SUPPLEMENTARY INFORMATION: We, the U.S. Fish and Wildlife Service (Service), announce the availability of the draft recovery plan for the endangered Poweshiek skipperling (*Oarisma poweshiek*) for public review and comment. The Poweshiek skipperling is a small prairie butterfly most often found in remnants of native prairies and fens. The draft recovery plan includes objective, measurable criteria and management actions as may be necessary for removal of the species from the Federal List of Endangered and Threatened Wildlife. We request review

and comment on this draft recovery plan from local, State, and Federal agencies, and the public.

Recovery Planning

Section 4(f) of the Endangered Species Act of 1973, as amended (Act; 16 U.S.C. 1531 *et seq.*), requires the development of recovery plans for listed species, unless such a plan would not promote the conservation of a particular species. Also pursuant to section 4(f) of the Act, a recovery plan must, to the maximum extent practicable, include (1) a description of site-specific management actions as may be necessary to achieve the plan's goals for the conservation and survival of the species; (2) objective, measurable criteria that, when met, would support a determination under section 4(a)(1) that the species should be removed from the List of Endangered and Threatened Species; and (3) estimates of the time and costs required to carry out those measures needed to achieve the plan's goal and to achieve intermediate steps toward that goal.

Species Background

The Poweshiek skipperling once ranged throughout the upper Midwest, from Illinois and Iowa in the south, to Michigan in the east, to North Dakota and South Dakota in the west, and southern Manitoba in the north. Currently, populations of the Poweshiek skipperling are known to occur in Michigan and Manitoba, Canada, and possibly in Wisconsin.

It is not known exactly what led to the decline in the species; however, populations are likely influenced by degradation and destruction of habitat through conversion of native prairie to cropland or development; ecological succession to woody vegetation; encroachment of invasive species; past and present fire, haying, or grazing management that degraded or destroyed the species' habitats; flooding; and, groundwater depletion, alteration, and contamination. Additionally, biocide use may have direct or indirect effects on Poweshiek skipperlings, compounding the effects of habitat curtailment. The remaining populations of the Poweshiek skipperling are small and isolated, and thus they are vulnerable to the effects of small population dynamics, further compounding the effects of other stressors.

Under the Act, the Service added the Poweshiek skipperling to the Federal List of Endangered and Threatened Wildlife as an endangered species on October 23, 2014 (79 FR 63671).
