The general area of RISE's planned activity is to help address the energy security and climate crises by reimagining how we use, generate, transport, and store energy and how we build efficient, modern, resilient infrastructure. RISE will also serve as an industry forum to engage with new federal energy and resilience policies, standards, and programs. The process will be fully collaborative and to fulfill its mission, RISE will recruit a broad array of members from manufacturers, technology startups, energy services companies, utilities, academic institutions, financiers, and legal, consulting, and engineering firms to accelerate energy and infrastructure modernization.
