Electronic Tariff Filings; Notice of Updates to the Commission's E-Tariff Public Viewer

Take notice that effective August 13, 2021, the Commission's electronic tariff (eTariff) public viewer (<https://etariff.ferc.gov/>) will be improved in several respects.

First, when the user selects a tariff record title from the list at the left of the screen, the browser will no longer reset to the top of the page, requiring the user to scroll down to the selected tariff record. Instead, the tariff record and the tariff record version table for that record will appear in two separate panels with the versions of the tariff record next to the selected tariff record. This will enable users to move more quickly from tariff record to tariff record in the same section of the tariff. A new Locate Selected button also will enable users to move back to the selected tariff record.

Export	Effective Date	Superseded	Status	Change Type	Docket#	Version
☐	09/17/2010	01/01/2011	Superseded	New	ER10-2710-005	0.0.0
☐	01/01/2011	01/31/2011	Superseded	Change	ER11-2527-000	3.0.0
☐	01/31/2011	02/01/2011	Superseded	Change	ER11-2287-000	1.0.0

Second, the tariff record version numbers have been added to the table, so users can locate the specific version of the tariff record.

Third, the tariff record version table will default to listing the tariff record versions by effective date in ascending order. Also, the Column Headings for Effective Date, Superseded, Status, Change Type, Docket #, and Version can be resorted (toggling between ascending and descending) by clicking on the column heading on the tariff record version table. This will enable users to locate more easily the tariff record version for which they are looking.

k. This application has been accepted and is ready for environmental analysis.

l. **Project Description:** The project consists of: (1) A 22-foot-wide, 24-foot-high concrete intake structure located approximately 60 feet upstream of the U.S. Forest Service's Campton Dam on the east shoreline of the U.S. Forest Service's Campton Pond, that includes a 25-foot-long, 13-foot-high trashrack with 1.75-inch clear bar spacing; (2) a 600-foot-long, 78-inch-diameter underground steel penstock that trifurcates into three 48-inch-diameter sections measuring 20 feet, 30 feet, and 43 feet in length, respectively; (3) a 43-foot-long, 30-foot-wide powerhouse located on the east side of the Mad River that contains a 167-kW Francis turbine-generator unit; (4) two 236-kW submersible Flygt turbine-generator units located outside of the powerhouse; (5) an approximately 55-foot-long, 40-foot-wide tailrace; (6) a 200-foot-long transmission line and a 33.5-kilovolt transformer that connects the generators to the electric grid; (7) an Atlantic salmon smolt bypass facility consisting of an 85-foot-long, 20-inch diameter cast iron pipe that empties into an 3.5-foot-deep plunge pool approximately 15 feet downstream of the dam; and (8) appurtenant facilities. The project creates an approximately 600-foot-long bypassed reach of the Mad River.

The current license requires: (1) Inflow to be discharged over the spillway to the bypassed reach during periods of non-generation or when inflow is less than 25 cfs; (2) a minimum flow of 4.5 cfs through the Atlantic salmon smolt bypass facility during periods of generation or when inflow is greater than 25 cfs; and (3) operation of the smolt bypass facility from mid-April to mid-June. The average annual generation of the project is currently approximately 1,170 megawatt-hours (MWh).

MRPA proposes to: (1) Continue operating the project in a run-of-release mode; (2) replace one of the 236-kW Flygt turbine-generator units with a new 340-kW Flygt turbine-generator unit, for a total installed capacity of 743 kW at the project; (2) release a minimum flow of 29 cfs or inflow, whichever is less, over the dam to the bypassed reach; and (3) close the existing smolt bypass facility. MRPA estimates that the average annual generation of the proposed project will be approximately 1,900 MWh.
