The FEDERAL REGISTER (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The FEDERAL REGISTER provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see www.federalregister.gov.

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the Federal Register shall be judicially noticed.

The Federal Register is published in paper and on 24x microfiche. It is also available online at no charge at www.govinfo.gov, a service of the U.S. Government Publishing Office.

The online edition of the Federal Register is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the Federal Register is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, gpocusthelp.com.

The annual subscription price for the Federal Register paper edition is $860 plus postage, or $929, for a combined Federal Register, Federal Register Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the Federal Register including the Federal Register Index and LSA is $830, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily Federal Register, including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see bookstore.gpo.gov.

There are no restrictions on the republication of material appearing in the Federal Register.

How To Cite This Publication: Use the volume number and the page number. Example: 86 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

The Federal Register Printing Savings Act of 2017 (Pub. L. 115–120) placed restrictions on distribution of official printed copies of the daily Federal Register to members of Congress and Federal offices. Under this Act, the Director of the Government Publishing Office may not provide printed copies of the daily Federal Register unless a Member or other Federal office requests a specific issue or a subscription to the print edition. For more information on how to subscribe use the following website link: https://www.gpo.gov/fsubs.
Dear [Name],

I hope this message finds you well. I am writing to share some updates from the recent Federal Register.

The Federal Register is a daily publication by the United States National Archives and Records Administration, which contains presidential documents, federal rules, Proposed rules, notices, federal contractors listings, and significant federal agency notices.

In the recent issue, there are several notices and regulations that might interest you. For instance, the Agency for International Development has several notices and regulations on safeguarding against exploitation, sexual abuse, child abuse, and neglect.

The Agricultural Marketing Service has a rule regarding the handling of spearmint oil produced in the Far West. There are also proposed rules for amendments to the Marketing Order and changes to reporting requirements.

The Centers for Disease Control and Prevention have notices on meetings, including the Board of Scientific Counselors, National Institute for Occupational Safety and Health.

The Coast Guard has rules regarding safety zones and special local regulations.

The Comptroller of the Currency has notices on agency information collection activities.

The Committee for Purchase From People Who Are Blind or Severely Disabled has a notice on the procurement list.

The Federal Energy Regulatory Commission has a notice on charter renewal.

If you need more information on any of these topics, please let me know.

Best regards,

[Your Name]

OFFICE OF MANAGEMENT AND BUDGET

2 CFR Part 200

Uniform Administrative Requirements, Cost Principles, and Audit Requirements

AGENCY: Office of Management and Budget (OMB).

ACTION: Guidance.

SUMMARY: This document announces the availability of the 2021 Compliance Supplement (2021 Supplement) for the Office of Management and Budget’s uniform administrative requirements, cost principles, and audit requirements regulations. This document also offers interested parties an opportunity to comment on the 2021 Supplement.

ADDRESSES: All comments to the 2021 Supplement must be in writing and received by August 30, 2021. Late comments will be considered to the extent practicable. Comments will be reviewed and addressed, when appropriate, in the 2022 Compliance Supplement. Electronic mail comments may be submitted to: http://www.regulations.gov. Please include “2 CFR Part 200 Subpart F—Audit Requirements, Appendix XI—Compliance Supplement—2021” in the subject line and the full body of your comments in the text of the electronic message and as an attachment. Please include your name, title, organization, postal address, telephone number, and email address in the text of the message. Comments may also be sent to: GrantsTeam@omb.eop.gov.

Please note that all public comments received are subject to the Freedom of Information Act and will be posted in their entirety, including any personal and/or business confidential information provided. Do not include any information you would not like to be made publically available.

The 2021 Supplement is available online on the OMB home page at https://www.whitehouse.gov/omb/office-federal-financial-management/.

FOR FURTHER INFORMATION CONTACT: Recipients and auditors should contact their cognizant or oversight agency for audit, or Federal awarding agency, as appropriate. The Federal agency contacts are listed in appendix III of the Supplement. Subrecipients should contact their pass-through entity. Federal agencies should contact Gil Tran at Hai_M_.Tran@omb.eop.gov or (202) 395–3052 or the OMB Grants team at GrantsTeam@omb.eop.gov.

SUPPLEMENTARY INFORMATION: The 2021 Supplement (2 CFR part 200, subpart F, appendix XI) adds five new programs, deletes four programs and provides updates on many other programs (including the 14 programs previously included in the 2020 Addendum to the Single Audit Compliance Supplement), where necessary. The 2021 Supplement is a continuation of efforts to maximize the value of grant funding by applying a risk-based, data-driven framework that balances compliance requirements with demonstrating successful results. Consistent with the reduction in compliance areas in the 2019 Supplement, the 2021 Compliance Supplement allows for a maximum of six compliance areas and requires a review for performance reporting for 57 programs. OMB is continuing to work with Federal awarding agencies to further emphasize performance reviews and will make updates accordingly in future Supplements. The 2021 Supplement also includes guidance related to the administrative flexibilities included in Appendix 3 of OMB memorandum M–21–20 (March 19, 2021) and the revisions to 2 CFR—Grants and Agreements (published in August 12, 2020) in Part 8, Appendix VII of the Supplement. As part of the development of the audit guidance contained in the Supplement, OMB shared the draft language developed by the agencies with recipient and audit stakeholders, including the American Institute of Certified Public Accountants (AICPA), the National Association of State Auditors, Controllers and Treasurers (NASACT), the US Government Accountability Office (GAO), and agency Inspector General offices for comments. The comments were reviewed, adjudicated, and addressed by the relevant agencies and OMB. All necessary changes are reflected in the final published version. A summary of comments and OMB responses is shown below.

Audit Extension—Commenters suggested clarifications on the Single Audit extension allowed in OMB M–21–20 to be included in the Supplement Part 8, Appendix VII. OMB concurred and added information related the audit extension.

Performance Reporting Review—Commenters highlighted that there was a significant increase in the number of programs in the Supplement that require auditors to review the recipients’ performance reporting requirements. Commenters suggested agencies add the key line items in the performance reports that the agencies request the auditors verify, in order to focus the auditors on the important areas for review. OMB concurred and worked with the relevant agencies to add the key line items on the performance reports in the “Suggested Audit Procedures” section.

2 CFR Revisions (effective November 12, 2020)—Commenters requested that the Supplement contain two separate parts B for the Allowable Costs/Cost Principles—one for the applicable cost principles prior to 2 CFR updates on November 12, 2020 and one for applicable cost principles after November 12, 2020. OMB disagreed but provided clear indication of the cost principles and areas that were revised in November 12, 2020. Additionally, the Supplement provides the link to CFO.gov Uniform Guidance (cfo.gov) which contains the relevant information related to the 2 CFR and its revisions, including the redlined version of the guidance, a crosswalk document, and the latest set of Frequently Asked Questions (FAQs)—2CRF-Frequently Asked Questions_2021050321.pdf (cfo.gov).

Assistance Listing (CFDA)—Commenters noted that the term “Assistance Listing” is now used on the Federal Government website Sam.gov instead of the previous term of “CFDA” to describe a Federal program. OMB concurred and replaced “CFDA” with “Assistance Listing” for consistency.
American Rescue Plan Act (ARP) Programs—The audit community, including GAO, requested that the agencies provide audit guidance expeditiously for the programs created under the ARP, since funds are material and many have complex compliance and reporting requirements. When completed by the agencies and reviewed by OMB, these audit guides will be published on the CFO.gov website.

Deidre A. Harrison,
Deputy Controller.

BILLING CODE 3110–01–P

DEPARTMENT OF HOMELAND SECURITY

Office of the Secretary

6 CFR Part 5
[Docket No. DHS–2021–0028]

ACTION: Final rule.

SUMMARY: The U.S. Department of Homeland Security (DHS) is issuing a final rule to amend its regulations to exempt portions of a newly established system of records titled, “DHS/ALL–046 Counterintelligence Program System of Records” from certain provisions of the Privacy Act. Specifically, the Department exempts portions from one or more provisions of the Privacy Act because of criminal, civil, and administrative enforcement requirements.

DATES: This final rule is effective August 13, 2021.

SUPPLEMENTARY INFORMATION:

I. Background

The U.S. Department of Homeland Security (DHS) published a notice of proposed rulemaking in the Federal Register, 85 FR 80667 (December 14, 2020), proposing to exempt portions of the system of records from one or more provisions of the Privacy Act because of criminal, civil, and administrative enforcement requirements. In concert with that rulemaking, DHS issued a new system of records notice, “DHS/ALL–046 Counterintelligence Program System of Records” in the Federal Register, 85 FR 80800 (December 14, 2020), outlining that DHS will collect and maintain records as part of the unified Counterintelligence Program across the Department.

DHS invited comments on both the Notice of Proposed Rulemaking (NPRM) and System of Records Notice (SORN).

II. Public Comments

DHS received no comments on the NPRM and comments from one organization on the SORN.

SORN

DHS received comments suggesting that (1) the scope of the proposed records system is broad and DHS components' access to records covered by the Counterintelligence Program System of Records creates the risk that components would use the records system in ways that exceed their stated missions; (2) the proposed routine use exemptions are not narrowly tailored to the defined purpose of the SORN for which the records are collected, would be used to disclose records to foreign and private entities that are not subject to the Privacy Act, and would create substantial risks for potential data breaches; (3) the Counterintelligence Program System of Records creates a substantial risk of data breach since the Federal Government has demonstrated it is incapable of handling and safeguarding sensitive information; and (4) the proposed exemptions are unnecessary and limit individuals’ ability to correct harmful errors, thwart DHS’s public notice obligations, and permit unlimited data collection, even if unnecessary and irrelevant. After full consideration of public comments, the Department will implement the rulemaking as proposed for the reasons described in the NPRM and as described here in the final rule.

List of Subjects in 6 CFR Part 5

Freedom of information, Privacy.

For the reasons stated in the preamble, DHS amends Chapter I of Title 6, Code of Federal Regulations, as follows:

PART 5—DISCLOSURE OF RECORDS AND INFORMATION

1. The authority citation for part 5 continues to read as follows:

Subpart A also issued under 5 U.S.C. 552.

Subpart B also issued under 5 U.S.C. 552a.

2. Amend Appendix C to Part 5 by adding paragraph 83 to read as follows:

Appendix C to Part 5—DHS Systems of Records Exempt From the Privacy Act

83. The Department of Homeland Security (DHS)/ALL–046 Counterintelligence Program System of Records consists of electronic and paper records and will be used by DHS and its components. The DHS/ALL–046 Counterintelligence Program System of Records is a repository of information held by DHS in connection with its several and varied missions and functions, including the enforcement of civil and criminal laws; investigations, inquiries, and proceedings there under; national security and intelligence activities; and protection of the President of the U.S. or other individuals pursuant to Section 3056 and 3056A of Title 18. The system of records covers information that is collected by, on behalf of, in support of, or in cooperation with DHS and its components and may contain personally identifiable information collected by other federal, state, local, tribal, foreign, or international government agencies.

The Secretary of Homeland Security, pursuant to 5 U.S.C. 552a(j)(2), has exempted this system from the following provisions of the Privacy Act, 5 U.S.C. secs. 552a(c)(3), (c)(4); (d); (e)(1)[(1)], (e)(2), (e)(3), (e)(4)[G], (e)(4)[H], (e)(4)[I], (e)(5), (e)(6), (e)(12); (f); and (g)(1). Additionally, the Secretary of Homeland Security, pursuant to 5 U.S.C. 552a(k)(1), (k)(2), and (k)(5), has exempted this system from the following provisions of the Privacy Act: 5 U.S.C. secs. 552a(c)(3), (c)(4); (d); (e)(1), (e)(4)[G], (e)(4)[I], (e)(5), (e)(6), (e)(12); (f); and (g)(1). Exemptions from these particular subsections are justified, on a case-by-case basis to be determined at the time a request is made, for the following reasons:

(a) From subsection (c)(3) and (4) (Accounting for Disclosures) because release of the accounting of disclosures could alert the subject of an investigation of an actual or potential criminal, civil, or regulatory violation to the existence of that investigation and reveal investigative interest on the part of DHS as well as the recipient agency.

Disclosure of the accounting would therefore present a serious impediment to law enforcement efforts and/or efforts to preserve national security. Disclosure of the accounting would also permit the individual who is the subject of a record to impede the investigation, to tamper with witnesses or evidence, and to avoid detection or apprehension, which would undermine the entire investigative process.

(b) From subsection (d) (Access and Amendment to Records) because access to the records contained in this system of
records could inform the subject of an investigation of an actual or potential criminal, civil, or regulatory violation to the existence of that investigation and reveal investigative interest on the part of DHS or another agency. Access to the records could permit the subject to tamper with witnesses or evidence, and to avoid detection or apprehension. Amendment of the records could interfere with ongoing investigations and law enforcement activities. Further, permitting amendment to counterintelligence records after an investigation has been completed would impose an unmanageable administrative burden. In addition, permitting access and amendment to such information could disclose security-sensitive information that could be detrimental to homeland security.

(c) From subsection (e)(1) (Relevancy and Necessity of Information) because in the course of investigations into potential violations of federal law, the accuracy of information obtained or introduced occasionally may be unclear, or the information may not be strictly relevant or necessary to a specific investigation. In the interests of effective law enforcement, it is appropriate to retain all information that may aid in establishing patterns of unlawful activity.

(d) From subsection (e)(2) (Collection of Information from Individuals) because requiring that information be collected from the subject of an investigation would alert the subject to the nature or existence of the investigation, thereby interfering with that investigation and related law enforcement activities.

(e) From subsection (e)(3) (Notice to Subjects) because providing such detailed information could impede law enforcement by compromising the existence of a confidential investigation or reveal the identity of witnesses or confidential informants.

(f) From subsections (e)(4)(G), (e)(4)(H), and (e)(4)(I) (Agency Requirements) and (f) (Agency Rules), because portions of this system are exempt from the individual access provisions of subsection (d) for the reasons noted above, and therefore DHS is not required to establish requirements, rules, or procedures with respect to such access. Providing notice to individuals with respect to existence of records pertaining to them in the system of records or otherwise setting up procedures pursuant to which individuals may access and view records pertaining to themselves in the system would undermine investigative efforts and reveal the identities of witnesses, and potential witnesses, and confidential informants.

(g) From subsection (e)(8) (Collection of Information) because with the collection of information for law enforcement purposes, it is impossible to determine in advance what information is accurate, relevant, timely, and complete.

(h) From subsection (e)(8) (Notice on Individuals) because compliance would interfere with DHS’s ability to obtain, serve, and issue subpoenas, warrants, and other law enforcement mechanisms that may be filed under seal and could result in disclosure of investigative techniques, procedures, and evidence.

(i) From subsection (o)(12) (Matching Agreements) because requiring DHS to provide notice of a new or revised matching agreement with a non-Federal agency, if one existed, would impair DHS operations by indicating which data elements and information are valuable to DHS’s analytical functions, thereby providing harmful disclosure of information to individuals who would seek to circumvent or interfere with DHS’s missions.

(j) From subsection (g)(1) (Civilians Remedies) that the system is exempt from other specific subsections of the Privacy Act.

BILLING CODE 9110–9N–P

DEPARTMENT OF AGRICULTURE

Food and Nutrition Service

7 CFR Part 275

[FNS–2018–0043]

RIN 0584–AE64

Supplemental Nutrition Assistance Program Non–Discretionary Quality Control Provisions of the Agricultural Improvement Act of 2018

AGENCY: Food and Nutrition Service (FNS), USDA.

ACTION: Interim final rule.

SUMMARY: The U. S. Department of Agriculture (the Department) is issuing this interim final rule to strengthen and improve the integrity and accuracy of the Food and Nutrition Service (FNS) Supplemental Nutrition Assistance Program (SNAP) Quality Control (QC) system by codifying statutory requirements enacted by the Agriculture Improvement Act of 2018 (2018 Farm Bill) that was signed into law on December 20, 2018.

DATES: Effective date: August 13, 2021. Compliance date: August 13, 2021, except for the Paperwork Reduction Act (PRA) provisions, which are delayed pending approval by the Office of Management and Budget (OMB). The Food and Nutrition Service will publish a document in the Federal Register announcing the compliance date.

Comment dates: Written comments on this interim final rule must be received on or before October 12, 2021 to be assured of consideration. We will consider comments on the Paperwork Reduction Act that we receive by October 12, 2021.

ADDRESSES: The Food and Nutrition Service, USDA, invites interested persons to submit written comments on this interim final rule. Comments may be submitted in writing by one of the following methods:

• Federal eRulemaking Portal: Go to http://www.regulations.gov. Follow the online instructions for submitting comments.

• Email: Send comments to SNAPQCReform@usda.gov.

FOR FURTHER INFORMATION CONTACT:

Stephanie Proska, Food and Nutrition Service, 1320 Braddock Place, 5th Floor; Alexandria, Virginia 22314.

Email: SNAPQCReform@usda.gov.

SUPPLEMENTARY INFORMATION:

Background

Pursuant to Section 16 of the Food and Nutrition Act of 2008, as amended (FNA), each State agency is responsible for monitoring and improving its administration of SNAP and providing information from the SNAP quality control (QC) system. For QC reviews, States conduct monthly reviews of a statistically representative sample of households participating in SNAP (active cases) and households for whom participation was denied, terminated, or suspended (negative cases). These reviews measure the accuracy of SNAP eligibility and benefit determinations and ultimately serve as the basis for the SNAP payment error rate (PER), as defined in Section 16(c)(2)(A) of the FNA, and case and procedural error rate (CAPER), respectively. The results of

1 In fiscal year 2012, the procedures for reviewing cases in the negative frame, discussed later, changed to include the State’s procedural processes in determining a negative case’s validity. FNS has referred to the negative error rate since then as the case and procedural error rate, or CAPER, to reflect this change.
these reviews provide States with feedback on the State’s administration of the program, including how their chosen policy options, waivers, and business processes affect the accuracy of their eligibility determinations.

SNAP QC has four goals, identified at 7 CFR 275.10(b), which are to provide: (1) A systematic method of measuring the accuracy of the SNAP eligibility caseload; (2) a basis for determining all SNAP error rates; (3) a timely, continuous flow of information on which to base corrective action at all levels of administration; and (4) a basis for establishing State agency liability for errors that exceed the National performance measure pursuant to Section 16(c)(1)(C) of the FNA.

Every Federal fiscal year (October through September), State agencies conduct QC reviews for two different sampling frames—the active sampling frame and the negative sampling frame. For the active frame, States review a sample of their overall participating SNAP households (those receiving SNAP benefits). This QC review consists of a detailed examination of household non-financial and financial circumstances including income, resources, and deductions to determine whether benefits were accurately authorized by State eligibility offices for cases in the active frame. For the negative frame, reviewers review a statistical sample of cases that were denied, suspended, or terminated to determine not only their accuracy, but also if the State agency followed the correct procedures according to SNAP regulations.

After State agencies submit their completed QC reviews to the Federal government, Federal staff select and review a sub-sample of cases from the active and negative frames to verify the accuracy of the States’ QC review findings. A regression analysis is then performed utilizing both the Federal and State data to calculate national and State error rates. FNS also uses the data gathered through the QC review process for program analysis.

Beginning in the fiscal year 2015, FNS conducted integrity reviews of all 53 SNAP State agencies nationwide and USDA’s Office of Inspector General (OIG) conducted an audit on the SNAP QC review process. The integrity reviews and the OIG audit found there were integrity issues with the data submitted by State agencies. In short, the majority of States (42 of 53) were underreporting QC errors in the active frame. In response to these findings, FNS undertook significant measures, explained in more detail later in this preamble, to improve training and strengthen controls over the QC process. In some cases, the Department of Justice (DOJ) entered into settlement agreements with States for the underreporting of SNAP QC errors in violation of Federal law.

On December 20, 2018, the President signed into law the Agriculture Improvement Act of 2018 (2018 Farm Bill). Section 4013 of the 2018 Farm Bill included requirements to reform the SNAP QC system in order to further improve the integrity of the system and accuracy of the data it produces. These requirements build upon the Departmental and DOJ actions taken to address integrity concerns raised by FNS and OIG reviews.

The 2018 Farm Bill included changes in three sections of the legislation that required SNAP to update its regulations accordingly. Section 4013(a) of the 2018 Farm Bill requires “All [State SNAP] records shall be maintained in systems in which records are contained . . .” be made available for inspection and audit by the Secretary. Section 4013(b) of the 2018 Farm Bill required the Department issue an interim final rule that: (1) Ensures the QC system produces valid statistical results; (2) provides for the oversight of contracts entered into by a State to improve payment accuracy; (3) ensures the accuracy of data collected in the QC system; and (4) provides for the evaluation of the integrity of the QC process for a sample of 2 State agencies per fiscal year, to the maximum extent practicable. The regulations within this rule reflect those requirements.

Good Cause Analysis

Pursuant to the Administrative Procedure Act (APA), notice and comment are not required prior to the issuance of a rule if an agency, for good cause, finds that “notice and public procedure thereon are impracticable, unnecessary, or contrary to the public interest.” (5 U.S.C. 553(b)(B)). USDA recognizes that courts have held that the good cause exception to notice and comment rulemaking is to be narrowly construed and only reluctantly countenanced. As a result of the statutory requirement for the Department to promulgate an interim final rule addressing these issues, the Department finds for good cause that notice and public comment is unnecessary and contrary to the public interest for this rule. This interim final rule and the regulatory amendments described below address provisions of Sections 4013(a), as well as Section 4013(b) of the 2018 Farm Bill that USDA was directed by Congress to promulgate via interim final rule.

Subpart A—Administration

Use of Third-Party Contractors

Upholding the integrity of the QC system is critical to the Department’s responsibility for improper payment reporting and proper stewardship of taxpayer funds. Evaluation of the SNAP caseload and the benefits issued must be reliable in order to accurately measure SNAP payment errors. In their respective reviews, FNS, OIG, and DOJ found that a majority of States used third-party contractors at various times over the preceding 10 years to provide regulatory and policy advice on how to conduct SNAP QC reviews in their State. It was also found that States following the advice of contractors often underreported errors in active QC case reviews. Advice that contributed to the underreporting of errors included training State QC reviewers to document cases inappropriately, organizing committees that focused on developing methods to mitigate errors and underreport existing payment errors to FNS, and withholding information or disposing of cases contrary to SNAP regulations and established policy.

On January 20, 2016, FNS issued a policy memorandum on the use of third-party contractors for QC purposes to address these issues. FNS issued this memorandum based the understanding that it is within the agency’s regulatory authority to clarify policy. While the memorandum provided timely and clear guidance to States in response to a critical integrity issue, this interim final rule will ensure that the expectations are explicit. The memorandum clarified the appropriate use of contractors in the QC process and established procedures regarding the use of contractors to help ensure that activities performed under the contract are in accordance with Federal regulations and policies. The memorandum required a State to notify FNS of its intent to enter into a contract for the purposes of training State QC reviewers on SNAP regulations, policies, or manuals to improve payment accuracy, and to provide a copy of its contract and all deliverables to FNS. The memorandum emphasized that any activities or deliverables not complying with Federal regulations and policy would not be eligible for Federal reimbursement, as provided by Section 2 https://www.fns.usda.gov/snap/integrity-snap-quality-control-system.
challenges. These challenges include due to technological and security difficulties to gain access in some states their duty stations. While some State conduct thorough QC re-reviews from Federal staff has the tools necessary to access in this requirement to ensure necessary to specifically include remote access to State computer systems for QC purposes, and therefore help ensure the accuracy of the collected data through the QC system. FNS will continue to work with States collaboratively to establish data sharing and system integrity agreements to facilitate the required systems access. This provision is effective upon publication of this rule.

Federal Monitoring—Reviews of State Agency’s Quality Control System

The 2018 Farm Bill further requires FNS to ensure that the integrity of the QC system is reviewed in at least two State agencies per fiscal year to the maximum extent practicable. As a result, the Department is adding a new paragraph at § 275.3(c) to use the existing management evaluation process to provide for the review of at least two State agency QC systems per year. The paragraphs currently located at § 275.3(c) and (d) are being appropriately re-designated as § 275.3(d) and (e), respectively. This provision is effective upon publication of this rule.

Social Security Administration (SSA) Processed Cases

This rule will also ensure statistically valid results and improve the accuracy of QC data collected by State agencies by requiring that cases processed by the Social Security Administration (SSA) are included in the error rate. Currently, SSA processes applications for around 50,000 SNAP cases a year. Less than one-tenth of a percent of cases sampled for QC review are processed by SSA. Current regulations require SNAP cases that are processed by SSA to be reviewed according to standard procedures; longstanding FNS policy exempts these cases from inclusion in the error rates. SNAP regulations at 273.2(k)(1) provide two options for SSA involvement in the certification process for SNAP beneficiaries, which are designed to simplify the SNAP

16(a) of the FNA, which authorizes the Secretary of Agriculture to pay each State agency 50 percent of all administrative costs involved in each State agency’s operation of SNAP. The memorandum also stipulated that FNS be allowed attend any training sessions or meetings that discussed individual QC cases and required that the State document any discussions about individually sampled cases within the QC record for subsequent review and auditing purposes.

Subsequent to the issuance of this guidance, the 2018 Farm Bill directed the Department to issue interim final regulations to provide for the oversight of contracts entered into by a State agency for the purpose of improving payment accuracy. As a result, the Department is codifying at § 275.2(c) the requirements on the oversight of contracts previously set forth by FNS in the 2016 policy memorandum. This paragraph at § 275.2(c) will also codify the 2018 Farm Bill requirement at Section 4013(b) that any person who knows or has reason to know that such false information is being carried out the QC system be debarred in accordance with procedures outlined in 2 CFR part 417. This particular provision regarding debarment, codified through this interim final rule, was self-executing upon enactment of the 2018 Farm Bill.

These provisions associated with third-party contractors under 7 CFR § 275.2(c)(1) will be effective uponOMB’s approval of the information collection associated with this activity.

State Systems Access

Section 4013(a) of the 2018 Farm Bill required that all State agency records and the systems in which those records are contained be made available to the Department for QC purposes. To ensure the accuracy of data collected in SNAP QC and to allow for independent oversight of program administration, FNS must have access to State agency records and the systems in which those records are contained; this includes remote access. While mandatory FNS access to State computer systems for QC purposes has existed since the current QC system was implemented, it is necessary to specifically include remote access in this requirement to ensure Federal staff has the tools necessary to conduct thorough QC re-reviews from their duty stations. While some State agencies have already provided remote access to their systems, it has been difficult to gain access in some states due to technological and security challenges. These challenges include issues concerning equipment and firewalls as well as the fact that some State systems do not include a user role that allows access only to SNAP information.4 A new paragraph at § 275.2(d) will require FNS have access, including remote access, to all State agency records and systems in which those records are contained. The Department believes this provision will enable State agencies to make the necessary changes to allow remote access to State computer systems for SNAP QC purposes, and therefore help ensure the accuracy of the collected data through the QC system. FNS will continue to work with States collaboratively to establish data sharing and system integrity agreements to facilitate the required systems access. This provision is effective upon publication of this rule.

Record Retention

To further ensure the accuracy of QC data collected by State agencies, this interim final rule will also provide more detail on what records must be retained for QC case files. Past QC integrity management evaluation reviews conducted by FNS found that many State agencies misunderstood SNAP QC record retention requirements, including the essential document types that must be reported and retained. In addition to these FNS reviews, the OIG audit of the QC error rate process and the FNS completion rate study 5 each discovered intentional and unintentional instances of State agencies leaving documentary evidence out of the case file. As a result, Federal QC reviewers had insufficient information to review such cases and determine whether the information used

---

4State systems contain information on participants in a multitude of different programs, each of which can have (as some currently do) statutory and regulatory language prohibiting the disclosure of such information outside of said program. As such, the State systems must be able to limit user access to SNAP information only before sharing the system with FNS for SNAP QC purposes to ensure compliance with federal law.

5On January 11, 2016, FNS published a study, Enhancing SNAP Quality Control Completion Rates, that examined the factors contributing to incomplete reviews of cases and described best practices associated with high SNAP QC completion rates.
in the State case determinations was accurate. When State agencies do not properly retain such documentary records, FNS cannot adequately confirm data accuracy and integrity.

The Department has concluded that the existing regulations lack sufficient specificity for States to determine which QC-related records must be maintained for the required duration of three years post fiscal closure, which is when the error rate is issued for most States; for States in liability status, three years post fiscal closure begins on the date the State fulfills all requirements to close its liability. In an effort to strengthen the understanding of which records States must maintain and to increase the integrity of the QC system and quality of data, the Department is amending the regulatory language at § 275.4(c) to provide more comprehensive detail, including specifying that all correspondence with the household and all case notes, digital or otherwise, be included in the QC case file, among other requirements. This will help ensure the accuracy of QC data collected by State agencies. This provision is effective upon publication of this rule.

Subpart F—Responsibilities for Reporting on Program Performance

Quality Control Review Reports—Individual Cases

In the course of conducting a QC review, FNS requires State agencies to accurately record, document, summarize, and code household circumstances, which includes completing the review forms associated with active and negative QC reviews, to ensure the accuracy of the data collected. Current regulations at § 275.21(b) require States to submit "edited" findings for both Form FNS–380–1 and Form FNS–245. When these QC rules were originally written, the "edits" were related to the capability of computer systems to communicate with one another. Until computers were able to communicate more directly, without a dial up connection, it was common practice for States to review the files uploaded to FNS to ensure the data they submitted was consistent with data received on the other end. When the received data did not match what was sent, the State had to "edit" those mismatched fields to ensure the data was accurate.

As computer technology has dramatically improved since this provision was written and communication errors are now the exception rather than the norm, it is necessary to remove this reference to "edited" data to ensure FNS is clear that States are expected to submit thorough and final versions of the required QC forms to FNS.

FNS, OIG and DOJ found that, in some cases, States interpreted § 275.21(b) to allow significant editing of the facts of cases under review before submission to FNS and used that interpretation to misrepresent cases that contained payment errors and to artificially lower the reported State error rate. Since "editing" findings is an integrity concern and the original intent is no longer of concern due to advancements in technology, the Department is amending the language in § 275.21(b) by removing the term, "edited" from regulatory text to better ensure the accuracy of the data collected. FNS will continue to provide a process for States to correct typos and data entry errors in their submissions. This provision is effective upon publication of this rule.

In addition, the regulation at § 275.21(b) does not currently require States to include Form FNS–380, Worksheet for QC reviews, upon submission of QC cases to FNS. Currently, States are required to use the Form FNS–380 to record their notes and observations over the course of completing their review, but are only required to submit the form in the event that a case is selected for Federal subsample. Requiring the Form FNS–380 be submitted for all cases, regardless of whether the case was included in the Federal subsample, will provide greater information about SNAP households to FNS for program analysis purposes and improve the consistency of documentation across cases by ensuring States submit all pertinent information before knowing a case has been selected for Federal review. The Department believes requiring that the form be thoroughly documented and submitted will enable case reviewers to fully understand the circumstances of the case, final finding, and disposition, and the quality of the State QC reviewers’ submitted reviews will be improved. These changes will help to ensure more statistically valid results and will help to ensure the accuracy of QC data collected. As a result, § 275.21(b) is modified accordingly. This provision is effective upon publication of this rule.

Procedural Matters

Executive Order 12866 and 13563

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if the regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. The Department has developed this rule in accordance with these orders.

Executive Order 12866 provides that the Office of Information and Regulatory Affairs (OIRA) at the Office of Management and Budget (OMB) will review all significant rules. OIRA has determined that this interim final rule is significant and was accordingly reviewed by the Office of Management and Budget (OMB).

Regulatory Impact Analysis

A regulatory impact analysis (RIA) must be prepared for major rules with economically significant effects ($100 million or more in any one year). USDA does not anticipate this interim final rule is likely to have an economic impact of $100 million or more in any one year, and therefore, does not meet the definition of “economically significant” under Executive Order 12866.

The provisions in this rule are not anticipated to have any impacts on SNAP participation or benefit issuance (transfers) and most are not expected to have measurable impacts on State Agencies or the Federal Government. For example, the cost estimate for the burden associated with the new reporting provisions do not exceed a total of $110 combined for all State agencies per year. The interim final provisions implement statutory changes included in the 2018 Farm Bill; most of these statutory changes reflect policies and practices that are already in place and thus are not a substantive change from current practice. For example, requiring access to State computer systems for QC purposes is existing policy that has been in place since the current QC system was implemented.

While this interim final regulation would clarify that FNS must have remote access to State computer systems, this requirement is expected to have minimal impact on State administrative expenses. Currently 21 States already provide remote access to their systems. In 17 of these States there was no cost associated with allowing FNS access (other than Federal staff time to resolve firewall issues). In the remaining 4 States there was a small cost for enabling remote access ($200 for licensing in one State and $3000 for a dedicated laptop used to access all 3 of the other States, or an average of $800
per State). At $800 per State, the remote access requirement is expected to result in one-time costs of about $25,600 for the remaining 32 States.

Similarly, existing policy requires a State to notify FNS of its intent to enter into a contract for the purposes of training State QC Reviewers (SQCRs), to provide a copy of its contract and all deliverables to FNS, and any contractor activities or deliverables not complying with Federal regulations and policy are not eligible for Federal reimbursement. Current policy also requires that the State document any discussions about individually sampled cases within the QC record for subsequent review and auditing purposes.

In addition to codifying the existing requirement to document discussion about individually sampled cases, this rule places additional requirements if the State discusses individual sampled cases with a contractor. If the discussion occurs orally, FNS must be given notice 24 hours in advance of the discussion and must be allowed to participate in the discussion. If the discussion occurs in writing, the State must ensure that FNS is copied on all written correspondence discussing individual sampled cases. FNS estimates this new notification requirement will affect 5 State agency respondents once per year.

Costs:
The Department anticipates minimal costs associated with this rule. As noted above, the rule provisions primarily implement activities that are current policies and practice.

FNS does anticipate a small increase in reporting burden for State agencies associated with the requirement that States notify FNS in advance or copy FNS on written correspondence when the State discusses individual sampled cases with a contractor. As described in the Paperwork Reduction Act section of this rule, FNS anticipates that 5 States will be required to submit such notification once per year, for an additional 0.4 hours in reporting burden annually. Because FNS has already addressed situations where States used contractors improperly, we expect States to discuss individual cases with contractors only on rare occasions.

No additional Federal costs are anticipated; any staff time devoted to these activities will be part of the normal duties of Federal staff.

Benefits:
The Department anticipates that these interim final provisions will improve Federal oversight of State QC systems and improve the integrity of State-reported QC data used to determine SNAP error rates.

Transfers:
The Department does not anticipate any changes in transfers associated with this rule.

Alternatives:
The 2018 Farm Bill required that the Department implement specific changes to current QC operations and eliminated performance bonus payments to States. Therefore, no alternatives were considered.

Regulatory Flexibility Act
The Regulatory Flexibility Act (5 U.S.C. 601–612) requires Agencies to analyze the impact of rulemaking on small entities and consider alternatives that would minimize any significant impacts on a substantial number of small entities. Rules that are exempt from notice and comment are also exempt from the Regulatory Flexibility Act requirements, including conducting a regulatory flexibility analysis, when among other things the agency for good cause finds that notice and public procedure are impracticable, unnecessary, and contrary to the public interest.

Congressional Review Act
Pursuant to the Congressional Review Act (5 U.S.C. 801 et seq.), the Office of Information and Regulatory Affairs designated this rule as “not major”, as defined by 5 U.S.C. 804(2).

Executive Order 12372
SNAP is listed in the Catalog of Federal Domestic Assistance under Number 10.551. For the reasons set forth in the Final Rule codified in 7 CFR part 3015, subpart V and the related Notice (48 FR 29115), this Program is excluded from the scope of Executive Order 12372, which requires intergovernmental consultation with State and local officials.

Federalism Summary Impact Statement
Executive Order 13132 requires Federal agencies to consider the impact of their regulatory actions on State and local governments. Where such actions have federalism implications, agencies are directed to provide a statement for inclusion in the preamble to the regulations describing the agency’s considerations in terms of the three categories called for under Section (b)(2)(B) of Executive Order 13121. The Department has considered the impact of this interim rule on State and local governments and has determined that this rule does not have federalism implications. Therefore, under Section 6(b) of the Executive Order, a federalism summary is not required.

Executive Order 12988, Civil Justice Reform
This interim final rule has been reviewed under Executive Order 12988, Civil Justice Reform. This rule is intended to have preemptive effect with respect to any State or local laws, regulations or policies which conflict with its provisions or which would otherwise impede its full and timely implementation. This rule is not intended to have retroactive effect unless so specified in the Effective Dates section of the final rule. Prior to any judicial challenge to the provisions of the final rule, all applicable administrative procedures must be exhausted.

Civil Rights Impact Analysis
FNS has reviewed the interim final rule, in accordance with the Department Regulation 4300–004, Civil Rights Impact Analysis, to identify and address any major civil rights impacts the interim final rule might have on minorities, women, and persons with disabilities. A comprehensive Civil Rights Impact Analysis (CRIA) was conducted on the interim final rule, including an analysis of data and provisions contained in the interim final rule. The CRIA outlines outreach and mitigation strategies to lessen any possible civil rights impacts. The CRIA concludes the interim final rule will impact State agencies by including cases processed by SSA in the error rate determination; however, this will not change the rate at which these households are selected for review. The Department finds that the implementation of mitigation strategies and monitoring by the FNS Civil Rights Division and FNS SNAP may lessen any impacts. SNAP has procedures in place to provide special accommodations for the QC review should elderly persons and individuals with disabilities request accommodation. These accommodations are described at 7 CFR 275.12(c)(1), which provides that if there is a hardship to the household in attending the QC interview, the reviewer must interview the household’s authorized representative if they have one or go to the household’s home. Additionally, FNS SNAP will continue to work with State agencies to ensure they are aware of their responsibility to provide special accommodation for the elderly and disabled persons during QC reviews. If necessary, the FNS Civil Rights Division will propose further mitigation and outreach strategies to alleviate impacts that may result from the implementation of the interim final rule.
Executive Order 13175

Executive Order 13175 requires Federal agencies to consult and coordinate with Tribes on a government-to-government basis on policies that have Tribal implications, including regulations, legislative comments, or proposed legislation. Additionally, other policy statements or actions that have substantial direct effects on one or more Indian Tribes, the relationship between the Federal Government and Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes also require consultation. This regulation discloses there are no tribal implications associated with this rule. FNS attended a tribal consultation meeting on May 1, 2019, in Washington, DC where the changes to the rule were explained. No questions or concerns were brought to FNS’s attention about this rule by any tribal leaders at the meeting. If a tribe requests consultation in the future, FNS will work with the Office of Tribal Relations to ensure meaningful consultation is provided.

Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. Chap. 35; see 5 CFR 1320), requires that the Office of Management and Budget (OMB) approve all collections of information by a Federal agency from the public before they can be implemented. Respondents are not required to respond to any collection of information unless it displays a current, valid OMB control number.

In accordance with the Paperwork Reduction Act of 1995, this interim final rule contains information collections that are subject to review and approval by the Office of Management and Budget; therefore, FNS is submitting for public comment the changes in the information collection burden that would result from adoption of the proposals in the rule. The agency is seeking a three-year renewal date for both OMB control numbers. Once OMB approves these burden requirements associated with OMB Control Numbers: 0584–0074 and 0584–0303, the agency plans to publish separate notices in the Federal Register announcing OMB’s approval.

We are revising two existing burden inventories for this rulemaking. The current burden inventories affected are Worksheet for the Supplemental Nutrition Assistance Program Quality Control Reviews (FNS–380) OMB Control Number: 0584–0074, expiration date 04/30/2023 and Supplemental Nutrition Assistance Program 275 QC Regulations OMB Control Number: 0584–0303, expiration date 1/31/2024 respectively. These changes are contingent upon OMB approval under the Paperwork Reduction Act of 1995 and as such are including two 60 day notices for comment on the affected collections.

Comments on both the information collections in this interim final rule must be received by October 12, 2021.

Send comments to the Office of Information and Regulatory Affairs, OMB, Attention: Desk Officer for FNS, Washington, DC 20503, Fax 202–395–7285, or email to oira_submission@omb.eop.gov. Please also send a copy of your comments to any of the following: via mail to Stephanie Proska, Branch Chief, Quality Control Branch, Program Accountability and Administration Division, 1320 Braddock Place, 5th Floor; Alexandria, Virginia 22314; via fax to the attention of Stephanie Proska at 703–305–0928; or via email to SNAPHQ-WEB@fns.usda.gov.

Comments will also be accepted through the Federal eRulemaking Portal. Go to http://www.regulations.gov, and follow the online instructions for submitting comments electronically. All responses to this notice will be summarized and included in the request for Office of Management and Budget approval. All comments will be a matter of public record. For further information, or for copies of the information collection requirements, please contact Stephanie Proska at the address indicated above or email SNAPHQ-WEB@fns.usda.gov.

Comments are invited on: (1) Whether the proposed collection of information is necessary for the proper performance of the Agency’s functions, including whether the information will have practical utility; (2) the accuracy of the Agency’s estimate of the proposed information collection burden, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on those who are to respond, including use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

All responses to these requests for comment will be summarized and included in the request for OMB approval. All comments will also become a matter of public record.

Title: Worksheet for the Supplemental Nutrition Assistance Program’s Quality Control Reviews.

Form Number: FNS 380.

OMB Control Number: 0584–0074.

Expiration Date: April 30, 2023.

Type of Request: Revision of a currently approved collection due to rulemaking.

Abstract: Section 16 of the Food and Nutrition Act of 2008 provides the legislative basis for the operation of the Quality Control (QC) system. Part 275, Subpart C, of SNAP regulations implements the legislative mandates found in Section 16. Regulations at 7 CFR 275.1, 275.14(d) and 275.21(a) and (b)(1) provide the regulatory basis for the QC reporting requirements.

Section 11(a) of the Food and Nutrition Act of 2008 provides the legislative basis for the recordkeeping requirements. SNAP regulations, at 7 CFR 272.1(f), specify that program records must be retained for three years from the month of origin. Regulations at 7 CFR 275.4 specifically address record retention requirements for form FNS–380.

Form FNS–380, is a SNAP worksheet used to determine eligibility and benefits for households selected for review in the QC sample of active SNAP cases. This form provides a systematic means of aiding the State’s Quality Control Reviewer in analyzing the case record, planning and doing field investigation and gathering, comparing, analyzing and evaluating data.

Due to this interim-final rulemaking, the FNS 380 form must include a new State agency respondent burden for a new requirement at 7 CFR 275.2(c)(1)(v). The Department will require that if the State discusses individual sampled cases with a contractor, the State must document, within the case file, the contents of the discussion and any action taken by the State as a result of the discussion. If the discussion occurs orally, FNS must be given notice 24 hours in advance of the discussion and must be allowed to participate in the discussion. If the discussion occurs in writing, the State must ensure that FNS is copied on all written correspondence discussing individual sampled cases. The Department estimates this new notification requirement will affect 5 State agency respondents at least one time per year for a total burden of 5 minutes (0.0835 hour) per response, estimating an additional 25 minutes (0.40 hour) to the current information collection. No additional recordkeeping requirements are necessary.

We estimate the total reporting burden for the collection of information to support SNAP QC as 405,995.67 hours. This includes approximately 8.48 hours for State Agencies to analyze each household case, planning and carrying out the field investigation; gathering, comparing,
analyzing and evaluating the review data and forwarding selected cases to the Food and Nutrition Service for Federal validation, totaling approximately 382,173.44 hours for the entire caseload. We also include an average interview burden of 30 minutes (0.5 hours) for each household, creating a reporting burden for them for 22,748.50 hours. The total reporting burden for the affected public is 404,921.94 hours. Additionally, we estimate the recordkeeping burden per record for the State Agencies to be 1.4 minutes (0.0236 hours), thereby making the recordkeeping burden associated with this information collection to be 1,073.73 hours. There is no recordkeeping requirement for households. The total estimated reporting and recordkeeping burden for this collection is 405,995.67 hours.

**Reporting Burden Annual Estimates for OMB Control Number 0584–0074**

*Affected Public:* State, Local and Tribal Government and Individuals and Households.

*Estimated Number of Respondents:* 45,550 (53 State Agencies and 45,497 Individuals/households).

*Estimated Number of Responses per Respondent:* 4,293.24 (4,292.24 for State agencies and 1 per individual/household).

*Estimated Total Annual Responses:* 272,985.95 (227,488.95 for State agencies and 45,497 from individuals and households).

*Estimated Time per Response:* 8.98 hours (8.48 hours for State agencies and .5 hour for individuals and households).

*Estimated Total Burden Response Hours:* 404,921.94 (382,173.44 from State agencies and 22,748.50 from individuals/households).

**Recordkeeping Burden Annual Estimates for OMB Control Number 0584–0074**

*Number of Record Keepers:* 53.

*Number of Records per Record Keeper:* 858.43 Records.

*Estimated Number of Records/Response to Keep:* 45,497 Records.

*Recordkeeping time per Response:* .0236 hours.

*Total Estimated Recordkeeping Burden Hours:* 1,073.73 hours.

*Estimated Total Annual Reporting and Recordkeeping Burden on Respondents:* 405,995 hours.

This information collection request associated with OMB Control Number: 0584–0074 reflects a difference of +0.40 hour due to program changes for rulemaking.

Type of Request: Revision of a currently approved collection.

Abstract: Section 16 of the Food and Nutrition Act of 2008, as amended, provides the legislative basis for the operation of the SNAP QC system. Part 275, Subpart C, of SNAP regulations implements the legislative mandates found in Section 16. Section 11(d) of the Food and Nutrition Act of 2008, as amended (the Act), requires each State agency administering SNAP to submit a plan of operation specifying the manner in which the program is conducted and Section 11(e) of the Act authorizes the inclusion of other provisions as required by regulation. In Part 275, due to this interim final rulemaking there will now be five components of the Quality Control (QC) system that are covered in this required information collection.

They are: (1) The sampling plan; (2) Third party contractors (new requirement); (3) the arbitration process; (4) the good cause process; and (5) QC-related New Investments.

Each State is required to develop a sampling plan that demonstrates the integrity of its case selection process. The QC system is designed to measure each State agency’s payment error rate and case and procedural error rate based on a statistically valid sample of SNAP cases. A State agency’s payment error rate represents the proportion of cases that were reported through a QC review as being ineligible, as well as the proportion of SNAP benefits that were either overissued or under-issued to SNAP households. A State agency’s case and procedural error rate represents the correctness of a proportion of cases that were measured in a QC review in which the State agency took an action to deny an application or suspend or terminate the benefits of a participating household. It also includes the accuracy of measuring a State’s compliance with Federal procedural requirements for those actions, which include the timeliness of the action and adherence to notice requirements.

Due to this interim-final rulemaking, the QC system will require States to notify FNS about its intent to hire third party contractors for QC purposes, send FNS the signed contracts that are awarded, send FNS information on the third party contractor’s completed deliverables to FNS, and notify FNS of training sessions that will be hosted by 3rd party contractors in the event the State agency intends to request federal reimbursement for administrative expenses associated with the third party contractor’s conduct of the QC system.

The QC system also contains procedures that provide relief for State agencies from all or a part of a QC liability when a State agency can demonstrate that a part or all of an excessive error rate was due to an unusual event that had an uncontrollable impact on the State agency’s payment error rate. This is referred to as the good cause process.

Finally, when a State agency is unable to demonstrate that a part or all of an excessive error rate was due to an unusual event that had an uncontrollable impact on the State agency’s payment error rate and chooses to settle with FNS by investing fifty percent of their total QC liability using new State agency funds into the SNAP program to target the root causes of their errors, the State agency must submit a new investment plan and, after approval, new investment progress reports every six months until the plan is complete.

Note: The ability for a State agency to settle its error rate related liability is described in Section 16(c) of the Food and Nutrition Act of 2008, as amended.

Burden for the QC system includes reporting and recordkeeping burden for State agencies to create a QC sampling plan, notify and submit the required information regarding the use of third party contractors to FNS, and participate in the arbitration, good cause, new investment plan and new investment progress report processes.

The requested extension of unchanged estimates and revisions for the reporting burdens due to new requirements for each component are as follows: (1) The estimated annual reporting burden associated with the QC sampling plan is 1,060 hours, no change from the current collection; (2) the four new annual collection estimates for reporting burden associated with the notifications and submissions activities of third party contractors combined estimates is 3.99 hours; (3) the estimated annual reporting burden associated with arbitration is 1,224 hours, no change from the current collection; (4) The estimated annual reporting burden associated with the good cause process
is 160 hours, no change from the current collection; (5) The estimated annual reporting burden associated with the new investment plan is 288 hours, no change from the current collection-no 74A form changes either; and finally (6) The estimated annual reporting burden associated with the new investment progress report is 90 hours, no change from the current collection-no 74B form changes, either.

We are requesting 2,825.99 estimate annual reporting burden hours. This total includes the current estimate for this requested total estimated reporting burden for the QC system is 2,822.00, plus an increase of 3.99 hours due to program changes for this rulemaking.

The requested annual recordkeeping burden associated with the QC sampling plan remains at 1.25 hours per year. No recordkeeping is required for the third party contractor provisions, since states have their own rules for recordkeeping State contracts. The annual recordkeeping burden associated with arbitration is 0.8496 and the good cause process burden is 0.0236 hour, both remain the same as the current collection. The estimated recordkeeping burden for the QC-related new investment plans remains at 0.0214 hours and the estimated recordkeeping burden for the QC-related new investment progress reports remains at 0.4248 hours.

The burden for recordkeeping has remained at 2.7612 hours. As a result, the overall annual reporting and recordkeeping burden for the QC system, as proposed by this notice, increased from 2135.76 hours to 2,828.75 hours due to the interim-final rule provisions adding reporting requirements related to State agency use of third party contractors. Affected Public: 53 State, Local and Tribal Government.

E-Government Act Compliance

The Department is committed to complying with the E-Government Act of 2002, to promote the use of the internet and other information technologies to provide increased opportunities for citizen access to Government information and services, and for other purposes.

List of Subjects in 7 CFR Part 275

Grant programs-social programs, Reporting and recordkeeping requirements.

Accordingly, 7 CFR part 275 is amended as follows:

PART 275—PERFORMANCE REPORTING SYSTEM

§ 275.2 State agency responsibilities.

(c) Use of third party contractors. Any State agency procuring services of a contractor for quality control related services, including any project or training that involves the interpretation of SNAP regulations, policies, or handbooks for quality control or payment accuracy purpose, must ensure that all activities and deliverables performed by the contractor within the scope of the contract adhere to Federal law, regulations, and policies. Activities performed or deliverables provided by a contractor that are not in accordance with Federal law, regulations, or policies are unallowable SNAP administrative costs and are not eligible for Federal reimbursement.

(1) For expenses related to the hiring of a contractor for any quality control related work to qualify for SNAP administrative cost reimbursement under § 277.4(b), FNS requires the following:

(i) The State must notify FNS in writing of its intent to hire a contractor at least 30 days prior to entering into the contract to do so. The notification must include a copy of the selected contractor’s complete proposal, which must receive FNS approval before the State may proceed with the procuring the contract.

(ii) Once the contract is procured, the State must submit to FNS a copy of the signed contract and documentation that outlines all tasks and deliverables to be performed or produced by the contractor.

(iii) The State must submit to FNS a copy of all deliverables, including any training materials, provided by the contractor.

(iv) The State must notify FNS of the date, time, and location of any training sessions led by the contractor at least 10 days in advance of the training. FNS shall be allowed to attend any such training session with or without providing prior notice to the State agency or the contractor.

(v) If the State discusses individual sampled cases with the contractor, the State must document, within the case file, the contents of the discussion and any action taken by the State as a result of the discussion. If the discussion occurs orally, FNS shall be given notice 24 hours in advance of the discussion and shall be allowed to participate in the discussion. If the discussion occurs in writing, the State must ensure that FNS is copied on all written correspondence discussing individual sampled cases.

(2) Copies of documentation and notices required in paragraph (c)(1) of this section must be provided to the appropriate FNS Regional SNAP Director.

(3) In accordance with the non-procurement debarment procedures under 2 CFR part 417, or successor regulations, FNS shall debar any person that, in carrying out the quality control system, knowingly submits or causes to be submitted false information to FNS.

(4) Compliance date: Paragraph (c)(1) of this section contains information-collection requirements. Compliance with paragraph (c)(1) will not be required until this paragraph or paragraph (c)(4) is removed or contains a compliance date, after review of such requirements by the Office of Management and Budget pursuant to the Paperwork Reduction Act.

(d) FNS Access to State Systems. Subject to data and security protocols agreed to by FNS and a State agency administering SNAP, each State agency shall ensure that FNS has complete access, including remote access for QC purposes, to both the records that are used in the administration of SNAP, including but not limited to the records contained within certification and EBT systems, and the information systems in which such records are contained.

3. In § 275.3:

a. Redesignate paragraphs (c) and (d) as paragraphs (d) and (e); and

b. Add a new paragraph (c).

The addition reads as follows:

§ 275.3 Federal Monitoring.

(c) Reviews of State Agency’s Quality Control System. FNS will conduct a management evaluation (ME) of at least two State Quality Control systems annually, to the maximum extent practicable. The ME will include, but not be limited to, a determination of whether the State agency is complying with FNS regulations; an assessment of the State agency’s methods and procedures for conducting and managing the Quality Control system; and an assessment of the data collected by the State agency and submitted to the FNS Regional Office for conducting reviews.

4. Amend § 275.4 by revising paragraph (c) to read as follows:

§ 275.4 Record retention.

(3) QC review records consist of Forms FNS–380, Worksheet for Supplemental Nutrition Assistance Program, FNS–380–1, Quality Control Review Schedule, FNS–245, Negative Quality Control Review Schedule; other materials supporting the review decision, including all correspondence with the household and all case notes, digital or otherwise, taken or used by the eligibility worker that are applicable to the review period; sample lists; sampling frames; tabulation sheets; and reports of the results of all quality control reviews during each review period.

5. In § 275.11 amend paragraph (g) by:

a. Revising the paragraph heading; and

b. In the first sentence, removing the phrase, , and households participating based upon an application processed by Social Security Administration personnel’’;

c. In the third sentence, removing the term “§ 275.21(e)” and adding, in its place, the term “§ 275.21(d)’’;

d. In the third sentence removing the term “§ 275.23(b)(2)” and adding, in its place, the term “§ 275.23(b)(1)”;

e. Removing the sixth and seventh sentences.

The revision reads as follows:

§ 275.11 Sampling.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 985

Marketing Order Regulating the Handling of Spearmint Oil Produced in the Far West; Salable Quantities and Allotment Percentages for the 2021–2022 Marketing Year

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Final rule.

SUMMARY: This rule implements a recommendation from the Far West Spearmint Oil Administrative Committee to establish salable quantities and allotment percentages for Class 1 (Scotch) and Class 3 (Native) spearmint oil produced in Washington, Idaho, Oregon, and designated parts of Nevada and Utah (the Far West) for the 2021–2022 marketing year.

DATES: Effective September 13, 2021.

FOR FURTHER INFORMATION CONTACT: Joshua R. Wilde, Marketing Specialist, or Gary Olson, Regional Director, Northwest Marketing Field Office, Marketing Order and Agreement Division, Specialty Crops Program, AMS, USDA; Telephone: (503) 326–2724, or Email: joshua.r.wilde@usda.gov or Gary.D.Olson@usda.gov.

Small businesses may request information on complying with this regulation by contacting Richard Lower, Marketing Order and Agreement Division, Specialty Crops Program, AMS, USDA, 1400 Independence Avenue SW, STOP 0237, Washington, DC 20250–0237; Telephone: (202) 720–2491, Fax: (202) 720–8938, or Email: Richard.Lower@usda.gov.

SUPPLEMENTARY INFORMATION: This action, pursuant to 5 U.S.C. 553, amends regulations issued to carry out a marketing order as defined in 7 CFR 900.21. This rule is issued under Marketing Order No. 985, as amended (7 CFR part 985), regulating the handling of spearmint oil produced in the Far West. Part 985 (referred to as the “Order”) is effective under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601–674), hereinafter referred to as the “Act.” The Far West Spearmint Oil Administrative Committee (Committee) locally administers the Order and is comprised of spearmint oil producers operating within the area of production, and a public member.

The Department of Agriculture (USDA) is issuing this final rule in conformance with Executive Orders 12866 and 13563. Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility. This action falls within a category of regulatory actions that the Office of Management and Budget (OMB) exempted from Executive Order 12866 review.

This final rule has been reviewed under Executive Order 13175—Consultation and Coordination with Indian Tribal Governments, which requires agencies to consider whether their rulemaking actions would have tribal implications. AMS has determined this final rule is unlikely to have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

This rule has been reviewed under Executive Order 12988, Civil Justice Reform. This rule is not intended to have retroactive effect. Under the Order now in effect, salable quantities and allotment percentages may be established for classes of spearmint oil produced in the Far West. This rule establishes quantities and allotment percentages for Scotch and Native spearmint oil for the 2021–2022 marketing year, which begins on June 1, 2021.

The Act provides that administrative proceedings must be exhausted before parties may file suit in court. Under section 608c(15)(A) of the Act, any handler subject to a marketing order may file with USDA a petition stating that the marketing order, any provision of the marketing order, or any obligation imposed in connection with the marketing order is not in accordance with law and request a modification of the marketing order or to be exempted therefrom. Such a handler is afforded the opportunity for a hearing on the petition. After the hearing, USDA would rule on the petition. The Act provides that the district court of the United States in any district in which the handler is an inhabitant, or has his or her principal place of business, has jurisdiction to review USDA’s ruling on the petition, provided an action is filed.
no later than 20 days after the date of the entry of the ruling. Pursuant to §§ 985.50, 985.51, and 985.52, the Order requires the Committee to meet each year to consider supply and demand of spearmint oil and to adopt a marketing policy for the ensuing marketing year. When such considerations indicate a need to establish or to maintain stable market conditions through volume regulation, the Committee recommends salable quantity limitations and producer allotments to regulate the quantity of Far West spearmint oil available to the market.

According to § 985.12, “salable quantity” is the total quantity of each class of oil (Scotch or Native) that handlers may purchase from, or handle on behalf of, producers during a given marketing year. The total industry allotment base is the aggregate of all allotment bases held individually by producers as prescribed under § 985.53(d)(1). The total allotment base is revised each year on June 1 to account for producer base being lost as a result of the “bona fide effort” production provision of § 985.53(e) and additional base made available pursuant to the provisions of § 985.153.

Each producer’s prorated share of the salable quantity of each class of oil, or the “annual allotment” as defined in § 985.13, is calculated by using an allotment percentage. The allotment percentage is derived by dividing the salable quantity of each class of spearmint oil by the total industry allotment base for that same class of oil.

The Committee met on October 14, 2020, to consider its marketing policy for the 2021–2022 marketing year. At that meeting, the Committee determined that, based on the current market and supply conditions, volume regulation for both classes of oil would be necessary. With a 6–1 vote, the Committee recommended a salable quantity and allotment percentage for Scotch spearmint oil of 846,684 pounds and 38 percent. The member voting in opposition to the recommendation favored volume regulation but supported an unspecified lower salable quantity and allotment percent than what was recommended. The Committee voted six in favor, with one abstention, to recommend a salable quantity and allotment percentage for Native spearmint oil of 938,397 pounds and 37 percent. The member abstaining did not give a reason.

This action establishes the amount of Scotch and Native spearmint oil that handlers may purchase from, or handle on behalf of, producers during the 2021–2022 marketing year, which begins on June 1, 2021. Salable quantities and allotment percentages have been placed into effect each season since the Order’s inception in 1980.

Scotch Spearmint Oil

The Committee recommended a Scotch spearmint oil salable quantity of 846,684 pounds and an allotment percentage of 38 percent for the 2021–2022 marketing year. The 2021–2022 marketing year salable quantity of 846,684 pounds is 8,355 pounds more than the 2020–2021 marketing year salable quantity of 838,329 pounds. The allotment percentage, recommended at 38 percent for the 2021–2022 marketing year, is the same as the percentage in effect the previous year. The total allotment base for the coming marketing year is estimated to be 2,228,116 pounds. This figure represents a one-percent increase over the 2020–2021 marketing year total allotment base of 2,206,055 pounds. The salable quantity (846,684 pounds) is the product of total allotment base (2,228,116 pounds) and the allotted percentage (38 percent).

The Committee considered several factors in making its recommendation, including the current and projected future supply, estimated future demand, production costs, and producer prices. The Committee’s recommendation also accounts for the established acreage of Scotch spearmint, consumer demand, existing carry-in, reserve pool volume, and increased production in competing markets.

According to the Committee, as costs of production have increased and spearmint oil prices have decreased, many producers have forgone new plantings of Scotch spearmint. This has resulted in a significant decline in production of Scotch spearmint oil in recent years. Production has decreased from 1,113,346 pounds produced in 2016 to an estimated 498,322 pounds of Scotch spearmint oil produced in 2020.

Industry reports indicate that trade demand for Far West Scotch spearmint oil has decreased over the past five years as international markets for spearmint-flavored products have slowed. Sales of Far West Scotch spearmint oil have averaged 740,216 pounds per year over the last five years but have averaged only 645,965 pounds over the last three years. In addition to declining spearmint oil demand, increasing production of Scotch spearmint oil in competing markets, most notably by Canadian producers, has put additional downward pressure on the Far West Scotch spearmint oil market.

Given the general decline in demand and anticipated market conditions for the coming year, the Committee estimates that Scotch spearmint oil trade demand for the 2021–2022 marketing year will be 623,000 pounds, which is 19,000 pounds higher than the prior year estimate, but still down from the three-year average of actual sales. Should the volume regulation levels established by this action prove insufficient to adequately supply the market, the Committee has the authority to recommend intraseasonal increases, as it has in previous marketing years.

The Committee calculated the minimum salable quantity of Scotch spearmint oil that will be required during the 2021–2022 marketing year (359,424 pounds) by subtracting the estimated salable carry-in on June 1, 2021, (263,576 pounds) from the estimated trade demand (623,000 pounds). This minimum salable quantity represents the estimated minimum amount of Scotch spearmint oil that will be needed to satisfy estimated trade demand for the coming year. To ensure that the market will be fully supplied, the Committee recommended a 2021–2022 marketing year salable quantity of 846,684 pounds. The recommended salable quantity, combined with an estimated 263,576 pounds of salable quantity carried in from the previous year, will yield a total available supply of 1,110,260 pounds of Scotch spearmint oil for the 2021–2022 marketing year. With the recommended salable quantity and current market environment, the Committee estimates that as much as 487,260 pounds of salable Scotch spearmint oil could be carried into the 2022–2023 marketing year.

Salable carry-in is the primary measure of excess spearmint oil supply under the Order, as it represents overproduction in prior years that is currently available to the market without restriction. Under volume regulation, spearmint oil that is designated as salable continues to be available to the market until it is sold and may be marketed at any time at the discretion of the owner. Salable quantities established under volume regulation over the last four seasons have exceeded sales, leading to a gradual build of Scotch spearmint oil salable carry-in.

The Committee estimates that there will be 263,576 pounds of salable carry-in of Scotch spearmint oil on June 1, 2021. If current market conditions are maintained and the Committee’s projections are correct, salable carry-in will increase to 487,260 pounds at the beginning of the 2022–2023 marketing year. This level will be above the
quantity that the Committee generally considers favorable (150,000 pounds). However, the Committee believes that, given the current economic conditions in the Scotch spearmint oil industry, some Scotch spearmint oil producers may not produce enough oil in the 2021–2022 marketing year to fill all of their annual allotment. The Committee estimates that as much as 245,352 pounds of 2020–2021 marketing year annual allotment may not be filled by producers. While the Committee has not projected unused base allotment for the 2021–2022 marketing year and did not incorporate this factor in its recommendation, it anticipates that the actual quantity of Scotch spearmint oil carried into the following marketing year will be significantly less than the quantity calculated above (487,260 pounds).

Spearmint oil held in reserve is oil that has been produced in excess of a producer’s marketing year allotment and is not available to the market in the current marketing year without an increase in the salable quantity and allotment percentage. Oil held in the reserve pool is another indicator of excess supply. Scotch spearmint oil held in the reserve pool was 67,645 pounds as of May 31, 2020, down from 132,984 pounds as of May 31, 2019. However, the Scotch spearmint oil reserve is expected to rebound slightly to an estimated 83,608 pounds by the end of the 2020–2021 marketing year. This quantity of reserve pool oil should be an adequate buffer to supply the market, if necessary, should the industry experience an unexpected increase in demand.

The Committee recommended an allotment percentage of 38 percent for the 2021–2022 marketing year for Scotch spearmint oil. During its October 14, 2020, meeting, the Committee calculated an initial allotment percentage by dividing the minimum required salable quantity (359,424 pounds) by the total estimated allotment base (2,228,116 pounds), resulting in 16.1 percent. However, producers and handlers at the meeting indicated that the computed percentage (16.1 percent) might not adequately supply potential 2021–2022 Scotch spearmint oil market demand and may also result in a less than desirable carry-in for the subsequent marketing year. After deliberation, the Committee increased the recommended allotment percentage to 38 percent. The total estimated allotment base (2,228,116 pounds) for the 2021–2022 marketing year, multiplied by the recommended salable allotment percentage (38 percent), yields 846,684 pounds, which is the recommended salable quantity for the 2021–2022 marketing year.

The 2021–2022 marketing year computational data for the Committee's recommendations is detailed below.

**Estimated Carry-in of Scotch Spearmint Oil**

- **Estimated carry-in of Scotch spearmint oil on June 1, 2021: 263,576 pounds.** This figure is the difference between the 2020–2021 marketing year total actual allotment base of 867,576 pounds and the 2020–2021 marketing year estimated trade demand of 604,000 pounds. The estimated 2020–2021 marketing year trade demand was revised down from the original estimate of 750,000 pounds by the Committee at its October 14, 2020, meeting.

- **Estimated trade demand of Scotch spearmint oil for the 2021–2022 marketing year: 623,000 pounds.** This figure was established at the Committee meeting held on October 14, 2020.

**Salable Quantity of Scotch Spearmint Oil**

- **Total estimated Scotch spearmint oil allotment base for the 2021–2022 marketing year: 2,228,116 pounds.** This figure is the sum of the 2021–2022 marketing year recommended salable allotment (846,684 pounds) and the estimated carry-in on June 1, 2021 (263,576 pounds).

For the reasons stated above, the Committee believes that the recommended salable quantity and allotment percentage will adequately satisfy trade demand, will result in a reasonable carry-in for the following year, and will contribute to the orderly marketing of Scotch spearmint oil.

**Native Spearmint Oil**

The Committee recommended a Native spearmint oil salable quantity of 938,397 pounds and an allotment percentage of 37 percent for the 2021–2022 marketing year. These figures are, respectively, 292,089 pounds and 12 percentage points lower than the levels established for the 2020–2021 marketing year. The Committee utilized handlers’ estimated trade demand of Native spearmint oil for the coming year, historical and current Native spearmint oil production, inventory statistics, and international market data obtained from consultants for the spearmint oil industry to arrive at these recommendations.

The Committee anticipates that 2021 Native spearmint oil production will total 1,181,230 pounds, down substantially from the previous year’s production of 1,493,686 pounds. Committee records show an estimated 7,957 acres of Native spearmint production in the Far West in 2020 compared to an estimated 9,013 acres of Native spearmint production in 2019.

Sales of Native spearmint oil have also been declining, falling from a high of 1,565,515 pounds in the 2017–2018 marketing year to 1,076,906 pounds over the 2019–2020 marketing year, the last full year of reported sales. The Committee estimates that trade demand for Native spearmint oil will be 1,059,167 pounds for the 2020–2021 marketing year, well below the 5-year sales average of 1,283,266 pounds.

The Committee expects that 694,137 pounds of salable Native spearmint oil from prior years will be carried into the 2021–2022 marketing year. This amount...
is up from the 522,818 pounds of salable oil carried into the 2020–2021 marketing year and well above the level that the Committee generally considers favorable.

Further, the Committee estimates that there will be 1,130,264 pounds of Native spearmint oil in the reserve pool at the beginning of the 2021–2022 marketing year. This figure is 49,256 pounds lower than the quantity of reserve pool oil held by producers on June 1, 2020, but is still higher than the level that the Committee believes is optimal. This modest decline in the reserve oil reverses the recent trend of gradual increases that the industry has experienced over the past several marketing years.

The Committee expects end users of Native spearmint oil to continue to rely on Far West production as their primary source of high-quality Native spearmint oil. Overseas production of Native spearmint has declined in recent years. As a result, U.S. exports of Native spearmint oil have increased since 2018. However, the increase in domestic production from other states outside the Far West region has more than offset the decline in foreign production of Native spearmint oil. For instance, production of Native spearmint oil in the U.S. Midwest region has spiked in recent years, rising from fewer than 2,000 acres in 2016 to approximately 5,500 acres in 2020. Additionally, the sharp increase in demand for Native spearmint experienced during the 2017–2018 marketing year has tapered off in recent years. These factors have contributed to declining trade demand for Far West Native spearmint oil and led to downward pressure on producer prices.

The Committee chose to be cautiously optimistic in the establishment of its trade demand estimate for the 2021–2022 marketing year to ensure that the market will be adequately supplied. At the October 14, 2020, meeting, the Committee estimated the 2021–2022 marketing year Native spearmint oil trade demand to be 1,125,000 pounds. This figure is based on input provided by producers at nine production area meetings held in early October 2020, as well as estimates provided by handlers and other meeting participants. This figure represents an increase of 65,833 pounds from the previous year’s revised trade demand estimate. The average estimated trade demand for Native spearmint oil derived from the area producer meetings was 1,105,556 pounds, whereas the handlers’ estimates ranged from 900,000 to 1,500,000 pounds. Normalized Native spearmint oil sales over the last three years was 1,295,832 pounds. The quantity marketed over the most recent full marketing year, 2019–2020, was 1,076,906 pounds.

The estimated June 1, 2021, carry-in of 694,137 pounds of Native spearmint oil, plus the recommended 2021–2022 marketing year salable quantity of 938,397 pounds, results in an estimated total available supply of 1,632,534 pounds of Native spearmint oil during the 2021–2022 marketing year. With the corresponding estimated trade demand of 1,125,000 pounds, the Committee projects that 507,534 pounds of oil will be carried into the 2022–2023 marketing year, resulting in a year-over-year decrease of 186,603 pounds. The Committee estimates that there will be 1,130,264 pounds of Native spearmint oil held in the reserve pool at the beginning of the 2021–2022 marketing year. Should the industry experience an unexpected increase in trade demand, oil in the Native spearmint oil reserve pool could be released through an intra-seasonal increase to satisfy that demand.

The Committee recommended a producer allotment percentage of 37 percent for the 2021–2022 marketing year. During its October 14, 2020, meeting, the Committee calculated an initial producer allotment percentage of 17 percent by dividing the minimum required salable quantity to satisfy estimated trade demand (430,863 pounds) by the total allotment base (2,536,208 pounds). However, producers and handlers at the meeting expressed that the computed percentage of 17 percent may not adequately supply the potential 2021–2022 Native spearmint oil market demand or result in adequate carry-in for the subsequent marketing year. After deliberation, the Committee increased the recommended allotment percentage to 37 percent. The total estimated allotment base (2,536,208 pounds) for the 2021–2022 marketing year multiplied by the recommended salable allotment percentage (37 percent) yields 938,397 pounds, the recommended salable quantity for the year.

The 2021–2022 marketing year computational data for the Committee’s recommendations is further outlined below.

(A) Estimated carry-in of Native spearmint oil on June 1, 2021: 694,137 pounds. This figure is the difference between the revised 2020–2021 marketing year total available supply of 1,753,304 pounds and the revised 2020–2021 marketing year estimated trade demand of 1,059,167 pounds.

(B) Estimated trade demand of Native spearmint oil for the 2021–2022 marketing year: 1,125,000 pounds. This estimate was established by the Committee at the October 14, 2020, meeting.

(C) Salable quantity of Native spearmint oil required from the 2021–2022 marketing year production: 430,863 pounds. This figure is the difference between the estimated 2021–2022 marketing year estimated trade demand (1,125,000 pounds) and the estimated carry-in on June 1, 2021 (694,137 pounds). This is the minimum amount of Native spearmint oil that the Committee believes will be required to meet the anticipated 2021–2022 marketing year trade demand.

(D) Total estimated allotment base of Native spearmint oil for the 2021–2022 marketing year: 2,536,208 pounds. This figure represents a one-percent increase over the 2020–2021 total actual allotment base of 2,511,097 pounds as prescribed in § 985.153. The one-percent increase equals 25,111 pounds of oil. This estimate is revised each year on June 1, due to adjustments resulting from the bona fide effort production provisions of § 985.53(e).

(E) Computed Native spearmint oil allotment percentage for the 2021–2022 marketing year: 17 percent. This percentage is calculated by dividing the required salable quantity (430,863 pounds) by the total estimated allotment base (2,536,208 pounds) for the 2021–2022 marketing year.

(F) Recommended Native spearmint oil allotment percentage for the 2021–2022 marketing year: 37 percent. This is the Committee’s recommendation based on the computed allotment percentage (17 percent) and input from producers and handlers at the October 14, 2020, meeting. The recommended 37 percent allotment percentage is also based on the Committee’s belief that the computed percentage (17 percent) may not adequately supply the potential market for Native spearmint oil in the 2021–2022 marketing year or allow for salable Native spearmint oil to be carried into the beginning of the 2022–2023 marketing year.

(G) Recommended Native spearmint oil 2021–2022 marketing year salable quantity: 938,397 pounds. This figure is the product of the recommended allotment percentage (37 percent) and the total estimated allotment base (2,536,208 pounds).

(H) Estimated available supply of Native spearmint oil for the 2021–2022 marketing year: 1,632,534 pounds. This figure is the sum of the 2021–2022 recommended salable quantity (938,397 pounds) and the estimated carry-in on June 1, 2021 (694,137 pounds). This amount could be increased, as needed, through an intra-seasonal increase in the
salable quantity and allotment percentage.

The Committee’s recommended Scotch and Native spearmint oil salable quantities and allotment percentages of 846,684 pounds and 38 percent, and 938,397 pounds and 37 percent, respectively, will match the available supply of each class of spearmint oil to the estimated demand of each, thus avoiding extreme fluctuations in inventories and prices. This rule is similar to regulations issued in prior seasons.

The salable quantities established in this final rule are not expected to cause a shortage of either class of spearmint oil. Any unanticipated or additional market demand for either class of spearmint oil which may develop during the marketing year could be satisfied by an intra-seasonal increase in the salable quantity and corresponding allotment percentage. The Order contains a provision in §985.51 for intra-seasonal increases to allow the Committee the flexibility to respond quickly to changing market conditions. Under volume regulation, producers who produce more than their annual allotments during the marketing year may transfer such excess spearmint oil to producers who have produced less than their annual allotment. In addition, on December 1 of each year, producers who have not transferred their excess spearmint oil to other producers must place their excess spearmint oil production into the reserve pool to be released in the future, in accordance with market needs and under the Committee’s direction.

USDA has reviewed the Committee’s marketing policy statement for the 2021–2022 marketing year. The Committee’s marketing policy statement, a requirement whenever the Committee recommends volume regulation, meets the requirements of §§985.50 and 985.51.

The establishment of salable quantities and allotment percentages in this rule is expected to fully satisfy anticipated market needs. In determining anticipated market needs, the Committee considered historical sales, as well as changes and trends in production and demand. This rule also provides producers with information regarding the amount of spearmint oil that should be produced for the 2021–2022 season to meet anticipated market demand.

Final Regulatory Flexibility Act

Pursuant to requirements set forth in the Regulatory Flexibility Act (RFA) (5 U.S.C. 601–612), the Agricultural Marketing Service (AMS) has considered the economic impact of this rule on small entities. Accordingly, AMS has prepared this final regulatory flexibility analysis.

The purpose of the RFA is to fit regulatory actions to the scale of businesses subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders issued pursuant to the Act, and the rules issued thereunder, are unique in that they are brought about through group action of essentially small entities acting on their own behalf.

There are approximately 40 producers and 94 producers of Scotch and Native spearmint oil, respectively, in the regulated production area and approximately 8 spearmint oil handlers subject to regulation under the Order. Small agricultural service firms are defined by the Small Business Administration (SBA) as those having annual receipts of less than $30,000,000, and small agricultural producers are defined as those having annual receipts of less than $1,000,000 (13 CFR 121.201).

The Committee reported that recent producer prices for spearmint oil have ranged from $12.00 to $17.00 per pound. The National Agricultural Statistics Service (NASS) reported that the 2019 U.S. season average spearmint oil producer price per pound was $16.90. Spearmint oil utilization for the 2019–2020 marketing year, as reported by the Committee, was 598,706 pounds and 1,076,906 pounds for Scotch and Native spearmint oil, respectively, for a total of 1,675,612 pounds. Multiplying $16.90 per pound by 2019–2020 marketing year spearmint oil utilization of 1,675,612 pounds yields a handler free on board (f.o.b.) price per pound estimate of about $28.3 million.

Given the accounting requirements for the volume regulation provisions of the Order, the Committee maintains accurate records of each producer’s production and sales. Using the $16.90 average spearmint oil price, and Committee production data for each producer, the Committee estimates that 37 of the 40 Scotch spearmint oil producers and 90 of the 94 Native spearmint oil producers could be classified as small entities under the SBA definition.

There is no third party or governmental entity that collects and reports spearmint oil prices received by spearmint oil handlers. However, the Committee estimates an average spearmint oil handling markup at approximately 12 percent of the price received by producers. Multiplying 1.20 by the 2018 producer price of $16.90 yields a handler free on board (f.o.b.) price per pound estimate of $20.28. Multiplying this estimated handler f.o.b. price by the 2019–2020 marketing year total spearmint oil utilization of 1,675,612 pounds results in an estimated handler-level spearmint oil value of $33.98 million. Dividing this figure by the number of handlers (8) yields estimated average annual handler receipts of about $4.25 million, which is well below the SBA threshold for small agricultural service firms.

Furthermore, using confidential data on pounds handled by each handler, and the abovementioned estimated handler price per pound, the Committee reported that it is not likely that any of the eight handlers had 2019–2020 marketing year spearmint oil sales that exceeded the $30 million SBA threshold.

Therefore, the majority of producers of spearmint oil may be classified as small entities, and all of the handlers of spearmint oil may be classified as small entities.

This final rule establishes the quantity of spearmint oil produced in the Far West, by class, which handlers may purchase from, or handle on behalf of, producers during the 2021–2022 marketing year. The Committee recommended this action to help maintain stability in the spearmint oil market by matching supply to estimated demand, thereby avoiding extreme fluctuations in supplies and prices. Establishing quantities that may be purchased or handled during the marketing year through volume regulation allows producers to coordinate their spearmint oil production with the expected market demand. Authority for this action is provided in §§985.50, 985.51, and 985.52 of the Order.

The Committee estimates the total trade demand for the 2021–2022 marketing year for both classes of oil at 1,748,000 pounds. In addition, the Committee expects that the combined salable carry-in for both classes of spearmint oil will be 957,713 pounds. As such, the combined required salable quantity for the 2021–2022 marketing year is estimated to be 790,287 pounds (1,748,000 pounds trade demand less 957,713 pounds carry-in). Under volume regulation, total sales of spearmint oil by producers for the 2021–2022 marketing year will be held to 2,742,794 pounds (the recommended salable quantity for both classes of spearmint oil of 1,785,081 pounds plus 957,713 pounds of carry-in).

This total available supply of 2,742,794 pounds should be more than adequate to supply the 1,748,000
pounds of anticipated total trade demand for spearmint oil. In addition, as of May 31, 2020, the total reserve pool for both classes of spearmint oil stood at 1,247,165 pounds. That quantity is expected to remain relatively unchanged over the course of the 2021–2022 marketing year, with current Committee reserve pool estimates totaling 1,366,673 pounds. Should trade demand increase unexpectedly during the 2021–2022 marketing year, reserve pool spearmint oil could be released into the market to supply that increase in demand.

The established allotment percentages, upon which 2021–2022 marketing year annual allotments are based, are 38 percent for Scotch spearmint oil and 37 percent for Native spearmint oil. Without volume regulation, producers will not be held to these allotment levels, and could sell unrestricted quantities of spearmint oil.

The USDA econometric model used to evaluate the Far West spearmint oil market estimated that the season average producer price per pound (from both classes of spearmint oil) would decline about $1.70 per pound without volume regulation. The surplus situation for the spearmint oil market that would exist without volume regulation in the 2021–2022 marketing year also would likely dampen prospects for improved producer prices in future years because of the excessive buildup in stocks.

In addition, the econometric model estimated that spearmint oil prices would fluctuate with greater amplitude in the absence of volume regulation. The coefficient of variation, or CV (a standard measure of variability), of Far West spearmint oil producer prices for the period 1980–2019 (the years in which the Order has been in effect), is 25 percent, compared to 49 percent for the 20-year period (1960–1979) immediately prior to the establishment of the Order. Since higher CV values correspond to greater variability, this is an indicator of the price stabilizing impact of the Order.

The use of volume regulation allows the industry to fully supply spearmint oil markets while avoiding the negative consequences of over-supplying these markets. The use of volume regulation is believed to have little or no effect on consumer prices of products containing spearmint oil and will not result in fewer retail sales of such products.

The Committee discussed alternatives to the recommendations contained in this rule for both classes of spearmint oil. The Committee rejected the idea of not regulating volume for either class of spearmint oil because of the severe, price-depressing effects that will likely occur without volume regulation. The Committee also discussed and considered salable quantities and allotment percentages that were above and below the levels that were ultimately recommended for both classes of spearmint oil. Ultimately, the action recommended by the Committee was to maintain the allotment percentage for Scotch spearmint oil (which will slightly increase the salable quantity) and to decrease both the salable quantity and allotment percentage for Native spearmint oil from the levels established for the 2020–2021 marketing year.

As noted earlier, the Committee’s recommendation to establish salable quantities and allotment percentages for both classes of spearmint oil was made after careful consideration of all available information including: (1) The estimated quantity of salable oil of each class held by producers and handlers; (2) the estimated demand for each class of oil; (3) the prospective production of each class of oil; (4) the total of allotment bases of each class of oil for the current marketing year and the estimated total of allotment bases of each class for the ensuing marketing year; (5) the quantity of reserve oil, by class, in storage; (6) producer prices of oil, including prices for each class of oil; and (7) general market conditions for each class of oil, including whether the estimated season average price to producers is likely to exceed parity.

Based on its review, the Committee believes that the salable quantities and allotment percentages established in this rule will achieve the objectives sought. The Committee also believes that, should there be no volume regulation in effect for the upcoming marketing year, the Far West spearmint oil industry will return to the pronounced cyclical price patterns that occurred prior to the promulgation of the Order. As previously stated, annual salable quantities and allotment percentages have been issued for both classes of spearmint oil since the Order’s inception. The salable quantities and allotment percentages established herein are expected to facilitate the goal of maintaining orderly marketing conditions for Far West spearmint oil for the 2021–2022 and future marketing years.

Costs to producers and handlers, large and small, resulting from this action are expected to be offset by the benefits derived from a more stable market and increased returns. The benefits of this rule are expected to be equally available to all producers and handlers regardless of their sizes.

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), the Order’s information collection requirements have been previously approved by OMB and assigned OMB No. 0581–0178. Vegetable and Specialty Crops. No changes in those requirements are necessary as a result of this rule. Should any changes become necessary, they would be submitted to OMB for approval.

This rule establishes the salable quantities and allotment percentages for Scotch spearmint oil and Native spearmint oil produced in the Far West during the 2021–2022 marketing year. Accordingly, this rule does not impose any additional reporting or recordkeeping requirements on either small or large spearmint oil producers or handlers. As with all Federal marketing order programs, reports and forms are periodically reviewed to reduce information requirements and duplication by industry and public sector agencies. In addition, USDA has not identified any relevant Federal rules that duplicate, overlap, or conflict with this final rule.

AMS is committed to complying with the E-Government Act, to promote the use of the internet and other information technologies to provide increased opportunities for citizen access to Government information and services, and for other purposes.

A proposed rule concerning this action was published in the Federal Register on April 16, 2021 (86 FR 20038). Copies of the proposed rule were also mailed or sent via email to all Far West spearmint oil handlers. The proposal was made available through the internet by USDA and the Office of the Federal Register. A 60-day comment period ending June 15, 2021, was provided for interested persons to respond to the proposal. No comments were received during the comment period. Accordingly, no changes will be made to the rule as proposed.

A small business guide on complying with fruit, vegetable, and specialty crop marketing agreements and orders may be viewed at: https://www.ams.usda.gov/rules-regulations/moa/small-businesses. Any questions about the compliance guide should be sent to Richard Lower at the previously mentioned address in the FOR FURTHER INFORMATION CONTACT section.

After consideration of all relevant material presented, including the information and recommendation submitted by the Board and other available information, it is hereby found that this rule will tend to effectuate the declared policy of the Act.
List of Subjects in 7 CFR Part 985
Marketing agreements, Oils and fats, Reporting and recordkeeping requirements, Spearmint oil.
For the reasons set forth in the preamble, 7 CFR part 985 is amended as follows:

PART 985—MARKETING ORDER REGULATING THE HANDLING OF SPEARMINT OIL PRODUCED IN THE FAR WEST

1. The authority citation for 7 CFR part 985 continues to read as follows:

2. Section 985.236 is added to read as follows:

§ 985.236 Salable quantities and allotment percentages—2021–2022 marketing year.
The salable quantity and allotment percentage for each class of spearmint oil during the marketing year beginning on June 1, 2021, shall be as follows:
(a) Class 1 (Scotch) oil—a salable quantity of 846,684 pounds and an allotment percentage of 38 percent.
(b) Class 3 (Native) oil—a salable quantity of 938,397 pounds and an allotment percentage of 37 percent.

Erin Morris,
Associate Administrator, Agricultural Marketing Service.

DEPARTMENT OF HOMELAND SECURITY
8 CFR Parts 212, 214, 245 and 274a
[CIS No. 2507–11; DHS Docket No USCIS–2011–0010]
RIN 1615–AA59
Classification for Victims of Severe; Forms of Trafficking in Persons; Eligibility for ‘’T’’ Nonimmigrant Status; Extension of Comment Period

ACTION: Interim final rule; extension of the comment period.

SUMMARY: On July 16, 2021, the Department of Homeland Security (DHS) reopened the public comment period for the interim final rule titled “Classification for Victims of Severe Forms of Trafficking in Persons; Eligibility for “T” Nonimmigrant Status,” with a comment period ending August 16, 2021. DHS is announcing that the reopened comment period will be extended an additional 30 days. As part of this rulemaking, DHS will consider comments received during the entire public comment period, including comments received since July 16, 2021.

DATES: The comment period for the interim final rule published at 81 FR 92266 (Dec. 19, 2016), which was reopened on July 16, 2021, at 86 FR 37670, is extended. Written comments and related material must be submitted on or before September 14, 2021.

ADDRESSES: You may submit comments on the entirety of this rule package, to include the related information collection requirements, set forth in the 2016 interim final rule (IFR), which is identified as DHS Docket No. USCIS–2011–0010, through the Federal eRulemaking Portal at http://www.regulations.gov. Follow the website instructions for submitting comments. Comments submitted in another manner, including emails or letters sent to DHS or U.S. Citizenship and Immigration Services (USCIS) officials, will not be considered comments on the rule and may not receive a response from DHS. Please note that DHS and USCIS cannot accept any comments that are hand delivered or couriered. In addition, USCIS cannot accept comments contained on any form of digital media storage devices, such as CDs/DVDs and USB drives. Due to COVID–19, USCIS is also not accepting mailed comments at this time. If you cannot submit your comment by using http://www.regulations.gov, please contact Samantha Deshommes, Chief, Regulatory Coordination Division, Office of Policy and Strategy, U.S. Citizenship and Immigration Services, Department of Homeland Security, by telephone at 240–721–3000 for alternate instructions.

FOR FURTHER INFORMATION CONTACT: Andria Strano, Acting Branch Chief, Humanitarian Affairs Division, Office of Policy and Strategy, U.S. Citizenship and Immigration Services, DHS, 5900 Capital Gateway Drive, Camp Springs, MD 20746; telephone 240–721–3000 (this is not a toll-free number). Individuals with hearing or speech impairments may access the telephone numbers above via TTY by calling the toll-free Federal Information Relay Service at 1–877–889–5627 (TTY/TDD).

SUPPLEMENTARY INFORMATION: Interested persons are invited to participate in this rulemaking by submitting written data, views, or arguments on all aspects of this rule. DHS also invites comments that relate to any federalism effects that might result from this rule. Comments that will provide the most assistance to DHS will reference a specific portion of the rule, explain the reason for any recommended change, and include data, information, or authority that support such recommended change.

Instructions: All submissions received must include the agency name and DHS Docket No. USCIS–20011–0010. Providing comments is entirely voluntary. Regardless of how comments are submitted to DHS, all submissions will be posted, without change, to the Federal eRulemaking Portal at http://www.regulations.gov and will include any personal information provided by commenters. Because the information submitted will be publicly available, commenters should consider limiting the amount of personal information provided in each submission. DHS may withhold information provided in comments from public viewing if it determines that such information is offensive or may affect the privacy of an individual. For additional information, please read the Privacy Act notice available through the link in the footer of http://www.regulations.gov.

Docket: For access to the docket, go to http://www.regulations.gov and enter this rulemaking’s eDocket number USCIS 2011–0010.

Background

On December 19, 2016, DHS published an interim final rule (IFR) in the Federal Register at 81 FR 92266 and received 17 public comments. In this IFR, USCIS amended its regulations governing the classification for Victims of Severe Forms of Trafficking in Persons; Eligibility for T Nonimmigrant Status, see Immigration and Nationality Act (INA) sec. 101(a)(15)(T), 8 U.S.C. 1101(a)(15)(T). On July 16, 2021, at 86 FR 37670, DHS published a document reopening the comment period for this rulemaking for 30 days, with the deadline to submit comments set at August 16, 2021. DHS has received a request from multiple stakeholders to extend the deadline for submitting public comments during the reopened public comment period. In response to that request, DHS is extending the reopened comment period for an additional 30 days, to provide a total of 60 days for the public to submit comments. Through this document, DHS is extending the comment period for the IFR published in the Federal Register at 86 FR 37670 until September 14, 2021. DHS will consider comments received during the entire public.
comment period, including comments received since July 16, 2021.

Ur M. Jaddou,
Director, U.S. Citizenship and Immigration Services.

BILLING CODE 9111–97–P

NUCLEAR REGULATORY COMMISSION
10 CFR Parts 15, 170, and 171
[NRC–2018–0292]
RIN 3150–AK24

Revision of Fee Schedules; Fee Recovery for Fiscal Year 2021

AGENCY: Nuclear Regulatory Commission.

ACTION: Final rule; delay of effective date.

SUMMARY: On June 16, 2021, the U.S. Nuclear Regulatory Commission (NRC) published a final rule that amends its regulations pertaining to user fees and annual fees charged to its applicants and licensees. These amendments are necessary to implement the Nuclear Energy Innovation and Modernization Act, which, beginning with fiscal year 2021, requires the NRC to recover, to the maximum extent practicable, approximately 100 percent of its annual budget less certain amounts excluded from this fee recovery requirement. In addition, the final rule also included improvements associated with fee invoicing to implement provisions of NEIMA. The final rule had an original effective date of August 16, 2021. This document delays the effective date of the final rule to August 20, 2021, to ensure that the rule has the 60-day delayed effective date required by the Congressional Review Act.

DATES: As of August 13, 2021, the effective date of the rule amending 10 CFR parts 15, 170, and 171 published at 86 FR 32146, June 16, 2021, is delayed until August 20, 2021.

ADDRESSES: Please refer to Docket ID NRC–2018–0292 when contacting the NRC about the availability of information for this action. You may obtain publicly-available information related to this action by any of the following methods:

• NRC’s Agencywide Documents Access and Management System (ADAMS): You may obtain publicly-available documents online in the ADAMS Public Documents collection at https://www.nrc.gov/reading-rm/adams.html. To begin the search, select “Begin Web-based ADAMS Search.” For problems with ADAMS, please contact the NRC’s Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to pdr.resource@nrc.gov.

• Attention: The PDR, where you may examine and order copies of public documents, is currently closed. You may submit your request to the PDR via email at pdr.resource@nrc.gov or call 1–800–397–4209 between 8:00 a.m. and 4:00 p.m. (EST), Monday through Friday, except Federal holidays.

SUPPLEMENTARY INFORMATION: On June 16, 2021 (86 FR 32146), the NRC published a final rule that amends the licensing, inspection, special project, and annual fees charged to its applicants and licensees. These amendments are necessary to implement the Nuclear Energy Innovation and Modernization Act (NEIMA), which, beginning with fiscal year (FY) 2021, requires the NRC to recover, to the maximum extent practicable, approximately 100 percent of its annual budget less certain amounts excluded from this fee recovery requirement. In addition, the final rule also included improvements associated with fee invoicing to implement provisions of NEIMA.

The FY 2021 final fee rule had an original effective date of August 16, 2021, which is 60 days after the date of publication in the Federal Register. The Congressional Review Act (CRA) requires a 60-day delay in the effective date of any rule determined to be a “major” rule ¹ by the Office of Management and Budget (OMB). The OMB determined the FY 2021 final fee rule to be a major rule under the CRA. The 60-day delay in effective date begins with the date of publication in the Federal Register or the date of congressional notification, whichever is later. Publication of the FY 2021 final fee rule occurred on Wednesday, June 16, 2021, and congressional notification occurred on Thursday, June 17, 2021; however, due to the Federal observance of the Juneteenth national holiday on Friday, June 18, 2021, and the weekend, the congressional notification was not formally recorded until Monday, June 21, 2021, a delay of four days.

Therefore, to ensure that the rule has the 60-day delayed effective date required by the CRA, this document delays the effective date of the FY 2021 final fee rule until August 20, 2021.

For the Nuclear Regulatory Commission.

Cherish K. Johnson,
Chief Financial Officer.

[FR Doc. 2021–17399 Filed 8–12–21; 8:45 am]

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION
10 CFR Part 72
[NRC–2021–0108]
RIN 3150–AK64

List of Approved Spent Fuel Storage Casks: TN Americas, LLC, Standardized Advanced NUHOMS® Horizontal Modular Storage System, Certificate of Compliance No. 1029, Renewal of Initial Certificate and Amendment Nos. 1, 3, and 4

AGENCY: Nuclear Regulatory Commission.

ACTION: Direct final rule.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is amending its spent fuel storage regulations by revising the TN Americas, LLC, Standardized Advanced NUHOMS® Horizontal Modular Storage System listing within the “List of approved spent fuel storage casks” to renew, for an additional 40 years, the initial certificate and Amendment Nos. 1, 3, and 4 of Certificate of Compliance No. 1029. The renewal of the initial certificate and Amendment Nos. 1, 3, and 4 revises the certificate of compliance’s conditions and technical specifications to address aging management activities related to the structures, systems, and components of the dry storage system to ensure that these will maintain their intended functions during the period of extended storage operations.

DATES: This direct final rule is effective October 27, 2021, unless significant adverse comments are received by
September 13, 2021. If this direct final rule is withdrawn as a result of such comments, timely notice of the withdrawal will be published in the Federal Register. Comments received after this date will be considered if it is practical to do so, but the NRC is able to ensure consideration only for comments received on or before this date. Comments received on this direct final rule will also be considered to be comments on a companion proposed rule published in the Proposed Rules section of this issue of the Federal Register.

**ADDRESSES:** Submit your comments, identified by Docket ID NRC–2021–0108 at https://www.regulations.gov. If your material cannot be submitted using https://www.regulations.gov, call or email the individuals listed in the FOR FURTHER INFORMATION CONTACT section of this document for alternate instructions.

For additional direction on obtaining information and submitting comments, see “Obtaining Information and Submitting Comments” in the SUPPLEMENTARY INFORMATION section of this document.

**I. Obtaining Information and Submitting Comments**

**A. Obtaining Information**

Please refer to Docket ID NRC–2021–0108 when contacting the NRC about the availability of information for this action. You may obtain publicly available information related to this action by any of the following methods:

- **Federal Rulemaking Website:** Go to https://www.regulations.gov and search for Docket ID NRC–2021–0108. Address questions about NRC docket to Dawn Forder, telephone: 301–415–3407, email: Dawn.Forder@nrc.gov. For technical questions contact the individuals listed in the FOR FURTHER INFORMATION CONTACT section of this document.

- **NRC’s Agencywide Documents Access and Management System (ADAMS):** You may obtain publicly available documents online in the ADAMS Public Documents collection at https://www.nrc.gov/reading-rm/adams.html. To begin the search, select “Begin Web-based ADAMS Search.” For problems with ADAMS, please contact the NRC’s Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to pdr.resource@nrc.gov. For the convenience of the reader, instructions about obtaining materials referenced in this document are provided in the “Availability of Documents” section.

- **Attention:** The PDR, where you may examine and order copies of public documents, is currently closed. You may submit your request to the PDR via email at pdr.resource@nrc.gov or call 1–800–397–4209 between 8:00 a.m. and 4:00 p.m. (EST), Monday through Friday, except Federal holidays.

**B. Submitting Comments**

Please include Docket ID NRC–2021–0108 in your comment submission. The NRC requests that you submit comments through the Federal rulemaking website at https://www.regulations.gov. If your material cannot be submitted using https://www.regulations.gov, call or email the individuals listed in the FOR FURTHER INFORMATION CONTACT section of this document for alternate instructions.

The NRC cautions you not to include identifying or contact information that you do not want to be publicly disclosed in your comment submission. The NRC will post all comment submissions at https://www.regulations.gov as well as enter the comment submissions into ADAMS. The NRC does not routinely edit comment submissions to remove identifying or contact information.

If you are requesting or aggregating comments from other persons for submission to the NRC, then you should inform those persons not to include identifying or contact information that they do not want to be publicly disclosed in their comment submission. Your request should state that the NRC does not routinely edit comment submissions to remove such information before making the comment submissions available to the public or entering the comment into ADAMS.

**II. Rulemaking Procedure**

This rule is limited to the renewal of the initial certificate and Amendment Nos. 1, 3, and 4 of Certificate of Compliance No. 1029 and does not include other aspects of TN Americas, LLC, Standardized Advanced NUHOMS® Horizontal Modular Storage System. Amendment No. 2 was withdrawn and not issued by the NRC. The NRC is using the “direct final rule procedure” to issue this renewal because it represents a limited and routine change to an existing certificate of compliance that is expected to be non-controversial. Adequate protection of public health and safety continues to be reasonably assured. The amendment to the rule will become effective on October 27, 2021. However, if the NRC receives any significant adverse comments on this direct final rule by September 13, 2021, then the NRC will publish a document that withdraws this action and will subsequently address the comments received in a final rule as a response to the companion proposed rule published in the Proposed Rules section of this issue of the Federal Register.

Absent significant modifications to the proposed revisions requiring republication, the NRC will not initiate a second comment period on this action.

A significant adverse comment is a comment where the commenter explains why the rule would be inappropriate, including challenges to the rule’s underlying premise or approach, or would be ineffective or unacceptable without a change. A comment is adverse and significant if:

1. The comment opposes the rule and provides a reason sufficient to require a substantive response in a notice-and-comment process. For example, a substantive response is required when:
   (a) The comment causes the NRC to reevaluate (or reconsider) its position or conduct additional analysis.
   (b) The comment raises an issue serious enough to warrant a substantive response to clarify or complete the record; or
   (c) The comment raises a relevant issue that was not previously addressed or considered by the NRC.

2. The comment proposes a change or an addition to the rule, and it is apparent that the rule would be ineffective or unacceptable without incorporation of the change or addition.

3. The comment causes the NRC to make a change (other than editorial) to the rule, certificate of compliance, or technical specifications.
III. Background

Section 218(a) of the Nuclear Waste Policy Act of 1982, as amended, requires that "[t]he Secretary [of the Department of Energy] shall establish a demonstration program, in cooperation with the private sector, for the dry storage of spent nuclear fuel at civilian nuclear power reactor sites, with the objective of establishing one or more technologies that the [Nuclear Regulatory] Commission may, by rule, approve for use at the site of any civilian nuclear power reactor without, to the maximum extent practicable, the need for additional site-specific approvals by the Commission." Section 133 of the Nuclear Waste Policy Act states, in part, that "[t]he Commission shall, by rule, establish procedures for the licensing of any technology approved by the Commission under Section 219(a) [sic: 218(a)] for use at the site of any civilian nuclear power reactor."

To implement this mandate, the Commission approved dry storage of spent nuclear fuel in NRC-approved casks under a general license by publishing a final rule that added a new subpart K in part 72 of title 10 of the Code of Federal Regulations (10 CFR) entitled "General License for Storage of Spent Fuel at Power Reactor Sites" (55 FR 29161; July 18, 1990). This rule also established a new subpart L in 10 CFR part 72 entitled "Approval of Spent Fuel Storage Casks," which contains procedures and criteria for obtaining NRC approval of spent fuel storage cask designs. The NRC subsequently issued a final rule on January 6, 2003 (68 FR 463), that approved the Standardized Advanced NUHOMS® Horizontal Modular Storage System design and added it to the list of NRC-approved cask designs in §72.214 as Certificate of Compliance No. 1029.

IV. Discussion of Changes

On May 22, 2019, TN Americas, LLC submitted a request to the NRC to renew, for an additional 40 years, the initial certificate and Amendment Nos. 1, 3, and 4 of Certificate of Compliance No. 1029 for the Standardized Advanced NUHOMS® Horizontal Modular Storage System. TN Americas, LLC, supplemented its request on December 4, 2019, and July 10, 2020.

The renewals of the initial certificate and Amendment Nos. 1, 3, and 4 were conducted in accordance with the renewal provisions in §72.240. This section of the NRC spent fuel storage regulations authorizes NRC staff to include any additional certificate conditions it deems necessary to ensure the safe operation of the casks during the certificate's renewal period. The NRC included five additional conditions to the renewal of the initial certificate of compliance and Amendment Nos. 1, 3, and 4:

- The submittal of an updated final safety analysis report (UFSAR) to address aging management activities resulting from the renewal of the certificate of compliance. This condition ensures that the UFSAR changes are made in a timely fashion to enable general licensees using the storage system during the period of extended operation to develop and implement necessary procedures.
- The requirement that general licensees initiating or using spent fuel dry storage operations with the Standardized Advanced NUHOMS® Horizontal Modular Storage System ensure that their evaluations are included in the reports required by §72.212, “Conditions of general license issued under §72.210.” These reports will include appropriate considerations for the period of extended operation, a review of the UFSAR changes resulting from the certificate of compliance renewal, and a review of the NRC Safety Evaluation Report (SER) related to the certificate of compliance renewal.
- The requirement that future amendments and revisions to this certificate of compliance include evaluations of the impacts to aging management activities to ensure that they remain adequate for any changes to the structures, systems, and components (SSCs).
- The requirement that general licensees not use the OS197, OS197H, and OS200FC transfer casks approved under Certificate of Compliance No. 1004 aged 20 years or more to perform the transfer cask functions in the Standardized Advanced NUHOMS® Horizontal Modular Storage System. This condition prohibits the use of those transfer casks aged 20 years or older because the renewal application for the Certificate of Compliance No. 1004 did not assess performance of the transfer casks after the initial 20-year period.
- The requirement that the Standardized Advanced NUHOMS® Horizontal Modular System loaded up to and including those loaded on February 5, 2023, are considered loaded during the term of the initial certificate of compliance.

The NRC made two corresponding changes to the technical specifications for the initial certificate of compliance and Amendment Nos. 1, 3, and 4:

- Added text to the 'Transfer Cask Section' to ensure that the requirements of the applicable transfer cask aging management program under the Renewed Certificate of Compliance No. 1004 have been satisfied.
- Added a section to the initial certificate of compliance and Amendment Nos. 1, 3, and 4 on the aging management program, which includes establishing, implementing, and maintaining written procedures for each aging management program described in the UFSAR.

As documented in the preliminary SER, the NRC performed a safety evaluation of the proposed certificate of compliance renewal request. The NRC determined that this amendment does not change the cask design or fabrication requirements in the proposed certificate of compliance renewal request. The NRC determined the design of the cask would continue to maintain confinement, shielding, and criticality control in the event of each evaluated accident condition. In addition, any resulting occupational exposure of offsite dose rates from the renewal of the initial certificate of compliance renewal of the Standardized Advanced NUHOMS® Horizontal Modular Storage System, the NRC has determined that if the conditions specified in the certificate of compliance to implement these regulations are met, adequate protection of public health and safety will continue to be reasonably assured.

This direct final rule revises the Standardized Advanced NUHOMS® Horizontal Modular Storage System listing in §72.214 by renewing for 40 more years the initial certificate and Amendment Nos. 1, 3, and 4 of Certificate of Compliance No. 1029. The renewal consists of the changes previously described and set forth in the renewal initial certificate and amendments and their revised technical specifications. The revised technical specifications are identified in the SER.

V. Voluntary Consensus Standards

The National Technology Transfer and Advancement Act of 1995 (Pub. L. 104–113) requires that Federal agencies use technical standards that are developed or adopted by voluntary consensus standards by voluntary consensus standards. The use of such a standard is inconsistent with applicable law or otherwise
impractical. In this direct final rule, the NRC revises the TN Americas, LLC Standardized Advanced NUHOMS® Horizontal Modular Storage System design listed in §72.214, “List of approved spent fuel storage casks.” This action does not constitute the establishment of a standard that contains generally applicable requirements.

VI. Agreement State Compatibility

Under the “Agreement State Program Policy Statement,” approved by the Commission on October 2, 2017, and published in the Federal Register on October 18, 2017 (82 FR 48535), this rule is classified as Compatibility Category NRC—Areas of Exclusive NRC Regulatory Authority. The NRC program elements in this category are those that relate directly to areas of regulation reserved to the NRC by the Atomic Energy Act of 1954, as amended, or the provisions of 10 CFR chapter I. Therefore, compatibility is not required for program elements in this category. Although an Agreement State may not adopt program elements reserved to the NRC, and the Category “NRC” does not confer regulatory authority on the State, the State may wish to inform its licensees of certain requirements by means consistent with the particular State’s administrative procedure laws.

VII. Plain Writing

The Plain Writing Act of 2010 (Pub. L. 111–274) requires Federal agencies to write documents in a clear, concise, and well-organized manner. The NRC has written this document to be consistent with the Plain Writing Act as well as the Presidential Memorandum, “Plain Language in Government Writing,” published June 10, 1998 (63 FR 31885).

VIII. Environmental Assessment and Finding of No Significant Impact

Under the National Environmental Policy Act of 1969, as amended, and the NRC’s regulations in 10 CFR part 51, “Environmental Protection Regulations for Domestic Licensing and Related Regulatory Functions,” the NRC has determined that this direct final rule, if adopted, would not be a major Federal action significantly affecting the quality of the human environment and, therefore, an environmental impact statement is not required. The NRC has made a finding of no significant impact based on this environmental assessment.

A. The Action

The action is to amend §72.214 to revise the Standardized Advanced NUHOMS® Horizontal Modular Storage System listing within the “List of approved spent fuel storage casks” to renew, for an additional 40 years, the initial certificate and Amendment Nos. 1, 3, and 4 of Certificate of Compliance No. 1029.

B. The Need for the Action

This direct final rule renews the initial certificate and Amendment Nos. 1, 3, and 4 of Certificate of Compliance No. 1029 for the TN Americas, LLC, Standardized Advanced NUHOMS® Horizontal Modular Storage System design within the list of approved spent fuel storage casks to allow power reactor licensees to store spent fuel at reactor sites in casks with the approved modifications under a general license. Specifically, this rule extends the expiration date for the TN Americas, LLC, Standardized Advanced NUHOMS® Horizontal Modular Storage System certificate for an additional 40 years, allowing a power reactor licensee to continue using it under general license provisions in an independent spent fuel storage installation to store spent fuel in dry casks in accordance with 10 CFR part 72.

C. Environmental Impacts of the Action

On July 18,1990 (55 FR 29181), the NRC issued an amendment to 10 CFR part 72 to provide for the storage of spent fuel under a general license in cask designs approved by the NRC. The potential environmental impact of using NRC-approved storage casks was analyzed in the environmental assessment for the 1990 final rule. The environmental assessment for the renewal of the initial certificate and Amendment Nos. 1, 3, and 4 of Certificate of Compliance No. 1029 tiers off of the environmental assessment for the July 18, 1990, final rule. Tiering on past environmental assessments is a standard process under the National Environmental Policy Act of 1969, as amended. As required by §72.240, applications for renewal of a spent fuel storage certificate of compliance design are required to demonstrate that SSCs important to safety will continue to perform their intended function for the requested renewal term. As discussed in the NRC staff’s SER for the renewal of the initial certificate and Amendment Nos. 1, 3, and 4, the NRC staff has approved conditions in the renewed initial certificate and Amendment Nos. 1, 3, and 4 requiring the general licensee to implement the aging management activities described in the renewal application and incorporated into the UFSAR. These conditions ensure that the TN Americas, LLC, Standardized Advanced NUHOMS® Horizontal Modular Storage System will continue to perform its intended safety functions and provide reasonable assurance of adequate protection of public health and safety throughout the renewal period. Incremental impacts from continued use of the Standardized Advanced NUHOMS® Horizontal Modular Storage System under a general license for an additional 40 years are not considered significant. When the general licensee follows all procedures and administrative controls, including the conditions established because of this renewal, no effluents are expected from the sealed dry cask systems. Activities associated with cask loading and decontamination may result in some small incremental liquid and gaseous effluents, but these activities will be conducted under 10 CFR parts 50 and 52 reactor operating licenses, and effluents will be controlled within existing reactor site technical specifications. Because reactor sites are relatively large, any incremental offsite doses due to direct radiation exposure from the spent fuel storage casks are expected to be small, and when combined with the contribution from reactor operations, well within the annual dose equivalent of 0.25 mSv (25 mrem) limit to the whole body specified in §72.104. Incremental impacts on collective occupational exposures due to dry cask spent fuel storage are expected to be only a small fraction of the exposures from operation of the nuclear power station.

The Standardized Advanced NUHOMS® Horizontal Modular Storage System is designed to mitigate the effects of design basis accidents that could occur during storage. Design basis accidents account for human-induced events and the most severe natural phenomena reported for the site and surrounding area. Postulated accidents analyzed for an independent spent fuel storage installation include tornado winds and tornado-generated missiles, a design basis earthquake, a design basis flood, an accidental cask drop, lightning effects, fire, explosions, and other incidents.

During the promulgation of the amendments that added subpart K to 10 CFR part 72 (55 FR 29181; July 18, 1990), the NRC staff assessed the public health consequences of dry cask storage accidents and sabotage events. In the supporting analyses for these amendments, the NRC staff determined that a release from a dry cask storage system would be comparable in magnitude to a release from the same quantity of fuel in a spent fuel storage pool. As a result of these evaluations, the NRC staff determined that, because
of the physical characteristics of the storage casks and conditions of storage that include specific security provisions, the potential risk to public health and safety due to accidents or sabotage is very small.

Considering the specific design requirements for each accident or sabotage condition, the design of the cask would maintain confinement, shielding, and criticality control. If confinement, shielding, or criticality control are maintained, the environmental impacts from an accident would be insignificant.

There are no changes to cask design or fabrication requirements in the renewed initial certificate or Amendment Nos. 1, 3, and 4. Because there are no significant design or process changes, any resulting occupational exposure or offsite dose rates from the implementation of the renewal of the initial certificate and Amendment Nos. 1, 3, and 4 would remain well within the 10 CFR part 20 limits.

In summary, the changes will not result in any radiological or non-radiological environmental impacts that significantly differ from the environmental impacts evaluated in the environmental assessment supporting the July 18, 1990, final rule. Compliance with the requirements of 10 CFR parts 20 and 72 would provide reasonable assurance that adequate protection of public health and safety will continue. The NRC, in its SER for the renewal of the Standardized Advanced NUHOMS® Horizontal Modular Storage System, has determined if the conditions specified in the certificate of compliance to implement these regulations are met, adequate protection of public health and safety will continue to be reasonably assured.

Based on the previously stated assessments and its SER for the requested renewal of the Standardized Advanced NUHOMS® Horizontal Modular Storage System certificates, the NRC has determined that the expiration date of this system in 10 CFR 72.214 can be safely extended for an additional 40 years, and that commercial nuclear power reactor licensees can continue using the system during this period under a general license without significant impacts on the human environment.

D. Alternative to the Action

The alternative to this action is to deny approval of the renewals and not issue the direct final rule. Under this alternative, the NRC would either (1) require general licensees using the Standardized Advanced NUHOMS® Horizontal Modular Storage System to unload the spent fuel from these systems and either return it to a spent fuel pool or re-load it into a dry storage cask system listed in 10 CFR 72.214; or (2) require that users of the existing Standardized Advanced NUHOMS® Horizontal Modular Storage System request site-specific licensing proceedings to continue storage in these systems.

The environmental impacts of requiring the licensee to unload the spent fuel and either return it to the spent fuel pool or re-load it into another NRC-approved cask system would result in increased radiological doses to workers. These increased doses would be due primarily to direct radiation from the casks while the workers unloaded, transferred, and re-loaded the spent fuel. These activities would consist of transferring the dry storage canisters to a cask-handling building, opening the canister lid welds, returning the canister to a spent fuel pool or dry transfer facility, removing the fuel assemblies, and re-loading them, either into a spent fuel pool storage rack or another NRC-approved dry storage system. In addition to the increased occupational doses to workers, these activities may also result in additional liquid or gaseous effluents.

Alternatively, users of the dry cask storage system would need to apply for a site-specific license. Under this option for implementing the no-action alternative, interested licensees would have to prepare, and the NRC would have to review, each separate license application, thereby increasing the administrative burden upon the NRC and the costs to each licensee.

In summary, the no-action alternative would entail either (1) more environmental impacts than the preferred action from transferring the spent fuel now in the Standardized Advanced NUHOMS® Horizontal Modular Storage System; or (2) cost and administrative impacts from multiple licensing actions that, in aggregate, are likely to be the same as, or more likely greater than, the preferred action.

E. Alternative Use of Resources

Renewal of the initial certificate and Amendment Nos. 1, 3, and 4 to Certificate of Compliance No. 1029 would result in no irreversible commitment of resources.

F. Agencies and Persons Contacted

No agencies or persons outside the NRC were contacted in connection with the preparation of this environmental assessment.

G. Finding of No Significant Impact

The environmental impacts of the action have been reviewed under the requirements in the National Environmental Policy Act of 1969, as amended, and the NRC’s regulations in subpart A of 10 CFR part 51, “Environmental Protection Regulations for Domestic Licensing and Related Regulatory Functions.” Based on the foregoing environmental assessment, the NRC concludes that this direct final rule “List of Approved Spent Fuel Storage Casks: TN Americas, LLC, Standardized Advanced NUHOMS® Horizontal Modular Storage System, Certificate of Compliance No. 1029, Renewal of Initial Certificate and Amendment Nos. 1, 3, and 4,” will not have a significant effect on the human environment. Therefore, the NRC has determined that an environmental impact statement is not necessary for this direct final rule.

IX. Paperwork Reduction Act Statement

This direct final rule does not contain any new or amended collections of information subject to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 et seq.). Existing collections of information were approved by the Office of Management and Budget, approval number 3150–0132.

Public Protection Notification

The NRC may not conduct or sponsor, and a person is not required to respond to, a request for information or an information collection requirement unless the requesting party displays a currently valid Office of Management and Budget control number.

X. Regulatory Flexibility Certification

Under the Regulatory Flexibility Act of 1980 (5 U.S.C. 605(b)), the NRC certifies that this direct final rule will not, if issued, have a significant economic impact on a substantial number of small entities. This direct final rule affects only nuclear power plant licensees and TN Americas, LLC. These entities do not fall within the scope of the definition of small entities set forth in the Regulatory Flexibility Act or the size standards established by the NRC ($ 2.810).

XI. Regulatory Analysis

On July 18, 1990 (55 FR 29181), the NRC issued an amendment to 10 CFR part 72 to provide for the storage of spent nuclear fuel under a general license in cask designs approved by the NRC. Any nuclear power reactor licensee can use NRC-approved cask
Further, as documented in the consistent with previous NRC actions. Licensing actions that, in aggregate, are modular storage system; or (2) cost and advanced NUHOMS alternative would entail either (1) more NUHOMS and 4 of the standardized advanced NUHOMS® Horizontal Modular Storage System for an additional 40 years beyond the initial certificate term. TN Americas, LLC supplemented its request on December 4, 2019, and July 10, 2020. Because TN Americas, LLC filed its renewal application at least 30 days before the certificate expiration date of February 5, 2023, pursuant to the timely renewal provisions in § 72.240(b), the initial issuance of the certificate and Amendment Nos. 1, 3, and 4 of Certificate of Compliance No. 1029 did not expire.

The alternative to this action is to deny approval of the renewal of the initial certificate and Amendment Nos. 1, 3, and 4 of Certificate of Compliance No. 1029 and end this direct final rule. Under this alternative, the NRC would either (1) require general licensees using the standardized advanced NUHOMS® Horizontal Modular Storage System to unload spent fuel from these systems and return it to a spent fuel pool or reload it into a different dry storage cask system listed in 10 CFR 72.214; or (2) require that users of the existing standardized advanced NUHOMS® Horizontal Modular Storage System request site-specific licensing proceedings to continue storage in these systems. Therefore, the no-action alternative would result in a significant burden on licensees and an additional inspection or licensing caseload on the NRC. In addition, the no-action alternative would entail either (1) more environmental impacts than the preferred action from transferring the spent fuel now in the standardized advanced NUHOMS® Horizontal Modular Storage System; or (2) cost and administrative impacts from multiple licensing actions that, in aggregate, are likely to be the same as, or more likely greater than, the preferred action. Approach of this direct final rule is consistent with previous NRC actions. Further, as documented in the preliminary SER and environmental assessment, this direct final rule will have no adverse effect on public health and safety or the environment. This direct final rule has no significant identifiable impact or benefit on other government agencies. Based on this regulatory analysis, the NRC concludes that the requirements of this direct final rule are commensurate with the NRC’s responsibilities for public health and safety and the common defense and security. No other available alternative is believed to be as satisfactory; therefore, this action is recommended.

XII. Backfitting and Issue Finality

The NRC has determined that the backfit rule (§ 72.62) does not apply to this direct final rule. Therefore, a backfit analysis is not required. This direct final rule renews Certificate of Compliance No. 1029 for the standardized advanced NUHOMS® Horizontal Modular Storage System, as currently listed in § 72.214, to extend the expiration date of the initial certificate and Amendment Nos. 1, 3, and 4 by 40 years. The renewed initial certificate and Amendment Nos. 1, 3, and 4 consist of the changes previously described, as set forth in the revised certificate of compliance and technical specifications.

Extending the effective date of the initial certificate and Amendment Nos. 1, 3, and 4 for 40 more years and requiring the implementation of aging management activities does not impose any modification or addition to the design of a cask system’s SSR, or to the procedures or organization required to operate the system during the initial 20-year storage period of the system, as authorized by the current certificate. General licensees that have loaded these casks, or that load these casks in the future under the specifications of the applicable certificate, may continue to store spent fuel in these systems for the initial 20-year storage period authorized by the original certificate. The aging management activities required to be implemented by this renewal are only required after the storage cask system’s initial 20-year service period ends. As explained in the 2011 final rule that amended 10 CFR part 72 (76 FR 8872, Question 1), the general licensee’s authority to use a particular storage cask design under an approved certificate of compliance terminates 20 years after the date that the general licensee first loads the particular cask with spent fuel, unless the cask’s certificate of compliance is renewed. Because this rulemaking is voluntary implemented by vendors, the renewal of the initial certificate and Amendment Nos. 1, 3, and 4 is not an imposition of new or changed requirements from which these licensees would otherwise be protected by the backfitting provisions in 10 CFR 72.62.

Even if renewal of the initial certificate and Amendment Nos. 1, 3, and 4 of Certificate of Compliance No. 1029 could be considered a backfit, TN Americas, LLC, as the holder of the certificate of compliance and vendor of the casks, is not protected by the backfitting provisions in 10 CFR 72.62.

Unlike a vendor, general licensees using the existing systems subject to these renewals would be protected by the backfitting provisions in 10 CFR 72.62 if the renewals constituted new or changed requirements applicable during the initial 20-year storage period. But, as previously explained, renewal of the initial certificate and Amendment Nos. 1, 3, and 4 of Certificate of Compliance No. 1029 does not impose such requirements. The general licensee using the initial certificate or Amendment Nos. 1, 3, or 4 of Certificate of Compliance No. 1029 may continue storing material in their respective cask systems for the initial 20-year storage period identified in the applicable certificate or amendment with no changes. If general licensees choose to continue to store spent fuel in standardized advanced NUHOMS® Horizontal Modular Storage Systems after the initial 20-year period, these general licensees will be required to implement aging management activities for any cask systems subject to a renewed certificate of compliance, but such continued use is voluntary.

For these reasons, renewing the initial certificate and Amendment Nos. 1, 3, and 4 of Certificate of Compliance No. 1029, and imposing the additional conditions previously discussed, does not constitute backfitting under § 72.62, or otherwise represent an inconsistency with the issue finality provisions applicable to combined licenses in 10 CFR part 52. Accordingly, the NRC has not prepared a backfit analysis for this rulemaking.

XIII. Congressional Review Act

This direct final rule is not a rule as defined in the Congressional Review Act.

XIV. Availability of Documents

The documents identified in the following table are available to interested persons, as indicated.
The NRC may post materials related to this document, including public comments, on the Federal rulemaking website at https://www.regulations.gov under Docket ID NRC–2021–0108.

List of Subjects in 10 CFR Part 72

Administrative practice and procedure, Hazardous waste, Indians, Intergovernmental relations, Nuclear energy, Penalties, Radiation protection, Reporting and recordkeeping requirements, Security measures, Spent fuel, Whistleblowing.

For the reasons set out in the preamble and under the authority of the Atomic Energy Act of 1954, as amended; the Energy Reorganization Act of 1974, as amended; the Nuclear Waste Policy Act of 1982, as amended; and 5 U.S.C. 552 and 553, the NRC is adopting the following amendments to 10 CFR part 72:

PART 72—LICENSING REQUIREMENTS FOR THE INDEPENDENT STORAGE OF SPENT NUCLEAR FUEL, HIGH-LEVEL RADIOACTIVE WASTE, AND REACTOR-RELATED GREATER THAN CLASS C WASTE

1. The authority citation for part 72 continues to read as follows:

Authority: Atomic Energy Act of 1954, secs. 51, 53, 57, 62, 63, 65, 69, 81, 161, 182, 183, 184, 186, 187, 189, 223, 234, 274 (42 U.S.C. 2071, 2073, 2077, 2092, 2093, 2095, 2099, 2111, 2201, 2210e, 2232, 2233, 2234, 2236, 2237, 2238, 2273, 2282, 2021); Energy Reorganization Act of 1974, as amended; the Nuclear Waste Policy Act of 1982, as amended; and 5 U.S.C. 552 and 553; the NRC is adopting the following amendments to 10 CFR part 72:

2. In §72.214, Certificate of Compliance No. 1029 is revised to read as follows:

§72.214 List of approved spent fuel storage casks.

* * * * *

Certificate Number: 1029.

Initial Certificate Effective Date: February 5, 2003, superseded by Renewed Initial.

Certificate Effective Date: October 27, 2021.

Amendment Number 1 Effective Date: May 16, 2005, superseded by Renewed. Amendment Number 1 Effective Date: October 27, 2021.

Amendment Number 2 Effective Date: Amendment not issued by the NRC. Amendment Number 3 Effective Date: February 23, 2015, superseded by Renewed. Amendment Number 3 Effective Date: October 27, 2021.

Amendment Number 4 Effective Date: March 12, 2019, superseded by Renewed. Amendment Number 4 Effective Date: October 27, 2021.

SAR Submitted by: Transnuclear, Inc., now TN Americas, LLC. Renewal SAR Submitted by: TN Americas, LLC.

Certificate Expiration Date: February 5, 2023.

Renewed Certificate Expiration Date: February 5, 2023. Model Number: Standardized Advanced NUHOMS®–24PT1, –24PT4, and –32PTH2.* * * * *

Dated: August 6, 2021.

For the Nuclear Regulatory Commission.

Daniel H. Dorman,
Acting Executive Director for Operations.

BILLING CODE 7590–01–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

RIN 2120–AA64

Airworthiness Directives; Airbus Canada Limited Partnership (Type Certificate Previously Held by C Series Aircraft Limited Partnership (CSALP); Bombardier, Inc.) Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule; request for comments.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for certain Airbus Canada Model BD–500–1A10 and BD–500–1A11 airplanes. This AD was prompted by the potential for the flexible hose assembly of the fuel motive flow (MF), installed between the pylon and wing, to be installed twisted in the shroud, which can restrict the flow of fuel for the MF and cause fuel imbalance and damage to the shroud assembly. This AD requires inspecting for damage of the left and right MF fuel line assemblies (including the flexible-hose and shroud assemblies), and replacing damaged parts, as specified in a Transport Canada Civil Aviation (TCCA) AD, which is incorporated by reference. The FAA is issuing this AD...
to address the unsafe condition on these products.

**DATES:** This AD becomes effective August 30, 2021.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of August 30, 2021.

The FAA must receive comments on this AD by September 27, 2021.

**ADDRESSES:** You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- **Federal eRulemaking Portal:** Go to https://www.regulations.gov. Follow the instructions for submitting comments.
- **Fax:** 202–493–2251.
- **Mail:** U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.
- **Hand Delivery:** Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For material incorporated by reference (IBR) in this AD, contact TCCA, Transport Canada National Aircraft Certification, 159 Cleopatra Drive, Nepean, Ontario K1A 0N5, Canada; telephone 888–663–3639; email AD-CN@tc.gc.ca; internet https://tc.canada.ca/en/aviation. You may view this IBR material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195. It is also available in the AD docket at https://www.regulations.gov by searching for and locating Docket No. FAA–2021–0669.

**Examining the AD Docket**

You may examine the AD docket at https://www.regulations.gov by searching for and locating Docket No. FAA–2021–0669; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this AD, any comments received, and other information. The street address for Docket Operations is listed above.

**FOR FURTHER INFORMATION CONTACT:** Jiwan Karunatilake, Aerospace Engineer, Airframe and Propulsion Section, FAA, New York ACO Branch, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 516–228–7300; fax 516–794–5531; email 9-ave-nyaco-cos@faa.gov.

**SUPPLEMENTARY INFORMATION:**

**Background**

TCCA, which is the aviation authority for Canada, has issued TCCA AD CF–2021–09, dated March 11, 2021 (TCCA AD CF–2021–09) (also referred to as the Mandatory Continuing Airworthiness Information, or the MCAI), to correct an unsafe condition for certain Airbus Canada Limited Partnership Model BD–500–1A10 and BD–500–1A11 airplanes.

This AD was prompted by the determination that a new configuration of the pylon-to-wing area MF flexible fuel line assembly was introduced without revision or modification to the installation procedure, potentially resulting in a twisted MF flexible fuel line in the shroud. This can restrict the flow of fuel of the MF, which can cause fuel imbalance and possible damage including abrasion to the shroud assembly. The FAA is issuing this AD to address this condition, which could result in the consequent abrasion of the fuel line and a possible fuel leak; as a result, the electrical harness connectors in the wing area could be a potential ignition source and pose a risk of fire. See the MCAI for additional background information.

**Related Service Information Under 1 CFR Part 51**

TCCA AD CF–2021–09 describes procedures for a general visual inspection for damage (including permanent deformities) of the left and right MF fuel line assemblies (including the flexible-hose assembly and shroud assembly), and replacement of affected MF fuel line assemblies (including cleaning of the ends of the flexible-hose assembly, injecting grease at both ends of the flexible-hose assembly, and torquing the aft end of the flexible-hose assembly). This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the ADDRESSES section.

**FAA’s Determination**

This product has been approved by the aviation authority of another country, and is approved for operation in the United States. Pursuant to the FAA’s bilateral agreement with the State of Design Authority, the FAA has been notified of the unsafe condition described in the MCAI referenced above. The FAA is issuing this AD because the FAA evaluated all pertinent information and determined the unsafe condition exists and is likely to exist or develop on other products of the same type design.

**Requirements of This AD**

This AD requires accomplishing the actions specified in TCCA AD CF–2021–09 described previously, as incorporated by reference, except for any differences identified as exceptions in the regulatory text of this AD.

**Explanation of Required Compliance Information**

In the FAA’s ongoing efforts to improve the efficiency of the AD process, the FAA developed a process to use some civil aviation authority (CAA) ADs as the primary source of information for compliance with requirements for corresponding FAA ADs. The FAA has been coordinating this process with manufacturers and CAAs. As a result, TCCA AD CF–2021–09 is incorporated by reference in this AD. This AD requires compliance with TCCA AD CF–2021–09 in its entirety through that incorporation, except for any differences identified as exceptions in the regulatory text of this AD. Service information required by TCCA AD CF–2021–09 for compliance will be available at https://www.regulations.gov by searching for and locating Docket No. FAA–2021–0669 after this AD is published.

FAA’s Justification and Determination of the Effective Date

An unsafe condition exists that requires the immediate adoption of this AD without providing an opportunity for public comments prior to adoption. The FAA has found that the risk to the flying public justifies waiving notice and comment prior to adoption of this rule because a twisted MF flexible fuel line in the shroud can restrict the flow of fuel of the MF and cause fuel imbalance and possible damage including abrasion to the shroud assembly and fuel line, resulting in a fuel leak; as a result, the electrical harness connectors in the wing area are a potential ignition source and pose a risk of fire. In addition, the compliance time for the required action is shorter than the time necessary for the public to comment and for publication of the final rule. Therefore, the FAA finds good cause that notice and opportunity for prior public comment are impracticable. In addition, for the reasons stated above, the FAA finds that good cause exists for making this amendment effective in less than 30 days.

**Comments Invited**

The FAA invites you to send any written relevant data, views, or arguments about this AD. Send your comments to an address listed under ADDRESSES. Include “Docket No. FAA–
2021–0669; Project Identifier MCAI–2021–00314–T” at the beginning of your comments. The most helpful comments reference a specific portion of the final rule, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this final rule because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to https://www.regulations.gov, including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this final rule.

Confidential Business Information
CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this AD contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this AD, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as “PROPIN.” The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this AD. Submissions containing CBI should be sent to Jiwan Karunatilake, Aerospace Engineer, Airframe and Propulsion Section, FAA, New York ACO Branch, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 516–228–7300; fax 516–794–5531; email 9-avs-nyaco-cos@faa.gov. Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Regulatory Flexibility Act (RFA)
The requirements of the RFA do not apply when an agency finds good cause pursuant to 5 U.S.C. 553 to adopt a rule without prior notice and comment. Because the FAA has determined that it has good cause to adopt this rule without notice and comment, RFA analysis is not required.

Costs of Compliance
The FAA estimates that this AD affects 5 airplanes of U.S. registry. The FAA estimates the following costs to comply with this AD:

### ESTIMATED COSTS FOR REQUIRED ACTIONS

<table>
<thead>
<tr>
<th>Labor cost</th>
<th>Parts cost</th>
<th>Cost per product</th>
<th>Cost on U.S. operators</th>
</tr>
</thead>
<tbody>
<tr>
<td>7 work-hours × $85 per hour = $595</td>
<td>$0</td>
<td>$595</td>
<td>$2,975</td>
</tr>
</tbody>
</table>

The FAA estimates the following costs to do any necessary on-condition actions that would be required based on the results of any required actions. The FAA has no way of determining the number of aircraft that might need this on-condition action:

### ESTIMATED COSTS OF ON-CONDITION ACTIONS

<table>
<thead>
<tr>
<th>Labor cost</th>
<th>Parts cost</th>
<th>Cost per product</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.5 work-hour × $85 per hour = $42.50</td>
<td>$20,260</td>
<td>$20,302.50</td>
</tr>
</tbody>
</table>

According to the manufacturer, some or all of the costs of this AD may be covered under warranty, thereby reducing the cost impact on affected operators. The FAA does not control warranty coverage for affected operators. As a result, the FAA has included all known costs in the cost estimate.

Authority for This Rulemaking
Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency’s authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings
The FAA determined that this AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

1. Is not a “significant regulatory action” under Executive Order 12866, and
2. Will not affect intrastate aviation in Alaska.

List of Subjects in 14 CFR Part 39
Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment
Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

**Authority:** 49 U.S.C. 106(g), 40113, 44701.
§ 39.13 [Amended]

2. The FAA amends §39.13 by adding the following new airworthiness directive:

(a) Effective Date

This airworthiness directive (AD) becomes effective August 30, 2021.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Airbus Canada Limited Partnership (type certificate previously held by C-Series Aircraft Limited Partnership (CSALP); Bombardier, Inc.) Model BD–500–1A10 and BD–500–1A11 airplanes, certified in any category, as identified in Transport Canada Civil Aviation (TCCA) AD CF–2021–09, dated March 11, 2021 (TCCA AD CF–2021–09).

(d) Subject

Air Transport Association (ATA) of America Code 28, Aircraft fuel system.

(e) Reason

This AD was prompted by the potential for the flexible hose assembly of the fuel motive flow (MF) line, installed between the pylons and wing, to be installed twisted in the shroud, which can restrict the flow of fuel for the MF and cause fuel imbalance and possible damage, including abrasion, to the shroud assembly. The FAA is issuing this AD to address this condition, which could result in abrasion of the fuel line and a possible fuel leak; as a result, the electrical harness connectors in the wing area could be a potential ignition source and pose a risk of fire.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Requirements

Except as specified in paragraph (h) of this AD: Comply with all required actions and times specified in, and in accordance with, TCCA AD CF–2021–09.

(h) Exception to TCCA AD CF–2021–09

(1) Where TCCA AD CF–2021–09 refers to this AD, this AD requires using the effective date of this AD.

(2) Where TCCA AD CF–2021–09 specifies replacing MF fuel line assemblies, this AD requires that replacement before further flight after any damage (including any permanent deformity) is detected.

(i) No Return of Parts

Although the service information referenced in TCCA AD CF–2021–09 specifies to return certain parts to the manufacturer, this AD does not include that requirement.

(j) Other FAA AD Provisions

The following provisions also apply to this AD:

(1) Alternative Methods of Compliance (AMOCs): The Manager, New York ACO Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19, in accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the manager of the certification office, send it to ATTN: Program Manager, Continuing Operational Safety, FAA, New York ACO Branch, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590: telephone 516–228–7300; fax 516–794–5531. Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(2) Contacting the Manufacturer: For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, New York ACO Branch, FAA; or Transport Canada Civil Aviation (TCCA); or Airbus Canada’s TCCA Design Approval Organization (DAO). If approved by the DAO, the approval must include the DAO-authorized signature.

(k) Related Information

For more information about this AD, contact Jiwan Karmatilake, Aerospace Engineer, Airframe and Propulsion Section, FAA, New York ACO Branch, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590: telephone 516–228–7300; fax 516–794–5531; email 9-avs-nyaco-cos@faa.gov.

(l) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(2) [Reserved]

(3) For TCCA AD CF–2021–09, contact TCCA, Transport Canada National Airworthiness Certification, 159 Cleopatra Drive, Nepean, Ontario K1A 0N5, Canada; telephone 613–663–3639; email AD-CN@tc.gc.ca; internet https://tc.canada.ca/en/aviation.

(4) You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–217–3895. This material may be found in the AD docket on the internet at https://www.regulations.gov by searching for and locating Docket No. FAA–2021–0669.

(5) You may view this material that is incorporated by reference at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, email fr.inspection@nara.gov, or go to https://www.archives.gov/federal-register/ibr-locations.html.
assign the use of the airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it establishes restricted area airspace at Cherry Point, NC, to enhance aviation safety and accommodate essential U.S. Marine Corps training activities.

History

The FAA published a notice of proposed rulemaking for Docket No. FAA–2019–0111 in the Federal Register (85 FR 16918; March 25, 2020), proposing to expand the restricted airspace at MCAS Cherry Point, NC, by establishing restricted area R–5306F, because the altitude constraints of the current airspace structure cannot fully support U.S. Marine Corps training and readiness requirements. Interested parties were invited to participate in this rulemaking effort by submitting written comments on the proposal. No comments were received.

The Rule

This action amends 14 CFR part 73 by establishing restricted area R–5306F, Cherry Point, NC, to overlie the existing restricted area R–5306A, and the adjacent Core MOA. Restricted area R–5306F extends from FL 180 to FL 290. The time of designation is Monday through Friday, 0800 to 0000 hours, local time; other times by NOTAM.

In conjunction with R–5306A, R–5306F will provide the low-altitude to high-altitude restricted airspace needed to train in the variety of tactics as discussed above.

There are no current Air Traffic Service routes (i.e., jet routes or Q-routes) or preferential IFR routes that are impacted by the restricted area. R–5306F is joint-use special use airspace; meaning that the using agency will return the restricted area to the controlling agency (FAA, Washington ARTCC) on a real-time basis when not in use by the using agency. Supersonic flight will not be conducted in R–5306F.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore: (1) Is not a “significant regulatory action” under Executive Order 12866; (2) is not a “significant rule” under Department of Transportation (DOT) Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that only affects air traffic procedures and air navigation, it is certified that this rule does not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

The FAA has determined that this action of establishing restricted area R–5306F at MCAS Cherry Point, NC, qualifies for categorical exclusion under the National Environmental Policy Act (42 U.S.C. 4321 et seq.) and its implementing regulations at 40 CFR part 1500, and in accordance with FAA Order 1050.1F, Environmental Impacts: Policies and Procedures, paragraph 5–6.5f, which categorically excludes from further environmental impact review actions that increase the altitude of special use airspace. As such, this action is not expected to result in any potentially significant environmental impacts. In accordance with FAA Order 1050.1F, paragraph 5–2 regarding Extraordinary Circumstances, the FAA has reviewed this action for factors and circumstances in which a normally categorically excluded action may have a significant environmental impact requiring further analysis. The FAA has determined that no extraordinary circumstances exist that warrant preparation of an environmental assessment or environmental impact study. The FAA’s categorical exclusion declaration and decision for this action is separately documented in a categorical exclusion dated August 25, 2020.

List of Subjects in 14 CFR Part 73

Airspace, Prohibited areas, Restricted areas.

The Amendment

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 73 as follows:

PART 73—SPECIAL USE AIRSPACE

1. The authority citation for part 73 continues to read as follows:

§ 73.53 North Carolina [Amended]

2. Section 73.53 is amended as follows:

R–5306F Cherry Point, NC [New]

Boundaries. Beginning at lat. 35°23′16″ N, long. 76°34′39″ W; to lat. 35°18′16″ N, long. 76°16′29″ W; to lat. 35°04′31″ N, long. 76°06′51″ W; to lat. 35°00′31″ N, long. 76°00′59″ W; to lat. 35°00′22″ N, long. 76°00′51″ W; whence southwest 3 NM from and parallel to the shoreline to lat. 34°40′16″ N, long. 76°24′45″ W; to lat. 34°40′14″ N, long. 76°23′08″ W; to lat. 34°46′01″ N, long. 76°29′50″ W; to lat. 33°08′01″ N, long. 76°51′19″ W; to the point of beginning.

Designated altitudes. FL 180 to FL 290.

Time of designation. Monday through Friday, 0800 to 0000; other times by NOTAM.

Controlling agency. FAA, Washington ARTCC.

Using agency. USMC, Commanding Officer, U.S. Marine Corps Air Station Cherry Point, NC.

Issued in Washington, DC, on August 9, 2021.

George Gonzalez,

Acting Manager, Rules and Regulations Group.

BILLING CODE 4910–13–P

SECURITIES AND EXCHANGE COMMISSION

17 CFR Part 241

[Release No. 34–92565]

Procedures for the Commission’s Use of Certain Authorities Under Rule 21F–3(b)(3) and Rule 21F–6 of the Securities Exchange Act of 1934

AGENCY: Securities and Exchange Commission.

ACTION: Policy statement.

SUMMARY: The Securities and Exchange Commission (“Commission” or “SEC”) is issuing this statement to clarify how the SEC will proceed when addressing certain issues under Exchange Act Rule 21F–3(b)(3) and Exchange Act Rule 21F–6 while the staff is preparing and the Commission is considering potential amendments to those rules (“Interim Policy-Review Period”). These procedures will remain in effect until withdrawn by the Commission.

DATES: The policy statement is effective: August 13, 2021.

FOR FURTHER INFORMATION CONTACT: Emily Pasquinelli, Acting Chief in the Office of the Whistleblower, Division of Enforcement, at (202) 551–5973; William K. Shirey, Counsel to the Solicitor, Office of the General Counsel, at (202) 551–5043; Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549.

SUPPLEMENTARY INFORMATION:

1. Background

Pursuant to the Dodd-Frank Consumer Protection and Wall Street
Reform Act of 2010 ("Dodd-Frank Act"). Section 21F was added to the Securities Exchange Act of 1934 ("Exchange Act"), 15 U.S.C. 78u–1 et seq., to establish a new SEC whistleblower award program. Section 21F provides that, pursuant to regulations adopted by the SEC, a monetary award shall be paid to any eligible whistleblower who provides the SEC with original information about a securities law violation that leads to the SEC’s success in obtaining a monetary order of more than a million dollars in an SEC judicial or administrative enforcement action ("covered action"). If an eligible whistleblower qualifies for an award, the SEC must pay an award that is at least 10%, but no more than 30%, of the amount of the monetary sanctions collected in the SEC enforcement action.

Section 21F further provides that if the SEC makes a whistleblower award in connection with its own enforcement action, the whistleblower becomes potentially eligible for an award in connection with any related enforcement action ("related actions") that are successfully litigated using the whistleblower’s same original information. The potential related enforcement actions must be brought either by a self-regulatory organization or certain statutorily identified governmental authorities (such as the U.S. Department of Justice or a state attorney general in connection with a related action); Exchange Act Rule 21F–3(b)(1) (same).

Whistleblower Program rules, including two amendments that whistleblower advocates and others have asserted are unfair to whistleblowers and may risk reducing the willingness of individuals to blow the whistle. These amendments were made to: (1) Exchange Act Rule 21F–3, which addresses the criteria for making an award based on a whistleblower’s contributions to the successful resolution of a related action; and (2) Exchange Act Rule 21F–6, which establishes the criteria that the Commission may consider when determining the appropriate award amount.

The 2020 Amendments added new subparagraph (c) to Rule 21F–3 to govern situations where a whistleblower has filed a claim for an award in connection with a potential related action but that action is potentially also covered by a second, separate award program [such as, for example, the federal whistleblower award program that the Internal Revenue Service administers, see 26 U.S.C. 7623]. New paragraph (c) authorizes the Commission to determine, based on the facts and circumstances of the claims and misconduct at issue in the potential related action (among other factors), whether the Commission’s whistleblower program or the other whistleblower program has the more “direct or relevant connection to the [related action].” And responsibility for making an award in connection with the potential related action will then rest with whichever award program is determined to have the more direct or relevant connection to the action.

Relevant Amendment to Exchange Act Rule 21F–6. The 2020 Amendments added language to permit the Commission to consider, in its discretion, the dollar amount of a potential award when making an award determination. Before this amendment, the text of the rule (with one limited exception) did not expressly afford the Commission authority to consider the potential dollar amount of an award when determining awards; rather, the text of the rule generally referred to setting awards as a percentage of the monetary sanctions recovered.

II. Procedures Available During the Interim Policy-Review Period

On August 2, 2021, Chair Gensler issued a public statement advising that he has directed the staff to prepare for the Commission’s consideration later this year potential changes to Rules 21F–3(b)(3) and Rule 21F–6 to address policy concerns raised by whistleblower advocates and others about possible adverse effects of the 2020 Amendments.

While the staff is preparing and the Commission is considering potential additional rulemaking, the procedures discussed below are available to whistleblowers with claims pending during the Interim Policy-Review Period so that they are not disadvantaged under the components of Rule 21F–3(b)(3) and Rule 21F–6 that may be revised. These interim procedures are consistent with the SEC’s overarching goal of protecting investors and the United States capital markets by encouraging whistleblowers to come forward to report violations of the federal securities laws and then rewarding them when their information leads to successful enforcement actions.

A. Exchange Act Rule 21F–3(b)(3)

For any claim that may be subject to Rule 21F–3(b)(3) during the Interim Policy-Review Period, the Commission directly as follows:

1. Before providing a preliminary determination to a claimant, or a proposed recommendation to the Commission, the staff shall consider whether to recommend that the Commission’s exemptive authority under Section 36(a) of the Exchange Act should be utilized to permit an award on a potential related action irrespective of the limitations of Rule 21F–3(b)(3) if:
   (a) The alternative whistleblower program has an award cap or award range that could disadvantage the particular claimant;
   (b) the Commission is aware or the claimant demonstrates a likelihood that a condition or exclusion would apply to his or her award claim under the alternative award program and the staff determines that the claimant would likely obtain an award were he or she permitted to proceed under the SEC’s award program.

2. For any other award claim under Rule 21F–3(b)(3) for which the staff determines that an alternative whistleblower program has a “more direct or relevant connection” to the potential related action than the Commission’s award program does, the staff will inform the claimant of its assessment. The claimant may then request that the related-action award claim held in abeyance during the Interim Policy-Review Period. Further, any related-action award claim that is held in abeyance shall not impact the

2In pertinent part, Section 36(a) provides that “by rule, regulation, or order, may conditionally or unconditionally exempt any person . . . from any provision or provisions of [the Exchange Act] or of any rule or regulation thereunder, to the extent that such exemption is necessary or appropriate in the public interest, and is consistent with the protection of investors.”

3 See also SEC’s Spring 2021 Regulatory Agenda (publicly available at: https://www.reginfo.gov/public/dockets/AgendaViewRule?pubId=202104FRIN-32355-AN00) ("The Commission is considering additional amendments to the rules governing the Whistleblower Program established by the Dodd-Frank Act.")
timely processing of any award claim arising from a covered Commission enforcement action that is successfully litigated using the claimant’s same original information.

B. Exchange Act Rule 21F–6

With respect to Rule 21F–6, the Commission at the time it adopted the 2020 rulemaking amendments explained that the amendment in question was a clarification of discretionary authority the Commission already possessed. The Commission anticipates that, going forward, it will continue its practice of considering dollar amounts only in connection with provisions of the rules that explicitly contemplate the use of such discretion to raise awards (i.e., law enforcement interest prong of 21F–6(a)(3) and the application of the presumption embodied in Rule 21F–6(c)). In the unlikely event that the staff or the Commission should consider deviating from this practice, the staff will inform the claimant that such action is being considered. The claimant may then request that the matter be held in abeyance during the Interim Policy-Review Period.

III. Other Matters

Publication for notice and comment is not required under the Administrative Procedure Act (“APA”) pursuant to the exemption for agency rules of organization, procedure, or practice. It follows that the requirements of the Regulatory Flexibility Act do not apply. The effective date is August 13, 2021. In accordance with the APA, we find that there is good cause to establish an effective date less than 30 days after publication. The Commission believes that establishing an effective date less than 30 days after publication of this document is necessary to clarify how the SEC will proceed when addressing certain issues under Exchange Act Rule 21F–3(b)(3) and Exchange Act Rule 21F–6 while the staff is preparing and the Commission is considering potential amendments to those rules.

The Commission has determined that the foregoing relates only to agency procedures and does not substantially affect the rights or obligations of non-agency parties. The foregoing is therefore not a “rule” under the Congressional Review Act, 5 U.S.C. 804(3)(C).

Finally, the Commission has adopted the foregoing under the authority set forth in Sections 3(b), 21F, and 23(a) of the Exchange Act.

By the Commission.

Dated: August 5, 2021.

Vanessa A. Countrryan,
Secretary.

[FR Doc. 2021–17019 Filed 8–12–21; 8:45 am]

BILLING CODE 8011–01–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 100

[Docket Number USCG–2021–0598]

RIN 1625–AA08

Special Local Regulation; Cumberland River, Ashland City, TN

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary special local regulation for navigable waters on the Cumberland River. The special local regulation is needed to protect personnel, vessels, and the marine environment from potential hazards created by the Riverbluff Triathlon marine event. Entry of vessels or persons into this zone is prohibited unless specifically authorized by the Captain of the Port Sector Ohio Valley.

DATES: This rule is effective on August 29, 2021 from 6 a.m. to 10 a.m.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to https://www.regulations.gov, type USCG–2021–0598 in the search box and click “Search.” Next, in the Document Type column, select “Supporting & Related Material.”

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email Petty Officer Third Class Benjamin Gardner, Marine Safety Detachment Nashville, U.S. Coast Guard; telephone 615–736–5421, email Benjamin.t.gardner@uscg.mil.

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
DHS Department of Homeland Security
FR Federal Register
MM Mile Marker
NPRM Notice of proposed rulemaking
§ Section

II. Background Information and Regulatory History

The Coast Guard is issuing this temporary rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are “unpracticable, unnecessary, or contrary to the public interest.” Under 5 U.S.C. 553(b)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because it is impracticable. We must establish this regulation by August 29, 2021 and lack sufficient time to provide a reasonable comment period and then consider those comments before issuing this rule. Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the Federal Register. Delaying the effective date of this rule would be contrary to public interest because immediate action is needed to ensure the safety of the participants and vessels during the Riverbluff Triathlon. It is impracticable to publish an NPRM because we must establish this special local regulation by August 29, 2021.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 46 U.S.C. 70034 (previously 33 U.S.C. 1231). The Captain of the Port Sector Ohio Valley (COTP) has determined that potential hazards associated with Riverbluff Triathlon on August 29, 2021, will be a safety concern from MM 157.0 to MM 159.0 of the Cumberland River for 4 hours. This rule is needed to protect personnel, vessels, and the marine environment in the navigable waters within the special local regulation while the event is taking place.

IV. Discussion of the Rule

This rule establishes a special local regulation from MM 157.0 to MM 159.0 on the Cumberland River. The safety zone will be in effect on August 29, 2021 from 6 a.m. to 10 a.m. The duration of the zone is intended to protect participants, and the marine environment in these navigable waters while the Riverbluff Triathlon is taking place. No vessel or person will be permitted to enter the regulated area without obtaining permission from the COTP or a designated representative.
V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This rule has not been designated a "significant regulatory action," under Executive Order 12866. Accordingly, this rule has not been reviewed by the Office of Management and Budget (OMB).

This regulatory action determination is based on the size, location, duration, and the time-of-day of the special local regulation. Vessel traffic will be able to safely transit around the this special local regulation which would impact a small designated area of the Cumberland River before or after the time of the event. Moreover the Coast Guard will issue a Broadcast the Mariners via VHF–FM marine channel 16 about the zone, and the rule would allow vessels to seek permission to enter the zone.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term "small entities" comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the regulated zone may be small entities, for the reasons stated in section V.A above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the FOR FURTHER INFORMATION CONTACT section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132. Federalism, if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves a special local regulation lasting only 4 hours that will prohibit entry within a 2 mile segment of the Cumberland River. It is categorically excluded from further review under paragraph [L61] and [L63a] of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. For instructions on locating the docket, see the ADDRESSES section of this preamble.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protestors. Protesters are asked to call or email the person listed in the FOR FURTHER INFORMATION CONTACT section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places or vessels.

List of Subjects in 33 CFR Part 100

Marine safety, Navigation (water), Reporting and recordkeeping requirements, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 100 as follows:

PART 100—SAFETY OF LIFE ON NAVIGABLE WATERS

1. The authority citation for part 100 continues to read as follows:

Authority: 46 U.S.C. 70041; 33 CFR 1.05–1.

2. Add § 100.T08–0598 to read as follows:

§ 100.T08–0275 Cumberland River MM 157 to MM 159, Ashland City, TN.

(a) Regulated area. The regulations in this section apply to the following area: all waters of the Cumberland River from MM 157.0 to 159.0.

(b) Regulations. (1) All non-participants are prohibited from entering, transiting through, anchoring in, or remaining within the regulated area described in paragraph (a) of this
section unless authorized by the Captain of the Port Sector Ohio Valley or their designated representative.

(2) To seek permission to enter, contact the COTP or the COTP’s representative by phone at 1–800–253–7465. Those in the regulated area must comply with all lawful orders or directions given to them by the COTP or the COTP’s designated representative.

(3) The COTP will provide notice of the regulated area through advanced notice via broadcast notice to mariners.

(d) Enforcement period. This section will be enforced on August 29, 2021, from 6 a.m. to 10 a.m.

Dated: August 5, 2021.

A.M. Beach,
Captain, U.S. Coast Guard, Captain of the Port Sector Ohio Valley.

[FR Doc. 2021–17354 Filed 8–12–21; 8:45 am]

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket Number USCG–2021–0608]

RIN 1625–AA00

Temporary Safety Zone; Ferdon Wedding Fireworks Display, Harbor Springs, MI; Sector Sault Sainte Marie Captain of the Port Zone

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone for navigable waters within a 250-foot radius of a fireworks display off shore near Little Harbor Club in Harbor Springs, MI. The safety zone is needed to protect personnel, vessels, and the marine environment from potential hazards created by fireworks display. Entry of vessels or persons into this zone is prohibited unless specifically authorized by the Captain of the Port Sault Sainte Marie or a designated representative.

DATES: This rule is effective from 6 p.m. through 11:59 p.m. on August 28, 2021. It will be enforced from 8 p.m. through 10 p.m. on that day.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to https://www.regulations.gov, type USCG–2021–0608 in the search box and click “Search.” Next, in the Document Type column, select “Supporting & Related Material.”

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email LT Deaven Palenzuela, U.S. Coast Guard Sector Sault Sainte Marie Waterways Management, U.S. Coast Guard; telephone 906–635–3223, email ssmprevention@uscg.mil.

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section

II. Background Information and Regulatory History

The Coast Guard is issuing this temporary rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are “impracticable, unnecessary, or contrary to the public interest.” Under 5 U.S.C. 553(b)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because the event sponsor notified the Coast Guard with insufficient time to accommodate the comment period. Delaying the effective date of this rule would be contrary to the public interest and the rule’s objectives of protecting safety of life on the navigable waters, including protection of persons and vessels in vicinity of the fireworks display. It is impracticable to publish an NPRM because we must establish this safety zone by August 28, 2021. Delay of the effective date would inhibit the Coast Guard’s ability to protect spectators and vessels from the hazards associated with a fireworks display with an expected fall-out area over the water.

Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the Federal Register. Delaying the effective date of this rule would be impracticable because action is needed to establish a safety zone in order to protect the public from the hazards associated with the fireworks display.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 45 U.S.C. 79034 (previously 46 U.S.C. 1231). The Captain of the Port Sault Sainte Marie (COTP) has determined that potential hazards associated with a fireworks display on August 28, 2021, will be a safety concern for anything within a 250-foot radius of the navigable waters surrounding the fireworks launch site. This rule is needed to protect personnel, vessels, and the marine environment in the navigable waters within the safety zone during the fireworks display.

IV. Discussion of the Rule

This rule establishes a temporary safety zone that will be enforced from 8 p.m. through 10 p.m. on August 28, 2021. The safety zone will cover all navigable waters within 250-foot of a fireworks display off shore Little Harbor Club in Harbor Springs, MI in position 45°25′34.00″ N 84°59′23.49″ W. The duration of the zone is intended to protect personnel, vessels, and the marine environment in the safety zone proceeding, during and immediately after the fireworks display.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protesters.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This rule has not been designated a “significant regulatory action,” under Executive Order 12866. Accordingly, this rule has not been reviewed by the Office of Management and Budget (OMB).

This regulatory action determination is based on size, location, duration, and time-of-day of the safety zone. Vessel traffic will be able to safely transit around this safety zone which would impact a small designated area off shore Little Harbor Club. Moreover, the Coast Guard would issue a Broadcast Notice to Mariners via VHF–FM marine channel 16 about the zone.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term “small entities” comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions
with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section V.A above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the FOR FURTHER INFORMATION CONTACT section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency’s responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132. Federalism, if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175. Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves a temporary safety zone lasting only 2 hours that will prohibit entry within a 250-foot radius of a fireworks display off shore near Little Harbor Club in Harbor Springs, MI. It is categorically excluded under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121) and section 1908.1 of Title 48 of the Code of Federal Regulations (48 C.F.R. 1908.1).

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to call or email the person listed in the FOR FURTHER INFORMATION CONTACT section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places or vessels.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and record keeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

1. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034, 70051; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 0170.1.

2. Add §165.T09–0608 to read as follows:

(a) Location. The following area is a temporary safety zone: All navigable water within 250 feet of the fireworks launching location in position 45°25′34″ N 84°59′23.49″ W (NAD 83)

(b) Definitions. As used in this section, designated representative means a Coast Guard Patrol Commander, including a Coast Guard coxswain, petty officer, or other officer operating a Coast Guard vessel and a Federal, State, and local officer designated by or assisting the Captain of the Port Sault Sainte Marie (COTP) in the enforcement of the safety zone.

(c) Regulations. (1) In accordance with the general regulations in §165.23, entry into, transiting, or anchoring within the safety zone described in paragraph (a) is prohibited unless authorized by the Captain of the Port, Sault Sainte Marie or his designated representative.

(2) Before a vessel operator may enter or operate within the safety zone, they must obtain permission from the Captain of the Port, Sault Sainte Marie, or his designated representative via VHF Channel 16 or telephone at (906) 635–3233. Vessel operators given permission to enter or operate in the safety zone must comply with all orders given to them by the Captain of the Port, Sault Sainte Marie or his designated representative.

(d) Enforcement period. This section will be enforced from 8 p.m. through 10 p.m. on August 28, 2021.

Dated: August 9, 2021.

A.R. Jones,

Captain, U.S. Coast Guard, Captain of the Port Sault Sainte Marie.

[FR Doc. 2021–17336 Filed 8–12–21; 8:45 am]

BILLING CODE 9110–04–P
DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket Number USCG–2021–0327]

RIN 1625–AA00

Safety Zone: Patapsco River, Baltimore, MD

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone for certain waters of the Patapsco River. This action is necessary to provide for the safety of life on these navigable waters near the Francis Scott Key (I–695) Bridge, Baltimore, MD, while work crews install power transmission lines crossing over the Patapsco River from September 1, 2021 through November 17, 2021. This regulation prohibits persons and vessels from being in the safety zone unless authorized by the Captain of the Port Maryland—National Capital Region a designated representative.

DATES: This rule is effective from September 1, 2021, through November 17, 2021.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to https://www.regulations.gov, type USCG–2021–0327 in the “SEARCH” box and click “SEARCH.” Next, in the Document Type column, select “Supporting & Related Material.”

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email Mr. Ron Houck, Sector Maryland—National Capital Region Waterways Management Division, U.S. Coast Guard; telephone 410–576–2674, email Ronald.L.Houck@uscg.mil.

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
COTP Captain of the Port
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section

II. Background Information and Regulatory History

On May 12, 2021, Baltimore Gas and Electric Company (BGE) provided the Coast Guard with details concerning activities associated with the installation of two new overhead power transmission lines crossing over the Patapsco River from the vicinity of the Hawkins Point terminal Station on the west side of the Patapsco River to a location just north of Sollers Point Terminal Station on the east side of the Patapsco River, to be conducted from September 1, 2021, through November 17, 2021. This installation process requires the temporary closure of the navigation channel near the Francis Scott Key (I–695) Bridge and the temporary closure of other portions of the Patapsco River nearby, including on multiple days during the stated installation period. In response, on May 16, 2021, the Coast Guard published a notice of proposed rulemaking (NPRM) titled “Safety Zone; Patapsco River, Baltimore, MD.” (86 FR 31999). There we stated why we issued the NPRM, and invited comments on our proposed regulatory action related to this installation of overhead power transmission lines. During the comment period that ended July 16, 2021, we received no comments.

Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the Federal Register. Delaying the effective date of this rule would be impracticable and contrary to the public interest because immediate action is needed to respond to the potential safety hazards associated with the installation of power transmission lines over the Patapsco River adjacent to Francis Scott Key (I–695) Bridge conducted within the federal navigation channel and other portions of the river nearby. Such hazards include low-hanging or falling ropes and cables, helicopter rotor downwash and noise, dangerous projectiles, and or other debris.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 46 U.S.C. 70034 (previously 33 U.S.C. 1231). The COTP Maryland—National Capital Region has determined that potential hazards associated with the overhead power transmission line installation work will be a safety concern for anyone transiting the Patapsco River. The purpose of this rule is to ensure safety of vessels and the navigable waters in the safety zone before, during, and after the scheduled work.

IV. Discussion of Comments, Changes, and the Rule

As noted above, we received no comments on our NPRM published May 16, 2021. There are no changes in the regulatory text of this rule from the proposed rule in the NPRM.

This rule establishes a safety zone from September 1, 2021, through November 17, 2021, to be enforced while BGE installs overhead power transmission lines over the river. On days the safety zone will be enforced, the affected area of the river will be closed during the dates and times scheduled. These dates and times may change due to weather, or for any reason that the primary dates and times could not be used. Alternative dates have been provided in the event the primary dates can not be used. Exact dates and times would be announced by broadcast notice to mariners, between one and five days in advance of the scheduled date, to alert mariners of the change. The safety zone will cover all navigable waters of the Patapsco River, encompassed by a line connecting the following points beginning at the shoreline at Thoms Cove at position latitude 39°12′36″ N, longitude 076°32′50″ W, thence east and south along the shoreline to Hawkins Point at latitude 39°12′40″ N, longitude 076°31′58″ W, thence northeast across the Patapsco River to Coffin Point at latitude 39°13′55″ N, longitude 076°30′18″ W, thence west and north along the shoreline to Sollers Point at latitude 39°14′01″ N, longitude 076°30′59″ W, thence west across the Patapsco River to and terminating at the point of origin, located at Baltimore, MD.

This rule provides additional information about areas within the safety zone and their definitions. These areas include “Area 1,” “Area 2,” “Area 3,” “Area 4,” “Area 5,” and “Area 6.” A diagram of the tower locations is provided in the docket folder.

The duration of the rule and enforcement of the zone is intended to ensure the safety of vessels and these navigable waters while the activities associated with the installation of two new overhead power transmission lines crossing over the Patapsco River are being conducted. The COTP will notify the public that the safety zone will be enforced by all appropriate means to the affected segments of the public, as practicable, in accordance with 33 CFR 165.7(a). Such means of notification may also include, but are not limited to, Broadcast Notice to Mariners. Vessels or persons violating this rule are subject to the penalties set forth in 46 U.S.C. 70036 (previously codified in 33 U.S.C. 1232) and 46 U.S.C. 70052 (previously codified in 50 U.S.C. 192).

Except for craft and equipment owned by BGE or its subcontractors, no vessel or person will be permitted to enter the safety zone without obtaining...
permission from the COTP or a designated representative.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This rule has not been designated as a “significant regulatory action” under Executive Order 12866. Accordingly, this rule has not been reviewed by the Office of Management and Budget (OMB).

This regulatory action determination is based on the size, duration, day-of-week, and time of year of the safety zone, which will impact a small designated area of the Patapsco River during certain weekdays (Mondays through Fridays, including holidays). Vessels or persons will not be allowed to enter or transit a portion of the Patapsco River for a total 97 enforcement-hours, over an 11-week period from September 1, 2021, through November 17, 2021, during active overhead power transmission line installation activities as described in the text above. The closures are scheduled to impose the least amount of impact on vessel operations in Baltimore Harbor. Due to the nature of the work and the hazards it presents to the workers and the public, the COTP has identified the need to close the Patapsco River in the vicinity of the overhead power line crossing while this work is ongoing. Moreover, the Coast Guard will issue Local Notices to Mariners and a Broadcast Notice to Mariners via VHF–FM marine channel 16 about the zone.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term “small entities” comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard received no comments from the Small Business Administration on this rulemaking. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section V.A above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the FOR FURTHER INFORMATION CONTACT section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency’s responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132. Federalism, if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132. Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves a safety zone lasting 97 total enforcement hours that will prohibit entry within portions of the Patapsco River. It is categorically excluded from further review under paragraph L60(a) of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the ADDRESSES section of this preamble.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protestors. Protesters are asked to call or email the person listed in the FOR FURTHER INFORMATION CONTACT section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places or vessels.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:
PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

1. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034, 70051; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 0170.1.

2. Add § 165.T05–0327 to read as follows:

§ 165.T05–0327 Safety Zone; Patapsco River, Baltimore, MD.

(a) Location. The following area is a safety zone: All navigable waters of the Patapsco River, encompassed by a line connecting the following points beginning at the shoreline at Thoms Cove at position latitude 39°12'35.73" N, longitude 076°32'30.00" W, and Tower 6 at latitude 39°13'39.43" N, longitude 076°31'05.18" W, and Tower 6 at latitude 39°13'39.43" N, longitude 076°31'05.18" W, and Tower 6 at latitude 39°13'39.43" N, longitude 076°31'05.18" W, and Tower 6 at latitude 39°13'39.43" N, longitude 076°31'05.18" W, and Tower 6 at latitude 39°13'39.43" N, longitude 076°31'05.18" W, and Tower 6 at latitude 39°13'39.43" N, longitude 076°31'05.18" W.

(b) Definitions. As used in this section—

Captain of the Port (COTP) means a Coast Guard Patrol Commander, including a Coast Guard coxswain, petty officer, or other officer operating a Coast Guard vessel and a Federal, State, and local officer designated by or assisting the Captain of the Port Maryland—National Capital Region (COTP) in the enforcement of the safety zone.

Tower means a Baltimore Gas and Electric Company steel monopole structure used to support overhead high voltage transmission lines, located between the vicinity of the Hawkins Point Terminal Station on the west side of the Patapsco River and a location just north of Sollers Point Terminal Station on the east side of the Patapsco River.

(c) Regulations. (1) Under the general safety zone regulations in subpart C of this part, you may not enter the safety zone described in paragraph (a) of this section unless authorized by the COTP or the COTP’s designated representative.

(2) To seek permission to enter, contact the COTP or the COTP’s representative by telephone at 410–576–2693 or on Marine Band Radio VHF–FM channel 16 (156.8 MHz). Those in the safety zone must comply with all lawful orders or directions given to them by the COTP or the COTP’s designated representative.

(d) Enforcement officials. The U.S. Coast Guard may be assisted in the patrol and enforcement of the safety zone by Federal, State, and local agencies.

(e) Enforcement periods. (1) Paragraphs (a)(1) through (g) of this section will be enforced:

(i) From 9 a.m. to 10:30 a.m. and from 1 p.m. to 2:30 p.m. on September 13, 2021. If necessary due to inclement weather or other reason on September 13, 2021, it will be enforced from 9 a.m. to 10:30 a.m. and from 1 p.m. to 2:30 p.m. on September 15, 2021;

(ii) From 9 a.m. to 10:30 a.m. and from 1 p.m. to 2:30 p.m. on September 20, 2021. If necessary due to inclement weather or other reason on September 20, 2021, it will be enforced from 9 a.m. to 10:30 a.m. and from 1 p.m. to 2:30 p.m. on September 22, 2021;

(iii) From 9 a.m. to 10:30 a.m. and from 1 p.m. to 2:30 p.m. on September 24, 2021. If necessary due to inclement weather or other reason on September 24, 2021, it will be enforced from 9 a.m. to 10:30 a.m. and from 1 p.m. to 2:30 p.m. on September 28, 2021;

(iv) From 9 a.m. to 10:30 a.m. and from 1 p.m. to 2:30 p.m. on October 1, 2021. If necessary due to inclement weather or other reason on October 1, 2021, it will be enforced from 9 a.m. to 10:30 a.m. and from 1 p.m. to 2:30 p.m. on October 4, 2021;

(v) From 9 a.m. to 10:30 a.m. and from 1 p.m. to 2:30 p.m. on October 13, 2021. If necessary due to inclement weather or other reason on October 13, 2021, it will be enforced from 9 a.m. to 10:30 a.m. and from 1 p.m. to 2:30 p.m. on October 15, 2021;

(vi) From 9 a.m. to 10:30 a.m. and from 1 p.m. to 2:30 p.m. on October 18, 2021. If necessary due to inclement weather or other reason on October 18, 2021, it will be enforced from 9 a.m. to 10:30 a.m. and from 1 p.m. to 2:30 p.m. on October 20, 2021;

(vii) From 9 a.m. to 10:30 a.m. and from 1 p.m. to 2:30 p.m. on October 25, 2021. If necessary due to inclement weather or other reason on October 25, 2021, it will be enforced from 9 a.m. to 10:30 a.m. and from 1 p.m. to 2:30 p.m. on October 27, 2021;

(viii) From 9 a.m. to 10:30 a.m. and from 1 p.m. to 2:30 p.m. on November 1, 2021. If necessary due to inclement weather or other reason on November 1, 2021, it will be enforced from 9 a.m. to 10:30 a.m. and from 1 p.m. to 2:30 p.m. on November 3, 2021; and

(ix) From 9 a.m. to 10:30 a.m. and from 1 p.m. to 2:30 p.m. on November 8, 2021.

(f) Legal Effect. The safety zone established by this section includes all waters within the area described, together with a 200-foot perpendicular area extending from the shoreline.
(2) Paragraph (a)(1) of this section will be enforced:

(i) From 6 a.m. to 7 a.m., from 8 a.m. to 9 a.m., and from 10 a.m. to 11 a.m. on October 5, 2021. If necessary due to inclement weather or other reason on October 5, 2021, it will be enforced from 6 a.m. to 7 a.m., from 8 a.m. to 9 a.m., and from 10 a.m. to 11 a.m. on October 7, 2021;

(ii) From 6 a.m. to 6:30 a.m., from 7 a.m. to 7:30 a.m., from 8 a.m. to 8:30 a.m., and from 9 a.m. to 9:30 a.m. on October 12, 2021;

(iii) From 6 a.m. to 7 a.m., from 8 a.m. to 9 a.m., and from 10 a.m. to 10:30 a.m. on November 6, 2021. If necessary due to inclement weather or other reason on October 8, 2021, it will be enforced from 6 a.m. to 6:30 a.m., from 7 a.m. to 7:30 a.m., from 8 a.m. to 8:30 a.m., and from 9 a.m. to 9:30 a.m. on October 12, 2021;

(iv) From 6 a.m. to 6:30 a.m., from 7 a.m. to 7:30 a.m., from 8 a.m. to 8:30 a.m., and from 9 a.m. to 9:30 a.m. on October 11, 2021; and

(v) From 6 a.m. to 6:30 a.m., from 7 a.m. to 7:30 a.m., from 8 a.m. to 8:30 a.m., and from 9 a.m. to 9:30 a.m. on November 12, 2021. If necessary due to inclement weather or other reason on October 12, 2021, it will be enforced from 6 a.m. to 6:30 a.m., from 7 a.m. to 7:30 a.m., from 8 a.m. to 8:30 a.m., and from 9 a.m. to 9:30 a.m. on November 16, 2021.

(3) Paragraph (a)(2) of this section will be enforced:

(i) From 6 a.m. to 7 a.m., from 8 a.m. to 9 a.m., and from 11 a.m. to 11:30 a.m. on November 10, 2021; and

(ii) From 6 a.m. to 7 a.m., from 8 a.m. to 9 a.m., and from 10 a.m. to 10:30 a.m. on November 10, 2021. If necessary due to inclement weather or other reason on November 10, 2021, it will be enforced from 6 a.m. to 7 a.m., from 8 a.m. to 9 a.m., and from 10 a.m. to 10:30 a.m. on November 12, 2021.

(4) Paragraph (a)(3) of this section will be enforced:

(i) From 6 a.m. to 7 a.m., from 7:30 a.m. to 8:30 a.m., from 9 a.m. to 10 a.m., and from 10 a.m. to 11 a.m. on October 6, 2021. If necessary due to inclement weather or other reason on October 6, 2021, it will be enforced from 9 a.m. to 10 a.m., from 10 a.m. to 11 a.m., and from 11 a.m. to 11:30 a.m. on October 8, 2021;

(ii) From 2 p.m. to 2:30 p.m., from 3 p.m. to 3:30 p.m., from 4 p.m. to 4:30 p.m., and from 5 p.m. to 5:30 p.m. on November 8, 2021; and

(iii) From 6 a.m. to 7 a.m., from 7:30 a.m. to 8:30 a.m., from 9 a.m. to 10 a.m., and from 10 a.m. to 11 a.m. on November 8, 2021.

(5) Paragraph (a)(4) of this section will be enforced:

(i) From 12 p.m. (noon) to 1 p.m., from 2 p.m. to 3 p.m., and from 4 p.m. to 5 p.m. on October 6, 2021. If necessary due to inclement weather or other reason on October 6, 2021, it will be enforced from 12 p.m. (noon) to 1 p.m., from 2 p.m. to 3 p.m., and from 4 p.m. to 5 p.m. on October 8, 2021;

(ii) From 6 a.m. to 6:30 a.m., from 7 a.m. to 7:30 a.m., from 8 a.m. to 8:30 a.m., and from 9 a.m. to 9:30 a.m. on October 11, 2021. If necessary due to inclement weather or other reason on October 11, 2021, it will be enforced from 6 a.m. to 6:30 a.m., from 7 a.m. to 7:30 a.m., from 8 a.m. to 8:30 a.m., and from 9 a.m. to 9:30 a.m. on October 13, 2021;

(iii) From 12 p.m. (noon) to 1 p.m., from 2 p.m. to 3 p.m., and from 4 p.m. to 5 p.m. on November 10, 2021. If necessary due to inclement weather or other reason on November 10, 2021, it will be enforced from 12 p.m. (noon) to 1 p.m., from 2 p.m. to 3 p.m., and from 4 p.m. to 5 p.m. on November 12, 2021; and

(iv) From 6 a.m. to 6:30 a.m., from 7 a.m. to 7:30 a.m., from 8 a.m. to 8:30 a.m., and from 9 a.m. to 9:30 a.m. on November 15, 2021. If necessary due to inclement weather or other reason on November 15, 2021, it will be enforced from 6 a.m. to 6:30 a.m., from 7 a.m. to 7:30 a.m., from 8 a.m. to 8:30 a.m., and from 9 a.m. to 9:30 a.m. on November 17, 2021.

(6) Paragraph (a)(5) of this section will be enforced:

(i) From 6 a.m. to 7 a.m., from 8 a.m. to 9 a.m., and from 10 a.m. to 11 a.m. on October 7, 2021. If necessary due to inclement weather or other reason on October 7, 2021, it will be enforced from 6 a.m. to 7 a.m., from 8 a.m. to 9 a.m., and from 10 a.m. to 11 a.m. on October 11, 2021;

(ii) From 10 a.m. to 10:30 a.m., from 11 a.m. to 11:30 a.m., from 12 p.m. (noon) to 12:30 p.m., and from 1 p.m. to 1:30 p.m. on October 11, 2021. If necessary due to inclement weather or other reason on October 11, 2021, it will be enforced from 10 a.m. to 10:30 a.m., from 11 a.m. to 11:30 a.m., from 12 p.m. (noon) to 12:30 p.m., and from 1 p.m. to 1:30 p.m. on October 13, 2021;

(iii) From 6 a.m. to 7 a.m., from 8 a.m. to 9 a.m., and from 10 a.m. to 11 a.m. on November 11, 2021. If necessary due to inclement weather or other reason on November 11, 2021, it will be enforced from 6 a.m. to 7 a.m., from 8 a.m. to 9 a.m., and from 10 a.m. to 11 a.m. on November 15, 2021; and

(iv) From 10 a.m. to 10:30 a.m., from 11 a.m. to 11:30 a.m., from 12 p.m. (noon) to 12:30 p.m., and from 1 p.m. to 1:30 p.m. on November 15, 2021. If necessary due to inclement weather or other reason on November 15, 2021, it will be enforced from 10 a.m. to 10:30 a.m., from 11 a.m. to 11:30 a.m., from 12 p.m. (noon) to 12:30 p.m., and from 1 p.m. to 1:30 p.m. on November 17, 2021.

(7) Paragraph (a)(6) of this section will be enforced:

(i) From 6 a.m. to 7 a.m., from 8 a.m. to 9 a.m., and from 10 a.m. to 11 a.m. on November 12, 2021. If necessary due to inclement weather or other reason on November 12, 2021, it will be enforced from 6 a.m. to 7 a.m., from 8 a.m. to 9 a.m., and from 10 a.m. to 11 a.m. on November 15, 2021; and

(ii) From 10 a.m. to 10:30 a.m., from 11 a.m. to 11:30 a.m., from 12 p.m. (noon) to 12:30 p.m., and from 1 p.m. to 1:30 p.m. on November 15, 2021. If necessary due to inclement weather or other reason on November 15, 2021, it will be enforced from 10 a.m. to 10:30 a.m., from 11 a.m. to 11:30 a.m., from 12 p.m. (noon) to 12:30 p.m., and from 1 p.m. to 1:30 p.m. on November 17, 2021.
necessary due to inclement weather or other reason on October 7, 2021, it will be enforced from 12 p.m. (noon) to 1 p.m., from 2 p.m. to 3 p.m., and from 4 p.m. to 5 p.m. on October 11, 2021;

(ii) From 2 p.m. to 2:30 p.m., from 3 p.m. to 3:30 p.m., from 4 p.m. to 4:30 p.m., from 5 p.m. to 5:30 p.m., from 6 p.m. to 6:30 p.m., and from 7 p.m. to 7:30 p.m. on October 11, 2021. If necessary due to inclement weather or other reason on October 11, 2021, it will be enforced from 2 p.m. to 2:30 p.m., from 3 p.m. to 3:30 p.m., from 4 p.m. to 4:30 p.m., and from 5 p.m. to 5:30 p.m. on November 15, 2021; and

(iv) From 2 p.m. to 2:30 p.m., from 3 p.m. to 3:30 p.m., from 4 p.m. to 4:30 p.m., and from 5 p.m. to 5:30 p.m. on November 15, 2021. If necessary due to inclement weather or other reason on November 15, 2021, it will be enforced from 2 p.m. to 2:30 p.m., from 3 p.m. to 3:30 p.m., from 4 p.m. to 4:30 p.m., and from 5 p.m. to 5:30 p.m. on November 17, 2021.

David E. O’Connell,
Captain, U.S. Coast Guard, Captain of the Port Maryland—National Capital Region.

II. Summary of SIP Revision and EPA Analysis

On June 4, 2020, the District, through DOEE, submitted as a formal SIP revision, a statement certifying that the District’s SIP-approved emissions statement program covers the District’s portion of the Washington, DC–MD–VA nonattainment area for the 2015 ozone NAAQS and is at least as stringent as the requirements of CAA section 182(a)(3)(B). In its submittal, the District states that 20 District of Columbia Municipal Regulations (DCMR) section 500.9 contains emissions reporting requirements consistent with CAA section 182(a)(3)(B)(i), and that 20 DCMR section 500.9 is approved into the District’s SIP. See 40 CFR 52.2420(c).

EPA first approved the District’s emissions statements requirements, now found at 20 DCMR section 500.9, into the District’s SIP on May 26, 1995 (60 FR 27944). See also 40 CFR 52.470.

EPA’s review of the District’s submittal finds that the District’s existing SIP-approved emissions statement program at 20 DCMR section 500.9 satisfies the emission statement requirements of CAA section 182(a)(3)(B) for the 2015 ozone NAAQS. The District’s regulation requires the owner of any stationary source located in the District that emits 25 tons per year (tpy) or more of volatile organic compounds (VOC) or nitrogen oxides (NOX) to submit an emissions statement to the Mayor by April 15 of each year for the emissions discharged during the previous calendar year. Emissions statements are required to be prepared and submitted in accordance with 20 DCMR section 500.9. These emissions statements are required to be submitted annually for the previous calendar year and, at a minimum, must contain the following: (1) Certification that the information in the statement is accurate to the best knowledge of the individual certifying the statement as well as the certifying individual’s name and contact information; (2) source identification including name, physical location, mailing address of the facility, latitude and longitude, and standard industrial classification code(s); (3) operating information including percentage annual throughput by season, days per week on the normal operating schedule, hours per day during the normal operating schedule, and hours per year during the normal operating schedule; (4) process rate data including annual process rate and peak ozone season daily process rate; (5) control equipment information; and (6) emissions information including, but not limited to, estimated actual emissions of NOX and VOC in tpy and

1 20 DCMR sections 500.4 through 500.6 were also approved into the District’s SIP on January 26, 1995 (60 FR 5134) and October 27, 1999 (64 FR 57777). These provisions concern reporting requirements related to the transfer of gasoline products.
pounds per typical ozone season day. These reporting requirements in 20 DCMR section 500.9 meet the requirements of CAA section 182(a)(3)(B)(i).

As allowed by CAA section 182(a)(3)(B)(ii), the District has waived the emissions reporting requirement for stationary sources emitting less than 25 tpy of NOX or VOCs because the District includes these emissions in reports to EPA. CAA section 182(a)(3)(B)(ii) allows the State to waive the application of clause (i) to any class or category of stationary sources which emit less than 25 tons per year of VOC or NOx if the State, in its submissions under subparagraphs (1) or (3)(A), provides an inventory of emissions from such class or category of sources, based on the use of the emission factors established by the Administrator or other methods acceptable to the Administrator.

As noted in the District’s June 4, 2020 submittal, pursuant to the Air Emissions Reporting Requirements rule at 40 CFR part 51, the District is required to submit inventories for criteria pollutants to EPA’s Emissions Inventory System (EIS), and that sources emitting less than 25 tpy of NOx or VOC are included in these inventories as area sources. The submission also notes that emissions from these sources are calculated using emission factors approved by the Administrator. These small stationary sources are therefore addressed in accordance with CAA section 182(a)(3)(B)(ii).

Therefore, EPA has determined that the District’s emissions statement program, as set forth at 20 DCMR section 500.9, which is currently in the District’s SIP, and the District’s reporting for sources emitting less than 25 tpy of NOx or VOC, meet the emissions statement requirements in CAA section 182(a)(3)(B) for the 2015 ozone NAAQS.

IV. Statutory and Executive Order Reviews

A. General Requirements

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the CAA and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA’s role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a “significant regulatory action” subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 et seq.);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 et seq.);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997).
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- Is not subject to requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and
- Does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, this rule does not have tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), because the SIP is not approved to apply in Indian country located in the State, and EPA notes that it will not impose substantial direct costs on tribal governments or preempt tribal law.

B. Submission to Congress and the Comptroller General

The Congressional Review Act, 5 U.S.C. 801 et seq., as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this action and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the Federal Register. A major rule cannot take effect until 60 days after it is published in the Federal Register. This action is not a “major rule” as defined by 5 U.S.C. 804(2).

C. Petitions for Judicial Review

Under section 307(b)(1) of the CAA, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by October 12, 2021. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action.

This action approving the District’s emissions statement certification for the 2015 ozone NAAQS may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).)

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Nitrogen dioxide, Ozone, Reporting and recordkeeping requirements, Volatile organic compounds.

Dated: August 5, 2021.

Diana Esher,
Acting Regional Administrator, Region III.

For the reasons stated in the preamble, the EPA amends 40 CFR part 52 as follows:
ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

Air Plan Approval; Illinois; 2008 Ozone Moderate VOC RACT for Chicago

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is approving volatile organic compound (VOC) reasonably available control technology (RACT) State Implementation Plan (SIP) revisions for the Illinois portion of the Chicago-Naperville, IL–IN–WI nonattainment area (Iowa portion) under the 2008 8-hour ozone National Ambient Air Quality Standard ("NAAQS" or "standard") submitted by the Illinois Environmental Protection Agency ("Illinois" or "Illinois EPA") on January 10, 2019 and supplemented on April 30, 2020. EPA is also approving the Stepan Co. construction permit submittals for the Illinois portion of the Chicago-Naperville, IL–IN–WI nonattainment area for the 2015 ozone NAAQS.

DATES: This final rule is effective on September 13, 2021.

ADDRESSES: EPA has established a docket for this action under Docket ID No. EPA–R05–OAR–2019–0031. All documents in the docket are listed on the www.regulations.gov website. Although listed in the index, some information is not publicly available, i.e., Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available either through www.regulations.gov or at the Environmental Protection Agency, Region 5, Air and Radiation Division, 77 West Jackson Boulevard, Chicago, Illinois 60604. This facility is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding Federal holidays and facility closures due to COVID–19. We recommend that you telephone Katie Mullen, Environmental Engineer, at (312) 353–3490 before visiting the Region 5 office.

FOR FURTHER INFORMATION CONTACT: Katie Mullen, Environmental Engineer, Attainment Planning and Maintenance Section, Air Programs Branch (AR–18J), Environmental Protection Agency, Region 5, 77 West Jackson Boulevard, Chicago, Illinois 60604, (312) 353–3490, Mullen.Kathleen@epa.gov.

SUPPLEMENTAL INFORMATION: Throughout this document whenever “we,” “us,” or “our” is used, we mean EPA.

I. Background Information

On May 7, 2021, EPA proposed to approve VOC RACT SIP revisions for the Illinois portion (86 FR 24569). An explanation of the CAA requirements, a detailed analysis of the revisions, and EPA’s reasons for proposing approval were provided in the notice of proposed rulemaking and will not be restated here. The public comment period for the proposed rule ended on June 7, 2021. EPA received no comments on the proposal.

II. Final Action

EPA is approving negative declarations, a VOC RACT certification, and the Stepan Co. construction permit submitted by Illinois as meeting the CAA section 182(b)(2) moderate RACT requirements for the Illinois portion under the 2008 8-hour ozone NAAQS.

III. Incorporation by Reference

In this rule, EPA is finalizing regulatory text that includes incorporation by reference. In accordance with requirements of 1 CFR 51.5, EPA is finalizing the incorporation by reference the Illinois Source-Specific Requirements described in the amendments to 40 CFR part 52 set forth below. EPA has made, and will continue to make, these documents generally available through www.regulations.gov, and at the EPA Region 5 Office (please contact the person identified in the FOR FURTHER INFORMATION CONTACT section of this preamble for more information). Therefore, these materials have been approved by EPA for inclusion in the SIP, have been incorporated by reference by EPA into that plan, are fully federally enforceable under sections 110 and 113 of the CAA as of the effective date of the final rulemaking of EPA’s approval, and will be...
incorporated by reference in the next update to the SIP compilation.¹

### IV. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the CAA and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA’s role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 et seq.);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 et seq.);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and
- Does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications and will not impose substantial direct costs on tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

The Congressional Review Act, 5 U.S.C. 801 et seq., as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this action and other required information to the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the Federal Register. A major rule cannot take effect until 60 days after it is published in the Federal Register. This action is not a “major rule” as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the CAA, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by October 12, 2021. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2) of the CAA.)

### List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Ozone, Volatile organic compounds.

Dated: July 30, 2021.

Cheryl Newton,
Acting Regional Administrator, Region 5.

For the reasons stated in the preamble, EPA amends 40 CFR part 52 as follows:

#### PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

1. The authority citation for part 52 continues to read as follows:

   Authority: 42 U.S.C. 7401 et seq.

2. In § 52.720, the table in paragraph (d) is amended by adding an entry for “Stepan Company Millsdale Plant” after the entry for “Solar Corporation, Libertyville, IL” to read as follows:

#### § 52.720 Identification of plan.

<table>
<thead>

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 180

[40 CFR 180.210]

Emamectin benzoate; Pesticide Tolerances

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This regulation establishes tolerances for residues of emamectin benzoate in or on soybean, seed.

Syngenta Crop Protection, LLC, requested these tolerances under the Federal Food, Drug, and Cosmetic Act (FFDCA).

DATES: This regulation is effective August 13, 2021. Objections and requests for hearings must be received on or before October 12, 2021, and must be filed in accordance with the instructions provided in 40 CFR part 178 (see also Unit I.C. of the SUPPLEMENTARY INFORMATION).

For the EPA Docket, contact: Docket Coordinator, OPP Docket, Environmental Protection Agency, 401 M St. NW, Washington, DC 20460–0001; telephone number: (703) 305–5805. For the OPP Public Docket, telephone number: (202) 566–1744, Monday through Friday, excluding legal holidays. The telephone number for the OPP Public Docket is (703) 305–5805. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the OPP Docket is (703) 305–5805.

A. Does this action apply to me?

You may be potentially affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:

• Crop production (NAICS code 111).
• Animal production (NAICS code 112).
• Food manufacturing (NAICS code 311).
• Pesticide manufacturing (NAICS code 32532).

II. Summary of Petitioned-For Tolerance

In the Federal Register of March 22, 2021 (86 FR 15162) (FRL–10021–44), EPA issued a document pursuant to FFDCA section 408(d)(3), 21 U.S.C. 346a(d)(3), announcing the filing of a pesticide petition (PP 9F8817) by Syngenta Crop Protection, LLC, 410 Swing Road, Greensboro, NC 27409. The petition requested that 40 CFR part 180 be amended by establishing a tolerance for residues of insecticide emamectin benzoate (a mixture of a minimum of 90% 4′-epi-methylamino-4′-deoxyavermectin B1a and a maximum of 10% 4′-epi-methylamino-4′deoxyavermectin B1b benzoate), and its metabolites, 8.9 isomer of the B1a and B1b component of the parent insecticide in or on soybean, seed at 0.01 parts per million (ppm). That document referenced a summary of the petition prepared by Syngenta Crop Protection, LLC, the registrant, which is available in the docket, https://www.regulations.gov/docket/EPA-HQ-OPP-2021-0066. There were no comments received in response to the notice of filing.

III. Aggregate Risk Assessment and Determination of Safety

Section 408(b)(2)(A)(i) of FFDCA allows EPA to establish a tolerance (the legal limit for a pesticide chemical residue in or on a food) only if EPA determines that the tolerance is “safe.” Section 408(b)(2)(A)(ii) of FFDCA defines “safe” to mean that there is a reasonable certainty that no harm will result from aggregate exposure to the pesticide chemical residue, including all anticipated dietary exposures and all other exposures for which there is reliable information.” This includes exposure through drinking water and in residential settings but does not include occupational exposure. Section 408(b)(2)(C) of FFDCA requires EPA to give special consideration to exposure...
of infants and children to the pesticide chemical residue in establishing a tolerance and to “ensure that there is a reasonable certainty that no harm will result to infants and children from aggregate exposure to the pesticide chemical residue . . .”

Consistent with FFDCA section 408(b)(2)(D), and the factors specified in FFDCA section 408(b)(2)(D), EPA has reviewed the available scientific data and other relevant information in support of this action. EPA has sufficient data to assess the hazards of and to make a determination on aggregate exposure for emamectin including exposure resulting from the tolerance established by this action. EPA’s assessment of exposures and risks associated with emamectin follows.

In an effort to streamline Federal Register publications, EPA is not reprinting sections of the rule that would repeat what has been previously published in tolerance rulemakings for the same pesticide chemical. Where scientific information concerning a particular chemical remains unchanged, the content of those sections would not vary between tolerance rulemakings, and republishing the same sections is unnecessary. EPA considers referral back to those sections as sufficient to provide an explanation of the information EPA considered in making its safety determination for the new rulemaking.

EPA has previously published a number of tolerance rulemakings for emamectin, in which EPA concluded, based on the available information, that there is a reasonable certainty that no harm would result from aggregate exposure to emamectin and established tolerances for residues of that chemical. EPA is incorporating previously published sections from those rulemakings as described further in this rulemaking, as they remain unchanged.

Toxicological Profile. The Toxicological Profile of emamectin remains unchanged from the Toxicological Profile in Unit III.A. of the August 27, 2019 rulemaking (84 FR 44718) (FRRL–9997–10). Refer to that section for a discussion of the Toxicological Profile of emamectin.

Toxicological points of departure/Levels of concern. The Toxicological Points of Departure/Levels of Concern used for the safety assessment remain unchanged from Unit III.B. of the August 27, 2019 rulemaking. For a summary, refer to that discussion.

Exposure assessment. Much of the exposure assessment remains the same, although updates have occurred to accommodate exposures from the petitioned-for tolerance. These updates are discussed in this section; for a description of the rest of the EPA approach to and assumptions for the exposure assessment, see Unit III.C. of the August 27, 2019 rulemaking.

EPA’s dietary exposure assessments have been updated to include the additional exposure from the new use of emamectin on soybean, seed. All other assumptions in the exposure assessments for emamectin remain the same as in the August 27, 2019 rulemaking.

Drinking water and non-occupational exposures. Drinking water exposures and residential (non-occupational) exposures are not impacted by the new use, and thus have not changed since the last assessment.

There are no proposed residential uses of emamectin that would result in residential exposures. As a result, there are no residential risk estimates recommended for use in the aggregate risk assessment for emamectin.

Cumulative exposures. Section 408(b)(2)(D)(V) of FFDCA requires that, when considering whether to establish, modify, or revoke a tolerance, the Agency consider “available information” concerning the cumulative effects of a particular pesticide’s residues and “other substances that have a common mechanism of toxicity.” For the new uses of emamectin, the quantitative exposures to residues of emamectin remain unchanged, and the cumulative exposures remain identical to those as assessed within the 2021 cumulative assessment. There are no risks of concern resulting from these cumulative exposures.

Safety factor for infants and children. The scientific information underpinning EPA’s prior safety factor determination remains unchanged from the August 27, 2019 rulemaking. EPA continues to conclude that there is reliable data to support the reduction of the Food Quality Protection Act (FQPA) safety factor. See Unit III.D. of the August 27, 2019 rulemaking for a discussion of the Agency’s rationale for that determination.

Aggregate risks and determination of safety. EPA determines whether acute and chronic dietary pesticide exposures are safe by comparing aggregate exposure estimates to the acute PAD (aPAD) and chronic PAD (cPAD). Short-, intermediate-, and chronic-term risks are evaluated by comparing the estimated aggregate food, water, and residential exposure to the appropriate points of departure to ensure that an adequate margin of exposure (MOE) exists. For linear cancer risks, EPA calculates the lifetime probability of acquiring cancer given the estimated aggregate exposure.

Acute dietary risks are below the Agency’s level of concern: 30% of the acute population adjusted dose (aPAD) for children 1 to 2 years old, the population group of concern. Chronic dietary risks are below the Agency’s level of concern: 3.8% of the chronic population adjusted dose (cPAD) for children 1 to 2 years old, the group with the highest exposure. Emamectin is classified as “Not likely to be Carcinogenic to Humans”, therefore, a cancer dietary exposure analysis was not performed.

There are no registered uses of emamectin that would result in residential exposure; therefore, aggregate exposure and risk estimates are equivalent to the dietary exposure and risk estimates and are not of concern. Using the exposure assumptions described for acute and chronic exposures, EPA has concluded the combined dermal and inhalation exposures result in negligible margins of exposures for handler scenarios ranging from 200 to 27,000 and post-application scenarios ranging from 48,000 to 750,000, which are not of concern because they exceed EPA’s level of concern (MOEs less than or equal to 100).

Therefore, based on the risk assessments and information described above, EPA concludes there is a reasonable certainty that no harm will result to the general population, or to infants and children from aggregate exposure to emamectin residues. More detailed information about the Agency’s analysis can be found at http://www.regulations.gov in the document titled “Emamectin Benzoate; Human Health Risk Assessment for a Proposed New Use on Soybean” in docket ID number EPA–HQ–OPP–2021–0066.

IV. Other Considerations

A. Analytical Enforcement Methodology

For a discussion of the available analytical enforcement method, see Unit IV.A. of the August 27, 2019 rulemaking.

B. International Residue Limits

In making its tolerance decisions, EPA seeks to harmonize U.S. tolerances with international standards whenever possible, consistent with U.S. food safety standards and agricultural practices. EPA considers the international maximum residue limits (MRLs) established by the Codex Alimentarius Commission (Codex), as required by FFDCA section 408(b)(4). The Codex has not established MRLs for residues of emamectin on soybeans.
V. Conclusion

Therefore, tolerances are established for residues of emamectin benzoate (a mixture of a minimum of 90% 4-epi-methylamino-4'-deoxoavermectin B1a and a maximum of 10% 4-epi-methylamino-4'-deoxoavermectin B1b benzoate) and its metabolites in or on in or on the soybean, seed at 0.01 ppm.

VI. Statutory and Executive Order Reviews

This action establishes a tolerance under FFDCA section 408(d) in response to a petition submitted to the Agency. The Office of Management and Budget (OMB) has exempted these types of actions from review under Executive Order 12866, entitled “Regulatory Planning and Review” (58 FR 51735, October 4, 1993). Because this action has been exempted from review under Executive Order 12866, this action is not subject to Executive Order 13211, entitled “Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use” (66 FR 28355, May 22, 2001) or Executive Order 13045, entitled “Protection of Children from Environmental Health Risks and Safety Risks” (62 FR 19885, April 23, 1997). This action does not contain any information collections subject to OMB approval under the Paperwork Reduction Act (PRA) (44 U.S.C. 3501 et seq.), nor does it require any special considerations under Executive Order 12898, entitled “Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations” (59 FR 7629, February 16, 1994).

Since tolerances and exemptions that are established on the basis of a petition under FFDCA section 408(d), such as the tolerance in this final rule, do not require the issuance of a proposed rule, the requirements of the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 et seq.), do not apply.

This action directly regulates growers, food processors, food handlers, and food retailers, not States or Tribes, nor does this action alter the relationships or distribution of power and responsibilities established by Congress in the preemption provisions of FFDCA section 408(n)(4). As such, the Agency has determined that this action will not alter the relationships or distribution of power and responsibilities among the various levels of government or between the Federal Government and Indian Tribes. Thus, the Agency has determined that Executive Order 13132, entitled “Federalism” (64 FR 43255, August 10, 1999) and Executive Order 13175, entitled “Consultation and Coordination with Indian Tribal Governments” (65 FR 67249, November 9, 2000) do not apply to this action. In addition, this action does not impose any enforceable duty or contain any unfunded mandate as described under Title II of the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 et seq.).

This action does not involve any technical standards that would require Agency consideration of voluntary consensus standards pursuant to section 12(d) of the National Technology Transfer and Advancement Act (NTTAA) (15 U.S.C. 272 note).

VII. Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 et seq.). EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the Federal Register. This action is not a “major rule” as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 180

Environmental protection, Administrative practice and procedure, Agricultural commodities, Pesticides and pests, Reporting and recordkeeping requirements.

Dated: July 29, 2021.

Marietta Echeverria,
Acting Director, Registration Division, Office of Pesticide Programs.

Therefore, for the reasons stated in the preamble, EPA is amending 40 CFR chapter I as follows:

PART 180—TOLERANCES AND EXEMPTIONS FOR PESTICIDE CHEMICAL RESIDUES IN FOOD

§ 180.505 Emamectin; tolerances for residues.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 180

Pyrrolo[3,4-c]pyrrole-1,4-dione, 3,6-bis(4-chlorophenyl)-2,5-dihydro-; Exemption From the Requirement of a Tolerance

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This regulation establishes an exemption from the requirement of a tolerance for residues of pyrrolo[3,4-c]pyrrole-1,4-dione, 3,6-bis(4-chlorophenyl)-2,5-dihydro- when used as an inert ingredient (dye, coloring agent) in pesticide formulations applied to growing crops or to raw agricultural commodities after harvest. BASF Corporation submitted a petition to EPA under the Federal Food, Drug, and Cosmetic Act (FFDCA), requesting establishment of an exemption from the requirement of a tolerance for pyrrolo[3,4-c]pyrrole-1,4-dione, 3,6-bis(4-chlorophenyl)-2,5-dihydro-. This regulation eliminates the need to establish a maximum permissible level for residues of pyrrolo[3,4-c]pyrrole-1,4-dione, 3,6-bis(4-chlorophenyl)-2,5-dihydro- when used in accordance with this exemption.

DATES: This regulation is effective August 13, 2021. Objections and requests for hearings must be received on or before October 12, 2021, and must be filed in accordance with the instructions provided in 40 CFR part 178 (see also Unit I.C. of the SUPPLEMENTARY INFORMATION).

ADDRESSES: The docket for this action, identified by docket identification (ID) number EPA–HQ–OPP–2020–0450, is available at http://www.regulations.gov or at the Office of Pesticide Programs Regulatory Public Docket (OPP Docket) in the Environmental Protection Agency Docket Center (EPA/DC), West William
Jefferson Clinton Bldg., Rm. 3334, 1301 Constitution Ave. NW, Washington, DC 20460–0001. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the OPP Docket is (703) 305–5805.

Due to the public health concerns related to COVID–19, the EPA Docket Center (EPA/DC) and Reading Room is closed to visitors with limited exceptions. The staff continues to provide remote customer service via email, phone, and webform. For the latest status information on EPA/DC services and docket access, visit https://www.epa.gov/dockets.

FOR FURTHER INFORMATION CONTACT: Marietta Echeverria, Registration Division (7505P), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001; main telephone number: (703) 305–7090; email address: RDFRNotices@epa.gov.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

You may be potentially affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:

• Crop production (NAICS code 111).
• Animal production (NAICS code 112).
• Food manufacturing (NAICS code 311).
• Pesticide manufacturing (NAICS code 32532).

B. How can I get electronic access to other related information?

C. How can I file an objection or hearing request?

Under FFDCA section 408(g), 21 U.S.C. 346a(g), any person may file an objection to any aspect of this regulation and may also request a hearing on those objections. You must file your objection or request a hearing on this regulation in accordance with the instructions provided in 40 CFR part 178. To ensure proper receipt by EPA, you must identify docket ID number EPA–HQ–OPP–2020–0450 in the subject line on the first page of your submission. All objections and requests for a hearing must be in writing and must be received by the Hearing Clerk on or before October 12, 2021. Addresses for mail and hand delivery of objections and hearing requests are provided in 40 CFR 178.25(b).

In addition to filing an objection or hearing request with the Hearing Clerk as described in 40 CFR part 178, please submit a copy of the filing (excluding any Confidential Business Information (CBI)) for inclusion in the public docket. Information not marked confidential pursuant to 40 CFR part 2 may be disclosed publicly by EPA without prior notice. Submit the non-CBI copy of your objection or hearing request, identified by docket ID number EPA–HQ–OPP–2020–0450, by one of the following methods:

• Federal eRulemaking Portal: http://www.regulations.gov. Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be CBI or other information whose disclosure is restricted by statute.
• Mail: OPP Docket, Environmental Protection Agency Docket Center (EPA/DC), (28221T), 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001.
• Hand Delivery: To make special arrangements for hand delivery or delivery of boxed information, please follow the instructions at http://www.epa.gov/dockets/contacts.html.

Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at http://www.epa.gov/dockets.

II. Petition for Exemption

In the Federal Register of December 21, 2020 (85 FR 82908) (FRL–10016–93), EPA issued a document pursuant to FFDCA section 408, 21 U.S.C. 346a, announcing the filing of a pesticide petition (PP IN–11384) by Spring Park, New Jersey 07932. The petition requested that 40 CFR 180.910 be amended by establishing an exemption from the requirement for a tolerance for residues of pyrrole[3,4-c]pyrrole-1,4-dione, 3,6-bis(4-chlorophenyl)-2,5-dihydro- (CAS Reg. No. 84632–65–5) when used as an inert ingredient (dye, color, agent) in pesticide formulations applied pre- and post-harvest. That document referenced a summary of the petition prepared by BASF Corporation, the petitioner, which is available in the docket, http://www.regulations.gov. One comment was received on the notice of filing. EPA’s response to this comment is discussed in Unit V.B.

III. Inert Ingredient Definition

Inert ingredients are all ingredients that are not active ingredients as defined in 40 CFR 153.125 and include, but are not limited to, the following types of ingredients (except when they have a pesticidal efficacy of their own):

• Solvents such as alcohols and hydrocarbons; surfactants such as polyoxyethylene polymers and fatty acids; carriers such as clay and diatomaceous earth; thickeners such as carrageenan and modified cellulose; wetting, spreading, and dispersing agents; propellants in aerosol dispensers; microencapsulating agents; and emulsifiers. The term “inert” is not intended to imply nontoxicity; the ingredient may or may not be chemically active. Generally, EPA has exempted inert ingredients from the requirement of a tolerance based on the low toxicity of the individual inert ingredients.

IV. Aggregate Risk Assessment and Determination of Safety

Section 408(c)(2)(A)(i) of the FFDCA allows EPA to establish an exemption from the requirement for a tolerance (the legal limit for a pesticide chemical residue in or on a food) only if EPA determines that the exemption is “safe.” Section 408(c)(2)(A)(ii) of the FFDCA defines “safe” to mean that EPA has determined that “there is a reasonable certainty that no harm will result from aggregate exposure to the pesticide chemical residue, including all anticipated dietary exposures and all other exposures for which there is reliable information.” This includes exposure through drinking water and in residential settings, but it does not include occupational exposure. Section 408(b)(2) of FFDCA requires EPA to give special consideration to exposure of infants and children to the pesticide chemical residue in establishing an exemption and to “ensure that there is a reasonable certainty that no harm will result to infants and children from aggregate exposure to the pesticide chemical residue.” EPA establishes exemptions from the requirement of a tolerance only in those cases where it can be clearly demonstrated that the risks from aggregate exposure to pesticide chemical residues under reasonably foreseeable circumstances will pose no harm to human health. In order to
determine the risks from aggregate exposure to pesticide inert ingredients, the Agency considers the toxicity of the inert in conjunction with possible exposure to residues of the inert ingredient through food, drinking water, and through other exposures that occur as a result of pesticide use in residential settings. If EPA is able to determine that a tolerance is not necessary to ensure that there is a reasonable certainty that no harm will result from aggregate exposure to the inert ingredient, an exemption from the requirement of a tolerance may be established.

Consistent with FFDCA section 408(c)(2)(A), and the factors specified in FFDCA section 408(c)(2)(B), EPA has reviewed the available scientific data and other relevant information in support of this action. EPA has sufficient data to assess the hazards of and to make a determination on aggregate exposure to pyrrolo[3,4-c]pyrrole-1,4-dione, 3,6-bis(4-chlorophenyl)-2,5-dihydro- including exposure resulting from the exemption established by this action. EPA’s assessment of exposures and risks associated with pyrrolo[3,4-c]pyrrole-1,4-dione, 3,6-bis(4-chlorophenyl)-2,5-dihydro- follows.

A. Toxicological Profile

EPA has evaluated the available toxicity data and considered their validity, completeness, and reliability as well as the relationship of the results of the studies to human risk. EPA has also considered available information concerning the variability of the sensitivities of major identifiable subgroups of consumers, including infants and children. Specific information on the studies received and the nature of the adverse effects caused by pyrrolo[3,4-c]pyrrole-1,4-dione, 3,6-bis(4-chlorophenyl)-2,5-dihydro- (also referred to as Pigment Red 254) as well as the no-observed-adverse-effect-level (NOAEL) and the lowest-observed-adverse-effect-level (LOAEL) from the toxicity studies are discussed in this unit.

Available acute toxicity studies on Pigment Red 254 show low oral, dermal, and inhalation toxicity. An eye irritation, a dermal irritation, and a dermal sensitization study were also available and showed no effect of treatment. No adverse effects of treatment were seen in rats in either a 28-day oral toxicity study or a reproduction/developmental toxicity study at the highest dose tested (1,000 mg/kg/day). Therefore, the NOAEL for the 28-day study and the parental, reproductive, and developmental NOAELs are (1,000 mg/kg/day).

There was no evidence of carcinogenicity or neuropathological changes or effects reported in any of the studies. There were no in vivo or in vitro mutagenic effects in mutagenicity testing with Pigment Red 254. The agency does not believe Pigment Red 254 will be carcinogenic or neurotoxic.

B. Toxicological Points of Departure/Limits of Concern

No toxicological endpoint of concern for Pigment Red 254 has been identified in the database.

C. Exposure Assessment

1. Dietary exposure from food, feed uses, and drinking water. In evaluating dietary exposure to Pigment Red 254, EPA considered exposure under the current and proposed uses of Pigment Red 254. Dietary exposure to Pigment Red 254 may occur from eating foods treated with pesticide formulations containing this inert ingredient and drinking water containing runoff from soils containing the treated crops. In addition, Pigment Red 254 is used as an indirect food additive. However, no toxicological endpoint of concern was identified for Pigment Red 254, and therefore, a quantitative assessment of dietary exposure is not necessary.

2. Non-dietary exposure. The term “residential exposure” is used in this document to refer to non-occupational, non-dietary exposure (e.g., textiles (clothing and diapers), carpets, swimming pools, and hard surface disinfection on walls, floors, tables). Residential exposure to Pigment Red 254 may occur based on its use as an inert ingredient in pesticide formulations marketed for residential uses. Additional non-dietary exposure may occur from use of Pigment Red 254 in consumer products. However, no toxicological endpoint of concern was identified for Pigment Red 254, and therefore, a quantitative residential exposure assessment for Pigment Red 254 was not conducted.

3. Cumulative effects from substances with a common mechanism of toxicity. Section 408(b)(2)(D)(v) of FFDCA requires that, when considering whether to establish, modify, or revoke a tolerance or exemption, the Agency consider “available information” concerning the cumulative effects of a particular pesticide’s residues and “other substances that have a common mechanism of toxicity.” EPA has not found Pigment Red 254 to share a common mechanism of toxicity with any other substances, and Pigment Red 254 does not appear to produce a toxic metabolite produced by other substances. For the purposes of this action, therefore, EPA has assumed that Pigment Red 254 does not have a common mechanism of toxicity with other substances. For information regarding EPA’s efforts to determine which chemicals have a common mechanism of toxicity and to evaluate the cumulative effects of such chemicals, see EPA’s website at http://www.epa.gov/pesticides/cumulative.

D. Safety Factor for Infants and Children

Section 408(b)(2)(C) of the FFDCA requires EPA to retain an additional tenfold margin of safety in the case of threshold effects to ensure that there is a reasonable certainty that no harm will result to infants and children from aggregate exposure to the pesticide chemical residue. As noted in Unit IV.B., there is no indication of threshold effects being caused by Pigment Red 254. Therefore, this requirement does not apply to the present analysis. Moreover, due to the lack of any toxicological endpoints of concern, EPA conducted a qualitative assessment of Pigment Red 254, which does not use safety factors for assessing risk, and no additional safety factor is needed for assessing risk to infants and children.

E. Aggregate Risks and Determination of Safety

Taking into consideration all available information on Pigment Red 254, EPA has determined that there is a reasonable certainty that no harm to the general population or any population subgroup, including infants and children, will result from aggregate exposure to Pigment Red 254 residues. Therefore, the establishment of exemptions from the requirement of a tolerance under 40 CFR 180.910 for residues of Pigment Red 254 when used as an inert ingredient in pesticide formulations pre- and post-harvest is safe under FFDCA section 408.

V. Other Considerations

A. Analytical Enforcement Methodology

An analytical method is not required for enforcement purposes since the Agency is establishing an exemption from the requirement of a tolerance without any numerical limitation.

B. Response to Comments

One comment was received which asserted that Pigment Red 254 contains chlorine gas and opposed its use; however, chlorine gas is not a constituent nor a metabolite/degradation product of Pigment Red 254 and is therefore not relevant to the assessment of this chemical.
VI. Conclusions

Therefore, an exemption from the requirement of a tolerance is established under 40 CFR 180.910 for pyrrolo[3,4-c]pyrrole-1,4-dione, 3,6-bis(4-chlorophenyl)-2,5-dihydro- (CAS Reg. No. 84632–65–5) when used as an inert ingredient (dye, coloring agent) in pesticide formulations applied pre- and post-harvest.

VII. Statutory and Executive Order Reviews

This action establishes an exemption from the requirement of a tolerance under FFDCA section 408(d) in response to a petition submitted to the Agency. The Office of Management and Budget (OMB) has exempted these types of actions from review under Executive Order 12866, entitled “Regulatory Planning and Review” (58 FR 51735, October 4, 1993). Because this action has been exempted from review under Executive Order 12866, this action is not subject to Executive Order 13211, entitled “Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use” (66 FR 28355, May 22, 2001) or Executive Order 13045, entitled “Protection of Children from Environmental Health Risks and Safety Risks” (62 FR 19885, April 23, 1997). This action does not contain any information collections subject to OMB approval under the Paperwork Reduction Act (PRA) (44 U.S.C. 3501 et seq.), nor does it require any special considerations under Executive Order 12986, entitled “Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations” (59 FR 7629, February 16, 1994).

Since tolerances and exemptions that are established on the basis of a petition under FFDCA section 408(d), such as the tolerance exemption in this final rule, do not require the issuance of a proposed rule, the requirements of the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 et seq.), do not apply.

This action directly regulates growers, food processors, food handlers, and food retailers, not States or Tribes, nor does this action alter the relationships or distribution of power and responsibilities established by Congress in the preemption provisions of FFDCA section 408(n)(4). As such, the Agency has determined that this action will not have a substantial direct effect on States or Tribal Governments, on the relationship between the National Government and the States or Tribal Governments, or on the distribution of power and responsibilities among the various levels of government or between the Federal Government and Indian Tribes. Thus, the Agency has determined that Executive Order 13132, entitled “Federalism” (64 FR 43255, August 10, 1999) and Executive Order 13175, entitled “Consultation and Coordination with Indian Tribal Governments” (65 FR 67249, November 9, 2000) do not apply to this action. In addition, this action does not impose any enforceable duty or contain any unfunded mandate as described under Title II of the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 et seq.).

This action does not involve any technical standards that would require Agency consideration of voluntary consensus standards pursuant to section 12(d) of the National Technology Transfer and Advancement Act (NTTAA) (15 U.S.C. 272 note).

VIII. Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 et seq.), EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the Federal Register. This action is not a “major rule” as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 180

Environmental protection. Administrative practice and procedure, Agricultural commodities, Pesticides and pests, Reporting and recordkeeping requirements.

Marietta Echeverria,
Acting Director, Registration Division, Office of Pesticide Programs.

Therefore, for the reasons stated in the preamble, 40 CFR chapter I is amended as follows:

PART 180—TOLERANCES AND EXEMPTIONS FOR PESTICIDE CHEMICAL RESIDUES IN FOOD

1. The authority citation for part 180 continues to read as follows:

2. In § 180.910, amend the table by adding in alphabetical order the inert ingredient “Pyrrolo[3,4-c]pyrrole-1,4-dione, 3,6-bis(4-chlorophenyl)-2,5-dihydro- (CAS Reg. No. 84632–65–5)” to the table to read as follows:

§ 180.910 Inert ingredients used pre- and post-harvest; exemptions from the requirement of a tolerance.

* * * * *

Add: Pyrrolo[3,4-c]pyrrole-1,4-dione, 3,6-bis(4-chlorophenyl)-2,5-dihydro-

ACTION: Final rule.

SUMMARY: This regulation establishes tolerances for residues of boscalid in or on tea, dried; tea, instant. BASF Corporation requested these tolerances under the Federal Food, Drug, and Cosmetic Act (FFDCA).

DATES: This regulation is effective August 13, 2021. Objections and requests for hearings must be received...
on or before October 12, 2021, and must be filed in accordance with the instructions provided in 40 CFR part 178 (see also Unit I.C. of the SUPPLEMENTARY INFORMATION).

ADDRESSES: The docket for this action, identified by docket identification (ID) number EPA–HQ–OPP–2020–0050, is available at http://www.regulations.gov or at the Office of Pesticide Programs Regulatory Public Docket (OPP Docket) in the Environmental Protection Agency Docket Center (EPA/DC), West William Jefferson Clinton Blvd., Rm. 3334, 1301 Constitution Ave. NW, Washington, DC 20460–0001. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the OPP Docket is (703) 305–5805.

Due to the public health concerns related to COVID–19, the EPA Docket Center (EPA/DC) and Reading Room is closed to visitors with limited exceptions. The staff continues to provide remote customer service via email, phone, and webform. For the latest status information on EPA/DC services and docket access, visit https://www.epa.gov/dockets.

FOR FURTHER INFORMATION CONTACT: Marietta Echeverria, Registration Division (7505P), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001; main telephone number: (703) 305–7090; email address: RDFRNotices@epa.gov.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

You may be potentially affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:

• Crop production (NAICS code 111).
• Animal production (NAICS code 112).
• Food manufacturing (NAICS code 311).
• Pesticide manufacturing (NAICS code 32532).

B. How can I get electronic access to other related information?

C. How can I file an objection or hearing request?

Under FFDCA section 408(g), 21 U.S.C. 346a(g), any person may file an objection to any aspect of this regulation and may also request a hearing on those objections. You must file your objection or request a hearing on this regulation in accordance with the instructions provided in 40 CFR part 178. To ensure proper receipt by EPA, you must identify docket ID number EPA–HQ–OPP–2020–0050 in the subject line on the first page of your submission. All objections and requests for a hearing must be in writing and must be received by the Hearing Clerk on or before October 12, 2021. Addresses for mail and hand delivery of objections and hearing requests are provided in 40 CFR 178.25(b).

In addition to filing an objection or hearing request with the Hearing Clerk as described in 40 CFR part 178, please submit a copy of the filing (excluding any Confidential Business Information (CBI)) for inclusion in the public docket. Information not marked confidential pursuant to 40 CFR part 2 may be disclosed publicly by EPA without prior notice. Submit the non-CBI copy of your objection or hearing request, identified by docket ID number EPA–HQ–OPP–2020–0050, by one of the following methods:

• Federal eRulemaking Portal: http://www.regulations.gov. Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be CBI or other information whose disclosure is restricted by statute.
• Mail: OPP Docket, Environmental Protection Agency Docket Center (EPA/DC), (28221T), 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001.
• Hand Delivery: To make special arrangements for hand delivery or delivery of boxed information, please follow the instructions at http://www.epa.gov/OPP/dockets/convtxt.html. Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at http://www.epa.gov/dockets.

II. Summary of Petitioned-For Tolerance

In the Federal Register of September 30, 2020 (85 FR 61681) (FRL–10014–74), EPA issued a document pursuant to FFDCA section 408(d)(9), 21 U.S.C. 346a(d)(3), announcing the filing of a pesticide petition (PP 998819) by BASF Corporation, 26 Davis Drive, P.O. Box 13528, Research Triangle Park, NC 27709. The petition requested that 40 CFR 180.589 be amended by establishing tolerances for residues of the fungicide boscalid in or on tea at 80 parts per million (ppm). That document referenced a summary of the petition prepared by BASF Corporation, the registrant, which is available in the docket, http://www.regulations.gov. No comments were received in response to the notice of filing.

FFDCA section 408(d)(4)(A)(i) permits the Agency to finalize a tolerance that varies from that sought by the petition. Based upon review of the data supporting the petition, EPA has modified the tolerance level being established and corrected the commodity definition of “tea” to “tea, dried” and “tea, instant.” The reason for these changes is explained in Unit IV.D.

III. Aggregate Risk Assessment and Determination of Safety

A. Statutory Background

Section 408(b)(2)(A)(i) of FFDCA allows EPA to establish a tolerance (the legal limit for a pesticide chemical residue in or on a food) only if EPA determines that the tolerance is “safe.” Section 408(b)(2)(A)(ii) of FFDCA defines “safe” to mean that “there is a reasonable certainty that no harm will result from aggregate exposure to the pesticide chemical residue, including all anticipated dietary exposures and all other exposures for which there is reliable information.” This includes exposure through drinking water and in residential settings but does not include occupational exposure. Section 408(b)(2)(C) of FFDCA requires EPA to give special consideration to exposure of infants and children to the pesticide chemical residue in establishing a tolerance and to “ensure that there is a reasonable certainty that no harm will result to infants and children from aggregate exposure to the pesticide chemical residue...” Consistent with FFDCA section 408(b)(2)(D) and the factors specified therein, EPA has reviewed the available scientific data and other relevant information in support of this action. EPA has sufficient data to assess the hazards of and to make a determination on aggregate exposure for boscalid including exposure resulting from the tolerances established by this action. EPA’s assessment of exposures and risks associated with boscalid follows.

B. Aggregate Risk Assessment

In an effort to streamline Federal Register publications, EPA is not
reprinting sections that have not changed from previous rulemakings for the same pesticide. On October 19, 2018, EPA published in the Federal Register a final rule establishing tolerances for residues of boscalid in or on multiple commodities based on the Agency’s conclusion that aggregate exposure to boscalid is safe for the general population, including infants and children. See 83 FR 52991 (EPA–HQ–OPP–2017–0310). Refer to the following sections from the previous tolerance rulemaking for boscalid that have remained the same under the current risk assessment: Units III.A (Toxicological Profile); III.B (Toxicological Points of Departure/Levels of Concern); III.C (Exposure Assessment), except as explained below; and III.D. (Safety Factor for Infants and Children). EPA has conducted an updated human health risk assessment to evaluate the safety of the requested tolerances, which is limited to an updated dietary exposure and risk assessment, and subsequent updates to the aggregate exposure and risk assessment. See “Boscalid. Human Health Risk Assessment for the Establishment of a Permanent Tolerance Without a U.S. Registration on Tea.” (D456100, 04/01/2021), which is available in the docket established by this action, EPA–HQ–OPP–2020–0050.

Updates to exposure assessment. EPA’s dietary (food and drinking water) exposure assessments have been updated to include the potential additional exposure from the tolerance for boscalid residues in or on tea, dried and tea, instant. The exposure assessments relied on tolerance-level residues for all crops and an assumption of 100 percent crop treated (CPT) as the October 19, 2018, final rule. Exposure in drinking water and from residential sources are not impacted by the increased tolerance on tea, dried and tea, instant because the tolerances are without U.S. registration.

Assessment of aggregate risks. An acute dietary exposure assessment was not conducted because there were no observed effects attributable to a single dose. Chronic dietary risks are below the Agency’s level of concern of 100% of the chronic population adjusted dose (cPAD): 60% of the cPAD for children 1 to 2 years old, the most highly exposed population subgroup.

For the aggregate risk assessment, exposures to boscalid in food and drinking water are combined with residential exposures for the relevant exposure duration period. There is potential for short-term aggregate exposure to boscalid via dietary (which is considered background exposure) and residential (which is considered primary) exposure pathways. The short-term aggregate margins of exposure (MOEs) are 160 for children 6 to 11 years old, 360 for youth 11 to 16 years old, and 130 for adults (LOC = 100), which are not of concern because they exceed EPA’s level of concern (MOEs less than or equal to 100).

A separate cancer dietary assessment was not conducted since boscalid was classified by the Cancer Assessment Review Committee (CARC) as “suggestive evidence of carcinogenicity”; and the chronic exposure assessment is protective of any cancer risks. Therefore, based on the chronic exposure assessment, which accounts for potential carcinogenicity, EPA does not expect boscalid to pose a cancer risk.

C. Determination of Safety

Therefore, based on the risk assessments and information described above, EPA concludes there is a reasonable certainty that no harm will result to the general population, or to infants and children, from aggregate exposure to boscalid residues. More detailed information about the Agency’s analysis can be found in the document entitled, “Boscalid. Human Health Risk Assessment for the Establishment of a Permanent Tolerance Without a U.S. Registration on Tea.” (D456100, 04/01/2021) by going to http://www.regulations.gov.

IV. Other Considerations

A. Analytical Enforcement Methodology

Adequate methods exist for both plants and livestock. In plants, the parent residue is extracted using an aqueous organic solvent mixture followed by liquid/liquid partitioning and a column clean up. Quantitation is by gas chromatography using mass spectrometry (GC/MS) or liquid chromatography in tandem with mass spectrometric detection (LC/MS/MS). In livestock, the residues are extracted with methanol. The extract is treated with enzymes in order to release the conjugated glucuronic acid metabolite. The residues are then isolated by liquid/liquid partition followed by column chromatography. The hydroxylated metabolite is acetylated followed by a column clean-up. The parent and acetylated metabolite are quantitated by gas chromatography with electron capture detection.

Adequate enforcement methodology, extraction using an aqueous organic solvent mixture followed by liquid/liquid partitioning and a column clean up with quantitation by gas chromatography using mass spectrometry (GC/MS) or liquid chromatography in tandem with mass spectrometric detection (LC/MS/MS), is available to enforce the tolerance expression.

The method may be requested from: Chief, Analytical Chemistry Branch, Environmental Science Center, 701 Mapes Rd., Ft. Meade, MD 20755–5350; telephone number: (410) 305–2905; email address: residumethods@epa.gov.

B. International Residue Limits

In making its tolerance decisions, EPA seeks to harmonize U.S. tolerances with international standards whenever possible, consistent with U.S. food safety standards and agricultural practices. EPA considers the international maximum residue limits (MRLs) established by the Codex Alimentarius Commission (Codex), as required by FFDCA section 408(b)(4). EPA may establish a tolerance that is different from a Codex MRL; however, FFDCA section 408(b)(4) requires that EPA explain the reasons for departing from the Codex level. The Codex has not established a MRL for boscalid. Taiwan has an MRL for residues of boscalid in/ on dried tea leaves at 0 ppm, and Japan has an MRL of residues of boscalid in/ on dried tea leaves at 0 ppm. The tolerance expression for Taiwan and Japan are harmonized with the US tolerance definition in crops as parent boscalid only but do not metabolites and degradates. All international MRLs fall below the calculated tolerance value of 70 ppm.

C. Revisions to Petitioned-For Tolerances

The petitioned—for tolerance for residues on the commodity tea at 80 ppm is revised so that there will be two separate tolerances for residues on tea, dried and tea, instant each at 70 ppm and corrected commodity definitions. The tolerance is also revised pursuant to a difference in how the tolerances are calculated. The registrant calculated a processing factor for dried black tea as 4.1x and used the field trial values from the fresh leaves at 7–days. EPA determined the processing factor to be no greater than 2.54x and extrapolated the 7–day residues for black tea based on the combination of the processing factor and the decline trend for fresh leaves.

V. Conclusion

Therefore, tolerances are established for residues of boscalid, in or on Tea, dried; and Tea, instant at 70 ppm.
VI. Statutory and Executive Order Reviews

This action establishes tolerances under FFDCA section 408(d) in response to a petition submitted to the Agency. The Office of Management and Budget (OMB) has exempted these types of actions from review under Executive Order 12866, entitled “Regulatory Planning and Review” (58 FR 51735, October 4, 1993). Because this action has been exempted from review under Executive Order 12866, this action is not subject to Executive Order 13211, entitled “Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use” (66 FR 28355, May 22, 2001) or Executive Order 13045, entitled “Protection of Children from Environmental Health Risks and Safety Risks” (62 FR 19885, April 23, 1997). This action does not contain any information collections subject to OMB approval under the Paperwork Reduction Act (PRA) (44 U.S.C. 3501 et seq.), nor does it require any special considerations under Executive Order 12998, entitled “Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations” (59 FR 7629, February 16, 1994).

Since tolerances and exemptions that are established on the basis of a petition under FFDCA section 408(d), such as the tolerance in this final rule, do not require the issuance of a proposed rule, the requirements of the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 et seq.) do not apply. This action directly regulates growers, food processors, food handlers, and food retailers, not States or tribes, nor does this action alter the relationships or distribution of power and responsibilities established by Congress in the preemption provisions of FFDCA section 408(n)(4). As such, the Agency has determined that this action will not have a substantial direct effect on States or Tribal Governments, on the relationship between the National Government and the States or Tribal Governments, or on the distribution of power and responsibilities among the various levels of government or between the Federal Government and Indian Tribes. Thus, the Agency has determined that Executive Order 13132, entitled “Federalism” (64 FR 43255, August 10, 1999) and Executive Order 13175, entitled “Consultation and Coordination with Indian Tribal Governments” (65 FR 67249, November 9, 2000) do not apply to this action. In addition, this action does not impose any enforceable duty or contain any unfunded mandate as described under Title II of the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 et seq.).

This action does not involve any technical standards that would require Agency consideration of voluntary consensus standards pursuant to section 12(d) of the National Technology Transfer and Advancement Act (NTTAA) (15 U.S.C. 272 note).

VII. Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 et seq.), EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the Federal Register. This action is not a “major rule” as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 180

Environmental protection, Administrative practice and procedure, Agricultural commodities, Pesticides and pests, Reporting and recordkeeping requirements.

Dated: August 2, 2021.

Marietta Echeverria, Acting Director, Registration Division, Office of Pesticide Programs.

Therefore, for the reasons stated in the preamble, EPA is amending 40 CFR chapter I as follows:

PART 180—TOLERANCES AND EXEMPTIONS FOR PESTICIDE CHEMICAL RESIDUES IN FOOD

1. The authority citation for part 180 continues to read as follows:

2. In §180.589 amend the table in paragraph (a)(1) by adding in alphabetical order entries for “Tea, dried” and “Tea, instant” to read as follows:

<table>
<thead>
<tr>
<th>Commodity</th>
<th>Parts per million</th>
</tr>
</thead>
<tbody>
<tr>
<td>* * * *</td>
<td></td>
</tr>
<tr>
<td>Tea, dried</td>
<td>70</td>
</tr>
<tr>
<td>Tea, instant</td>
<td>70</td>
</tr>
</tbody>
</table>

* * * * *

There are no U.S. registrations for these commodities as of August 13, 2021.
Federal agencies to follow certain procedures in recovering penalties and assessments against people who file false claims or statements for which the liability is $150,000 or less. Initially, the PFCRA did not apply to NEH. Section 10 of the Inspector General Reform Act of 2008, Public Law 110–409, 122 Stat. 4314, however, expanded the PFCRA’s scope to include NEH.

The PFCRA requires each covered agency to promulgate rules and regulations necessary to implement its provisions. Following the PFCRA’s enactment, the President’s Council on Integrity and Efficiency requested that the Department of Health and Human Services lead an inter-agency task force to develop model PFCRA regulations. This action was in keeping with the Senate Governmental Affairs Committee’s desire that “the regulations would be substantially similar throughout the government” (S. Rep. No. 99–212, 99th Cong., 1st Sess. 12 (1985)). The Council recommended that all covered agencies adopt the model rule.

Accordingly, NEH is implementing the PFCRA’s provisions through this final rule—which substantially conforms to the model rule—in order to establish procedures by which NEH will seek to recover penalties and assessments against persons who file, or cause to have filed, false claims or statements with NEH for which liability is $150,000 or less.

2. Maximum Penalty Amount

The PFCRA established a maximum penalty of $5,000 for each violation. The Federal Civil Penalties Inflation Adjustment Act Improvements Act of 2015 (the 2015 Act), 28 U.S.C. 2461 note, required all Federal agencies to (1) adjust the penalty amount to 2016 inflation levels with an initial “catch-up” inflation adjustment; and (2) make subsequent annual adjustments for inflation. This rule incorporates the initial “catch-up” adjustment to 2016 inflation levels and the annual adjustments for 2017 through 2021, and applies those adjustments cumulatively to the civil monetary penalties that the PFCRA imposes.2

A. Initial “Catch-Up” and 2021 Adjustments for Inflation

NEH determined the first “catch-up” adjustment to 2016 inflation levels using the formula set forth in the 2015 Act. Specifically, NEH calculated the percent change between the Consumer Price Index for all Urban Consumers (CPI–U) for October of the last year in which Congress adjusted the PFCRA civil penalties (October 1986) and the CPI–U for October 2015, and then rounded to the nearest dollar.

NEH similarly determined each subsequent annual adjustment by calculating the percent increase between the CPI–U for the month of October preceding the date of the adjustment and the CPI–U for the October one year prior to the October immediately preceding the date of the adjustment.

Table 1, below, details the above calculations.

### Table 1—Annual Adjustments to PFCRA Civil Monetary Penalties, 2016–2021

<table>
<thead>
<tr>
<th>Effective date</th>

</tr>
</tbody>
</table>

B. Future Annual Adjustments

The 2015 Act requires agencies to make annual adjustments to civil penalty amounts no later than January 15 of each year following the initial adjustment. NEH will calculate future annual adjustments using the same method as the adjustments previously described herein. If the CPI–U does not increase, then the civil penalties remain the same.

NEH will publish a Notice in the Federal Register containing the amount of these annual inflation adjustments no later than January 15 of each year.

---

1 For a more detailed explanation of the 2015 Act and the civil monetary penalty inflation adjustment calculations that it requires, see NEH’s regulation implementing the 2015 Act at 85 FR 55566.

2 Table 1 details the annual adjustments to the PFCRA maximum penalty amount for years 2016–2021.

---

Executive Order 12866, Regulatory Planning and Review, and Executive Order 13563, Improving Regulation and Regulatory Review

This action is not a significant regulatory action and was therefore not submitted to the Office of Management and Budget for review.

Executive Order 13132, Federalism

This rulemaking does not have federalism implications. It will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and

---

6 Office of Management and Budget, Memorandum M–19–04 (December 14, 2018).

7 Office of Management and Budget, Memorandum M–21–10 (December 23, 2020).
potential effects on Federally recognized Indian Tribes.

Executive Order 12630, Takings
Under the criteria in Executive Order 12630, this rulemaking does not have significant takings implications. Therefore, a takings implication assessment is not required.

Regulatory Flexibility Act of 1980
This rulemaking will not have a significant adverse impact on a substantial number of small entities, including small businesses, small governmental jurisdictions, or certain small not-for-profit organizations.

Paperwork Reduction Act of 1995
This rulemaking does not impose an information collection burden under the Paperwork Reduction Act. This action contains no provisions constituting a collection of information pursuant to the Paperwork Reduction Act.

Unfunded Mandates Reform Act of 1995
This rulemaking does not contain a Federal mandate that will result in the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of $100 million or more in any one year.

National Environmental Policy Act of 1969
This rulemaking will not have a significant effect on the human environment.

Small Business Regulatory Enforcement Fairness Act of 1996
This rulemaking will not be a major rule as defined in section 804 of the Small Business Regulatory Enforcement Fairness Act of 1996. This rulemaking will not result in an annual effect on the economy of $100 million or more, a major increase in costs or prices, significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of United States-based companies to compete with foreign-based companies in domestic and export markets.

E-Government Act of 2002
All information about NEH required to be published in the Federal Register may be accessed at www.neh.gov. The website www.regulations.gov contains electronic dockets for NEH’s rulemakings under the Administrative Procedure Act of 1946.

Plain Writing Act of 2010
To ensure this rule speaks in plain and clear language so that the public can use and understand it, NEH modeled the language of the rule on the Federal Plain Language Guidelines.

List of Subjects in 45 CFR 1174
Claims, Fraud, Penalites. For the reasons set forth in the preamble, the National Endowment for the Humanities amends 45 CFR chapter XI by adding part 1174 to read as follows:

PART 1174—PROGRAM FRAUD CIVIL REMEDIES ACT REGULATIONS

Subpart A—Purpose, Definitions, and Basis for Liability

Sec.
1174.1 Purpose.
1174.2 Definitions.
1174.3 Basis for civil penalties and assessments.

Subpart B—Procedures Leading to Issuance of a Complaint
1174.4 Who investigates program fraud.
1174.5 Review of suspected program fraud by the reviewing official.
1174.6 Prerequisites for issuing a complaint.
1174.7 Contents of a complaint.
1174.8 Service of a complaint.

Subpart C—Procedures Following Service of a Complaint
1174.9 Answer to a complaint.
1174.10 Default upon failure to file an answer.
1174.11 Referral of complaint and answer to the ALJ.

Subpart D—Hearing Procedures
1174.12 Notice of hearing.
1174.13 Location of the hearing.
1174.14 Parties to the hearing and their rights.
1174.15 Separation of functions.
1174.16 The ALJ’s role and authority.
1174.17 Disqualification of reviewing official or ALJ.
1174.18 Parties’ rights to review documents.
1174.19 Discovery.
1174.20 Discovery motions.
1174.21 Depositions.
1174.22 Exchange of witness lists, statements, and exhibits.
1174.23 Subpoenas for attendance at the hearing.
1174.24 Protective orders.
1174.25 Filing and serving documents with the ALJ.
1174.26 Computation of time.
1174.27 The hearing and the burden of proof.
1174.28 Presentation of evidence.
1174.29 Witness testimony.
1174.30 Ex parte communications.
1174.31 Sanctions for misconduct.
1174.32 Post-hearing briefs.

Subpart E—Decisions and Appeals
1174.33 Initial decision.
1174.34 Determining the amount of penalties and assessments.
1174.35 Reconsideration of the initial decision.
1174.36 Finalizing the initial decision.
1174.37 Procedures for appealing the ALJ’s decision.
1174.38 Appeal to the authority head.
1174.39 Judicial review.
1174.40 Collection of civil penalties and assessments.
1174.41 Rights to administrative offset.
1174.42 Deposit in Treasury of the United States.
1174.43 Voluntary settlement of the administrative complaint.
1174.44 Limitations regarding criminal misconduct.

Subpart A—Purpose, Definitions, and Basis for Liability

§ 1174.1 Purpose.

This part implements the Program Fraud Civil Remedies Act of 1986, 31 U.S.C. 3801–3812 (PFCRA). The PFCRA provides the National Endowment for the Humanities (NEH), and other Federal agencies, with an administrative remedy to impose civil penalties and assessments against persons who make, submit, or present, or cause to be made, submitted or presented, false, fictitious, or fraudulent claims or written statements to NEH. The PFCRA also provides due process protections to all persons who are subject to administrative proceedings under this part.

§ 1174.2 Definitions.

For the purposes of this part—

ALJ means an Administrative Law Judge in the authority appointed pursuant to 5 U.S.C. 3105 or detailed to the authority pursuant to 5 U.S.C. 3344.

Authority means the National Endowment for the Humanities (NEH).

Authority head means the NEH Chairperson or the Chairperson’s designee.

Benefit means anything of value, including but not limited to any advantage, preference, privilege, license, permit, favorable decision, ruling, status or loan guarantee.

Claim means any request, demand or submission that a person makes—

(1) To the authority—

(i) For property, services, or money (including money representing grants, loans, insurance, or benefits); or

(ii) Which has the effect of decreasing an obligation to pay or account for property, services, or money; or

(2) To a recipient of property, services, or money from the authority or to a party to a contract with the authority—

(i) For property or services if the United States—
(A) Provided such property or services;
(B) Provided any portion of the funds for the purchase of such property or services; or
(C) Will reimburse such recipient or party for the purchase of such property or services; or
(ii) For the payment of money (including money representing grants, loans, insurance, or benefits) if the United States—
(A) Provided any portion of the money requested or demanded; or
(B) Will reimburse such recipient or party for any portion of the money paid on such request or demand.
Complaint means the administrative complaint that the reviewing official serves on the defendant under §1174.8.
Defendant means any person alleged in a complaint to be liable for a civil penalty or assessment pursuant to the PFCRA.
Government means the United States Government.
Individual means a natural person.
Initial decision means the written decision of the ALJ under §1174.33, and includes a revised initial decision issued following a remand or a motion for reconsideration.
Knows or has reason to know means that a person, with respect to a claim or statement—
(1) Has actual knowledge that the claim or statement is false, fictitious, or fraudulent;
(2) Acts in deliberate ignorance of the truth or falsity of the claim or statement; or
(3) Acts in reckless disregard of the truth or falsity of the claim or statement; and no proof of specific intent to defraud is required.
Makes shall include the terms presents, submits, and causes to be made, presented, or submitted. As the context requires, making or made shall likewise include the corresponding forms of such terms.
Person means any individual, partnership, corporation, association, or private organization, and includes the plural of that term.
Representative means an attorney who is in good standing of the bar of any State, Territory, or possession of the United States, or the District of Columbia, or the Commonwealth of Puerto Rico, or any other individual who the defendant designates in writing.
Reviewing official means the NEH General Counsel or the General Counsel’s designee.
Statement means any representation, certification, affirmation, document, record, or accounting or bookkeeping entry that a person makes—
(1) With respect to a claim (or eligibility to make a claim) or to obtain the approval or payment of a claim; or
(2) With respect to (or with respect to eligibility for)—
(i) A contract with, or a bid or proposal for a contract with, or
(ii) A grant, loan, or benefit from, the authority, or any State, political subdivision of a State, or other party, if the United States Government provides any portion of the money or property under such contract or for such grant, loan, or benefit, or if the Government will reimburse such State, political subdivision, or party for any portion of the money or property under such contract or for such grant, loan, or benefit.
§1174.3 Basis for civil penalties and assessments.
(a) Claims. (1) Any person shall be subject, in addition to any other remedy provided by law, to a civil penalty of not more than $11,803 for each written statement that person makes that the person knows or has reason to know—
(i) Is false, fictitious, or fraudulent;
(ii) Contains or is accompanied by an express certification or affirmation of the truthfulness and accuracy of the statement’s contents.
(2) A person will only be subject to a civil penalty under paragraph (b)(1) of this section if the written statement made by the person contains or is accompanied by an express certification or affirmation of the truthfulness and accuracy of the statement’s contents.
(b) Statements. (1) Any person shall be subject, in addition to any other remedy prescribed by law, to a civil penalty of not more than $11,803 for each written statement that person makes that the person knows or has reason to know—
(i) Is false, fictitious, or fraudulent;
(ii) Contains or is accompanied by an express certification or affirmation of the truthfulness and accuracy of the statement’s contents.
(2) A person will only be subject to a civil penalty under paragraph (b)(1) of this section if the written statement made by the person contains or is accompanied by an express certification or affirmation of the truthfulness and accuracy of the statement’s contents.
(3) Each written representation, certification, or affirmation constitutes a separate statement.
(4) A statement shall be considered made to the authority when it is actually made to an agent, fiscal intermediary, or other entity, including any State or political subdivision of a State, acting for or on behalf of the authority.
(c) Proof of specific intent to defraud is not required to establish liability under this section.
(d) In any case in which more than one person is liable for making a false, fictitious, or fraudulent claim or statement under this section, each person may be held liable for a civil penalty and assessment.
(4) Each claim for property, services, or money is subject to a civil penalty regardless of whether such property, services, or money is actually delivered or paid.
(5) If the Government has made any payment on a claim, a person subject to a civil penalty under paragraph (a)(1) of this section may also be subject to an assessment of not more than twice the amount of such claim or the portion thereof that violates paragraph (a)(1) of this section. Such assessment shall be in lieu of damages that the Government sustained because of such a claim.

Subpart B—Procedures Leading to Issuance of a Complaint
§1174.4 Who investigates program fraud.
The Inspector General, or his or her designee, is the investigating official responsible for investigating allegations that a person has made a false claim or statement. In this regard, the Inspector General has authority under the PFCRA and the Inspector General Act of 1978,
§ 1174.5 Review of suspected program fraud by the reviewing official.

(a) If the investigating official concludes that the results of his or her investigation warrant an action under this part, the investigating official shall submit to the reviewing official a report containing the investigation’s findings and conclusions.

(b) If the reviewing official determines that the report provides adequate evidence that a person made a false, fictitious or fraudulent claim or statement, the reviewing official shall transmit to the Attorney General written notice of the reviewing official’s intention to refer the matter for adjudication, with a request for approval of such referral. This notice will include the reviewing official’s statement concerning:

(1) The reasons for the referral;
(2) The claims or statements that form the basis for liability;
(3) The evidence that supports liability;
(4) An estimate of the amount of money or the value of property, services, or other benefits requested or demanded in the false claim or statement;
(5) Any exculpatory or mitigating circumstances that may relate to the claims or statements that are known by the reviewing official or the investigating official; and
(6) A statement that there is a reasonable prospect of collecting an appropriate amount of penalties and assessments.

(c) If, at any time, the Attorney General (or designee) requests in writing that the authority stay this administrative process, the authority head must stay the process immediately.

(d) The reviewing official must serve the complaint on the defendant and, if the defendant requests a hearing, provide a copy to the ALJ assigned to the case.

§ 1174.6 Prerequisites for issuing a complaint.

The authority may issue a complaint only if:

(a) The Attorney General (or designee) approves the reviewing official’s referral of the allegations for adjudication; and

(b) In a case of submission of false claims, if the amount of money or the value of property or services that a false claim (or a group of related claims submitted at the same time) demanded or requested does not exceed $150,000.

§ 1174.7 Contents of a complaint.

(a) The complaint will state that the authority seeks to impose civil penalties, assessments, or both, against the defendant and will include:

(1) The allegations of liability against the defendant and the statutory basis for liability, identification of the claims or statements involved, and the reasons liability allegedly arises from such claims or statements;
(2) The maximum amount of penalties and assessments for which the defendant may be held liable;
(3) A statement that the defendant may request a hearing by filing an answer and may be represented by a representative;
(4) Instructions for filing such an answer; and
(5) A warning that failure to file an answer within thirty days of service of the complaint will result in an imposition of the maximum amount of penalties and assessments.

(b) The reviewing official must serve the complaint on the defendant and, if the defendant requests a hearing, provide a copy to the ALJ assigned to the case.

§ 1174.8 Service of a complaint.

(a) The reviewing official must serve the complaint on an individual defendant directly, on a partnership through a general partner, and on a corporation or an unincorporated association through an executive officer or a director, except that the reviewing official may also make service on any person authorized by appointment or by law to receive process for the defendant.

(b) The reviewing official may serve the complaint either by:

(1) Registered or certified mail; or
(2) Personal delivery by anyone eighteen years of age or older.

(c) The date of personal delivery or, in the case of service by registered or certified mail, the date of postmark.

(d) When the reviewing official serves the complaint, he or she should also serve the defendant with a copy of this part and 31 U.S.C. 3801–3812.

Subpart C—Procedures Following Service of a Complaint

§ 1174.9 Answer to a complaint.

(a) A defendant may file an answer with the reviewing official within thirty days of service of the complaint. An answer will be considered a request for an oral hearing.

(b) In the answer, the defendant—

(1) Must admit or deny each allegation of liability contained in the complaint (a failure to deny an allegation is considered an admission); and

(2) Must state any defense on which the defendant intends to rely;

(3) May state any reasons why the penalties, assessments, or both should be less than the statutory maximum; and

(4) Must state the name, address, and telephone number of the person the defendant authorized to act as the defendant’s representative, if any.

(c) If the defendant is unable to file a timely answer which meets the requirements set forth in paragraph (b) of this section, the defendant may file with the reviewing official a general answer denying liability, requesting a hearing, and requesting an extension of time in which to file a complete answer. The defendant must file a general answer within thirty days of service of the complaint.

(d) If the defendant initially files a general answer requesting an extension of time, the reviewing official must promptly file with the ALJ the complaint, the general answer, and the request for an extension of time.

(e) For good cause shown, the ALJ may grant the defendant up to thirty additional days within which to file an answer that meets the requirements of paragraph (b) of this section. The defendant must file such an answer with the ALJ and must serve a copy on the reviewing official.

§ 1174.10 Default upon failure to file an answer.

(a) If the defendant does not file any answer within thirty days after service of the complaint, the reviewing official may refer the complaint to the ALJ.

(b) Once the reviewing official refers the complaint, the ALJ will promptly serve on the defendant a notice that the ALJ will issue an initial decision.

(c) The ALJ will assume the facts alleged in the complaint to be true and, if such facts establish liability under the statute, the ALJ will issue an initial decision imposing the maximum amount of penalties and assessments allowed under the PPRA.

(d) Except as otherwise provided in this section, when a defendant fails to file a timely answer, the defendant waives any right to further review of the penalties and assessments the ALJ may impose in the initial decision.

(e) The initial decision becomes final thirty days after the ALJ issues it.

(f) At any time before an initial decision becomes final, a defendant may file a motion with the ALJ asking that the ALJ reopen the case. An ALJ may only reopen a case if he or she determines that the defendant set forth in the motion extraordinary circumstances that prevented the defendant from filing a timely answer.
The initial decision will be stayed until the ALJ decides on the motion. The reviewing official may respond to the motion.

(g) If the ALJ determines that a defendant has demonstrated extraordinary circumstances that excuse his or her failure to file a timely answer, the ALJ will withdraw the initial decision and grant the defendant an opportunity to answer the complaint.

(h) The ALJ’s decision to deny a defendant’s motion to reopen a case is not subject to reconsideration under §1174.35.

(i) The defendant may appeal the ALJ’s decision denying a motion to reopen by filing a notice of appeal with the authority head within fifteen days after the ALJ denies the motion. The timely filing of a notice of appeal shall stay the initial decision until the authority head decides the issue.

(j) If the defendant files a timely notice of appeal with the authority head, the ALJ shall forward the record of the proceeding to the authority head.

(k) The authority head shall decide expeditiously, based solely on the record before the ALJ, whether extraordinary circumstances excuse the defendant’s failure to file a timely answer.

(l) If the authority head decides that extraordinary circumstances excuse the defendant’s failure to file a timely answer, the authority head shall remand the case to the ALJ with instructions to grant the defendant an opportunity to answer.

(m) If the authority head decides that the circumstances do not excuse the defendant’s failure to file a timely answer, the authority head shall reinstate the ALJ's initial decision, which shall become final and binding upon the parties thirty days after the authority head issues such a decision.

§1174.11 Referral of complaint and answer to the ALJ.

When the reviewing official receives an answer, he or she must simultaneously file the complaint, the answer, and a designation of the authority’s representative with the ALJ.

Subpart D—Hearing Procedures

§1174.12 Notice of hearing.

(a) When the ALJ receives the complaint and the answer, the ALJ will promptly serve a notice of hearing upon the defendant and the authority’s representative in the same manner as the complaint. The ALJ must serve the notice of oral hearing within six years of the date on which the claim or statement was made.

(b) The hearing is a formal proceeding conducted by the ALJ during which a defendant will have the opportunity to cross-examine witnesses, present testimony, and dispute liability.

(c) The notice of hearing must include:

(1) The tentative date, time, and place of the hearing;

(2) The legal authority and jurisdiction under which the hearing is being held;

(3) The matters of fact and law to be asserted;

(4) A description of the procedures for the conduct of the hearing;

(5) The name, address, and telephone number of the defendant’s representative and the representative for the authority; and

(6) Such other matters as the ALJ deems appropriate.

§1174.13 Location of the hearing.

(a) The ALJ shall hold the hearing:

(1) In any judicial district of the United States in which the defendant resides or transacts business;

(2) In any judicial district of the United States in which a claim or statement in issue was made; or

(3) In such other place as the parties and the ALJ may agree upon.

(b) Each party shall have the opportunity to present arguments with respect to the location of the hearing.

(c) The ALJ shall decide the time and the place of the hearing.

§1174.14 Parties to the hearing and their rights.

(a) The parties to the hearing shall be the defendant and the authority.

(b) Except where the authority head designates another representative, the NEH General Counsel (or designee) shall represent the authority.

(c) Each party has the right to:

(1) Be represented by a representative;

(2) Request a pre-hearing conference and participate in any conference held by the ALJ;

(3) Conduct discovery;

(4) Agree to stipulations of fact or law which will be made a part of the record;

(5) Present evidence relevant to the issues at the hearing;

(6) Present and cross-examine witnesses;

(7) Present arguments at the hearing as permitted by the ALJ; and

(8) Submit written briefs and proposed findings of fact and conclusions of law after the hearing, as permitted by the ALJ.

§1174.15 Separation of functions.

(a) The investigating official, the reviewing official, and any employee or agent of the authority who takes part in investigating, preparing, or presenting a particular case may not, in such case or a factually related case:

(1) Participate in the hearing as the ALJ;

(2) Participate or advise in the authority head’s review of the initial decision; or

(3) Make the collection of penalties and assessment.

(b) The ALJ must not be responsible to or subject to the supervision or direction of the investigating official or the reviewing official.

§1174.16 The ALJ’s role and authority.

(a) An ALJ serves as the presiding officer at all hearings. The Office of Personnel Management selects the ALJ.

(b) The ALJ must conduct a fair and impartial hearing, avoid delay, maintain order, and assure that a record of the proceeding is made.

(c) The ALJ has the authority to—

(1) Set and change the date, time, and place of the hearing upon reasonable notice to the parties;

(2) Continue or recess the hearing, in whole or in part, for a reasonable period of time;

(3) Hold conferences to identify or simplify the issues or to consider other matters that may aid in the expeditious disposition of the proceeding;

(4) Administer oaths and affirmations;

(5) Issue subpoenas requiring witness attendance and the production of documents at depositions or at hearings;

(6) Rule on motions and other procedural matters;

(7) Regulate the scope and timing of discovery;

(8) Regulate the course of the hearing and the conduct of representatives and parties;

(9) Examine witnesses;

(10) Receive, rule on, exclude, or limit evidence;

(11) Upon motion of a party, take official notice of facts;

(12) Upon motion of a party, decide cases, in whole or in part, by summary judgment when there is no disputed issue of material fact;

(13) Conduct any conference, argument or hearing on motions in person or by telephone; and

(14) Exercise such other authority as is necessary to carry out the responsibilities of the ALJ under this part.

(d) The ALJ does not have the authority to find Federal statutes or regulations invalid.

§1174.17 Disqualification of reviewing official or ALJ.

(a) A reviewing official or an ALJ may disqualify himself or herself at any time.
(b) Upon any party’s motion, the reviewing official or ALJ may be disqualified as follows:

(1) The party must support the motion by an affidavit containing specific facts establishing that personal bias or other reason for disqualification exists, including the time and circumstances of the party’s discovery of such facts;

(2) The party must file the motion promptly after discovery of the grounds for disqualification or the objection will be deemed waived; and

(3) The party, or representative of record, must certify in writing that such party makes the motion in good faith.

c) Once a party has filed a motion to disqualify, the ALJ will halt the proceeding until he or she resolves the disqualification matter. If the ALJ disqualifies the reviewing official, the ALJ will dismiss the complaint without prejudice. If the ALJ disqualifies himself or herself, the authority will promptly reassign the case to another ALJ.

§ 1174.18 Parties’ rights to review documents.

(a) Once the ALJ issues a hearing notice pursuant to §1174.12, and upon request to the reviewing official or the defendant, the reviewing official or the defendant may:

(1) Review any relevant and material documents, transcripts, records, and other materials that relate to the allegations set out in the complaint and upon which the investigating official based his or her findings and conclusions, unless such documents are subject to a privilege under Federal law, and obtain copies of such documents upon payment of duplication fees; and

(2) Obtain a copy of all exculpatory information in the reviewing official’s or investigating official’s possession that relates to the allegations in the complaint, even if it appears in a document that would otherwise be privileged. If the document would otherwise be privileged, the other party only must disclose the portion containing exculpatory information.

(b) The notice that the reviewing official sends to the Attorney General, as described in §1174.5(b), is not discoverable under any circumstances.

(c) If the reviewing official does not respond to the defendant’s request within twenty days, the defendant may file with the ALJ a motion to compel disclosure of the documents, subject to the provisions of this section. The defendant may only file such a motion with the ALJ after filing an answer pursuant to §1174.9.

§ 1174.19 Discovery.

(a) Parties may conduct the following types of discovery:

(1) Requests for production of documents for inspection and copying;

(2) Requests for admissions of authenticity of any relevant document or of the truth of any relevant fact;

(3) Written interrogatories; and

(4) Depositions.

(b) For the purpose of this section, the term “documents” includes information, documents, reports, answers, records, accounts, papers, and other data and documentary evidence. Nothing contained herein shall be interpreted to require the creation of a document.

(c) Unless the parties mutually agree to discovery, a party may conduct discovery only as ordered by the ALJ. The ALJ shall regulate the timing of discovery.

(d) Each party shall bear its own discovery costs.

§ 1174.20 Discovery motions.

(a) Any party seeking discovery may file a motion with the ALJ together with a copy of the requested discovery, or in the case of depositions, a summary of the scope of the proposed deposition.

(b) Within ten days of service, a party may file an opposition to the motion and/or a motion for protective order as provided in §1174.24.

(c) The ALJ may grant a motion for discovery only if he or she finds that the discovery sought—

(1) Is necessary for the expeditious, fair, and reasonable consideration of the issues;

(2) Is not unduly costly or burdensome;

(3) Will not unduly delay the proceeding; and

(4) Does not seek privileged information.

(d) The burden of showing that the ALJ should allow discovery is on the party seeking discovery.

(e) The ALJ may grant discovery subject to a protective order under §1174.24.

§ 1174.21 Depositions.

(a) If the ALJ grants a motion for deposition, the ALJ shall issue a subpoena for the deponent, which may require the deponent to produce documents. The subpoena shall specify the time and place at which the deposition will take place.

(b) The party seeking to depose shall serve the subpoena in the manner prescribed by §1174.8.

(c) The deponent may file with the ALJ a motion to quash the subpoena or a motion for a protective order within ten days of service.

(d) The party seeking to depose shall provide for the taking of a verbatim transcript of the deposition, which it shall make available to all other parties for inspection and copying.

§ 1174.22 Exchange of witness lists, statements, and exhibits.

(a) As ordered by the ALJ, the parties must exchange witness lists and copies of proposed hearing exhibits, including copies of any written statements or transcripts of deposition testimony that each party intends to offer in lieu of live testimony.

(b) If a party objects, the ALJ will not admit into evidence the testimony of any witness whose name does not appear on the witness list, or any exhibit not provided to an opposing party in advance, unless the ALJ finds good cause for the omission or concludes that there is no prejudice to the objecting party.

(c) Unless a party objects within the time set by the ALJ, documents exchanged in accordance with this section are deemed to be authentic for the purpose of admissibility at the hearing.

§ 1174.23 Subpoenas for attendance at the hearing.

(a) A party wishing to procure the appearance and testimony of any individual at the hearing may request that the ALJ issue a subpoena.

(b) A subpoena requiring the attendance and testimony of an individual may also require the individual to produce documents at the hearing.

(c) A party seeking a subpoena shall file a written request no less than fifteen days before the hearing date unless otherwise allowed by the ALJ for good cause shown. Such request shall specify any documents to be produced, designate the witness, and describe the witness’ address and location with sufficient particularity to permit the witness to be found.

(d) The subpoena shall specify the time and place at which the witness is to appear and any documents the witness is to produce.

(e) The party seeking the subpoena shall serve it in the same manner prescribed in §1174.8. The party seeking the subpoena may serve the subpoena on a party, or upon an individual under the control of a party, by first class mail.

(f) The party requesting a subpoena shall pay the subpoenaed witness’ fees and mileage in the amounts that would be payable to a witness in a proceeding in United States District Court. A check for witness fees and mileage shall accompany the subpoena when it is served, except that when the authority
issues a subpoena, a check for witness fees and mileage need not accompany the subpoena.

(g) A party, or the individual to whom the subpoena is directed, may file with the ALJ a motion to quash the subpoena within ten days after service, or on or before the time specified in the subpoena for compliance if it is less than ten days after service.

§ 1174.24 Protective orders.

(a) A party, prospective witness, or deponent may file a motion for a protective order that seeks to limit the availability or disclosure of evidence with respect to discovery sought by an opposing party or with respect to the hearing.

(b) In issuing a protective order, the ALJ may make any order which justice requires to protect a party or person from annoyance, embarrassment, oppression, or undue burden or expense, including one or more of the following:

(1) That the parties shall not have discovery;

(2) That the parties shall have discovery only on specified terms and conditions;

(3) That the parties shall have discovery only through a method of discovery other than requested;

(4) That the parties shall not inquire into certain matters, or that the parties shall limit the scope of discovery to certain matters;

(5) That the parties shall conduct discovery with no one present except persons designated by the ALJ;

(6) That the parties shall seal the contents of the discovery;

(7) That a sealed deposition shall be opened only by order of the ALJ;

(8) That a trade secret or other confidential research, development, commercial information, or facts pertaining to any criminal investigation, proceeding, or other administrative investigation shall not be disclosed or shall be disclosed only in a designated way; or

(9) That the parties shall simultaneously file specified documents or information enclosed in sealed envelopes to be opened as the ALJ directs.

§ 1174.25 Filing and serving documents with the ALJ.

(a) Documents filed with the ALJ must include an original and two copies. Every document filed in the proceeding must contain a title (e.g., motion to quash subpoena), a caption setting forth the title of the action, and the case number assigned by the ALJ. Every document must be signed by the person on whose behalf the paper was filed, or by his or her representative.

(b) Documents are considered filed when they are mailed. The mailing date may be established by a certificate from the party or its representative, or by proof that the document was sent by certified or registered mail.

(c) A party filing a document with the ALJ must, at the time of filing, serve a copy of such document on every other party. When a party is represented by a representative, the party’s representative must be served in lieu of the party.

(d) A certificate from the individual serving the document constitutes proof of service. The certificate must set forth the manner in which the document was served.

(e) Service upon any party of any document other than the complaint must be made by delivering a copy or by placing a copy in the United States mail, postage prepaid and addressed to the party’s last known address.

(f) If a party consents in writing, documents may be sent electronically. In this instance, service is complete upon transmission unless the serving party receives electronic notification that transmission of the communication has not been completed.

§ 1174.26 Computation of time.

(a) In computing any period of time under this part or in an order issued under it, the time begins with the day following the act, event, or default, and includes the last day of the period, unless it is a Saturday, Sunday, or legal holiday that is observed by the Federal government, in which event it includes the next business day.

(b) When the period of time allowed is less than seven days, intermediate Saturdays, Sundays, and legal holidays that are observed by the Federal government are excluded from the computation.

(c) Where a document has been served or issued by placing it in the mail, an additional five days will be added to the time permitted for any response.

§ 1174.27 The hearing and the burden of proof.

(a) The ALJ conducts a hearing in order to determine whether a defendant is liable for a civil penalty, assessment, or both and, if so, the appropriate amount of the penalty and/or assessment.

(b) The hearing will be recorded and transcribed. The transcript of testimony, exhibits and other evidence admitted at the hearing, and all papers and requests filed in the proceeding, constitute the record for the ALJ’s and the authority head’s decisions.

(c) The hearing will be open to the public unless otherwise ordered by the ALJ for good cause shown.

(d) The authority must prove a defendant’s liability and any aggravating factors by a preponderance of the evidence.

(e) A defendant must prove any affirmative defenses and any mitigating factors by a preponderance of the evidence.

§ 1174.28 Presentation of evidence.

(a) The ALJ shall determine the admissibility of evidence.

(b) Except as provided in this part, the ALJ shall not be bound by the Federal Rules of Evidence, but the ALJ may apply the Federal Rules of Evidence where he or she deems appropriate.

(c) The ALJ shall exclude irrelevant and immaterial evidence.

(d) The ALJ may exclude evidence, although relevant, if its probative value is substantially outweighed by the danger of unfair prejudice, confusion of the issues, or by considerations of undue delay or needless presentation of cumulative evidence.

(e) The ALJ shall exclude evidence, although relevant, if it is privileged under Federal law.

(f) Evidence concerning compromise or settlement offers shall be inadmissible to the extent provided in Rule 408 of the Federal Rules of Evidence.

(g) The ALJ shall permit the parties to introduce rebuttal witnesses and evidence.

(h) All documents and other evidence taken for the record must be open to examination by all parties unless the ALJ orders otherwise.

§ 1174.29 Witness testimony.

(a) Except as provided in paragraph (b) of this section, testimony at the hearing shall be given orally by witnesses under oath or affirmation.

(b) At the ALJ’s discretion, the ALJ may admit testimony in the form of a written statement or deposition. The party offering such a statement must provide it to all other parties along with the last known address of the witness, in a manner which allows sufficient time for other parties to subpoena the witness for cross-examination at the hearing. The parties shall exchange deposition transcripts and prior written statements of witnesses proposed to testify at the hearing as provided in § 1174.22.

(c) The ALJ shall exercise reasonable control over the mode and order of interrogating witnesses and presenting evidence.

(d) The ALJ shall permit the parties to conduct such cross-examination as may
be required for a full and true disclosure of the facts.

(f) Upon any party’s motion, the ALJ shall order witnesses excluded from the hearing room so that they cannot hear the testimony of other witnesses. This rule does not authorize exclusion of—

(1) A party who is an individual;
(2) In the case of a party that is not an individual, the party’s officer or employee appearing for the party pro se or designated by the party’s representative; or
(3) An individual whose presence a party shows to be essential to the presentation of its case, including an individual employed by the Government or engaged in assisting the Government’s representative.

§ 1174.30 Ex parte communications.

A party may not communicate with the ALJ ex parte unless the other party consents to such a communication taking place. This does not prohibit a party from inquiring about the status of a case or asking routine questions concerning administrative functions or procedures.

§ 1174.31 Sanctions for misconduct.

(a) The ALJ may sanction a person, including any party or representative, for failing to comply with an order, or for engaging in other misconduct that interferes with the speedy, orderly, and fair conduct of a hearing.
(b) Any such sanction shall reasonably relate to the severity and nature of the misconduct.
(c) When a party fails to comply with an order, including an order for taking a deposition, producing evidence within the party’s control, or responding to a request for admission, the ALJ may:
(1) Draw an inference in favor of the requesting party with regard to the information sought;
(2) In the case of requests for admission, deem each matter for which an admission is requested to be admitted;
(3) Prohibit the party failing to comply with such order from introducing evidence concerning, or otherwise relying upon testimony relating to, the information sought; and
(4) Strike any part of the pleadings or other submissions filed by the party failing to comply with such a request.
(d) The ALJ may refuse to consider any motion, request, response, brief or other document which is not filed in a timely fashion.
(e) If a party fails to prosecute or defend an action under this part that is commenced by service of a hearing notice, the ALJ may dismiss the action or may issue an initial decision imposing penalties and assessments.

§ 1174.32 Post-hearing briefs.

Any party may file a post-hearing brief. Such briefs are not required, however, unless ordered by the ALJ. The ALJ must fix the time for filing such briefs, not to exceed 60 days from the date the parties receive the transcript of the hearing or, if applicable, the stipulated record. Such briefs may be accompanied by proposed findings of fact and conclusions of law. The ALJ may permit the parties to file reply briefs.

Subpart E—Decisions and Appeals

§ 1174.33 Initial decision.

(a) The ALJ will issue an initial decision based only on the record. It will contain findings of fact, conclusions of law, and the amount of any penalties and assessments.
(b) The ALJ will serve the initial decision on all parties within ninety days after the hearing’s close or, if the ALJ permitted the filing of post-hearing briefs, within ninety days after the final post-hearing brief was filed.
(c) The findings of fact must include a finding on each of the following issues:
(1) Whether any one or more of the claims or statements identified in the complaint violate this part; and
(2) If the defendant is liable for penalties or assessments, the appropriate amount of any such penalties or assessments, considering any mitigating or aggravating factors.
(d) If the defendant is liable for a civil penalty or assessment, the initial decision shall describe the defendant’s right to file a motion for reconsideration with the ALJ or a notice of appeal with the authority head.

§ 1174.34 Determining the amount of penalties and assessments.

In determining an appropriate amount of civil penalties and assessments, the ALJ and the authority head, upon appeal, should evaluate any circumstances that mitigate or aggravate the violation and should articulate in their opinions the reasons that support the penalties and assessments they impose.

§ 1174.35 Reconsideration of the initial decision.

(a) Any party may file a motion with the ALJ for reconsideration of the initial decision within twenty days of receipt of the initial decision. If the initial decision was served by mail, there is a rebuttable presumption that the party received the initial decision five days from the date of mailing.
(b) A motion for reconsideration must be accompanied by a supporting brief and must describe specifically each allegedly erroneous decision.
(c) A party only may file a response to a motion for reconsideration upon the ALJ’s request.
(d) The ALJ will dispose of a motion for reconsideration by denying it or by issuing a revised initial decision.
(e) If the ALJ issues a revised initial decision upon a party’s motion, no party may file a further motion for reconsideration.

§ 1174.36 Finalizing the initial decision.

(a) Thirty days after issuance, the ALJ’s initial decision shall become the authority’s final decision and shall bind all parties, unless any party timely files a motion for reconsideration or any defendant adjudged to have submitted a false, fictitious, or fraudulent claim or statement timely appeals to the authority head, as set forth in § 1174.37.
(b) If the ALJ disposes of a motion for reconsideration by denying it or by issuing a revised initial decision, the ALJ’s order on the motion for reconsideration shall become the authority’s final decision thirty days after the ALJ issues the order, unless a defendant that is adjudged to have submitted a false, fictitious, or fraudulent claim or statement timely appeals to the authority head, as set forth in § 1174.37.

§ 1174.37 Procedures for appealing the ALJ’s decision.

(a) Any defendant who submits a timely answer and is found liable in an initial decision for a civil penalty or assessment may appeal the decision.
(b) The defendant may file a notice of appeal with the authority head within thirty days following issuance of the initial decision, serving a copy of the notice of appeal on all parties and the ALJ. The authority head may extend this deadline for up to an additional thirty days if the defendant files an extension request within the initial thirty day period and shows good cause.
(c) The authority head shall not consider a defendant’s appeal until all timely motions for reconsideration have been resolved.
(d) If the ALJ denies a timely motion for reconsideration, the defendant may file a notice of appeal within thirty days following such denial or issuance of a revised initial decision, whichever applies.
(e) The defendant must support its notice of appeal with a written brief specifying why the authority head should reverse or modify the initial decision.
(f) The authority’s representative may file a brief in opposition to the notice of
appeal within thirty days of receiving the defendant’s appeal and supporting brief.

(g) If a defendant timely files a notice of appeal, and the time for filing reconsideration motions has expired, the ALJ will forward the record of the proceeding to the authority head.

(h) An initial decision is automatically stayed pending disposition of a motion for reconsideration or of an appeal to the authority head.

(i) No administrative stay is available following the authority head’s final decision.

§ 1174.38 Appeal to the authority head.

(a) A defendant has no right to appeal personally, or through a representative, before the authority head.

(b) There is no right to appeal any interlocutory ruling.

(c) The authority head will not consider any objection or evidence that was not raised before the ALJ unless the defendant demonstrates that extraordinary circumstances excuse the failure to object. If the defendant demonstrates to the authority head’s satisfaction that extraordinary circumstances prevented the presentation of evidence at the hearing, and that the additional evidence is material, the authority head may remand the matter to the ALJ for consideration of the additional evidence.

(d) The authority head may affirm, reduce, reverse, compromise, remand, or settle any penalty or assessment that the ALJ imposed in the initial decision or reconsideration decision.

(e) The authority head will promptly serve each party to the appeal and the ALJ with a copy of the decision. This decision must contain a statement describing the right of any person, against whom a penalty or assessment has been made, to seek judicial review.

§ 1174.39 Judicial review.

31 U.S.C. 3805 authorizes the appropriate United States District Court to review any final decision imposing penalties or assessments, and specifies the procedures for such review. To obtain judicial review, a defendant must file a petition with the appropriate court in a timely manner.

§ 1174.40 Collection of civil penalties and assessments.

31 U.S.C. 3806 and 3808(b) authorize actions for collecting civil penalties and assessments imposed under this part and specify the procedures for such actions.

§ 1174.41 Rights to administrative offset.

The authority may make an administrative offset under 31 U.S.C. 3716 to collect the amount of any penalty or assessment which has become final, for which a judgment has been entered, or which the parties agree upon in a compromise or settlement. However, the authority may not make an administrative offset under this subsection against a Federal tax refund that the United States owes to the defendant then or at a later time.

§ 1174.42 Deposit in Treasury of the United States.

The authority shall deposit all amounts collected pursuant to this part as miscellaneous receipts in the Treasury of the United States, except as provided in 31 U.S.C. 3806(g).

§ 1174.43 Voluntary settlement of the administrative complaint.

(a) Parties may make offers of compromise or settlement at any time. Any compromise or settlement must be in writing.

(b) The reviewing official has the exclusive authority to compromise or settle the case from the date on which the reviewing official is permitted to issue a complaint until the ALJ issues an initial decision.

(c) The authority head has exclusive authority to compromise or settle the case from the date of the ALJ’s initial decision until initiation of any judicial review or any action to collect the penalties and assessments.

(d) The Attorney General has exclusive authority to compromise or settle the case while any judicial review or any action to recover penalties and assessments is pending.

(e) The investigating official may recommend settlement terms to the reviewing official, the authority head, or the Attorney General, as appropriate.

§ 1174.44 Limitations regarding criminal misconduct.

(a) Any investigating official may:

(1) Refer allegations of criminal misconduct or a violation of the False Claims Act directly to the Department of Justice for prosecution and/or civil action, as appropriate;

(2) Refer or postpone a report or referral to the reviewing official to avoid interference with a criminal investigation or prosecution; or

(3) Issue subpoenas under any other statutory authority.

(b) Nothing in this part limits the requirement that the authority’s employees must report suspected violations of criminal law to the NEH Office of the Inspector General or to the Attorney General.
for inspection and copying during normal business hours in the FCC Reference Center, 45 L Street NE, Washington, DC 20554, or available for viewing via the Commission’s ECFS website by entering the docket number, GN Docket No. 13–111. Alternative formats are available for people with disabilities (Braille, large print, electronic files, audio format), by sending an email to FCC504@fcc.gov or calling the Consumer and Governmental Affairs Bureau at (202) 418–0530 (voice), (202) 418–0432 (TTY). The Commission will send a copy of this Second Report and Order in a report to be sent to Congress and the Government Accountability Office pursuant to the Congressional Review Act. The Commission will send a copy of this Second Report and Order in a report to be sent to Congress and the Government Accountability Office pursuant to the Congressional Review Act. This present Final Regulatory Flexibility Analysis, Final Regulatory Flexibility Analysis

The Regulatory Flexibility Act (RFA) requires that an agency prepare a regulatory flexibility analysis for notice and comment rulemakings, unless the agency certifies that “the rule will not, if promulgated, have a significant economic impact on a substantial number of small entities.” Accordingly, the Commission has prepared a Final Regulatory Flexibility Analysis (FRFA) concerning the possible impact of the rule changes contained in this Second Report and Order on small entities. As required by the Regulatory Flexibility Act of 1980, as amended (RFA), an Initial Regulatory Flexibility Analysis (IRFA) was incorporated in the Further Notice of Proposed Rulemaking (FNPRM) released in March 2017 in this proceeding (82 FR 22780, May 18, 2017). The Commission sought written public comment on the proposals in the FNPRM, including comments on the IRFA. No comments were filed addressing the IRFA. This present Final Regulatory Flexibility Analysis (FRFA) conforms to the RFA.

Paperwork Reduction Act

The requirements in § 20.23(b) through (d) include new or modified collections subject to the Paperwork Reduction Act of 1995 (PRA), Public Law 104–13. They will be submitted to the Office of Management and Budget (OMB) for review under Section 3507(d) of the PRA. OMB, the general public, and other Federal agencies will be invited to comment on the new or modified information collection requirements contained in this proceeding. In addition, the Commission notes that, pursuant to the Small Business Paperwork Relief Act of 2002 (Pub. L. No. 107–198), see 44 U.S.C. 3506(c)(4), the Commission previously sought, but did not receive, specific comment on how the Commission might further reduce the information collection burden for small business concerns with fewer than 25 employees. The Commission describes impacts that might affect small businesses, which includes more businesses with fewer than 25 employees, in the Final Regulatory Flexibility Analysis.

Congressional Review Act

The Commission will send a copy of this Second Report and Order to Congress and the Government Accountability Office pursuant to the Congressional Review Act. See 5 U.S.C. 801(a)(1)(A). In addition, the Commission will send a copy of the Second Report and Order, including this FRFA, to the Chief Counsel for Advocacy of the Small Business Administration (SBA). A copy of the Second Report and Order, and FRFA (or summaries thereof) will also be published in the Federal Register.

Synopsis

1. The Second Report and Order adopts new or additional reporting or recordkeeping and compliance obligations for small entities as well as other applicants and licensees. Small entities may have to hire attorneys, engineers, consultants, or other professionals in order to meet the reporting, recordkeeping or compliance obligations in the Second Report and Order, however, the Commission cannot quantify the cost of compliance with the requirements. To minimize burdens, we have adopted processes and procedures where possible to allow direct interaction between the Designated Correctional Facility Officials (DCFOs) and the wireless providers and avoided interfering the Commission and additional regulations into the process. In our approach, we sought to provide small and other entities flexible options such as giving DCFOs and wireless providers the flexibility to structure the format of the qualifying requests in a way that meets the unique needs of the parties rather than adopting a standardized form. We also adopted minimum requirements for information to be included in a qualifying request to disable a contraband device and allowed for self-certification to meet the certification requirements. Below we discuss reporting, recordkeeping, and/or compliance requirements adopted in the Second Report and Order.

2. Designated Correctional Facility Official Requirements. The Second Report and Order requires that a DCFO satisfy certain requirements in order to submit qualifying requests to wireless providers. Specifically, qualifying disabling requests must be submitted by a DCFO, which we define as an official of the state, local, or Federal government with responsibility for oversight of the relevant facility. In government-run correctional facilities, this definition requires the DCFO to be, at a minimum, the official with responsibility for oversight of the relevant facility (e.g., the warden) or higher ranking official; in privately-run correctional facilities, the DCFO must be a government official with responsibility for oversight of the facility’s performance through a contract.

3. The Second Report and Order also adopts a process for certification of DCFOs that will provide certainty to wireless providers that disabling requests are duly authorized by the relevant federal, state, or local government entities. The Commission will maintain a publicly available list of DCFOs that are authorized to transmit qualifying disabling requests. Authorized individuals that wish to be recognized on the Commission’s DCFO list must send a letter to the Commission’s Contraband Ombudsperson, signed by the relevant state attorney general, providing the individual’s name, official government position, and a list of correctional facilities over which the individual has oversight and management authority.

4. Authorization of CISs. The Second Report and Order establishes a two-phase authorization process for Contraband Interdiction System (CIS) applicants seeking to deploy CISs that will provide the requisite information necessary for DCFOs to submit qualifying requests to disable contraband devices at qualifying correctional facilities. In phase one, CIS applicants will submit applications to the Wireless Telecommunications Bureau (the Bureau) describing their legal and technical qualifications of the systems. The Bureau will review the applications and approve—at a system level—those CISs that meet the requirements. In phase two, CIS applicants will perform on-site testing of approved CISs at individual qualifying correctional facilities. After both phases are complete, DCFOs will be authorized to submit qualifying requests to disable contraband devices using approved CISs at each approved correctional facility.

5. CIS Certification Process. The Second Report and Order adopts a CIS certification process for detection systems to be used in qualifying requests. To obtain CIS certification, a CIS applicant must submit an application to the Bureau for review and
approval. The application must demonstrate, at a minimum that: (1) All radio transmitters used as part of the CIS have appropriate equipment authorization pursuant to Commission rules; (2) the CIS is designed and will be configured to locate devices solely within a correctional facility; (3) the methodology to be used in analyzing data collected by the CIS is sufficiently robust to ensure that the particular wireless device is in fact located within a correctional facility, including specific data analysis benchmarks designed to ensure successful detection, such as rate of detection of contraband versus non-contraband devices, relevant sample size (e.g., number of devices observed and length of observation period); (4) the CIS will secure and protect all information or data collected as part of its intended use; and (5) the CIS will not interfere with emergency 911 calls. The application must also include a description of whether the CIS requires a spectrum or network access agreement (e.g., a spectrum leasing arrangement and/or roaming agreement) to be authorized to operate. Finally, the application must include a proposed test plan for subsequent site-based testing of each CIS, which must include detailed descriptions and technical specifications to facilitate Commission review of whether the system satisfies its legal requirements and technically functions as anticipated.

6. Site-Based Testing and Self-Certification Requirement. In the second phase of the CIS authorization process, a CIS operator—which could be a CIS solutions provider, or a DCFO or other responsible entity that deploys its own CIS at a correctional facility—seeking to use the CIS to submit qualifying requests for disabling contraband devices must test a certified CIS at each location and, thereafter, must file a self-certification to the Bureau confirming that the testing at that specific correctional facility is complete and successful. The CIS operator must also serve notice of the testing on each of the wireless providers holding a spectrum license that includes the county within which the correctional facility is located and provide a reasonable opportunity to participate in the tests. Following the testing, and to be eligible for use in conjunction with qualifying requests for disabling, the CIS operator must submit a self-certification that: (1) Identifies the correctional facility where it seeks to deploy; (2) attests that applicable federal or state criminal statutes prohibit possession or operation of contraband devices within the correctional facility (and includes the applicable federal or state criminal statutory provision); (3) describes the results of on-site tests of the certified CIS conducted at the correctional facility; (4) attests that the on-site testing was performed consistent with the approved test plans for the certified CIS and that the CIS deployment minimizes the risk of disabling a non-contraband device; (5) identifies whether any wireless providers participated in the testing, and provides proof that the wireless providers were given notice regarding the testing and a reasonable opportunity to participate; and (6) includes proof of any spectrum and/or network access agreement (e.g., a spectrum leasing arrangement and/or roaming agreement) required to be authorized to operate and/or for the system to function effectively. The self-certification submitted by a CIS operator must be accompanied by an attestation from the DCFO verifying that all information contained in the self-certification is true and accurate.

7. CIS operators must submit self-certifications in accordance with filing procedures established by the Bureau and those certifications must also be served via electronic means on all wireless providers licensed in the geographic area occupied by the correctional facility. Wireless providers have five business days from the certification filing date to submit objections to the Bureau and to serve any such objection on the DCFO and the CIS operator. Absent objections, the DCFO may submit qualifying requests to wireless providers beginning on the sixth business day after the certification filing. If an objection is submitted, the DCFO may not submit qualifying requests until the Bureau addresses the objection.

8. Records Maintenance. To ensure the integrity and proper operation of CIS, we require CIS operators to retain records of all information supporting each request for disabling and the basis for disabling each device, for at least five years following the relevant disabling request. CIS operators of systems that have been tested and approved for use in qualifying requests must also make available all records upon request from the Bureau.

9. Recertification. In order to ensure the ongoing accuracy and reliability of a given CIS at a particular facility, at least every three years after the initial self-certification, CIS operators seeking to maintain the ability to submit qualifying requests through a DCFO to disable contraband devices must retest their systems and recertify them for continued CIS accuracy. Recertifications must comply with the same rules and filing instructions that apply to the initial self-certification.

10. Qualifying Requests. We required that qualifying requests to disable a contraband device include the following material: (1) A certification that (a) A certified CIS was used to gather the contraband subscriber and device information populated in the qualifying request; (b) the certified CIS was used to identify contraband devices operating in a correctional facility where the CIS has been tested and self-certified for operational readiness and for use in qualifying requests, and the identification of contraband devices occurred within 30 days immediately prior to the date of the qualifying request submission; (c) the DCFO has reviewed the list of contraband devices and attests that it is accurate; and (d) it is a violation of applicable state or federal criminal statutes to possess or operate a contraband device in the correctional facility; (2) the name and address of each requesting correctional facility; and (3) a list of contraband devices with identifiers sufficient to uniquely describe the devices in question at both the subscription and device level.

11. Disabling Process and Timeframe for Disabling a Contraband Device. The Second Report and Order adopts the following process for disabling contraband devices. Upon receipt of a qualifying request from a DCFO through a verifiable and secure transmission method, a wireless provider must treat the request as valid. The wireless provider may only reject a request if the request fails to meet the Commission-mandated information for a qualifying request or if there are errors with respect to the device identifying information that leave the wireless provider unable to disable the device. Unless a wireless provider finds these grounds to reject the qualifying request, it must, within two business days after receipt of a qualifying request: (1) Disable the device at both the subscriber level and at the device level; and (2) take reasonable and practical steps to prevent an identified device from being accessing another wireless provider’s network (e.g., by adding the equipment identifier to the Stolen Phone Database).

A wireless provider must inform the DCFO whether or not the request has been granted within two business days of receiving the qualifying request.

12. Reversals. A wireless provider may subsequently remove a device from disabling if it determines that the device was identified erroneously as

See Appendix A, Final Rules, of the Second Report and Order (adding definition to § 20.3 of the Commission’s rules, 47 CFR 20.3)
contraband. If the wireless provider chooses to reverse a disabling, however, it must promptly inform the DCFO of the mistakenly identified device. The Second Report and Order also provides wireless providers with the option to trigger the involvement of the DCFO in the reviewing the validity of a device previously identified and disabled as contraband. If the wireless provider seeks to trigger the DCFO’s involvement, it must provide the DCFO with: (1) The date of the qualifying request, (2) the identifying information provided for the device, and (3) any evidence supporting the wireless provider’s belief that the device was erroneously identified. The Second Report and Order states that, upon receipt of such a request, the DCFO should review the qualifying request to determine whether the device in question was erroneously identified and either: (1) Confirm the validity of the identifying information contained in the qualifying request, or (2) acknowledge the error and direct the carrier to restore service to the device. In the event the DCFO directs the wireless provider to reverse the disabling, the wireless provider must, within two business days, restore service to the device and reverse any actions taken to prevent the device from accessing other wireless provider networks (e.g., by removing the phone from the Stolen Phone Database). In the event the DCFO does not respond to a request from a wireless provider for review of a qualifying request within two business days, the wireless provider may proceed with reversing the disabling. The Second Report and Order requires the DCFO to provide notice to the Contraband Ombudsperson to work suitable methods for securely transmitting a qualifying request.

The authority citation for part 20 continues to read as follows:

PART 20—COMMERCIAL MOBILE SERVICES

1. The authority citation for part 20 continues to read as follows:

Authority: 47 U.S.C. 151, 152(a), 154(i), 155, 157, 160, 201, 214, 222, 251(e), 301, 302, 303, 303(b), 303(e), 307, 307(a), 309, 309(j)(3), 316, 316(a), 332, 610, 615, 615a, 615b, and 615c, unless otherwise noted.

2. Amend § 20.3 by adding the definitions of “CIS Operator,” “Contract Interdiction System,” “Designated Correctional Facility Official,” and “Managed Access System” in alphabetical order to read as follows:

§ 20.3 Definitions.

* * * * *

CIS Operator. An operator of a CIS at a correctional facility, whether a CIS solutions provider, a DCFO or responsible party that deploys its own CIS at a correctional facility.

* * * * *

Contract Interdiction System. A Contract Interdiction System (CIS) is any system comprised of one or more stations that is used only at a permanent correctional facility that is authorized to operate such systems pursuant to this part and that is designed exclusively to prevent transmissions to or from contraband wireless devices within the boundaries of the facility and/or to obtain identifying information from such contraband wireless devices.

Designated Correctional Facility Official. A Designated Correctional Facility Official (DCFO) is an official of the state, local, or Federal government responsible for administration and oversight of the relevant correctional facility where a contraband wireless device is located.

(1) In government-run correctional facilities, this definition requires the DCFO to be, at a minimum, the official with responsibility for oversight of the relevant facility (e.g., the warden) or higher ranking official.

(2) In privately-run correctional facilities, this definition requires the DCFO to be a government official with responsibility for oversight of the facility’s performance through contract.

* * * *

Managed Access System. A Managed Access System (MAS) is a Contract Interdiction System whose operations require:

(1) One or more lease agreements with CMRS operators; and

(2) Real-time awareness of wireless provider spectrum use in the vicinity of the correctional facility where it is deployed.

* * * *

3. Delay indefinitely, amend § 20.23 by adding paragraphs (b) through (d) to read as follows:

§ 20.23 Contract Interdiction System (CIS) authorization process. The
provisions in this section apply to any person seeking certification of a CIS authorized for use in the submission of qualifying disabling requests, whether operating a system that requires a license and is regulated as CMRS or private mobile radio service (PMRS), or operating a passive system that does not require a license. The Wireless Telecommunications Bureau (Bureau) will establish, via public notice, the form and procedure for: CIS operators to file CIS certification applications, self-certifications, and periodic recertification; CIS operators to serve on wireless providers notice of testing and copies of self-certification; and wireless providers to file objections to self-certifications, including required service on CIS operators and DCFOs.

(1) Application requirements. To obtain CIS certification, an applicant must submit an application to the Bureau for review and approval that:

(i) Demonstrates that all radio transmitters used as part of the CIS have appropriate equipment authorizations pursuant to Commission rules in part 2 of this chapter;

(ii) Demonstrates that the CIS is designed and will be configured to locate devices solely within a correctional facility;

(iii) Describes the methodology to be used in analyzing data collected by the CIS and demonstrates that such methodology is adequately robust to ensure that the particular wireless device is in fact located within a correctional facility and includes specific data analysis benchmarks designed to ensure successful detection, such as rate of detection of contraband versus non-contraband devices and relevant sample size (e.g., number of devices observed and length of observation period);

(iv) Demonstrates that the CIS will secure and protect all information or data collected as part of its intended use;

(v) Demonstrates that the CIS will not interfere with emergency 911 calls;

(vi) Describes whether the CIS requires a spectrum or network access agreement (e.g., a spectrum leasing arrangement or roaming agreement) to be authorized to operate; and

(vii) Includes a proposed test plan for subsequent site-based testing of each CIS, that must include detailed descriptions and technical specifications to facilitate Commission review of whether the system satisfies its legal requirements and technically functions as anticipated.

(2) Marketing and sales. CIS that are certified for use in qualifying requests for disabling of contraband devices may be marketed or sold only to correctional facilities or entities that will provide contraband interdiction services to such facilities.

(3) Site-based testing and self-certification requirements—(i) Site-based testing. A CIS operator seeking to use the CIS to submit qualifying requests for disabling must test a certified CIS at each location where it intends to operate. Thereafter, the CIS operator must file with the Bureau a self-certification that complies with paragraph (b)(3)(ii) of this section, confirming that the testing at that specific correctional facility is complete and successful. The CIS operator must serve notice of the testing on all relevant wireless providers prior to testing and provide such wireless providers a reasonable opportunity to participate in the tests. Relevant wireless providers include any wireless provider holding a spectrum license that:

(A) Authorizes operation on the frequencies on which the CIS seeks to detect contraband use; and

(B) Attests that applicable Federal or state criminal statutes prohibit the possession or operation of contraband devices within the correctional facility to which the testing relates.

(ii) Self-certification. Following the testing, and to be eligible for use in conjunction with qualifying requests for disabling, a CIS operator must file a self-certification with the Bureau that:

(A) Identifies the correctional facility where it seeks to deploy;

(B) Attests that a CIS does not interfere with emergency 911 calls;

(C) Describes the results of on-site tests of the certified CIS conducted at the correctional facility;

(D) Attests that the on-site testing was performed consistent with the approved test plans for the certified CIS and that the CIS deployment minimizes the risk of disabling a non-contraband device;

(E) Identifies whether any relevant wireless providers participated in the testing, and provides proof that the relevant wireless providers were given notice regarding the testing and a reasonable opportunity to participate;

(F) Includes proof of any spectrum and/or network access agreement (e.g., a spectrum leasing arrangement and/or roaming agreement) required to be authorized to operate and/or for the system to function effectively;

(G) Includes proof that the self-certification was served via electronic means on all relevant wireless providers; and

(H) Includes an attestation from the DCFO verifying that all information contained in the self-certification is true and accurate.

(i) The self-certification must be filed in accordance with part 1, subpart F, of this chapter.

(4) Submitting objections. Wireless providers may submit objections to the Bureau within five business days from the certification filing date. Any such objections must be served on the DCFO and the CIS operator.

(5) Recertification. At least every three years after the initial self-certification, CIS operators seeking to maintain the ability to submit qualifying requests through a DCFO for contraband device disabling must retest their systems and recertify them for continued CIS accuracy. Recertifications must comply with the same rules and filing instructions that apply to the initial self-certification.

(6) Suspension of CIS eligibility. The Bureau may suspend CIS certification generally or at a particular facility if subsequent credible information calls into question a system’s reliability.

(7) Records maintenance. To ensure the integrity and proper operation of CISs, a CIS operator must retain records of all information supporting each request for disabling and the basis for disabling each device, including copies of all documents submitted in the qualifying request, for at least five years following the date of submission of the relevant disabling request. CIS operators of systems that have been tested and approved for use in qualifying requests must make available all records upon request from the Bureau.

(c) Disabling contraband wireless devices. A DCFO may request that a CMRS licensee disable a contraband wireless device that has been detected in a correctional facility by a CIS that has been certified in accordance with paragraph (b) of this section. Absent objections from a wireless provider, as described under paragraph (b)(4) of this section, the DCFO may submit a qualifying request to a wireless provider beginning on the sixth business day after the later of the self-certification filing or actual service, as described under paragraph (b)(3)(ii) of this section.

(1) DCFO list. The Commission will maintain a publicly available list of DCFOs that are authorized to transmit qualifying disabling requests. Authorized DCFOs that seek to be recognized on the Commission’s DCFO list must send a letter to the Commission’s Contraband Ombudsperson, signed by the relevant
state attorney general or the relevant Bureau of Prisons Regional Director and providing:

(i) The individual’s name;
(ii) The individual’s official government position; and
(iii) A list of correctional facilities over which the individual has oversight and management authority.

(2) Qualifying request. A qualifying request must be made in writing, contain the certifications in paragraph (c)(2)(ii) of this section and the device and correctional facility identifying information in paragraph (c)(2)(ii) of this section, and be signed by the appropriate DCFO. The DCFO must transmit a qualifying request to a CMRS licensee using a secure communication means that will provide certainty regarding the identity of both the sending and receiving parties. A CMRS licensee must adopt a method, or use an existing method, for receiving secured and verified qualifying requests.

(i) Certifications. A qualifying request must include the following certifications by the DCFO:

(A) A CIS that has been certified in accordance with paragraph (b) of this section was used to gather the contraband subscriber and device information populated in the qualifying request;

(B) The certified CIS was used to identify contraband wireless devices operating in a correctional facility where the CIS has been tested and self-certified for operational readiness and for use in qualifying requests, and the identification of contraband wireless devices occurred within 30 days immediately prior to the date of the qualifying request submission;

(C) The DCFO has reviewed the list of contraband wireless devices and attests that it is accurate; and

(D) It is a violation of applicable state or Federal criminal statutes to possess or operate a contraband device in the correctional facility.

(ii) Device and correctional facility identifying information. The qualifying request must identify the contraband wireless device to be disabled and the correctional facility by providing the following information:

(A) Identifiers sufficient to:

(1) Identify the applicable wireless service provider;

(2) Uniquely describe each of the contraband wireless devices in question at the subscription level; and

(3) Uniquely describe each of the contraband wireless devices in question at the device-level;

(B) Name of the correctional facility at which the contraband wireless device(s) were identified; and

(C) Street address of the correctional facility at which the contraband wireless device(s) were identified.

(3) Licensee actions upon receipt of a qualifying request. Upon receiving a request from a DCFO to disable a contraband wireless device, a licensee providing CMRS service must verify that the request contains the required information for a qualifying request, as defined in paragraph (c)(2)(ii) of this section.

(i) Disabling upon receipt of a qualifying request and timing. If the qualifying request contains the required information, and does not contain an error in the device identifying information preventing the licensee from being able to disable the device, a licensee must, within two business days of receipt of the qualifying request, disable the contraband wireless device from using the wireless provider’s network at both the device and subscriber level and take reasonable and practical steps to prevent the contraband wireless device from being used on another wireless provider’s network.

(ii) Rejection of a qualifying request and timing. A licensee may reject a qualifying request within two business days of receipt of a qualifying request if it does not include the information required for a qualifying request or, with respect to a relevant device, the request contains an error in the device-identifying information preventing the licensee from being able to disable the device.

(iii) Customer outreach. A licensee may immediately disable a contraband wireless device without any customer outreach, or a licensee may contact the customer of record through any outreach, or a licensee may contact the carrier to restore service to the device. A licensee may reverse a disabling action, a wireless provider’s belief that the device was erroneously identified and either confirm the validity of the identifying information contained in the qualifying request or acknowledge the error and direct the carrier to restore service to the device.

(iv) Restoration of service. In the event the DCFO directs the wireless provider to reverse the disabling, the wireless provider must, within two business days, restore service to the device and reverse any actions taken to prevent the device from accessing other wireless provider networks.

(v) Notice of reversals. The DCFO must provide notice to the Contraband Ombudsperson of the number of erroneously disabled devices on a quarterly basis at the end of any quarter during which a device disabling was reversed.

(d) Notification to Managed Access System (MAS) operators of wireless provider technical changes—(1) Notification requirements. CMRS licensees leasing spectrum to MAS operators must provide 90 days’ advance notice to MAS operators of the following network changes occurring within 15 miles of the correctional facility, unless parties modify notification arrangements through mutual agreement:

(i) Adding a new frequency band to service offerings;

(ii) Deploying a new air interface technology or changing an existing air interface technology; and/or

(iii) Adding, relocating, or removing a site.

(2) Good faith negotiations. CMRS licensee lessors and MAS operator lessees must negotiate in good faith to reach an agreement for notification for other types of network adjustments not covered by the notice requirement set
forth in paragraph (d)(1) of this section and for the parties’ treatment of confidential information contained in notifications required pursuant to this section and/or negotiated between the parties.

(3) Emergency network changes exception. CMRS licensees leasing spectrum to managed access systems (MAS) operators are not required to provide 90 days’ advance notice to MAS operators of network technical changes occurring within 15 miles of the correctional facility that are required due to emergency and disaster preparedness. CMRS licensees must provide notice of these technical changes immediately after the exigency.

BILLING CODE 6712–01–P
This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

FEDERAL RETIREMENT THRIFT INVESTMENT BOARD

5 CFR Part 1630

Privacy Act: Proposed Exemptions

AGENCY: Federal Retirement Thrift Investment Board.

ACTION: Notice of proposed rulemaking.

SUMMARY: In accordance with the Privacy Act of 1974, the Federal Retirement Thrift Investment Board (FRTIB) proposes to exempt five systems of records from certain requirements of the Act. FRTIB has previously published System of Records Notices (SORNs) for these systems.

DATES: Comments on this notice of proposed rulemaking must be received by September 13, 2021.

ADDRESSES: You may submit written comments to FRTIB through the following methods:

- Fax: 202–942–1676.
- Mail or Hand Delivery: Office of General Counsel, Federal Retirement Thrift Investment Board, 77 K Street NE, Suite 1000, Washington, DC 20002.

SUPPLEMENTARY INFORMATION: FRTIB proposes to revise its Privacy Act regulations at 5 CFR part 1630 to exempt five of its systems of records, FRTIB–2, FRTIB–13, FRTIB–14, FRTIB–15, and FRTIB–23, from certain requirements of the Privacy Act, 5 U.S.C. 552a. The FRTIB is promulgating exemptions to the Privacy Act for these five systems of records in accordance with subsection (k)(2) and subsection (k)(5).

Subsection (k)(2) of the Privacy Act authorizes the head of an agency to exempt a system of records from the applicable subsections if investigatory records are compiled for law enforcement purposes; provided, however if an individual is denied any right, privilege, or benefit that he or she would otherwise be entitled by Federal law, or for which he or she would otherwise be eligible, as a result of the maintenance of such material, such material shall be provided to such individual, except to the extent that the disclosure of such material would reveal the identity of a source who furnished information to the Government under an express promise that the identity of the source would be held in confidence. Subsection (k)(5) of the Privacy Act authorizes the head of an agency to exempt a system of records from the applicable subsections if investigatory records are compiled solely for the purpose of determining suitability, eligibility, or qualifications for Federal civilian employment, military service, Federal contracts, or access to classified information, but only to the extent that the disclosure of such material would reveal the identity of a source who furnished information to the Government under an express promise that the identity of the source would be held in confidence.

Under the Privacy Act, individuals have a right of access to information pertaining to them which is contained in a system of records. At the same time, the Privacy Act permits certain types of systems to be exempt from some Privacy Act requirements. If an agency claims an exemption, however, it must issue a Notice of Proposed Rulemaking to make clear to the public the reasons why a particular exemption is being claimed.

As indicated in the Agency’s accompanying Privacy Act system of records notices proposing and modifying these systems of records, these five systems of records contain information collected by the Agency in the course of carrying out its duties under 5 U.S.C. 8401.

The FRTIB is promulgating exemptions under subsections (k)(2) and (k)(5) for FRTIB–2, Personnel Security Investigation Files. FRTIB–2 contains information compiled by the Agency in order to document and support decisions regarding clearance for access to sensitive FRTIB information and the suitability, eligibility, and fitness for service of applicants for federal employment and contract positions. FRTIB has previously published a SORN for this system in the Federal Register, 85 FR 43654, 43655 (July 21, 2020). FRTIB’s personnel investigations records fall under the exemption stated within subsection (k)(2) of the Privacy Act because these records may be used to help streamline and make more efficient the investigations and adjudications process, and may be used to document security violations and actions taken in response to such violations. FRTIB’s personnel investigations records also fall under the exemption stated within subsection (k)(5) of the Privacy Act because these records are compiled for the purpose of determining suitability, eligibility, or qualifications for Federal civilian employment, military service, Federal contracts, or access to classified information. FRTIB proposes to exempt eligible records contained within FRTIB–2 from the requirements of subsections (c)(3); (d); (e)(1); (e)(4)(G), (H), (I), and (J), which require agencies to provide an accounting of disclosures; provide notification, access, and amendment rights, rules, and procedures; maintain only relevant and necessary information; and identify categories of record sources. Exempting records from this system is necessary and appropriate to maintain the integrity of personnel investigations and to ensure that FRTIB’s efforts to obtain accurate and objective information will be successful. To the extent that FRTIB uses investigatory material within this system of records as a basis for denying an individual any right, privilege, or benefit to which an individual would be entitled in the absence of that record, FRTIB will grant that individual access to the material except to the extent that access would reveal the identity of a source promised confidentiality.

The FRTIB is promulgating exemptions under subsection (k)(2) for FRTIB–13, Fraud and Forgery Records. FRTIB–13 contains information compiled by the Agency in the course of carrying out its fiduciary duties to detect and prevent fraudulent activity against participant accounts. FRTIB has previously published a SORN for this system in the Federal Register, 84 FR 12249 (April 1, 2019), and a notice of proposed rulemaking for the exemptions, 84 FR 12954 (April 3, 2019). This notice of proposed
rulemaking supersedes the previous notice. FRTIB’s fraud and forgery records fall under the exemption stated within subsection (k)(2) of the Privacy Act because these records are compiled for law enforcement purposes. FRTIB proposes to exempt eligible records contained within FRTIB–13 from the requirements of subsections (c)(3); (d); (e)(1); (e)(4)(G); (H), (I); and (f), which require agencies to provide an accounting of disclosures; provide notification, access, and amendment rights, rules, and procedures; maintain only relevant and necessary information; and identify categories of record sources. Exempting records from this system is necessary and appropriate to maintain the integrity of FRTIB’s investments into allegations of fraud or forgery and to ensure that FRTIB’s efforts to obtain accurate and objective information will be successful. To the extent that FRTIB uses investigatory material within this system of records as a basis for denying an individual any right, privilege, or benefit to which an individual would be entitled in the absence of that record, FRTIB will grant that individual access to the material except to the extent that access would reveal the identity of a source promised confidentiality.

The FRTIB is promulgating exemptions under subsection (k)(2) for FRTIB–14, Legal Case Files. FRTIB–14 contains information compiled by the Agency in the course of its duties to provide legal advice to FRTIB personnel and respond appropriately to claims and litigation. FRTIB has previously published a SORN for this system in the Federal Register, 85 FR 43654, 43666 (July 21, 2020). FRTIB’s legal case files fall under the exemption stated within subsection (k)(2) of the Privacy Act because these records may be compiled for law enforcement purposes. FRTIB proposes to exempt eligible records contained within FRTIB–14 from the requirements of subsections (c)(3); (d); (e)(1); (e)(4)(G), (H), (I); and (f), which require agencies to provide an accounting of disclosures; provide notification, access, and amendment rights, rules, and procedures; maintain only relevant and necessary information; and identify categories of record sources. Exempting records from this system is necessary and appropriate to maintain the integrity of FRTIB’s legal case files and to ensure that FRTIB’s efforts to obtain accurate and objective information will be successful. To the extent that FRTIB uses investigatory material within this system of records as a basis for denying an individual any right, privilege, or benefit to which an individual would be entitled in the absence of that record, FRTIB will grant that individual access to the material except to the extent that access would reveal the identity of a source promised confidentiality.

The FRTIB is promulgating exemptions under subsection (k)(2) for FRTIB–15, Internal Investigations of Harassment and Hostile Work Environment Allegations. FRTIB–15 contains information compiled by the Agency in the course of upholding FRTIB’s policy to provide for a work environment free from all forms of harassment. FRTIB has previously published a SORN for this system in the Federal Register, 85 FR 43654, 43669 (July 21, 2020). FRTIB’s internal investigations and hostile work environment allegations files fall under the exemption stated within subsection (k)(2) of the Privacy Act because these records may be compiled for law enforcement purposes. FRTIB proposes to exempt eligible records contained within FRTIB–15 from the requirements of subsections (c)(3); (d); (e)(1); (e)(4)(G), (H), (I); and (f), which require agencies to provide an accounting of disclosures; provide notification, access, and amendment rights, rules, and procedures; maintain only relevant and necessary information; and identify categories of record sources. Exempting records from this system is necessary and appropriate to maintain the integrity of FRTIB’s investigations and hostile work environment allegations files and to ensure that FRTIB’s efforts to obtain accurate and objective information will be successful. To the extent that FRTIB uses investigatory material within this system of records as a basis for denying an individual any right, privilege, or benefit to which an individual would be entitled in the absence of that record, FRTIB will grant that individual access to the material except to the extent that access would reveal the identity of a source promised confidentiality.

These exemptions apply only to the extent that information in this system is subject to exemption pursuant to 5 U.S.C. 552a(k). Where FRTIB determines compliance would not appear to interfere with or adversely affect the purpose of this system to investigate and prevent insider threats, the applicable exemption may be waived by FRTIB in its sole discretion. Exemptions from the particular subsections are necessary and appropriate, and justified for the following reasons:

- 5 U.S.C. 552a(c)(3) (the requirement to provide accounts of disclosures) and 5 U.S.C. 552a(d)(1)–(4) (requirements addressing notification, access, and amendment rights, collectively referred to herein as access requirements). Providing individuals with notification, access, and amendment rights with respect to allegations and investigations into personnel investigations, fraud against participant accounts, legal case files, internal investigations of harassment and hostile work environment allegations, or investigations of potential insider threats could reveal the existence of an investigation; investigative interest; investigative techniques; details about an investigation; security-sensitive information, such as information about security measures and security vulnerabilities; information that must remain non-public to protect personal privacy; identities of law enforcement personnel; or other sensitive or Privacy Act-protected information. Revealing such information to individuals could compromise or otherwise impede pending and future law enforcement investigations and could protect sensitive information. Revealing such information could also violate personal...
exemption from this provision is necessary to protect the sources of law enforcement and intelligence information and to protect the privacy and safety of witnesses and informants and others who provide information to FRTIB or as part of the Thrift Savings Plan (TSP). Further, because records used to complete personnel investigations, investigate and prosecute allegations of fraud and forgery against participant accounts, pursue legal claims, pursue internal investigations of harassment or hostile work environment allegations, or investigate and prosecute allegations of insider threats could come from any source, it is not possible to know every category in advance in order to list them all in FRTIB’s accompanying SORN. Some record source categories may not be appropriate to make public in the SORN if, for example, revealing them could enable individuals to discover investigative techniques and devise ways to bypass them to evade detection and apprehension.

5 U.S.C. 552a(f) (the requirement to promulgate rules to implement provisions of the Privacy Act). To the extent that this subsection is interpreted to require agency rules addressing the aforementioned exempted requirements, exemption from this provision is also necessary to protect the sources of law enforcement and intelligence information and to protect the privacy and safety of witnesses and informants and others who provide information to FRTIB or as part of the TSP.

Regulatory Flexibility Act

FRTIB certifies that this proposed regulation will not have a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 et seq.). This rulemaking does not impose a requirement for small businesses to report or keep records on any of the requirements contained in this proposed rule. The exemptions to the Privacy Act apply to individuals, and individuals are not covered entities under the Regulatory Flexibility Act.

Paperwork Reduction Act

I certify that these proposed regulations do not require additional reporting under the criteria of the Paperwork Reduction Act.

Unfunded Mandates Reform Act of 1995

Pursuant to the Unfunded Mandates Reform Act of 1995, 2 U.S.C. 682, 632, 653, 1501, 1571, the effects of this proposed regulation on state, local, and tribal governments and the private sector have been assessed. This proposed regulation will not compel the expenditure in any one year of $100 million or more by state, local, and tribal governments, in the aggregate, or by the private sector. Therefore, a statement under § 1532 is not required.

List of Subjects in 5 CFR Part 1630

Privacy.

Ravindra Deo,

Executive Director, Federal Retirement Thrift Investment Board.

Accordingly, FRTIB proposes to amend 5 CFR part 1630 as follows:

PART 1630—PRIVACY ACT REGULATIONS

1. The authority citation for part 1630 continues to read as follows:

2. Amend § 1630.15 by revising paragraph (b) to read as follows:

§ 1630.15 Exemptions.

(b) Those designated systems of records which are exempt from the requirements of subsections (c)(3); (d); (e)(1); (e)(4)(G), (H), (I); and (f) of the Privacy Act, 5 U.S.C. 552a, include FRTIB–2, Personnel Security Investigation Files; FRTIB–13, Fraud and Forgery Records; FRTIB–14, FRTIB Legal Case Files; FRTIB–15, Internal Investigations of Harassment and Hostile Work Environment Allegations; and FRTIB–23, Insider Threat Program Records.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 925

Amendments to the Marketing Order of Grapes Grown in a Southeastern California

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Proposed rule.

SUMMARY: This rule invites comments on proposed amendments to Marketing Order No. 925, which regulates the handling of grapes grown in a designated area of southeastern California. Proposed amendments would change the California Desert...
Grape Administrative Committee’s (Committee) size, and its quorum and voting requirements.

DATES: Comments must be received by October 12, 2021.

ADDRESSES: Interested persons are invited to submit written comments concerning this proposed rule. Comments must be sent to the Docket Clerk, Marketing Order and Agreement Division, Specialty Crops Program, AMS, USDA, 1400 Independence Avenue SW, STOP 0237, Washington, DC 20250–0237; or submitted to internet: https://www.regulations.gov. All comments should reference the document number and the date and page number of this issue of the Federal Register and will be made available for public inspection in the Office of the Docket Clerk during regular business hours, or can be viewed at: https://www.regulations.gov. All comments submitted in response to this proposed rule will be included in the record and will be made available to the public. Please be advised that the identity of the individuals or entities submitting the comments will be made public on the internet at the address provided above.

FOR FURTHER INFORMATION CONTACT: Pushpa Kathir, Marketing Specialist, or Matthew Pavone, Chief, Rulemaking Services Branch, Marketing Order and Agreement Division, Specialty Crops Program, AMS, USDA, 1400 Independence Avenue SW, Stop 0237, Washington, DC 20250–0237; Telephone: (202) 720–2491, MarketOrderComment@usda.gov.

Small businesses may request information on complying with this regulation by contacting Richard Lower, Marketing Order and Agreement Division, Specialty Crops Program, AMS, USDA, 1400 Independence Avenue SW, STOP 0237, Washington, DC 20250–0237; Telephone: (202) 720–2491, or Email: Richard.Lower@usda.gov.

SUPPLEMENTARY INFORMATION: This action, pursuant to 5 U.S.C. 553, proposes amendments to regulations issued to carry out a marketing order as defined in 7 CFR 900.2(j). This proposal is issued under Marketing Order No. 925, as amended (7 CFR part 925), regulating the handling of grapes grown in a designated area of southeastern California. Part 925 (referred to as the “Order”) is effective under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601–674), hereinafter referred to as the “Act.” The Committee locally administers the Order and is comprised of grape producers and handlers operating within the area of production, and a public member.

Section 8c(17) of the Act (7 U.S.C 608c(17)) and the applicable rules of practice and procedure governing the formulation of marketing agreements and orders (7 CFR part 900) authorize amendment of the Order through this informal rulemaking action. The Agricultural Marketing Service (AMS) will consider comments received in response to this proposed rule and, based on all the information available, will determine if the Order amendment is warranted. If AMS determines amendment of the Order is warranted, a subsequent proposed rule and notice of referendum would be issued and producers would be allowed to vote for or against the proposed amendments. AMS would then issue a final rule effectuating any amendments approved by producers in the referendum.

The Department of Agriculture (USDA) is issuing this proposed rule in conformance with Executive Orders 13563 and 12866 and 13563 directs agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility. This action falls within a category of regulatory actions that the Office of Management and Budget (OMB) exempted from Executive Order 12866 review.

In addition, this proposed rule has been reviewed under Executive Order 13175—Consultation and Coordination with Indian Tribal Governments, which requires agencies to consider whether their rulemaking actions would have tribal implications. AMS has determined this proposed rule is unlikely to have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. This proposal has also been reviewed under Executive Order 12988, Civil Justice Reform. This rule is not intended to have retroactive effect. This rule shall not be deemed to preclude, preempt, or supersede any State program covering grapes grown in a designated area of Southeastern California. The Act provides that administrative proceedings must be exhausted before parties may file suit in court. Under section 8c(15)(A) of the Act (7 U.S.C. 608b(15)(A)), any handler subject to an order may file with USDA a petition stating that the order, any provision of the order, or any obligation imposed in connection with the order is not in accordance with law and request a modification of the order or to be exempted therefrom. A handler is afforded the opportunity for a hearing on the petition. After the hearing, USDA would rule on the petition. The Act provides that the district court of the United States in any district in which the handler is an inhabitant, or has his or her principal place of business, has jurisdiction to review USDA’s ruling on the petition, provided an action is filed no later than 20 days after the date of entry of the ruling.

Section 1504 of the Food, Conservation, and Energy Act of 2008 (2008 Farm Bill) (Pub. L. 110–246) amended section 8c(17) of the Act, which in turn required the addition of supplemental rules of practice to 7 CFR part 900 (73 FR 49397; August 21, 2008). The amendment of section 8c(17) of the Act and supplemental rules of practice authorize the use of informal rulemaking (5 U.S.C. 553) to amend Federal fruit, vegetable, and nut marketing agreements and orders. USDA may use informal rulemaking to amend marketing orders depending upon the nature and complexity of proposed amendments, potential regulatory and economic impacts on affected entities, and any other relevant matters.

AMS has considered these factors and has determined that amendments proposed herein are not unduly complex and the nature of proposed amendments is appropriate for utilizing the informal rulemaking process to amend the Order. A discussion of the potential regulatory and economic impacts on affected entities is discussed later in the “Initial Regulatory Flexibility Analysis” section of this proposed rule.

The Committee unanimously recommended amendments following deliberations at the public meeting held on April 13, 2021. Proposals would amend the Order by changing the Committee’s size, as well as its quorum and voting requirements.

Proposal 1—Reduce Committee Size § 925.20 provides that the Committee consists of 12 members and, for each member of the Committee, there must be an alternate who has the same qualifications as the member. This proposal would amend § 925.20 by reducing the size of the Committee from 12 to 10 members. The requirement that
each member has an alternate with the same qualifications as the member would remain unchanged. Four members and their alternates would be producers, officers, or employees of producers (producer members). Four members and their alternates would be handlers, officers, or employees of handlers (handler members). One member and alternate would be either a producer, handler, or officer or employee thereof. One member and alternate would represent the public.

Since promulgation of the Order in 1980, the California table grape industry has seen reductions of about 55% of its producers and 58% of registered handlers. Natural industry consolidation and land development pressure have also contributed to this decline. Decreasing the Committee’s size from 12 members to 10 members would make Committee membership more reflective of today’s industry and enable the Committee to fill all its member positions without difficulty.

Proposal 2—Revise Quorum and Voting Requirements

Currently, § 925.30 states that eight members of the Committee shall constitute a quorum, and any action of the committee require at least eight concurring votes.

The proposed change would modify § 925.30 to allow six members to constitute a quorum including at a minimum one producer member and one handler member, with six concurring votes required to pass any motion or approve any Committee action. The Committee is experiencing difficulties filling all seats and obtaining a quorum at meetings to conduct business activities. Adjusting current requirements would enable the Committee to operate fully mitigating the risk of not establishing a quorum during scheduled meetings and not having the required votes to pass any action. These changes would help to streamline the Committee’s operations and increase its effectiveness.

Initial Regulatory Flexibility Analysis

Pursuant to requirements set forth in the Regulatory Flexibility Act (RFA) (5 U.S.C. 601–612), AMS has considered the economic impact of this proposed rule on small entities. Accordingly, AMS has prepared this initial regulatory flexibility analysis.

The purpose of the RFA is to fit regulatory actions to the scale of businesses subject to such actions so that small businesses will not be unduly or disproportionately burdened. Small agricultural producers have been defined by the Small Business Administration (SBA) (13 CFR 121.201) as those having annual receipts of no more than $1,000,000. Small agricultural service firms (handlers) are defined as those with annual receipts of no more than $30,000,000.

Proposed amendments to the California desert grape marketing order would reduce the number of member and alternate seats on the California Desert Grape Administrative Committee from 12 to 10 and reduce quorum and voting requirements from 8 to 6 members. These amendments are necessary to reflect the industry’s consolidation. Since the promulgation of the marketing order in 1980, the California desert grape industry has lost roughly 55 percent of its producers and 58 percent of the registered handlers.

The Committee reports that there are 21 producers and 10 handlers of table grapes in the marketing order production region. The Committee packout reports show that average annual packout for 2018 through 2020 was 3,212,774 containers, equivalent to 28,914 tons. The 3-year average of California fresh table grape prices was $1.267 per ton. Multiplying quantity times price yields an annual average crop value estimate of $36,634 million. Dividing the average crop value estimate by the number of producers (21) yields an average crop value per producer of $1,744 million, moderately larger than the SBA small farm size threshold of $1,000,000. Therefore, using the estimated prices, packout volume, and number of producers, and assuming a normal bell-curve distribution of receipts among producers, AMS estimates the majority of producers would qualify as large businesses under the SBA definition.

Dividing the average crop value of $36,634 million by the number of handlers (10) yields a per-handler estimate of $3,663 million, well below the SBA small business threshold of $30,000,000 in annual receipts. However, that computation measures handler annual receipts using producer-level crop value data, since AMS is unable to locate an estimate of a handler margin. A range of handler margin estimates would be 30 to 40 percent above the grower price. Applying those two percentages, a range of handler annual receipts estimates would be $4.8 to $5.1 million, still well below $30,000,000. Therefore, using these estimated prices, utilization volume, handler margin estimates and number of handlers, assuming a normal bell-curve distribution of receipts among handlers, AMS estimates that the majority of handlers would meet the SBA definition of small businesses.

AMS has determined that these proposed amendments would not have a significant impact on a substantial number of small businesses. Rather, large and small entities alike would be expected to benefit from the Committee’s improved ability to address important issues of interest to all on a timely basis. The proposed reduction in the number of seats on the Committee, and the reduced quorum and voting requirements, would not require any significant changes in producer or handler business operations, and no significant industry educational effort would be needed. Producers and handlers, large and small alike, would incur no additional costs. No small businesses would be unduly or disproportionately burdened.

Paperwork Reduction Act

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), the Order’s information collection requirements have been previously approved by OMB and assigned OMB No. 0581–0189. Fruit Crops. No changes in these requirements are necessary because of this action. Should any changes become necessary, they would be submitted to OMB for approval.

This proposed rule would impose no additional reporting or recordkeeping requirements on either small or large California table grape handlers. As with all Federal marketing order programs, reports and forms are periodically reviewed to reduce information requirements and duplication by industry and public-sector agencies.

AMS is committed to complying with the E-Government Act, to promote the use of the internet and other information technologies to provide increased opportunities for citizen access to Government information and services, and for other purposes. USDA has not identified any relevant Federal rules that duplicate, overlap, or conflict with this action.

The Committee’s meetings are widely publicized throughout the southeastern California table grape production area. All interested persons are invited to attend the meeting and encouraged to participate in Committee deliberations on all issues. Like all Committee meetings, the April 13, 2021 meeting was public, and all entities, both large and small, were encouraged to express their views on the proposals.

Interested persons are invited to submit comments on the proposed amendments to the Order, including comments on the regulatory and information collection impacts of this action on small businesses.
Following analysis of any comments received on the amendments in this proposed rule, AMS will evaluate all available information and determine whether to proceed. If appropriate, a proposed rule and notice of referendum would be issued, and producers would be provided the opportunity to vote for or against the proposed amendments. Information about the referendum, including dates and voter eligibility requirements, would be published in a future issue of the Federal Register. A final rule would then be issued to effectuate any amendments favored by producers participating in the referendum.

A small business guide on complying with fruit, vegetable, and specialty crop marketing agreements and orders may be viewed at: https://www.ams.usda.gov/rules-regulations/moa/small-businesses. Any questions about the compliance guide should be sent to Richard Lower at the previously mentioned address in the FOR FURTHER INFORMATION CONTACT section.

General Findings

Findings hereinafter set forth are supplementary to findings and determinations that were previously made in connection with the issuance of Marketing Order 925; and all said previous findings and determinations are hereby ratified and affirmed, except insofar as such findings and determinations may be in conflict with the findings and determinations set forth herein.

1. Marketing Order 925, as hereby proposed to be amended, and all terms and conditions thereof, would tend to effectuate the declared policy of the Act;
2. Marketing Order 925, as hereby proposed to be amended, regulates the handling of grapes grown in southeastern California and is applicable only to persons in respective classes of commercial and industrial activity specified in the Order;
3. Marketing Order 925, as hereby proposed to be amended, is limited in application to the smallest regional production area which is practicable, consistent with carrying out the declared policy of the Act, and the issuance of several marketing orders applicable to subdivisions of the production area would not effectively carry out the declared policy of the Act;
4. Marketing Order 925, as hereby proposed to be amended, prescribes, insofar as practicable, such different terms applicable to different parts of the production area as are necessary to give due recognition to the differences in the production and marketing of grapes produced or packed in the production area; and
5. All handling of grapes produced or packed in the production area, as defined in Marketing Order 925, is in the current of interstate or foreign commerce or directly burdens, obstructs, or affects such commerce.

A 60-day comment period is provided to allow interested persons to respond to these proposals. Any comments received on amendments proposed in this rule will be analyzed, and if AMS determines to proceed based on all the information presented, a producer referendum would be conducted to determine producer support for the proposed amendments. If appropriate, a final rule would then be issued to effectuate the amendments favored by producers participating in the referendum.

List of Subjects in 7 CFR Part 925

Grapes, Marketing agreements, Reporting and recordkeeping requirements.

For reasons set forth in the preamble, 7 CFR part 925 is proposed to be amended as follows:

PART 925—GRAPE GROWN IN A DESIGNATED AREA OF SOUTHEASTERN CALIFORNIA.

1. The authority citation for 7 CFR part 925 continues to read as follows:
2. In §925.20, revise paragraph (a) to read as follows:

§925.20 Establishment and membership.

(a) There is hereby established a California Desert Grape Committee consisting of 10 members, each of whom shall have an alternate who shall have the same qualifications as the member. Four members and their alternates shall be producers, officers or employees of producers (producer members). Four members and their alternates shall be handlers, or officers or employees of handlers (handler members). One member and alternate shall be either a producer or handler, or an officer or employee thereof. One member and alternate shall represent the public.

3. In §925.30, revise paragraph (a) to read as follows:

§925.30 Procedure.

(a) Six members of the committee shall constitute a quorum, including at a minimum one producer representative and one handler representative, and any action of the committee shall require at least six concurring votes.

Erin Morris,
Associate Administrator, Agricultural Marketing Service.

7 CFR Part 930

[Doc. No. AMS–SC21–0026; SC21–930–1 PR]

Tart Cherries Grown in the States of Michigan, New York, Pennsylvania, Oregon, Utah, Washington, and Wisconsin; Changes to Reporting Requirements

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Proposed rule.

SUMMARY: This proposed rule would implement a recommendation from the Cherry Industry Administrative Board to revise reporting requirements prescribed under the Federal marketing order regulating the handling of tart cherries. This action would modify reporting requirements to include information necessary to determine the portion of total inventory that is greater than five years old.

DATES: Comments must be received by September 13, 2021.

ADDRESSES: Interested persons are invited to submit written comments concerning this proposal. Comments must be submitted via the internet at: http://www.regulations.gov. All comments should reference the document number and the date and page number of this issue of the Federal Register. All comments submitted in response to this proposed rule will be included in the record and the identity of the individuals or entities submitting the comments will be made public on the internet at the address provided above.

FOR FURTHER INFORMATION CONTACT: Thomas F. Nalepa, Marketing Specialist, or Christian D. Nissen, Regional Director, Southeast Marketing Field Office, Marketing Order and Agreement Division, Specialty Crops Program, AMS, USDA; Telephone: (863) 324–3375, Fax: (863) 291–8614, or email: Thomas.Nalepa@usda.gov or Christian.Nissen@usda.gov.

Small businesses may request information on complying with this
SUPPLEMENTARY INFORMATION: This action, pursuant to 5 U.S.C. 553, proposes an amendment to regulations issued to carry out a marketing order as defined in 7 CFR 900.2(j). This proposed rule is issued under Marketing Agreement and Order No. 930, (7 CFR part 930), regulating the handling of tart cherries produced in the States of Michigan, New York, Pennsylvania, Oregon, Utah, Washington, and Wisconsin. Part 930 (referred to as the “Order”) is effective under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601–674), hereinafter referred to as the “Act.” The Cherry Industry Administrative Board (Board or CIAB) locally administers the Order and is comprised of producers and handlers of tart cherries operating within the production area, and a public member.

The Department of Agriculture (USDA) is issuing this proposed rule in conformance with Executive Orders 12866 and 13563. Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing with OMB approved rules, and promoting flexibility. This action falls within a category of regulatory actions that the Office of Management and Budget (OMB) exempted from Executive Order 12866 review.

This proposed rule has been reviewed under Executive Order 13175—Consultation and Coordination with Indian Tribal Governments, which requires agencies to consider whether their rulemaking actions would have tribal implications. Agricultural Marketing Service (AMS) has determined that this proposed rule is unlikely to have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

This proposed rule has been reviewed under Executive Order 13175—Consultation and Coordination with Indian Tribal Governments, which requires agencies to consider whether their rulemaking actions would have tribal implications. Agricultural Marketing Service (AMS) has determined that this proposed rule is unlikely to have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

Agricultural Marketing Service (AMS) has determined that this proposed rule is unlikely to have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.
As part of their discussions, the Board also provided clarifying information on how to calculate inventory age for reporting purposes. To determine product age, the date used would either be the date of harvest and processing or date of remanufacturing. Board members emphasized the starting point for calculating inventory age would be reset if the inventory were remanufactured into a new product.

For example, if a handler was completing their routine inventory report on May 31, 2021, any tart cherries harvested in 2014 or earlier would be considered over five years old. Although cherries harvested in 2014 would be considered part of the 2014–15 harvest year, based on the date they were harvested and processed, they would be greater than five years old for reporting purposes by the end of May 2021. If cherries harvested in 2014 were remanufactured into another product, the date of remanufacturing would become the date used for calculating the age for inventory purposes. The Board stated this is the same dating procedure as used for calculating the age of cherries held in reserve under volume regulation. Using these dates, inventory older than five years would be reported each May on the modified report.

Several members commented the age of inventory is already recorded by handlers as part of their normal business activities, and as a result, this requirement would not be overly burdensome. Members further expressed the separate reporting of inventory over five years old would, at most, require a few extra minutes of a handler’s time and would only be required once annually.

Consequently, the Board voted to add a section to the inventory report to include the total volume of inventory over five years old. The Board recommended including this information on the inventory report for the reporting period ending May 31 due on June 10. The Board agreed this was the appropriate time to have the information available as this report would be used to develop the industry inventory data when the Board meets in June to consider the need to establish a volume control recommendation for the coming season.

This proposed rule would add sales and inventory report requirements to administrative provisions under the Order and would require handlers to report inventory older than five years. These reporting requirements would be added in a new §930.170 and would include information on the handler submitting the form; the reporting period; beginning inventory for each product; the amount packed for each product; sales; information on transfers of product between handlers, including the name of the selling handler, name of the receiving handler, and form type, number of units; information on product repacked or remanufactured during the reporting period, including form type and number of units of source products and form type and number of units of end products; and information on the amount of ending inventory for each product, including the amount of ending inventory for each product over five years old. Only the May 31 report would require handlers to record amounts of inventories over five years old.

This information would support the industry’s ability to make marketing decisions by providing more descriptive information than currently available when evaluating the need for volume regulation. Besides providing important information for industry reports regarding sales and inventory, this action would also help ensure compliance with the reporting requirement by including it in the rules and regulations under the Order.

Initial Regulatory Flexibility Analysis

Pursuant to requirements set forth in the Regulatory Flexibility Act (RFA) (5 U.S.C. 601–612), AMS has considered the economic impact of this proposed rule on small entities. Accordingly, AMS has prepared this initial regulatory flexibility analysis.

The purpose of the RFA is to fit regulatory actions to the scale of businesses subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders issued pursuant to the Act are unique in that they are brought about through group action of essentially small entities acting on their own behalf.

There are approximately 450 producers of tart cherries in the regulated area and approximately 40 handlers who are subject to the Order. Small agricultural growers are defined by the Small Business Administration as those having annual receipts less than $1,000,000, and small agricultural service firms are defined as those whose annual receipts are less than $30,000,000 (13 CFR 121.201).

According to information from the National Agricultural Statistics Service (NASS) and Board data, the average annual grower price for tart cherries during the 2019–2020 season was approximately $0.15 per pound. With total utilization at 236.34 million pounds, the total 2019–20 crop value is estimated at $35.45 million (236.34 million pounds times $0.15). Dividing the crop value by the estimated number of producers (450) yields an estimated average receipt per producer of $78,778. This is well below the SBA threshold for small producers.

A free-on-board (FOB) price of $0.82 per pound for processed tart cherries was derived from USDA’s 2020 purchases of dried tart cherries at an average price of $4.11 per pound. The dried cherry price was converted to a raw product equivalent price at an industry recognized ratio of five to one. Based on utilization, this price represents a good estimate of the price for processed cherries. Multiplying this FOB price ($0.82) by total utilization of 236.34 million pounds results in an estimated handler-level tart cherry value of $193.8 million. Dividing this figure by the number of handlers (40) yields estimated average annual handler receipts of $4.84 million, which is below the SBA threshold for small agricultural service firms. Assuming a normal distribution, the majority of producers and handlers of tart cherries may be classified as small entities.

This proposed rule would add the sales and inventory report requirements to the administrative provisions under the Order and would require handlers to report inventory older than five years. This proposed rule would establish a new §930.170 under the rules and regulations of the Order. The authority for this proposed action is provided in §930.70 of the Order. AMS anticipates that this proposed rule would impose minimal, if any, additional costs on handlers or growers, regardless of their size. This action would impose a small increase in the reporting burden for each tart cherry handler. However, because handlers currently maintain data about the age of their inventory in the regular course of business, they should be able to readily access this information. Consequently, any additional costs associated with this change would be minimal (not significant) and apply equally to all handlers.

This proposed action should also benefit the entire industry by providing more precise information on tart cherry product in inventory. This information would provide accurate information regarding available inventory and help with marketing and planning for the industry. Further, having these requirements codified under the rules and regulations would also benefit compliance enforcement of this reporting requirement. The benefits of this rule are expected to be equally available to all tart cherry growers and handlers, regardless of their size.
The Board discussed other alternatives to this proposed action, including reporting inventory older than three years for the purposes of classifying the age of inventory, reporting the age of inventory quarterly, and leaving the current reporting requirements unchanged. When discussing alternatives, the Board concluded a three-year timeframe would not sufficiently cover the normal lifespan of all products held in inventory. The Board also commented that quarterly reporting of older inventory was unnecessary because this information would be most useful at the end of the season, prior to making annual volume restriction recommendations. Therefore, the alternatives were rejected.

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), the Order’s information collection requirements have been previously approved by OMB and assigned OMB No. 0581–0177, Tart Cherries Grown in the States of Michigan, New York, Pennsylvania, Oregon, Utah, Washington, and Wisconsin. This proposed rule would require changes to the Board’s existing CIAB Form 3. However, changes are minor and the currently approved burden for the form would be minimally increased by the proposed changes. The revised form has been submitted to OMB for approval.

As with all Federal marketing order programs, reports and forms are periodically reviewed to reduce information requirements and duplication by industry and public sector agencies. USDA has not identified any relevant Federal rules that duplicate, overlap, or conflict with this proposed rule.

AMS is committed to complying with the E-Government Act, to promote the use of the internet and other information technologies to provide increased opportunities for citizen access to Government information and services, and for other purposes.

Further, Board meetings are widely publicized throughout the tart cherry industry. Meetings are public and virtual or in a hybrid style with participants having a choice whether to attend in person or virtually. All interested persons are invited to attend meetings and participate in Board deliberations on all issues. Board meetings on June 25, 2020, January 14, 2021, and February 25, 2021, were each conducted via videoconference. All entities, both large and small, were able to express views on this issue. Finally, interested persons are invited to submit comments on this proposed rule, including regulatory and information collection impacts of this proposed action on small businesses.

A small business guide on complying with fruit, vegetable, and specialty crop marketing agreements and orders may be viewed at: http://www.ams.usda.gov/rules-regulations/moa/small-businesses. Any questions about the compliance guide should be sent to Richard Lower at the previously mentioned address in the FOR FURTHER INFORMATION CONTACT section.

A 30-day comment period is provided to allow interested persons to respond to this proposal. All written comments timely received will be considered before a final determination is made on this matter.

List of Subjects in 7 CFR Part 930
Marketing agreements, Reporting and recordkeeping requirements, Tart cherries.

For reasons set forth in the preamble, 7 CFR part 930 is proposed to be amended as follows:

PART 930—TART CHERRIES GROWN IN THE STATES OF MICHIGAN, NEW YORK, PENNSYLVANIA, OREGON, UTAH, WASHINGTON, AND WISCONSIN

1. The authority citation for 7 CFR part 930 continues to read as follows:

2. Add § 930.170 to read as follows:
§ 930.170 Sales and Inventory Report.
(a) Handlers shall submit to the Board a sales and inventory report for the reporting period ending November 30, February 28, May 31, and June 30 of each crop year. Handlers shall file such reports by the tenth day of the month following the reporting period.
(b) The amount of inventory for each product, year-to-date;
(c) The reported period covered by the report;
(d) The form, type, and unit size for each product;
(e) The total beginning of year inventory for each product;
(f) The packed amount for each product;
(g) The total inter-handler transfers, and total volume repackaged or remanufactured for each product, year-to-date;
(h) The amount of ending inventory for each product, year-to-date;
(i) List of inter-handler transfers, both in and out, during the reporting period including:
(ii) Name of the selling handler;
(iii) Name of the receiving handler;
(iv) Form, type, number of units.
(10) List of repacks and remanufactures during the reporting period including:
(i) Form, type, and number of units of source products; and
(ii) Form, type, and number of units of end products.
(b) The amount of inventory for each product over 5 years old shall be reported annually on the sales and inventory report for the reporting period ending May 31. Product age is based on the crop year in which the current product was processed or remanufactured.

Erin Morris,
Associate Administrator, Agricultural Marketing Service.
[FR Doc. 2021–17234 Filed 8–12–21; 8:45 am]
specifications to address aging management activities related to the structures, systems, and components of the dry storage system to ensure that these will maintain their intended functions during the period of extended storage operations.

DATES: Submit comments by September 13, 2021. Comments received after this date will be considered if it is practical to do so, but the NRC is able to consider only comments received on or before this date.

ADDRESS: Submit your comments, identified by Docket ID NRC–2021–0108, at https://www.regulations.gov. If your material cannot be submitted using https://www.regulations.gov, call or email the individuals listed in the FOR FURTHER INFORMATION CONTACT section of this document for alternate instructions.

For additional direction on obtaining information and submitting comments, see “Obtaining Information and Submitting Comments” in the SUPPLEMENTARY INFORMATION section of this document.

SUPPLEMENTARY INFORMATION:

Table of Contents
I. Obtaining Information and Submitting Comments
II. Rulemaking Procedure
III. Background
IV. Plain Writing
V. Availability of Documents

I. Obtaining Information and Submitting Comments

A. Obtaining Information

Please refer to Docket ID NRC–2021–0108 when contacting the NRC about the availability of information for this action. You may obtain publicly available information related to this action by any of the following methods:

- NRC’s Agencywide Documents Access and Management System (ADAMS): You may obtain publicly available documents online in the ADAMS Public Documents collection at https://www.nrc.gov/reading-rm/adams.html. To begin the search, select “Begin Web-based ADAMS Search.” For problems with ADAMS, please contact the NRC’s Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to pdr.resource@nrc.gov. For the convenience of the reader, instructions about obtaining materials referenced in this document are provided in the “Availability of Documents” section.

- Attention: The PDR, where you may examine and order copies of public documents, is currently closed. You may submit your request to the PDR via email at pdr.resource@nrc.gov or call 1–800–397–4209 between 8:00 a.m. and 4:00 p.m. (EST), Monday through Friday, except Federal holidays.

B. Submitting Comments

Please include Docket ID NRC–2021–0108 in your comment submission. The NRC requests that you submit comments through the Federal rulemaking website at https://www.regulations.gov. If your material cannot be submitted using https://www.regulations.gov, call or email the individuals listed in the FOR FURTHER INFORMATION CONTACT section of this document for alternate instructions.

The NRC cautions you not to include identifying or contact information that you do not want to be publicly disclosed in your comment submission. The NRC will post all comment submissions at https://www.regulations.gov as well as enter the comment submissions into ADAMS. The NRC does not routinely edit comment submissions to remove identifying or contact information. If you are requesting or aggregating comments from other persons for submission to the NRC, then you should inform those persons not to include identifying or contact information that they do not want to be publicly disclosed in your comment submission. Your request should state that the NRC does not routinely edit comment submissions to remove such information before making the comment submissions available to the public or entering the comment into ADAMS.

II. Rulemaking Procedure

Because the NRC considers this action to be non-controversial, the NRC is publishing this proposed rule containing this direct final rule in the Rules and Regulations section of this issue of the Federal Register. The direct final rule will become effective on October 27, 2021. However, if the NRC receives any significant adverse comment by September 13, 2021, then the NRC will publish a document that withdraws the direct final rule. If the direct final rule is withdrawn, the NRC will address the comments in a subsequent final rule. Absent significant modifications to the proposed revisions requiring republication, the NRC will not initiate a second comment period on this action in the event the direct final rule is withdrawn.

A significant adverse comment is a comment where the commenter explains why the rule would be inappropriate, including challenges to the rule’s underlying premise or approach, or would be ineffective or unacceptable without a change. A comment is adverse and significant if:

1. The comment opposes the rule and provides a reason sufficient to require a substantive response in a notice-and-comment process. For example, a substantive response is required when:
   a. The comment raises an issue serious enough to warrant a substantive response to clarify or complete the record; or
   b. The comment raises an issue serious enough to warrant a substantive response to clarify or complete the record; or
   c. The comment raises a relevant issue that was not previously addressed or considered by the NRC.

2. The comment proposes a change or an addition to the rule, and it is apparent that the rule would be ineffective or unacceptable without incorporation of the change or addition.

3. The comment causes the NRC to make a change (other than editorial) to the rule.

For a more detailed discussion of the proposed rule changes and associated analyses, see the direct final rule published in the Rules and Regulations section of this issue of the Federal Register.

III. Background

Section 218(a) of the Nuclear Waste Policy Act of 1982, as amended, requires that “[t]he Secretary of Energy shall establish a demonstration program, in cooperation with the private sector, for the dry storage of spent nuclear fuel at civilian nuclear power reactor sites, with the objective of establishing one or more technologies that the [Nuclear Regulatory] Commission may, by rule, approve for use at the sites of civilian nuclear power reactors without, to the maximum extent practicable, the need for additional site-specific approvals by the Commission.” Section 133 of the
To implement this mandate, the Commission approved dry storage of spent nuclear fuel in NRC-approved casks under a general license by publishing a final rule that added a new subpart K in part 72 of title 10 of the Code of Federal Regulations (10 CFR) entitled “General License for Storage of Spent Fuel at Power Reactor Sites” (55 FR 29181; July 18, 1990). This rule also established a new subpart L in 10 CFR part 72 entitled “Approval of Spent Fuel Storage Casks,” which contains procedures and criteria for obtaining NRC approval of spent fuel storage cask designs. The NRC subsequently issued a final rule on January 6, 2003 (68 FR 463), that approved the Standardized Advanced NUHOMS® Horizontal Modular Storage System design and added it to the list of NRC-approved cask designs in §72.214 as Certificate of Compliance No. 1029.

IV. Plain Writing

The Plain Writing Act of 2010 (Pub. L. 111–274) requires Federal agencies to write documents in a clear, concise, well-organized manner. The NRC has written this document to be consistent with the Plain Writing Act as well as the Presidential Memorandum, “Plain Language in Government Writing,” published June 10, 1998 (63 FR 31885). The NRC requests comment on the proposed rule with respect to clarity and effectiveness of the language used.

V. Availability of Documents

Monday through Friday, except Federal holidays. For service information identified in this NPRM, contact MD Helicopters, Inc., Attn: Customer Support Division, 4555 E McDowell Rd., Mail Stop M615, Mesa, AZ 85215–9734; telephone (800) 388–3378; fax (480) 346–6813; or at https://www.mdhelicopters.com. You may view this service information at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Pkwy., Room 6N–321, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call (817) 222–5110.

Examining the AD Docket

You may examine the AD docket at https://www.regulations.gov by searching for and locating Docket No. FAA–2021–0653; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, any comments received, and other information. The street address for Docket Operations is listed above.

FOR FURTHER INFORMATION CONTACT:

Payman Soltani, Aerospace Engineer, Airframe Section, Los Angeles ACO Branch, Compliance & Airworthiness Division, FAA, 3960 Paramount Blvd., Lakewood, CA 90712; telephone (562) 627–5313; email payman.soltani@faa.gov.

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under ADDRESSES. Include “Docket No. FAA–2021–0653; Project Identifier AD–2021–00170–R” at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to https://www.regulations.gov, including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this NPRM.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as “PROPIN.” The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to Payman Soltani, Aerospace Engineer, Airframe Section, Los Angeles ACO Branch, Compliance & Airworthiness Division, FAA, 3960 Paramount Blvd., Lakewood, CA 90712; telephone (562) 627–5313; email payman.soltani@faa.gov. Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Background

The FAA proposes to adopt a new AD for MDHI Model 369D, 369E, 369F, 369FF, 369H, 369HE, 369HM, 369HS, 500N, and 600N helicopters. This proposed AD would require a one-time visual and recurring borescope inspections of the torque tube and depending on the results, removing the torque tube from service. This proposed AD was prompted by a report of a spiral crack in the torque tube that appears to have originated from a hole where the tail rotor torque tube control fitting attaches to the torque tube on a Model 369FF helicopter. This crack resulted in increased left pedal movement and subsequent reduced directional control pedal authority. Other model helicopters are affected due to design similarity. This condition, if not addressed, could result in failure of the torque tube, loss of tail rotor control, and subsequent loss of control of the helicopter.

FAA’s Determination

The FAA is issuing this NPRM to determine that the unsafe condition described previously is likely to exist or develop on other products of these same type designs.

Related Service Information Under 1 CFR Part 51

The FAA reviewed MD Helicopters Service Bulletin SB369D–229R2 for Model 369D helicopters, SB369E–129R2 for Model 369E helicopters, SB369F–119R2 for Model 369F and 369FF helicopters, SB369H–263R2 for Model 369H, 369HE, 369HM, and 369HS helicopters, SB500N–066R2 for Model 500N helicopters, and SB600N–080R2 for Model 600N helicopters, each dated March 24, 2021 (Revision 2). These service bulletins are co-published as one document. Revision 2 of this service information specifies procedures for a one-time visual inspection and recurring borescope inspections, completing a Service Operation Report, and returning a removed torque tube to an authorized service center or MDHI.

Other Related Service Information

The FAA also reviewed MD Helicopters Service Bulletin SB369H–263, SB369D–229, SB369E–129, SB369F–119, SB500N–066, and SB600N–080, each dated January 30, 2020 (initial issuance), and MD Helicopters Service Bulletin SB369H–263R1, SB369D–229R1, SB369E–129R1, SB369F–119R1, SB500N–066R1, and SB600N–080R1, each dated May, 15 2020 (Revision 1). The initial issuance and Revision 1 of this service information specify the same procedures as Revision 2 of this service information, except Revision 1 clarified the torque value to apply to the nut and Revision 2 deletes Method 2 of the Accomplishment Instructions and adds a recurring 300-hour borescope inspection of the torque tube.

Proposed AD Requirements in This NPRM

This proposed AD would initially require visually inspecting the torque tube exterior using a flashlight and mirror and borescope inspecting the interface of the torque tube and bushing segments for a crack, elongation, and other damage, which may be indicated by any corrosion, pitting, crazing, dents, dings, displacement of material at the bolt hole edge, or fretting of the hole. Thereafter, this proposed AD would require repeating the borescope inspection. If there is a crack, elongation, or other damage, this proposed AD would require removing the torque tube from service.

Differences Between This Proposed AD and the Service Information

For helicopters that have accumulated more than 600 total 600 or less total hours time-in-service (TIS), Revision 2 of the service information specifies an initial compliance time of during the next 100-hour inspection, whereas this proposed AD would require initial actions within 100 hours TIS after the effective date of this AD instead. For helicopters that have accumulated more than 600 total
hours TIS, Revision 2 of the service information specifies initial a compliance time of within 5 hours of flight time, whereas this proposed AD would require initial actions within 5 hours TIS or 30 days after the effective date of this AD, whichever occurs later, instead.

Revision 2 of the service information specifies returning a removed torque tube, whereas this proposed AD would require removing the torque tube from service instead. Revision 2 of the service information specifies completing a Service Operation Report, whereas this proposed AD does not include that requirement.

Costs of Compliance

The FAA estimates that this AD, if adopted as proposed, would affect 58 helicopters of U.S. Registry. Labor rates are estimated at $85 per work-hour. Based on these numbers, the FAA estimates the following costs to comply with this proposed AD.

Visually inspecting the torque tube would take a minimal amount of time. A borescope inspecting the torque tube would take about 1 work-hour for an estimated cost of $85 per helicopter and $4,930 for the U.S. fleet, per inspection cycle.

If required, replacing the torque tube would take about 5 work-hours and parts would cost about $983 for an estimated cost of $1,408 per helicopter. The FAA has included all known costs in its cost estimate. According to the manufacturer, however, some of the costs of this proposed AD may be covered under warranty, thereby reducing the cost impact on affected operators.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency’s authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed, I certify this proposed regulation:

(1) Is not a "significant regulatory action" under Executive Order 12866,
(2) Would not affect intrastate aviation in Alaska, and
(3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety, The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]
2. The FAA amends § 39.13 by adding the following new airworthiness directive:

(a) Comments Due Date

The FAA must receive comments on this airworthiness directive (AD) by September 27, 2021.

(b) Affected ADs
None.

(c) Applicability

This AD applies to MD Helicopters Inc. (MDH) Model 369D, 369E, 369F, 369FF, 369H, 369HE, 369HM, 369HS, 500N, and 600N helicopters, certificated in any category, with pilot-to-copilot tail rotor torque tube (torque tube) part number 369H7531–9–11–13, installed.

(d) Subject

Joint Aircraft Service Component (JASC) Code: 6720, Tail Rotor Control System.

(e) Unsafe Condition

This AD was prompted by a report of a spiral crack in the torque tube. The FAA is issuing this AD to prevent failure of a torque tube. The unsafe condition, if not addressed, could result in loss of tail rotor control and subsequent loss of control of the helicopter.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

(1) Using a flashlight and mirror, visually inspect the exterior of the torque tube at the interface of the torque tube and bushing segments, and borescope inspect the interior of the torque tube at the interface of the torque tube and bushing segments for a crack, elongation, and other damage, which may be indicated by any corrosion, pitting, crazing, dents, dings, displacement of material at the bolt hole edge, or fretting of the hole by following the Accomplishment Instructions, paragraphs 2.A.(1), through (3).(a), of MD Helicopters Service Bulletin SB369H–263R2, SB369D–229R2, SB369E–129R1, SB369F–119R2, SB500N–066R2, or SB600N–080R2, each dated March 24, 2021, as applicable to your model helicopter, as follows:

Note 1 to paragraph (g)(1): Scaling of the inner diameter primer or paint may be an indication of a crack.

(i) For helicopters that have accumulated 600 or less total hours time in-service (TIS), within 100 hours TIS after the effective date of this AD.

(ii) For helicopters that have accumulated more than 600 total hours TIS, within 5 hours TIS or 30 days after the effective date of this AD, whichever occurs later.

Note 2 to paragraph (g)(1)(ii): It is advised to limit flights with increased, excessive, or rapid pedal movements before the first instance of the actions required by paragraph (g)(1)(ii) are accomplished.

(iii) If there is a crack, elongation, or other damage, before further flight, remove the torque tube from service.

(2) Thereafter following paragraph (g)(1) of this AD, at intervals not to exceed 300 hours TIS, borescope inspect the interior of the torque tube at the interface of the torque tube and bushing segments as required by paragraph (g)(1) of this AD. If there is a crack, elongation, or other damage, before further flight, remove the torque tube from service.

(h) Credit for Previous Actions

You may take credit for the instance of the actions required by paragraphs (g)(1)(i) or (ii) of this AD if you performed corresponding actions before the effective date of this AD using MD Helicopters Service Bulletin SB369F–229R1, SB369D–229R1, SB369E–129R1, SB369F–119R2, SB500N–066R2, or SB600N–080R2, each dated January 30, 2020, as applicable to your model helicopter, or MD Helicopters Service Bulletin SB369H–263R1, SB369D–229R1, SB369E–129R1, SB369F–119R2, SB500N–066R1, or SB600N–080R1, each dated May, 15 2020, as applicable to your model helicopter.
DEPARTMENT OF TRANSPORTATION
Federal Aviation Administration

14 CFR Part 39

RIN 2120–AA64

Airworthiness Directives; Rolls-Royce Deutschland Ltd & Co KG (Type Certificate Previously Held by Rolls-Royce plc) Turbopan Engines

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to adopt a new airworthiness directive (AD) for certain Rolls-Royce Deutschland Ltd & Co KG (RRD) Trent 1000 model turbopan engines. This proposed AD was prompted by reports of high levels of wear on the seal fins on a small number of certain high-pressure turbine triple seals. This proposed AD would require manual deactivation of the modulated air system (MAS) control valves. The FAA is proposing this AD to address the unsafe condition on these products.

DATES: The FAA must receive comments on this proposed AD by September 27, 2021.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 39.19, directly to the Manager of the certification office, as appropriate. If sending information directly to the manager of the certification office, information may be emailed to: 9-ANM-LAACO-AMOC-REQUESTS@faa.gov.

(k) Related Information

(1) For more information about this AD, contact Payman Soltani, Aerospace Engineer, Airframe Section, Los Angeles ACO Branch, Compliance & Airworthiness Division, FAA, 3960 Paramount Blvd., Lakewood, CA 90712; telephone (562) 627–5313; email payman.soltani@faa.gov.

(2) For service information identified in this AD, contact MD Helicopters, Inc., Attn: Customer Support Division, 4555 E McDowell Rd., Mail Stop M615, Mesa, AZ 85215–9734; telephone (800) 386–3378; fax (480) 346–6813; or at https://www.mdhelicopters.com. You may view this referenced service information at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Pkwy., Room 6N–321, Port Worth, TX 76177. For information on the availability of this material at the FAA, call (817) 222–5110.

Issued on August 2, 2021.

Lance T. Gant,
Director, Compliance & Airworthiness Division, Aircraft Certification Service.

[FR Doc. 2021–17032 Filed 8–12–21; 8:45 am]

BILLING CODE 4910–13–P

Federal Register / Vol. 86, No. 154 / Friday, August 13, 2021 / Proposed Rules 44655

(i) No Reporting Requirement

(j) Alternative Methods of Compliance (AMOCs)

(1) The Manager, Los Angeles ACO, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR Part 39. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the certification office, information may be emailed to: 9-ANM-LAACO-AMOC-REQUESTS@faa.gov.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office or certificate holding district office.

Comments Invited

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under ADDRESSES. Include “Docket No. FAA–2021–0662; Project Identifier MCAI–2021–00031–E” at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this proposal because of those comments.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as “PROPIN.” The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to Kevin Clark, Aviation Safety Engineer, ECO Branch, FAA, 1200 District Avenue, Burlington, MA 01803. Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Background

The European Union Aviation Safety Agency (EASA), which is the Technical Agent for the Member States of the European Community, has issued EASA AD 2021–0009, dated January 8, 2021 (referred to after this as “the MCAI”), to
address the unsafe condition on these products. The MCAI states:

- The Modulated Air System (MAS) optimises air extracted from the compressor, where full flow is not required at cruise conditions. It is only active during cruise. Recently, occurrences have been reported of finding high levels of wear on the seal fins on a small number of high pressure turbine triple seals, Part Number PW3448. The effect on the secondary air system was conservatively assessed due to the resultant increased turbine cooling air leakage, which changes the cooling flow around the intermediate pressure (IP) turbine disc.

This condition, if not corrected, could lead to temperature increase at the IP turbine disc rim when the MAS is active, possibly resulting in IP turbine disc failure and high energy debris release, with consequent damage to, and reduced control of, the aeroplane. To address this potential unsafe condition, Rolls-Royce has issued the NMSB, providing instructions to manually ‘lock-out’ (deactivate) the MAS control valves.

For the reason described above, this [EASA] AD requires to deactivate the MAS control valves. This [EASA] AD also specifies that the Master Minimum Equipment List (MMEL) item for ‘MAS inoperative’, which has a limit of 120 days, does not apply when the system is manually deactivated.

You may obtain further information by examining the MCAI in the AD docket at https://www.regulations.gov.

### Related Service Information Under 1 CFR Part 51

The FAA reviewed Rolls-Royce Alert Non-Modification Service Bulletin (NMSB) Trent 1000 75–AK642, Initial Issue, dated November 30, 2020. This service information specifies procedures for deactivating the MAS control valves. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in ADDRESSES.

### ESTIMATED COSTS

<table>
<thead>
<tr>
<th>Action</th>
<th>Labor cost</th>
<th>Parts cost</th>

</thead>
<tbody>
<tr>
<td>Deactivate the MAS control valves</td>
<td>2 work-hours × $85 per hour = $170</td>
<td>$0</td>
<td>$170</td>
<td>$680</td>
</tr>
</tbody>
</table>

### Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency’s authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

### Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

1. Is not a “significant regulatory action” under Executive Order 12866,
2. Would not affect intrastate aviation in Alaska, and
3. Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

### List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

### Proposed AD Requirements in This NPRM

This proposed AD would require manual deactivation of the MAS control valves. Manual deactivation of the MAS control valves changes the engine to an approved configuration that will produce engine indicating and crew alerting system (EICAS) status messages that do not indicate inoperative (failed) equipment. Consequently, when these messages are displayed, the operator’s existing FAA-approved minimum equipment list (MEL) instructions and limitations, including the 120-day operation limitation, do not apply.

### Interim Action

The FAA considers that this proposed AD would be an interim action. If final action is later identified, the FAA might consider additional rulemaking.

### Costs of Compliance

The FAA estimates that this AD, if adopted as proposed, would affect 4 engines installed on airplanes of U.S. registry.

The FAA estimates the following costs to comply with this proposed AD:

### The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

### PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

   **Authority:** 49 U.S.C. 106(g), 40113, 44701.

### § 39.13 [Amended]

2. The FAA amends § 39.13 by adding the following new airworthiness directive:

   **Rolls-Royce Deutschland Ltd & Co KG (Type Certificate previously held by Rolls-Royce plc); Docket No. FAA—2021–0662; Project Identifier MCAI–2021–00031–E.**

   (a) **Comments Due Date**

   The FAA must receive comments on this airworthiness directive (AD) by September 27, 2021.

   (b) **Affected ADs**

   None.
(c) Applicability

This AD applies to Rolls-Royce Deutschland Ltd & Co KG (RRD) (Type Certificate previously held by Rolls-Royce plc) Trent 1000–A3E, Trent 1000–C3E, Trent 1000–D3, Trent 1000–G3, Trent 1000–H3, Trent 1000–J3, Trent 1000–K3, Trent 1000–L3, Trent 1000–M3, Trent 1000–N3, Trent 1000–P3, Trent 1000–Q3, and Trent 1000–R3 model turbofan engines.

(d) Subject

Joint Aircraft System Component (JASC) Code 7250, Turbine Section.

(e) Unsafe Condition

This AD was prompted by reports of high levels of wear on the seal fins on a small number of certain high-pressure turbine (HPT) triple seals. The FAA is issuing this AD to prevent wear on the seal fins on the affected HPT triple seals. The unsafe condition, if not addressed, could result in failure of the intermediate-pressure turbine disk, loss of engine thrust control, and loss of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

Within the compliance time specified in figure 1 to paragraph (g) of this AD, deactivate the modulated air system (MAS) control valves using the Accomplishment Instructions, paragraphs 3.A.[6] and 3.A.[7], of Rolls-Royce Alert Non-Modification Service Bulletin (NMSB) Trent 100075–AK442. Initial Issue, dated November 30, 2020.

Note 1 to paragraph (g): Deactivation of the MAS control valves on an engine required by paragraph (g) of this AD changes the engine to an approved configuration that will produce engine indicating and crew alerting system (EICAS) status messages “ENG MAS VALVE L/R” and “ENG MAS SYS TEST L/R.” Since MAS is purposely disabled after compliance with paragraph (g) of this AD, these status messages do not indicate inoperative (failed) equipment and, consequently, the operator’s existing FAA-approved minimum equipment list (MEL) instructions and limitations, including the 120-day operation limitation, do not apply.

Note 2 to paragraph (g): Deactivation of the MAS control valves on an engine as required by paragraph (g) of this AD does not produce the EICAS status message “ENG MAS VALVE SENSOR L/R.” Consequently, when this EICAS message displays, it remains indicative of inoperative equipment, even if the MAS has been disabled as required by paragraph (g) of this AD. As a result, the corresponding MEL instructions and limitations apply whenever the EICAS status message “ENG MAS VALVE SENSOR L/R” is displayed.

(h) Alternative Methods of Compliance (AMOCs)

(1) The Manager, ECO Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the certification office, send it to the attention of the person identified in Related Information. Information may be emailed to: ANE-AD-AMOC8@faa.gov.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/ certification holding district office.

(i) Related Information

(1) For more information about this AD, contact Kevin Clark, Aviation Safety Engineer, ECO Branch, FAA, 1200 District Avenue, Burlington, MA 01803; phone: (781) 238–7088; fax: (781) 238–7199; email: kevin.m.clark@faa.gov.

(2) For service information identified in this AD, contact Rolls-Royce plc, Corporate Communications, P.O. Box 31, Derby, DE24 8BJ, United Kingdom; phone: +44 (0)1332 242424; fax: +44 (0)1332 249936; website: https://www.rolls-royce.com/contact-us.aspx. You may view this referenced service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 1200 District Avenue, Burlington, MA 01803. For information on the availability of this material at the FAA, call (781) 238–7759.

Issued on August 5, 2021.

Lance T. Gant,
Director, Compliance & Airworthiness Division, Aircraft Certification Service.

RIN 2120–AA64

Airworthiness Directives; Leonardo S.p.a. Helicopters

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to adopt a new airworthiness directive (AD) for all Leonardo S.p.a. Model A109A, A109A II, A109C, A109E, A109K2, A109S, AW109SP, A119, and AW119 MKII helicopters. This proposed AD was prompted by a report of damage to a rigid connecting link (rod), and loosening of the nut on the upper rod end. This proposed AD would require a visual inspection of the affected rods for damage, cracks, or abnormal play, and corrective actions if necessary, as specified in a European Aviation Safety Agency (now European Union Aviation Safety Agency) (EASA) AD, which is proposed for incorporation by reference (IBR). The FAA is proposing this AD to address the unsafe condition on these products.

DATES: The FAA must receive comments on this proposed AD by September 27, 2021.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

• Federal eRulemaking Portal: Go to https://www.regulations.gov. Follow the instructions for submitting comments.

• Fax: (202) 493–2251.

• Hand Delivery: Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For EASA material that is proposed for IBR in this AD, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; phone: +49 221 8999 000; email: ADs@easa.europa.eu; internet www.easa.europa.eu. You may find this IBR material on the EASA website at https://ad.easa.europa.eu. You may view this material at the FAA, Office of the Regional Counsel,
Southwest Region, 10101 Hillwood Pkwy., Room 6N–321, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call (817) 222–5110. This material is also available at https://www.regulations.gov by searching for and locating Docket No. FAA–2021–0659.

Examining the AD Docket

You may examine the AD docket at https://www.regulations.gov by searching for and locating Docket No. FAA–2021–0659; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, the EASA AD, any comments received, and other information. The street address for Docket Operations is listed above.

FOR FURTHER INFORMATION CONTACT:
Darren Gassetto, Aerospace Engineer, COS Program Management Section, Operational Safety Branch, Compliance & Airworthiness Division, FAA, 1600 Stewart Ave., Suite 410, Westbury, NY 11590; phone: (516) 228–7323; email: Darren.Gassetto@faa.gov.

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under ADDRESSES. Include “Docket No. FAA–2021–0659; Project Identifier 2018–SW–112–AD” at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to https://www.regulations.gov, including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this NPRM.

Confidential Business Information

CBI is commercial or financial information that is both customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM. It is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as “PROPIN.” The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to Darren Gassetto, Aerospace Engineer, COS Program Management Section, Operational Safety Branch, Compliance & Airworthiness Division, FAA, 1600 Stewart Ave., Suite 410, Westbury, NY 11590; phone: (516) 228–7323; email: Darren.Gassetto@faa.gov. Any commentary that the FAA receives that is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Background

This proposed AD was prompted by a report of damage to a rod, and loosening of the nut on the upper rod end. The FAA is proposing this AD to address damage to the rod, and loosening of the nut on the upper rod end, which could result in failure of the rod, possibly resulting in reduced control of the helicopter. See EASA AD 2018–0280 for additional background information.

Related Service Information Under 1 CFR Part 51

EASA AD 2018–0280 requires a visual inspection of the affected rods for damage, cracks, or evidence of abnormal play, and, depending on findings, any applicable corrective actions (which include replacing damaged or cracked connecting links and actions to address abnormal play).

This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the ADDRESSES section.

FAA’s Determination

These helicopters have been approved by EASA and are approved for operation in the United States. Pursuant to the FAA’s bilateral agreement with the European Union, EASA has notified the FAA about the unsafe condition described in its AD. The FAA is proposing this AD after evaluating all known relevant information and determining that the unsafe condition described previously is likely to exist or develop on other helicopters of these same type designs.

Proposed AD Requirements in This NPRM

This proposed AD would require accomplishing the actions specified in EASA AD 2018–0280, described previously, as incorporated by reference, except for any differences identified as exceptions in the regulatory text of this proposed AD.

Explanation of Required Compliance Information

In the FAA’s ongoing efforts to improve the efficiency of the AD process, the FAA developed a process to use some civil aviation authority (CAA) ADs as the primary source of information for compliance with requirements for corresponding FAA ADs. The FAA has been coordinating this process with manufacturers and CAs. As a result, the FAA proposes to incorporate EASA AD 2018–0280 by reference in the FAA final rule. This proposed AD would, therefore, require compliance with EASA AD 2018–0280 in its entirety through that incorporation, except for any differences identified as exceptions in the regulatory text of this proposed AD.

Using common terms that are the same as the heading of a particular section in EASA AD 2018–0280 does not mean that operators need comply only with that section. For example, where the AD requirement refers to “all required actions and compliance times,” compliance with this AD requirement is not limited to the section titled “Required Action(s) and Compliance Time(s)” in EASA AD 2018–0280. Service information required by EASA AD 2018–0280 for compliance will be available at https://www.regulations.gov by searching for and locating Docket No. FAA–2021–0659 after the FAA final rule is published.
Interim Action

The FAA considers this proposed AD would be an interim action. The inspection reports that are required by this AD will enable the manufacturer to obtain better insight into the nature, cause, and extent of the cracking, and eventually to develop final action to address the unsafe condition. Once final action has been identified, the FAA might consider further rulemaking.

Costs of Compliance

The FAA estimates that this proposed AD affects 291 helicopters of U.S. registry. The FAA estimates the following costs to comply with this proposed AD:

<table>
<thead>
<tr>
<th>Labor cost</th>
<th>Parts cost</th>
<th>Cost per product</th>
<th>Cost on U.S. operators</th>
</tr>
</thead>
<tbody>
<tr>
<td>$0</td>
<td>$85</td>
<td>$85</td>
<td>$24,735</td>
</tr>
</tbody>
</table>

The FAA estimates that it would take about 1 work-hour per product to comply with the proposed reporting requirement in this proposed AD. The average labor rate is $85 per hour. Based on these figures, the FAA estimates the cost of reporting the inspection results on U.S. operators to be $24,735, or $85 per product.

The FAA estimates the following costs to do any necessary on-condition replacements that would be required based on the results of any required inspections. The FAA has no way of determining the number of aircraft that might need these on-condition replacements:

<table>
<thead>
<tr>
<th>Labor cost</th>
<th>Parts cost</th>
<th>Cost per product</th>
</tr>
</thead>
<tbody>
<tr>
<td>Up to $2,351</td>
<td>Up to $2,606</td>
<td></td>
</tr>
</tbody>
</table>

The FAA has included all known costs in its cost estimate. According to the manufacturer, however, some of the costs of this proposed AD may be covered under warranty, thereby reducing the cost impact on affected operators.

Paperwork Reduction Act

A federal agency may not conduct or sponsor, and a person is not required to respond to, nor shall a person be subject to a penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act unless that collection of information displays a current valid OMB Control Number. The OMB Control Number for this information collection is 2120–0056. Public reporting for this collection of information is estimated to take approximately 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. All responses to this collection of information are mandatory. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to: Information Collection Clearance Officer, Federal Aviation Administration, 10101 Hillwood Parkway, Fort Worth, TX 76177–1524.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency’s authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 12866, (2) Would not affect intrastate aviation in Alaska, and (3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. The FAA amends § 39.13 by adding the following new airworthiness directive:

(a) Comments Due Date

The FAA must receive comments on this airworthiness directive (AD) by September 27, 2021.
(b) Affected ADs
None.

(c) Applicability

(d) Subject
Joint Aircraft Service Component (JASC) Codes: 6700, Rotorcraft Flight Control; 6730, Rotorcraft Servo System.

(e) Unsafe Condition
This AD was prompted by a report of damage to a rigid connecting link (rod), and loosening of the nut on the upper rod end. The FAA is issuing this AD to address damage to the rod, and loosening of the nut on the upper rod end. The unsafe condition, if not addressed, could result in failure of the rod, possibly resulting in reduced control of the helicopter.

(f) Compliance
Comply with this AD within the compliance times specified, unless already done.

(g) Requirements
Except as specified in paragraph (h) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, EASA AD 2018–0280.

(h) Exceptions to EASA AD 2018–0280
(1) Where EASA AD 2018–0280 requires compliance in terms of flight hours, this AD requires using hours time-in-service.
(2) Where EASA AD 2018–0280 requires compliance from its effective date, this AD requires using the effective date of this AD.
(3) Where EASA AD 2018–0280 specifies action if “any discrepancy” is found, for this AD, discrepancies include damage, cracks, and evidence of abnormal play.
(4) Where the service information specified in EASA AD 2018–0280 specifies to “replace the damaged connecting link”, for this AD, if any damage or cracks are found, remove the rod from service.
(5) Where the service information specified in EASA AD 2018–0280 specifies to “contact Leonardo Helicopters” if abnormal play is detected, for this AD if any abnormal play is detected, corrective action must be accomplished using a method approved by the Manager, International Validation Branch, FAA; or EASA; or Leonardo S.p.a.’s EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.
(6) Where EASA AD 2018–0280 requires reporting inspection results to Leonardo S.p.a. within 14 days after the effective date of EASA AD 2018–0280, this AD requires reporting inspection results at the applicable time in paragraph (h)(6)(i) or (ii) of this AD.
(i) If the inspection was done on or after the effective date of this AD: Submit the report within 14 days after the inspection.

(ii) If the inspection was done before the effective date of this AD: Submit the report within 14 days after the effective date of this AD.
(7) This AD does not require the “Remarks” section of EASA AD 2018–0280.

(i) Special Flight Permit
Special flight permits, as described in 14 CFR 21.197 and 21.199, are not allowed.

(j) Alternative Methods of Compliance (AMOCs)
(1) The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the International Validation Branch, send it to the attention of the person identified in paragraph (k)(2) of this AD. Information may be emailed to: 9-AVS-AIR-730-AMOC@faa.gov.
(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/ certificate holding district office.

(k) Related Information
(1) For EASA AD 2018–0280, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; phone: +49 221 8999 000; email: ADs@easa.europa.eu; internet www.easa.europa.eu. You may view this material at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Pkwy., Room 6N–321, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call (817) 222–5110. This material may be found in the AD docket at https://www.regulations.gov by searching for and locating Docket No. FAA–2021–0659.
(2) For more information about this AD, contact Darren Gassetto, Aerospace Engineer, COS Program Management Section, Operational Safety Branch, Compliance & Airworthiness Division, FAA, 1600 Stewart Ave., Suite 410, Westbury, NY 11590; phone: (516) 228–7323; email: Darren.Gassetto@faa.gov.

Issued on August 4, 2021.

Lance T. Gant,
Director, Compliance & Airworthiness Division, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

RIN 2120–AA64

Airworthiness Directives; Learjet Inc. Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to adopt a new airworthiness directive (AD) for certain Learjet Inc. Model 45 airplanes. This proposed AD was prompted by a report of a fuel leak due to a cracked fuel line between the engine fuel control and the engine fuel flow meter. This proposed AD would require replacing the existing fuel flow meter bracket assembly with a redesigned bracket assembly and reporting information to the FAA. The FAA is proposing this AD to address the unsafe condition on these products.

DATES: The FAA must receive comments on this proposed AD by September 27, 2021.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:
• Federal eRulemaking Portal: Go to https://www.regulations.gov. Follow the instructions for submitting comments.
• Fax: (202) 493–2251.

• Hand Delivery: Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this NPRM, contact Learjet Inc., One Learjet Way, Wichita, KS 67209; phone: (316) 946–2000; email: ac.ict@aero.bombardier.com; website: https://businessaircraft.bombardier.com/en/aircraft/Learjet.html. You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 901 Locust, Kansas City, MO 64106. For information on the availability of this material at the FAA, call (816) 329–4148.

Examining the AD Docket

You may examine the AD docket at https://www.regulations.gov by
searching for and locating Docket No. FAA–2021–0660; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, any comments received, and other information. The street address for Docket Operations is listed above.

FOR FURTHER INFORMATION CONTACT:
James Galstad, Aviation Safety Engineer, Wichita ACO Branch, FAA, 1801 S Airport Road, Wichita, KS 67209; phone: (316) 946–4135; email: james.galstad@faa.gov or Wichita-COS@faa.gov; or Thomas Teplik, Aviation Safety Engineer, Wichita ACO Branch, FAA, 1801 S Airport Road, Wichita, KS 67209; phone: (316) 946–4196; email: thomas.teplik@faa.gov or Wichita-COS@faa.gov.

SUPPLEMENTARY INFORMATION:

Comments Invited
The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under ADDRESSES. Include “Docket No. FAA–2021–0660; Project Identifier AD–2021–00398–T” at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to https://www.regulations.gov, including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this NPRM.

Confidential Business Information
CBI is commercial or financial information that is both customarily treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as “PROPIN.” The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to James Galstad, Aviation Safety Engineer, or Thomas Teplik, Aviation Safety Engineer, Wichita ACO Branch, FAA, 1801 S Airport Road, Wichita, KS 67209. Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Background
The FAA received a report of a fuel leak due to a cracked fuel line between the engine fuel control and the engine fuel flow meter on a Learjet Model 45 (Learjet 45) airplane. There are four different Model 45 configurations: Model 45 (Learjet 40), Model 45 (Learjet 45), Model 45 (Learjet 70), and Model 45 (Learjet 75). They all are susceptible to cracked fuel lines with possible fuel leakage because the fuel flow meter bracket and fuel line is common to each model. Further analysis of the fleet of all the 45 models revealed similar failures in this area including the following: 16 fuel line failures, 2 instances of multiple inlet attaching bolts breaking, 9 leaking fuel controls, a broken gearbox strut, 4 cracked No. 6 bearing oil supply lines, and 7 cracked engine oil tanks. The FAA evaluated the flammable fluid leaks and broken parts and determined that they may have resulted from vibration.

Following the above report and analysis, Learjet designed a new engine fuel flow meter bracket and incorporated it during production. The unsafe condition, if not addressed, could result in an engine installation fire, which could progress to an uncontrolled fire and consequent loss of control of the airplane.

FAA’s Determination
The FAA is issuing this NPRM after determining that the unsafe condition described previously is likely to exist or develop on other products of the same type design.

Related Service Information Under 1 CFR Part 51
The FAA reviewed Bombardier Learjet 40 Service Bulletin (SB) SB 40–73–01, Revision 1, Bombardier Learjet 45 SB 45–73–2, Revision 1, Bombardier Learjet 70 SB 70–73–01, Revision 1, and Bombardier Learjet 75 SB 75–73–01, Revision 2, all dated January 9, 2017. This service information specifies procedures for replacing the existing fuel flow meter bracket assembly with a redesigned bracket assembly with pad fuel flow meter that has an increased material thickness. These documents are distinct since they apply to different airplane models. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in ADDRESSES.

Proposed AD Requirements in This NPRM
This proposed AD would require accomplishing the actions specified in the service information already described, except as discussed under “Differences Between this Proposed AD and the Service Information.”

Differences Between This Proposed AD and the Service Information
This proposed AD would require reporting certain maintenance information to the FAA, where the service information does not. The information provided in the reports would be related to contributing factors that the FAA found showed a correlation between the reported engine fan vibration levels and the cracking fuel line between engine fuel control and the engine fuel flow meter and a correlation between the cracking fuel line and a certain batch of fan disks. In addition, the FAA found that a contributing factor could be the susceptibility of the fuel flow meter bracket assembly and the susceptibility of the bracket assembly with pad fuel flow meter to the vibration induced. The requested reporting information would allow the FAA to determine whether further rulemaking action would be necessary to mitigate the unsafe condition.

Also, the effectivity of Bombardier Learjet 45 SB 45–73–2, Revision 1, dated January 9, 2017, begins with serial number 45–005. This proposed AD would also apply to airplane serial numbers 45–002 through 45–004 because, although these three airplanes are not currently in service, they are subject to the unsafe condition. Thus, it is necessary to include them in the event they are returned to service.

Costs of Compliance
The FAA estimates that this AD, if adopted as proposed, would affect 443 airplanes of U.S. registry.

The FAA estimates the following costs to comply with this proposed AD:
Paperwork Reduction Act

A federal agency may not conduct or sponsor, and a person is not required to respond to, nor shall a person be subject to a penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act unless that collection of information displays a current valid OMB Control Number. The OMB Control Number for this information collection is 2120–0056. Public reporting for this collection of information is estimated to take approximately 9 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. All responses to this collection of information are mandatory. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to: Information Collection Clearance Officer, Federal Aviation Administration, 10101 Hillwood Parkway, Fort Worth, TX 76177–1524.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency’s authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

1. Is not a “significant regulatory action” under Executive Order 12866;
2. Would not affect intrastate aviation in Alaska; and
3. Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

§ 39.13 [Amended]

(b) Affected ADs

None.

d Subject

(e) Unsafe Condition

This AD was prompted by a report of a fuel leak due to a cracked fuel line between the engine fuel control and the engine fuel flow meter. The FAA is amending this AD to prevent cracking and failures. The unsafe condition, if not addressed, could result in an engine installation fire, which could progress to an uncontrolled fire and consequent loss of control of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Reporting Requirement

Within 60 days after the effective date of this AD, report the following information, where available, to the Wichita ACO Branch via email at james.galstad@faa.gov, thomas.teplik@faa.gov, and Wichita-COS@faa.gov; or by mail to Wichita ACO Branch, Attn: James Galstad/Thomas Teplik, 1801 S Airport Road, Room 100, Wichita, KS 67209.

1. Name of the owner; the address of the owner; name of the organization doing the actions required by this AD; the date the actions were completed; the name of the person submitting the report; the address, telephone number, and email of the person submitting the report.

2. The fan vibration levels that have been recorded in the airplane and engine maintenance records since November 1, 2019. Include the airplane and engine serial numbers.

3. The date of each vibration level recorded and the associated hours time-in-service for the airplane and each engine.

4. For each fan vibration level reported, include:

(i) Whether molybdenum coating for the fan was applied per Temporary Revision 72–494, dated August 15, 2017 (or as subsequently incorporated into the engine’s Inspection/Repair Manual TFE731 (ATA Number 72–IR–02).

(ii) If molybdenum coating was applied using a different process than Temporary Revision 72–494, dated August 15, 2017 (or as subsequently incorporated into the engine’s Inspection/Repair Manual TFE731 (ATA Number 72–IR–02), report the process by which the molybdenum coating was applied and the revision level of the document defining the application process for the molybdenum coating.

Note 1 to paragraph (g)(4): Temporary Revision 72–494, dated August 15, 2017, specifies applying a dry film lubricant on the mating surfaces of the fan hub and the fan blades. The lubricating solid for this dry film lubricant is molybdenum disulfide, which is referred to in this AD as molybdenum coating.

[Note: The following table shows the estimated costs.]

<table>
<thead>
<tr>
<th>Action</th>
<th>Labor cost</th>
<th>Parts cost</th>
<th>Cost per product</th>
<th>Cost on U.S. operators</th>
</tr>
</thead>
<tbody>
<tr>
<td>Replacing the bracket assembly</td>
<td>4.5 work-hours × $85 per hour = $382.50</td>
<td>$3,895</td>
<td>$4,277.50</td>
<td>$1,894,932.50</td>
</tr>
<tr>
<td>Reporting and reviewing logbooks</td>
<td>9 work-hours × $85 per hour = $765</td>
<td>Not Applicable</td>
<td>765</td>
<td>338,895</td>
</tr>
</tbody>
</table>
Federal Register / Vol. 86, No. 154 / Friday, August 13, 2021 / Proposed Rules 44663

(5) For each fan vibration level reported, the fan hub serial number and hours time-in-service for this fan hub.

(6) Installation date and service bulletin (SB) revision level for the installation of the bracket assembly with pad fuel flow meter and hose if installed before the effective date of this AD.

(7) Any failures of the bracket assembly with pad fuel flow meter and hose installed in accordance with any SB listed in paragraph (h) or any prior revision of these SBs.

(8) Installation date and SB revision level used for installation of the fuel control screws within the engine fuel control in accordance with Honeywell SB TFE731–73–5146

(9) Any failures of fuel control screws after compliance with Honeywell SB TFE731–73–5146.

(b) Replacement

Within 12 months after the effective date of this AD or 750 hours time-in-service after the effective date of this AD, whichever occurs first, replace the engine fuel flow meter bracket in accordance with the Accomplishment Instructions, paragraphs 3.A through 3.C. of the following Bombardier SB applicable to your airplane model.

(1) Bombardier Learjet 40 SB 40–73–01, Revision 1, dated January 9, 2017.

(2) Bombardier Learjet 44 SB 45–73–2 Revision 1, dated January 9, 2017.

(3) Bombardier Learjet 70 SB 70–73–01 Revision 1, dated January 9, 2017.

(4) Bombardier Learjet 75 SB 75–73–01, Revision 2, dated January 9, 2017.

(i) Credit for Previous Actions

(1) This paragraph provides credit for the actions required by paragraph (h) of this AD, if those actions were performed before the effective date of this AD using Bombardier Learjet 40 SB 40–73–01, Basic Issue, Bombardier Learjet 44 Service Bulletin SB 45–73–2, Basic Issue, Bombardier Learjet 70 SB 70–73–01, Basic Issue, or Bombardier Learjet 75 SB 75–73–01, Basic Issue, all dated October 3, 2016, or Bombardier Learjet 75 SB 75–73–01, Revision 1, dated October 10, 2016.

(2) To take credit for any previous action, you must comply with paragraph (g) of this AD within 60 days after the effective date of this AD.

(j) Alternative Methods of Compliance (AMOCs)

(1) The Manager, Wichita ACO Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the certification office, send it to the attention of the person identified in Related Information.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/ certificate holding district office.

(k) Related Information

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION
Federal Aviation Administration

14 CFR Part 39

RIN 2120–AA64

Airworthiness Directives; Airbus SAS Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to supersede Airworthiness Directive (AD) 2016–17–12, which applies to all Airbus SAS Model A318 series airplanes; Model A319–111, –112, –113, –114, –115, –131, –132, and –133 airplanes; Model A320–211, –212, –214, –231, –232, and –233 airplanes; and Model A321–111, –112, –131, –211, –212, –213, –231, and –232 airplanes. AD 2016–17–12 requires inspecting certain tamperable horizontal stabilizer actuators (THSAs) to determine the number of total flight cycles the THSA has accumulated, and replacing the THSA if necessary. Since the FAA issued AD 2016–17–12, the FAA has determined that new or more restrictive airworthiness limitations are necessary. This proposed AD would require revising the existing maintenance or inspection program, as applicable, to incorporate new or more restrictive airworthiness limitations, as specified in a European Union Aviation Safety Agency (EASA) AD, which is proposed for incorporation by reference. The FAA is proposing this AD to address the unsafe condition on these products.

DATES: The FAA must receive comments on this proposed AD by September 27, 2021.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

• Federal eRulemaking Portal: Go to https://www.regulations.gov. Follow the instructions for submitting comments.
• Fax: 202–493–2251.
• Hand Delivery: Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

should be sent to Sanjay Ralhan, Aerospace Engineer, Large Aircraft Section, International Validation Branch, FAA, 2200 South 216th St., Des Moines, WA 98198; telephone and fax 206–231–3223; email sanjay.ralhan@faa.gov. Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Background

Actions Since AD 2016–17–12 Was Issued

Since the FAA issued AD 2016–17–12, new investigations determined that the compliance time for removal from service and replacement of certain THSA NBB disks must be reduced. This task was required by AD 2016–17–12, and the task and newly reduced compliance time have now been incorporated into Airbus A318/A319/ A320/A321 Airworthiness Limitations Section (ALS) Part 4 Variation 7.1, dated October 5, 2020. The FAA has therefore determined that new or more restrictive airworthiness limitations are necessary.

Airplanes with an original airworthiness certificate or original export certificate of airworthiness issued after October 5, 2020, must comply with the airworthiness limitations specified as part of the approved type design and referenced on the type certificate data sheet. However, Airbus A318/A319/A320/A321 Airworthiness Limitations Section (ALS) Part 4 Variation 7.1 specifies that replacements can be accomplished in accordance with certain service information, while this proposed AD would require accomplishing those replacements in accordance with certain service information. To ensure all maintenance or inspection programs incorporate the revised task, including the revised replacement requirements, this proposed AD would therefore require all operators to revise their existing maintenance or inspection program to include either the revised task including the revised provisions for replacement, or the revised provisions for replacement, depending on when the original airworthiness certificate or original export certificate of airworthiness was issued.

This proposed AD was prompted by a determination that new or more restrictive airworthiness limitations are necessary. The FAA is proposing this AD to address premature wear of the carbon friction disks on the NBB of the THSA, which could lead to reduced braking efficiency in certain load conditions, and, in conjunction with the inability of the power gear train to keep the ball screw in its last commanded position, could result in uncommanded movements of the trimmable horizontal stabilizer and loss of control of the airplane. See the MCAI for additional background information.

Model A320–216 Airplanes

The Airbus SAS Model A320–216 was U.S. type certificated on December 19, 2016. Before that date, any EASA ADs that affected Model A320–216 airplanes were included in the U.S. type certificate as part of the Required Airworthiness Actions List (RAAL). One or more Model A320–216 airplanes have subsequently been placed on the U.S. Register, and will now be included in FAA AD actions. For Model A320–216 airplanes, the requirements that correspond to AD 2016–17–12 were mandated by the MCAI via the RAAL. Although that RAAL requirement is still in effect, for continuity and clarity the FAA has identified Model A320–216 airplanes in paragraph (c) of this proposed AD; the MCAI that is specified in paragraph (l) in this proposed AD includes restated requirements, which would therefore apply to those airplanes.

Related Service Information Under 1 CFR Part 51

EASA AD 2020–0270 describes new or more restrictive airworthiness limitations for airplane structures and safe life limits.

Airbus A318/A319/A320/A321 Airworthiness Limitations Section (ALS) Part 4 Variation 7.1, dated October 5, 2020, describes a task for removal from service and replacement of certain THSA NBB disks.

This proposed AD would also require Airbus Service Bulletin A320–27–1242, Revision 01, dated February 4, 2016, which the Director of the Federal Register approved for incorporation by reference as of September 30, 2016 (81 FR 58823, August 26, 2016).

This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the ADDRESSES section.

FAA’s Determination and Requirements of This Proposed AD

This product has been approved by the aviation authority of another country, and is approved for operation in the United States. Pursuant to the FAA’s bilateral agreement with the State of Design Authority, the FAA has been notified of the unsafe condition described in the MCAI and service information referenced above. The FAA is proposing this AD because the FAA has evaluated all pertinent information and determined an unsafe condition exists and is likely to exist or develop on other products of the same type design.

Proposed AD Requirements

This proposed AD would retain the requirements of AD 2016–17–12. This proposed AD would also require revising the existing maintenance or inspection program, as applicable, to incorporate new or more restrictive airworthiness limitations, which are specified in EASA AD 2020–0270 described previously, as proposed for incorporation by reference. Any differences with EASA AD 2020–0270 are identified as exceptions in the regulatory text of this AD.

This proposed AD would require revisions to certain operator maintenance documents to include new actions (e.g., inspections). Compliance with these actions is required by 14 CFR 91.403(c). For airplanes that have been previously modified, altered, or repaired in the areas addressed by this proposed AD, the operator may not be able to accomplish the actions described in the revisions. In this situation, to comply with 14 CFR 91.403(c), the operator must request approval for an alternative method of compliance according to paragraph (p)(1) of this proposed AD.

Explanation of Required Compliance Information

In the FAA’s ongoing efforts to improve the efficiency of the AD process, the FAA developed a process to use certain civil aviation authority (CAA) ADs as the primary source of information for compliance with requirements for corresponding FAA ADs. The FAA has been coordinating this process with manufacturers and CAs. As a result, the FAA proposes to incorporate EASA AD 2020–0270 by reference in the FAA final rule. This proposed AD would, therefore, require compliance with EASA AD 2020–0270 in its entirety through that incorporation, except for any differences identified as exceptions in the regulatory text of this proposed AD.

Using common terms that are the same as the heading of a particular section in EASA AD 2020–0270 does not mean that operators need comply only with that section. For example, where the AD requirement refers to “all required actions and compliance times,” compliance with this AD requirement is not limited to the section titled “Required Action(s) and Compliance Time(s)” in EASA AD 2020–0270.

Service information required by EASA AD 2020–0270 for compliance will be available at https://www.regulations.gov by searching for and locating Docket No. FAA–2021–0663 after the FAA final rule is published.

Airworthiness Limitation ADs Using the New Process

The FAA’s process of incorporating by reference MCAI ADs as the primary source of information for compliance with corresponding FAA ADs has been limited to certain MCAI ADs (primarily those with service bulletins as the primary source of information for accomplishing the actions required by the FAA AD). However, the FAA is now expanding the process to include MCAI ADs that require a change to airworthiness limitation documents, such as airworthiness limitation sections.

For these ADs that incorporate by reference an MCAI AD that changes airworthiness limitations, the FAA requirements are unchanged. Operators must revise the existing maintenance or inspection program, as applicable, to incorporate the information specified in the new airworthiness limitation document. The airworthiness limitations must be followed according to 14 CFR 91.403(c) and 91.409(e).

The previous format of the airworthiness limitation ADs included a paragraph that specified that no alternative actions (e.g., inspections) or intervals may be used unless the actions or intervals are approved as an alternative method of compliance (AMOC) in accordance with the procedures specified in the AMOCs paragraph under “Other FAA Provisions.” This new format includes a “New Provisions for Alternative Actions and Intervals” paragraph that does not specifically refer to AMOCs, but operators may still request an AMOC to use an alternative actions or intervals.

Costs of Compliance

The FAA estimates that this proposed AD affects 1,630 airplanes of U.S. registry. The FAA estimates the following costs to comply with this proposed AD:

Costs of Compliance

- **$120,757**

This cost represents the estimated cost of labor and materials to comply with the proposed AD requirements.
Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency’s authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

(1) Is not a “significant regulatory action” under Executive Order 12866,

(2) Would not affect intrastate aviation in Alaska, and

(3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

§ 39.13 [Amended]

2. The FAA amends § 39.13 by:

a. Removing Airworthiness Directive (AD) 2016–17–12, Amendment 39–18625 (81 FR 58823, August 26, 2016); and

b. Adding the following new AD:

Airbus SAS: Docket No. FAA–2021–0663;
Project Identifier MCAI–2020–01618–T.

(a) Comments Due Date

The FAA must receive comments on this airworthiness directive (AD) by September 27, 2021.

(b) Affected ADs

(c) Applicability

This AD applies to all Airbus SAS airplanes, certificated in any category, identified in paragraphs (c)(1) through (7) of this AD.

(d) Subject

Air Transport Association (ATA) of America Code 05, Time Limits/Maintenance Checks; 27, Flight Controls.

(e) Reason

This AD was prompted by a determination that new or more restrictive airworthiness limitations are necessary. The FAA is issuing this AD to address premature wear of the carbon friction disks on the nose brake (NBB) of the trimmable horizontal stabilizer actuator (THSA), which could lead to reduced braking efficiency in certain load conditions, and, in conjunction with the inability of the power gear train to keep the ball screw in its last commanded position, could result in uncommanded movements of the trimmable horizontal stabilizer and loss of control of the airplane.
(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Retained Inspection To Determine THSA Part Number and Accumulated Total Flight Cycles, With No Changes

This paragraph restates the requirements of paragraph (g) of AD 2016–17–12, with no changes. For airplanes identified in paragraphs (c)(1) through (4) of this AD: No later than each date specified in paragraphs (g)(1) through (5) of this AD, inspect the THSA to determine if it has a part number (P/N) 47145–(XXX), and, if any THSA P/N 47145–(XXX) is found, determine the total number of flight cycles accumulated since the THSA’s first installation on an airplane, or since the most recent NBB replacement, whichever is later. A review of airplane delivery or maintenance records is acceptable in lieu of this inspection if the part number of the THSA can be conclusively determined from that review. In case maintenance records concerning the most recent NBB disk replacement are unavailable or incomplete, the total flight cycles accumulated since first installation of the THSA on an airplane apply. Accomplishing the maintenance or inspection program revision required by paragraph (i) of this AD terminates the requirements of this paragraph.

(1) As of September 30, 2016 (the effective date of AD 2016–17–12): The THSA flight-cycle limit (since first installation on an airplane, or since the most recent NBB replacement, whichever is later) is 40,000 total flight cycles.

(2) As of December 31, 2016: The THSA flight-cycle limit (since first installation on an airplane, or since the most recent NBB replacement, whichever is later) is 36,000 total flight cycles.

(3) As of December 31, 2017: The THSA flight-cycle limit (since first installation on an airplane, or since the most recent NBB replacement, whichever is later) is 33,600 total flight cycles.

(4) As of December 31, 2018: The THSA flight-cycle limit (since first installation on an airplane, or since the most recent NBB replacement, whichever is later) is 31,600 total flight cycles.

(5) As of December 31, 2019: The THSA flight-cycle limit (since first installation on an airplane, or since the most recent NBB replacement, whichever is later) is 30,000 total flight cycles.

(h) Retained Replacements, With No Changes

This paragraph restates the requirements of paragraph (h) of AD 2016–17–12, with no changes. For airplanes identified in paragraphs (c)(1) through (4) of this AD: For airplanes with any THSA P/N 47145–(XXX), do the replacements required by paragraphs (b)(1) and (4) of this AD: Accomplishing the maintenance or inspection program revision required by paragraph (l) of this AD terminates the requirements of this paragraph.

(1) No later than each date specified in paragraphs (g)(1) through (5) of this AD, replace all THSA that have reached or exceeded on each date the corresponding number of flight cycles specified in paragraphs (g)(1) through (5) of this AD. Do the replacement in accordance with the Accomplishment Instructions of Airbus Service Bulletin A320–27–1242, Revision 01, dated February 4, 2016. Affected THSAs must be replaced with serviceable THSAs.

(2) As of each date specified in paragraphs (g)(1) through (5) of this AD, and before exceeding the flight cycle limit corresponding to each date, as applicable: Replace each serviceable THSA in accordance with the Accomplishment Instructions of Airbus Service Bulletin A320–27–1242, Revision 01, dated February 4, 2016.

(i) Retained Definition of Serviceable THSA, With No Changes

This paragraph restates the definition of paragraph (i) of AD 2016–17–12, with no changes. For airplanes identified in paragraphs (c)(1) through (4) of this AD: For the purposes of this AD, a serviceable THSA is a THSA that has not exceeded the applicable flight-cycle limits, as specified paragraphs (g)(1) through (5) of this AD, since first installation of the THSA on an airplane or since last NBB replacement, whichever is later.

Note 1 to paragraph (i): Guidance for NBB disk replacement can be found in UTC Aerospace Systems Service Bulletin 47145–27–17, Revision 1, dated July 21, 2015.

(j) Retained Parts Installation Limitation, With No Changes

This paragraph restates the provisions of paragraph (j) of AD 2016–17–12, with no changes. For airplanes identified in paragraphs (c)(1) through (4) of this AD: As of each date specified in paragraphs (g)(1) through (5) of this AD, as applicable, only installation of a serviceable THSA P/N 47145–(XXX) is allowed on an airplane. Accomplishing the maintenance or inspection program revision required by paragraph (l) of this AD terminates the requirements of this paragraph.

(k) Retained Credit for Previous Actions, With No Changes

This paragraph restates the requirements of paragraph (k) of AD 2016–17–12, with no changes. For airplanes identified in paragraphs (c)(1) through (4) of this AD: This paragraph provides credit for actions required by paragraph (h) of this AD, if those actions were performed before September 30, 2016 (the effective date of AD 2016–17–12), using Airbus Service Bulletin A320–27–1242, dated February 9, 2015.

(l) New Maintenance or Inspection Program Revision

(1) For the airplanes identified in paragraph (c) of this AD with an original airworthiness certificate or original export certificate of airworthiness issued on or before October 5, 2020, except as specified in paragraph (m) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, European Union Aviation Safety Agency (EASA) AD 2020–0270, dated December 7, 2020 (EASA AD 2020–0270). Accomplishing the maintenance or inspection program revision required by this paragraph terminates the requirements of paragraphs (g), (h), and (i) of this AD.

(2) For the airplanes identified in paragraph (c) of this AD with an original airworthiness certificate or original export certificate of airworthiness issued after October 5, 2020, revise the existing maintenance or inspection program, as applicable, to incorporate the provision specified in paragraph (m)(7) of this AD.

(m) Exceptions to EASA AD 2020–0270

(1) Where EASA AD 2020–0270 refers to its effective date, this AD requires using the effective date of this AD.

(2) The requirements specified in paragraphs (1) and (2) of EASA AD 2020–0270 do not apply to this AD.

(3) Paragraph (3) of EASA AD 2020–0270 specifies revising “the approved AMP” within 12 months after its effective date, but this AD requires revising the existing maintenance or inspection program, as applicable, within 90 days after the effective date of this AD.

(4) The initial compliance time for doing the tasks specified in paragraph (3) of EASA AD 2020–0270 is at the applicable “thresholds” as incorporated by the requirements of paragraph (3) of EASA AD 2020–0270, or within 90 days after the effective date of this AD, whichever occurs later.

(5) The provisions specified in paragraph (4) of EASA AD 2020–0270 do not apply to this AD.

(6) The “Remarks” section of EASA AD 2020–0270 does not apply to this AD.

(7) For all airplanes identified in paragraph (c) of this AD: Where Note 1 in the service information referenced in EASA AD 2020–0270 specifies “NBB carbon disc replacement can be accomplished in accordance with SB A320–27–1242 or VSB 47145–27–17,” for this use “NBB carbon disk replacement must be accomplished in accordance with SB A320–27–1242.”

(n) New Provisions for Alternative Actions and Intervals

After the existing maintenance or inspection program has been revised as required by paragraph (l) of this AD, no alternative actions (e.g., inspections) or intervals are allowed unless they are approved as specified in the provisions of the “Ref. Publications” section of EASA AD 2020–0270.

(o) Terminating Action for Certain Requirements of AD 2020–21–10

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

RIN 2120–AA66

Proposed Establishment Class E Airspace; Portland-Troutdale Airport, OR

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This action proposes to establish Class E airspace, designated as an extension to a Class D or Class E surface area, at Portland-Troutdale Airport, Portland, OR. This action also proposes numerous administrative updates to the Class D and Class E2 text headers and airspace descriptions. This action would ensure the safety and management of instrument flight rules (IFR) operations at the airport.

DATES: Comments must be received on or before September 27, 2021.

For further information contact: Matthew Van Der Wal, Federal Aviation Administration, Western Service Center, Operations Support Group, 2200 S. 216th Street, Des Moines, WA 98198; telephone: (206) 231–3695.

FOR FURTHER INFORMATION CONTACT:

Interested parties are invited to participate in this proposed rulemaking by submitting such written data, views, or arguments, as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related
aspects of the proposal. Communications should identify both docket numbers and be submitted in triplicate to the address listed above. Persons wishing the FAA to acknowledge receipt of their comments on this notice must submit with those comments a self-addressed, stamped postcard on which the following statement is made: “Comments to Docket No. FAA–2021–0637; Airspace Docket No. 21–ANM–31.” The postcard will be date/time stamped and returned to the commenter.

All communications received before the specified closing date for comments will be considered before taking action on the proposed rule. The proposal contained in this notice may be changed in light of the comments received. A report summarizing each substantive public contact with FAA personnel concerned with this rulemaking will be filed in the docket.

Availability of NPRMs

An electronic copy of this document may be downloaded through the internet at https://www.regulations.gov. Recently published rulemaking documents can also be accessed through the FAA’s web page at https://www.faa.gov/air_traffic/publications/airspace_amendments/.

You may review the public docket containing the proposal, any comments received, and any final disposition in person in the Dockets Office (see the ADDRESSES section for the address and phone number) between 9:00 a.m. and 5:00 p.m., Monday through Friday, except federal holidays. An informal docket may also be examined during normal business hours at the Northwest Mountain Regional Office of the Federal Aviation Administration, Air Traffic Organization, Western Service Center, Operations Support Group, 2200 S. 216th Street, Des Moines, WA 98198.

Availability and Summary of Documents for Incorporation by Reference

This document proposes to amend FAA Order 7400.11E, Airspace Designations and Reporting Points, dated July 21, 2020, and effective September 15, 2020. FAA Order 7400.11E is publicly available as listed in the ADDRESSES section of this document. FAA Order 7400.11E lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Proposal

The FAA is proposing an amendment to 14 CFR part 71 by establishing Class E airspace at Portland-Troutdale Airport, Portland, OR. The additional airspace is designed to properly contain IFR aircraft descending below 1,000 feet above the surface on the RNAV (GPS)-A approach.

This action also proposes numerous administrative updates to the Class D and Class E2 text headers and airspace descriptions. The first line of the text headers should be updated from “ANM OR D Portland-Troutdale, OR” to “ANM OR D Portland, OR”. Portland is the official city for the airport. The second line of the text headers should be updated from “Portland-Troutdale Airport, Troutdale, OR” to “Portland-Troutdale Airport, OR”. This line should only list the airport name and state. A fourth and fifth line of text should be added to the headers. The lines should read “Portland International Airport, OR” and “((Lat. 45°35′19″ N, long. 112°35′49″ W), respectively. The additional lines are necessary because the airspace descriptions contain exclusionary language for Portland Airport’s Class C airspace area. The term Airport/Facility Directory” in the last sentence of the Class D airspace description is outdated and should be corrected to “Chart Supplement.” The Class E2 airspace area is not in use continuously, to accurately describe the airspace, the following sentences should be added to the description. “This Class E airspace area is effective during the specific dates and times established in advance by a Notice to Airmen. The effective date and time will thereafter be continuously published in the Chart Supplement.”

Class D, Class E2, and Class E4 airspace designations are published in paragraphs 5000, 6002, and 6004, respectively, of FAA Order 7400.11E, dated July 21, 2020, and effective September 15, 2020, which is incorporated by reference in 14 CFR 71.1. The Class D and Class E airspace designations listed in this document will be published subsequently in the Order.

FAA Order 7400.11, Airspace Designations and Reporting Points, is published yearly and effective on September 15.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current, is non-controversial, and unlikely to result in adverse or negative comments. It, therefore: (1) Is not a “significant regulatory action” under Executive Order 12866; (2) is not a “significant rule” under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule, when promulgated, would not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

This proposal will be subject to an environmental analysis in accordance with FAA Order 1050.1F, “Environmental Impacts: Policies and Procedures” prior to any FAA final regulatory action.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me, the Federal Aviation Administration proposes to amend 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

§ 71.1 [Amended]

1. The authority citation for 14 CFR part 71 continues to read as follows:

§ 71.1 [Amended]

2. The incorporation by reference in 14 CFR 71.1 of FAA Order 7400.11E, Airspace Designations and Reporting Points, dated July 21, 2020, and effective September 15, 2020, is amended as follows:

Paragraph 5000  Class D Airspace

* * * * *

ANM OR D Portland, OR [Amended]

Portland-Troutdale Airport, OR

(Lat. 45°32′58″ N, long. 122°24′05″ W)

Portland International Airport, OR

(Lat. 45°35′19″ N, long. 112°35′49″ W)

That airspace extending upward from the surface to and including 2,500 feet MSL within a 4-mile radius of the Portland-Troutdale Airport, excluding the portion within Portland International Airport's Class C airspace area. This Class D airspace area is effective during the specific dates and times established in advance by a Notice to Airmen. The effective date and time will thereafter be continuously published in the Chart Supplement.

RIN 2120–AA66

Proposed Modification and Establishment of Class E airspace;
Frank Wiley Field Airport, MT

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This action proposes to establish Class E airspace, designated as an extension to a Class D or Class E surface area, at Frank Wiley Field Airport, Miles City, MT. This action also proposes to remove the Class E airspace extending upward from 1,200 feet above the surface. Additionally, the action proposes an administrative update to the Class E2 and E5 text headers. This action would ensure the safety and management of instrument flight rules (IFR) operations at the airport.

DATES: Comments must be received on or before September 27, 2021.

FAA Order 7400.11E, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at https://www.faa.gov/air_traffic/publications/. For further information, you can contact the Airspace Policy Group, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; telephone: (202) 267–8783. The Order is also available for inspection at the National Archives and Records Administration (NARA). For information on the availability of FAA Order 7400.11E at NARA, email firi.nap@nara.gov or go to https://www.archives.gov/federal-register/cfr/ibr-locations.html.

FOR FURTHER INFORMATION CONTACT:
Matthew Van Der Wal, Federal Aviation Administration, Western Service Center, Operations Support Group, 2200 S. 216th Street, Des Moines, WA 98198; telephone (206) 231–3695.

SUPPLEMENTARY INFORMATION:
Authority for This Rulemaking

The FAA’s authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency’s authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority, as it would establish and modify Class E airspace at Frank Wiley Field Airport, Miles City, MT, to support IFR operations at the airport.

Comments Invited

Interested parties are invited to participate in this proposed rulemaking by submitting such written data, views, or arguments, as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal. Communications should identify both docket numbers and be submitted in triplicate to the address listed above. Persons wishing the FAA to acknowledge receipt of their comments on this notice must submit with those comments a self-addressed, stamped postcard on which the following statement is made: “Comments to Docket No. FAA–2021–0633; Airspace Docket No. 21–ANM–22”. The postcard will be date/time stamped and returned to the commenter.

All communications received before the specified closing date for comments will be considered before taking action on the proposed rule. The proposal contained in this notice may be changed in light of the comments received. A report summarizing each substantive public contact with FAA personnel concerned with this rulemaking will be filed in the docket.

Availability of NPRMs

An electronic copy of this document may be downloaded through the internet at https://www.regulations.gov. Recently published rulemaking documents can also be accessed through the FAA’s web page at https://www.faa.gov/air_traffic/publications/airspace_amendments/.

You may review the public docket containing the proposal, any comments received, and any final disposition in person in the Dockets Office (see the ADDRESSES section for the address and phone number) between 9:00 a.m. and 5:00 p.m., Monday through Friday, except federal holidays. An informal docket may also be examined during normal business hours at the Northwest Mountain Regional Office of the Federal Aviation Administration, Air Traffic Organization, Western Service Center, Operations Support Group, 2200 S. 216th Street, Des Moines, WA 98198.

Availability and Summary of Documents for Incorporation by Reference

This document proposes to amend FAA Order 7400.11E, Airspace
Designations and Reporting Points, dated July 21, 2020, and effective September 15, 2020. FAA Order 7400.11E is publicly available as listed in the ADDRESSES section of this document. FAA Order 7400.11E lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Proposal

The FAA is proposing an amendment to 14 CFR Part 71 by establishing Class E airspace, designated as an extension to a Class D or Class E surface area, at Frank Wiley Field Airport, Miles City, MT. The FAA proposes to amend the VOR RWY 4 approach and the amendment will relocate the point where aircraft descend below 1,000 feet above the surface from “3.35 miles” to “10.8 miles southwest of the airport.” The additional Class E airspace will ensure the containment of IFR aircraft flying the approach. This action also proposes to remove the Class E airspace extending upward from 1,200 feet above the surface. This airspace area is wholly contained with the Glasgow en route airspace and duplication is not necessary.

Additionally, the action proposes an administrative update to the Class E2 and E5 text headers. The city name should not appear in the second line of the text header, and the term “Airport” should be added. This line of text should be changed from “Miles City, Frank Wiley Field, MT” to “Frank Wiley Field Airport, MT.” Class E2, E4, and E5 airspace designations are published in paragraphs 6002, 6004, and 6005, respectively, of FAA Order 7400.11E, dated July 21, 2020, and effective September 15, 2020, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designation listed in this document will be published subsequently in the Order. FAA Order 7400.11, Airspace Designations and Reporting Points, is published yearly and effective on September 15.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current, is non-controversial, and unlikely to result in adverse or negative comments. It, therefore: (1) Is not a “significant regulatory action” under Executive Order 12866; (2) is not a “significant rule” under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule, when promulgated, would not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

This proposal will be subject to an environmental analysis in accordance with FAA Order 1050.1F, “Environmental Impacts: Policies and Procedures” prior to any FAA final regulatory action.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me, the Federal Aviation Administration proposes to amend 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

1. The authority citation for 14 CFR part 71 continues to read as follows:

§ 71.1 [Amended]

2. The incorporation by reference in 14 CFR 71.1 of FAA Order 7400.11E, dated July 21, 2020, and effective September 15, 2020, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designation listed in this document will be published subsequently in the Order. FAA Order 7400.11, Airspace Designations and Reporting Points, is published yearly and effective on September 15.

RIN 2120-AA66

Proposed Amendment of J–8 and V–140, and Establishment of T–422 in the Vicinity of Kingfisher, OK

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This action proposes to amend Jet Route J–8 and VHF Omnidirectional Range (VOR) Federal airway V–140, and establish Area Navigation (RNAV) route T–422 in the vicinity of Kingfisher, OK. The Air Traffic Service (ATS) route modifications are necessary due to the planned decommissioning of the VOR portion of the Kingfisher, OK, VOR/Tactical Air Navigation (VORTAC) navigational aid (NAVAID) which provides navigational guidance for portions of J–8 and V–140. The VOR portion of the VORTAC is being decommissioned as part of the FAA’s VOR Minimum Operational Network (MON) program.

DATES: Comments must be received on or before September 27, 2021.

ADDRESSES: Send comments on this proposal to the U.S. Department of Transportation, Docket Operations, 1200 New Jersey Avenue SE, West Building Ground Floor, Room W12–140, Washington, DC 20590; telephone: (800) 647–5527; or (202) 366–9826. You must identify FAA Docket No. FAA–2021–0632; Airspace Docket No. 21–ASW–11 at the beginning of your comments. You
may also submit comments through the internet at https://www.regulations.gov. FAA Order 7400.11E, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at https://www.faa.gov/air_traffic/publications/. For further information, you can contact the Rules and Regulations Group, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; telephone: (202) 267–8783. The Order is also available for inspection at the National Archives and Records Administration (NARA). For information on the availability of FAA Orders 7400.11E at NARA, email: fr.inspection@nara.gov or go to https://www.archives.gov/federal-register/cfr/ibr-locations.html.

FOR FURTHER INFORMATION CONTACT: Colby Abbott, Rules and Regulations Group, Office of Policy, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; telephone: (202) 267–8783.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA’s authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency’s authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of the airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it would modify the route structure as necessary to preserve the safe and efficient flow of air traffic within the National Airspace System (NAS).

Comments Invited

Interested parties are invited to participate in this proposed rulemaking by submitting such written data, views, or arguments as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal.

Communications should identify both docket numbers (FAA Docket No. FAA–2021–0632; Airspace Docket No. 21–ASW–11) and be submitted in triplicate to the Docket Management Facility (see ADDRESSES section for address and phone number). You may also submit comments through the internet at https://www.regulations.gov. Commenters wishing the FAA to acknowledge receipt of their comments on this action must submit with those comments a self-addressed, stamped postcard on which the following statement is made: “Comments to FAA Docket No. FAA–2021–0632; Airspace Docket No. 21–ASW–11.” The postcard will be date/time stamped and returned to the commenter.

All communications received on or before the specified comment closing date will be considered before taking action on the proposed rule. The proposal contained in this action may be changed in light of comments received. All comments submitted will be available for examination in the public docket both before and after the comment closing date. A report summarizing each substantive public contact with FAA personnel concerned with this rulemaking will be filed in the docket.

Availability of NPRMs

An electronic copy of this document may be downloaded through the internet at https://www.regulations.gov. Recently published rulemaking documents can also be accessed through the FAA’s web page at https://www.faa.gov/air_traffic/publications/airspace_amendments/.

You may review the public docket containing the proposal, any comments received and any final disposition in person in the Dockets Office (see ADDRESSES section for address and phone number) between 9:00 a.m. and 5:00 p.m., Monday through Friday, except Federal holidays. An informal docket may also be examined during normal business hours at the office of the Operations Support Group, Central Service Center, Federal Aviation Administration, 10101 Hillwood Parkway, Fort Worth, TX, 76177.

Availability and Summary of Documents for Incorporation by Reference

This document proposes to amend FAA Order 7400.11E, Airspace Designations and Reporting Points, dated July 21, 2020, and effective September 15, 2020. FAA Order 7400.11E is publicly available as listed in the ADDRESSES section of this document. FAA Order 7400.11E lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

Background

The FAA is planning decommissioning activities for the VOR portion of the Kingfisher, OK, VORTAC in May 2022. The VOR portion of the Kingfisher, OK, VORTAC is a candidate VOR identified for discontinuance by the FAA’s VOR MON program and listed in the final policy statement notice. “Provision of Navigation Services for the Next Generation Air Transportation System (NextGen) Transition to Performance-Based Navigation (PBN) (Plan for Establishing a VOR Minimum Operational Network),” published in the Federal Register of July 26, 2016 (81 FR 48694), Docket No. FAA–2011–1082.

Although the VOR portion of the Kingfisher VORTAC is planned for decommissioning, the co-located DME portion of the NAVAID is being retained to support Performance Based Navigation (PBN) procedures. The existing ATS route dependencies to the Kingfisher, OK, VORTAC NAVAID are Jet Route J–8 and VOR Federal airway V–140. With the planned decommissioning of the VOR portion of the Kingfisher, OK, VORTAC, the remaining ground-based NAVAID coverage in the area is insufficient to enable the continuity of these affected ATS routes. As such, proposed modifications to the routes would result in the creation of a gap in J–8 and the creation of two gaps in V–140.

To overcome the proposed gaps in the routes, instrument flight rules (IFR) traffic could use adjacent ATS routes, including Jet Routes J–6, J–14, J–20, J–78, and J–98 in lieu of the affected J–8 segment and VOR Federal airways V–14, V–272, V–436, and V–440 in lieu of the affected V–140 segment or receive air traffic control (ATC) radar vectors to fly through or circumnavigate the affected area. Additionally, IFR pilots equipped with RNAV capabilities could also navigate point to point using the existing fixes that will remain in place to support continued operations through the affected area. Visual flight rules (VFR) pilots who elect to navigate via the airways through the affected area could also take advantage of the adjacent VOR Federal airways or ATC services listed previously.

Further, the FAA proposes to establish an RNAV route T–422 between the Panhandle, TX, VORTAC and the Tulsa, OK, VORTAC to, in part, mitigate the proposed removal of the V–140 airway segment affected by the planned decommissioning of the Kingfisher VOR. Also, establishment of T–422 would provide RNAV routing capability between the Amarillo, TX, area
eastward to the Tulsa, OK, area; as well as, support ongoing FAA NextGen efforts to transition the NAS to performance-based navigation.

Prior to this NPRM, the FAA published a rule for Docket No. FAA–2020–0654 in the Federal Register (85 FR 79425; December 10, 2020), amending VOR Federal airway V–140 by removing the airway segment between the London, KY, VOR/Distance Measuring Equipment (VOR/DME) and the Bluefield, WV, VOR/DME. That airway amendment, effective February 25, 2021, is included in this NPRM.

The Proposal

The FAA is proposing an amendment to 14 CFR part 71 by modifying Jet Route J–8 and VOR Federal airway V–140, and establishing RNAV route T–422. The planned decommissioning of the VOR portion of the Kingfisher, OK, VORTAC has made this action necessary.

The proposed Jet route change is outlined below.

J–8: J–8 currently extends between the Needles, CA, VORTAC and the Casanova, VA, VORTAC. The FAA proposes to remove the route segment overlying the Kingfisher, OK, VORTAC between the Borger, TX, VORTAC and the Springfield, MO, VORTAC. The unaffected portions of the existing route would remain as charted.

The proposed VOR Federal airway change is outlined below.

V–140: V–140 currently extends between the Panhandle, TX, VORTAC and the Casanova, VA, VORTAC. The FAA proposes to remove the airway segment overlying the Kingfisher, OK, VORTAC between the Burns Flat, OK, VORTAC and the Tulsa, OK, VORTAC. This RNAV route would mitigate the proposed loss of the V–140 airway segment proposed to be removed (above) between the Burns Flat, OK, VORTAC and the Tulsa, OK, VORTAC and provide RNAV routing capability between the Amarillo, TX, area and the Tulsa, OK, area.

All of the NAVAID radials listed in the ATS route descriptions below are unchanged and stated in True degrees.

Jet routes are published in paragraph 2004, VOR Federal airways are published in paragraph 6010(a), and United States RNAV T-routes are published in paragraph 6011 of FAA Order 7400.11E, dated July 21, 2020, and effective September 15, 2020, which is incorporated by reference in 14 CFR 71.1. The ATS routes listed in this document would be published subsequently in the Order.

FAA Order 7400.11, Airspace Designations and Reporting Points, is published yearly and effective on September 15.

Regulatory Notices and Analyses

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore: (1) Is not a “significant regulatory action” under Executive Order 12866; (2) is not a “significant rule” under Department of Transportation (DOT) Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this proposed rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

This proposal will be subject to an environmental analysis in accordance with FAA Order 1050.1F, “Environmental Impacts: Policies and Procedures” prior to any FAA final regulatory action.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

In consideration of the foregoing, the Federal Aviation Administration proposes to amend 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

1. The authority citation for part 71 continues to read as follows:

§71.1 [Amended]

2. The incorporation by reference in 14 CFR 71.1 of FAA Order 7400.11E, Airspace Designations and Reporting Points, dated July 21, 2020, and effective September 15, 2020, is amended as follows:

RIN 2120–AA66

Proposed Amendment of Class D and Class E Airspace; Fort Leonard Wood, MO

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This action proposes to amend the Class D and Class E airspace at Waynesville-St. Robert Regional Airport Forney Field, Fort Leonard Wood, MO. The FAA is proposing this action as the result of an airspace review caused by the decommissioning of the Maples very high frequency (VHF) omnidirectional range (VOR) as part of the VOR Minimal Operational Network (MON) Program. The name of the airport would also be updated to coincide with the FAA’s aeronautical database.

DATES: Comments must be received on or before September 27, 2021.

ADDRESSES: Send comments on this proposal to the U.S. Department of Transportation, Docket Operations, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590; telephone (202) 366–9826, or (800) 647–5527. You may also submit comments through the internet at https://www.regulations.gov. You may review the public docket containing the proposal, any comments received, and any final disposition in person in the Dockets Office between 9:00 a.m. and 5:00 p.m., Monday through Friday, except federal holidays.

FOR FURTHER INFORMATION CONTACT: Jeffrey Claypool, Federal Aviation Administration, Operations Support Group, Central Service Center, 10101 Hillwood Parkway, Fort Worth, TX 76177; telephone (817) 222–5711.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it would amend the Class D airspace, the Class E airspace area designated as an extension to a Class D surface area, and the Class E airspace extending upward from 700 feet above the surface at Waynesville-St. Robert Regional Airport Forney Field, Fort Leonard Wood, MO, to support instrument flight rule operations at this airport.

Comments Invited

Interested parties are invited to participate in this proposed rulemaking by submitting such written data, views, or arguments, as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal.

Communications should identify both docket numbers and be submitted in triplicate to the address listed above. Commenters wishing the FAA to acknowledge receipt of their comments on this notice must submit with those comments a self-addressed, stamped postcard on which the following statement is made: "Comments to Docket No. FAA–2021–0634/Airspace Docket No. 21–ACE–19." The postcard will be date/time stamped and returned to the commenter.

All communications received before the specified closing date for comments will be considered before taking action on the proposed rule. The proposal contained in this notice may be changed in light of the comments received. A report summarizing each substantive public contact with FAA personnel concerned with this rulemaking will be filed in the docket.

Availability of NPRMs

An electronic copy of this document may be downloaded through the internet at https://www.regulations.gov. Recently published rulemaking documents can also be accessed through the FAA’s web page at https://www.faa.gov/air_traffic/publications/airspace_amendments/.

You may review the public docket containing the proposal, any comments received, and any final disposition in person in the Dockets Office (see the ADDRESSES section for the address and phone number) between 9:00 a.m. and 5:00 p.m., Monday through Friday, except federal holidays. An informal docket may also be examined during normal business hours at the Federal Aviation Administration, Air Traffic Organization, Central Service Center, Operations Support Group, 10101 Hillwood Parkway, Fort Worth, TX 76177.
Availability and Summary of Documents for Incorporation by Reference

This document proposes to amend FAA Order 7400.11E, Airspace Designations and Reporting Points, dated July 21, 2020, and effective September 15, 2020. FAA Order 7400.11E is publicly available as listed in the addresses section of this document. FAA Order 7400.11E lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Proposal

The FAA is proposing an amendment to 14 CFR part 71 by:

- Amending the Class D airspace at Waynesville-St. Robert Regional Airport Forney Field by removing the Buckhorn NDB and associated extensions from the airspace legal description as they are no longer needed; removing the exclusionary language as it is no longer needed; updating the name (previously Waynesville Regional Airport at Forney Field) of the airport to coincide with the FAA’s aeronautical database; and replacing the outdated term of “Airport/Facility Directory” with “Chart Supplement”; and
- Amending the Class E airspace area designated as an extension to a Class D surface area at Waynesville-St. Robert Regional Airport Forney Field by removing the exclusionary language as it is no longer needed; removing the name (previously Waynesville Regional Airport at Forney Field) of the airport to coincide with the FAA’s aeronautical database; and replacing the outdated term of “Airport/Facility Directory” with “Chart Supplement”;
- Amending the Class E airspace extending upward from 700 feet above the at Waynesville-St. Robert Regional Airport Forney Field by removing the Buckhorn NDB and associated extensions from the airspace legal description as they are no longer needed; removing the exclusionary language as it is no longer needed; updating the name (previously Waynesville Regional Airport at Forney Field) of the airport to coincide with the FAA’s aeronautical database.

This action is necessary due to an airspace review caused by the decommissioning of the Maples VOR, which provided navigation information for the instrument procedures this airport, as part of the VOR MON Program.

Class D and E airspace designations are published in paragraph 5000. FAA Order 7400.11E, dated July 21, 2020, and effective September 15, 2020, which is incorporated by reference in 14 CFR 71.1. The Class D and E airspace designation listed in this document will be published subsequently in the Order.

FAA Order 7400.11, Airspace Designations and Reporting Points, is published yearly and effective on September 15.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current, is non-controversial and unlikely to result in adverse or negative comments. It, therefore: (1) Is not a “significant regulatory action” under Executive Order 12866; (2) is not a “significant rule” under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule, when promulgated, would not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

This proposal will be subject to an environmental analysis in accordance with FAA Order 1050.1F, “Environmental Impacts: Policies and Procedures” prior to any FAA final regulatory action.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me, the Federal Aviation Administration proposes to amend 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

1. The authority citation for 14 CFR part 71 continues to read as follows:

71.1 [Amended]

2. The incorporation by reference in 14 CFR 71.1 of FAA Order 7400.11E, Airspace Designations and Reporting Points, dated July 21, 2020, and effective September 15, 2020, is amended as follows:

Paragraph 5000 Class D Airspace.

ACE MO D Fort Leonard Wood, MO [Amended]

Waynesville-St. Robert Regional Airport Forney Field, MO (Lat. 37°44′30″N, long. 92°08′27″W) That airspace extending upward from the surface to and including 3,700 feet MSL within a 4-mile radius of the Waynesville-St. Robert Regional Airport Forney Field. This Class D airspace area is effective during the specific dates and times established in advance by a Notice to Airmen. The effective date and time will thereafter be continuously published in the Chart Supplement.

Paragraph 6004 Class E Airspace Areas Designated as an Extension to a Class D or Class E Surface Area.

ACE MO E4 Fort Leonard Wood, MO [Amended]

Waynesville-St. Robert Regional Airport Forney Field, MO (Lat. 37°44′30″N, long. 92°08′27″W) That airspace extending upward from the surface to and including 3,700 feet MSL within a 4-mile radius of the Forney VOR 318° radial extending from the 4-mile radius of Waynesville-St. Robert Regional Airport Forney Field to 7 miles northwest of the VOR. This Class E airspace area is effective during the specific dates and times established in advance by a Notice to Airmen. The effective date and time will thereafter be continuously published in the Chart Supplement.

Paragraph 6005 Class E Airspace Areas Extending Upward From 700 Feet or More Above the Surface of the Earth.

ACE MO E5 Fort Leonard Wood, MO [Amended]

Waynesville-St. Robert Regional Airport Forney Field, MO (Lat. 37°44′30″N, long. 92°08′27″W) That airspace extending upward from the surface to and including 3,700 feet MSL within a 6.5-mile radius of Waynesville-St. Robert Regional Airport Forney Field to within 2.4 miles each side of the Forney VOR 318° radial extending from the 6.5-mile radius of the airport to 7 miles northwest of the VOR, excluding that airspace within the R–4501 Fort Leonard Wood, MO, Restricted Areas during the specific times they are in effect.

Issued in Fort Worth, Texas, on August 5, 2021.

Martin A. Skinner, Acting Manager, Operations Support Group, ATO Central Service Center.

[FR Doc. 2021–17006 Filed 8–12–21; 8:45 am]

BILLING CODE 4910–13–P
II. Proposal Five

Proposal. The Postal Service proposes to treat International surface transportation to Canada separately from the treatment of International air transportation. Petition. Proposal Five at 1. The Postal Service explains that the proposal uses additional Foreign Postal Settlement System (FPS) data to develop a distribution key to more accurately distribute outbound International surface transportation expenses to Canada (Account 53281). Id. After isolating International surface transportation to Canada for separate treatment, the proposal continues to use the International Air Transportation file to distribute outbound International air transportation expenses (Accounts 53201 and 53212), with a refinement to remap surface parcels to regular parcels in the distribution. Id. Account 53281 expenses would be isolated from the other expenses and additional FPS data would be used to distribute account 53281 expenses to international mail categories transported to Canada by surface. Id.

Rationale. Following information requests during the recent Annual Compliance Report process, the Postal Service reviewed its international transportation costs. Id. at 2. The Postal Service indicates that removing account 53281 from the current treatment that sums accounts 53201, 53212, and 53281 results in the distribution of only air expenses. The Postal Service concludes that with new surface and air treatments for accounts 53201, 53212, and 53281, and account 53286 continuing to receive its separate treatment as part of the FedEx agreement, there is no longer a need for diversion factors. Id.

The Postal Service states that the proposal mostly maintains the methodology described in the Air Transportation Cost Computations, but would remove account 53281 from the benchmarking of International air transportation expenses for all countries. Id. at 3.

The Postal Service states that the proposal mainly replaces the International highway costs section. Id. Currently, the proportions of total outbound kilograms to Canada are used to develop diversion ratios for mail types transported by surface. Id. at 4. The proposal would use U.S. and Canada information service center origin destination pairs by ICRA outbound mail class to replace the diversion percentages. Id.

The Postal Services notes that additional FPS data is used to distribute expenses for outbound surface transportation to Canada. It concludes that “refining the treatment of air transportation costs would improve ICRA reporting by providing a finer level of mail category detail that: (1) eliminates treating the sum of air and surface costs together, (2) eliminates the need to develop air to surface diversion factors to isolate or divert Canada surface transportation expenses, and (3) provides the basis for the distribution of surface costs using surface data and the distribution of air costs using air data.” Id. at 4–5.

Impact. The Postal Service claims that the two non-public attachments accompanying the proposal show its “modest impact,” and indicates that both are filed under seal as part of Library Reference USPS–RM2021–8/NP1. Id. at 5. It concludes that the net impact on total Market Dominant and total Competitive products costs is zero. Id. Additional pages display the detailed impacts on Market Dominant products and Competitive products. The Postal Service concludes that, overall, the proposal would shift roughly $158,000 of attributable costs from Market Dominant to Competitive products. Id.

The Postal Service also indicates that the change in Total Volume Variable and Product Specific Cost in Attachment 2 reflect the International Negotiated Service Agreement (NSA) differences in Attachment 1. It concludes that all NSAs that were compensatory in FY 2020 would have remained so under this proposal. Id.

Mechanics. The Postal Service details several of the adjustments that would be made to various files by the proposal. Id. at 6.

III. Notice and Comment

IV. Ordering Paragraphs

It is ordered:

...
2. Comments by interested persons in this proceeding are due no later than September 15, 2021.
3. Pursuant to 39 U.S.C. 505, the Commission appoints Jennaca D. Upperman to serve as an officer of the Commission (Public Representative) to represent the interests of the general public in this docket.
4. The Secretary shall arrange for publication of this order in the Federal Register.

By the Commission.

Erica A. Barker,
Secretary.

I. Background

The CAA requires the EPA to establish primary and secondary NAAQS for certain pervasive pollutants that “may reasonably be anticipated to endanger public health and welfare.” The primary NAAQS is designed to protect public health with an adequate margin of safety, and the secondary NAAQS is designed to protect public welfare and the environment. The EPA has set NAAQS for six common air pollutants, referred to as criteria pollutants, including ozone. The NAAQS represent the air quality levels an area must meet to comply with the CAA. Ozone is a gas composed of three oxygen atoms and is created by chemical reactions between volatile organic compounds (VOC) and oxides of nitrogen (NOX) in the atmosphere in the presence of sunlight. Ground-level ozone can harm human health and the environment. Ozone exposure has been associated with increases in susceptibility to respiratory infections, medication use by asthmatics, doctor visits, and emergency department visits and hospital admissions for individuals with respiratory disease. Ozone exposure may also contribute to premature death, especially in people with heart and lung disease.

In October 2015, the EPA strengthened the primary and secondary eight-hour ozone NAAQS from 0.075 parts per million (ppm) to 0.070 ppm (“2015 ozone NAAQS”). In accordance with section 107(d) of the CAA, the EPA must designate an area “nonattainment” if it is violating the NAAQS or if it is contributing to a violation of the NAAQS in a nearby area. With respect to the ozone NAAQS, the EPA further classifies nonattainment areas as “Marginal,” “Moderate,” “Serious,” “Severe,” or “Extreme,” depending upon the ozone design value for an area. As a general matter, higher classified ozone nonattainment areas are subject to a greater number of, and more stringent, CAA planning requirements than lower classified areas but are allowed more time to demonstrate attainment of the ozone NAAQS.

Effective August 3, 2018, the EPA designated and classified the Eastern Nevada portions of the California state nonattainment areas. In connection with the reclassification, the EPA is proposing to establish deadlines for submittal of revisions to the Eastern Kern, Sacramento Metro, and Western Nevada nonattainment areas. In order to be deemed in compliance with the CAA, the Eastern Kern, Sacramento Metro, and Western Nevada nonattainment areas must meet additional requirements for Serious ozone nonattainment areas.

DATES: Comments must be received on or before September 13, 2021.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R09–OAR–2021–0426 at https://www.regulations.gov. For comments submitted at Regulations.gov, follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from Regulations.gov. The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (i.e., on the web, cloud, or other file sharing system). For additional submission methods, please contact the person identified in the FOR FURTHER INFORMATION CONTACT section. For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit https://www.epa.gov/dockets/commenting-epa-dockets. If you need assistance in a language other than English or if you are a person with disabilities who needs a reasonable accommodation at no cost to you, please contact the person identified in the FOR FURTHER INFORMATION CONTACT section.

Kern,4 Sacramento Metro,5 and Western Nevada6 areas under the CAA as Moderate nonattainment for the 2015 ozone NAAQS.7 The EPA’s classification of these areas as Moderate ozone nonattainment established a requirement that each area attain the 2015 ozone NAAQS as expeditiously as practicable, but no later than six years from the date of designation as nonattainment, i.e., August 3, 2024.8

In August 2020, CARB submitted to the EPA a request from the air districts in the Sacramento Metro area9 to voluntarily reclassify the Sacramento Metro ozone nonattainment area from Moderate to Serious nonattainment for the 2015 ozone NAAQS.10 In May 2021, CARB submitted to the EPA requests from the air districts in the Western Nevada ozone nonattainment area from Moderate to Serious nonattainment for the 2015 ozone NAAQS.11 In this

4 Kern County is located in the southernmost portion of California’s Central Valley. The Eastern Kern ozone nonattainment area, which lies within the Mojave Desert air basin, covers the eastern portion of Kern County, excluding Indian Wells Valley. The western portion of Kern County lies within the San Joaquin Valley air basin and is included within the San Joaquin Valley ozone nonattainment area. For more detail on the boundaries of the Eastern Kern ozone nonattainment area, see the entry for “Kern County (Eastern Kern), CA” in the 2015 ozone table in 40 CFR 81.305.

5 The Sacramento Metro nonattainment area includes Sacramento and Yolo Counties, the eastern portion of Solano County, the western portions of Placer and El Dorado counties outside of the Lake Tahoe Basin, and the southern portion of Sutter County. For more detail on the boundaries of the Sacramento Metro ozone nonattainment area, see the entry for “Sacramento Metro, CA” in the 2015 ozone table in 40 CFR 81.305.

6 Nevada County is located in the north-central Sierra Nevada Range and includes portions of Tahoe National Forest. The easternmost portion of Nevada County is excluded from the Western Nevada ozone nonattainment area and is designated unclassified or attainment for the 2015 ozone NAAQS. For more detail on the boundaries of the Western Nevada ozone nonattainment area, see the entry for “Nevada County (Western part), CA” in the 2015 ozone table in 40 CFR 81.305.

7 83 FR 25776 (June 4, 2018).

8 See 40 CFR 51.1303(a).

9 The Sacramento Metro area is regulated by five local air districts: The Sacramento Metropolitan Air Quality Management District (AQMD), the Feather River AQMD, the El Dorado County AQMD, the Yolo-Solano AQMD, and the Placer County Air Pollution Control District.

10 Letter dated August 3, 2020, from Richard W. Corey, Executive Officer, CARB, to John Bustinard, Regional Administrator, EPA Region IX, requesting voluntary reclassification of Sacramento Metro to Serious nonattainment for the 2015 ozone NAAQS.

11 Letters, dated April 30, 2021 and May 15, 2021, from Richard W. Corey, Executive Officer, CARB, to Deborah Jordan, Acting Regional Administrator, EPA Region IX, requesting voluntary reclassification of Western Nevada and Eastern document, we refer to the air districts in the Sacramento Metro, Eastern Kern, and Western Nevada nonattainment areas collectively as the “districts.” Under the EPA’s ozone implementation rules at 40 CFR 51.1303(b), the EPA must approve a state’s request, for any reason, for a higher classification for an ozone nonattainment area, in accordance with CAA section 181(b)(3).12 We find that the plain language of CAA section 181(b)(3) and 40 CFR 51.1303(b) mandates that we approve these voluntary reclassification requests, and thus, the EPA proposes in this action to grant CARB’s request to reclassify the Eastern Kern, Sacramento Metro, and Western Nevada nonattainment areas from Moderate to Serious for the 2015 ozone NAAQS.

II. Serious Area Requirements and Proposed Schedule

In this action, we are proposing to reclassify the Eastern Kern, Sacramento Metro, and Western Nevada ozone nonattainment areas from Moderate to Serious for the 2015 ozone NAAQS. We are also proposing to establish a schedule for the State to submit SIP revisions to address the planning requirements made applicable to each area as a result of its higher classification, including both the general air quality planning requirements under CAA section 172(c) and the specific requirements for Serious areas under CAA section 182(c), as interpreted and described in the final SIP Requirements Rule for the 2015 ozone NAAQS (“2015 Ozone SRR”).13

12 CAA section 181(b)(3) provides that the EPA shall grant the request of any state to reclassify an ozone nonattainment area to a higher classification.

13 We find that the plain language of CAA section 181(b)(3) and 40 CFR 51.1303(b) mandates that we approve these voluntary reclassification requests, and thus, the EPA proposes in this action to grant CARB’s request to reclassify the Eastern Kern, Sacramento Metro, and Western Nevada nonattainment areas from Moderate to Serious for the 2015 ozone NAAQS.

A. Serious Area Plan Requirements in General

The 2015 Ozone SRR requires states to submit a SIP revision including a Serious area attainment demonstration, reasonable further progress demonstration, reasonably available control measures, and contingency measures for the 2015 ozone NAAQS no later than four years from the area’s date of designation as nonattainment.14 Additionally, for the Sacramento area, California would be required to certify that its current motor vehicle inspection and maintenance (I/M) program meets the requirements for an enhanced I/M program as required by the CAA and the EPA’s I/M regulations.15 CARB would also need to either submit a SIP revision that addresses the CAA’s requirements for a clean fuel vehicle program or certify that its currently approved substitute measure continues to meet CAA requirements.16 Neither Eastern Kern nor Western Nevada meet the minimum population-based applicability thresholds for the enhanced I/M and clean fuel vehicle program requirements.17 We are proposing not to alter the four-year schedule for submittal of Serious area SIP revisions under the 2015 Ozone SRR. Therefore, following the EPA’s final reclassification of Eastern Kern, Sacramento Metro, and Western Nevada to Serious ozone nonattainment, CARB would be required to submit a SIP revision addressing the Serious area elements listed in this section by August 3, 2022 (i.e., four years from the areas’ designation as nonattainment).

B. New Source Review and Title V Program Revisions

Typically, when we reclassify an area to a higher ozone classification, the state must amend its new source review (NSR) rules for the area to reflect the lower NSR major source threshold, lower major modification threshold (as applicable), and higher NSR offset ratio corresponding to the higher classification. Under CAA section 182(c), the major source threshold for areas reclassified from Moderate to Serious is lowered from 100 tons per year (tpy) to 50 tpy. Under the EPA’s NSR regulations, the significant emissions rates that define major modifications for NOX and VOC in areas reclassified from Moderate to Serious are lowered from 40 tpy to 25 tpy. Under CAA section 182(c)(10), the VOC and NOX offset ratios for major sources and modifications in a Serious nonattainment area must be at least 1.2 to 1. Reclassification to Serious ozone nonattainment would typically also
require changes to the districts’ title V operating permits programs necessary to reflect the change in the major source threshold for Serious areas.

The Eastern Kern and Western Nevada ozone nonattainment areas are currently classified as Serious for the 2008 ozone NAAQS and therefore are currently subject to the lower major source and major modification thresholds and higher offset ratios applicable to Serious ozone nonattainment areas. The Sacramento Metro nonattainment area is classified as Severe for the 2008 ozone NAAQS and is therefore subject to the more stringent major source and major modification thresholds and offset ratio applicable to Severe ozone nonattainment areas. For this reason, we anticipate that reclassification to Serious for the 2015 ozone NAAQS will not require the districts to amend their NSR rules to incorporate the requirements for Serious nonattainment areas and that the districts may therefore satisfy the applicable NSR requirements by certifying that their current NSR programs address Serious area requirements.

We are proposing under our general CAA section 301(a) authority to establish a deadline of August 3, 2022, for the State to submit, for each area, revised NSR rules or a certification that the area’s current NSR program is sufficient to meet the applicable requirements. We are also proposing under CAA section 301(a) to establish a deadline of August 3, 2022, for each area to submit a title V program rules reflecting the Serious area major source definition. Given the narrow scope of the required revisions, we anticipate a deadline of August 3, 2022, will allow the districts sufficient time to make the required changes without imposing a lengthy delay in the requirement for sources newly subject to the title V program to submit a timely application. Additionally, this date is the same as the submittal due date for other Serious area elements and will allow the districts to submit any NSR and title V revisions together with these other elements.

C. Reasonably Available Control Technology

Ozone nonattainment areas classified as Moderate and above are required to implement reasonably available control technology (RACT) for major sources. Major sources are defined for Moderate areas as sources that emit or have the potential to emit 100 tpy of VOC or NOX. For Serious areas reclassified from Moderate, the requirement for RACT expands to include all sources that emit, or have the potential to emit, 50 tpy of VOC or NOX. Thus, following reclassification from Moderate to Serious, states must revise their RACT SIPs to include those other sources emitting or having the potential to emit between 50 and 100 tpy. Under 40 CFR 51.1312[a][2][ii], RACT SIP submittals are due 24 months from the effective date of reclassification or a deadline otherwise established by the EPA in the reclassification action. Under 40 CFR 51.1312[a][3][ii], RACT requirements triggered by reclassification should be implemented as expeditiously as practicable, but no later than the start of the attainment year ozone season associated with the area’s new attainment deadline, or January 1 of the third year after the associated SIP revision submittal deadline, whichever is earlier; or by a deadline otherwise established by the EPA.

Consistent with 40 CFR 51.1312[a][2][ii], we are proposing to establish a deadline of 24 months from the effective date of reclassification to Serious for Eastern Kern, Sacramento Metro, and Western Nevada to submit a Serious area RACT SIP. Consistent with 40 CFR 51.1312[a][3][ii], we are proposing a deadline for implementation of Serious area RACT rules as expeditiously as practicable but no later than the start of the attainment year ozone season associated with the affected areas’ new attainment date (i.e., January 1, 2027, as proposed) or January 1 of the third year after the affected areas’ Serious area RACT SIP submittal deadline, whichever is earlier. Eastern Kern, Sacramento Metro, and Western Nevada each remain subject to the Moderate area RACT implementation deadline of January 1, 2023, under 40 CFR 51.1312[a][3][i].

D. Transportation Control

CAA section 182(c)(5) requires ozone nonattainment areas that are classified as Serious to submit a demonstration as to whether current aggregate vehicle mileage, aggregate vehicle emissions, congestion levels, and other relevant parameters are consistent with those used for the area’s demonstration of attainment. The CAA requires the first report to be submitted 6 years after November 15, 1990, which is two years after the deadline for Serious area attainment demonstrations, and every three years thereafter. Consistent with this schedule, we are proposing that the first report be submitted 24 months after the attainment demonstrations for these areas are due (i.e., August 3, 2024) and every three years thereafter. If a demonstration shows that such parameters and emissions levels exceed the levels projected for purposes of the area’s attainment demonstration, the State would be required to develop and submit a SIP revision within 18 months that includes transportation control measures to reduce emissions to levels that are consistent with those projected in the demonstration.

III. Reclassification of Areas of Indian Country

Because the State of California does not have jurisdiction over Indian country geographically located within the borders of the state, CARB’s reclassification requests do not apply to the areas of Indian country within the boundaries of the nonattainment areas identified in 40 CFR 81.305. In these areas of Indian country, the EPA implements federal CAA programs, including reclassifications, consistent with our discretionary authority under sections 301(a) and 301(d)(4) of the CAA. There are no tribal lands located within the boundaries of the Eastern Kern and Western Nevada ozone nonattainment areas. The Sacramento Metro ozone nonattainment area includes lands of four federally recognized tribes: The Shingle Springs Band of Miwok Indians, Shingle Springs Rancheria (Verona Tract); the United Auburn Indian Community of the Auburn Rancheria of California; the Wilton Rancheria; and the Yocha Dehe Wintun Nation.

The EPA contacted tribal officials from each of the federally recognized tribes having jurisdiction over lands within the boundaries of the Sacramento Metro ozone nonattainment area to invite government-to-government consultation on this rulemaking. Under the EPA’s Consultation Policy, the EPA consults on a government-to-government basis with federally recognized tribal governments when the EPA’s actions and decisions may affect tribal interests.
No tribes requested government-to-government consultation on this action. We have considered the relevance of our proposal to reclassify the Sacramento Metro area as Serious nonattainment for the 2015 ozone NAAQS for each tribe located within the Sacramento Metro area. We believe that the same facts and circumstances that support the proposal for the non-Indian country lands also support the proposal for reservation areas of Indian country and any other areas of Indian country where the EPA or a tribe has demonstrated that the tribe has jurisdiction located within the Sacramento Metro area. In this particular case, the State’s reclassification request is based on modeling results that show that a longer timeframe is necessary to attain the 2015 ozone NAAQS for the Sacramento Metro area. The longer timeframes will provide the time necessary to realize full implementation of the stationary and mobile source regulations contained in the districts’ attainment plans. Additionally, uniformity of classification throughout a nonattainment area is a guiding principle and premise when an area is being reclassified. Ozone and ozone precursors are pervasive pollutants that can be transported throughout a nonattainment area. Therefore, boundaries for nonattainment areas are drawn to encompass both areas with direct sources of pollution as well as nearby areas in the same airshed in which ozone can be transported. Each nonattainment area is assigned an initial classification that applies consistently within the boundaries of the area. The EPA believes this approach best ensures public health protection from the adverse effects of ozone pollution. Therefore, it is generally counterproductive from an air quality and planning perspective to have a different classification for a land area located within the boundaries of a nonattainment area, such as the areas of Indian country in the Sacramento Metro ozone nonattainment area. Accordingly, based on the EPA’s discretionary authority under sections 301(a) and 301(d)(4) of the CAA to implement federal CAA programs in these areas of Indian country, including reclassifications, the EPA is proposing to reclassify areas of Indian country geographically located in the Sacramento Metro area to Serious nonattainment for the 2015 ozone NAAQS.

The Sacramento Metro area and the tribes located within its boundaries are currently designated as Severe, i.e., one classification higher than Serious, for the 1997 and 2008 ozone NAAQS. An area’s applicable major source thresholds and offset ratios for NSR and title V programs are based on the area’s highest ozone classification. Because these areas of Indian country are already classified as a higher classification for the 1997 and 2008 ozone NAAQS, the major source thresholds and offset ratios for NSR and title V programs applicable to the tribes in the Sacramento Metro area will not change. This reclassification also will not affect projects proposed in these areas of Indian country that require federal permits, approvals, or funding under the EPA’s general conformity rule because such projects are already subject to the de minimis thresholds and offset ratios for Severe ozone nonattainment areas. We note that, while eligible tribes may seek EPA approval of relevant tribal programs under the CAA, none of the affected tribes would be required to submit an implementation plan as a result of this reclassification.

In light of the considerations outlined in this notice, this principle and premise when an area is being reclassified. Ozone and ozone precursors are pervasive pollutants that can be transported throughout a nonattainment area. Therefore, boundaries for nonattainment areas are drawn to encompass both areas with direct sources of pollution as well as nearby areas in the same airshed in which ozone can be transported. Each nonattainment area is assigned an initial classification that applies consistently within the boundaries of the area. The EPA believes this approach best ensures public health protection from the adverse effects of ozone pollution. Therefore, it is generally counterproductive from an air quality and planning perspective to have a different classification for a land area located within the boundaries of a nonattainment area, such as the areas of Indian country in the Sacramento Metro ozone nonattainment area. Accordingly, based on the EPA’s discretionary authority under sections 301(a) and 301(d)(4) of the CAA to implement federal CAA programs in these areas of Indian country, including reclassifications, the EPA is proposing to reclassify areas of Indian country geographically located in the Sacramento Metro area to Serious nonattainment for the 2015 ozone NAAQS.

The Sacramento Metro area and the tribes located within its boundaries are currently designated as Severe, i.e., one classification higher than Serious, for the 1997 and 2008 ozone NAAQS. An area’s applicable major source thresholds and offset ratios for NSR and title V programs are based on the area’s highest ozone classification. Because these areas of Indian country are already classified as a higher classification for the 1997 and 2008 ozone NAAQS, the major source thresholds and offset ratios for NSR and title V programs applicable to the tribes in the Sacramento Metro area will not change. This reclassification also will not affect projects proposed in these areas of Indian country that require federal permits, approvals, or funding under the EPA’s general conformity rule because such projects are already subject to the de minimis thresholds and offset ratios for Severe ozone nonattainment areas. We note that, while eligible tribes may seek EPA approval of relevant tribal programs under the CAA, none of the affected tribes would be required to submit an implementation plan as a result of this reclassification.

In light of the considerations outlined in this notice, this principle and premise when an area is being reclassified. Ozone and ozone precursors are pervasive pollutants that can be transported throughout a nonattainment area. Therefore, boundaries for nonattainment areas are drawn to encompass both areas with direct sources of pollution as well as nearby areas in the same airshed in which ozone can be transported. Each nonattainment area is assigned an initial classification that applies consistently within the boundaries of the area. The EPA believes this approach best ensures public health protection from the adverse effects of ozone pollution. Therefore, it is generally counterproductive from an air quality and planning perspective to have a different classification for a land area located within the boundaries of a nonattainment area, such as the areas of Indian country in the Sacramento Metro ozone nonattainment area. Accordingly, based on the EPA’s discretionary authority under sections 301(a) and 301(d)(4) of the CAA to implement federal CAA programs in these areas of Indian country, including reclassifications, the EPA is proposing to reclassify areas of Indian country geographically located in the Sacramento Metro area to Serious nonattainment for the 2015 ozone NAAQS.

The Sacramento Metro area and the tribes located within its boundaries are currently designated as Severe, i.e., one classification higher than Serious, for the 1997 and 2008 ozone NAAQS. An area’s applicable major source thresholds and offset ratios for NSR and title V programs are based on the area’s highest ozone classification. Because these areas of Indian country are already classified as a higher classification for the 1997 and 2008 ozone NAAQS, the major source thresholds and offset ratios for NSR and title V programs applicable to the tribes in the Sacramento Metro area will not change. This reclassification also will not affect projects proposed in these areas of Indian country that require federal permits, approvals, or funding under the EPA’s general conformity rule because such projects are already subject to the de minimis thresholds and offset ratios for Severe ozone nonattainment areas. We note that, while eligible tribes may seek EPA approval of relevant tribal programs under the CAA, none of the affected tribes would be required to submit an implementation plan as a result of this reclassification.

In light of the considerations outlined in this notice, this principle and premise when an area is being reclassified. Ozone and ozone precursors are pervasive pollutants that can be transported throughout a nonattainment area. Therefore, boundaries for nonattainment areas are drawn to encompass both areas with direct sources of pollution as well as nearby areas in the same airshed in which ozone can be transported. Each nonattainment area is assigned an initial classification that applies consistently within the boundaries of the area. The EPA believes this approach best ensures public health protection from the adverse effects of ozone pollution. Therefore, it is generally counterproductive from an air quality and planning perspective to have a different classification for a land area located within the boundaries of a nonattainment area, such as the areas of Indian country in the Sacramento Metro ozone nonattainment area. Accordingly, based on the EPA’s discretionary authority under sections 301(a) and 301(d)(4) of the CAA to implement federal CAA programs in these areas of Indian country, including reclassifications, the EPA is proposing to reclassify areas of Indian country geographically located in the Sacramento Metro area to Serious nonattainment for the 2015 ozone NAAQS. The EPA specifically solicits additional comment on this proposed rule from tribal officials.

V. Statutory and Executive Order Reviews

Under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011), this proposed action is not a “significant regulatory action” and therefore is not subject to Executive Order 12866. With respect to lands under state jurisdiction, voluntary reclassifications under CAA section 181(b)(3) are based solely upon requests by the state, and the EPA is required under the CAA to grant them. These actions do not, in and of themselves, impose any new requirements on any sectors of the economy. In addition, because the statutory requirements are clearly defined with respect to the differently classified areas, and because those requirements are automatically triggered by reclassification, reclassification does not impose a materially adverse impact under Executive Order 12866. For these reasons, this proposed action is also not subject to Executive Order 13211, “Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use” (66 FR 28355, May 22, 2001).

In addition, I certify that this proposed rule will not have a significant economic impact on a substantial number of small entities under the
Regulatory Flexibility Act (5 U.S.C. 601 et seq.) and that this proposed rule does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4), because the EPA is required to grant requests by states for voluntary reclassifications, and such reclassifications in and of themselves do not impose any federal intergovernmental mandate, and because tribes are not subject to implementation plan submittal deadlines that apply to states as a result of reclassifications.

Executive Order 13175 (65 FR 67249, November 9, 2000) requires the EPA to develop an accountable process to ensure "meaningful and timely input by tribal officials in the development of regulatory policies that have tribal implications." “Policies that have tribal implications” is defined in Executive Order 13175 to include regulations that have "substantial direct effects on one or more Indian tribes, on the relationship between the federal government and Indian tribes, or on the distribution of power and responsibilities between the federal government and Indian tribes.” Four Indian tribes have areas of Indian country located within the boundaries of the Sacramento Metro ozone nonattainment area, and there are no areas of Indian country located in the Eastern Kern and Western Nevada ozone nonattainment areas. The EPA implements federal CAA programs, including reclassification, in these areas of Indian country within the boundaries of the Sacramento Metro area, consistent with our discretionary authority under sections 301(a) and 301(d)(4) of the CAA. The EPA has concluded that this proposed rule might have tribal implications for the purposes of Executive Order 13175 but would not impose substantial direct costs upon the tribes, nor would it preempt Tribal law. As discussed in Section III of this document, this proposed rule does not affect the implementation of NSR or title V programs in areas of Indian country, nor does it affect projects proposed in these areas of Indian country that require federal permits, approvals, or funding under the EPA’s general conformity rule. None of the affected tribes would be required to submit an implementation plan as a result of this reclassification.

The EPA contacted tribal officials early in the process of developing this proposed rule to provide an opportunity to have meaningful and timely input into its development. On December 11, 2020, we sent letters to leaders of the four tribal governments representing the areas of Indian country in the nonattainment area offering government-to-government consultation and seeking input on how we could best communicate with the tribes on this rulemaking effort. No tribes requested government-to-government consultation on this action.

Executive Order 12898 establishes federal executive policy on environmental justice. Its main provision directs federal agencies, to the greatest extent practicable and permitted by law, to make environmental justice part of their mission by identifying and addressing, as appropriate, disproportionately high and adverse human health or environmental effects of their programs, policies, and activities on minority populations and low-income populations in the United States. This reclassification action does not provide the EPA with the discretionary authority to address disproportionate human health or environmental effects with practical, appropriate, and legally permissible methods under Executive Order 12898.

This proposed action also does not have federalism implications because it does not have substantial direct effects on the states, on the relationship between the national government and the states, nor on the distribution of power and responsibilities among the various levels of government, as specified in Executive Order 13132 (64 FR 43255, August 10, 1999). This proposed action does not alter the relationship or the distribution of power and responsibilities established in the CAA.

This proposed rule also is not subject to Executive Order 13045, “Protection of Children from Environmental Health Risks and Safety Risks” (62 FR 19885, April 23, 1997), because the EPA interprets Executive Order 13045 as applying only to those regulatory actions that concern health or safety risks, such that the analysis required under section 5–501 of Executive Order 13045 has the potential to influence the regulation.

As this proposal would set a deadline for the submittal of CAA required plans and information, the requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) do not apply. This proposed rule does not impose an information collection burden under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 et seq.).

List of Subjects in 40 CFR Part 81

Environmental protection, Air pollution control, Intergovernmental relations, National parks, Ozone, Wilderness areas.

Dated: July 13, 2021.

BILLING CODE 6560–50–P

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 20

[GN Docket No. 13–111; FCC 21–82; FR ID 39501]

Promoting Technological Solutions To Combat Contraband Wireless Device Use in Correctional Facilities

AGENCY: Federal Communications Commission.

ACTION: Proposed rule.

SUMMARY: In this document, the Federal Communications Commission (Commission or FCC) takes further steps to facilitate the deployment and viability of technological solutions used to combat contraband wireless devices in correctional facilities. The Second Further Notice of Proposed Rulemaking (SFNPRM) seeks further comment on the relative effectiveness, viability, and cost of additional technological solutions to combat contraband phone use in correctional facilities previously identified in the record.

DATES: Interested parties may file comments on or before September 13, 2021, and reply comments on or before October 12, 2021.

ADDRESSES: You may submit comments, identified by GN Docket No. 13–111, by any of the following methods:

• Electronic Filers: Comments may be filed electronically using the internet by accessing the Commission’s Electronic Comment Filing System (ECFS): http://apps.fcc.gov/ecfs/.
• Paper Filers: Parties who choose to file by paper must file an original and one copy of each filing.

Filings can be sent by commercial overnight courier, or by first-class or overnight U.S. Postal Service mail. All filings must be addressed to the Commission’s Secretary, Office of the Secretary, Federal Communications Commission.

• Commercial overnight mail (other than U.S. Postal Service Express Mail and Priority Mail) must be sent to 9050 Junction Drive, Annapolis Junction, MD 20701.
• U.S. Postal Service first-class, Express, and Priority mail must be addressed to 45 L Street NE, Washington, DC 20554.
• Effective March 19, 2020, and until further notice, the Commission no longer accepts any hand or messenger delivered filings. This is a temporary measure taken to help protect the health and safety of individuals, and to mitigate the transmission of COVID–19. See FCC Announces Closure of FCC Headquarters Open Window and Change in Hand-Delivery Policy, Public Notice, DA 20–304 (March 19, 2020), https://www.fcc.gov/document/fcc-closes-headquarters-open-window-and-changes-hand-delivery-policy.

People with Disabilities: To request materials in accessible formats for people with disabilities (Braille, large print, electronic files, audio format), send an email to FCC504@fcc.gov or call the Consumer & Governmental Affairs Bureau at (202) 418–0530 (voice), 202–418–0432 (TTY).

FOR FURTHER INFORMATION CONTACT: Melissa Conway of the Wireless Telecommunications Bureau, Mobility Division, at (202) 418–2887 or Melissa.Conway@fcc.gov.

SUPPLEMENTARY INFORMATION: This is a summary of the Commission’s Second Further Notice of Proposed Rulemaking in GN Docket No. 13–111, FCC 21–82 adopted July 12, 2021 and released July 13, 2020. The full text of this document, including all Appendices, is available for inspection and copying during normal business hours in the FCC Reference Center, 45 L Street NE, Washington, DC 20554, or available for viewing via the Commission’s ECFS website by entering the docket number, GN Docket No. 13–111. Alternative formats are available for people with disabilities (Braille, large print, electronic files, audio format), by sending an email to FCC504@fcc.gov or calling the Consumer and Governmental Affairs Bureau at (202) 418–0530 (voice), (202) 418–0432 (TTY).

This proceeding shall continue to be treated as a “permit-but-disclose” proceeding in accordance with the Commission’s ex parte rules (47 CFR 1.1200 through 1.1216). Persons making ex parte presentations must file a copy of any written presentation or a memorandum summarizing any oral presentation within two business days after the presentation (unless a different deadline applicable to the Sunshine period applies). Persons making oral ex parte presentations are reminded that memoranda summarizing the presentation must (1) list all persons attending or otherwise participating in

the meeting at which the ex parte presentation was made, and (2) summarize all data presented and arguments made during the presentation. If the presentation consisted in whole or in part of the presentation of data or arguments already reflected in the presenter’s written comments, memoranda or other filings in the proceeding, the presenter may provide citations to such data or arguments in his or her prior comments, memoranda, or other filings (specifying the relevant page and/or paragraph numbers where such data or arguments can be found) in lieu of summarizing them in the memorandum. Documents shown or given to Commission staff during ex parte meetings are deemed to be written ex parte presentations and must be filed consistent with rule § 1.1206(b). In proceedings governed by rule § 1.49(f) or for which the Commission has made available a method of electronic filing, written ex parte presentations and memoranda summarizing oral ex parte presentations, and all attachments thereto, must be filed through the electronic comment filing system available for that proceeding, and must be filed in their native format (e.g., .doc, .xml, .ppt, searchable .pdf). Participants in this proceeding should familiarize themselves with the Commission’s ex parte rules.

Synopsis
1. In the SFNPRM, the Commission seeks comment on whether there have been technological, economic, policy, and/or legal developments sufficient to overcome the variety of challenges presented to the widespread deployment of these technologies and whether and how the Commission can further facilitate these technologies through regulatory next steps. In doing so, the Commission contemplates various approaches to combating the use of contraband wireless devices in correctional facilities that would each have their own projected reporting, recordkeeping, and other compliance requirements. We cannot quantify the cost of compliance with any regulatory next steps and do not know whether small entities will have to hire professionals to comply with any rules that we ultimately adopt. Below we discuss the projected reporting, recordkeeping, and other compliance requirements associated with the various approaches in the SFNPRM to combat contraband wireless device use in correctional facilities.
2. The Commission contemplates as a potential solution the creation of “quiet zones” in and around correctional facilities where wireless communications are not authorized such that contraband wireless devices in correctional facilities would not be able to receive service from a wireless provider. Quiet zones would require wireless carriers and solution providers to have appropriate engineering capabilities to precisely define quiet zones around the borders of correctional facilities. To understand the cost implications for small and other entities, we seek comment on the potential costs that could be associated with the implementation of quiet zones, including the cost of hardware, software, network integration, engineering, and ongoing maintenance. The Commission also seeks comment on who should bear the cost of implementing quiet zones, and the potential alternatives to a Commission mandate that might encourage implementation.
3. The SFNPRM seeks comments on the options of geolocation-based denial, also known as geofencing, and a “network-based solution.” The geolocation-based denial would allow for mobile device software and/or hardware to be used to shut down contraband wireless devices that violate a perimeter surrounding a correctional facility. A geolocation-based solution would require adequate engineering to locate and disable wireless contraband. Relatedly, a “network-based solution” would require commercial mobile radio service (CMRS) licensees to independently identify and disable contraband wireless devices in correctional facilities using their own network elements. Therefore, the Commission seeks comment on whether there have been technological advancements in carriers’ network engineering that might make it more feasible for entities to implement and comply with network-based geofencing. If network-based geofencing is selected as the solution for contraband wireless devices in correctional facilities, then the engineering required could have associated costs, including the testing and maintenance necessary to ensure accuracy and ongoing viability. The Commission’s request for comment on additional costs that could be associated with the implementation of network-based geofencing, including software and network integration, should provide insight and allow us to evaluate costs for small and other entities that will be impacted by any future rules we adopt regarding these two potential solutions.
4. This SFNPRM also contemplates the option of using beacon technology to combat the issue of contraband wireless device use in correctional facilities. The
The Commission seeks comment on the potential advancements in beacon technology that would allow beacon software to be installed on mobile devices remotely (e.g., through a software update). If the Commission is found to have the authority to require entities to install the software on devices, then this approach could require related compliance requirements. Relatedly, the Commission seeks comment on how beacon technology could ensure that authorized users (e.g., correctional officers) are still able to use their devices. This requirement could impose recordkeeping and compliance requirements for entities such as wireless providers and mobile device manufacturers that must implement beacon technology via hardware and/or software changes to mobile devices for all users. We raise inquiries and seek information on the cost and implementation timing for beacon technology, specifically as compared to managed access systems (MAS) or advanced detection, and who should bear these costs. In addition, we request information on the various types of costs for entities associated with this type of technology, including hardware, software, network integration, engineering, ongoing maintenance, etc., which is germane to our analysis of any regulatory next steps and could impact the nature and type of recordkeeping, reporting, and compliance obligations that may result in this proceeding.

5. The Commission also seeks further comment on potential regulatory steps that might be necessary to ensure that MAS maintains effectiveness as wireless technology evolves from 2G to widespread 3G/4G and ultimately 5G deployments. We note that the commenters on the July 2020 Refresh Public Notification (85 FR 49999, August 17, 2020) largely agree that MAS Evolved will be even more effective than existing MAS systems. In this SFNPRM, we seek further comment on steps the Commission could take to facilitate MAS deployments. Depending on the comments, it is possible that the Commission could mandate roaming agreements between wireless carriers and solutions providers in the corrections context given the vital public safety concerns, which would impact small entities. It is also possible that the Commission could implement other approaches that could be developed by the wireless providers and/or the vendors to add features or services and help defray the cost of MAS deployments and operations. Lastly, the Commission could revise the previously streamlined leasing rules in the correctional facility context to facilitate further Contraband Interdiction System (CIS) deployments nationwide. Each of these potential rule changes could require additional recordkeeping and reporting from entities that seek to deploy MAS Evolved solutions.

Federal Communications Commission.

Katura Jackson,
Federal Register Liaison Officer.

BILLING CODE 6712–01–P
AGENCY FOR INTERNATIONAL DEVELOPMENT

Information Collection; Safeguarding Against Exploitation, Sexual Abuse, Child Abuse, and Neglect

AGENCY: U.S. Agency for International Development.

ACTION: Notice and request for comments.

SUMMARY: U.S. Agency for International Development (USAID), as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on the following information collection, as required by the Paperwork Reduction Act of 1995. Comments are requested concerning whether the proposed collection of information is necessary for sustaining USAID-funded programming; the accuracy of USAID's estimate of the burden of the proposed collection of information; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the collection of information on respondents. This notice provides 60 days for public comment preceding submission of the collection to OMB.

DATES: Comments must be received no later than October 12, 2021.

ADDRESSES: USAID invites interested persons to submit comments on this collection through the following methods:

1. Web: Through the Federal eRulemaking Portal at http://www.regulations.gov. This website provides instructions and includes the ability to type short comments directly into the comment field or attach a file for lengthier comments.

2. Email: For comments sent via email, please address them to aapsm@usaid.gov and cite OMB Control Number XXXX–XXXX Safeguarding Against Exploitation, Sexual Abuse, Child Abuse, and Neglect in the subject line of the email. Email submissions must be received before the close of the comment period.

FOR FURTHER INFORMATION CONTACT: Keetah Salazar-Thompson via email to aapsm@usaid.gov.

Instructions: Comments received generally will be posted without change to http://www.regulations.gov, including any personal and/or business confidential information provided.

SUPPLEMENTARY INFORMATION:

A. Need and Uses

The purpose of this collection is to enable the U.S. Agency for International Development to respond to allegations of exploitation, sexual abuse, child abuse, and neglect and institute controls necessary to prevent, detect, address, and resolve allegations of exploitation, sexual abuse, child abuse, and neglect, consistent with the minimum set of policies and internal controls necessary to prevent, detect, address, and respond to allegations of exploitation, sexual abuse, child abuse, and neglect, and take appropriate action against personnel, invitees, subrecipients, and agents that commit exploitation, sexual abuse, child abuse, or neglect or those who fail to take reasonable steps to prevent it. The Recipient’s compliance plan must be appropriate to the size and complexity of the award and to the nature and scope of the activities, including the particular risks presented by the operating context and the assistance, services or supplies provided.

Recipient’s will be required to provide the compliance plan to the Agreement Officer upon request. The plan must include, at a minimum, the following:

(a) An awareness program to inform its personnel, invitees, and agents about USAID’s zero tolerance policy for inaction regarding exploitation, sexual abuse, child abuse, and neglect and the minimum set of policies and internal controls necessary to prevent, detect, address, and resolve allegations of exploitation, sexual abuse, child abuse, and neglect, and take appropriate action against subrecipients, personnel, invitees, and agents that commit exploitation, sexual abuse, child abuse, or neglect or those who fail to take reasonable steps to prevent it, including the activities prohibited and the action that will be taken in response to violations;

(b) A description of how project beneficiaries are made aware that engaging in or tolerating exploitation, sexual abuse, child abuse, and neglect is prohibited, the Recipient’s survivor-centered approach for response, and how beneficiaries can report allegations of exploitation, sexual abuse, child abuse, and neglect;

(c) Accessible reporting processes for anyone to report, without fear of retaliation, exploitation, sexual abuse, child abuse, and neglect;
(d) Procedures for the Recipient to prevent any of its personnel, invitees, or agents or subrecipient at any tier and at any dollar value from engaging in or tolerating exploitation, sexual abuse, child abuse, and neglect. The Recipient must also have procedures to monitor, detect, and terminate, or take any other actions as may be appropriate, for any of its personnel, invitees, or agents, subrecipients or subrecipient personnel that have engaged in such activities.

B. Annual Burden

There will be a small, but measurable reporting burden for the notification of any credible information of exploitation, sexual abuse, child abuse, or neglect and any actions taken in response by any Recipient. Information in the notifications should include: The award title and number, the location of the program, name of the organization, a point of contact, the type of allegation, and the position(s) of those involved, and if beneficiaries or minors were involved. The notification may also identify any actions taken to investigate or respond to the allegation, including referral to local authorities. If known or available, next steps to address the perpetrator and/or the survivor’s and whistleblower’s safety, resources and information available to the survivor, and any established organizational procedures or framework to respond may also be provided. The notifications should include: Any interim or final measures taken or planned to ensure accountability of the alleged perpetrator, as well as protective measures or reforms, such as changes to applicable policies and procedures, in order to assess, address, or mitigate factors that contributed to the incident. USAID expects reporting to increase as awareness for this requirement increases in the short-term. Therefore, the annual reporting burden for notification to USAID is estimated as follows:

Respondents: 253.
Responses per respondent: 2.
Preparation hours per response: 4 hours.
Total response burden hours: 2,024.

Public reporting and recordkeeping burden for this collection of information is estimated to average 24 hours to prepare a compliance plan, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. The number below includes all grants and estimated subawards over $500,000 required to be performed outside the United States.

The annual recordkeeping burden for the compliance plan is estimated as follows:

Recipients: 2,365.
Records per recordkeeper: 1.
Preparation hours per response: 24.
Total recordkeeping burden hours: 56,760.

For Recipients that meet the $500,000 threshold to maintain a compliance plan, there will be a small but measurable reporting burden for submission of the compliance plan, but only when it is requested by the Agreement Officer. We anticipate that requests to submit the compliance plan will only occur in circumstances where the Agreement Officer has reason to believe that there may be exploitation, sexual abuse, child abuse, or neglect in USAID funded programming. Therefore, the annual reporting burden for submission of the compliance plan to USAID is estimated as follows:

Respondents: 200.
Responses per respondent: 1.
Preparation hours per response: 1.
Total response burden hours: 200.

Keetah Salazar-Thompson,
Coordinator, Action Alliance for Preventing Sexual Misconduct, U.S. Agency for International Development.

FOR FURTHER INFORMATION CONTACT:
Consuelo Brandeis, Southern Research Station, at 865–862–2028. Individuals who use telecommunication devices for the deaf (TDD) may call the Federal Relay Service (FRS) at 1–800–877–8339 twenty-four hours a day, every day of the year, including holidays.

SUPPLEMENTARY INFORMATION:

Title: Forest Industries and Logging Operations Data Collection Systems.
OMB Number: 0596–0010.
Expiration Date of Approval: February 28, 2022.

Type of Request: Extension with revision of a currently approved information collection.

Abstract: The Forest and Range Renewable Resources Planning Act of 1974 and the Forest and Rangeland Renewable Resources Research Act of 1978 require the Forest Service to evaluate trends in the use of roundwood (logs in whole or chipped form), to forecast anticipated levels of roundwood use and availability, and to analyze changes in the harvest of these resources from the United States’ forests. This data collection effort has been conducted since the mid-1970s, with various adjustments through time to accommodate new questions, sampling approaches, and/or data collection needs. Data collection is performed by Forest Service personnel and cooperators from State natural resource agencies and universities. Currently, the data collection gathers information from two groups: Primary wood industry and logging operations.

Primary Wood Industry Questionnaire: This questionnaire is used by the Forest Service to collect and evaluate information from primary wood-using mills, including small, part-time mills, as well as large corporate
entities. Primary wood-using mills are facilities that use roundwood to manufacture a primary product, such as lumber, wood pulp, veneer, etc. Forest Service personnel evaluate the information collected and use it to monitor volume of roundwood harvested throughout the Nation by primary product type, tree species, and origin. The information gathered is not available from other sources and provides baseline data for resource analyses, which are a key component in the formulation of forestry programs, industrial expansion decisions, and forest policy. Primary wood industry questionnaires are delivered to mills via regular mail or through email. Responses are collected through email, regular mail, phone interviews, or personal mill visits.

Logging Operations Questionnaire: This questionnaire is used by the Forest Service to collect and evaluate information from logging operations to help characterize the logging industry and its response to outside influences. The information is used to measure the ‘health’ of the logging industry as well as to provide background information for decision-making. The logging operations questionnaire is administered in person by field personnel during tree utilization data collection at sampled logging sites. For this extension, we are proposing to revise the questionnaire for the primary wood industry survey to simplify the format and eliminate questions that are no longer needed. At the same time, we propose to test a few survey mechanisms that could help improve survey response and lower respondents’ burden by piloting various survey structures including different questionnaire lengths (e.g., a three-question post-card or a short version of the traditional survey). We also propose using a cognitive survey to assess respondent’s understanding of the survey questions and to identify areas of potential clarification. These proposed tests are in direct response to comments received by State Foresters or Tribal representatives, procurement foresters and loggers.

Estimate of Burden per Response: Accounting for the proposed tests, the primary wood industry questionnaire’s estimated burdens are 41 minutes for the traditional format, to be delivered to a sample of 2,500 mills; 25 minutes for the short-form test version going to a sample of 98 mills; five minutes for the three-question post-card test to be sent to a sample of 2,500 mills; five minutes to a sample of 500 mills which will be screened for the cognitive interview; and 60 minutes for the cognitive interviews to be conducted for 20 mills identified during the screening process. Estimated time burden for the logging operations questionnaire is 11 minutes to be distributed to a sample of 150 logging operations.

Estimates:
- Estimated Annual Number of Respondents: 5,768.
- Estimated Annual Number of Responses per Respondent: 1.
- Estimated Total Annual Burden on Respondents: 2,060 hours.

Comment is invited on: (1) Whether this collection of information is necessary for the stated purposes and proper performance of the function of the Agency, including whether the information will have practical or scientific utility; (2) the accuracy of the Agency’s estimate of the burden of the information collection, including validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the information collection on respondents, including the use of automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

All comments received in response to this notice, including names and addresses when provided, will be a matter of public record. Comments will be summarized and included in the submission request toward Office of Management and Budget approval.

Alexander L. Friend, Deputy Chief, Research and Development.

DEPARTMENT OF AGRICULTURE
Forest Service
Request for Applications: The Community Forest and Open Space Conservation Program

AGENCY: Forest Service, Agriculture (USDA).
ACTION: Request for applications.

SUMMARY: The Forest Service, U.S. Department of Agriculture (USDA), State and Private Forestry, and Cooperative Forestry staff requests applications for the Community Forest and Open Space Conservation Program (Community Forest Program or CFP). This is a competitive grant program whereby local governments, qualified nonprofit organizations, and Indian tribes are eligible to apply for grants to establish community forests through fee simple acquisition of private forest land from a willing seller. The purpose of the program is to establish community forests by protecting forest land from conversion to non-forest uses and provide community benefits such as sustainable forest management; environmental benefits including clean air, water, and wildlife habitat; benefits from forest-based educational programs; benefits from serving as models of effective forest stewardship; and recreational benefits secured with public access.

DATES: Interested local government and nonprofit applicants must submit applications to the State Forester. Tribal applicants must submit applications to the appropriate Tribal government officials. All applications, either hardcopy or electronic, must be received by State Foresters or Tribal governments by January 10th, 2022. State Foresters or Tribal government officials must forward applications to the appropriate Forest Service Regional office or International Institute of Tropical Forestry by February 7th, 2022.

ADDRESSES: All local government and qualified nonprofit organization applications must be submitted to the State Forester of the State where the property is located. All Tribal applications must be submitted to the equivalent Tribal government official. Applicants are encouraged to contact and work with the Forest Service Region or International Institute of Tropical Forestry, and State Forester or equivalent Tribal government official when developing their proposal. Applicants must consult with the State Forester and equivalent Tribal government official prior to requesting technical assistance for a project.
State Forester’s member roster may be found on https://www.stateforesters.org/who-we-are/our-membership/. All applicants must also send an email to SM.FS.CFP@usda.gov to confirm an application has been submitted for funding consideration.

State Foresters and Tribal government officials shall submit applications, either electronic or hardcopy, to the appropriate Forest Service Region/Institute contact noted below.

FOR FURTHER INFORMATION CONTACT: For questions regarding the grant application or administrative regulations, contact Scott Stewart, Program Coordinator, 202–465–5038, scott.stewart@usda.gov and Nausheen Iqbal, 202–504–7554, nausheen.iqbal@usda.gov. Additional information about the Community Forest and Open Space Conservation Program may be obtained at https://www.fs.usda.gov/managing-land/private-land/community-forest. Individuals who use telecommunications devices for the hearing-impaired (TDD) may call the Federal Relay Service (FRS) at 1–800–877–8339, 24 hours a day, every day of the year, including holidays.

SUPPLEMENTARY INFORMATION: Eligible lands for grants funded under this program are private forest that are at least five acres in size, suitable to sustain natural vegetation, and at least 75 percent forested. The lands must also be threatened by conversion to non-forest uses, must not be held in trust by the United States on behalf of any Indian Tribe, must not be Tribal allotment lands, must be offered for sale by a willing seller, and if acquired by an eligible entity, must provide defined community benefits under CFP and allow public access.

CFDA number 10.689: To address the goals of Section 7A of the Cooperative Forestry Assistance Act of 1978 (16 U.S.C. 2103d) as amended, the Forest Service is requesting proposals for community forest projects that protect forest land that has been identified as a national, regional, or local priority for protection and to assist communities in acquiring forestland that will provide public recreation, environmental and economic benefits, and forest-based educational programs.

Detailed information regarding what to include in the application, definitions of terms, eligibility, and necessary prerequisites for consideration can be found in the final program rule, published April 2, 2021 (86 FR 17302), which is available at https://www.fs.usda.gov/managing-land/private-land/community-forest/program.

Grant Application Requirements
1. Eligibility Information
   a. Eligible Applicants. A local governmental entity, Indian Tribe (including Alaska Native Corporations), or a qualified nonprofit organization that is qualified to acquire and manage land. Individuals are not eligible to receive funds through this program.
   b. Cost Sharing (Matching Requirement). All applicants must demonstrate a 50 percent match of the total project cost. The match can include cash, in-kind services, or donations, which shall be from a non-Federal source. For additional information, please see § 230.6 of the final rule.
   c. DUNS Number. All applicants shall include a Data Universal Numbering System (DUNS) number in their application. For this requirement, the applicant is the entity that meets the eligibility criteria and has the legal authority to apply for and receive the grant. For assistance in obtaining a DUNS number at no cost, call the DUNS number request line 1–866–705–5711 or register on-line at http://fedgov.dnb.com/webform.
   d. System for Award Management. All prospective awardees shall be registered in the System for Award Management prior to award, during performance, and through final payment of any grant resulting from this solicitation. Further information can be found at: https://www.sam.gov/SAM/. For assistance, contact the Federal Service Desk 1–866–606–8220.

2. Award Information
   Funds have not yet been appropriated for CFP in FY 2022. Individual grant applications may not exceed $600,000, which does not include technical assistance requests. The Federal Government’s obligation under this program is contingent upon the availability of appropriated funds.
   No legal liability on the part of the Government shall be incurred until funds are committed by the grant officer for this program to the applicant in writing. The initial grant period shall be for two years, and acquisition of lands should occur within that timeframe. Lands acquired prior to the grant award are not eligible for CFP funding. The grant may be reasonably extended by the Forest Service when necessary to accommodate unforeseen circumstances in the land acquisition process. Written annual financial performance reports

44687
and semi–annual project performance reports shall be required and submitted to the appropriate grant officer.

Technical assistance funds, totaling not more than 10 percent of all funds, may be allocated to State Foresters and equivalent officials of the Indian tribe. Technical assistance, if provided, will be awarded at the time of the grant. Applicants shall work with State Foresters and equivalent officials of the Indian Tribe to determine technical assistance needs and include the technical assistance request in the project budget.

As funding allows, applications submitted through this request may be funded in future years, subject to the availability of funds and the continued feasibility and viability of the project.

3. Application Information

Application submission. All local governments and qualified nonprofit organizations’ applications must be submitted to the State Forester where the property is located by January 10th, 2022. All Tribal applications must be submitted to the equivalent Tribal officials by January 10th, 2022.

Applications may be submitted either electronically or hardcopy to the appropriate official. The State Forester’s contact information may be found at: https://www.stateforesters.org/who-we-are/our-membership/.

All applicants must also send an email to SM.FS.CFP@usda.gov to confirm an application has been submitted to the State Forester or equivalent Tribal official for funding consideration. All State Foresters and Tribal government officials must forward applications to the Forest Service by February 7th, 2022.

4. Application Requirements

The following section outlines grant application requirements:

a. The application can be no more than eight pages long, plus no more than two maps (eight and half inches by eleven inches in size).

b. Documentation verifying that the applicant is an eligible entity and that the land proposed for acquisition is eligible (see § 230.2 of the final rule).

c. Applications must include the following, regarding the property proposed for acquisition:

(1) A description of the property, including acreage and county location;

(2) A description of current land uses, including improvements;

(3) A description of forest type and vegetation cover;

(4) A map of sufficient scale to show the location of the property in relation to roads and other improvements as well as parks, refuges, green/open space, urban natural areas, and other protected lands in the vicinity;

(5) A description of applicable zoning and other land use regulations affecting the property;

(6) A description of the type of community being served and the extent of community benefits, including to underserved communities (see Project Selection Criteria);

(7) A description of relationship of the property within and its contributions to landscape conservation initiatives, as well as any environmental justice initiatives, if applicable; and

(8) A description of any threats of conversion to non-forest uses, including any encumbrances on the property that prevent conversion to non-forest uses.

d. Information regarding the proposed establishment of a community forest, including:

(1) A description of the benefiting community, including demographics, availability of and access to green spaces and other vulnerabilities including health, economic, environmental and climate impacts faced by the community and a description of the associated benefits;

(2) A description of community involvement, including underrepresented communities, to-date in the planning of the community forest acquisition, and the participation of different community groups anticipated in long-term management;

(3) An identification of persons and organizations that support the project, a description of how they represent the organizations that support the project, a description of the associated benefits; and

(4) Information regarding the proposed land acquisition, including:

(1) A proposed project budget not exceeding $600,000 and technical assistance needs as coordinated with the State Forester or equivalent Tribal government official (section § 230.6 of the final program rule);

(2) The status of due diligence, including signed option or purchase and sale agreement, title search, minerals determination, and appraisal;

(3) Description and status of costshare (secure, pending, commitment letter, etc.) (section § 230.6 of the final rule);

(4) The status of negotiations with participating landowner(s) including purchase options, contracts, and other terms and conditions of sale;

(5) The proposed timeline for completing the acquisition and establishing the community forest; and

(6) Long term management costs and funding source(s).

5. Forest Service’s Project Selection Criteria

- Using the criteria described below, to the extent practicable, the Forest Service will give priority to applications that maximize the delivery of community benefits, as defined in the final rule (see section § 230.2 of the final rule); and

- The Forest Service will evaluate all applications received by the State Foresters or equivalent Tribal government officials and award grants based on the following criteria:

  (1) Type and extent of community benefits provided, including to underserved communities. Community benefits are defined in the final program rule as:

    (i) Economic benefits, such as timber and non-timber products resulting from sustainable forest management, recreation, and tourism;

    (ii) Environmental benefits, including clean air and water, stormwater management, wildlife habitat, and cultural resources.

  (iii) Benefits from forest-based experiential learning, including K–12 conservation education programs; vocational education programs in disciplines such as forestry and environmental biology; and environmental education through individual study or voluntary participation in programs offered by organizations such as 4–H, Boy or Girl Scouts, Master Gardeners, etc.;

  (iv) Benefits from serving as replicable models of effective forest stewardship for private landowners; and

  (v) Recreational benefits such as hiking, hunting, and fishing secured through public access.

- Extent and nature of community engagement, including participation by...
DEPARTMENT OF AGRICULTURE
Rural-Business Cooperative Service
Agency Information Collection Activities: Revision of a Currently Approved Information Collection; Comments Request; Rural Development Loan Servicing
AGENCY: Rural Business-Cooperative Service, Agriculture (USDA).
ACTION: 60-Day notice and request for comments.
SUMMARY: In accordance with the Paperwork Reduction Act of 1995, this notice announces the Rural Business-Cooperative Service’s (RBCS) intention to request a revision of a currently approved information collection in support of Rural Development Loan Servicing for the Intermediary Relending Program.
DATES: Comments on this notice must be received by October 12, 2021 to be assured of consideration.
SUPPLEMENTARY INFORMATION:
Title: Rural Development Loan Servicing.
OMB Number: 0570–0015.
Expiration Date of Approval: November 30, 2021.
Type of Request: Revision of a currently approved information collection.
Abstract: Subpart R of 7 CFR part 1951 contains regulations for servicing and liquidating loans made by Rural Development under the Intermediary Relending Program (IRP) and the Rural Microentrepreneur Assistance Program (RMAP) to eligible intermediaries and applies to ultimate recipients and other involved parties. The information requested is vital to RBS for prudent loan servicing, credit decisions, and reasonable program monitoring.
Rural Development has determined that the financial reporting requirements are necessary to provide the Agency with current information in order to monitor the program, to make various reporting requirements to Congress, and for program innovation and expansion under the Government’s Performance Review.
Servicing of the IRP is administered by RBCS in Washington, DC, which will be the primary user of the information collected. Under the Freedom of Information Act (FOIA), the general public can request the majority of the data by the Agency from the intermediaries, except for information that is classified as confidential.
Estimate of Burden: Public reporting burden for this collection of information is estimated to average 3 hours per response.
Respondents: Non-profit corporations, public agencies, Indian groups and cooperatives.
Estimated number of Respondents: 475.
Estimated number of responses: 3,941.
Estimated total annual burden on respondents: 11,878 hours.
Copies of this information collection can be obtained from Kimble Brown, Innovation Center—Regulations Management Division, at (202) 720–6780.
Comments
Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of RBCS, including whether the information will have practical utility; (b) the accuracy of RBCS estimate of the burden of the proposed collection of information including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology. All responses to this notice will be summarized and included in the request for OMB approval. All comments will also become a matter of public record.
Mark Brodzinski,
Acting Administrator, Rural Business-Cooperative Service.

DEPARTMENT OF COMMERCE

Economic Development Administration

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Application Materials for EDA Investment Assistance

The Department of Commerce will submit the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, on or after the date of publication of this notice. We invite the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. Public comments were previously requested via the Federal Register on May 27, 2021, during a 60-day comment period. This notice allows for an additional 30 days for public comments.

Agency: Economic Development Administration (EDA), Commerce.

OMB Control Number: 0610–0094.

Type of Request: Revision and extension of a currently approved information collection.

Number of Respondents: For construction projects, 977 estimated respondents, and for non-construction projects, 1,663 estimated respondents, for a total of 2,640 estimated respondents.

Average Hours per Response: For construction projects, 43.0 estimated hours per response, and for non-construction projects, 17.1 estimated hours per response.

Burden Hours: For construction projects, 42,011 estimated annual burden hours, and for non-construction projects, 28,437 estimated annual burden hours, for a total of 70,448 estimated total annual burden hours.

International Trade Administration

[A–552–831]

Seamless Refined Copper Pipe and Tube From the Socialist Republic of Vietnam: Antidumping Duty Order

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: Based on the affirmative final determinations by the Department of Commerce (Commerce) and the U.S. International Trade Commission (ITC), Commerce is issuing an antidumping duty (AD) order on seamless refined copper pipe and tube (copper pipe and tube) from the Socialist Republic of Vietnam (Vietnam).

SUPPLEMENTARY INFORMATION:

Background

In accordance with sections 735(d) and 777(i)(1) of the Tariff Act of 1930, as amended (the Act), on June 24, 2021, Commerce published its affirmative final determination of sales at less than fair value (LTFV) of copper pipe and tube from Vietnam. As part of this determination, Commerce made negative critical circumstances findings for the sole mandatory respondent, Hailiang (Vietnam) Copper Manufacturing Company (Hailiang Vietnam) and its affiliated trading company Hong Kong Hailiang Metal Trading Limited (also known as Hong Kong Hailiang Metal Trading Limited) (Hong Kong Hailiang) (collectively, Hailiang Vietnam/Hong Kong Hailiang), the non-examined, separate rate companies, and the Vietnam-wide entity. On August 5, 2021, the ITC notified Commerce of its final affirmative determination that an industry in the United States is materially injured by reason of LTFV imports of copper pipe and tube from Vietnam, within the meaning of section 735(b)(1)(A)(i) of the Act.

Scope of the Order

The products covered by this order are copper pipe and tube from Vietnam. For a complete description of the scope of the order, see the appendix to this notice.

Order

In accordance with sections 735(b)(1)(A)(i) and 735(d) of the Act, the ITC notified Commerce of its final determination that an industry in the United States is materially injured by reason of imports of copper pipe and tube from Vietnam. Therefore, Commerce is issuing this order in accordance with section 735(c)(2) of the Act. Because Commerce has determined that sales of copper pipe and tube from Vietnam were made at LTFV, and the ITC determined that imports of copper pipe and tube from Vietnam are materially injuring a U.S. industry, unliquidated entries of such merchandise from Vietnam entered, or withdrawn from warehouse, for consumption are subject to the assessment of antidumping duties.

Id.

Id.

In accordance with section 736(a)(1) of the Act, Commerce will direct U.S. Customs and Border Protection (CBP) to assess, upon further instruction by Commerce, antidumping duties equal to the amount by which the normal value of the merchandise exceeds the export price (or constructed export price) of the subject merchandise for all relevant entries of copper pipe and tube from Vietnam. Antidumping duties will be assessed on unliquidated entries of copper pipe and tube from Vietnam entered, or withdrawn from warehouse, for consumption on or after February 1, 2021, the date of publication of the Preliminary Determination, but antidumping duties will not be assessed on entries of subject merchandise occurring after the expiration of the provisional measures period and before publication in the Federal Register of the ITC’s final injury determination, as further described below.

Continuation of Suspension of Liquidation

In accordance with section 736 of the Act, Commerce will instruct CBP to continue to suspend liquidation on all relevant entries of copper pipe and tube from Vietnam entered, or withdrawn from warehouse, for consumption on or after the date of publication of the ITC’s final affirmative injury determination in the Federal Register. These instructions suspending liquidation will remain in effect until further notice.

Pursuant to 735(c)(1)(B) of the Act and 19 CFR 351.210(d), Commerce will also instruct CBP to require cash deposits equal to the appropriate estimated weighted-average dumping margin indicated in the table below. Accordingly, effective on the date of publication of the ITC’s final affirmative injury determination, CBP will require, at the same time as an importer of record would normally deposit estimated duties on the subject merchandise, a cash deposit for each entry of subject merchandise equal to the appropriate estimated weighted-average dumping margins listed below.

Estimated Weighted-Average Dumping Margins

The estimated weighted-average dumping margins are as follows:

<table>
<thead>
<tr>
<th>Exporter</th>

Provisional Measures

Section 733(d) of the Act states that suspension of liquidation pursuant to an affirmative preliminary determination may not remain in effect for more than four months, except that Commerce may extend the four-month period to no more than six months at the request of exporters representing a significant proportion of exports of the subject merchandise. Commerce published its affirmative Preliminary Determination on February 1, 2021. 7 On February 8, 2021, Commerce postponed the Final Determination and extended the provisional measures period from four months to six months. 8 Commerce published the Final Determination in the Federal Register on June 24, 2021. 9 The six-month period beginning on the date of publication of the LTFV Preliminary Determination ended on July 30, 2021.

Therefore, in accordance with section 733(d) of the Act, Commerce will instruct CBP to terminate the suspension of liquidation and to liquidate, without regard to antidumping duties, unliquidated entries of copper pipe and tube from Vietnam, entered, or withdrawn from warehouse, for consumption after July 30, 2021, the date on which the provisional measures expired, through the day preceding the date of publication of the ITC’s final affirmative injury determination in the Federal Register. Suspension of liquidation and the collection of cash deposits will remain on the date of publication of the ITC’s final determination in the Federal Register.

Notification to Interested Parties

This notice constitutes the AD order with respect to copper pipe and tube from Vietnam pursuant to section 736(a) of the Act. Interested parties can find a list of AD orders currently in effect at https://enforcement.trade.gov/stats/iastats1.html.

This order is published in accordance with section 736(a) of the Act and 19 CFR 351.211(b).

Dated: August 9, 2021.

Christian Marsh,
Acting Assistant Secretary for Enforcement and Compliance.

 Appendix

Scope of the Order

The products covered by this order are all seamless circular refined copper pipes and tubes, including redraw hollows, greater than or equal to 6 inches (152.4 mm) in actual length and measuring less than 12.130 inches (308.102 mm) in actual outside diameter (OD), regardless of wall thickness, bore (e.g., smooth, enhanced with inner grooves or ridges), manufacturing process (e.g., hot finished, cold-drawn, annealed), outer surface (e.g., plain or enhanced with grooves, ridges, fins, or gills), end finish (e.g., plain, capped, plugged, with compression or other fitting), or physical configuration (e.g., straight, coiled, bent, wound on spools).

The scope of this order covers, but is not limited to, seamless refined copper pipe and tube produced or comparable to the American Society for Testing and Materials Standard Specification for Copper and Copper-Alloy Pipe, Tubes, and Tubing for General-Purpose Applications, and other similar products.

6 See Final Determination.

7 See Final Determination.

8 See Seamless Refined Copper Pipe and Tube from the Socialist Republic of Vietnam: Postponement of Final Determination in the Less-
Excluded from the scope of this order are all seamless circular hollows of refined copper less than 12 inches in actual length whose actual OD exceeds its actual length.

The products subject to this order are currently classifiable under subheadings 7411.10.1030 and 7411.10.1090 of the Harmonized Tariff Schedule of the United States (HTSUS). Products subject to the order may also enter under HTSUS subheadings 7407.10.1500, 7419.99.5050, 8415.90.8065, 8415.90.8085. Although the HTSUS subheadings are provided for convenience and customs purposes, the written subheadings are provided for convenience and the physical parameters described therein.

Also included within the scope of this order are all sets of covered products, including “line sets” of seamless refined copper tubes (with or without fittings or insulation) suitable for connecting an outdoor air conditioner or heat pump to an indoor evaporator unit. The phrase “all sets of covered products” denotes any combination of items put up for sale that is comprised of merchandise subject to the scope.

“Refined copper” is defined as: (1) Metal containing at least 99.85 percent by actual weight of copper; or (2) metal containing at least 97.5 percent by actual weight of copper, provided that the content by actual weight of any other element does not exceed the following limits:

<table>

Meeting Topics

The PAC meeting topics may include the following: (1) Outcomes of the 2020 annual session of the WCPFC and 2021 sessions of the WCPFC Scientific Committee, Northern Committee, and Technical and Compliance Committee; (2) issues to be considered in the WCPFC 2021 annual session; (3) potential U.S. proposals to the WCPFC 2021 annual session; and (4) other issues.
Taking and Importing Marine Mammals; Taking Marine Mammals Incidental to Geophysical Surveys Related to Oil and Gas Activities in the Gulf of Mexico

SUMMARY: In accordance with the Marine Mammal Protection Act (MMPA), as amended, its implementing regulations, and NMFS' MMPA Regulations for Taking Marine Mammals Incidental to Geophysical Surveys Related to Oil and Gas Activities in the Gulf of Mexico, notification is hereby given that a Letter of Authorization (LOA) has been issued to Taylor Energy Company LLC (Taylor) for the take of marine mammals incidental to geophysical survey activity in the Gulf of Mexico.

DATES: The LOA is effective from August 15, 2021, through August 15, 2022.

ADDRESSES: The LOA, LOA request, and supporting documentation are available online at: www.fisheries.noaa.gov/action/incidental-take-authorization-oil-and-gas-industry-geophysical-survey-activity-gulf-mexico. In case of problems accessing these documents, please call the contact listed below (see FOR FURTHER INFORMATION CONTACT).

FURTHER INFORMATION CONTACT: Ben Laws, Office of Protected Resources, NMFS, (301) 427–8401.

SUPPLEMENTARY INFORMATION:

ANALYSIS

An authorization for incidental takings shall be granted if NMFS finds that the taking will have a negligible impact on the species or stock(s), will not have an immutable adverse impact on the availability of the species or stock(s) for subsistence uses (where relevant), and if the permissible methods of taking and requirements pertaining to the mitigation, monitoring and reporting of such takings are set forth. NMFS has defined “negligible impact” in 50 CFR 216.103 as an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival. Excess with respect to certain activities not pertinent here, the MMPA defines “harassment” as: Any act of pursuit, torment, or annoyance which (i) has the potential to injure a marine mammal or marine mammal stock in the wild (Level A harassment); or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering (Level B harassment). On January 19, 2021, we issued a final rule with regulations to govern the unintentional taking of marine mammals incidental to geophysical survey activities conducted by oil and gas industry operators, and those persons authorized to conduct activities on their behalf (collectively “industry operators”). In Federal waters of the U.S. Gulf of Mexico (GOM) over the course of 5 years (86 FR 5322; January 19, 2021), the rule was based on our findings that the total taking from the specified activities over the 5-year period will have a negligible impact on the affected species or stock(s) of marine mammals and will not have an immutable adverse impact on the availability of those species or stocks for subsistence uses. The rule became effective on April 19, 2021.

OUR RULEMAKING PROCESS

Our regulations at 50 CFR 217.180 et seq. allow for the issuance of LOAs to industry operators for the incidental take of marine mammals during geophysical survey activities and prescribe the permissible methods of taking and other means of effecting the least practicable adverse impact on marine mammal species or stocks and their habitat (often referred to as mitigation), as well as requirements pertaining to the monitoring and reporting of such taking. Under 50 CFR 217.186(e), issuance of an LOA shall be based on a determination that the level of taking will be consistent with the findings made for the total taking allowable under these regulations and a determination that the amount of take authorized under the LOA is of no more than small numbers.

The acoustic exposure modeling performed in support of the rule provides 24-hour exposure estimates for each species, specific to each modeled survey type in each zone and season. Exposure modeling results were generated using the single airgun proxy. Because those results assume use of a 90-in³ airgun, the take numbers authorized through this LOA are considered conservative (i.e., they likely overestimate take) due to differences in the sound source planned for use by Taylor, as compared to those modeled for the rule. The survey is planned to occur for 3 days in Zone 5. The season is not known in advance. Therefore, the take estimates for each species are based on the season that has the greater value for the species (i.e., winter or summer). In this case, use of the exposure modeling produces results that are substantially smaller than average GOM group sizes for multiple species (i.e., estimated exposure values are less than 10 percent of assumed average group size for the majority of species) [Maze-Foley and Mullin, 2006]. NMFS' typical practice in such a situation is to increase exposure estimates to the assumed average group size for a species in order to ensure that, if the species is encountered, exposures will not exceed the authorized take number. However, other relevant considerations here lead to a determination that increasing the estimated exposures to average group size for purposes of acoustic exposure modeling, the GOM was divided into seven zones. Zone 1 is not included in the geographic scope of the rule.

FOR FURTHER INFORMATION CONTACT: Ben Laws, Office of Protected Resources, NMFS, (301) 427–8401.
sizes would likely lead to an overestimate of actual potential take. In this circumstance, the very short survey duration and relatively small Level B harassment isopleths produced through use of a single airgun (compared with an airgun array) mean that it is unlikely that certain species would be encountered at all, much less that the encounter would result in exposure of a greater number of individuals than is estimated through use of the exposure modeling results. As a result, in this case NMFS has not increased the estimated exposure values to assumed average group sizes in authorizing take. Based on the results of our analysis, NMFS has determined that the level of taking expected for this survey and authorized through the LOA is consistent with the findings made for the total taking allowable under the regulations. See Table 1 in this notice and Table 9 of the rule (86 FR 5322; January 19, 2021).

Small Numbers Determination

Under the GOM rule, NMFS may not authorize incidental take of marine mammals in an LOA if it will exceed “small numbers.” In short, when an acceptable estimate of the individual marine mammals taken is available, if the estimated number of individual animals taken is up to, but not greater than, one-third of the best available abundance estimate, NMFS will determine that the numbers of marine mammals taken of a species or stock are small. For more information please see NMFS’ discussion of the MMPA’s small numbers requirement provided in the final rule (86 FR 5322, 5438; January 19, 2021).

The take numbers for authorization, which are determined as described above, are used by NMFS in making the necessary small numbers determinations, through comparison with the best available abundance estimates (see discussion at 86 FR 5322, 5391; January 19, 2021). For this comparison, NMFS’ approach is to use the maximum theoretical population, determined through review of current stock abundance reports (SAR; www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-stock-assessments) and model-predicted abundance information (https://seamap.env.duke.edu/models/Duke/GOM/). For the latter, for taxa where a density surface model could be produced, we use the maximum mean seasonal (i.e., 3-month) abundance prediction for purposes of comparison as a precautionary smoothing of month-to-month fluctuations and in consideration of a corresponding lack of data in the literature regarding seasonal distribution of marine mammals in the GOM. Information supporting the small numbers determinations is provided in Table 1.

1 Scalar ratios were not applied in this case due to brief survey duration.
2 Best abundance estimate. For most taxa, the best abundance estimate for purposes of comparison with take estimates is considered here to be the model-predicted abundance (Roberts et al., 2016). For those taxa where a density surface model predicting abundance by month was produced, the maximum mean seasonal abundance was used. For those taxa where abundance is not predicted by month, only mean annual abundance is available. For the killer whale, the larger estimated SAR abundance estimate is used.
3 The final rule refers to the GOM Bryde’s whale (Balaenoptera edeni). These whales were subsequently described as a new species, Rice’s whale (Balaenoptera ricei) (Rosel et al., 2021).

Based on the analysis contained herein of Taylor’s proposed survey activity described in its LOA application and the anticipated take of marine mammals, NMFS finds that small numbers of marine mammals will be taken relative to the affected species or stock sizes (i.e., less than one-third of the best available abundance estimate) and therefore the taking is of no more than small numbers.

Authorization

NMFS has determined that the level of taking for this LOA request is consistent with the findings made for the total taking allowable under the incidental take regulations and that the amount of take authorized under the LOA is of no more than small numbers. Accordingly, we have issued an LOA to Taylor authorizing the take of marine mammals incidental to its geophysical survey activity, as described above.

Catherine Marzin, 
Acting Director, Office of Protected Resources, 
National Marine Fisheries Service.

BILLING CODE 3510–22–P
DEPARTMENT OF COMMERCE
National Oceanic and Atmospheric Administration
[RTID 0648--XB326]
Endangered and Threatened Species; Take of Anadromous Fish
AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.
ACTION: Notice of receipt of one enhancement permit application and request for comment.

SUMMARY: Notice is hereby given that NMFS has received one permit application submitted by California Department of Fish and Wildlife (CDFW) to enhance the propagation and survival of species listed under the Endangered Species Act (ESA) of 1973, as amended, for a 5-year period. This document serves to notify the public of the availability of the permit application for review and comment, prior to a decision by NMFS whether to issue the permit.

DATES: Comments or requests for a public hearing on the application must be received at the appropriate address (see ADDRESSES) no later than 5 p.m. Pacific standard time on September 13, 2021.

ADDRESSES: The permit application may be viewed online at: https://apps.nmfs.noaa.gov/preview/preview_open_for_comment.cfm. Written comments on the application should be submitted to the NMFS California Central Valley Office, 650 Capitol Mall, Suite 5–100, Sacramento, CA 95814. Comments may also be submitted by email to amanda.cranford@noaa.gov (include the permit number in the subject line of the email).

FURTHER INFORMATION CONTACT: Amanda Cranford, Sacramento, CA (Phone: 916–930–3706; Email: amanda.cranford@noaa.gov). Permit application instructions are available from the address above, or online at https://apps.nmfs.noaa.gov.

SUPPLEMENTARY INFORMATION:

ESA-Listed Species Covered in This Notice
Chinook salmon (Oncorhynchus tshawytscha): Threatened, naturally produced and hatchery propagated Sacramento River winter-run;
Chinook salmon (Oncorhynchus tshawytscha): Threatened, naturally produced and hatchery-propagated Central Valley (CV) spring-run;
Steelhead (O. mykiss): Threatened, naturally produced and artificially propagated California Central Valley (CCV);
North American green sturgeon (Acipenser medirostris): Threatened, naturally produced southern distinct population segment (sDPS).

Background
Permit 18181–4R
CDFW is seeking to renew an enhancement permit under section 10(a)(1)(A) of the ESA for a period of 5 years that would allow take of both adult and juvenile Sacramento River winter-run Chinook salmon, CV spring-run Chinook salmon, CCV steelhead, and sDPS North American green sturgeon in the Sacramento River and its tributaries. This permit renewal would cover four monitoring and rescue efforts carried out by CDFW: (1) Juvenile emigration monitoring, (2) adult trapping for the Steelhead Monitoring Program, (3) Upper Sacramento River restoration site monitoring, and (4) fish salvage and rescue operations.

Each project has its own objectives.

Juvenile Emigration Monitoring
Juvenile Emigration Monitoring will take place at Tisdale Weir, Knights Landing, the Feather River High Flow Channel, and the Delta Entry sites, with the goals to monitor juvenile salmonid outmigration in real time, provide summaries of timing, abundance, and size distribution, provide timing information to water agencies for better management decisions, and evaluate how environmental conditions (flow, temperature, turbidity) affect downstream movement. The objectives of the Central Valley Steelhead Monitoring will be to estimate the steelhead population abundance, examine trends in abundance, and identify spatial distribution over time. The Upper Sacramento River Restoration Site Monitoring aims to evaluate the outcome of the Central Valley Project Improvement Act Section 3406(b)(13) gravel augmentation and restoration projects through documentation of spawning activity, relative abundance of juvenile salmonids using the restored habitat, habitat attributes and quantities in restored sites, and habitat conditions and fish presence in control and pre- and post-construction sites. Efforts associated with the Central Valley Fish Rescues will involve the collection, tagging, and relocation of entrained listed salmonids and sDPS green sturgeon at the fish collection facility at Wallace Weir, the Colusa Basin Drainage Canal, behind Fremont and Tisdale weirs, the Sacramento River, Deer Creek, Mill Creek, Antelope Creek, and various urban streams. The rescue program also assesses the magnitude of stranding and aims to document conditions resulting in high levels of stranding. CDFW staff will also monitor winter-run Chinook salmon redds that are at risk of being dewatered. In the event that a redd is likely to be dewatered, CDFW staff may physically modify the redd by hand to prevent complete dewatering and increase the likelihood of survival.

With the exception of the juvenile salmon CWT retrieval (above), the researchers are not proposing to kill any fish. However, a small number of fish may be incidentally killed as an inadvertent result of these

program.
activities. However, fish captured and relocated as part of the fish rescues would likely perish due to low flows and dissolved oxygen, coupled with high water temperatures, if it were not for this project.

The proposed projects could impact ESA-listed species by delaying migration, resulting in stress, or indirect mortality or indirect non-lethal effects as a result of stress, physical harm during insertion of tags, and/or susceptibility to predation upon displacement at release. These effects will be minimized by frequent (at least daily) trap checks and taking all possible measures to expedite the process of capturing, tagging, and releasing adult entrained fish. Anesthetization will follow strict guidelines and use the least amount of sedative necessary. Unintentional mortality of juvenile fish can occur during rotary screw trapping and will be minimized through a reduction in sampling effort or through increased checking/servicing of rotary-screw traps. Authority

Enhancement permits are issued in accordance with section 10(a)(1)(A) of the ESA (16 U.S.C. 1531 et seq.) and regulations governing listed fish and wildlife permits (50 CFR part 222). NMFS issues permits based on findings that such permits: (1) Are applied for in good faith; (2) if granted and exercised, would not operate to the disadvantage of the listed species that are the subject of the permit; (3) are consistent with the purposes and policies of section 2 of the ESA; (4) further a bona fide and necessary or desirable scientific purpose or enhance the propagation or survival of the endangered species, taking into account the benefits anticipated to be derived on behalf of the endangered species; and additional issuance criteria derived on behalf of the endangered species, taking into account the benefits anticipated to be derived on behalf of the endangered species; and additional issuance criteria.

NMFS will evaluate the permit application, associated documents, and comments submitted to determine whether the applications meet the requirements of section 10(a)(1)(A) of the ESA and the applicable Federal regulations. The final permit decisions will not be made until after the end of the 30-day public comment period and after NMFS has fully considered all relevant comments received. NMFS will publish notice of its final action in the Federal Register.

Angela Somma,
Chief, Endangered Species Division, Office of Protected Resources, National Marine Fisheries Service.

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE
National Oceanic and Atmospheric Administration

[RTID 0648–XB323]
Pacific Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of public meeting.

SUMMARY: The Pacific Fishery Management Council’s (Pacific Council) Ecosystem Subcommittee of the Scientific and Statistical Committee (SSC) will hold an online meeting to review new analyses conducted by the NMFS California Current Integrated Ecosystem Assessment team that may inform future annual reports to the Pacific Council on the state of the California Current Ecosystem.

DATES: The online meeting will be held Tuesday, August 31, 2021, from 1 p.m. to 5 p.m. Pacific Daylight Time (PDT). The online meeting will reconvene on Wednesday, September 1, 2021, from 8:30 a.m. to 12:30 p.m. PDT.

ADDRESSES: This meeting will be held online. Specific meeting information, including directions on how to join the meeting and system requirements will be provided in the meeting announcement on the Pacific Council’s website (see www.pcouncil.org). You may send an email to Mr. Kris Kleinschmidt (kris.kleinschmidt@noaa.gov) or contact him at (503) 820–2412 for technical assistance.

Council address: Pacific Fishery Management Council, 7700 NE Ambassador Place, Suite 101, Portland, OR 97220–1384.

FOR FURTHER INFORMATION CONTACT: John DeVore, Staff Officer. Pacific Council; telephone: (503) 820–2413.

SUPPLEMENTARY INFORMATION: The SSC’s Ecosystem Subcommittee will review analyses conducted by the NMFS California Current Integrated Ecosystem Assessment team. Specifically, the SSC Ecosystem Subcommittee will review the following four items: (1) Threshold Relationships Between Environmental Drivers and Performance of Salmon Preseason Abundance Forecasts, (2) Krill-based Indicators, (3) Year Class Strength and Distribution of Small Groundfish, and (4) Port-level Linkages Between Fisheries using Network Analysis. The SSC’s Ecosystem Subcommittee will consider recommending summaries of these ecosystem indicators be included in future state of the California Current Ecosystem reports to the Pacific Council.

No management actions will be decided by the SSC’s Ecosystem Subcommittee. The SSC Ecosystem Subcommittee members’ role will be development of recommendations and a report for consideration by the SSC and Pacific Council at their March 2022 meeting in San Jose, CA.

Although non-emergency issues not contained in the meeting agenda may be discussed, those issues may not be the subject of formal action during this meeting. Action will be restricted to those issues specifically listed in this document and any issues arising after publication of this document that require emergency action under section 305(c) of the Magnuson-Stevens Fishery Conservation and Management Act, provided the public has been notified of the intent to take final action to address the emergency.

Special Accommodations

Requests for sign language interpretation or other auxiliary aids should be directed to Mr. Kris Kleinschmidt (kris.kleinschmidt@noaa.gov; (503) 820–2412) at least 10 days prior to the meeting date.

Authority: 16 U.S.C. 1801 et seq.
DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[RTID 0648–XR8288]

Endangered and Threatened Species; Take of Anadromous Fish

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; Determination on Hatchery and Genetic Management Plan (HGMP) and availability of the associated Finding of No Significant Impacts (FONSI).

SUMMARY: Notice is hereby given that NMFS has made a determination on a joint tribal and state resource management plan (RMP) pursuant to Limit 6 of the Endangered Species Act (ESA) section 4(d) and has issued a Final Environmental Assessment (EA) and FONSI addressing the effects of the 4(d) determination. The Tulalip Tribes and Washington Department of Fish and Wildlife (collectively the co-managers) have submitted an RMP, in the form of a HGMP, to NMFS pursuant to Limit 6 of the ESA 4(d) Rule for a summer steelhead hatchery program in the Skykomish River basin. The hatchery program is intended to contribute to fulfilling Federal tribal trust responsibilities and treaty rights guaranteed through treaties and affirmed in U.S. v. Washington (1974), and to contribute to the conservation and restoration of the North Fork Skykomish River summer steelhead population.

The program would be operated in such a way as to minimize potential risks to listed natural-origin Chinook salmon and steelhead populations, including interactions between hatchery and natural fish that may lead to adverse genetic effects and competition and predation effects. The proposed hatchery program is consistent with the recovery plans for each of the listed species, designed to protect and restore listed species across their range. The program uses adaptive management procedures and the best available science to minimize adverse genetic effects typically associated with steelhead hatchery programs. As part of the proposed hatchery program, monitoring and evaluation would be implemented to assess performance in meeting population conservation or harvest augmentation objectives, and to evaluate effects on ESA-listed natural-origin Chinook salmon and steelhead. Information gained through monitoring and evaluation will be used to assess whether the impacts of the program on listed fish are as expected.

DEPARTMENT OF COMMERCE

National Telecommunications and Information Administration

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; NTIA Internet Use Survey

The Department of Commerce will submit the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, on or after the date of publication of this notice. We invite the general public and other Federal agencies to comment on proposed and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public’s reporting burden. Public comments were previously requested via the Federal Register on May 25, 2021 during a 60-day comment period.

Summary of Comments Received

NMFS published a notice of its PEPD on the Skykomish Summer Steelhead Program for public review and comment on December 22, 2020 (85 FR 83519), as required under Limit 6 of the ESA section 4(d) Rule. The PEPD was available for public review and comment for 30 days, and our responses to the comments are addressed in our Evaluation and Recommended Determination.

NMFS published a notice of availability for public review and comment on the Draft EA on February 5, 2021 (86 FR 8342), in accordance with National Environmental Policy Act of 1969, as amended (42 U.S.C. 4321 et seq.). The Draft EA was available for public review and comment for 30 days, and our responses to the comments are addressed in our Final EA. NMFS has determined that there are no significant impacts associated with the project and issued a FONSI for the program on July 2, 2021.

Agency: National Telecommunications and Information Administration, Commerce.

Title: NTIA internet Use Survey.

OMB Control Number: 0660–0021.

Form Number(s): None.

Type of Request: Regular submission (Revision of a current information collection).

Number of Respondents: 54,000 households.

Estimated Time per Response: 10 minutes.

Burden Hours: 9,000.

Needs and Uses: Data from the NTIA internet Use Survey will be used to help inform federal policies related to digital equity and other internet-related issues. NTIA will use the data both in relevant publications and to help inform policymakers. Additionally, a public use dataset that protects respondent confidentiality will be created by the Census Bureau and made available by both agencies for use by researchers and other members of the public.

Affected Public: Individuals and households.

Frequency: Biennial.

Respondent’s Obligation: Voluntary.

This information collection request may be viewed at www.reginfo.gov. Follow the instructions to view the Department of Commerce collections currently under review by OMB.

Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function and entering either the title of the collection or the OMB Control Number 0660–0021.

Sheleen Dumas,
Department PHA Clearance Officer, Office of the Chief Information Officer, Commerce Department.

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Procurement List; Deletions

AGENCY: Committee for Purchase From People Who Are Blind or Severely Disabled.

ACTION: Deletions from the Procurement List.

SUMMARY: This action deletes product(s) and service(s) from the Procurement List that were furnished by nonprofit agencies employing persons who are blind or have other severe disabilities.

DATES: Date added to and deleted from the Procurement List: September 12, 2021.

ADDRESSES: Committee for Purchase From People Who Are Blind or Severely Disabled, 1401 S Clark Street, Suite 715, Arlington, Virginia 22202–4149.

FOR FURTHER INFORMATION CONTACT: Michael R. Jurkowski, Telephone: (703) 785–6404, or email CMTEFedReg@AbilityOne.gov.

SUPPLEMENTARY INFORMATION:

Deletions

On 7/9/2021, the Committee for Purchase From People Who Are Blind or Severely Disabled published notice of proposed deletions from the Procurement List. This notice is published pursuant to 41 U.S.C. 8503(a)(2) and 41 CFR 51–2.3.

After consideration of the relevant matter presented, the Committee has determined that the product(s) and service(s) listed below are no longer suitable for procurement by the Federal Government under 41 U.S.C. 8501–8506 and 41 CFR 51–2.4.

Regulatory Flexibility Act Certification

I certify that the following action will not have a significant impact on a substantial number of small entities. The major factors considered for this certification were:

1. The action will not result in additional reporting, recordkeeping or other compliance requirements for small entities.
2. The action may result in authorizing small entities to furnish the product(s) and service(s) to the Government.
3. There are no known regulatory alternatives which would accomplish the objectives of the Javits-Wagner-O’Day Act (41 U.S.C. 8501–8506) in connection with the product(s) and service(s) deleted from the Procurement List.

End of Certification

Accordingly, the following product(s) and service(s) are deleted from the Procurement List:

Product(s)

NSN(s)—Product Name(s): MR 13025—Set, Disc, Christmas
MR 13049—Set, Disc, Springtime
MR 13004—Grensaver Crisper Insert
MR 13009—Salad Chopper with Bowl

Designated Source of Supply: Lighthouse for the Blind, Inc., Dallas, TX

Contracting Activity: GSA/FAS ADMIN
SVCS ACQUISITION BR (2, NEW YORK, NY)

Service(s)

Service Type: Document Destruction

Mandatory for: Defense Logistics Agency,
Defense Supply Center, Columbus, OH
3990 East Broad Street, Columbus, OH

Designated Source of Supply: Greene, Inc., Xenia, OH

Contracting Activity: DEFENSE LOGISTICS AGENCY, DCSO COLUMBUS

Michael R. Jurkowski,
Acting Director, Business Operations.

BILLING CODE 6353–01–P
DEPARTMENT OF DEFENSE
Department of the Army, Corps of Engineers

Notice of Intent To Prepare a Supplemental Environmental Impact Statement to the 2014 Final Integrated Feasibility Report and Environmental Impact Statement for the West Shore Lake Pontchartrain Hurricane and Storm Damage Risk Reduction Study, St. Charles, St. James, and St. John the Baptist Parishes

AGENCY: U.S. Army Corps of Engineers, DoD.

ACTION: Notice of intent.

SUMMARY: The U.S. Army Corps of Engineers (USACE), Mississippi Valley Division, New Orleans District (CEMVN), is announcing its intent to prepare a Supplemental Environmental Impact Statement (SEIS) to reevaluate alternatives to compensate for unavoidable impacts to swamp habitat associated with the construction of the West Shore Lake Pontchartrain Hurricane and Storm Damage Risk Reduction Project (hereafter WSLP Project). Compensatory mitigation for impacts due to construction of the WSLP Project was described previously in the 2014 WSLP Environmental Impact Statement (EIS) and in Environmental Assessment (EA) 576, which addressed mitigation for habitat impacts associated with each of CEMVN’s Bipartisan Budget Act (BBA) of 2018 funded risk reduction projects (i.e., the WSLP Project, Comite River Diversion Project, and the East Baton Rouge Parish Watershed Flood Risk Management Project). The Finding of No Significant Impact (FONSI) for EA 576 was signed by the CEMVN District Commander on April 4, 2020. Public comment on EA 576 included requests by the Louisiana’s Coastal Protection Restoration Authority (CPRA) and others that the Mississippi River Diversion into Maurepas Swamp Project (hereafter MSP), a proposed ecological restoration project that shares construction features with the WSLP Project, be considered as a mitigation alternative for impacts to swamp habitat associated with the construction of the WSLP Project. Anticipated impacts to swamp habitat as a result of the construction of the MSP, estimated to be approximately 55 Average Annual Habitat Units (AAHU), would be self-mitigated by the operation of the diversion. Impacts to bottomland hardwood (BLH) habitat because of the MSP construction would be approximately 30 AAHU. These BLH impacts would be mitigated in accordance with EA 576.

FOR FURTHER INFORMATION CONTACT: Questions and scoping comments regarding the proposed action should be directed to Mr. Landon Parr at U.S. Army Corps of Engineers, New Orleans District, Attn: CEMVN–PDC–C, 7400 Leake Avenue, New Orleans, Louisiana 70118, by phone (504) 862–1908, or by email at Landon.Parr@usace.army.mil.

For additional information, including but not limited to a copy of 2014 WSLP EIS, and other associated documents, please visit the WSLP Project website at: https://www.mvn.usace.army.mil/Missions/Environmental/NEPA-Compliance-Documents/Bipartisan-Budget-Act-2018-BBA-18/West-Shore-Lake-Pontchartrain/.

SUPPLEMENTARY INFORMATION:

1. Project Details. The WSLP Project is located in southeast Louisiana on the east-bank of the Mississippi River in St. Charles, St. John the Baptist, and St. James Parishes. Part of the Water Infrastructure Improvement for the Nation Act (WIN Act, Pub. L. 114–322) in 2016 authorized construction of the WSLP Project. The BBA of 2018 (BBA 2018, Pub. L. 115–123) funded construction of the WSLP Project. The WSLP Project is described in the 2014 WSLP EIS; West Shore Lake Pontchartrain Hurricane and Storm Damage Risk Reduction Structural Alignment Surveys and Borings Investigations St. Charles and St. John the Baptist Parishes, Louisiana Supplemental Environmental Assessment (SEA) 570; and West Shore Lake Pontchartrain Hurricane and Storm Damage Risk Reduction Levee System, St. Charles and St. John the Baptist Parishes, Louisiana SEA 571. The WSLP Project is approximately 19 miles in length and includes approximately 18 miles of levee, one mile of T-wall, six pumping stations with associated drainage structures, one gated road crossing, two gated railroad crossings, and approximately 35 utility relocations.

The Record of Decision (ROD) for the 2014 WSLP EIS was signed by the Assistant Secretary of the Army, Civil Works on September 14, 2016. SEA 570 investigated levee alignment shifts as well as the addition of five stockpile/staging areas for construction related activities. The FONSI associated with SEA 570 was signed by the CEMVN District Commander on May 13, 2019. SEA 571 evaluated additional changes to the WSLP levee alignment, the addition of four borrow areas, widening of the levee alignment, minor modifications to previously assessed access roads, and the addition of three access roads. The FONSI associated with SEA 571 was signed by the CEMVN District Commander on June 29, 2020.

Based on the changes to date, the WSLP Project could impact approximately 10,895 acres of swamp and 4,880 acres of wetland bottomland hardwoods (BLH-Wet) in the Louisiana (LA) Coastal Zone (CZ). This equates to a compensatory mitigation need of approximately 1,010 AAHU of CZ swamp (if the MSP is selected) [including direct impacts to swamp associated with construction of the MSP (~55 AAHU), and indirect (~600 AAHU) and indirect (~355 AAHU) impacts to swamp associated with the construction of WSLP] and approximately 295 AAHU of CZ BLH-Wet (BLH habitat impacted by the construction of the WSLP Project would be mitigated in accordance with EA 576).

This Supplemental EIS would provide an assessment of proposed alternative projects to compensate for the WSLP Project’s swamp impacts and it would identify the Tentatively Selected Alternative. When unavoidable impacts occur, the CEMVN is required to offset those impacts through compensatory mitigation by replacing the lost habitat’s functions and services equally and in-kind. Compensatory mitigation is required by the Water Resources Development Act (WRDA) of 1986, Section 906, as amended, and by the Clean Water Act Section 404(b)(1) Guidelines. The MSP is a freshwater diversion that would reconnect the
Mississippi River to the Maurepas Swamp, strategically delivering nutrient-laden river water to restore a degraded Cypress-Tupelo swamp. The proposed diversion has a 2,000 cubic foot per second (cfs) design flow. The freshwater intake structure and conveyance channel are located on the east bank of the Mississippi River in St. John the Baptist Parish, immediately west of Garyville, Louisiana, at River Mile 144 Above Head of Passes. The construction corridor for the conveyance channel extends from LA 44 (River Road) northward for 5½ miles, terminating at the outfall structure, which is approximately 1,000 ft north of Interstate 10.

2. Scoping Process. The CEMVN invites all affected federal, state, and local agencies, affected Native American Tribes, other interested parties, and the general public to participate in the National Environmental Policy Act (NEPA) scoping process during development of the SEIS. The purpose of the public scoping process is to provide information to the public, narrow the scope of analysis to significant environmental issues, serve as a mechanism to solicit agency and public input on potential alternatives and issues of concern, and ensure full and open participation in scoping for the SEIS. CEMVN requests input from interested parties regarding potential WSLP mitigation alternatives and information and analyses relevant to the proposed MSP. To ensure that all the issues related to the proposed MSP are addressed, the CEMVN will conduct virtual and, if permissible, in-person public scoping meetings(s) to which agencies, organizations, and members of the general public are invited to present comments or suggestions with regard to the range of actions, alternatives, and potential impacts to be considered in the SEIS. Project and public scoping meeting information, including information as to where, when, and how to participate and submit scoping comments as well as other opportunities for public involvement, will be available on CEMVN’s website at: https://www.mvp.usace.army.mil/Missions/Environmental/NEPA-Compliance-Documents/Bipartisan-Budget-Act-2018-BBA-18/West-Shore-Lake-Pontchartrain/.

Notification of public scoping meetings will also be available via press releases, special public notices, and on CEMVN’s social media platforms.

3. Federal Authority. The SEIS will disclose the context and intensity of environmental impacts, including focusing the analysis on those effects that are reasonably foreseeable and that have a reasonably close causal relationship to the proposed action as required under the Council of Environmental Quality’s (CEQ) NEPA regulations at 40 CFR parts 1500–1508 and the Department of the Army’s NEPA regulations at 33 CFR part 230. A reasonable range of alternatives will be determined, and significant issues related to the proposed action will be identified during public scoping. The following agencies are being invited to participate as Cooperating Agencies on the SEIS: United States Environmental Protection Agency; United States Department of the Interior, Fish and Wildlife Service (USFWS); United States Department of Commerce, National Marine Fisheries Service (NMFS); United States Department of Agriculture, Natural Resources Conservation Service; Advisory Council on Historic Preservation (ACHP); State of Louisiana, Historic Preservation Office (SHPO), State of Louisiana Department of Natural Resources (LDNR), State of Louisiana Department of Wildlife and Fisheries (LDWF), and State of Louisiana, Coastal Protection and Restoration Authority (CPRA).

4. Alternatives. The SEIS will address a reasonable range of alternatives based on the proposed Project’s purpose and need. The SEIS will compare, at a minimum, the previously identified BBA Alternative for the WSLP Project in EA 576 to Alternative 1 (MSP–1: Public and Private Lands) and Alternative 2 (MSP–2: Public Land Only) by using the Alternatives Evaluation and Comparison (AEC) process. The results of the AEC process would be presented in the SEIS. The BBA Alternative would compensate for the WSLP Project impacts of 955 AAHU of CZ swamp. The MSP Alternative would compensate for WSLP Project impacts of approximately 1,010 AAHU of CZ swamp.

5. Potentially Significant Issues. The SEIS will analyze the potential impacts on the human and natural environment resulting from the Project. The scoping, public involvement, and interagency coordination processes will help identify and define the range of potential significant issues that will be considered. Important resources and issues to be evaluated in the SEIS could include, but are not limited to, the reasonably foreseeable effects on tidal wetlands and other waters of the U.S.; aquatic resources; commercial and recreational fisheries; wildlife resources; essential fish habitat; water quality; cultural resources; geology and soils; hydrology and hydraulics; air quality; marine mammals; threatened and endangered species and their critical habitats; navigation and navigable waters; induced flooding; employment and incomes; land use; property values; tax revenues; population and housing; community and regional growth; environmental justice; community cohesion; public services; recreation; transportation and traffic; utilities and community service systems.

6. Environmental Consultation and Review and Authorizations. The proposed action is being coordinated with a number of federal, state, regional, and local agencies. In accordance with relevant environmental laws and regulations, CEMVN will consult with the following agencies: USFWS under the Fish and Wildlife Coordination Act; USFWS and NMFS under the Endangered Species Act; NMFS under the Magnuson-Stevens Fishery Conservation and Management Act; LDNR for Coastal Zone Consistency determination concurrence; and LDEQ for Clean Water Act, Section 401 Water Quality Certification; and, the ACHP, Louisiana SHPO, and the appropriate Tribal Historic Preservation Officers under the National Historic Preservation Act using an integrated NHPA Section 106/NEPA EIS process.

7. Availability. The SEIS is presently scheduled to be available for public review and comment in October 2021. A Final SEIS is scheduled for release in January 2022. A decision regarding implementation of the MSP is expected in 2022. All comments received throughout the review process will become part of the project file for the proposed Project and will be subject to public release.
has determined that each submarine of this class is a vessel of the Navy which, due to its special construction and purpose, cannot comply fully with the navigation lights provisions of the International Regulations for Preventing Collisions at Sea, 1972 (72 COLREGS) without interfering with its special function as a naval vessel. The intended effect of this notice is to warn mariners in waters where 72 COLREGS apply.

DATES: This Certificate of Alternate Compliance is effective August 13, 2021 and is applicable beginning August 6, 2021.

SUPPLEMENTARY INFORMATION:
Background and Purpose.

Executive Order 11946 of January 19, 1977 and 33 U.S.C. 1605 provide that the requirements of the International Regulations for Preventing Collisions at Sea, 1972 (72 COLREGS), as to the number, position, range, or arc of visibility of lights or shapes, as well as to the disposition and characteristics of sound-signaling appliances, shall not apply to a vessel or class of vessels of the Navy where the Secretary of the Navy shall find and certify that, by reason of special construction or purpose, it is not possible for such vessel(s) to comply fully with the provisions without interfering with the special function of the vessel(s). Notice of issuance of a Certificate of Alternate Compliance must be made in the Federal Register.

In accordance with 33 U.S.C. 1605, the DAJAG (Admiralty and Maritime Law), under authority delegated by the Secretary of the Navy, hereby finds and certifies that all Block IV VIRGINIA Class submarines are vessels of special construction or purpose, and that, with respect to the position of the following navigational lights, it is not possible to comply fully with the requirements of the provisions enumerated in the 72 COLREGS without interfering with the special function of the vessel:

Annex I, Section 2(a)(i) pertaining to the height of the masthead light; Annex I, Section 2(b)(i) pertaining to the vertical position of the masthead light; Annex I, Section 2(b)(ii) pertaining to the height of the forward anchor light; Rule 30(a) and Rule 21(e) pertaining to the 360 degree arc of visibility of the forward and aft anchor lights; Annex I, Section 3(b) pertaining to the position of the sidelights; Rule 21(c) pertaining to the position and the arcs of visibility of the stern light.

The DAJAG (Admiralty and Maritime Law) further finds and certifies that these navigational lights are in closest possible compliance with the applicable provision of the 72 COLREGS.

Authority: 33 U.S.C. 1605(c), E.O. 11964.

Approved: August 10, 2021.

K.R. Callan,
Commander, Judge Advocate General’s Corps, U.S. Navy, Federal Register Liaison Officer.

BILLING CODE 3810–FF–P

DEPARTMENT OF EDUCATION
[Docket No.: ED–2021–SCC–0123]

Agency Information Collection Activities; Comment Request; Student Assistance General Provisions—Subpart K—Cash Management

AGENCY: Federal Student Aid (FSA), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, ED is proposing an extension without change of a currently approved collection.

DATES: Interested persons are invited to submit comments on or before October 12, 2021.

ADDRESSES: To access and review all the documents related to the information collection listed in this notice, please use http://www.regulations.gov by searching the Docket ID number ED–2021–SCC–0123. Comments submitted in response to this notice should be submitted electronically through the Federal eRulemaking Portal at http://www.regulations.gov by selecting the Docket ID number or via postal mail, commercial delivery, or hand delivery. If the regulations.gov site is not available to the public for any reason, ED will temporarily accept comments at ICDocketMgr@ed.gov. Please include the docket ID number and the title of the information collection request when requesting documents or submitting comments. Please note that comments submitted by fax or email and those submitted after the comment period will not be accepted. Written requests for information or comments submitted by postal mail or delivery should be addressed to the PRA Coordinator of the Strategic Collections and Clearance Governance and Strategy Division, U.S. Department of Education, 400 Maryland Ave. SW, LBJ, Room 6W208C, Washington, DC 20202–8240.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Beth Grebeldinger, 202–377–4018.

SUPPLEMENTARY INFORMATION: The Department of Education (ED), in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public’s reporting burden. It also helps the public understand the Department’s information collection requirements and provide the requested data in the desired format. ED is soliciting comments on the proposed information collection request (ICR) that is described below. The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: Student Assistance General Provisions—Subpart K—Cash Management.

OMB Control Number: 1845–0106.

Type of Review: An extension without change of a currently approved collection.

Respondents/Affected Public: Private Sector; State, Local, and Tribal Governments; Individuals and Households.

Total Estimated Number of Annual Responses: 2,503,922.

Total Estimated Number of Annual Burden Hours: 764,450.

Abstract: The Department of Education (the Department) amended the Student Assistance General Provisions regulations issued under the Higher Education Act of 1965, as amended (HEA), to implement the changes made to the Student Assistance General Provisions regulations—Subpart K—Cash Management § 686.164—Disbursing funds. These regulations are...
intended to ensure students and parents have convenient access to their Title IV, HEA program funds, do not incur unreasonable and uncommon financial account fees on these Title IV funds and are not led to believe that they must open a particular financial account to receive their Federal student aid. This request is for an extension of the information collection for the requirements that are contained in the regulations §668.164—Disbursing funds. The regulations require that an institution that makes direct payments to a student or parent by electronic funds transfer (EFT) and that chooses to enter into an arrangement described in 668.164(e) or (f), including an institution that uses a third-party servicer to make those payments, must establish a selection process under which the student chooses one of several options for receiving those Title IV, HEA fund payments. There has been no change to the regulations.

Juliana Pearson,
PRA Coordinator, Strategic Collections and Clearance Governance and Strategy Division, Office of Chief Data Officer, Office of Planning, Evaluation and Policy Development.

DEPARTMENT OF ENERGY

DOE/NSF High Energy Physics Advisory Panel

AGENCY: Office of Science, Department of Energy.

ACTION: Notice of renewal.

SUMMARY: Pursuant to the Federal Advisory Committee Act, and Code of Federal Regulations, and following consultation with the Committee Management Secretariat, General Services Administration, notice is hereby given that the DOE/NSF High Energy Physics Advisory Panel (HEPAP) has been renewed for a two-year period. The Committee will provide advice and recommendations to the Director, Office of Science (DOE), and the Assistant Director, Directorate for Mathematical and Physical Sciences (NSF), on scientific priorities within the field of basic high energy physics research. Additionally, the Secretary of Energy has determined that renewal of the HEPAP is essential to conduct business of the Department of Energy and the National Science Foundation and is in the public interest in connection with the performance of duties imposed upon the Department of Energy by law. The Committee will continue to operate in accordance with the provisions of the Federal Advisory Committee Act, adhering to the rules and regulations in implementation of that Act.

FOR FURTHER INFORMATION CONTACT: Dr. John Kogut at (301) 903–1298 or email: john.kogut@science.doe.gov.

Signing Authority
This document of the Department of Energy was signed on August 9, 2021, by Miles Fernandez, Acting Committee Management Officer, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon the Federal Register.

Signed in Washington, DC, on August 10, 2021.

Treena V. Garrett,
Federal Register Liaison Officer, U.S. Department of Energy.

DEPARTMENT OF ENERGY

Agency Information Collection Extension

AGENCY: U.S. Department of Energy.

ACTION: Submission for Office of Management and Budget (OMB) review; comment request.

SUMMARY: The Department of Energy (DOE) has submitted an information collection request to the OMB for extension under the provisions of the Paperwork Reduction Act of 1995. The information collection requests a three-year extension of its “Industrial Relations,” OMB Control Number 1910–0600. The proposed collection covers major Department contractor Human Resource information necessary for contract management, administration, and cost control.

DATES: Comments regarding this collection must be received on or before September 13, 2021. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, please advise the OMB Desk Officer of your intention to make a submission as soon as possible. The Desk Officer may be telephoned at 202–395–4718.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

Reporting requirements can be found at: https://www.energy.gov/sites/prod/files/2021/02/f82/Special%20H%20Clause%20-%20%20EMPLOYEE%20COMPENSATION_PAY%20AND%20BENEFITS.pdf.

SUPPLEMENTARY INFORMATION: This information collection request contains:

(1) OMB No.: 1910–0600;
(2) Information Collection Request Title: Industrial Relations;
(3) Type of Request: Renewal;
(4) Purpose: This information is required for management oversight of the Department of Energy’s Facilities Management Contractors and to ensure that the programmatic and administrative management requirements of the contracts are managed efficiently and effectively;
(5) Annual Estimated Number of Respondents: 282;
(6) Annual Estimated Number of Total Responses: 282;
(7) Annual Estimated Number of Burden Hours: 3,529.5;
(8) Annual Estimated Reporting and Recordkeeping Cost Burden: $0.

Signing Authority: This document of the Department of Energy was signed on July 19, 2021, by John R. Bashista, Director, Office of Acquisition Management, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. [Project No. 7186–052]

Missiquoi, LLC; Notice of Application for Amendment of License, Soliciting Comments, Motions To Intervene, and Protests

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection:

a. **Type of Proceeding:** Application for non-capacity amendment of license.
b. **Project No.**: 7186–052.
c. **Date Filed**: August 2, 2021.
d. **Licensee**: Missiquoi, LLC.
e. **Name of Project**: Sheldon Springs Hydroelectric Project.
f. **Location**: The project is located on the Missiquoi River in the Town of Sheldon in Franklin County, Vermont.
g. **Filed Pursuant to**: Federal Power Act, 16 U.S.C. 791a–825r.
h. **Description of Request**: The Licensee proposes to change the project’s mode of operation from a peaking facility, with two feet of storage, to a run-of-river facility whereby inflow equals outflow year-round, with allowance for minor, short-term deviations for flashboard maintenance or for recreational purposes required under the project’s current license. The project has already been operating as a run-of-river project for over 10 years.
i. **Locations of the Application**: This filing may be viewed on the Commission’s website at http://www.ferc.gov using the “eLibrary” link. Enter the docket number excluding the last three digits in the docket number field to access the document. You may also register online at http://www.ferc.gov/docs-filing/esubscription.asp to be notified via email of new filings and issuances related to this or other pending projects. For assistance, call 1–866–208–3676 or email FERCOnlineSupport@ferc.gov, for TTY, call (202) 502–8659. Agencies may obtain copies of the application directly from the applicant.
j. **Deadline for filing comments, interventions, and protests**: Deadline for filing comments, motions to intervene, and protests: September 8, 2021.
k. **Comments, Protests, or Motions to Intervene**: Anyone may submit comments, a protest, or a motion to intervene in accordance with the Commission’s Rules of Practice and Procedure. Rules may become a party to the proceeding. Any comments, protests, or motions to intervene must be received on or before the specified comment date for the particular application.

DEPARTMENT OF ENERGY
Federal Energy Regulatory Commission
[Project No. 2354–151]

Georgia Power Company Notice of Application Accepted for Filing and Soliciting Comments, Motions To Intervene, and Protests

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection:

a. **Application Type**: Application for variance from Article 418.
b. **Project No.**: 2354–151.
c. **Date Filed**: July 9, 2021.
d. **Applicant**: Georgia Power Company.
e. **Name of Project**: North Georgia Hydroelectric Project.
f. **Location**: Tugalo Park is located at the headwaters of Yonah Lake in Habersham County, Georgia.
g. **Filed Pursuant to**: Federal Power Act, 16 U.S.C. 791a–825r.
h. **Applicant Contact**: Joseph Charles, (404) 782–8796, jcharles@southernco.com.
i. FERC Contact: Tara Perry, (202) 502–6546, tara.perry@ferc.gov.

j. Deadline for filing comments, motions to intervene, and protests: September 8, 2021.

The Commission strongly encourages electronic filing. Please file comments, motions to intervene, and protests using the Commission’s eFiling system at https://www.ferc.gov/docs-filing/efiling.asp. Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at http://www.ferc.gov/docs-filing/ecomment.asp. You must include your name and contact information at the end of your comments. For assistance, please contact FERC Online Support at FERCOnlineSupport@ferc.gov or call toll-free, (888) 208–3676 or TTY, (202) 502–8659. In lieu of electronic filing, you may submit a paper copy. Submissions sent via the U.S. Postal Service must be addressed to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Room 1A, Washington, DC 20426. Submissions sent via any other carrier must be addressed to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852. The first page of any filing should include docket number P–2354–151. Comments emailed to Commission staff are not considered part of the Commission record.

k. Description of Request: The licensee requests a variance from Article 418 which requires, in part, the licensee to operate and maintain the Tugalo Park recreation site. As part of a hydro modernization program, the licensee is planning to replace several plant systems, including the turbines and generators, spillway gates, control system, and associated auxiliary equipment, at the Tugalo dam and powerhouse. Due to the rugged terrain and limited access in the area, the licensee would bring the heavy equipment and materials needed for the modernization work through the Yonah Lake and use the Tugalo Park area for construction staging. For safety and security reasons, the licensee is proposing to temporarily close the park to public access, starting October 1, 2021 for up to five years (October 2026). Following completion of the modernization work, the licensee would replace the existing recreation facilities (10 primitive campsites, restrooms, and a boat ramp). There are other nearby recreation sites and opportunities that would be available to the public during the time of the site closure.

l. Locations of the Application: In addition to publishing the full text of this document in the Federal Register, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission’s Home Page (http://www.ferc.gov) using the “eLibrary” link. Enter the docket number excluding the last three digits in the document field to access the document. At this time, the Commission has suspended access to the Commission’s Public Reference Room, due to the proclamation declaring a National Emergency concerning the Novel Coronavirus Disease (COVID–19), issued by the President on March 13, 2020. For assistance, contact FERC at FERCOnlineSupport@ferc.gov or call toll-free, (888) 208–3673 or TTY, (202) 502–8659. Agencies may obtain copies of the application directly from the applicant.

m. Individuals desiring to be included on the Commission’s mailing list should so indicate by writing to the Secretary of the Commission.

n. Comments, Protests, or Motions to Intervene: Anyone may submit comments, a protest, or a motion to intervene in accordance with the requirements of Rules of Practice and Procedure, 18 CFR 385.210, .211, .214, respectively. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but only those who file a motion to intervene in accordance with the Commission’s Rules may become a party to the proceeding. Any comments, protests, or motions to intervene must be received or before the specified comment date for the particular application.

o. Filing and Service of Documents: Any filing must (1) bear in all capital letters the title “COMMENTS”, “PROTEST”, or “MOTION TO INTERVENE” as applicable; (2) set forth in the heading the name of the applicant and the project number of the application to which the filing responds; (3) furnish the name, address, and telephone number of the person commenting, protesting or intervening; and (4) otherwise comply with the requirements of 18 CFR 385.2001 through 385.2005. All comments, motions to intervene, or protests must set forth their evidentiary basis. Any filing made by an intervenor must be accompanied by proof of service on all persons listed in the service list prepared by the Commission in this proceeding, in accordance with 18 CFR 385.2010.

Dated: August 9, 2021.
Debbie-Anne A. Reese, Deputy Secretary.

ENVIRONMENTAL PROTECTION AGENCY

Pesticide Product Registration; Receipt of Applications for New Active Ingredients (July 2021)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: EPA has received applications to register pesticide products containing active ingredients not included in any currently registered pesticide products. Pursuant to the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), EPA is hereby providing notice of receipt and opportunity to comment on these applications.

DATES: Comments must be received on or before September 13, 2021.

ADDRESSES: Submit your comments, identified by docket identification (ID) number and the File Symbol of interest, online at http://www.regulations.gov. Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at https://www.epa.gov/dockets/about-epa-dockets.

Due to the public health concerns related to COVID–19, the EPA/DC and Reading Room is closed to visitors with limited exceptions. The staff continues to provide remote customer service via email, phone, and webform. For the latest status information on the EPA/DC and docket access, visit https://www.epa.gov/dockets.

FOR FURTHER INFORMATION CONTACT:
Charles Smith, Biopesticides and Pollution Prevention Division (BPPD) (7511P), main telephone number: (703) 305–7090, email address: BPPDFRNotices@epa.gov; The mailing address for each contact person is: Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001. As part of the mailing address, include the contact person’s name, division, and mail code. The division to contact is listed at the end of each pesticide petition summary.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

You may be potentially affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:

• Crop production (NAICS code 111).
• Animal production (NAICS code 112).
• Food manufacturing (NAICS code 311).

B. What should I consider as I prepare my comments for EPA?

1. Submitting CBI. Do not submit this information to EPA through regulations.gov or email. Clearly mark the part or all of the information that you claim to be CBI. For CBI information in a disk or CD–ROM that you mail to EPA, mark the outside of the disk or CD–ROM as CBI and then identify electronically within the disk or CD–ROM the specific information that is claimed as CBI. In addition to one complete version of the comment that includes information claimed as CBI, a
ENVIRONMENTAL PROTECTION AGENCY

Information Collection Request Submitted to OMB for Review and Approval; Comment Request; Data Reporting Requirements for State and Local Vehicle Emission Inspection and Maintenance (I/M) Programs (Renewal)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) has submitted an information collection request (ICR), Data Reporting Requirements for State and Local Vehicle Emission Inspection and Maintenance (I/M) Programs (EPA ICR Number 1613.07, OMB Control Number 2060–0252) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act. This is a proposed extension of the ICR, which is currently approved through October 31, 2021. Public comments were previously requested via the Federal Register on March 1, 2021, which included a 60-day comment period ending on April 30, 2021. This notice allows for an additional 30 days for public comments. A fuller description of the ICR is given below, including its estimated burden and cost to the public. An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

DATES: Additional comments may be submitted on or before September 13, 2021.

ADDRESSES: You may send comments, identified by Docket ID No. EPA–HQ– OAR–2008–0707, online using www.regulations.gov (our preferred method), or by mail to: EPA Docket Center, Environmental Protection Agency, Mail Code 28221T, 1200 Pennsylvania Ave. NW, Washington, DC 20460. EPA’s policy is that all comments received will be included in the public docket without change and the impact of such changes, including any personal information provided, unless the comment includes profanity, threats, information claimed to be Confidential Business Information (CBI), or other information whose disclosure is restricted by statute. Submit written comments and recommendations to OMB for the proposed information collection within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

Out of an abundance of caution for members of the public and our staff, the EPA Docket Center and Reading Room has remained closed to public visitors since March 31, 2020, to reduce the risk of transmitting COVID–19. Our Docket Center staff will continue to provide remote customer service via email, phone, and webform. We encourage the public to submit comments via https://www.regulations.gov, as there is a temporary suspension of mail delivery to EPA, and no hand deliveries are currently accepted. For further information on EPA Docket Center services and the current status, please visit us online at https://www.epa.gov/dockets.

FOR FURTHER INFORMATION CONTACT: Joe Winkelmann, Office of Transportation and Air Quality, U.S. Environmental Protection Agency, 2000 Traverwood, Ann Arbor, Michigan 48105; telephone number: 734–214–4255; email address: winkelmann.joseph@epa.gov.

SUPPLEMENTARY INFORMATION: Supporting documents, which explain in detail the information that the EPA will be collecting, are available in the public docket for this ICR. The docket can be viewed online at www.regulations.gov. For further information and updates on EPA Docket Center services, please visit us online at https://www.epa.gov/dockets.

Abstract: Clean Air Act section 182 and EPA’s regulations (40 CFR part 51, subpart S) establish the requirements for state and local I/M programs that are included in state implementation plans (SIPs). To provide general oversight and support to these programs, EPA requires that state agencies with basic and enhanced I/M programs collect two varieties of reports for submission to the Agency:

• An annual report providing general program operating data and summary statistics, addressing the program’s current design and coverage, a summary of testing data, enforcement program efforts, quality assurance and quality control efforts, and other miscellaneous information allowing for an assessment of the program’s relative effectiveness; and
• A biennial report on any changes to the program over the two-year period and the impact of such changes, including any deficiencies discovered and corrections made or planned.

General program effectiveness is determined by the degree to which a program misses, meets, or exceeds the
emission reductions committed to in the state’s approved SIP, which, in turn, must meet or exceed the minimum emission reductions expected from the relevant performance standard, as promulgated under 40 CFR part 51, subpart S, in response to requirements established in section 182 of the Clean Air Act. This information is used by EPA to determine a program’s progress toward meeting requirements under 40 CFR part 51, subpart S, and to provide background information in support of program evaluations. Additional information regarding the current renewal of this ICR as well as previous renewals can be found in Docket ID No. EPA–HQ–OAR–2008–0707.

Form Numbers: None.
Respondent/affected entities: State governments.
Respondent’s obligation to respond: Mandatory (40 CFR 51.366).
Estimated number of respondents: 26 (total).
Frequency of response: Annual and biennial.
Total estimated burden: 2,236 hours (per year). Burden is defined at 5 CFR 1320.03(b).
Total estimated cost: $148,824 (per year), includes $0 annualized capital or operation & maintenance costs.

Changes in Estimates: There is a decrease of 172 hours in the total estimated respondent burden compared with the ICR currently approved by OMB due to a reduction in the number of respondents covered by the collection.

Courtney Kerwin,
Director, Regulatory Support Division.

ENVIRONMENTAL PROTECTION AGENCY

Information Collection Request Submitted to OMB for Review and Approval; Comment Request; Federal Implementation Plans Under the Clean Air Act for Indian Reservations in Idaho, Oregon and Washington (Renewal)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) has submitted an information collection request (ICR), Federal Implementation Plans under the Clean Air Act for Indian Reservations in Idaho, Oregon and Washington (EPA ICR Number 2020.08, OMB Control Number 2060–0558), to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act. This is a proposed extension of the ICR, which is currently approved through August 31, 2021. Public comments were previously requested via the Federal Register on February 12, 2021 during a 60-day comment period. This notice allows for an additional 30 days for public comments. A fuller description of the ICR is given below, including its estimated burden and cost to the public. An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

DATES: Additional comments may be submitted on or before September 13, 2021.

ADDRESSES: Submit your comments to EPA, referencing Docket ID No. EPA–R10–OAR–2020–0724, online using www.regulations.gov (our preferred method), or by mail to: EPA Docket Center, Environmental Protection Agency, Mail Code 2822T, 1200 Pennsylvania Ave. NW, Washington, DC 20460. EPA’s policy is that all comments received will be included in the public docket without change including any personal information provided, unless the comment includes profanity, threats, information claimed to be Confidential Business Information (CBI), or other information whose disclosure is restricted by statute.

Submit written comments and recommendations to OMB for the proposed information collection within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

FOR FURTHER INFORMATION CONTACT:
Sarah Frederick, Region 10 Air and Radiation Division, telephone number: (206) 553–1601; email address: Frederick.Sarah@epa.gov.

SUPPLEMENTARY INFORMATION: Supporting documents, which explain in detail the information that the EPA will be collecting, are available in the public docket for this ICR. The docket can be viewed online at www.regulations.gov or in person at the EPA Docket Center, WJC West, Room 3334, 1301 Constitution Ave. NW, Washington, DC. The telephone number for the Docket Center is 202–566–1744.

For additional information about EPA’s public docket, visit http://www.epa.gov/dockets.

Abstract: EPA promulgated Federal Implementation Plans (FIPs) under the Clean Air Act for Indian reservations located in Idaho, Oregon, and Washington in 40 CFR part 49 (70 FR 18074, April 8, 2005). The FIPs in the final rule, also referred to as the Federal Air Rules for Indian Reservations in Idaho, Oregon, and Washington (FARR), include information collection requirements associated with the partial delegation of administrative authority to a Tribe in 40 CFR 49.122; the rule for limiting visible emissions at 40 CFR 49.124; fugitive particulate matter rule in 40 CFR 49.126; the wood waste burner rule in 40 CFR 49.127; the rule for limiting sulfur in fuels in 40 CFR 49.130; the rule for open burning in 40 CFR 49.131; the rules for general open burning permits, agricultural burning permits, and forestry and silvicultural burning permits in 40 CFR 49.132, 49.133, and 49.134; the rule for emissions detrimental to human health and welfare in 40 CFR 49.135; the registration rule in 40 CFR 49.138; and the rule for non-title V operating permits in 40 CFR 49.139. EPA uses this information to manage the activities and sources of air pollution on the Indian reservations in Idaho, Oregon, and Washington. EPA believes these information collection requirements are appropriate because they will enable EPA to develop and maintain accurate records of air pollution sources and their emissions, track emissions trends and changes, identify potential air quality problems, allow EPA to issue permits or approvals, and ensure appropriate records are available to verify compliance with these FIPs. The information collection requirements listed above are all mandatory. Regulated entities can assert claims of business confidentiality and EPA will address these claims in accordance with the provisions of 40 CFR part 2, subpart B.

Form Numbers:
EPA Form 7630–1 Nez Perce Reservation Air Quality Permit: Agricultural Burn
EPA Form 7630–2 Nez Perce Reservation Air Quality Permit: Forestry Burn
EPA Form 7630–3 Nez Perce Reservation Air Quality Permit: Large Open Burn
EPA Form 7630–4 Initial or Annual Source Registration
EPA Form 7630–5 Report of Change of Ownership
EPA Form 7630–6 Report of Closure
EPA Form 7630–7 Report of Relocation
EPA Form 7630–8 Small Burn Air Quality Permit Application
EPA Form 7630–9 Non-Title V Operating Permit Application Form
EPA Form 7630–10 Umatilla Indian Reservation: Agricultural Burn Permit Application
EPA Form 7630–11 Umatilla Indian Reservation: Forestry Burn Permit Application
EPA Form 7630–12 Umatilla Indian Reservation: Large Open Burn Permit Application
EPA Form 5800–057 FARR Online Reporting System Initial or Annual Source Registration

Respondents/affected entities:
Owners and operators of air emission sources in all industry groups and tribal governments, located in the identified Indian reservations.

Respondent’s obligation to respond: Mandatory.

Estimated number of respondents: 1,732 (total).

Frequency of response: Annual or occasional.

Total estimated burden: 3,601 hours (per year). Burden is defined at 5 CFR 1320.03(b).

Total estimated cost: $286,888 (per year). Burden is defined at 5 CFR 30, 0833; email address: ali.muntasir@epa.gov.

SUPPLEMENTARY INFORMATION:
Supporting documents, which explain in detail the information that the EPA will be collecting, are available in the public docket for this ICR. The docket can be viewed online at https://www.regulations.gov, or in person at the EPA Docket Center, WJC West Building, Room 3334, 1301 Constitution Ave. NW, Washington, DC. The telephone number for the Docket Center is 202–566–1744. For additional information about EPA’s public docket, visit http://www.epa.gov/dockets.

Abstract: Owners and operators of sulfuric acid plants are required to comply with reporting and record keeping requirements for the General Provisions (40 CFR part 60, subpart A), as well as for the applicable specific standards in 40 CFR part 60 Subpart H. This includes submitting initial notifications, performance tests and periodic reports and results, and maintaining records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperable. These reports are used by the EPA to determine compliance with these standards.

Form Numbers: None.

Respondents/affected entities:
Sulfuric acid manufacturing plants.

Respondent’s obligation to respond: Mandatory (40 CFR part 60, subpart H).

Estimated number of respondents: 53 (total).

Frequency of response: Semiannually.

Total estimated burden: 13,500 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: $1,900,000 (per year), which includes $309,900 in annualized capital/startup and/or operation & maintenance costs.

Changes in the Estimates: There is no increase in burden from the most-relevant...
recently approved ICR as currently identified in the OMB Inventory of Approved Burdens. This is due to several considerations: (1) The regulations have not changed over the past three years and are not anticipated to change over the next three years; and (2) the growth rate for this industry is very low or non-existent, so there is no significant change in the number of respondents. Since there are no changes in the regulatory requirements and there is no significant industry growth, there are also no changes in the capital/startup costs. Operation and maintenance (O&M) costs have been adjusted using the CEPCI Index to reflect the increase in costs since 2005.

Courtney Kerwin,
Director, Regulatory Support Division.

ENVIRONMENTAL PROTECTION AGENCY

Information Collection Request Submitted to OMB for Review and Approval; Comment Request; NESHAP for Natural Gas Transmission and Storage (Renewal)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) has submitted an information collection request (ICR), NESHAP for Natural Gas Transmission and Storage (EPA ICR Number 1789.11, OMB Control Number 2060–0418), to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act. This is a proposed extension of the ICR, which is currently approved through October 31, 2021. Public comments were previously requested, via the Federal Register, on February 8, 2021 during a 60-day comment period. This notice allows for an additional 30 days for public comments. A fuller description of the ICR is given below, including its estimated burden and cost to the public. An agency may neither conduct nor sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

DATES: Additional comments may be submitted on or before September 13, 2021.

ADDRESSES: Submit your comments, referencing Docket ID Number EPA–HQ–OAR–2020–0623, online using www.regulations.gov (our preferred method), or by mail to: EPA Docket Center, Environmental Protection Agency, Mail Code 28221T, 1200 Pennsylvania Ave. NW, Washington, DC 20460. EPA’s policy is that all comments received will be included in the public docket without change including any personal information provided, unless the comment includes profanity, threats, information claimed to be Confidential Business Information (CBI), or other information whose disclosure is restricted by statute. Submit written comments and recommendations to OMB for the proposed information collection within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

Out of an abundance of caution for members of the public and our staff, the EPA Docket Center and Reading Room are closed to the public, with limited exceptions, to reduce the risk of transmitting COVID–19. Our Docket Center staff will continue to provide remote customer service via email, phone, and webform. We encourage the public to submit comments via https://www.regulations.gov/, or email, as there may be a delay in processing mail and faxes. Hand deliveries and couriers may be received by scheduled appointment only. For further information on the EPA Docket Center services and the current status, please visit us online at https://www.epa.gov/dockets.

FOR FURTHER INFORMATION CONTACT: Muntasir Ali, Sector Policies and Program Division (D243–05), Office of Air Quality Planning and Standards, U.S. Environmental Protection Agency, Research Triangle Park, North Carolina, 27711; telephone number: (919) 541–0833; email address: ali.muntasir@epa.gov.

SUPPLEMENTARY INFORMATION: Supporting documents, which explain in detail the information that the EPA will be collecting, are available in the public docket for this ICR. The docket can be viewed online at https://www.regulations.gov, or in person at the EPA Docket Center, WJC West Building, Room 3334, 1301 Constitution Ave. NW, Washington, DC. The telephone number for the Docket Center is 202–566–1744. For additional information about EPA’s public docket, visit: http://www.epa.gov/dockets.

Abstract: The National Emission Standards for Hazardous Air Pollutants (NESHAP) for Natural Gas Transmission and Storage (40 CFR part 63, subpart HHH) apply to existing facilities and new facilities that are major sources of hazardous air pollutants (HAP) and that either transport or store natural gas prior to entering the pipeline to a local distribution company or to a final end user (if there is no local distribution company). In general, all NESHAP standards require initial notifications, performance tests, and periodic reports by the owners/operators of the affected facilities. They are also required to maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperative. These notifications, reports, and records are essential in determining compliance with 40 CFR part 63, subpart HHH.

Form Numbers: None.

Respondents/affected entities: Natural gas transmission and storage facilities.

Respondent’s obligation to respond: Mandatory (40 CFR part 63, subpart HHH).

Estimated number of respondents: 73 (total).

Frequency of response: Initially, occasionally, and semiannually.

Total estimated burden: 3,780 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: $448,000 (per year), includes S0 annualized capital or operation & maintenance costs.

Changes in the Estimates: There is an increase in the total estimated burden from the most recently-approved ICR as currently identified in the OMB Inventory of Approved Burdens. This increase is not due to any program changes. This increase is due to an increase in the number of affected sources subject to the rule based on the latest available data and taking into account growth in this industry. The growth rate for the industry is based on our consultations with the Agency’s internal industry experts, including a review of EPA’s ECHO, GHGRP, and data from related rulemakings. There are no capital/startup or operation and maintenance costs incurred as a result of these standards because the industry has primarily installed flares to control emissions.

Courtney Kerwin,
Director, Regulatory Support Division.

Information Collection Request Submitted to OMB for Review and Approval; Comment Request; NSPS for Polymeric Coating of Supporting Substrates Facilities (Renewal)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) has submitted an information collection request (ICR), NSPS for Polymeric Coating of Supporting Substrates Facilities (EPA ICR Number 1284.12, OMB Control Number 2060–0181), to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act. This is a proposed extension of the ICR, which is currently approved through October 31, 2021. Public comments were previously requested, via the Federal Register, on February 8, 2021 during a 60-day comment period. This notice allows for an additional 30 days for public comments. A fuller description of the ICR is given below, including its estimated burden and cost to the public. An agency may neither conduct nor sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

DATES: Additional comments may be submitted on or before September 13, 2021.

ADDRESSES: Submit your comments, referencing Docket ID Number EPA–HQ–OAR–2020–0633, online using www.regulations.gov (our preferred method), or by mail to: EPA Docket Center, Environmental Protection Agency, Mail Code 28221T, 1200 Pennsylvania Ave. NW, Washington, DC 20460. EPA’s policy is that all comments received will be included in the public docket without change including any personal information provided, unless the comment includes proficiency, threats, information claimed to be Confidential Business Information (CBI), or other information whose disclosure is restricted by statute. Submit written comments and recommendations to OMB for the proposed information collection within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

FOR FURTHER INFORMATION CONTACT: Muntasir Ali, Sector Policies and Program Division (D243–05), Office of Air Quality Planning and Standards, U.S. Environmental Protection Agency, Research Triangle Park, North Carolina 27711; telephone number: (919) 541–0833; email address: ali.muntasir@epa.gov.

SUPPLEMENTARY INFORMATION: Supporting documents, which explain in detail the information that the EPA will be collecting, are available in the public docket for this ICR. The docket can be viewed online at https://www.regulations.gov, or in person at the EPA Docket Center, WJC West Building, Room 3334, 1301 Constitution Ave. NW, Washington, DC. The telephone number for the Docket Center is 202–566–1744. For additional information about EPA’s public docket, visit: http://www.epa.gov/dockets.

Abstract: Owners and operators of polymeric coating of supporting substrates facilities are required to comply with reporting and record keeping requirements for the General Provisions of 40 CFR part 60, subpart A, as well as for the applicable specific standards in 40 CFR part 60 Subpart VV. This includes submitting initial notifications, performance tests and periodic reports and results, and maintaining records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperative. These reports are used by EPA to determine compliance with these standards.

Form Numbers: None.

Respondents/affected entities: Polymeric coating of supporting substrates facilities.

Respondent’s obligation to respond: Mandatory (40 CFR part 60, subpart VV).

Estimated number of respondents: 74 (total).

Frequency of response: Quarterly and semiannually.

Total estimated burden: 16,400 hours (per year). Burden is defined at 5 CFR 16,400 hours (per year).

Total estimated cost: $2,770,000 (per year), which includes $826,000 in annualized capital/startup and/or operation & maintenance costs.

Changes in the Estimates: There is an increase in burden from the most–recently approved ICR as currently identified in the OMB Inventory of Approved Burdens. This is due to an increase in the number of respondents subject to the rule. An examination of EPA’s Enforcement and Compliance History Online (ECHO) database indicated that there are 72 sources currently reporting under NSPS Subpart VV, an increase of 10 sources from the previous ICR. The regulations have not changed over the past three years and are not anticipated to change over the next three years. The increase in the operation and maintenance (O&M) costs is due to the increase in the number of respondents performing monitoring activities. The rate of increase in the number of new respondents remains steady at one new source per year, so the capital/startup cost will not increase.

Courtney Kerwin, Director, Regulatory Support Division.

ENVIRONMENTAL PROTECTION AGENCY

Ambient Water Quality Criteria To Address Nutrient Pollution in Lakes and Reservoirs

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of availability.

SUMMARY: The Environmental Protection Agency (EPA) is announcing the release of Ambient Water Quality Criteria to Address Nutrient Pollution in Lakes and Reservoirs. These national recommended criteria are models for total nitrogen and total phosphorus concentrations in lakes and reservoirs to protect three different designated uses—aquatic life, recreation, and drinking water source protection—from the adverse effects of nutrient pollution. Nutrient pollution can degrade the conditions of water bodies worldwide, and the effects of excess nitrogen and phosphorus may be particularly evident in lakes and reservoirs. These recommended criteria are based on stressor-response models, which link nutrient pollution stressors (nitrogen, phosphorus) to responses associated with protection of designated uses. Models and associated criteria provided in this document are based on national data. States and authorized tribes can also incorporate local data, when available, into the national models, helping states and authorized tribes to derive numeric nutrient criteria that apply relationships estimated from national data while accounting for unique local conditions. These recommended criteria replace numeric nutrient criteria recommended by EPA in 2000 and 2001 for lakes and reservoirs for 12 out of 14 ecoregions of the conterminous United States. This document was released for 60-day public comment in the Federal Register on May 22, 2020. The comment period was extended 30 days, for a total comment period of 90 days. EPA has considered the comments, made minor revisions to the draft document in response, and published this final document to provide recommendations for states and authorized tribes interested in establishing water quality standards under the Clean Water Act (CWA) to protect the designated uses of their lakes and reservoirs from nutrient pollution.

ADDRESSES: EPA has established a docket for this action under Docket ID No. EPA–HQ–OW–2019–0675. All documents in the docket are listed on the https://www.regulations.gov website. Although listed in the index, some information is not publicly available, e.g. confidential business information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available electronically through https://www.regulations.gov. FOR FURTHER INFORMATION CONTACT: Lester Yuan, Health and Ecological Criteria Division, Office of Water (Mail Code 4304T), Environmental Protection Agency, 1200 Pennsylvania Avenue NW, Washington, DC 20460; telephone number: (202) 566–0908; email address: yuan.lester@epa.gov.

SUPPLEMENTARY INFORMATION:

I. What is nutrient pollution, and why is EPA concerned about it?

Nutrient pollution, or the excess loading of nitrogen and phosphorus, can degrade the conditions of water bodies and potentially make them unsafe for aquatic life, recreation, or to use as drinking water sources. Nutrient pollution stimulates excess growth of algae, which can limit the recreational use of lakes and reservoirs. Overabundant algae also increase the amount of organic matter in a lake or reservoir, which, when decomposed, can depress dissolved oxygen concentrations below levels needed to sustain aquatic life. In extreme cases, the depletion of dissolved oxygen causes fish kills. Nutrient pollution can also stimulate the excess growth of nuisance algae, such as cyanobacteria, which can produce cyanotoxins that are toxic to animals and humans. Elevated concentrations of these cyanotoxins can reduce the suitability of a lake or reservoir for recreation and as a source of drinking water.

II. Information on Recommended Ambient Water Quality Criteria for Lakes and Reservoirs

These recommended ambient water quality criteria for lakes and reservoirs are part of EPA’s ongoing efforts to support states and authorized tribes in developing and adopting numeric nutrient criteria. Numeric nutrient criteria provide an important tool for managing the effects of nutrient pollution by providing nutrient goals that support the protection and maintenance of the designated uses of the waters of the United States. Recognizing the utility of such criteria, EPA published recommended numeric nutrient criteria for lakes and reservoirs for 12 out of 14 ecoregions of the conterminous United States from 2000 to 2001. These criteria were derived by analyzing available data on the concentrations of total nitrogen, total phosphorus, chlorophyll a, and Secchi depth. Scientific understanding of the relationships between nutrient concentrations and deleterious effects in lakes and reservoirs has increased since 2001, and standardized, high-quality data collected from lakes and reservoirs across the United States have become available. In this document, EPA describes analyses of these new data and provides models to derive numeric nutrient criteria for lakes and reservoirs.
that replace the recommended numeric nutrient criteria of 2000 and 2001. These models and associated criteria are provided in accordance with the provisions of CWA Section 304(a) for EPA to revise national recommended ambient water quality criteria from time to time to reflect the latest scientific knowledge. The ecological responses on which these models and criteria are based were selected by applying a risk assessment approach to explicitly link nutrient concentrations to the protection of designated uses.

The recommended ambient water quality criteria for lakes and reservoirs are based on the available data from EPA’s National Lakes Assessment (NLA) survey. The NLA surveys are carried out under EPA’s National Aquatic Resource Survey program, which conducts water quality and biological surveys of the nation’s surface waters in partnerships with state and authorized tribal water quality monitoring programs (https://www.epa.gov/national-aquatic-resource-surveys). The NLA surveys were designed using random sampling of lakes and reservoirs across the United States, and as a result, the collected data represent the characteristics of the full population of United States lakes and reservoirs. The NLA surveys were implemented using standardized field sampling and analytical methods, with internal oversight and independent quality control surveillance yielding data of high quality and statistical rigor.

The stressor-response models used in generating the recommended ambient water quality criteria are based on previously published EPA technical guidance (U.S. EPA 2010, Using stressor-response relationships to derive numeric nutrient criteria, Office of Water, U.S. Environmental Protection Agency, Washington, DC, EPA–820–S–10–001), as well as scientific peer-reviewed statistical and modeling techniques. Models provided in the recommended criteria document are based on national data, but states and authorized tribes may have additional data collected during routine monitoring. Incorporating these local data into the national models can refine and improve the precision of the stressor-response relationships on a site-specific basis. EPA stands ready to assist states and authorized tribes to add their data into the models through the Nutrient Scientific Technical Exchange Partnership & Support (N–STEPS) program. In the appendices of the criteria document, EPA describes case studies in which state monitoring data have been combined with national data, yielding models that can be used to derive numeric nutrient criteria that account for both unique local conditions and national, large-scale trends.

III. What are CWA Section 304(a) recommended water quality criteria?

CWA Section 304(a) water quality criteria are non-binding recommendations developed by EPA under authority of CWA Section 304(a) based on the latest scientific knowledge on the effects that pollutant concentrations have on aquatic species, recreation, and human health. CWA Section 304(a)(1) directs EPA to develop, publish, and, from time to time, revise criteria for water quality accurately reflecting the latest scientific knowledge. Water quality criteria developed under CWA Section 304(a) are based on data and scientific judgments on the relationship between pollutant concentrations and environmental and human health effects. CWA Section 304(a) recommended criteria do not reflect consideration of economic impacts or the technological feasibility of meeting pollutant concentrations in ambient water.

CWA Section 304(a) recommended criteria provide non-binding guidance to states and authorized tribes in adopting water quality standards that ultimately provide a basis for controlling discharges of pollutants. Under the CWA and its implementing regulations, states and authorized tribes are to adopt water quality criteria to protect designated uses (e.g., aquatic life, recreational use). EPA’s recommended water quality criteria are not regulations and do not constitute legally binding requirements. States and authorized tribes may adopt other scientifically defensible water quality criteria that differ from these recommendations. The CWA and its implementing regulations require that any new or revised water quality standards adopted by the states and authorized tribes be scientifically defensible and protective of the designated uses of the bodies of water. States and authorized tribes have the flexibility to do this by adopting criteria based on (1) EPA’s recommended criteria, (2) EPA’s criteria modified to reflect site-specific conditions, or (3) other scientifically defensible methods.

IV. Use of the Recommended Ambient Water Quality Criteria for Lakes and Reservoirs by States and Authorized Tribes

EPA is publishing the recommended ambient water quality criteria for lakes and reservoirs for consideration by states and authorized tribes as they adopt numeric nutrient criteria to protect aquatic life, recreation, and drinking water sources from nutrient pollution. States and authorized tribes could consider using the recommendations as an alternative to or as a supplement of other scientifically defensible approaches. States and authorized tribes may also modify the criteria to reflect site-specific conditions or establish criteria based on other scientifically defensible methods (40 CFR 131.11(b)). These updated CWA Section 304(a) recommended nutrient criteria for lakes do not, as a general matter, compel a state or authorized tribe to revise current EPA approved and adopted criteria, Total Maximum Daily Load nutrient load targets, or nitrogen or phosphorus numeric values established by other scientifically defensible methods. As part of its triennial review, if a state or authorized tribe uses its discretion to not adopt new or revised nutrient criteria based on these CWA Section 304(a) recommended criteria, then the state or authorized tribe shall provide an explanation when it submits the results of its triennial review (40 CFR 131.20(a)).

V. What changed between the draft and final criteria?

Changes in the final recommended criteria document, compared to the May 2020 draft posted for public comment, include technical revisions to the models limited to the parameter estimates for the zooplankton model, which were updated to reflect a slight change in how the model calculates seasonal mean biomass of phytoplankton and zooplankton. Other changes include the addition of an appendix that provides an example workflow for identifying appropriately protective numeric nutrient criteria using the interactive tools, as well as minor editorial revisions that clarify or expand on existing text.

Radhika Fox, Assistant Administrator.

ENVIRONMENTAL PROTECTION AGENCY

Notification of Safe Drinking Water Act (SDWA) Section 1441 Application Submissions

AGENCY: Environmental Protection Agency (EPA).
ACTION: Notice of availability; request for comments.
SUMMARY: The U.S. Environmental Protection Agency (EPA) is announcing receipt of Certifications of Need applications pursuant to the Safe Drinking Water Act (SDWA) Section 1441. Seven public water systems and three publicly owned treatment works submitted these applications. Each applicant cited receipt of notices of force majeure or unavailability of treatment chemical via normal procurement channels. The notices explained that a significant curtailment of deliveries of chlorine and derivative treatment chemicals from producers and from producers to repackagers would necessitate either a reduction in allocations of chlorine, sodium hypochlorite, or ferric chloride relative to the contractual agreements or an outright cancellation of the contracts. The applications further stated that after receiving the notices, each of these utilities tried to identify alternate treatment chemical suppliers with no success. EPA is providing an opportunity for written comments from the public on the SDWA Section 1441 applications, from chemical producers and repackagers that could supply the required chlorine, sodium hypochlorite, or ferric chloride to the applicants, and from any other interested parties.

DATES: Comments must be received on or before August 27, 2021.

ADDRESSES: You may send comments, identified by Docket ID Number EPA–HQ–OW–2021–0532, by any of the following methods:

Federal eRulemaking Portal: https://www.regulations.gov (our preferred method). Follow the online instructions for submitting comments.

Hand Delivery/Courier (by scheduled appointment only): EPA Docket Center, WJC West Building, Room 3334, 1301 Constitution Ave. NW, Washington, DC 20004. The Docket Center’s hours of operations are 8:30 a.m. to 4:30 p.m., Monday through Friday (except federal holidays).

Instructions: All submissions received must include the Docket ID No. EPA–HQ–OW–2021–0532 for this action. Comments received may be posted without change to https://www.regulations.gov, including any personal information provided. For detailed instructions on sending comments, see the “Public Participation” heading of the SUPPLEMENTARY INFORMATION section of this document. Out of an abundance of caution for members of the public and our staff, the EPA Docket Center and Reading Room are closed to the public, with limited exceptions, to reduce the risk of transmitting COVID–19. Our Docket Center staff will continue to provide remote customer service via email, phone, and webform. We encourage the public to submit comments via https://www.regulations.gov, as there may be delay in processing mail. Hand deliveries and couriers may be received by scheduled appointment only. For further information of EPA Docket Center Services and the current status, please visit us online at https://www.epa.gov/dockets.

FOR FURTHER INFORMATION CONTACT: For information on SDWA Section 1441 applications contact Gabrielle Minton, Office of Ground Water and Drinking Water, Water Security Division, at (202) 564–8284 or email minton.gabrielle@epa.gov. For information on water utility disinfection products contact Steve Allgeier, Office of Ground Water and Drinking Water, Water Security Division, at (569) 513–7131 or email allgeier.steve@epa.gov. For more information, visit EPA’s website at: https://www.epa.gov/waterutilityresponse/watersectorsupplychain/chemicalshortages.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. General Information
A. Does this action impose any requirements on Public Water Systems (PWSs) or Publicly Owned Treatment Works (POTWs)?
B. Public Participation
C. What should I consider as I prepare my comments for EPA?
II. Purpose, Background, and Statutory Requirements of This Action
A. What is the purpose of this action?
B. Background and Statutory Requirements
I. General Information
A. Does this action impose any requirements on Public Water Systems (PWSs) or Publicly Owned Treatment Works (POTWs)?
This action, when published, will not impose any requirements on utilities.
B. Public Participation
Submit your comments, identified by Docket ID No. EPA–HQ–OW–2021–0532, at https://www.regulations.gov (our preferred method), or the other methods identified in the ADDRESSES section of this document. Once submitted, comments cannot be edited or removed from the docket. EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. EPA will generally not consider comments or comment contents located outside of the primary submission (i.e., on the web, cloud, or other file sharing system). For additional submission methods, the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit https://www.epa.gov/dockets/commenting-epa-dockets.

EPA is temporarily suspending its Docket Center and Reading Room for public visitors, with limited exceptions, to reduce the risk of transmitting COVID–19. Our Docket Center Staff will continue to provide remote customer service via email, phone, and webform. We encourage the public to submit comments via https://www.regulations.gov/ as there may be a delay in processing mail. Hand deliveries or couriers will be received by scheduled appointment only. For further information and updates on EPA Docket Center services, please visit us online at https://www.epa.gov/dockets.

EPA continues to carefully monitor information from the Centers for Disease Control and Prevention (CDC), local area health departments, and our federal partners so that we can respond rapidly as conditions change regarding COVID–19.

C. What should I consider as I prepare my comments for EPA?
You may find the following suggestions helpful for preparing your comments:

Explain your views as clearly as possible. Describe any assumptions that you used. Provide any technical information and/or data you used that support your views. Provide specific examples to illustrate your concerns.

Offer alternatives.

Make sure to submit your comments by the comment period deadline. To ensure proper receipt by EPA, identify the appropriate docket identification number in the subject line on the first page of your response. It would also be helpful if you provided the name, date,
II. Purpose, Background, and Statutory Requirements of This Action

This section briefly summarizes the purpose of this action and the statutory requirements.

A. What is the purpose of this action?

The purpose of this action is to provide notification of the applications received under SDWA Section 1441. EPA has received applications for Certifications of Need under SDWA Section 1441 authority, from the following public water systems and publicly owned treatment works: City of Oceanside—Mission Basin Groundwater Purification Facility (PWSID CA3710014, 12.5% sodium hypochlorite, 5,000 gallons delivered every 55 days); City of Oceanside—Weese Filtration Plant (PWSID CA3710014, 12.5% sodium hypochlorite, 5,000 gallons delivered every 5 days); City of Oceanside—San Luis Rey Water Reclamation Facility (POTW ID R9-2019-0166, 12.5% sodium hypochlorite, 5,000 gallons delivered every 10 days); Western Municipal Water District—Western Water Recycling Facility (POTW ID R9-2003-0113, 12.5% sodium hypochlorite, 5,000 gallons delivered every 10 days); Western Municipal Water District—Western Riverside County Regional Wastewater Authority (POTW CA8000216, 12.5% sodium hypochlorite, 5,000 gallons delivered every 3 days); City of Poway (PWSID CA3710015, 100% gaseous chlorine, 5 tons delivered every 21 days); Jordan Valley River Water Conservancy District (PWSID UT18027, 100% gaseous chlorine, 12 tons delivered every 7 days); Helix Water District (PWSID CA3710010, 100% gaseous chlorine, 12 tons delivered every 14 days); Niagara Falls Water Board Wastewater Treatment Plant (PWSID NY0026336, 12.5% sodium hypochlorite, 30,000 gallons delivered every day); and the City of Farmington Water and Wastewater Utility (PWSID NM-35-10224, 38%-42% ferric chloride, 5,000 gallons delivered every 55 days).

Submitted applications were reviewed by EPA for accuracy, completeness, and basis for need. After the comment period, EPA will issue or deny Certifications of Need. If issued, EPA will transmit the Certifications of Need to the U.S. Department of Commerce Undersecretary for Business and Industrial Security to implement the certification (issuing an order to contracted suppliers). The orders will require repackagers and/or suppliers to provide the fully contracted chlorine and other derivative treatment chemical allocations to the utilities listed in this Federal Register document. EPA requests comment on the application submittals as well as feedback from repackagers or suppliers who may be able to assist.

On June 30, 2021, EPA Administrator Regan issued a letter to the chemical sector encouraging chemical manufacturers and suppliers to prioritize drinking water and wastewater systems. EPA has been in frequent communication with representatives from the chemical sector, including specific chlorine producers and chlorine repackagers. While drinking water and wastewater disinfection accounts for less than 5% of chlorine consumed in the U.S., the water sector’s use of this chemical is essential for protecting public health.

The applicants indicated that if their public water systems cannot obtain a sufficient and reliable supply of the required treatment chemical in the form used at that treatment facility, they would be compelled to issue boil water notices and Tier 1 public notifications or shut down the treatment system until the supply of the required treatment chemical is restored. If public water systems are forced to shut down, the communities served by the system would lack a safe drinking water supply, with significant consequences to public health and the local economy. Similarly, if publicly owned treatment works lack adequate chlorine or derivitive chemical supplies, they would be unable to disinfect treated wastewater prior to discharge to surface waters, potentially leading to an increase in the concentration of pathogens in the surface water, which may be used by downstream drinking water utilities as a source of drinking water or by recreational users.

B. Background and Statistical Requirements

Pursuant to SDWA Section 1441, a PWS or POTW may submit an application to the EPA Administrator for a Certification of Need when the amount of a “chemical or substance necessary to effectively treat water is not reasonably available” or “will not be so available when required.” 42 U.S.C. 300j(a). Upon receipt of the application, EPA must publish a notice in the Federal Register, notify in writing all individuals who could be subject to an order based on the Certification of Need, and provide time for written comment. EPA may waive such requirements when the agency finds for good cause that a waiver is necessary to protect public health. Id. at (b)(2). Within 30 days after publishing the notice in the Federal Register or after receipt of the application if publication is waived, EPA will either issue or deny the Certification of Need. Id. at (b)(3). The EPA Administrator has delegated the authority to receive applications for Certifications of Need, issue such certifications, and take other actions under SDWA Section 1441 to the EPA Assistant Administrator for Water.

If EPA issues the Certification of Need, the agency will forward it to the U.S. Department of Commerce (Department) for implementation. 42 U.S.C. 300j(c)(1). Within seven days of EPA issuing the certification, the Department will issue an order requiring the manufacturers, producers, processors, distributors, or repackagers of the chemical or substance, identified in the amount and form in the Certification of Need, that the Department determines the supplies to be necessary and appropriate. Id. Persons or companies subject to the order will be given a reasonable opportunity to consult with the Department with respect to implementation of the order. Id.

Radhika Fox, Assistant Administrator.

ENVIRONMENTAL PROTECTION AGENCY

[FRL–8844–01–R5]

Great Lakes Advisory Board Notice for Virtual Meeting

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of public meeting for Great Lakes Advisory Board.

SUMMARY: Pursuant to the Federal Advisory Committee Act (FACA), the Environmental Protection Agency (EPA) provides notice of a public meeting for the Great Lakes Advisory Board (GLAB). Pre-registration is required.

DATES: This virtual public meeting will be held on August 30th, 2021 from 1:00 p.m. to 4:00 p.m. Central Daylight Time and August 31st from 9:00 a.m. to 12:00 p.m. Central Daylight Time. Members of the public seeking to view the meeting must register by 3:00 p.m. Central Daylight Time on August 23rd, 2021. Members of the public seeking to make comments relevant to issues discussed at the virtual meeting must register and indicate a request to make oral and/or written public comments in advance of
the meeting. For information on how to register, please see [How do I participate in the meeting] below.

FOR FURTHER INFORMATION CONTACT:
Edlynzia Barnes, Designated Federal Officer (DFO), at Barnes.Edlynzia@epa.gov or 312–886–6249.

SUPPLEMENTARY INFORMATION:

I. General Information

The GLAB is chartered in accordance with the Federal Advisory Committee Act (FACA) of 1972 (5 U.S.C., Appendix 2, as amended) and 41 CFR 102–3.50(d). The Advisory Board provides advice and recommendations on matters related to the Great Lakes Restoration Initiative. The Advisory Board also advises on domestic matters related to implementation of the Great Lakes Water Quality Agreement between the U.S. and Canada. The major objectives are to provide advice and recommendations on: Great Lakes protection and restoration activities; long-term goals, objectives, and priorities for Great Lakes protection and restoration; and other issues identified by the Great Lakes Interagency Task Force/Regional Working Group.

II. How do I participate in the remote public meeting?

A. Remote Meeting

This meeting will be conducted as a virtual meeting on August 30th, 2021 from 1:00 p.m. to 4:00 p.m. Central Daylight Time and August 31st from 9:00 a.m. to 12:00 p.m. Central Daylight Time. You must register by 3:00 p.m. Central Daylight Time on August 23rd, 2021 to receive information on how to participate. You may also submit written or oral comments for the committee by following the processes outlined below.

B. Registration

Individual registration is required for participation in this meeting. Information on registration for this meeting can be found at https://event.capconcopr.com/form/view.php?id=127543. When registering, please provide your name, email, organization, city, and state. Please also indicate whether you would like to provide oral and/or written comments during the meeting at the time of registration.

C. Procedures for Providing Public Comments

Oral Statements: In general, oral comments at this virtual conference will be limited to the Public Comments portion of the meeting agenda. Members of the public may provide oral comments limited to up to three minutes per individual or group and may submit further information as written comments. Persons interested in providing oral statements should register at https://event.capconcopr.com/form/view.php?id=127543 for the meeting and indicate your interest to provide public comments. Oral commenters will be provided an opportunity to speak in the order in which their request was received by the DFO and to the extent permitted by the number of comments and the scheduled length of the meeting. Persons not able to provide oral comments during the meeting will be given an opportunity to provide written comments after the meeting.

Written Statements: Persons interested in providing written statements pertaining to this committee meeting may do so by indicating at https://event.capconcopr.com/form/view.php?id=127543. Written comments will be accepted before, during, and after the public meeting and will be considered by the Great Lakes Advisory Board members.

D. Availability of Meeting Materials

The meeting agenda and other materials for the virtual conference will be posted on the GLAB website at www.glri.us/glab.

E. Accessibility

Persons with disabilities who wish to request reasonable accommodations to participate in this event may contact the DFO at Barnes.Edlynzia@epa.gov or 312–886–6249 by 3:00 p.m. Central Daylight Time on August 23rd, 2021 to receive information on how to participate. You may also submit written or oral comments for the committee by following the processes outlined below.

For further reduction of the information collection burden on small business concerns with fewer than 25 employees. The FCC may not conduct or sponsor a collection of information unless it displays a currently valid control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid Office of Management and Budget (OMB) control number.

DATES: Written PRA comments should be submitted on or before October 12, 2021. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the contact listed below as soon as possible.

ADDRESSES: Direct all PRA comments to Nicole Ongele, FCC, via email PRA@fcc.gov and to Nicole.Ongele@fcc.gov.

FOR FURTHER INFORMATION CONTACT: For additional information about the information collection, contact Nicole Ongele at (202) 418–2991.

SUPPLEMENTARY INFORMATION:

OMB Control Number: 3060–1031.
Title: Commission’s Initiative to Implement Enhanced 911 (E911) Emergency Services.
Form No.: N/A.
Type of Review: Extension of a currently approved collection.
Respondents: Business or other for-profit, and State, Local and Tribal government.
Number of Respondents and Responses: 22 respondents; 23 responses.
Estimated Time per Response: 2–4 hours.
ACTION: Petition for Reconsideration of Action in Rulemaking Proceeding

AGENCY: Federal Communications Commission.

ACTION: Petition for Reconsideration; correction.

SUMMARY: The Federal Communications Commission (Commission) published a document in the Federal Register of July 23, 2021 (86 FR 38969), regarding a Petition for Reconsideration filed in the Commission’s rulemaking proceeding. In this document, the Commission corrects the dates for replies to an opposition.

DATES: Oppositions to the Petitions must be filed on or before August 9, 2021. Replies to an opposition must be filed on or before August 19, 2021.

ADDRESS: Federal Communications Commission, 45 L Street NE, Washington, DC 20554.

FURTHER INFORMATION CONTACT: Hugh VanTuyl. Office of Engineering and Technology, (202) 418–7506 or Hugh.VanTuyl@fcc.gov.

SUPPLEMENTARY INFORMATION: In FR Doc. 21–15641, appearing on page 38969 in the Federal Register on July 23, 2021, the following correction is made:

On page 38969, in the third column, the dates are corrected to read “Oppositions to the Petitions must be filed on or before August 9, 2021. Replies to an opposition must be filed on or before August 19, 2021.”

Federal Communications Commission.

Marlene Dortch,
Secretary.

BILLLING CODE 6712–01–P

Federal Communications Commission

Petition for Reconsideration of Action

[ET Docket No. 20–36; Report No. 3178; FRS 42281]

APPLICATION:

AGENCY: Federal Communications Commission.

ACTION: Petition for Reconsideration of Action.

FEDERAL COMMUNICATIONS COMMISSION

[FR Doc. 2021–17282 Filed 8–12–21; 8:45 am]

SECRETARY: Nicole Ongele, FCC, via email PRA@fcc.gov and to Nicole.Ongele@fcc.gov.

FURTHER INFORMATION CONTACT: For additional information about the information collection, contact Nicole Ongele at (202) 418–2991.

SUPPLEMENTARY INFORMATION:

OMB Control Number: 3060–0807.

Title: Section 51.803, Procedures for Commission Notification of a State Commission’s Failure to Act;

Supplemental Procedures for Petitions Pursuant to Section 252(e)(5) of the Communications Act of 1934, as amended.

Form Number: N/A.

Type of Review: Extension of a currently approved collection.

Respondents: Business or other for-profit entities and State, Local or Tribal government.

Number of Respondents and Responses: 60 respondents; 60 responses.

Estimated Time per Response: 40 hours per requirement.

Frequency of Response: On occasion reporting requirement and third party disclosure requirement.

Obligation to Respond: Required to obtain or retain benefits. Statutory authority for this information collection is contained in 47 U.S.C. 252(e)(5) as amended by the Communications Act of 1934, as amended.

Total Annual Burden: 1,600 hours.

Total Annual Cost: No cost.

Privacy Act Impact Assessment: No impact(s).

Nature and Extent of Confidentiality: The Commission is not requesting petitioners to submit confidential information to the Commission.

Needs and Uses: Any interested party seeking preemption of a state commission’s jurisdiction based on the
state commission’s failure to act shall notify the Commission as follows: (1) File with the Secretary of the Commission a detailed petition, supported by an affidavit, that states with specificity the basis for any claim that it has failed to act; and (2) serve the state commission and other parties to the proceeding on the same day that the party serves the petition on the Commission. Within 15 days of filing the petition, the state commission and parties to the proceeding may file a response to the petition. In an OMB-approved Public Notice, DA 97–2540, released December 4, 1997, the Commission set forth procedures for filing petitions for preemption pursuant to section 252(e)(5). Section 252(e)(5) provides that “if a state commission fails to act to carry out its responsibility under this section in any proceeding or other matter under this section, then the Commission shall issue an order preempting the state commission’s jurisdiction of the proceeding or matter within 90 days after being notified (or taking notice) of such failure, and shall assume the responsibility of the state commission under this section with respect to the proceeding or matter and act for the state commission.” All of the requirements are used to ensure that petitioners have complied with their obligations under the Communications Act of 1934, as amended.

Federal Communications Commission.

Marlene Dortch,
Secretary, Office of the Secretary.

FEDERAL RESERVE SYSTEM

Formations of, Acquisitions by, and Mergers of Bank Holding Companies

The companies listed in this notice have applied to the Board for approval, pursuant to the Bank Holding Company Act of 1956 (12 U.S.C. 1841 et seq.) (BHC Act), Regulation Y (12 CFR part 225), and all other applicable statutes and regulations to become a bank holding company and/or to acquire the assets or the ownership of, control of, or the power to vote shares of a bank or bank holding company and all of the banks and nonbanking companies owned by the bank holding company, including the companies listed below. The public portions of the applications listed below, as well as other related filings required by the Board, if any, are available for immediate inspection at the Federal Reserve Bank(s) indicated below and at the offices of the Board of Governors. This information may also be obtained on an expedited basis, upon request, by contacting the appropriate Federal Reserve Bank and from the Board’s Freedom of Information Office at https://www.federalreserve.gov/foia/request.htm. Interested persons may express their views in writing on the standards enumerated in paragraph 7 of the Act.

Comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors, Ann E. Misback, Secretary of the Board, 20th Street and Constitution Avenue NW, Washington, DC 20551–0001, not later than August 30, 2021.

A. Federal Reserve Bank of Dallas (Karen Smith, Director, Applications)
2200 North Pearl Street, Dallas, Texas 75201–2272:

1. Security State Bank & Trust, Fredericksburg, Texas, as co-trustee of the Kathleen Keller 2016 Trust, Blanco County, Texas, and of the Kay Durst Family 2016 Trust, Gillespie County, Texas; to retain voting shares of Security Holding Company, and thereby indirectly retain voting shares of Security State Bank & Trust, both of Fredericksburg, Texas.

Additionally, the Elliott Gage Hayne GST Trust, Elliott Gage Hayne, as trustee, the James L. Hayne, Jr. GST Trust, James L. Hayne, Jr., as trustee, the Nancy Elliott Hayne GST Trust, Nancy Elliott Hayne, as trustee, and the Walter Catto Hayne GST Trust, Walter Catto Hayne, as trustee, all of San Antonio, Texas; to join the Bonnen/Durst/Hayne/Igler/Keller/Kemp/LaJeune/Loth control group, a group acting in concert, to retain voting shares of Security Holding Company, and thereby indirectly retain voting shares of Security State Bank & Trust.

B. Federal Reserve Bank of San Francisco (Sebastian Astrada, Director, Applications) 101 Market Street, San Francisco, California 94105–1579:

1. TriCo Bancshares, Chico, California; to acquire Valley Republic Bancorp, and thereby indirectly acquire Valley Republic Bank, both of Bakersfield, California.

Ann Misback,
Secretary of the Board.

BILLING CODE 6210–01–P

OFFICE OF GOVERNMENT ETHICS

Agency Information Collection Activities; Information Collection Renewal; Comment Request for OGE Form 278e Executive Branch Personnel Public Financial Disclosure Report

AGENCY: Office of Government Ethics (OGE).

ACTION: Notice and request for comments.

SUMMARY: After publication of this second round notice, the Office of Government Ethics (OGE) intends to
request that the Office of Management and Budget (OMB) renew its approval under the Paperwork Reduction Act for an existing information collection, entitled the OGE Form 278e Executive Branch Personnel Public Financial Disclosure Report.

**ADDRESSES:** Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/ PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

**FOR FURTHER INFORMATION CONTACT:** Grant Anderson at the U.S. Office of Government Ethics; telephone: 202-482-9318; TTY: 800-877-8339; Email: Grant.Anderson@oge.gov.

**SUPPLEMENTARY INFORMATION:**

**Title:** Executive Branch Personnel Public Financial Disclosure Report. **Agency Form Number:** OGE Form 278e.

**Abstract:** The OGE Form 278 collects information from certain officers and high-level employees in the executive branch for conflicts of interest review and public disclosure. The form is also completed by individuals who are nominated by the President for high-level executive branch positions requiring Senate confirmation and individuals entering into and departing from other public reporting positions in the executive branch. The financial information collected relates to: Assets and income; transactions; gifts, reimbursements and travel expenses; liabilities; agreements or arrangements; outside positions; and compensation over $5,000 paid by a source—all subject to various reporting thresholds and exclusions. The information is collected in accordance with section 102 of the Ethics in Government Act, 5 U.S.C. app. sec. 102, as amended by the Representative Louise McIntosh Slaughter Stop Trading on Congressional Knowledge Act (Pub. L. 112–105) (STOCK Act) and OGE’s implementing financial disclosure regulations at 5 CFR part 2634.

In 2013, OGE sought and received approval for the OGE Form 278e, an electronic version of the Form 278, implemented pursuant to the e-filing system mandated under section 11(b) of the STOCK Act. The OGE Form 278e collects the same information as the OGE Form 278. In 2014, OGE sought and received approval to incorporate the OGE Form 278e into its Integrity e-filing application. Integrity has been in use since January 1, 2015, and OGE now requires filers to use a version of the OGE Form 278e rather than the old OGE Form 278. The version of the Form 278e that is produced by Integrity is a streamlined output report format that presents only the filer’s inputs in given categories and does not report other categories not selected by the filer. OGE also continues to maintain an Excel version of the form and a 508 compliant PDF version on its website.

A **Federal Register** Notice with a 60-day comment period soliciting comments on this information collection was published on June 2, 2021 (86 FR 29583). OGE received four responses to that notice, two of which contained several suggestions.

Several of the suggestions addressed the reporting requirements, for example eliminating the requirement to report diversified mutual funds. The financial disclosure requirements are dictated by the Ethics in Government Act (EIGA), 5 U.S.C. app. sec. 102, as amended. Therefore, these suggested changes could not be made without revisions to the EIGA. Several of the suggestions proposed user experience changes to the Integrity system. There is a pre-existing process to collect, analyze, and prioritize proposed changes to the Integrity system through the Integrity Advisory Council (IAC). Agency employees should forward suggestions concerning Integrity to their agency’s Integrity administrator or an agency ethics official who can present the suggestions for IAC consideration.

Two suggestions involved the clarity of the form’s instructions. One of these suggestions was considered, but it was determined that making the change would actually decrease the overall clarity of the instructions. The other suggestion made a valid point that a particular instruction can be confusing to filers, but offered no specific alternative. Without a specific alternative to consider, OGE is unable to make this change as part of the Paperwork Reduction Act renewal process. OGE intends to study the issue for a future revision.

Finally, several suggestions made by Citizens for Responsibility & Ethics in Washington (CREW) focused on requiring additional personal information from filers, which would increase the burden of the information collection and may implicate privacy concerns. One CREW proposal suggested requiring more information about filers’ assets. That idea was previously considered and OGE determined that the resulting burden to the filer would outweigh the benefits. Some of CREW’s suggestions are not directly related to the purpose of the form and/ or would require a legislative or regulatory change. To the extent that the proposed changes may assist the government in identifying potential conflicts of interest, they will be considered for a future iteration of the form.

**OMB Control Number:** 3209–0001. **Type of Information Collection:** Extension of a currently approved collection.

**Type of Review Request:** Regular. **Affected Public:** Private citizen Presidential nominees to executive branch positions subject to Senate confirmation; other private citizens who are potential (incoming) Federal employees whose positions are designated for public disclosure filing; those who file termination reports from such positions after their Government service ends; and Presidential and Vice-Presidential candidates.

**Estimated Annual Number of Respondents:** 3,196. **Estimated Time per Response:** 10 hours. **Estimated Total Annual Burden:** 31,960 hours.

**Request for Comments:** OGE is publishing this second round notice of its intent to request paperwork clearance renewal for OGE Form 278e. Public comment is invited specifically on the need for and practical utility of this information collection, the accuracy of OGE’s burden estimate, the enhancement of quality, utility and clarity of the information collected, and the minimization of burden (including the use of information technology). The comments will become a matter of public record.

Approved: August 10, 2021.

Emory Rounds, Director, U.S. Office of Government Ethics.

---

**OFFICE OF GOVERNMENT ETHICS**

**Agency Information Collection Activities; Information Collection Renewal; Comment Request for OGE Form 450 Executive Branch Confidential Financial Disclosure Report**

**AGENCY:** Office of Government Ethics (OGE).

**ACTION:** Notice and request for comments.

**SUMMARY:** After publication of this second round notice, the Office of Government Ethics (OGE) plans to request that the Office of Management and Budget (OMB) renew its approval.
under the Paperwork Reduction Act for an existing information collection, entitled the OGE Form 450 Executive Branch Confidential Financial Disclosure Report.

Comments: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

FOR FURTHER INFORMATION CONTACT:
Grant Anderson at the U.S. Office of Government Ethics; telephone: 202–482–9318; TTY: 800–877–8339; Email: Grant.Anderson@oge.gov.

SUPPLEMENTARY INFORMATION:
Title: Executive Branch Confidential Financial Disclosure Report.
Agency Form Number: OGE Form 450.

Abstract: The OGE Form 450 collects information from covered department and agency employees as required under OGE’s executive branch wide regulatory provisions in subpart I of 5 CFR part 2634. The basis for the OGE reporting regulation is section 201(d) of Executive Order 12674 of April 12, 1989 (as modified by Executive Order 12731 of October 17, 1990) and section 107(a) of the Ethics in Government Act, 5 U.S.C. app. sec. 107(a). OGE maintains the form in three formats on its website: A PDF version, a 508 compliant PDF version, and an Excel spreadsheet version. OGE seeks renewal of the OGE Form 450 without modification.

A Federal Register Notice with a 60-day comment period soliciting comments on this information collection was published on June 2, 2021 (86 FR 29584). OGE received five responses to that notice, one of which did not directly address the information collection.

The other four comments suggest requiring additional information, apparently for the benefit of the government employees tasked with reviewing the information. These suggestions would add additional reporting burden to filers and could have privacy implications. One of the suggestions would also require a regulatory change. Accordingly, OGE declined to adopt these suggestions in seeking Paperwork Reduction Act renewal for the OGE Form 450.

OMB Control Number: 3209–0006.
Type of Information Collection: Extension of a currently approved collection.
Type of Review Request: Regular.

Affected public: Prospective Government employees, including special Government employees, whose positions are designated for confidential disclosure filing and whose agencies require that they file new entrant confidential disclosure reports prior to assuming Government responsibilities.

Estimated Annual Number of Respondents: 30,449.
Estimated Time per Response: 3 hours.
Estimated Total Annual Burden: 91,347 hours.

Request for Comments: OGE is publishing this second round notice of its intent to request paperwork clearance renewal for the OGE Form 450. Public comment is invited specifically on the need for and practical utility of this information collection, the accuracy of OGE’s burden estimate, the enhancement of quality, utility and clarity of the information collected, and the minimization of burden (including the use of information technology). The comments will become a matter of public record.

Approved: August 10, 2021.

DEPARTMENT OF HEALTH AND HUMAN SERVICES
Agency for Toxic Substances and Disease Registry

[08Day–21–0048; Docket No. ATSDR–2021–0007]

Proposed Data Collection Submitted for Public Comment and Recommendations

AGENCY: Agency for Toxic Substances and Disease Registry (ATSDR), Department of Health and Human Services (HHS).

ACTION: Notice with comment period.

SUMMARY: The Agency for Toxic Substances and Disease Registry (ATSDR), as part of its continuing effort to reduce public burden and maximize the utility of government information, invites the general public and other Federal agencies the opportunity to comment on a proposed and/or continuing information collection, as required by the Paperwork Reduction Act of 1995. This notice invites comment on a proposed information collection project titled ATSDR Exposure Investigations (EIs). The information collection is designed to evaluate public health issues at a site resulting from environmental exposure. ATSDR EIs fill data gaps by conducting environmental and biological sampling.

DATES: ATSDR must receive written comments on or before October 12, 2021.

ADDRESSES: You may submit comments, identified by Docket No. ATSDR–2021–0007 by any of the following methods:

• Federal eRulemaking Portal: Regulations.gov. Follow the instructions for submitting comments.

• Mail: Jeffrey M. Zirger, Information Collection Review Office, Centers for Disease Control and Prevention, 1600 Clifton Road NE, MS–D74, Atlanta, Georgia 30329.

Instructions: All submissions received must include the agency name and Docket Number. ATSDR will post, without change, all relevant comments to Regulations.gov.

Please note: Submit all comments through the Federal eRulemaking portal (regulations.gov) or by U.S. mail to the address listed above.

FOR FURTHER INFORMATION CONTACT: To request more information on the proposed project or to obtain a copy of the information collection plan and instruments, contact Jeffrey M. Zirger, Information Collection Review Office, Centers for Disease Control and Prevention, 1600 Clifton Road NE, MS–D74, Atlanta, Georgia 30329; phone: 404–639–7118; Email: omb@cdc.gov.

SUPPLEMENTARY INFORMATION: Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3520), Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. In addition, the PRA also requires Federal agencies to provide a 60-day notice in the Federal Register concerning each proposed collection of information, including each new proposed collection, each proposed extension of existing collection of information, and each reinstatement of previously approved information collection before submitting the collection to the OMB for approval. To comply with this requirement, we are publishing this notice of a proposed data collection as described below.

The OMB is particularly interested in comments that will help:
1. Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
2. Evaluate the accuracy of the agency’s estimate of the burden of the
proposed collection of information, including the validity of the methodology and assumptions used;
3. Enhance the quality, utility, and clarity of the information to be collected;
4. Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submissions of responses; and
5. Assess information collection costs.

**Proposed Project**

ATSDR Exposure Investigations (EIs) (OMB Control No. 0923–0048, Exp. 04/30/2022)—Extension—Agency for Toxic Substances and Disease Registry (ATSDR).

**Background and Brief Description**

The Agency for Toxic Substances and Disease Registry (ATSDR) is requesting a three-year extension of this generic clearance to allow the agency to conduct exposure investigations (EIs), through methods developed by ATSDR. After a chemical release or suspected release into the environment, EIs are usually requested by officials of a state health agency, county health department, the Environmental Protection Agency (EPA), the general public, and/or ATSDR staff. EI results are used by public health professionals, environmental risk managers, and other decision makers to determine if current conditions warrant intervention strategies to minimize or eliminate human exposure.

All of ATSDR’s targeted biological assessments (e.g., urine, blood) and some of the environmental investigations (e.g., air, water, soil, dust, or food sampling) involve participants to determine whether they are or have been exposed to unusual levels of pollutants at specific locations (e.g., where people live, spend leisure time, or anywhere they might come into contact with contaminants under investigation).

Questionnaires, appropriate to the specific contaminant, are generally needed in about half of the EIs (at most, approximately 12 per year) to assist in interpreting the biological or environmental sampling results. ATSDR collects contact information (e.g., name, address, phone number) to provide the participant with their individual results. ATSDR also collects information on other possible confounding sources of chemical(s) exposure such as medicines taken, foods eaten, hobbies, jobs, etc. in addition, ATSDR asks questions on recreational or occupational activities that could increase a participant’s exposure potential. The information collected represents an individual’s exposure history.

The number of questions can vary depending on the number of chemicals being investigated, the route of exposure (e.g., breathing, eating, touching), and the number of other sources of the chemical(s) (e.g., products used, jobs). We use approximately 12–20 questions about the pertinent environmental exposures per investigation. A question bank is available for health assessors to use as a basis of questions to be asked during the EI, but EI-specific questions may be included as appropriate.

Typically, the number of participants in an individual EI ranges from 10 to 100. Participation is completely voluntary, and there are no costs to participants other than their time. Based on a maximum of 12 EIs per year and 100 participants each, the estimated annualized burden hours are 600.

**DEPARTMENT OF HEALTH AND HUMAN SERVICES**

**Centers for Disease Control and Prevention**

[Docket No. CDC–2021–0083; NIOSH 278]

**Board of Scientific Counselors,**  
National Institute for Occupational Safety and Health (BSC, NIOSH)

**AGENCY:** Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

**ACTION:** Notice of meeting and request for comment.

**SUMMARY:** In accordance with the Federal Advisory Committee Act, the CDC announces the following virtual meeting of the Board of Scientific Counselors, National Institute for Occupational Safety and Health (BSC, NIOSH).

**DATES:** The meeting will be held on October 5, 2021, from 10:00 a.m.–3:30 p.m., EDT. Written comments are due by September 28, 2021.

**ADDRESSES:** This is a virtual meeting. You may submit comments, identified by Docket No. CDC–2021–0083; NIOSH–278 by mail. CDC does not accept comments by email.

- **Federal eRulemaking Portal:** https://www.regulations.gov. Follow the instructions for submitting comments.
- **Mail:** Docket number CDC–2021–0083; NIOSH–278, c/o Sherri Diana, NIOSH Docket Office, National Institute for Occupational Safety and Health, 1090 Tusculum Avenue, MS C–34, Cincinnati, Ohio 45226.

**Instructions:** All submissions received must include the Agency name and Docket Number. Written public comments received by September 28, 2021 will be provided to the BSC prior to the meeting. Docket number CDC–2021–0083; NIOSH–278 will close September 28, 2021.

**FOR FURTHER INFORMATION CONTACT:**  
Emily J.K. Novicki, M.A., M.P.H., Executive Secretary, BSC, NIOSH, CDC, 1600 Clifton Road NE, MS V24–4, Atlanta, GA 30329–4027, Telephone (404) 498–2581, or email at enovicki@cdc.gov.

**SUPPLEMENTARY INFORMATION:**  
**Purpose:** The Secretary, the Assistant Secretary for Health, and by delegation the Director, Centers for Disease Control and Prevention, are authorized under Sections 301 and 308 of the Public Health Service Act to conduct directly
or by grants or contracts, research, experiments, and demonstrations relating to occupational safety and health and to mine health. The Board of Scientific Counselors provides guidance to the Director, National Institute for Occupational Safety and Health on research and prevention programs. Specifically, the Board provides guidance on the Institute’s research activities related to developing and evaluating hypotheses, systematically documenting findings and disseminating results. The Board evaluates the degree to which the activities of the National Institute for Occupational Safety and Health: (1) Conform to appropriate scientific standards, (2) address current, relevant needs, and (3) produce intended results.

**Matters To Be Considered:** The agenda for the meeting addresses progress on the NIOSH Evaluation Capacity Building Plan; mental health initiative for health workers; and National Firefighter Registry. An agenda is also posted on the NIOSH website (http://www.cdc.gov/niosh/bsc/). Agenda items are subject to change as priorities dictate. Meeting Information: It is open to the public, limited only by web conference lines (500 web conference lines are available). Register at the NIOSH website http://www.cdc.gov/niosh/bsc/ or call (404–498–2581) no later than September 28, 2021. Time will be available for public comment.

**Public Participation**

Comments received are part of the public record and are subject to public disclosure. Do not include any information in your comment or supporting materials that you consider confidential or inappropriate for public disclosure. If you include your name, contact information, or other information that identifies you in the body of your comments, that information will be on public display. CDC will review all submissions and may choose to redact, or withhold, submissions containing private or proprietary information such as Social Security numbers, medical information, inappropriate language, or duplicate/ near duplicate examples of a mass-mail campaign. CDC will carefully consider all comments submitted into the docket. CDC does not accept comment by email.

**Oral Public Comment:** The public is welcome to participate during the public comment period, from 1:00 p.m. to 1:15 p.m., EDT, September 28, 2021. Please note that the public comment period ends at the time indicated above. Each comment may be provided up to five minutes for comment. A limited number of time slots are available and will be assigned on a first come-first served basis. Members of the public who wish to address the NIOSH BSC are requested to contact the Executive Secretary for scheduling purposes (see **FOR FURTHER INFORMATION** above).

**Written Public Comment:** Written comments will also be accepted from those unable to attend the public session per the instructions provided in the address section above. Written comments received in advance of the meeting will be included in the official record of the meeting. Written comments received by September 28, 2021 will be provided to the BSC prior to the meeting.

The Director, Strategic Business Initiatives Unit, Office of the Chief Operating Officer, Centers for Disease Control and Prevention, has been delegated the authority to sign **Federal Register** notices pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and Prevention and the Agency for Toxic Substances and Disease Registry.

Kalwant Smagh,
Director, Strategic Business Initiatives Unit, Office of the Chief Operating Officer, Centers for Disease Control and Prevention.

**DEPARTMENT OF HEALTH AND HUMAN SERVICES**

**Centers for Disease Control and Prevention**

[60Day–21–21HD; Docket No. CDC–2021–0080]

**Proposed Data Collection Submitted for Public Comment and Recommendations**

**AGENCY:** Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

**ACTION:** Notice with comment period.

**SUMMARY:** The Centers for Disease Control and Prevention (CDC), as part of its continuing effort to reduce public burden and maximize the utility of government information, invites the general public and other Federal agencies the opportunity to comment on a proposed and/or continuing information collection, as required by the Paperwork Reduction Act of 1995. This notice invites comment on a proposed information collection project titled One Health SARS–CoV–2 Animal Testing Form, which aims to improve the scientific community’s understanding of the number of animals state officials report are tested for SARS–CoV–2, including the associated epidemiological data and testing results.

**DATES:** CDC must receive written comments on or before October 12, 2021.

**ADDRESSES:** You may submit comments, identified by Docket No. CDC–2021–0080 by any of the following methods:

- **Federal eRulemaking Portal:** Regulations.gov. Follow the instructions for submitting comments.
- **Mail:** Jeffrey M. Zirger, Information Collection Review Office, Centers for Disease Control and Prevention, 1600 Clifton Road NE, MS–D74, Atlanta, Georgia 30329.

**Instructions:** All submissions received must include the agency name and Docket Number. CDC will post, without change, all relevant comments to Regulations.gov.

**Please note:** Submit all comments through the Federal eRulemaking portal (regulations.gov) or by U.S. mail to the address listed above.

**FOR FURTHER INFORMATION CONTACT:** To request more information on the proposed project or to obtain a copy of the information collection plan and proposed project or to obtain a copy of the information collection plan and instruments, contact Jeffrey M. Zirger, Information Collection Review Office, Centers for Disease Control and Prevention, 1600 Clifton Road NE, MS–D74, Atlanta, Georgia 30329; phone: 404–639–7570; Email: omb@cdc.gov.

**SUPPLEMENTARY INFORMATION:** Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3520), Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. In addition, the PRA also requires Federal agencies to provide a 60-day notice in the Federal Register concerning each proposed collection of information, including each new proposed collection, each proposed extension of existing collection of information, and each reinstatement of previously approved information collection before submitting the collection to the OMB for approval. To comply with this requirement, we are publishing this notice of a proposed data collection as described below.

The OMB is particularly interested in comments that will help:

1. Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
2. Evaluate the accuracy of the agency’s estimate of the burden of the proposed collection of information,
including the validity of the methodology and assumptions used;
3. Enhance the quality, utility, and clarity of the information to be collected;
4. Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submissions of responses; and
5. Assess information collection costs.

Proposed Project

One Health SARS–CoV–2 Animal Testing Form—New—National Center for Emerging and Zoonotic Infectious Diseases (NCEZID), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

The goal of this project is to collect information from state, tribal, local, and territorial partners on the scope and context of SARS–CoV–2 testing in animals in order to understand and monitor testing burden and prevalence of the virus among animal populations. Currently, most animal samples that test positive for SARS–CoV–2 are confirmed by the United States Department of Agriculture (USDA) National Veterinary Services Lab (NVSL), and are reported to the World Organization for Animal Health (OIE). However, no reporting requirements or mechanisms are in place to determine the number of negative results, total number of samples tested, and samples for which testing was not approved by state, territorial, local, or tribal health authorities. Additional information on the overall number of animals tested for SARS–CoV–2 will allow us to refine our understanding of the clinical course and presentation in animals, gain a sense of the burden that SARS–COV–2 testing places on health officials, and develop an estimate of national prevalence of SARS–CoV–2. In turn, these data can help inform guidance and recommendations, as well as surveillance directives for future emerging infectious diseases.

The need for these data has been discussed with federal, state, tribal, local, and territorial partners and the questionnaire was developed in consultation with these stakeholders. CDC requests approval for an estimated 8,000 annual burden hours. There is no cost to respondents other than their time.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention [60Day–21–0852; Docket No. CDC–2021–0082]

Proposed Data Collection Submitted for Public Comment and Recommendations

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice with comment period.

SUMMARY: The Centers for Disease Control and Prevention (CDC), as part of its continuing effort to reduce public burden and maximize the utility of government information, invites the general public and other Federal agencies the opportunity to comment on a proposed and/or continuing information collection, as required by the Paperwork Reduction Act of 1995. This notice invites comment on a proposed information collection project titled Prevalence Survey of Healthcare-Associated Infections and Antimicrobial Use in U.S. Acute Care Hospitals. This project examines the numbers and types of Healthcare-Associated Infections and causative pathogens, types of antimicrobial drugs (such as antibiotics) used, and the quality of antimicrobial prescribing in U.S. acute care hospitals.

DATES: CDC must receive written comments on or before October 12, 2021.

ADDRESSES: You may submit comments, identified by Docket No. CDC–2021–0082 by any of the following methods:
- Federal eRulemaking Portal: Regulations.gov. Follow the instructions for submitting comments.
- Mail: Jeffrey M. Zirger, Information Collection Review Office, Centers for Disease Control and Prevention, 1600 Clifton Road NE, MS–D74, Atlanta, Georgia 30329.

Instructions: All submissions received must include the agency name and Docket Number. CDC will post, without change, all relevant comments to Regulations.gov.

Please note: Submit all comments through the Federal eRulemaking portal (regulations.gov) or by U.S. mail to the address listed above.

FOR FURTHER INFORMATION CONTACT: To request more information on the proposed project or to obtain a copy of the information collection plan and instruments, contact Jeffrey M. Zirger, Information Collection Review Office, Centers for Disease Control and Prevention, 1600 Clifton Road, NE, MS–D74, Atlanta, Georgia 30329; phone: 404–639–7570; Email: omb@cdc.gov.

SUPPLEMENTARY INFORMATION: Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3520), Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. In addition, the PRA also requires Federal agencies to provide a 60-day notice in the Federal Register concerning each proposed collection of information, including each new proposed collection, each proposed extension of existing collection of information, and each reinstatement of previously approved information collection before submitting the collection to the OMB for approval. To comply with this requirement, we are publishing this notice of a proposed data collection as described below. The OMB is particularly interested in comments that will help:

1. Evaluate whether the proposed collection of information is necessary...
for the proper performance of the functions of the agency, including whether the information will have practical utility;

2. Evaluate the accuracy of the agency’s estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

3. Enhance the quality, utility, and clarity of the information to be collected;

4. Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submissions of responses; and

5. Assess information collection costs.

Proposed Project

Prevalence Survey of Healthcare-Associated Infections and Antimicrobial Use in U.S. Acute Care Hospitals (OMB Control No. 0920–0852, Exp. 10/31/2022)—Extension—National Center for Emerging and Zoonotic Infectious Diseases (NCEZID), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

Preventing healthcare-associated infections (HAIs) and improving antimicrobial use (AU) are both CDC and national priorities. An essential step in reducing the occurrence of HAIs is to accurately estimate the burden of these infections in U.S. acute care hospitals and to describe the types of HAIs and causative pathogens. Periodic assessments of the magnitude and types of HAIs and AU occurring in all patient populations within acute care hospitals are needed to inform decisions by policy makers and hospital infection control personnel (ICP) regarding appropriate targets and strategies for HAI prevention and antimicrobial stewardship.

Since 2009, CDC has conducted four prevalence surveys (i.e., pilot survey in 2009, limited-scale survey in 2010, and two full-scale surveys in 2011 and 2015) in partnership with the CDC’s Emerging Infections Program (EIP) sites. Findings from the most recent survey showed a reduction in the percentage of patients with healthcare-associated infections compared with 2011. CDC was granted approval from OMB to conduct a fifth survey in 2020, but due to the COVID–19 pandemic the survey was postponed to 2023.

Minor adjustments to data collection instruments since the previous 2019 OMB approval have been made. These adjustments were made to enhance future analyses and utility of the survey data. These changes are non-substantive and are not expected to increase the public reporting burden. An extension of the prevalence survey’s existing OMB approval is sought to allow a repeat HAI and AU Prevalence Survey to be performed in 2023. A repeat survey will allow assessment of changes in HAI and AU prevalence, pathogen distribution, and quality of antimicrobial prescribing. These changes will also allow CDC and its partners to continue to monitor HAI and AU trends, to measure progress in meeting national targets, and to further refine prevention strategies. In the 2023 survey, data collection will occur within acute care general hospitals of varying size in each of the 10 EIP sites (i.e., CA, CO, CT, GA, MD, MN, NM, NY, OR, & TN).

Infection Control Personnel (ICP) in participating hospitals may assist EIP site personnel in collecting demographic and limited clinical data from the electronic or paper-based medical records of a sample of randomly selected patients on a single day in 2023. Patients will not be interviewed, and no direct interaction with patients will occur. Hospital and patient-level data will be collected using unique identification codes. EIP site personnel will submit hospital and patient-level data to CDC using a secure data management system.

Based on experiences from previous surveys, the time required to complete the Healthcare Facility Assessment Form (HFA) and Patient Information Form (PIF) is estimated to be 45 and 17 minutes, respectively. To conduct the full-scale survey in a three-year approval period, 100 hospital respondents will complete both the HFA (1x) and the PIF (on average 63x) per year.

To assess changes in HAIs and AU over time, EIP sites will seek participation from the same hospitals that participated in prior surveys. These hospitals were originally selected for participation using a stratified random sampling scheme based on the number of staffed acute care beds (i.e., small: <150 staffed beds; medium: 151–399 staffed beds; large: >400 staffed beds). Each site will also have the option to recruit additional hospitals for a total of up to 30 in each site. As in previous surveys, hospital participation will remain voluntary. Within each participating hospital, EIP site personnel will establish patient sample size targets based on the number of staffed acute care beds (e.g., up to 75 patients in small hospitals, 75 patients in medium hospitals, and 100 patients in large hospitals).

The total estimated annualized public burden is 1,860 hours, which represents no change from the 2019 OMB approval. There is no cost to respondents other than their time.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

[30Day–21–0792]

Agency Forms Undergoing Paperwork Reduction Act Review

In accordance with the Paperwork Reduction Act of 1995, the Centers for Disease Control and Prevention (CDC) has submitted the information collection request titled “Environmental Health Specialists Network (EHS-Net) Program” to the Office of Management and Budget (OMB) for review and approval. CDC previously published a “Proposed Data Collection Submitted for Public Comment and Recommendations” notice on April 5, 2021 to obtain comments from the public and affected agencies. CDC did not receive comments related to the previous notice. This notice serves to allow an additional 30 days for public and affected agency comments.

CDC will accept all comments for this proposed information collection project. The Office of Management and Budget is particularly interested in comments that:

(a) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(b) Evaluate the accuracy of the agencies estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(c) Enhance the quality, utility, and clarity of the information to be collected;

(d) Minimize the burden of the collection of information on those who are to respond, including, through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses; and

(e) Assess information collection costs.

To request additional information on the proposed project or to obtain a copy of the information collection plan and instruments, call (404) 639–7570. Comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function. Direct written comments and/or suggestions regarding the items contained in this notice to the Attention: CDC Desk Officer, Office of Management and Budget, 725 17th Street NW, Washington, DC 20503 or by fax to (202) 395–5806. Provide written comments within 30 days of notice publication.

Proposed Project

Environmental Health Specialists Network (EHS-Net) Program (OMB Control No. 0920–0792, Exp. 8/31/2021)—Revision—National Center for Environmental Health (NCEH), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

The CDC is requesting a three-year Paperwork Reduction Act (PRA) clearance for this generic clearance. This Revision information collection request (ICR) will allow the Environmental Health Specialists Network (EHS-Net) to collect research data focused on identifying and addressing the environmental causes of foodborne illness.

An estimated 47.8 million foodborne illnesses occur annually in the United States, resulting in 127,839 hospitalizations, and 3,037 deaths annually. These figures indicate that foodborne illness is a significant problem in the U.S. Reducing foodborne illness requires identification and understanding of the environmental factors that cause these illnesses, and it needs to be understood how and why food becomes contaminated with foodborne illness pathogens. This information can then be used to determine effective food safety prevention methods, increase regulatory program effectiveness, and decrease foodborne illness. The purpose of this food safety research program is to identify and understand environmental factors associated with foodborne illness and outbreaks. This program is conducted by the EHS-Net, a collaborative project of CDC, FDA, USDA, and local and state sites.

Environmental factors associated with foodborne illness include both food safety practices (e.g., inadequate cleaning practices) and the factors in the environment associated with those practices (e.g., worker and retail food establishment characteristics). To understand these factors, we need to collect data from those who prepare food (i.e., food workers) and on the environments in which the food is prepared (i.e., retail food establishment kitchens). Thus, data collection methods for this generic package include: (1) Manager and worker interviews/information collection instruments, and (2) observation of kitchen environments. Both methods allow data collection on food safety practices and environmental factors associated with those practices.

The current package differs from the previous package in three primary ways, described below:

• The sites in which data will be collected differ. CDC funded a renewal of the EHS-Net cooperative agreement in 2020; as a result, one site was dropped from the agreement (California), and one was added (Franklin County, Ohio). The other sites remained the same. These are: Harris County, Texas; Minnesota; New York; New York City, New York; Rhode Island; Southern Nevada Health District, Nevada; and Tennessee.

• Since the previous PRA clearance, the National Center for Environmental Health (NCEH) Human Subjects Coordinator has determined that EHS-Net information collections are not human subjects research, and thus, do not require IRB review or approval.

• The annual burden estimate has been revised downward by 933 hours from 1,777 hours in 2018 to 844 hours in 2021. We estimated interviewing 10 workers per restaurant in the last cycle; we have revised this down to five workers per restaurant.

There is no cost to the respondents other than their time. The total annual time burden requested is 844 hours.

DEPARTMENT OF HEALTH AND HUMAN SERVICES  

Centers for Disease Control and Prevention  

[60Day–21–21HE; Docket No. CDC–2021–0081]

Proposed Data Collection Submitted for Public Comment and Recommendations  

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).  

ACTION: Notice with comment period.  

SUMMARY: The Centers for Disease Control and Prevention (CDC), as part of its continuing effort to reduce public burden and maximize the utility of government information, invites the general public and other Federal agencies the opportunity to comment on a proposed and/or continuing information collection, as required by the Paperwork Reduction Act of 1995. This notice invites comment on a proposed information collection project titled One Health Case Investigation Form for Animals with SARS–CoV–2—New—National Center for Emerging and Zoonotic Infectious Diseases (NCEZID), Centers for Disease Control and Prevention (CDC).  

DATES: CDC must receive written comments on or before October 12, 2021.  

ADDRESSES: You may submit comments, identified by Docket No. CDC–2021–0081 by any of the following methods:  

• Federal eRulemaking Portal: Regulations.gov. Follow the instructions for submitting comments.  

• Mail: Jeffrey M. Zirger, Information Collection Review Office, Centers for Disease Control and Prevention, 1600 Clifton Road NE, MS–D74, Atlanta, Georgia 30329.  

Instructions: All submissions received must include the agency name and Docket Number. CDC will post, without change, all relevant comments to Regulations.gov.  

Please note: Submit all comments through the Federal eRulemaking portal (regulations.gov) or by U.S. mail to the address listed above.  

FOR FURTHER INFORMATION CONTACT: To request more information on the proposed project or to obtain a copy of the information collection plan and instruments, contact Jeffrey M. Zirger, Information Collection Review Office, Centers for Disease Control and Prevention, 1600 Clifton Road NE, MS–D74, Atlanta, Georgia 30329; phone: 404–639–7570; email: omb@cdc.gov.  

SUPPLEMENTARY INFORMATION: Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3520), Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. In addition, the PRA also requires Federal agencies to provide a 60-day notice in the Federal Register concerning each proposed collection of information, including each new proposed collection, each proposed extension of existing collection of information, and each reinstatement of previously approved information collection before submitting the collection to the OMB for approval. To comply with this requirement, we are publishing this notice of a proposed data collection as described below.  

The OMB is particularly interested in comments that will help:  
1. Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;  
2. Evaluate the accuracy of the agency’s estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;  
3. Enhance the quality, utility, and clarity of the information to be collected;  
4. Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submissions of responses; and  
5. Assess information collection costs.  

Proposed Project  

One Health Case Investigation Form for Animals with SARS–CoV–2—New—National Center for Emerging and Zoonotic Infectious Diseases (NCEZID), Centers for Disease Control and Prevention (CDC).  

Background and Brief Description  

The proposed collection includes a standardized form that collects and compiles epidemiologic data on animals infected with SARS–CoV–2, including exposure history to people or other sources, clinical presentation, diagnostic testing data, and the risk the animal may pose of transmitting SARS–CoV–2 to human or animal hosts. The form is intended to guide state, tribal, local and territorial health officials conducting an epidemiological investigation when an animal with suspected or confirmed SARS–CoV–2 infection is identified. Data collected will focus primarily on animal subjects, and there is no Personal Identifiable Information (PII) requested on the form. Steps have been taken to minimize duplication of effort, including consultation with state, tribal, local, territorial, and federal partners (including USDA and FDA), and international agencies.  

The epidemiological information on animals infected with SARS–CoV–2 that is collected will be used to refine guidance and recommendations, identify high-risk exposures and transmission events, and advance surveillance directives for future emerging infectious diseases. CDC requests approval for an estimated 1,000

Centers for Disease Control and Prevention

[30Day–21–0572]

Agency Forms Undergoing Paperwork Reduction Act Review

In accordance with the Paperwork Reduction Act of 1995, the Centers for Disease Control and Prevention (CDC) has submitted the information collection request titled Health Message Testing System (HMTS) to the Office of Management and Budget (OMB) for review and approval. CDC previously published a “Proposed Data Collection Submitted for Public Comment and Recommendations” notice on May 26, 2021 to obtain comments from the public and affected agencies. CDC received one non-substantive comment. This notice serves to allow an additional 30 days for public and affected agency comments.

CDC will accept all comments for this proposed information collection project. The Office of Management and Budget is particularly interested in comments that:

(a) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
(b) Evaluate the accuracy of the agencies estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
(c) Enhance the quality, utility, and clarity of the information to be collected;
(d) Minimize the burden of the collection of information on those who are to respond, including, through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses; and
(e) Assess information collection costs.

To request additional information on the proposed project or to obtain a copy of the information collection plan and instruments, call (404) 639–7570. Comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function. Direct written comments and/or suggestions regarding the items contained in this notice to the Attention: CDC Desk Officer, Office of Management and Budget, 725 17th Street NW, Washington, DC 20503 or by fax to (202) 395–5806. Provide written comments within 30 days of notice publication.

Proposed Project

Health Message Testing System (HMTS) (OMB Control No. 0920–0572, Exp. 8/31/2021)—Extension—Office of the Associate Director for Communication (OADC), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

Before CDC disseminates a health message to the public, the message always undergoes scientific review. However, even though the message is based on sound scientific content, there is no guarantee that the public will understand a health message or that the message will move people to take recommended action. Communication theorists and researchers agree that for health messages to be as clear and influential as possible, target audience members or representatives must be involved in developing the messages and provisional versions of the messages must be tested with members of the target audience.

Increasingly, there are circumstances when CDC must move swiftly to protect life, prevent disease, or calm public anxiety. Health message testing is even more important in these instances, because of the critical nature of the information need. In the interest of timely health message dissemination, many programs forgo the important step of testing messages on dimensions such as clarity, salience, appeal, and persuasiveness (i.e., the ability to influence behavioral intention). Skipping this step avoids the delay involved in the standard OMB review process, but at a high potential cost. Untested messages can waste communication resources and opportunities because the messages can be perceived as unclear or irrelevant. Untested messages can also have unintended consequences, such as jeopardizing the credibility of Federal health officials.

The Health Message Testing System (HMTS), a Generic information collection, enables programs across CDC to collect the information they require in a timely manner to:

• Ensure quality and prevent waste in the dissemination of health information by CDC to the public;
• Refine message concepts and to test draft materials for clarity, salience, appeal, and persuasiveness to target audiences;
• Guide the action of health communication officials who are responding to health emergencies, Congressionally-mandated campaigns with short timeframes, media-generated public concern, time-limited communication opportunities, trends, and the need to refresh materials or dissemination strategies in an ongoing campaign.

Each testing instrument will be based on specific health issues or topics. Although it is not possible to develop one instrument for use in all instances, the same kinds of questions are asked in
most message testing. This package includes generic questions and formats that can be used to develop health message testing data collection instruments. These include a list of screening questions, comprised of demographic and introductory questions, along with other questions that can be used to create a mix of relevant questions for each proposed message testing data collection method. Programs may request to use additional questions if needed.

Message testing questions will focus on issues such as comprehension, impressions, personal relevance, content and wording, efficacy of response, channels, and spokesperson/sponsor. Such information will enable message developers to enhance the effectiveness of messages for intended audiences.

Data collection methods proposed for HMTS include intercept interviews, telephone interviews, focus groups, online surveys, and cognitive interviews. In almost all instances, data will be collected by outside organizations under contract with CDC. For many years CDC programs have used HMTS to test and refine message concepts and test draft materials for clarity, salience, appeal, and persuasiveness to target audiences. Having this generic clearance available has enabled them to test their information and get critical health information from the public quickly.

Over the last three years, more than 32 messages have been tested using this clearance. Examples include:

- CDC Older Adult Injury Prevention Creative Campaign—Survey. This health communication campaign aimed to support and expand upon CDC’s older adult injury prevention efforts and to raise awareness among older adults and their caregivers about preventable injuries that disproportionately impact them, steps to reduce their risk of injuries, and increase education about risk factors. Information collected can assist in the most effective use of CDC communication resources and opportunities by assessing clarity, appeal, persuasiveness and effectiveness of campaign material and advertisements (i.e., poster or video advertisement).

- The Division of Tuberculosis Elimination (DTBE) obtained OMB approval through HMTS for Health Communications Testing for Latent Tuberculosis Infections (LTBI) Campaign for CDC’s National Center for HIV/AIDS, Viral Hepatitis, STD, and TB Prevention. This collection was used to inform NCHHSTP/DTBE’s future public service campaign efforts targeted to consumers at high-risk for LTBI, and the providers who serve them. This information collection activity is essential because it will provide CDC with effective messages for communicating about this disease and infection to motivate at-risk consumers to get preventive screening and, if infected, treatment, and to motivate healthcare providers to encourage testing and early detection.

The Division of Diabetes Translation obtained OMB approval through HMTS for Message Testing for Diabetes Self-Management Education and Support (DSMES) Marketing Support: Card Sort Activity. Findings from this message testing effort were used by the Centers for Disease Control and Prevention’s (CDC) Division of Diabetes Translation (DTT) to inform how best to communicate with key audiences about DSMES services. Specifically, information about which attributes of DSMES services are most important to each audience will be identified and will serve as the basis for messages developed to promote DSMES services. This work will help increase the likelihood that messages will resonate and be understood as intended.

Over 27,696 respondents were queried and over 6,100 burden hours used during this time period. Because the availability of this ICR has been so critical to programs in disseminating their materials and information to the public in a timely manner, OADC is requesting a three-year extension of this information collection. Based on anticipated use, CDC requests approval for an estimated 2,470 annual burden hours (7,410 over the course of the three-year approval). There is no cost to the respondents other than their time.

Proposed Project

The Collaborating Center for Questionnaire Design and Evaluation Research (CCQDER) (OMB Control No. 0920–0222, Exp. 08/31/2021)—Revision—National Center for Health Statistics (NCHS), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

Section 306 of the Public Health Service (PHS) Act (42 U.S.C. 242k), as amended, authorizes that the Secretary of Health and Human Services (DHHS), acting through NCHS, shall undertake and support (by grant or contract) research, demonstrations, and evaluations respecting new or improved methods for obtaining current data to support statistical and epidemiological activities for the purpose of improving the effectiveness, efficiency, and quality of health services in the United States. The Collaborating Center for Questionnaire Design and Evaluation Research (CCQDER) is the focal point within NCHS for questionnaire and survey development, pre-testing, and evaluation activities for CDC surveys such as: The National Survey of Family Growth (NSFG), the Research and Development Survey (RANDS) (including RANDS COVID), and other federally sponsored surveys. The CCQDER and other NCHS programs conduct cognitive interviews, focus groups, in-depth or ethnographic interviews, usability tests, field tests/pilot interviews, and experimental research in laboratory and field settings, both for applied questionnaire development and evaluation, as well as more basic research on measurement errors and survey response.

Various techniques to evaluate interviewer-administered, self-administered, telephone, Computer-Assisted Personal Interviewing (CAPI), Computer Assisted Self-Interviewing (CASI), Audio Computer-Assisted Self-Interviewing (ACASI), and web-based questionnaires are used.

The most common questionnaire evaluation method is the cognitive interview. These evaluations are conducted by the CCQDER. The interview structure consists of respondents first answering a draft survey question and then providing textual information to reveal the processes involved in answering the test question. Specifically, cognitive interview respondents are asked to describe how and why they answered the question as they did. Through the interviewing process, various types of question-response problems that would not normally be identified in a traditional survey interview, such as interpretive errors and recall accuracy, are uncovered. By conducting a comparative analysis of cognitive interviews, it is also possible to determine whether particular interpretive patterns occur within particular sub-groups of the population. Interviews are generally conducted in small rounds totaling 40–100 interviews; ideally, the questionnaire is re-worked between rounds, and revisions are tested iteratively until interviews yield relatively few new insights.

Cognitive interviewing is inexpensive and provides useful data on questionnaire performance while minimizing respondent burden. Cognitive interviewing offers a detailed depiction of meanings and processes used by respondents to answer questions, a process that ultimately produces the survey data. As such, the method offers an insight that can transform understanding of question validity and response error. Documented findings from these studies represent tangible evidence of how the question performs. Such documentation also serves CDC data users, allowing them to be critical users in their approach and application of the data.

In addition to cognitive interviewing, a number of other qualitative and quantitative methods are used to investigate and research measurement errors and the survey response process. These methods include conducting focus groups, usability tests, in-depth or ethnographic interviews, and the administration and analysis of questions in both representative and non-representative field tests. Focus groups are conducted by the CCQDER. Focus groups are group interviews whose primary purpose is to elicit the basic sociocultural understandings and terminology that form the basis of questionnaire design. Each group typically consists of one moderator and 4–10 participants, depending on the research question. In-depth or ethnographic interviews are one-on-one interviews designed to elicit the understandings or terminology that are necessary for question design, as well as to gather detailed information that can contribute to the analysis of both qualitative and quantitative data. Usability tests are typically one-on-one interviews that are used to determine how a given survey or information collection tool functions in the field, and how the mode and layout of the instrument itself may contribute to survey response error and the survey response process.

In addition to these qualitative methods, NCHS also uses various tools to obtain quantitative data, which can be analyzed alone or analyzed alongside qualitative data to give a much fuller accounting of the survey response process. For instance, phone, internet, mail, and in-person follow-up interviews of previous NCHS survey respondents may be used to test the validity of survey questions and questionnaires and to obtain more detailed information that cannot be gathered on the original survey. Additionally, field or pilot tests may be conducted on both representative and non-representative samples, including those obtained from commercial survey and web panel vendors. Beyond looking at traditional measures of survey errors (such as item missing rates, non-response, and don’t know rates), these pilot tests can be used to run...
experimental designs in order to capture how different questions function in a field setting. Similar methodology has been adopted by other federal agencies, as well as by academic and commercial survey organizations.

In 2021–2024, NCHS/CCQDER staff plan to continue research on methods evaluation and general questionnaire design research. We envision that over the next three years, NCHS/CCQDER will work collaboratively with survey researchers from universities and other Federal agencies to define and examine several research areas, including, but not limited to: (1) Differences between face-to-face, telephone, and virtual/video over internet cognitive interviewing, (2) effectiveness of different approaches to cognitive interviewing, such as concurrent and retrospective probing, (3) reactions of both survey respondents and survey interviewers to the use of Computer-Assisted Personal Interviewing (CAPI), Audio Computer-Assisted Self-Interview (ACASI), video over internet/virtual, (4) social, cultural and linguistic factors in the question response process, and (5) recruitment and respondent participation at varying levels of incentive in an effort to establish empirical evidence regarding remuneration and coercion. Procedures for each of these studies will be similar to those applied in the usual testing of survey questions. For example, questionnaires that are of current interest (such as RANDS and NIOSH) may be evaluated using several of the techniques described above. In addition, different versions of a survey question will be developed, and the variants then administered to separate groups of respondents in order to study the cognitive processes that account for the differences in responses obtained across different versions.

These studies will be conducted either by CCQDER staff, DHHS staff, or NCHS contractors who are trained in cognitive interviewing techniques. The results of these studies will be applied to our specific questionnaire development activities in order to improve the methods that we use to conduct questionnaire testing, and to guide questionnaire design in general.

OMB approval is requested for three years. Participation is voluntary. We are requesting 9,455 annualized hours, totaling 28,365 over three years. This is an increase of 1,672 hours per year or 5,016 hours over three years. The requested increases are due to an anticipated increase in the number and size of projects being undertaken.

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[Document Identifier CMS–1880 and CMS–1856]

Agency Information Collection Activities: Submission for OMB Review; Comment Request

AGENCY: Centers for Medicare & Medicaid Services, Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: The Centers for Medicare & Medicaid Services (CMS) is announcing an opportunity for the public to comment on CMS’ intention to collect information from the public. Under the Paperwork Reduction Act of 1995 (PRA), federal agencies are required to publish notice in the Federal Register concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, and to allow a second opportunity for public comment on the notice. Interested persons are invited to send comments regarding the burden estimate or any other aspect of this collection of information, including the necessity and utility of the proposed information collection for the proper performance of the agency’s functions, the accuracy of the estimated burden, ways to enhance the quality, utility, and clarity of the information to be collected, and the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

DATES: Comments on the collection(s) of information must be received by the OMB desk officer by September 13, 2021.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

To obtain copies of a supporting statement and any related forms for the proposed collection(s) summarized in this notice, you may make your request using one of following:

FOR FURTHER INFORMATION CONTACT: William Parham at (410) 786–4669.

SUPPLEMENTARY INFORMATION: Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3520), federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. The term “collection of information” is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires federal agencies to publish a 30-day notice in the Federal Register concerning each
proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, CMS is publishing this notice that summarizes the following proposed collection(s) of information for public comment:

1. Type of Information Collection Request: Revision of a currently approved collection; Title of Information Collection: Request for Certification as Supplier of Portable X-Ray Services under the Medicare/Medicaid Program; Use: CMS–1880 is initially completed by suppliers of portable X-ray services, expressing an interest in and requesting participation in the Medicare program. The CMS–1880 form initiates the process of obtaining a decision as to whether the conditions of coverage are met by the portable X-ray supplier seeking Medicare participation. It also promotes data reduction or introduction to, and retrieval from, the Certification and Survey Provider Enhanced Reporting (CSPER) by the CMS Regional Offices (ROs). The CMS–1880 form is also completed by current Medicare participating portable x-ray supplier during each recertification survey. Form Numbers: CMS–1880 (OMB control number: 0938–0027); Frequency: Occasionally; Affected Public: State, Local, or Tribal Governments; Number of Respondents: 104; Total Annual Responses: 104; Total Annual Hours: 26. (For policy questions regarding this collection contact Caroline Gallaher at 410–786–8705.)

2. Type of Information Collection Request: Extension of a currently approved collection; Title of Information Collection: Request for Certification in the Medicare/Medicaid Program for Providers of Outpatient Physical Therapy and/or Speech-Language Pathology; Use: The form is used as an application to be completed by providers of outpatient physical therapy and/or speech-language pathology services requesting participation in the Medicare and Medicaid programs. This form initiates the process of obtaining a decision as to whether the conditions of participation are met as a provider of outpatient physical therapy and/or speech-language pathology services requesting participation in the Medicare and Medicaid programs. The form is also used for recertification of the provider. Surveyors are no longer required to use the CMS–1856. Surveyors are now able to access survey resources electronically from the national surveyor database, as a result, the need for surveyors to carry printed copies of the survey information data is no longer efficient. Form Number: CMS–1856 (OMB control number: 0938–0065); Frequency: Annually, occasionally; Affected Public: Private sector—Business or other for-profit and Not-for-profit institutions; Number of Respondents: 195; Total Annual Responses: 195; Total Annual Hours: 49. (For policy questions regarding this collection contact Caeclia Blondiaux at 410–786–2191.)

William N. Parham, III,
Director, Paperwork Reduction Staff, Office of Strategic Operations and Regulatory Affairs.

BILLING CODE 4120–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2020–N–1245]

Drug Products Approved in Abbreviated New Drug Applications Before the Enactment of the Hatch-Waxman Amendments; Establishment of a Public Docket; Request for Comments

AGENCY: Food and Drug Administration, Health and Human Services (HHS).

ACTION: Notice; establishment of a public docket; request for comments.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing the establishment of a public docket to solicit comments on several issues related to FDA’s post-approval regulation of certain drug products approved in abbreviated applications before the Drug Price Competition and Patent Term Restoration Act of 1984 (Hatch-Waxman Amendments) amended the Federal Food, Drug, and Cosmetic Act (FD&C Act) to establish the current abbreviated new drug application (ANDA) process. Because these pre-Hatch-Waxman abbreviated new drug applications (referred to in this notice as “PANDAs”) were submitted and approved under the provisions of the FD&C Act that apply to 505(b) new drug applications, they can serve as a reference listed drug (RLD) for ANDAs and can also be a listed drug relied on by 505(b)(2) applications. PANDAs have historically been overseen by FDA’s Office of Generic Drugs, and FDA is aware that there may be some confusion about the applicability of certain statutory and regulatory provisions to PANDAs. FDA is seeking input from holders of PANDAs and other interested persons regarding whether there are regulatory or policy rationales for treating PANDAs differently from other 505(b) applications in certain respects.

DATES: Submit either electronic or written comments by December 13, 2021.

ADDRESSES: FDA is establishing a docket for public comments on this document. The docket number is FDA–2020–N–1245. The docket will close on December 13, 2021. Submit either electronic or written comments by that date. Please note that late, untimely filed comments will not be considered. Electronic comments must be submitted on or before December 13, 2021. The https://www.regulations.gov electronic filing system will accept comments until 11:59 p.m. Eastern Time at the end of December 13, 2021. Comments received by mail/hand delivery/courier (for written/paper submissions) will be considered timely if they are postmarked or the delivery service acceptance receipt is on or before that date.

You may submit comments as follows:

Electronic Submissions

Submit electronic comments in the following way:

• Federal eRulemaking Portal: https://www.regulations.gov. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to https://www.regulations.gov will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else’s Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on https://www.regulations.gov.

• If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see “Written/Paper Submissions” and “Instructions”).

Electronic Submissions

Submit electronic comments in the following way:

• Federal eRulemaking Portal: https://www.regulations.gov. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to https://www.regulations.gov will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else’s Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on https://www.regulations.gov.

• If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see “Written/Paper Submissions” and “Instructions”).

Written/Paper Submissions

Submit written/paper submissions as follows:
• Mail/Hand Delivery/Courier (for written/paper submissions): Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
• For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in “Instructions.”

Instructions: All submissions received must include the Docket No. FDA–2020–N–1245 for “Drug Products Approved in Abbreviated New Drug Applications Before the Enactment of the Hatch-Waxman Amendments: Establishment of a Public Docket; Request for Comments.” Received comments, those filed in a timely manner (see ADDRESSES), will be placed in the docket and, except for those submitted as “Confidential Submissions,” publicly viewable at https://www.regulations.gov or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

• Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states “CONFIDENTIAL INFORMATION.” The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on https://www.regulations.gov. Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as “confidential.” Any information marked as “confidential” will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA’s posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to https://www.regulations.gov and insert the docket number, found in brackets in the heading of this document, into the “Search” box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

SUPPLEMENTARY INFORMATION:

I. Background
A. Abbreviated New Drug Applications Before the Hatch-Waxman Amendments

After the enactment of the FD&C Act (Pub. L. 75–717) in 1938, new drug products were required to be approved on the basis of safety before they could be marketed. Between 1938 and 1962, if a drug product obtained approval, FDA considered drug products that were identical, related, or similar to the approved product to be covered by that approval; such identical, related, or similar products were marketed without independent approval. An identical, related, or similar drug includes another brand, potency, dosage form, salt, or ester of the same drug moiety related in chemical structure or known pharmacological properties (see 21 CFR 310.6(b)(1)). In 1962, the Kefauver-Harris Drug Amendments (Pub. L. 87–310) amended the FD&C Act to require that new drug products also be shown to be effective in order to obtain approval of a new drug application (NDA). After the enactment of the Kefauver-Harris Drug Amendments, FDA initiated the Drug Efficacy Study Implementation (DESI) to evaluate the effectiveness of drug products that had been approved between 1938 and 1962 solely on the basis of safety. DESI also covered the identical, related, or similar products that had entered the market without approval. If drug products were determined to be effective for one or more indications, manufacturers that were already marketing under an NDA were required to submit a supplement to update the application and revise the product labeling as necessary. Manufacturers of drug products that were identical, related, or similar were required to submit applications for their drug products.

FDA introduced the concept of an “abbreviated new drug application” in 1968 as a vehicle for approval of certain drugs affected by the DESI review, and in 1970, FDA published a final rule establishing a regulatory pathway for submission of abbreviated applications for these drugs (see 35 FR 6574 (April 24, 1970); see also 34 FR 2673 (February 27, 1969)). This abbreviated approval mechanism was created to offer manufacturers of certain drugs a streamlined and more administratively efficient path to seek FDA approval as part of the DESI review (47 FR 46622 at 46631 to 46632 (October 19, 1982)).

When a drug product subject to the DESI review was determined to be effective for one or more indications, FDA would issue a Federal Register notice (DESI notice) for that drug product describing the DESI review findings and stating whether abbreviated new drug applications that met specified criteria could be submitted to FDA (see generally 35 FR 11273 (July 14, 1970); 35 FR 6574 for products that had not been marketed under an NDA. Such a finding allowed manufacturers to submit an abbreviated new drug application (i.e., a PANDA) in lieu of an NDA.

For approval of PANDAs, FDA relied on the evidence of effectiveness that had been provided, reviewed, and accepted during the DESI process. FDA evaluated the safety of these drug products on the basis of information included in NDAs submitted prior to 1962, as well as the subsequent marketing experience with the drugs (see 54 FR 28872 at 28873 (July 10, 1989)). PANDAs were submitted under section 505(b) of the FD&C Act and approved under section 505(c) of the FD&C Act.3

1 If a drug product was found to be less than effective for one or more labeled indications in FDA’s initial DESI review, the Agency provided an opportunity to submit additional data and eventually an opportunity for a hearing on those indications found to be less than effective. FDA considered the basis of any hearing request and either granted or denied the hearing request and published its final determination in the Federal Register. If FDA’s final determination classified a drug product as effective for an indication, those manufacturers that claimed the drug product as lacking substantial evidence of effectiveness for an indication, the product and those identical, related or similar to it could no longer be legally marketed for that indication.

2 See the Washington briefing on FDA’s drug efficacy review, FDA Papers, at pp. 10–12 (March 1968) and Address of Commissioner James L. Goddard, M.D., at the Alpha Omega Alpha Lecture at Yale New Haven Medical Center on New Drug Research and Development (April 17, 1968).

3 The content of section 505(b) of the FD&C Act regarding the required contents of an application remained largely unchanged following the enactment of the Hatch-Waxman Amendments, except for changes related to new patent submission requirements and, for applications submitted...
Because the history of FDA review of applications for antibiotic drug products is more complex and historically many were subject to section 507 of the FD&C Act (21 U.S.C. 357 (1994 ed.)); repealed upon the enactment of the Food and Drug Administration Modernization Act of 1997 (Pub. L. 105–115)), the scope of this notice is limited to drug products approved in PANDAs under section 505 of the FD&C Act prior to the Hatch-Waxman Amendments; this notice does not cover applications for antibiotic drug products that were originally submitted under section 507 of the FD&C Act. 4

Because PANDAs could be for products that were “similar or related” to, and not just “duplicates” of, drug products approved in NDAs before October 10, 1962, and listed in DESI notices (pre-1962 NDA drug products), FDA’s “Approved Drug Products With Therapeutic Equivalence Evaluations” (Orange Book) lists both unique products approved in PANDAs (i.e., no NDA was ever approved for the identical drug product), and products approved in PANDAs that may be duplicates of pre-1962 NDA drug products. In the Orange Book, a product approved in a PANDA typically is identified as an “ANDA.” (The application type for a product is identified in the Orange Book by either an “N” (for an NDA) or an “A” (for an ANDA) before the application number.) Although the regulations establishing the pathway for PANDAs were similar in some respects to the ANDA pathway created by the Hatch-Waxman Amendments and described in section 505(j) of the FD&C Act, the requirements under the old regulatory pathway (which evolved over the decade-plus in which it was operational before the Hatch-Waxman Amendments) also differed in many respects from current ANDA requirements. For example, although the conditions of use and labeling for PANDA products had to be in accord with the relevant DESI notice (which frequently covered a class of drugs that included multiple products and multiple active ingredients) (see, e.g., 36 FR 11227 (June 10, 1971); 35 FR 18215 (November 28, 1970); and 35 FR 12356 (August 1, 1970)), PANDA products were not required to have the same labeling as a particular pre-1962 NDA drug product listed in the DESI notice. In addition, although PANDAs were required to include adequate data to assure biological availability of the drug if the relevant DESI notice for that drug specified that such data should be submitted for the formulation intended for marketing, PANDA generally did not have to include data to demonstrate bioequivalence to a particular pre-1962 NDA drug product (see, e.g., 21 CFR 130.4(i)(3) (1971 ed.)) and 21 CFR 314.2(f)(3) (1984 ed.)). In addition, drug products with a different formulation, active ingredient, route of administration, dosage form, or strength than the pre-1962 NDA drug products listed in the DESI notice could be submitted in PANDAs. Prior to the Hatch-Waxman Amendments, there were also no requirements related to patent listing or patent certification or exclusivity for PANDAs or other applications approved under section 505(c) of the FD&C Act.

B. Hatch-Waxman Amendments

In 1984, the Hatch-Waxman Amendments added section 505(b)(2) and section 505(j) to the FD&C Act. These sections provide an abbreviated approval pathway for submission of two types of applications: Section 505(b)(2) new drug applications (505(b)(2) applications) and section 505(j) abbreviated new drug applications (505(j) ANDAs). A 505(b)(2) application is an NDA submitted under section 505(b)(1) and approved under section 505(c) of the FD&C Act that contains full reports of investigations of safety and effectiveness, where at least some of the information required for approval comes from studies not conducted by or for the applicant and for which the applicant has not obtained a right of reference or use (e.g., the Agency’s finding of safety and/or effectiveness for a listed drug). A 505(j) ANDA is an application that requests FDA approval to market a duplicate of a listed drug. 5 Regulations implementing the Hatch-Waxman Amendments define a listed drug as a new drug product that has been approved under section 505(c) of the FD&C Act for safety and effectiveness or under section 505(j) of the FD&C Act, which has not been withdrawn or suspended under section 505(o)(1) through (5) or section 505(j)(6) of the FD&C Act, and which has not been withdrawn from sale for what FDA has determined are reasons of safety or effectiveness. Listed drug status is evidenced by the drug product’s identification in the current edition of FDA’s “Approved Drug Products With Therapeutic Equivalence Evaluations” (the list) as an approved drug. A drug product is deemed to be a listed drug on the date of approval for the NDA or ANDA for that drug product. (See §314.3(b) (21 CFR 314.3(b)), as amended at 81 FR 69580 at 69638 (October 6, 2016); see also section 505(j)(2)(A), (j)(7) of the FD&C Act).

FDA regulations require an applicant to refer to its 505(j) ANDA to the specific listed drug on which the applicant relies in seeking approval of the 505(j) ANDA (§314.94(a)(3)) (21 CFR 314.94(a)(3)); see also section 505(j)(2) of the FD&C Act). The listed drug that a generic applicant seeks to duplicate is commonly referred to as the “reference listed drug (RLD)” (see definition in §314.3(b)). A 505(j) ANDA applicant must show, among other things, that the proposed generic drug is bioequivalent to the RLD, and that it has the same active ingredient(s), conditions of use, route of administration, dosage form, strength, and (with limited exceptions) labeling as the RLD (section 505(j)(2)(A), (j)(2)(C), and (j)(4) of the FD&C Act; see also §314.94(a)). We note that certain differences between an RLD and a proposed generic drug product may be permitted in an ANDA if these differences are the subject of an approved suitability petition (see section 505(j)(2)(C) of the FD&C Act and 21 CFR 314.93). An applicant may submit a suitability petition to FDA requesting permission to submit an ANDA for a generic drug product that differs from an RLD in its route of administration, dosage form, or strength or that has one different active ingredient in a fixed-combination drug product (ibid.). Because a 505(j) ANDA applicant is relying on FDA’s finding that the RLD... 6

In the context of the Hatch-Waxman Amendments, the term “duplicates” generally refers to a “drug product that has the same active ingredient(s), dosage form, strength, route of administration, and conditions of use as a listed drug.” 7
is safe and effective. FDA’s general practice is to designate as RLDs drug products that have been approved under section 505(c) for safety and effectiveness. Similarly, FDA regulations require a 505(b)(2) applicant to identify in its application each listed drug for which FDA has made a finding of safety and effectiveness on which the applicant relies in seeking approval of its proposed drug product (21 CFR 314.54(a)(1)(iii)).

Listed drugs appear in the Orange Book, and beginning in 1992, the Orange Book also began identifying which listed drugs were designated as RLDs to aid 505(j) ANDA applicants. The listed drugs that were designated as RLDs were labeled with a “+” sign in the paper version of the Orange Book, and with the word “Yes” in the column titled RLD in the electronic version of the Orange Book. Before 2017, the “+” sign and the word “Yes” in the column labeled RLD were used to denote that at times an RLD and at other times a reference standard, which is the drug product selected by FDA that an applicant seeking approval of a 505(j) ANDA must use in conducting an in vivo bioequivalence study required for approval of the ANDA (§ 314.3(b)).

The reference standard selected by FDA is ordinarily the RLD. However, at times the reference standard is a drug product other than the RLD. For example, if the NDA RLD is no longer marketed, FDA generally will select as the reference standard a previously approved 505(j) ANDA that refers to that RLD. Where the RLD was no longer marketed and FDA selected a new reference standard, FDA’s practice prior to 2017 was to identify the reference standard with the “+” sign in the paper version of the Orange Book and “Yes” in the RLD column of the electronic version of the Orange Book; FDA also would move the previously identified RLD to the discontinued section of the Orange Book without a “+” sign in the paper version or RLD designation in the electronic version of the Orange Book.

Because the “+” sign or RLD designation in some cases identified drug products that were RLDs as well as reference standards, and in other cases identified reference standards that were not also the RLD, there may have been some confusion among 505(j) ANDA applicants about which product to cite as the RLD when the reference standard and RLD were not the same drug product. Inconsistent use of terminology, as well as certain longstanding FDA practices, may have added to this confusion.

C. FDA’s Current Identification of RLDs and Reference Standards in the Orange Book

In 2017, FDA began to separately identify in the Orange Book which listed drugs, including some in the “Discontinued Drug Product List” (discontinued section), are designated as RLDs, and which listed drugs in the Active Section (i.e., in the sections entitled “Prescription Drug Product List” and “Over-the-Counter Drug Product List”) are selected as reference standards. In the electronic version of the Orange Book, there is one column that identifies RLDs and a separate column that identifies reference standards. In the printed version of the Orange Book, the RLDs and reference standards are identified by distinct symbols.

These changes to the Orange Book were intended to provide clarity to 505(j) ANDA applicants as to which listed drugs are the RLDs (versus the reference standards) for a drug product. For some drug products, however, these changes revealed that no product is identified as being approved under an NDA (in either the active or discontinued sections of the Orange Book) that could serve as an RLD for a 505(j) ANDA. The lack of an RLD is confusing because the Orange Book reflects that there are approved ANDAs for the drug product, including ANDAs identified as reference standards. One reason for this lack of an RLD is that some of the products listed in the Orange Book and identified as being approved in an “ANDA” are actually drugs that were approved for safety and effectiveness under section 505(c) of the FD&C Act in PANDAs that appeared to have been identified as RLDs before the 2017 update to the Orange Book. As noted previously, products approved in PANDAs could be unique products that differed from products approved under pre-1962 NDAs in various ways, including in their active ingredient, route of administration, dosage form, or strength. In addition, even when certain listed drugs approved in a PANDA appear to be pharmaceutical equivalents (as defined in § 314.3(b)) of products approved under an NDA, these products can differ from the products approved under the NDA in other respects, including in the approved conditions of use reflected in the labeling or in their formulation, and may not have been determined to be bioequivalent to the products approved under an NDA. Further, even if the drug product approved in a PANDA was a duplicate of a drug product that was at one time also approved and marketed under an NDA, if the product approved under the NDA was no longer marketed when the Orange Book was first published in October 1980, it was not listed in the Orange Book.

D. Designation of Additional Drugs as RLDs

In light of the changes to the Orange Book in 2017, FDA examined the types of products for which there were no RLDs designated and determined that many were approved in PANDAs. After consideration of the history of PANDAs, FDA determined that it was appropriate and consistent with FDA’s general practice regarding the designation of RLDs to designate PANDA products as RLDs because these products were approved for safety and effectiveness under section 505(c) of the FD&C Act. In addition, as noted in section I.C, many of these products appeared to have been identified as RLDs before the 2017 update to the Orange Book. Designation of the PANDA products as RLDs provides clarity both to prospective 505(j) ANDA applicants seeking to make generic versions of these products, and to applicants of 505(b)(2) applications that there is a finding of safety and effectiveness for these products that may be relied upon for approval. In addition, it is aligned with FDA’s efforts to help advance competition and increase patient access to more affordable medicines.

FDA has begun adding RLD designations for PANDAs to the Orange Book and will continue making these designations as expeditiously as resources permit. If a prospective 505(j) ANDA applicant is seeking to duplicate a product approved in a PANDA that has not yet been designated as an RLD by FDA, the prospective applicant may submit controlled correspondence to FDA identifying the drug it intends to duplicate and asking FDA to designate that drug as an RLD (see FDA’s guidance for industry, “Controlled Correspondence Related to Generic Drug Development,” announced in 85 FR 81928 (December 17, 2020)).

To aid stakeholders in identifying PANDAs, FDA has posted a list of the products currently included in the Orange Book and identified as an “ANDA” in the Orange Book that were approved in a PANDA for safety and effectiveness under section 505(c) prior to the enactment of the Hatch-Waxman Amendments. This list includes only PANDAs described in this notice, i.e.,...
II. Additional Issues for Consideration and Request for Comments

The Agency is seeking input from holders of PANDAs and other interested stakeholders on several issues related to FDA’s post-approval regulation of drug products approved in PANDAs. As explained in section I of this notice, PANDAs were submitted under section 505(b) and approved under section 505(c) of the FD&C Act, which are the same provisions under which NDAs are submitted and approved. However, PANDA products have historically been overseen by FDA’s Office of Generic Drugs and are included in the definition of abbreviated new drug application for user fee purposes under the Generic Drug User Fee Amendments (GDUFA), which specify that this term includes an abbreviated new drug application submitted pursuant to regulations in effect prior to the implementation of the Drug Price Competition and Patent Term Restoration Act of 1984 (see 21 U.S.C. 379j–41). PANDAs are not included in the FD&C Act statutory definition of the term abbreviated drug application, which is limited to applications submitted under section 505(j) of the FD&C Act (see 21 U.S.C. 321(aa)).

FDA recognizes that PANDAs may have been treated similarly to 505(j) ANDAs in some respects over the decades after the enactment of the Hatch-Waxman Amendments, and that there may be confusion among holders of PANDAs about the applicability of certain statutory and regulatory provisions to their products and in particular, whether their products are subject to the requirements that apply to other 505(b) applications or to those that apply to 505(j) applications (to the extent there are differences between the two), including with respect to requirements regarding labeling updates, patent listing, eligibility for exclusivity, and certain drug safety-related requirements or procedures. For example, with respect to labeling updates, FDA is aware that some PANDA holders have followed procedures applicable to 505(b) applications when proposing labeling updates for their products (e.g., submitting labeling supplements and making labeling changes independent of the pre-1962 NDA product or products that were listed in the DESI notice). However, FDA is also aware that some PANDA holders have followed procedures applicable to 505(j) ANDA holders when proposing labeling updates for their products (e.g., submitting labeling supplements and making labeling changes approved for a pre-1962 NDA product listed in a relevant DESI notice).

With respect to patent listing, to FDA’s knowledge, PANDA holders have neither sought to list patent information in the Orange Book for their products after the enactment of the Hatch-Waxman Amendments, nor have they submitted patent listing information when submitting supplements to their approved applications during the years after the enactment of the Hatch-Waxman Amendments. Similarly, PANDA holders have generally not submitted supplements containing reports of new clinical investigations or sought exclusivity under provisions applicable to 505(b) applications (see, e.g., section 505(c)(3)(E)(iv) and 505(j)(5)(F)(iv) of the FD&C Act) following enactment of the Hatch-Waxman Amendments.

FDA is also aware that there may be confusion among PANDA holders about the applicability of certain safety-related requirements to their applications. For example, section 505(o) of the FD&C Act, which relates to postmarket studies and clinical trials and labeling, and section 505–1 of the FD&C Act, which relates to risk evaluation and mitigation strategies, reflect some differences in the safety-related requirements or procedures that apply to 505(b) application holders versus 505(j) ANDA holders, and PANDA holders may consider the requirements that apply to 505(j) ANDA holders to also apply to their applications.

Although, as noted in section I of this notice, PANDAs are section 505(b) applications, FDA understands, as outlined above, that the holders of some PANDAs may have been following various requirements applicable to 505(j) ANDAs over the years after the enactment of the Hatch-Waxman Amendments, and that for them to instead follow requirements applicable to 505(b) applications could be a change in practice. FDA also understands that PANDAs are a unique category of 505(b) applications and that there could be valid reasons to treat PANDAs differently from other 505(b) applications in certain circumstances, to the extent permitted by the applicable statutory provisions.

FDA is seeking input from PANDA holders and other interested stakeholders on whether there are regulatory or policy reasons for treating PANDAs differently from other 505(b) applications, consistent with the statutory requirements for applications submitted under section 505(b) and approved under section 505(c) of the FD&C Act. To facilitate this input, FDA developed the following list of questions. These questions are not meant to be exhaustive, and FDA is also...
interested in any other pertinent information stakeholders would like to share on this topic. In all cases, FDA encourages stakeholders to provide the specific rationale and basis for their comments, including any available supporting data and information.

Questions

1. Given the legal requirements in place for applications submitted under section 505(b) and approved under section 505(c) of the FD&C Act, are there regulatory or policy rationales for treating PANDAs differently from other 505(b) applications in certain respects, in particular with respect to the following:

   1.1. Labeling requirements, including requirements related to updating product labeling to reflect certain types of newly acquired safety-related information by submitting a “changes being effected” (CBE–0) supplement to FDA?
   1.2. Patent listing requirements?
   1.3. Eligibility for exclusivity?
   1.4. Certain safety-related requirements, such as the postmarket studies and clinical trials or safety-labeling change requirements in section 505(o) of the FD&C Act or the risk evaluation and mitigation strategies requirements in section 505–1 of the FD&C Act?

   In responding to the questions above, please provide a specific rationale for treating these applications differently.

2. To the extent that PANDA holders are expected to make changes to their current practices, what factors should FDA consider in determining a reasonable amount of time for PANDA holders to make such changes to their practices?

3. Are there additional steps FDA should take to highlight for PANDA holders that their “abbreviated new drug application” is a PANDA, i.e., that it is a 505(b) application?

4. Are there additional steps FDA should take beyond posting the list on the Orange Book website to aid other interested persons in identifying PANDAs?

5. Are modifications needed to the list of PANDAs posted on the Orange Book website for accuracy? For example, are some PANDAs missing from the list?

6. Are there other issues FDA should consider in assessing the regulatory framework for PANDAs under the FD&C Act? Please provide specific examples and explain FDA’s authority to address these issues.

Lauren K. Roth,
Acting Principal Associate Commissioner for Policy.

National Institutes of Health

National Institute of Dental & Craniofacial Research; Notice of Meeting

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended, notice is hereby given of a meeting of the National Advisory Dental and Craniofacial Research Council.

The meeting will be held as a virtual meeting and is open to the public.

Individuals who plan to view the virtual meeting and need special assistance or other reasonable accommodations to view the meeting, should notify the Contact Person listed below in advance of the meeting. The open session will be videocast and can be accessed from the NIH Videocasting and Podcasting website (http://videocast.nih.gov/).

The meeting will be closed to the public in accordance with the provisions set forth in sections 522(b)(4) and 522(b)(6), Title 5 U.S.C., as amended. The grant applications and/or contract proposals and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications and/or contract proposals, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: National Advisory Dental and Craniofacial Research Council.
Date: September 9, 2021.
Open: 10:00 a.m. to 2:30 p.m.
Agenda: Report of the Director, NICDR and concept clearances.
Place: National Institutes of Health, National Institute of Dental and Craniofacial Research, 6701 Democracy Blvd., Bethesda, MD 20892 (Virtual Meeting).
Closed: 2:45 p.m. to 4:00 p.m.
Agenda: To review and evaluate grant applications and/or proposals.
Place: National Institutes of Health, National Institute of Dental and Craniofacial Research, 6701 Democracy Blvd., Bethesda, MD 20892 (Virtual Meeting).
Contact Person: Alicia J. Dombroski, Ph.D., Director, Division of Extramural Activities, National Institute of Dental and Craniofacial Research, National Institutes of Health, Bethesda, MD 20892, 301–594–4895, adombroski@niddcr.nih.gov.

Any interested person may file written comments with the committee by forwarding the statement to the Contact Person listed on this notice. The statement should include the name, address, telephone number and when applicable, the business or professional affiliation of the interested person.

Information is also available on the Institute’s/Center’s home page: http://www.nidcr.nih.gov/about, where an agenda and any additional information for the meeting will be posted when available.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Substance Abuse and Mental Health Services Administration

Agency Information Collection Activities: Proposed Collection; Comment Request

In compliance with Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 concerning opportunity for public comment on proposed collections of information, the Substance Abuse and Mental Health Services Administration (SAMHSA) will publish periodic summaries of proposed projects. To request more information on the proposed projects or to obtain a copy of the information collection plans, call the SAMHSA Reports Clearance Officer at (240) 276–0361.

Comments are invited on: (a) Whether the proposed collections of information are necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency’s estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Project: Minority AIDS Initiative-Management Reporting Tools (MAI-MRTs)—(OMB No. 0930–0357)—Revision

The Substance Abuse and Mental Health Services Administration (SAMHSA), Center for Substance Abuse Prevention (CSAP) is requesting from the Office of Management and Budget (OMB) approval for the revised Minority AIDS Initiative (MAI) monitoring tools, which includes both youth and adult questionnaires, as well as the quarterly progress report. This revision includes the inclusion of new cohorts, substantial revisions to the youth and adult questionnaires, updates to the data used to estimate response rates and expected numbers of participants by service duration (see Table 1 below).

The cohorts of grantees funded by the MAI and included in this clearance request are:

• Capacity Building Initiative 2017
• Capacity Building Initiative 2018
• Prevention Navigators 2017
• Prevention Navigators 2019
• Prevention Navigators 2020
• Prevention Navigators 2021

The target population for the grantees will be at-risk minority adolescents and young adults. All MAI grantees are expected to report their monitoring data using SAMHSA’s Strategic Prevention Framework (SPF) and to target minority populations, as well as other high-risk groups residing in communities of color with high prevalence of Substance Abuse and HIV/AIDS. The primary objectives of the monitoring tools include:

• Assess the success of the MAI in reducing risk factors and increasing protective factors associated with the transmission of the Human Immunodeficiency Virus (HIV), Hepatitis C Virus (HCV) and other sexually transmitted diseases (STD).
• Measure the effectiveness of evidence-based programs and infrastructure development activities such as: Outreach and training, mobilization of key stakeholders, substance abuse and HIV/AIDS counseling and education, testing, referrals to appropriate medical treatment and/or other intervention strategies (i.e., cultural enrichment activities, educational and vocational resources, social marketing campaigns, and computer-based curricula).
• Investigate intervention types and features that yield the best outcomes for specific population groups.
• Assess the extent to which access to health care was enhanced for population groups and individuals vulnerable to behavioral health disparities residing in communities targeted by funded interventions.

• Assess the process of adopting and implementing the SPF with the target populations.

• Added questions to capture details on the intervention and the referrals to the record management section (completed by grantee staff).

### SUPPLEMENTARY INFORMATION:

#### I. Background

Evaluation activity occurs in several offices at HUD, but the special mission of HUD's Office of Policy Development and Research (PD&R) is to inform HUD policy development and implementation to improve life in American communities through conducting, supporting, and sharing research, surveys, demonstrations, program evaluations, and best practices. Within HUD, PD&R is responsible for most, but not all, program evaluations. The office provides reliable and objective data and analysis to help inform policy decisions.

In July 2016, GAO issued a report entitled “Department of Housing and Urban Development: Actions Needed to Incorporate Key Practices into Management Functions and Program Oversight,” (GAO 16–497) in which GAO presented a broad assessment of HUD’s management of its operations and programs. In the report, GAO examined HUD efforts to: (1) Meet Federal requirements and implement key practices for management functions, including performance planning and reporting and human capital, financial, acquisition, and information technology (IT) management; and (2) oversee and evaluate programs.

PD&R is the primary office within HUD responsible for data analysis, research, program evaluations, and policy studies that inform the development and implementation of programs and policies across HUD offices. PD&R undertakes program evaluations, often by using a process that includes convening expert panels. However, GAO found that PD&R had neither developed agency-wide, written policies for its program evaluations, nor documented the criteria used to select the expert panels and review the quality of program evaluations.

On December 6, 2016 (81 FR 87949), HUD issued a policy statement in the Federal Register responding to the GAO report by setting out the core principles and practices of PD&R’s evaluation and research activities. This statement incorporated some language from a policy statement by the Office of Policy, Research, and Evaluation of the Administration for Children and Families of the U.S. Department of Health and Human Services.

On January 14, 2019, the Foundations for Evidence-Based Policymaking Act of 2018 (“Evidence Act”), Public Law 115–435, was enacted. Section 101 of the Evidence Act created 5 U.S.C. 311–315 and mandated that the head of each agency appoint an Evaluation Officer, including at HUD. This officer must establish common standards for all HUD evaluations, whether performed by PD&R or another office. This issuance articulates department-wide evaluation standards and states other new principles based on PD&R’s experience since the November 2016 publication.

#### II. HUD Program Evaluation Policy

Section 101 of the Evidence Act defines “evaluation” to mean “an assessment using systematic data collection and analysis of one or more programs, policies, and organizations intended to assess their effectiveness and efficiency.”

HUD has identified the following core principles and practices as fundamental to ensuring high-quality and consistent evaluation results: Rigor, relevance, transparency, independence, ethics, and technical innovation. This policy applies to all HUD-sponsored...
evaluations and regulatory impact analyses; they also apply to the selection of projects, contractors, and HUD staff that are involved in evaluations.

Rigor

HUD is committed to using the most rigorous methods that are appropriate to the evaluation questions and feasible within budget and other constraints. The need for rigor is not restricted to impact evaluations; rigor is also necessary in implementation or process evaluations, descriptive studies, outcome evaluations, and formative evaluations; in both qualitative and quantitative approaches. Rigor requires ensuring that inferences about cause and effect are well founded (internal validity); requires clarity about the populations, settings, or circumstances to which results can be generalized (external validity); requires that researchers seek to understand and correct for implicit bias in the formulation of research questions and methods; and requires the use of measures that accurately capture the intended information (measurement reliability and validity). Implicit biases are discriminatory biases that reflect unidentified traces of past experience, including implicit attitudes that affect feelings, thoughts or actions, and implicit stereotypes that affect how others are characterized. Survey instruments are pre-tested with members of the population to be studied to increase measurement validity. When statistically appropriate, and particularly if the number of hypotheses being tested is large, HUD will require the use of commonly accepted adjustments to classical statistical testing to reduce the probability that random outliers are presented as meaningful.

In assessing the effects of programs or services, HUD evaluations use methods that isolate to the greatest extent possible the impacts of the programs or services from other influences, such as trends over time, geographic variation, or pre-existing differences between participants and non-participants. Where feasible, research should employ a treatment group and a counterfactual. A treatment group is a population that would have happened to the treatment group in the absence of the intervention according to the above standard for rigor. For such causal questions, experimental approaches are preferred. When experimental approaches are not feasible, HUD uses the most rigorous approach that is feasible.

In both quantitative and qualitative research, rigor means having clear research questions and an explicit analytic framework; justification for case selection and sampling methods in relation to research goals; and transparent, verifiable methods of systematic data collection and analysis, auditable records, and attention to possible alternative interpretations during analysis and writing. HUD ensures that contractors and grantees conducting evaluations have appropriate expertise through emphasizing the requirement for rigor in requests for proposals and funding opportunity announcements, noting that applicants’ capacity for rigor will be evaluated in the selection process. In addition, HUD will judge research teams with equal capacity for rigor to be more qualified if the team includes researchers demographically similar to or knowledgeable about the perspectives and lived experiences of the populations studied.

HUD employs a strategic human capital development plan to hire, train, and retain a workforce that ensures staff have the tools and resources to accomplish the mission.

Relevance

The HUD evaluation agenda reflects the legislative requirements and policy issues related to HUD’s mission. HUD solicits input from stakeholders, both internal and external, including stakeholders with lived experience, such as program participants, and grantees, on the selection of programs to be evaluated, initiatives, demonstrations, and research questions. For new initiatives and demonstrations in particular, evaluations will be more feasible and useful when planned in advance, in concert with the development of the initiative or demonstration, rather than as an afterthought. HUD strives to understand the relevance of its completed research through concerted stakeholder engagement, including with people and grantees affected by HUD programs, to continuously improve its research agenda.

Expert panels include research and other subject matter experts and are diverse in ways tailored to the study, including racial and ethnic diversity and representatives of the studied populations.

HUD strives to design program evaluations and other analyses to better understand structural racism and to reveal unequal benefits and harms across social groups as relevant, with special attention to race, national origin, color, familial status, religion, disability, age, and sex (including gender identity and sexual orientation).

To support this goal, insofar as feasible, HUD collects and reports data on race, ethnicity, gender, and income, and other characteristics of underrepresented and underserved communities relevant for research and analysis efforts.

HUD also encourages research to engage studied populations. “Engagement” means the deliberate and intentional inclusion of the thoughts and perspectives of studied groups, such as program participants, grantees, and underrepresented and underserved populations. This includes collecting people’s thoughts and perspectives through standard (valid and rigorous) research methods such as surveys, focus groups, in-depth interviews, or ethnography to produce published research that conveys studied populations’ thoughts and perspectives. In another type of engagement, people influence the research that is about them. This includes a wide range of activities that lie on a continuum from simple input (which should be documented and published) to full co-creation of any aspect of the research, from topic selection to research design, data collection, data analysis, interpretation, writing, or dissemination, or even being on the research team. An example of simple input is to include in the final report a summary of comments on the research by members of studied groups. Examples of collaboration include, but are not limited to, co-creating the list of topics to be covered in a survey or having members of a studied group on the research team.

To raise awareness of and spur creative approaches to engagement of studied populations in program evaluations and HUD-sponsored research, HUD may require contractors and grantees to explain how their research will and will not engage studied populations. HUD recognizes that engagement must be tailored to particular research efforts.

HUD retains the right to determine research methods.

HUD disseminates findings in ways that are accessible and useful to policymakers, practitioners, and members of communities affected by HUD programs and policies. Published findings will be accessible to individuals with disabilities pursuant to Section 508 of the Rehabilitation Act. PD&R partners with other HUD program offices to inform internal and external stakeholders through disseminating.
evidence from HUD-sponsored evaluations.

**Transparency**

HUD will release methodologically valid evaluations without regard to the findings. Evaluation reports must describe the methods used, including strengths and weaknesses, and discuss the generalizability of the findings. Evaluation reports must present comprehensive results, including favorable, unfavorable, and null findings. HUD will publish interim findings, as projected in the initial research design. If there are indications that the findings of the final report may differ, HUD will provide appropriate qualifications accompanying the publication to guard against misunderstanding or misuse of the interim findings. If there are interim findings, HUD will publish those findings even if there are indications that the findings of the final report may differ. When findings are highly relevant to current policy, HUD evaluations carry a foreword articulating the policy position of the Department with respect to those findings.

If the findings of a HUD evaluation will have broad public interest and includes a counterfactual, PD&R will publish a synopsis of the research design, data collection and analysis plan soon after it is approved and will require interim and final reports that deviate from that document to explain how they deviate and why.

HUD publishes a 5-year Learning Agenda 4 that outlines the research and evaluation that it believes would be of greatest value to public policy. PD&R lists all ongoing evaluation projects at the HUDUSER.gov website 5 and updates it quarterly. PD&R will release evaluation results timely, usually within 4 months of receiving the final report.

HUD will, where possible, archive administrative and evaluation data for secondary use by interested researchers. HUD typically builds requirements into contracts to prepare data sets for secondary use. Access for external researchers may be provided directly through data licenses or indirectly through inter-agency agreements. This policy may not apply for data that has obvious commercial value, such as mortgage performance data. HUD staff may publish the results of their scholarship and analysis in any forum, so long as they do not claim to speak for the Department.

* 4 https://www.huduser.gov/portal/about/pdr-learningagenda.html.
* 5 https://www.huduser.gov/portal/about/PDR-Research.html.

HUD evaluation contracts will generally permit contractors to publish their findings within 6 months of the termination of the contract if HUD has not already published them.

**Independence**

Independence and objectivity are core principles of evaluation. Agency and program leadership, program staff, service providers, and others participate actively in setting evaluation priorities, identifying evaluation questions, and assessing the implications of findings. However, it is important to insulate evaluation functions from undue influence and from both the appearance and the reality of bias. To promote objectivity, HUD protects independence in the design, conduct, and analysis of evaluations. To this end:

- HUD conducts evaluations through the competitive award of grants and contracts to external experts who are free from conflicts of interest.
- HUD also conducts evaluations in-house and supports unsolicited external evaluation proposals with funding, data, or both.
- The Evaluation Officer will consult with the HUD office with lead responsibility on the design of evaluation projects and analysis plans and will advise that office on whether to publish evaluation reports.

**Ethics**

HUD-sponsored evaluations must be conducted in an ethical manner and safeguard the dignity, rights, safety, and privacy of participants. HUD-sponsored evaluations must comply with both the spirit and the letter of relevant requirements such as regulations governing research involving human subjects. In particular, PD&R protects the privacy of HUD-assisted households and HUD-insured borrowers through its Rule of Eleven; that is, PD&R allows no disclosure of information about the characteristics of any group of individuals or households numbering fewer than eleven by PD&R staff, contractors, grantees, or licensees.

HUD is a signatory to the Federal Policy for the Protection of Human Subjects, generally known as the “Common Rule.” 24 CFR part 60, which includes its own requirements for ensuring adequate provisions to protect the privacy of human subjects research. 6

HUD does not tolerate plagiarism, or fabrication or deliberate mischaracterization of data by staff, contractors or grantees who are engaged in evaluation activity.

**Technical Innovation**

PD&R supports and employs new methods of data collection and analysis that more reliably and efficiently answer research questions than old methods do.

**Application of These Principles to Economic Analysis of Regulations**

Economic analysis of both existing and proposed regulations, properly conducted, is a critical tool in improving public policy. Economists at HUD rely on the insights, data, and empirical estimates from rigorous program evaluations when predicting the economic impact of an incremental change to the program. In any HUD Regulatory Impact Analysis:

- HUD analyzes whether the issues addressed by the regulation stem from a market failure, government failure, or other systemic problem, and whether the regulation addresses the root causes of those problems.
- HUD uses and as necessary produces the best objective estimates of the benefits, costs, and transfers resulting from the regulation, taking into account gaps and uncertainties in the available data and methodologies.
- HUD assesses the economic benefits, costs, and transfers of proposed regulatory actions as required by Executive Order 12866. 7 HUD provides additional analysis of impacts across groups defined by race, ethnicity, and other characteristics that may define underrepresented and underserved groups when such analyses are relevant and feasible.

- Where clear alternatives to the regulatory actions exist, HUD objectively estimates the benefits, costs, and transfers of those alternatives, and additional analysis of impacts of those alternatives across underrepresented or underserved groups as well.

Todd M. Richardson,
Evaluation Officer.

BILLING CODE 4210–67–P

---

A. Overview of Information Collection

Title of Information Collection: HUD Multifamily Rental Project Closing Documents.

OMB Approval Number: 2502–0598.

OMB Expiration Date: 4/30/2024.

Type of Request: Revision of currently approved collection.

Description of the need for the information and proposed use:

This information collection consists of numerous existing closing forms (Closing Documents) used in FHA-insured multifamily transactions. HUD is also adding to the collection of Closing Documents twelve (12) documents, published, or referenced in Chapter 19 of the 2020 MAP Guide, 4430.G. The sample forms are not new. They were previously used in the Federal Housing Administration Multifamily Program Closing Guide, 4300.G, or available on HUD’s website as sample forms. HUD will assign form numbers to each document upon PRA approval. Once published, preparers will use the OMB-approved forms and discontinue use of the “sample” documents. The following is a list of the names of the former “sample” documents that will receive HUD Form numbers.

List of New Forms:

Respondents: FHA lenders, borrowers, housing finance agencies and other government agencies that support affordable housing, and HFA counsel.

Estimated Number of Respondents: 34,484.

B. Solicitation of Public Comment

This notice is soliciting comments from members of the public and affected parties concerning the collection of information described in Section A on the following:

(1) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) The accuracy of the agency’s estimate of the burden of the proposed collection of information;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) Ways to minimize the burden of the collection of information on those who are to respond; including through the use of appropriate automated collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

HUD encourages interested parties to submit comment in response to these questions.

Janet M. Golrick,

Acting, Chief of Staff for the Office of Housing—Federal Housing Administration.

BILLING CODE 4210–67–P

DEPARTMENT OF THE INTERIOR

Bureau of Indian Affairs

[212A2100DD AAK6006201 AOR3030.999990]

Indian Child Welfare Act (ICWA) Grants to Indian Organizations for Off-Reservation Indian Child and Family Service Programs

AGENCY: Office of Indian Services, Bureau of Indian Affairs, Interior.

ACTION: Solicitation of proposals; extension of deadline and updates to solicitation.

SUMMARY: The Secretary of the Interior (Secretary), through the Bureau of Indian Affairs (BLA), is soliciting grant proposals from Indian Organizations to establish and operate off-reservation Indian child and family service programs. The intent of the Indian child...
and family service programs are to provide services for stabilizing Indian families and Tribes, preventing the breakup of Indian families and, in particular, to ensure that the permanent removal of an Indian child from the custody of his/her Indian parent or Indian custodian shall be a last resort. This notice updates the original solicitation to extend the application deadline, raise the award ceiling, and remove a restriction on the number of applications per applicant.

DATES: Grant application packages must be submitted no later than 5 p.m. Eastern Daylight Time, August 13, 2021. The BIA will not consider proposals received after this time and date.

ADDRESSES: Grant application packages must be submitted through Grants.gov. For information on how to apply for grants in Grants.gov, see the instructions available at: https://www.grants.gov/help/html/help/Applicants/HowToApplyForGrants.htm.

FOR FURTHER INFORMATION CONTACT: If you have questions regarding the application process, please contact Jo Ann Metcalfe, Grant Officer, via email at jo.metcalfe@bia.gov or phone at (703) 390–6410.

SUPPLEMENTARY INFORMATION: On June 23, 2021, BIA published in the Federal Register a solicitation for grant proposals from Indian Organizations to establish and operate off-reservation Indian child and family service programs. See 86 FR 32970. Today’s notice makes several changes to that original solicitation. Specifically, this notice:

- Extends the July 16, 2021, proposal deadline to August 13, 2021;
- Raises the award ceiling from $100,000 per budget period to $200,000 per budget period; and
- Removes the restriction on an applicant submitting more than one application or being the beneficiary of more than one grant, to allow an applicant to submit more than one application and receive more than one grant under this notice as long as the proposals are for different services offered by the applicant organization.

All remaining provisions of the original solicitation remain in effect. See 86 FR 32970 (June 23, 2021).

Bryan Newland,
Assistant Secretary—Indian Affairs.

Bureau of Land Management

[LLORW0000.1020000. DF0000.LXSSH1080000.20X. HAG 21–0063]

Notice of Public Meeting for the San Juan Islands National Monument Advisory Committee, Washington

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of public meeting.

SUMMARY: In accordance with the Federal Land Policy and Management Act, the Federal Advisory Committee Act of 1972, and the U.S. Department of the Interior, Bureau of Land Management (BLM), the San Juan Islands National Monument Advisory Committee (MAC) will meet as indicated below.

DATES: The MAC will hold a public meeting on Tuesday, September 14, 2021. This meeting will be held from 9:00 a.m. to 3:30 p.m. A public comment period will be available in the afternoon from 12 p.m. until 1 p.m.

ADDRESSES: The meeting will be held at the Lopez Community Center for the Arts, 204 Village Road, Lopez Island, WA 98261. There will be an option to participate in the meeting virtually as well. Virtual participation information will be posted online two weeks in advance of each meeting at https://www.blm.gov/get-involved/resource-advisory-council/come-to-meeting/oregon-washington/san-juan-islands.

FOR FURTHER INFORMATION CONTACT: Jeff Clark, Spokane District Public Affairs Officer, 1103 N. Fancher, Spokane Valley, WA 99212, telephone: (509) 536–1297, or email: jeffclark@blm.gov.

Persons who use a telecommunications device for the deaf (TDD) may call the Federal Relay Service at 1(800) 877–8339 to contact Mr. Clark during normal business hours. This service is available 24 hours a day, 7 days a week, to leave a message or question. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: The San Juan Islands MAC is comprised of 12 members representing a wide array of interests, including recreation, Tribal interests, education, environmental organizations, and private landowners. The meeting will begin at 9:00 a.m. with a welcome and agenda review. Members will then review the San Juan Islands National Monument Proposed Resource Management Plan and Environmental Impact Statement and clarifying items from the BLM. This discussion and review will continue until a working lunch at noon. At noon, members of the public will have the opportunity to make comments to the MAC during a 1-hour public comment period. The review will continue after the public comment period, if necessary. The next topic will be to consider opportunities for the MAC to support implementation of the management plan once the record of decision is signed. The MAC will adjourn no later than 3:30 p.m.

All MAC meetings are open to the public. Persons wishing to make comments during the public comment period should register in person with the BLM by 11:00 a.m. on the meeting day. Depending on the number of persons wishing to speak and the time available, the amount of time or oral comments may be limited. Written public comments may be sent to the BLM Spokane District office listed in the ADDRESSES section of this notice. All comments received will be provided to the MAC.

Kurt Pindel,
Spokane District Manager.

[FR Doc. 2021–17322 Filed 8–12–21; 8:45 am]

BILLING CODE 4310–33–P
proceedings and consideration of whether the withdrawal is needed for sage-grouse conservation. Accordingly, this notice announces that the BLM is now re-initiating the National Environmental Policy Act (NEPA) process to inform the Secretary's consideration of whether to withdraw any of the lands proposed for withdrawal. This notice does not segregate any of the lands described in the proposal, which, subject to any overlapping withdrawals, remain open to location and entry under the mining laws.

DATES: The BLM will shortly issue a new draft Environmental Impact Statement (EIS) and publish a Notice of Availability (NOA) initiating a public comment period.

FOR FURTHER INFORMATION CONTACT: Patricia Deibert, National Sage-grouse Coordinator (Acting), BLM Headquarters, at email: blm_hq_sfa.withdrawal@blm.gov; telephone: 307–757–3709. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Relay Service (FRS) at 1–800–877–8339 to contact Ms. Seibert during normal business hours. The FRS is available 24 hours a day, 7 days a week, to leave a message or question. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: On September 24, 2015, a Notice of Proposed Withdrawal was published in the Federal Register (80 FR 57635), as corrected (80 FR 63583), which provided notice of the proposal to withdraw approximately 10 million acres of Federal lands in Idaho, Montana, Nevada, Oregon, Utah, and Wyoming from location and entry under the United States mining laws for 20 years, subject to valid existing rights. The lands included in the proposed action are National System of Public Lands and National Forest System lands administered by the BLM and the United States Forest Service (USFS). The BLM is the agency lead for this proposed withdrawal.

On December 30, 2016, a Notice of Amended Proposed Withdrawal, Release of Draft Environmental Impact Statement, and Notice of Public Meetings; Idaho, Montana, Nevada, Oregon, Utah, and Wyoming was published in the Federal Register (81 FR 96478). The amended proposal added 387,981.42 acres in the State of Nevada and proposed boundary refinements in Idaho, Montana, Nevada, Oregon, Utah, and Wyoming that were identified because of legal land description refinements. The notice released for public comment a draft EIS, which analyzed and disclosed the impacts of the proposed withdrawal. The notice included a summary of scoping comments, the issues analyzed, and the alternatives considered in the draft EIS. The draft EIS can be found on BLM's National NEPA Register at https://eplanning.blm.gov/eplanning-ui/project/70697/510 (DOI-BLM-WO-WO3500-2016-0002-EIS). The BLM sought comments on the draft EIS from December 30, 2016, through March 28, 2017. The BLM received approximately 4,200 comment submissions on the draft EIS, of which approximately 192 submissions were unique.

A Notice of Cancellation of Withdrawal Application and Withdrawal Proposal and Notice of Termination of Environmental Impact Statement was published on October 11, 2017, in the Federal Register (82 FR 47248), which stated that the BLM had determined the lands were no longer needed in connection with the proposed withdrawal, and terminated the preparation of an EIS evaluating the application and proposal. The BLM canceled the application prior to responding to public comments and publishing a final EIS.

The cancellation was then vacated by the Court on February 11, 2021 (Western Watersheds Project v. Bernhardt, Case No. 1:16–cv–00083–BLW, EFC 264). The Court ordered the BLM to consider “whether the withdrawal is needed for sage-grouse conservation,” and that “[s]uch proceedings shall include re-initiation of the NEPA process.” To comply with the Court's order and to review issues raised during the initial scoping and comment period for the draft EIS published on December 30, 2016, the BLM will issue a new draft EIS and publish an NOA initiating a public comment period. The withdrawal proposal will continue to be processed in accordance with the regulations set forth in 43 CFR part 2300. The process will inform a final decision as to whether to withdraw any of the lands proposed for withdrawal from location and entry under the mining laws. This notice does not segregate the lands because the segregation period for this withdrawal proposal expired on September 24, 2017. All the lands (unless subject to an existing withdrawal) remain open to location and entry under the mining laws.

The lands included in the withdrawal application were published in the previous notices. A description of the lands is posted on BLM's National NEPA Register at https://eplanning.blm.gov/eplanning-ui/project/70697/510 (DOI-BLM-WO-WO3500-2016-0002-EIS). Non-Federal mineral lands located within the boundaries of the proposed withdrawal areas will not be affected.

Thirty-one agencies and two American Indian Tribes entered into cooperating agency agreements with the BLM for the EIS process. The BLM will re-initiate participation with cooperating agencies for this NEPA process.

The BLM also contacted 53 American Indian governments via letter or face-to-face meetings during scoping and prior to the release of the draft EIS. The governments were provided a project update, an offer to provide more information, and an offer for government-to-government consultation. The BLM will re-initiate consultation with Indian tribes on a government-to-government basis in accordance with Executive Order 13175 and other policies for this NEPA process.

In accordance with 36 CFR 800.3(a)(1), the BLM previously determined that the proposed SFA withdrawal is an undertaking that has no potential to affect historic properties, assuming such historic properties were present, and therefore the agency official has no further obligation under the National Historic Preservation Act. The BLM informed 53 American Indian governments; the Idaho, Montana, Nevada, Oregon, Utah, and Wyoming State Historic Preservation Offices; and the Advisory Council on Historic Preservation of this determination of effect. This previous determination by the BLM remains accurate and will not be changed during re-initiated consideration of the withdrawal proposal.

David Jenkins,
Assistant Director, Resources and Planning.

BILLING CODE 4310–84–P

DEPARTMENT OF THE INTERIOR

National Park Service

[CPS–NERO–CEBE–32227; PPNCEBE000, PPMPSAS1Z.Y00000]

Cedar Creek and Grove National Historical Park Advisory Commission Notice of Public Meeting

AGENCY: National Park Service, Interior.

ACTION: Meeting notice.

SUMMARY: In accordance with the Federal Advisory Committee Act of 1972, the National Park Service is hereby giving notice that the Cedar Creek and Belle Grove National
Historical Park Advisory Commission (Commission) will meet as indicated below.

DATES: The meeting will be held on Thursday, September 16, 2021, from 9:00 a.m. to 11:00 a.m. (EASTERN).

ADDRESSES: The meeting will be held in the Middletown Town Hall Council Chambers, 7875 Church Street, Middletown, VA 22645. Enter through the rear of the building which leads directly into the council chambers. A teleconference may substitute for an in-person meeting if public health restrictions are in effect. Additional information will be made available on the Park’s website: https://www.nps.gov/cebe/index.htm.

FOR FURTHER INFORMATION CONTACT:
Karen Beck-Herzog, Site Manager, Cedar Creek and Belle Grove National Historical Park, P.O. Box 700, Middletown, Virginia 22645, telephone (540) 868-9176, or visit the park website: https://www.nps.gov/cebe/index.htm.

SUPPLEMENTARY INFORMATION: The Commission was designated by Congress to provide advice to the Secretary of the Interior on the preparation and implementation of the park’s general management plan and to advise on land protection (16 U.S.C. 410ii–7). Individuals who are interested in the park, the implantation of the plan, or the business of the Commission are encouraged to attend the meeting. This meeting is open to the public. Interested members of the public may present, either orally or through written comments, information for the Commission to consider during the public meeting. Attendees and those wishing to provide comment are strongly encouraged to preregister through the contact information provided. A detailed final agenda will be posted 48 hours in advance of the meeting on the Commission’s website at https://www.nps.gov/cebe/learn/management/park-advisory-commission.htm.

Purpose of the Meeting: The topics to be discussed include: general management plan next steps, visitor services and interpretation, land protection planning, historic preservation, and natural resource protection.

Commission meetings consist of the following:
1. General Introductions
2. Review and Approval of Commission Meeting Notes
3. Reports and Discussions
4. Old Business
5. New Business
6. Public Comments
7. Closing Remarks

Public Disclosure of Comments: Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public view, we cannot guarantee that we will be able to do so.

Gateway National Recreation Area Fort Hancock 21st Century Advisory Committee; Notice of Public Meeting

AGENCY: National Park Service, Interior.

ACTION: Meeting notice.

SUMMARY: In accordance with the Federal Advisory Committee Act of 1972, the National Park Service (NPS) is hereby giving notice that the Gateway National Recreation Area Fort Hancock 21st Century Advisory Committee (Committee) will meet as indicated below.

DATES: The virtual meeting will take place on Thursday, September 23, 2021. The meeting will begin at 9:00 a.m. until 1:30 p.m., with a public comment period at 11:15 a.m. to 12:00 p.m. (EASTERN). Please contact Daphne Yun (see FOR FURTHER INFORMATION CONTACT) no later than September 21, 2021, to receive instructions for accessing the meeting.

FOR FURTHER INFORMATION CONTACT: This will be a virtual meeting. Anyone interested in attending or submitting a public comment should contact Daphne Yun, Acting Public Affairs Officer, Gateway National Recreation Area, 210 New York Avenue, Staten Island, New York 10305, or by telephone (718) 815–3651, or by email daphne_yun@nps.gov.

SUPPLEMENTARY INFORMATION: The Committee was established on April 18, 2012, by authority of the Secretary of the Interior (Secretary) under 54 U.S.C. 100906, and is regulated by the Federal Advisory Committee Act. The Committee provides advice to the Secretary, through the Director of the NPS, on matters relating to the Fort Hancock Historic District of Gateway National Recreation Area. All meetings are open to the public.

Purpose of the Meeting: The Gateway National Recreation Area will discuss park and leasing updates, updates from working groups, including an update on the Stillman proposal. The final agenda will be posted on the Committee’s website at https://www.forthancock21.org. The website includes meeting minutes from all prior meetings.

Interested persons may present, either orally or through written comments, information for the Committee to consider during the public meeting. Written comments will be accepted prior to, during, or after the meeting. Members of the public may submit written comments for consideration by the Committee to Daphne Yun (see FOR FURTHER INFORMATION CONTACT).

Due to time constraints during the meeting, the Committee is not able to read written public comments submitted into the record. Individuals or groups requesting to make oral comments at the public Committee meeting will be limited to no more than three minutes per speaker. All comments will be made part of the public record and will be electronically distributed to all Committee members. Detailed minutes of the meeting will be available for public inspection within 90 days of the meeting.

Public Disclosure of Comments: Before including your address, phone number, email address, or other personal identifying information in your written comments, you should be aware that your entire comment including your personal identifying information will be publicly available. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

National Park Service

[PPWOCRAD10, PUC00RP14.R50000]

Cold War Advisory Committee Notice of Public Meeting

AGENCY: National Park Service, Interior.

ACTION: Meeting notice.

SUMMARY: The National Park Service (NPS) is hereby giving notice that the Cold War Advisory Committee (Committee) will meet as indicated below.

DATES: The Committee will meet via GoToWebinar on Tuesday, September 14, 2021, from 2:00 p.m. until approximately 4:00 p.m. (Eastern).

FOR FURTHER INFORMATION CONTACT: Lisa P. Davidson, Ph.D., Acting Program Manager, National Historic Landmarks Program, Historian, Heritage Documentation Programs, National Park Service, telephone at (202) 354–2179, or email lisa.davidson@nps.gov.

Supplementary Information: The Committee was established by title VII, subtitle C, section 7210 of the Omnibus Public Land Management Act of 2009 (16 U.S.C. 1a–5 note).

The Committee meeting will be open to the public and will have time allocated for public comment. Meeting minutes will be available upon request approximately eight weeks after the meeting.

Purpose of the Meeting: The Committee assists the Secretary of the Interior in the preparation of a national historic landmark theme study to identify sites and resources significant to the Cold War. The Committee may change to accommodate Committee business. The proposed meeting agenda includes the following:

1. Call to Order and Welcome
2. Welcome from the NPS
3. Introductions
4. Status Report—Mountain Home National Historic Landmarks Nomination and Cold War National Historic Landmarks Theme Study
5. Introduction of Draft Cold War Interpretive Handbook
6. Discussion of Cold War Interpretive Handbook
7. Public Comments
8. Adjourn Meeting

Public Disclosure of Comments: Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

BILLING CODE 4312–52–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337–TA–1248]

Certain Cellular Communications Infrastructure Systems, Components Thereof, and Products Containing Same; Commission Determination Not To Review an Initial Determination Terminating the Investigation in Its Entirety Based on Settlement; Termination of Investigation

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission (“Commission”) has determined not to review an initial determination (“ID”) (Order No. 6) of the presiding administrative law judge (“ALJ”), terminating the investigation in its entirety based on settlement. This investigation is terminated.

FOR FURTHER INFORMATION CONTACT: Ronald A. Traud, Esq., Office of the General Counsel, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436, telephone (202) 205–3427. Copies of non-confidential documents filed in connection with this investigation may be viewed on the Commission’s electronic docket (EDIS) at https://edis.usitc.gov. For help accessing EDIS, please email EDIS3Help@usitc.gov. General information concerning the Commission may also be obtained by accessing its internet server at https://www.usitc.gov. Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission’s TDD terminal on (202) 205–1810.

SUPPLEMENTARY INFORMATION: The Commission instituted this investigation on February 22, 2021, based on a complaint filed on behalf of Ericsson Inc. of Plano, Texas and Telefonaktiebolaget LM Ericsson of Sweden (collectively, “Ericsson”). 86 FR 10596 (Feb. 22, 2021). The complaint, as amended, alleged violations of section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337, in the importation into the United States, the sale for importation, or the sale within the United States after importation of certain cellular communications infrastructure systems, components thereof, and products containing same by reason of infringement of certain claims of U.S. Patent Nos. 9,037,166; 9,107,082; 9,509,605; and 9,692,682. Id. The complaint also alleged that an industry in the United States exists as required by section 337. Id. The Commission’s notice of investigation named as respondents Samsung Electronics Co. Ltd. of Republic of Korea and Samsung Electronics America, Inc. of Ridgefield Park, New Jersey (collectively, “Samsung”). Id. The Office of Unfair Import Investigations is not participating in this investigation.

On July 13, 2021, Ericsson and Samsung jointly moved pursuant to 19 CFR 210.21(a)(2) and (b) to terminate the investigation based on a settlement agreement (“the Agreement”). The motion attached public and confidential versions of the Agreement.

On July 22, 2021, the ALJ issued Order No. 6, the subject ID, which granted the motion. The ID found that the motion complied with the Commission’s Rules and that there are no extraordinary circumstances that warrant denying the motion. The ID also found that there is no evidence indicating that terminating this investigation would be contrary to the public interest. No petitions for review of the ID were received.

The Commission has determined not to review the subject ID. The investigation is hereby terminated in its entirety.

The Commission vote for this determination took place on August 10, 2021.

By order of the Commission.
INTERNATIONAL TRADE COMMISSION

[Investigation No. 731–TA–1526 (Final)]

Silicon Metal From Malaysia; Determination

On the basis of the record developed in the subject investigation, the United States International Trade Commission ("Commission") determines, pursuant to the Tariff Act of 1930 ("the Act"), that an industry in the United States is materially injured by reason of imports of silicon metal, provided for in subheadings 2804.69.10 and 2804.69.50 of the Harmonized Tariff Schedule of the United States, from Malaysia, that have been found by the U.S. Department of Commerce ("Commerce") to be sold in the United States at less than fair value ("LTFV").

Background

The Commission instituted the investigations effective June 30, 2020, following receipt of petitions filed with the Commission and Commerce by Globe Specialty Metal, Inc., Beverly, Ohio and Mississippi, Silicon, LLC, Burnsville, Mississippi. The final phase of the investigations was scheduled by the Commission following notification of preliminary determinations by Commerce that imports of silicon metal from Kazakhstan were subsidized within the meaning of section 703(b) of the Act (19 U.S.C. 1673d(b)) and that imports of silicon metal from Bosnia and Herzegovina and Iceland were being sold at LTFV within the meaning of section 733(b) of the Act (19 U.S.C. 1673b(b)). Notice of the scheduling of the final phase of the Commission's investigation, issue a limited exclusion order, and cease and desist orders.

Determination

The Commission made this determination pursuant to § 735(b) of the Act (19 U.S.C. 1675(b)). It completed and filed its determination in this investigation on August 9, 2021. The views of the Commission are contained in USITC Publication 5220 (August 2021), entitled Silicon Metal From Malaysia: Investigation No. 731–TA–1526 (Final).

By order of the Commission.

Issued: August 9, 2021.

Lisa Barton, Secretary to the Commission.

FOR FURTHER INFORMATION CONTACT:

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337–TA–1275]

Certain Networking Devices, Computers, and Components Thereof; Institution of Investigation

ACTION: Notice.

SUMMARY: Notice is hereby given that a complaint was filed with the U.S. International Trade Commission on June 1, 2021, under section 337 of the Tariff Act of 1930, as amended, on behalf of Proven Networks, LLC of Los Angeles, California. An amended complaint was filed on June 11, 2021, and a supplement to the amended complaint was filed on July 27, 2021. The amended complaint, as supplemented, alleges violations of section 337 based upon the importation into the United States, the sale for importation, and the sale within the United States after importation of certain networking devices, computers, and components thereof by reason of infringement of certain claims of U.S. Patent No. 8,687,573 ("the '573 patent"). The amended complaint further alleges that an industry in the United States exists as required by the applicable Federal Statute. The complainant requests that the Commission institute an investigation and, after the investigation, issue a limited exclusion order and cease and desist orders.

ADDRESSES: The complaint, as amended and supplemented, except for any confidential information contained therein, may be viewed on the Commission’s electronic docket (EDIS) at https://edis.usitc.gov. For help accessing EDIS, please email EDISHelp@usitc.gov. Hearing impaired individuals are advised that information on this matter can be obtained by contacting the Commission’s TDD terminal on (202) 205–1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at (202) 205–2000. General information concerning the Commission may also be obtained by accessing its internet server at https://www.usitc.gov.

SUPPLEMENTARY INFORMATION:

(1) Pursuant to subsection (b) of section 337 of the Tariff Act of 1930, as amended, an investigation be instituted to determine whether there is a violation of subsection (a)(1)(B) of section 337 in the importation into the
United States, the sale for importation, or the sale within the United States after importation of certain products identified in paragraph (2) by reason of infringement of one or more of claims 1–37 of the '573 patent, and whether an industry in the United States exists as required by subsection (a)(2) of section 337;

(2) Pursuant to section 210.10(b)(1) of the Commission’s Rules of Practice and Procedure, 19 CFR 210.10(b)(1), the plain language description of the accused products or category of accused products, which defines the scope of the investigation, is “networking appliances, such as switches, gateways, and application delivery controller products, that manage the flow of traffic and bandwidth for application quality of service, policy management, and security over a network, and related software”;

(3) For the purpose of the investigation so instituted, the following are hereby named as parties upon which this notice of institution of investigation shall be served:

(a) The complainant is: Proven Networks, LLC, 12424 Wilshire Blvd., 12th Floor, Los Angeles, CA 90025.

(b) The respondent is the following entity alleged to be in violation of section 337, and is the party upon which the complaint is to be served: F5 Networks, Inc., 801 5th Ave., Seattle, WA 98104.

(c) The Office of Unfair Import Investigations, U.S. International Trade Commission, 500 E Street SW, Suite 401, Washington, DC 20436; and

(d) For the investigation so instituted, the Chief Administrative Law Judge, U.S. International Trade Commission, shall designate the presiding Administrative Law Judge.

Responses to the complaint and the notice of institution of investigation must be submitted by the named respondents in accordance with section 210.13 of the Commission’s Rules of Practice and Procedure, 19 CFR 210.13. Pursuant to 19 CFR 201.16(e) and 210.13(a), as amended in 85 FR 15798 (March 19, 2020), such responses will be considered by the Commission if received not later than 20 days after the date of service by the complainant of the complaint and the notice of institution of investigation. Extensions of time for submitting responses to the complaint and the notice of institution of investigation will not be granted unless good cause therefor is shown.

Failure of a respondent to file a timely response to each allegation in the complaint in this notice may be deemed to constitute a waiver of the right to appear and contest the allegations of the complaint and this notice, and to authorize the administrative law judge and the Commission, without further notice to the respondent, to find the facts to be as alleged in the complaint and this notice and to enter an initial determination and a final determination containing such findings, and may result in the issuance of an exclusion order or a cease and desist order or both directed against the respondent.

By order of the Commission.

Issued: August 10, 2021.

Lisa Barton,
Secretary to the Commission.

[FR Doc. 2021–17372 Filed 8–12–21; 8:45 am]

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

Notice of Receipt of Complaint; Solicitation of Comments Relating to the Public Interest

ACTION: Notice.

SUPPLEMENTARY INFORMATION: The Commission has received a complaint and a submission pursuant to § 210.8(b) of the Commission’s Rules of Practice and Procedure filed on behalf of Motorola Solutions, Inc.; Avigilon Corporation; Avigilon Fortress Corporation; Avigilon Patent Holding 1 Corporation; and Avigilon Technologies Corporation on August 9, 2021. The complaint alleges violations of section 337 of the Tariff Act of 1930 (19 U.S.C. 1337) in the importation into the United States, the sale for importation, and the sale within the United States of certain video security equipment and systems, related software, components thereof, and products containing same. The complainant names as a respondent: Verkada Inc. of San Mateo, CA. The complaint requests that the Commission issue a limited exclusion order, a cease and desist order, and impose a bond upon respondents alleged infringing articles during the 60-day Presidential review period pursuant to 19 U.S.C. 1337(j).

Proposed respondents, other interested parties, and members of the public are invited to file comments on any public interest issues raised by the complaint or § 210.8(b) filing. Comments should address whether issuance of the relief specifically requested by the complainant in this investigation would affect the public health and welfare in the United States, competitive conditions in the United States economy, the production of like or directly competitive articles in the United States, or United States consumers.

In particular, the Commission is interested in comments that:

(i) Explain how the articles potentially subject to the requested remedial orders are used in the United States;

(ii) identify any public health, safety, or welfare concerns in the United States relating to the requested remedial orders;

(iii) identify like or directly competitive articles that complainant, its licensees, or third parties make in the United States which could replace the subject articles if they were to be excluded;

(iv) indicate whether complainant, complainant’s licensees, and/or third party suppliers have the capacity to replace the volume of articles potentially subject to the requested exclusion order and/or a cease and desist order within a commercially reasonable time; and
(v) explain how the requested remedial orders would impact United States consumers.

Written submissions on the public interest must be filed no later than by close of business, eight calendar days after the date of publication of this notice in the Federal Register. There will be further opportunities for comment on the public interest after the issuance of any final initial determination in this investigation. Any written submissions on other issues must also be filed by no later than the close of business, eight calendar days after publication of this notice in the Federal Register. Complainant may file replies to any written submissions no later than three calendar days after the date on which any initial submissions were due. No other submissions will be accepted, unless requested by the Commission. Any submissions and replies filed in response to this Notice are limited to five (5) pages in length, inclusive of attachments.

Persons filing written submissions must file the original document electronically on or before the deadlines stated above. Submissions should refer to the docket number ("Docket No. 3565") in a prominent place on the cover page and/or the first page. (See Handbook for Electronic Filing Procedures, Electronic Filing Procedures 1). Please note the Secretary’s Office will accept only electronic filings during this time. Filings must be made through the Commission’s Electronic Document Information System (EDIS, https://edis.usitc.gov). No in-person paper-based filings or paper copies of any electronic filings will be accepted until further notice. Persons with questions regarding filing should contact the EDIS Helpdesk at EDISHelp@usitc.gov.

Any person desiring to submit a document to the Commission in confidence must request confidential treatment. All such requests should be directed to the Secretary to the Commission and must include a full statement of the reasons why the Commission should grant such treatment. See 19 CFR 201.6. Documents for which confidential treatment by the Commission is properly sought will be treated accordingly. All information, including confidential business information and documents for which confidential treatment is properly sought, submitted to the Commission for purposes of this Investigation may be disclosed to and used: (i) By the Commission, its employees and Offices, and contract personnel (a) for developing or maintaining the records of this or a related proceeding, or (b) in internal investigations, audits, reviews, and evaluations relating to the programs, personnel, and operations of the Commission including under 5 U.S.C. Appendix 3; or (ii) by U.S. government employees and contract personnel, solely for cybersecurity purposes. All nonconfidential written submissions will be available for public inspection at the Office of the Secretary and on EDIS. 2

This action is taken under the authority of section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and of §§ 201.10 and 210.8(c) of the Commission’s Rules of Practice and Procedure (19 CFR 201.10, 210.8(c)).

By order of the Commission.
Issued: August 9, 2021.
Lisa Barton, Secretary to the Commission.

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION
[Investigation No. 731–TA–1545 (Final)]
Utility Scale Wind Towers From Spain; Determination

On the basis of the record 1 developed in the subject investigation, the United States International Trade Commission ("Commission") determines, pursuant to the Tariff Act of 1930 ("the Act"), that an industry in the United States is materially injured by reason of imports of utility scale wind towers ("wind towers") from Spain, provided for in subheadings 7308.20.00 and 8502.31.00 of the Harmonized Tariff Schedule of the United States, that have been found to be sold at Less Than Fair Value ("LTFV"). 2

Background

The Commission instituted antidumping and countervailing duty investigations effective September 30, 2020, following receipt of petitions filed with the Commission and Commerce by the Wind Tower Trade Coalition (Arcosa Wind Towers Inc., Dallas, Texas; and Broadwind Towers, Inc., Manitowoc, Wisconsin). The Commission established a general schedule for the conduct of the final phase of its investigations on wind towers from India, Malaysia, and Spain following preliminary determinations by Commerce that imports of wind towers were subsidized by the governments of India and Malaysia. Notice of the scheduling of the final phase of the Commission’s investigations and of a public hearing to be held in connection therewith was given by posting copies of the notice in the Office of the Secretary, U.S. International Trade Commission, Washington, DC, and by publishing the notice in the Federal Register of April 16, 2021 (86 FR 20197). Counsel for the Wind Tower Trade Coalition withdrew its previously filed request to appear at the hearing, after no other parties submitted a request to appear, and indicated a willingness to submit written responses to any Commission questions in lieu of a hearing. Consequently, since no party to the proceeding requested a hearing, the Commission canceled its hearing in connection with this proceeding (86 FR 31730, June 9, 2021). Parties to this proceeding responded to written questions posed by the Commission in their posthearing briefs.

The investigation schedules became staggered when Commerce did not align its countervailing duty investigation with its antidumping duty investigation regarding imports from Malaysia (86 FR 27828, May 24, 2021), nor with its antidumping duty investigation regarding imports from Spain (86 FR 17373, Apr. 2, 2021), while it aligned its countervailing duty investigation regarding imports from India with that of its corresponding postponed antidumping duty investigation, and postponed its antidumping duty investigation regarding Malaysia (86 FR 15897, Mar. 25, 2021; 86 FR 38274, July 20, 2021; 86 FR 27828, May 24, 2021). On July 26, 2021, the Commission issued a final affirmative determination in its countervailing duty investigation of wind towers from Malaysia (86 FR 41087, July 30, 2021). Following notification of a final determination by Commerce that imports of wind towers from Spain were being sold at LTFV within the meaning of section 735(a) of the Act (19 U.S.C. 1673d(a)), notice of the supplemental scheduling of the final phase of the Commission’s antidumping duty investigation regarding Spain was given by posting copies of the notice in the Office of the Secretary, U.S. International Trade Commission,

---

2 All contract personnel will sign appropriate nondisclosure agreements.
4 The record is defined in § 207.2(f) of the Commission’s Rules of Practice and Procedure (19 CFR 207.2(f)).
5 86 FR 33656, June 25, 2021.
instrument with instructions, or additional information, please contact: Matthew S. Grim, Tracing Operations & Records Mgmt. Branch, National Tracing Center Division either by mail at ATF National Services Center, 244 Needy Road, Martinsburg, WV 25405, by email at matthew.grim@atf.gov, or by telephone at 304–260–3683.

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Comments should address one or more of the following four points:

1. Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
2. Evaluate the accuracy of the agency’s estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
3. Evaluate whether and if so how the quality, utility, and clarity of the information to be collected can be enhanced; and
4. Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Overview of This Information Collection

1. Type of Information Collection (check justification or form 83): Revision of a currently approved collection.
2. The Title of the Form/Collection: ATF Out of Business Records Request—ATF Form 5300.3A

AGENCY: Bureau of Alcohol, Tobacco, Firearms and Explosives, Department of Justice.

ACTION: 60-Day notice.

SUMMARY: The Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF), Department of Justice (DOJ) will submit the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. The proposed collection OMB 1140–0036 (FFL Out of Business Records Request—ATF F 5300.3A) is being revised to include updated contact information, make minor changes in wording to improve form clarity, and identify an increase in the total burden hours since the last renewal in 2018. The proposed information collection is also being published to obtain comments from the public and affected agencies.

DATES: Comments are encouraged and will be accepted for 60 days until October 12, 2021.

FOR FURTHER INFORMATION CONTACT: If you have additional comments regarding the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection
DEPARTMENT OF JUSTICE
[OMB Number 1122–0012]

Agency Information Collection Activities; Proposed eCollection Requested; Extension of a Currently Approved Collection

AGENCY: Office on Violence Against Women, Department of Justice.

ACTION: 60-Day notice.

SUMMARY: The Office on Violence Against Women (OVW), Department of Justice, will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995.

DATES: Comments are encouraged and will be accepted for 60 days until October 12, 2021.

FOR FURTHER INFORMATION CONTACT: Written comments and/or suggestion regarding the items contained in this notice, especially the estimated public burden and associated response time, should be directed to Cathy Poston, Office on Violence Against Women, at 202–514–5430 or Catherine.poston@usdoj.gov.

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

1. Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

2. evaluate the accuracy of the agency’s estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

3. Enhance the quality, utility, and clarity of the information to be collected; and

4. Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Overview of This Information Collection

1. Type of Information Collection: Extension of a currently approved collection.

2. Title of the Form/Collection: Semi-Annual Progress Report for Education, Training and Enhanced Services to End Violence Against and Abuse of Women with Disabilities Grant Program (Disability Grant Program).

3. Agency form number, if any, and the applicable component of the Department of Justice sponsoring the collection: Form Number: 1122–0012.

4. Affected public who will be asked or required to respond, as well as a brief abstract: The affected public includes the approximately 18 grantees of the Disability Grant Program. Grantees include states, units of local government, Indian tribal governments or tribal organizations and non-governmental private organizations. The goal of this program is to build the capacity of such jurisdictions to address such violence against individuals with disabilities through the creation of multi-disciplinary teams. Disability Grant Program recipients will provide training, consultation, and information on domestic violence, dating violence, stalking, and sexual assault against individuals with disabilities and enhance direct services to such individuals.

5. An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond/reply: It is estimated that it will take the approximately 18 respondents (Disability Program grantees) approximately one hour to complete a semi-annual progress report. The semi-annual progress report is divided into sections that pertain to the different types of activities in which grantees may engage. A Disability Program grantee will only be required to complete the sections of the form that pertain to its own specific activities.

6. An estimate of the total public burden (in hours) associated with the collection: The total annual hour burden to complete the data collection forms is 36 hours, that is 18 grantees completing a form twice a year with an estimated completion time for the form being one hour.

If additional information is required, contact: Melody Braswell, Deputy Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution Square, 145 N Street NE, 3E, 405B, Washington, DC 20530.

Controlled substance | Drug code | Schedule
--- | --- | ---
Gamma Hydroxybutyric Acid. | 2010 | 1
Marihuana Extract | 7350 | 1
Marihuana | 7360 | 1
Tetrahydrocannabinols | 7370 | 1

The company plans to import the above controlled substances as dosage unit products for clinical trials. No other activity for these drug codes is authorized for this registration.

Approval of permit applications will occur only when the registrant’s business activity is consistent with what is authorized under 21 U.S.C. 952(a)(2). Authorization will not extend to the import of Food Drug Administration-approved or non-approved finished dosage forms for commercial sale.

Brian S. Besser,
Acting Assistant Administrator.

DEPARTMENT OF JUSTICE

Notice of Lodging of Partial Consent Decree Pursuant to the Comprehensive Environmental Response, Compensation, and Liability Act

This Consent Decree represents a settlement of certain cost claims of the United States ("Plaintiff") against Shell Oil Company, ("Shell" or "Defendant") under Sections 106, 107, and 113 of the Comprehensive Environmental Response, Compensation, and Liability Act ("CERCLA"), 42 U.S.C. 9606, 9607, and 9613, relating to the McColl Superfund Site in Fullerton, California. Under the proposed Consent Decree, Shell will be required to pay the United States $29,501,511.85, plus interest in the amount of $3,059.39, and $75.83 per day from 3/16/2021 through the date of payment. Shell is also required under the Consent Decree to pay its allocated fair share of future response costs.

The publication of this notice opens a period for public comment on the Consent Decree. Comments should be addressed to the Assistant Attorney General, Environment and Natural Resources Division, and should refer to United States of America v. Shell Oil Company, et al, and the D.J. Ref. No. 90–11–2–3A. All comments must be submitted no later than thirty (30) days after the publication date of this notice. Comments may be submitted either by email or by mail:

To submit comments:                      Send them to:
By e-mail ...... pubcomment-ees.erenr@usdoj.gov
By mail ...... Assistant Attorney General,
              U.S. DOJ—ENRD, P.O. Box 7611, Washington, DC 20044–7611.

During the public comment period, the Amended Consent Decree may be examined and downloaded at this Justice Department website: http://www.usdoj.gov/ernd/Consent_Decrees.html. We will provide a paper copy of the Consent Decree upon written request and payment of reproduction costs. Please mail your request and payment to: Consent Decree Library, U.S. DOJ—ENRD, P.O. Box 7611, Washington, DC 20044–7611.

Please enclose a check or money order for $6.25 (25 cents per page reproduction cost) payable to the United States Treasury for the Consent Decree and $20.00 for the Consent Decree and Appendices thereto.

Lori Jonas,
Assistant Section Chief, Environmental Enforcement Section, Environment and Natural Resources Division.

DEPARTMENT OF JUSTICE

[OMB Control No. 1103–NEW]

Information Collection; Improving Customer Experience (OMB Circular A–11, Section 280 Implementation)

AGENCY: Office of the Chief Information Officer, Department of Justice.

ACTION: 30-Day notice.

SUMMARY: The Department of Justice as part of its continuing effort to reduce paperwork and respondent burden, is announcing an opportunity for public comment on a new proposed collection of information by the Agency. Under the Paperwork Reduction Act of 1995 (PRA), Federal Agencies are required to publish notice in the Federal Register concerning each proposed collection of information, and to allow 30 days for public comment in response to the notice. This notice solicits comments on a new collection proposed by the Agency.

DATES: Submit comments on or before: September 13, 2021.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

SUPPLEMENTARY INFORMATION:
A. Purpose

Under the PRA, (44 U.S.C. 3501–3520) Federal Agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. “Collection of information” is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes Agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA requires Federal Agencies to provide a 60-day notice in the Federal Register concerning each proposed collection of information, including each proposed extension of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, OMB is publishing notice of the proposed collection of information set forth in this document.

Whether seeking a loan, Social Security benefits, veteran’s benefits, or other services provided by the Federal Government, individuals and businesses expect Government customer services to be efficient and intuitive, just like services from leading private-sector organizations. Yet the 2016 American Customer Satisfaction Index and the 2017 Forrester Federal Customer Experience Index show that, on average, Government services lag nine percentage points behind the private sector.

A modern, streamlined and responsive customer experience means: Raising government-wide customer experience to the average of the private sector service industry; developing indicators for high-impact Federal programs to monitor progress towards excellent customer satisfaction; developing and mature digital services; and providing the structure (including increasing transparency) and resources to ensure customer experience is a focal point for agency leadership. To support this, OMB Circular A–11 Section 280 established government-wide standards for mature customer experience organizations in government and measurement. To enable Federal programs to deliver the expected experience taxpayers deserve, they must undertake three general categories of activities: Conduct ongoing customer research, gather and share customer feedback, and test services and digital products.

These data collection efforts may be either qualitative or quantitative in nature or may consist of mixed methods. Additionally, data may be collected via a variety of means, including but not limited to electronic or social media, direct or indirect observation (i.e., in person, video and audio collections), interviews, questionnaires, surveys, and focus groups. The OMB will limit its inquiries to data collections that solicit strictly...
voluntary opinions or responses. Steps will be taken to ensure anonymity of respondents in each activity covered by this request.

The results of the data collected will be used to improve the delivery of Federal services and programs. It will include the creation of personas, customer journey maps, and reports and summaries of customer feedback data and user insights. It will also provide government-wide data on customer experience that can be displayed on performance.gov to help build transparency and accountability of Federal programs to the customers they serve.

Method of Collection
The Department will collect this information by electronic means when possible, as well as by mail, fax, telephone, technical discussions, and in-person interviews. The Department may also utilize observational techniques to collect this information.

Data
Form Number(s): None.
Type of Review: New.

B. Annual Reporting Burden
Affected Public: Collections will be targeted to the solicitation of opinions from respondents who have experience with the program or may have experience with the program in the near future. For the purposes of this request, “customers” are individuals, businesses, and organizations that interact with a Federal Government agency or program, either directly or via a Federal contractor. This could include individuals or households; businesses or other for-profit organizations; not-for-profit institutions; State, local or tribal governments; Federal government; and Universities.

Estimated Number of Respondents: 2,001,550.
Estimated Time per Response: Varied, dependent upon the data collection method used. The possible response time to complete a questionnaire or survey may be 3 minutes or up to 1.5 hours to participate in an interview.

Estimated Total Annual Burden Hours: 101,125.
Estimated Total Annual Cost to Public: 0.

C. Public Comments
The Department invites comments on:
(a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
(b) the accuracy of the agency’s estimate of the burden (including hours and cost) of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

DEPARTMENT OF JUSTICE
Agency Information Collection Activities; Proposed eCollection eComments Requested; Extension of a Currently Approved Collection

AGENCY: Office on Violence Against Women, Department of Justice.

ACTION: Notice.

SUMMARY: The Office of Violence Against Women, Department of Justice, will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995.

DATES: Comments are encouraged and will be accepted for 30 days until September 13, 2021.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:
(1) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
(2) evaluate the accuracy of the agency’s estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
(3) Enhance the quality, utility, and clarity of the information to be collected; and
collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Overview of This Information Collection

(1) Type of Information Collection: Revision to Currently Approved Collection.

(2) Title of the Form/Collection: Semi-Annual Progress Report for Grantees of the Transitional Housing Assistance Grant Program.

(3) Agency form number, if any, and the applicable component of the Department of Justice sponsoring the collection: Form Number: 1122–0016. U.S. Department of Justice, Office on Violence Against Women.

(4) Affected public who will be asked or required to respond, as well as a brief abstract: The affected public includes the approximately 120 grantees of the Transitional Housing Assistance Grant Program (Transitional Housing Program) whose eligibility is determined by statute. This discretionary grant program provides transitional housing, short-term housing assistance, and related support services for individuals who are homeless, or in need of transitional housing or other housing assistance, as a result of fleeing a situation of domestic violence, dating violence, sexual assault, or stalking, and for whom emergency shelter services or other crisis intervention services are unavailable or insufficient. Eligible applicants are States, units of local government, Indian tribal governments, and other organizations, including domestic violence and sexual assault victim services providers, domestic violence or sexual assault coalitions, other nonprofit, nongovernmental organizations, or community-based and culturally specific organizations, that have a documented history of effective work concerning domestic violence, dating violence, sexual assault, or stalking.

(5) An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond/reply: It is estimated that it will take the 120 respondents (grantees) approximately one hour to complete the Semi-Annual Progress Report. The semi-annual progress report is divided into sections that pertain to the different types of activities that grantees may engage in and the different types of grantees that receive funds. A Transitional Housing Program grantee will only be required to complete the sections of the form that pertain to its own specific activities.

(6) An estimate of the total public burden (in hours) associated with the collection: The total annual hour burden to complete the data collection forms is 240 hours, that is 120 grantees completing a form twice a year with an estimated completion time for the form being one hour.

If additional information is required contact: Melody Braswell, Deputy Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution Square, 145 N Street NE, 3E, 405B, Washington, DC 20530.

Dated: August 9, 2021.

DEPARTMENT OF JUSTICE

[OMB Number 1122–0007]

Agency Information Collection Activities; Proposed eCollection eComments Requested; Extension of a Currently Approved Collection

AGENCY: Office on Violence Against Women, Department of Justice.

ACTION: 30-Day notice.

SUMMARY: The Office on Violence Against Women (OWW), Department of Justice, will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995.

DATES: Comments are encouraged and will be accepted for 30 days until October 12, 2021.

FOR FURTHER INFORMATION CONTACT: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

(1) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agency’s estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Overview of This Information Collection

(1) Type of Information Collection: Extension of a currently approved collection.

(2) Title of the Form/Collection: Semi-Annual Progress Report for Grantees of the Legal Assistance for Victims Program.

(3) Agency form number, if any, and the applicable component of the Department of Justice sponsoring the collection: Form Number: 1122–0007. U.S. Department of Justice, Office on Violence Against Women.

(4) Affected public who will be asked or required to respond, as well as a brief abstract: The affected public includes the approximately 200 grantees of the Legal Assistance for Victims Program (LAV Program) whose eligibility is determined by statute. In 1998, Congress appropriated funding to provide civil legal assistance to domestic violence victims through a set-aside under the Grants to Combat Violence Against Women, Public Law 105–277. In the Violence Against Women Act of 2000 and again in 2005, Congress statutorily authorized the LAV Program. 34 U.S.C. 20121. The LAV Program is intended to increase the availability of legal assistance necessary to provide effective aid to victims of domestic violence, stalking, or sexual assault who are seeking relief in legal matters arising as a consequence of that abuse or violence. The LAV Program awards grants to law school legal clinics, legal aid or legal services programs, domestic violence victims’ shelters, bar associations, sexual assault programs, private nonprofit entities, and
Indian tribal governments. These grants are for providing direct legal services to victims of domestic violence, sexual assault, and stalking in matters arising from the abuse or violence and for providing enhanced training for lawyers representing these victims. The goal of the Program is to develop innovative, collaborative projects that provide quality representation to victims of domestic violence, sexual assault, and stalking.

(5) An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond/reply: It is estimated that it will take the approximately 200 respondents (LAV Program grantees) approximately one hour to complete a semi-annual progress report. The semi-annual progress report is divided into sections that pertain to the different types of activities that grantees may engage in and the different types of grantees that receive funds. An LAV Program grantee will only be required to complete the sections of the form that pertain to its own specific activities.

(6) An estimate of the total public burden (in hours) associated with the collection: The total annual hour burden to complete the data collection forms is 400 hours, that is 200 grantees completing a form twice a year with an estimated completion time for the form being one hour.

If additional information is required contact: Melody Braswell, Deputy Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution Square, 145 N Street NE, 3E, 405B, Washington, DC 20530.

Dated: August 9, 2021.
Melody Braswell,
Department Clearance Officer, PRA, U.S. Department of Justice.

BILLING CODE 4410–FX–P

DEPARTMENT OF LABOR
Agency Information Collection Activities: Submission for OMB Review; Comment Request; Vertical Tandem Lifts for Marine Terminals

ACTION: Notice of availability; request for comments.

SUMMARY: The Department of Labor (DOL) is submitting this Occupational Safety and Health Administration (OSHA)-sponsored information collection (ICR) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995 (PRA). Public comments on the ICR are invited.

DATES: The OMB will consider all written comments that agency receives on or before September 13, 2021.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

Comments are invited on: (1) Whether the collection of information is necessary for the proper performance of the functions of the Department, including whether the information will have practical utility; (2) if the information will be processed and used in a timely manner; (3) the accuracy of the agency’s estimates of the burden and cost of the collection of information, including the validity of the methodology and assumptions used; (4) ways to enhance the quality, utility, and clarity of the information collection; and (5) ways to minimize the burden of the collection of information on those who are to respond, including the use of automated collection techniques or other forms of information technology.

FOR FURTHER INFORMATION CONTACT: Crystal Rennie by telephone at 202–693–0456 or by email at DOL_PRA_PUBLIC@dol.gov.

SUPPLEMENTARY INFORMATION: The Vertical Tandem Lifts (VTLs) Standard requires employers to develop, implement, and maintain a written plan for transporting vertically connected containers in the longshoring and marine terminal industries. The written plan is necessary for the safe transport of VTLs in the marine terminal where factors affect the stability of a VTL which has a higher center of gravity than a single container. For additional substantive information about this ICR, see the related notice published in the Federal Register on May 3, 2021 (86 FR 23432).

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless the OMB approves it and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid OMB Control Number. See 5 CFR 1320.5(a) and 1320.6.

DOL seeks PRA authorization for this information collection for three (3) years. OMB authorization for an ICR cannot be for more than three (3) years without renewal. The DOL notes that information collection requirements submitted to the OMB for existing ICRs receive a month-to-month extension while they undergo review.

Agency: DOL–OSHA.
Title of Collection: Vertical Tandem Lifts Marine Terminals.
OMB Control Number: 1218–0260.
Affected Public: Private Sector: Businesses or other for-profits.
Total Estimated Number of Respondents: 1,192.
Total Estimated Number of Responses: 75,675.
Total Estimated Annual Time Burden: 23,256 hours.
Total Estimated Annual Other Costs Burden: $0.

Crystal Rennie,
Senior PRA Analyst.

AGENCY: Millennium Challenge Corporation.

ACTION: Notice.

SUMMARY: In accordance with the Millennium Challenge Act of 2003, as amended, the Millennium Challenge Corporation is publishing a summary, justification, and full text of the proposed First Amendment to Millennium Challenge Compact between the United States of America, acting through the Millennium Challenge Corporation, and the Republic of Benin. Representatives of the United States Government and the Government of Benin plan to conclude the Amendment in August 2021.

Authority: 22 U.S.C. 7708(i)(2).

Thomas G. Hohenthaner,
Acting VP/General Counsel and Corporate Secretary.

Summary of First Amendment to Millennium Challenge Compact With the Republic of Benin

The Board of Directors of the Millennium Challenge Corporation
VerDate Sep<11>2014 17:06 Aug 12, 2021 Jkt 253001 PO 00000 Frm 00072 Fmt 4703 Sfmt 4703 E:\FR\FM\13AUN1.SGM 13AUN1

Staff to work sites, resulting in delays in staff to Benin and deployment of field hinders mobilization of contractor key to 97% of the Benin’s territory. The net mitigation of international commercial airlines stopped servicing on staff travel, and shortly thereafter the compact budget rapidly imposed packages that comprise nearly half of cutting off access to the economic and population centers in southern Benin, movement outside of the major restricted visa issuance, and limited land borders to all but emergency travel, the Government of Benin imposed related oversight costs associated with additional program administration and additional funding will be used to cover originally contemplated. The proposed complete infrastructure projects as the COVID-19 pandemic and to mitigate implementation delays due to the Extending the Compact’s term will maximize long-term results and the return on investment by enabling MCC and the accountable entity in Benin to complete and hand over all ongoing projects to the beneficiary institutions without compromising health, safety, or environmental standards, and will reduce sustainability risks through the necessary attention to testing, commissioning, training of utility operators and technicians, and additional oversight. The additional MCC funding is necessary for and will be used to support oversight and other administrative functions during the additional twelve months of the compact term.

First Amendment to Millennium Challenge Compact Between the United States of America, Acting Through the Millennium Challenge Corporation and the Republic of Benin

This First Amendment to Millennium Challenge Compact (this “Amendment”), is made by and between the United States of America, acting through the Millennium Challenge Corporation, a United States government corporation (“MCC”), and the Republic of Benin, acting through its government (the “Government”) (each referred to herein individually as a “Party” and collectively, as the “Parties”). All capitalized terms used in this Amendment that are not otherwise defined herein have the meanings given to such terms in the Compact (as defined below).

Recitals

Whereas, the Parties signed that certain Millennium Challenge Compact by and between the United States of America, acting through MCC, and the Republic of Benin, on September 9, 2015 (as modified, the “Compact”); Whereas, Section 7.4 of the Compact provides for a Compact Term of five (5) years after its entry into force;

Whereas, the Compact entered into force on June 22, 2017;

Whereas, implementation of the Program has been adversely affected and delayed by the coronavirus pandemic;

Whereas, the Parties now desire to extend the Compact Term by an additional twelve (12) months (the “Extension”), and to increase MCC’s assistance under the Compact for related administrative and oversight costs, to allow the Government more time to implement and complete the Projects in order to fully achieve the Compact Goal, Program Objective and Project Objectives; and

Whereas, pursuant to Section 6.2(a) of the Compact, the Parties desire to amend the Compact as more fully described herein to memorialize the Extension.

Now, therefore, the Parties hereby agree as follows:

Amendments

1. Amendment to Section 2.1

Section 2.1 (Program Funding) of the Compact is amended and restated to read as follows:

“Section 2.1 Program Funding. Upon entry into force of this Compact in accordance with Section 7.3, MCC will grant to the Government, under the terms of this Compact, an amount not to exceed Three Hundred Seventy-Three Million, Five Hundred Nine Thousand, Eight Hundred Fourteen United States Dollars (US$375,000,000) (“Program Funding”) consisting of Two Hundred Twenty-Three Million, Seven Hundred Fifty United States Dollars (US$223,750,000) (“On-Grid Tranche Funding”), Eighty Million United States Dollars (US$80,000,000) (“Off-Grid Tranche Funding”), and Twenty Million United States Dollars (US$20,000,000) (“Off-Grid Tranche Funding”), for use by the Government to implement the Program. The allocation of Program Funding is generally described in Annex II.”

2. Amendment to Section 2.2

Section 2.2(a) (Compact Implementation Funding) of the Compact is amended and restated to read as follows:

“(a) Upon the signing of this Compact, MCC will grant to the Government, under the terms of this Compact and in addition to the Program Funding described in Section 2.1, an amount not to exceed Seventeen Million, Four Hundred Ninety Thousand, One

Scope of the Amendment

MCC proposes to extend the term of the Compact for an additional twelve months to June 22, 2023, and to provide additional funding up to $16,000,000. The term extension is necessary to mitigate implementation delays due to the COVID–19 pandemic and to complete infrastructure projects as originally contemplated. The proposed additional funding will be used to cover additional program administration and related oversight costs associated with extending the Compact’s term.

Background

The Compact was signed September 9, 2015 and entered into force on June 22, 2017. The Compact aims to strengthen Benin’s national power utility, attract private sector investment into solar power generation, and fund infrastructure investments in electricity distribution as well as off-grid electrification for poor and unserved households. The Compact comprises four projects: The Policy Reform and Institutional Strengthening Project, the Electricity Generation Project, the Electricity Distribution Project, and the Off-Grid Electricity Access Project.
Hundred Eighty-Six United States Dollars (US$17,490,186) ("Compact Implementation Funding") under Section 609(g) of the Millennium Challenge Act of 2003, as amended (the "MCA Act"), for use by the Government to facilitate implementation of this Compact, including for the following purposes:

(i) Financial management and procurement activities;

(ii) administrative activities (including start-up costs such as staff salaries) and administrative support expenses such as rent, computers and other information technology or capital equipment;

(iii) monitoring and evaluation activities;

(iv) feasibility, design and other project preparatory studies; and

(v) other activities to facilitate Compact implementation as approved by MCC.

The allocation of Compact Implementation Funding is generally described in Annex II.

3. Amendment to Section 7.4

Section 7.4 (Compact Term) of the Compact is amended and restated to read as follows:

"Section 7.4 Compact Term. This Compact will remain in force for six (6) years after its entry into force, unless terminated earlier under Section 5.1 (the "Compact Term")..

4. Amendments to Annex II (Multi-Year Financial Plan Summary)

(a) Section 2 of Annex II (Multi-Year Financial Plan Summary) to the Compact is amended and restated to read as follows:

"2. Government Contribution. During the Compact Term, the Government will make contributions, relative to its national budget and taking into account prevailing economic conditions, as are necessary to carry out the Government’s responsibilities under Section 2.6(a) of this Compact. These contributions may include in-kind and financial contributions (including obligations of Benin on any debt incurred toward meeting these contribution obligations). In connection with this obligation the Government has developed a budget over the Compact Term to complement MCC Funding through budget allocations to each of the Projects and Program Administration. The Government will make a contribution of at least 7.5 percent of the amount of MCC Funding provided under this Compact over the Compact Term. The Government will allocate such contribution in the national budget according to a multi-year plan. The Government will provide evidence of the approval thereof to MCC prior to entry into force. In the event that deobligation of the On-Grid Tranche Funding or the Off-Grid Tranche Funding occurs in accordance with Section 8.3(a) of this Compact, the obligation for the corresponding Government contribution will cease to apply. Such contribution will be in addition to the Government’s spending toward such Project Objectives in its budget for the year immediately preceding the establishment of this Compact. The Government’s contribution will be subject to any legal requirements in Benin for the budgeting and appropriation of such contribution, including approval of the Government’s budget by its legislature. The Parties may set forth in the Program Implementation Agreement or other appropriate Supplemental Agreements certain requirements regarding this Government contribution, which requirements may be conditions precedent to the Disbursement of MCC Funding. During implementation of the Program, the Government’s contributions may be modified or new contributions added with MCC approval, provided that the modified or new contributions continue to advance the Project Objectives."

(b) Exhibit A to Annex II (Multi-Year Financial Plan Summary) to the Compact is deleted in its entirety and replaced by revised Exhibit A set forth in Annex I to this Amendment.

General Provisions

1. Further Assurances

Each Party hereby covenants and agrees, without necessity of any further consideration, to execute and deliver any and all such further documents and take any and all such other action as may be reasonably necessary or appropriate to carry out the intent and purpose of this Amendment.

2. Effect of this Amendment

From and after the date this Amendment enters into force, the Compact and this Amendment will be read together and construed as one document, and each reference in the Compact to the “Compact,” “hereunder,” “thereof” or words of like import referring to the Compact, and each reference to the “Compact,” “thereunder,” “thereof” or words of like import in any Supplemental Agreement or in any other document or instrument delivered pursuant to the Compact or any Supplemental Agreement, will mean and be construed as a reference to the Compact, as amended by this Amendment.

3. Limitations

Except as expressly amended by this Amendment, all of the provisions of the Compact remain unchanged and in full force and effect.

4. Governing Law

The Parties acknowledge and agree that this Amendment is an international agreement entered into for the purpose of amending the Compact and as such will be interpreted in a manner consistent with the Compact and is governed by international law.

**CONTACT PERSON FOR MORE INFORMATION:**

For more information or to verify the status of meetings, contact Wesley Held at 301–287–3591 or via email at Wesley.Held@nrc.gov. The schedule for Commission meetings is subject to change on short notice.

The NRC Commission Meeting Schedule can be found on the internet.

The NRC provides reasonable accommodation to individuals with disabilities where appropriate. If you need a reasonable accommodation to participate in these public meetings or need this meeting notice or the transcript or other information from the public meetings in another format (e.g., braille, large print), please notify Anne Silk, NRC Disability Program Specialist, at 301–287–0745, by videophone at 240–428–9217, or by email at Anne.Silk@nrc.gov. Determinations on requests for reasonable accommodation will be made on a case-by-case basis.

Members of the public may request to receive this information electronically. If you would like to be added to the distribution, please contact the Nuclear Regulatory Commission, Office of the Secretary, Washington, DC 20555, at 301–415–1969, or by email at Wendy.Moore@nrc.gov or Betty.Thweatt@nrc.gov.

The NRC is holding the meetings under the authority of the Government in the Sunshine Act, 5 U.S.C. 552b.

Dated: August 11, 2021.

For the Nuclear Regulatory Commission.

Wesley W. Held,
Policy Coordinator, Office of the Secretary.

The Commission invites comments on whether the Postal Service’s request(s) in the captioned docket(s) are consistent with the policies of title 39. For request(s) that the Postal Service states concern market dominant product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3622, 39 U.S.C. 3642, 39 CFR part 3030, and 39 CFR part 3040, subpart B. For request(s) that the Postal Service states concern competitive product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3632, 39 U.S.C. 3633, 39 U.S.C. 3642, 39 CFR part 3035, and 39 CFR part 3040, subpart B. Comments are due: August 17, 2021.

SUPPLEMENTARY INFORMATION:
Table of Contents

I. Introduction
II. Docketed Proceeding(s)

I. Introduction

The Commission gives notice that the Postal Service filed request(s) for the Commission to consider matters related to negotiated service agreement(s). The request(s) may propose the addition or removal of a negotiated service agreement from the market dominant or the competitive product list, or the modification of an existing product currently appearing on the market dominant or the competitive product list.

Section II identifies the docket number(s) associated with each Postal Service request, the title of each Postal Service request, the request’s acceptance date, and the authority cited by the Postal Service for each request. For each request, the Commission appoints an officer of the Commission to represent the interests of the general public in the proceeding, pursuant to 39 U.S.C. 505 (Public Representative). Section II also establishes comment deadline(s) pertaining to each request.

The public portions of the Postal Service’s request(s) can be accessed via the Commission’s website (http://www.prc.gov). Non-public portions of the Postal Service’s request(s), if any, can be accessed through compliance with the requirements of 39 CFR 3011.301.1

The Commission invites comments on whether the Postal Service’s request(s) in the captioned docket(s) are consistent with the policies of title 39. For request(s) that the Postal Service states concern market dominant product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3622, 39 U.S.C. 3642, 39 CFR part 3030, and 39 CFR part 3040, subpart B. For request(s) that the Postal Service states concern competitive product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3632, 39 U.S.C. 3633, 39 U.S.C. 3642, 39 CFR part 3035, and 39 CFR part 3040, subpart B. Comments are due: August 17, 2021.

II. Docketed Proceeding(s)

This Notice will be published in the Federal Register.

FOR FURTHER INFORMATION CONTACT:
David A. Trissell, General Counsel, at 202–789–6820.

SECURITIES AND EXCHANGE COMMISSION

Self-Regulatory Organizations; New York Stock Exchange LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend Its Price List

August 9, 2021.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act") 2 and Rule 19b–4 thereunder, 3 notice is hereby given that, on August 2, 2021, New York Stock Exchange LLC ("NYSE" or "Exchange") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization’s Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend its Price List to eliminate the (1) underutilized monthly rebate payable to Designated Market Makers ("DMM") with 30 or fewer assigned securities, and (2) expired waivers for equipment and related service charges and trading license fees for NYSE Trading Floor-based member organizations.

The Exchange proposes to implement the rule change on August 2, 2021. The proposed rule change is available on the Exchange’s website at www.nyse.com, at the principal office of the Exchange, and at the Commission’s Public Reference Room.

II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C, below, of the most significant parts of such statements.

A. Self-Regulatory Organization’s Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend its Price List to eliminate the (1) underutilized monthly rebate payable to DMMs with 30 or fewer assigned securities, and (2) expired waivers for equipment and related service charges and trading license fees for NYSE Trading Floor-based member organizations.

[FR Doc. 2021–17482 Filed 8–11–21; 11:15 am]

BILLING CODE 7710–FW–P
The Exchange proposes to implement the rule change on August 2, 2021.

Proposed Rule Change

The Exchange proposes to eliminate an underutilized DMM rebate and obsolete waivers, as follows.

Underutilized DMM Rebate

The Exchange currently pays a DMM with 30 or fewer assigned securities a monthly rebate of $1,500 per security, up to a maximum of $10,000, for each security assigned to such a DMM in the previous month (regardless of whether the stock price exceeds $1.00) for which that DMM provides quotes at the National Best Bid ("NBB") and National Best Offer ("NBO," together the "NBBO") at least 25% of the time in the applicable month. The monthly rebate is in addition to the current rate on transactions and is prorated to the number of trading days in a month that an eligible security is assigned to a DMM.

The Exchange proposes to eliminate this rebate in its entirety and to remove it from the Price List because the rebate has been underutilized by member organizations insofar as no DMMs with 30 or fewer assigned securities has qualified for the rebate in the past six months. As such, Exchange does not anticipate any member organization in the near future would qualify for the rebate that is the subject of this proposed rule change.

Expired Waivers

In response to the unprecedented events surrounding the spread of COVID–19 in 2020, the Exchange waived certain equipment and related service charges and trading license fees for NYSE Trading Floor-based member organizations beginning in June 2020 through the earlier of the first full month of a full reopening of the Trading Floor facilities to Floor personnel or June 2021. Specifically, the Exchange waived 50% of the Annual Telephone Line Charge of 400 per phone number; the $129 fee for a single line phone, jack, and data jack; the related service charges ($161.25 to install single jack (voice or data); $107.50 to relocate a jack; $53.75 to remove a jack; $107.50 to install voice or data line; $53.75 to disconnect data line; $53.75 to change a phone line subscriber; and miscellaneous telephone charges billed at $106 per hour in 15 minute increments); and the monthly portion of all applicable annual fees for member organizations that (1) had at least one trading license, a physical trading Floor presence and Floor broker executions accounting for 40% or more of the member organization’s combined adding, taking and auction volumes during March 1 to March 20, 2020 or, if not a member organization during March 1 to March 20, 2020, based on the member organization’s combined adding, taking, and auction volumes during its first month as a member organization on or after May 26, 2020, and (2) were unable to operate at more than 50% of their March 2020 on-Floor staffing levels or, for member organizations that began Floor operations after March 2020, are unable to operate at more than 50% of their Exchange-approved on-Floor staffing levels, both excluding part-time Floor brokers known as “flex brokers”.

As set forth in footnotes 11 and 15 of the Price List, the waivers expired in June 2021 and have not been renewed. The Exchange accordingly proposes to delete footnote 11, which sets forth the equipment waivers described above, in its entirety, and to delete that portion of footnote 15 which addresses the waiver of the monthly portion of all applicable annual fees for member organizations, as obsolete.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with Section 6(b) of the Act, in general, and further the objectives of Sections 6(b)(4) and 6(b)(5) of the Act. In particular, because it provides for the equitable allocation of reasonable dues, fees, and other charges among its members, issuers and other persons using its facilities and does not unfairly discriminate between customers, issuers, brokers or dealers.

The Proposed Change Is Reasonable

The Exchange believes that the proposed elimination of the monthly rebate of $1,500 per security, up to a maximum of $10,000, for DMMs with 30 or fewer assigned securities is reasonable because DMMs have underutilized the incentive. No DMM has qualified for the rebate in the past six months. The Exchange does not anticipate any member organization in the near future qualifying for the rebate that is the subject of this proposed rule change. The Exchange believes it is reasonable to eliminate requirements and credits when such incentives become underutilized. The Exchange also believes eliminating underutilized incentive programs would also simplify the Price List. The Exchange further believes that removing the optional DMM rebate and credit from the Price List would also add clarity and transparency to the Price List.

Further, the Exchange believes that it is reasonable to delete the expired waivers for NYSE Trading Floor-based member organizations from the Price List because the waivers are no longer offered and the fees are currently being charged. Deleting obsolete waivers would add greater clarity of the Exchange’s rules and enable market participants to navigate the Exchange’s Price List more easily.

The Proposal Is an Equitable Allocation of Fees

The Exchange believes the proposal equitably allocates fees among its market participants because elimination of underutilized and ineffective DMM rebate and credits the Exchange proposes to eliminate would be eliminated in their entirety, and would no longer be available to any member organization in any form. Similarly, the Exchange believes the proposal equitably allocates fees among its market participants because elimination of obsolete waivers would apply to all similarly-situated member organizations on an equal basis. All such member organizations would continue to be subject to the same fee structure, and access to the Exchange’s market would continue to be offered on fair and nondiscriminatory terms.

The Proposal Is Not Unfairly Discriminatory

The Exchange believes that the proposal is not unfairly discriminatory. The proposal is not unfairly discriminatory because it neither targets nor will it have a disparate impact on any particular category of market participants. The Exchange believes that the proposal is not unfairly discriminatory because the proposed elimination of the optional DMM rebate and credits would affect all similarly-
situating market participants on an equal and non-discriminatory basis. The Exchange believes that eliminating optional DMM rebate and credits that are underutilized and ineffective would no longer be available to any DMM on an equal basis. Further, the proposal does not permit unfair discrimination because elimination of obsolete waivers would apply to all similarly situated member organizations on an equal basis. In addition, the Exchange believes that the proposed elimination of obsolete waivers would remove impediments to and perfect the mechanism of a free and open market by eliminating references to waivers that are no longer offered, thereby improving the clarity of the Exchange’s rules and enabling market participants to more easily navigate the Exchange’s Price List. The Exchange also believes that the proposed change would protect investors and the public interest because the deletion of underutilized and obsolete fees would make the Price List more accessible and transparent and facilitate market participants’ understanding of the fees charged for services currently offered by the Exchange.

Finally, the Exchange believes that it is subject to significant competitive forces, as described below in the Exchange’s statement regarding the burden on competition.

For the foregoing reasons, the Exchange believes that the proposal is consistent with the Act.

B. Self-Regulatory Organization’s Statement on Burden on Competition

In accordance with Section 6(b)(8) of the Act,7 the Exchange believes that the proposed rule change would not impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. Instead, as discussed above, the proposal relates solely to elimination of an underutilized rebate and obsolete waivers and, as such, would not have any impact on intra- or inter-market competition because the proposed change is solely designed to accurately reflect the services that the Exchange currently offers, thereby adding clarity to the Price List.

C. Self-Regulatory Organization’s Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change is effective upon filing pursuant to Section 19(b)(3)(A)8 of the Act and subparagraph (f)(2) of Rule 19b–49 thereunder, because it establishes a due, fee, or other charge imposed by the Exchange.

At any time within 60 days of the filing of such proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B)10 of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission’s internet comment form (http://www.sec.gov/rules/sro.shtml); or
- Send an email to rule-comments@sec.gov.

Please include File Number SR–NYSE–2021–41 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–NYSE–2021–41. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission’s internet website (http://www.sec.gov/rules/sro.shtml). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission’s Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–NYSE–2021–41 and should be submitted on or before September 3, 2021.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.11

J. Matthew DeLesDernier,
Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

Self-Regulatory Organizations; Financial Industry Regulatory Authority, Inc.; Notice of Filing of Amendment No. 1 and Order Instituting Proceedings To Determine Whether To Approve or Disapprove the Proposed Rule Change, as Modified by Amendment No. 1, Relating to Security-Based Swaps

August 9, 2021.

I. Introduction

---

rulemaking regarding SBS dealers (“SBSDs”) and major SBS participants (“MSBSPs”) (collectively, “SBS Entities”). The Proposed Rule Change was published for public comment in the Federal Register on May 12, 2021. On June 14, 2021, FINRA consented to an extension of the time period in which the Commission must approve the Proposed Rule Change, disapprove the Proposed Rule Change, or institute proceedings to determine whether to approve or disapprove the Proposed Rule Change to August 10, 2021. On August 9, 2021, FINRA responded to the comment letters received in response to the Notice and filed an amendment to modify the Proposed Rule Change (“Amendment No. 1”). The Commission is publishing this order pursuant to Section 19(b)(2)(B) of the Exchange Act to solicit comments on Amendment No. 1 from interested persons and to institute proceedings to determine whether to approve or disapprove the Proposed Rule Change, as modified by Amendment No. 1.

II. Description of the Proposed Rule Change, as Modified by Amendment No. 1

FINRA is proposing to amend FINRA Rules 0180, 4120, 4210, 4220, 4240 and 9610 to take into account members’ SBS activities once SBS Entities begin registering with the Commission on October 6, 2021. The proposed amendments to these rules generally fall into three categories. First, the Proposed Rule Change, as modified by Amendment No. 1, would adopt a new FINRA Rule 0180, to replace expiring current FINRA Rule 0180, that would generally apply FINRA rules to members’ activities and positions with respect to SBS, while providing limited exceptions for those activities and positions in circumstances where FINRA believes such exceptions are appropriate. Second, the Proposed Rule Change, as modified by Amendment No. 1, would amend FINRA’s financial responsibility and operational rules for SBSDs and broker-dealers to conform to the SEC’s amendments to its capital, margin and segregation requirements, and to otherwise take into account members’ SBS activities. Third, the Proposed Rule Change, as modified by Amendment No. 1, would adopt a new margin rule specifically applicable to SBS, which would replace the expiring interim pilot program establishing margin requirements for credit default swaps.

Amendment No. 1 would make the following changes to the Proposed Rule Change: (1) Extend the effective date of the proposed amendments to FINRA Rules 0180, 4120 and 9610 from October 6, 2021 to February 6, 2022; (2) extend the effective date of the proposed amendments to FINRA Rules 4210, 4220 and 4240 from October 6, 2021 to April 6, 2022; and (3) conform the proposed definition of Legacy Swap in proposed FINRA Rule 4240(d)(12) to reflect the new effective date of April 6, 2022.

III. Proceedings To Determine Whether To Approve or Disapprove File No. SR–FINRA–2021–008 and Grounds for Disapproval Under Consideration

The Commission is instituting proceedings pursuant to Section 19(b)(2)(B) of the Exchange Act to determine whether the Proposed Rule Change, as modified by Amendment No. 1, should be approved or disapproved. Institution of proceedings is appropriate at this time in view of the legal and policy issues raised by the Proposed Rule Change, as modified by Amendment No. 1. Institution of proceedings does not indicate that the Commission has reached any conclusions with respect to the Proposed Rule Change, as modified by Amendment No. 1. Pursuant to Section 19(b)(2)(B) of the Exchange Act, the Commission is providing notice of the grounds for disapproval under consideration. The Commission is instituting proceedings to allow for additional analysis and input concerning whether the Proposed Rule Change, as modified by Amendment No. 1, is consistent with the Exchange Act and the rules thereunder.

IV. Request for Written Comments

The Commission requests that interested persons provide written submissions of their views, data, and arguments with respect to the issues identified above, as well as any other concerns they may have with the Proposed Rule Change, as modified by Amendment No. 1. In particular, the Commission invites the written views of interested persons concerning whether the Proposed Rule Change, as modified by Amendment No. 1, is consistent with the Exchange Act and the rules thereunder.

Although there do not appear to be any issues relevant to approval or disapproval that would be facilitated by an oral presentation of views, data, and arguments, the Commission will consider, pursuant to Rule 19b–4, any request for an opportunity to make an oral presentation.

Interested persons are invited to submit written data, views, and arguments regarding whether the Proposed Rule Change, as modified by Amendment No. 1, should be approved or disapproved by August 30, 2021. Any person who wishes to file a rebuttal to any other person’s submission must file that rebuttal by September 3, 2021.

Comments may be submitted by any of the following methods:

Electronic Comments

• Use the Commission’s internet comment form (http://www.sec.gov/rules/sro.shtml); or
• Send an email to rule-comments@sec.gov. Please include File No. SR–FINRA–2021–008 on the subject line.

Paper Comments

• Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090. All submissions should refer to File No. SR–FINRA–2021–008. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission’s internet website (http://www.sec.gov/rules/sro.shtml). Copies of the submission, all subsequent amendments, all written statements with respect to the Proposed Rule Change, as modified by Amendment No. 1, that are filed with the Commission, and all written communications relating

---

to the Proposed Rule Change, as modified by Amendment No. 1, between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission’s Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal office of FINRA.

All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly.

All submissions should refer to File No. SR–FINRA–2021–008 and should be submitted on or before August 30, 2021. If comments are received, any rebuttal comments should be submitted on or before September 3, 2021.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.12

J. Matthew DeLesDernier,
Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

Self-Regulatory Organizations; NYSE Arca, Inc.; Order Instituting Proceedings To Determine Whether To Approve or Disapprove a Proposed Rule Change To List and Trade Shares of the Valkyrie Bitcoin Fund Under NYSE Arca Rule 8.201–E

August 9, 2021.

On April 23, 2021, NYSE Arca, Inc. (“NYSE Arca” or “Exchange”) filed with the Securities and Exchange Commission (“Commission”), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (“Act”) 1 and Rule 19b–4 thereunder,2 a proposed rule change to list and trade shares (“‘Shares’”) of the Valkyrie Bitcoin Fund (“‘Trust’”) under NYSE Arca Rule 8.201–E (Commodity-Based Trust Shares). The proposed rule change was published for comment in the Federal Register on May 12, 2021.3 On June 22, 2021, pursuant to Section 19(b)(2) of the Act,4 the Commission designated a longer period within which to approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether to disapprove the proposed rule change.5 This order institutes proceedings under Section 19(b)(2)(B) of the Act 6 to determine whether to approve or disapprove the proposed rule change.

I. Summary of the Proposal

As described in more detail in the Notice,7 the Exchange proposes to list and trade the Shares of the Trust under NYSE Arca Rule 8.201–E, which governs the listing and trading of Commodity-Based Trust Shares on the Exchange.

The investment objective of the Trust will be for the Shares to reflect the performance of the value of a bitcoin as represented by the CF Bitcoin US Settlement Price (“Index”), less the Trust’s liabilities and expenses.8 The Fund will use the Index to calculate the Trust’s net asset value (“NAV”).9 The Index serves as a once-a-day benchmark rate of the U.S. dollar price of bitcoin (USD/BTC), calculated as of 4:00 p.m., E.T. The Index aggregates the trade flow of several bitcoin exchanges, during an observation window between 3:00 p.m. and 4:00 p.m., E.T., into the U.S. dollar price of one bitcoin at 4:00 p.m., E.T. The current constituent bitcoin exchanges of the Index are Bitstamp, Coinbase, Gemini, itBit, and Kraken (“Constituent Bitcoin Exchanges”). In calculating the Index, the methodology creates a joint list of certain trade prices and sizes from the Constituent Bitcoin Exchanges between 3:00 p.m. and 4:00 p.m., E.T. The methodology then divides this list into 12 equally-sized time intervals of 5 minutes and it calculates the volume-weighted median trade price for each of those time intervals. The Index is the arithmetic mean of these 12 volume-weighted median trade prices.10

The Shares of the Trust represent units of fractional undivided beneficial interest in, and ownership of, the Trust. The Trust will only hold bitcoin. The Custodian will establish accounts that hold the bitcoins deposited with the Custodian on behalf of the Trust.11

The Administrator will calculate the NAV of the Trust once each Exchange trading day. The Sponsor will publish the NAV and NAV per Share as soon as practicable after their determination and availability, and the NAV will be released after the end of the Core Trading Session (4:00 p.m., E.T.). The NAV of the Trust is not officially struck until later in the day (often by 5:30 p.m., E.T. and usually by 8:00 p.m., E.T.). The Trust’s NAV per Share is calculated by taking the current market value of its total assets, less any liabilities of the Trust, and dividing that total by the total number of outstanding Shares. The bitcoin held by the Trust will be valued based on the price set by the Index.12

The Trust will provide website disclosure of its bitcoin holdings daily.13 The Trust will also disseminate an intraday indicative value (“‘IV’”) per Share updated every 15 seconds by one of more major market data vendors during the Exchange’s Core Trading Session (normally 9:30 a.m. to 4:00 p.m., E.T.). The IV will be calculated by a third-party financial data provider using the prior day’s closing NAV per Share of the Trust as a base and updating that value throughout the trading day to reflect changes in the most recently reported price level of the CME CF Bitcoin Real-Time Index (“BRIT”), as reported by CME Group, Inc., Bloomberg, L.P., or another reporting service.14

The Trust will issue and redeem Shares to authorized participants on an ongoing basis in one or more “Baskets” of 50,000 Shares. The creation and redemption of a Basket requires the delivery to the Trust, or the distribution by the Trust, of the number of whole and fractional bitcoins represented by

5 See Notice, supra note 3.
6 Valkyrie Digital Assets LLC is the sponsor of the Trust (“‘Sponsor’”) and Delaware Trust Company is the trustee. Coinbase Custody Trust Company, LLC (“Custodian”) will act as custodian for the Trust’s bitcoins. U.S. Bankcorp Fund Services, LLC (“Administrator”) will act as the transfer agent and administrator of the Trust. See Notice, supra note 3, 86 FR at 26073.
7 The Index is not affiliated with the Sponsor and is administered by CF Benchmarks Ltd. (“Benchmark Administrator”). See Notice, supra note 3, 86 FR at 26076.
11 See Notice, supra note 3.
12 See id. at 26073.
14 The BRIT is calculated in real time based on the universe of the currently unmatched limit orders to buy or sell in the BTC/USD pair of all Constituent Bitcoin Exchanges. See id. at 26076.
each Basket being created or redeemed.\textsuperscript{15} Creation orders and redemption orders may be placed either “in-kind” or “in-cash.” Although the Trust will create Baskets only upon the receipt of bitcoins, and will redeem Baskets only by distributing bitcoins, an authorized participant may deposit cash with the Administrator, which will facilitate the purchase or sale of bitcoins through a liquidity provider on behalf of an authorized participant (“Conversion Procedures”).\textsuperscript{16}

II. Proceedings To Determine Whether To Approve or Disapprove SR–NYSEArca–2021–31 and Grounds for Disapproval Under Consideration

The Commission is instituting proceedings pursuant to Section 19(b)(2)(B) of the Act \textsuperscript{17} to determine whether the proposed rule change should be approved or disapproved. Institution of proceedings is appropriate at this time in view of the legal and policy issues raised by the proposed rule change discussed below. Institution of proceedings does not indicate that the Commission has reached any conclusions with respect to any of the issues involved. Rather, as described below, the Commission seeks and encourages interested persons to provide comments on the proposed rule change.

Pursuant to Section 19(b)(2)(B) of the Act,\textsuperscript{18} the Commission is providing notice of the grounds for disapproval under consideration. The Commission is instituting proceedings to allow for additional analysis of the proposed rule change’s consistency with Section 6(b)(5) of the Act, which requires, among other things, that the rules of a national securities exchange be “designed to prevent fraudulent and manipulative acts and practices” and “to protect investors and the public interest.”\textsuperscript{19}

The Commission asks that commenters address the sufficiency of the Exchange’s statements in support of the proposal, which are set forth in the Notice,\textsuperscript{20} in addition to any other comments they may wish to submit about the proposed rule change. In particular, the Commission seeks comment on the following questions:

1. What are commenters’ views on whether the proposed Trust and Shares would be susceptible to manipulation? What are commenters’ views generally on whether the Exchange’s proposal is designed to prevent fraudulent and manipulative acts and practices? What are commenters’ views generally with respect to the liquidity and transparency of the bitcoin markets, the bitcoin markets’ susceptibility to manipulation, and thus the suitability of bitcoin as an underlying asset for an exchange-traded product?
2. What are commenters’ views of the Exchange’s assertion that the bitcoin ecosystem has matured considerably since the last time the Commission reviewed a proposal for a bitcoin exchange-traded product?\textsuperscript{21} Are the changes that the Exchange identifies sufficient to support the determination that the proposed listing and trading of the Shares is consistent with the Act?
3. The Exchange states that the design choices within the methodology and framework of the Index are sufficiently resistant to market manipulation and that, to date, there has been no evidence that the Index has been subject to manipulation.\textsuperscript{22} What are commenters’ views on these assertions regarding the Index, including the relevance of such assertions in determining whether the proposed listing and trading of the Shares is consistent with the Act?
4. The Exchange states that the Chicago Mercantile Exchange (“CME”) participates in the oversight committee of the Index.\textsuperscript{23} The Exchange further states that the Constituent Bitcoin Exchanges “(1) must enter into a data sharing agreement with the CME, (2) must cooperate with inquiries and investigations of regulators and the Benchmark Administrator and (3) must submit each of its clients to its Know-Your-Customer (“KYC”) procedures; therefore, the CME would be able, in the case of any suspicious trades, to discover all material trade information including the identities of the customers placing the trades.”\textsuperscript{24} What are commenters’ views on these assertions regarding the Index, including the relevance of such assertions in determining whether the proposed listing and trading of the Shares is consistent with the Act?
5. The Exchange states that the “proposed rule change is designed to prevent fraudulent and manipulative acts and practices because, although the global Bitcoin market is not inherently resistant to fraud and manipulation, the Index used by the Trust to determine the value of its bitcoin assets and its NAV, serves as a benchmark mechanism sufficient to mitigate the impact of instances of fraud and manipulation on a reference price for Bitcoin.”\textsuperscript{25} The Exchange further states that “use of the Index would mitigate the effects of potential manipulation of the bitcoin market.”\textsuperscript{26} What are commenters’ views regarding such assertions?

III. Procedure: Request for Written Comments

The Commission requests that interested persons provide written submissions of their views, data, and arguments with respect to the issues identified above, as well as any other concerns they may have with the proposal. In particular, the Commission invites the written views of interested persons concerning whether the proposal is consistent with Section 6(b)(5) or any other provision of the Act, and the rules and regulations thereunder. Although there do not appear to be any issues relevant to approval or disapproval that would be facilitated by an oral presentation of views, data, and arguments, the Commission will consider, pursuant to Rule 19b–4, any request for an opportunity to make an oral presentation.\textsuperscript{27}

Interested persons are invited to submit written data, views, and arguments regarding whether the proposal should be approved or disapproved by September 13, 2021. Any person who wishes to file a rebuttal to any other person’s submission must file that rebuttal by September 17, 2021.

Comments may be submitted by any of the following methods:

Electronic Comments
• Use the Commission’s internet comment form (http://www.sec.gov/rules/sro.shtml); or
• Send an email to rule-comments@sec.gov. Please include File Number SR–NYSEArca–2021–31 on the subject line.

\textsuperscript{15} See id. at 26076–77.
\textsuperscript{16} The Conversion Procedures will be facilitated by a single liquidity provider, which will be selected by the Sponsor on an order-by-order basis. In the event that an order cannot be filled in its entirety by a single liquidity provider, additional liquidity provider(s) will be selected by the Sponsor to fill the remaining amount. See id. at 26076–78.

\textsuperscript{27} Section 19(b)(2) of the Act, as amended by the Securities Act Amendments of 1975, Public Law 94–29 (June 4, 1975), grants the Commission flexibility to determine what type of proceeding—either oral or notice and opportunity for written comments—is appropriate for consideration of a particular proposal by a self-regulatory organization. See Securities Act Amendments of 1975, Senate Comm. on Banking, Housing & Urban Affairs, S. Rep. No. 75, 94th Cong., 1st Sess. 30 (1975).
SECURITIES AND EXCHANGE COMMISSION

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Modify the NYSE Arca Options Fee Schedule

August 9, 2021.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the “Act”) and Rule 19b–4 thereunder, notice is hereby given that, on August 4, 2021, NYSE Arca, Inc. (“NYSE Arca” or the “Exchange”) filed with the Securities and Exchange Commission (the “Commission”) the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization’s Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to modify the NYSE Arca Options Fee Schedule (“Fee Schedule”). The Exchange proposes to implement the fee change effective August 4, 2021. The proposed rule change is available on the Exchange’s website at www.nyse.com, at the principal office of the Exchange, and at the Commission’s Public Reference Room.

II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below.

A. Self-Regulatory Organization’s Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of this filing is to amend the Fee Schedule to remove language associated with a fee waiver and a credit that expired at the close of business on June 30, 2021.

On March 18, 2020, the Exchange announced that it would temporarily close the Trading Floor, effective March 23, 2020, as a precautionary measure to prevent the potential spread of COVID–19. Following the temporary closure of the Trading Floor, the Exchange waived certain Floor-based fixed fees for April and May 2020. Although the Trading Floor partially reopened on May 4, 2020 and Floor-based open outcry activity was supported, certain participants were unable to resume pre-Floor closure levels of operations. As a result, the Exchange extended the fee waiver through June 2021, but only for Floor Broker firms that were unable to operate at more than 50% of their March 2020 on-Floor staffing levels and for Market Maker firms that had vacant or “unmanned” Podia for the entire month due to COVID–19 related considerations (the “Qualifying Firms”).

Because the Trading Floor continued to operate with reduced capacity, the Exchange extended the fee waiver for Qualifying Firms through “the earlier of the first full month of a full reopening of the Trading Floor facilities to Floor personnel or June 2021”. The Trading Floor re-opened without social distancing requirements for vaccinated personnel on May 12, 2021.

Additionally, in May 2021, the Exchange implemented an incentive to encourage Floor Brokers to increase their Professional Customer billable volume. Specifically, the Exchange offered Floor Brokers a credit of $0.13 per contract for each billable

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.28

J. Matthew DeLesDernier,
Assistant Secretary.

[FR Doc. 2021–17305 Filed 8–12–21; 8:45 am]
BILLING CODE 8011–01–P
Professional Customer contract that exceeded a baseline average daily volume for the month. This fee incentive was adopted with a stated expiration at the close of business on June 30, 2021.

As the expiration date for both the fee waiver and the fee incentive has passed, the Exchange is submitting this proposed rule change to remove language related to the fee waiver and the fee incentive from the Fee Schedule.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with Section 6(b) of the Act, in general, and furthers the objectives of Sections 6(b)(4) and (5) of the Act, because it provides for the equitable allocation of reasonable dues, fees, and other charges among its members, issuers and other persons using its facilities and does not unfairly discriminate between customers, issuers, brokers or dealers.

The Exchange believes that the proposed modifications to the Fee Schedule to remove an expired fee waiver and an expired fee incentive that the Exchange no longer offers are reasonable, equitable, and not unfairly discriminatory because the changes would provide clarity to the Fee Schedule, and do not affect any current activity by any OTP Holder or OTP Firm.

B. Self-Regulatory Organization’s Statement on Burden on Competition

In accordance with Section 6(b)(8) of the Act, the Exchange does not believe that the proposed rule change would impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. Instead, the proposed change is meant to add clarity and transparency to the Fee Schedule to the benefit of all market participants that trade on the Exchange.

C. Self-Regulatory Organization’s Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change is effective upon filing pursuant to Section 19(b)(3)(A)9 of the Act and subparagraph (f)(2) of Rule 19b–410 thereunder, because it establishes a due, fee, or other charge imposed by the Exchange.

At any time within 60 days of the filing of such proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B)11 of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

• Use the Commission’s internet comment form (http://www.sec.gov/rules/sro.shtml); or
• Send an email to rule-comments@sec.gov. Please include File Number SR–NYSEArca–2021–69 on the subject line.

Paper Comments

• Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090. All submissions should refer to File Number SR–NYSEArca–2021–69 on the subject line.

DEPARTMENT OF STATE

[Public Notice 11492]

60-Day Notice of Proposed Information Collection: DS–160, Online Application for Nonimmigrant Visa and DS–156, Nonimmigrant Visa Application

ACTION: Notice of request for public comment.

SUMMARY: The Department of State is seeking Office of Management and Budget (OMB) approval for the information collections described below. In accordance with the Paperwork Reduction Act of 1995, we are requesting comments on this collection from all interested individuals and organizations. The purpose of this notice is to allow 60 days for public comment preceding submission of the collection to OMB.

DATES: The Department will accept comments from the public up to October 12, 2021.

ADDRESSES: You may submit comments by any of the following methods:

• Web: Persons with access to the internet may comment on this notice by going to www.Regulations.gov. You can search for the document by entering “Docket Number: DOS–2021–0023” in the Search field. Then click the “Comment Now” button and complete the comment form.

FOR FURTHER INFORMATION CONTACT: D. Aikens at PRA_BurdenComments@state.gov or over telephone at (202)–485–7580.

Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–NYSEArca–2021–69, and should be submitted on or before September 3, 2021.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.12

J. Matthew DeLesDernier,

Assistant Secretary.

BILLING CODE 8011–01–P
SUPPLEMENTARY INFORMATION:

- **Title of Information Collection:** Electronic Application for Immigrant Visa and Alien Registration
- **OMB Control Number:** 1405–0182
- **Type of Request:** Revision of a Currently Approved Collection
- **Originating Office:** CA/NO
- **Form Number:** DS–160, DS–156
- **Respondents:** Immigrant Visa Applicants
- ** Estimated Number of Responses:** 5,190,367
- **Estimated Number of Respondents:** 5,190,367
- **Average Time per Response:** 90 minutes
- **Total Estimated Burden Time:** 7,785,550.5 hours
- **Frequency:** Once per respondent’s application
- **Obligation to respond:** Required to Obtain or Retain a Benefit

We are soliciting public comments to permit the Department to:

- Evaluate whether the proposed information collection is necessary for the proper functions of the Department.
- Evaluate the accuracy of our estimate of the time and cost burden of this proposed collection, including the validity of the methodology and assumptions used.
- Enhance the quality, utility, and clarity of the information to be collected.
- Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Please note that comments submitted in response to this Notice are public record. Before including any detailed personal information, you should be aware that your comments as submitted, including your personal information, will be available for public review.

Abstract of Proposed Collection

The DS–160 and DS–156 collect biographical information from individuals seeking a nonimmigrant visa. The consular officer uses the information collected to elicit information necessary to determine an applicant’s eligibility for a visa. Most nonimmigrant visa applicants, as well as certain authorized parole applicants use the DS–160, however posts may authorize an applicant to use the paper-based DS–156 in limited circumstances as outlined below.

Methodology

The applicant submits the DS–160 electronically over an encrypted connection to the Department via the internet. The applicant will be instructed to print a confirmation page containing a bar coded record locator, which the consular office will use to locate the application during processing.

The DS–156 is a paper-based version of the DS–160. In order to obtain a copy of the DS–156, an applicant must contact the Embassy or consulate at which he or she is applying and request a copy. A consular officer may allow an applicant to submit the DS–156 in the following limited circumstances when applicants cannot access the DS–160:

- An applicant has an urgent medical or humanitarian travel need and the consular officer has received explicit permission from the Visa Office to accept form DS–156;
- The applicant is a student exchange visitor who must leave immediately in order to arrive on time for his/her course and the consular officer has explicit permission from the Visa Office to accept form DS–156;
- The applicant is a diplomatic or official traveler with urgent government business and form DS–160 has been unavailable for more than four hours; or
- Form DS–160 has been unavailable for more than three days and the officer receives explicit permission from the Visa Office.

The DS–160 is also used in limited circumstances to process certain parole applicants. When a humanitarian or significant public benefit parole request is authorized by USCIS, the applicants are required to complete the DS–160 and appear for an appointment with the Department of State consular section to verify their identity and collect biometrics for additional security vetting. If no new derogatory information or new identity information is identified during vetting that would cause USCIS to rescind parole approval, the U. S. Consulate issues a document referred to as a boarding foil that allows the beneficiary to travel to the United States within 30 days of it being issued. A final determination on whether to parole an applicant into the United States is then made by CBP at the port of entry.

Kevin E. Bryant,
Deputy Director, Office of Directives Management, Department of State.

BILLING CODE 4710–06–P

SURFACE TRANSPORTATION BOARD
[Docket No. FD 36527]

South Kansas and Oklahoma Railroad, L.L.C.—Lease and Operation Exemption—Tulsa’s Port of Catoosa Facilities Authority

South Kansas and Oklahoma Railroad, L.L.C. (SKOR), a Class III rail carrier, has filed a verified notice of exemption under 49 CFR 1150.41 to lease from Tulsa’s Port of Catoosa Facilities Authority (the Port) and continue to operate a line of railroad extending approximately 7.1 miles between milepost 0.00, in Owasso, Okla., and milepost 7.07, in Catoosa, Okla. (the Line).

The verified notice states that SKOR previously operated the Line pursuant to assignment of a leasehold from the former Atchison, Topeka & Santa Fe Railway Company. See S. Kan. & Okla. R.R.—Lease Exemption—The Atchison, Topeka & Santa Fe Ry., FD 32082 (ICC served Aug. 11, 1992). 1 SKOR and the Port have entered into a new Rail Line Lease Agreement (the Lease Agreement) to govern the subject transaction. SKOR intends to continue common carrier operations on the Line under the terms of the Lease Agreement.

According to SKOR, the Lease Agreement does not include an interchange commitment. Further, SKOR certifies that its projected annual revenues as a result of this transaction will not result in SKOR’s becoming a Class II or Class I rail carrier, but that its current annual revenues exceed $5 million. Pursuant to 49 C.F.R 1150.42(e), if a carrier’s projected annual revenues will exceed $5 million, it must, at least 60 days before this exemption is to become effective, post a notice of its intent to undertake the proposed transaction at the workplace of the employees on the affected lines, serve a copy of the notice on the national offices of the labor unions with employees on the affected lines, and certify to the Board that it has done so. However, SKOR has filed a petition for waiver of the 60-day advance labor notice requirements. SKOR’s waiver request will be addressed in a separate decision. The Board will establish the effective date of the exemption in its separate decision on the waiver request.

If the verified notice contains false or misleading information, the exemption is void ab initio. Petitions to revoke the exemption under 49 U.S.C. 10502(d) may be filed at any time. The filing of

1 SKOR states that the 7.1 miles identified in this notice is a more accurate measurement of the Line than the 7.3 miles given in Docket No. FD 32082.
a petition to revoke will not automatically stay the effectiveness of the exemption. Petitions for stay must be filed no later than August 20, 2021.

All pleadings, referring to Docket No. FD 36527, should be filed with the Surface Transportation Board via e-filing on the Board’s website. In addition, one copy of each pleading must be served on SKOR’s representative, Bradon J. Smith, Fletcher & Sippell LLC, 29 North Wacker Drive, Suite 800, Chicago, IL 60606.

According to SKOR, this action is categorically excluded from environmental review under 49 CFR 1105.6(c) and from historic reporting requirements under 49 CFR 1105.8(b).

Board decisions and notices are available at www.stb.gov.

By the Board, Valerie O. Quinn, Acting Director, Office of Proceedings.

Eden Besera,
Clearance Clerk.

Summary: In accordance with the requirements of the Paperwork Reduction Act of 1995 (PRA), the OCC, the Board, and the FDIC (the agencies) may not conduct or sponsor, and the respondent is not required to respond to, an information collection unless it displays a currently valid Office of Management and Budget (OMB) control number. The Federal Financial Institutions Examination Council (FFIEC), of which the agencies are members, has approved the agencies’ publication for public comment of a proposal to extend for three years, without revision, the Foreign Branch Report of Condition (FFIEC 030) and the Abbreviated Foreign Branch Report of Condition (FFIEC 030S).

Dates: Comments must be submitted on or before October 12, 2021.

Addresses: Interested parties are invited to submit written comments to any or all of the agencies. All comments, which should refer to the “FFIEC 030 or FFIEC 030S,” will be shared among the agencies.

OCC: You may submit comments, which should refer to “FFIEC 030 or FFIEC 030S,” by any of the following methods:

- Email: prainfo@occ.treas.gov.

Instructions: You must include “OCC” as the agency name and “1557–0099” in your comment. In general, the OCC will publish comments on www.reginfo.gov without change, including any business or personal information provided, such as name and address information, email addresses, or phone numbers. Comments received, including attachments and other supporting materials, are part of the public record and subject to public disclosure. Do not include any information in your comment or supporting materials that you consider confidential or inappropriate for public disclosure.

You may review comments and other related materials that pertain to this information collection beginning on the date of publication of the second notice for this collection by the following method:

- Viewing Comments Electronically: Go to www.reginfo.gov. Click on the “Information Collection Review” link on the “Information Collection Review” tab. Underneath the “Currently under Review” section heading, from the drop-down menu select “Department of Treasury” and then click “submit.” This information collection can be located by searching by OMB control number “1557–0099.” Upon finding the appropriate information collection, click on the related “ICR Reference Number.” On the next screen, select “View Supporting Statement and Other Documents” and then click on the link to any comment listed at the bottom of the screen.
- For assistance in navigating www.reginfo.gov, please contact the Regulatory Information Service Center at (202) 482–7340.

Board: You may submit comments, which should refer to “FFIEC 030 or FFIEC 030S,” by any of the following methods:

- Email: regs.comments@federalreserve.gov. Include “FFIEC 030 or FFIEC 030S” in the subject line of the message.
- Fax: (202) 395–6974.

All public comments are available on the Board’s website at https://www.federalreserve.gov/apps/foia/proposedregs.aspx as submitted, unless modified for technical reasons. Accordingly, your comments will not be edited to remove any identifying or contact information.

FDIC: You may submit comments, which should refer to “FFIEC 030 or FFIEC 030S,” by any of the following methods:

- Agency Website: https://www.fdic.gov/regulations/laws/federal/. Follow the instructions for submitting comments on the FDIC’s website.
- Email: comments@FDIC.gov. Include “FFIEC 030 or FFIEC 030S” in the subject line of the message.
- Hand Delivery: Comments may be hand delivered to the guard station at the rear of the 550 17th Street Building (located on F Street) on business days between 7:00 a.m. and 5:00 p.m.
- Public Inspection: All comments received will be posted without change to https://www.fdic.gov/regulations/laws/federal/ including any personal information provided. Paper copies of public comments may be requested from the FDIC Public Information Center by telephone at (877) 275–3342 or (703) 562–2200.

Additionally, commenters may send a copy of their comments to the OMB desk officer for the agencies by mail to the Office of Information and Regulatory Affairs, U.S. Office of Management and Budget, New Executive Office Building, Room 10235, 725 17th Street NW, Washington, DC 20503; by fax to (202)
FOR FURTHER INFORMATION CONTACT: For further information about the proposed revisions to the information collections discussed in this notice, please contact any of the agency staff whose names appear below. In addition, copies of the report forms for the FFIEC 030 and FFIEC 030S can be obtained at the FFIEC’s website (https://www.ffiec.gov/ffiec_report_forms.htm).

SUPPLEMENTARY INFORMATION: The agencies propose to extend for three years, without revision, the FFIEC 030 and the FFIEC 030S.

Form Number: FFIEC 030 and FFIEC 030S.

Frequency of Response: Annually, and quarterly for significant branches.

Affected Public: Business of other for profit.

OCC: OMB Control Number: 1557–099. Estimated Number of Respondents: 56 quarterly respondents (FFIEC 030); 46 annual respondents (FFIEC 030); 15 annual respondents (FFIEC 030S). Estimated Average Burden per Response: 3.4 burden hours (FFIEC 030); 0.5 burden hours (FFIEC 030S). Estimated Total Annual Burden: 926 burden hours.

Board: OMB Control Number: 7100–0071. Estimated Number of Respondents: 20 quarterly respondents (FFIEC 030); 12 annual respondents (FFIEC 030); 7 annual respondents (FFIEC 030S). Estimated Average Burden per Response: 3.4 burden hours (FFIEC 030); 0.5 burden hours (FFIEC 030S). Estimated Total Annual Burden: 316 burden hours.

FDIC: OMB Control Number: 3064–0011 (FDIC).

Estimated Number of Respondents: 1 quarterly respondent (FFIEC 030); 3 annual respondents (FFIEC 030); 3 annual respondents (FFIEC 030S).

Response: 3.4 burden hours (FFIEC 030); 0.5 burden hours (FFIEC 030S).

Estimated Total Annual Burden: 25 burden hours.

I. Legal Basis and Need for Collection

This information collection is mandatory under the following authorities: 12 U.S.C. 602 (Board); 12 U.S.C. 161 and 602 (OCC); and 12 U.S.C. 1828 (FDIC). This information collection is given confidential treatment under 5 U.S.C. 552(b)(4) and (8).

The FFIEC 030 collects asset and liability information for foreign branches of insured U.S. banks and insured U.S. savings associations (U.S. depository institutions) and is required for regulatory and supervisory purposes.

The information is used to analyze the foreign operations of U.S. institutions. All foreign branches of U.S. institutions regardless of charter type file this report as provided in the instructions to the FFIEC 030 and FFIEC 030S.

A U.S. depository institution generally must file a separate report for each foreign branch, but in some cases may consolidate filings for multiple foreign branches in the same country, as described below.

A branch with either total assets of at least $2 billion or commitments to purchase foreign currencies and U.S. dollar exchange of at least $5 billion as of the end of a calendar quarter is considered a “significant branch” and an FFIEC 030 report is required to be filed quarterly. A U.S. depository institution with a foreign branch having total assets in excess of $250 million that does not meet either of the criteria to file quarterly must file the entire FFIEC 030 report for this foreign branch on an annual basis as of December 31. A U.S. depository institution with a foreign branch having total assets of $50 million, but less than or equal to $250 million that does not meet the criteria to file the FFIEC 030 report must file the FFIEC 030S report for this foreign branch on an annual basis as of December 31. A U.S. depository institution with a foreign branch having total assets of less than $50 million is exempt from filing the FFIEC 030 and 030S reports.

II. Request for Comment

Public comment is requested on all aspects of this notice. Comment is specifically invited on:

a. Whether the information collection is necessary for the proper performance of the agencies’ functions, including whether the information has practical utility;

b. The accuracy of the agencies’ estimate of the burden of the information collection, including the validity of the methodology and assumptions used;

c. Ways to enhance the quality, utility, and clarity of the information to be collected;

d. Ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology; and

e. Estimates of capital or start up costs and costs of operation, maintenance, and purchase of services to provide information.

Comments submitted to the Board in response to this notice will be shared with the other agencies. All comments will become a matter of public record.

Theodore J. Dowd, Deputy Chief Counsel, Office of the Comptroller of the Currency.

Board of Governors of the Federal Reserve System.

Ann Misback, Secretary of the Board.

Federal Deposit Insurance Corporation.

Dated at Washington, DC, on August 6, 2021.

James P. Sheesley, Assistant Executive Secretary.

[FR Doc. 2021–17311 Filed 8–12–21; 8:45 am]

BILLING CODE 4810–33–P; 6210–01–P; 6714–01–P

DEPARTMENT OF THE TREASURY

Agency Information Collection Activities; Proposed Collection; Comment Request; Generic Clearance for Meaningful Access Information Collections

AGENCY: Bureau of Engraving and Printing, U.S. Department of the Treasury.

ACTION: Notice.

SUMMARY: The Bureau of Engraving and Printing (BEP), as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other federal agencies to comment on the proposed information collections listed below, in accordance with the Paperwork Reduction Act of 1995.

DATES: Written comments must be received on or before October 12, 2021.

ADDRESSES: Send comments regarding the burden estimate, or any other aspect of the information collection, including suggestions for reducing the burden, to Tracy Garret, Bureau of Engraving and Printing, 14th and C Streets SW, Washington, DC 20228.
FOR FURTHER INFORMATION CONTACT:
Copies of the submissions may be obtained from Tracy Garrett by emailing Tracy.Garrett@bep.gov, calling (202) 874–3256, or viewing the entire information collection request at www.reginfo.gov.

SUPPLEMENTARY INFORMATION:

Title: Generic Clearance for Meaningful Access Information Collections.

OMB Control Number: 1520–0009.

Type of Review: Extension of a currently approved collection.

Description: A court order was issued in American Council of the Blind v. Paulson, 591 F. Supp. 2d 1 (D.D.C. 2008) (“ACB v. Paulson”) requiring the Department of the Treasury and BEP to “provide meaningful access to United States currency for blind and other visually impaired persons, which steps shall be completed, in connection with each denomination of currency, not later than the date when a redesign of that denomination is next approved by the Secretary of the Treasury. . . .”

In compliance with the court’s order, BEP intends to meet with blind and visually impaired persons and request their feedback about tactile features that BEP is considering for possible incorporation into the next U.S. paper currency redesign. BEP employees will attend national conventions and conferences for disabled persons, as well as focus groups and other meetings. At those gatherings, BEP employees will invite blind and visually impaired persons to provide feedback about certain tactile features being considered for inclusion in future United States currency paper designs. In the past BEP contracted with specialists in the field of tactile acuity to develop a methodology for collecting the feedback. This same or substantially similar methodology will be used to continue this information collection.

Over the next three years, the BEP anticipates undertaking a variety of new information collection activities related to BEP’s continued efforts to provide meaningful access to U.S. paper currency for blind and visually impaired persons. Following standard OMB requirements, for each information collection that BEP proposes to undertake under this generic clearance, the OMB will be notified at least two weeks in advance and provided with a copy of the information collection instrument along with supportive materials. The BEP will only undertake a new collection if the OMB does not object to the BEP’s proposal.

Form: None.

Affected Public: Individuals and households, Businesses and other for-profits, Not-for-profit Institutions.

Estimated Number of Respondents: 650.

Frequency of Response: On Occasion.

Estimated Total Number of Annual Responses: 650.

Estimated Time per Response: 60 minutes.

Estimated Total Annual Burden Hours: 650 hours.

Request for Comments: Comments submitted in response to this notice will be summarized and included in the request for Office of Management and Budget approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency’s estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services required to provide information.

Authority: 44 U.S.C. 3501 et seq.

Katherine A. Allen, BEP PRA Clearance Officer.

Health Services Research and Development Service Scientific Merit Review Board, Notice of Meeting

The Department of Veterans Affairs (VA) gives notice under the Federal Advisory Committee Act, 5 U.S.C. App.2, that a meeting of the Health Services Research and Development Service Scientific Merit Review Board will be held September 2, 2021, via WebEx. The meeting will be held between noon and 1:00 p.m. EST. The meeting will be partially closed to the public from 12:15–1:00 p.m. EST for the discussion, examination and reference to the research applications and scientific review. Discussions will involve reference to staff and consultant critiques of research proposals.

Written comments from the public must be sent to Liza Catucci, Designated Federal Officer, Health Services Research and Development Service, Department of Veterans Affairs (14RDH), 810 Vermont Avenue NW, Washington, DC 20420, or to Liza.Catucci@va.gov prior to the meeting. Those who plan to attend the open portion of the meeting must contact Ms. Catucci at least five days before the meeting. For further information, please call Ms. Catucci at 202–443–5797.

Agency Information Collection Activity Under OMB Review: Receipt of Supplies (Chapter 31—Veteran Readiness and Employment)

AGENCY: Veterans Benefits Administration, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (PRA) of 1995, this notice announces that the Veterans Benefits Administration (VBA), Department of Veterans Affairs (VA), will submit the collection of information abstracted below to the Office of Management and Budget (OMB) for review and comment. The PRA submission describes the nature of the information collection and its expected cost and burden and it includes the actual data collection instrument.

DATES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAListMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function. Refer to “OMB Control No. 2900–XXXX.”

FOR FURTHER INFORMATION CONTACT: Maribel Aponte, Office of Enterprise and Integration, Data Governance Analytics (008), 1717 H Street NW, Washington, DC 20006, (202) 266–4688 or email maribel.aponte@va.gov. Please refer to “OMB Control No. 2900–XXXX” in any correspondence.

SUPPLEMENTARY INFORMATION:

Title: Receipt of Supplies (Chapter 31—Veteran Readiness and Employment), VA Form 28–1905r.

OMB Control Number: 2900–XXXX.

Type of Review: Request for approval of a new collection.

Abstract: A claimant will use VA Form 28–1905r, Receipt of Supplies (Chapter 31—Veteran Readiness and Employment), to verify that the supplies and/or equipment provided as part of a rehabilitation program under 38 U.S.C. Chapter 31 have been received and are in good condition. The VR&E program subsequently uses the information on this form to justify processing payments for the supplies and/or equipment provided to claimants under 38 U.S.C. 3104(a)(7). Without the information gathered on this form, the VR&E program would be unable to verify that the claimant received the supplies and/or equipment, which could result in inaccurate payments being rendered.

An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. The Federal Register Notice with a 60-day comment period soliciting comments on this collection of information was published on May 13, 2021 on page 26,257. Affected Public: Individuals or Households.

Estimated Annual Burden: 4,667 hours.

Estimated Average Burden per Respondent: 10 minutes.

Frequency of Response: On occasion.

Estimated Number of Respondents: 28,000.

By direction of the Secretary.

Maribel Aponte,

VA PRA Clearance Officer, Office of Enterprise and Integration, Data Governance Analytics, Department of Veterans Affairs.

DEPARTMENT OF VETERANS AFFAIRS

[OMB Control No. 2900–0501]

Agency Information Collection Activity: Agency Information Collection Activity: Veterans Mortgage Life Insurance Inquiry

AGENCY: Veterans Benefits Administration, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: Veterans Benefits Administration, Department of Veterans Affairs (VA), is announcing an opportunity for public comment on the proposed collection of certain information by the agency. Under the Paperwork Reduction Act (PRA) of 1995, Federal agencies are required to publish notice in the Federal Register concerning each proposed collection of information, including each proposed extension of a currently approved collection, and allow 60 days for public comment in response to the notice. This notice solicits comments on information needed from Veterans for the proper maintenance of Veterans Mortgage Life Insurance accounts.

DATES: Written comments and recommendations on the proposed collection of information should be received on or before October 12, 2021.

ADDRESS: Submit written comments on the collection of information through Federal Docket Management System (FDMS) at www.Regulations.gov or to Nancy J. Kessinger, Veterans Benefits Administration (20M33), Department of Veterans Affairs, 810 Vermont Avenue NW, Washington, DC 20420 or email to nancy.kessinger@va.gov. Please refer to “OMB Control No. 2900–0501” in any correspondence. During the comment period, comments may be viewed online through FDMS.

FOR FURTHER INFORMATION CONTACT: Maribel Aponte, Office of Enterprise and Integration, Data Governance Analytics (008), 1717 H Street NW, Washington, DC 20006, (202) 266–4688 or email maribel.aponte@va.gov. Please refer to “OMB Control No. 2900–0501” in any correspondence.

SUPPLEMENTARY INFORMATION:

Under the PRA of 1995, Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. This request for comment is being made pursuant to Section 3506(c)(2)(A) of the PRA.

With respect to the following collection of information, VBA invites comments on: (1) Whether the proposed collection of information is necessary for the proper performance of VA’s functions, including whether the information will have practical utility; (2) the accuracy of VBA’s estimate of the burden of the proposed collection of information; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or the use of other forms of information technology.

Title: Veterans Mortgage Life Insurance Inquiry (VA Form 29–0543).

OMB Control Number: 2900–0501.

Type of Review: Extension of a previously approved collection.

Abstract: The Veterans Mortgage Life Insurance Inquiry solicits information needed from Veterans for the proper maintenance of Veterans Mortgage Life Insurance accounts. The form is authorized by 38 U.S.C. 2106 and 38 CFR 8a.3(e).

Affected Public: Individuals and households.

Estimated Annual Burden: 17 hours.

Estimated Average Burden per Respondent: 5 minutes.

Frequency of Response: On occasion.
Estimated Number of Respondents: 200.

By direction of the Secretary.

Maribel Aponte,
VA PRA Clearance Officer, Office of Enterprise and Integration/Data Governance Analytics, Department of Veterans Affairs.

Medicare Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System and Policy Changes and Fiscal Year 2022 Rates; Quality Programs and Medicare Promoting Interoperability Program Requirements for Eligible Hospitals and Critical Access Hospitals; Changes to the Medicare Shared Savings Program

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Final rule.

SUMMARY: This final rule revises the Medicare hospital inpatient prospective payment systems (IPPS) for operating and capital-related costs of acute care hospitals to implement changes arising from our continuing experience with these systems for FY 2022 and to implement certain recent legislation. The final rule also updates the payment policies and the annual payment rates for the Medicare prospective payment system (PPS) for inpatient hospital services provided by long-term care hospitals (LTCHs) for FY 2022. It also finalizes a May 10, 2021 interim final rule with comment period regarding rural reclassification through the Medicare Geographic Classification Review Board (MGCRR). The final rule also implements changes and updates for the Medicare Promoting Interoperability, Hospital Value-Based Purchasing, Hospital Readmissions Reduction, Hospital Inpatient Quality Reporting, Hospital-Acquired Condition Reduction, the PPS-Exempt Cancer Hospital Reporting, and the Long-Term Care Hospital Quality Reporting programs. It also finalizes provisions that alleviate a longstanding problem related to claiming Medicare bad debt and provide a participation opportunity for eligible accountable care organizations (ACOs).

DATES: This final rule is effective October 1, 2021.

III. Secretary’s Recommendation
IV. MedPAC Recommendation for Assessing Payment Adequacy and Updating Payments in Traditional Medicare

I. Executive Summary and Background

A. Executive Summary

1. Purpose and Legal Authority

   This FY 2022 IPPS/LTCH PPS final rule makes payment and policy changes under the Medicare inpatient prospective payment systems (IPPS) for operating and capital-related costs of acute care hospitals as well as for certain hospitals and hospital units excluded from the IPPS. In addition, it makes payment and policy changes for inpatient hospital services provided by long-term care hospitals (LTCHs) under the long-term care hospital prospective payment system (LTCH PPS). This final rule also makes policy changes to programs associated with Medicare IPPS hospitals, IPPS-excluded hospitals, and LTCHs. In this FY 2022 final rule, we are continuing policies to address wage index disparities impacting low wage index hospitals. We are finalizing our implementation of Section 9831 of the American Rescue Plan Act of 2021, which permanently established the imputed floor wage index policy. In addition, we are finalizing the regulations implemented in CMS–1762–IFC (86 CFR 24735–24739), which allowed hospitals with a rural redesignation under the Act to reclassify through the MCCRB using the rural reclassified area as the geographic area in which the hospital is located. This final rule includes policies related to new technology add-on payments. We are also finalizing our proposal to repeal the collection of market-based rate information on the Medicare cost report and the market-based MS–DRG relative weight methodology.

We are establishing new requirements and revising existing requirements for eligible hospitals and CAHs participating in the Medicare Promoting Interoperability Program.

We are providing estimated and newly established performance standards for the Hospital Value-Based Purchasing (VBIP) Program, and updated policies for the Hospital Readmissions Reduction Program, Hospital Inpatient Quality Reporting (IQR) Program, Hospital VBIP Program, Hospital-Acquired Condition (HAC) Reduction Program, Long-Term Care Hospital Quality Reporting Program (LTCH QRP), and the PPS-Exempt Cancer Hospital Reporting (PCHQR) Program.

Additionally, due to the impact of the COVID–19 PHE on measure data used in our value-based purchasing programs, we are finalizing our proposal to suppress several measures in the Hospital VBIP, HAC Reduction, and Hospital Readmissions Reduction Programs. As a result of these measure suppressions for the Hospital VBIP Program we are also implementing a special scoring methodology for FY 2022 that results in a value-based incentive payment amount that matches the 2-percent reduction to the base operating DRG payment amount.

We note that the FY 2022 IPPS/LTCH PPS proposed rule included our proposals related to the implementation of the provisions of the Consolidated Appropriations Act (CAA) of 2021 related to payments to hospitals for direct graduate medical education (GME) and indirect medical education (IME) costs. Please refer to the proposed rule (86 FR 25502 through 25524) for additional background information on these proposals. Due to the number and nature of the comments that we received on the implementation of sections 126, 127 and 131 of the CAA of 2021 relating to payments to hospitals for direct GME and IME costs, we will address public comments associated with these issues in future rulemaking.

In addition, we note that the FY 2022 IPPS/LTCH PPS proposed rule included our proposals related to the organ acquisition payment policy for transplant hospitals, donor community hospitals, and organ procurement organizations. Please refer to the proposed rule (86 FR 25656 through 25676) for additional background information on these proposals. Due to the number and nature of the comments that we received on the organ acquisition payment policy proposals we will address public comments associated with these issues in future rulemaking.

Under various statutory authorities, we either discuss continued program implementation or are making changes to the Medicare IPPS, to the LTCH PPS, other related payment methodologies and programs for FY 2022 and subsequent fiscal years, and other policies and provisions included in this rule. These statutory authorities include, but are not limited to, the following:

• Section 1886(d) of the Social Security Act (the Act), which sets forth a system of payment for the operating costs of acute care hospital inpatient stays under Medicare Part A (Hospital Insurance) based on prospectively set rates. Section 1886(g) of the Act requires that, instead of paying for capital-related costs of inpatient hospital services on a reasonable cost basis, the Secretary use a prospective payment system (PPS).

• Section 1886(d)(1)(B) of the Act, which specifies that certain hospitals and hospital units are excluded from the IPPS. These hospitals and units are: Rehabilitation hospitals and units; LTCHs; psychiatric hospitals and units; children’s hospitals; cancer hospitals; extended neoplastic disease care hospitals, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa). Religious nonmedical health care institutions (RNHCIs) are also excluded from the IPPS.

• Sections 123(a) and (c) of the BBRA (Public Law (Pub. L.) 106–113) and section 307(b)(1) of the BIPA (Pub. L. 106–554) (as codified under section 307(b)(1) of the Bipartisan Budget Act of 2018 (Pub. L. 115–123)), which provide for the development and implementation of a prospective payment system for payment for inpatient hospital services of LTCHs described in section 1886(d)(1)(B)(iv) of the Act.

• Sections 1814(l), 1820, and 1834(g) of the Act, which specify that payments are made to critical access hospitals (CAHs) (that is, rural hospitals or facilities that meet certain statutory requirements) for inpatient and outpatient services and that these payments are generally based on 101 percent of reasonable cost.

• Section 1886(a)(4) of the Act, which specifies that costs of approved...
educational activities are excluded from the operating costs of inpatient hospital services. Hospitals with approved graduate medical education (GME) programs are paid for the direct costs of GME in accordance with section 1886(h) of the Act.

Section 1886(b)(3)(B)(viii) of the Act, which requires the Secretary to reduce the applicable percentage increase that would otherwise apply to the standardized amount applicable to a subsection (d) hospital for discharges occurring in a fiscal year if the hospital does not submit data on measures in a form and manner, and at a time, specified by the Secretary.

Section 1866(k) of the Act, which provides for the establishment of a quality reporting program for hospitals described in section 1886(d)(1)(B)(iv) of the Act, referred to as “PPS-exempt cancer hospitals.”

Section 1886(o) of the Act, which requires the Secretary to establish a Hospital Value-Based Purchasing (VBP) Program, under which value-based incentive payments are made in a fiscal year to hospitals meeting performance standards established for a performance period for such fiscal year.

Section 1886(p) of the Act, which establishes a Hospital-Acquired Condition (HAC) Reduction Program, under which payments to applicable hospitals are adjusted to provide an incentive to reduce hospital-acquired conditions.

Section 1886(q) of the Act, as amended by section 15002 of the 21st Century Cures Act, which establishes the Hospital Readmissions Reduction Program. Under the program, payments for discharges from an applicable hospital as defined under section 1886(d) of the Act will be reduced to account for certain excess readmissions. Section 15002 of the 21st Century Cures Act directs the Secretary to compare hospitals with respect to the number of their Medicare-Medicaid dual-eligible beneficiaries (dual-eligibles) in determining the extent of excess readmissions.

Section 1886(r) of the Act, as added by section 3133 of the Affordable Care Act, which provides for a reduction to disproportionate share hospital (DSH) payments under section 1886(d)(5)(F) of the Act and for a new uncompensated care payment to eligible hospitals. Specifically, section 1886(r) of the Act requires that, for fiscal year 2014 and each subsequent fiscal year, subsection (d) hospitals that would otherwise receive a DSH payment made under section 1886(d)(5)(F) of the Act will receive two separate payments: (1) 25 percent of the amount they previously would have received under section 1886(d)(5)(F) of the Act for DSH (“the empirically justified amount”), and (2) an additional payment for the DSH hospital’s proportion of uncompensated care, determined as the product of three factors. These three factors are: (1) 75 percent of the payments that would otherwise be made under section 1886(d)(5)(F) of the Act; (2) 1 minus the percent change in the percent of individuals who are uninsured; and (3) a hospital’s uncompensated care amount relative to the uncompensated care amount of all DSH hospitals expressed as a percentage.

Section 1886(m)(5) of the Act, which requires the Secretary to reduce by two percentage points the annual update to the standard Federal rate for discharges for a long-term care hospital (LTCH) during the rate year for LTCHs that do not submit data in the form, manner, and at a time, specified by the Secretary.

Section 1886(m)(6) of the Act, as added by section 1206(a)(1) of the Pathway for Sustainable Growth Rate (SGR) Reform Act of 2013 (Pub. L. 113–67) and amended by section 51005(a) of the Bipartisan Budget Act of 2018 (Pub. L. 115–123), which provided for the establishment of site neutral payment rate criteria under the LTCH PPS, with implementation beginning in FY 2018. Section 51005(b) of the Bipartisan Budget Act of 2018 amended section 1886(m)(6)(B) by adding new clause (iv), which specifies that the IPPS comparable amount defined in clause (ii)(I) shall be reduced by 4.6 percent for FYs 2018 through 2026.

Section 1899B of the Act, as added by section 2(a) of the Improving Medicare Post-Acute Care Transformation Act of 2014 (IMPACT Act) (Pub. L. 113–185), which provides for the establishment of standardized data reporting for certain post-acute care providers, including LTCHs.

Section 1899 of the Act which established the Medicare Shared Savings Program (Shared Savings Program) to facilitate coordination and cooperation among providers and suppliers to improve the quality of care for Medicare fee-for-service (FFS) beneficiaries and reduce the rate of growth in expenditures under Medicare Parts A and B.

Section 1902(kk)(3) of the Act, as amended by section 6401(b) of the Affordable Care Act, which mandates that states require providers and suppliers to comply with the same disclosure requirements established by the Secretary under section 1866(j)(5) of the Act.

Section 2107(e)(1) of the Act, as amended by section 6401(c) of the Affordable Care Act, which makes the requirements of section 1902(kk) of the Act, including the disclosure requirements, applicable to CHIP.

The following is a summary of the major provisions in this final rule. In general, these major provisions are being finalized as part of the annual update to the payment rates, consistent with the applicable statutory provisions. A general summary of the changes in this final rule is presented in section I.D. of the preamble of this final rule.

a. MS–DRG Documentation and Coding Adjustment

Section 631 of the American Taxpayer Relief Act of 2012 (ATRA, Pub. L. 112–240) amended section 7(b)(1)(B) of Public Law 110–90 to require the Secretary to make a recoupment adjustment to the standardized amount of Medicare payments to acute care hospitals to account for changes in MS–DRG documentation and coding that do not reflect real changes in case-mix, totaling $11 billion over a 4-year period of FYs 2014, 2015, 2016, and 2017. The FY 2014 through FY 2017 adjustments represented the amount of the increase in aggregate payments as a result of not completing the prospective adjustment authorized under section 7(b)(1)(A) of Public Law 110–90 until FY 2013. Prior to the ATRA, this amount could not have been recovered under Public Law 110–90. Section 414 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10) replaced the single positive adjustment we intended to make in FY 2018 with a 0.5 percent positive adjustment to the standardized amount of Medicare payments to acute care hospitals for FYs 2018 through 2023. (The FY 2018 adjustment was subsequently adjusted to 0.4588 percent by section 15005 of the 21st Century Cures Act.) Therefore, for FY 2022, we are making an adjustment of +0.5 percent to the standardized amount.

b. Extension of the New COVID–19 Treatments Add-on Payment (NCTAP)

In response to the COVID–19 PHE, we established the New COVID–19 Treatments Add-on Payment (NCTAP) under the IPPS for COVID–19 cases that meet certain criteria (85 FR 71157 and 71158). We believe that as drugs and biological products become available and authorized for emergency use or approved by Food and Drug Administration (FDA) for the treatment
of COVID–19 in the inpatient setting, it is appropriate to increase the current IPPS payment amounts to mitigate any potential financial disincentives for hospitals to provide new COVID–19 treatments during the PHE. Therefore, effective for discharges occurring on or after November 2, 2020 and until the end of the PHE for COVID–19, CMS established the NCTAP.

We anticipate that there might be inpatient cases of COVID–19, beyond the end of the PHE, for which payment based on the assigned MS–DRG may not adequately reflect the additional cost of new COVID–19 treatments. In order to continue to mitigate potential financial disincentives for hospitals to provide these new treatments, and to minimize any potential payment disruption immediately following the end of the PHE, we believe that the NCTAP should remain available for cases involving eligible treatments for the remainder of the fiscal year in which the PHE ends (for example, until September 30, 2022).

After review of public comments received and for the reasons discussed in section II.F. of the preamble of this final rule, we are finalizing to extend the NCTAP through the end of the fiscal year in which the PHE ends for all eligible products, including those approved for new technology add-on payments for FY 2022, with any new technology add-on payment reducing the amount of the NCTAP.

c. Use of FY 2020 or FY 2019 Data in the FY 2022 IPPS and LTCH PPS Ratesetting

For the IPPS and LTCH PPS ratesetting, our longstanding goal is always to use the best available data overall. In section I.F. of the preamble of this final rule, we discussed our analysis of the best available data for use in the development of this FY 2022 IPPS/LTCH PPS final rule given the potential impact of the public health emergency (PHE) for the Coronavirus Disease (COVID–19). As discussed in section I.F. of the preamble of this final rule, we are using the FY 2019 data, such as the FY 2019 MedPAR file, for the FY 2022 ratesetting for circumstances where the FY 2020 data is significantly impacted by the COVID–19 PHE, primarily in that the utilization of inpatient services reflect generally markedly different utilization for certain types of services in FY 2020 than would have been expected in the absence of the PHE.

d. Continuation of the Low Wage Index Hospital Policy

To help mitigate wage index disparities between high wage and low hospitals, in the FY 2020 IPPS/LTCH PPS rule (84 FR 42326 through 42332), we adopted a policy to increase the wage index values for certain hospitals with low wage index values (the low wage index hospital policy). This policy was adopted in a budget neutral manner through an adjustment applied to the standardized amounts for all hospitals. We also indicated that this policy will be effective for at least 4 years, beginning in FY 2020, in order to allow employee compensation increases implemented by these hospitals sufficient time to be reflected in the wage index calculation. Therefore, for FY 2022, we are continuing the low-wage index hospital policy, and are also applying this policy in a budget neutral manner by applying an adjustment to the standardized amounts.

e. Implementation of Section 9831 of the American Rescue Plan Act of 2021 (Pub. L. 117–2) Imputed Floor Wage Index Policy for All-Urban States

Section 9831 of the American Rescue Plan Act of 2021 (Pub. L. 117–2) amended section 1886(d)(3)(E) of the Act (42 U.S.C. 1395ww(d)(3)(E)) to establish a minimum area wage index for hospitals in all-urban States. Specifically, section 1886(d)(3)(E)(iv) of the Act (as added by section 9831(a)(2) of Pub. L. 117–2) reinstates the imputed floor wage index policy for all-urban States effective for discharges on or after October 1, 2021 (FY 2022) with no expiration date using the methodology described in 42 CFR 412.64(b)(4)(iv) as in effect for FY 2018. Furthermore, section 1886(d)(3)(E)(iii) of the Act provides that the imputed floor wage index shall not be applied in a budget neutral manner. We refer readers to section III.G.2. of this final rule for a summary of the provisions of section 9831 of Public Law 117–2 that we are implementing in this final rule.

f. DSH Payment Adjustment and Additional Payment for Uncompensated Care

Section 3133 of the Affordable Care Act modified the Medicare disproportionate share hospital (DSH) payment methodology beginning in FY 2014. Under section 1886(r) of the Act, which was added by section 3133 of the Affordable Care Act, starting in FY 2014, Medicare DSHs receive 25 percent of the amount they previously would have received under the statutory formula for Medicare DSH payments in section 1886(d)(5)(F) of the Act. The remaining amount, equal to 75 percent of the otherwise would have been paid as Medicare DSH payments, is paid as additional payments after the amount is reduced for changes in the percentage of individuals that are uninsured. Each Medicare DSH will receive an additional payment based on its share of the total amount of uncompensated care for all Medicare DSHs for a given time period.

In this final rule, we are updating our estimates of the three factors used to determine uncompensated care payments for FY 2022. We are also continuing to use uninsured estimates produced by CMS’ Office of the Actuary (OACT) as part of the development of the National Health Expenditure Accounts (NHEA) in the calculation of Factor 2. Consistent with the policy adopted in the FY 2021 IPPS/LTCH PPS final rule for FY 2022 and subsequent fiscal years, we are using a single year of data on uncompensated care costs from Worksheet S–10 of the FY 2018 cost reports to calculate Factor 3 in the FY 2022 methodology for all eligible hospitals with the exception of Indian Health Service (IHS) and Tribal hospitals and Puerto Rico hospitals. For IHS and Tribal hospitals and Puerto Rico hospitals we are finalizing our proposal to continue to use the low-income insured days proxy to calculate Factor 3 for these hospitals for FY 2022. We are also finalizing certain methodological changes for calculating Factor 3 for FY 2022.

g. Modification of Limitations on Redesignation by the Medicare Geographic Classification Review Board (MGCRB)

In May 10, 2021 Federal Register (86 FR 24735), concurrent with the FY 2022 IPPS/LTCH PPS proposed rule, we published an interim final rule with comment period (IFC) (CMS–1762–IFC) that amended our current regulations to allow hospitals with a rural redesignation under the Act to reclassify through the Medicare MGCRB using the rural classified area as the geographic area in which the hospital is located. These regulatory changes align our policy with the decision in Bates County Memorial Hospital v. Azar, effective with reclassifications beginning with fiscal year (FY) 2023. We respond to the public comments on CMS–1762–IFC in this final rule, and finalize the regulatory changes made therein.

h. Reduction of Hospital Payments for Excess Readmissions

We are making changes to policies for the Hospital Readmissions Reduction Program, which was established under section 1886(q) of the Act, as amended by section 15002 of the 21st Century
Cures Act. The Hospital Readmissions Reduction Program requires a reduction to a hospital’s base operating DRG payment to account for excess readmissions of selected applicable conditions. For FY 2017 and subsequent years, the reduction is based on a hospital’s risk-adjusted readmission rate during a 3-year period for acute myocardial infarction (AMI), heart failure (HF), pneumonia, chronic obstructive pulmonary disease (COPD), elective primary total hip arthroplasty/total knee arthroplasty (THA/TKA), and coronary artery bypass graft (CABG) surgery. In this FY 2022 IPPS/LTC PPS final rule, we are finalizing the following policies: (1) To adopt a cross-program measure suppression policy for the duration of the public health emergency for COVID–19; (2) to suppress the Hospital 30-Day, All-Cause, Risk-Standardized Readmission Rate (RSRR) following Pneumonia Hospitalization measure (NQF 0506) for the FY 2023 program year; (3) to modify the remaining five condition-specific readmission measures to exclude COVID–19 diagnosed patients from the measure denominators, beginning with the FY 2023 program year; (4) to use the MedPAR data that aligns with the applicable period for FY 2022; (5) to automatically adopt the use of MedPAR data corresponding to the applicable period beginning with the FY 2023 program year and all subsequent program years, unless otherwise specified by the Secretary; and (6) to update the regulatory text to reflect that our Hospital Compare website has been renamed and is now referred to as Care Compare. We are clarifying our Extraordinary Circumstances Exceptions (ECE) policy, and we also requested public comment on opportunities to advance health equity through possible future stratification of results by race and ethnicity for condition/procedure-specific readmission measures and by expansion of standardized data collection to additional social factors, such as language preference and disability status. We also sought comment on mechanisms of incorporating other demographic characteristics into analyses that address and advance health equity, such as the potential to include administrative and self-reported data to measure co-occurring disability status.

i. Hospital Value-Based Purchasing (VBP) Program

Section 1886(o) of the Act requires the Secretary to establish a Hospital VBP Program under which value-based incentive payments are made in a fiscal year to hospitals based on their performance on measures established for a performance period for such fiscal year. In this final rule, we are finalizing our proposals to: (1) Establish a measure suppression policy for the duration of the public health emergency for COVID–19; (2) suppress the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS), Medicare Spending Per Beneficiary (MSPB), and five Healthcare-Associated Infection (HAI) measures, for the FY 2022 program year; and (3) suppress the Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Pneumonia (PN) Hospitalization (MORT–30–PN) measure for the FY 2023 program year. We are also finalizing our proposal to revise the scoring and payment methodology for the FY 2022 program year such that hospitals will not receive Total Performance Scores. We believe that awarding a TPS to any hospital based off the remaining measures that are not suppressed would not result in a fair national comparison and, as a result, are not awarding a TPS to any hospital for the FY 2022 program year. Instead, we are finalizing our proposal to award each hospital a payment incentive multiplier that results in a value-based incentive payment that is equal to the amount withheld for the fiscal year (2 percent). We are finalizing our proposal to remove the CMS Patient Safety and Adverse Events Composite (CMS PSI 90) measure beginning with FY 2023 because the costs associated with the measure outweigh the benefit of its use in the program. We are also finalizing our proposal to update the baseline of certain measures affected by the ECE granted in response to the COVID–19 PHE and making a technical update to our terminology used in the Hospital VBP Program regulations.

j. Hospital-Acquired Condition (HAC) Reduction Program

Section 1886(p) of the Act establishes an incentive to hospitals to reduce the incidence of hospital-acquired conditions by requiring the Secretary to make an adjustment to payments to applicable hospitals, effective for discharges beginning on October 1, 2014. This 1-percent payment reduction applies to hospitals that rank in the worst-performing quartile (25 percent) of all applicable hospitals, relative to the national average, of conditions acquired during the applicable period and on all of the hospital’s discharges for the specified fiscal year. In this FY 2022 IPPS/LTC PPS final rule, we are: (1) Clarifying our ECE policy; (2) finalizing our proposal to adopt a cross-program measure suppression policy for the duration of the public health emergency for COVID–19; (3) finalizing our proposal to apply that measure suppression policy to suppress certain program data from FY 2022, FY 2023, and FY 2024 HAC Reduction Programs; and (4) finalizing our proposal to update the regulatory text to reflect that the Hospital Compare website has been renamed and is now referred to as Care Compare.

k. Hospital Inpatient Quality Reporting (IQR) Program

Under section 1886(b)(3)(B)(viii) of the Act, subsection (d) hospitals are required to report data on measures selected by the Secretary for a fiscal year in order to receive the full annual percentage increase that would otherwise apply to the standardized amount applicable to discharges occurring in that fiscal year.

In this FY 2022 IPPS/LTC PPS final rule, we are making several changes. We are finalizing the adoption of five new measures: (1) A new structural measure—Maternal Morbidity Structural Measure—beginning with a shortened reporting period from October 1, 2021 through December 31, 2021 affecting the CY 2021 reporting period/FY 2023 payment determination; (2) the Hybrid Hospital-Wide All-Cause Risk Standardized Mortality (Hybrid HWM) measure in a stepwise fashion, beginning with a voluntary reporting period from July 1, 2022 through June 30, 2023, and followed by mandatory reporting from July 1, 2023 through June 30, 2024, affecting the FY 2026 payment determination and for subsequent years; (3) the COVID–19 Vaccination Coverage among Health Care Personnel (HCP) measure beginning with a shortened reporting period from October 1, 2021 through December 31, 2021, affecting the CY 2021 reporting period/FY 2023 payment determination and with quarterly reporting beginning with the FY 2024 payment determination and for subsequent years; and two medication-related adverse event eCQMs beginning with the CY 2023 reporting period/FY 2025 payment determination: (4) Hospital Harm-Severe Hypoglycemia eCQM (NQF #3503e); and (5) Hospital Harm-Severe Hyperglycemia eCQM (NQF #3533e). We are also finalizing the removal of three measures: (1) Exclusive Breast Milk Feeding (PC–05) (NQF #0480) beginning with the FY 2026 payment determination; (2) Admit Decision Time to ED Departure Time for Admitted Patients (ED–2) (NQF #0497) beginning with the FY 2026 payment determination; and (3) the Discharged on Statin Medication eCQM (STK–06)
(NQF #0439), beginning with the FY 2026 payment determination. We are not finalizing our proposals to remove the following two measures: (1) Death Among Surgical Inpatients with Serious Treatable Complications (CMS PSI-04); and (2) Anticoagulation Therapy for Atrial Fibrillation/Flutter eCQM (STK–03) (NQF #0436).

In the FY 2022 IPPS/LTC PPS proposed rule (86 FR 25070), we requested comment from stakeholders on the potential future development and inclusion of two measures: (1) A mortality measure for patients admitted with COVID–19; and (2) a patient-reported outcomes measure following elective total hip and/or total knee arthroplasty (THA/TKA). We also requested comment from stakeholders on ways we can leverage measures to address gaps in existing health equity generally as well as comment on: (1) Potential future confidential stratified reporting for the Hospital-Wide All-Cause Unplanned Readmission (HWR) measure using both dual eligibility and race/ethnicity; and (2) potential future reporting of a structural measure to assess the degree of hospital leadership engagement in health equity performance data. We also requested feedback across programs on potential actions and priority areas that would enable the continued transformation of our quality measurement toward greater digital capture of data and use of the FHIR standard.

In addition, we are finalizing our proposal that beginning with the CY 2023 reporting period/FY 2025 payment determination, hospitals will be required to use certified technology that has been updated consistent with the 2015 Edition Cures Update and clarifying that certified technology must support the reporting requirements for all available eCQMs. We also are finalizing our provision that hybrid measures comply with the same certification requirements as eCQMs, specifically that EHR technology must be certified to the 2015 Edition Cures Update. We are revising 42 CFR 412.140(a)(2) and 42 CFR 412.140(e)(2)(iii) to replace the terms “Security Administrator” and “System Administrator” with the term “security official” in alignment with other CMS quality programs. Due to an updated URL for the QualityNet website from QualityNet.org to QualityNet.cms.gov, we are also revising Hospital IQR Program regulations at 42 CFR 412.140(a)(1) and 42 CFR 412.140(c)(2)(i) to reflect updates to the QualityNet site. Lastly, we are finalizing our proposal to extend the effects of the educational review process for chart-abstracted measures beginning with validations affecting the FY 2024 payment determination.

1. PPS-Exempt Cancer Hospital Quality Reporting Program

Section 1866(k)(1) of the Act requires, for purposes of FY 2014 and each subsequent fiscal year, that a hospital described in section 1866(d)(1)(B)(v) of the Act (a PPS-exempt cancer hospital, or a PCH) submit data in accordance with section 1866(k)(2) of the Act with respect to such fiscal year. There is no financial impact to PCH Medicare payment if a PCH does not participate.

In this final rule, we are removing the Oncology: Plan of Care for Pain—Medical Oncology and Radiation Oncology (NQF #0383) (PCH–15) measure beginning with the FY 2024 program year, adopting the COVID–19 Vaccination Coverage among Healthcare Personnel measure beginning with the FY 2023 program year, making a technical update to the terminology we use in the program, and codifying existing PCHQR Program policies in our regulations.

m. Medicare Promoting Interoperability Program

For purposes of reducing the burden on eligible hospitals and CAHs, we are making several changes to the Medicare Promoting Interoperability Program. Specifically, we are: (1) Continuing the EHR reporting period of a minimum of any continuous 90-day period for new and returning eligible hospitals and CAHs for CY 2023 and increasing the EHR reporting period to a minimum of any continuous 180-day period for new and returning eligible hospitals and CAHs for CY 2024; (2) maintaining the Electronic Prescribing Objective’s Query of PDMP measure as optional while increasing its available bonus from 5 points to 10 points for the EHR reporting period in CY 2022; (3) adding a new Health Information Exchange (HIE) Bi-Directional Exchange measure as a yes/no attestation to the HIE objective as an optional alternative to the two existing measures beginning with the EHR reporting period in CY 2022; (4) requiring reporting a “yes” on four of the existing Public Health and Clinical Data Exchange Objective measures (Syndromic Surveillance Reporting, Immunization Registry Reporting, Electronic Case Reporting, and Electronic Reportable Laboratory Result Reporting) or requesting the applicable exclusion(s); (5) adding a new measure to the Protect Patient Health Information objective that requires eligible hospitals and CAHs to attest to having completed an annual assessment of SAFER Guides beginning with the EHR reporting period in CY 2022; (6) removing attestation statements 2 and 3 from the Promoting Interoperability Program’s prevention of information blocking requirement; (7) increasing the minimum required score for the objectives and measures from 50 points to 60 points (out of 100 points) in order to be considered a meaningful EHR user; and (8) adopting two new eCQMs to the Medicare Promoting Interoperability Program’s eCQM measure set beginning with the reporting period in CY 2023, in addition to removing three eCQMs from the measure set beginning with the reporting period in CY 2024, which updates are in alignment with the eCQM updates being finalized for the Hospital IQR Program. We are amending our regulation texts as necessary to incorporate several of these changes. We are not finalizing our proposal to remove the Anticoagulation Therapy for Atrial Fibrillation/Flutter eCQM (STK–03) (NQF #0436) in alignment with the Hospital IQR Program. We are also not finalizing our proposal to modify the Provide Patients Electronic Access to Their Health Information measure by requiring eligible hospitals and CAHs to ensure that patient health information remains available to the patient (or patient-authorized representative). We will consider the feedback we received for future rulemaking.

n. Repeal of Market-Based Data Collection and Market-Based MS–DRG Relative Weight Methodology

As discussed in section V.L. of the preamble of this final rule, we are finalizing our proposal, without modification, to repeal the requirement that a hospital report on the Medicare cost report the median payer-specific negotiated charge that the hospital has negotiated with all of its MA organization payers, by MS–DRG, for cost reporting periods ending on or after January 1, 2021. We are also finalizing our proposal, without modification, to repeal the market-based MS–DRG relative weight methodology adopted for calculating the MS–DRG relative weights effective in FY 2024, and to continue using the existing cost-based methodology for calculating the MS–DRG relative weights for FY 2024 and subsequent fiscal years. Lastly, we solicited comment on alternative approaches or data sources that could be used in Medicare fee-for-service (FFS) ratsetting. We will continue to consider these comments as applicable.
We are making changes to policies for the Shared Savings Program, which was established under section 1899 of the Act, to allow eligible ACOs participating in the BASIC track’s glide path the option to elect to forgo automatic advancement along the glide path’s increasing levels of risk and potential reward for performance year (PY) 2022. Under the policy we are adopting in this final rule, prior to the automatic advancement for PY 2022, an eligible ACO may elect to remain in the same level of the BASIC track’s glide path in which it participated during PY 2021. For PY 2023, an ACO that elects this advancement deferral option will be automatically advanced to the level of the BASIC track’s glide path in which it would have participated during PY 2023 if it had advanced automatically to the required level for PY 2022 (unless the ACO elects to advance more quickly before the start of PY 2023).

3. Summary of Costs and Benefits

The following table provides a summary of the costs, savings, benefits associated with the major provisions described in section I.A.3. of the preamble of this final rule.
<table>
<thead>
<tr>
<th>Provision Description</th>
<th>Description of Costs, Transfers, Savings, and Benefits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Adjustment for MS-DRG</td>
<td>Section 414 of the MACRA replaced the single positive adjustment we intended to make in FY 2018 once the recoupment required by section 631 of the ATRA was complete with a 0.5 percentage point positive adjustment to the standardized amount of Medicare payments to acute care hospitals for FYs 2018 through 2023. (The FY 2018 adjustment was subsequently adjusted to 0.4588 percentage point by section 15005 of the 21st Century Cures Act.) For FY 2022, we are making an adjustment of +0.5 percentage point to the standardized amount consistent with the MACRA.</td>
</tr>
<tr>
<td>Documentation and Coding Changes</td>
<td></td>
</tr>
<tr>
<td>Changes to the New COVID-19 Treatments Add-on Payment</td>
<td>In response to the COVID-19 PHE, CMS established the New COVID-19 Treatments Add-on Payment (NCTAP) under the IPPS for COVID-19 cases that meet certain criteria (85 FR 71155). We anticipate inpatient cases of COVID-19 beyond the end of the PHE for which payment based on the assigned MS-DRG may not adequately reflect the additional cost of new COVID-19 treatments. In order to continue to mitigate potential financial disincentives for hospitals to provide these new treatments, and to minimize any potential payment disruption immediately following the end of the PHE, we believe that the NCTAP should remain available for cases involving eligible treatments for the remainder of the fiscal year in which the PHE ends (for example, until September 30, 2022). Therefore, after consideration of comments received, we are extending the NCTAP for all eligible products through the end of the fiscal year in which the PHE ends (for example, until September 30, 2022), including for technologies/cases eligible for new technology add-on payments, with the new technology add-on payment reducing the amount of the NCTAP. On one extreme, if all of the new COVID–19 treatments decrease the net cost of hospitalizations (for example, due to shortened lengths of stay), including the cost of the new treatment, below the Medicare payment for discharges after the end of the PHE and through the end of the fiscal year in which the PHE ends, then there would be no NCTAP made and no additional cost to the Medicare program as a result of this proposed extension. On the other extreme, if all of the new COVID–19 treatments result in the net cost of hospitalizations that exceed the outlier threshold (for example, due to the cost of the new treatment) for discharges after the end of the PHE and through the end of the fiscal year in which the PHE ends, the cost to the Medicare program would be the sum over all such NCTAP cases of 0.65 times the outlier threshold for each case. Given it is unknown what the cost and utilization of inpatient stays using these new treatments will be, this is a cost but is not estimable. Therefore, it is not possible to quantify the impact of the extension of the NCTAP.</td>
</tr>
<tr>
<td>Implementation of Section 9831 of the American Rescue Plan Act of 2021 (Pub. L. 117–2) Imputed Floor Wage Index Policy for All-Urban States</td>
<td>As discussed in section III.G.2. of the preamble of this final rule, we are implementing section 9831 of the American Rescue Plan Act of 2021 (Pub. L. 117–2) which reinstates the imputed floor wage index policy for all-urban States effective for discharges on or after October 1, 2021 (FY 2022) with no expiration date using the methodology described in 42 CFR 412.64(b)(4)(vi) as in effect for FY 2018. Furthermore, section 1886(d)(3)(E)(iv)(III) of the Act (as added by section 9831(a)(2) of the American Rescue Plan Act of 2021) provides that the imputed floor wage index shall not be applied in a budget neutral manner. We estimate that our proposed implementation of section 9831 of the American Rescue Plan Act of 2021 will result in an estimated cost of approximately $0.2 billion for FY 2022.</td>

<tr>
<td>--------------------------------------------------------------------------------------</td>
<td>----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Medicare DSH Payment Adjustment and Additional Payment for Uncompensated Care</td>
<td>For FY 2022, we are updating our estimates of the three factors used to determine uncompensated care payments. We are continuing to use uninsured estimates produced by OACT as part of the development of the NHEA in conjunction with more recently available data that takes into consideration the effects of the COVID-19 pandemic in the calculation of Factor 2. Consistent with the policy adopted in the FY 2021 IPPS/LTCH PPS final rule for FY 2022 and subsequent fiscal years, we are using a single year of data on uncompensated care costs from Worksheet S–10 for FY 2018 to determine Factor 3 for FY 2022 for all eligible hospitals with the exception of Indian Health Service (IHS) and Tribal hospitals and Puerto Rico hospitals. To determine the amount of uncompensated care for purposes of calculating Factor 3 for Puerto Rico hospitals and Indian Health Service and Tribal hospitals, we are continuing to use data regarding low-income insured days for FY 2013. We project that the amount available to distribute as payments for uncompensated care for FY 2022 will decrease by approximately $1.4 billion, as compared to our estimate of the uncompensated care payments that will be distributed in FY 2021. The uncompensated care payments have redistributive effects, based on a hospital’s uncompensated care amount relative to the uncompensated care amount for all hospitals that are projected to be eligible to receive Medicare DSH payments, and the calculated payment amount is not directly tied to a hospital’s number of discharges.</td>
</tr>
<tr>
<td>Update to the IPPS Payment Rates and Other Payment Policies</td>
<td>As discussed in Appendix A of this final rule, acute care hospitals are estimated to experience an increase of approximately $2.3 billion in FY 2022, including operating (including increased payments as a result of the imputed floor provision in section 9831 of the American Rescue Plan Act of 2021), capital, and new technology changes, as modeled for this final rule.</td>
</tr>
<tr>
<td>Update to the LTCH PPS Payment Rates and Other Payment Policies</td>
<td>As discussed in Appendix A of this final rule, based on the best available data for the 363 LTCHs in our database, we estimate that the changes to the payment rates and factors that we present in the preamble of and Addendum to this final rule, which reflect the update to the LTCH PPS standard Federal payment rate for FY 2022, will result in an estimated increase in payments in FY 2022 of approximately $42 million.</td>
</tr>
<tr>
<td>Changes to the Hospital Readmissions Reduction Program</td>
<td>For FY 2022 and subsequent years, DRG reductions in payments are based on a hospital’s risk-adjusted readmission rate during the performance period for acute myocardial infarction (AMI), heart failure (HF), pneumonia, chronic obstructive pulmonary disease (COPD), elective primary total hip arthroplasty/total knee arthroplasty (THA/TKA), and coronary artery bypass graft (CABG) surgery. Overall, in this final rule, we estimate that 2,500 hospitals will have their base operating DRG payments reduced by their determined estimated FY 2022 hospital-specific readmission adjustment. As a result, we estimate that the Hospital Readmissions Reduction Program will save approximately $521 million in FY 2022.</td>
</tr>
<tr>
<td>Value-Based Incentive Payments under the Hospital VBP Program</td>
<td>We estimate that there will be no net financial impact to the Hospital VBP Program for the FY 2022 program year in the aggregate because, by law, the amount available for value-based incentive payments under the program in a given year must be equal to the total amount of base operating MS-DRG payment amount reductions for that year, as estimated by the Secretary. Specifically for the FY 2022 program year, after applying the measure suppressions and special scoring policy, the estimated amount of base operating MS-DRG payment amount reductions and payback to hospitals is approximately $1.9 billion.</td>
</tr>
<tr>
<td>Changes to the HAC Reduction Program</td>
<td>A hospital’s Total HAC Score and its ranking in comparison to other hospitals in any given year depend on several different factors. We are making no changes to the scoring methodology, which will continue to use the Winsorized z-score and equal measure weights approaches to determine the worst-performing quartile of hospitals. Any significant impact due to the HAC Reduction Program changes for FY 2022, including which hospitals will receive the adjustment, will depend on the actual experience of hospitals in the Program. For example, a hospital with poor performance during CY 2020 may move out of the worst-performing quartile status (that is, not receive a payment reduction) due to the measure suppression policy. In turn, this would lead to another hospital moving into the worst-performing quartile status. In a typical year, approximately 18 percent of hospitals experience a change in worst-performing quartile status from one year to the next. Preliminary analysis indicates the percentage of hospitals experiencing a change in worst-performing quartile status to be 17.2 percent due to the measure suppression policy. We refer readers to section IX.1.3.c. of the preamble of this final rule.</td>
</tr>
<tr>
<td>Provision Description</td>
<td>Description of Costs, Transfers, Savings, and Benefits</td>
</tr>
<tr>
<td>-----------------------------------------------------------</td>
<td>--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Changes to the Hospital Inpatient Quality Reporting (IQR) Program</td>
<td>Across 3,300 IPPS hospitals, we estimate that our changes for the Hospital IQR Program in this final rule will result in a total information collection burden increase of 2,475 hours associated with our policies and updated burden estimates and a total cost increase of approximately $101,475 across a 4-year period from the CY 2022 reporting period/FY 2024 payment determination.</td>
</tr>
<tr>
<td>Changes to the Medicare and Promoting Interoperability Program</td>
<td>Based on updated wage rates for 2019 from the Bureau of Labor Statistics, and an amended hourly staff usage from that of a lawyer to a medical records and health information technician role, we estimate that the finalized changes will result in a net decrease of $607,893 for the annual information collection burden (total cost) in CY 2022.</td>
</tr>
<tr>
<td>Market-Based MS-DRG Relative Weight Policy – Repeal</td>
<td>In section V.L. of the preamble of this final rule, we finalize our proposal to repeal the requirement that hospitals report on the Medicare cost report the median payer-specific negotiated charge that the hospital has negotiated with all of its MA organization payers, by MS-DRG, for cost reporting periods ending on or after January 1, 2021. We are also finalizing our proposal to repeal the market-based MS-DRG relative weight methodology adopted for calculating the MS-DRG relative weights effective in FY 2024. We previously estimated total annual burden hours for this policy and refer readers to (85 FR 59015) for further analysis of this estimate.</td>
</tr>
<tr>
<td>Changes to the Medicare Shared Savings Program</td>
<td>In section I.H.12 of Appendix A of this final rule, we describe the estimated impacts of our changes to the Shared Savings Program to extend the flexibility for eligible ACOs to elect to “freeze” their participation level along the BASIC track’s glide path for PY 2022. The net effect of offering this flexibility is estimated to be a $90 million reduction in Federal spending, with the reduction ranging from $50 to $140 million.</td>
</tr>
</tbody>
</table>
B. Background Summary

1. Acute Care Hospital Inpatient Prospective Payment System (IPPS)

Section 1886(d) of the Act sets forth a system of payment for the operating costs of acute care hospital inpatient stays under Medicare Part A (Hospital Insurance) based on prospectively set rates. Section 1886(g) of the Act requires the Secretary to use a prospective payment system (PPS) to pay for the capital-related costs of inpatient hospital services for these “subsection (d) hospitals.” Under these PPSs, Medicare payment for hospital inpatient operating and capital-related costs is made at predetermined, specific rates for each hospital discharge. Discharges are classified according to a list of diagnosis-related groups (DRGs).

The base payment rate is comprised of a standardized amount that is divided into a labor-related share and a nonlabor-related share. The labor-related share is calculated based on the wage index applicable to the area where the hospital is located. If the hospital is located in Alaska or Hawaii, the nonlabor-related share is adjusted by a cost-of-living adjustment factor. This base payment rate is multiplied by the DRG relative weight.

If the hospital treats a high percentage of certain low-income patients, it receives a percentage add-on payment applied to the DRG-adjusted base payment rate. This add-on payment, known as the disproportionate share hospital (DSH) adjustment, provides for a percentage increase in Medicare payments to hospitals that qualify under either of two statutory formulas designed to identify hospitals that serve a disproportionate share of low-income patients. For qualifying hospitals, the amount of this adjustment varies based on the outcome of the statutory calculations. The Affordable Care Act revised the Medicare DSH payment methodology and provides for a new additional Medicare payment beginning on October 1, 2013, that considers the amount of uncompensated care furnished by the hospital relative to all other qualifying hospitals.

Additional payments may be made for cases that involve new technologies or medical services that have been approved for special add-on payments. In general, to qualify, a new technology or medical service must demonstrate that it is a substantial clinical improvement over technologies or services otherwise available, and that, absent an add-on payment, it would be inadequately paid under the regular DRG payment. In addition, certain transformative new devices and certain antimicrobial products may qualify under an alternative inpatient new technology add-on payment pathway by demonstrating that, absent an add-on payment, they would be inadequately paid under the regular DRG payment.

The costs incurred by the hospital for a case are evaluated to determine whether the hospital is eligible for an additional payment as an outlier case. This additional payment is designed to protect the hospital from large financial losses due to unusually expensive cases. Any eligible outlier payment is added to the DRG-adjusted base payment rate, plus any DSH, IME, and new technology or medical service add-on adjustments.

Although payments to most hospitals under the IPPS are made on the basis of the standardized amounts, some categories of hospitals are paid in whole or in part based on their hospital-specific rate, which is determined from their costs in a base year. For example, sole community hospitals (SCHs) receive the higher of a hospital-specific rate based on their costs in a base year (the highest of FY 1982, FY 1987, FY 1996, or FY 2006) or the IPPS Federal rate based on the standardized amount. SCHs are the sole source of care in their areas. Specifically, section 1886(d)(5)(D)(iii) of the Act defines an SCH as a hospital that is located more than 35 road miles from another hospital or that, by reason of factors such as an isolated location, weather conditions, travel conditions, or absence of other like hospitals (as determined by the Secretary), is the sole source of hospital inpatient services reasonably available to Medicare beneficiaries. In addition, certain rural hospitals previously designated by the Secretary as essential access community hospitals are considered SCHs.

Under current law, the Medicare-dependent, small rural hospital (MDH) program is effective through FY 2022. For discharges occurring on or after October 1, 2007, but before October 1, 2022, an MDH receives the higher of the Federal rate or the Federal rate plus 75 percent of the amount by which the Federal rate is exceeded by the highest of its FY 1982, FY 1987, or FY 2002 hospital-specific rate. MDHs are a major source of care for Medicare beneficiaries in their area. Section 1886(d)(5)(G)(iv) of the Act defines an MDH as a hospital that is located in a rural area (or, as amended by the Bipartisan Budget Act of 2018, a hospital located in a State with no rural area that meets certain statutory criteria), has not more than 100 beds, is not an SCH, and has a high percentage of Medicare discharges (not less than 60 percent of its inpatient days or discharges in its cost reporting year beginning in FY 1987 or in two of its three most recently settled Medicare cost reporting years).

Section 1886(g) of the Act requires the Secretary to pay for the capital-related costs of inpatient hospital services in accordance with a prospective payment system established by the Secretary. The basic methodology for determining capital prospective payments is set forth in our regulations at 42 CFR 412.308 and 412.312. Under the capital IPPS, payments are adjusted by the same DRG for the case as they are under the operating IPPS. Capital IPPS payments are also adjusted for IME and DSH, similar to the adjustments made under the operating IPPS. In addition, hospitals may receive outlier payments for those cases that have unusually high costs.

The existing regulations governing payments to hospitals under the IPPS are located in 42 CFR part 412, subparts A through M.

2. Hospitals and Hospital Units Excluded From the IPPS

Under section 1886(d)(1)(B) of the Act, as amended, certain hospitals and hospital units are excluded from the IPPS. These hospitals and units are: Inpatient rehabilitation facility (IRF) hospitals and units; long-term care hospitals (LTCHs); psychiatric hospitals and units; children’s hospitals; cancer hospitals; extended neoplastic disease care hospitals, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa). Religious nonmedical health care institutions (RNHCIs) are also excluded from the IPPS. Various sections of the Balanced Budget Act of 1997 (BBA) (Pub. L. 105–33), the Medicare, Medicaid and SCHIP [State Children’s Health Insurance Program] Balanced Budget Refinement Act of 1999 (BBRA, Pub. L. 106–113), and the Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (BIPA, Pub. L. 106–554) provide for the implementation of PPSs for IRF hospitals and units, LTCHs, and psychiatric hospitals and units (referred to as inpatient psychiatric facilities (IPFs)). (We note that the annual updates to the LTCH PPS are included.
along with the IPPS annual update in this document. Updates to the IRF PPS and IPF PPS are issued as separate documents.) Children’s hospitals, cancer hospitals, hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa), and RNHCHs continue to be paid solely under a reasonable cost-based system, subject to a rate-of-increase ceiling on inpatient operating costs. Similarly, extended neoplastic disease care hospitals are paid on a reasonable cost basis, subject to a rate-of-increase ceiling on inpatient operating costs.

The existing regulations governing payments to excluded hospitals and hospital units are located in 42 CFR parts 412 and 413.

3. Long-Term Care Hospital Prospective Payment System (LTCH PPS)

The Medicare prospective payment system (PPS) for LTCHs applies to hospitals described in section 1886(f)(3)(B)(iv) of the Act, effective for cost reporting periods beginning on or after October 1, 2002. The LTCH PPS was established under the authority of sections 123 of the BBRA and section 307(b) of the BIPA (as codified under section 1886(m)(1) of the Act). Section 1206(a) of the Pathway for SGR Reform Act of 2013 (Pub. L. 113–67) established the site neutral payment rate under the LTCH PPS, which made the LTCH PPS a dual rate payment system beginning in FY 2016. Under this statute, effective for LTCH’s cost reporting periods beginning in FY 2016 cost reporting period, LTCHs are generally paid for discharges at the LTCH PPS standard Federal payment rate. The existing regulations governing payment under the LTCH PPS are located in 42 CFR part 412, subpart O. Beginning October 1, 2009, we issue the annual updates to the LTCH PPS in the same documents that update the IPPS.

4. Critical Access Hospitals (CAHs)

Under sections 1814(l), 1820, and 1834(g) of the Act, payments made to critical access hospitals (CAHs) (that is, rural hospitals or facilities that meet certain statutory requirements) for inpatient and outpatient services are generally based on 101 percent of reasonable cost. Reasonable cost is determined under the provisions of section 1861(v) of the Act and existing regulations under 42 CFR part 413.

5. Payments for Graduate Medical Education (GME)

Under section 1886(a)(4) of the Act, costs of approved educational activities are excluded from the operating costs of inpatient hospital services. Hospitals with approved graduate medical education (GME) programs are paid for the direct costs of GME in accordance with section 1886(h) of the Act. The amount of payment for direct GME costs for a cost reporting period is based on the hospital’s number of residents in that period and the hospital’s costs per resident in a base year. The existing regulations governing payments to the various types of hospitals are located in 42 CFR part 413.

C. Summary of Provisions of Recent Legislation Implemented in This Final Rule

Section 414 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA, Pub. L. 114–10) specifies a 0.5 percent positive adjustment to the standardized amount of Medicare payments to acute care hospitals for FYs 2018 through 2023. These adjustments follow the recoupment adjustment to the standardized amounts under section 1886(d) of the Act based upon the Secretary’s estimates for discharges occurring from FYs 2014 through 2017 to fully offset $11 billion, in accordance with section 631 of the ATRA. The FY 2018 adjustment was subsequently adjusted to 0.4588 percent by section 15005 of the 21st Century Cures Act.

Section 9831 of the American Rescue Plan Act of 2021 (Pub. L. 117–2) amended section 1886(d)(3)(E) of the Act (42 U.S.C. 1395ww(d)(3)(E)) to establish a minimum area wage index for hospitals in all-urban States. Specifically, section 1886(d)(3)(E)(iv) of the Act (as added by section 9831(a)(2) of Pub. L. 117–2) reinstates the imputed floor wage index policy for all-urban states effective for discharges on or after October 1, 2021 (FY 2022) with no expiration date using the methodology described in 42 CFR 412.64(h)(4)(vi) as in effect for FY 2018.

D. Issuance of Proposed and Interim Final Rulemakings

1. FY 2022 IPPS/LTCH PPS Proposed Rule

In the FY 2022 IPPS/LTCH PPS proposed rule appearing in the May 10, 2021 Federal Register (86 FR 25070), we set forth proposed payment and policy changes to the Medicare IPPS for FY 2022 operating costs and capital-related costs of acute care hospitals and certain hospitals and hospital units that are excluded from IPPS. In addition, we set forth proposed changes to the payment rates, factors, and other payment and policy-related changes to programs associated with payment rate policies under the LTCH PPS for FY 2022.

The following is a general summary of the changes that we proposed to make.

a. Proposed Changes to MS–DRG Classifications and Recalibrations of Relative Weights

In section II. of the preamble of the proposed rule, we include—

- Proposed changes to MS–DRG classifications based on our yearly review for FY 2022.
- Proposed adjustment to the standardized amounts under section 1886(d) of the Act for FY 2022 in accordance with the amendments made to section 7(b)(1)(B) of Public Law 110–90 by section 414 of the MACRA.
- Proposed recalibration of the MS–DRG relative weights.
- A discussion of the proposed FY 2022 status of new technologies approved for add-on payments for FY 2022, a presentation of our evaluation and analysis of the FY 2022 applicants for add-on payments for high-cost new medical services and technologies (including public input, as directed by Pub. L. 108–173, obtained in a town hall meeting) for applications not submitted under an alternative pathway, and a discussion of the proposed status of FY 2022 new technology applicants under the alternative pathways for certain medical devices and certain antimicrobial products.
- A proposal to extend the New COVID–19 Treatments Add-on Payment (NCTAP) through the end of the fiscal year in which the PHE ends for certain products and discontinue NCTAP for products approved for new technology add-on payments in FY 2022.

b. Proposed Changes to the Hospital Wage Index for Acute Care Hospitals

In section III. of the preamble of the proposed rule, we proposed to revise to the wage index for acute care hospitals and the annual update of the wage data. Specific issues addressed include, but were not limited to, the following:

- The proposed FY 2022 wage index update using wage data from cost reporting periods beginning in FY 2018.
- Calculation, analysis, and implementation of the proposed occupational mix adjustment to the wage index for acute care hospitals for
FY 2022 based on the 2019 Occupational Mix Survey.

- Proposed application of the rural floor and the frontier State floor, and continuation of the low wage index hospital policy.
- Proposed implementation of the imputed floor wage index policy for all-urban States under section 9831 of the American Rescue Plan Act of 2021 (Pub. L. 117–2).
- Proposed revisions to the wage index for acute care hospitals, based on hospital redesignations and reclassifications under sections 1886(d)(8)(B), (d)(8)(E), and (d)(10) of the Act.
- Proposed revisions to the regulations at §412.278 regarding the Administrator’s Review of MGCRB decisions.
- Proposed changes to rural reclassification cancellation requirements at §412.103(g).
- Proposed adjustment to the wage index for acute care hospitals for FY 2022 based on commuting patterns of hospital employees who reside in a county and work in a different area with a higher wage index.
- Proposed labor-related share for the proposed FY 2022 wage index.

Proposed Rebasings and Revising of the Hospital Market Baskets

In section IV. of the preamble of the proposed rule, we proposed to rebase and revise the hospital market baskets for acute care hospitals and update the labor-related share.

d. Other Decisions and Proposed Changes to the IPPS for Operating Costs

In section V. of the preamble of the proposed rule, we discussed proposed changes or clarifications of a number of the provisions of the regulations in 42 CFR parts 412 and 413, including the following:

- Proposed inpatient hospital update for FY 2022.
- Proposed updated national and regional case-mix values and discharges for purposes of determining RRC status.
- The statutorily required IME adjustment factor for FY 2022.
- Proposed changes to the methodologies for determining Medicare DSH payments and the additional payments for uncompensated care.
- Proposed requirements for payment adjustments under the Hospital Readmissions Reduction Program for FY 2022.
- The provision of estimated and newly established performance standards for the calculation of value-based incentive payments, as well as a proposal to suppress multiple measures and provide net-neutral payment adjustments under the Hospital Value-Based Purchasing Program.
- Proposed requirements for payment adjustments to hospitals under the HAC Reduction Program for FY 2022.
- Discussion of and proposed changes relating to the implementation of the Rural Community Hospital Demonstration Program in FY 2022.
- Proposed revisions to the regulations regarding the counting of days associated with section 1115 demonstration projects in the Medicare fraction.
- Proposals to implement provisions of the Consolidated Appropriations Act relating to payments to hospitals for direct graduate medical education (GME) and indirect medical education (IME) costs.
- Proposed repeal of the market-based data collection requirement and market-based MS–DRG relative weight methodology.
- Proposed FY 2022 Policy Governing the IPPS for Capital-Related Costs.

In section VI. of the preamble to the proposed rule, we discussed the proposed payment policy requirements for capital-related costs and capital payments to hospitals for FY 2022.

f. Proposed Changes to the Payment Rates for Certain Excluded Hospitals: Rate-of-Increase Percentages

In section VII. of the preamble of the proposed rule, we discussed the following:

- Proposed changes to payments to certain excluded hospitals for FY 2022.
- Proposed continued implementation of the Frontier Community Health Integration Project (FCHIP) Demonstration.

Proposed Changes to the LTCH PPS

In section VIII. of the preamble of the proposed rule, we set forth proposed changes to the LTCH PPS Federal payment rates, factors, and other payment rate policies under the LTCH PPS for FY 2022.

h. Proposed Changes Relating to Quality Data Reporting for Specific Providers and Suppliers

In section IX. of the preamble of the proposed rule, we addressed the following:

- We requested information on CMS’s future plans to define digital quality measures (dQMs) in CMS Hospital Quality Programs and on CMS’ continued efforts to close the health equity gap in CMS Hospital Quality Programs.
- Proposed requirements for the Hospital Inpatient Quality Reporting (IQR) Program.
- Proposed changes to the requirements for the quality reporting program for PPS-exempt cancer hospitals (PCHQR Program).
- Proposed changes to the requirements under the LTCH Quality Reporting Program (QRP). We also sought information on CMS’s future plans to define digital quality measures (dQMs) for the LTCH QRP and on CMS’ continued efforts to close the health equity gap.
- Proposed changes to requirements pertaining to eligible hospitals and CAHs participating in the Medicare Promoting Interoperability Program.

i. Other Proposals Included in the Proposed Rule

Section X. of the preamble of the proposed rule included the following proposals:

- Proposed changes pertaining to Medicaid enrollment of Medicare-enrolled providers and suppliers to 42 CFR part 455.410 and request for comment on provider experiences where State Medicaid agencies apply the Medicaid payment and coverage rules to a claim for a Medicare service rather than adjudicating the claim for Medicare cost-sharing liability.
- Proposed changes pertaining to Medicare’s share of organ acquisition costs transplanted into Medicare beneficiaries and the charges for services provided to cadaveric organ donors by donor community hospitals and transplants hospitals.
- Proposed changes pertaining to the Shared Savings Program that would allow eligible ACOs participating in the BASIC track’s glide path to maintain their current level of participation for FY 2022.

j. Other Provisions of the Proposed Rule

Section XI. of the preamble to the proposed rule included our discussion of the MedPAC Recommendations.

Section XII. of the preamble to the proposed rule includes the following:

- A descriptive listing of the public use files associated with the proposed rule.
- The collection of information requirements for entities based on our proposals.
- Information regarding our responses to public comments.

k. Determining Prospective Payment Operating and Capital Rates and Rate-of-Increase Limits for Acute Care Hospitals

In sections II. and III. of the Addendum to the proposed rule, we set
forth proposed changes to the amounts and factors for determining the proposed FY 2022 prospective payment rates for operating costs and capital-related costs for acute care hospitals. We proposed to establish the threshold amounts for outlier cases. In addition, in section IV, of the Addendum to the proposed rule, we addressed the proposed update factors for determining the rate-of-increase limits for cost reporting periods beginning in FY 2022 for certain hospitals excluded from the IPPS.

l. Determining Prospective Payment Rates for LTCHs

In section V. of the Addendum to the proposed rule, we set forth proposed changes to the amounts and factors for determining the proposed FY 2022 LTCH PPS standard Federal payment rate and other factors used to determine LTCH PPS payments under both the LTCH PPS standard Federal payment rate and the site neutral payment rate in FY 2022. We are proposing to establish the adjustments for the wage index, labor-related share, the cost-of-living adjustment, and high-cost outliers, including the applicable fixed-loss amounts and the LTCH cost-to-charge ratios (CCRs) for both payment rates.

m. Impact Analysis

In Appendix A of the proposed rule, we set forth an analysis of the impact the proposed changes would have on affected acute care hospitals, CAHs, LTCHs, PCHs and other entities.

n. Recommendation of Update Factors for Operating Cost Rates of Payment for Hospital Inpatient Services

In Appendix B of the proposed rule, as required by sections 1886(e)(4) and (e)(5) of the Act, we provide our recommendations of the appropriate percentage changes for FY 2022 for the following:

• A single average standardized amount for all areas for hospital inpatient services paid under the IPPS for operating costs of acute care hospitals (and hospital-specific rates applicable to SCHs and MDHs).
• Target rate-of-increase limits to the allowable operating costs of hospital inpatient services furnished by certain hospitals excluded from the IPPS.
• The LTCH PPS standard Federal payment rate and the site neutral payment rate for hospital inpatient services provided for LTCH PPS discharges.

o. Discussion of Medicare Payment Advisory Commission Recommendations

Under section 1805(b) of the Act, MedPAC is required to submit a report to Congress, no later than March 15 of each year, in which MedPAC reviews and makes recommendations on Medicare payment policies. MedPAC’s March 2021 recommendations concerning hospital inpatient payment policies address the update factor for hospital inpatient operating costs and capital-related costs for hospitals under the IPPS. We addressed these recommendations in Appendix B of the proposed rule. For further information relating specifically to the MedPAC March 2021 report or to obtain a copy of the report, contact MedPAC at (202) 220–3700 or visit MedPAC’s website at: http://www.medpac.gov.

2. Medicare Geographic Classification Review Board (MGCRB) Interim Final Rule With Comment Period

In the interim final rule with comment period appearing in the May 10, 2021 Federal Register (86 FR 25735) (hereinafter referred to as CMS–1762–IFC), we implemented regulations which allowed hospitals with a rural redesignation under the section XXXX of the Act to reclassify through the Medicare Geographic Classification Review Board (MGCRB) using the rural reclassified area as the geographic area in which the hospital is located.

E. Advancing Health Information Exchange

The Department of Health and Human Services (HHS) has a number of initiatives designed to encourage and support the adoption of interoperable health information technology and to promote nationwide health information exchange to improve health care and patient access to their health information.

To further interoperability in post-acute care settings, CMS and the Office of the National Coordinator for Health Information Technology (ONC) participate in the Post-Acute Care Interoperability Workgroup (PACIO http://pacioproject.org/) to facilitate collaboration with industry stakeholders to develop FHIR standards. These standards could support the exchange and reuse of patient assessment data derived from the Minimum Data Set (MDS), Inpatient Rehabilitation Facility-Patient Assessment Instrument (IRF–PAI), LTCH Continuity Assessment Record and Evaluation (CARE Data Set (LCDS), Outcome and Assessment Information Set (OASIS), and other sources. The PACIO Project has focused on FHIR implementation guides for functional status, cognitive status and new use cases on advance directives and speech language pathology. We encourage post-acute care (PAC) provider and health information technology (IT) vendor participation in the efforts advance.

The CMS Data Element Library (DEL) continues to be updated and serves as the authoritative resource for PAC assessment data elements and their associated mappings to health IT standards, such as Logical Observation Identifiers Names and Codes (LOINC) and Systematized Nomenclature of Medicine Clinical Terms (SNOMED). The DEL furthers CMS’ goal of data standardization and interoperability. These interoperable data elements can reduce provider burden by allowing the use and exchange of healthcare data; supporting provider exchange of electronic health information for care coordination, person-centered care; and supporting real-time, data driven, clinical decision-making. Standards in the Data Element Library (https://del.cms.gov/DELSWeb/pubHome) can be referenced on the CMS website and in the ONC Interoperability Standards Advisory (ISA). The 2021 ISA is available at https://www.healthit.gov/isa.

The 21st Century Cures Act (Cures Act) (Pub. L. 114–255, enacted December 13, 2016) requires HHS to take new steps to enable the electronic sharing of health information ensuring interoperability for providers and settings across the care continuum. The Cures Act includes a trusted exchange framework and common agreement (TEFCA) provision that will enable the nationwide exchange of electronic health information across health information networks and provide an important way to enable bi-directional health information exchange in the future. For more information on current developments related to TEFCA, we refer readers to https://www.healthit.gov/topic/interoperability/trusted-exchange-framework-and-common-agreement and https://rce.sequioaproject.org/.

The ONC final rule entitled “21st Century Cures Act: Interoperability, Information Blocking, and the ONC Health IT Certification Program” (85 FR 25642) published in the May 1, 2020 Federal Register (hereinafter referred to as “Cures Act Final Rule”)

implemented policies related to information blocking as authorized under section 4004 of the 21st Century Cures Act. Information blocking is generally defined as a practice by a health IT developer of certified health IT, health information network, health information exchange, or health care provider that, except as required by law or specified by the HHS Secretary as a reasonable and necessary activity, is likely to interfere with access, exchange, or use of electronic health information.

For a health care provider (as defined in 45 CFR 171.102), the definition of information blocking (see 45 CFR 171.103) specifies that the provider knows that the practice is unreasonable, as well as likely to interfere with access, exchange, or use of electronic health information. To deter information blocking, health IT developers of certified health IT, health information networks and health information exchanges whom the HHS Inspector General determines, following an investigation, have committed information blocking, are subject to civil monetary penalties of up to $1 million per violation. Appropriate disincentives for health care providers need to be established by the Secretary through rulemaking. Stakeholders can learn more about information blocking at https://www.healthit.gov/curesrule/final-rule-policy/information-blocking. OCR has posted information resources including fact sheets (https://www.healthit.gov/curesrule/resources/fact-sheets), frequently asked questions (https://www.healthit.gov/curesrule/resources/information-blocking-faqs), and recorded webinars (https://www.healthit.gov/curesrule/resources/webinars).

We invite providers to learn more about these important developments and how they are likely to affect LTCHs.

F. Use of FY 2020 or FY 2019 Data in the FY 2022 IPPS and LTCH PPS Ratesetting

We primarily use two data sources in the IPPS and LTCH PPS ratesetting: Claims data and cost report data. The claims data source is the MedPAR file, which includes fully coded diagnostic and procedure data for all Medicare inpatient hospital claims for discharges in a fiscal year. Our goal is always to use the best available data overall for ratesetting. Ordinarily, the best available MedPAR data would be the most recent MedPAR file that contains claims from discharges for the fiscal year that is 2 years prior to the fiscal year that is the subject of the rulemaking. For FY 2022 ratesetting, under ordinary circumstances, the best available data would be the FY 2020 MedPAR file. The cost report data source is the Medicare hospital cost report data files from the most recent quarterly HCRIS release. For example, ordinarily, the best available cost report data used in relative weight calculations would be based on the cost reports beginning 3 fiscal years prior to the fiscal year that is the subject of the rulemaking. For the FY 2022 ratesetting, under ordinary circumstances, that would be the FY 2019 cost report data from HCRIS, which would contain many cost reports ending in FY 2020 based on each hospital’s cost reporting period.

In the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25086 through 25090), we discussed that the FY 2020 MedPAR claims file and the FY 2019 HCRIS dataset both contain data significantly impacted by the COVID–19 PHE, primarily in that the utilization of inpatient services was generally markedly different for certain types of services for FY 2020 than would have been expected in the absence of the PHE. Accordingly, we questioned whether these data sources are the best available data to use for the FY 2022 ratesetting. In the proposed rule, we identified two factors for assessing whether these data sources represent the best available data. The first factor is to what extent the FY 2019 data from before the COVID–19 PHE is a better overall approximation of FY 2022 inpatient experience (for example, whether the share of total inpatient utilization for elective surgeries will be more similar to FY 2019 than to FY 2020), or alternatively, to what extent the FY 2020 data which include the COVID–19 PHE time period is a better overall approximation of FY 2022 inpatient experience (for example, whether the share of total inpatient utilization for respiratory infections will be more similar to FY 2020 than to FY 2019). The second factor is to what extent the decision to use the FY 2019 or FY 2020 data differentially impacts the FY 2022 IPPS ratesetting.

In the proposed rule, in order to help assess likely inpatient utilization in FY 2022, we examined the trend in the number of COVID–19 vaccinations in the United States as reported to the Centers for Disease Control (CDC) (see https://www.cdc.gov/coronavirus/2019-ncov/covid-data/covidview/index.html, accessed April 16, 2021).

The U.S. COVID–19 Vaccination Program began December 14, 2020. As of April 15, 2021, 198.3 million vaccine doses had been administered. Overall, about 125.8 million people, or 37.9 percent of the U.S. population, had received at least one dose of vaccine as of this date. About 78.5 million people, or 23.6 percent of the U.S. population had been fully vaccinated. As of April 15, the 7-day average number of administered vaccine doses reported to CDC per day was 3.3 million, a 10.3 percent increase from the previous week. As of April 15, 80 percent of people 65 or older had received at least one dose of vaccine; 63.7 percent were fully vaccinated. Nearly one-half (48.3 percent) of people 18 or older had received at least one dose of vaccine; 30.3 percent were fully vaccinated. Nationally, COVID–19-related emergency department visits as well as both hospital admissions and current hospitalizations had risen among patients ages 18 to 64 in recent weeks, but emergency department visits and hospitalizations among people ages 65 years and older had decreased, likely demonstrating the important role vaccination plays in protecting against COVID–19.

As indicated by the CDC, COVID–19 vaccines are effective at preventing COVID–19. For example, a CDC report on the effectiveness of the Pfizer-BioNTech and Moderna COVID–19 vaccines when administered in real-world conditions found that after being fully vaccinated with either of these vaccines a person’s risk of infection is reduced by up to 90 percent. With respect to inpatient utilization in FY 2020, in the proposed rule we stated our belief that COVID–19 and the risk of disease were drivers of the different utilization patterns observed. Therefore, the continuing rapid increase in vaccinations coupled with the overall effectiveness of the vaccines led us to conclude based on the information

2 For other types of actors (health IT developers of certified health IT and health information network or health information exchange, as defined in 45 CFR 171.102), the definition of “information blocking” (see 45 CFR 171.103) specifies that the actor “knows, or should know, that such practice is likely to interfere with access, exchange, or use of electronic health information.”

3 People who are fully vaccinated (formerly receiving 2 doses) represents the number of people who have received the second dose in a two-dose COVID–19 vaccine series or one dose of the single-dose J&J/Janssen COVID–19 vaccine.

available at the time of the proposed rule that there will be significantly lower risk of COVID–19 in FY 2022 and fewer hospitalizations for COVID–19 for Medicare beneficiaries in FY 2022 than there were in FY 2020. This called into question the applicability of inpatient data from FY 2020 to the FY 2022 time period for hospitals paid under the IPPS and LTCH PPS.

In the proposed rule, we also reviewed CDC guidance to healthcare facilities during the COVID–19 PHE (see https://www.cdc.gov/coronavirus/2019-ncov/hcp/guidance-hcf.html). In its most recent guidance available at the time of the proposed rule, the CDC described how the COVID–19 pandemic has changed how health care is delivered in the United States and has affected the operations of healthcare facilities. Effects cited by the CDC include increases in patients seeking care for respiratory illnesses, patients deferring and delaying non-COVID–19 care, disruptions in supply chains, fluctuations in facilities’ occupancy, absenteeism among staff because of illness or caregiving responsibilities, and increases in mental health concerns.

In the proposed rule, in order to investigate the effects cited by the CDC, we examined the claims data from the FY 2020 MedPAR compared to the FY 2019 MedPAR. Overall, in FY 2020, inpatient admissions under the IPPS dropped by approximately 14 percent compared to FY 2019. Elective surgeries declined significantly, and the share of admissions for MS–DRGs associated with the treatment of COVID–19 increased. For example, the number of inpatient admissions for MS–DRG 470 (Major Hip and Knee Joint Replacement or Reattachment of Lower Extremity without MCC) dropped by 40 percent in FY 2020. Its share of inpatient admissions dropped from 4.0 percent in FY 2019 to 2.8 percent in FY 2020. The number of inpatient admissions for MS–DRG 177 (Respiratory Infections and Inflammations with MCC) increased by +133 percent. Its share of inpatient admissions increased from 0.8 percent in FY 2019 to 2.2 percent in FY 2020. This data analysis from the proposed rule was consistent with the observations in the CDC’s guidance that COVID–19 increased the number of patients seeking care for respiratory illnesses, and caused patients to defer and delay non-COVID–19 care. In the proposed rule, we noted that these observed changes in the claims data also extend to the cost reports submitted by hospitals under the IPPS during the COVID–19 PHE time period, since those cost reports that extend into the COVID–19 PHE are based in part on the discharges that occurred during that time.

In the proposed rule, we concluded that the effects noted by the CDC are specific to the pandemic and to the extent that the effects on healthcare facilities noted by the CDC are not expected to continue into FY 2022, it would suggest that the inpatient data from FY 2020 impacted by the COVID–19 PHE may be less suitable for use in the FY 2022 ratesetting.

In the proposed rule, we also considered the analysis of 2020 IPPS real case-mix included in the notice titled “CY 2021 Inpatient Hospital Deductible and Hospital and Extended Care Services Coinsurance Amounts” that appeared in the Federal Register on November 12, 2020 (85 FR 71916). Section 1813(b) of the Act prescribes the method for computing the amount of the inpatient hospital deductible. The inpatient hospital deductible is an amount equal to the inpatient hospital deductible for the preceding CY, adjusted by the percentage of the payment-weighted average of the applicable percentage increases used for updating the payment rates to hospitals, and adjusted to reflect changes in real case-mix.

To develop the adjustment to reflect changes in real case-mix, we first calculated an average case-mix for each hospital that reflected the relative costliness of that hospital’s mix of cases compared to those of other hospitals. We then computed the change in average case-mix for hospitals paid under the IPPS in FY 2020 compared to FY 2019, using Medicare claims from IPPS hospitals received as of July 2020. Those claims represented a total of about 6.1 million Medicare discharges for FY 2020 and provided the most recent case-mix data available at the time of that analysis. Based on these claims, the change in average case-mix in FY 2020 was 2.8 percent. Based on these claims and past experience, we expected the overall case-mix change to be 3.8 percent as the year progressed and more FY 2020 data became available.

Real case-mix is that portion of case-mix that is due to changes in the mix of cases in the hospital and not due to coding optimization. As stated in the November 2020 notice, COVID–19 has complicated the determination of real case-mix increase. COVID–19 cases typically group to higher-weighted MS–DRGs, and hospitals have experienced a concurrent reduction in cases that group to lower weighted MS–DRGs. Both of these factors cause a real increase in case-mix. We compared the average case-mix for February 2020 through July 2020 (COVID–19 period) with average case-mix for October 2019 through January 2020 (pre-COVID–19 period). Since this increase applies for only a portion of CY 2020, we allocated this increase by the estimated discharges over the 2 periods—a 2.5 percent increase for FY 2020. The 1.3-percent residual case-mix increase is a mixture of real case-mix and coding optimization. Over the past several years, we have observed total case-mix increases of about 0.5 percent per year and have assumed that they are real. Thus, based on the information available, we expect that 0.5 percent of the residual 1.3 percent change in average case-mix for FY 2020 will be real. The combination of the 2.5 percent COVID–19 effect and the remaining residual 0.5-percent real case-mix increase results in an estimated 3.0 percent increase in real case-mix for FY 2020.

Because this analysis was based on Medicare claims from IPPS hospitals received as of July 2020, in the proposed rule, we calculated case-mix values for FY 2019 and FY 2020 based on the full year FY 2019 and FY 2020 MedPAR files to help assess the change in case-mix based on more complete data. For FY 2019 we calculated a case-mix value of 1.813 and for FY 2020 we calculated a case-mix value of 1.883, an increase in total case-mix of 3.9 percent. These were calculated using the MS–DRG relative weights in effect for those time periods.3 This was consistent with the estimate in the Notice of the CY 2021 Inpatient Hospital Deductible and Hospital and Extended Care Services Coinsurance Amounts that the change in total case-mix for FY 2020 would be 3.8 percent when more complete data was available.

The increases in patients seeking care for respiratory illnesses and patients deferring and delaying non-COVID–19 care during FY 2020, the increasing number of vaccinations for COVID–19, and the high estimate of FY 2020 real case-mix growth all led us to believe that FY 2020 is not the best overall approximation of inpatient experience in FY 2022 and that FY 2019 as the most recent complete FY prior to the COVID–19 PHE is a better approximation of FY 2022 inpatient experience. As we indicated in the proposed rule, whether the data is a better overall assessment...
approximation of FY 2022 inpatient experience is one factor in assessing which data source represents the best available data for the FY 2022 rulemaking. Another factor is to what extent the decision to use the FY 2019 or FY 2020 data differentially impacts the FY 2022 ratesetting. One way to assess this factor is to model the change in the total case-mix, which is a driver of spending, if our assumption regarding the FY 2022 inpatient experience used in calculating the MS–DRG relative weights turns out to be less accurate based on actual FY 2022 experience. In the proposed rule, we estimated the difference in the total case-mix if we calculated the MS–DRG relative weights based on the FY 2019 claims data and the actual utilization is ultimately more similar to the FY 2020 data, as compared to if we calculated the MS–DRG relative weights based on the FY 2020 data and the actual utilization is ultimately more similar to the FY 2019 data.

We first calculated a set of MS–DRG relative weights using an assumption that the FY 2022 inpatient experience would be similar to the FY 2019 data. Specifically, we used the proposed version 39 GROUPER (which would be applicable to discharges occurring in FY 2022) and the FY 2019 MedPAR data to calculate MS–DRG relative weights. We refer to these MS–DRG relative weights as the FY 2019-based weights.

We next calculated a set of MS–DRG relative weights using an assumption that the FY 2022 inpatient experience would be more similar to the FY 2020 data. Specifically, we used the proposed version 39 GROUPER and the FY 2020 MedPAR data to calculate MS–DRG relative weights. This is how we would ordinarily calculate the proposed FY 2022 MS–DRG relative weights. We refer to these MS–DRG relative weights as the FY 2020-based weights.

We then estimated the difference in case-mix under the FY 2019-based weights and the FY 2020-based weights

In Scenario A and Scenario C, there is by definition no differential impact on total case-mix due to a less accurate assumption made when the MS–DRG relative weights were calculated: The FY 2022 inpatient experience matches the assumption used when the MS–DRG relative weights were calculated. In Scenario B and Scenario D, it is the reverse of the assumption used when the MS–DRG relative weights were calculated.

In the proposed rule, we explained that in Scenario B, when the FY 2019-based weights were used, but the FY 2022 inpatient experience turns out to be more similar to FY 2020 data, the less accurate assumption does not differentially impact the modelled case-mix. This can be seen by comparing the modelled case-mix under Scenario B (1.885) with the modelled case-mix under Scenario C (also 1.885). In other words, if the FY 2019-based weights and inpatient experience turn out to be more similar to the FY 2020 data, then the modelled case-mix is approximately the same as if we had used the FY 2020-based weights. The results show that use of the FY 2019-based weights did not impact the modelled case-mix compared to using the FY 2020-based weights.

In the proposed rule, we explained that the same conclusion is not true of Scenario D where the FY 2020-based weights were used, but the FY 2022 inpatient experience turns out to be more similar to FY 2019 data. Here the less accurate assumption does differentially impact the modelled case-mix, by −0.2 percent. This can be seen by comparing the modelled case-mix under Scenario D (1.816) with the modelled case-mix under Scenario A (1.820). In other words, if we use the FY 2020-based weights, and FY 2022 inpatient experience turns out to be more similar to FY 2019 data, the modelled case-mix is −0.2 percent lower than if we had used the FY 2019-based weights. This shows that use of the FY 2020-based weights does impact the modelled case-mix compared to a result from using the FY 2019-based weights.

Putting aside that we believe FY 2019 is a more likely approximation of the FY 2022 inpatient experience for the reasons discussed earlier, the previous analysis from the proposed rule indicates that the differential effect of the FY 2022 MS–DRG relative weights is more limited if the FY 2019-based weights are used than it is if the FY 2020-based weights are used, should the FY 2022 inpatient experience not match the assumption used to calculate the MS–DRG relative weights.
Another payment factor that is impacted by the use of the FY 2019 or FY 2020 data in the FY 2022 ratesetting is the outlier fixed-loss threshold. As discussed in section II.A.4.j. of the proposed rule, section 1886(d)(5)[A] of the Act provides for payments in addition to the basic prospective payments for “outlier” cases involving extraordinarily high costs. To qualify for outlier payments, a case must have costs greater than the sum of certain payments and the “outlier threshold” or “fixed-loss” amount (a dollar amount by which the costs of a case must exceed payments in order to qualify for an outlier payment). In accordance with section 1886(d)(5)[A](iv) of the Act, outlier payments for any year are projected to be not less than 5 percent nor more than 6 percent of total operating DRG payments plus outlier payments. We target 5.1 percent within this range. Section 1886(d)(3)[B] of the Act requires the Secretary to reduce the average standardized amount by a factor to account for the estimated proportion of total DRG payments made to outlier cases. In other words, outlier payments are prospectively estimated to be budget neutral overall under the IPPS.6

In the proposed rule, under an assumption that the FY 2022 inpatient experience will be more similar to FY 2019 data, we estimated an outlier fixed-loss amount of $30,967. Under an assumption that FY 2022 inpatient experience will be more similar to FY 2020 data, we estimated an outlier fixed-loss amount of $36,843, a difference of $5,876 or approximately 20 percent higher. Again, putting aside that we believe FY 2019 is a better approximation of the FY 2022 inpatient experience for the reasons discussed earlier, we concluded in the proposed rule that the difference between the two estimated outlier fixed-loss amounts means there is a consequence to making a decision as to the best available data for estimating the FY 2022 outlier fixed-loss amount in the form of potentially exceeding or falling short of the targeted 5.1 percent of total operating DRG payments plus outlier payments.

In summary, in the proposed rule, we highlighted two factors in the decision regarding the best available data to use in the FY 2022 ratesetting. The first factor was to what extent the FY 2019 data from COVID–19 PHE is a better overall approximation of FY 2022 inpatient experience, or alternatively, to what extent the FY 2020 data including the COVID–19 PHE time period is a better overall approximation of FY 2022 inpatient experience. After analyzing this issue and for the reasons discussed, in the proposed rule we stated our belief that FY 2019 is generally a better overall approximation of FY 2022. The second factor was to what extent the decision to use the FY 2019 or FY 2020 data differentially impacts the FY 2022 IPPS ratesetting. After analyzing this issue, in the proposed rule we determined that the decision does differentially impact the overall FY 2022 IPPS ratesetting in two primary ways. First, a decision to base the MS–DRG relative weights on the FY 2020 data has an impact of −0.2 percent if the FY 2022 inpatient experience is more like FY 2019 data. Second, the decision to use the FY 2019 or FY 2020 data results in an approximately 20 percent difference in the estimate of the outlier fixed-loss amount.

Taking these factors into account, in the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25089) we proposed to use the FY 2019 data for the FY 2022 ratesetting for circumstances where the FY 2020 data is significantly impacted by the COVID–19 PHE. A commenter was supportive of our proposal but noted that transplant volume was higher in 2020 than 2019. However, the commenter stated that it recognized that due to the nature of hospital admissions during 2020 and the number and types of procedures provided in the hospital during the PHE, use of 2019 data is necessary. A commenter who stated they did not disagree with our proposal, expressed a concern that surges in COVID–19 cases could still occur in the future, making it impossible to predict whatFY 2022 will look like. The commenter mentioned the slowing COVID–19 vaccination rate in many areas and the emergence of new COVID–19 variants that the COVID–19 vaccines were not tested against as reasons to support this concern.

Some commenters were supportive of our proposal, but urged CMS to make or consider certain technical adjustments when calculating the FY 2022 relative weights. We refer readers to section I.E. of the preamble to this final rule for a complete discussion of these comments. A few commenters objected to CMS not considering the role of the market basket update and the effect of COVID–19 PHE. A commenter was supportive of CMS not using FY 2020 data to calculate the payment adjustment for CAR T-cell clinical trial and expanded access use immunotherapy cases. We refer readers to section VIII.A.4. of the preamble to this final rule for a complete discussion of these comments. A commenter expressed concern about not using FY 2020 data in FY 2022 ratesetting for the LTCH PPS, in particular with respect to how the additional costs LTCHs incurred in 2020 will be reflected in future years’ rates. We believe this commenter may have misunderstood the role of the market basket update and refer readers to section VIII.A.4. of the preamble to this final rule for a complete discussion of this comment.

Response: We appreciate the commenters’ support of our proposal to use the FY 2019 data for the FY 2022 ratesetting for circumstances where the FY 2020 data is significantly impacted by the COVID–19 PHE. In response to the commenter who expressed concerns about the possibility of future surges in COVID–19 making it impossible to predict what FY 2022 will look like, we appreciate the feedback. However, we believe the most recent vaccination and
hospitalization data reported by the CDC, discussed later in this section, support our assumption that there will be significantly lower risk of COVID–19 in FY 2022 and fewer hospitalizations for COVID–19 for Medicare beneficiaries in FY 2022 than there were in FY 2020. To address to the extent possible the commenter’s concerns about the efficacy of the COVID–19 vaccines against new variants, we refer the reader to the June 25th weekly summary report from the CDC that states “recent studies have shown that the vaccines available in the United States are effective against variants currently circulating, including B.1.617.2.”

Since the publication of the proposed rule, we have continued to monitor the vaccine and hospitalization data reported by the CDC (see https://www.cdc.gov/coronavirus/2019-ncov/covid-data/covidview/past-reports/07022021.html, accessed July 6, 2021). As of July 1, 2021, 328.2 million vaccine doses have been administered. Overall, about 181.3 million people, or 54.6 percent of the U.S. population, have received at least one dose of vaccine as of this date. About 155.9 million people, or 47.0 percent of the U.S. population have been fully vaccinated. As of July 1, the 7-day average number of administered vaccine doses reported to CDC per day was 334,816, a 45.3 percent decrease from the previous week. As of July 1, 2021, 88.2 percent of people 65 or older have received at least one dose of vaccine; 78.3 percent are fully vaccinated. Two-thirds (66.7 percent) of people 18 or older have received at least one dose of vaccine; 57.7 percent are fully vaccinated. Nationally, the COVID–19-related 7-day moving average for new hospital admissions has been generally decreasing since publication of the proposed rule, demonstrating the important role vaccination is playing in protecting against COVID–19. As of July 3, 2021 (the most recent date with data available at the time of writing), the 7-day moving average for new hospital admissions was 1,821, down significantly from the 7-day moving average peak of 16,492 recorded on January 9th, 2021 and the 7-day moving average of 5,075 recorded on April 27, 2021, the date the proposed rule was issued.

In the proposed rule, we analyzed the significant growth in real-case mix observed in the FY 2020 MedPAR claims data. This analysis was consistent with the observations in the CDC’s guidance that COVID–19 increased the number of patients seeking care for respiratory illnesses, and caused patients to defer and delay non-COVID–19 care. While we acknowledge that the rate of vaccination for the U.S. population has slowed considerably since we released the proposed rule, the total number of vaccines administered, especially for people 65 or older, along with the latest hospitalization trends, lead us to continue to believe that there will be a significantly lower risk of COVID–19 in FY 2022 and fewer hospitalizations for COVID–19 for Medicare beneficiaries in FY 2022 than there were in FY 2020. For these reasons, we continue to believe that FY 2020 is not the best overall approximation of inpatient experience in FY 2022 and that FY 2019 as the most recent complete FY prior to the COVID–19 PHE is a better approximation of FY 2022 inpatient experience. Therefore, after considering the comments received and evaluating the most recent vaccination and hospitalization data from the CDC, we are finalizing our proposal to use the FY 2019 data for the FY 2022 ratesetting for circumstances where the FY 2020 data is significantly impacted by the COVID–19 PHE, primarily in that the data reflect generally markedly different utilization for certain types of services in FY 2020 than would have been expected in the absence of the PHE, as discussed previously. For example, in this final rule we used the FY 2019 MedPAR claims data for purposes where we ordinarily would have used the FY 2020 MedPAR claims data, such as in our analysis of changes to MS–DRG classifications (as discussed in greater detail in section II.D. of the preamble of this final rule). Similarly, we used cost report data from the FY 2018 HCRIS file for purposes where we ordinarily would have used the FY 2019 HCRIS file, such as in determining the FY 2022 IPPS MS–DRG relative weights (as discussed in greater detail in section I.E. of the preamble of this final rule). (As noted previously, the FY 2019 HCRIS data would contain many cost reports ending in FY 2020 based on each hospital’s cost reporting period.)

We note that MedPAR claims data and cost report data from the HCRIS file are examples of the data sources for which we describe the use of the FY 2019 data for the FY 2022 ratesetting in this final rule. We have clearly identified throughout this final rule where and how we are using alternative data than what ordinarily would be used for the FY 2022 IPPS and LTCH PPS ratesetting, including certain provider specific information.

II. Changes to Medicare Severity Diagnosis-Related Group (MS-DRG) Classifications and Relative Weights

A. Background

Section 1886(d) of the Act specifies that the Secretary shall establish a classification system (referred to as diagnosis-related groups (DRGs) for inpatient discharges and adjust payments under the IPPS based on appropriate weighting factors assigned to each DRG. Therefore, under the IPPS, Medicare pays for inpatient hospital services on a rate per discharge basis that varies according to the DRG to which a beneficiary’s stay is assigned. The formula used to calculate payment for a specific case multiplies an individual hospital’s payment rate per case by the weight of the DRG to which the case is assigned. Each DRG weight represents the average resources required to care for cases in that particular DRG, relative to the average resources used to treat cases in all DRGs.

Section 1886(d)(4)(C) of the Act requires that the Secretary adjust the DRG classifications and relative weights at least annually to account for changes in resource consumption. These adjustments are made to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources.

B. Adoption of the MS–DRGs and MS–DRG Reclassifications

For information on the adoption of the MS–DRGs in FY 2008, we refer readers to the FY 2008 IPPS final rule with comment period (72 FR 47140 through 47189).

For general information about the MS–DRG system, including yearly reviews and changes to the MS–DRGs, we refer readers to the previous discussions in the FY 2010 IPPS/RY 2010 LTCH PPS final rule (74 FR 43764 through 43766) and the FYs 2011 through 2021 IPPS/LTCH PPS final rules (75 FR 50053 through 50055; 76 FR 51465 through 51487; 77 FR 53273; 78 FR 50512; 79 FR 49871; 80 FR 49342; 81 FR 56787 through 56872; 82 FR 39010 through 34085; 83 FR 41158 through 41258; 84 FR 42058 through 42165, and 85 FR 58445 through 58596 respectively).
C. FY 2022 MS–DRG Documentation and Coding Adjustment

1. Background on the Prospective MS–DRG Documentation and Coding Adjustments for FY 2008 and FY 2009

Authorized by Public Law 110–90 and the Recoupment or Repayment Adjustment Authorized by Section 631 of the American Taxpayer Relief Act of 2012 (ATRA).

In the FY 2008 IPPS final rule with comment period (72 FR 47140 through 47189), we adopted the MS–DRG patient classification system for the IPPS, effective October 1, 2007, to better recognize severity of illness in Medicare payment rates for acute care hospitals. The adoption of the MS–DRG system resulted in the expansion of the number of DRGs from 538 in FY 2007 to 745 in FY 2008. By increasing the number of MS–DRGs and more fully taking into account patient severity of illness in Medicare payment rates for acute care hospitals, MS–DRGs encourage hospitals to improve their documentation and coding of patient diagnoses.

In the FY 2008 IPPS final rule with comment period (72 FR 47175 through 47186), we indicated that the adoption of the MS–DRGs had the potential to lead to increases in aggregate payments without a corresponding increase in actual patient severity of illness due to the incentives for additional documentation and coding. In that final rule with comment period, we exercised our authority under section 1886(d)(3)(A)(vi) of the Act, which authorizes us to maintain budget neutrality by adjusting the national standardized amount, to eliminate the estimated effect of changes in coding or classification that do not reflect real changes in case mix. Our actuaries estimated that maintaining budget neutrality required an adjustment of −4.8 percentage points to the national standardized amount. We provided for phasing in this −4.8 percentage point adjustment over 3 years. Specifically, we established prospective documentation and coding adjustments of −1.2 percentage points for FY 2008, −1.8 percentage points for FY 2009, and −1.8 percentage points for FY 2010.

On September 29, 2007, Congress enacted the TMA [Transitional Medical Assistance], Abstinence Education, and QI [Qualifying Individuals] Programs Extension Act of 2007 (Pub. L. 110–90). Section 7(a) of Public Law 110–90 reduced the documentation and coding adjustment made as a result of the MS–DRG system that we adopted in the FY 2008 IPPS final rule with comment period to −0.6 percentage point for FY 2008 and −0.9 percentage point for FY 2009.

As discussed in prior year rulemakings, and most recently in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56780 through 56782), we implemented a series of adjustments required under sections 7(b)(1)(A) and 7(b)(1)(B) of Public Law 110–90, based on a retroactive review of FY 2008 and FY 2009 claims data. We completed these adjustments in FY 2013 but indicated in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53274 through 53275) that delaying full implementation of the adjustment required under section 7(b)(1)(A) of Public Law 110–90 until FY 2013 resulted in payments in FY 2010 through FY 2012 being overstated, and that these overpayments could not be recovered under Public Law 110–90. In addition, as discussed in prior rulemakings and most recently in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38008 through 38009), section 631 of the American Taxpayer Relief Act of 2012 (ATRA) amended section 7(b)(1)(B) of Public Law 110–90 to require the Secretary to make a recoupment adjustment or adjustments totaling $11 billion by FY 2017. This adjustment represented the amount of the increase in aggregate payments as a result of not completing the prospective adjustment authorized under section 7(b)(1)(A) of Public Law 110–90 until FY 2013.

2. Adjustments Made for FYs 2018, 2019, 2020, and 2021 as Required Under Section 414 of Public Law 114–10 (MACRA) and Section 15005 of Public Law 114–255

As stated in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56785), once the recoupment required under section 631 of the ATRA was complete, we had anticipated making a single positive adjustment in FY 2018 to offset the reductions required to recoup the $11 billion under section 631 of the ATRA. However, section 414 of the MACRA (which was enacted on April 16, 2015) replaced the single positive adjustment we intended to make in FY 2018 with a 0.5 percentage point positive adjustment for each of FYs 2018 through 2023. In the FY 2017 rulemaking, we indicated that we would address the adjustments for FY 2018 and later fiscal years in future rulemaking. Section 15005 of the 21st Century Cures Act (Pub. L. 114–255), which was enacted on December 13, 2016, amended section 7(b)(1)(B) of the ATRA, as amended by section 631 of the ATRA (82 FR 38008 through 38009) and section 414 of the MACRA, to reduce the adjustment for FY 2018 from a 0.5 percentage point positive adjustment to a 0.4588 percentage point positive adjustment. As discussed in the FY 2018 rulemaking, we believe the directive under section 15005 of Public Law 114–255 is clear. Therefore, in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38009) for FY 2018, we implemented the required +0.4588 percentage point adjustment to the standardized amount. In the FY 2019 IPPS/LTCH PPS final rule (83 FR 41157), the FY 2020 IPPS/LTCH PPS final rule (84 FR 42057), and the FY 2021 IPPS/LTCH PPS final rule (85 FR 58444 and 58445), consistent with the requirements of section 414 of the MACRA, we implemented 0.5 percentage point positive adjustments to the standardized amount for FY 2019, FY 2020, and FY 2021, respectively. We indicated the FY 2018, FY 2019, FY 2020, and FY 2021 adjustments were permanent adjustments to payment rates. We also stated that we plan to propose future adjustments required under section 414 of the MACRA for FYs 2022 and 2023 in future rulemaking.

3. Adjustment for FY 2022

Consistent with the requirements of section 414 of the MACRA, we proposed to implement a 0.5 percentage point positive adjustment to the standardized amount for FY 2022. We stated that this proposed adjustment would constitute a permanent adjustment to payment rates. We also stated that we plan to propose the final adjustment required under section 414 of the MACRA for FY 2023 in future rulemaking.

Comment: A commenter reiterated their position from prior year comments that CMS misinterpreted the relevant statutory authority, which they believe explicitly assumes that the ATRA recoupment would result in negative adjustments totaling −3.2 percentage points completed through FY 2017, rather than the cumulative −3.9 percentage point adjustment made by CMS. The commenter stated that CMS should have made an additional 0.7 percent positive adjustment to the standardized amount in FY 2018. The commenter stated that the failure to make this adjustment resulted in an incorrect reduction in the standardized amount for all subsequent years. We also received multiple comments recommending that CMS commit to use its authority (a commenter specifically citing CMS’s authority under § 1886(d)(5)(l) of the Act) to restore the full amount of the cumulative −3.9 percentage point adjustment made to achieve the $11 billion targeted by the ATRA. A commenter requested CMS
specify the method for full repayment of this reduction to all providers by FY 2023 in the final rule, instead of waiting until future rulemaking to propose the final adjustment for FY 2023.

Response: As we discussed in response to a similar comment in the FY 2021 IPPS/LTC PPS final rule (85 FR 58444 through 58445) and in prior rules, we believe section 414 of the MACRA and section 15005 of the 21st Century Cures Act set forth the levels of positive adjustments for FYs 2018 through 2023. We are not convinced that the adjustments prescribed by MACRA were predicated on a specific adjustment level estimated or implemented by CMS in previous rulemaking. We see no evidence that Congress enacted these adjustments with the intent that CMS would make an additional +0.7 percentage point adjustment in FY 2018 to compensate for the higher than expected final ATRA adjustment made in FY 2017, nor are we persuaded that it would be appropriate to use the Secretary’s exceptions and adjustments authority under section 1886(d)(5)(I) of the Act to adjust payments in FY 2022 to restore any additional amount of the original 3.9 percentage point reduction, given Congress’ prescriptive adjustment levels under section 414 of the MACRA and section 15005 of the 21st Century Cures Act. CMS did not propose the specific level of adjustment to be made in FY 2023, and therefore we will proceed as planned to discuss the future (and final) adjustment under section 414 of the MACRA in FY 2023 rulemaking.

After consideration of the public comments we received, we are finalizing our proposal to implement a 0.5 percentage point adjustment to the standardized amount for FY 2022.

D. Changes to Specific MS–DRG Classifications

1. Discussion of Changes to Coding System and Basis for FY 2022 MS–DRG Updates

a. Conversion of MS–DRGs to the International Classification of Diseases, 10th Revision (ICD–10)

As of October 1, 2015, providers use the International Classification of Diseases, 10th Revision (ICD–10) coding system to report diagnoses and procedures for Medicare hospital inpatient services under the MS–DRG system instead of the ICD–9–CM coding system, which was used through September 30, 2015. The ICD–10 coding system includes the International Classification of Diseases, 10th Revision, Clinical Modification (ICD–10–CM) for diagnosis coding and the International Classification of Diseases, 10th Revision, Procedure Coding System (ICD–10–PCS) for inpatient hospital procedure coding, as well as the ICD–10–CM and ICD–10–PCS Official Guidelines for Coding and Reporting. For a detailed discussion of the conversion of the MS–DRGs to ICD–10, we refer readers to the FY 2017 IPPS/LTC PPS final rule (81 FR 56787 through 56789).

b. Basis for FY 2022 MS–DRG Updates

Given the need for more time to carefully evaluate requests and propose updates, as discussed in the FY 2018 IPPS/LTC PPS final rule (82 FR 38010), we changed the deadline to request updates to the MS–DRGs to November 1 of each year, which provided an additional five weeks for the data analysis and review process. In the FY 2021 IPPS/LTC PPS proposed rule (85 FR 32472), we stated that with the continued increase in the number and complexity of the requested changes to the MS–DRG classifications, since the adoption of ICD–10 MS–DRGs, and in order to consider as many requests as possible, more time is needed to carefully evaluate the requested changes, analyze claims data, and consider any proposed updates. We further stated we were changing the deadline to request changes to the MS–DRGs to October 20 of each year to allow for additional time for the review and consideration of any proposed updates. However, in the FY 2021 IPPS/LTC PPS final rule (85 FR 58445), due to the unique circumstances for the FY 2021 IPPS/LTC PPS final rule for which we waived the delayed effective date, we maintained the deadline of November 1, 2020 for FY 2022 MS–DRG classification change requests. We also noted that we expected to reconsider a change in the deadline beginning with comments and suggestions submitted for FY 2023. We stated in the proposed rule that while we continue to believe that a change in the deadline from November 1 to October 20 will provide hospitals sufficient time to assess potential impacts and inform future MS–DRG recommendations, we are maintaining the deadline of November 1 for FY 2023 MS–DRG classification change requests.

Comment: Commenters expressed support for a future change to the deadline for requesting updates to the MS–DRG classifications from November 1 to October 20. The commenters also recommended that CMS consider implementing an additional submission deadline, such as earlier in the calendar year. Additional, while the current process to submit requests for changes to the MS–DRG classifications may be submitted at any time prior to the fall deadline, a second target submission date may encourage interested parties to submit requests earlier in the year and enable additional time for CMS to carefully evaluate requested changes, analyze claims data and consider proposed changes.

Response: We appreciate the commenters feedback and support for our discussion regarding a future change to the deadline for requesting updates to the MS–DRG classifications from November 1 to October 20. We also thank the commenters for the suggestion to add a second submission date, and may consider any changes to the deadline and/or the frequency for submissions of requests for MS–DRG classification changes for future fiscal years.

Interested parties had to submit MS–DRG classification change requests for FY 2022 by November 1, 2020, and the comments that were submitted in a timely manner for FY 2022 are discussed in this section of the preamble of this final rule. As we discuss in the sections that follow, we may not be able to fully consider all of the requests that we receive for the upcoming fiscal year. We have found that, with the implementation of ICD–10, some types of requested changes to the MS–DRG classifications require more extensive research to identify and analyze all of the data that are relevant to evaluating the potential change. We note in the discussion that follows those topics for which further research and analysis are required, and which we will continue to consider in connection with future rulemaking. Interested parties should continue to submit any comments and suggestions for FY 2023 by November 1, 2021 via the CMS MS–DRG Classification Change Request Mailbox located at: MSDRGClassificationChange@cms.hhs.gov.

We provided a test version of the ICD–10 MS–DRG GROUPER Software, Version 39, in connection with the FY 2022 IPPS/LTC PPS proposed rule so that the public could better analyze and understand the impact of the proposals included in the proposed rule. We noted that this test software reflected the proposed GROUPER logic for FY 2022. Therefore, it included the new diagnosis and procedure codes that are effective for FY 2022 as reflected in Table 6A.—New Diagnosis Codes—FY 2022 and Table 6B.—New Procedure Codes—FY 2022 that were associated with the proposed rule and did not include the diagnosis codes that are included beginning in FY 2022 as reflected in Table 6C.—Invalid Diagnosis Codes—
FY 2022 and Table 6D.—Invalid Procedure Codes—FY 2022 that was associated with the proposed rule. Those tables were not published in the Addendum to the proposed rule, but are available via the internet on the CMS website at: https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html as described in section VI. of the Addendum to the proposed rule. Because the diagnosis and procedure codes no longer valid for FY 2022 are not reflected in the test software, we made available a supplemental file in Table 6P.1a that included the mapped Version 39 FY 2022 ICD–10–CM codes and the deleted Version 38 FY 2021 ICD–10–CM codes that should be used for testing purposes with users’ available claims data. In addition, we made available a supplemental file in Table 6P.1b that included the mapped Version 39 FY 2022 ICD–10–PCS codes and the deleted Version 38 FY 2021 ICD–10–PCS codes that should be used for testing purposes with users’ available claims data. Therefore, users had access to the test software allowing them to build case examples that reflect the proposals that were included in the proposed rule. In addition, users were able to view the draft version of the ICD–10 MS–DRG Definitions Manual, Version 39.

Following are the changes that we proposed to the MS–DRGs for FY 2022. We invited public comments on each of the MS–DRG classification proposed changes, as well as our proposals to maintain certain existing MS–DRG classifications discussed in the proposed rule. In some cases, we proposed changes to the MS–DRG classifications based on our analysis of claims data and consultation with our clinical advisors. In other cases, we proposed to maintain the existing MS–DRG classifications based on our analysis of claims data and consultation with our clinical advisors. As discussed in section I.F. of the preamble of the proposed rule, we proposed to use claims data from the March 2020 update of the FY 2019 MedPAR file in our analysis of proposed MS–DRG classification changes for FY 2022, consistent with our goal of using the best available data overall for ratesetting. Alternatively, we also provided the results of our analysis of proposed MS–DRG classification changes using claims data from the September 2020 update of the FY 2020 MedPAR file. As a result, for the FY 2022 IPPS/LTCH PPS proposed rule, our MS–DRG analysis was based on ICD–10 claims data from the March 2020 update of the FY 2019 MedPAR file, which contains hospital claims received from October 1, 2018 through March 31, 2020, for discharges occurring through September 30, 2019. In addition, we also analyzed ICD–10 claims data from the September 2020 update of the FY 2020 MedPAR file, which contains hospital claims received from October 1, 2019 through September 30, 2020, for discharges occurring through September 30, 2020. In our discussion of the proposed MS–DRG reclassification changes, we referred to these claims data as the “March 2020 update of the FY 2019 MedPAR file” and the “September 2020 update of the FY 2020 MedPAR file.”

In this FY 2022 IPPS/LTCH PPS final rule, we summarize the public comments we received on our proposals, present our responses, and state our final policies. For this FY 2022 final rule, we generally did not perform any further MS–DRG analysis of claims data. Therefore, the MS–DRG analysis is based on ICD–10 claims data from both the March 2020 update of the FY 2019 MedPAR file and the September 2020 update of the FY 2020 MedPAR file, as set forth in the proposed rule, except as otherwise noted. As explained in previous rulemaking (76 FR 51487), in deciding whether to propose to make further modifications to the MS–DRGs for particular circumstances brought to our attention, we consider whether the resource consumption and clinical characteristics of the patients with a given set of conditions are significantly different than the remaining patients represented in the MS–DRG. We evaluate patient care costs using average costs and lengths of stay and rely on the judgment of our clinical advisors to determine whether patients are clinically distinct or similar to other patients represented in the MS–DRG. In evaluating resource costs, we consider both the absolute and percentage differences in average costs between the cases we select for review and the remainder of cases in the MS–DRG. We also consider variation in costs within these groups; that is, whether observed average differences are consistent across patients or attributable to cases that are extreme in terms of costs or length of stay, or both. Further, we consider the number of patients who will have a given set of characteristics and generally prefer not to create a new MS–DRG unless it would include a substantial number of cases.

In the FY 2022 IPPS/LTCH PPS final rule (85 FR 58448), we finalized our proposal to expand our existing criteria to create a new complication or comorbidity (CC) or major complication or comorbidity (MCC) subgroup within a base MS–DRG. Specifically, we finalized the expansion of the criteria to include the NonCC subgroup for a three-way severity level split. We stated we believed that applying these criteria to the NonCC subgroup would better reflect resource stratification as well as promote stability in the relative weights by avoiding low volume counts for the NonCC level MS–DRGs. We noted that in our analysis of MS–DRG classification requests for FY 2021 that were received by November 1, 2019, as well as any additional analyses that were conducted in connection with those requests, we applied these criteria to each of the MCC, CC, and NonCC subgroups. We also noted that the application of the NonCC subgroup criteria going forward may result in modifications to certain MS–DRGs that are currently split into three severity levels and result in MS–DRGs that are split into two severity levels. We stated that any proposed modifications to the MS–DRGs would be addressed in future rulemaking consistent with our annual process and reflected in Table 5—Proposed List of Medicare Severity Diagnosis Related Groups (MS–DRGs), Relative Weighting Factors, and Geometric and Arithmetic Mean Length of Stay for the applicable fiscal year.

In our analysis of the MS–DRG classification requests for FY 2022 that we received by November 1, 2020, as well as any additional analyses that were conducted in connection with those requests, we applied these criteria to each of the MCC, CC, and NonCC subgroups, as described in the following table.
In general, once the decision has been made to propose to make further modifications to the MS–DRGs as described previously, such as creating a new base MS–DRG, or in our evaluation of a specific MS–DRG classification request to split (or subdivide) an existing base MS–DRG into severity levels, all five criteria must be met for the base MS–DRG to be split (or subdivided) by a CC subgroup. We note that in our analysis of requests to create a new MS–DRG, we typically evaluate the most recent year of MedPAR claims data available. For example, in the FY 2022 IPPS/LTCH PPS proposed rule we stated our MS–DRG analysis was based on ICD–10 claims data from both the March 2020 update of the FY 2019 MedPAR file and the September 2020 update of the FY 2020 MedPAR file. However, in our evaluation of requests to split an existing base MS–DRG into severity levels, as noted in prior rulemaking (80 FR 49368), we typically analyze the most recent two years of data. This analysis includes 2 years of MedPAR claims data to compare the data results from 1 year to the next to avoid making determinations about whether additional severity levels are warranted based on an isolated year’s data fluctuation and also, to validate that the established severity levels within a base MS–DRG are supported. The first step in our process of evaluating if the creation of a new CC subgroup within a base MS–DRG is warranted is to determine if all the criteria are satisfied for a two way split. If the criteria fail, the next step is to determine if the criteria are satisfied for a two way split. If the criteria for both of the two way splits fail, then a split (or CC subgroup) would generally not be warranted for that base MS–DRG. If the three way split fails on any one of the five criteria and all five criteria for both two way splits (1, 23, and 12.3) are met, we would apply the two way split with the highest R2 value. We note that if the request to split (or subdivide) an existing base MS–DRG into severity levels specifies the request is for either one of the two way splits (1, 23, 12, or 12.3), in response to the specific request, we will evaluate the criteria for both of the two way splits, however we do not also evaluate the criteria for a three way split.

In the FY 2022 IPPS/LTCH PPS proposed rule, we stated that using the March 2020 update of the FY 2019 MedPAR file and the September 2020 update of the FY 2020 MedPAR file, we analyzed how applying the NonCC subgroup criteria to all MS–DRGs currently split into three severity levels would affect the MS–DRG structure beginning in FY 2022. We noted that findings from our analysis indicated that approximately 32 MS–DRGs would be subject to change based on the three-way severity level split criterion finalized in FY 2021. Specifically, we found that applying the NonCC subgroup criteria to all MS–DRGs currently split into three severity levels would result in the deletion of 96 MS–DRGs (32 MS–DRGs × 3 severity levels = 96) and the creation of 58 new MS–DRGs. We further noted that these updates would also involve a redistribution of cases, which would impact the relative weights, and, thus, the payment rates proposed for particular types of cases. We referred the reader to Table 6P.1c associated with the proposed rule for the list of the 96 MS–DRGs that would be subject to deletion and the list of the 58 new MS–DRGs that would be proposed for creation for FY 2022 under this policy if the NonCC subgroup criteria were applied.

We stated in the proposed rule that in light of the public health emergency (PHE), we had concerns about the impact of implementing this volume of MS–DRG changes at this time, and our belief that it may be appropriate to delay application of the NonCC subgroup criteria to existing MS–DRGs in order to maintain more stability in the current MS–DRG structure. Therefore, we proposed to delay the application of the NonCC subgroup criteria to existing MS–DRGs with a three-way severity level split until FY 2023, and proposed for FY 2022 to maintain the current structure of the 32 MS–DRGs that currently have a three-way severity level split (total of 96 MS–DRGs) that would otherwise be subject to these criteria.

Comment: Several commenters expressed support for our proposal to delay the application of the expanded three-way severity level split criteria to the NonCC subgroup until fiscal year 2023 in light of the PHE, and to maintain the current structure of the MS–DRGs. Many commenters also recommended that a complete analysis of the MS–DRG changes to be proposed for fiscal year 2023 in connection with the expanded three-way severity split criteria be conducted and made available to enable the public an opportunity to review and consider the redistribution of cases, which would impact the relative weights, for example, Table 5—Proposed List of Medicare Severity
Diagnosis Related Groups (MS–DRGs), Relative Weighting Factors, and Geometric and Arithmetic Mean Length of Stay), payment rates and hospital case mix to allow meaningful comment prior to implementation. A few commenters suggested delaying the application of the expanded three-way severity split NonCC subgroup criteria until fiscal year 2024 to allow analysis of claims data from FY 2022 that may better reflect post pandemic utilization. Another commenter recommended delaying any changes until FY 2025. A commenter expressed concern that changes to the underlying MS–DRG structure may inadvertently exacerbate payment differentials between different types of hospitals (e.g., urban versus rural) based on the types of services they provide, which may negatively impact Medicare beneficiary access to some services. Another commenter stated it reviewed its hospital specific data and had concerns that the “with cc” level will be reduced on several MS–DRGs. This commenter stated that if its case mix remains the same it would continue to treat many patients with comorbid conditions and receive payment consistent with a MS–DRG at the “without cc” level. The commenter identified the following four MS–DRGs that appeared to be impacted the most with respect to lost revenue, MS–DRG 617 (Amputation of Lower Limb for Endocrine, Nutritional and Metabolic Disorder with CC); MS–DRG 847 (Chemotherapy without Acute Leukemia as Secondary Diagnosis with CC); MS–DRG 854 (Infectious and Parasitic Diseases with O.R. Procedure with CC) and MS–DRG 958 (Other O.R. Procedures for Multiple Significant Trauma with CC). Lastly, the commenter recommended that CMS also further assess other proposed groupings, such as the maternity MS–DRGs, due to historically low volumes in these MS–DRGs and to determine if it would be appropriate to combine any of them.

Another commenter requested that CMS provide data transparency to illustrate volumes by MS–DRG that support the proposal for changes to the 96 MS–DRGs discussed in the FY 2022 IPPS/LTCH PPS proposed rule and to also consider patient mix for the obstetric MS–DRGs. This commenter also suggested that CMS examine the impact for surgical versus medical MS–DRGs with respect to redistribution and associated impacts to the relative weights. According to the commenter, the impact appears to be greater for surgical MS–DRGs.

Finally, a commenter who expressed support for CMS’ proposal to delay implementation of the expanded three-way severity split criteria to the NonCC subgroup recommended that any proposed changes to the structure of the MS–DRGs should consist of the impact of the proposed CC/MCC redesign and not the current CC/MCC structure that is scheduled to be changed. Response: We appreciate the commenters’ support. In response to the recommendation that a complete analysis of the MS–DRG changes to be proposed for FY 2023 in connection with the application of the expanded three-way severity split criteria to the NonCC subgroup be conducted and made publicly available, we plan to perform and make publicly available a more detailed analysis in connection with any future proposed changes, consistent with our annual claims analysis for MS–DRG classification change proposals. With respect to the commenters who suggested delaying the application of the expanded three-way severity split NonCC subgroup criteria until fiscal year 2024 or later, including to allow the use of FY 2022 claims data, we appreciate the feedback and will take these suggestions under consideration.

In response to the commenters who expressed concern that changes to the underlying MS–DRG structure may inadvertently exacerbate payment differentials between different types of hospitals based on the types of services they provide, or would have the greatest impacts with respect to particular MS–DRGs, we note that generally, changes to the MS–DRG classifications and related policies under the IPPS that are implemented on an annual basis may affect payment for different types of hospitals depending on the services they provide, and, note that we intend to conduct and make publicly available analysis of the application of the NonCC subgroup criteria in connection with any future proposed changes, consistent with our annual MS–DRG analysis, including with respect to particular MS–DRGs.

We appreciate the commenters’ feedback suggesting further review of the maternity (obstetric) MS–DRGs and agree that these groupings warrant special consideration. As discussed in prior rulemaking (83 FR 41210), we cannot adopt the same approach to refine the maternity and newborn MS–DRGs because of the extremely low volume of Medicare patients there are in these DRGs.

In response to the commenter who requested that CMS provide data transparency to illustrate volumes by MS–DRG to support the proposal for changes to the 96 MS–DRGs discussed in the FY 2022 IPPS/LTCH PPS proposed rule, we refer the reader to Table 6P.1l associated with this final rule and available via the internet at https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS. This table displays the volume (case counts) by each MS–DRG based on claims data from the March 2020 update of the FY 2019 MedPAR file and the September 2020 update of the FY 2020 MedPAR file.

We also thank the commenter for its suggestion to examine the impact for surgical versus medical MS–DRGs and agree that type of information can be useful for stakeholders.

With respect to the commenter who recommended that any proposed changes to the structure of the MS–DRGs should consist of the impact of the proposed CC/MCC redesign and not the current CC/MCC structure that is scheduled to be changed, it is not clear to us from the limited comment if the commenter is referring to the potential changes in connection with the comprehensive CC/MCC analysis that is currently in progress. We note that any proposed modifications to the MS–DRGs would be addressed in future rulemaking, including any proposed changes to the severity level designation of diagnosis codes, and would be considered and taken into account with application of the NonCC subgroup criteria.

After consideration of the public comments we received, we are finalizing our proposal to delay the application of the NonCC subgroup criteria to existing MS–DRGs until FY 2023 or later, and are finalizing for FY 2022 to maintain the current structure of the 32 MS–DRGs that currently have a three-way severity level split.

2. Pre-MDC: MS–DRG 018 Chimeric Antigen Receptor (CAR) T-Cell Therapy

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58451 through 58453), we finalized our proposal to create Pre-MDC MS–DRG 018 (Chimeric Antigen Receptor (CAR) T-cell Immunotherapy) and to reassign cases reporting ICD–10–PCS procedure codes XW033C3 (Introduction of engineered autologous chimeric antigen receptor t-cell...
immunotherapy into peripheral vein, percutaneous approach, new technology group 3) or XW043C3 (Introduction of engineered autologous chimeric antigen receptor t-cell immunotherapy into central vein, percutaneous approach, new technology group 3) from Pre-MDC MS–DRG 016 (Autologous Bone Marrow Transplant with CC/MCC or T-cell Immunotherapy), to new Pre-MDC MS–DRG 018 effective with discharges on and after October 1, 2020. We also finalized our proposal to revise the title for MS–DRG 016 from “Autologous Bone Marrow Transplant with CC/MCC or T-cell Immunotherapy” to “Autologous Bone Marrow Transplant with CC/MCC” to reflect these changes.

Additionally, in the FY 2021 IPPS/LTCH PPS final rule in response to public comments expressing concern that Pre-MDC MS–DRG 018 is specific to one mechanistic approach to cellular therapy, and in response to commenters who sought clarification on how future CAR T-cell and non-CAR T-cell therapy products would be assigned, we stated that if additional cellular therapies should become available, we would use our established process to determine the MS–DRG assignment. The commenters requested that CMS provide flexibility for future cellular therapies, as they are made available and not restrict Pre-MDC MS–DRG 018 to CAR T-cell therapies alone. In this section of this rule, we discuss the assignment of these therapies in more detail.

As discussed in the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25094), during the September 8–9, 2020 ICD–10 Coordination and Maintenance Committee meeting, several topics involving requests for new procedure codes related to CAR T-cell therapies, non-CAR T-cell therapies and other immunotherapies were discussed. We referred the reader to the CMS website at: https://www.cms.gov/Medicare/Coding/ICD10/C-and-M-Meeting-Materials for additional detailed information regarding these requests for new procedure codes.

Additionally, in the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25094), for new procedure codes that have been finalized through the ICD–10 Coordination and Maintenance Committee meeting process and are proposed to be classified as O.R. procedures or non-O.R. procedures affecting Pre-MDC MS–DRG 018, as shown in Table 6B.—New Procedure Codes, lists the new procedure codes that describe the administration of CAR T-cell and non-CAR T-cell therapies and other immunotherapies. As stated in the proposed rule, consistent with our established process, we examined the MS–DRG assignment for the predecessor codes to determine the most appropriate MS–DRG assignment and, consistent with the assignment of those predecessor codes, we proposed to classify the following new procedure codes affecting Pre-MDC MS–DRG 018, as shown in Table 6B.—New Procedure Codes associated with the proposed rule and available via the internet on the CMS website at https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index/.
In connection with our proposed assignment of the listed procedure codes to Pre-MDC MS–DRG 018, we also proposed to revise the title for Pre-MDC MS–DRG 018 “Chimeric Antigen Receptor (CAR) T-cell Immunotherapy” to “Chimeric Antigen Receptor (CAR) T-cell and Other Immunotherapies” to better reflect the cases reporting the administration of non-CAR T-cell therapies and other immunotherapies that would also be assigned to this MS–DRG (for example, Introduction of lifileucel immunotherapy into peripheral vein, percutaneous approach, new technology group 7).

**Comment:** Several commenters agreed with the proposal to assign the listed ICD–10–PCS procedure codes to Pre-MDC MS–DRG 018 and to revise the title to include “Other Immunotherapies.” A commenter who expressed support for the change to Pre-MDC MS–DRG 018 stated its view that the domain of cellular therapeutics will become increasingly important in the care of Medicare beneficiaries with cancer in the future and that creating sufficient plasticity in the diagnostic coding system to permit the continued integration of new and innovative therapeutics into the evidence-based care of Medicare beneficiaries is essential. Another commenter stated they appreciated the recognition of the differentiated nature of cancer care, as well as the importance of innovation in
the domain of immune-oncology, which it stated was a necessary part of effective, equitable cancer care delivery to CMS beneficiaries who receive their care at both PPS and PPS-Exempt centers to ensure equitable access. A commenter stated the proposed change to Pre-MDC MS–DRG 018 furthers the goal of securing expedited access for Medicare beneficiaries to innovative therapies. Another commenter stated the proposal responds to stakeholder concerns that currently, Pre-MDC MS–DRG 018 is specific to one mechanistic approach to cellular therapy. This same commenter and other commenters stated the proposal is also responsive to stakeholder requests that CMS provide flexibility for future cellular therapies as they are made available, and not restrict Pre-MDC MS–DRG 018 to CAR T-cell therapies alone.

However, some commenters who expressed appreciation of CMS’ recognition of non-CAR T-cell immunotherapy and a need to revise the description for Pre-MDC MS–DRG 018 requested further clarification from CMS on what the “Other Immunotherapies” terminology is intended to include. The commenters stated the term “Other Immunotherapies” is very general and may lead to confusion since “immunotherapy” is a broad term that is applied across several therapeutic areas (for example Diabetes, Rheumatoid Arthritis, Cancer, etc.) to describe treatments that stimulate an immune response within patients. A commenter stated that the National Cancer Institute differentiates immunotherapy for cancer patients into several types (for example, Immune checkpoint inhibitors, T-cell transfer therapy, Monoclonal antibodies, etc.). This commenter stated their belief that CMS is not intending to refer to a broad array of immunotherapy and suggested that more precise language in the description of Pre-MDC MS–DRG 018 may be beneficial. Some commenters recommended that CMS consider using terminology such as “Immune Effector Cells” in place of “Other Immunotherapies” with respect to the description of the MS–DRG. Other commenters suggested that CMS consider revising the title for Pre-MDC MS–DRG 018 to “Autologous T-cell Immunotherapies”. Another commenter stated they recognized the intent of the proposed change and commended the effort by CMS to ensure that future cellular and CAR T-cell therapies are rapidly assigned to a MS–DRG to allow for proper payment, however, similar to other commenters, this commenter requested clarification as to whether the proposed revision to the title of Pre-MDC MS–DRG 18 is intended to incorporate solely cellular and CAR T-cell therapies, or whether the goal is to include all cancer immunotherapeutic agents since the term “immunotherapy” is broad and future novel cancer immunotherapeutic agents may have different resource utilization.

A commenter acknowledged that CMS is faced with a challenging landscape in incorporating the administration of new gene and cell therapies into the IPPS and recognized that CMS’ proposed assignment of procedure codes describing the administration of tumor-infiltrating lymphocyte (TIL) therapies to MS–DRG 018 is to the most similar MS–DRG that covers similar clinical characteristics and comorbidities. However, whether for TIL therapies or other products in the pipeline, the commenter recommended that CMS consider the following factors when determining a permanent payment mechanism:

- Patient diagnosis and product indication (solid vs. blood cancers)
- Cell collection methodologies (tissue biopsy, pheresis, etc.)
- Product administration methodologies
- Patient clinical care regimes and durations
- Product safety and toxicity profiles that impact inpatient care and follow-up

According to the commenter, society experts state there are distinct and important differences in these factors between TIL therapies and CAR T-cell therapies that may support reconsideration of the MS–DRG assignment after a product is approved by the FDA and is used to treat Medicare beneficiaries. The commenter recommended further consideration of the appropriateness and patient access implications, based on these factors, before grouping the two types of therapies together on a long-term basis. This commenter also suggested that if CMS finalized a change to the title of MS–DRG 018 to include TIL therapies upon their initial approval, as proposed, that the title of the MS–DRG more clearly reflect the specialized products assigned to it.

A few commenters urged CMS to finalize the proposal while continuing to work with stakeholders on ways to improve the predictability and stability of hospital payment for these complex, novel cell therapies that provide options for patients who so desperately need them. Other commenters stated that if the proposed revision to the title for Pre-MDC MS–DRG 018 is finalized, that CMS should continue to monitor and assess the appropriateness of therapies assigned to MS–DRG 018, if they continue to be aligned on resource use, and whether additional refinements or MS–DRGs may be warranted in the future. The commenters also suggested that CMS consider and detail a process for creating new Pre-MDC MS–DRGs that reflect utilization and clinical similarity consistent with the current overall IPPS infrastructure while maintaining important resource and clinical differences to maintain relative weight stability.

Other commenters opposed or expressed strong concerns with the proposal to assign the procedure codes describing non-CAR T-cell and other immunotherapies to Pre-MDC MS–DRG 018 and to revise the title of the MS–DRG. These commenters stated that assigning therapies that are clinically distinct from CAR T-cell therapies and may vary in resource use has the potential to distort future rate setting and will disrupt the Agency’s measured multi-year approach in establishing a MS–DRG dedicated to CAR T-cell therapy. According to the commenters, expanding the MS–DRG to other immunotherapies one year after it has been implemented holds the risk of creating additional payment uncertainty around CAR T-cell therapies. The commenters urged CMS to maintain Pre-MDC MS–DRG 018 specifically for autologous CAR T-cell therapies only, as a long-term solution for reliable and predictable payments that will enable hospitals to provide access to CAR T-cell therapies for Medicare beneficiaries.

Some commenters recommended that CMS publicly propose MS–DRG mappings in advance of making a final assignment decision and provide an opportunity for stakeholders to submit comments with respect to proposed mappings. Other commenters stated the new technology add-on payment process should be independent of the process for obtaining a MS–DRG assignment for a new code.

A few commenters provided specific information relating to the process that is involved for patients undergoing treatment with CAR T-cell therapy. The commenters outlined the stage of leukapheresis where T-cells are separated and removed from the blood and the remaining blood is returned to the body, followed by the T-cells being sent to a manufacturing facility where they are genetically engineered and grown in a laboratory until millions of T-cells are produced. These commenters stated they do not agree with the assignment of procedure codes describing non-CAR T-cell therapies and other
immunotherapies to Pre-MDC MS–DRG 018 stating the treatment processes are distinctly different and that some products have yet to be approved by the FDA.

A commenter who specifically opposed the modification of Pre-MDC MS–DRG 018 for FY 2022 stated that there are not any non-CAR T-cell therapy FDA approved products that are anticipated in the near term. This commenter further stated that CMS’ proposal to include “other immunotherapies” in the description for Pre-MDC MS–DRG 018 is overly broad and risks inclusion of therapeutics which are not well aligned with CAR T-cell cases being mapped to this MS–DRG. According to the commenter, CMS has not provided sufficient detail about the rationale and supporting evidence for assignment of non-CAR T-cell products to MS–DRG 018. The commenter also stated that the term “immunotherapy” could describe products that treat a range of conditions, and those products may have different experience with potential complications and expected length of stay than CAR T-cell products as well as different costs for the product itself. This same commenter recommended that CMS provide evidence of clinical consistency and resource use alignment in future rulemaking when proposing therapies that may map to Pre-MDC MS–DRG–018 and allow for public comments. Another commenter expressed concern that the proposed change to encompass “other immunotherapies” in Pre-MDC MS–DRG 018 could set a precedent for creating “generic” MS–DRGs for gene therapies, which, according to the commenter, could hamper timely beneficiary access to needed treatment. This commenter urged CMS to limit Pre-MDC MS–DRG 018 to all types of CAR T-cell therapies and to consider creating new MS–DRGs for therapies, such as gene therapies, outside the CAR T-cell space.

Response: We thank the commenters for their support of our proposal to assign the listed procedure codes describing CAR T-cell, non-CAR T-cell and other immunotherapies to Pre-MDC MS–DRG 018 and to modify the title for Pre-MDC MS–DRG 018 to reflect this assignment. As previously noted, we used our established process to examine the MS–DRG assignment for the predecessor codes to determine the most appropriate MS–DRG assignment. Specifically, we reviewed the predecessor code and MS–DRG assignment most closely associated with the new procedure code, and in the absence of claims data, we considered other factors that may be relevant to the MS–DRG assignment, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis and/or treatment of the condition. We have noted in prior rulemaking that this process does not automatically result in the new procedure code being assigned to the same MS–DRG or to have the same designation (O.R. versus Non-O.R.) as the predecessor code. As stated in the preamble of the proposed rule and discussed in this final rule, we proposed to classify the new procedure codes as Non-O.R. procedures affecting Pre-MDC MS–DRG 018, as shown in Table 6B—New Procedure Codes that was associated with the proposed rule and available via the internet on the CMS website at https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index/, providing the opportunity for public comment on the MDC, MS–DRG assignment and designation.

The predecessor code and associated MS–DRG assignment (if applicable) for the listed codes are as follows:

</table>
exception of four procedure codes (XW033G7, XW033L7, XW043G7, and XW043L7) that have a predecessor code that was designated Non-O.R. and did not impact any MS–DRG assignment. Two of the four codes describe the introduction (administration) of an allogeneic CAR T-cell therapy and are intended to capture any allogeneic CAR T-cell products that may become available and do not yet have a unique procedure code. The other two codes specifically describe the product lifileucel. We believe that at this time, as the field of cellular and gene immunotherapies is continuing to evolve very rapidly, that it is appropriate to initially classify the procedure codes describing allogeneic CAR T-cell therapy and lifileucel to Pre-MDC MS–DRG 018 because there are clinical similarities with respect to the administration of these products, the complexity of the conditions in which they are treating, and resource utilization that are consistent with other CAR T-cell products currently assigned to the MS–DRG. As a commenter specifically noted in its support to assign the procedure codes describing the introduction of lifileucel (XW033L7 and XW043L7) to Pre-MDC MS–DRG 018, both lifileucel (a tumor-infiltrating lymphocyte or TIL therapy) and CAR T-cell therapies require collection of a patient’s lymphocyte cells which are a key component of a complicated manufacturing process to produce a patient-specific therapeutic dose, both are primarily administered in the inpatient setting due to risk of significant but treatable adverse events and the resources are anticipated to be comparable with respect to the intensity of patient care that includes the treatment phase, monitoring, management of any adverse events, and length of stay. While for TIL therapy the source of the lymphocyte is the patient’s tumor and is obtained through surgical resection, and for CAR T-cell therapy the source of the lymphocyte is the patient’s blood, obtained through apheresis, both therapies require a patient’s lymphocytes. We also appreciate another commenter’s recognition of the challenges involved with incorporating the administration of new gene and cellular therapies into the IPPS and the view that assignment of procedure codes describing the administration of tumor-infiltrating lymphocyte (TIL) therapies to Pre-MDC MS–DRG 018 is to the most similar MS–DRG that reflects similar clinical characteristics and comorbidities. With respect to allogeneic CAR T-cell therapies, it is understood that these therapies are not derived from a patient’s own cells and therefore are not “autologous”, however, the resources and complexity in the care and clinical management of these patients may be considered comparable when taking into account diagnosis, prognosis, and treatment difficulty (for example, frequent adjustments in dosing regimens in efforts to prevent rejection of the new cells and susceptibility to infection). We note that the definition of a MS–DRG will not be so specific that every patient is identical, rather, the level of variation is known and predictable. Thus, while the precise resource intensity of a patient cannot be predicted, the average pattern of resource intensity of a group of patients in a MS–DRG can be accurately predicted.

We also appreciate the commenter’s feedback on factors to consider for products that are in the pipeline with respect to MS–DRG assignment as a permanent payment mechanism. We agree that there may be distinctions to account for as we continue to gain more experience in the utilization of these therapies and have additional claims data to analyze.

We acknowledge the commenters’ concerns that the term “Other Immunotherapies” that was proposed for the title of Pre-MDC MS–DRG 018 may be considered broad. While, as several commenters stated in their comments, cellular therapies and gene therapies are an evolving field, the term “Other Immunotherapies” is intended to encompass the group of therapies that are currently available and being utilized today (for which codes have been created for reporting in response to industry requests or being considered for implementation), and to enable appropriate MS–DRG assignment for any future therapies that may also fit into this category and are not specifically identified as a CAR T-cell product, that may become available (for example receive marketing authorization or a newly established procedure code in the ICD–10–PCS classification during FY 2022. We appreciate the suggestions to consider alternative terminology for the title (description) of Pre-MDC MS–DRG 018 and look forward to continuing to work with stakeholders on this issue in the future. At this time, for FY 2022, we believe it is premature to finalize any of the suggested title revisions by commenters to Pre-MDC MS–DRG 018 that may not fully reflect the various types of therapies and products described by the different procedure codes that are assigned or may be considered for assignment there in FY 2022. We also note that any proposed changes to modify the logic for case assignment and/or the title to Pre-MDC MS–DRG 018 would be considered in future rulemaking. We further note that the process of code creation and proposed assignment to the most appropriate MS–DRG exists independently, regardless of whether there is an associated application for a new technology add-on payment for a product or technology submitted for consideration in a given fiscal year. Specifically, requests for a new code(s) or updates to existing codes are addressed through the ICD–10 Coordination and Maintenance Committee meetings where code proposals are presented and the public is provided the opportunity to comment. All codes finalized after the September meeting must be reviewed and are subsequently proposed for assignment under the ICD–10 MS–DRGs through notice and comment rulemaking. Codes that are finalized after the March meeting are also reviewed and subject to our established process of initially reviewing the predecessor codes MS–DRG assignment and designation, while considering other relevant factors as previously described. The codes that are finalized after the March meeting are specifically identified with a footnote in Tables 6A.—New Diagnosis Codes and Table 6B.—New Procedure Codes that are made publicly available in association with the final rule via the internet on the CMS website at https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS. The public may provide feedback on these finalized assignments which are then taken into consideration for the following fiscal year. We refer the reader to section I.II.16 of the preamble of this final rule for additional information regarding the ICD–10 Coordination and Maintenance Committee meeting process. Lastly, we note that while some of the commenters opposed the revision to the title and assignment of the new ICD–10–PCS procedure codes to Pre-MDC MS–DRG 018, these commenters did not provide any alternative MS–DRGs for CMS to consider.

In response to concerns involving payment uncertainty, we disagree that modifying Pre-MDC MS–DRG 018 to include other immunotherapies one year after it has been implemented carries a risk of creating additional payment uncertainty around CAR T-cell therapies and volatility in the relative weight for Pre-MDC MS–DRG 018. As stated in section I.II.2.b. of the preamble of the proposed rule and this
final rule, we proposed and are finalizing to maintain the methodology for the relative weight calculation for Pre-MDC MS–DRG 018. We refer the reader to section II.E.2.b. of the preamble of this final rule for the detailed discussion. Since the new procedure codes describing CAR T-cell, non-CAR T-cell or other immunotherapies are effective with discharges on and after October 1, 2021 and based on our understanding that the administration of these therapies continues to be in clinical trials, any claims reporting these new procedure codes containing diagnosis code Z00.6 or having standardized drug charges of less than $373,000 would be excluded from the calculation of the relative weight for Pre-MDC MS–DRG 018. During this timeframe, as additional claims data is made available, we will be better positioned to further evaluate if changes to the current methodology or other modifications to the procedure code assignments and MS–DRG are warranted.

We appreciate the unique process that is involved with the development and production of CAR T-cell therapies, however, under the IPPS, when evaluating appropriate MS–DRG assignment for technologies (for example devices) that are utilized in the performance of a procedure we do not take into consideration how a specific device is manufactured compared to how other similar devices are manufactured. Rather, we analyze and consider the procedure(s) for which the technology is utilized for or in, and the resources involved in the performance of the procedure. As discussed, based on the information to date, we believe that the initial assignment of the listed procedure codes is appropriate. Based on the nature of some comments, it appears commenters were suggesting that CMS apply the criteria that is utilized for the new technology add-on application process when suggesting what factors CMS should consider for MS–DRG assignment of CAR T-cell, non-CAR T-cell, and other immunotherapies. We note that the new technology add-on application criteria is separate and distinct from the code request process and subsequent MS–DRG assignment process.

In response to the commenter who stated there are not any non-CAR T-cell therapy FDA approved products that are anticipated in the near term, we wish to clarify that the proposed and final assignment of a procedure code to a MS–DRG is not dependent upon a product’s approval. Similarly, the creation of a code to describe a technology that is utilized in the performance of a procedure or service does not require FDA approval of the technology.

With respect to the commenters’ recommendation for CMS to continue to assess the appropriateness of the therapies being proposed or finalized to group to Pre-MDC MS–DRG 018, we note that, as discussed in the preamble of the proposed rule and this final rule we use our established process to examine the MS–DRG assignment for the most appropriate MS–DRG assignment and, consistent with the assignment of those predecessor codes, we propose to classify new procedure codes as shown Table 6B.—New Procedure Codes in association with the proposed rule each year. The procedure codes describing CAR T-cell, non-CAR T-cell or other immunotherapies are effective with discharges on and after October 1, 2021 as shown in Table 6B.—New Procedure Codes associated with this final rule and available via the internet on the CMS website at: https://www.cms.gov/medicare/fee-for-service-payment/acuteinpatientpps.

In connection with the new procedure codes (and diagnosis codes), the MS–DRGs are reviewed and recalibrated on an annual basis to specifically identify changes in utilization and resources, and to allow the opportunity for public comment on proposed changes under the IPPS.

In response to the comment that the term “immunotherapy” could describe products that treat a range of conditions, we note that for FY 2022 we are addressing an immediate need to account for any upcoming therapies that may be made available that are not specifically classified as a CAR T-cell therapy to enable appropriate payment and predictability. We note that the ICD–10–CM diagnosis codes identify specific conditions and are available for tracking indications and other purposes. We also note that because MS–DRG 018 is a Pre-MDC, the logic for case assignment is dependent on the procedure codes that are specifically assigned to the logic of the MS–DRG. Therefore, if a particular type of immunotherapy is not specifically described by one of the procedure codes that are listed in the definition (logic) for Pre-MDC MS–DRG 018, then the logic for case assignment to this MS–DRG would not be satisfied and another MS–DRG would be appropriately assigned based on the GROUPER logic (the definition of the MS–DRG).

After consideration of the public comments, and based on our understanding that the new immunotherapies for which new procedure codes have been created and are effective October 1, 2021 or that may be created and become effective during FY 2022, we can evaluate that data to determine if further modifications to Pre-MDC MS–DRG 018 are warranted. We plan to continue engaging with stakeholders on additional options for consideration in this field of cellular and gene therapies, such as the creation of new and distinct MS–DRGs and to determine if the creation of a new MDC (Major Diagnostic Category) may be warranted to which unique MS–DRGs could be established and the appropriate corresponding procedure codes could be proposed for assignment.

3. MDC 03 (Diseases and Disorders of Ear, Nose, Mouth and Throat)

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58462 through 58471), we finalized our proposal to create two new base MS–DRGs, 140 and 143, with a three-way severity level split for new MS–DRGs 140, 141, and 142 (Major Head and Neck Procedures with MCC, with CC, and without CC/MCC, respectively) and new MS–DRGs 143, 144, and 145 (Other Ear, Nose, Mouth and Throat O.R. Procedures with MCC, with CC, and without CC/MCC, respectively). We provided the list of procedure codes that were finalized to define the logic for the new MS–DRGs in Tables 6P.2a, 6P.2b, and 6P.2c associated with the final rule and available via the internet on the CMS website at https://www.cms.gov/Medicare/medicare-fee-for-service-payment/AcuteInpatientPPS/index1. As discussed in the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25095 through 25098), we received two separate but related requests to review and reconsider the MS–DRG assignments for a subset of the procedure codes listed in Table 6P.2a (procedure codes assigned to MS–DRGs 140, 141, and 142) and Table 6P.2b (procedure codes assigned to MS–DRGs 143, 144, and 145). In this section of this rule, we discuss each of these separate, but related requests.
The requestor provided the following procedure codes from Table 6P.2a associated with the FY 2021 IPPS/LTCH PPS final rule for CMS to examine.

The requestor stated that the listed procedure codes do not appear appropriately assigned to MS–DRGs 140, 141, and 142. According to the requestor, if any one of the five procedure codes describing a procedure performed on the cranial cavity (0W9100Z, 0W910ZZ, 0WC10ZZ, 0WC13ZZ, or 0WX14ZZ) is assigned in conjunction with a principal diagnosis from MDC 03 (Diseases and Disorders of Ear, Nose, Mouth, and Throat), it appears more appropriate that cases reporting the diagnosis and procedure combination would group to MS–DRGs 25, 26, and 27 (Craniotomy and Endovascular Intracranial Procedures with MCC, with CC, and without CC/MCC, respectively) (for example, “craniotomy” MS–DRGs in MDC 01 (Diseases and Disorders of the Central Nervous System) or to MS–DRGs 981, 982, and 983 (Extensive O.R. Procedures Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively). The requestor stated that drainage and extirpation from the cranial cavity always involves drilling or cutting through the skull regardless of the approach, therefore the five procedure codes identified warrant assignment to the “craniotomy” MS–DRGs. For the three procedure codes describing excision of subcutaneous tissue of chest, back, or abdomen (0JB60ZZ, 0JB70ZZ, and 0JB80ZZ), the requestor stated those codes should group to MS–DRGs 987, 988, and 989 (Non-extensive O.R. Procedures with and without CC/MCC, respectively) in MDC 03 under version 131 and 132 (Cranial and Facial Procedures with and without CC/MCC, respectively) in MDC 03 under version 37 of the ICD–10 MS–DRGs prior to the restructuring that was finalized effective FY 2021 for MS–DRG 129 (Major Head and Neck Procedures with CC/MCC or Major Device) and MS–DRG 130 (Major Head and Neck Procedures without CC/ MCC), MS–DRGs 131 and 132, and MS–DRGs 133 and 134 (Other Ear, Nose, Mouth and Throat O.R. Procedures with and without CC/MCC, respectively).

We stated in the proposed rule that, in the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25096 through 25097), we stated that we reviewed this request and noted that the five procedure codes describing procedures performed on the cranial cavity are already assigned to MDC 01 and group to the “craniotomy” MS–DRGs (25, 26, and 27) when reported with a principal diagnosis from MDC 01, and are also currently classified as Extensive O.R. procedures, resulting in assignment to MS–DRGs 981, 982, and 983 when any one of the five procedure codes is reported on the claim and is unrelated to the MDC to which the case was assigned based on the principal diagnosis. We also noted that in addition to MS–DRGs 25, 26, and 27, MS–DRG 23 (Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis with MCC or Chemotherapy Implant or Epilepsy with Neurostimulator) and MS–DRG 24 (Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis without MCC) include procedures performed on structures located within the cranial cavity, are included in the range of MS–DRGs known as the “craniotomy” MS–DRGs in MDC 01, and the five procedure codes submitted by the requestor describing procedures performed on the cranial cavity are also assigned to these MS–DRGs. We referred the requestor to Appendix E of the ICD–10 MS–DRG Definitions Manual for further discussion of how each procedure code may be assigned to multiple MDCs and MS–DRGs under the IPPS. The ICD–10 MS–DRG Definitions Manual is located on the CMS website at https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/EndStageRenalDisease/ICD10CM-Codes.html#classifications-and-software for assignment to MS–DRGs 140, 141, and 142. However, we also stated we believe that the codes are appropriate for assignment in MDC 03 and noted that the three procedure codes were previously assigned to MS–DRGs 133 and 134 (Other Ear, Nose, Mouth and Throat O.R. Procedures with and without CC/MCC, respectively).
Throat O.R. Procedures with and without CC/MCC, respectively) in MDC 03 prior to the restructuring that was finalized effective FY 2021 for MS–DRGs 129, 130, 131, 132, 133, and 134. We also provided the following clarification in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58470), as stated in the ICD–10 MS–DRG Definitions Manual, “In each MDC there is usually a medical and a surgical class referred to as “other medical diseases” and “other surgical procedures,” respectively. The “other” medical and surgical classes are not as precisely defined from a clinical perspective. The other classes would include diagnoses or procedures, which were infrequently encountered or not well defined clinically. For example, the “other” medical class for the Respiratory System MDC would contain the diagnoses “other somatoform disorders” and “congenital malformation of the respiratory system,” while the “other” surgical class for the female reproductive MDC would contain the surgical procedures “excision of liver” (liver biopsy in ICD–9–CM) and “inspection of peritoneal cavity” (exploratory laparotomy in ICD–9–CM). The “other” surgical category contains surgical procedures which, while infrequent, could still reasonably be expected to be performed for a patient in the particular MDC.”

In the proposed rule, we noted that during our review of procedure codes 0JB60ZZ, 0JB70ZZ, and 0JB80ZZ (describing excision of subcutaneous tissue of chest, back, and abdomen, respectively) we also confirmed that these procedures are currently designated as Extensive O.R. procedures. Consistent with other procedure codes on the Non-extensive procedure code list, we stated we do not believe the procedures described by these procedure codes necessarily utilize the resources or have the level of technical complexity as the procedures on the Extensive O.R. procedures list. Therefore, we agreed that the procedure codes describing these procedures would be more appropriately designated as Non-extensive procedures and group to MS–DRGs 987, 988, and 989 (Non-extensive O.R. Procedures Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) when any one of the three procedure codes is reported on a claim and is unrelated to the MDC to which the case was assigned based on the principal diagnosis. We referred the reader to section II.D.10. of the preamble of the proposed rule for further discussion regarding our proposal to reassign these procedure codes from MS–DRGs 981, 982, and 983 (Extensive O.R. Procedures Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) to MS–DRGs 987, 988, and 989 (Non-extensive O.R. Procedures Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) for FY 2022.

Therefore, we proposed to reassign the three procedure codes describing excision of subcutaneous tissue of chest, back, or abdomen (0JB60ZZ, 0JB70ZZ, and 0JB80ZZ) from MS–DRGs 140, 141, and 142 (Major Head and Neck Procedures with MCC, with CC, and without CC/MCC, respectively) to MS–DRGs 143, 144, and 145 (Other Ear, Nose, Mouth and Throat O.R. Procedures with MCC, with CC, and without CC/MCC, respectively) in MDC 03 for FY 2022. We refer the reader to section II.D.10. of the preamble of this final rule for further discussion regarding the designation of these codes as Extensive O.R. procedures versus Non-extensive O.R. procedures and our finalized reassignment of these codes from MS–DRGs 981, 982, and 983 to MS–DRGs 987, 988, and 989 for FY 2022.

Comment: Commenters supported the proposed reassignment of the three procedure codes describing excision of subcutaneous tissue of chest, back, or abdomen from MS–DRGs 140, 141, and 142 to MS–DRGs 143, 144, and 145 (Other Ear, Nose, Mouth and Throat O.R. Procedures with MCC, with CC, and without CC/MCC, respectively) versus MS–DRGs 981, 982, and 983 (Extensive O.R. Procedures Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) or to MS–DRGs 987, 988, and 989 (Non-extensive O.R. Procedures Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) for FY 2022.

Response: We appreciate the commenters’ support.

After consideration of the public comments we received, we are finalizing our proposal to reassign procedure codes 0JB60ZZ, 0JB70ZZ, and 0JB80ZZ describing excision of subcutaneous tissue of chest, back, or abdomen from MS–DRGs 140, 141, and 142 to MS–DRGs 143, 144, and 145 for FY 2022.

b. Other Ear, Nose, Mouth and Throat O.R. Procedures

As discussed in the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25097 through 25098) and noted earlier, we received two separate but related requests to review and reconsider the MS–DRG assignments for a subset of the procedure codes listed in Table 6P.2a and Table 6P.2b associated with the FY 2021 IPPS/LTCH PPS final rule. In this section of this rule, we discuss the second request related to procedure codes listed in Table 6P.2b associated with the FY 2021 IPPS/LTCH PPS final rule and currently assigned to MS–DRGs 143, 144 and 145.

The requestor provided a list of 82 procedure codes from Table 6P.2b associated with the FY 2021 IPPS/LTCH PPS final rule for CMS to examine. We refer the reader to Table 6P.1d associated with the FY 2022 IPPS/LTCH PPS proposed rule and this final rule and available via the internet at: https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index/ for the list of procedure codes that were provided by the requestor. According to the requestor, if any one of the 82 procedure codes is assigned in conjunction with a principal diagnosis code from MDC 03, it appears more appropriate that cases reporting the diagnosis and procedure code combination would group to MS–DRGs 981, 982, and 983 (Extensive O.R. Procedures Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) or to MS–DRGs 987, 988, and 989 (Non-extensive O.R. Procedures Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) versus MS–DRGs 143, 144, and 145 (Other Ear, Nose, Mouth and Throat O.R. Procedures with MCC, with CC, and without CC/MCC, respectively). However, the requestor also stated that of the 82 procedure codes, the following three procedure codes describing control of bleeding in the cranial cavity warrant grouping to MS–DRGs 25, 26, and 27 (for example, “craniotomy” MS–DRGs) in MDC 01, for the same reasons previously described in the prior section pertaining to the five other procedures performed on the cranial cavity.
We reviewed this request and similar

</tr>
</tbody>
</table>

The commenters acknowledged that the “other” surgical category contains surgical procedures which, while infrequent, could still reasonably be expected to be performed for a patient in the particular MDC, however, the commenters stated it is unclear what clinical scenarios would result in certain procedure codes listed being assigned with a diagnosis in MDC 03.

The commenters provided the following list of 38 procedure codes as examples of procedures that would not be expected to be performed with a diagnosis from MDC 03.
Another commenter requested transparency for the logic and data for the exclusion of the 82 procedure codes and suggested that CMS may not have any data for these procedures within MS–DRGs 143, 144, and 145 that were created in FY 2021.

Response: We appreciate the commenters’ feedback and acknowledge that the listed procedure codes would not appear to be clinically indicated specifically for diagnoses in MDC 03. The commenter is correct that it is too soon to have data available for the listed procedure codes under MS–DRGs 143, 144, and 145 that were created effective FY 2021. However, in our analysis of the FY 2018 MedPAR data that was studied in our initial review of MDC 03 in consideration of potential restructuring, for MS–DRG 133 (currently MS–DRG 144), we identified one case reporting procedure code 0DJ04ZZ (Inspection of upper intestinal tract, percutaneous endoscopic approach) with an average length of stay of 14 days and average costs of $5,728 and one case reporting procedure code 0FB00ZX (Excision of liver, open approach, diagnostic) with an average length of stay of 17 days and average costs of $32,642. We continued to believe that these procedures, in addition and/or including the 38 procedure codes listed that are now the subject of commenters’ concerns, appropriate to maintain in the logic for case assignment to the “other” surgical MS–DRGs in MDC 03. However, as a result of the ongoing concerns expressed by commenters specifically regarding the assignment of the 38 listed procedure codes and the suggestion that CMS should reconsider the current MS–DRG assignment, we determined it may be helpful to provide the comparable translations under ICD–9–CM for commenters to better understand how these 38 procedures were initially grouped to the ICD–10 MS–DRGs as a result of replication during the conversion from ICD–9 to ICD–10 based MS–DRGs. We refer the reader to Table

</table>
After consideration of the public comments we received, we are finalizing to maintain the assignment of the listed 82 procedure codes to MS–DRGs 143, 144, and 145 for FY 2022. We will continue to review the appropriateness of procedure code assignment to these MS–DRGs in connection with our broader comprehensive procedure code analysis.

As noted in the proposed rule, with regard to the three procedure codes describing control of bleeding in the cranial cavity (0W310ZZ, 0W313ZZ, and 0W314ZZ), and the requestor’s suggestion that the codes should group with MS–DRGs 25, 26, and 27 in MDC 01, we consulted with our clinical advisors who stated these procedures are consistent with the existing procedure codes included in the logic for case assignment to MS–DRGs 25, 26, and 27. We refer the reader to section II.D.10. of the preamble of the proposed rule and this final rule for further discussion of this request, as well as the finalized assignment of these codes to MS–DRGs 23, 24, 25, 26, and 27 for FY 2022.

4. MDC 04 (Diseases and Disorders of the Respiratory System)

a. Bronchiectasis

In the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25098), we discussed a request we received to reassign cases reporting diagnosis codes describing bronchiectasis from MS–DRGs 190, 191, and 192 (Chronic Obstructive Pulmonary Disease with MCC, with CC, and without CC/MCC, respectively) to MS–DRGs 177, 178, and 179 (Respiratory Infections and Inflammation with MCC, with CC, and without CC/MCC, respectively). Bronchiectasis is described by the following diagnosis codes:

<table>
<thead>
<tr>
<th>ICD-10-CM Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>J47.0</td>
<td>Bronchiectasis with acute lower respiratory infection</td>
</tr>
<tr>
<td>J47.1</td>
<td>Bronchiectasis with (acute) exacerbation</td>
</tr>
<tr>
<td>J47.9</td>
<td>Bronchiectasis, uncomplicated</td>
</tr>
<tr>
<td>Q33.4</td>
<td>Congenital bronchiectasis</td>
</tr>
</tbody>
</table>

According to the requestor, the underlying pathophysiology of bronchiectasis is more similar to cystic fibrosis than it is to chronic obstructive pulmonary disease (COPD). The requestor stated that in bronchiectasis, there is an inciting event that creates scarring in the lung which prevents the lung from clearing out mucus like it normally would. The accumulation of abnormal mucus results in an environment conducive to bacterial growth and commonly found bacteria in this setting is very similar to those of cystic fibrosis with staphylococcus aureus, pseudomonas aeruginosa, and non-tuberculous mycobacterium. The requestor reported that when patients develop an exacerbation of bronchiectasis, this is because of a buildup of mucus compounded by overwhelming growth of the previously discussed bacteria. The requestor also stated that patients admitted to the hospital for bronchiectasis exacerbation are treated aggressively with intravenous (IV) antibiotics to suppress the bacterial infection in combination with airway clearance therapies. The requestor further stated that, unlike in an acute COPD exacerbation, these patients do not always require steroids as there is not necessarily airway reactivity.

The requestor maintained that the underlying reason for admission to the hospital for these patients is the bacterial infection component of the exacerbation, with the standard course of treatment for these pulmonary bacterial infections averaging a minimum of 10–14 days due to the slow growing nature of the bacteria commonly encountered in these patients.

We stated in the FY 2022 IPPS/LTCH PPS proposed rule that we reviewed this request and believed that bronchiectasis is appropriately assigned to MS–DRGs 190, 191, and 192 (Chronic Obstructive Pulmonary Disease with MCC, with CC, and without CC/MCC, respectively) because bronchiectasis, like COPD, is a chronic condition. We noted that with respect to the requestor’s comments, cystic fibrosis, a genetic disease that affects mucous producing cells resulting in recurring lung infections, can lead to bronchiectasis. However, our clinical advisors indicated that the cause of bronchiectasis can be multifactorial or even remain undefined. Regardless of the cause, when present, bronchiectasis is an irreversible chronic pulmonary condition due to abnormal change to or destruction of normal pulmonary anatomy (the major bronchi and bronchiole walls), resulting in impaired air movement in and out of the lungs. COPD, regardless of the cause (smoking, pollution, other exposures), is a chronic pulmonary condition due to change/destruction of normal pulmonary anatomy, resulting in impaired air movement in and out of the lungs. Both bronchiectasis and COPD patients have abnormal pulmonary function tests and abnormal anatomic findings on chest x-ray and/or chest CT. Therefore, for these reasons, we proposed to maintain the structure of MS–DRGs 190, 191, and 192 for FY 2022.

Comment: Commenters agreed with our proposal to maintain the structure of MS–DRGs 190, 191, and 192.

Response: We thank the commenters for their support.

After consideration of the public comments we received, we are finalizing our proposal to maintain the structure of MS–DRGs 190, 191, and 192 for FY 2022.
b. Major Chest Procedures

In the FY 2020 IPPS/LTCH PPS proposed (84 FR 19234) and final rules (84 FR 42148), we stated that in review of the procedures that are currently assigned to MS–DRGs 163, 164, and 165 (Major Chest Procedures with MCC, with CC and without CC/MCC, respectively) and 166, 167, and 168 (Other Respiratory System O.R. Procedures with MCC, with CC, and without CC/MCC, respectively), that further refinement of these MS–DRGs may be warranted. In this section of this rule, we discuss our review of the procedures and restructuring these MS–DRGs for FY 2022.

We began our review of MS–DRGs 163, 164, 165, 166, 167, and 168 by first examining all the procedures currently assigned to these MS–DRGs. We referred the reader to the ICD–10 MS–DRG Definitions Manual Version 38.1, which is available via the internet on the CMS website at: https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS for complete documentation of the GROUPER logic for MS–DRGs 163, 164, 165, 166, 167, and 168.

We stated in the proposed rule that in our review of the procedures currently assigned to MS–DRGs 163, 164, 165, 166, 167, and 168, we found 17 procedure codes in MS–DRGs 163, 164, and 165 describing laser interstitial thermal therapy (LITT) of body parts that do not describe areas within the respiratory system, which would not be clinically appropriate to maintain in the logic. These procedure codes are listed in the following table.

<table>
<thead>
<tr>
<th>ICD-10-PCS Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>D0Y6KZZ</td>
<td>Laser interstitial thermal therapy of spinal cord</td>

</tr>
</tbody>
</table>

BILLING CODE 4120–01–P

During our review of these 17 procedure codes, we identified additional MDCs and MS–DRG assignments that are also not clinically appropriate to maintain in the logic because the body parts described by the codes are not consistent with the organ system, etiology or clinical specialty of the MDC to which the procedure code is currently assigned. For example, 16 of the 17 procedure codes (all except procedure code D0Y0KZZ) are included in the logic for case assignment to MDC 12 (Diseases and Disorders of the Male Reproductive System) in MS–DRGs 715 and 716 (Other Male Reproductive System O.R. Procedures for Malignancy with and without CC/MCC, respectively) and MS–DRGs 717 and 718 (Other Male Reproductive System O.R. Procedures Except Malignancy with and without CC/MCC, respectively) which is not clinically appropriate. Therefore, we proposed to realign these 17 procedure codes from their current MS–DRG assignments in MDC 04, and from the additional MDCs and MS–DRGs identified during our review that were found to be clinically inappropriate, to their clinically appropriate MDC and MS–DRGs.

We stated in the proposed rule that in our review of the procedures currently assigned to MS–DRGs 163, 164, 165, 166, 167, and 168, we found 17 procedure codes in MS–DRGs 163, 164, and 165 describing laser interstitial thermal therapy (LITT) of body parts that do not describe areas within the respiratory system, which would not be clinically appropriate to maintain in the logic. These procedure codes are listed in the following table.

<table>

We stated in the proposed rule that in our review of the procedures currently assigned to MS–DRGs 163, 164, 165, 166, 167, and 168, we found 17 procedure codes in MS–DRGs 163, 164, and 165 describing laser interstitial thermal therapy (LITT) of body parts that do not describe areas within the respiratory system, which would not be clinically appropriate to maintain in the logic. These procedure codes are listed in the following table.

We stated in the proposed rule that in our review of the procedures currently assigned to MS–DRGs 163, 164, 165, 166, 167, and 168, we found 17 procedure codes in MS–DRGs 163, 164, and 165 describing laser interstitial thermal therapy (LITT) of body parts that do not describe areas within the respiratory system, which would not be clinically appropriate to maintain in the logic. These procedure codes are listed in the following table.
assignment to MS–DRGs 40, 41, and 42 because the resources involved in the performance of a LITT procedure of the spinal cord (code D0Y6KZZ) clinically align more appropriately with the resources involved in the performance of stereotactic radiosurgery of spinal cord procedures currently assigned to MS–DRGs 40, 41, and 42 (procedure codes D026DZZ, D026HZZ, and D026JZZ).

We also note that, as discussed in section II.D.10. of the preamble of the proposed rule and this final rule, we identified additional procedure codes describing LITT of various body parts, in addition to the 17 procedure codes listed earlier in this section. The 14 additional procedure codes are:

<table>

</tbody>
</table>

We then examined procedure codes DBY0KZZ, DBY1KZZ, DBY2KZZ, DBY5KZZ, DBY6KZZ, DBY7KZZ, and DBY8KZZ describing LITT of respiratory structures including the trachea, bronchus, lung, pleura, mediastinum, chest wall, and diaphragm, respectively, that are currently assigned to the “major chest procedures” MS–DRGs 163, 164, and 165. While we agree that these procedures are appropriately assigned to MDC 04, we do not believe LITT of these respiratory structures utilize the same resources or require the same level of complexity as the other procedures currently defined in the GROUPER logic as “major chest procedures” since, as noted previously, LITT is considered a minimally invasive procedure and there are no large incisions with extensive muscle dissection. For these reasons, we believe it is more appropriate for the procedure codes describing LITT of respiratory structures to be reassigned to MS–DRGs 166, 167, and 168 (Other Respiratory System O.R. Procedures with MCC, with CC, and without CC/MCC, respectively).

After consideration of the public comments we received and based on the analysis described previously, we finalize the proposal, with modification, to reassign the 31 listed procedure codes as shown in Table 6P.2b associated with this final rule describing LITT of various body parts to the more clinically appropriate MDCs and MS–DRGs for FY 2022.

During our review of the procedure codes describing LITT of various body parts we also confirmed that these procedures are currently designated as Extensive O.R. procedures. We do not believe the procedures described by these procedure codes necessarily utilize the resources or have the level of technical complexity as the other procedures on the Extensive O.R. procedures list. We stated in the proposed rule that we believe that the procedure codes describing these procedures would be more appropriately designated as Non-extensive procedures and group to MS–DRGs 987, 988, and 989 (Non-extensive O.R. Procedures Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) when any one of the procedure codes is reported on a claim and is unrelated to the MDC to which the case was assigned based on the principal diagnosis. We refer the reader to section II.D.10. of the preamble of the proposed rule and this final rule for further discussion regarding reassignment of these procedure codes from MS–DRGs 981, 982, and 983 (Extensive O.R. Procedures Unrelated to Principal Diagnosis with
MCC, with CC, and without CC/MCC, respectively) to MS–DRGs 987, 988, and 989 (Non-extensive O.R. Procedures Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) for FY 2022.

We also identified five procedure codes describing repair of the esophagus procedures currently assigned to MS–DRGs 163, 164, and 165 that would not be clinically appropriate to maintain in the logic. The procedure codes are

- 0DQ50ZZ (Repair esophagus, open approach),
- 0DQ53ZZ (Repair esophagus, percutaneous approach),
- 0DQ54ZZ (Repair esophagus, percutaneous endoscopic approach),
- 0DQ57ZZ (Repair esophagus, via natural or artificial opening), and
- 0DQ58ZZ (Repair esophagus, via natural or artificial opening endoscopic), and are currently assigned to the following MDCs and MS–DRGs.

</table>
We stated that the five procedure codes describing repair of esophagus procedures are not clinically coherent with the other procedures in MS–DRGs 163, 164, and 165 that describe procedures performed on major chest structures. Therefore, we proposed to remove procedure codes 0DQ50ZZ, 0DQ53ZZ, 0DQ54ZZ, 0DQ57ZZ, and 0DQ58ZZ from the logic in MDC 04 for FY 2022.

Comment: Commenters agreed with the proposal to remove procedure codes 0DQ50ZZ, 0DQ53ZZ, 0DQ54ZZ, 0DQ57ZZ, and 0DQ58ZZ from the logic in MDC 04 for FY 2022.

Response: We appreciate the commenters’ support. After consideration of the public comments we received, we are finalizing our proposal to remove procedure codes 0DQ50ZZ, 0DQ53ZZ, 0DQ54ZZ, 0DQ57ZZ, and 0DQ58ZZ from the logic in MDC 04 for FY 2022.

As discussed in the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25102), during our review of procedure codes 0DQ50ZZ, 0DQ53ZZ, 0DQ54ZZ, 0DQ57ZZ, and 0DQ58ZZ (describing repair of esophagus procedures) we also confirmed that these procedures are currently designated as Extensive O.R. procedures. We stated we do not believe the procedures described by procedure codes 0DQ53ZZ, 0DQ57ZZ, and 0DQ58ZZ necessarily utilize the resources or have the level of technical complexity as the other procedures on the Extensive O.R. procedures list. We further stated we believe that the procedure codes describing these procedures would be more appropriately designated as Non-extensive procedures and group to MS–DRGs 987, 988, and 989 (Non-extensive O.R. Procedures Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) when any one of the three procedure codes is reported on a claim and is unrelated to the MDC to which the case was assigned based on the principal diagnosis. We refer the reader to section II.D.10. of the preamble of the proposed rule and this final rule for further discussion regarding reassignment of these procedure codes from MS–DRGs 981, 982, and 983 (Extensive O.R. Procedures Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) to MS–DRGs 987, 988, and 989 (Non-extensive O.R. Procedures Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) for FY 2022.

Next, we examined claims data from the March 2020 update of the FY 2019 MedPAR file and the September 2020 update of the FY 2020 MedPAR file for all cases in MS–DRGs 163, 164, 165, 166, 167, and 168. Our findings are shown in the following tables.
As shown in the tables, there were a higher number of cases reported in MS–DRGs 163, 164, 165, 166, 167, and 168 from the March 2020 update of the FY 2019 MedPAR file in comparison to the September 2020 update of the FY 2020 MedPAR file and overall, the cases reported have comparable average lengths of stay and comparable average costs for both fiscal years.

We then examined claims data from both the March 2020 update of the FY 2019 MedPAR file and the September 2020 update of the FY 2020 MedPAR file for MS–DRGs 163, 164, 165, 166, 167, and 168 to compare costs, complexity of service and clinical coherence for each procedure code currently assigned to these MS–DRGs to assess any potential reassignment of the procedures. We refer the reader to Table 6P.1e and Table 6P.1f associated with the proposed rule and this final rule, in our examination of the claims data from both the March 2020 update of the FY 2019 MedPAR file and September 2020 update of the FY 2020 MedPAR file, we found there is wide variation in the volume, length of stay, and average costs for the procedures currently assigned to MS–DRGs 163, 164, 165, 166, 167, and 168. There were several instances in which only one occurrence of a procedure was reported with a procedure code from MS–DRGs 163, 164, 165, 166, 167, or 168, and the average length of stay for these specific cases ranged from 1 day to 97 days. For example, in the analysis of the claims data from the March 2020 update of the FY 2019 MedPAR file, we found 139 procedures for which only one occurrence of the procedure was reported with the average length of stay ranging from 1 day to 28 days and the average costs ranging from $1,886 to $137,810 for these cases. For MS–DRG 165, we found 111 procedures for which only one occurrence of the procedure was reported with the average length of stay ranging from 1 day to 23 days and the average costs ranging from $2,656 to $73,092 for these cases. For MS–DRG 164, we found 150 procedures for which only one occurrence of the procedure was reported with the average length of stay ranging from 1 day to 61 days and the average costs ranging from $3,230 to $246,679 for these cases. For MS–DRG 167, we found 110 procedures for which only one occurrence of the procedure was reported with the average length of stay ranging from 1 day to 23 days and the average costs ranging from $2,058 to $149,220 for these cases. For MS–DRG 166, we found 68 procedures for which only one occurrence of the procedure was reported with the average length of stay ranging from 1 day to 18 days and the average costs ranging from $2,033 to $35,576 for these cases.

Our analysis of the claims data from the September 2020 update of the FY 2020 MedPAR file resulted in similar findings to those from the March 2020 update of the FY 2019 MedPAR file; there were several instances in which only one occurrence of a procedure was reported with a procedure code from MS–DRGs 163, 164, 165, 166, 167, or 168, and the average length of stay for these specific cases ranged from 1 day to 28 days and the average costs ranging from $1,886 to $137,810 for these cases. For MS–DRG 165, we found 111 procedures for which only one occurrence of the procedure was reported with the average length of stay ranging from 1 day to 23 days and the average costs ranging from $2,656 to $73,092 for these cases. For MS–DRG 164, we found 150 procedures for which only one occurrence of the procedure was reported with the average length of stay ranging from 1 day to 61 days and the average costs ranging from $3,230 to $246,679 for these cases. For MS–DRG 167, we found 110 procedures for which only one occurrence of the procedure was reported with the average length of stay ranging from 1 day to 23 days and the average costs ranging from $2,058 to $149,220 for these cases. For MS–DRG 166, we found 68 procedures for which only one occurrence of the procedure was reported with the average length of stay ranging from 1 day to 18 days and the average costs ranging from $2,033 to $35,576 for these cases.

</tbody>
</table>
was reported with the average length of stay ranging from 2 days to 97 days and
the average costs ranging from $5,697 to $205,696 for these cases. For MS–DRG
164, we found 122 procedures for which only one occurrence of the procedure
was reported with the average length of stay ranging from 1 day to 35 days and
the average costs ranging from $3,204 to $120,128 for these cases. For MS–DRG
165, we found 92 procedures for which only one occurrence of the procedure
was reported with the average length of stay ranging from 1 day to 16 days and
the average costs ranging from $2,150 to $76,061 for these cases.

Our clinical advisors reviewed the procedures currently assigned to MS–
DRGs 163, 164, 165, 166, 167, and 168 to identify the patient attributes that
currently define each of these procedures and to group them with respect
to complexity of service and resource intensity. This process included separating the procedures
according to the surgical approach (open, percutaneous, percutaneous
endoscopic, via natural or artificial opening, via natural or artificial opening
endoscopic, and external).

We also considered the claims data
from the March 2020 update of the FY 2019 MedPAR file and the September
2020 update of the FY 2020 MedPAR file for MS–DRGs 163, 164, 165, 166,
167, and 168 to further analyze the average length of stay and average costs
for the cases reporting procedures assigned to any one of these MS–DRGs
as well as clinical coherence for these cases. For example, procedures that we
believe represent greater treatment difficulty and reflect a class of patients
who are similar clinically with regard to consumption of hospital resources were
grouped separately from procedures that we believe to be less complex but still
reflect patients who are similar clinically with regard to consumption of hospital resources. This approach
differentiated the more complex procedures, such as procedures
performed on the sternum and ribs (for example, major chest) from the less
complex procedures such as bypass procedures performed on peripheral
vessels or diagnostic biopsies.

We stated in the FY 2022 IPPS/LTCH
PPS proposed rule that as an initial step
in our proposed restructuring of these
MS–DRGs, we identified the following
26 procedure codes that are currently
assigned to MS–DRGs 166, 167, and 168
that we believe represent procedures
performed on structures that align more
appropriately with the procedures
assigned to MS–DRGs 163, 164, and 165
that describe major chest procedures.

We analyzed claims data from the
March 2020 update of the FY 2019
MedPAR file for the listed procedure
codes in MS–DRGs 166, 167, and 168.
We noted that if a listed procedure code
is not displayed, it is because there were
no cases found reporting that code
among MS–DRGs 166, 167, and 168.
Our findings are shown in the following
table.
We then analyzed claims data from the September 2020 update of the FY 2020 MedPAR file for the listed procedure codes in MS–DRGs 166, 167, and 168. We noted that if a listed procedure code is not displayed, it is because there were no cases found reporting that code among MS–DRGs 166, 167, and 168. Our findings are shown in the following table.

</tbody>
</table>
We referred the reader to Tables 6P.1e and 6P.1f for detailed claims data for the previously listed procedures in MS–DRGs 163, 164, 165, 166, 167, and 168 from the March 2020 update of the FY 2019 MedPAR file and the September 2020 update of the FY 2020 MedPAR file, respectively, and noted in the proposed rule that while some of the 26 listed procedure codes identified in MS–DRGs 166, 167, and 168 may not have been reported in either year's MedPAR claims data or only had one occurrence in which the procedure was performed, we believe these procedures described by the listed 26 procedure codes are clinically coherent with the other procedures that are currently assigned to MS–DRGs 163, 164, and 165. For example, in our analysis of the March 2020 update of the FY 2019 MedPAR file, as shown in the table, we found procedure code 02QW0ZZ reported with one occurrence with an average length of stay of 15 days and average costs of $46,829. Despite finding only one case, we stated that we believe procedures described by this procedure code, as well as related procedure codes describing procedures performed on the great vessels, are more clinically coherent with the procedures assigned to MS–DRGs 163, 164, and 165 and align more appropriately with the average length of stay and average costs of those MS–DRGs. Similarly, in our analysis of the September 2020 update of the FY 2020 MedPAR file, as shown in the table, we found procedure code 0PS204Z reported with 344 occurrences with an average length of stay of 9.6 days and average costs of $48,340. We stated that we believe procedures described by this procedure code, as well as related procedure codes describing procedures performed to repair or resect the ribs, are more clinically coherent with the procedures assigned.

</table>
assigned to MS–DRGs 163, 164, and 165 and also align more appropriately with the average length of stay and average costs of those MS–DRGs.

As a result of our preliminary review of MS–DRGs 163, 164, 165, 166, 167, and 168, for FY 2022, we proposed the reassignment of the listed 26 procedure codes (9 procedure codes describing repair of pulmonary or thoracic structures, and 17 procedure codes describing procedures performed on the sternum or ribs) from MS–DRGs 166, 167, and 168 to MS–DRGs 163, 164, and 165 in MDC 04. We stated that our data analysis shows that for the cases reporting any one of the 26 procedure codes, generally, they have an average length of stay and average costs that appear more consistent with the average length of stay and average costs of cases in MS–DRGs 163, 164, and 165. Our clinical advisors also agreed that these procedures clinically align with the other procedures that are currently assigned to MS–DRGs 163, 164, and 165. We referred the reader to Table 6P.2c associated with this final rule for the list of procedure codes we proposed for reassignment from MS–DRGs 166, 167, and 168 to MS–DRGs 163, 164, and 165 in MDC 04.

Comment: Commenters supported the proposed reassignment of the listed 26 procedure codes from MS–DRGs 166, 167, and 168 to MS–DRGs 163, 164, and 165 in MDC 04.

Response: We appreciate the commenters’ support.

After consideration of the public comments received, we are finalizing our proposal to reassign the listed 26 procedure codes (9 procedure codes describing repair of pulmonary or thoracic structures, and 17 procedure codes describing procedures performed on the sternum or ribs), as listed in Table 6P.2c associated with this final rule, from MS–DRGs 166, 167, and 168 to MS–DRGs 163, 164, and 165 in MDC 04 for FY 2022.

As discussed in the proposed rule, after this initial review of all the procedures currently assigned to MS–DRGs 163, 164, 165, 166, 167, and 168, in combination with the results of the data analysis as reflected in Tables 6P.1e and 6P.1f, our clinical advisors support a phased restructuring of these MS–DRGs. We believe further analysis of the procedures assigned to these MS–DRGs is warranted based on the creation of new procedure codes that have been assigned to these MS–DRGs in recent years for which claims data are not yet available and the need for additional time to examine the procedures currently assigned to those MS–DRGs by clinical intensity, complexity of service and resource utilization. We will continue to evaluate the procedures assigned to these MS–DRGs as additional claims data become available.

5. MDC 05 (Diseases and Disorders of the Circulatory System)

a. Short-Term External Heart Assist Device

As discussed in the FY 2020 IPPS/LTCH PPS proposed rule (86 FR 25106 through 25115), Impella® Ventricular Support Systems are temporary heart assist devices intended to support blood pressure and provide increased blood flow to critical organs in patients with cardiogenic shock, by drawing blood out of the heart and pumping it into the aorta, partially or fully bypassing the left ventricle to provide adequate circulation of blood (replace or supplement left ventricle pumping) while also allowing damaged heart muscle the opportunity to rest and recover in patients who need short-term support for up to 6 days. The ICD–10–PCS codes that describe the insertion of Impella® heart assist devices are currently assigned to MS–DRG 215 (Other Heart Assist System Implant). We referred the reader to the ICD–10–MS–DRG Definitions Manual Version 38.1, which is available via the internet on the CMS website at: https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/InpatientPPS/MS–DRG-Classifications-and-Software for complete documentation of the GROUPER logic for MS–DRG 215.

In the FY 2019 IPPS/LTCH PPS final rule (83 FR 41159 through 41170), we discussed public comments that recommended that CMS continue to monitor the data in MS–DRG 215 for future consideration of distinctions (for example, different approaches and evolving technologies) that may impact the clinical and resource use of procedures utilizing heart assist devices. Our data analysis showed a wide range in the average length of stay and the average costs for cases reporting procedures that involve a biventricular short-term external heart assist system versus a short-term external heart assist system. We noted we were aware that the AHA published Coding Clinic advice that clarified coding and reporting for certain external heart assist devices due to the technology being approved for new indications but the claims data current at that time did not yet reflect that updated guidance. We also noted that there had been recent updates to the descriptions of the codes for heart assist devices. The qualifier “intraoperative” was added effective October 1, 2017 (FY 2018) to the procedure codes describing the insertion of short-term external heart assist system procedures to distinguish between procedures where the device was only used intraoperatively and was removed at the conclusion of the procedure versus procedures where the device was not removed at the conclusion of the procedure and for which that qualifier would not be reported. We agreed with the commenters that continued monitoring of the data and further analysis was necessary prior to proposing any modifications to MS–DRG 215 and finalized our proposal to maintain the current structure of MS–DRG 215 for FY 2019.

In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42167) we discussed public comments on our proposals related to recalibration of the FY 2020 relative weights and the changes in relative weights from FY 2019. Several commenters expressed concern about significant reductions to the relative weight for MS–DRG 215. Commenters stated that the reduction in the proposed relative weight was 29 percent, the largest decrease of any MS–DRG; commenters also noted that the cumulative decrease to the relative weight for MS–DRG 215 would be 43 percent since FY 2017. Commenters stated that the proposed relative weights would result in significant underpayments to facilities, which would in turn limit access to heart assist devices. After reviewing the comments received and the data used in our rate-setting calculations, we acknowledged an outlier circumstance where the weight for a MS–DRG was seeing a significant reduction for each of the 3 years since CMS began using the ICD–10 data in calculating the relative weights. Therefore, for the reasons discussed in the FY 2020 final rule, we adopted a temporary one-time measure for FY 2020 where the FY 2020 relative weight was set equal to the FY 2019 relative weight, which in turn had been set equal to the FY 2018 relative weight.

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58598) we again acknowledged an outlier circumstance where the weight for MS–DRG 215 was seeing a significant reduction for each of the 4 years since CMS began using the ICD–10 data in calculating the relative weights. We stated while we would ordinarily consider this weight change to be appropriately driven by the underlying data, given the comments received, and in an abundance of caution because this may be the MS–DRG assigned when a hospital provides temporary right ventricular support for...
up to 14 days in critical care patients for the treatment of acute right heart failure or decompensation caused by complications related to COVID–19, including pulmonary embolism, we adopted a temporary one-time measure for FY 2021 for MS–DRG 215. Specifically, we set the 2021 relative weight for MS–DRG 215 equal to the average of the FY 2020 relative weight and the otherwise applicable FY 2021 weight.

For the FY 2022 IPPS/LTCH PPS proposed rule, we received a request to assign certain cases reporting procedure codes describing the insertion of a percutaneous short-term external heart assist device from MS–DRG 215 to MS–DRGs 216, 217, and 218 (Cardiac Valve and Other Major Cardiothoracic Procedures with Cardio Catheterization with MCC, with CC, and without CC/MCC, respectively). According to the requestor, there are two distinct clinical populations within MS–DRG 215: High-risk Percutaneous Coronary Intervention (PCI) patients receiving short term “intraoperative” external heart assist systems where the device is only used intraoperatively and is removed at the conclusion of the procedure, and those patients in or at risk of cardiogenic shock requiring longer heart pump support and ICU stays. The requestor stated that cases in which short-term external heart assist systems are placed intraoperatively require fewer resources. The requestor suggested that moving the less resource intensive cases that report a procedure code that describes the intraoperative insertion of short-term external heart assist systems from MS–DRG 215 into MS–DRG 216, 217, and 218, will clinically align the two distinctly different patient populations, and consequently will address the potential decrease in the relative weight of MS–DRG 215.

The requestor stated it performed its own analysis of claims in MS–DRG 215 that involve the intraoperative insertion of a short-term external heart assist device (as identified by the presence of ICD–10–PCS codes 02HA3RJ [Insertion of short-term external heart assist system into heart, intraoperative, percutaneous approach]) and 5A0221D (Assistance with cardiac output using impeller pump, continuous). The requestor stated that its analysis found that if procedures involving intraoperative placement of a short-term external heart assist device were moved into MS–DRGs 216, 217 and 218, it would result in an increase in the average costs and average lengths of stay for the cases that would remain to be assigned to MS–DRG 215. As discussed in the proposed rule, during our review of this issue, we noted that when a patient is admitted and has an Impella® external heart assist device inserted two ICD–10–PCS codes are assigned: A code that describes the insertion of the device and code 5A0221D that describes assistance with an impeller pump. Therefore, our analysis included procedure code 02HA3RJ as identified by the requestor as well as similar procedure codes 02HA0RJ [Insertion of short-term external heart assist system into heart, intraoperative, open approach] and 02HA4RJ [Insertion of short-term external heart assist system into heart, intraoperative, percutaneous endoscopic approach] that also describe the intraoperative insertion of a short-term heart assist device, differing only in approach. Because the assistance with an Impella® is coded with ICD–10–PCS code 5A0221D whether the device is used only intraoperatively or in instances where the device is left in place at the conclusion of the procedure, we did not include this code in our analysis. We also noted that the requestor suggested that the cases reporting a procedure code describing the intraoperative insertion of a short-term external heart assist device be moved to MS–DRGs 216, 217 and 218 but these MS–DRGs are defined by the performance of catheterization. Therefore, we expanded our analysis to also include MS–DRGs 219, 220 and 221 (Cardiac Valve and Other Major Cardiothoracic Procedures without Cardio Catheterization with MCC, with CC, and without CC/MCC, respectively).

We stated in the FY 2022 IPPS/LTCH PPS proposed rule that first, we examined claims data from the March 2020 update of the FY 2019 MedPAR file for MS–DRG 215 to identify cases reporting ICD–10–PCS codes 02HA0RJ, 02HA3RJ or 02HA4RJ and a procedure code describing the performance of a cardiac catheterization. Our findings are shown in the following table:

<table>
<thead>
<tr>
<th>MS-DRG</th>
<th>Number of Cases</th>
<th>Average Length of Stay</th>
<th>Average Costs</th>
</tr>
</thead>
<tbody>
<tr>
<td>All cases</td>
<td>7,741</td>
<td>7.8</td>
<td>$68,234</td>
</tr>
<tr>
<td>All intraoperative short-term external heart assist devices with cardiac catheterization</td>
<td>2,943</td>
<td>7.1</td>
<td>$60,449</td>
</tr>
<tr>
<td>02HA0RJ with cardiac catheterization</td>
<td>23</td>
<td>8.9</td>
<td>$85,806</td>
</tr>
<tr>
<td>02HA3RJ with cardiac catheterization</td>
<td>2,904</td>
<td>7.1</td>
<td>$60,227</td>
</tr>
<tr>
<td>02HA4RJ with cardiac catheterization</td>
<td>16</td>
<td>6.4</td>
<td>$64,217</td>
</tr>
</tbody>
</table>

As shown in the table, we identified a total of 7,741 cases within MS–DRG 215 with an average length of stay of 7.8 days and average costs of $68,234. Of these 7,741 cases, there are 2,943 cases that include both a procedure code describing the intraoperative insertion of a short-term external heart assist device and a procedure code describing the performance of a cardiac catheterization with an average length of stay of 7.1 days and average costs of $60,449. Of these 2,943 cases, there are 23 cases reporting a procedure code describing the open intraoperative
insertion of a short-term external heart assist device with a procedure code describing the performance of a cardiac catheterization with an average length of stay of 8.9 days and average costs of $85,806. There are 2,904 cases reporting a procedure code describing a percutaneous intraoperative insertion of a short-term external heart assist device with a procedure code describing the performance of a cardiac catheterization with an average length of stay of 8.9 days and average costs of $85,806. There are 2,904 cases reporting a procedure code describing a percutaneous endoscopic insertion of a short-term external heart assist device with a procedure code describing the performance of a cardiac catheterization with an average length of stay of 7.1 days and average costs of $60,227. There are 16 cases reporting a procedure code describing a percutaneous endoscopic insertion of a short-term external heart assist device with a procedure code describing the performance of a cardiac catheterization with an average length of stay of 6.4 days and average costs of $64,217.

The data analysis shows that for the cases in MS–DRG 215 reporting ICD–10–PCS codes 02HA0RJ, 02HA3RJ or 02HA4RJ with a procedure code describing the performance of a cardiac catheterization, generally, the average length of stay is shorter and the average costs are lower than the average length of stay and average costs (with the exception of the average costs and length of stay for the 23 cases reporting a procedure code describing the open intraoperative insertion of a short-term external heart assist device with a procedure code describing the performance of a cardiac catheterization which are higher) compared to all cases in that MS–DRG.

In the proposed rule, we indicated that we also examined claims data from the March 2020 update of the FY 2019 MedPAR file for MS–DRGs 216, 217 and 218. Our findings are shown in the following table:

<table>
<thead>
<tr>
<th>MS-DRG</th>
<th>Number of Cases</th>
<th>Average Length of Stay</th>
<th>Average Costs</th>
</tr>
</thead>
<tbody>
<tr>
<td>216</td>
<td>5,603</td>
<td>16.7</td>
<td>$74,413</td>
</tr>
<tr>
<td>217</td>
<td>1,885</td>
<td>9.5</td>
<td>$47,159</td>
</tr>
<tr>
<td>218</td>
<td>210</td>
<td>6.6</td>
<td>$37,778</td>
</tr>
</tbody>
</table>

Because MS–DRG 215 is a base DRG and there is a three-way split within MS–DRGs 216, 217, and 218, we indicated that we also analyzed the cases reporting a procedure code describing the intraoperative insertion of a short-term external heart assist device with a procedure code describing the performance of a cardiac catheterization for the presence or absence of a secondary diagnosis designated as a complication or comorbidity (CC) or a major complication or comorbidity (MCC).

<table>
<thead>
<tr>
<th>MS-DRG</th>

<td>02HA0RJ, 02HA3RJ or 02HA4RJ with cardiac catheterization without CC/MCC</td>
<td>278</td>
<td>2.5</td>
</tr>
</tbody>
</table>

This data analysis shows the cases in MS–DRG 215 reporting ICD–10–PCS codes 02HA0RJ, 02HA3RJ or 02HA4RJ with a procedure code describing the performance of a cardiac catheterization when distributed based on the presence or absence of a secondary diagnosis designated as a complication or comorbidity (CC) or a major complication or comorbidity (MCC) have average costs generally more similar to the average costs in the FY 2019 MedPAR file for MS–DRGs 216, 217 and 218 respectively, while the average lengths of stay are shorter. While the cases from MS–DRG 215 reporting a procedure code describing the intraoperative insertion of a short-term external heart assist device with a procedure code describing the performance of a cardiac catheterization “with CC” and “without CC/MCC” have higher average costs than the average costs of MS–DRGs 217 and 218, these costs are closer to the average costs of those MS–DRGs than they are to the average costs of MS–DRG 215. The average costs of the cases from MS–DRG 215 reporting a procedure code describing the intraoperative insertion of a short-term external heart assist device with a procedure code describing the performance of a cardiac catheterization “with MCC” are lower than the average costs of both MS–DRGs 215 and 216.

Next, we examined claims data from the March 2020 update of the FY 2019 MedPAR file for MS–DRG 215 to identify cases reporting ICD–10–PCS codes 02HA0RJ, 02HA3RJ or 02HA4RJ without a procedure code describing the performance of a cardiac catheterization. Our findings are shown in the following table:
As shown in the table, of the 7,741 cases within MS–DRG 215, there are 432 cases that include a procedure code describing the intraoperative insertion of a short-term external heart assist device without a procedure code describing the performance of a cardiac catheterization with an average length of stay of 4.8 days and average costs of $53,607. Of these 432 cases, there are eight cases reporting a procedure code describing the open intraoperative insertion of a short-term external heart assist device without a procedure code describing the performance of a cardiac catheterization with an average length of stay of 8.8 days and average costs of $141,242. There are 423 cases reporting a procedure code describing a percutaneous intraoperative insertion of a short-term external heart assist device without a procedure code describing the performance of a cardiac catheterization with an average length of stay of 4.7 days and average costs of $51,964. There is one case reporting a procedure code describing a percutaneous endoscopic intraoperative insertion of a short-term external heart assist device without a procedure code describing the performance of a cardiac catheterization approach with a length of stay of 2 days and costs of $47,289. We noted that the data analysis shows that for the cases in MS–DRG 215 reporting ICD–10–PCS codes 02HA0RJ, 02HA3RJ or 02HA4RJ without a procedure code describing the performance of a cardiac catheterization, generally, the average length of stay is shorter and the average costs are lower than the average length of stay and average costs (with the exception of the average costs and length of stay for the eight cases describing the open intraoperative insertion of a short-term external heart assist device without a procedure code describing the performance of a cardiac catheterization which are higher) compared to all cases in that MS–DRG.

We also examined claims data from the March 2020 update of the FY 2019 MedPAR file for MS–DRGs 219, 220 and 221. Our findings are shown in the following table.

<table>
<thead>
<tr>
<th>MS-DRG</th>
<th>Number of Cases</th>
<th>Average Length of Stay</th>
<th>Average Costs</th>
</tr>
</thead>
<tbody>
<tr>
<td>219</td>
<td>15,597</td>

<tr>
<td>220</td>
<td>15,074</td>
<td>6.5</td>
<td>$39,565</td>
</tr>
<tr>
<td>221</td>
<td>2,417</td>
<td>4.5</td>
<td>$33,560</td>
</tr>
</tbody>
</table>

Similarly, because MS–DRG 215 is a base DRG and there is a three-way split within MS–DRGs 219, 220 and 221, we stated that we also analyzed the cases reporting a procedure code describing the intraoperative insertion of a short-term external heart assist device without a procedure code describing the performance of a cardiac catheterization for the presence or absence of a secondary diagnosis designated as a complication or comorbidity (CC) or a major complication or comorbidity (MCC).
We indicated in the proposed rule that this data analysis shows the cases in MS–DRG 215 reporting ICD–10–PCS codes 02HA0RJ, 02HA3RJ or 02HA4RJ without a procedure code describing the performance of a cardiac catheterization when distributed based on the presence or absence of a secondary diagnosis designated as a complication or comorbidity (CC) or a major complication or comorbidity (MCC) have average costs generally more similar to the average costs in the FY 2019 MedPAR file for MS–DRGs 219, 220 and 221 respectively, while the average lengths of stay are shorter. While the cases from MS–DRG 215 reporting a procedure code describing the intraoperative insertion of a short-term external heart assist device, without a procedure code describing the performance of a cardiac catheterization “with MCC”, “with CC” and “without CC/MCC” have higher average costs than the average costs MS–DRGs 219, 220 and 221, respectively, these costs are closer to the average costs of those MS–DRGs than they are to the average costs of MS–DRG 215.

We also examined claims data from the September 2020 update of the FY 2020 MedPAR file for MS–DRG 215 to identify cases reporting ICD–10–PCS codes 02HA0RJ, 02HA3RJ or 02HA4RJ with a procedure code describing the performance of a cardiac catheterization. Our findings are shown in the following table:

<table>
<thead>
<tr>
<th>MS-DRG</th>
<th>Number of Cases</th>
<th>Average Length of Stay</th>
<th>Average Costs</th>
</tr>
</thead>
<tbody>
<tr>
<td>215</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>02HA0RJ, 02HA3RJ or 02HA4RJ without cardiac catheterization with MCC</td>
<td>205</td>
<td>7.3</td>
<td>$60,274</td>
</tr>
<tr>
<td>02HA0RJ, 02HA3RJ or 02HA4RJ without cardiac catheterization with CC</td>
<td>158</td>
<td>2.7</td>
<td>$46,745</td>
</tr>
<tr>
<td>02HA0RJ, 02HA3RJ or 02HA4RJ without cardiac catheterization without CC/MCC</td>
<td>68</td>
<td>1.4</td>
<td>$41,050</td>
</tr>
</tbody>
</table>

As shown in the table, we identified a total of 6,275 cases within MS–DRG 215 with an average length of stay of 7.9 days and average costs of $72,144. Of these 6,275 cases, there were 2,395 cases that include both a procedure code describing the intraoperative insertion of a short-term external heart assist device and a procedure code describing the performance of a cardiac catheterization with an average length of stay of 6.8 days and average costs of $62,260. Of these 2,395 cases, there were 25 cases reporting a procedure code describing the open intraoperative insertion of a short-term external heart assist device with a procedure code describing the performance of a cardiac catheterization with an average length of stay of 8.2 days and average costs of $85,954. There are 2,360 cases reporting a procedure code describing a percutaneous intraoperative insertion of a short-term external heart assist device with a procedure code describing the performance of a cardiac catheterization with an average length of stay of 6.9 days and average costs of $72,564. The data analysis shows that for the cases in MS–DRG 215 reporting ICD–10–PCS codes 02HA0RJ, 02HA3RJ or
02HA4RJ with a procedure code describing the performance of a cardiac catheterization. When examined collectively, the average length of stay is shorter (6.8 days versus 7.9 days) and the average costs are lower ($62,260 versus $72,144) than the average length of stay and average costs (of all cases in that MS–DRG). We noted there were some differences noted in cases reporting a procedure code describing the intraoperative insertion of a short-term external heart assist device with a procedure code describing the performance of a cardiac catheterization, when examined by operative approach. For the 25 cases reporting a procedure code describing the open intraoperative insertion of a short-term external heart assist device with a procedure code describing the performance of a cardiac catheterization, the average costs were higher ($85,954 versus $72,144) and average length of stay was slightly longer (8.2 days versus 7.9 days) when compared to all cases in that MS–DRG. For the 10 cases reporting a procedure code describing the percutaneous endoscopic intraoperative insertion of a short-term external heart assist device with a procedure code describing the performance of a cardiac catheterization, the average costs were nearly equal ($72,564 versus $72,144) and average length of stay was shorter (6.9 days versus 7.9 days) when compared to all cases in that MS–DRG.

We also examined claims data from the September 2020 update of the FY 2020 MedPAR file for MS–DRGs 216, 217 and 218. Our findings are shown in the following table.

<table>
<thead>
<tr>
<th>MS-DRG</th>

</table>

This data analysis shows the cases in MS–DRG 215 reporting ICD–10–PCS codes 02HA0RJ, 02HA3RJ or 02HA4RJ with a procedure code describing the performance of a cardiac catheterization when distributed based on the presence or absence of a secondary diagnosis designated as a complication or comorbidity (CC) or a major complication or comorbidity (MCC) have average costs generally more similar to the average costs in the FY 2020 MedPAR file for MS–DRGs 216, 217 and 218 respectively, while the average lengths of stay are shorter. While the cases from MS–DRG 215 reporting a procedure code describing the intraoperative insertion of a short-term external heart assist device with a procedure code describing the performance of a cardiac catheterization “with MCC” are lower than the average costs of both MS–DRGs 215 and 216.

Next, we examined claims data from the September 2020 update of the FY 2020 MedPAR file for MS–DRG 215 to identify cases reporting ICD–10–PCS codes 02HA0RJ, 02HA3RJ or 02HA4RJ without a procedure code describing the performance of a cardiac catheterization. Our findings are shown in the following table:
As shown in the table, of the 6,275 cases within MS–DRG 215, there are 331 cases that include a procedure code describing the intraoperative insertion of a short-term external heart assist device without a procedure code describing the performance of a cardiac catheterization with an average length of stay of 4.5 days and average costs of $52,181. Of these 331 cases, there are eight cases reporting a procedure code describing the open intraoperative insertion of a short-term external heart assist device without a procedure code describing the performance of a cardiac catheterization with an average length of stay of 8.9 days and average costs of $80,314. There are 332 cases reporting a procedure code describing a percutaneous intraoperative insertion of a short-term external heart assist device without a procedure code describing the performance of a cardiac catheterization with an average length of stay of 4.4 days and average costs of $51,569. There is one case reporting a procedure code describing a percutaneous endoscopic intraoperative insertion of a short-term external heart assist device without a procedure code describing the performance of a cardiac catheterization approach with a length of stay of 2 days and costs of $24,379. The data analysis shows that for the cases in MS–DRG 215 reporting ICD–10–PCS codes 02HA0RJ, 02HA3RJ or 02HA4RJ without a procedure code describing the performance of a cardiac catheterization, generally, the average length of stay is shorter and the average costs are lower than the average length of stay and average costs (with the exception of the average costs and length of stay for the eight cases reporting a procedure code describing the open intraoperative insertion of a short-term external heart assist device without a procedure code describing the performance of a cardiac catheterization which are higher) compared to all cases in that MS–DRG.

We also examined claims data from the September 2020 update of the FY 2020 MedPAR file for MS–DRGs 219, 220 and 221. Our findings are shown in the following table.

<table>

Similarly, because MS–DRG 215 is a base DRG and there is a three-way split within MS–DRGs 219, 220 and 221, we also analyzed the 331 cases reporting a procedure code describing the intraoperative insertion of a short-term external heart assist device without a procedure code describing the performance of a cardiac catheterization for the presence or absence of a secondary diagnosis designated as a complication or comorbidity (CC) or a major complication or comorbidity (MCC).
This data analysis shows the cases in MS–DRG 215 reporting ICD–10–PCS codes 02HA0RJ, 02HA3RJ or 02HA4RJ without a procedure code describing the performance of a cardiac catheterization when distributed based on the presence or absence of a secondary diagnosis designated as a complication or comorbidity (CC) or a major complication or comorbidity (MCC) have average costs generally more similar to the average costs in the FY 2020 MedPAR file for MS–DRGs 219, 220 and 221 respectively, while the average lengths of stay are shorter. While the cases from MS–DRG 215 reporting a procedure code describing the intraoperative insertion of a short-term external heart assist device without a procedure code describing the performance of a cardiac catheterization “with MCC” are generally less resource intensive and are clinically distinct from other cases reporting procedure codes describing the insertion of other types of heart assist devices currently assigned to MS–DRG 215. Our clinical advisors stated that critically ill patients who are experiencing or at risk for cardiogenic shock from an emergent event such as heart attack or virus that impacts the functioning of the heart and requires longer heart pump support are different from those patients who require intraoperative support only. Patients receiving a short-term external heart assist device intraoperatively during coronary interventions often have an underlying disease pathology such as heart failure related to occluded coronary vessels that is broadly similar in kind to other patients also receiving these interventions without the need for an insertion of a short-term external heart assist device. In the post-operative period, these patients can recover and can be sufficiently rehabilitated prior to discharge. For these reasons, we indicated our clinical advisors supported reassigning ICD–10–PCS codes 02HA0RJ, 02HA3RJ, and 02HA4RJ that describe the intraoperative insertion of a short-term external heart assist device to MS–DRGs 216, 217, 218, 219, 220, and 221 in MDC 05. They stated this reassignment would improve clinical coherence in these MS–DRGs.

To compare and analyze the impact of our suggested modifications, we ran a simulation using the Version 38.1 ICD–10–PCS GROUPER and the claims data from the March 2020 update of the FY 2019 MedPAR file. The following table reflects our simulation for ICD–10–PCS procedure codes 02HA0RJ, 02HA3RJ or 02HA4RJ that describe the intraoperative insertion of a short-term external heart assist device if they were moved to MS–DRGs 216, 217, 218, 219, 220, and 221.

We stated in the proposed rule that we believe the resulting proposed MS–DRG assignments would be more clinically homogeneous, coherent and better reflect hospital resource use while at the same time addressing concerns related to the relative weight of MS–DRG 215. A review of this simulation shows that this distribution of ICD–10–PCS codes 02HA0RJ, 02HA3RJ or 02HA4RJ that describe the intraoperative insertion of a short-term external heart assist device if moved to MS–DRGs 216, 217, 218, 219, 220 and 221, increases the average costs of the cases remaining in MS–DRG 215 by over $4,500, while generally having a more limited effect on the average costs of MS–DRGs 216, 217, 218, 219, 220 and 221.

We also ran a simulation using the Version 38.1 ICD–10 MS–DRG GROUER and the claims data from the September 2020 update of the FY 2020 MedPAR file. The following table reflects our simulation for ICD–10–PCS procedure codes 02HA0RJ, 02HA3RJ or 02HA4RJ that describe the intraoperative insertion of a short-term external heart assist device if they were moved to MS–DRGs 216, 217, 218, 219, 220 and 221.

As with our simulation based on the March 2020 update of the FY 2019 MedPAR file, we indicated we believe that this simulation supports the resulting proposed MS–DRG assignments would be more clinically homogeneous, coherent and better reflect hospital resource use while at the same time addressing concerns related to the relative weight of MS–DRG 215. We noted that a review of this simulation shows that this distribution of ICD–10–PCS codes 02HA0RJ, 02HA3RJ, and 02HA4RJ that describe the intraoperative insertion of a short-term external heart assist device if moved to MS–DRG 216, 217, 218, 219, 220, and 221, increases the average costs of the cases remaining in MS–DRG 215 by over $6,000, while generally having a more limited effect on the average costs of MS–DRGS 216, 217, 218, 219, 220 and 221.

Therefore, for FY 2022, we proposed to reassign ICD–10–PCS codes 02HA0RJ, 02HA3RJ, and 02HA4RJ from MDC 05 in MS–DRG 215 to MS–DRGs 216, 217, 218, 219, 220 and 221 in MDC 05.

Comment: Commenters supported the proposal to reassign ICD–10–PCS codes 02HA0RJ, 02HA3RJ, and 02HA4RJ from MDC 05 in MS–DRG 215. These commenters stated they appreciated CMS’ attention, careful review and efforts to create more long-term stability for heart assist devices, a life-saving technology. Some commenters stated CMS’ actions will create a more clinically balanced structure for hospital payments for patients needing short-term external heart assist device support. Commenters stated that this reassignment will better reflect hospital resource utilization creating a more clinically homogenous coherent structure for acute patients that require intraoperative support of a short-term external heart assist device. A commenter stated this reassignment would also result in a relative weight for MS–DRG 215 that more accurately reflects the resource utilization of the procedures within that MS–DRG, as well as stabilizing the relative weight for MS–DRG 215, which has fluctuated over the last few years. Another commenter acknowledged intraoperative cases require fewer hospital resources during their admission than all other cases in MS–DRG 215 and stated removing ICD–10–PCS codes 02HA0RJ, 02HA3RJ, and 02HA4RJ describing intraoperative use from MS–DRG 215 maintains appropriate payment for longer term circulatory support, such as cardiogenic shock patients, who require more intensive resource use.

Response: We thank the commenters for their support.

Comment: Other commenters opposed CMS’ proposal to reassign the short-term heart assist device ICD–10–PCS codes 02HA0RJ, 02HA3RJ, and 02HA4RJ from MDC 05 in MS–DRG 215 to MDC 05 in MS–DRG 215. These commenters noted patients requiring intraoperative short-term external heart assist devices tend to be more severely ill and stated the proposal does not fully consider the complexity of care required for these patients and the associated resource utilization, in terms of the need for additional length of stay and monitoring. A commenter stated short-term external heart assist systems, require high resources consumption evidenced by critical care management, expensive drugs and tests; and specialized clinical staff such as: Physicians, nursing, perfusionists, etc. Another commenter stated they believe there may be hospital-specific differences with some facilities performing the diagnostic cardiac catheterizations as outpatient services prior to the inpatient admission for the other cardiothoracic procedures. A commenter expressed concern about the impact this change would have related to the increased use of the external heart assist devices and resources required to insert the device, including the cost of the device. This commenter stated an estimated 50% of the cases at their facility involving a short-term heart assist device would fall into a CC or NonCC category under the proposed MS–DRG change in spite of the fact the patients who require this device are at higher risk, which would mean that approximately 50% of their Medicare payment would be allocated to the cost.

</table>
of the device itself. This commenter stated that an even greater negative financial impact may be recognized as there has been an increase in the use of Impella® devices due to higher incidence of advanced ischemic cardiomyopathy because of the COVID–19 pandemic and delays in treatment.

Another commenter requested that CMS consider re-evaluation once the MedPAR data are normalized from the pandemic to consider structure revisions for these MS–DRGs. This commenter noted that there is a proposed relative weight reduction from 11.1579 to 10.5614 for MS–DRG 215 even though CMS proposed to move the intraoperative short-term heart assist devices from this MS–DRG. This commenter stated this reduction does not seem appropriate especially if the proposed MS–DRG changes are finalized.

Response: We thank the commenters for their feedback. Our clinical advisors have reviewed these concerns regarding the proposed group and continue to state the resulting MS–DRG assignments, as proposed, would be more clinically homogeneous, coherent and better reflect hospital resource use because cases reporting a procedure code that describes the intraoperative insertion of a short-term external heart assist device are generally less resource intensive and are clinically distinct from other cases reporting procedure codes describing the insertion of other types of heart assist devices currently assigned to MS–DRG 215. Our clinical advisors acknowledge that while the need to have a short term heart assist device inserted can reflect on the severity of illness of the patient being treated, critically ill patients who are experiencing or at risk for cardiogenic shock from an emergent event such as heart attack or virus that impacts the functioning of the heart and require longer heart pump support and ICU stays are different from those patients who require intraoperative support only where the device is removed at the conclusion of the procedure. As additional claims data become available, we will continue to analyze the clinical nature of each of the procedures describing the insertion of short-term heart assist devices and their MS–DRG assignments to further improve the overall accuracy of the IPPS payments in future rulemaking.

Comment: While indicating their support of CMS’ proposal, some commenters urged CMS to refrain from moving cases reporting a procedure code describing the intraoperative insertion of a short-term external heart assist device into MS–DRG 219, 220, and 221. These commenters stated the cases should be assigned to MS–DRGs 216, 217 and 218 only, based on the presence or absence of a secondary diagnosis designated as a complication or comorbidity (CC) or a major complication or comorbidity (MCC). A few commenters stated that CMS should refrain from moving cases into MS–DRG 219, 220, or 221 because the claim volume of cases reporting a procedure code describing the intraoperative insertion of a short-term external heart assist device without a procedure code describing a cardiac catheterization is under five hundred and intracardiac heart assist devices, such as Impella® devices require the use of diagnostic catheters, fluoroscopy, and hemodynamic monitoring during use, all resulting in higher costs. Considering the types of procedures that utilize short term circulatory support and the techniques used by these circulatory support devices, these commenters stated cases reporting a procedure code describing the intraoperative insertion of a short-term external heart assist device are comparable to those mapping to MS–DRG 216, 217 and 218, even when a cardiac catheterization procedure is not performed. Other commenters asserted there are known coding and documentation issues seen with this complex therapy, without providing examples of these issues, and stated that reassigning ICD–10–PCS codes 02HA0RJ, 02HA3RJ, and 02HA4RJ to MS–DRGs 219, 220, and 221, described as “without cardiac catheterization” may lead to coding errors since the vast majority of these procedures necessitate a cardiac catheterization.

Response: We note that the requestor originally suggested that the cases reporting a procedure code describing the intraoperative insertion of a short-term external heart assist device be moved to MS–DRGs 216, 217 and 218 but because these MS–DRGs are defined by the performance of cardiac catheterization, we specifically expanded our analysis to also include MS–DRGs 219, 220 and 221 (Cardiac Valve and Other Major Cardiothoracic Procedures without Cardiac Catheterization with MCC, with CC, and without CC/MCC, respectively). We do not believe it would be appropriate to assign all cases to the “with cardiac catheterization” MS–DRGs because the claims data would not reflect the additional resources associated with the performance of a cardiac catheterization in cases reporting a procedure code describing the intraoperative insertion of a short-term external heart assist device.

As presented in the proposed rule and in this final rule, the data analysis performed show in both the FY 2019 MedPAR file and the FY 2020 MedPAR file, the average length of stay is shorter and the average costs are lower in cases reporting a procedure code describing the intraoperative insertion of a short-term external heart assist device without the performance of a cardiac catheterization when compared to cases reporting a procedure code describing the intraoperative insertion of a short-term external heart assist device with the performance of a cardiac catheterization when analyzed for the presence or absence of a secondary diagnosis designated as a complication or comorbidity (CC) or a major complication or comorbidity (MCC).

Our clinical advisors believe that continued monitoring of the data and further analysis is needed prior to proposing any additional modifications to the MS–DRG assignment of cases reporting ICD–10–PCS codes 02HA0RJ, 02HA3RJ or 02HA4RJ without a procedure code describing the performance of a cardiac catheterization. Our clinical advisors believe maintaining the distinction between the performance of or lack of a cardiac catheterization procedure is important in these subsets of cases as we continue to examine the volume and length of stay as well as considering a variety of factors pertaining to resource consumption and clinical characteristics that might account for differences in resource use before determining if additional modifications to the assignment of these procedure codes are warranted.

In response to the suggestion that we refrain from moving cases into MS–DRG 219, 220, or 221 because claim volume of cases reporting a procedure code describing the intraoperative insertion of a short-term external heart assist device without a procedure code describing a cardiac catheterization is low, we do not believe moving this subset of cases into an incoherent grouping simply because the case volume is low is in keeping with our goal to maintain clinically coherent groups that also more accurately stratify Medicare patients with varying levels of severity.

Similarly, in response to the comments asserting that there are known coding and documentation issues seen with this complex therapy and that reassigning ICD–10–PCS codes 02HA0RJ, 02HA3RJ, and 02HA4RJ to MS–DRGs 219, 220, and 221, described as “without cardiac catheterization” may lead to coding errors since the vast majority of these procedures necessitate
a cardiac catheterization, we again do not believe moving cases into an MS-DRG because of the need for improved provider documentation or any additional coder instruction is in keeping with our goal to maintain clinically coherent groups that also more accurately stratify Medicare patients with varying levels of severity. We acknowledge that accurate coding of external heart assist devices has been the subject of confusion in the past, and we will continue to monitor the claims data for these procedures. As one of the four Cooperating Parties, we also will continue to collaborate with the American Hospital Association to provide guidance for coding external heart assist devices through the Coding Clinic for ICD–10–CM/PCS publication and to review the ICD–10–PCS guidelines to determine where further clarifications may be made.

Therefore, after consideration of the public comments we received, and for reasons stated previously, we are finalizing our proposal to reassign ICD–10–CM diagnosis codes 02HA4RJ and 02HA4RJ from MDC 05 in MS–DRG 215 to MS–DRGs 216, 217, 218, 219, 220 and 221 in MDC 05, without modification, effective October 1, 2021.

b. Type II Myocardial Infarction

In the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25115 through 25116), we discussed a request we received to review the MS–DRG assignment of ICD–10–CM diagnosis code I21.A1 (Myocardial infarction type 2). The requestor stated that when a type 2 myocardial infarction is documented, per coding guidelines, it is to be coded as a secondary diagnosis since it is due to an underlying cause. This requestor also noted that when a type 2 myocardial infarction is coded with a principal diagnosis in MDC 05 (Diseases and Disorders of the Circulatory System), the GROUPER logic assigns MS–DRGs 280 through 282 (Acute Myocardial Infarction: Discharged Alive with MCC, with CC, and without CC/MCC, respectively). The requestor questioned if this GROUPER logic was correct or if the logic should be changed so that a type 2 myocardial infarction, coded as a secondary diagnosis, does not result in the assignment of a MS–DRG that describes an acute myocardial infarction.

As discussed in the proposed rule, to begin our analysis, we reviewed the GROUPER logic. We noted that the requestor is correct that when diagnosis code I21.A1 is reported as a secondary diagnosis in combination with a principal diagnosis in MDC 05, the case currently groups to medical MS–DRGs 280 through 282 in the absence of a surgical procedure, when the patient is discharged alive. We also noted that if the patient expires, GROUPER logic instead will assign MS–DRGs 283 through 285 (Acute Myocardial Infarction, Expired with CC, with CC, and without CC/MCC, respectively) when diagnosis code I21.A1 is reported as a secondary diagnosis in combination with a principal diagnosis in MDC 05.

According to the Universal Definition of Myocardial Infarction (MI), developed by a global task force that included the European Society of Cardiology, the American College of Cardiology, the American Heart Association and the World Heart Federation (WHF), the diagnosis of MI requires the rise and/or fall of cardiac biomarkers with clinical evidence of ischemia in which there is evidence of myocardial injury or necrosis, defined by symptoms, electrocardiographic (ECG) changes, or new regional wall motion abnormalities. Since 2007, this definition further classifies myocardial infarctions into five distinct subtypes. While a type 1 MI is defined as a MI due to an acute coronary syndrome, type 2 MI is defined as a mismatch in myocardial oxygen supply and demand due to other causes such as coronary dissection, vasospasm, emboli, or hypotension that is not attributed to unstable coronary artery disease (CAD).

We indicated in the proposed rule that our clinical advisors reviewed this issue and did not recommend changing the current MS–DRG assignment of ICD–10–CM diagnosis code I21.A1. As noted by the requestor, the ICD–10–CM Official Guidelines for Coding and Reporting state “Type 2 myocardial infarction, (myocardial infarction due to demand ischemia or secondary to ischemic imbalance) is assigned to code I21.A1, Myocardial infarction type 2 with a code for the underlying cause coded first.” We indicated our clinical advisors believed that cases reporting diagnosis code I21.A1 as a secondary diagnosis are associated with a severity of illness on par with cases reporting a principal diagnosis of another type myocardial infarction. They stated the diagnosis of myocardial infarction describes myocardial cell death due to inadequate oxygen supply to the myocardium for a prolonged period, regardless of the subtype. Our clinical advisors further stated, for clinical consistency, it is more appropriate to maintain the current assignment of ICD–10–CM diagnosis code I21.A1 with the other codes that describe myocardial infarction. Therefore, we did not propose to reassign diagnosis code I21.A1 from MS–DRGs 280 through 285.

As discussed in the proposed rule, during our review of this issue we also noted that code I21.A1 (Myocardial infarction type 2) is currently one of the listed principal diagnoses in the GROUPER logic for MS–DRGs 222 and 223 (Cardiac Defibrillator Implant with Cardiac Catheterization with AMI, HF or Shock with and without MCC, respectively). However, code I21.A1 is not currently recognized in these same MS–DRGs when coded as a secondary diagnosis. As a result, when coded as a secondary diagnosis in combination with a principal diagnosis in MDC 05, MS–DRGs 224 and 225 (Cardiac Defibrillator Implant with Cardiac Catheterization without AMI, HF, or Shock with and without MCC, respectively) are instead assigned when reported with a listed procedure code. We referred the reader to the ICD–10–MS–DRG Definitions Manual Version 38.1, which is available via the internet on the CMS website at: https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Definitions-and-Software for complete documentation of the GROUPER logic for MS–DRGs 222, 223, 224, and 225.

Acknowledging that coding guidelines instruct to code I21.A1 after the diagnosis code that describes the underlying cause, we indicated our clinical advisors recommended adding special logic in MS–DRGs 222 and 223 to have code I21.A1 also qualify when coded as a secondary diagnosis in combination with a principal diagnosis in MDC 05 since these diagnosis code combinations also describe acute myocardial infarctions.

As a result, we proposed modifications to the GROUPER logic to allow cases reporting diagnosis code I21.A1 (Myocardial infarction type 2) as a secondary diagnosis to group to MS–DRGs 222 and 223 when reported with a listed procedure code for clinical consistency with the other MS–DRGs describing acute myocardial infarction. A diagnosis code may define the logic for a specific MS–DRG assignment in three different ways. The diagnosis code may be listed as principal or as any one of the secondary diagnoses, as a secondary diagnosis, or only as a secondary diagnosis as noted in more detail in the proposed rule and this final rule.

- Principal or secondary diagnoses. Indicates that a specific set of diagnoses are used in the definition of the MS–DRG. The diagnoses may be listed as principal or as any one of the secondary diagnoses. A special case of this condition is MS–DRG 008 in which two
diagnoses (for example, renal and diabetic) must both be present somewhere in the list of diagnoses in order to be assigned to MS–DRG 008.
• Secondary diagnoses. Indicates that a specific set of secondary diagnoses are used in the definition of the MS–DRG. For example, a secondary diagnosis of acute leukemia with chemotherapy is used to define MS–DRG 839.
• Only secondary diagnoses. Indicates that in order to be assigned to the specified MS–DRG no secondary diagnoses other than those in the specified list may appear on the patient’s record. For example, in order to be assigned to MS–DRG 795, only secondary diagnoses from the specified list may appear on the patient’s record.

We noted in the proposed rule that whenever there is a secondary diagnosis component to the MS–DRG logic, the diagnosis code can either be used in the logic for assignment to the MS–DRG or to act as a CC/MCC. For this specific scenario, we proposed that code I21.A1, as a secondary diagnosis, be used in the definition of the logic for assignment to MS–DRGs 222 and 223, similar to the example described previously, where a secondary diagnosis of acute leukemia with chemotherapy is used to define MS–DRG 839, and therefore will not act as an MCC in these MS–DRGs.

In summary, for FY 2022, we proposed to maintain the current structure of MS–DRGs 280 through 285. We proposed to modify the GROUPER logic to allow cases reporting diagnosis code I21.A1 (Myocardial infarction type 2) as a secondary diagnosis to group to MS–DRG 839, because patients with type 2 MI face an increased mortality risk. Another commenter stated that the proposed rule did not provide rationale as to why code I21.A1 would not act as an MCC under the proposal to revise the GROUPER logic to allow cases reporting diagnosis code I21.A1 as a secondary diagnosis to group to MS–DRG 839.

We appreciate the comments we received, we are considering the commenters’ rationale for these conflicting statements. Specifically, because MS–DRGs 222 and 223 also describe an acute myocardial infarction, it is unclear why the commenter indicates a type 2 MI should only be considered an MI in this instance. In response to the commenter that stated that if type 2 MI cases are assigned to the MS–DRGs that describe an acute myocardial infarction, this would disrupt the resource accuracy of these MS–DRGs, while at the same time agreeing with the proposal to allow cases reporting diagnosis code I21.A1 (Myocardial infarction type 2) as a secondary diagnosis to group to MS–DRGs 222 and 223 when reported with qualifying procedures, we are unclear of the commenters’ rationale for these conflicting statements. Specifically, because MS–DRGs 222 and 223 also describe an acute myocardial infarction, it is unclear why the commenter indicates a type 2 MI should only be considered an MI in this instance. In response to the commenter that stated that CMS did not provide rationale as to why code I21.A1 would not act as an MCC under the proposal to revise the GROUPER logic in MS–DRGs 222 and 223 and in response to their request that data analysis be provided on the instances when this code would not act as an MCC.

Response: We appreciate the commenters’ feedback. We note to that the GROUPER logic assignment for each diagnosis code as a principal diagnosis is for grouping purposes only. As discussed in the FY 2019 IPPS/LTCPPS final rule (83 FR 41217) and the FY 2021 IPPS/LTCPPS final rule (86 FR 58519), because the diagnoses are codes listed under the heading of “Principal Diagnosis” in the ICD-10 MS–DRG Definitions Manual, it may appear to indicate that these codes are to be reported as a principal diagnosis for assignment to these MS–DRGs. However, the Definitions Manual display of the GROUPER logic assignment for each diagnosis code does not correspond to coding guidelines for reporting the principal diagnosis. The MS–DRG logic must specifically require a condition to group based on whether it is reported as a principal diagnosis or a secondary diagnosis, and consider any procedures that are reported, in addition to consideration of the patient’s age, sex and discharge status, in order to affect the MS–DRG assignment. In other words, cases will group according to the GROUPER logic, regardless of any coding guidelines or coverage policies. It is the Medicare Code Editor (MCE) and other payer-specific edits that identify inconsistencies in the coding guidelines or coverage policies. These data integrity edits address issues such as data validity, coding rules, and coverage policies. Since the inception of the IPPS, the data editing function has been a separate and independent step in the process of determining a DRG assignment. The separation of the MS–DRG grouping and data editing functions allows the MS–DRG GROUPER to remain stable even though coding rules and coverage policies may change during the fiscal year.

In response to the commenter that stated that if type 2 MI cases are assigned to the MS–DRGs that describe an acute myocardial infarction, this would disrupt the resource accuracy of these MS–DRGs, while at the same time agreeing with the proposal to allow cases reporting diagnosis code I21.A1 (Myocardial infarction type 2) as a secondary diagnosis to group to MS–DRGs 222 and 223 when reported with qualifying procedures, we are unclear of the commenters’ rationale for these conflicting statements. Specifically, because MS–DRGs 222 and 223 also describe an acute myocardial infarction, it is unclear why the commenter indicates a type 2 MI should only be considered an MI in this instance. In response to the commenter that stated that CMS did not provide rationale as to why code I21.A1 would not act as an MCC under the proposal to revise the GROUPER logic in MS–DRGs 222 and 223 and in response to their request that data analysis be provided on the instances when this code would not act as an MCC, as we indicated in the proposed rule, whenever there is a secondary diagnosis component to the MS–DRG logic, the diagnosis code can either be used in the logic for assignment to the MS–DRG or to act as a CC/MCC. It is not a question of data analysis. Although I21.A1 is designated as an MCC when reported as a secondary diagnosis, if code I21.A1, as a secondary diagnosis, is being used in the definition of the logic for assignment to MS–DRGs 222 and 223, it cannot act as an MCC in these MS–DRGs. Therefore, outside of MS–DRGs 222, 223, 280, 281, 282, 283, 284 and 285, diagnosis code I21.A1 will continue to act as an MCC when reported as a secondary diagnosis in Version 39.

After consideration of the public comments we received, we are maintaining our proposal to maintain the current structure of MS–DRGs 280 through 285, without modification, for
We indicated our clinical advisors in the absence of a surgical procedure. Without MCC, respectively) in MDC 18 (Viral Illness with and without MCC, respectively) to MDC 18 in MS DRGs 865 and 866 (Viral Illness with and without MCC, respectively) to MDC 05 (Diseases and Disorders of the Circulatory System). The requestors noted that a discontinuity exists in the current MDC assignment of diagnosis codes in ICD–10–CM subcategory B33.2. The list of the five ICD–10–CM diagnosis codes in subcategory B33.2, as well as their current MDC assignments, is found in the following table.

<table>
<thead>
<tr>
<th>ICD-10-CM Code</th>
<th>Code Description</th>
<th>MDC</th>
</tr>
</thead>
<tbody>
<tr>
<td>B33.20</td>
<td>Viral carditis, unspecified</td>
<td>05</td>
</tr>
<tr>
<td>B33.21</td>
<td>Viral endocarditis</td>
<td>05</td>
</tr>
<tr>
<td>B33.22</td>
<td>Viral myocarditis</td>
<td>05</td>
</tr>
<tr>
<td>B33.23</td>
<td>Viral pericarditis</td>
<td>05</td>
</tr>
<tr>
<td>B33.24</td>
<td>Viral cardiomyopathy</td>
<td>18</td>
</tr>
</tbody>
</table>

A requestor noted ICD–10–CM codes B33.20, B33.21, B33.22, and B33.23 are assigned to MDC 05 (Diseases and Disorders of the Circulatory System), while code B33.24 is assigned to MDC 18 (Infectious and Parasitic Diseases, Systemic or Unspecified Sites). The requestor stated that the placement of ICD–10–CM diagnosis code B33.24 within subcategory B33.2 is clinically appropriate, as all the diagnoses within this subcategory share a common etiology, involve the heart and supporting structures, and require the same intensity of hospital care. However, the assignment of code B33.24 to a different MDC is clinically incongruous with the placement of the other codes in the subcategory. According to the requestor, all of the conditions share similar etiology, anatomic location, and needs for care, therefore the five codes should all be assigned to MDC 05. This requestor also stated that reassigning code B33.24 to MDC 05 would ensure both clinical continuity and coding consistency within the B33.2 subcategory. Another requestor stated MDC 05 surgical MS–DRGs should be assigned when procedures such as cardiac catheterization or coronary angioplasty are performed for a principal diagnosis of viral cardiomyopathy.

In the proposed rule, we indicated that to begin our analysis, we reviewed the GROUPER logic. We noted that currently, cases reporting ICD–10–CM diagnosis code B33.24 as a principal diagnosis group to medical MS–DRGs 865 and 866 (Viral Illness with and without MCC, respectively) in MDC 18 in the absence of a surgical procedure. We indicated our clinical advisors reviewed this issue and noted viral cardiac infections may present as endocarditis (inflammation of the heart’s inner lining), myocarditis (inflammation of the middle layer of the heart), pericarditis (inflammation of the pericardium), or cardiomyopathy (disease of the heart muscle). The infection usually begins somewhere other than the heart, often in the nose, lungs, or stomach. As the infection progresses, and the microbe multiplies and gets into the bloodstream, it can infiltrate the heart muscle. The growth and replication of viruses inside the heart can endanger the heart by destroying heart cells. The management of viral cardiomyopathy is similar to the management of other viral heart infections and can include bed rest, control of pain with non-steroidal anti-inflammatory agents and anti-microbial therapy to avoid permanent myocardial damage, cardiomegaly, and/or congestive cardiac failure.

We indicated our clinical advisors agreed that the diagnosis of viral cardiomyopathy is clinically related to the other diagnoses in ICD–10–CM subcategory B33.2. We stated that they believed it is clinically appropriate for all five diagnoses in subcategory B33.2 to group to MDC 05 (Diseases and Disorders of the Circulatory System) as these conditions describe circulatory system conditions and complications and that this modification will improve clinical coherence. Therefore, we proposed to reassign ICD–10–CM diagnosis code B33.24 from MDC 18 (Viral Illness with and without MCC, respectively) to MDC 05 in MS DRGs 865 and 866 (Viral Illness with and without MCC, respectively) to MDC 05 in MS DRGs 314, 315, and 316 (Other Circulatory System Diagnoses with MCC, with CC, and without CC/MCC, respectively). Commenters stated this change will improve clinical coherence since viral cardiomyopathy is closely related to the other viral heart diseases in subcategory B33.2 that are already assigned to MDC 05.

Response: We appreciate the commenters’ support.

After consideration of the public comments we received, we are finalizing our proposal to reassign ICD–10–CM diagnosis code B33.24 from MDC 18 in MS DRGs 865 and 866 (Viral Illness with and without MCC, respectively) to MDC 05 in MS DRGs 314, 315, and 316 (Other Circulatory System Diagnoses with MCC, with CC, and without CC/MCC, respectively), without modification, effective October 1, 2021.

d. Left Atrial Appendage Closure (LAAC)

In the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 58471 through 58477), we identified nine ICD–10–PCS procedure codes that describe Left Atrial Appendage Closure (LAAC) procedures and noted their corresponding MS–DRG assignments in the ICD–10 MS–DRGs Version 37 as listed in the following table.
As discussed in the FY 2021 IPPS/LTCH PPS final rule, we examined claims data from the September 2019 update of the FY 2019 MedPAR file for cases reporting LAAC procedures with an open approach in MS–DRGs 250 and 251. We also stated our clinical advisors believed that ICD–10–PCS codes 02L70CK, 02L70DK, and 02L70ZK that describe a LAAC procedure with an open approach were more suitably grouped to MS–DRGs 273 and 274 (Percutaneous Intracardiac Procedures with and without MCC, respectively). Therefore, we finalized our proposal to reassign ICD–10–PCS procedure codes 02L70CK, 02L70DK, and 02L70ZK from MS–DRGs 250 and 251 to MS–DRGs 273 and 274. We also revised a revision to the titles for MS–DRGs 228 and 229. We appreciated the commenter’s feedback. We note that the analysis discussed in FY 2021 rulemaking was based on the examination of claims data from the September 2019 update of the FY 2019 MedPAR file, while discussions in Section II. D. of the FY 2022 proposed rule are based on the examination of claims data from the March 2020 update of the FY 2019 MedPAR file, as well as the September 2020 update of the FY 2020 MedPAR file.

In the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25117 through 25118), we discussed a request we received to again review the MS–DRG assignment of cases involving surgical ablation procedures for atrial fibrillation. The commenter stated that because CMS did not provide a detailed analysis of the claims data for the average length of stay and average costs related to the cases reporting procedure codes describing the open occlusion of left atrial appendage in the FY 2021 proposed rule, it reviewed the data analysis as presented in the FY 2021 IPPS/LTCH PPS rule and compared it to the data analysis in Section II.D.5.d of the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25118 through 25121) which was presented as part of the discussion of a two-part request to review the MS–DRG assignments for cases involving surgical ablation procedures for atrial fibrillation. The commenter stated based on their own analysis, it appeared the average length of stay and average costs of open occlusion of left atrial appendage procedures would be more clinically aligned with MS–DRGs 228 and 229.

Response: We appreciate the commenter’s concern and requested that CMS reconsider its proposal to continue the assignment of the open LAAC procedure codes to MS–DRGs 273 and 274. We display in the following tables the codes to MS–DRGs 273 and 274 (Percutaneous and Other Intracardiac Procedures with and without MCC, respectively) and instead assign these procedures to MS–DRGs 228 and 229 (Other Cardiothoracic Procedures with and without MCC, respectively). This commenter acknowledged in response to the FY 2021 proposed rule, they supported CMS’ proposal to assign the open approach left atrial appendage procedure codes from MS–DRGs 250 and 251 to MS–DRGs 273 and 274 at that time. However, the commenter stated that because CMS did not provide a detailed analysis of the claims data for the average length of stay and average costs related to the cases reporting procedure codes describing the open occlusion of left atrial appendage in the FY 2022 proposed rule, it reviewed the data analysis as presented in the FY 2021 IPPS/LTCH PPS rule and compared it to the data analysis in Section II.D.5.d of the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25118 through 25121) which was presented as part of the discussion of a two-part request to review the MS–DRG assignments for cases involving surgical ablation procedures for atrial fibrillation. The commenter stated based on their own analysis, it appeared the average length of stay and average costs of open occlusion of left atrial appendage procedures would be more clinically aligned with MS–DRGs 228 and 229.

Response: We appreciate the commenter’s feedback. We note that the analysis discussed in FY 2021 rulemaking was based on the examination of claims data from the September 2019 update of the FY 2019 MedPAR file, while discussions in Section II. D. of the FY 2022 proposed rule are based on the examination of claims data from the March 2020 update of the FY 2019 MedPAR file, as well as the September 2020 update of the FY 2020 MedPAR file.

We display in the following tables claims analysis using claims data from the March 2020 update of the FY 2019 MedPAR file, as well as the September 2020 update of the FY 2020 MedPAR file. We examined claims data from the March 2020 update of the FY 2019 MedPAR file for all cases in MS–DRGs 273 and 274 and compared the results to cases with a procedure code describing an open LAAC procedure.

</table>
In MS–DRG 273, we found a total of 7,557 cases with an average length of stay of 6.1 days and average costs of $28,356. Of those 7,557 cases, there were 29 cases reporting a LAAC procedure with an open approach, with an average length of stay of 7.6 days and average costs of $52,365. In MS–DRG 274, we found a total of 26,595 cases with an average length of stay of 2 days and average costs of $24,295. Of those 26,595 cases, there were 89 cases reporting a LAAC procedure with an open approach, with an average length of stay of 3.5 days and average costs of $25,185. The analysis shows that the cases reporting a LAAC procedure with an open approach in MS–DRGs 273 and 274 have higher average costs compared to all cases in MS–DRGs 273 and 274 ($52,365 versus $28,356 and $25,185 versus $24,295, respectively).

We also examined claims data from the September 2020 update of the FY 2020 MedPAR file for all cases in MS–DRGs 273 and 274 and compared the results to cases with a procedure code describing an open LAAC procedure.

### MS-DRGs 273 and 274 - LAAC Procedures with Open Approach

In MS–DRG 273, we found a total of 6,542 cases with an average length of stay of 6.1 days and average costs of $30,671. Of those 6,542 cases, there were 19 cases reporting a LAAC procedure with an open approach, with an average length of stay of 8.3 days and average costs of $47,421. In MS–DRG 274, we found a total of 23,125 cases with an average length of stay of 1.9 days and average costs of $25,880. Of those 23,125 cases, there were 55 cases reporting a LAAC procedure with an open approach, with an average length of stay of 3.1 days and average costs of $20,995. The analysis shows that the cases reporting a LAAC procedure with an open approach in MS–DRG 273 have lower average costs compared to all cases in MS–DRG 274 ($20,995 versus $25,880). While we recognize the average costs of the small number of cases reporting LAAC procedures with an open approach generally have average costs greater than the average costs of the cases in MS–DRGs 273 and 274 overall, our clinical advisors continue to support the reassignment of the open occlusion of left atrial appendage procedures, which was finalized in FY 2021 rulemaking. The MS–DRG system is a system of averages, and it is expected that across the diagnostic related groups that within certain groups, some cases may demonstrate higher than average costs, while other cases may demonstrate lower than average costs.

Our clinical advisors reviewed this issue and stated they do not believe that assigning procedure codes describing an open LAAC procedure to MS–DRGs 228 and 229 (Other Cardiothoracic Procedures with and without MCC, respectively) will improve clinical coherence, as this surgical class is not as precisely defined from a clinical perspective. MS–DRGs 228 and 229 are an example of the surgical MS–DRGs that are found within each MDC that include ‘other’ procedures intended to encompass procedures that, while not directly related to the MDC, can and do occur with principal diagnoses in that MDC with sufficient frequency.

Our clinical advisors note that, as stated in the ICD–10 MS–DRG Definitions Manual, “In each MDC there is usually a medical and a surgical class referred to as “other medical diseases” and “other surgical procedures,” respectively. The “other” medical and surgical classes are not as precisely...
defined from a clinical perspective. The other classes would include diagnoses or procedures which were infrequently encountered or not well defined clinically”. The ICD–10 MS–DRG Definitions Manual also states “The “other” surgical category contains surgical procedures which, while infrequent, could still reasonably be expected to be performed for a patient in the particular MDC.”

Our clinical advisors continue to state that when performed as standalone procedures, open LAAC procedures share similar factors such as complexity and resource utilization with all other LAAC procedures. Moreover, our clinical advisors continue to support the FY 2021 reassignment of the open occlusion of left atrial appendage procedures because it allows all LAAC procedures to be grouped together under the same MS–DRGs and improves clinical coherence. After consideration of the public comments we received, and for the reasons stated previously, we are finalizing our proposal to maintain the assignment of codes 02L70CK, 02L70DK, and 02L70ZK that describe the open occlusion of the left atrial appendage in MS–DRGs 273 and 274, without modification, for FY 2022.

e. Surgical Ablation

In the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25118 through 25121), we discussed a two-part request we received to review the MS–DRG assignments for cases involving the surgical ablation procedure for atrial fibrillation. Atrial fibrillation (AF) is an irregular and often rapid heart rate that occurs when the two upper chambers of the heart experience chaotic electrical signals. AF presents as either paroxysmal (lasting <7 days), persistent (lasting >7 day, but less than 1 year), or long standing persistent (chronic) (lasting >1 year) based on time duration and can increase the risk for stroke, heart failure, and mortality. Management of AF has two primary goals: Optimizing cardiac output through rhythm or rate control, and decreasing the risk of cerebral and systemic thromboembolism. Patients who worsen in symptomology or fail to respond to pharmacological treatment or other interventions may be referred for surgical ablation to treat their AF. Surgical ablation is a procedure that works by burning or freezing tissue on the inside of the heart to disrupt faulty electrical signals causing the arrhythmia, which can help the heart maintain a normal heart rhythm.

As discussed in the proposed rule, the first part of this request was to create a new classification of surgical ablation MS–DRGs to better accommodate the costs of open concomitant surgical ablations. According to the requestor, patients undergoing surgical ablation are treated under two potential scenarios: (1) Open concomitant (combination) surgical ablation, meaning open surgical ablation performed during another open-heart surgical procedure such as mitral valve repair or replacement (MVR), aortic valve repair or replacement (AVR), or coronary artery bypass grafting (CABG) and (2) minimally invasive, percutaneous endoscopic, standalone surgical ablation as the sole therapeutic procedure performed. According to the requestor, open concomitant surgical ablation is an efficient procedure, as it allows treatment of AF and another clinical pathology in one procedure thereby decreasing the risk of future readmits, need for future repeat catheter ablation procedures, and patient mortality.

The requestor identified the following potential procedure combinations that would comprise an “open concomitant surgical ablation” procedure.

- Open CABG + open surgical ablation
- Open MVR + open surgical ablation
- Open AVR + open surgical ablation
- Open MVR + open AVR + open surgical ablation
- Open MVR + open CABG + open surgical ablation
- Open MVR + open AVR + open CABG + open surgical ablation
- Open AVR + open CABG + open surgical ablation

The requestor performed their own analysis of these procedure code combinations and stated that it found the average costs for open concomitant surgical ablation procedures were consistently higher compared to the average costs within their respective MS–DRGs, which could limit beneficiary access to these procedures. The requestor suggested that the following four MS–DRGs be created to address the differences in average costs and average lengths of stay it found in its data analysis:

- Suggested New MS–DRG XXX—Open Surgical Ablation with or without Other Cardiothoracic Procedure with Cardiac Catheterization with MCC;
- Suggested New MS–DRG XXX—Open Surgical Ablation with or without Other Cardiothoracic Procedure with Cardiac Catheterization without MCC;
- Suggested New MS–DRG XXX—Open Surgical Ablation with or without Other Cardiothoracic Procedure without Cardiac Catheterization with MCC; and
- Suggested New MS–DRG XXX—Open Surgical Ablation with or without Other Cardiothoracic Procedure without Cardiac Catheterization without MCC.

In response to this request, we identified nine ICD–10–PCS codes that describe open surgical ablation. These codes and their corresponding MDC and MS–DRG assignments are listed in the following table.

<table>
<thead>
<tr>
<th>ICD-10-PCS Code</th>

</tbody>
</table>
We stated in the proposed rule that the ICD–10 MS–DRGs Definitions Manual Version 38.1, for open concomitant surgical ablation procedures, the GROUPER logic assigns MS–DRGs 228 and 229 (Other Cardiothoracic Procedures with and without MCC, respectively) in most instances because MS–DRGs 228 and 229 are high in the surgical hierarchy GROUPER logic of MDC 05 (Diseases and Disorders of the Circulatory System). We would like to correct the statement in the proposed rule that, in ICD–10 MS–DRGs Definitions Manual Version 38.1, for open concomitant surgical ablation procedures, the GROUPER logic assigns MS–DRGs 228 and 229 (Other Cardiothoracic Procedures with and without MCC, respectively) in most instances. We list in the following table the open concomitant surgical ablation procedure code combinations and their corresponding MS–DRG assignments in the ICD–10 MS–DRGs Definitions Manual Version 38.1.

Since patients can have multiple procedures reported with a principal diagnosis during a particular hospital stay, and a patient can be assigned to only one MS–DRG, the surgical hierarchy GROUPER logic provides a hierarchical order of surgical classes from the most resource-intensive to the least resource-intensive. Patients with multiple procedures are generally assigned to the MS–DRG that correlates to the most resource-intensive surgical class.

As noted in the proposed rule, our clinical advisors reviewed this grouping and noted in open concomitant surgical ablation procedures, the CABG, MVR, and/or AVR components of the procedure are more technically complex than the open surgical ablation procedure. We noted that our clinical advisors stated that in open concomitant surgical ablation procedures, the MS–DRG assigned should be based on the most resource-intensive procedure performed. Therefore, we indicated we believed this request would be better addressed by proposing to revise the surgical hierarchy in MDC 05 rather than creating four new MS–DRGs. For FY 2022, we proposed to revise the surgical hierarchy for the MS–DRGs in MDC 05 to sequence MS–DRGs 231–236 (Coronary Bypass) above MS–DRGs 228 and 229 to enable more appropriate MS–DRG assignment for these types of cases. We indicated in the proposed rule, that, under this proposal, if a procedure code describing a CABG and a procedure code describing an open surgical ablation are present, the GROUPER logic would assign the CABG surgical class because a CABG would be sequenced higher in the hierarchy than an open surgical ablation.

Response: We thank the commenters for their support.

Comment: While supporting our proposal, other commenters stated that this proposal does not address the issue of the increased resources required to treat patients with AF that are also a candidate for open surgical ablation procedure at the same time of their CABG procedure. Some commenters stated that CMS’ proposal to revise the surgical hierarchy for CABG procedures does not advance patient access nor allow patients the opportunity to receive these procedures during the
CABG surgical procedure. Another commenter stated that the proposed revision to the surgical hierarchy fails to address the increased costs of cases associated with open concomitant surgical ablation for AF performed during open mitral valve procedures, which are assigned to MS–DRGs 216 through 221. Another commenter stated while they agree that surgical ablation procedures are not as resource intensive as CABG procedures, CMS' proposal does not give consideration to the increased costs the surgical ablation procedure adds to the CABG procedure.

A commenter stated that CMS did not describe its methodology in detail regarding its analysis of the costs associated with performance of open surgical ablation for AF performed concomitantly during open-heart procedures, preventing meaningful public comments. This commenter stated that concomitant surgical ablation does not represent an "incidental cost" to a hospital that can be remedied just through changes in the existing surgical hierarchy.

Commenters expressed concern that given the added costs of performing as many as three procedures at the same time, hospitals may more likely schedule the patient for separate procedures even though guidelines of the Society for Thoracic Surgeons and the Heart Rhythm Society recommend performing surgical ablation for AF at the time of open-heart procedures. A commenter stated that facilities receive only one MS–DRG payment when procedures are performed concomitantly and are therefore burdened with absorbing the additional expenses of other services provided, further stating that data have shown that mortality is significantly reduced in the first year following concomitant treatment.

Many commenters urged CMS to either (1) create new MS–DRGs for these open concomitant procedures as originally requested, or (2) assign these procedures to MS–DRGs that consider the added procedure and device costs required. Another commenter requested that CMS create a supplemental payment mechanism that could be modeled based on the respective costs of the individual procedures determined by claims data and then adjusted for efficiencies of a single operative session to facilitate incremental payment when two major procedures are performed during the same hospital admission.

**Response:** We appreciate the commenters’ feedback. As discussed in the preamble II.D.15. of the preamble of the proposed rule and this final rule, in our proposal to revise the surgical hierarchy for the MS–DRGs in MDC 05, MS–DRGs 216–221 (Cardiac Valve and Other Major Cardiothoracic Procedures) will continue to be sequenced above MS–DRGs 231–236 (Coronary Bypass) and MS–DRGs 228 and 229. Of note, in the absence of other procedure codes on the claim, we agree with the commenter that the only procedure code combination describing open concomitant surgical ablations affected by our proposal to revise the surgical hierarchy for the MS–DRGs in MDC 05 is "Open CABG + Open Ablation". Under this proposal, the six other combinations describing open concomitant surgical ablations will continue to be assigned to MS–DRGs 216 through 221.

In response to the comment that CMS did not describe its methodology in detail regarding its analysis of the costs associated with performance of open surgical ablation, as we discussed in the preamble II.D.15. of the preamble of the proposed rule, we reviewed the surgical hierarchy within MDC 05 consistent with our annual process; specifically, we weigh the average costs of each MS–DRG in the class by frequency (that is, by the number of cases in the MS–DRG) to determine average resource consumption for the surgical class. With regard to the comments stating that the proposed revision to the surgical hierarchy fails to address the increased costs of cases associated with open concomitant surgical ablation, we examined the data analysis of cases reporting procedure code combinations describing open concomitant surgical ablations in the March 2020 update of the FY 2019 MedPAR file and the September 2020 update of the FY 2020 MedPAR file for cases reporting procedure code combinations describing open concomitant surgical ablations. First, we refer the reader to Table 6P.1n associated with this final rule (which is available via the internet on the CMS website at: https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS) for the list of ICD–10–PCS procedure codes reflecting mitral valve repair or replacement (MVR), aortic valve repair or replacement (AVR), and coronary artery bypass grafting (CABG) procedures that we examined in our analysis of this issue. We also refer the reader to Table 6P.1o associated with this final rule (which is available via the internet on the CMS website at: https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS) for data analysis findings of cases reporting procedure code combinations describing open concomitant surgical ablations currently assigned to MS–DRGs 216, 217, 218, 219, 220 and 221 from the March 2020 update of the FY 2019 MedPAR file and from the September 2020 update of the FY 2020 MedPAR file. We note that if a procedure code combination that is currently assigned to MS–DRGs 216, 217, 218, 219, 220 and 221 is not displayed, it is because there were no cases found reporting that combination in the assigned MS–DRG.

As shown in Table 6P.1o associated with this final rule, in our examination of the claims data from both the March 2020 update of the FY 2019 MedPAR file and September 2020 update of the FY 2020 MedPAR file, while the average lengths of stay and average costs of cases reporting procedure code combinations describing open concomitant surgical ablations are higher than all cases in their respective MS–DRG, we found there is variation in the volume, length of stay, and average costs of the cases. In the analysis of claims data from the March 2020 update of the FY 2019 MedPAR file, during our review of MS–DRG 216, we found 1,145 cases reporting procedure code combinations describing open concomitant surgical ablations with the average length of stay ranging from 17.6 days to 24.3 days and average costs ranging from $77,868 to $125,120 for these cases. For MS–DRG 217, we found 295 cases reporting procedure code combinations describing open concomitant surgical ablations with the average length of stay ranging from 10 days to 13 days and average costs ranging from $45,526 to $52,859 for these cases. For MS–DRG 218, we found 7 cases reporting procedure code combinations describing open concomitant surgical ablations with the average length of stay ranging from 7 days to 11 days and average costs ranging from $28,614 to $68,725 for these cases. For MS–DRG 219, we found 2,673 cases reporting procedure code combinations describing open concomitant surgical ablations with the average length of stay ranging from 11.6 days to 13.3 days and average costs ranging from $65,846 to $83,281 for these cases. For MS–DRG 220, we found 1,890 cases reporting procedure code combinations describing open concomitant surgical ablations with the average length of stay ranging from 7.3 days to 10.2 days and average costs ranging from $44,568 to $64,726 for these cases. For MS–DRG 221, we found 110 cases reporting procedure code combinations describing open concomitant surgical ablations with the average length of stay ranging from 5.6 days to 6.8 days and average costs...
ranging from $44,826 to $73,629 for these cases.

Our analysis of the claims data from the September 2020 update of the FY 2020 MedPAR file resulted in similar findings to those from the March 2019 MedPAR file; while the average lengths of stay and average costs of cases reporting procedure code combinations describing open concomitant surgical ablations are higher than all the cases in their respective MS–DRG, we found there is variation in the volume, length of stay, and average costs of the cases. In the analysis of claims data from the September 2020 update of the FY 2020 MedPAR file, during our review of MS–DRG 216, we found 931 cases reporting procedure code combinations describing open concomitant surgical ablations with the average length of stay ranging from 16.1 days to 20.5 days and average costs ranging from $79,732 to $108,552 for these cases. For MS–DRG 217, we found 207 cases reporting procedure code combinations describing open concomitant surgical ablations with the average length of stay ranging from 9.2 days to 12 days and average costs ranging from $46,588 to $70,840 for these cases. For MS–DRG 218, we found 1 case reporting procedure code combinations describing open concomitant surgical ablations with a length of stay of 8 days and average costs of $17,611. For MS–DRG 219, we found 1,998 cases reporting procedure code combinations describing open concomitant surgical ablations with the average length of stay ranging from 11.6 days to 14.6 days and average costs ranging from $68,175 to $104,560 for these cases. For MS–DRG 220, we found 1,318 cases reporting procedure code combinations describing open concomitant surgical ablations with the average length of stay ranging from 7.5 days to 8.0 days and average costs ranging from $48,200 to $61,444 for these cases. For MS–DRG 221, we found 60 cases reporting procedure code combinations describing open concomitant surgical ablations with the average length of stay ranging from 5.1 days to 8.6 days and average costs ranging from $49,910 to $65,501 for these cases.

In response to comments that urged CMS to create new MS–DRGs for these open concomitant procedures as originally requested, based on these data, our clinical advisors believe additional time is needed given the complexity of these code combinations and corresponding data before exploring a proposal to create new MS–DRGs for this subset of patients. For example, cases reporting a CABG and a procedure code describing an open surgical ablation without procedure codes describing an AVR or an MVR were found in MS–DRGs 216 through 221 meaning another cardiac valve or other major cardiothoracic procedure was reported, which could be contributing to the increased costs of these cases. Secondly, MS–DRGs 216, 217 and 218 are defined by the performance of cardiac catheterization, meaning a cardiac catheterization procedure was reported, which could be also contributing to the increased costs of these cases. Lastly, the cases reporting an open concomitant surgical ablation code combination are predominately found in the higher (CC or MCC) severity level MS–DRGs of their current base MS–DRG assignment. Therefore, our clinical advisors believe that additional time is needed to allow for further analysis of the claims data to determine to what extent the patient’s co-morbid conditions are also contributing to higher costs and to identify other contributing factors that might exist with respect to the increased length of stay and costs of these cases in these MS–DRGs. Our clinical advisors also believe that future data findings may demonstrate additional variance in resource utilization for this patient population.

We also note, as discussed in Section D.1.b of the proposed rule and this final rule, using the March 2020 update of the FY 2019 MedPAR file and the September 2020 update of the FY 2020 MedPAR file, we analyzed how applying the NonCC subgroup criteria to all MS–DRGs currently split into three severity levels would affect the MS–DRG structure beginning in FY 2022. Findings from our analysis indicated that MS–DRGs 216, 217, 218 as well as approximately 31 other MS–DRGs would be subject to change based on the three-way severity level split criterion finalized in FY 2021. We refer the reader to Table 6P.1c associated with the proposed rule and this final rule (which is available via the internet on the CMS website at: https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPS) for the list of the 96 MS–DRGs that would be subject to deletion and the list of the 58 new MS–DRGs that would have been proposed for creation under this policy if the NonCC subgroup criteria were applied.

As discussed previously, we are finalizing the delay of the application of the NonCC subgroup criteria to existing MS–DRGs with a three-way severity level split until FY 2023 or later, and are finalizing our proposal to maintain the current structure of the 32 MS–DRGs that currently have a three-way severity level split (total of 96 MS–DRGs) that would otherwise be subject to these criteria for FY 2022. Noting that currently the total number of cases in MS–DRG 218 is below 500, and that we may consider consolidating these MS–DRGs into two severity levels based on the application of the NonCC subgroup criteria in future rule-making, as well as for the reasons stated previously, we believe additional time is needed to review the clinical nature of cases reporting an open concomitant surgical ablation code combination before creating new MS–DRGs for the subset of cases with procedure codes that describe open concomitant surgical ablation procedures that are currently assigned to MS–DRGs 216 through 221 at this time.

In response to comment that the proposed hierarchy change will not address the increased resources required to treat patients with AF that are a candidate for an open surgical ablation procedure at the same time of their CABG procedure, we analyzed the March 2020 update of the FY 2019 MedPAR file for cases reporting the procedure code combination “Open CABG + Open Ablation” of the seven potential procedure combinations that would comprise an “open concomitant surgical ablation” procedure, as this is the only concomitant procedure code combination potentially affected by the proposed hierarchy change (in the absence of other procedure codes that could affect MS–DRG assignment on the claim).
As shown in the table, the data analysis performed indicates that the 1,010 cases in MS–DRG 228 reporting a procedure code that describes a CABG procedure as well as a procedure code describing an open ablation have an average length of stay that is longer than the average length of stay for all the cases in MS–DRG 228 (12.8 days versus 10.7 days) and higher average costs when compared to all the cases in MS–DRG 228 ($56,331 versus $45,772). The 1,041 cases in MS–DRG 229 reporting a procedure code that describes a CABG procedure as well as a procedure code describing an open ablation also have an average length of stay that is longer than the average length of stay for all the cases in MS–DRG 229 (8.2 days versus 5.3 days) and higher average costs when compared to all the cases in MS–DRG 229 ($38,643 versus $29,454). As expected, there were zero cases found with procedure codes describing one of the other six “open concomitant surgical ablation” procedure code combinations as described by the requestor since GROUPER logic would assign MS–DRGs 216 through 221 for the other combinations.

We then examined the redistribution of cases that is anticipated to occur as a result of the proposal to move MS–DRGs 231 through 236 (Coronary Bypass) above MS–DRGs 228 and 229 in the surgical hierarchy of MDC 05 for Version 39 of the ICD–10 MS–DRGs, by processing the claims data from the March 2020 update of the FY 2019 MedPAR file through the ICD–10 MS–DRG GROUPER Version 38 and then processing the same claims data through the ICD–10 MS–DRG GROUPER Version 39 for comparison. The number of cases from this comparison that result in different MS–DRG assignments is the number of the cases that are anticipated to potentially shift or be redistributed. Our findings are shown in the following table.

### MS-DRGs 228 – 229: Cases Reporting Procedures Describing Open Concomitant Ablation

<table>

</tbody>
</table>
We found a number of cases that are anticipated to potentially shift or be redistributed into MS–DRGs 231 through 236. The largest number of cases moving out of MS–DRG 228 are moving into MS–DRG 235, which means these cases reported a procedure code for CABG and a cardiothoracic procedure, such as a surgical ablation, without procedure codes reporting a PTCA or cardiac catheterization. The largest number of cases moving out of MS–DRG 229 are moving into MS–DRG 236, which again means these cases reported a procedure code for CABG and a cardiothoracic procedure, such as a surgical ablation, without procedure codes reporting a PTCA or cardiac catheterization.

We then examined the claims data from the March 2020 update of the FY 2019 MedPAR file to identify the average length of stay and average costs for all cases in MS–DRGs 231, 232, 233, 234, 235 and 236. Our findings are shown in the following table.

<table>

</tbody>
</table>

In reviewing the data analysis performed, the 1,010 cases in MS–DRG 228 reporting a procedure code that describes a CABG procedure as well as a procedure code describing an open ablation have an average length of stay that is longer than the average length of stay for all the cases in MS–DRG 235 (12.8 days versus 9.8 days) and higher average costs when compared to all the cases in MS–DRG 235 ($56,331 versus $42,133). The 1,041 cases in MS–DRG 229 reporting a procedure code that describes a CABG procedure as well as a procedure code describing an open ablation in MS–DRG 228 as well as a secondary diagnosis of MCC are closer aligned to costs of cases in MS–DRGs 231, 232, 233, 234, 235 and 236. Our findings are shown in the following table.
Next, we analyzed the September 2020 update of the FY 2020 MedPAR file for cases reporting a procedure code describing a CABG procedure with a procedure code describing an open ablation.

<table>
<thead>
<tr>
<th>MS-DRG</th>
<th>Number of Cases</th>
<th>Average Length of Stay</th>
<th>Average Costs</th>
</tr>
</thead>

<td>4.9</td>
</tr>
<tr>
<td></td>
<td>Cases with procedure code for CABG and procedure code for open ablation</td>
<td>824</td>
<td>7.9</td>
</tr>
</tbody>
</table>

As shown in the table, the data analysis performed indicates that the 836 cases in MS–DRG 228 reporting a procedure code that describes a CABG procedure as well as a procedure code describing an open ablation have an average length of stay that is longer than the average length of stay for all the cases in MS–DRG 228 (12.8 days versus 10.2 days) and higher average costs when compared to all the cases in MS–DRG 228 ($60,327 versus $46,508). The 824 cases in MS–DRG 229 reporting a procedure code that describes a CABG procedure as well as a procedure code describing an open ablation also have an average length of stay that is longer than the average length of stay for all the cases in MS–DRG 229 (7.9 days versus 4.9 days) and higher average costs when compared to all the cases in MS–DRG 229 ($39,392 versus $29,885). As expected, there were zero cases found with procedure codes describing one of the other six “open concomitant ablation” procedure code combinations as described by the requestor since GROUPER logic would assign MS–DRGs 216 through 221 for the other combinations.

As we did with the March 2020 update of the FY 2019 MedPAR file, we then examined the redistribution of cases that is anticipated to occur by processing the claims data, this time from the September 2020 update of the FY 2020 MedPAR file through the ICD–10 MS–DRG GROUPER Version 38 and then processed the same claims data through the ICD–10 MS–DRG GROUPER Version 39 for comparison. Our findings are shown in the table.
Similarly, we found a number of cases that are anticipated to potentially shift or be redistributed into MS–DRGs 231 through 236. The largest number of cases moving out of MS–DRG 228 are moving into MS–DRG 235, which means these cases reported a procedure code for CABG and a cardiothoracic procedure, such as a surgical ablation, without procedure codes reporting a PTCA or cardiac catheterization. The largest number of cases moving out of MS–DRG 229 are moving into MS–DRG 236, which again means these cases reported a procedure code for CABG and a cardiothoracic procedure, such as a surgical ablation, without procedure codes reporting a PTCA or cardiac catheterization.

We also examined the claims data from the September 2020 update of the FY 2020 MedPAR file to identify the average length of stay and average costs for all cases in MS–DRGs 231, 232, 233, 234, 235 and 236. Our findings are shown in the following table.

<table>

</tbody>
</table>

In reviewing the data analysis performed, the 836 cases in MS–DRG 228 reporting a procedure code that describes a CABG procedure as well as a procedure code describing an open ablation have an average length of stay for all the cases in MS–DRG 235 (12.8 days versus 9.7 days) and higher average costs when compared to all the cases in MS–DRG 235 ($60,327 versus $44,106). The 824 cases in MS–DRG 229 reporting a procedure code that describes a CABG procedure as well as a procedure code describing an open ablation also have an average length of stay that is longer than the average length of stay for all the cases in MS–DRG 236 (7.9 days versus 6.4 days) and higher average costs when compared to all the cases in MS–DRG 236 ($39,392 versus $31,170).
The average length of stay and average costs of cases reporting a procedure code that describes a CABG procedure as well as a procedure code describing an open ablation in MS–DRGs 228 as well as a secondary diagnosis of MCC are closer aligned to costs of cases in MS–DRGs 233 (Coronary Bypass with Cardiac Catheterization with MCC) (12.8 versus 12.5 days and $60,327 versus $56,388 respectively). The requestor identified nine ICD–10–PCS codes that they stated describe percutaneous endoscopic surgical ablation. According to the requestor, standalone, percutaneous endoscopic surgical ablation is a rapidly growing therapy, indicated for highly symptomatic patients that have already failed medical management and/or percutaneous catheter ablation procedures. The requestor identified nine ICD–10–PCS codes that they stated describe percutaneous endoscopic surgical ablation. These codes and their corresponding MDC and MS–DRG assignments are listed in the following table.

<table>
<thead>
<tr>
<th>ICD-10-PCS Code</th>
<th>MDC</th>
<th>MS-DRG</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>

<td>163-165</td>
<td>270-272</td>
</tr>
</tbody>
</table>

The requestor performed their own analysis and stated that they found the most common MS–DRG assignment for cases describing standalone percutaneous endoscopic surgical ablation was MS–DRGs 228 and 229 (Other Cardiothoracic Procedures with and without MCC, respectively) and that in those MS–DRGs, the standalone surgical ablation procedures cost more than all the procedures in their currently assigned MS–DRGs 228 and 229.
Therefore, the requestor recommended CMS reassign these procedures to higher weighted MS–DRGs 219 and 220 (Cardiac Valve and Other Major Cardiothoracic Procedures without Cardiac Catheterization with MCC and with CC, respectively).

In response to this request, we examined claims data from the March 2020 update of the FY 2019 MedPAR file for all cases in MS–DRGs 228 and 229 and compared the results to cases with a procedure code describing a standalone percutaneous endoscopic surgical ablation procedure. Our findings are shown in the following table.

### MS-DRGs 228 – 229: Cases Reporting Procedures Describing Percutaneous Endoscopic Surgical Ablation

</tbody>
</table>

As shown in the table, the data analysis performed indicates that the 99 cases in MS–DRG 228 reporting a procedure code that describes percutaneous endoscopic surgical ablation have an average length of stay that is shorter than the average length of stay for all the cases in MS–DRG 228 (7.1 days versus 10.7 days) and higher average costs when compared to all the cases in MS–DRG 228 ($48,281 versus $45,772). The 497 cases in MS–DRG 229 reporting a procedure code that describes percutaneous endoscopic surgical ablation have an average length of stay that is shorter than the average length of stay for all the cases in MS–DRG 229 (3.7 days versus 5.3 days) and higher average costs when compared to all the cases in MS–DRG 229 ($35,516 versus $29,454).

We then examined the claims data from the March 2020 update of the FY 2019 MedPAR file to identify the average length of stay and average costs for all cases in MS–DRGs 219 and 220. Our findings are shown in the following table.

<table>
<thead>
<tr>
<th>MS-DRG</th>
<th>Number of Cases</th>
<th>Average Length of Stay</th>
<th>Average Costs</th>
</tr>
</thead>
<tbody>
<tr>
<td>219</td>
<td>15,597</td>
<td>10.9</td>
<td>$57,845</td>
</tr>
<tr>
<td>220</td>
<td>15,074</td>
<td>6.5</td>
<td>$39,565</td>
</tr>
</tbody>
</table>

As shown in the table, for MS–DRG 219, there were a total of 15,597 cases with an average length of stay of 10.9 days and average costs of $57,845. For MS–DRG 220, there were a total of 15,074 cases with an average length of stay of 6.5 days and average costs of $39,565.

We also examined claims data from the September 2020 update of the FY 2020 MedPAR file for all cases in MS–DRGs 228 and 229 and compared the results to cases with a procedure code describing a standalone percutaneous endoscopic surgical ablation procedure. Our findings are shown in the following table.
As shown in the table, the data analysis performed indicates that the 84 cases in MS–DRG 228 reporting a procedure code that describes percutaneous endoscopic surgical ablation have an average length of stay that is shorter than the average length of stay for all the cases in MS–DRG 228 (6.9 days versus 10.2 days) and lower average costs when compared to all the cases in MS–DRG 228 ($44,710 versus $46,508). The 393 cases in MS–DRG 229 reporting a procedure code that describes percutaneous endoscopic surgical ablation have an average length of stay that is shorter than the average length of stay for all the cases in MS–DRG 229 (3.4 days versus 4.9 days) and higher average costs when compared to all the cases in MS–DRG 229 ($34,237 versus $29,885).

We then examined the claims data from the September 2020 update of the FY 2020 MedPAR file to identify the average length of stay and average costs for all cases in MS–DRGs 219 and 220. Our findings are shown in the following table.

<table>
<thead>
<tr>
<th>MS-DRG</th>
<th>Number of Cases</th>
<th>Average Length of Stay</th>
<th>Average Costs</th>
</tr>
</thead>
<tbody>
<tr>
<td>219</td>
<td>11,863</td>
<td>10.9</td>
<td>$61,934</td>
</tr>
<tr>
<td>220</td>
<td>10,072</td>
<td>6.5</td>
<td>$41,800</td>
</tr>
</tbody>
</table>

As shown in the table, for MS–DRG 219, there were a total of 11,863 cases with an average length of stay of 10.9 days and average costs of $61,934. For MS–DRG 220, there were a total of 10,072 cases with an average length of stay of 6.5 days and average costs of $41,800.

As noted in the proposed rule, our analysis indicates that MS–DRGs 219 and 220 generally have much higher average costs and longer average lengths of stay than the cases with a procedure code describing a standalone percutaneous endoscopic surgical ablation procedure currently assigned to MS–DRGs 228 and 229. Instead, the average costs and average length of stay for cases reporting a standalone percutaneous endoscopic surgical ablation appear to be generally more aligned with the average costs and average length of stay for all cases in MS–DRGs 228 and 229, where they are currently assigned. We indicated that our clinical advisors reviewed this issue and did not recommend changing the assignment of procedure codes describing percutaneous endoscopic surgical ablation. Therefore, for the reasons indicated, we proposed to maintain the current structure of MS–DRGs 219 and 220.

Comment: Commenters disagreed with our proposal to maintain the current structure of MS–DRGs 219 and 220 and noted that payment for MS–DRGs 228 and 229 has been trending downward over the last 5 years. Some commenters stated that CMS did not provide transparency to the details of its analysis to support why standalone hybrid surgical ablation procedures should not be moved from MS–DRGs 228 and 229. Another commenter stated CMS’ proposed decline in payment rates makes it impossible for their facility to continue to provide these needed procedures to patients suffering from atrial fibrillation. Another commenter stated the proposed relative weight does not accurately reflect the costs of these device intensive procedures and that there has been no transparency into the cause for these significant declines. Other commenters asserted that hospitals will be forced to postpone or “trim back” on providing patients access to more complex, resource intensive procedures such as these, to better align their costs with what they asserted were Medicare’s inadequate payment levels. Other commenters requested that CMS use its statutory authority to not reduce the relative weight and payment for MS–DRGs 228 and 229, which contain stand-alone surgical ablation procedures for AF.

Response: We appreciate the commenters’ feedback. We note that we did not propose a change to the GROUPER logic of MS–DRGs 228 and 229. Our clinical advisors did not recommend changing the assignment of procedure codes describing percutaneous endoscopic surgical ablation, currently assigned to MS–DRGs 228 and 229, to MS–DRGs 219 and 220. Therefore, we proposed to maintain the current structure of MS–DRGs 219 and 220. This proposal by extension also maintains the current structure of MS–DRGs 228 and 229. With regard to the comments about the implications for payment in MS–DRGs 228 and 229, we note that the goals of assigning or re-assigning procedure codes to MS–DRGs are to better clinically represent the resources involved in caring for these patients and enhance the overall accuracy of the system. In response to the comment that CMS did not provide transparency to...
In the details of its analysis in the proposed rule, we provided our claims analysis for the cases with a procedure code describing a standalone percutaneous endoscopic surgical ablation procedure as well as a discussion of that analysis and the basis for our proposal. It is unclear from the comments what additional details the commenters are referencing.

In response to the comment that hospitals will be forced to postpone or “trim back” on providing patients access to these procedures in order to better align their costs with Medicare payment levels, as we have stated in prior rulemaking, it is not appropriate for facilities to deny treatment to beneficiaries needing a specific type of therapy or treatment that potentially involves increased costs.

As we have indicated in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38103), the FY 2019 IPPS/LTCH PPS final rule (83 FR 41273), the FY 2020 IPPS/LTCH PPS final rule (84 FR 42167) and the FY 2021 IPPS/LTCH final rule (85 FR 58598), we do not believe it is normally appropriate to address relative weight fluctuations that appear to be driven by changes in the underlying data even if we have addressed relative weight fluctuations in specific circumstances such as when a relative weight would have declined by more than 20 percent in one year, or in instances where we did not have sufficient MedPAR data to set accurate and stable cost relative weights for low volume MS–DRGs. We do however acknowledge the trending reduction in relative weights for MS–DRGs 228 and 229 in our ratesetting as reflected in the following chart.

**MS-DRG 228 OTHER CARDIOTHORACIC PROCEDURES WITH MCC**

**MS-DRG 229 OTHER CARDIOTHORACIC PROCEDURES WITHOUT MCC**

We believe this weight change over time to be appropriately driven by the underlying data in the 5 years since CMS began using the ICD–10 data in calculating the relative weights. We note that there are 809 ICD–10–PCS codes assigned to the GROUPER logic of MS–DRGs 228 and 229 in the ICD–10 MS–DRGs Definitions Manual Version 38.1, of which the procedure codes describing standalone ablation represent a small percentage.

As stated in the ICD–10 MS–DRG Definitions Manual, “In each MDC there is usually a medical and a surgical class referred to as “other medical diseases” and “other surgical procedures,” respectively. The “other” medical and surgical classes are not as precisely defined from a clinical perspective. The other classes would include diagnoses or procedures which were infrequently encountered or not well defined clinically”. The ICD–10 MS–DRG Definitions Manual also states “The “other” surgical category contains surgical procedures which, while infrequent, could still reasonably be expected to be performed for a patient in the particular MDC.” MS–DRGs 228 and 229 are an example of the surgical MS–DRGs that are found within each MDC that include “other” procedures intended to encompass procedures that, while not directly related to the MDC, can and do occur with principal diagnoses in that MDC with sufficient frequency.

As displayed in the proposed rule, when we examined claims data from the March 2020 update of the FY 2019 MedPAR file for all cases in MS–DRGs 228 and 229 and compared the results to cases with a procedure code describing a standalone percutaneous endoscopic surgical ablation procedure, the 84 cases in MS–DRG 228 reporting a procedure code that describes percutaneous endoscopic surgical ablation represent only 2% of the 4,419 total cases in MS–DRG 228. The 393 cases in MS–DRG 229 reporting a procedure code that describes percutaneous endoscopic surgical ablation represent only 9% of the 5,250 total cases in MS–DRG 229.

Similarly, when we examined claims data from the September 2020 update of the FY 2020 MedPAR file for all cases in MS–DRGs 228 and 229 and compared the results to cases with a procedure code describing a standalone percutaneous endoscopic surgical ablation procedure, the 84 cases in MS–DRG 228 reporting a procedure code that describes percutaneous endoscopic surgical ablation represent only 2% of the 4,419 total cases in MS–DRG 228. The 393 cases in MS–DRG 229 reporting a procedure code that describes percutaneous endoscopic surgical ablation represent only 8% of the 4,732 total cases in MS–DRG 229.

We also note that each year, we calculate the relative weights by dividing the average cost for cases within each MS–DRG by the average cost for cases across all MS–DRGs. It is to be expected that when MS–DRGs are restructured, such as when procedure codes are reassigned or the hierarchy within an MDC is revised, resulting in
A different case-mix within the MS–DRGs, the relative weights of the MS–DRGs will change as a result. Over the past five years, there have been changes to the structure of MS–DRGs 228 and 229. Specifically, in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56809 through 56813), we finalized our proposal to collapse MS–DRGs 228, 229, and 230 from three severity levels to two severity levels by deleting MS–DRG 230 and revised the structure of MS–DRG 229. We also finalized our proposal to reassign ICD–9–CM procedure code 35.97 and the cases reporting ICD–10–PCS procedure code 02UG3JZ (Supplemental material valve with synthetic substitute, percutaneous approach) from MS–DRGs 273 and 274 to MS–DRG 228 and revised the titles of MS–DRG 228 and 229. In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42080 through 56813) we finalized our proposal to modify the structure of MS–DRGs 266 and 267 by reassigning ICD–10–PCS procedure code 02UG3JZ describing a transcatheter mitral valve repair with implant procedure from MS–DRGs 228 and 229 to MS–DRGs 266 and 267 and revised the titles of MS–DRG 266 and 267. Finally, as discussed in the FY 2022 IPPS/LTCH PPS proposed rule, and earlier in this section, we proposed to revise the surgical hierarchy for the MS–DRGs in MDC 05 to sequence MS–DRGs 231–236 (Coronary Bypass) above MS–DRGs 228 and 229 for FY 2022.

Therefore, the data appear to reflect that the difference in the relative weights reflected in Table 5—List of Medicare Severity Diagnosis Related Groups (MS–DRGs), Relative Weighting Factors, and Geometric and Arithmetic Mean Length of Stay associated with final rule for the applicable fiscal year can be attributed to the fact that the finalization of these proposals resulted in a different case-mix within the MS–DRGs which is then being reflected in the relative weights. We refer the reader to section I.E. of the preamble of this FY 2022 IPPS/LTCH PPS final rule for a complete discussion of the relative weight calculations.

**Comment:** A few commenters noted that hybrid standalone percutaneous endoscopic surgical ablation includes both a minimally invasive surgical ablation performed by a surgeon and catheter ablation performed by an electrophysiologist in the same hospital visit, and stated that the downward payment trend for the MS–DRGs 228 and 229 has resulted in hospitals being undercompensated for the costs of furnishing standalone hybrid percutaneous surgical ablation procedures for AF. These commenters proposed two possible remedies to this underpayment, that CMS either (1) maintain the relative weights of MS–DRGs 228 and 229 for a year and then reassess the data, or (2) assign cases reporting procedure codes describing standalone percutaneous endoscopic surgical ablation from MS–DRGs 228 and 229 to the higher (MCC) severity level MS–DRG of its current base MS–DRG assignment, which is MS–DRG 228 (Other Cardiothoracic Procedures with MCC), to prevent underpayment for these procedures.

**Response:** We appreciate the commenter’s suggestions. In response to the request that CMS maintain the relative weights of MS–DRGs 228 and 229 for a year, as stated in response to similar comments expressed by other commenters, we believe the weight change in these MS–DRGs over time to be appropriately driven by the underlying data. In response to the request that CMS assign cases reporting procedure codes describing standalone percutaneous endoscopic surgical ablation from MS–DRGs 228 and 229 to the higher (MCC) severity level MS–DRG of its current base MS–DRG assignment, we examined the claims analysis as presented in the proposed rule and earlier in this section. Using the March 2020 update of the FY 2019 MedPAR file, the 497 cases in MS–DRG 229 reporting a procedure code that describes percutaneous endoscopic surgical ablation without a secondary diagnosis designated as an MCC have an average length of stay that is shorter than the average length of stay for all the cases in MS–DRG 228 (3.7 days versus 10.7 days) and lower average costs when compared to all the cases in MS–DRG 228 ($35,516 versus $45,772). Similarly, using the September 2020 update of the FY 2020 MedPAR file, the 393 cases in MS–DRG 229 reporting a procedure code that describes percutaneous endoscopic surgical ablation without a secondary diagnosis designated as an MCC have an average length of stay that is shorter than the average length of stay for all the cases in MS–DRG 228 (3.4 days versus 10.2 days) and lower average costs when compared to all the cases in MS–DRG 228 ($34,237 versus $46,508). Our clinical advisors reviewed this analysis and do not support reassignment of cases reporting a procedure code that describes percutaneous endoscopic surgical ablation without a secondary diagnosis designated as an MCC from MS–DRG 229 to MS–DRG 228 based on this claims data analysis. Our advisors stated it would not be appropriate to reassign these cases into the higher severity level MS–DRG in the absence of an MCC and noted that the cases would not be clinically coherent with regard to resource utilization as reflected in the differences in average costs and average lengths of stay. As additional claims data becomes available, we will continue to analyze the clinical nature of procedure codes that describe percutaneous endoscopic surgical ablation and their MS–DRG assignments to further improve the overall accuracy of the IPPS payments in future rulemaking.

Therefore, after consideration of the public comments we received, and for the reasons stated earlier, we are finalizing our proposal to maintain the current structure of MS–DRGs 219 and 220 for FY 2022.

**f. Drug-Eluting Stents**

In the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25121 through 25122), we discussed a request we received to review the MS–DRG assignments of claims involving the insertion of coronary stents in percutaneous coronary interventions. The requestor suggested that CMS eliminate the distinction between drug-eluting and bare-metal coronary stents in the MS–DRG classification. According to the requestor, coated stents have a clinical performance comparable to drug-eluting stents however they are grouped with bare-metal stents because they do not contain a drug. The requestor asserted that this conglobing muddies the clinical coherence of the MS–DRG structure, as one cannot infer distinctions in clinical performance or benefits among the groups and potentially creates a barrier (based on hospital decision-making) to patient access to modern coated stents.

The requestor listed the following MS–DRG in its request.

- **MS–DRG 246 (Percutaneous Cardiovascular Procedures with Drug-Eluting Stent with MCC or 4+ Arteries or Stents);**
- **MS–DRG 247 (Percutaneous Cardiovascular Procedures with Drug-Eluting Stent without MCC);**
- **MS–DRG 248 (Percutaneous Cardiovascular Procedures with Non-Drug-Eluting Stent with MCC or 4+ Arteries or Stents); and**
- **MS–DRG 249 (Percutaneous Cardiovascular Procedures with Non-Drug-Eluting Stent without MCC).**

According to the requestor, the non-drug-eluting stent MS–DRGs have outlived their usefulness in the stent market. The requestor performed its own analysis of MedPAR data from FY 2015 through FY 2019 and stated that it found the volume of cases describing non-drug-eluting coronary stents has
declined since 2015, culminating in FY 2019, with drug-eluting stents accounting for 96.1% of all stent cases within the Medicare program, while non-drug-eluting stents accounted for only 3.9% that year. The requestor asserted that the assignment of coated stents to the non-drug-eluting stent category creates a market distortion as this newer technology is being conmingled with very old technology at a payment disadvantage large enough to influence hospitals’ willingness to prescribe, while at the same time acknowledging that the separation in average charges and costs between the non-drug-eluting stent category and the drug-eluting stent category is minimal in their analysis of the claims data.

In the proposed rule, based on a review of the procedure codes that are currently assigned to MS–DRGs 246, 247, 248 and 249, we indicated that our clinical advisors agreed that further refinement of these MS–DRGs may be warranted. However, we noted that in ICD–10–PCS, a stent is considered an intraluminal device. The distinction between drug-eluting and non-drug-eluting intraluminal devices is found elsewhere in the ICD–10–PCS procedure code classification and evaluating this request requires a more extensive analysis to assess potential impacts across the MS–DRGs. For these reasons, at this time, we indicated that our clinical advisors recommended that rather than evaluating the procedure codes assigned to MS–DRGs 246, 247, 248 and 249 in isolation, additional analysis should be performed for this subset of procedure codes across the MS–DRGs, as part of the comprehensive procedure code review described in section II.D.11. of the preamble of the proposed rule and this final rule. Therefore, we indicated we believed it would be more appropriate to consider this request further during our comprehensive procedure code review in future rulemaking.

Comment: We received a comment expressing concern that the existence of a payment differential between drug-eluting and bare-metal stents continues to prevent access for patients who are not able to obtain the clinical benefits of modern coated stents due to hospital margin concerns. The commenter stated that multiple clinical studies have consistently proven that the clinical safety and effectiveness of their cardiovascular coated stent is more similar to drug-eluting coronary stents when compared to bare-metal-stents. This commenter urged CMS to take timely action in revising the MS–DRGs to remedy the patient access issue, respectfully requested that CMS complete its analysis in time for the FY 2023 IPPS proposed rule, and also requested that CMS confirm the timing in this FY 2022 IPPS final rule.

Response: We appreciate the commenter’s comments. We note that the distinction between drug eluting and non-drug-eluting stents has long existed in the classification. In the FY 2003 IPPS/LTCH PPS final rule (67 FR 50003 through 50005), we created two new temporary CMS DRGs to reflect cases involving the insertion of a drug-eluting coronary artery stent as signified by the presence of code ICD–9–CM procedure code 36.07 (Insertion of drug-eluting coronary artery stent): CMS DRG 526 (Percutaneous Cardiovascular Procedure With Drug-Eluting Stent With AMI); and CMS DRG 527 (Percutaneous Cardiovascular Procedure With Drug-Eluting Stent Without AMI) to parallel existing CMS DRGs 516 (Percutaneous Cardiovascular Procedure With Acute Myocardial Infarction (AMI)) and 517 (Percutaneous Cardiovascular Procedure With Coronary Artery Stent Without AMI).

Although the FDA had not yet approved the technology for use, at the time public presentation of the results from clinical trials found virtually no in-stent restenosis in patients treated with the drug-eluting stent. Therefore, we stated temporary CMS DRGs 526 and 527 CMS DRGs were created effective for discharges occurring on or after April 1, 2003 in recognition of the potentially significant impact this technology may conceivably have on the treatment of coronary artery disease, the predictions of its rapid, widespread use, and that the higher costs of this technology could create undue financial hardships for hospitals due to the high volume of stent cases. The FDA ultimately approved drug-eluting stents for use in April 2003.

In the FY 2006 IPPS/LTCH PPS (70 FR 47292 through 47295), we deleted CMS DRGs 516, 517, 526, and 527 and created four new CMS DRGs in their places. We stated that rather than divide the CMS DRG pairs based on whether the patient had an acute myocardial (AMI), we split each pair of CMS DRGs based on the presence or absence of a major cardiovascular condition to identify subgroups of significantly more severe patients who use greater hospital resources more accurately than was possible under the previous CMS DRGs. The new CMS DRG titles were: CMS DRG 555 (Percutaneous Cardiovascular Procedure with Major Cardiovascular Diagnosis); CMS DRG 556 (Percutaneous Cardiovascular Procedure with Non-Drug-Eluting Stent with Major Cardiovascular Diagnosis); CMS DRG 557 (Percutaneous Cardiovascular Procedure with Drug-Eluting Stent with Major Cardiovascular Diagnosis) (formerly CMS DRG 526); and CMS DRG 558 (Percutaneous Cardiovascular Procedure with Drug-Eluting Stent without Major Cardiovascular Diagnosis). In the FY 2008 IPPS/LTCH PPS final rule we adopted the MS–DRGs and in that rule (72 FR 47259 through 47260) we stated we found that PTCAs with four or more vessels or four or more stents were more comparable in average charges to the higher weighted DRG in the group and made changes to the GROUPER logic. Claims containing ICD–9–CM procedure code 00.66 for PTCA, and code 36.07 (Insertion of drug-eluting coronary artery stent(s)), and code 00.43 (Procedure on four or more vessels) or code 00.48 (Insertion of four or more vascular stents) were assigned to MS–DRG 246 (formerly 557). In addition, claims containing ICD–9–CM procedure code 00.66 for PTCA, and code 36.06 (Insertion of non-drug eluting coronary artery stent(s)), and code 00.43 or code 00.48 were assigned to MS–DRG 248 (formerly 555).

We also made conforming changes to the MS–DRG titles as follows: MS–DRG 246 was titled “Percutaneous Cardiovascular Procedures with Drug-Eluting Stent(s) with MCC or 4 or more Vessels/Stents”. The title for MS–DRG 247 (formerly 558) and 249 (formerly 556) remained unchanged. In FY 2018 IPPS/LTCH PPS Final rule (82 FR 38024) we finalized our proposal to revise the title of MS–DRG 246 to “Percutaneous Cardiovascular Procedures with Drug-Eluting Stent(s) with MCC or 4+ Arteries or Stents” and the title of MS–DRG 248 to “Percutaneous Cardiovascular Procedures with Non-Drug-Eluting Stent(s) with MCC or 4+ Arteries or Stents” to better reflect the ICD–10–PCS terminology of “arteries” versus “vessels” as used in the procedure code titles within the classification.

We also again note the distinction between drug-eluting and non-drug eluting intraluminal devices is found elsewhere in the ICD–10–PCS procedure code classification. This distinction is not limited to procedures describing coronary interventions. A more extensive analysis is needed to assess the potential impacts across the MS–DRGs to avoid unintended consequences or missed opportunities in measures appropriately capturing the resource utilization and clinical coherence for this subset of procedures.
In response to the commenter’s concern that the existence of a payment differential between drug-eluting and bare-metal stents continues to prevent access for patients, as we have stated in prior rulemaking, it is not appropriate for facilities to deny treatment to beneficiaries needing a specific type of therapy or treatment that potentially involves increased costs. In response to the commenter’s request that CMS complete its analysis of the classification in time for the FY 2023 IPPS proposed rule, we note that the comprehensive procedure code review will be a multi-year project. As indicated in section II.D.11. of the preamble of the proposed rule and this final rule, we will provide more detail on this analysis and the methodology for conducting this review in future rulemaking.

After consideration of the public comments we received, and for the reasons discussed, we are not making changes in this final rule to the MS–DRG assignments of claims involving the insertion of coronary stents in percutaneous coronary interventions, and we will further consider this issue in future rulemaking.

6. MDC 08 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue)

a. Knee Joint Procedures

In the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25122), we discussed a request we received to examine the procedure code combinations for procedures describing a right knee joint removal and replacement and procedures describing a left knee joint removal and replacement in MS–DRGs 466, 467, and 468 (Revision of Hip or Knee Replacement with MCC, with CC, and without CC/MCC, respectively). According to the requestor, when using the MS–DRG GROUPER software version 37, the left knee joint procedure combinations group correctly to MS–DRG 468, while the exact same right knee procedure code combinations group incorrectly to MS–DRG 465 (Wound Debridement and Skin Graft Except Hand for Musculoskeletal and Connective Tissue Disorders without CC/MCC).

The requestor provided the following procedure codes that describe the procedure code combinations for the left knee joint removal and replacement procedures currently assigned to MS–DRGs 466, 467, and 468.

<table>
<thead>
<tr>
<th>ICD-10-PCS Code</th>
<th>Description</th>
<th>with</th>
<th>ICD-10-PCS Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0SPD4JC</td>
<td>Removal of synthetic substitute from left knee joint, patellar surface, percutaneous endoscopic approach</td>
<td>with</td>
<td>0SRW0JZ</td>
<td>Replacement of left knee joint, tibial surface with synthetic substitute, open approach</td>
</tr>
<tr>
<td>0SPU4JZ</td>
<td>Removal of synthetic substitute from left knee joint, femoral surface, percutaneous endoscopic approach</td>
<td>with</td>
<td>0SRW0JZ</td>
<td>Replacement of left knee joint, tibial surface with synthetic substitute, open approach</td>
</tr>
<tr>
<td>0SPW4JZ</td>
<td>Removal of synthetic substitute from left knee joint, tibial surface, percutaneous endoscopic approach</td>
<td>with</td>
<td>0SRW0JZ</td>
<td>Replacement of left knee joint, tibial surface with synthetic substitute, open approach</td>
</tr>
</tbody>
</table>

The requestor also provided the following procedure codes that describe the procedure code combinations for right knee joint removal and replacement procedures for CMS’ review and consideration.

BILLING CODE 4120–01–P
In the proposed rule, we noted that we reviewed the procedure code combinations listed and agree with the requestor that the procedure codes that describe the procedure code combinations for right knee joint removal and replacement procedures were inadvertently excluded from the logic for MS–DRGs 466, 467, and 468. We also noted that during our review of the previously listed procedure code combinations describing removal and replacement of the right and left knee joints, we identified additional MS–DRGs in which the listed procedure code combinations for the left knee joint are in the logic, however, the listed procedure code combinations for the right knee joint were inadvertently excluded from the logic. Specifically, the listed procedure code combinations describing removal and replacement of the left knee joint are also included in the logic for case assignment to MS–DRGs 461 and 462 (Bilateral or Multiple Major Joint Procedures of Lower Extremity with and without MCC, respectively) in MDC 08 and in the logic for case assignment to MS–DRGs 628, 629, and 630 (Other Endocrine, Nutritional and Metabolic O.R. Procedures with MCC, with CC, and without CC/MCC, respectively) in MDC 10 (Endocrine, Nutritional and Metabolic Diseases and Disorders). Our clinical advisors stated that the procedure code combinations describing removal and replacement of the right knee joint should be added to MS–DRGs 461, 462, 466, 467, and 468 in MDC 08 and MS–DRGs 628, 629, and 630 in MDC 10 for consistency with the procedure code combinations describing removal and replacement of the left knee joint that are currently assigned to those MS–DRGs. We stated that adding these procedure codes will improve clinical coherence and ensure more appropriate MS–DRG assignment for these cases.

Therefore, for FY 2022, we proposed to add the three procedure code combinations listed previously describing removal and replacement of the right knee joint that were inadvertently omitted from the logic to MS–DRGs 461, 462, 466, 467, and 468 in MDC 08 and MS–DRGs 628, 629, and 630 in MDC 10.

**Comment:** Several commenters supported the proposal to add the three procedure code combinations listed previously describing removal and replacement of the right knee joint that were inadvertently omitted from the logic to MS–DRGs 461, 462, 466, 467, and 468 in MDC 08 and MS–DRGs 628, 629, and 630 in MDC 10. A few commenters also recommended that CMS conduct further review to determine whether additional combinations may be currently excluded from the logic for these MS–DRGs.

Another commenter who supported our proposal stated they found the following 11 additional combinations that appeared to be missing from the logic for MS–DRGs 628, 629, and 630 in MDC 10.

This commenter also noted the difficulty in analyzing the logic list as some code combinations display the Removal code first and other.
Response: We appreciate the commenters’ support. We thank the commenters for their feedback and agree with the commenter’s findings of the 11 additional code combinations inadvertently missing from the logic for MS–DRGs 628, 629, and 630 in MDC 10. We performed further analysis to determine if other combinations may be inadvertently missing and did not find any.

In response to the commenter’s feedback regarding the format in which the Removal and Replacement codes are displayed in the logic, we note that we are working with our contractor, 3M HIS, to evaluate modifications to the logic list in these MS–DRGs that are defined by such combinations and reflected in the ICD–10 MS–DRG Definitions Manual to refine how the logic list may be better displayed.

After consideration of the public comments received, we are finalizing our proposal to add the three procedure code combinations listed previously describing removal and replacement of the right knee joint that were inadvertently omitted from the logic to MS–DRGs 461, 462, 466, 467, and 468 in MDC 08 and MS–DRGs 628, 629, and 630 in MDC 10 and are adding the 11 additional code combinations listed that were provided by the commenter to the logic for MS–DRGs 628, 629, and 630 in MDC 10 for FY 2022.

b. Pelvic Trauma With Internal Fixation

In the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25123), we discussed a request we received to reassign cases reporting a diagnosis code describing a pelvic fracture in combination with a procedure code describing repair of a pelvic fracture with internal fixation, from the lower (NonCC) severity level MS–DRG of its current base MS–DRG assignment to the higher (MCC) severity level MS–DRG of its current base MS–DRG assignment. According to the requestor, there has been steady growth in the volume of internal fixation procedures performed for pelvic fractures since 2008. The requestor stated that due to this growth rate and the anticipated increase in utilization of these internal fixation devices in these procedures in the future that CMS should reconsider the payment structure for these cases it referred to as “internal fixation for pelvic trauma”.

The requestor provided data for the Healthcare Common Procedural Coding System (HCPCS) code G0413 (Percutaneous skeletal fixation of posterior pelvic bone fracture and/or dislocation, for fracture patterns which disrupt the pelvic ring, unilateral or bilateral, (includes ileum, sacroiliac joint and/or sacrum) and Current Procedural Terminology (CPT) code 22848 (Pelvic fixation (attachment of caudal end of instrumentation to pelvic bony structures) other than sacrum) from 2008 through 2018 that it crosswalked to ICD–10–PCS procedure codes. The requestor stated that this CPT coded data indicated that physicians have used pelvic fracture fixation, and pelvic instrumentation, for an increasing number of trauma/fracture repair cases, demonstrating expanded use of these devices in the pelvic area overall.

The requestor reported that sacral fractures are often underdiagnosed and once the diagnosis is made, bedrest is common, although prolonged bedrest is not recommended for the elderly. In addition, the requestor stated that pelvic fractures may be isolated or they may be associated with surrounding structures. For example, the requestor reported that the sacroiliac joint is involved in approximately 30 to 35% of pelvic fracture cases. According to the requestor, the standard of care has also transitioned, from bedrest-only to surgery, and current medical practice has evolved to lower the threshold for fracture repair surgery. For instance, the requestor stated that smaller 5mm fractures that were once left untreated now have standard treatment protocols involving the use of pelvic instrumentation. As a result, the requestor asserted that there will be greater utilization of internal fixation devices to treat these smaller pelvic fractures.

The requestor provided the following procedure codes that it stated describe procedures involving the use of internal fixation devices for pelvic fracture repair.

<table>

</tbody>
</table>
The requestor performed its own analysis of claims data and reported findings for cases reporting a combination of the diagnosis codes found in the listed diagnosis code subcategories and the listed procedure codes (internal fixation for pelvic trauma) for MS–DRGs 515, 516, and 517 (Other Musculoskeletal System and Connective Tissue O.R. Procedures with MCC, with CC, and without CC/MCC, respectively); MS–DRGs 907, 908, and 909 (Other O.R. Procedures for Injuries with MCC, with CC, and without CC/MCC, respectively); and MS–DRGs 957, 958, and 959 (Other O.R. Procedures for Multiple Significant Trauma with MCC, with CC, and without CC/MCC, respectively). According to the requestor, its findings support reassignment of these internal fixation for pelvic trauma cases from the lower severity level MS–DRG 517 to the higher severity level MS–DRG 515, from the lower severity level MS–DRG 909 to the higher severity level 907, and from the lower severity level MS–DRG 959 to the higher severity level 957. The requestor suggested that approximately 2,000 cases would be impacted by its recommendation to reassign internal fixation for pelvic trauma cases. The requestor also stated that these internal fixation for pelvic trauma cases currently result in a high rate of CMS outlier payments to institutions that perform a high volume of these procedures. Finally, the requestor stated that there is precedent for reassignment of cases from the lower severity level MS–DRGs to the higher severity level MS–DRG for cases involving the use of a device in orthopedic surgery. The requestor provided the examples of total ankle replacement procedures, spinal disc replacement procedures and neurostimulator implantation procedures to demonstrate how CMS has previously reassigned cases from the lower severity level MS–DRG to the higher severity level MS–DRG.

We noted in the proposed rule that we first examined the claims data from the March 2020 update of the FY 2019 MedPAR file and the September 2020 update of the FY 2020 MedPAR file for all cases in MS–DRGs 515, 516, and 517; MS–DRGs 907, 908, and 909; and MS–DRGs 957, 958, and 959. Our findings are shown in the following tables.

<table>

</tbody>
</table>
We then examined claims data from the March 2020 update of the FY 2019 MedPAR file and the September 2020 update of the FY 2020 MedPAR file for cases reporting any combination of the diagnosis and procedure codes that the requestor provided to identify internal fixation for pelvic trauma cases in MS–DRGs 515, 516, and 517; MS–DRGs 907, 908, and 909; and MS–DRGs 957, 958, and 959. We noted in the proposed rule that our analysis identified two types of cases in which the combination of a diagnosis code and a procedure code (that the requestor provided to identify internal fixation for pelvic trauma cases) was reported. The first type of case consisted of a diagnosis code describing a pelvic fracture reported in combination with two procedure codes describing repair of a pelvic fracture with internal fixation (for example, one for the right side and one for the left side) on a claim. These cases are described as single and bilateral internal fixation procedures for pelvic trauma, respectively. We refer the reader to Tables 6P.1h and 6P.1i associated with the proposed rule and this final rule (which are available via the internet on the CMS website at: https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS) for the list of diagnosis and procedure code combinations reflecting bilateral internal fixation for pelvic trauma procedures reported by case ID in each MS–DRG, by fiscal year, along with the detailed claims analysis. For example, Table 6P.1h shows the claims data analysis findings from the March 2020 update of the FY 2019 MedPAR file. Line 2 identifies the section for single cases reported in MS–DRG 515, line 13 identifies the section for single cases reported in MS–DRG 516, and line 42 identifies the section for single cases reported in MS–DRG 517. The following table summarizes the information found in each column of the tables.

As shown in Table 6P.1h, line 4, column A, displays the Case ID “Single-A” for the first case; column B displays MS–DRG 515; column C displays the diagnosis code S32.111A; column D displays the description of the diagnosis code (Minimally displaced Zone 1 fracture of sacrum, initial encounter for closed fracture); column E displays the procedure code 0QS234Z; column F displays the description of the procedure code (Reposition right pelvic bone with internal fixation device, percutaneous approach); column G displays the case count 1; column H displays an average length of stay of 3.0 days; column I displays average costs of $8,433 for the case; column J displays the frequency of the procedure reported was one (1) occurrence; column K displays a 3.0 day length of stay for the case; and column L displays $8,433 for the cost of the case.

We also noted that in our analysis of the claims data from the March 2020 update of the FY 2019 MedPAR file, we found that there were no cases reporting any combination of the diagnosis codes and procedure codes previously listed in MS–DRGs 907, 908, and 909 or MS–DRGs 957, 958, and 959. Our findings are shown in the following table for any cases found to report a diagnosis code describing a pelvic trauma in combination with a procedure code describing single internal fixation in MS–DRGs 515, 516, and 517.

<table>
<thead>

<td>3</td>
<td>5.33</td>
<td>$12,147</td>
</tr>
</tbody>
</table>

As shown in the table, there were only three cases found in MS–DRG 517 reporting single internal fixation for pelvic trauma procedures, with an average length of stay of 5.33 days and average costs of $12,147. The average length of stay is longer and the average costs of these three cases higher compared to the average length of stay and the average costs for all cases in MS–DRG 517 (5.33 days versus 2.6 days and $12,147 versus $10,316, respectively); however, overall, we believe the data findings are comparable. We stated that our clinical advisors did not support reassignment of the three cases from MS–DRG 517 to MS–DRG 515 based on the claims data analysis and also stated it would not be appropriate to reassign these cases into the higher severity level MS–DRG in the absence of a MCC and noted that the cases would not be clinically coherent with regard to resource utilization.

In the proposed rule we noted that in our analysis of the claims data from the March 2020 update of the FY 2019 MedPAR file for cases in which a bilateral internal fixation for pelvic trauma procedure was performed, we identified one case in MS–DRG 517. As shown in Table 6P.1j, the average length of stay for this case was 4.0 days and the average costs were $24,258, which is longer than the average length of stay and greater than the average costs for all cases in MS–DRG 517 (2.6 days and $10,316, respectively). We also identified cases reporting various code combinations for MS–DRGs 515 and 516, and provide the details in Table 6P.1j associated with the proposed rule and this final rule (which is available via the internet on the CMS website at: https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS).

We also noted that in our analysis of the claims data from the September 2020 update of the FY 2020 MedPAR file we found that there were no cases reporting any combination of the diagnosis codes and procedure codes previously listed in MS–DRG 909 or in MS–DRGs 957, 958, and 959. Our findings are shown in the following table for any cases found to report a diagnosis code describing a pelvic trauma in combination with a procedure code describing single internal fixation in MS–DRGs 515, 516, and 517.

</tbody>
</table>

We stated we believe further analyses of these internal fixation for pelvic trauma cases in the claims data is warranted. We noted that our analysis for both the single and bilateral cases was centered on the reporting of a principal diagnosis code describing a pelvic fracture (fracture) in combination with a procedure code describing internal fixation based on the codes provided by the requestor. However, we also identified cases in the claims data in which a pelvic trauma diagnosis code was reported as a secondary diagnosis code in combination with a procedure code describing internal fixation and believe these cases require further evaluation. In addition, during our review of the diagnosis and procedure codes that the requestor provided, we identified diagnosis codes that we believe do not warrant consideration for purposes of this request and additional procedure codes that describe internal fixation for pelvic trauma procedures, which we believe do warrant further analysis. For example, as previously noted, the requestor provided the subcategories for the diagnosis codes that it requested we consider for analysis. We do not agree that diagnosis codes describing a pelvic fracture that include the term “sequela” should be considered in the analysis to examine this request because, in the ICD–10–CM classification, the term sequela is defined as the residual effect (condition produced) after the acute phase of an illness or injury has terminated.

As noted in the proposed rule, we referred the reader to Table 6P.1g for the list of diagnosis codes that are included in the diagnosis subcategories provided by the requestor and the list of procedure codes provided by the requestor, which also contains the procedure codes we identified. We stated that additional time is needed for data analysis given the volume of these code combinations and corresponding data. We also stated we believe that additional time is needed to allow for further analysis of the claims data to determine the causes of the fractures and other possible contributing factors with respect to the length of stay and costs of these cases, as well as the rate of outlier payments as identified by the requestor. We noted that our clinical advisors also believe that future data findings may demonstrate additional variance in resource utilization for this patient population. We further noted that, as discussed in the FY 2021 IPPS/LTCH PPS final rule, we finalized the addition of 161 procedure codes to MS–DRGs 957, 958, and 959 in MDC 24 (Multiple Significant Trauma) that include the insertion of internal fixation devices. We stated we believe it would be beneficial to examine future claims data to determine if there is a change in the volume of cases in those specific MS–DRGs as a result of that update. For these reasons, we proposed to maintain the structure of MS–DRGs 515, 516, and 517; MS–DRGs 907, 908, and 909; and MS–DRGs 957, 958, and 959 for FY 2022.

**Comment:** Some commenters agreed with CMS that additional analysis would be beneficial for the reasons discussed in the proposed rule. A commenter also suggested that as part of the additional analysis, CMS should also analyze cases involving trauma activations. According to the commenter, the most common reason for treatment of Medicare patients by a trauma center is falls with a high rate of associated fractures, especially hip fractures. This commenter stated that in
interest in collaborating further with fractures. This commenter expressed debilitating hip and/or extremity in an attempt to avoid a future, more involve providing payment for also stated that other approaches could such as making beneficiary data available on ED visits and hospital admissions for falls sorted by geographic location and the treating hospital and including the source of admission for these beneficiaries. The commenter stated that with appropriate incentives, hospitals could direct injury prevention efforts in collaboration with community organizations, nursing facilities and senior centers to assist with proven fall prevention interventions such as installing safety equipment (for example, grab bars and railings), introducing exercise programs and promoting safe routines for activities of daily living. The commenter also stated that other approaches could involve providing payment for prevention activities targeted at patients who present with a first or recurrent fall in an attempt to avoid a future, more severe injury that could result in a debilitating hip and/or extremity fracture. This commenter expressed interest in collaborating further with CMS and other stakeholders on these initiatives.

**Response:** We appreciate the commenters’ support. We also thank the commenter for their recommendation to examine trauma activation in connection with the additional analysis planned for pelvic fracture repair cases and for the various options presented for injury prevention strategies. We look forward to further engagement with stakeholders on this topic.

**Comment:** Other commenters suggested that CMS reconsider the request to reassign cases reporting a diagnosis code describing a pelvic fracture in combination with a procedure code describing repair of a pelvic fracture with internal fixation, from the lower (NonCC) severity level MS–DRG of its current base MS–DRG assignment to the higher (MCC) severity level MS–DRG for FY 2022. According to a commenter, as new technologies are made available intended to surgically treat many pelvic fracture patients who previously may have been treated medically in the inpatient setting, hospitals may bear a disproportionate share of these costs until the MS–DRGs are calibrated. This commenter stated that providing a reassignment now would help mitigate the financial strain for hospitals supporting these procedure types, and would benefit the Medicare program in its potential to reduce outlier payments. The commenter maintained that CMS could initially limit the reassignment to specific DRGs, or to specific combinations of procedure and diagnosis codes at this time, and review the data in a future rulemaking period.

Another commenter conducted its own analysis and indicated its findings support reassignment for FY 2022. Alternatively, this commenter also stated they looked forward to updating CMS with additional data to support future reassignment options.

**Response:** We appreciate the commenters’ feedback and the additional analysis conducted. It is not clear from the commenter’s analysis which specific code combinations generated the results provided. As we noted in the proposed rule, among other factors, there are specific codes and code combinations requiring further review as we identified additional codes that the requestor did not include in their initial submission. We will continue to work with stakeholders as we evaluate the data for these cases and consider future modifications to the structure of the MS–DRGs.

After consideration of the public comments received, we are finalizing our proposal to maintain the structure of MS–DRGs 515, 516, and 517; MS–DRGs 907, 908, and 909; and MS–DRGs 957, 958, and 959 for FY 2022.

7. MDC 11 (Diseases and Disorders of the Kidney and Urinary Tract): Chronic Renal Replacement Therapy (CRRT)

In the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25128 through 25138), we discussed a request we received to create new MS–DRGs for cases where the patient receives continuous renal replacement therapy (CRRT) during the inpatient stay. According to the requestor, hospitals incur higher costs related to CRRT and current MS–DRG definitions do not adequately account for the clinical and resource requirements of CRRT. The requestor stated Medicare payment is insufficient to cover the costs of administering CRRT, creating a disincentive in offering this dialysis modality and is a barrier to further adoption of CRRT. The requestor suggested that the following two new MS–DRGs be created:

- **Suggested New MS–DRG XXX—Continuous Renal Replacement Therapy with CC/MCC:**
  - Renal replacement therapy (RRT) replaces kidney function by exchanging solute and removing fluid from the blood as a means to prevent or treat renal failure in patients with acute kidney injury (AKI). Modalities of renal support include CRRT, conventional intermittent hemodialysis (IHD), and prolonged intermittent renal replacement therapies (PIRRTs), which are a hybrid of CRRT and IHD. IHD provides solute clearance and filtration during relatively brief treatment sessions, generally lasting from three to five hours. CRRT provides gradual fluid removal and solute clearance over prolonged treatment times, typically over a 24-hour period, mimicking the natural function of the kidney to allow for the continuous removal or replacement of fluid. The most common CRRT modalities are continuous venovenous hemofiltration, continuous venovenous hemodialysis, and continuous venovenous hemodiafiltration.

According to the requestor, CRRT is used primarily to treat critically ill, hospitalized patients who experience AKI requiring more intensive and continuous treatment than other dialysis modalities. The requestor stated that CRRT offers fluid balance and convective clearance that may be precisely adjusted for each patient, and has been associated with a higher likelihood of kidney recovery as compared to other modalities of RRT. The requestor asserted that IHD may worsen the neurological status of patients with acute brain injury or other causes of increased intracranial pressure by compromising their cerebral perfusion by raising intracranial pressure. The ongoing modulation of fluid balance and targeted fluid management capabilities of CRRT enables its use in situations other than renal failure. According to the requestor, CRRT, a slow continuous therapy, is preferred for patients who are hemodynamically unstable because it helps prevent the hemodynamic fluctuations common with the more rapid IHD. In light of the COVID–19 pandemic, the requestor noted the National Institutes of Health’s Coronavirus Disease 2019 (COVID–19) Treatment Guidelines and The American Society of Nephrology recommend CRRT as the preferred renal replacement therapy for critically ill, COVID–19 patients treated; specifically AKI, who develop indications for renal replacement therapy, due to the
hemodynamic instability often experienced in this condition.

The requestor acknowledged that under the current MS–DRG definitions, Medicare cases with beneficiaries receiving CRRT are assigned to more than 300 MS–DRGs. Although these beneficiaries are clinically similar in that they are critically ill patients who experience AKI requiring more intensive and continuous treatment than other dialysis modalities, the principal diagnoses for their inpatient stays vary. The requestor stated their analysis of the variability in principal diagnosis of the cases examined with beneficiaries receiving CRRT indicated that, in general, IHD tends to be used more for patients with chronic illnesses, and CRRT tends to be used for more acute injuries and end of life scenarios. Therefore, the requestor suggested that CMS create new MS–DRGs specific to CRRT, without regard to principal diagnosis, in order to group the resource intensive, clinically coherent, CRRT cases together in contrast to the existing GROUPER definitions.

According to the requestor, continuing to assign CRRT to existing MS–DRGs would be clinically inappropriate and remain financially devastating to providers even when treating the most routine, uncomplicated CRRT patients. The requestor performed its own data analysis and stated hospitals lose over $22,000 per CRRT case on average, even when outliers are considered, which they state is a shortfall of more than 30 percent. The requestor asserted these losses create a disincentive for providers to offer CRRT despite its clinical benefits. The requestor also asserted the magnitude of financial losses associated with the provision of CRRT at the current level of MS–DRG payment could force many hospitals to examine the capacity and scope of their CRRT programs if facilities continue to determine that the financial burden of treating Medicare beneficiaries with CRRT is more than the facility can sustain. As COVID–19 continues to strain hospital resources, the requestor asserts the availability of CRRT should not be impeded by inadequate MS–DRG payments related to CRRT.

In the proposed rule, we noted that the following ICD–10–PCS procedure code identifies the performance of CRRT.

<table>
<thead>
<tr>
<th>ICD-10-PCS Code</th>
<th>Code Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>5A1D90Z</td>
<td>Performance of urinary filtration, continuous, greater than 18 hours per day</td>
</tr>
</tbody>
</table>

In the ICD–10 MS–DRGs Definitions Manual Version 38.1, procedure code 5A1D90Z is currently recognized as a non-O.R. procedure that affects the MS–DRG to which it is assigned. We agreed that the principal diagnosis assigned for inpatient admissions where continuous renal replacement of therapy is utilized can vary. To examine the impact of the use of CRRT in response to this request, we examined claims data from the March 2020 update of the FY 2019 MedPAR file for the top ten MS–DRGs reporting the use of CRRT. Our findings are reflected in the following table:
### Top 10 MS-DRGs Reporting Continuous Renal Replacement Therapy

</table>

As shown in this table, our data findings demonstrate the average lengths of stay were longer and the average costs were higher for the cases.
reporting the use of CRRT when compared to all cases in their respective MS–DRG. We note that the claims data demonstrate that the MS–DRG with the largest number of cases reporting CRRT is MS–DRG 871 with 2,912 cases. Of the top 10 MS–DRGs reporting CRRT, the MS–DRG with the smallest number of cases is MS–DRG 682 with 401 cases. The average length of stay of this subset of cases ranges from a high of 35.5 days in MS–DRG 004 to a low of 7.9 days in MS–DRG 871 for cases reporting the use of CRRT. The average costs of this subset of cases ranges from a high of $174,085 in MS–DRG 003 to a low of $27,681 in MS–DRG 871 for cases reporting the use of CRRT.

We also examined claims data from the September 2020 update of the FY 2020 MedPAR file for the top ten MS–DRGs reporting the use of CRRT. Our similar findings are reflected in the following table:

<table>
<thead>
<tr>
<th>Top 10 MS-DRGs Reporting Continuous Renal Replacement Therapy</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>MS-DRG</strong></td>
</tr>
<tr>
<td>-----------</td>
</tr>
<tr>
<td>458</td>
</tr>
<tr>
<td>219</td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td>270</td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td>682</td>
</tr>
<tr>
<td></td>
</tr>
</tbody>
</table>
As shown in this table, our data findings show that the average lengths of stay were longer and the average costs were higher for the cases reporting the use of CRRT when compared to all cases in their respective MS–DRG. We noted that the claims data demonstrate that the MS–DRG with the largest number of cases reporting CRRT is MS–DRG 871 with 3,023 cases. Of the top 10 MS–DRGs reporting CRRT, the MS–DRG with the smallest number of cases is MS–DRG 219 with 374 cases. The average length of stay of this subset of cases ranges from a high of 34.9 days in MS–DRG 004 to a low of 7.9 days in MS–DRG 871 for cases reporting the use of CRRT. The average costs of this subset of cases ranges from a high of $182,952 in MS–DRG 003 to a low of $29,248 in MS–DRG 871 for cases reporting the use of CRRT.

We indicated in the proposed rule that, while the results of the claims analysis indicate that the average costs and average lengths of stay for cases reporting the use of CRRT are higher compared to the average costs for all cases in their assigned MS–DRG, we were unable to ascertain from the claims data the resource use specifically attributable to CRRT during a hospital stay. We noted that there is large variability in the differences in average costs from MS–DRG to MS–DRG, indicating there may have been other factors contributing to the higher costs. When reviewing consumption of hospital resources for this subset of cases, the claims data clearly demonstrate the patients typically have a major complication or co-morbid (MCC) condition reported based on the MS–DRGs assigned. The claims data also reflect, based on the top ten MS–DRGs, that the procedure frequently occurs in cases with other procedures with higher than average resource use such as mechanical ventilation, tracheostomy, extracorporeal membrane oxygenation (ECMO) and other major cardiovascular procedures that also may...
be contributing to the higher average costs for these cases.

To further examine the variability in cases reporting the use of CRRT, we also reviewed the claims data to identify the number (frequency) and types of principal diagnoses that were reported to determine what factors may also be contributing to the higher average costs for these cases.

Our findings for the top 10 principal diagnoses that were reported within the claims data from the March 2020 update of the FY 2019 MedPAR file for this subset of cases is shown in the following table:

<table>
<thead>
<tr>
<th>ICD-10-CM Code</th>

<td>$62,664</td>
</tr>
</tbody>
</table>

The claims data in this table reflects a wide variance with regard to the frequency and types of principal diagnoses that were reported along with the procedure code describing the use of CRRT. We noted that the claims data demonstrate that the diagnosis with the largest number of cases reporting CRRT is A41.9 (Sepsis, unspecified organism) with 4,226 cases. Of the top 10 principal diagnoses reporting CRRT, the diagnosis with the smallest number of cases is A41.01 (Sepsis due to Methicillin susceptible Staphylococcus aureus) with 271 cases. The average length of stay of this subset of cases ranges from a high of 20 days with a diagnosis of I13.0 (Hypertensive heart and chronic kidney disease with heart failure and stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney disease) to a low of 12.6 days with a diagnosis of A41.9 (Sepsis, unspecified organism) for cases reporting the use of CRRT. The average costs of this subset of cases ranges from a high of $85,557 with a diagnosis of I21.4 (Non-ST elevation (NSTEMI) myocardial infarction) to a low of $40,908 with a diagnosis of N17.9 (Acute kidney failure, unspecified) for cases reporting the use of CRRT.

Our findings for the top 10 principal diagnoses that were reported within the claims data from the September 2020 update of the FY 2020 MedPAR file for this subset of cases are shown in the following table:
The claims data in this table also reflect a wide variance with regard to the frequency and types of principal diagnoses that were reported along with the procedure code describing the use of CRRT. As shown, the claims data demonstrate that the diagnosis with the largest number of cases reporting CRRT is A41.9 (Sepsis, unspecified organism) with 4,128 cases. Of the top 10 principal diagnoses reporting CRRT, the diagnosis with the smallest number of cases is N17.0 (Acute kidney failure with tubular necrosis) with 270 cases. The average length of stay of this subset of cases ranges from a high of 21.4 days with a diagnosis of U07.1 (COVID–19) to a low of 11.8 days with a diagnosis of J96.01 (Acute respiratory failure with hypoxia) for cases reporting the use of CRRT. The average costs of this subset of cases ranges from a high of $86,717 with a diagnosis of I21.4 (Non-ST elevation (NSTEMI) myocardial infarction) to a low of $48,882 with a diagnosis of J96.01 (Acute respiratory failure with hypoxia) for cases reporting the use of CRRT.

As indicated in the proposed rule, to evaluate the frequency with which the use of CRRT is reported for different clinical scenarios, we examined claims from the March 2020 update of the FY 2019 MedPAR file across each of the 25 MDCs to determine the number of cases reporting the use of CRRT. Our findings are shown in this table.

</table>

As shown in the table, the top five MDCs with the largest number of cases reporting CRRT are MDC 18, with 7,678 cases; MDC 05, with 5,516 cases; MDC...
04, with 2,191 cases; MDC 11, with 1,066 cases; and MDC 06, with 838 cases. The top five MDCs with the highest average costs for cases reporting the use of CRRT were MDC 22, with average costs of $139,244; MDC 17, with average costs of $88,182; MDC 05, with average costs of $87,875; MDC 07, with average costs of $86,894; and MDC 08, with average costs of $77,515. The claims data indicate that the average length of stay ranges from a high of 26.7 days in MDC 22 to a low of 11 days in MDC 20 for cases reporting the use of CRRT across each of the 25 MDCs.

We indicated in the proposed rule that our clinical advisors reviewed the clinical issues and the claims data, and did not support creating new MS–DRGs for CRRT without regard to principal diagnosis. Our clinical advisors noted that more than one modality for RRT can be utilized for managing patients with AKI given the needs of the patient. For example, a patient may initially start on CRRT when they are hemodynamically unstable, but transition to IHD as their condition is managed during the admission. While patients requiring CRRT can be more resource intensive, we stated it would not be practical to create new MS–DRGs specifically for this subset of patients given the various clinical presentations for which CRRT may be utilized, and the variation of costs in their assigned MS–DRGs. We further indicated that we believed that additional analysis and efforts toward a broader approach to refining the MS–DRGs for cases of patients requiring renal replacement therapy would be needed to address the concerns expressed by the requestor. These data do show cases reporting the use of CRRT can present greater treatment difficulty. However, when reviewing consumption of hospital resources for this subset of cases, the claims data also suggest that the increased costs may be attributable to the severity of illness of the patient and other circumstances of the admission.

In summary, we indicated in the proposed rule that the claims data reflect a wide variance with regard to the frequency and average costs for cases reporting the use of CRRT. Depending on the number of cases in each MS–DRG, it is difficult to detect patterns of complexity and resource intensity. We indicated we believed the creation of new MS–DRGs for cases with procedure codes reporting the use of CRRT has the potential for creating instability in the relative weights and disrupting the integrity of the MS–DRG system. Therefore, we did not propose to create new MS–DRGs for cases reporting the use of continuous renal replacement therapy.

Comment: A commenter supported CMS’ proposal and stated they agreed that new MS–DRGs should not be created for continuous renal replacement therapy without regard to principal diagnosis. Another commenter stated that CMS should group cases reporting the use of continuous renal replacement therapy along with ICD–10–CM diagnosis codes N17.8 (Other acute kidney failure) or N17.9 (Acute kidney failure, unspecified) to the highest (MCC) severity level MS–DRG of its current base MS–DRG assignment. The commenter noted that both N17.8 and N17.9 (Acute kidney failure, unspecified) are designated as a “CC” when reported as a secondary diagnosis. This commenter also stated that while CRRT is not a new technology, given its increased costs, CRRT should be considered for a permanent “add-on” payment that compensates hospitals for the higher costs of caring for these patients.

Response: We appreciate the commenters’ support. With regard to the commenter’s statement that cases reporting the use of continuous renal replacement therapy along with ICD–10–CM diagnosis codes N17.8 (Other acute kidney failure) or N17.9 (Acute kidney failure, unspecified) should be grouped to the highest (MCC) severity level MS–DRG of its current base MS–DRG assignment, we consider this comment to be outside the scope of the proposal discussed. We may consider additional claims data analysis for these procedures in future rulemaking. After consideration of the public comments we received, we are finalizing our proposal to not create new MS–DRGs for cases reporting the use of continuous renal replacement therapy for FY 2022.

8. MDC 16 (Diseases and Disorders of Blood, Blood Forming Organs and Immunologic Disorders)
   a. ANDEXXA® (Coagulation Factor Xa (Recombinant), Inactivated-zhzo)
      ANDEXXA® (Coagulation Factor Xa (Recombinant), Inactivated-zhzo) is a recombinant decoy protein that rapidly reverses the anticoagulant effects of two direct oral anticoagulants, apixaban and rivaroxaban, when reversal of anticoagulation is needed due to life-threatening or uncontrolled bleeding in indications such as intracranial hemorrhages (ICHs) and gastrointestinal bleeds (GIBs). ANDEXXA® received FDA approval on May 3, 2018. When administered as a bolus followed by continuous infusion, ANDEXXA® blocks the anticoagulants ability to inhibit FXa. ANDEXXA® was approved for new technology add on payments in FY 2019 (83 FR 41362). We refer readers to section II.H.5.j. of the preamble of the FY 2019 IPPS/LTCH PPS final rule (83 FR 41355 through 41362), and section II.H.4.k. of the preamble of the FY 2020 IPPS/LTCH PPS final rule (84 FR 42193 through 42194) for a complete discussion of the new technology add on payment application and payment amount for ANDEXXA® for FY 2019 and FY 2020.

In section II.H.4.i. of the preamble of the FY 2021 IPPS/LTCH PPS final rule (85 FR 58614 through 58615), we noted the 3-year anniversary date of the entry of ANDEXXA® onto the U.S. market (May 3, 2021) will occur in the second half of FY 2021. We stated in general, we extend new technology add-on payments for an additional year only if the 3-year anniversary date of the product’s entry onto the U.S. market occurs in the latter half of the upcoming fiscal year. After consideration of the public comments received, we finalized our proposal to continue new technology add-on payments for this technology for FY 2021.

In the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25138 through 25146), we discussed a request we received from the manufacturer to review potential access issues in the inpatient setting for this drug in the future. The requestor acknowledged that CMS approved the new technology add-on payment for ANDEXXA® beginning in FY 2019 and noted that FY 2021 will be the last year before the add-on payments expire. According to the requestor, ANDEXXA® is the only indicated factor Xa inhibitor reversal agent, and the requestor stated a concern for the future of access to ANDEXXA® for patients experiencing uncontrolled bleeds caused by factor Xa inhibitors. The requestor stated their claims modeling showed a significant drop in hospital payment for cases involving use of ANDEXXA® following the expiration of new technology add-on payments. Specifically, after new technology add-on payments expire, the requestor stated their model projects that approximately 59% of cases are likely to be paid less than the wholesale acquisition costs for ANDEXXA®.

We noted in the proposed rule that the following ICD–10–PCS procedure codes identify the intravenous administration of ANDEXXA®.
In the ICD–10 MS–DRGs Definitions Manual Version 38.1, procedure codes XW03372 and XW04372 are designated as non-O.R. procedures for purposes of MS–DRG assignment. We indicated that our clinical advisors agreed that the principal diagnosis assigned for inpatient admissions where the intravenous administration of ANDEXXA® is indicated can vary. To evaluate the frequency with which the intravenous administration of ANDEXXA® is reported for different clinical scenarios in response to this request, we examined claims data from the March 2020 update of the FY 2019 MedPAR file across the Pre-MDC category, each of the 25 MDCs and the surgical class referred to as “unrelated operating room procedures” to determine the number of cases reporting the use of ANDEXXA®. Our findings are shown in the following table.

</table>
As shown in the table, there were 461 cases reporting the intravenous administration of ANDEXXA® with procedure codes XW03372 or XW04372. The top five MDCs with the largest number of cases reporting ANDEXXA® are MDC 01, with 250 cases; MDC 06 with 53 cases; MDC 05, with 33 cases; MDC 18, with 25 cases; and the Pre-MDC category, with 16 cases. The claims data indicate that the average costs range from a high of $107,741 in the Pre-MDC category to a low of $22,242 in MDC 09 for cases reporting the use of ANDEXXA® across the claims data. The claims data also indicates that the average length of stay ranges from a high of 19.9 days in the Pre-MDC category to a low of 4 days in MDC 09 for cases reporting the use of ANDEXXA®.

We also examined claims data from the September 2020 update of the FY 2020 MedPAR file across the Pre-MDC category, each of the 25 MDCs and the surgical class referred to as “unrelated operating room procedures” to determine the number of cases reporting the use of ANDEXXA®. Our findings are shown in the following table.

</tbody>
</table>
As shown in the table, there were 719 cases reporting the intravenous administration of ANDEXXA® with procedure codes XW03372 or XW04372. The top five MDCs with the largest number of cases reporting ANDEXXA® are MDC 01, with 364 cases; MDC 06 with 98 cases; MDC 18, with 52 cases; MDC 05, with 50 cases; and MDC 24, with 30 cases. The claims data indicate that the average costs range from a high of $123,750 in the Pre-MDC category to a low of $27,922 in MDC 09 for cases reporting the use of ANDEXXA® across the claims data. The claims data also indicates that the average length of stay ranges from a high of 25 days in the Pre-MDC category to a low of 4.2 days in MDC 21 for cases reporting the use of ANDEXXA® across the claims data.

As discussed in the proposed rule, to further examine the impact of the intravenous administration of ANDEXXA®, we examined claims data from the March 2020 update of the FY 2019 MedPAR file for the top ten MS-DRGs reporting procedure codes XW03372 or XW04372. Our findings are reflected in the following table:

<table>

Top 10 MS-DRGs Reporting ANDEXXA® Therapy
As shown in this table, the claims data demonstrate that the MS–DRG with the largest number of cases reporting ANDEXXA® is MS–DRG 064 with 78 cases. Of the top 10 MS–DRGs reporting ANDEXXA®, the MS–DRG with the smallest number of cases is MS–DRG 003 with 13 cases. The average length of stay of this subset of cases ranges from a high of 21.5 days in MS–DRG 003 to a low of 4.2 days in MS–DRG 086 for cases reporting the use of ANDEXXA®. The average costs of this subset of cases ranges from a high of $117,265 in MS–DRG 003 to a low of $26,992 in MS–DRG 083 for cases reporting the use of ANDEXXA®. We noted while our data findings demonstrate the average costs were higher for the cases reporting the intravenous administration of ANDEXXA® when compared to all cases in their respective MS–DRG, these cases represent a very small percentage of the total number of cases reported in these MS–DRGs. We also noted that the top 10 MS–DRGs identified only account for 239 of the 461 cases in total that were identified in the March 2020 update of the FY 2019 MedPAR file reporting ICD–10–PCS codes XW03372 or XW04372. The remainder of the cases are distributed in small numbers across the MS–DRGs.

We also examined claims data from the September 2020 update of the FY 2020 MedPAR file for the top ten MS–DRGs reporting procedure codes XW03372 or XW04372. Our findings are reflected in the following table:

### Top 10 MS–DRGs Reporting ANDEXXA® Therapy

As shown in this table, the claims data demonstrate that the MS–DRG with the largest number of cases reporting ANDEXXA® is MS–DRG 064 with 111 cases. Of the top 10 MS–DRGs reporting ANDEXXA®, the MS–DRG with the smallest number of cases is MS–DRG 083 with 23 cases. The average length of stay of this subset of cases ranges from a high of 10 days in MS–DRG 023 to a low of 3.5 days in MS–DRG 378 for cases reporting the use of ANDEXXA®.

</table>
The average costs of this subset of cases ranges from a high of $59,478 in MS–DRG 025 to a low of $24,348 in MS–DRG 378 for cases reporting the use of ANDEXXA®. As with our analysis of the FY 2019 claims data, while these data findings demonstrate the average costs were higher for the cases reporting the intravenous administration of ANDEXXA® when compared to all cases in their respective MS–DRG, these cases represent a very small percentage of the total number of cases reported in these MS–DRGs. We also noted that the top 10 MS–DRGs identified only account for 385 of the 719 cases in total that were identified in the September 2020 update of the FY 2020 MedPAR file reporting ICD–10–PCS codes XW03372 or XW04372. The remainder of the cases are distributed in small numbers across the MS–DRGs.

After reviewing the claims data, we indicated in the proposed rule that we believe it is premature to consider a proposal for cases involving ANDEXXA® therapy for FY 2022. We noted that while the March 2020 update of the FY 2019 MedPAR file and the September 2020 update of the FY 2020 MedPAR file do contain claims reporting the procedure codes identifying the intravenous administration of ANDEXXA®, the number of cases is small across the MDCs and MS–DRGs. We also noted the claims data also reflects a wide variance with regard to the frequency and average costs for these cases reporting the use of ANDEXXA®. Moreover, we indicated we were unable to identify another MS–DRG that would be a more appropriate MS–DRG assignment for these cases based on the indication for this therapeutic drug. As noted previously, ANDEXXA® reverses the anticoagulant effects of apixaban and rivaroxaban, when reversal of anticoagulation is needed due to life-threatening or uncontrolled bleeding. The underlying cause of the life-threatening or uncontrolled bleeding can vary which means the principal diagnosis assigned for inpatient admissions where ANDEXXA® is administered can vary. The MS–DRGs are a classification system intended to group together diagnoses and procedures with similar clinical characteristics and utilization of resources. As discussed in the proposed rule, we generally seek to identify sufficiently large sets of claims data with a resource/cost similarity and clinical similarity in developing diagnostic-related groups rather than smaller subsets based on the drugs administered. In reviewing this issue, we indicated our clinical advisors expressed concern regarding making potential MS–DRG changes based on a specific, single therapeutic agent, identified by unique procedure codes rather than based on a group of related procedure codes that can be reported to describe that same type or class of treatment or technology, which is more consistent with the intent of the MS–DRGs.

We indicated that we recognized that the average costs of the small numbers of cases involving the intravenous administration of ANDEXXA® are greater when compared to the average costs of all cases in their respective MS–DRG. We noted that the MS–DRG system is a system of averages and it is expected that within the diagnostic related groups, some cases may demonstrate higher than average costs, while other cases may demonstrate lower than average costs. We further noted that section 1886(d)(5)(A) of the Act provides for Medicare payments to Medicare-participating hospitals in addition to the basic prospective payments for cases incurring extraordinarily high costs.

In the proposed rule, we acknowledged the importance of ensuring that patients diagnosed with an indication for a factor Xa inhibitor reversal agent have adequate access to care and receive the necessary treatment. While we are sensitive to the requestors’ concerns about continued access to treatment for beneficiaries who require the reversal of anticoagulation due to life-threatening or uncontrolled bleeding, we indicated additional time is needed to explore options and other mechanisms through which to address low volume high-cost drugs should be explored outside of the MS–DRG classification.

Response: We appreciate the commenters’ support, and intend to continue to consider these issues. For the reasons summarized earlier, and after consideration of the public comments we received, we are not making any MS–DRG changes for cases involving the intravenous administration of ANDEXXA® for FY 2022.

b. Cytokine Release Syndrome (CRS)

Logic

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58557 through 58561), we finalized modifications to the proposed severity level designations for a subset of the diagnosis codes describing Cytokine Release Syndrome (CRS) based upon further review of the conditions and in response to public comments. We provided the following table to display the finalized severity level designations and stated that we will continue to monitor the CRS codes and their impact on resource use once the claims data become available to determine if further modifications to the severity level are warranted.
In connection with the finalized severity level designations for the listed CRS codes, we also finalized modifications to the ICD–10 MS–DRG GROUPER logic V38 for MS–DRGs 814, 815, and 816 (Reticuloendothelial and Immunity Disorders with MCC, with CC, and without CC/MCC, respectively) to conform to the updates the CDC finalized in the ICD–10–CM Tabular List instructions for assigning and reporting the CRS codes effective with discharges on and after October 1, 2020. The following modifications to the GROUPER logic were finalized effective with discharges on and after October 1, 2020, for case assignment involving CRS following CAR T-cell therapy to MS–DRGs 814, 815, and 816. We noted that the GROUPER logic for MS–DRGs 814, 815, and 816 will include a principal diagnosis of T80.89XA with a secondary diagnosis of any CRS code as shown.

<table>

<td>Complication of immune effector cellular therapy, subsequent encounter</td>
</tr>
<tr>
<td>T80.82XS</td>
<td>Complication of immune effector cellular therapy, sequela</td>
</tr>
</tbody>
</table>

Consistent with the Tabular List instruction for these two sets of diagnosis codes as presented and discussed by the CDC at the September 8–9, 2020 ICD–10 Coordination and Maintenance Committee meeting, the diagnosis codes describing a complication of the immune effector cellular therapy (T80.82XA, T80.82XD, and T80.82XS) are to be sequenced first, followed by the applicable diagnosis code to identify the specified condition resulting from the complication. For example, the types of complications that may result from immune effector cellular therapy are listed below.
cellular therapy treatment (for example, CAR T-cell therapy) include ICANS or CRS, as described by the listed diagnosis codes. Accordingly, the CDC included the following instructional note in the Tabular List modifications for code T80.82—

“Use additional code to identify the specific complication, such as: cytokine release syndrome (D89.83—) immune effector cell-associated neurotoxicity syndrome (G92.0—)"

Materials relating to the discussions involving the diagnosis codes from the September 8–9, 2020 ICD—10 Coordination and Maintenance Committee meeting can be obtained from the CDC website at: https://www.cdc.gov/nchs/icd/icd10cm_maintenance.htm.

As noted previously, the current logic for case assignment involving CRS following CAR T-cell therapy to MS–DRGs 814, 815, and 816 includes a principal diagnosis of T80.89XA with a secondary diagnosis of any CRS code. However, with the finalization of new diagnosis code T80.82—, diagnosis code T80.89XA would no longer be reported and these cases would instead report new diagnosis code T80.82XA, effective with discharges on and after October 1, 2021. As shown in Table 6A associated with the proposed rule, we proposed to assign diagnosis code T80.82XA to MDC 16 (Diseases and Disorders of Blood, Blood Forming Organs, and Immunologic Disorders) in MS–DRGs 814, 815, and 816. We stated that if the MDC and MS–DRG assignment for new diagnosis code T80.82XA is finalized, the current logic for MS–DRGs 814, 815, and 816 that includes a principal diagnosis code of T80.89XA with a secondary diagnosis code of any CRS code would no longer be appropriate or necessary.

Therefore, we proposed to revise the structure of MS–DRGs 814, 815, and 816 by removing the logic that includes a principal diagnosis of T80.89XA with a secondary diagnosis of any CRS code from MS–DRGs 814, 815, and 816 effective FY 2022.

Comment: Commenters supported the proposed revision to the structure of MS–DRGs 814, 815, and 816 to remove the logic that includes a principal diagnosis of T80.89XA with a secondary diagnosis of any CRS code from MS–DRGs 814, 815, and 816. Commenters also supported the proposed assignment of new diagnosis code T80.82XA to MS–DRGs 814, 815, and 816 in MDC 16.

Response: We appreciate the commenters’ support.

Comment: A commenter requested that CMS explain its rationale for MS–DRG assignment of the listed diagnosis codes describing complication of immune effector cellular therapy (T80.82XA, T80.82XD, and T80.82XS) and the codes describing immune effector cell-associated neurotoxicity syndrome (ICANS), with varying degrees of severity (G92.00, G92.01, G92.02, G92.03, G92.04, and G92.05). Specifically, the commenter questioned why CMS limited assignment to these MS–DRGs and if consideration could be given for the codes to be identified as CCs or MCCs for any MS–DRG.

Response: As discussed in prior rulemaking and in the proposed rule (86 FR 25186), we use our established process which involves examining the MS–DRG assignment and the attributes (severity level and O.R. status) of the predecessor diagnosis or procedure code, as applicable, to inform our proposed assignments and designations. Specifically, we review the predecessor code and MS–DRG assignment most closely associated with the new diagnosis or procedure code, and in the absence of claims data, we consider other factors that may be relevant to the MS–DRG assignment, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis and/or treatment of the condition. We note that this process does not automatically result in the new diagnosis or procedure code being proposed for assignment to the same MS–DRG or to have the same designation as the predecessor code. We encourage the commenter to also review the FY 2022 Conversion Table that was made publicly available via the internet on the CMS website at: https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software, and Table 6A.—New Diagnosis Codes associated with the proposed and final rules (available via the internet on the CMS website at: https://www.cms.gov/medicare/acute-inpatient-pps/8422-ippsproposed-rule-home-page#Tables) for information regarding MDC, MS–DRG and severity level assignment for these diagnosis codes. As shown in the Conversion Table, the predecessor code for new diagnosis code T80.82XA is diagnosis code T80.89XA; as shown in Appendix B—Diagnosis Code/MDC/MS–DRG Index of the V38.1 ICD–10 MS–DRG Definitions Manual, diagnosis code T80.89XA is assigned to MDC 16 in MS–DRGs 814–816; and as shown in Table 6A.—New Diagnosis Codes, the finalized severity level assignments for the diagnosis codes inquired about are as follows:

<table>
<thead>
<tr>
<th>ICD-10-CM Code</th>
<th>Description</th>
<th>Severity Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>G92.00</td>
<td>Immune effector cell-associated neurotoxicity syndrome, grade unspecified</td>

</tr>
<tr>
<td>T80.82XS</td>
<td>Complication of immune effector cellular therapy, sequela</td>
<td>N</td>
</tr>
</tbody>
</table>
Effective October 1, 2021, when diagnosis code G92.03, G92.04 or G92.05 are reported as a secondary diagnosis, the GROUPER logic would recognize any one of these codes as a CC and the appropriate “with CC” MS–DRG would be assigned.

After consideration of the public comments we received, we are finalizing our proposal to assign diagnosis code T80.82XA to MDC 16 (Diseases and Disorders of Blood, Blood Forming Organs, and Immunologic Disorders) in MS–DRGs 814, 815, and 816. We are also finalizing our proposal to revise the structure of MS–DRGs 814, 815, and 816 by removing the logic that includes a principal diagnosis of T80.89XA with a secondary diagnosis of any CRS code from MS–DRGs 814, 815, and 816 effective FY 2022.

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58517 through 58520), we discussed the ICD–10–PCS codes that describe the insertion of an intraluminal device into the inferior vena cava that are listed in the following table.

<table>
<thead>
<tr>
<th>ICD-10-PCS Code</th>
<th>Code Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>06H003T</td>
<td>Insertion of infusion device, via umbilical vein, into inferior vena cava, open approach</td>
</tr>
<tr>
<td>06H003Z</td>
<td>Insertion of infusion device, into inferior vena cava, open approach</td>
</tr>
<tr>
<td>06H00DZ</td>
<td>Insertion of intraluminal device, into inferior vena cava, open approach</td>
</tr>
<tr>
<td>06H033T</td>
<td>Insertion of infusion device, via umbilical vein, into inferior vena cava, percutaneous approach</td>
</tr>
<tr>
<td>06H033Z</td>
<td>Insertion of infusion device, into inferior vena cava, percutaneous approach</td>
</tr>
<tr>
<td>06H03DZ</td>
<td>Insertion of intraluminal device, into inferior vena cava, percutaneous approach</td>
</tr>
<tr>
<td>06H043Z</td>
<td>Insertion of infusion device, into inferior vena cava, percutaneous endoscopic approach</td>
</tr>
<tr>
<td>06H04DZ</td>
<td>Insertion of intraluminal device, into inferior vena cava, percutaneous endoscopic approach</td>
</tr>
</tbody>
</table>

We finalized a change in the designation of ICD–10–PCS procedure code 06H03DZ from O.R. procedure to non-O.R. procedure and maintained the O.R. designation of procedure codes 06H00DZ and 06H04DZ. In that discussion, we noted our clinical advisors supported changing the O.R. designation of procedures describing insertion of an intraluminal device into the inferior vena cava performed via a percutaneous approach since the procedure does not require the resources of an operating room, while concurring that procedures describing the insertion of an intraluminal device into the inferior vena cava performed via an open or a percutaneous endoscopic approach could require greater resources than a procedure describing insertion of an intraluminal device into the inferior vena cava performed via a percutaneous approach. We also noted that the goals of changing the designation of procedures from non-O.R. to O.R., or vice versa, are to better clinically represent the resources involved in caring for these patients and to enhance the overall accuracy of the system and not whether the change in designation would impact payment in a particular direction.

In the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25147 through 25149), we discussed a request we received to revise MS–DRGs 829 and 830 (Myeloproliferative Disorders or Poorly Differentiated Neoplasms with Other Procedures with and without CC/MCC, respectively) by removing the current two-way severity level split and creating a three-way severity level split in response to this final policy. The requestor respectfully disagreed with creating a three-way severity level split within MS–DRGs 829 and 830 and the three-way split within MS–DRGs 837, 838 and 839. The requestor theorized that removing the current two-way severity level split of MS–DRGs 829 and 830 and creating a three-way severity level split could help resolve the relative weight discrepancy when any non-major O.R. procedure is performed. The requestor stated the difference in relative weights might be occurring because of the two-way split within MS–DRGs 829 and 830 and the three-way split within MS–DRGs 837, 838 and 839. The requestor theorized that removing the current two-way severity level split of MS–DRGs 829 and 830 and creating a three-way severity level split could help resolve the relative weight discrepancy when any non-major O.R. procedures are performed during hospitalizations for chemotherapy for acute leukemia.

This requestor also suggested that if CMS’ analysis did not support creating a three-way split for MS–DRGs 829 and 830, exclusion of PCS code 06H03DZ from the list of qualifying procedures and reinstatement of O.R. procedure status to appropriately compensate providers for the cost of devices and
resources to place inferior vena cava filters across the patient population should be proposed. As indicated in the proposed rule, to evaluate the request to create a three-way severity split MS–DRG for cases reporting myeloproliferative disorders or poorly differentiated neoplasms with other procedures, consistent with our established process, we conducted an analysis of base MS–DRG 829. This analysis includes 2 years of MedPAR claims data to compare the data results from 1 year to the next to avoid making determinations about whether additional severity levels are warranted based on an isolated year’s data fluctuation and also, to validate that the established severity levels within a base MS–DRG are supported.

Therefore, we reviewed the claims data for base MS–DRG 829 using the September 2018 update of the FY 2018 MedPAR file and the March 2020 update of the FY 2019 MedPAR file, which were used in our analysis of claims data for MS–DRG reclassification requests for FY 2020 and FY 2022, respectively. Our findings are shown in the table:

<table>
<thead>
<tr>
<th>FY Data</th>
<th>Number of Cases</th>
<th>Number of Cases MCC</th>
<th>Number of Cases CC NonCC</th>
<th>Number of Cases CC</th>
<th>Average Costs No Split</th>
<th>Average Costs MCC</th>
<th>Average Costs CC</th>
<th>Average Costs NonCC</th>

<td>$33,693</td>
<td>$15,513</td>
<td>$9,811</td>
<td>$22,324</td>
<td>$14,202</td>
</tr>
</tbody>
</table>

We applied the criteria to create subgroups for the three-way severity level split. Specifically, for the “with MCC”, “with CC”, and “without CC/MCC” split, there were only 333 cases in the “without CC/MCC” subgroup based on the data in the FY 2018 MedPAR file and only 333 cases in the “without CC/MCC” subgroup based on the data in the FY 2018 MedPAR file. Accordingly, the claims data do not support a three-way severity level split for base MS–DRG 829.

We also reviewed the claims data for base MS–DRG 829 using the September 2019 update of the FY 2019 MedPAR file and the September 2020 update of the FY 2020 MedPAR file, which were used in our analysis of claims data for MS–DRG reclassification requests for FY 2021 and FY 2022, respectively. Our findings are shown in the table:

<table>
<thead>
<tr>
<th>FY Data</th>

</table>

As discussed in the proposed rule, in response to the request to exclude ICD–10–PCS code 06H03DZ from a list of qualifying procedures if CMS’ analysis did not support creating a three-way split for MS–DRGs 829 and 830, we noted that by definition, procedure codes designated as non-O.R. procedures, not further classified as “affecting the MS–DRG assignment”, do not influence the MS–DRG assignment. As stated previously, in the FY 2021 IPPS/LTCPP final rule we finalized our proposal to change the designation of ICD–10–PCS procedure code 06H03DZ from O.R. procedure to non-O.R. procedure, not further classified as non-O.R. procedure, there is no need to exclude ICD–10–PCS code 06H03DZ from a list of qualifying procedure codes for MS–DRGs 829 and 830.

In response to the request to reinstate the O.R. procedure designation of ICD–10–PCS code 06H03DZ if CMS’ analysis did not support creating a three-way split for MS–DRGs 829 and 830, we indicated the change in designation from O.R. procedure to non-O.R. procedure was recent, only becoming effective October 1, 2020. We indicated our clinical advisors continued to indicate that code 06H03DZ, describing the percutaneous insertion of an intraluminal device into the inferior vena cava, does not require the insertion of infusion devices into the inferior vena cava that are currently designated as non-O.R. procedures. We noted our clinical advisors stated that our FY 2021 final policy resulted in an O.R. designation of 06H03DZ that better reflects the associated technical complexity and hospital resource use of this procedure. We also noted that we continue to explore alternatives on how we may restructure the current O.R. and non-O.R. designations for procedures by leveraging the detail that is now available in the ICD–10 claims data, as discussed in the FY 2021 IPPS/LTCPP final rule and in section II.D.11. of the preamble of the proposed rule and this final rule. We indicated we continue to develop our process and methodology, and that we will provide more detail in future rulemaking.
In summary, based on the results of our analysis, for FY 2022, we proposed to maintain the current structure of MS–DRGs 829 and 830.

Comment: Commenters expressed support for CMS’ proposal to maintain the current structure of MS–DRGs 829 and 830 (Myeloproliferative Disorders or Poorly Differentiated Neoplasms with Other Procedures with and without CC/MCC, respectively) and not create a three-way severity level split.

Response: We thank the commenters for their support.

After consideration of the public comments we received, we are finalizing our proposal to maintain the current structure of MS–DRGs 829 and 830, without modification, for FY 2022.

10. Review of Procedure Codes in MS–DRGs 981 Through 983 and 987 Through 989

We annually conduct a review of procedures producing assignment to MS–DRGs 981 through 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) or MS–DRGs 987 through 989 (Non-Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) on the basis of volume, by procedure, to see if it would be appropriate to move cases reporting these procedure codes out of these MS–DRGs into one of the surgical MS–DRGs for the MDC into which the principal diagnosis falls. The data are arrayed in two ways for comparison purposes. We look at a frequency count of each major operative procedure code. We also compare procedures across MDCs by volume of procedure codes within each MDC. We use this information to determine which procedure codes and diagnosis codes to examine.

We identify those procedures occurring in conjunction with certain principal diagnoses with sufficient frequency to justify adding them to one of the surgical MS–DRGs for the MDC in which the diagnosis falls. We also consider whether it would be more appropriate to move the principal diagnosis codes into the MDC to which the procedure is currently assigned.

In addition to this internal review, we also consider requests that we receive to examine cases found to group to MS–DRGs 981 through 983 or MS–DRGs 987 through 989 to determine if it would be appropriate to add procedure codes to one of the surgical MS–DRGs for the MDC into which the principal diagnosis falls or to move the principal diagnosis to the surgical MS–DRGs to which the procedure codes are assigned.

Based on the results of our review of the claims data from the March 2020 update of the FY 2019 MedPAR file and the September 2020 update of the FY 2020 MedPAR file, as well as our review of the requests that we received to examine cases found to group to MS–DRGs 981 through 983 or MS–DRGs 987 through 989, we proposed to move the cases reporting the procedures and/or principal diagnosis codes described in this section of this rule from MS–DRGs 981 through 983 or MS–DRGs 987 through 989 into one of the surgical MS–DRGs for the MDC into which the principal diagnosis or procedure is assigned.

As discussed in section II.D.3.b. of the preamble of the proposed rule and this final rule, we received a request to reassign cases with procedures describing control of bleeding in the cranial cavity when reported with a central nervous system diagnosis from MS–DRGs 981, 982, and 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) to MDC 01 (Diseases and Disorders of the Central Nervous System) in MS–DRGs 25, 26, and 27 (Craniotomy and Endovascular Intracranial Procedures with MCC, with CC, and without CC/MCC, respectively) for example, “craniotomy” MS–DRGs). We noted that in addition to MS–DRGs 25, 26, and 27, MS–DRG 23 (Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis with MCC or Chemotherapy Implant or Epilepsy with Neurostimulator) and MS–DRG 24 (Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis without MCC) also include procedures performed on structures located within the cranial cavity and are included in the range of MS–DRGs known as the “craniotomy” MS–DRGs in MDC 01.

The management and treatment for bleeding (or hemorrhage) within the cranial cavity varies depending on the location, cause and the severity (or extent) of the bleed. Common causes include head trauma or cerebral aneurysm. Control of bleeding in the cranial cavity procedures are identified by ICD–10–PCS procedure codes 0W310ZZ (Control bleeding in cranial cavity, open approach), 0W313ZZ (Control bleeding in cranial cavity, percutaneous approach) and 0W314ZZ (Control bleeding in cranial cavity, percutaneous endoscopic approach) and are currently assigned to the following MDCs and MS–DRGs.

procedures performed within the cranial cavity always involve drilling or cutting through the skull regardless of the approach, therefore the three procedure codes identified (0W310ZZ, 0W313ZZ, and 0W314ZZ) warrant assignment to the “craniotomy” MS–DRGs. We stated in the proposed rule that our analysis of this grouping issue confirmed that when a procedure

As noted in the proposed rule, we examined claims data from the March 2020 update of the FY 2019 MedPAR file and the September 2020 update of the FY 2020 MedPAR file for cases reporting any one of the three procedure codes (0W310ZZ, 0W313ZZ or 0W314ZZ) in MS–DRGs 981 through 983 with a principal diagnosis from MDC 01. Our findings are shown in the following tables.
As noted previously, the requestor asked that we consider reassignment of these cases to the craniotomy MS–DRGs (identified as MS–DRGs 23, 24, 25, 26, and 27). We therefore examined the data for all cases in MS–DRGs 23, 24, 25, 26, and 27. Our findings are shown in the following tables.

As shown, in our analyses of the claims data for MS–DRGs 981 through 983, we found a total of ten cases reporting procedures describing control of bleeding in cranial cavity with a principal diagnosis from MDC 01 in the March 2020 update of the FY 2019 MedPAR file, and a total of two cases reporting procedures describing control of bleeding in cranial cavity with a principal diagnosis from MDC 01 in the September 2020 update of the FY 2020 MedPAR file. As noted in the proposed rule, our clinical advisors stated these procedures...
describing control of bleeding in the cranial cavity are consistent with the existing procedure codes included in the logic for case assignment to MS–DRGs 25, 26, and 27. In addition to MS–DRG 23 (Cranio-removal with Major Device Implant or Acute Complex CNS Principal Diagnosis with MCC or Chemotherapy Implant or Epilepsy with Neurostimulator) and MS–DRG 24 (Cranio-removal with Major Device Implant or Acute Complex CNS Principal Diagnosis without MCC) that also describe procedures performed on structures located within the cranial cavity and are included in the range of MS–DRGs known as the “cranio-removal” MS–DRGs. While the claims analysis based on the March 2020 update of the FY 2019 MedPAR file identified only ten cases and the September 2020 update of the FY 2020 MedPAR file identified only two cases for which these procedures were reported as a stand-alone procedure resulting in assignment to MS–DRGs 981 through 983, and the average length of stay and average costs for these cases vary in comparison to the average length of stay and average costs of all cases in MS–DRGs 23, 24, 25, 26, and 27, given the nature of head trauma cases, the resource use would be expected to vary based on the extent of the patient’s injuries. We stated in the proposed rule that we believed it is clinically appropriate to add these procedure codes describing control of bleeding in the cranial cavity to MS–DRGs 23, 24, 25, 26, and 27 in MDC 01.

Therefore, we proposed to add procedure codes 0W31OZZ, 0W313ZZ, and 0W314ZZ to MDC 01 in MS–DRGs 23, 24, 25, 26, and 27 (“cranio-removal” MS–DRGs) for FY 2022.

Comment: Commenters agreed with our proposal to add procedure codes 0W31OZZ, 0W313ZZ, and 0W314ZZ to MDC 01 in MS–DRGs 23, 24, 25, 26, and 27 for FY 2022.

Response: We thank the commenters for their support.

After consideration of the public comments received, we are finalizing our proposal to add procedure codes 0W31OZZ, 0W313ZZ, and 0W314ZZ describing bleeding in the cranial cavity to MDC 01 in MS–DRGs 23, 24, 25, 26, and 27 for FY 2022.

We also review the list of ICD–10–PCS procedures that, when in combination with their principal diagnosis code, result in assignment to MS–DRGs 981 through 983, or 987 through 989, to ascertain whether any of those procedures should be reassigned from one of those two groups of MS–DRGs to the other group of MS–DRGs based on average costs and the length of stay. We look at the data for trends such as shifts in treatment practice or reporting practice that would make the resulting MS–DRG assignment illogical. If we find these shifts, we would propose to move cases to keep the MS–DRGs clinically similar or to provide payment for the cases in a similar manner.

In addition to this internal review, we also consider requests that we receive to examine cases found to group to MS–DRGs 981 through 983 or MS–DRGs 987 through 989 to determine if it would be appropriate for the cases to be reassigned from one of the MS–DRG groups to the other.

Based on the results of our review of the claims data from the March 2020 update of the FY 2019 MedPAR file and the September 2020 update of the FY 2020 MedPAR file, as well as our review of the requests that we received to examine cases found to group to MS–DRGs 981 through 983 or MS–DRGs 987 through 989, we proposed to move the cases reporting the procedures codes described in this section of this rule from MS–DRGs 981 through 983 to MS–DRGs 987 through 989.

As discussed in section II.D.3.a. of the preamble of the proposed rule and this final rule, we received a request that we understood to be for consideration of the reassignment of the following three procedure codes from Extensive O.R. procedures to Non-extensive O.R. procedures.

<table>
<thead>
<tr>
<th>ICD-10-PCS Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0JB60ZZ</td>
<td>Excision of chest subcutaneous tissue and fascia, open approach</td>
</tr>
<tr>
<td>0JB70ZZ</td>
<td>Excision of back subcutaneous tissue and fascia, open approach</td>
</tr>
<tr>
<td>0JB80ZZ</td>
<td>Excision of abdomen subcutaneous tissue and fascia, open approach</td>
</tr>
</tbody>
</table>

As stated in the proposed rule, in conducting our review of this request, our clinical advisors noted that ICD–10–PCS codes 0JB60ZZ, 0JB70ZZ, and 0JB80ZZ currently group to MS–DRGs 981 through 983 when reported with a principal diagnosis that is not assigned to one of the MDCs to which these procedure codes are assigned. While our claims analysis of both the March 2020 update of the FY 2019 MedPAR file and the September 2020 update of the FY 2020 MedPAR file did not identify any cases reporting any one of the three listed procedure codes in MS–DRGs 981, 982, or 983, we stated that our clinical advisors believe that these procedures would be more appropriately designated as Non-extensive procedures because they are more consistent with other procedures on the Non-extensive procedure code list. They stated that these procedures do not consume the resources or require a similar level of technical complexity as the procedures on the Extensive O.R. procedures list.

Therefore, we proposed to reassign the three procedure codes listed from MS–DRGs 981, 982, and 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, without CC/MCC, respectively) to MS–DRGs 987, 988, and 989 (Non-Extensive Procedure Unrelated to Principal Diagnosis with MCC, with CC, without CC/MCC, respectively) for FY 2022.

Comment: Commenters supported our proposal to reassign procedure codes 0JB60ZZ, 0JB70ZZ, and 0JB80ZZ from MS–DRGs 981, 982, and 983 to MS–DRGs 987, 988, and 989 for FY 2022.

Response: We appreciate the commenters’ support.

After consideration of the public comments received, we are finalizing our proposal to reassign procedure codes 0JB60ZZ, 0JB70ZZ, and 0JB80ZZ describing excision of subcutaneous tissue from the chest, back, and abdomen, respectively, from MS–DRGs 981, 982, and 983 to MS–DRGs 987, 988, and 989 for FY 2022.

As discussed in section II.D.4.b. of the preamble of the proposed rule and this final rule, we identified 17 procedure codes describing laser interstitial thermal therapy (LITT) that are currently designated as extensive O.R. procedures. In addition to those 17 procedure codes, we identified additional procedure codes describing LITT of various body parts that are also designated as extensive O.R. procedures. The ICD–10–PCS codes describing LITT of various body parts are as follows.

BILLING CODE 4120–01–P
Whenever one of these listed procedure codes is reported on a claim that is unrelated to the MDC to which the case was assigned based on the principal diagnosis, it currently results in assignment to MS–DRGs 981, 982, and 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, without CC/MCC, respectively). Specifically, our clinical advisors stated that all of the listed procedure codes warrant redesignation from the extensive procedure list and MS–DRGs 981, 982, and 983 to the non-extensive procedure list and to MS–DRGs 987, 988, and 989 (Non-Extensive Procedure Unrelated to Principal Diagnosis with MCC, with CC, without CC/MCC, respectively). Specifically, our clinical advisors stated the procedures described by these codes are minimally invasive and are consistent with other ablation (root operation Destruction) type procedures that are designated as non-extensive procedures in the ICD–10–PCS classification.

As noted in the proposed rule, in our analysis of claims from the March 2020 update of the FY 2019 MedPAR file, we identified a total of six cases reporting procedure codes describing LITT of various body sites in MS–DRG 981 with an average length of stay of 2.5 days and average costs of $7,734. Specifically, we found one case reporting procedure code DVY0KZZ (Laser interstitial thermal therapy of prostate) in MS–DRG 981 with an average length of stay of 4.0 days and average costs of $7,348. For MS–DRG 982, we found five cases in which procedure codes describing LITT of various body sites were reported. The first case reported procedure code D0Y0KZZ (Laser interstitial thermal therapy of brain) with an average length of stay of 1.0 day and average costs of $4,142, the second case reported procedure code D0Y6KZZ (Laser interstitial thermal therapy of spinal cord) with an average length of stay of 3.0 days and average costs of $20,007, the third case reported procedure code DDY1KZZ (Laser interstitial thermal therapy of stomach) with an average length of stay of 2.0 days and average costs of $12,500, the fourth case reported procedure code DGY5KZZ (Laser interstitial thermal therapy of thyroid) with an average length of stay of 2.5 days and average costs of $9,750, and the fifth case reported procedure code DMY5KZZ (Laser interstitial thermal therapy of left breast) with an average length of stay of 2.5 days and average costs of $9,500.
In the proposed rule, we stated that for our analysis of claims from the September 2020 update of the FY 2020 MedPAR file, we identified one case reporting procedure code D0Y6KZZ (Laser interstitial thermal therapy of spinal cord) with an average length of stay of 8.5 days and average costs of $20,329 in MS–DRGs 981, 982, or 983. Although our claims analysis identified a limited number of cases reporting procedures describing LITT, we stated that our clinical advisors believe that these procedures would be more appropriately designated as Non-extensive procedures because they are more consistent with other procedures on the Non-extensive procedure code list. Therefore, we proposed to reassign the listed procedure codes describing LITT of various body parts from MS–DRGs 981, 982, and 983 (Extensive O.R. Procedures Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) to MS–DRGs 987, 988, and 989 (Non-extensive Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively). Specifically, our clinical advisors stated the procedures identified by procedure codes 0DQ53ZZ, 0DQ57ZZ, and 0DQ58ZZ do not involve the same utilization of resources with respect to the performance of the procedure in comparison to the procedures identified by procedure codes 0DQ50ZZ and 0DQ540ZZ. In our analysis of claims from the March 2020 update of the FY 2019 MedPAR file, we identified three cases reporting procedure code 0DQ58ZZ in MS–DRGs 981, 982, and 983 with an average length of stay of 14 days and average costs of $34,894. In our analysis of claims from the September 2020 update of the FY 2020 MedPAR file, we identified two cases reporting procedure code 0DQ58ZZ in MS–DRGs 981, 982, and 983 with an average length of stay of 8 days and average costs of $12,037. We stated that our clinical advisors believe that these procedures would be more appropriately designated as Non-extensive procedures because they are more consistent with other procedures on the Non-extensive procedure code list.

Response: We thank the commenters for their support.

After consideration of the public comments received, we are finalizing our proposal to reassign the listed procedure codes describing LITT of various body parts from MS–DRGs 981, 982, and 983 to MS–DRGs 987, 988, and 989, without modification, for FY 2022. As also discussed in section II.D.4.b. of the preamble of the proposed rule and this final rule, we identified five procedure codes describing repair of the esophagus that are currently designated as extensive O.R. procedures. The procedure codes are 0DQ50ZZ (Repair esophagus, open approach), 0DQ53ZZ (Repair esophagus, percutaneous approach), 0DQ54ZZ (Repair esophagus, percutaneous endoscopic approach), 0DQ57ZZ (Repair esophagus, via natural or artificial opening), and 0DQ58ZZ (Repair esophagus, via natural or artificial opening endoscopic). Whenever one of these five procedure codes is reported on a claim that is unrelated to the MDC to which the case was assigned based on the principal diagnosis, it currently results in assignment to MS–DRGs 981, 982, and 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively). Our clinical advisors stated that three of these five procedures warrant redesignation from the extensive procedure list and MS–DRGs 981, 982, and 983 to the non-extensive procedure list and to MS–DRGs 987, 988, and 989 (Non-extensive Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) for FY 2022.

Comment: Commenters agreed with our proposal to reassign the listed procedure codes describing LITT of various body parts from MS–DRGs 981, 982, and 983 to MS–DRGs 987, 988, and 989.
Comment: Commenters supported our proposal to reassign procedure codes 0T9D0ZZ, 0U9L0ZZ, and 0T9D5ZZ from MS–DRGs 981, 982, and 983 to MS–DRGs 987, 988, and 989.

Response: We appreciate the comments’ support.

After consideration of the public comments received, we are finalizing our proposal to reassign the procedure codes describing repair of the esophagus via percutaneous approach, natural or artificial opening approach, and natural or artificial opening endoscopic approach, from MS–DRGs 981, 982, and 983 to MS–DRGs 987, 988, and 989, without modification, for FY 2022.

As discussed in section II.D.11.c.24. of the preamble of the proposed rule, we identified procedure code 0T9D0ZZ (Drainage of urethra, open approach) during our review of procedure code 0U9L0ZZ (Drainage of vestibular gland, open approach), which is currently designated as a non-O.R. procedure. We noted that the procedure described by procedure code 0T9D0ZZ represents the male equivalent of the female procedure described by procedure code 0U9L0ZZ. Procedure code 0T9D0ZZ is currently designated as an extensive O.R. procedure and is reported to describe procedures performed on the Cowper’s (bulbourethral) gland in males. Whenever this procedure code is reported on a claim that is unrelated to the MDC to which the case was assigned based on the principal diagnosis, it currently results in assignment to MS–DRGs 981, 982, and 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, without CC/MCC, respectively).

In the proposed rule we noted that our clinical advisors stated that this procedure warrants redesignation from the extensive procedure list and MS–DRGs 981, 982, and 983 to the non-extensive procedure list and to MS–DRGs 987, 988, and 989 (Non-Extensive Procedure Unrelated to Principal Diagnosis with MCC, with CC, without CC/MCC, respectively). Specifically, our clinical advisors stated that the procedure described by procedure code 0T9D0ZZ continues to warrant an O.R. designation because it is performed on deeper structures and requires a higher level of technical skill and it is a more complex procedure when compared to the non-O.R. procedure described by procedure code 0U9L0ZZ, however, abscess formation in the Cowper’s (bulbourethral) glands is uncommon and can often be treated with ultrasound guided percutaneous aspiration. The need for open surgical management is rare and includes chronic infection unresponsive to non-operative management and complication acute infection such as perineal fistula formation. Open surgical management would require use of the operating room for both appropriate anesthesia and for the resources required to perform the more invasive perineal surgical dissection. Therefore, we stated that our clinical advisors believe a non-extensive O.R. designation is suitable for this procedure.

We noted in the proposed rule that we analyzed claims data from the March 2020 update of the FY 2019 MedPAR file and the September 2020 update of the FY 2020 MedPAR file for cases reporting procedure code 0T9D0ZZ in MS–DRGs 981, 982, and 983. We found one case in MS–DRG 981 with an average length of stay of 8.0 days and average costs of $23,566 in the March 2020 update of the FY 2019 MedPAR file, and no cases in the September 2020 update of the FY 2020 MedPAR file. Although our claims analysis identified only one case reporting procedure code 0T9D0ZZ, we stated in the proposed rule that our clinical advisors believe that these procedures would be more appropriately designated as Non-extensive procedures because they are more consistent with other procedures on the Non-extensive procedure code list.

Therefore, we proposed to reassign procedure code 0T9D0ZZ from MS–DRGs 981, 982, and 983 (Extensive O.R. Procedures Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) to MS–DRGs 987, 988, and 989 (Non-Extensive O.R. Procedures Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) for FY 2022.

Comment: Commenters supported our proposal to reassign procedure code 0T9D0ZZ from MS–DRGs 981, 982, and 983 to MS–DRGs 987, 988, and 989.

Response: We thank the commenters for their support.

After consideration of the public comments received, we are finalizing our proposal to reassign procedure code 0T9D0ZZ from MS–DRGs 981, 982, and 983 to MS–DRGs 987, 988, and 989, without modification, for FY 2022.

11. Operating Room (O.R.) and Non-O.R. Issues

a. Background

Under the IPPS MS–DRGs (and former CMS MS–DRGs), we have a list of procedure codes that are considered operating room (O.R.) procedures. Historically, we developed this list using physician panels that classified each procedure code based on the procedure and its effect on consumption of hospital resources. For example, generally the presence of a surgical procedure which required the use of the operating room would be expected to have a significant effect on the type of hospital resources (for example, operating room, recovery room, and anesthesia) used by a patient, and therefore, these patients were considered surgical. Because the claims data generally available do not precisely indicate whether a patient was taken to the operating room, surgical patients were identified based on the procedures that were performed. Generally, if the procedure was not expected to require the use of the operating room, the patient would be considered medical (non-O.R.).

Currently, each ICD–10–PCS procedure code has designations that determine whether and in what way the presence of that procedure on a claim impacts the MS–DRG assignment. First, each ICD–10–PCS procedure code is either designated as an O.R. procedure for purposes of MS–DRG assignment (“O.R. procedures”) or is not designated as an O.R. procedure for purposes of MS–DRG assignment (“non-O.R. procedures”). Second, for each procedure that is designated as an O.R. procedure, that O.R. procedure is further classified as either extensive or non-extensive. Third, for each procedure that is designated as a non-O.R. procedure, that non-O.R. procedure is further classified as either affecting the MS–DRG assignment or not affecting the MS–DRG assignment. We refer to these designations that do affect MS–DRG assignment as “o.R. affecting the MS–DRG.” For new procedure codes that have been finalized through the ICD–10 Coordination and Maintenance Committee meeting process and are proposed to be classified as O.R. procedures or non-O.R. procedures affecting the MS–DRG, our clinical advisors recommend the MS–DRG assignment which is then made available in association with the proposed rule (Table 6B.—New Procedure Codes) and subject to public comment. These proposed assignments are generally based on the assignment of predecessor codes or the assignment of similar codes. For example, we generally examine the MS–DRG assignment for similar procedures, such as the other approaches for that procedure, to determine the most appropriate MS–DRG assignment for procedures proposed to be newly designated as O.R. procedures. As discussed in section II.D.13 of the preamble of this final rule, we are
making Table 6B.—New Procedure Codes—FY 2022 available on the CMS website at: https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html. We also refer readers to the ICD–10 MS–DRG Version 38.1 Definitions Manual at: https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.html for detailed information regarding the designation of procedures as O.R. or non-O.R. (affecting the MS–DRG) in Appendix E—Operating Room Procedures and Procedure Code/MS–DRG Index.

In the FY 2020 IPPS/LTCH PPS proposed rule, we stated that, given the long period of time that has elapsed since the original O.R. (extensive and non-extensive) and non-O.R. designations were established, the incremental changes that have occurred to these O.R. and non-O.R. procedure code lists, and changes in the way inpatient care is delivered, we plan to conduct a comprehensive, systematic review of the ICD–10–PCS procedure codes. This will be a multi year project during which we will also review the process for determining when a procedure is considered an operating room procedure. For example, we may restructure the current O.R. and non-O.R. designations for procedures by leveraging the detail that is now available in the ICD–10 claims data. We refer readers to the discussion regarding the designation of procedure codes in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38066) where we stated that the determination of when a procedure code should be designated as an O.R. procedure has become a much more complex task. This is, in part, due to the number of various approaches available in the ICD–10–PCS classification, as well as changes in medical practice. While we have typically evaluated procedures on the basis of whether or not they would be performed in an operating room, we believe that there may be other factors to consider with regard to resource utilization, particularly with the implementation of ICD–10.

We discussed in the FY 2020 IPPS/LTCH PPS proposed rule that as a result of this planned review and potential restructuring, procedures that are currently designated as O.R. procedures may no longer warrant that designation, and conversely, procedures that are currently designated as non-O.R. procedures may warrant an O.R. type of designation. We intend to consider the resources used and how a procedure should affect the MS–DRG assignment. We may also consider the effect of specific surgical approaches to evaluate whether to subdivide specific MS–DRGs based on a specific surgical approach. We plan to utilize our available MedPAR claims data as a basis for this review and the input of our clinical advisors. As part of this comprehensive review of the procedure codes, we also intend to evaluate the MS–DRG assignment of the procedures and the current surgical hierarchy because both of these factors into the process of refining the ICD–10 MS–DRGs to better recognize complexity of service and resource utilization.

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58540 through 58541), we provided a summary of the comments we received in response to our request for feedback on what factors or criteria to consider in determining whether a procedure is designated as an O.R. procedure in the ICD–10–PCS classification system for future consideration.

As stated in the proposed rule that in consideration of the PHE, we believe it may be appropriate to allow additional time for the claims data to stabilize prior to selecting the timeframe to analyze for this review. Additional time is also necessary as we continue to develop our process and methodology. Therefore, stated that we will provide more detail on this analysis and the methodology for conducting this review in future rulemaking.

Comment: Several commenters agreed it is appropriate to allow additional time for the claims data to stabilize prior to selecting the timeframe to analyze for the comprehensive procedure code review.

Response: In the FY 2022 IPPS/LTCH PPS proposed rule and this final rule, we are addressing requests that we received regarding changing the designation of specific ICD–10–PCS procedure codes from non-O.R. to O.R. procedures, or changing the designation from O.R. procedure to non-O.R. procedure. In this section of this rule we discuss the process that was utilized for evaluating the requests that were received for FY 2022 consideration. For each procedure, our clinical advisors considered—

- Whether the procedure would typically require the resources of an operating room;
- Whether it is an extensive or a nonextensive procedure; and
- To which MS–DRGs the procedure should be assigned.

We note that many MS–DRGs require the presence of any O.R. procedure. As a result, cases with a principal diagnosis associated with a particular MS–DRG would, by default, be grouped to that MS–DRG. Therefore, we do not list these MS–DRGs in our discussion in this section of this rule. Instead, we only discuss MS–DRGs that require explicitly adding the relevant procedure codes to the GROUPER logic in order for those procedure codes to affect the MS–DRG assignment as intended. In cases where we proposed to change the designation of procedure codes from non-O.R. procedures to O.R. procedures, we also proposed one or more MS–DRGs with which these procedures are clinically aligned and to which the procedure code would be assigned.

In addition, cases that contain O.R. procedures will map to MS–DRG 981, 982, or 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) or MS–DRG 987, 988, or 989 (Non-Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) when they do not contain a principal diagnosis that corresponds to one of the MDCs to which that procedure is assigned. These procedures need not be assigned to MS–DRGs 981 through 989 in order for this to occur. Therefore, if requestors included some or all of MS–DRGs 981 through 989 in their request or included MS–DRGs that require the presence of any O.R. procedure, we did not specifically address that aspect in summarizing their request or our response to the request in this section of this rule.

For procedures that would not typically require the resources of an operating room, our clinical advisors determined if the procedure should affect the MS–DRG assignment.

As indicated in the proposed rule, we received several requests to change the designation of specific ICD–10–PCS procedure codes from non-O.R. procedures to O.R. procedures, or to change the designation from O.R. procedures to non-O.R. procedures. In this section of this rule, as we did in the proposed rule, we detail and respond to some of those requests and, further, summarize and respond to the public comments we received in response to our proposals, if applicable. With regard to the remaining requests, as stated in the proposed rule, our clinical advisors believe it is appropriate to consider these requests as part of our comprehensive review of the procedure codes as previously discussed.

With respect to some of the comments received in response to our discussion of several requests to change the designation of specific ICD–10–PCS procedure codes from non-O.R.
procedures to O.R. procedures, we wish to clarify that when we state that a current non-O.R. procedure is frequently or generally performed in the outpatient setting, we are indicating that the resources involved in the performance of the procedure are such that, it does not specifically require an inpatient admission and is typically not the underlying reason for the admission, nor a major factor in the consumption of resources for an inpatient admission. While an inpatient provider may elect to perform a specific procedure in the operating room or a procedure room, that does not constitute automatic designation of the procedure as an O.R. procedure under the IPPS. Alternatively, a procedure that is performed at the bedside does not constitute automatic designation of the procedure as a non-O.R. procedure under the IPPS. In addition, when we state that a current non-O.R. procedure is typically performed in conjunction with another O.R. procedure, we are indicating that there is generally another O.R. procedure reported on the claim that is primarily responsible for impacting the utilization of resources for that admission.

b. O.R. Procedures to Non-O.R. Procedures

(1) Open Drainage of Subcutaneous Tissue and Fascia

One requestor identified the following ICD–10–PCS procedure code that describes the open drainage of right lower leg subcutaneous tissue and fascia, shown in the following table.

<table>
<thead>
<tr>
<th>ICD-10-PCS Code</th>
<th>Code Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0J9N0ZZ</td>
<td>Drainage of right lower leg subcutaneous tissue and fascia, open approach</td>
</tr>
</tbody>
</table>

In the ICD–10 MS–DRG Version 38.1 Definitions Manual, this ICD–10–PCS procedure code is currently recognized as an O.R. procedure for purposes of MS–DRG assignment. The requestor noted that this procedure consumes resources comparable to related ICD–10–PCS procedure code 0J9N00Z (Drainage of right lower leg subcutaneous tissue and fascia with drainage device, open approach) that describes the open drainage of right lower leg subcutaneous tissue and fascia with a drainage device, which is currently designated as a non-O.R. procedure. The requestor stated that these comparable procedures should be recognized similarly for purposes of MS–DRG assignment.

In the proposed rule, we noted that during our review of this issue, we identified 21 ICD–10–PCS procedure codes that describe the open drainage of subcutaneous tissue and fascia, shown in the following table that are clinically similar to ICD–10–PCS code 0J9N0ZZ, and are also designated as O.R. procedures in the ICD–10 MS–DRG Version 38.1 Definitions Manual.
We stated we reviewed these procedures and that our clinical advisors agreed that procedures that describe the open drainage of subcutaneous tissue and fascia consume resources comparable to the related ICD–10–PCS procedure codes that describe the open drainage of subcutaneous tissue and fascia with a drainage device that are currently designated as non-O.R. procedures. We stated that these procedures do not typically require the resources of an operating room, and are not surgical in nature. Therefore, we proposed to remove the 22 codes listed in the following table from the FY 2022 ICD–10 MS–DRGs Version 39 Definitions Manual in Appendix E—Operating Room Procedures and Procedure Code/MS–DRG Index as O.R. procedures. We stated in the proposed rule that, under this proposal, these procedures would no longer impact MS–DRG assignment.

</tbody>
</table>
Comment: Commenters supported CMS’ proposal to change the designation of the 22 procedure codes describing open drainage of subcutaneous tissue and fascia from O.R. procedures to non-O.R. procedures.

Response: We appreciate the commenters for their support.

Comment: Other commenters opposed CMS’ proposal. Commenters stated that these procedures are indeed performed in the operating room under general anesthesia, are surgical in nature, and significantly increase costs. A commenter also stated that ICD–10–PCS codes describing open drainage “with drainage device” are rarely (if ever) assigned because when drains are placed at the conclusion of open drainage procedures, drains are considered integral to the performance of a procedure. Some commenters acknowledged there may be certain circumstances in which these procedures do not require an operating room but note they are not consistently conducive to being performed at bedside, especially when the patient is not able to tolerate the procedure, or when performed in for community hospitals that do not have hybrid O.R.s or special procedure rooms. A commenter stated that a review of the cases at their facility shows that approximately 80% of the procedures describing open drainage of subcutaneous tissue and fascia are performed in an O.R. setting requiring anesthesia, with a much lesser percentage performed at the bedside. Another commenter noted in the FY 2018 IPPS proposed rule, these same 22 ICD–10–PCS codes were identified and a commenter opposed the proposal to redesignate these codes at that time. In response to the issues raised by this commenter, CMS agreed in the FY 2018 IPPS final rule to maintain the designation of the 22 procedure codes. This commenter stated the rationale to maintain these 22 codes as O.R. procedures has not changed and that there is no safe way to effectively drain an infection involving the subfascial plane without the resources of an O.R.

Response: Our clinical advisors reviewed the commenters’ concerns and state that treatment practices have continued to shift since FY 2018 rulemaking. Procedures describing the open drainage of subcutaneous tissue and fascia can now be safely performed in the outpatient setting and when performed during a hospitalization, it is typically in conjunction with another O.R. procedure. In cases where procedures describing open drainage of subcutaneous tissue and fascia are the only procedures performed in an admission, the admission is quite likely due to need for IV antibiotics as opposed to the need for operating room resources in an inpatient setting. Our clinical advisors continue to state that these procedures consume resources comparable to the related ICD–10–PCS procedure codes that describe the open drainage of subcutaneous tissue and fascia with a drainage device that are currently designated as non-O.R. procedures. In response to the comment that ICD–10–PCS codes describing open drainage “with drainage device” are rarely (if ever) assigned, while we agree there are limited scenarios in which the qualifier “with drainage device” is applicable, we note coding is dependent on the documentation in the medical record.

In response to the comments that differentiate when these procedures are performed at bedside versus in hybrid O.R.s versus in special procedure rooms, we note that the designation of procedure as a non-O.R. procedure is
not determined solely by the location in the facility in which the procedure was performed. While the site in which the procedure is performed and the procedural approach are important considerations in the designation of a procedure, other clinical factors such as procedure complexity, resource utilization, and need for anesthesia administration are also relevant to whether a procedure would typically require the resources of an operating room. In that regard, our clinical advisors state procedure codes that describe the open drainage of subcutaneous tissue and fascia do not reflect the technical complexity or resource intensity in comparison to other procedures that are designated as O.R. procedures. As noted by the commenters, while there are circumstances where performing open drainage in the operating room under sedation or general anesthesia may be necessary, open drainage procedures can be performed at the bedside or settings other than an operating room under general anesthesia.

We also note we have identified that the designation of the 22 procedure codes that describe the open drainage of subcutaneous tissue and fascia being listed as comparable translations for ICD–9–CM code 83.09 (Other incision of soft tissue), which was designated as a non-O.R. procedure under the ICD–9–CM MS–DRGs Version 32. Conversely, this replication error led to ICD–10–PCS procedure codes that describe the open drainage of subcutaneous tissue and fascia being listed as comparable translations for ICD–9–CM code 86.04 (Other incision with drainage of skin and subcutaneous tissue) which was designated as a non-O.R. procedure under the ICD–9–CM MS–DRGs Version 32 which was 86.04, not 83.09 and is more aligned with current shifts in treatment practices.

After consideration of the public comments we received, for the reasons stated, we are finalizing our proposal, without modification, to change the designation of the 22 procedure codes listed in the preceding table from O.R. procedures to non-O.R. procedures, effective October 1, 2021.

(1) Percutaneous Introduction of Substance Into Cranial Cavity and Brain

One requestor identified ICD–10–PCS procedure code XW0Q316 (Introduction of eladocagene exuparvovec into cranial cavity and brain, percutaneous approach, new technology group 6) that the requestor stated is currently not recognized as an O.R. procedure for purposes of MS–DRG assignment. The requestor recommended that this procedure be designated as an O.R. procedure because the procedure requires traversing the skull in order to place a substance within the cranial cavity or brain. The requestor noted that CMS disagreed with designating this procedure as an O.R. procedure last year in the absence of claims data; however, the requestor stated that because the skull must be opened by drilling or cutting a burr hole through the skull, this procedure warrants O.R. status similar to other transcranial procedures performed with an open or percutaneous approach that are classified as O.R. procedures.

We noted in the proposed rule that in the ICD–10 MS–DRGs Definitions Manual Version 38.1, procedure code XW0Q316 is currently designated as a non-O.R. procedure for purposes of MS–DRG assignment. We agreed with the requestor that procedure code XW0Q316 describes a procedure that involves the creation of a burr hole in the skull. In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58579 through 58580), we stated that, consistent with our annual process of assigning new procedure codes to MDCs and MS–DRGs, and designating a procedure as an O.R. or non-O.R. procedure, we reviewed the predecessor procedure code assignment. The predecessor code for procedure code XW0Q316 is procedure code 3E0Q3GC (Introduction of other therapeutic substance into cranial cavity and brain, percutaneous approach) which is designated as a non-O.R. procedure. In the absence of claims data, our clinical advisors also considered the indication for the specific procedure being described by the new procedure code, the treatment difficulty, and the resources utilized.

We stated in the proposed rule that upon further review and consideration, our clinical advisors agreed that procedure code XW0Q316 describing a procedure that is performed by creating a burr hole in the skull warrants designation as an O.R. procedure consistent with other percutaneous procedures performed on the cranial cavity and brain body parts. Therefore, we proposed to add this procedure code to the FY 2022 ICD–10 MS–DRGs Version 39 Definitions Manual in Appendix E—Operating Room Procedures and Procedure Code/MS–DRG Index as an O.R. procedure, assigned to MS–DRGs 628, 629, and 630 (Other Endocrine, Nutritional and Metabolic O.R. Procedures with MCC, with CC, and without CC/MCC, respectively) in MDC 10 (Endocrine, Nutritional and Metabolic Diseases and Disorders) and to MS–DRGs 987, 988, and 989 (Non-Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC and without MCC/CC, respectively).

Comment: Commenters agreed with our proposal to designate procedure code XW0Q316 as an O.R. procedure.

Response: After consideration of the public comments we received, we are finalizing our proposal to change the designation of procedure code XW0Q316 from a non-O.R. procedure to an O.R. procedure, effective October 1, 2021.

(2) Open Drainage of Maxilla and Mandible

One requestor identified three ICD–10–PCS procedure codes that describe the open drainage of maxilla or mandible, which the requestor stated are currently not recognized as O.R. procedures for purposes of MS–DRG assignment. The three procedure codes are listed in the following table.
The requestor stated that procedures that describe the open drainage of the maxilla or mandible should be designated as O.R. procedures because these procedures, indicated for diagnoses such as subperiosteal abscesses, are performed in the operating room under general anesthesia and involve making open incisions through muscle and stripping away the periosteum. The requestor identified procedure codes 0W96OZZ (Drainage of lower jaw, open approach) and 0W94OZZ (Drainage of upper jaw, open approach) that are currently designated as O.R. procedures. The requestor noted that ICD–10–PCS guidelines instruct that the procedure codes in Anatomical Regions, General, can be used when the procedure is performed on an anatomical region rather than a specific body part, or on the rare occasion when no information is available to support assignment of a code to a specific body part. The requestor stated that because bone is a specific body part in ICD–10–PCS, procedure codes should be assigned for subperiosteal drainage of mandible and maxilla bones from table 0N9, Drainage of Head and Facial Bones, instead of codes from table 0W9, Drainage of Anatomical Regions, General, when these procedures are performed. Therefore, the requestor stated that procedure codes 0N9R0ZZ, 0N9T0ZZ, and 0N9V0ZZ should also be recognized as O.R. procedures for purposes of MS–DRG assignment.

In the ICD–10 MS–DRGs Definitions Manual Version 38.1, procedure codes 0N9R0ZZ, 0N9T0ZZ, and 0N9V0ZZ are currently designated as non-O.R. procedures for purposes of MS–DRG assignment. In the proposed rule, we stated that our clinical advisors reviewed this issue and disagreed that the procedures describing the open drainage of the maxilla or mandible are typically performed in the operating room under general anesthesia. Our clinical advisors stated that these procedures can be done in an oral surgeon’s office or an outpatient setting and are rarely performed in the inpatient setting. Our clinical advisors also stated a correlation cannot be made between procedures performed in general anatomic regions and procedures performed in specific body parts because these procedures coded with the general anatomic regions body part represent a broader range of procedures that cannot be coded to a specific body part. Therefore, we proposed to maintain the current non-O.R. designation of ICD–10–PCS procedure codes 0N9R0ZZ, 0N9T0ZZ, and 0N9V0ZZ.

Comment: A commenter supported CMS’ proposal to maintain the current non-O.R. designation for procedure codes describing open drainage of maxilla or mandible.

Response: We appreciate the commenters’ support.

Comment: Another commenter opposed CMS’ proposal to maintain the current non-O.R. designation of ICD–10–PCS procedure codes 0N9R0ZZ, 0N9T0ZZ and 0N9V0ZZ and stated that the treatment of jaw infections requires open drainage of jaw bones performed in the operating room under anesthesia in conjunction with intravenous antibiotics to prevent sepsis. This commenter stated that procedures that are typically performed in the outpatient surgical setting should be designated as O.R. procedures and that the frequency in which procedures are performed in the inpatient setting should not determine the designation. The commenter asserted that when these procedures are necessitated during inpatient stays, providers should be compensated for operating room resources because the payment of infrequent surgeries as non-O.R. procedures results in significant uncompensated surgical resources for facilities.

Response: Our clinical advisors reviewed the commenters’ concerns and continue to support maintaining the current non-O.R. designation for procedure codes describing open drainage of maxilla or mandible and disagree that the procedures describing the open drainage of the maxilla or mandible typically require the resources of an operating room. Our clinical advisors state that if admission is required for the treatment of a jaw infection as the commenter suggested, the admission is quite likely due to need for IV antibiotics as opposed to the need for operating room resources in an inpatient setting.

With regard to the comments about the implications for reimbursement, we note that the goals of changing the designation of procedures from non-O.R. to O.R., or vice versa, are to better clinically represent the resources involved in caring for these patients and to enhance the overall accuracy of the system. Therefore, decisions to change an O.R. designation are based on whether such a change would accomplish those goals and not whether the change in designation would impact the payment in a particular direction.

After consideration of the public comments we received, for the reasons stated, we are finalizing our proposal to maintain the current non-O.R. designation of ICD–10–PCS procedure codes 0N9R0ZZ, 0N9T0ZZ, and 0N9V0ZZ, without modification, for FY 2022.

(3) Thoracoscopic Extirpation of Pleural Cavities

One requestor identified ICD–10–PCS procedure codes 0WC94ZZ (Extirpation of matter from right pleural cavity, percutaneous endoscopic approach) and 0WCB4ZZ (Extirpation of matter from left pleural cavity, percutaneous endoscopic approach) that the requestor stated are currently not recognized as O.R. procedures for purposes of MS–DRG assignment. The requestor stated that these procedures should be designated as O.R. procedures because they are thoracoscopic procedures that are always performed in the operating room under general anesthesia. The requestor stated procedure codes 0WC94ZZ (Drainage of right pleural cavity, percutaneous endoscopic approach) and 0W9B4ZZ (Drainage of left pleural cavity, percutaneous endoscopic approach) are currently designated as O.R. procedures because they are thoracoscopic procedures that are always performed in the operating room under general anesthesia. The requestor stated procedure codes 0WC94ZZ and 0WCB4ZZ should also be recognized as O.R. procedures for purposes of MS–DRG assignment.

In the ICD–10 MS–DRGs Definitions Manual Version 38.1, procedure codes 0WC94ZZ and 0WCB4ZZ are currently designated as non-O.R. procedures for purposes of MS–DRG assignment. We stated in the proposed rule that our clinical advisors reviewed this issue and

<table>
<thead>
<tr>
<th>ICD-10-PCS Code</th>
<th>Code Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0N9R0ZZ</td>
<td>Drainage of maxilla, open approach</td>
</tr>
<tr>
<td>0N9T0ZZ</td>
<td>Drainage of right mandible, open approach</td>
</tr>
<tr>
<td>0N9V0ZZ</td>
<td>Drainage of left mandible, open approach</td>
</tr>
</tbody>
</table>
disagreed that procedure codes describing the thoracoscopic drainage of the pleural cavities should necessarily have the same designation as procedure codes describing the thoracoscopic extirpation of matter from the pleural cavities. We noted that our review of the designation of ICD–10–PCS codes as an O.R. procedure or a non-O.R. procedure considers the resources used as well as whether that procedure should affect the MS–DRG assignment, and if so, in what way. Our clinical advisors stated that thoracoscopic drainage of the pleural cavities is performed for different indications in clinically different scenarios. Our clinical advisors further stated that drainage is the process of taking out, or letting out, fluids and/or gases from a body part and is typically performed in the pleural cavity for indications such as congestive heart failure, infection, hemothorax and empyema. In contrast, the procedures describing the thoracoscopic extirpation of the pleural cavities are performed for a wider range of indications because the solid matter removed may be an abnormal byproduct of a biological function or a foreign body. Our clinical advisors noted that the thoracoscopic extirpation of the pleural cavities is generally performed with other procedures such as heart transplant, lung transplant mechanical ventilation, and other major chest procedures and would not be the main reason for inpatient hospitalization or be considered the principal driver of resource expenditure. Therefore, we proposed to maintain the current non-O.R. designation of ICD–10–PCS procedure codes 0WC94ZZ and 0WCB4ZZ.

Comment: A commenter supported CMS’ proposal to maintain the current non-O.R. designation for procedure codes describing the thoracoscopic extirpation of matter from the pleural cavities.

Response: We appreciate the commenter’s support.

Comment: Another commenter opposed CMS’ proposal to maintain the non-O.R. designation of ICD–10–PCS procedure codes 0WC94ZZ and 0WCB4ZZ. The commenter stated that procedure codes describing the thoracoscopic extirpation of matter from the pleural cavities can indeed be primary surgical procedures in procedures such as when the thoracoscopic evacuation of a traumatic hemothorax is performed during hospitalization, and stated that all thoracoscopic lung procedures should be designated as O.R. procedures because they are performed in the operating room and require general anesthesia with one lung ventilation. This commenter also stated that ICD–10–PCS codes for thoracoscopic drainage of pleural cavities have been appropriately designated as O.R. procedures, and the only difference between root operations “Drainage” and “Extirpation” is strictly the consistency of the substance removed.

Response: Our clinical advisors reviewed the commenters’ concerns and continue to support maintaining the current non-O.R. designation for procedure codes of ICD–10–PCS procedure codes 0WC94ZZ and 0WCB4ZZ because the resources involved in furnishing these procedures does not warrant designation as O.R. procedures. Our clinical advisors continue to state the thoracoscopic extirpation of the pleural cavities is generally performed with other procedures such as heart transplant, lung transplant mechanical ventilation, and other major chest procedures and would not be the main reason for inpatient hospitalization or be considered the principal driver of resource expenditure. Our clinical advisors also do not agree that unilaterally all thoracoscopic lung procedures should be designated as O.R. procedures.

Our clinical advisors reiterate that thoracoscopic drainage of the pleural cavities and thoracoscopic extirpation of the pleural cavities are performed for distinct indications in clinically different scenarios and disagree with the suggestion that the only difference between the PCS root operations “Drainage” and “Extirpation” is the consistency of the substance removed. Rather, drainage procedures take out, or let out, fluids and/or gases from a body part and are typically performed in the pleural cavity for indications such as congestive heart failure, infection, hemothorax and empyema. Extirpation procedures are not limited to removing blood clots. In contrast, the procedures describing the thoracoscopic extirpation of the pleural cavities are performed for a wider range of indications because the solid matter removed may be an abnormal byproduct of a biological function or a foreign body.

In response to the commenter that stated highlighted the thoracoscopic evacuation of a traumatic hemothorax as an example of how these procedures can indeed be primary surgical procedures, we note hemothorax is defined as a collection of blood in the pleural cavity. The thoracoscopic evacuation of a hemothorax would meet the ICD–10–PCS definition of “Drainage” procedure. The procedure codes describing the drainage of the pleural cavity were not the subject of this request.

After consideration of the public comments we received, for the reasons stated, we are finalizing our proposal to maintain the current non-O.R. designation of ICD–10–PCS procedure codes 0WC94ZZ and 0WCB4ZZ, without modification, for FY 2022.

(4) Open Pleural Biopsy

One requestor identified ICD–10–PCS procedure codes 0BBN0ZX (Excision of right pleura, open approach, diagnostic) and 0BBP0ZX (Excision of left pleura, open approach, diagnostic), that describe an open pleural biopsy that the requestor stated are performed in the operating room with general anesthesia. The requestor also stated that procedure codes 0BBN0ZZ (Excision of right pleura, open approach) and 0BBP0ZZ (Excision of left pleura, open approach) describing open pleural biopsy for non-diagnostic purposes are justifiably designated as O.R. procedures.

According to the requestor, these procedure codes describing an open pleural biopsy should be designated as O.R. procedures regardless of whether they are performed for diagnostic or therapeutic purposes.

In the proposed rule we noted that under the ICD–10–PCS procedure classification, biopsy procedures are identified by the 7th digit qualifier value “diagnostic” in the code description. In response to the requestor’s suggestion that procedures performed for a pleural biopsy by an open approach, regardless of whether it is a diagnostic or therapeutic procedure, should be designated as an O.R. procedure, we examined procedure codes 0BBN0ZX, 0BBN0ZZ, 0BBP0ZX, and 0BBP0ZZ.

We also noted that in the ICD–10 MS–DRGs Definitions Manual Version 38.1, procedure codes 0BBN0ZZ and 0BBP0ZZ are currently designated as O.R. procedures, however, procedure codes 0BBN0ZX and 0BBP0ZX are not recognized as O.R. procedures for purposes of MS–DRG assignment. We agreed with the requestor that procedure codes 0BBN0ZX and 0BBP0ZX would typically require the resources of an operating room. We stated that our clinical advisors also agreed that procedure codes 0BBN0ZX and 0BBP0ZX would typically require the resources of an operating room.

Therefore, we proposed to add these 2 procedure codes to the FY 2022 ICD–10 MS–DRGs Version 39 Definitions Manual in Appendix E—Operating Room Procedures and Procedure Code/MS–DRG Index as O.R. procedures, assigned to MS–DRGs 166, 167, and 168...
(Other Respiratory System O.R. Procedures with MCC, with CC, and without CC/MCC, respectively) in MDC 04 (Diseases and Disorders of the Respiratory System).

Comment: Commenters supported our proposal to designate procedure codes 0BBN0ZX and 0BBP0ZX as O.R. procedures.

Response: After consideration of the public comments we received, we are finalizing our proposal to change the designation of procedure codes 0BBN0ZX and 0BBP0ZX from non-O.R. procedures to O.R. procedures, without modification, effective October 1, 2021.

(5) Percutaneous Revision of Intraluminal Devices

One requestor identified five ICD–10–PCS procedure codes that describe the percutaneous revision of intraluminal vascular devices that the requestor stated are currently not recognized as O.R. procedures for purposes of MS–DRG assignment. The five procedure codes are listed in the following table.

<table>
<thead>
<tr>
<th>ICD-10-PCS Code</th>
<th>Code Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>02WY3DZ</td>
<td>Revision of intraluminal device in the great vessel, percutaneous approach</td>
</tr>
<tr>
<td>03WY3DZ</td>
<td>Revision of intraluminal device in upper artery, percutaneous approach</td>
</tr>
<tr>
<td>04WY3DZ</td>
<td>Revision of intraluminal device in lower artery, percutaneous approach</td>
</tr>
<tr>
<td>05WY3DZ</td>
<td>Revision of intraluminal device in upper vein, percutaneous approach</td>
</tr>
<tr>
<td>06WY3DZ</td>
<td>Revision of intraluminal device in lower vein, percutaneous approach</td>
</tr>
</tbody>
</table>

The requestor stated that the procedure codes that describe the percutaneous revision of intraluminal vascular devices within arteries, veins, and great vessels should be designated as O.R. procedures to compensate for the resources needed to perform these procedures. The requestor also stated procedures to reattach, realign, or otherwise revise intraluminal devices percutaneously require anesthesia, specialized equipment for intravascular visualization, significant skill, and time, therefore, it is important for these codes to be designated with O.R. procedure status.

In the ICD–10 MS–DRGs Definitions Manual Version 38.1, procedure codes 02WY3DZ, 03WY3DZ, 04WY3DZ, 05WY3DZ, and 06WY3DZ are currently designated as non-O.R. procedures for purposes of MS–DRG assignment. We stated in the proposed rule that we agreed with the requestor that these five ICD–10–PCS procedure codes typically require the resources of an operating room. Therefore, to the FY 2022 ICD–10 MS–DRG Version 39 Definitions Manual in Appendix E—Operating Room Procedures and Procedure Code/MS–DRG Index, we proposed to add code 02WY3DZ as an O.R. procedure assigned to MS–DRGs 270, 271, and 272 (Other Major Cardiovascular Procedures, with MCC, with CC, and without CC/MCC, respectively) in MDC 05 (Diseases and Disorders of the Circulatory System). We also proposed to add codes 03WY3DZ, 04WY3DZ, 05WY3DZ, and 06WY3DZ as O.R. procedures assigned to MS–DRGs 252, 253, and 254 (Other Vascular Procedures with MCC, with CC, and without CC/MCC, respectively) in MDC 05 (Diseases and Disorders of the Circulatory System).

Response: After consideration of the public comments we received, we are finalizing our proposal to change the designation of procedure code 02WY3DZ from a non-O.R. procedure to an O.R. procedure, effective October 1, 2021, without modification. We are also finalizing our proposal to change the designation of procedure codes 03WY3DZ, 04WY3DZ, 05WY3DZ, and 06WY3DZ from non-O.R. procedures to O.R. procedure, without modification, effective October 1, 2021.

(6) Occlusion of Left Atrial Appendage

One requestor identified nine ICD–10–PCS procedure codes that describe left atrial appendage closure (LAAC) procedures that the requestor stated are currently not recognized as O.R. procedures for purposes of MS–DRG assignment. The nine procedure codes are listed in the following table.
The requestor stated that these procedures are currently designated as non-O.R. procedures that route to surgical MS–DRGs only when assigned in combination with a principal diagnosis within MDC 05 (Diseases and Disorders of the Circulatory System). The requestor stated these procedures should also be designated as O.R. procedures when assigned in combination with diagnoses outside of the circulatory system, such as sepsis or trauma, to compensate for the associated resource use, skill requirements, and device costs.

In the ICD–10 MS–DRG Version 38.1 Definitions Manual, the nine ICD–10–PCS procedure codes that describe left atrial appendage closure are currently recognized as non-O.R. procedures that affect the MS–DRG to which they are assigned. We refer readers to section II.D.5.d of the preamble of this final rule, where we address ICD–10–PCS procedure codes 02L70CK, 02L70DK, and 02L70ZK that describe a LAAC procedure performed with an open approach. These codes were discussed in response to a request to assign these codes to MS–DRGs 228 and 229 (Other Cardiothoracic Procedures with and without MCC, respectively). In section II.D.5.d of this final rule we also summarize and respond to the comments regarding our proposal to maintain the assignment of these codes in MS–DRGs 273 and 274 (Percutaneous and Other Intracardiac Procedures with and without MCC, respectively) in MDC 05 for the reasons discussed, and discuss our finalization of that proposal.

We stated in the proposed rule that our clinical advisors reviewed this related issue and believed the current designation of LAAC procedures as non-O.R. procedures that affect the assignment for MS–DRGs 273 and 274 is clinically appropriate to account for the subset of patients undergoing left atrial appendage closure specifically. LAAC is indicated and approved as a treatment option for patients diagnosed with atrial fibrillation, a heart rhythm disorder that can lead to cardiovascular blood clot formation, who are also at increased risk for stroke. LAAC procedures block off the left atrial appendage to prevent emboli that may form in the left atrial appendage from exiting and traveling to other sites in the vascular system, thereby preventing the occurrence of ischemic stroke and systemic thromboembolism. We noted the ICD–10–CM diagnosis codes used to report atrial fibrillation are currently assigned to MDC 05 (Diseases and Disorders of the Circulatory System). We stated our clinical advisors believed that circumstances in which a patient is admitted for a principal diagnosis outside of MDC 05 and a left atrial appendage closure is performed as the only surgical procedure in the same admission are infrequent, and if they do occur, the LAAC procedure would not be a significant contributing factor in the increased intensity of resources needed for facilities to manage these complex cases. Our clinical advisors further stated LAAC procedures generally do not require the resources of an operating room. LAAC procedures are most often performed percutaneously in settings such as cardiac catheterization laboratories and take approximately one hour. We stated when performed with an open approach or percutaneous endoscopic approach, these procedures share similar factors such as complexity, and resource utilization with all other LAAC procedures. Therefore, we proposed to maintain the current designation of ICD–10–PCS procedure codes 02L70CK, 02L70DK, 02L70ZK, 02L73CK, 02L73DK, 02L73ZK, 02L74CK, 02L74DK, and 02L74ZK as non-O.R. procedures affecting the MS–DRGs to which they are assigned.

Comment: Commenters supported maintaining the current designation of procedure codes describing left atrial appendage closure as non-O.R. procedures affecting the MS–DRGs to which they are assigned. Another commenter stated although they believe it would be reasonable for these PCS codes to be designated as O.R. procedures in the event they are necessitated during a hospitalization with a principal diagnosis outside of MDC 05, their own data analysis showed when performed, cases reporting LAAC procedures are being assigned to MS–DRGs 273 and 274 or into higher-weighted cardiac MS–DRGs corresponding with other cardiac procedures performed during the same stay.

Response: After consideration of the public comments we received, we are finalizing our proposal to maintain the current designation of ICD–10–PCS procedure codes 02L70CK, 02L70DK, 02L70ZK, 02L73CK, 02L73DK, 02L73ZK, 02L74CK, 02L74DK, and 02L74ZK as non-O.R. procedures affecting the MS–DRGs to which they are assigned, without modification, for FY 2022.
The requestor stated that these procedures should be designated as O.R. procedures because procedures describing the arthroscopic drainage of major joints such as knee, hip, and shoulder are performed in the operating room under general anesthesia. The requestor stated these procedures are indicated for conditions such as symptomatic septic/pyogenic arthritis, which can require inpatient admission for intravenous antibiotics and arthroscopic drainage to resolve infection. Therefore, the requestor stated it is reasonable for these arthroscopic procedures to be designated as O.R. procedures to compensate for operating room resources.

In the ICD–10 MS–DRGs Definitions Manual Version 38.1, procedure codes 0S9C4ZZ, 0S9D4ZZ, 0S994ZZ, 0S9B4ZZ, 0R9J4ZZ, and 0R9K4ZZ are currently designated as non-O.R. procedures for purposes of MS–DRG assignment. In the proposed rule, we stated our clinical advisors reviewed this issue and disagreed that procedures describing the percutaneous endoscopic drainage of major joints such as knee, hip, and shoulder are typically performed in the operating room under general anesthesia. With development of better instrumentation and surgical techniques, many patients now have arthroscopic procedures performed in an outpatient setting and return home several hours after the procedure. Our clinical advisors also stated the percutaneous endoscopic drainage of joints can be performed using local or regional anesthesia, and general anesthesia is not always required. We stated that in cases where the patient is admitted for diagnoses such as septic/pyogenic arthritis, as identified by the requestor, the requirement for intravenous antibiotics would be the main reason for admission because the percutaneous endoscopic drainage procedure could be done as an outpatient. Therefore, we proposed to maintain the current non-O.R. designation of ICD–10–PCS procedure codes 0S9C4ZZ, 0S9D4ZZ, 0S994ZZ, 0S9B4ZZ, 0R9J4ZZ, and 0R9K4ZZ.

Comment: A commenter supported CMS’ proposal to maintain the non-O.R. designation of procedure codes describing percutaneous endoscopic drainage of shoulder, knee, and hip joints.

Response: We appreciate the commenters’ support.

Comment: A commenter opposed CMS’ proposal to maintain the current non-O.R. designation of ICD–10–PCS procedure codes 0S9C4ZZ, 0S9D4ZZ, 0S994ZZ, 0S9B4ZZ, 0R9J4ZZ, and 0R9K4ZZ. This commenter stated that an O.R. designation should not be determined based on whether or not a surgery is most often performed as an outpatient or based on the type of anesthesia required during the surgery. This commenter also noted that some patients who undergo outpatient surgery require inpatient admission instead of release home. The commenter stated that retention of non-O.R. procedure status for surgeries most often performed as outpatient results in providers not being reimbursed for surgical resources when patients require conversion to inpatient, while those discharged from outpatient surgery are paid a surgical APC. The commenter also included a portion of an operative report from its facility to demonstrate that an arthroscopic drainage procedure was performed under general anesthesia at their facility.

Response: Our clinical advisors reviewed the commenters’ concerns and continue to support maintaining the current non-O.R. designation for ICD–10–PCS procedure codes 0S9C4ZZ, 0S9D4ZZ, 0S994ZZ, 0S9B4ZZ, 0R9J4ZZ, and 0R9K4ZZ. In reviewing the operative report included in the comment, our clinical advisors note that using a single isolated case, with only an operative report provided and without other diagnostic information on the patient, does not provide a clear picture of the circumstances of that admission, nor does it inform whether the procedure requires the resources of an operating room more broadly. For any procedure, there may be instances where performing this procedure is best done in the setting of an operating room using general anesthesia. Therefore, when looking more broadly at the procedure being described by the ICD–10–PCS codes 0S9C4ZZ, 0S9D4ZZ, 0S994ZZ, 0S9B4ZZ, 0R9J4ZZ, and 0R9K4ZZ, our clinical advisors state in most instances, the percutaneous endoscopic drainage of joints does not require the resources of an operative room.

With regard to the comments about the implications for reimbursement when cases are converted from outpatient to inpatient, we note that the goals of changing the designation of procedures from non-O.R. to O.R., or vice versa, are to better clinically represent the resources involved in caring for these patients and to enhance the overall accuracy of the system.

Therefore, after consideration of the public comments we received, for the reasons stated, we are finalizing our proposal to maintain the current non-O.R. designation of ICD–10–PCS procedure codes 0S9C4ZZ, 0S9D4ZZ, 0S994ZZ, 0S9B4ZZ, 0R9J4ZZ, and 0R9K4ZZ, without modification, for FY 2022.

(8) Arthroscopic Irrigation of Joints

One requestor identified ICD–10–PCS procedure codes 3E1U48X (Irrigation of joints using irrigating substance, percutaneous endoscopic approach, diagnostic) and 3E1U48Z (Irrigation of joints using irrigating substance, percutaneous endoscopic approach, diagnostic).

### ICD-10-PCS Code Description

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0S9C4ZZ</td>
<td>Drainage of right knee joint, percutaneous endoscopic approach</td>
</tr>
<tr>

<td>0R9J4ZZ</td>
<td>Drainage of right shoulder joint, percutaneous endoscopic approach</td>
</tr>
<tr>
<td>0R9K4ZZ</td>
<td>Drainage of left shoulder joint, percutaneous endoscopic approach</td>
</tr>
</tbody>
</table>

One requestor identified six ICD–10–PCS procedure codes that describe the percutaneous endoscopic drainage of joints that the requestor stated are currently not recognized as O.R. procedures for purposes of MS–DRG assignment. The six procedure codes are listed in the following table.
The utilization of hospital resources.

Technical complexity and a greater operating room, involve a higher level of procedures that would require the resources of an operating room, involve a higher level of technical complexity and a greater utilization of hospital resources.

Therefore, we proposed to add the two procedure codes describing percutaneous reposition of the sacroiliac joint with internal fixation procedures (0SS734Z and 0SS834Z) to the FY 2022 ICD–10–MS–DRGs to the FY 2022 ICD–10–MS–DRGs Version 39 Definitions Manual in Appendix E—Operating Room Procedures and Procedure Code/MS–DRG Index as O.R. procedures, assigned to MS–DRGs 515, 516, and 517 (Other Musculoskeletal System and Connective Tissue O.R. Procedures with MCC, with CC, and without CC/MCC, respectively) in MDC 08 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue) and to MS–DRGs 987, 988, and 989 (Non-Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC and without MCC/CC, respectively). We also proposed to add the two procedure codes describing percutaneous reposition of the hip joint with internal fixation procedures (0SS934Z and 0SSB34Z) to the FY 2022 ICD–10–MS–DRGs Version 39 Definitions Manual in Appendix E—Operating Room Procedures and Procedure Code/MS–DRG Index as O.R. procedures, assigned to MS–DRGs 480, 481, and 482 (Hip and Femur Procedures Except Major Joint with MCC, with CC, and without CC/MCC, respectively) in MDC 08 (Diseases and Disorders of the Musculoskeletal System

We stated in the proposed rule that our clinical advisors reviewed the procedures described by these four procedure codes and agreed that these percutaneous reposition procedures involving internal fixation in the sacroiliac and hip joint warrant an O.R. designation. They noted that these procedures are major operations that would require the resources of an operating room, involve a higher level of technical complexity and a greater utilization of hospital resources.

<table>

</tbody>
</table>

We appreciate the comments’ feedback. We are unclear from the comment why the commenter references the ICD–10–PCS guidelines related to debridement procedures, as this topic relates to the arthroscopic irrigation of joints. Our clinical advisors reviewed the comments’ concerns and continue to note the arthroscopic irrigation of joints is rarely performed independently as a standalone procedure in the inpatient setting to be considered the principal driver of resource expenditure in those admissions.

After consideration of the public comments we received, we are finalizing our proposal to maintain the current non-O.R. designation of ICD–10–PCS procedure codes 3E1U48X and 3E1U48Z, without modification, for FY 2022.

(9) Percutaneous Reposition With Internal Fixation

One requestor identified four ICD–10–PCS procedure codes describing procedures performed on the sacroiliac and hip joints that involve percutaneous repositioning with internal fixation that the requestor stated are not recognized as O.R. procedures for purposes of MS–DRG assignment but warrant an O.R. designation. The procedure codes are listed in the following table.
and Connective Tissue) and to MS–
DRGs 987, 988, and 989 (Non-Extensive
O.R. Procedure Unrelated to Principal
Diagnosis with MCC, with CC and
without MCC/CC, respectively).

Comment: Commenters supported our
proposal to designate procedure codes
0SS734Z, 0SS834Z, 0SS934Z and
0SSB34Z as O.R. procedures.
Response: After consideration of the
public comments we received, we are
finalizing our proposal to change the
designation of procedure codes
0SS734Z, 0SS834Z, 0SS934Z and
0SSB34Z from non-O.R. procedures to
O.R. procedures, without modification,
effective October 1, 2021.

(10) Open Insertion and Removal of
Spacer Into Shoulder Joint

One requestor identified four ICD–10–
PCS procedure codes describing
procedures performed on the shoulder
joint that involve the insertion or
removal of a spacer by an open
approach that the requestor stated are
not recognized as O.R. procedures for
purposes of MS–DRG assignment. The
procedure codes are listed in the
following table.

<table>
<thead>
<tr>
<th>ICD-10-PCS Code</th>
<th>Code Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0RHK08Z</td>
<td>Insertion of spacer into left shoulder joint, open approach</td>
</tr>
<tr>
<td>0RHJ08Z</td>
<td>Insertion of spacer into right shoulder joint, open approach</td>
</tr>
<tr>
<td>0RPK08Z</td>
<td>Removal of spacer from left shoulder joint, open approach</td>
</tr>
<tr>
<td>0RPJ08Z</td>
<td>Removal of spacer from right shoulder joint, open approach</td>
</tr>
</tbody>
</table>

According to the requestor, insertion
and removal of joint spacers from the
hips and knees are designated with an
O.R. procedure status and although
similar procedures performed on the
shoulder joint may be performed less
frequently, these procedures warrant an
O.R. designation because they are
performed in the operating room under
general anesthesia.

In the proposed rule we stated that
during our review, we noted that the
following procedure codes describing
procedures performed on the shoulder
joint that involve the insertion or
removal of a spacer in the shoulder joint
with an open or percutaneous endoscopic approach warrant an O.R. designation. They noted
that the insertion of a spacer is typically
performed to treat an infection at the
site of a previously placed prosthesis
and the removal of a spacer is typically
performed once the infection is healed
and the site is ready for a new prosthetic
replacement or to exchange for a new
spacer if the infection is not yet healed.

Therefore, we proposed to add the
listed procedure codes describing the
insertion or removal of spacer in the
shoulder joint to the FY 2022 ICD–10
MS–DRGs Version 39 Definitions

<table>
<thead>
<tr>
<th>ICD-10-PCS Code</th>
<th>Code Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0RPJ48Z</td>
<td>Removal of spacer from right shoulder joint, percutaneous endoscopic approach</td>
</tr>
<tr>
<td>0RPK48Z</td>
<td>Removal of spacer from left shoulder joint, percutaneous endoscopic approach</td>
</tr>
<tr>
<td>0RHJ48Z</td>
<td>Insertion of spacer into right shoulder joint, percutaneous endoscopic approach</td>
</tr>
<tr>
<td>0RHK48Z</td>
<td>Insertion of spacer into left shoulder joint, percutaneous endoscopic approach</td>
</tr>
</tbody>
</table>

We stated that our clinical advisors
reviewed the procedures described by
these eight procedure codes and agreed
that these procedures involving the
insertion or removal of a spacer in the
shoulder joint with an open or
percutaneous endoscopic approach
warrant an O.R. designation. They noted
that the insertion of a spacer is typically
performed to treat an infection at the
site of a previously placed prosthesis
and the removal of a spacer is typically
performed once the infection is healed
and the site is ready for a new prosthetic
replacement or to exchange for a new
spacer if the infection is not yet healed.

Therefore, we proposed to add the
listed procedure codes describing the
insertion or removal of spacer in the
shoulder joint to the FY 2022 ICD–10
MS–DRGs Version 39 Definitions

<table>
<thead>
<tr>
<th>ICD-10-PCS Code</th>
<th>Code Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0RHK08Z</td>
<td>Insertion of spacer into left shoulder joint, open approach</td>

Manual in Appendix E—Operating
Room Procedures and Procedure Code/
MS–DRG Index as O.R. procedures,
assigned to MS–DRGs 510, 511, and 512
(Shoulder, Elbow or Forearm
Procedures, Except Major Joint
Procedures with MCC, with CC, and
without CC/MCC, respectively) in MDC
08 (Diseases and Disorders of the
Musculoskeletal System and Connective
Tissue) and to MS–DRGs 987, 988, and
989 (Non-Extensive O.R. Procedure
Unrelated to Principal Diagnosis with
MCC, with CC and without MCC/CC,
respectively).

Comment: Commenters supported our
proposal to designate the listed
procedure codes as O.R. procedures.
Response: We appreciate the
commenters’ support.

After consideration of the public
comments we received, we are
finalizing our proposal to change the
designation of procedure codes
0RHK08Z, 0RHJ08Z, 0RPK08Z,
0RPJ08Z, 0RPJ48Z, 0RPK48Z, 0RHJ48Z,
and 0RHK48Z from non-O.R.
procedures to O.R. procedures, without
modification, effective October 1, 2021.

(11) Open/Percutaneous Extirpation of
Jaw

One requestor identified four ICD–10–
PCS procedure codes that describe
the extirpation of matter from the upper
or lower jaw that the requestor stated are
currently not recognized as O.R.
procedures for purposes of MS–DRG
assignment. The four procedure codes
are listed in the following table.

<table>
<thead>
<tr>
<th>ICD-10-PCS Code</th>
<th>Code Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0RHJ08Z</td>
<td>Insertion of spacer into right shoulder joint, open approach</td>
</tr>
<tr>
<td>0RPK08Z</td>
<td>Removal of spacer from left shoulder joint, open approach</td>
</tr>
<tr>
<td>0RPJ08Z</td>
<td>Removal of spacer from right shoulder joint, open approach</td>
</tr>
<tr>
<td>0RHK08Z</td>
<td>Insertion of spacer into left shoulder joint, open approach</td>
</tr>
</tbody>
</table>
The requestor stated that the procedure codes that describe the extirpation of matter from the upper or lower jaw by an open or percutaneous endoscopic approach should be designated as O.R. procedures. The requestor stated these procedures would commonly be performed under general anesthesia and require the resources of an operating room. The requestor also stated that these ICD–10–PCS codes were specifically created to describe the surgical evacuation of solid matter from deep jaw structures therefore, it is important for these codes to be designated with O.R. procedure status.

In the ICD–10 MS–DRGs Definitions Manual Version 38.1, procedure codes 0WC40ZZ, 0WC44ZZ, 0WC50ZZ, 0WC54ZZ are currently designated as non-O.R. procedures for purposes of MS–DRG assignment. We stated in the proposed rule that we agreed with the requestor that these four ICD–10–PCS procedure codes typically require the resources of an operating room. Therefore, to the FY 2022 ICD–10 MS–DRG Version 39 Definitions Manual in Appendix E—Operating Room Procedures and Procedure Code/MS–DRG Index, we proposed to add codes 0WC40ZZ, 0WC44ZZ, 0WC50ZZ, 0WC54ZZ as O.R. procedures assigned to MS–DRGs 143, 144 and 145 (Other Ear, Nose, Mouth and Throat O.R. procedures, with MCC, with CC, and without CC/MCC, respectively) in MDC 03 (Diseases and Disorders of the Ear, Nose, Mouth and Throat).

Comment: Commenters supported our proposal to designate ICD–10–PCS procedure codes 0WC40ZZ, 0WC44ZZ, 0WC50ZZ, 0WC54ZZ as O.R. procedures. A commenter noted that they agreed that these procedures do typically require the resources of an operating room.

Response: We appreciate the commenters’ support.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of procedure codes 0WC40ZZ, 0WC44ZZ, 0WC50ZZ, 0WC54ZZ from non-O.R. procedures to O.R. procedures, without modification, effective October 1, 2021.

(12) Open Extirpation of Subcutaneous Tissue and Fascia

One requestor identified 22 ICD–10–PCS procedure codes that describe the open extirpation of matter from the subcutaneous tissue and fascia that the requestor stated are currently not recognized as O.R. procedures for purposes of MS–DRG assignment. The 22 procedure codes are listed in the following table.
The requestor stated that procedure codes that describe the open extirpation of matter from the subcutaneous tissue and fascia should be designated as O.R. procedures because these procedures are performed through open incisions with direct visualization of subcutaneous tissue and fascia in the operating room under general anesthesia. The requestor noted procedure codes that describe the open drainage of subcutaneous tissue and fascia and use comparable resources are currently designated as O.R. procedures.

The requestor stated whether the evacuated substance is fluid, gelatinous, or solid, a procedure involving an open incision with direct visualization of subcutaneous tissue and fascia for evacuation of substances should be classified as an O.R. procedure. Therefore, the requestor stated that these procedures should also be recognized as O.R. procedures for purposes of MS–DRG assignment.

In the ICD–10 MS–DRGs Definitions Manual Version 38.1, the 22 ICD–10–PCS procedure codes listed in the table are currently designated as non-O.R. procedures for purposes of MS–DRG assignment. We stated in the proposed rule that while we disagreed that drainage procedures are comparable to extirpation procedures, we agreed with the requestor that these 22 ICD–10–PCS procedure codes typically require the resources of an operating room. We noted that our clinical advisors stated that drainage is the process of taking out, or letting out, fluids and/or gases from a body part and is typically performed for indications such as abscess, infection, and other systemic conditions. In contrast, extirpation procedures are performed for a wider range of indications because the solid matter removed may be an abnormal byproduct of a biological function or a retained foreign body. Therefore, to the FY 2022 ICD–10 MS–DRG Version 39 Definitions Manual in Appendix E—Operating Room Procedures and Procedure Code/MS–DRG Index, we proposed to add the 22 ICD–10–PCS listed previously as O.R. procedures assigned to MS–DRGs 579, 580 and 581 (Other Skin, Subcutaneous Tissue and Breast Procedures, with MCC, with CC, and without CC/MCC, respectively) in MDC 09 (Diseases and Disorders of the Skin, Subcutaneous Tissue and Breast) and MS–DRGs 907, 908, and 909 (Other O.R. Procedures for Injuries with MCC, with CC, and without CC/MCC, respectively) in MDC 21 (Injuries, Poisonings and Toxic Effects of Drugs).

Comment: Commenters supported our proposal to designate 22 ICD–10–PCS procedure codes that describe the open extirpation of matter from the subcutaneous tissue and fascia as O.R. procedures.

Response: We appreciate the commenters’ support. After consideration of the public comments we received, we are finalizing our proposal to change the designation of the 22 procedure codes

listed in the preceding table from non-O.R. procedures to O.R. procedures, without modification, effective October 1, 2021.

(13) Open Revision and Removal of Devices From Subcutaneous Tissue and Fascia

One requestor identified six ICD-10-PCS procedure codes describing open revision and removal of neurostimulator generators, monitoring devices, and totally implantable vascular access devices (TIVADs) procedures that are not currently designated as O.R. procedures for purposes of MS-DRG assignment. The six procedure codes are listed in the following table.

<table>
<thead>
<tr>
<th>ICD-10-PCS Code</th>
<th>Code Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0JPT0MZ</td>
<td>Removal of stimulator generator from trunk subcutaneous tissue and fascia, open approach</td>
</tr>
<tr>
<td>0JPT02Z</td>
<td>Removal of monitoring device from trunk subcutaneous tissue and fascia, open approach</td>
</tr>
<tr>
<td>0JPT0WZ</td>
<td>Removal of totally implantable vascular access device from trunk subcutaneous tissue and fascia, open approach</td>
</tr>
<tr>
<td>0JWT0MZ</td>
<td>Revision of stimulator generator from trunk subcutaneous tissue and fascia, open approach</td>
</tr>
<tr>
<td>0JWT0WZ</td>
<td>Revision of totally implantable vascular access device from trunk subcutaneous tissue and fascia, open approach</td>
</tr>
<tr>
<td>0JWT03Z</td>
<td>Revision of infusion device in trunk subcutaneous tissue and fascia, open approach</td>
</tr>
</tbody>
</table>

The requestor stated that although removal of these devices is often performed in outpatient surgery, device complications can require removal or revision during inpatient hospitalizations. The requestor indicated it is reasonable for these open procedures to be designated as O.R. procedures to compensate for operating room resources during such inpatient stays.

In the proposed rule we stated that our clinical advisors reviewed this request and did not agree that these procedures warrant an O.R. designation for FY 2022.

Comment: Commenters supported our proposal to maintain the non-O.R. designation for procedure codes 0JPT0MZ, 0JPT02Z, 0JPT0WZ, 0JWT0MZ, 0JWT0WZ, and 0JWT03Z. We appreciate the commenters’ support.

Response: We appreciate the commenters’ support.

After consideration of the public comments we received, we are finalizing our proposal to maintain the non-O.R. designation for procedure codes 0JPT0MZ, 0JPT02Z, 0JPT0WZ, 0JWT0MZ, 0JWT0WZ, and 0JWT03Z.

(14) Open Insertion of Feeding Device

One requestor identified ICD-10-PCS procedure code 0DH50UZ (Insertion of feeding device into esophagus, open approach) that the requestor stated is currently recognized as an O.R. procedure because this procedure is performed in the operating room under general anesthesia. The requestor noted comparable procedure code 0DH80UZ (Insertion of feeding device into stomach, open approach) is recognized as an O.R. procedure. Therefore, the requestor stated that procedure code 0DH50UZ should also be recognized as an O.R. procedure for purposes of MS-DRG assignment.

We stated in the proposed rule that our analysis of this issue confirmed that in the ICD-10 MS-DRG Version 38.1 Definitions Manual, for purposes of MS-DRG assignment, 0DH50UZ is recognized as a non-O.R. procedure and 0DH80UZ is currently recognized as an O.R. procedure. We stated that in reviewing this request, we also identified the following four related codes:

<table>
<thead>
<tr>
<th>ICD-10-PCS Code</th>
<th>Code Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0DH60UZ</td>
<td>Insertion of feeding device into jejunum, open approach</td>
</tr>
<tr>
<td>0DH50UZ</td>
<td>Insertion of feeding device into esophagus, open approach</td>
</tr>
<tr>
<td>0DH80UZ</td>
<td>Insertion of feeding device into small intestine, open approach</td>
</tr>
<tr>
<td>0DH90UZ</td>
<td>Insertion of feeding device into duodenum, open approach</td>
</tr>
<tr>
<td>0DH81UZ</td>
<td>Insertion of feeding device into ileum, open approach</td>
</tr>
</tbody>
</table>
In the ICD–10 MS–DRGs Version 38.1, these four ICD–10–PCS codes are currently recognized as non-O.R. procedure for purposes of MS–DRG assignment. In the proposal rule, we stated that while we agreed with the requestor that procedures describing the open insertion of a feeding device into the jejunalum are comparable to procedures describing the open insertion of a feeding device into the stomach, we did not agree that these procedures should be designated as O.R. procedures. Our clinical advisors stated the procedures that describe the open insertion of a feeding device into the jejunum or the stomach should instead have the same designation as the related ICD–10–PCS procedure codes that describe the open insertion of a feeding device into the esophagus, small intestine, duodenum and ileum that are currently designated as non-O.R. procedures.

We noted with advancements in procedural techniques, feeding devices are most commonly placed using a percutaneous endoscopic approach. Our clinical advisors further stated feeding devices are usually not placed using an open surgical approach; this approach is generally only used if the patient requires another surgical procedure at the same time. When placed at the same time as another surgical procedure, our clinical advisors stated the surgical procedure, as the main determinant of resource use for those cases, should drive the MS–DRG assignment, not the procedure that describes the open insertion of a feeding device. For these reasons, our clinical advisors stated procedures that describe the open insertion of a feeding device in the gastrointestinal system should all have the same non-O.R. designation in the ICD–10 MS–DRGs Version 39 for coherence.

Therefore, we proposed to maintain the current non-O.R. designation of ICD–10–PCS procedure code 0DHA4UZ. We also proposed to remove ICD–10–PCS procedure code 0DH60UZ from the FY 2022 ICD–10 MS–DRG Version 39 Definitions Manual in Appendix E—Operating Room Procedures and Procedure Code/MS–DRG Index as an O.R. procedure. We stated in the proposed rule that, under this proposal, this procedure would no longer impact MS–DRG assignment.

Comment: A commenter supported CMS' proposal and stated they agreed that neither the procedure code describing open insertion of feeding device into stomach nor the procedure code describing open insertion of feeding device into jejunalum should be designated as an O.R. procedure.

Response: We appreciate the commenters' support.

Comment: Other commenters opposed CMS' proposal. A commenter stated that ICD–10–PCS procedure codes that describe the open insertion of a feeding device should be designated as O.R. procedures because they require operating room resources with general anesthesia, and involve incision through the abdominal wall and into the peritoneal cavity with direct visualization. The commenter noted that these procedures may be performed as standalone procedures in patients who are unable to have feeding tubes placed by percutaneous or percutaneous endoscopic approaches because of anatomy, prior surgeries, and adhesions. Another commenter stated that open feeding tube insertions are associated with higher resource use, are prone to more complications, have higher mortality rates, and can have extended recovery times and these procedures should have an OR designation to accurately reflect the resource use for the patient.

Response: We appreciate the commenters' feedback and concern. In response to the comment that these procedures may be performed as standalone procedures in patients who are unable to have feeding tubes placed by percutaneous or percutaneous endoscopic approaches, our clinical advisors note there may be instances when performing any procedure is best done in the setting of an operative room using general anesthesia. However, when looking more broadly at the procedures being described, and the manner in which these procedures are most often performed and their associated resource use our clinical advisors believe that the open insertion of a feeding device in the gastrointestinal system do not warrant an O.R. designation. They noted that these procedures, when performed during a hospitalization, are typically in conjunction with another O.R.

procedure and maintain that procedures that describe the open insertion of a feeding device into the esophagus, stomach, small intestine, duodenum, jejunalum and ileum are all clinically aligned. Accordingly, our clinical advisors state that procedures that describe the open insertion of a feeding device in the gastrointestinal system should all have the same non-O.R. designation in the ICD–10 MS–DRGs Version 39 for coherence.

After consideration of the public comments we received, for the reasons stated, we are finalizing our proposal to maintain the current non-O.R. designation of ICD–10–PCS procedure code 0DHA4UZ for FY 2022, without modification. We are also finalizing our proposal to change the designation of ICD–10–PCS procedure code 0DH60UZ from O.R. procedure to non-O.R. procedure, without modification, effective October 1, 2021.

(15) Laparoscopic Insertion of Feeding Tube

One requestor identified ICD–10–PCS procedure codes 0DH64UZ (Insertion of feeding device into stomach, percutaneous endoscopic approach) and 0DHA4UZ (Insertion of feeding device into jejunum, percutaneous endoscopic approach) that the requestor stated are currently not recognized as O.R. procedures for purposes of MS–DRG assignment. The requestor stated the procedures describing the percutaneous endoscopic insertion of a feeding device into the stomach or the jejunum should be designated as O.R. procedures because these procedures are performed in the operating room under general anesthesia. The requestor stated all laparoscopic procedures, regardless if they are diagnostic or therapeutic, should be classified as O.R. procedures to compensate for operating room resources.

In the proposed rule, we stated our analysis of this issue confirmed that in the ICD–10 MS–DRG Version 38.1 Definitions Manual, 0DH64UZ and 0DHA4UZ are currently designated as non-O.R. procedures for purposes of MS–DRG assignment. We stated in reviewing this request, we also identified the following four related codes:
In the ICD–10 MS–DRGs Version 38.1, these four ICD–10–PCS codes are currently recognized as non-O.R. procedures for purposes of MS–DRG assignment. We stated in the proposed rule that our clinical advisors reviewed this request and did not agree that unilaterally all laparoscopic procedures should be designated as O.R. procedures. We stated that while the procedural approach is an important consideration in the designation of a procedure, there are other clinical factors such as the site of procedure, the procedure complexity, and resource utilization that should also be considered. In this regard, our clinical advisors indicated that codes 0DH64UZ and 0DHA4UZ describing the percutaneous endoscopic insertion of a feeding device into the stomach or the jejunum, do not require the resources of an operating room, are not surgical in nature, and are generally performed in the outpatient setting. The percutaneous endoscopic insertion of a feeding device also does not require general anesthesia. As opposed to being rendered unconscious, patients can receive a local anesthetic (usually a lidocaine spray), an intravenous (IV) pain reliever, and a mild sedative if needed. Patients receiving these devices usually return home the same day after placement, unless they are in the hospital for treatment of another condition.

Our clinical advisors stated the percutaneous endoscopic insertion of a feeding device into the stomach or the jejunum is comparable to the related ICD–10–PCS procedure codes that describe the insertion of feeding devices of other gastrointestinal system body parts that are currently designated as non-O.R. procedures. We stated our clinical advisors believed all procedures that describe the percutaneous endoscopic insertion of a feeding device in the gastrointestinal system should continue to have the same non-O.R. designation in the ICD–10 MS–DRGs Version 39 for coherence. Therefore, for the reasons discussed, we proposed to maintain the current non-O.R. designation of ICD–10–PCS procedure codes 0DH64UZ and 0DHA4UZ.

Comment: A commenter supported CMS’ proposal and stated they agreed that all procedures that describe the percutaneous endoscopic insertion of a feeding device in the gastrointestinal system should continue to have the same non-O.R. designation.

Response: We appreciate the commenters’ support.

Comment: Other commenters opposed CMS’ proposal. A commenter stated that ICD–10–PCS procedure codes that describe the percutaneous endoscopic insertion of a feeding device should be designated as O.R. procedures. This commenter stated that laparoscopic procedures, whether performed inpatient or outpatient, are indeed surgical procedures which require general anesthesia, have increased procedural risks, and require high skill and specialized equipment. The commenter stated that when necessitated during inpatient stays, even if infrequent, providers should be compensated for operating room resources. Another commenter stated that these procedures require the use of an operating room and should be classified in a manner that reflects the resources expended by the facility in the care and treatment of the patient.

Response: We appreciate the commenters’ feedback and concern. Our clinical advisors reviewed the commenters’ concerns and continue to state the percutaneous endoscopic insertion of a feeding device into the stomach or the jejunum, does not require the resources of an operating room or general anesthesia. Our advisors state these procedures are not surgical in nature, and because treatment practices have shifted are generally performed in the outpatient setting. When performed in the inpatient setting, patients are generally in the hospital for the treatment of another condition as opposed to the need for operating room resources in an inpatient setting. Accordingly, when considering clinical factors such as the site of procedure, the procedure complexity, and resource utilization, when performed in the inpatient setting, they believe the non-O.R. designation of procedure codes describing the percutaneous endoscopic insertion of a feeding device is supported.

Therefore, after consideration of the public comments we received, we are finalizing our proposal to maintain the current non-O.R. designation of ICD–10–PCS procedure codes 0DH64UZ and 0DHA4UZ, without modification, for FY 2022.

(16) Endoscopic Fragmentation and Extirpation of Matter of Urinary Tract

As discussed in the proposed rule, one requestor sent two separate but related requests related to endoscopic procedures performed in the urinary system. With regard to the first request, the requestor identified six ICD–10–PCS procedure codes that describe endoscopic fragmentation in the kidney pelvis, ureter, bladder, and bladder neck that the requestor stated are currently not recognized as O.R. procedures for purposes of MS–DRG assignment. The six procedure codes are listed in the following table.

<table>
<thead>
<tr>
<th>ICD-10-PCS Code</th>
<th>Code Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0DH54UZ</td>
<td>Insertion of feeding device into esophagus, percutaneous endoscopic approach</td>
</tr>
<tr>
<td>0DH84UZ</td>
<td>Insertion of feeding device into small intestine, percutaneous endoscopic approach</td>
</tr>
<tr>
<td>0DH94UZ</td>
<td>Insertion of feeding device into duodenum, percutaneous endoscopic approach</td>
</tr>
<tr>
<td>0DHB4UZ</td>
<td>Insertion of feeding device into ileum, percutaneous endoscopic approach</td>
</tr>
<tr>
<td>0DHA4UZ</td>
<td>Insertion of feeding device into duodenum, percutaneous endoscopic approach</td>
</tr>
<tr>
<td>0DH64UZ</td>
<td>Insertion of feeding device into ileum, percutaneous endoscopic approach</td>
</tr>
</tbody>
</table>
The requestor stated that these procedures should be designated as O.R. procedures because procedures such as the endoscopic fragmentation of calculi within the kidney pelvis, ureter, bladder, and bladder neck are performed in the operating room under anesthesia. The requestor stated that procedures that describe the endoscopic extirpation of calculi from the kidney pelvis or ureter use comparable resources, and are designated as O.R. procedures. Therefore, the requestor asserted it is reasonable that procedure codes describing endoscopic fragmentation in kidney pelvis, ureter, bladder, and bladder neck also be designated as O.R. procedures.

In the ICD–10 MS–DRGs Definitions Manual Version 38.1, procedure codes 0TF38ZZ, 0TF48ZZ, 0TF68ZZ, 0TF78ZZ, 0TFB8ZZ, and 0TFC8ZZ are designated as non-O.R. procedures for purposes of MS–DRG assignment. We stated in the proposed rule that our clinical advisors reviewed this issue and disagreed that procedures describing the endoscopic fragmentation of calculi within the kidney pelvis, ureter, bladder, and bladder neck are typically performed in the operating room. We stated that in endoscopic fragmentation procedures in the kidney pelvis, ureter, bladder, and bladder neck, the scope is passed through a natural or artificial orifice. The procedure is not surgical in nature and involves no skin incisions. With advancements in scope size, deflection capabilities, video imaging, and instrumentation, many patients now have these endoscopic urinary procedures performed in an outpatient setting, instead of the inpatient setting. Therefore, we proposed to maintain the current non-O.R. designation of ICD–10–PCS procedure codes 0TF38ZZ, 0TF48ZZ, 0TF68ZZ, 0TF78ZZ, 0TFB8ZZ, and 0TFC8ZZ.

In the second request, the requestor also identified two ICD–10–PCS procedure codes that describe endoscopic extirpation of matter from the bladder and bladder neck that the requestor stated are also currently not recognized as O.R. procedures for purposes of MS–DRG assignment. The two procedure codes are listed in the following table.

<table>
<thead>
<tr>
<th>ICD-10-PCS Code</th>
<th>Code Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0TCB8ZZ</td>
<td>Exirpation of matter from bladder via natural or artificial opening, endoscopic</td>
</tr>
<tr>
<td>0TCC8ZZ</td>
<td>Exirpation of matter from bladder neck via natural or artificial opening, endoscopic</td>
</tr>
</tbody>
</table>

The requestor stated that these procedures also should be designated as O.R. procedures because they performed in the operating room under anesthesia.

In the ICD–10 MS–DRGs Definitions Manual Version 38.1, procedure codes 0TCB8ZZ and 0TCC8ZZ are currently designated as a non-O.R. procedure for purposes of MS–DRG assignment. As indicated in the proposed rule, in response to the second request to designate 0TCB8ZZ and 0TCC8ZZ as O.R. procedures and in response to the requestor’s suggestion that resource consumption is comparable in procedures describing endoscopic fragmentation in the urinary system and procedures describing the endoscopic extirpation in the urinary system, we examined the following procedure codes:
In the ICD–10 MS–DRG Version 38.1 Definitions Manual, these six ICD–10–PCS procedure codes are currently recognized as O.R. procedures for purposes of MS–DRG assignment. We stated in the proposed rule that our clinical advisors indicated that these procedures are not surgical in nature. In endoscopic extirpation procedures, the scope enters the urinary tract through the urethra, which is the tube that carries urine out of the body, or through an artificial orifice. Our clinical advisors further stated the urinary system is one conduit so the scope continues to pass through the urethra, bladder, and into the ureter or kidney (if necessary) to access the stone. For that reason, we stated the procedures describing endoscopic extirpation from a urinary body part should all have the same non-O.R. designation in the ICD–10 MS–DRG Version 39 for coherence.

Therefore, we proposed to maintain the current non-O.R. designation of ICD–10–PCS procedure codes 0TC88ZZ and 0TC68ZZ. We also proposed to remove ICD–10–PCS procedure codes 0TC08ZZ, 0TC18ZZ, 0TC38ZZ, 0TC48ZZ, 0TC68ZZ, and 0TC78ZZ from the FY 2022 ICD–10 MS–DRG Version 39 Definitions Manual in Appendix E—Operating Room Procedures and Procedure Code/MS–DRG Index as O.R. procedures. We stated in the proposed rule that, under this proposal, these procedures would no longer impact MS–DRG assignment.

Comment: Commenters supported maintaining the non-O.R. designation of the procedure codes describing endoscopic extirpation of matter from the bladder and bladder neck and removing six procedure codes describing endoscopic extirpation of matter from the kidney, kidney pelvis, and ureter from the O.R. procedure list. This commenter stated they agreed that procedures describing endoscopic extirpation from a urinary body part should all have the same non-O.R. designation.

Response: We appreciate the commenters’ support.

Other commenters opposed CMS’ proposal. These commenters stated endoscopic kidney and ureter procedures traverse narrow tubular structures and require the operating room with specialized equipment, positioning, image-guidance, and general anesthesia to obtain the surgical precision and satisfactory pain control that cannot be provided at the bedside. A commenter stated that although providers attempt to manage conditions that might warrant the performance of these procedures in the outpatient setting, some patients fail outpatient preventative measures and require both medical and surgical interventions in an inpatient setting.

Response: We appreciate the commenters’ feedback and concern.

Our clinical advisors reviewed the commenters’ concerns and state with development of better instrumentation and surgical techniques, many patients now have endoscopic fragmentation procedures and endoscopic extirpation procedures performed in an outpatient setting. In response to the comment that these procedures cannot be provided at the bedside, we wish to clarify the designation of a procedure as a non-O.R. procedure is not limited to procedures that can be performed at the patient’s bedside. While the site in which the procedure is performed and the procedural approach are important considerations in the designation of a procedure, there are other clinical factors such as procedure complexity, resource utilization, and need for anesthesia administration that should also be considered. In this regard, our clinical advisors state endoscopic fragmentation procedures and endoscopic extirpation procedures are not surgical in nature, because treatment practices have shifted and they do not generally require the resources of an operating room or general anesthesia in an inpatient setting.

After consideration of the public comments we received, for the reasons stated, we are, without modification, (1) finalizing our proposal to maintain the current non-O.R. designation of ICD–10–PCS procedure codes 0TF38ZZ, 0TF48ZZ, 0TF68ZZ, 0TF78ZZ, 0TF88ZZ, and 0TFC8ZZ for FY 2022 and (2) finalizing our proposal to maintain the current non-O.R. designation of ICD–10–PCS procedure codes 0TC08ZZ, 0TC18ZZ, 0TC38ZZ, 0TC48ZZ, 0TC68ZZ, and 0TC78ZZ from the FY 2022 ICD–10 MS–DRG Version 39 Definitions Manual for effective October 1, 2021.

(17) Endoscopic Removal of Ureteral Stent

One requestor identified ICD–10–PCS procedure code 0TP98ZZ (Removal of intraluminal device from ureter, via natural or artificial opening endoscopic) that the requestor stated is not recognized as an O.R. procedure for

<table>

</table>
purposes of MS–DRG assignment. The requestor suggested that this procedure warrants an O.R. designation because the procedure code describes a procedure that is performed in the operating room with anesthesia. The requestor stated that while most ureteral stents can be removed by string, some complicated cases require endoscopic removal using forceps in the operating room under general anesthesia and may be performed during inpatient stays precipitated by severe urinary tract infection, sepsis, or urinary obstructions. The requestor asserted that procedure codes for insertion of ureteral stent(s) as a ureteroscopic, endoscopic approach have been justifiably designated as O.R. procedures because they are performed in the O.R. under anesthesia. Therefore, the requestor suggested it is reasonable for endoscopic removal of the stent to be designated with OR procedure status to compensate for operating room resources and anesthesia.

We stated in the proposed rule that our clinical advisors reviewed this procedure and did not agree that it warrants an O.R. designation. They noted that this procedure is generally not the focus of the admission when it is performed and does not reflect the technical complexity or resource intensity in comparison to other procedures that are designated as O.R. procedures. Therefore, we proposed to maintain the current non-O.R. designation for procedure code 0TP98DZ for FY 2022.

Comment: Commenters supported our proposal to maintain the non-O.R. designation for procedure code 0TP98DZ.

Response: We appreciate the commenters’ support.

Comment: A commenter did not support our proposal based on the rationale provided. According to the commenter, patients may be admitted with sepsis and/or urinary tract infections associated with ureteral stents and require joint focuses of treatment consisting of removal of a stent(s) and intravenous antibiotics. The commenter stated that patients who require stent removal during hospitalization are those who have chronic diagnoses, altered anatomy, or encrusted stents that prevent removal from being performed elsewhere.

Response: Our clinical advisors maintain that generally, the procedure to remove a ureteral stent endoscopically is not the focus or driver of resources for an inpatient admission. With respect to patients who may be admitted with or acquire an infection during the hospitalization, it is understood that these patients typically consume additional resources, however, our clinical advisors do not believe that the endoscopic removal of a ureteral stent is a contributing factor. For those patients who have a chronic diagnosis, altered anatomy or an encrusted stent requiring stent removal specifically in an inpatient setting, we believe additional analysis may be advantageous to determine if a subset of the claims reporting these conditions warrant any modifications to the GROUPER logic. However, the commenter did not provide a list of the specific ICD–10–CM diagnoses describing these conditions for CMS to consider in its analysis for FY 2022. We intend to work with the commenter and examine this issue for consideration in future rulemaking.

After consideration of the public comments we received, we are finalizing our proposal to maintain the non-O.R. designation for procedure code 0TP98DZ, effective October 1, 2021.

(18) Endoscopic/Transorifice Inspection of Ureter

One requestor identified ICD–10–PCS procedure code 0TJ98ZZ (Inspection of ureter, via natural or artificial opening endoscopic), that describes procedures involving endoscopic viewing of the ureter that the requestor stated is currently not recognized as an O.R. procedure for purposes of MS–DRG assignment.

The requestor stated this ureteroscopy procedure is performed in the operating room with anesthesia. According to the requestor, the inspection of ureter procedure code is assigned when obstruction is found during the ureteroscopy and procedures to break up (fragmentation), remove calculi (extirpation), or place a ureteral stent cannot be performed.

In the proposed rule we stated that our clinical advisors reviewed this procedure and disagree that it warrants an O.R. designation. They noted that this procedure typically does not require hospitalization and is generally not the reason for the patient’s admission since it is often performed in conjunction with another O.R. procedure. Therefore, we proposed to maintain the current non-O.R. designation for procedure code 0TJ98ZZ for FY 2022.

Comment: Commenters supported our proposal to maintain the non-O.R. designation for procedure code 0TJ98ZZ, without modification, effective October 1, 2021.

(19) Endoscopic Biopsy of Ureter and Kidney

One requestor identified six ICD–10–PCS procedure codes that describe endoscopic biopsy procedures performed on the ureter and kidney structures that the requestor stated are currently not recognized as O.R. procedures for purposes of MS–DRG assignment. According to the requestor, regardless of whether it is a diagnostic or therapeutic procedure, these procedures should be designated as O.R. procedures because the procedures utilize operating room, anesthesia and recovery room resources. The requestor stated that after the surgeon places the scope into the bladder that ureteral orifices must be identified and instruments carefully navigated to obtain excisional biopsies from within the ureter or further within the kidney. The six procedure codes are listed in the following table.

Comment: A commenter did not support our proposal to maintain the non-O.R. designation for procedure code 0TJ98ZZ based on the rationale that this procedure typically does not require hospitalization and is generally not the reason for the patient’s admission since it is often performed in conjunction with another O.R. procedure. According to the commenter, whether or not a procedure is most often performed as an outpatient should not be the determining factor for designating O.R. status.

Response: Our clinical advisors maintain that typically, this procedure is not the basis for an inpatient admission and as noted earlier in this section, when we state a current non-O.R. procedure is typically performed in conjunction with another O.R. procedure, we are indicating that there is generally another O.R. procedure reported on the claim that is primarily responsible for impacting the utilization of resources for that admission. We wish to clarify that statements indicating a procedure is most often performed as an outpatient or in an outpatient setting are not the single determining factor in our proposals to maintain or modify the designation of a procedure code from O.R. to non-O.R. or vice versa, rather, the proposals set forth in rulemaking are based on a combination of clinical judgment and data, when applicable.

After consideration of the public comments we received, we are finalizing our proposal to maintain the non-O.R. designation for procedure code 0TJ98ZZ, without modification, effective October 1, 2021.
In the proposed rule we stated that our clinical advisors reviewed this request and do not agree that this procedure warrants an O.R. designation. They noted that this procedure is not surgical in nature, does not require the resources of an operating room and is not a technically complex procedure requiring increased hospital resources.

Therefore, we proposed to maintain the current non-O.R. designation for procedure codes 0T767DZ, 0T777DZ, and 0T787DZ for FY 2022.

Comment: Commenters supported our proposal to maintain the non-O.R. designation for procedure codes 0T767DZ, 0T777DZ, and 0T787DZ, without modification, effective October 1, 2021.

(20) Transorifice Insertion of Ureteral Stent

One requestor identified three ICD–10–PCS procedure codes that the requestor stated are not recognized as O.R. procedures for purposes of MS–DRG assignment. The requestor suggested that the procedure described by these procedure codes warrants an O.R. designation because it involves the insertion of an indwelling ureteral stent through a nephrostomy with image-guidance in the interventional radiology suite. According to the requestor, image-guided technology now allows placement of ureteral stents through nephrostomy tracts. The requestor stated this procedure may or may not be performed in the operating room; however, it involves placement of device(s), interventional radiology resources, sedation, and continuous monitoring of vital signs. The three procedure codes are shown in the following table.
(21) Percutaneous Insertion of Ureteral Stent

One requestor identified three ICD–10–PCS procedure codes that the requestor stated are not recognized as O.R. procedures for purposes of MS–DRG assignment. The requestor suggested that the procedure described by these procedure codes warrants an O.R. designation because the procedure is typically performed following a failed ureteral stent insertion procedure in the operating room, which can only be reported as a cystoscopy or ureteroscopy, neither of which are designated as O.R. procedures.

In the proposed rule we stated that our clinical advisors reviewed this request and do not agree that the procedure warrants an O.R. designation. They noted that this procedure is not surgical in nature, does not involve technical complexity or require the resources of an operating room. Therefore, we proposed to maintain the current non-O.R. designation for procedure codes 0T763DZ, 0T773DZ, and 0T783DZ for FY 2022.

Comment: Commenters supported our proposal to maintain the non-O.R. designation for procedure codes 0T763DZ, 0T773DZ, and 0T783DZ.

Response: We appreciate the commenters’ support.

After consideration of the public comments we received, we are finalizing our proposal to maintain the non-O.R. designation for procedure codes 0T763DZ, 0T773DZ, and 0T783DZ, without modification, effective October 1, 2021.

(22) Endoscopic Dilation of Urethra

One requestor identified ICD–10–PCS procedure code 0T7D8DZ (Dilation of urethra with intraluminal device, percutaneous approach) as the procedure code describes a procedure that utilizes the UroLift® System, a minimally invasive technology to treat lower urinary tract symptoms (LUTS) due to benign prostatic hyperplasia (BPH). According to the requestor, the procedure is placed endoscopically within the prostate urethra in the operating room under anesthesia.

In the proposed rule we stated that our clinical advisors reviewed this request and do not agree that the procedure warrants an O.R. designation. They noted that this procedure is performed without incision, resection or thermal injury to the prostate and is primarily performed in the outpatient setting. It is generally not the cause for the patient’s admission and utilization of resources when it is performed. Therefore, we proposed to maintain the current non-O.R. designation for procedure code 0T7D8DZ for FY 2022.

Comment: Commenters supported our proposal to maintain the non-O.R. designation for procedure code 0T7D8DZ.

Response: We appreciate the commenters’ support. A commenter did not support our proposal to maintain the non-O.R. designation for procedure code 0T7D8DZ based on the rationale that this procedure is primarily performed in the outpatient setting and is generally not the cause for the patient’s admission and utilization of resources. According to the commenter, whether or not a procedure is most often performed as an outpatient should not be the determining factor in O.R. status. The commenter asserted that in its review of procedures currently assigned to MS–DRGs 671 and 672, the procedure described by procedure code 0T7D8DZ utilizes comparable O.R. resources.

Response: We thank the commenter for their feedback. Our clinical advisors maintain that typically, this procedure is not the basis for an inpatient admission and if performed, it does not increase the consumption of hospital resources to warrant O.R. status. With regard to the list of procedures currently assigned to MS–DRGs 671 and 672, the procedure described by procedure code 0T7D8DZ utilizes comparable O.R. resources, as stated in previous rulemaking, as well as, the preamble of the FY 2022 IPPS/LTCH PPS proposed rule and this final rule, we are in the process of reviewing prior stakeholder feedback on criteria and factors to consider on what constitutes a procedure being designated as O.R. versus non-O.R. as a component of our broader, comprehensive procedural code review. We are allowing additional time for the claims data to stabilize prior to selecting the timeframe to analyze for this review considering the PHE, and to develop our proposed methodology. Therefore, we will be examining all the procedures currently assigned to MS–DRGs 671 and 672 in connection with that process and discuss if modifications to the designation of code 0T7D8DZ are warranted.

After consideration of the public comments we received, we are finalizing our proposal to maintain the non-O.R. designation for procedure code 0T7D8DZ, without modification, effective October 1, 2021.

(23) Open Repair of Scrotum

One requestor identified ICD–10–PCS procedure code 0VQ50ZZ (Repair scrotum, open approach) that the requestor stated is not recognized as an O.R. procedure for purposes of MS–DRG assignment. The requestor suggested that this procedure warrants an O.R. designation because it involves repair of scrotal tissue deeper than the skin with direct visualization and utilizes general anesthesia in the operating room.

We noted in the proposed rule that our clinical advisors do not agree that open repair of the scrotum merits an O.R. designation. They stated this procedure would not typically require the resources of an operating room and would generally not be a contributing factor impacting hospital resource use during the patient’s admission when it is performed. Therefore, we proposed to maintain the current non-O.R. designation for procedure code 0VQ50ZZ for FY 2022.

Comment: Commenters supported our proposal to maintain the non-O.R. designation for procedure code 0VQ50ZZ.

Response: We appreciate the commenters’ support.

After consideration of the public comments we received, we are finalizing our proposal to maintain the non-O.R. designation for procedure code 0VQ50ZZ, without modification, effective October 1, 2021.

(24) Open Drainage of Vestibular Gland

One requestor identified ICD–10–PCS procedure code 0U9L0ZZ (Drainage of vestibular gland, open approach) that describes a procedure commonly performed for the treatment of an abscess that the requestor stated is performed in the operating room under general anesthesia and therefore warrants an O.R designation. The requestor stated this procedure is comparable to the procedure described by procedure code 0UBL0ZZZX (Excision of vestibular gland, open approach) which is currently designated as an O.R. procedure.

We stated in the proposed rule that during our review of procedure code 0U9L0ZZ, we also examined procedure codes 0U9L0ZX (Drainage of vestibular gland, open approach, diagnostic), 0U9LXZX (Drainage of vestibular gland, external approach, diagnostic), and 0UBL0ZZZX. Separately, we reviewed procedure code 0T9D0ZZ (Drainage of urethra, open approach) because it represents the male equivalent of the female procedure described by procedure code 0U9L0ZZZX.

In the ICD–10 MS–DRGs Definitions Manual Version 38.1, procedure codes 0T9D0ZZ, 0U9L0ZX, 0U9LXZX, and 0UBL0ZZZX are currently designated as O.R. procedures. In the proposed rule we stated that we examined procedure code 0U9L0ZZZX and do not believe this drainage procedure warrants an O.R. designation, however, procedure code 0U9L0ZZZX is not recognized as an O.R. procedure for purposes of MS–DRG assignment. In the proposed rule we stated that we examined procedure code 0U9L0ZZZX and do not believe this drainage procedure warrants an O.R. designation, nor do we agree that this drainage of the vestibular gland procedure (0U9L0ZZZX) is comparable to an excision of the vestibular gland procedure (0UBL0ZZZX), which is currently designated as an O.R. procedure.

In the ICD–10–PCS classification, drainage is defined as taking or letting off, without replacement, a portion of a body part. Therefore, the classification specifically distinguishes the underlying objectives of each distinct procedure. In the proposed rule we noted that our clinical advisors stated a drainage procedure is frequently performed in the outpatient setting and is generally not the cause for the patient’s admission and utilization of resources when it is performed. Drainage of the vestibular gland, also known as Bartholin’s glands, is typically indicated when a cyst or abscess is present and may or may not involve the placement of a Word catheter. Conversely, excision of the vestibular gland is not considered an office-based procedure and is generally reserved for a vulvar mass or for patients who have not responded to more conservative attempts to create a drainage tract. In addition, after review, our clinical advisors recommended changing the O.R. status for procedure codes 0U9L0ZX and 0U9LXZX from O.R. to non-O.R. for similar reasons. These procedures do not typically require the resources of an operating room.

Therefore, we proposed to remove procedure codes 0U9L0ZX and 0U9LXZX from the FY 2022 ICD–10 MS–DRGs Definitions Manual in Appendix E–Operating Room Procedures and Procedure Code/MS–DRG Index as O.R. procedures and noted that under this proposal, these procedure codes would no longer impact MS–DRG assignment. We refer the reader to section II.D.10 of the preamble of the proposed rule and this final rule for further discussion related to procedure code 0T9D0ZZ.

Comment: Commenters supported our proposal to maintain the non-O.R. designation of procedure code 0U9L0ZZZX and to change the designation of procedure codes 0U9L0ZX and 0U9LXZX from O.R. to non-O.R. We appreciate the commenters’ support.

After consideration of the public comments we received, we are finalizing our proposal to maintain the non-O.R. designation of procedure code 0U9L0ZZZX and to change the designation of procedure codes 0U9L0ZX and 0U9LXZX from O.R. to non-O.R., effective October 1, 2021.

(25) Transvaginal Repair of Vagina

One requestor identified ICD–10–PCS procedure code 0UQG7ZZZ (Repair vagina, via natural or artificial opening) that the requestor stated is currently not recognized as an O.R. procedure for purposes of MS–DRG assignment. The requestor stated that procedures described by this code such as the non-obstetric transvaginal repair of the vaginal cuff and the non-obstetric transvaginal repair of vaginal lacerations should be designated as O.R. procedures because these procedures are performed in the operating room under general anesthesia. The requestor noted procedure codes 0USG7ZZZ (Reposition vagina, via natural or artificial opening), 0UBG7ZZZ (Excision of vagina, via natural or artificial opening), and 0UGQ8ZZZ (Repair vagina, via natural or artificial opening endoscopic) are currently designated as O.R. procedures, therefore procedure code 0UQG7ZZZ should also be recognized as an O.R. procedure for purposes of MS–DRG assignment. In the proposed rule, we stated that our clinical advisors reviewed this issue and disagreed that a correlation can be made between procedures described as the transvaginal repair of the vagina and the procedures described by ICD–10–PCS codes 0USG7ZZZ, 0UBG7ZZZ, and 0UGQ8ZZZ. We stated that the root operation “reposition,” “excision,” and “excision” define procedures with more distinct objectives. Also, the approach “via natural or artificial opening,” for example, transvaginal, is defined as the entry of instrumentation through a natural or artificial external opening to reach the site of the procedure while the “via natural or artificial opening endoscopic approach” is defined as the entry of instrumentation through for example a scope) through a natural or artificial external opening to both reach and visualize the site of the procedure. We stated that our clinical advisors also disagreed that procedures described as the transvaginal repair of the vagina are typically performed in the operating room under general anesthesia. Our clinical advisors stated transvaginal repair can be performed using regional anesthesia, used to numb only the area of the body that requires surgery instead of rendering the patient unconscious. Therefore, for the reasons described, we proposed to maintain the current non-O.R. designation of ICD–10–PCS procedure code 0UQG7ZZZ.

Response: We appreciate the commenters’ support.

Comment: Other commenters opposed CMS’ proposal to maintain the non-O.R. designation of ICD–10–PCS procedure code 0UQG7ZZZ. A commenter stated...
procedures such as vaginal cuff revisions must be performed in the operating room under general anesthesia because a sterile surgical environment remains required for surgeons to accomplish this procedure before safely discharging patients. Another commenter stated that transvaginal repair of the vagina is typically an emergent procedure and for the safety of the patient, the procedure is best performed in the operating room under general anesthesia so the patient can stay relaxed. This commenter also stated that when this procedure is performed for indications such as vaginal cuff dehiscence, it is common that a concurrent procedure may be indicated to ensure there was not compromised/ischemic bowel since it is imperative that the bowel is kept out of the field while the cuff is closed.

Response: We appreciate the commenters’ feedback and concern. Our clinical advisors reviewed the commenters’ concerns and continue to support maintaining the current non-O.R. designation for ICD–10–PCS procedure code 0UQG7ZZ. While our clinical advisors agree that procedures described as the transvaginal repair of the vagina are often performed in conjunction with another O.R. procedure, they do not agree that this procedure warrants an O.R. designation. They stated these procedures are typically not the focus for the patient’s admission, and that the other definitive procedures performed with the transvaginal repair of the vagina in the inpatient setting would be considered the principal driver of resource expenditure in those admissions. After consideration of the public comments we received, we are finalizing our proposal to maintain the current non-O.R. designation of ICD–10–PCS procedure code 0UQG7ZZ, without modification, for FY 2022.

(26) Percutaneous Tunneled Vascular Access Devices

One requestor identified ten ICD–10–PCS procedure codes describing percutaneous insertion of tunneled vascular access devices into various body parts that the requestor stated are not recognized as an O.R. procedure for purposes of MS–DRG assignment. The requestor suggested that these procedures warrant an O.R. designation because they are placed in an interventional radiology suite or in the operating room under anesthesia. The requestor stated that these procedures should be grouping to procedural MS–DRGs across all MDCs. The requestor stated that these procedures should be grouping to procedural MS–DRGs across all MDCs. They stated that these percutaneous procedures are generally performed in the outpatient setting and when performed during a hospitalization, they are frequently performed in combination with another O.R. procedure. Therefore, we proposed to maintain the current non-O.R. status

for the ten procedure codes listed previously for FY 2022.

**Comment:** Commenters supported our proposal to maintain the non-O.R. designation for procedure codes 0JH63XZ, 0JH83XZ, 0JD3XZ, 0JH93XZ, 0JH23XZ, 0JH73XZ, 0JHL3XZ, 0JHM3XZ, 0JHN3XZ and 0JHP3XZ.

**Response:** We appreciate the commenters’ support.

After consideration of the public comments we received, we are finalizing our proposal to maintain the non-O.R. designation for procedure codes 0JH63XZ, 0JH83XZ, 0JD3XZ, 0JH93XZ, 0JH23XZ, 0JH73XZ, 0JHL3XZ, 0JHM3XZ, 0JHN3XZ and 0JHP3XZ, effective October 1, 2021.

12. Changes to the MS–DRG Diagnosis Codes for FY 2022

a. Background of the CC List and the CC Exclusions List

Under the IPPS MS–DRG classification system, we have developed a standard list of diagnoses that are considered CCs. Historically, we developed this list using physician panels that classified each diagnosis code based on whether the diagnosis, when present as a secondary condition, would be considered a substantial complication or comorbidity. A substantial complication or comorbidity was defined as a condition that, because of its presence with a specific principal diagnosis, would cause an increase in the length-of-stay by at least 1 day in at least 75 percent of the patients. However, depending on the principal diagnosis of the patient, some diagnoses on the basic list of complications and comorbidities may be excluded if they are closely related to the principal diagnosis. In FY 2008, we evaluated each diagnosis code to determine its impact on resource use and to determine the most appropriate CC subclassification (NonCC, CC, or MCC) assignment. We refer readers to sections II.D.2. and 3. of the preamble of the FY 2008 IPPS final rule with comment period for a discussion of the refinement of CCs in relation to the MS–DRGs we adopted for FY 2008 (72 FR 47152 through 47171).

b. Overview of Comprehensive CC/MCC Analysis

In the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159), we described our process for establishing three different levels of CC severity into which we would subdivide the diagnosis codes. The diagnosis codes as a MCC, a CC, or a NonCC was accomplished using an iterative approach in which each diagnosis was evaluated to determine the extent to which its presence as a secondary diagnosis resulted in increased hospital resource use. We refer readers to the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159) for a complete discussion of our approach. Since the comprehensive analysis was completed for FY 2008, we have evaluated diagnosis codes individually when assigning severity levels to new codes and when receiving requests to change the severity level of specific diagnosis codes.

We noted in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19235 through 19246) that with the transition to ICD–10–CM and the significant changes that have occurred to diagnosis codes since the FY 2008 review, we believed it was necessary to conduct a comprehensive analysis once again. Based on this analysis, we proposed changes to the severity level designations for 1,492 ICD–10–CM diagnosis codes and invited public comments on those proposals. As summarized in the FY 2020 IPPS/LTCH PPS final rule, many commenters expressed concern with the proposed severity level designation changes overall and recommended that CMS conduct further analysis prior to finalizing any proposals. After careful consideration of the public comments we received, as discussed further in the FY 2020 final rule, we generally did not finalize our proposed changes to the severity designations for the ICD–10–CM diagnosis codes, other than the changes to the severity level designations for the diagnosis codes in category Z16- (Resistance to antimicrobial drugs) from a NonCC to a CC. We stated that postponing adoption of the proposed comprehensive changes in the severity level designations would allow further opportunity to provide additional background to the public on the methodology utilized and clinical rationale applied across diagnostic categories to assist the public in its review.

We refer readers to the FY 2021 IPPS/LTCH PPS final rule for a complete discussion of our response to public comments regarding the nine guiding principles. We continue to solicit feedback regarding these guiding principles, as well as other possible ways we can incorporate meaningful indicators of clinical severity. When providing additional feedback or comments, we encourage the public to provide a detailed explanation of how applying a suggested concept or principle would ensure that the severity designation appropriately reflects resource use for any diagnosis code.

As discussed in the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25175), for new diagnosis codes approved for FY 2022, consistent with our annual process for designating a severity level (MCC, CC or NonCC) for new diagnosis codes, we first review the predecessor code designation, followed by review and consideration of other factors that may be relevant to the severity level designation, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis and/or treatment of the condition. We noted that this process does not automatically result in the new diagnosis code having the same designation as the predecessor code. We refer the reader to I.D.13 of this final rule for the discussion of the proposed changes to the ICD–10–CM and ICD–10–PCS coding systems for FY 2022.
In the FY 2022 IPPS/LTCH PPS proposed rule, we noted that we received several requests to change the severity level designations of specific ICD–10–CM diagnosis codes. We stated our clinical advisors believed it was appropriate to consider these requests in connection with our continued comprehensive CC/MCC analysis in future rulemaking, rather than proposing to change the designation of individual ICD–10–CM diagnosis codes at this time. As discussed in the proposed rule and noted earlier in this section, we plan to continue a comprehensive CC/MCC analysis, using a combination of mathematical analysis of claims data and the application of nine guiding principles. We will consider these individual requests received for changes to severity level designations as we continue our comprehensive CC/MCC analysis and will provide more detail in future rulemaking.

Comment: A commenter stated they agreed with the decision by CMS to withhold its recommendations pending a complete discussion of how the comprehensive CC/MCC analysis in future rulemaking is to be constructed. This commenter also stated they appreciated CMS’ publication of the guiding principles of what should constitute a CC or MCC.

Response: We appreciate the commenters’ support. In response to the comment that the guiding principles indicate what should constitute a CC or MCC, as noted in the FY 2021 IPPS/LTCH PPS final rule, we do not believe the nine guiding principles would be mostly applicable, or only applicable, to CC or MCC conditions. In applying the nine guiding principles in our review of the appropriate severity level designation, the intention is not to require that a diagnosis code satisfy each principle, or a specific number of principles in assessing whether to designate a secondary diagnosis code as a NonCC versus a CC versus a MCC. Rather, the severity level determinations would be based on the consideration of the clinical factors captured by these principles as well as the empirical analysis of the additional resources associated with the secondary diagnosis.

Comment: Other commenters expressed their willingness to partner with CMS to provide their expertise to assist in the continuation of a comprehensive CC/MCC analysis. These commenters requested that CMS post another secondary diagnosis impact on resource use file so that the public can determine how individual ICD–10–CM diagnosis codes affect resource use when reported as secondary diagnoses.

A commenter stated providing this information will help prepare the public and inform the feedback and advice submitted by the public in the IPPS comment periods of future rulemaking.

Response: While CMS has already convened an internal workgroup comprised of clinicians, consultants, coding specialists and other policy analysts, we welcome additional public feedback. Commenters can continue to submit their recommendations to the following email address: MDRGClassificationChange@cms.hhs.gov by November 1, 2021.

In response to the request that CMS make an updated impact on resource use available, we note that in May 2021, we made an updated impact on resource use file available so that the public can review the mathematical data for the impact on resource use generated using claims from the FY 2019 MedPAR file and the FY 2020 MedPAR file. The link to this file is posted on the CMS website at https://www.cms.gov/Medicare/Med-Payments/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.

c. Potential Change to Severity Level Designation for Unspecified Diagnosis Codes for FY 2022

As discussed in the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25175 through 25180), as another interval step as we continue to address the comprehensive review of the severity designations of ICD–10–CM diagnosis codes in which we have been engaged over the past two years, we requested public comments on a potential change to the severity level designations for “unspecified” ICD–10–CM diagnosis codes that we were considering adopting for FY 2022. Specifically, we noted we were considering changing the severity level designation of all “unspecified” diagnosis codes to a NonCC where there are other codes available in that code subcategory that further specify the anatomic site, effective for FY 2022, after consideration of the public comments we receive in response to the proposed rule.

We noted that according to the ICD–10–CM Official Guidelines for Coding and Reporting, codes titled “unspecified” are for use when the information in the medical record is insufficient to assign a more specific code. In our review of severity level designation of the codes in the ICD–10–CM classification, we stated we noted 3,490 “unspecified” diagnosis codes designated as a MCC, where there are other codes available in that code subcategory that further specify the anatomic site with an equivalent severity level designation. For example, ICD–10–CM code L89.003 (Pressure ulcer of unspecified elbow, stage 3) is currently designated as a MCC. In the same code subcategory of L89.0- (Pressure ulcer of elbow), ICD–10–CM codes L89.013 (Pressure ulcer of right elbow, stage 3) and code L89.023 (Pressure ulcer of left elbow, stage 3) are also designated as MCCs.

In the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159), we described the categorization of diagnoses as an MCC, a CC, or a NonCC, accomplished using an iterative approach in which each diagnosis was evaluated to determine the extent to which its presence as a secondary diagnosis resulted in increased hospital resource use. As such, the designation of CC or MCC is intended to account for the increased resources required to address a condition as a secondary diagnosis. The usage of “unspecified” diagnosis codes where there are other codes available in that code subcategory that further specify the anatomic site may contribute to and eventually result in less reliable data for researching clinical outcomes. If documentation is not available to code to the highest level of specificity as to the laterality of the condition treated, and an unspecified code is reported by the hospital, it may be harder to quantify in the claims data what additional resources were expended to address that condition in terms of requiring clinical evaluation, therapeutic treatment, diagnostic procedures, extended length of hospital stay, increased nursing care and/or monitoring.

As stated in the proposed rule and previously, we discussed in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58550 through 58554) that we plan to continue a comprehensive CC/MCC analysis, using a combination of mathematical analysis of claims data, and the application of nine guiding principles, and plan to present the findings and proposals in future rulemaking. As patients present with a variety of diagnoses, in examining the secondary diagnoses, we stated we would consider what additional resources are required, that surpasses those that are already being utilized to address the principal diagnosis and/or other secondary diagnoses that might also be present on the claim. The goal of our comprehensive analysis is to create stratification for reimbursing inpatient hospitalization in the fewest amount of categories with the most explanatory power in a clinically cohesive way.

We stated in the FY 2022 proposed rule that we believed more robust claims data
would facilitate this effort to determine the impact on resource use and inform our decision-making in determining the most appropriate CC subclass (NonCC, CC, or MCC) assignment for each diagnosis as a secondary diagnosis. As part of this effort, we solicited comments on adopting a change to the severity level designation of the 3,490 “unspecified” diagnosis codes currently designated as either CC or MCC, where there are other codes available in that code subcategory that further specify the anatomic site, to a NonCC for FY 2022. 

As discussed in the HIPAA Administrative Simplification: Modification to Medical Data Code Set Standards To Adopt ICD–10–CM and ICD–10–PCS proposed rule (73 FR 49796 through 49803), in proposing the adoption of ICD–10–CM and ICD–10–PCS, we listed that the addition of laterality in ICD–10–CM—specifying which organ or part of the body is involved when the location could be on the right, the left, or could be bilateral, was one of several improvements over ICD–9–CM. We also noted that in comparison to ICD–9–CM, ICD–10–CM diagnosis codes are very specific and that this specificity improves the richness of data for analysis and improves the accuracy of data used for medical research. In the Modifications to Medical Data Code Set Standards To Adopt ICD–10–CM and ICD–10–PCS final rule (74 FR 3328 through 3362), we adopted the ICD–10–CM and ICD–10–PCS as medical data code sets under HIPAA, replacing ICD–9–CM Volumes 1 and 2, and Volume 3 and noted that ICD–10–CM and ICD–10–PCS provide specific diagnosis and treatment information that can improve quality measurements and patient safety, and the evaluation of medical processes and outcomes. We stated in the FY 2022 proposed rule that we continue to believe that reporting the most specific diagnosis codes supported by the available medical record documentation and clinical knowledge of the patient’s health condition would more accurately reflect each health care encounter and improve the reliability and validity of the coded data. However, in consideration of the PHE, and to the extent that some providers may not currently have programs in place that focus on improving documentation, we requested public comments on making this change to the severity level designation for these unspecified ICD–10–CM diagnosis codes for FY 2022.

We refer the reader to table 6P.2a associated with the proposed rule for a detailed list of the diagnosis codes for which we solicited comments on a change in severity level. As noted in the proposed rule, we also made available the data describing the impact on resource use when reported as a secondary diagnosis for all 3,490 ICD–10–CM unspecified diagnosis codes. While these claims data were not used in our identification of the “unspecified” diagnosis codes for which there are other codes available in the code subcategory that further specify the anatomic site, as stated in the proposed rule and earlier in this section, these data are consistent with data historically used to mathematically measure impact on resource use for secondary diagnoses, and the data which we plan to use in combination with application of the nine guiding principles as we continue a comprehensive CC/MCC analysis. Therefore, we displayed the data on these unspecified codes in order to facilitate public comment on these potential changes in the severity level designation for these codes.

In Table 6P.2a associated with the proposed rule, column C displays the FY 2020 severity level designation for these diagnosis codes in MS–DRG Grouper Version 37.2. Column D displays CMS’ current FY 2021 severity level designation in MS–DRG Grouper Version 38.1 and column E displays the potential changes to the severity level designation that we stated we were considering adopting. Columns F–O show data on the impact on resource use generated using discharge claims from the September 2019 update of the FY 2019 MedPAR file and MS–DRG Grouper Version 37.2. Columns Q–Z show data on the impact on resource use generated using discharge claims from the September 2020 update of the FY 2020 MedPAR file and MS–DRG Grouper Version 38.1.

For further information on the data on the impact on resource use as displayed in Columns F–O and Columns Q–Z, we refer readers to the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159) for a complete discussion of the methodology utilized to mathematically measure the impact on resource use. Also, as discussed in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32550), to provide the public with more information on the CC/MCC comprehensive analysis discussed in the FY 2020 IPPS/LTCH PPS proposed and final rules, CMS hosted a listening session on October 8, 2019. The listening session included a review of this methodology utilized to mathematically measure the impact on resource use. We refer readers to https://www.cms.gov/Outreach-and-Education/Outreach/OpenDoorForums/PodcastAndTranscripts.html for the transcript and audio file of the listening session. We also refer readers to https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.html for the supplementary file containing the data describing the impact on resource use of specific ICD–10–CM diagnosis codes when reported as a secondary diagnosis that was made available for the listening session. We note that the supplementary file that was made available for the listening session contains the mathematical data for the impact on resource use generated using claims from the FY 2018 MedPAR file. We have also made available on the CMS website an updated impact on resource use file so that the public can review the mathematical data for the impact on resource use generated using claims from the FY 2019 MedPAR file and the FY 2020 MedPAR file.

This table shows the Version 38.1 ICD–10 MS–DRG categorization of diagnosis codes by severity level.
As stated in the proposed rule, we requested public comments on a modification to the Version 38.1 severity level subclass assignments for 4.8 percent of the ICD–10–CM diagnosis codes, potentially effective with the Version 39 ICD–10 MS–DRG MCC/CC list. The following table compares the Version 38.1 ICD–10 MS–DRG MCC/CC list and the potential Version 39 ICD–10 MS–DRG MCC/CC list. There are 17,957 diagnosis codes on the Version 38.1 MCC/CC lists. These potential MCC/CC severity level changes would reduce the number of diagnosis codes on the MCC/CC lists to 14,467 (2,771 + 11,696).

### Current Categorization of CC Codes (Version 38.1)

<table>
<thead>
<tr>
<th></th>

</table>

The net result of these potential changes to the Version 39 ICD–10 MS–DRG MCC/CC list, for the 72,621 diagnosis codes in the ICD–10–CM classification, would be a decrease of 507 (3,278 – 2,771) codes designated as an MCC, a decrease of 2,983 (14,679 – 11,696) codes designated as a CC, and an increase of 3,490 (58,154 – 54,664) codes designated as a NonCC.

The following table compares the Version 38.1 ICD–10 MS–DRG severity level list and the potential Version 39 ICD–10 MS–DRG severity level list by each of the 22 chapters of the ICD–10–CM classification to display how each chapter of ICD–10–CM might be affected by these modifications.

</tbody>
</table>
As shown in the table, the Diseases of the Musculoskeletal System and Connective Tissue (M00–M99) chapter of ICD–10–CM would have the largest percentage reduction in codes designated as CC/MCC. Twelve chapters would have a zero percentage change to the percentage of codes designated as CC/MCC.

As stated in the proposed rule and previously, we requested public comments on our possible adoption of a change to the severity level designation of these 3,490 “unspecified” diagnosis codes currently designated as either CC or MCC, where there are other codes available in that code subcategory that further specify the anatomic site, to a NonCC, potentially effective with the Version 39 ICD–10 MS–DRG MCC/CC list. As part of this request, we stated we would be interested in comments regarding whether this modification might present operational challenges and how we might otherwise foster the reporting of the most specific diagnosis codes supported by the available medical record documentation and clinical knowledge of the patient’s health condition to more accurately reflect each health care encounter and improve the reliability and validity of the coded data.

In this FY 2022 IPPS/LTCH PPS final rule, we present a summation of the comments we received on our possible adoption of a change to the severity level designation of the 3,490 “unspecified” diagnosis codes currently designated as either CC or MCC, where there are other codes available in that code subcategory that further specify the anatomic site, to a NonCC, potentially effective with the Version 39 ICD–10 MS–DRG MCC/CC list and our responses to those comments. We appreciate commenters for sharing their views and their willingness to support CMS in our efforts to continue a comprehensive CC/MCC analysis.

Comment: Many commenters supported CMS’ possible adoption of a change to the severity level designation of the 3,490 “unspecified” diagnosis codes to a NonCC when there are more specific codes available in that code subcategory that recognize laterality. Some commenters stated it is reasonable to expect that laterality would be documented in the hospital inpatient setting in most cases. A commenter stated that they agreed that reporting the most specific diagnosis codes supported by the available medical record documentation and clinical knowledge of the patient’s health condition would more accurately reflect the healthcare encounter and improve the reliability and validity of the coded data. This commenter further stated the anticipated benefits of the ICD–10–CM transition (including better data for measuring quality and safety of patient care, assessing patient outcomes, determining disease severity for risk and severity adjustment, and conducting analyses and research) cannot be realized if healthcare encounters are not coded and documented to the highest possible level of specificity. A commenter stated that they appreciated that CMS is considering changing the severity designation of “unspecified” diagnosis codes where a more specific code describing laterality is available as they have observed that the presence of these codes in the classification has become a challenge when determining how to code based on vague medical record documentation. Another commenter stated they supported CMS’ aim to encourage diagnosis coding to the highest level of specificity available, and stated specifically, if there are codes that can be used to indicate laterality, then those codes should be reported rather than an unspecified code.

Response: We appreciate the commenters’ support.

Comment: Other commenters questioned the need for such a change. Commenters stated the use of unspecified codes in reporting diagnoses that describe the patient’s condition does not diminish the resources required to care for patients. A commenter requested that CMS provide insight pertaining to how the laterality of the condition impacts the severity of the diagnosis. Another commenter stated the treatment plans developed by providers to address diagnoses remains the same, regardless of the laterality affected. Another commenter stated that the laterality of a condition does not clinically impact the severity of the diagnosis or make it less costly to treat, and that it also does not offer any more value to the reported data.

Response: We appreciate the commenter’s feedback. To clarify how the concept of laterality is reflected in the claims data and the importance in accurately reporting this information we provide the following examples of diagnosis codes and their impact on resource use as represented in the claims data when reported as a secondary diagnosis. The following table reflects the impact on resource use data using the September 2019 update of the FY 2019 MedPAR file for diagnosis codes that describe stage 3 pressure ulcers of the hip. We refer readers to the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159) for a complete discussion of our historical approach to mathematically
evaluate the extent to which the presence of an ICD–10–CM code as a secondary diagnosis resulted in increased hospital resource use, and the explanation of the columns in the table.

</tbody>
</table>

As shown in the table, the three diagnosis codes that describe stage 3 pressure ulcers of the hip are designated as MCCs in Version 38.1 of the ICD–10 MS–DRGs. When examining diagnosis code L89.213 (Pressure ulcer of right hip, stage 3), the value in column C1 is closer to 2.0 than to 1.0. The data suggests that when stage 3 pressure ulcers of the right hip are reported as a secondary diagnosis, the resources involved in caring for these patients are more aligned with a CC than a NonCC or an MCC, as explained in the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159). However, when examining diagnosis codes L89.223 (Pressure ulcer of left hip, stage 3) and L89.203 (Pressure ulcer of unspecified hip, stage 3), the C1 values are generally closer to 1, which suggest the resources involved in caring for stage 3 pressure ulcers of the left hip or an unspecified hip are more aligned with a NonCC severity level than a CC or an MCC severity level.

The following table reflects the impact on resource use data using the September 2020 update of the FY 2020 MedPAR file for the same three diagnosis codes.

<table>

</tbody>
</table>

When examining this data file, we find opposite results. The C1 values for diagnosis code L89.213 (Pressure ulcer of right hip, stage 3) is generally close to 1 and the C2 values for L89.213 and L89.203 (Pressure ulcer of unspecified hip, stage 3) are generally close to 2, both of which suggest the resources involved in caring for stage 3 pressure ulcers of the right hip or an unspecified hip are more aligned with a NonCC severity level than a CC or an MCC severity level. However, when examining diagnosis code L89.223 (Pressure ulcer of left hip, stage 3), the value in column C1 is closer to 2.0, which suggests that when stage 3 pressure ulcers of the left hip are reported as a secondary diagnosis, the resources involved in caring for these patients are more aligned with a CC than either a NonCC or an MCC.

As we have noted in prior rulemaking, these mathematical constructs are used as guides in conjunction with the judgment of our clinical advisors to classify each secondary diagnosis reviewed. We present these data to highlight that when taking laterality into account, the resources expended in caring for certain conditions may not be as equally expressed in the claims data as some commenters may suggest and to demonstrate how reporting the most specific diagnosis codes supported by the available medical record documentation and clinical knowledge of the patient’s health condition could...
more accurately reflect the health care encounter and improve the reliability and validity of the coded data the 108 cases and 56 cases that reported a stage 3 pressure ulcer of an unspecified hip as a secondary diagnosis in the FY 2019 and FY 2020 MedPAR file, respectively, may each reflect an opportunity to potentially have reported more specific and valuable data that could be used in evaluating the impact of resource use in the claims data, had the laterality been specified.

We also note that in Table 6P.2a associated with the proposed rule, of the 3,490 diagnosis codes listed, when reviewing the total counts in the data on the impact on resource use generated using discharge claims from the September 2019 update of the FY 2019 MedPAR file and the September 2020 update of the FY 2020 MedPAR file, respectively, were reported in numbers greater than 500 in the claims data. The remaining codes were generally all reported in small numbers. In fact, in as shown in Table 6P.2a, 2,772 and 2,767 of these codes were reported zero times in the claims data when reviewing the impact on resource use generated using discharge claims from the September 2019 update of the FY 2019 MedPAR file and the September 2020 update of the FY 2020 MedPAR file, respectively.

As noted in the proposed rule, this consideration of a possible adoption to change the severity level designation of certain unspecified codes was to foster the reporting of the most specific diagnosis supported by the available medical record documentation and clinical knowledge of the patient’s health condition to more accurately reflect each health care encounter and improve the reliability and validity of the coded data. These findings demonstrate providers are already appropriately documenting laterality in most instances.

Comment: Other commenters noted that laterality is not one of CMS’ long-standing criteria for determining the severity level of a condition. These commenters stated the presence (or absence) of laterality is not a factor in the nine guiding principles for establishing the severity level of an ICD–10 code. Therefore, these commenters suggested that CMS withdraw its possible adoption of a change, as the agency’s own principles for establishing the severity level of an ICD–10 code do not support this change.

Response: In prior rulemaking, our clinical advisors reviewed the resource use impact suggested modifications to the initial CC subclass assignments when clinically appropriate based on review of the mathematical data as well as consideration of the clinical nature of each of the secondary diagnoses and the severity level of clinically similar diagnoses. As discussed in the proposed rule and noted earlier in this section, we plan to continue a comprehensive CC/MCC analysis, using a combination of mathematical analysis of claims data and the application of nine guiding principles. We believe the possible adoption of a change to the severity level designation of diagnosis codes when there are more specific codes available in that code subcategory that recognize laterality will have the downstream effect of strengthening the data used in such analysis. In regards to the comment that laterality in not listed as a factor in the nine guiding principles, our clinical advisors state that determining laterality is inherent to the guiding principle that states “typically requires higher level of care (that is, intensive monitoring, greater number of caregivers, additional testing, intensive care unit care, extended length of stay).” If a higher level of care is required to address the diagnosis as a secondary diagnosis, then the laterality affected in most instances should be able to be determined in the course of the associated intensive monitoring, greater number of caregivers, and/or additional testing in most instances. We also note that if a procedure is performed to address a diagnosis as a secondary diagnosis, the laterality must be known and documented in order to assign an ICD–10–PCS code because ICD–10–PCS use of laterality since “unspecified” is not an anatomical option in the procedure classification.

Comment: A commenter requested that CMS provide transparency in reference to the table that displays the distribution of volume within these codes for a better representation of the impact. The commenter noted that the table indicates that only 4% of the neoplasm codes would be impacted under the proposal; however, when reviewing the distribution of cases, the commenter stated that it appears that neoplasms were actually heavily impacted with the highest volume of cases.

Response: We note that the table displayed in the proposed rule compares the Version 38.1 ICD–10–MS–DRG severity level list and the potential Version 39 ICD–10–MS–DRG severity level list by each of the 22 chapters of the ICD–10–CM classification to display how each chapter of ICD–10–CM might be affected by these modifications. This table was not intended to represent an analysis of the claims reporting the 3,490 codes as listed.

Comment: A few commenters suggested that CMS analyze the frequency of use of unspecified codes, their impact on resource utilization, and also the typical documentation practices for acute stays with these conditions which may or may not include specificity before changing the severity designation of these codes. These commenters recommended that CMS conduct an analysis of how often the unspecified codes in question are actually used; how much resources they consume; and the standard documentation for the patient stays associated with the use of these codes.

Response: Table 6P.2a associated with the proposed rule contained data describing the impact on resource use when reported as a secondary diagnosis for all 3,490 ICD–10–CM unspecified diagnosis codes, generated using discharge claims from the September 2019 update of the FY 2019 MedPAR file and the September 2020 update of the FY 2020 MedPAR file, including the number of cases reporting these unspecified codes. We note that we have made complete impact on resource use files available so that the public can review the mathematical data for the impact on resource use generated using claims from the FY 2018 MedPAR file, FY 2019 MedPAR file and the FY 2020 MedPAR file. The link to these files is posted on the CMS website at https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ AcuteInpatientPPS/MS-DRG-Classifications-and-Software.

In response to the comment that CMS review the typical documentation practices for acute stays with these conditions, we note that medical professionals’ documentation is already open to scrutiny by many, including employers, Federal and State reviewers, and auditors. We encourage providers to continue to focus efforts on improving their respective facilities medical record documentation practices.

Comment: Some commenters disagreed with the possible adoption of a change to the severity level designation of individual diagnosis codes listed in Table 6P.2a associated with the proposed rule.

Many commenters opposed the inclusion of diagnosis codes that describe neoplasms in the list of codes. Commenters stated cancer patients typically are more complex than other types of patients, and often their cancer leads to greater resource utilization even when coded with an unspecified code. These commenters noted that while the neoplasm may still be under active...
treatment, the specific side of the neoplasm may not be documented if the patient is admitted for a different, unrelated condition such as trauma or infections. Also, there are instances where patients with a known primary cancer are often evaluated, tested, and treated for a clinically likely yet unspecified secondary cancer site. These commenters stated in these cases, the lack of specificity is warranted, and the clinical presentation is still aligned with a CC or MCC. A commenter specifically identified code C56.9. Malignant neoplasm of unspecified ovary, and stated this code should remain a CC because some patients have extensive intraperitoneal metastases typical of (presumed) ovarian primary, and have pelvic involvement so extensive that resection is unable to be performed, and laterality is unable to be determined.

Response: Our clinical advisors reviewed this condition described by code C56.9 and agree with the commenters that this and other unspecified diagnosis codes that describe neoplasms should not be included in the list of unspecified diagnosis codes for consideration for a possible adoption of a change to the severity level designation. They agree that in certain presentations, the laterality affected might be difficult to determine in certain instances. Our clinical advisors believe the severity level designations for this subset of codes would be better addressed as part of our comprehensive CC/MCC analysis, using a combination of mathematical analysis of claims data and the application of nine guiding principles.

Comment: A commenter identified diagnosis codes S02.113A, S02.113B, and S02.113K that describe unspecified occipital condyle fractures listed in Table 6P.2a associated with the proposed rule. The commenter noted that the ICD–10–CM classification does not have diagnosis codes that specify laterality when the type of occipital fracture (for example, Type I, Type II, Type III) is unknown or unobtainable. Because unspecified codes must be assigned when the type of fracture is unknown, even when laterality is documented, the commenter suggested that these codes should be removed from the list of codes under consideration and retain their CC and MCC designations.

Response: We agree with the commenter that in subcategory S02.11 of the ICD–10–CM classification, there are no codes available that further specify laterality in the code description when the type of occipital condyle fracture is unknown. We further examined the list of diagnosis codes listed in Table 6P.2a, and noted diagnosis codes S02.119A, S02.119B and S02.119K that describe unspecified fractures of the occiput. Our clinical advisors noted that there are also no codes available in that classification that further specify laterality in the code description when the type of occipital fracture is unknown. Accordingly, our clinical advisors believe that these codes should not be included in the list of unspecified diagnosis codes for consideration for a possible adoption of a change to the severity level designation.

Response: We appreciate the commenter noting that two diagnosis codes describing fractures affecting the right patella were included in Table 6P.2a associated with the proposed rule. We note that this was an inadvertent error. We further examined the list of diagnosis codes in Table 6P.2a, and noted diagnosis codes S78.911A and S78.921A that describe complete and partial traumatic amputation of right hip and thigh, respectively, were also inadvertently included in the list of “unspecified” diagnosis codes currently designated as either CC or MCC, where there are other codes available in that code subcategory that further specify the anatomic site.

Comment: A commenter stated they disagreed with removing the severity designation of an unspecified code that is internal to the body and cannot be visualized externally. This would include all of the codes involving conditions of internal organs, vessels or body parts (for example, neoplasm, DVT, etc.).

Response: In response to this comment, we further examined the list of diagnosis codes in Table 6P.2a, and note the following:

- Our clinical advisors noted that codes S02.118A, S02.118B, and S02.118K which describe other fractures of occiput, S04.819A which describes an injury of olfactory [1st] nerve, and S04.9XXA which describes an injury of unspecified cranial nerve were listed in Table 6P.2a. Our clinical advisors stated that in cases of traumatic injury, laterality may not be easily identified in occipital fractures or injuries to olfactory or cranial nerves.

- Our clinical advisors noted codes S32.9XXA, S32.9XXB, and S32.9XXK that describe fractures of unspecified parts of lumbosacral spine and pelvis; codes S36.209A, S36.249A, S36.259A, and S36.269A that describe injury and laceration to unspecified parts of the pancreas; code S36.509A that describes an unspecified injury of an unspecified part of colon; code S36.90XA that describes an unspecified injury of an unspecified intra-abdominal organ; code S37.90XA that describes an unspecified injury of unspecified urinary and pelvic organ; code T27.3XXA that describes a burn of an unspecified part of the respiratory tract; and T27.7XXA that describes a corrosion of an unspecified part of the respiratory tract were listed in Table 6P.2a. Our clinical advisors note that while we encourage the reporting and coding to the highest possible level of specificity based on documentation, the codes listed in Table 6P.2a were intended to be limited to “unspecified” diagnosis codes currently designated as either CC or MCC, where there are other codes available in that code subcategory that further specify the anatomic site involved, when the location could be on the right, the left, or could be bilateral, and not parts of body sites.

Therefore, after further consideration, and for the reasons noted, we believe that the 58 ICD–10–CM diagnosis codes listed in the following table should not be included for consideration of changing the severity level designation as part of the list of “unspecified” diagnosis codes currently designated as either CC or MCC, where there are other codes available in that code subcategory that further specify the anatomic site.

**Comment:** Some commenters suggested that CMS can meet its goal to improve coding specificity through other mechanisms, such as working with the Cooperating Parties for ICD–10 to update coding guidelines to allow coding specificity from other clinical staff documentation. These commenters indicated they are supportive of CMS’ efforts but believe CMS should first focus on provider outreach and education and consider updating the ICD–10–CM Official Guidelines for Coding and Reporting. Commenters
Comment: A number of commenters recommended (or urged) CMS to delay any possible change to the designation of these codes for at least two years to give hospitals and their physicians time to prepare. These commenters stated the change of this magnitude should not be implemented without giving providers time to restructure physician documentation improvement plans and to provide additional education to physicians and coders related to documentation practices. These commenters also stated a delay will give hospitals the time needed to update computer-assisted coding systems to incorporate this change to reduce the administrative burden on physicians related to documentation. Other commenters stated more time is needed before finalizing any policy decisions since this change impacts the quality and risk of mortality scores generated by commercial insurers who often follow CMS’ coding and MS–DRG changes. Another commenter stated that this is a significant change from an operational perspective that, if implemented, will create significant administrative burden for hospitals at a time when administrative and clinical resources are still stretched thin by the COVID–19 pandemic.

Response: We appreciate the commenter’s concern’s after consideration of the public comments we received, we are maintaining the severity level designation of all “unspecified” diagnosis codes currently designated as a CC or MCC where there are other codes available in that code subcategory that further specify the anatomic site for FY 2022. Instead, we are finalizing the Unspecified code MCC severity levels list for FY 2022 and are available via the internet on the CMS website at: https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html.

Table 6.1—Proposed Additions to the MCC List—FY 2022; and Table 6.2—Proposed Deletions to the MCC List—FY 2022; and

Table 6.1—Proposed Additions to the CC List—FY 2022.

Comment: Commenters agreed with the proposed additions and deletions to the diagnosis code MCC severity levels list and the proposed additions and deletions to the diagnosis code CC severity levels list for FY 2022 and are available via the internet on the CMS website at: https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html.

Table 6.1—Complete MCC List—FY 2022; and Table 6.1—Additions to the MCC List—FY 2022; and Table 6.2—Deletions to the MCC List—FY 2022; and Table 6.1—Complete CC List—FY 2022; and Table 6.1—Additions to the CC List—FY 2022; and Table 6.2—Deletions to the CC List—FY 2022.

We continue to be interested in receiving feedback on how we might otherwise foster the documentation and reporting of the most specific diagnosis codes supported by the available medical record documentation and clinical knowledge of the patient’s health condition to more accurately reflect each health care encounter and improve the reliability and validity of the coded data. Comments should be directed to the MS–DRG Classification Change Mailbox located at: MSDRGClassificationChange@cms.hhs.gov.

d. Additions and Deletions to the Diagnosis Code Severity Levels for FY 2022

In the FY 2022 IPPS/LTCPPS proposed rule (86 FR 25180) we noted the following tables identify the proposed additions and deletions to the diagnosis code MCC severity levels list and the proposed additions and deletions to the diagnosis code CC severity levels list for FY 2022 and are available via the internet on the CMS website at: https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html.

d. Additions and Deletions to the Diagnosis Code Severity Levels for FY 2022

In the FY 2022 IPPS/LTCPPS proposed rule (86 FR 25180) we noted the following tables identify the proposed additions and deletions to the diagnosis code MCC severity levels list and the proposed additions and deletions to the diagnosis code CC severity levels list for FY 2022 and are available via the internet on the CMS website at: https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html.

Table 6.1—Proposed Additions to the MCC List—FY 2022; and Table 6.2—Proposed Deletions to the MCC List—FY 2022; and Table 6.1—Proposed Additions to the CC List—FY 2022.

We continue to be interested in receiving feedback on how we might otherwise foster the documentation and reporting of the most specific diagnosis codes supported by the available medical record documentation and clinical knowledge of the patient’s health condition to more accurately reflect each health care encounter and improve the reliability and validity of the coded data. Comments should be directed to the MS–DRG Classification Change Mailbox located at: Msdrgclassificationchange@cms.hhs.gov.
a Table 6J.2.—Proposed Deletions to the CC List—FY 2022 listed because we were not specifically proposing to delete any diagnosis codes from the current CC list effective with discharges on October 1, 2021 for FY 2022. However, we have included Table 6J.2 in association with this final rule for completeness, to display diagnosis code M35.8 (Other specified systemic involvement of connective tissue) that was previously designated as a CC in FY 2020 and was deleted effective January 1, 2021 due to the creation of diagnosis codes, M35.81 (Multisystem inflammatory syndrome) and M35.89 (Other specified systemic involvement of connective tissue) effective January 1, 2021 as displayed in the footnote of Table 6A.—New Diagnosis Codes—FY 2022. Similar to the process we described in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32559), where we solicited comments and provided the public an opportunity to comment on the severity level designations (in addition to the MDC and MS–DRG assignments) that had been implemented for the two diagnosis codes (U07.0 and U07.1) effective with discharges on and after April 1, 2020 (FY 2020) for FY 2021 consideration, in the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25191 through 25192), we provided the list of six diagnosis codes that were effective with discharges on and after January 1, 2021 in Table 6A.—New Diagnosis Codes—FY 2022 associated with the proposed rule and likewise, provided the public an opportunity to comment on the severity level designations (in addition to the MDC and MS–DRG assignments) that had been implemented for those six diagnosis codes, for FY 2022 consideration. We did not receive any comments suggesting changes to the severity level (or MDC and MS–DRG assignments) for diagnosis codes M35.81 or M35.89 that were implemented on January 1, 2021, therefore, as shown in Table 6A.—New Diagnosis Codes—FY 2022 associated with this final rule, we are maintaining the CC severity level for these two diagnoses (displaying in Table 6J.2.—Deletions to the CC List—FY 2022 also associated with this final rule, the corresponding deletion of diagnosis code M35.8 from the CC list that was implemented January 1, 2021 for completeness.

e. CC Exclusions List for FY 2022

In the September 1, 1987 final notice (52 FR 33143) concerning changes to the DRG classification system, we modified the GROUPER logic so that certain diagnoses included on the standard list of CCs would not be considered valid CCs in combination with a particular principal diagnosis. We created the CC Exclusions List for the following reasons: (1) To preclude coding of CCs for closely related conditions; (2) to preclude duplicative or inconsistent coding from being treated as CCs; and (3) to ensure that cases are appropriately classified between the complicated and uncomplicated DRGs in a pair.

In the May 19, 1987 proposed notice (52 FR 18877) and the September 1, 1987 final notice (52 FR 33154), we explained that the excluded secondary diagnoses were established using the following five principles:

- Chronic and acute manifestations of the same condition should not be considered CCs for one another;
- Specific and nonspecific (that is, not otherwise specified (NOS)) diagnosis codes for the same condition should not be considered CCs for one another;
- Codes for the same condition that cannot coexist, such as partial/total, unilateral/bilateral, obstructed/unobstructed, and benign/malignant, should not be considered CCs for one another;
- Codes for the same condition in anatomically proximal sites should not be considered CCs for one another; and
- Closely related conditions should not be considered CCs for one another.

The creation of the CC Exclusions List was a major project involving hundreds of codes. We have continued to review the remaining CCs to identify additional exclusions and to remove diagnoses from the master list that have been shown not to meet the definition of a CC. We refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50541 through 50544) for detailed information regarding revisions that were made to the CC and CC Exclusion Lists under the ICD–9–CM MS–DRGs. The ICD–10 MS–DRGs Version 38.1 CC Exclusion List is included as Appendix C in the ICD–10 MS–DRG Definitions Manual, which is available via the internet on the CMS website at: https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html for the 3,490 diagnosis codes that are currently listed in Part 1 of the CC Exclusions List and are defined as a CC when reported as a secondary diagnosis. Table 6P.3a is divided into several tabs, with the first tab titled “SDX Codes and Exclu Categories” containing columns A, B, and C. Column A (titled “ICD–10–CM Code”) lists the “unspecified” diagnosis codes that are currently listed in Part 1 of Appendix C of the CC Exclusions List. Column B (titled “Description”) lists the narrative description of each diagnosis code, and column C (titled “Exclusion Category”) contains a hyperlink to the collection of diagnosis codes which, when reported as the principal diagnosis, would cause the CC diagnosis to be considered a NonCC. For example, for line 2, Column A displays diagnosis code C34.00, column B displays “Malignant neoplasm of unspecified main bronchus” and column C displays a hyperlink to Exclusion Category number 280. When the user clicks on the hyperlink for number 280, they are directed to another tab labeled “PDX Category 280” that contains the list of diagnosis codes which, when reported as the principal diagnosis, would cause the corresponding CC diagnosis to be considered as a NonCC. In connection with the request for public comments on the potential changes to the severity level for 3,490 diagnosis codes describing an “unspecified” anatomic site, from a CC severity level to a NonCC severity level for FY 2022, Table 6P.3a was made available for readers to review and consider the list of the 3,490 “unspecified” diagnosis codes that are currently included in Part 1 of the CC Exclusions List and the principal diagnosis exclusion category with which they are currently associated. In the proposed rule we stated that if we were to finalize the potential changes to the severity level for 3,490 diagnosis codes describing an “unspecified” anatomic site from a CC severity level to
a NonCC severity level for FY 2022, we would also finalize the removal of these codes from the CC Exclusions List for FY 2022. As discussed previously, we are not finalizing the changes to the severity level for the 3,490 diagnosis codes describing an “unspecified” anatomic site from a CC severity level to a NonCC severity level for FY 2022, and therefore we are also not finalizing the removal of these codes from the CC Exclusions List for FY 2022.

In the proposed rule we discussed three requests we received related to the CC Exclusions List logic. We received a request to review the secondary diagnoses that are excluded as a CC or MCC in the CC Exclusions List logic when any one of the following three diagnosis codes is reported as the principal diagnosis.

<table>
<thead>
<tr>
<th>ICD-10-CM Code</th>
<th>Code Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>O99.891</td>
<td>Other specified diseases and conditions complicating pregnancy</td>
</tr>
<tr>
<td>O99.892</td>
<td>Other specified diseases and conditions complicating childbirth</td>
</tr>
<tr>
<td>O99.893</td>
<td>Other specified diseases and conditions complicating puerperium</td>
</tr>
</tbody>
</table>

According to the requestor, in the ICD–10 MS–DRGs version 37.2 CC Exclusions List logic, the predecessor code for the listed diagnosis codes, diagnosis code O99.89 (Other specified diseases and conditions complicating pregnancy, childbirth and the puerperium) is listed in the collection of principal diagnosis list number 1000, therefore, when a CC or MCC secondary diagnosis associated with that principal diagnosis list describes a condition as occurring in pregnancy, childbirth or the puerperium, the CC Exclusions List logic will render that diagnosis code as a NonCC. The requestor stated that because diagnosis code O99.89 under version 37.2 of the ICD–10 MS–DRGs is now a subcategory under version 38.1 of the ICD–10 MS–DRGs, with three unique diagnosis codes to specify which obstetric stage the patient is in, in that further analysis of the new diagnosis codes (O99.891, O99.892, and O99.893) should occur to determine if changes to the collection of principal diagnosis list is warranted. The requestor provided three examples for CMS to review and consider for possible changes to the CC Exclusions List logic.

In the first example, the requestor noted that diagnosis code O72.1 (Other immediate postpartum hemorrhage) is listed as a CC secondary diagnosis associated with the collection of principal diagnosis list number 1000, and that under the ICD–10 MS–DRGs version 38.1 CC Exclusions List logic, the diagnosis listed in principal diagnosis collection number 1000 is now diagnosis code O99.893 (Other specified diseases and conditions complicating puerperium). Thus, both diagnosis codes (O72.1 and O99.893) are describing conditions occurring specifically in the postpartum or puerperium period. The postpartum period is defined as the period beginning immediately after delivery and continues for six weeks following delivery. A postpartum complication is any complication occurring within the six-week period. The requestor stated that because diagnosis code O72.1 is assigned for documented postpartum uterine atony with hemorrhage when it occurs immediately following the delivery of the baby and placenta, that CMS should review diagnosis code O99.892 (Other specified diseases and conditions complicating childbirth) and determine if it should be added to the collection of principal diagnosis list number 1000 to cause diagnosis code O72.1 to be considered as a NonCC when diagnosis code O99.892 is reported as the principal diagnosis.

In the second example, the requestor noted that diagnosis code O98.32 (Other infections with a predominantly sexual mode of transmission complicating childbirth) is associated with principal diagnosis collection number 1012. The requestor also noted that principal diagnosis collection number 1012 does not list diagnosis codes O99.891, O99.892, or O99.893 as a principal diagnosis to exclude the CC secondary diagnosis code O98.32, however, it does not list diagnosis code O99.892. The requestor further noted that the “Includes” note at Category O87 (Venous complications and hemorrhoids in the puerperium) in the FY 2021 ICD–10–CM Tabular List includes “venous complications in labor, delivery and the puerperium”, therefore, diagnosis code O87.2 would also be reported for documented hemorrhoids during labor and delivery. The requestor recommended CMS review diagnosis code O99.892 to determine if, when reported as a principal diagnosis, it should exclude CC diagnosis code O87.2. The requestor stated that the “Includes” note at Category O87 (Venous complications and hemorrhoids in the puerperium) in the FY 2021 ICD–10–CM Tabular List includes “venous complications in labor, delivery and the puerperium”, therefore, diagnosis code O87.2 would also be reported for documented hemorrhoids during labor and delivery. The requestor recommended CMS review diagnosis code O99.892
and because these diagnosis codes are specifically describing "other specified diseases and conditions complicating pregnancy, childbirth, and the puerperium," respectively, we do not believe that any of these three diagnosis codes, when reported as a principal diagnosis, should exclude any CC secondary diagnosis. In cases where any one of these three diagnosis codes is reported as a principal diagnosis, which are generally anticipated to be rare, it is understood that there is not a more specific diagnosis code available in the classification to report as the principal diagnosis that identifies the underlying or associated cause of the disease or the condition complicating the specific obstetric stage (pregnancy, childbirth, or puerperium), hence the "other specified" in the code title. Specifically, the title of category O99 is "Other maternal diseases classifiable elsewhere but complicating pregnancy, childbirth and the puerperium" and there are nine subcategories, each of which is generally associated with a single organ system or etiology, with the exception of the "other specified" subcategory (O99.8) as displayed in the following table.

### Subcategories within ICD-10-CM Category O99 Other Maternal Diseases Classifiable Elsewhere But Complicating Pregnancy, Childbirth and the Puerperium

<table>
<thead>
<tr>
<th>Subcategory</th>
<th>Description</th>

<tr>
<td>O99.8</td>
<td>Other specified diseases and conditions complicating pregnancy, childbirth and the puerperium</td>
</tr>
</tbody>
</table>

The instructional note at category O99 states "use additional code to identify specific condition" and included at each subcategory (O99.0–O99.7) are a range of codes that refer to diagnoses that are associated with the condition in the title of the subcategory that are to be reported in addition to the applicable code within the respective subcategory. For example, at subcategory O99.0 (Anemia complicating pregnancy, childbirth, and the puerperium), the range of associated codes to identify the specific condition (for example, type of anemia) includes conditions in diagnosis code range D50–D64, meaning that when any one of the diagnosis codes under subcategory O99.0 describing anemia complicating a specific obstetric stage (pregnancy, childbirth, or puerperium) is reported, a code within the D50–D64 code range to identify the specific type of anemia would also be expected to be reported when supported by the medical record documentation. It is therefore reasonable to associate the two conditions (one from subcategory O99.0 and one from code range D50–D64) when reported on a claim. However, the same cannot be stated for subcategory O99.8. There is no range of associated codes from which users are instructed to report located at this particular subcategory in addition to the specific code under sub-subcategory O99.89 (Other specified diseases and conditions complicating pregnancy, childbirth and the puerperium). We note that subcategory O99.8 and sub-subcategory O99.89 have the same title. Therefore, when a diagnosis code from other than that sub-subcategory is reported that describes a condition occurring in any one of the obstetric stages (pregnancy, childbirth, or puerperium) it is not clear if the condition can reasonably be associated to correspond to the "other specified diseases and conditions" diagnosis. In addition, the code ranges included at subcategory O99.8 are D00–D48, H00–H95, M00–N99, and Q00–Q99. Consequently, diagnosis codes within those code ranges would be expected to be reported with one of the diagnosis codes under subcategory O99.8 when reported as a principal diagnosis.

In all three of the requestor’s examples, the diagnosis codes provided for CMS to review and consider are located in the “O” code range (O72.1, O98.32, and O87.2 in addition to O99.891, O99.892, and O99.893). As noted previously, the code ranges included at subcategory O99.8 as listed, do not include any codes in the "O" code range. Upon review of the diagnosis codes provided by the requestor, it is also reasonable to expect that any one of those diagnosis codes (O72.1, O98.32, and O87.2) could be
reported as a principal diagnosis alone. For instance, there are no instructional notes at diagnosis code O72.1 that preclude that diagnosis code from being reported as the principal diagnosis.

We stated in the proposed rule that during our review of the CC Exclusions List logic in response to the requestor's recommendations, we also identified some diagnosis codes describing the specific trimester of pregnancy that we believe warrant further examination. We noted that we were unable to fully evaluate these conditions for FY 2022, therefore, we will continue to analyze for future rulemaking.

For the reasons discussed, we stated in the proposed rule that we do not believe that any of the three diagnosis codes (O99.891, O99.892, and O99.893), when reported as a principal diagnosis, should exclude any CC secondary diagnosis. Therefore, we proposed to remove diagnosis codes O99.891, O99.892, and O99.893 from the CC Exclusions List logic. Specifically, we proposed to remove those diagnosis codes from the following principal diagnosis collection list numbers 0085, 0954, 0956 through 0963, 0972, 0988, 0991 through 0998, 1000 through 1002, 1004, 1006, 1009, 1011, 1014, 1015, 1019, 3999, 4000, 4002 through 4006, 4008, 4010, through 4013, 4017, 4020, 4021, 4023 through 4026, 4030, 4031, 4033 through 4043, 4050 through 4054, 4059 through 4063, 4065 and 4067, effective FY 2022.

We did not receive any comments opposing our proposal, therefore, we are finalizing the proposal to maintain the structure of principal diagnosis collection list number 0744 in the CC Exclusions List logic for FY 2022.

ICD-10-CM

<table>
<thead>
<tr>
<th>Code</th>
<th>Code Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>150.23</td>

</tr>
</tbody>
</table>

However, the requestor stated that diagnosis codes I50.21 (Acute systolic (congestive) heart failure) and I50.31 (Acute diastolic (congestive) heart failure) are not excluded from acting as MCCs when diagnosis code I11.0 is reported as the principal diagnosis. The requestor also stated that all diagnosis codes in category I50 (Heart Failure) share common etiologies and demonstrate comparable severity of illness. Therefore, the requestor suggested that none of the conditions in this category (I50) should be excluded from acting as a MCC when diagnosis code I11.0 is reported as a principal diagnosis.

In the proposed rule we stated that we examined all the diagnosis codes in category I50 with regard to the CC Exclusions List logic. In addition to diagnosis code I11.0, we also reviewed diagnosis code I13.2 (Hypertensive heart and chronic kidney disease with heart failure and with stage 5 chronic kidney disease, or end stage renal disease) when reported as a principal diagnosis because that diagnosis code also has the Tabular instruction “use additional code to identify the type of heart failure”.

We found additional inconsistencies in the CC secondary diagnosis heart failure codes where some diagnoses were excluded depending on the principal diagnosis reported and others were not excluded. As a result, we proposed to revise the CC Exclusions Logic list for diagnosis codes I11.0 and
I13.2 when reported as a principal diagnosis to ensure they are consistent in the CC and MCC diagnoses they exclude. In the proposed rule we showed the findings for each diagnosis code in category I50 in the following table with respect to the current severity level (MCC, CC or NonCC), if it is currently excluded as a CC or MCC when reported with either diagnosis code I11.0 or I13.2 as the principal diagnosis, and our proposal under the CC Exclusions List logic for FY 2022.

</tbody>
</table>

Comment: Several commenters agreed with our proposal to revise the CC Exclusions List logic for diagnosis codes I11.0 and I13.2 when either code is reported as a principal diagnosis. A commenter also suggested that the changes made for diagnosis code I13.2 should be made for diagnosis code I13.0 (Hypertensive heart and chronic kidney disease with heart failure)
disease with heart failure and stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney disease). Response: With regard to the commenter’s suggestion that changes made for diagnosis code I13.2 should also be made for diagnosis code I13.0, we appreciate the feedback. We were unable to fully evaluate the request for FY 2022 consideration, therefore, we will examine this issue for future rulemaking and determine if there are other diagnoses that should also be considered further.

After consideration of the comments received, we are finalizing our proposal to revise the CC Exclusions Logic list for diagnosis codes I11.0 and I13.2 when reported as a principal diagnosis, without modification, for FY 2022.

We also proposed additional changes to the ICD–10 MS–DRGs Version 39 CC Exclusion List based on the diagnosis and procedure code updates as discussed in section I.D.13. of the FY 2022 IPPS/LTCF PPS proposed rule and set forth in Tables 6G.1, 6G.2, 6H.1, and 6H.2 associated with the proposed rule and available via the internet on the CMS website at https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html.

Comment: A commenter stated they did not agree with the proposed MCC exclusion for new diagnosis codes S06.A0XA (Traumatic brain compression without herniation, initial encounter) and S06.A1XA (Traumatic brain compression with herniation, initial encounter) as shown in Tables 6G.1 and 6G.2 associated with the proposed rule, when reported with principal diagnoses from subcategories S06.1-, S06.2, S06.3, S06.4, S06.5, or S06.6. According to the commenter, patients with brain compression secondary to traumatic intracranial injuries have significantly higher morbidity and mortality, longer length of stays, and greater consumption of resources than those without brain compression. The commenter identified that the current code for brain compression (G93.5) has been separately reportable as a MCC with principal diagnoses from subcategories S06.4, S06.5, and S06.6; and maintained that the new codes for brain compression should reasonably retain MCC severity. The commenter added that some epidural, subdural, and subarachnoid hemorrhages are small, easily monitored and without compression; but others result in significant brain compression with longer length of stays and greater consumption of resources with the MCC severity differentiating these groups of patients. The commenter asserted that brain compression should also be a MCC when reported with principal diagnoses from subcategories S06.2 (Diffuse traumatic brain injury) and S06.3 (Focal traumatic brain injury) for the same reasons.

Lastly, the commenter stated that because diffuse traumatic brain injury with diffuse cerebral edema must be reported with a single code from subcategory S06.1-, it is additionally reasonable for brain compression to be a MCC severity with a principal diagnosis of traumatic cerebral edema (S06.1) in order to differentiate between patients with and without the life-threatening complication of brain compression.

Response: We appreciate the commenter’s feedback. It is not clear from the commenter’s statement if they were unable to differentiate the content between Table 6G.1 and Table 6G.2 associated with the proposed rule. We note that for Table 6G.1, each secondary diagnosis code proposed for addition to the CC Exclusion List is shown with an asterisk and the principal diagnoses proposed to exclude the secondary diagnosis code are provided in the indented column immediately following it. For Table 6G.2, each of the principal diagnosis codes for which there is a proposed CC exclusion is shown with an asterisk and the conditions proposed for addition to the CC Exclusion List that will not count as a CC are provided in an indented column immediately following the affected principal diagnosis. We believe the commenter may have inadvertently reviewed Table 6G.2 as if it were Table 6G.1. To clarify, diagnosis codes S06.A0XA and S06.A1XA, as shown in Table 6G.1 with an asterisk, were proposed to be excluded from acting as a secondary diagnosis MCC when any one of the following diagnoses are reported as the principal diagnosis; G93.6 (Cerebral edema), G93.82 (Brain death), S06.1X0A (Traumatic cerebral edema without loss of consciousness, initial encounter), S06.A0XA (Traumatic brain compression without herniation, initial encounter), and S06.A1XA (Traumatic brain compression with herniation, initial encounter). We are providing the following table to illustrate how the content of Table 6G.1 associated with the proposed rule (and available via the internet on the CMS website at https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html), are displayed for these codes. We note that Table 6G.1 does not include the decimal point for any of the diagnosis codes listed.

### Table 6G.1: Diagnosis Exclusions for FY 2022

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>S06.A0XA</td>
<td>Traumatic brain compression without hazeination, initial encounter</td>
</tr>
<tr>
<td>S06.A1XA</td>
<td>Traumatic brain compression with herniation, initial encounter</td>
</tr>
</tbody>
</table>

As shown in the table, codes S06.A0XA and S06.A1XA are the secondary diagnosis codes that were proposed for addition to the CC Exclusion List as shown with an asterisk, and the principal diagnoses proposed to exclude these codes from acting as a MCC are provided in the indented column immediately following each. Therefore, our proposal was not to exclude codes S06.A0XA and S06.A1XA from acting as a MCC when reported with principal diagnoses from subcategories S06.2, S06.3, S06.4, S06.5, or S06.6, as there are no codes from those subcategories listed in the table. With respect to subcategory S06.1, as shown in the table, diagnosis code S06.1X0A is listed as a principal diagnosis that would exclude codes S06.A0XA and S06.A1XA from acting as a MCC when reported as a secondary diagnosis, as proposed.

We acknowledge that diffuse traumatic brain injury with diffuse cerebral edema must be reported with a single code from subcategory S06.1- per the Excludes 1 note at subcategory S06.2-, therefore, we consulted with staff at the Centers for Disease Control’s (CDC’s) National Center for Health Statistics (NCHS) because NCHS has the
lead responsibility for the ICD–10–CM diagnosis codes. The NCHS’ staff confirmed that the Excludes 1 note at subcategory S06.2- requires further clinical review and consideration. We also examined the predecessor code for new diagnosis codes S06.A0XA and S06.A1XA, (code S06.1X0A), to identify the principal diagnosis collection list (list of principal diagnosis codes) that exclude code S06.1X0A from acting as a MCC and were the basis for the list of principal diagnosis codes proposed to exclude new diagnosis codes S06.A0XA and S06.A1XA from acting as a MCC when reported as a principal diagnosis. We note that code S06.1X0A is associated with principal diagnosis collection number 3977 and includes diagnosis codes G93.6, G93.8, and S06.1X0A, consistent with the principal diagnosis exclusions proposed for new diagnosis codes S06.A0XA and S06.A1XA.

We refer the reader to Table 6G.2 associated with the proposed rule (available via the internet on the CMS website at https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html), to review how codes S06.A0XA and S06.A1XA were displayed as principal diagnoses as shown with an asterisk, and the conditions proposed for addition to the CC Exclusion List to not count as a CC are provided in an indented column immediately following the affected principal diagnosis. Among the conditions proposed for addition to the CC Exclusion List to not count as a CC are those from subcategories S06.1, S06.2, S06.3, S06.4, S06.5, and S06.6. As such, we believe the commenter inadvertently reviewed Table 6G.2 as if it were Table 6G.1. After consideration of the public comments received, and until such time the CDC/NCHS staff can review the Excludes note at subcategory S06.2- further, we are finalizing our proposal to exclude diagnosis codes S06.A0XA and S06.A1XA from acting as a MCC when one of the listed diagnosis codes from Table 6G.1 is reported as a principal diagnosis and we are also finalizing our proposal to exclude the listed diagnosis codes in Table 6G.2 from acting as a MCC when diagnosis code S06.A0XA or S06.A1XA is reported as the principal diagnosis.

As discussed in section II.D.13. of the preamble of this final rule, we are finalizing, without modification, the proposed assignments and designations for the diagnosis codes after consideration of the public comments received. Therefore, the finalized CC Exclusions List as displayed in Tables 6G.1, 6G.2, 6H.1, 6H.2, and 6K, associated with this final rule reflect the severity levels under V39 of the ICD–10 MS–DRGs.

We have developed Table 6G.1.—Secondary Diagnosis Order Additions to the CC Exclusions List—FY 2022; Table 6G.2.—Principal Diagnosis Order Additions to the CC Exclusions List—FY 2022; Table 6H.1.—Secondary Diagnosis Order Deletions to the CC Exclusions List—FY 2022; and Table 6H.2.—Principal Diagnosis Order Deletions to the CC Exclusions List—FY 2022; and Table 6K. Complete List of CC Exclusions—FY 2022.

For Table 6G.1, each secondary diagnosis code finalized for addition to the CC Exclusion List is shown with an asterisk and the principal diagnoses finalized to exclude the secondary diagnosis code are provided in the indented column immediately following it. For Table 6G.2, each of the principal diagnosis codes for which there is a CC exclusion is shown with an asterisk and the conditions finalized for addition to the CC Exclusion List that will not count as a CC are provided in an indented column immediately following the affected principal diagnosis. For Table 6H.1, each secondary diagnosis code finalized for deletion from the CC Exclusion List is shown with an asterisk followed by the principal diagnosis codes that currently exclude it. For Table 6H.2, each of the principal diagnosis codes is shown with an asterisk and the finalized deletions to the CC Exclusions List are provided in an indented column immediately following the affected principal diagnosis. Table 6K is a list of all of the codes that are defined as either CC or a MCC when used as a secondary diagnosis. Within the table each code is specifically indicated as CC or MCC. A table number is given to a collection of diagnosis codes which, when used as the principal diagnosis, will cause the CC or MCC to be considered as only a NonCC. Tables 6G.1., 6G.2., 6H.1., 6H.2, and 6K, associated with this final rule are available via the internet on the CMS website at: https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html.

The ICD–10 MS–DRGs Version 39 CC Exclusion List is included as Appendix C of the Definitions Manual (available in two formats; text and HTML). The manuals are available via the internet on the CMS website at: https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/DRGClassifications-and-Software and each format includes two lists identified as Part 1 and Part 2. Part 1 is the list of all diagnosis codes that are defined as a CC or MCC when reported as a secondary diagnosis. For all diagnosis codes on the list, a link (HTML version) is provided to a collection of diagnosis codes which, when used as the principal diagnosis, would cause the CC or MCC diagnosis to be considered as a non-CC. Part 2 is the list of diagnosis codes designated as a MCC only for patients discharged alive; otherwise, they are assigned as a non-CC.

13. Changes to the ICD–10–CM and ICD–10–PCS Coding Systems

To identify new, revised and deleted diagnosis and procedure codes, for FY 2022, we have developed Table 6A.—New Diagnosis Codes, Table 6B.—New Procedure Codes, Table 6C.—Invalid Diagnosis Codes, Table 6D.—Invalid Procedure Codes Table 6E.—Revised Diagnosis Code Titles, and Table 6F.—Revised Procedure Codes Table 6G. for this final rule.

These tables are not published in the Addendum to the proposed rule or final rule, but are available via the internet on the CMS website at: https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html as described in section VI. of the Addendum to this final rule. As discussed in section II.D.16. of the preamble of this final rule, the code titles are adopted as part of the ICD–10 (previously ICD–9–CM) Coordination and Maintenance Committee meeting process. Therefore, although we publish the code titles in the IPPS proposed and final rules, they are not subject to comment in the proposed or final rules.

In the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25186) we proposed the MDC and MS–DRG assignments for the new diagnosis codes and procedure codes as set forth in Table 6A.—New Diagnosis Codes and Table 6B.—New Procedure Codes. We also stated that the proposed severity level designations for the new diagnosis codes are set forth in Table 6A, and the proposed O.R. status for the new procedure codes are set forth in Table 6B. Consistent with our established process, we examined the MS–DRG assignment and the attributes (severity level and O.R. status) of the predecessor diagnosis or procedure code, as applicable, to inform our proposed assignments and designations. Specifically, we reviewed the predecessor code and MS–DRG assignment most closely associated with the new diagnosis or procedure code, and in the absence of claims data, we considered other factors that may be
relevant to the MS–DRG assignment, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis and/or treatment of the condition. We noted that this process does not automatically result in the new diagnosis or procedure code being proposed for assignment to the same MS–DRG or to have the same designation as the predecessor code.

Comment: A commenter stated they did not agree with the proposed severity level for diagnosis code I5A (Non-ischemic myocardial injury (non-traumatic)) shown as a CC in Table 6A.—New Diagnosis Codes. According to the commenter, the 4th Universal Definition of MI states that a non-ischemic myocardial injury is diagnosed only with an elevated troponin. The commenter recommended that the CC severity level for this diagnosis code be changed to a NonCC and to allow the underlying cause of the non-ischemic myocardial injury to act as the CC or MCC instead.

Response: We appreciate the commenter’s feedback. Consistent with our annual process of assigning new diagnosis codes to MDCs, MS–DRGs, and designating a severity level (MCC, CC or NonCC), we reviewed the predecessor diagnosis code assignment for code I5A. The predecessor code for code I5A is diagnosis code I21.A9 (Other myocardial infarction type), which is designated as a MCC. Our clinical advisors did not agree with a MCC severity level assignment for code I5A because they stated nonischemic myocardial injury may be secondary to cardiac conditions such as myocarditis or non-cardiac conditions such as renal failure and the clinical evaluation and work up vary depending on the results of testing. Upon further review, they continue to believe that a CC severity level designation is warranted.

Comment: A commenter stated they did not agree with the proposed designation of procedure codes 07DT0ZX (Extraction of bone marrow, open approach, diagnostic) and 07DT0ZZ (Extraction of bone marrow, open approach) shown as Non-O.R. procedures in Table 6B.—New Procedure Codes. According to the commenter, these procedures should be classified as O.R. procedures because open incision down to bone with direct visualization of bone marrow during extraction requires operating room resources and anesthesia.

Response: We appreciate the commenter’s feedback. Consistent with our annual process of assigning new procedure codes to MDCs, MS–DRGs, and classifying as an O.R. or Non-O.R. procedure, we reviewed the predecessor procedure code assignment for codes 07DT0ZX and 07DT0ZZ. The predecessor code for code 07DT0ZX is procedure code 079T0ZX (Drainage of bone marrow, open approach, diagnostic), which is designated as a Non-O.R. procedure and the predecessor code for code 07DT0ZZ is 079T0ZZ (Drainage of bone marrow, open approach) which is also designated as a Non-O.R. procedure. Our clinical advisors did not agree with an O.R. designation because they stated open bone marrow biopsy procedures would rarely be performed and rarely be the primary cause for an inpatient admission contributing to resource consumption. They indicated that if performed, it is more likely they would be conducted in connection with another open surgical procedure.

After consideration of the comments received, for FY 2022, we are maintaining the CC severity level for diagnosis code I5A and finalizing the Non-O.R. designation for procedure codes 07DT0ZX and 07DT0ZZ. We are making available on the CMS website at https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html the following tables associated with this final rule:

- Table 6A.—New Diagnosis Codes—FY 2022;
- Table 6B.—New Procedure Codes—FY 2022;
- Table 6C.—Invalid Diagnosis Codes—FY 2022;
- Table 6D.—Invalid Procedure Codes—FY 2022;
- Table 6E.—Revised Diagnosis Code Titles—FY 2022;
- Table 6F.—Revised Procedure Code Titles—FY 2022;

- Table 6H.1.—Secondary Diagnosis Order Deletions to the CC Exclusions List—FY 2022;
- Table 6H.2.—Principal Diagnosis Order Deletions to the CC Exclusions List—FY 2022;
- Table 6I.1.—Complete MCC List—FY 2022;
- Table 6I.2.—Deletions to the MCC List—FY 2022;
- Table 6J.1.—Complete CC List—FY 2022;
- Table 6J.2.—Deletions to the CC List—FY 2022; and
- Table 6K.—Complete List of CC Exclusions—FY 2022

14. Changes to the Medicare Code Editor (MCE) The Medicare Code Editor (MCE) is a software program that detects and reports errors in the coding of Medicare claims data. Patient diagnoses, procedure(s), and demographic information are entered into the Medicare claims processing systems and are subjected to a series of automated screens. The MCE screens are designed to identify cases that require further review before classification into an MS–DRG.

As discussed in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58448), we made available the FY 2021 ICD–10 MCE Version 38 manual file. The manual contains the definitions of the Medicare code edits, including a description of each coding edit with the corresponding diagnosis and procedure code edit lists. The link to this MCE manual file, along with the link to the mainframe computer software for the MCE Version 38 (and ICD–10 MS–DRGs) are posted on the CMS website at https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.

In the FY 2022 IPPS/LTCH PPS proposed rule, we addressed the MCE requests we received by the November 1, 2020 deadline. We also discussed the proposals we were making based on our internal review and analysis. In this FY 2022 IPPS/LTCH PPS final rule, we present a summation of the comments we received in response to the MCE requests and proposals presented based on internal review and analyses in the proposed rule, our responses to those comments, and our finalized policies. In addition, as a result of new and modified code updates approved after the annual spring ICD–10 Coordination and Maintenance Committee meeting, we routinely make changes to the MCE. In the past, in both the IPPS proposed and final rules, we have only provided the list of changes to the MCE that were brought to our attention after the prior year’s final rule. We historically have not listed the changes we have made to the MCE as a result of the new and modified codes approved after the annual spring ICD–10 Coordination and Maintenance Committee meeting, These changes are approved too late in the rulemaking schedule for inclusion in the proposed rule. Furthermore, although our MCE policies have been described in our proposed and final
rules, we have not provided the detail of each new or modified diagnosis and procedure code edit in the final rule. However, we make available the finalized Definitions of Medicare Code Edits (MCE) file. Therefore, we are making available the FY 2022 ICD–10 MCE Version 39 Manual file, along with the link to the mainframe and computer software for the MCE Version 39 (and ICD–10 MS–DRGs), on the CMS website at https://www.cms.gov/Medicare/.
example, a male patient with cervical cancer (diagnosis) or a female patient with a prostatectomy (procedure). In both instances, the indicated diagnosis or the procedure conflicts with the stated sex of the patient. Therefore, the patient’s diagnosis, procedure, or sex is presumed to be incorrect.

(1) Diagnoses for Females Only Edit

As discussed in section II.D.13. of the preamble of the proposed rule and section II.D.13. of this final rule, Table 6A.—New Diagnosis Codes, lists the new diagnosis codes that have been approved to date which will be effective with discharges on and after October 1, 2021. We proposed to add the following new ICD–10–CM diagnosis codes to the edit code list for the Diagnoses for Females Only edit.

<table>
<thead>
<tr>
<th>ICD-10-CM code</th>
<th>Code description</th>
</tr>
</thead>
<tbody>
<tr>
<td>C56.3</td>
<td>Malignant neoplasm of bilateral ovaries</td>
</tr>
<tr>
<td>C79.63</td>
<td>Secondary malignant neoplasm of bilateral ovaries</td>
</tr>
</tbody>
</table>

Comment: Commenters supported the proposal to add the ICD–10–CM diagnosis codes listed in the previous table to the Diagnoses for Females Only edit code list.

Response: We appreciate the commenters’ support.

After consideration of the public comments we received, we are finalizing our proposal to add the diagnosis codes listed in the previous table to the Diagnoses for Females Only edit code list under the ICD–10 MCE Version 39, effective October 1, 2021.

d. Unacceptable Principal Diagnosis Edit

In the MCE, there are select codes that describe a circumstance which influences an individual’s health status but does not actually describe a current illness or injury. There also are codes that are not specific manifestations but may be due to an underlying cause. These codes are considered unacceptable as a principal diagnosis. In limited situations, there are a few codes on the MCE Unacceptable Principal Diagnosis edit code list that are considered “acceptable” when a specified secondary diagnosis is also coded and reported on the claim.

As discussed in section II.D.13. of the preamble of the proposed rule and section II.D.13. of this final rule, Table 6A.—New Diagnosis Codes, lists the new diagnosis codes that have been approved to date which will be effective with discharges on and after October 1, 2021. We stated in the proposed rule that as a result of proposed new instructional notes to “Code first underlying disease” (which indicate the proper sequencing order of the codes) for existing diagnosis codes found at subcategory M40.1 (Other secondary kyphosis) and subcategory M41.5 (Other secondary scoliosis) discussed at the September 8–9, 2020 ICD–10 Coordination and Maintenance Committee meeting, we were proposing to add the following new and, if those instructional notes were finalized, existing ICD–10–CM diagnosis codes at subcategories M40.1 and M41.5, to the Unacceptable Principal Diagnosis edit code list.

Unacceptable Principal Diagnosis edit

Comment: Many commenters supported our proposal to add the diagnosis codes listed in the previous table to the Unacceptable Principal Diagnosis edit code list. Response: We appreciate the commenters’ support.

Comment: A commenter expressed disagreement with the proposal to add the listed diagnosis codes from subcategories M40.1 and M41.5 to the unacceptable principal diagnosis code list if the “code first underlying disease” notes are finalized. The commenter acknowledged that physicians can reasonably diagnose acquired, new onset scoliosis and/or kyphosis as “secondary” to an underlying condition; however, the commenter stated that the diagnostic workup must occur (usually as an outpatient) before the exact cause(s) can be determined, such as degenerative disc disease, spondylosis, osteoporosis, pathologic fracture, failed fusion, etc. According to the commenter, when there are two or more potential causes, physicians may be unable to identify one specific cause versus multifactorial causes and the commenter stated their concern that when queried for the underlying cause(s), the physician may respond that they are unable to determine. The commenter added that when secondary scoliosis and/or kyphosis are responsible for causing surgical hospitalizations, the ability to sequence these conditions as a principal diagnosis should remain when the underlying cause(s) cannot be obtained.

The commenter referenced language from the ICD–10–CM Official Guidelines for Coding and Reporting, with an emphasis on section I.A.13. Etiology/manifestation convention (“code first”, “use additional code” and “in diseases classified elsewhere” notes) which essentially states that “Code first” and “Use additional code” notes are also used as sequencing rules in the classification for certain codes that are not part of an etiology manifestation combination and section I.B.7. Multiple coding for a single condition, which states “code first” notes are also under certain codes that are not specifically manifestation codes but may be due to an underlying cause. When there is a “code first” note and an underlying condition is present, the underlying condition should be sequenced first, if known.

Response: We appreciate the commenters’ feedback. We note that we consulted with the staff at the Centers for Disease Control and Prevention’s (CDC’s) National Center for Health Statistics (NCHS) because NCHS has the lead responsibility for the ICD–10–CM diagnosis codes. The NCHS’ staff confirmed that the intent is that the listed diagnosis codes from subcategories M40.1 and M41.5 be reported as secondary diagnoses. The staff agreed that in cases where it could be more than one condition as the underlying cause (E.g. Multifactorial), that the guideline for the principal diagnosis could be applied. Section 11. C. (Two or more diagnoses that equally meet the definition for principal diagnosis,) in the ICD–10–CM Official Guidelines for Coding and Reporting.

After consideration of the public comments that we received, we are finalizing our proposal to add the diagnosis codes listed in the previous table to the Unacceptable Principal Diagnosis edit code list under the ICD–10 MCE Version 39, effective October 1, 2021.

In addition, as discussed in section II.D.13. of the preamble of the proposed rule and section II.D.13. of this final rule, Table 6C.—Invalid Diagnosis Codes, lists the diagnosis codes that are no longer effective October 1, 2021. Included in this table are the following ICD–10–CM diagnosis codes that are currently listed on the Unacceptable Principal Diagnosis edit code list. We proposed to delete these codes from the Unacceptable Principal Diagnosis edit code list.

Comment: Commenters agreed with our proposal to remove the codes listed in the previous table from the Unacceptable Principal Diagnosis edit code list since they are no longer valid effective October 1, 2021.

Response: We appreciate the commenters’ support.

After consideration of the public comments that we received, we are finalizing our proposal to remove the diagnosis codes previously listed from...
the Unacceptable Principal Diagnosis edit code list under the ICD–10 MCE Version 39, effective October 1, 2021.

e. Unspecified Codes

As discussed in section II.D.12.c. of the preamble of the proposed rule and this final rule, we requested public comments on a potential change to the severity level designations for “unspecified” ICD–10–CM diagnosis codes that we were considering adopting for FY 2022. In connection with that request, we also requested public comments on the potential creation of a new MCE code edit involving these “unspecified” codes for FY 2022. Specifically, this MCE code edit could trigger when an “unspecified” diagnosis code currently designated as either a CC or MCC, that includes other codes available in that code subcategory that further specify the anatomic site, is entered. We refer the reader to table 6P.3a associated with the proposed rule (which is available via the internet on the CMS website at: http://www.cms.hhs.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html) for the list of unspecified diagnosis codes that would be subject to this edit. We stated that this edit could signal to the provider that a more specific code is available to report. We also stated we believed this edit aligns with documentation improvement efforts and leverages the specificity within ICD–10. As part of our request for comment on the potential creation of this new MCE code edit for these “unspecified” codes, we noted we were interested in comments on how this MCE code edit may be developed for FY 2022 to more accurately reflect each health care encounter and improve the reliability and validity of the coded data.

Comment: Many commenters expressed support for the creation of a new “unspecified” code edit where other codes in the subcategory (family) exist describing laterality, however, the commenters stated that the edit should be phased in with a subset of the “unspecified” codes at a time. The commenters also stated this approach would help provide training time for coding professionals and clinical documentation program staff on the potential changes to the severity level for the unspecified codes. A commenter stated a phased approach could also better prepare teams to adapt to potential operational challenges in addressing these edits industry wide. Another commenter who expressed support stated they agreed with the list of codes, with the exception of the neoplasm codes.

Another commenter expressed support for the creation of a new “unspecified” code MCE edit to align with the potential change to the severity level designation of “unspecified” diagnosis codes to a NonCC when there are other codes available in that code subcategory that further specify the anatomic site.

Other commenters stated they appreciated CMS assisting hospitals to more accurately code and not negatively impact MS–DRG group assignment, however according to the commenters, edits at the time of claim submission will add significant administrative burden to hospitals. According to the commenters, it would necessitate every case being routed from billing staff back to coding staff and then coding staff having to query physicians to amend the medical record with specificity. The commenters stated they did not object to CMS instructing providers to no longer report unspecified codes if it was done in concert with updates to the coding guidelines. Commenters suggested a delay in the implementation of the edit to allow the Cooperating Parties for ICD–10 time to update the current guidelines to include reporting specificity (for example laterality) based on non-physician clinical staff documentation.

Other commenters recommended that CMS conduct an analysis of how often the unspecified codes that were listed in Table 6P.2a in association with the proposed rule are reported and how many resources they consume.

Response: In response to the recommendation that CMS implement the edit using a phased approach to allow time for staff to prepare for potential changes to the severity level for the unspecified codes, we do not believe that a phased approach is necessary. As discussed in section II.D.12.c. of the preamble of this final rule, we are not finalizing any changes to the severity level designations for the unspecified codes that were subject to the potential change and listed in Table 6P.2a in association with the proposed rule (available via the internet on the CMS website at: https://www.cms.gov/medicare/medicare-fee-for-service-payment/acuteinpatientpps/index.html), this time. As also discussed in section II.D.12.c. of the preamble of this final rule, in response to public comments, we removed the diagnosis codes describing neoplasm of an unspecified site from the list of codes that were being considered for possible adoption of a change to the severity level designation.

In response to commenters’ concerns that an edit for “unspecified” codes would create an administrative burden to hospitals, as it may result in additional physician queries, we note that the intent of the edit is not to create the need for physician queries. In anticipation of such potential concerns and suggested updates to the coding guidelines, we note that, as one of the four Cooperating Parties for ICD–10, we considered these issues in advance and updated the guidelines accordingly, as shown in the FY 2022 ICD–10–CM Official Guidelines for Coding and Reporting (available via the internet on the CMS website at: https://www.cms.gov/medicare/medicare-fee-for-service-payment/acuteinpatientpps/index.html) and discussed in section II.D.12.c. of the preamble of this final rule. Specifically, as stated in section I.B.13. of the guidelines, “When laterality is not documented by the patient’s provider, code assignment for the affected side may be based on medical record documentation from other clinicians. If there is conflicting medical record documentation regarding the affected side, the patient’s attending provider should be queried for clarification. Codes for “unspecified” side should rarely be used, such as when the documentation in the record is insufficient to determine the affected side and it is not possible to obtain clarification.” Corresponding revisions to the guidelines can also be found in section I.B.14. Therefore, we believe that the updates made to the coding guidelines address that aspect of the commenters’ concerns.

With respect to the commenters’ recommendation that CMS conduct an analysis of how often the unspecified codes that were listed in Table 6P.2a are reported and how many resources they consume, we refer to the discussion in section II.D.12.c. of the preamble of this final rule, and note that Table 6P.2a associated with the proposed rule specifically provided this information. After consideration of the public comments received, we are finalizing the implementation of a new code edit for “unspecified” codes, where there are other codes available in that code subcategory that further specify the anatomic site. As noted previously, the severity level of the unspecified diagnosis codes is unaffected and therefore this edit does not affect the payment the provider is eligible to receive. We also note that, in consideration of commenters’ concerns that more time is needed to educate providers, the implementation date for this new edit is April 1, 2022. As such, we are finalizing the new edit for FY 2022 effective with discharges on and after April 1, 2022.
We are finalizing a new “Unspecified Code Edit: to read as follows:

20. Unspecified Code Edit

Unspecified codes exist in the ICD–10–CM classification for circumstances when documentation in the medical record does not provide the level of detail needed to support reporting a more specific code. However, in the inpatient setting, there should generally be very limited and rare circumstances for which the laterality (right, left, bilateral) of a condition is unable to be documented and reported.

The following pages contain the list of unspecified ICD–10–CM diagnosis codes for which there is a more specific code to identify laterality (right, left, bilateral) within that code family.”

The list of codes subject to this edit are identified in Table 6P.3a associated with this final rule. In addition to the removal of the neoplasm codes from the unspecified codes list discussed previously, we also removed the following codes from consideration in response to public comments and further internal review, as discussed previously in connection with the potential change to the severity level designation.

BILLING CODE 4120–01–P
When a code from the list displayed in Table 6P.3a is entered on the claim, the edit will be triggered. It is the provider's responsibility to determine if a more specific code from that subcategory is available in the medical

</table>
record documentation by a clinical provider. If, upon review, additional information to identify the laterality from the available medical record documentation by any other clinical provider is unable to be obtained or there is documentation in the record that the physician is clinically unable to determine the laterality because of the nature of the disease/condition, then the provider must enter that information into the remarks section. Specifically, the provider may enter “UNABLE TO DET LAT 1” to identify that they are unable to obtain additional information to specify laterality or they may enter “UNABLE TO DET LAT 2” to identify that the physician is clinically unable to determine laterality.” This action and language will enable the Medicare Administrative Contractor (MAC) to bypass the edit and process the claim accordingly. If there is no language entered into the remarks section as to the availability of additional information to specify laterality and the provider submits the claim for processing, the claim would then be returned to the provider.

f. Future Enhancement

In the FY 2018 IPPS/LTCH PPS final rule (82 FR 38053 through 38054) we noted the importance of ensuring accuracy of the coded data from the reporting, collection, processing, coverage, payment and analysis aspects. Subsequently, in the FY 2019 IPPS/LTCH PPS proposed rule (83 FR 20235) we stated that we engaged a contractor to assist in the review of the limited coverage and non-covered procedure edits in the MCE that may also be present in other claims processing systems that are utilized by our MACs. The MACs must adhere to criteria specified within the National Coverage Determinations (NCDs) and may implement their own edits in addition to what is already incorporated into the MCE, resulting in duplicate edits. The objective of this review is to identify where duplicate edits may exist and to determine what the impact might be if these edits were to be removed from the MCE.

We have also noted that the purpose of the MCE is to ensure that errors and inconsistencies in the coded data are recognized during Medicare claims processing. As we indicated in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41228), we are considering whether the inclusion of coverage edits in the MCE necessarily aligns with that specific goal because the focus of coverage edits is on whether particular services is covered for payment purposes and not whether it was coded correctly.

As we continue to evaluate the purpose and function of the MCE with respect to ICD–10, we encourage public input for future discussion. As we have discussed in prior rulemaking, we recognize a need to further examine the current list of edits and the definitions of those edits. We continue to encourage public comments on whether there are additional concerns with the current edits, including specific edits or language that should be removed or revised, edits that should be combined, or new edits that should be added to assist in detecting errors or inaccuracies in the coded data. Comments should be directed to the MS–DRG Classification ChangeMailbox located at MSDRGClinificationChange@cms.hhs.gov by November 1, 2021.

15. Changes to Surgical Hierarchies

Some inpatient stays entail multiple surgical procedures, each one of which, occurring by itself, could result in assignment of the case to a different MS–DRG in the MDC to which the principal diagnosis is assigned. Therefore, it is necessary to have a decision rule within the Grouper by which these cases are assigned to a single MS–DRG. The surgical hierarchy, an ordering of surgical classes from most resource-intensive to least resource-intensive, performs that function. Application of this hierarchy ensures that cases involving multiple surgical procedures are assigned to the MS–DRG associated with the most resource-intensive surgical class. A surgical class can be composed of one or more MS–DRGs. For example, in MDC 11, the surgical class “kidney transplant” consists of a single MS–DRG (MS–DRG 652) and the class “major bladder procedures” consists of three MS–DRGs (MS–DRGs 653, 654, and 655). Consequently, in many cases, the surgical hierarchy has an impact on more than one MS–DRG. The methodology for determining the most resource-intensive surgical class involves weighting the average resources for each MS–DRG by frequency to determine the weighted average resources for each surgical class. For example, assume surgical class A includes MS–DRGs 001 and 002 and surgical class B includes MS–DRGs 003, 004, and 005. Assume also that the average costs of MS–DRG 001 are higher than that of MS–DRG 003, but the average costs of MS–DRG 004 and 005 are higher than the average costs of MS–DRG 002. To determine whether surgical class A should be higher or lower than surgical class B in the surgical hierarchy, we would weigh the average costs of each MS–DRG in the class by frequency (that is, by the number of cases in the MS–DRG) to determine average resource consumption for the surgical class. The surgical classes would then be ordered from the class with the highest average resource utilization to that with the lowest, with the exception of “other O.R. procedures” as discussed in this final rule.

This methodology may occasionally result in assignment of a case involving multiple procedures to the lower-weighted MS–DRG in the highest, most resource-intensive surgical class of the available alternatives. However, given that the logic underlying the surgical hierarchy provides that the Grouper search for the procedure in the most resource-intensive surgical class, in cases involving multiple procedures, this result is sometimes unavoidable. We note that, notwithstanding the foregoing discussion, there are a few instances when a surgical class with a lower average cost is ordered above a surgical class with a higher average cost. For example, the “other O.R. procedures” surgical class is uniformly ordered last in the surgical hierarchy of each MDC in which it occurs, regardless of the fact that the average costs for the MS–DRG or MS–DRGs in that surgical class may be higher than those for other surgical classes in the MDC. The “other O.R. procedures” class is a group of procedures that are only infrequently related to the diagnoses in the MDC, but are still occasionally performed on patients with cases assigned to the MDC with these diagnoses. Therefore, assignment to these surgical classes should only occur if no other surgical class more closely related to the diagnoses in the MDC is appropriate.

A second example occurs when the difference between the average costs for two surgical classes is very small. We have found that small differences generally do not warrant reordering of the hierarchy because, as a result of reassigning cases on the basis of the hierarchy change, the average costs are likely to shift such that the higher-ordered surgical class has lower average costs than the class ordered below it. As discussed in the FY 2022 IPPS/LTCH PPS proposed rule, we received a request to examine the MS–DRG hierarchy within MDC 05 (Diseases and Disorders of the Circulatory System). The requestor stated its request to review the hierarchy within MDC 05 was based on the relative weights within each MS–DRG subdivision which they stated are supportive ofHierarchy change, and average cost. The requestor stated that when multiple procedures are performed, it is
reasonable for providers to be compensated for the highest weighted procedure. The requestor did not specify which data year it analyzed to identify the relative weights. As discussed in the proposed rule and previously in this section, in reviewing the surgical hierarchy, we weigh the average costs of each MS-DRG in the class by frequency (that is, by the number of cases in the MS-DRG), not the relative weights of each MS-DRG as suggested by the requestor, to determine average resource consumption for the surgical class; therefore, consistent with our annual process, we stated we used the methodology as described previously to review the surgical hierarchy within MDC 05.

Based on our review of the surgical hierarchy within MDC 05 in response to this request, and in response to the request we received to review the MS-DRG assignments for cases involving the surgical ablation procedure for atrial fibrillation as discussed in section II.D.5.e. of the preamble of the proposed rule and this final rule, we proposed to revise the surgical hierarchy for the MS-DRGs in MDC 05 for FY 2022. Specifically, we proposed to sequence MS-DRGs 231–236 above MS-DRGs 222–227 and below MS-DRGs 216–221, sequence MS-DRGs 222–227 above MS-DRGs 266–227 and below MS-DRGs 231–236, sequence MS-DRGs 266–227 above MS-DRGs 268–269 and below MS-DRGs 222–227, sequence MS-DRGs 268–229 above MS-DRGs 319–320 and below MS-DRGs 268–269.

Our proposal for Appendix D MS-DRG Surgical Hierarchy by MDC and MS-DRG of the ICD-10 MS-DRG Definitions Manual Version 39 is illustrated in the following table.

Comment: Commenters supported our proposal. A commenter stated that this reordering of the surgical hierarchy appears reasonable. However, other commenters opposed portions of our proposal and requested that CMS reconsider and maintain MS-DRGs 222–227 (Cardiac Defibrillator Implant) as higher in the surgical hierarchy than MS-DRGs 231–236 (Coronary Bypass). These commenters stated that if CABG procedures are considered in the surgical hierarchy before procedures to insert a cardiac defibrillator implant, the majority of the cases would probably be assigned to MS-DRGs 235 and 236 (Coronary Bypass without Cardiac Catheterization with and without MCC, respectively), which would not account for the higher cost of the defibrillators.

Another commenter stated while they agreed with the proposal to sequence MS-DRGs 231–236 above MS-DRGs 222–227 (Cardiac Defibrillator Procedures), they stated that CMS did not provide specific discussion regarding the more extensive resequencing in MDC 05 and suggested that CMS to hold on these revisions to the surgical hierarchy pending a clear and specific rationale for each, to which the public can respond. Another commenter proposed an alternative option by stating that it seemed more appropriate to sequence MS-DRG 245 (AICD Generator Procedures) above MS-DRGs 270–272 (Other Major Cardiovascular Procedures) and below MS-DRGs 228–229 (Other Cardiothoracic Procedures) and to sequence MS-DRGs 270–272 above MS-DRGs 319–320 (Other Endovascular Cardiac Valve Procedures) and below MS-DRG 245. However, this commenter did not provide any rationale for their alternative option.

Response: We appreciate the commenters’ support.

In response to the comment that CMS did not provide specific discussion, we note that we indicated in the proposed rule and previously in this section, that in reviewing the surgical hierarchy, we weigh the average costs of each MS-DRG in the class by frequency (that is, by the number of cases in the MS-DRG) to determine average resource consumption for the surgical class. Consistent with our annual process, we stated we used the methodology as described previously to review the surgical hierarchy within MDC 05.

To compare and analyze the impact of our suggested modifications in response to the commenter’s suggestion that we sequence MS-DRGs 222–227 above MS-DRGs 231–236, we reviewed the surgical hierarchy once again. Specifically, we examined the redistribution of cases that is anticipated to occur as a result of the proposal to move MS-DRGs 231–236 (Coronary Bypass) above MS-DRGs 222–227 (Cardiac Defibrillator Implant) in the surgical hierarchy of MDC 05 for Version 39 of the ICD-10 MS-DRGs. We processed the claims data from the March 2020 update of the FY 2019 MedPAR file through the ICD-10 MS-DRG GROUPER Version 38 and then processed the same claims data through the ICD-10 MS-DRG GROUPER Version 39 for comparison. The number of cases from this comparison that result in different MS-DRG assignments is the number of the cases that are anticipated to potentially shift or be redistributed. Our findings are shown in the following table.
We found that a small number of cases, 67 cases and 24 cases, are anticipated to potentially shift or be...
As we did with March 2020 update of the FY 2019 MedPAR file, we then examined the redistribution of cases that is anticipated to occur by processing the claims data, this time from the September 2020 update of the FY 2020 MedPAR file through the ICD–10 MS–DRG GROUPER Version 38 and then processed the same claims data through the ICD–10 MS–DRG GROUPER Version 39 for comparison. Our findings are shown in the following table.

</table>
Similarly, we found that a small number of cases, 84 cases and 23 cases, are anticipated to potentially shift or be redistributed into MS–DRGs 235 and 236, respectively.

Our clinical advisors reviewed these data and the commenter’s concerns and state, as in open concomitant surgical ablation procedures, when a CABG procedure is performed along with the insertion of a cardiac defibrillator implant, the CABG component of the procedure is more technically complex than the procedure to insert the cardiac defibrillator implant. The redistribution of the small number of cases to MS–DRGs 235 and 236 as a result of the proposed hierarchy change more appropriately reflects resource utilization when multiple cardiac procedures are performed and will result in the most suitable MS–DRG assignment.

In the absence of a compelling rationale to further modify our proposal as suggested by the alternate option provided by the commenter, our clinical advisors continue to state that the proposed revision to the surgical hierarchy leads to a grouping that is more coherent and better accounts for the resources expended to address the more complex procedures from other cases redistributed during the hierarchy change.

Therefore, after consideration of the public comments we received, we are finalizing the proposed changes to the surgical hierarchy for the MS–DRGs in MDC 05 as illustrated in the table for the surgical hierarchy within Appendix D MS–DRG Surgical Hierarchy by MDC and MS–DRG of the ICD–10 MS–DRG Definitions Manual Version 39, without modification, for FY 2022.

In September 1985, the ICD–9–CM Coordination and Maintenance Committee was formed. This is a Federal interdepartmental committee, co-chaired by the Centers for Disease Control and Prevention’s (CDC) National Center for Health Statistics (NCHS) and CMS, charged with maintaining and updating the ICD–9–CM system. The final update to ICD–9–CM codes was made on October 1, 2013. Therefore, the name of the Committee was changed to the ICD–10 Coordination and Maintenance Committee, effective with the March 19–20, 2014 meeting. The ICD–10 Coordination and Maintenance Committee addresses updates to the ICD–10–CM and ICD–10–PCS coding systems. The Committee is jointly responsible for approving coding changes, and developing errata, addenda, and other modifications to the coding systems to reflect newly developed procedures and technologies and newly identified diseases. The Committee is also responsible for promoting the use of Federal and non-Federal educational programs and other communication techniques with a view toward standardizing coding applications and upgrading the quality of the classification system.

The official list of ICD–9–CM diagnosis and procedure codes by fiscal year can be found on the CMS website at: https://www.cms.gov/Medicare/Coding/ICD10/index.html.

The NCHS has lead responsibility for the ICD–10–CM and ICD–9–CM diagnosis codes included in the Tabular List and Alphabetic Index for Diseases, while CMS has lead responsibility for the ICD–10–PCS and ICD–9–CM procedure codes included in the Tabular List and Alphabetic Index for Procedures.

The Committee encourages participation in the previously stated process by health-related organizations. In this regard, the Committee holds public meetings for discussion of educational issues and proposed coding changes. These meetings provide an opportunity for representatives of
recognized organizations in the coding field, such as the American Health Information Management Association (AHIMA), the American Hospital Association (AHA), and various physician specialty groups, as well as individual physicians, health information management professionals, and other members of the public, to contribute ideas on coding matters. After considering the opinions expressed during the public meetings and in writing, the Committee formulates recommendations, which then must be approved by the agencies.

The Committee presented proposals for coding changes for implementation in FY 2022 at a public meeting held on September 8–9, 2020 and finalized the coding changes following consideration of comments received at the meetings and in writing by November 09, 2020.

The Committee held its 2021 meeting on March 9–10, 2021. The deadline for submitting comments on the code proposals being considered for an October 1, 2021 implementation was April 9, 2021. It was announced at this meeting that any new diagnosis and procedure codes for which there was consensus of public support and for which complete tabular and indexing changes would be made by June 2021 would be included in the October 1, 2021 update to the ICD–10–CM diagnosis and ICD–10–PCS procedure code sets. As discussed in earlier sections of the preamble of this final rule, there are new, revised, and deleted ICD–10–CM diagnosis codes and ICD–10–PCS procedure codes that are captured in Table 6A—New Diagnosis Codes, Table 6B—New Procedure Codes, Table 6C—Invalid Diagnosis Codes, Table 6D—Invalid Procedure Codes, Table 6E—Revised Diagnosis Code Titles and Table 6F—Revised Procedure Code Titles for this final rule, which are available via the internet on the CMS website at: http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html. The code titles are adopted as part of the ICD–10 (previously ICD–9–CM) Coordination and Maintenance Committee process. Therefore, although we make the code titles available for the IPPS proposed and final rules, they are not subject to comment in the proposed or final rule. Because of the length of these tables, they are not published in the Addendum to the proposed or final rule. Rather, they are available via the internet as discussed in section VI. of the Addendum to the proposed rule and this final rule.

We refer the reader to the CDC webpage at https://www.cdc.gov/nchs/icd/icd10cm.htm for additional details regarding the implementation of these new diagnosis codes.

As we discussed in the proposed rule, we provided the MS–DRG assignments for the six diagnosis codes effective with discharges on and after January 1, 2021, consistent with our established process for assigning new diagnosis codes. Specifically, we review the predecessor diagnosis code and MS–DRG assignment most closely associated with the new diagnosis code, and consider other factors that may be relevant to the MS–DRG assignment, including the severity of illness, treatment difficulty, and the resources utilized for the specific condition/diagnosis. We note that this process does not automatically result in the new diagnosis code being assigned to the same MS–DRG as the predecessor code. The assignments for the previously listed diagnosis codes are reflected in Table 6A—New Diagnosis Codes associated with the proposed rule (which is available via the internet on the CMS website at https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS). As with the other new diagnosis codes and MS–DRG assignments included in Table 6A of the proposed rule, we solicited public comments on the most appropriate MDC, MS–DRG, and severity level assignments for these codes for FY 2022, as well as any other options for the GROUPER logic.

We did not receive any comments opposing the MDC, MS–DRG, and severity level assignments for the listed codes and are therefore, finalizing the assignments as reflected in Table 6A—New Diagnosis Codes in association with this final rule.

In addition, we noted in the proposed rule that CMS implemented 21 new procedure codes describing the introduction or infusion of therapeutics, including monoclonal antibodies and vaccines for COVID–19 treatment, into the ICD–10–PCS effective with
discharges on and after January 01, 2021. The 21 procedure codes listed in this section of this rule are designated as non-O.R. and do not affect any MDC or MS–DRG assignment as shown in the following table.

</table>
The ICD–10 MS–DRG assignment for cases reporting any one of the 21 procedure codes is dependent on the reported principal diagnosis, any secondary diagnoses defined as a CC or MCC, procedures or services performed, age, sex, and discharge status. The 21 procedure codes are reflected in Table 6B—New Procedure Codes associated with the proposed rule (which is available via the internet on the CMS website at https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS.) As with the other new procedure codes and MS–DRG assignments included in Table 6B of the proposed rule, we solicited public comments on the most appropriate MDC, MS–DRG, and operating room status assignments for these codes for FY 2022, as well as any other options for the GROUPEP logic.

We did not receive any comments opposing the MDC, MS–DRG, and operating room status assignments for the listed codes and are therefore, finalizing the assignments as reflected in Table 6B—New Procedure Codes in association with this final rule.

In the proposed rule we also noted that Change Request (CR) 11895, Transmittal 10654, titled “Fiscal Year (FY) 2021 Annual Update to the Medicare Code Editor (MCE) and International Classification of Diseases, Tenth Revision, Clinical Modification (ICD–10–CM) and Procedure Coding System (ICD–10–PCS),” was issued on March 12, 2021 (available via the internet on the CMS website at: https://www.cms.gov/Regulations-and-Guidance/Guidance/Transmittals/Transmittals/r10654cp regarding the release of an updated version of the ICD–10 MS–DRG GROUPEP and Medicare Code Editor software, Version 38.1, effective with discharges on and after January 1, 2021, reflecting the new diagnosis and procedure codes. The updated software, along with the updated ICD–10 MS–DRG V38.1 Definitions Manual and the Definitions of Medicare Code Edits V38.1 manual is available at https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.

In the September 7, 2001 final rule implementing the IPPS new technology add-on payments (66 FR 46906), we indicated we would attempt to include add-on payments (66 FR 46906), we implemented the IPPS new technology classifications and software use this diagnosis and procedure codes twice a year instead of a single update on October 1 of each year. This requirement was included as part of the amendments to the Act relating to recognition of new technology under the IPPS. Section 503(a) of Public Law 108–173 amended section 1886(d)(5)(K) of the Act by adding a clause (vii) which states that the Secretary shall provide for the addition of new diagnosis and procedure codes on April 1 of each year, but the addition of such codes shall not require the Secretary to adjust the payment (or diagnosis-related group classification) until the fiscal year that begins after such date. This requirement improves the recognition of new technologies under the IPPS by providing information on these new technologies at an earlier date. Data will be available 6 months earlier than would be possible with updates occurring only once a year on October 1.

While section 1886(d)(5)(K)(vii) of the Act states that the addition of new diagnosis and procedure codes on April 1 of each year shall not require the Secretary to adjust the payment, or DRG classification, under section 1886(d) of the Act until the fiscal year that begins after such date, we have to update the DRG software and other systems in order to recognize and accept the new codes. We also publicize the code changes and the need for a mid-year systems update by providers to identify the new codes. Hospitals also have to obtain the new code books and encoder updates, and make other system changes in order to identify and report the new codes.

The ICD–10 (previously the ICD–9–CM) Coordination and Maintenance Committee holds its meetings in the spring and fall in order to update the codes and the applicable payment and reporting systems by October 1 of each year. Items are placed on the agenda for the Committee meeting if the request is received at least 3 months prior to the meeting. This requirement allows time for staff to review and research the coding issues and prepare material for discussion at the meeting. It also allows time for the topic to be publicized in meeting announcements in the Federal Register as well as on the CMS website. A complete addendum describing details of all diagnosis and procedure coding changes, both tabular and index, is published on the CMS and NCHS websites in June of each year. Publishers of coding books and software use this information to modify their products that are used by health care providers. Historically, this 5-month time period has proved to be necessary for hospitals and other providers to update their systems.

A discussion of this timeline and the need for changes are included in the December 4–5, 2005 ICD–9–CM Coordination and Maintenance Committee Meeting minutes. The public agreed that there was a need to hold the fall meetings earlier, in September or October, in order to meet the new implementation dates. The public provided comment that additional time would be needed to update hospital systems and obtain new code books and coding software. There was considerable concern expressed about the impact this April update would have on providers.

In the FY 2005 IPPS final rule, we implemented section 1886(d)(5)(K)(vii) of the Act, as added by section 503(a) of Pub. L. 108–173, by developing a mechanism for approving, in time for the April update, diagnosis and procedure code revisions needed to describe new technologies and medical services for purposes of the new technology add-on payment process. We also established the following process for making these determinations. Topics considered during the Fall ICC–10 (previously ICD–9–CM) Coordination and Maintenance Committee meeting are considered for an April 1 update if a strong and convincing case is made by the requestor during the Committee’s public meeting. The request must identify the reason why a new code is needed in April for purposes of the new technology process. Meeting participants and those reviewing the Committee meeting materials are provided the opportunity to comment on this expedited request. All other topics are considered for the October 1 update. Participants of the Committee meeting and those reviewing the Committee meeting materials are encouraged to comment on all such requests. There were no code requests approved for an expedited April 1, 2021 implementation at the September 8–9, 2020 Committee meetings. Therefore, there were no new codes implemented April 1, 2021.

We noted in the proposed rule that during the March 9–10, 2021 ICD–10 Coordination and Maintenance Committee meeting we announced our consideration of an April 1 implementation date for ICD–10–CM diagnosis and ICD–10–PCS procedure code updates, in addition to the current October 1 annual update for ICD–10–CM diagnosis codes and ICD–10–PCS procedure codes. We stated that this April 1 code update would be in addition to the existing April 1 update under section 1886(d)(5)(K)(vii) of the Act for diagnosis or procedure code
revisions needed to describe new technologies and medical services for purposes of the new technology add-on payment process. As explained during the March 9–10, 2021 meeting, we stated we believe this additional April 1 implementation date for new codes would allow for earlier recognition of diagnoses, conditions, and illnesses as well as procedures, services, and treatments in the claims data. We also stated we believe this earlier recognition would be beneficial for purposes of reporting, data collection, tracking clinical outcomes, claims processing, surveillance, research, policy decisions and data interoperability. We noted, as previously summarized, that in 2005, in connection with the implementation of the current April 1 update for diagnosis or procedure code revisions for purposes of the new technology add-on payment process, stakeholders expressed concerns with an April 1 update, specifically with regard to the time needed to update hospital systems and obtain new code books and coding software. We further stated we believe that the advances in technology that have occurred since that time, including the use of electronic health records (EHRs), electronic coding books, and updated encoder software that are now utilized by the majority of providers, would alleviate those concerns and make a broader April 1 update more feasible today. Consistent with our established process for the existing April 1 update under section 1886(d)(5)(k)(vii) of the Act, if adopted, any new ICD–10 code updates finalized for implementation on the following April 1 would be announced in November of the prior year, which would provide a 4-month timeframe for the public to receive notice about the diagnosis and/or procedure code updates with respect to the codes, code descriptions, code designations (severity level for diagnosis codes or O.R. status for procedure codes) and code assignment under the ICD–10 MS–DRGs. As discussed during the March 9–10, 2021 meeting, all April 1 code update files would be made publicly available by February 1, providing a 2-month timeframe for providers to incorporate systems updates. We also noted in the proposed rule that we do not anticipate any need for code book publishers to issue new code books as a result of an April 1 code update, if adopted. Rather, as was done in the past at the publisher’s discretion, supplemental pages containing the code update information would be made available and sent to purchasers of the code book products. We further noted that historically, coders would hand-write any updates or notes directly into their code books. In addition, we stated in the proposed rule that with the availability of electronic code book files, we would anticipate any April 1 code updates, if adopted, could be reasonably completed in the allotted timeframe. For these same reasons, we also stated we do not believe a 5-month time period would continue to be needed to update providers’ systems to reflect newly approved coding changes. We further noted that if an April 1 update were to be adopted, it could be through a phased approach, such that initially, the number and nature of the code updates would be fewer and less comprehensive as compared to the existing October 1 update. For example, it was discussed during the meeting that consideration could first be given to proposals identified as “Addenda”. For diagnosis codes, the proposed addenda updates typically consist primarily of minor revisions to the Index and Tabular List, such as corrections to typos and changes to instructional notes. For procedure codes, the proposed addenda update typically consist primarily of minor revisions to the Index and Tables, such as adding or deleting entries to describe a body part or approach value or making changes to the Substance and Device Keys. We stated we would use our established process to implement an April 1 code update, which would include presenting proposals for April 1 consideration at the September ICD–10 Coordination and Maintenance Committee meeting, requesting public comments, reviewing the public comments, finalizing codes, and announcing the new codes with their assignments consistent with the new GROUPER release information. We also stated that under our contemplated process, requestors would indicate whether they are submitting their code request for consideration for an April 1 implementation date, if adopted, or an October 1 implementation date. We further stated that the ICD–10 Coordination and Maintenance Committee would make efforts to accommodate the requested implementation date for each request submitted. However, the Committee would determine which requests would be presented for consideration for an April 1 implementation date or an October 1 implementation date. We refer the reader to the Agenda packet from the meeting at: https://www.cms.gov/Medicare/Coding/ICD10-C-and-M-Meeting-Materials for additional information regarding this announcement and our request for comments.

We stated that if this new April 1 implementation date is adopted, we would assign the codes approved for the April 1 update to an MS–DRG(s) using our established process for GROUPER assignments for new diagnosis and procedure codes. Specifically, consistent with our established process for assigning new diagnosis and procedure codes, we would review the predecessor code and MS–DRG assignment most closely associated with the new diagnosis or procedure code, and in the absence of claims data, we would consider other factors that may be relevant to the MS–DRG assignment, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis and/or treatment of the condition. We noted that this process would not automatically result in the new diagnosis or procedure code being assigned to the same MS–DRG or having the same designation as the predecessor code.
