the return, § 301.6652–2(f) will apply.
(c) Meaning of terms. For purposes of this section the term return required under section 6033 means a Form 990, Return of Organization Exempt From Income Tax, Form 990–EZ, Short Form Return of Organization Exempt From Income Tax, and Form 990–PF, Return of Private Foundation or Section 4947(a)(1) Trust Treated as Private Foundation, along with all other related forms, schedules, and statements that are required to be attached to the Form 990, Form 990–EZ, or Form 990–PF, and all members of the Form 990 series of returns, including amended and superseding returns. A Form 4720 filed by a private foundation is a form required to be filed under section 6033.

(d) Applicability date. The rules of this section apply for any returns under section 6033 required to be filed during calendar years beginning after [Date of publication of the Treasury decision adopting these rules as final regulations in the Federal Register].

Par. 30. Section 301.6037–2 is amended by revising the section heading, paragraphs (a), (b), (d)(1) and (5), (e) and (f) to read as follows:

§ 301.6037–2 Required use of electronic form for returns of electing small business corporation.

(a) Returns of electing small business corporation required electronically. (1) An electing small business corporation required to file an electing small business return on Form 1120–S, U.S. Income Tax Return for an S Corporation, under § 1.6037–1 of this chapter must file its Form 1120–S electronically if the small business corporation is required by the Internal Revenue Code and regulations to file at least 10 returns during the calendar year.

(2) The Commissioner may direct the type of electronic filing and may also exempt certain returns from the electronic requirements of this section through revenue procedures, publications, forms, instructions, or other guidance, including postings on the IRS.gov website. Returns filed electronically must be made in accordance with the applicable revenue procedures, publications, forms, instructions, or other guidance.

(b) Undue hardship. The Commissioner may grant waivers of the requirements of this section in cases of undue hardship. The principal factor in determining hardship will be the amount, if any, by which the cost of filing the return electronically in accordance with this section exceeds the cost of filing the return on paper. A request for a waiver must be made in accordance with applicable IRS revenue procedures, publications, forms, instructions, or other guidance, including postings to the IRS.gov website. The waiver will specify the type of filing (that is, a registration statement or notification under section 6057) and the period to which it applies.

§ 301.6057–3 Required use of electronic form for filing requirements relating to deferred vested retirement benefit.

(a) Electronic-filing requirements under section 6057. A registration statement required under section 6057(a) or a notification required under section 6057(b) with respect to an employee benefit plan must be filed electronically if the filer is required by the Internal Revenue Code or regulations to file at least 10 returns during the calendar year that includes the first day of the plan year. The Commissioner may direct the type of electronic filing and may also exempt certain returns from the electronic requirements of this section through revenue procedures, publications, forms, instructions, or other guidance, including postings on the IRS.gov website. Returns filed electronically must be made in accordance with applicable revenue procedures, publications, forms, instructions, or other guidance.

(b) Undue hardship. The Commissioner may waive the requirements of this section in cases of undue economic hardship. The principal factor in determining hardship will be the amount, if any, by which the cost of filing the registration statements or notifications electronically in accordance with this section exceeds the cost of filing the registration statements or notifications on paper. A request for a waiver must be made in accordance with applicable IRS revenue procedures, publications, forms, instructions, or other guidance, including postings to the IRS.gov website. The waiver will specify the type of filing (that is, a registration statement or notification under section 6057) and the period to which it applies.
(d) * * * * (1) Magnetic media or electronic form. The terms magnetic media or electronic form mean any media or form permitted under applicable regulations, revenue procedures, or publications. These generally include electronic filing, as well as magnetic tape, tape cartridge, diskette, and other media specifically permitted under the applicable regulations, procedures, publications, forms, instructions, or other guidance. *

(4) Calculating the number of returns—(i) In general. For purposes of this section, a filer is required to file at least 10 returns if, during the calendar year that includes the first day of the plan year, the filer is required to file at least 10 returns of any type, including information returns (for example, Forms W–2 and Forms 1099), income tax returns, employment tax returns, and excise tax returns.

(e) * * * *

(1) Example. In 2023, P, the plan administrator of Plan B, is required to file 12 returns (including Forms 1099–R, Distributions From Pensions, Annuities, Retirement or Profit-Sharing Plans, IRAs, Insurance Contracts, etc.; Form 8955–SSA; Form 5500, Annual Return/Report of Employee Benefit Plan; and Form 945, Annual Return of Withheld Federal Income Tax). Plan B’s plan year is the calendar year. Because P is required to file at least 10 returns during the 2023 calendar year, P must file the 2023 Form 8955–SSA for Plan B electronically.

(2) [Reserved]

(f) Applicability date. The rules of this section apply for registration statements and other notifications required to be filed under section 6057 for plan years that begin on or after January 1, 2022, but only for filings with a filing deadline (not taking into account extensions) after July 31, 2022.

Par. 32. Section 301.6058–2 is amended by:

1. Revising the section heading;
2. Revising paragraphs (a), (b), and (d)(1);
3. Revising the heading of paragraph (d)(3); and
4. Revising paragraphs (d)(3)(i), (d)(3)(ii), (e), and (f).

The revisions read as follows:

§ 301.6058–2 Required use of electronic form for filing requirements relating to information required in connection with certain plans of deferred compensation.

(a) Electronic-filing requirements under section 6058. A return required under section 6058 with respect to an employee benefit plan must be filed electronically if the filer is required by the Internal Revenue Code or regulations to file at least 10 returns during the calendar year that includes the first day of the plan year. The Commissioner may direct the type of electronic filing and may also exempt certain returns from the electronic requirements of this section through revenue procedures, publications, forms, instructions, or other guidance, including postings on the IRS.gov website. Returns filed electronically must be made in accordance with the applicable revenue procedures, publications, forms, instructions, or other guidance.

* * * * *

Calculating the number of returns—(i) In general. For purposes of this section, a filer is required to file at least 10 returns during the calendar year that includes the first day of the plan year. The Commissioner may direct the type of electronic filing and may also exempt certain returns from the electronic requirements of this section through revenue procedures, publications, forms, instructions, or other guidance, including postings on the IRS.gov website. Returns filed electronically must be made in accordance with the applicable revenue procedures, publications, forms, instructions, or other guidance.

(b) Undue hardship. The Commissioner may waive the requirements of this section in cases of undue economic hardship. The principal factor in determining hardship will be the amount, if any, by which the cost of filing the return electronically in accordance with this section exceeds the cost of filing the return on paper. A request for a waiver must be made in accordance with applicable IRS revenue procedures, publications, forms, instructions, or other guidance, including postings on the IRS.gov website. The waiver will specify the type of filing (that is, a return required under section 6058) and the period to which it applies.

* * * * *

(d) * * * * (1) Magnetic media or electronic form. The terms magnetic media or electronic form mean any media or form permitted under applicable regulations, revenue procedures, or publications. These generally include electronic filing, as well as magnetic tape, tape cartridge, diskette, and other media specifically permitted under the applicable regulations, procedures, publications, forms, instructions, or other guidance. *

(3) Calculating the number of returns—(i) In general. For purposes of this section, a filer is required to file at least 10 returns if, during the calendar year that includes the first day of the plan year, the filer is required to file at least 10 returns of any type, including information returns (for example, Forms W–2 and Forms 1099), income tax returns, employment tax returns, and excise tax returns. See section 6011(e)(6), Application of numerical limitation to returns relating to deferred compensation plans.

* * * *

(iii) Special rules relating to calculating the number of returns. For purposes of applying paragraph (d)(3)(ii) of this section, the aggregation rules of section 414(b), (c), (m), and (o) will apply to a filer that is or includes an employer. Thus, for example, a filer that is a member of a controlled group of corporations within the meaning of section 414(b) must file the Form 5500 series electronically if the aggregate number of returns required to be filed by all members of the controlled group of corporations is at least 10 returns.

(e) Example. The following example illustrates the provisions of paragraph (d)(3) of this section:

(1) In 2023, Employer X (the plan sponsor and plan administrator of Plan A) is required to file 12 returns. The sole shareholder of X and his spouse are the only participants in Plan A. Employer X is required to file the following: One Form 1120, U.S. Corporation Income Tax Return; two Forms W–2, Wage and Tax Statement; one Form 940, Employer’s Annual Federal Unemployment (FUTA) Tax Return; four Forms 941, Employer’s Quarterly Federal Tax Return; one Form 945, Annual Return of Withheld Federal Income Tax; and two Forms 1099–DIV, Dividends and Distributions. Employer X is required to file one Form 5500–EZ. Plan A’s plan year is the calendar year. Because Employer X is required to file at least 10 returns during the 2023 calendar year, the 2023 Form 5500–EZ must be filed electronically.

(2) [Reserved]

(f) Applicability date. This section is applicable for returns required to be filed under section 6058 for plan years that begin on or after January 1, 2022, but only for filings with a filing deadline (not taking into account extensions) after July 31, 2022.

Par. 33. Section 301.6059–2 is amended by:

1. Revising the section heading;
2. Revising paragraphs (a), (b), (d)(1);
3. In paragraph (d)(3), revising the paragraph heading and paragraph (d)(3)(i);
4. Removing paragraph (e) and redesignating paragraph (f) as paragraph (e); and
5. Revising newly designated paragraph (e).

The revisions read as follows:

§ 301.6059–2 Required use of electronic form for filing requirements relating to periodic report of actuary.

(a) Electronic-filing requirements under section 6059. An actuarial report required under section 6059 with respect to an employee benefit plan must be filed electronically if the filer is required by the Internal Revenue Code or regulations to file at least 10 returns during the calendar year that includes the first day of the plan year.
The Commissioner may direct the type of electronic filing and may also exempt certain returns from the electronic requirements of this section through revenue procedures, publications, forms, instructions, or other guidance, including postings on the IRS.gov website. Actuarial reports filed electronically must be made in accordance with the applicable revenue procedures, publications, forms, instructions, or other guidance. (b) Undue hardship. The Commissioner may waive the requirements of this section in cases of undue economic hardship. The principal factor in determining hardship will be the amount, if any, by which the cost of filing the reports electronically in accordance with this section exceeds the cost of filing the reports on paper. A request for a waiver must be made in accordance with applicable IRS revenue procedures, publications, forms, instructions, or other guidance, including postings to the IRS.gov website. The waiver will specify the type of filing (that is, an actuarial report required under section 6059) and the period to which it applies.

(i) A failure to include all the information required to be shown on the return or including incorrect information (failure to include correct information). A failure to file timely includes a failure to file in the required manner, for example, electronically or in other machine-readable form as provided under section 6011(e).

(ii) A failure to file corrected information returns electronically is required under section 6059(f) unless such returns are filed electronically. Corporation U does not correct its failures to file these returns electronically. Corporation U does not correct its failures to file these returns electronically by August 1, 2023. See section 6721(b)(2). Corporation U is therefore subject to a penalty for a failure to file timely under paragraph (a)(2) of this section. However, under section 6724(c) and paragraph (a)(2) of this section, the penalty for a failure to file timely electronically applies only to the extent the number of returns exceeds 10. As Corporation U was required to file 12 returns electronically, it is subject to a penalty of $500 for 2 returns ($250 x 2 = $500).
deemed a failure to correct the corresponding original information return. As Corporation W was required to file its 25 corrected information returns electronically, it is deemed to have failed to correct the original information returns and is subject to a penalty of $6,250 for failure to include correct information on its 25 original Forms 1099–B ($250 × 25 = $6,250), without any reductions for correcting the information on or before August 1.

(v) Example 5. During the 2023 calendar year, Corporation V files 25 Forms 1099–B (relating to proceeds from broker and barter exchange transactions) on paper. The forms were filed on March 15, 2023, rather than on the required filing date of February 28, 2023. Under § 301.6011–2, a person required to file at least 10 returns during calendar years 2023 and after must file those returns electronically. Corporation V does not correctly file these returns electronically by August 1, 2023. See section 6721(b)(2). Corporation V is subject to a penalty of $500 for filing 10 of the returns late, but within 30 days after the required filing date ($50 × 10).

In addition, Corporation V is subject to a penalty of $3,750 for failing to file 15 returns electronically ($250 × 15).

(vi) Example 6. Partnership X has 120 partners in calendar year 2022. In calendar year 2023, it timely filed on paper its 2022 Form 1065 and 230 accompanying Schedules K–1 and Schedules K–3 (120 Schedules K–1 and 110 Schedules K–3). Partnership X filed no other returns during calendar year 2023. Under § 301.6011–3(a)(1)(B), a partnership with more than 100 partners must electronically file its partnership return, including Schedules K–1 and K–3. Under section 6724(e), Schedules K–1 and K–3 are treated as separate information returns for purposes of penalties under section 6721, even though they are not listed under § 301.6011–2(b) as information returns required to be filed electronically and are not defined as information returns under section 6724(d). Because the applicable number for information returns required to be filed during calendar year 2023 is 10, Partnership X would be subject to a penalty of $55,000 for failing to electronically file 220 Schedules K–1 and K–3 required to be included with the partnership return: The 11th through the 230th of the required schedules ($250 × 220 = $55,000).

(h) Applicability date. The rules of paragraph (a)(2)(ii) of this section apply for information returns required to be filed during calendar years beginning after [Date of publication of the Treasury decision adopting these rules as final regulations in the Federal Register]. For the rules that apply under paragraph (a)(2)(ii) of this section for information returns required to be filed before calendar years beginning after [Date of publication of the Treasury decision adopting these rules as final regulations in the Federal Register], see 26 CFR part 301, revised as of April 1, 2021.

Douglas W. O’Donnell,
Deputy Commissioner for Services and Enforcement.

LIST OF PUBLIC LAWS

Note: No public bills which have become law were received by the Office of the Federal Register for inclusion in today’s List of Public Laws.

Last List July 8, 2021

Public Laws Electronic Notification Service (PENS)

PENS is a free email notification service of newly enacted public laws. To subscribe, go to https://listserv.gsa.gov/cgi-bin/wa.exe?SUBED1=PUBLAWS-L&A=1

Note: This service is strictly for email notification of new laws. The text of laws is not available through this service. PENS cannot respond to specific inquiries sent to this address.
