SUPPLEMENTARY INFORMATION: Notice is here given in accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), 25 U.S.C. 3003, of the completion of an inventory of human remains and associated funerary objects under the control of the University of California, Berkeley; Berkeley, CA, and the United States Army Corps of Engineers, San Francisco District, San Francisco, CA. The human remains and associated funerary objects were removed from around Humboldt Bay, Humboldt County, CA, and they are presently located at the University of California, Berkeley.

This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA, 25 U.S.C. 3003(d)(3). The determinations in this notice are the sole responsibility of the museum, institution, or Federal agency that has control of the Native American human remains and associated funerary objects. The National Park Service is not responsible for the determinations in this notice.

Consultation

A detailed assessment of the human remains was made by the University of California, Berkeley and the United States Army Corps of Engineers, San Francisco District professional staff in consultation with representatives of the Wiyot Tribe, California [previously listed as Table Bluff Reservation—Wiyot Tribe].

History and Description of the Remains

In October 1953, human remains representing, at minimum, 20 individuals were removed from CA-HUM-112 in Humboldt County, CA, by Albert B. Elsasser and James Allan Bennyhoff. The human remains had been discovered by F. Hodgkinson, the night editor for the Humboldt Times. The remains likely were exposed as a result of a United States Army Corps of Engineers, San Francisco District (USACE) project nearby, but whether they were removed from USACE-controlled property is unclear. Some museum records suggest that they were under the control of the USACE, while others suggest that they were under the jurisdiction of the Humboldt County Sheriff. Because the matter of control is unclear, this notice is being submitted jointly by the University of California, Berkeley and the United States Army Corps of Engineers, San Francisco District. As most of the human remains were sorted by skeletal element, the age and the sex of the individuals were not

recorded. No known individuals were identified.

The 136 associated funerary objects are counted and described according to individual catalog entries as follows: 59 entries described as “Beads”; 25 entries described as “Bead”; 33 entries described as “Ornament”; one entry described as “Ornament Fragment”; one entry described as “Dentalia”; one entry described as “Arrowhead Fragment”; two entries described as “Flake”; one entry described as “Sinker (Fishing)”; one entry described as “Worked Stone”; one entry described as “Flakes”; two entries described as “Bone (tools)”; one entry described as “Potsherd”; one entry described as “Ceramic Fragment”; one entry described as “Knife”; one entry described as “Hook and Eye”; one entry described as “Rod”; one entry described as “Metal Fragments”; one entry described as “Cloth Fragments”; one entry described as “Tooth (elk)”; and one entry described as “Bone and beads.” Based on the condition of the human remains, the concentration of European-American manufactured goods, and the location of the human remains, these human remains likely belong to the victims of the Indian Island Massacre, which took place on February 26, 1860.

Most of the sites around Humboldt Bay date to the creation of the Bay approximately 5000–7000 years ago. Based on archeological and Wiyot oral traditional evidence, Wiyot have occupied this area since before the creation of Humboldt Bay. Wiyot culture is represented by the Bear River Band of the Rohnerville Rancheria, the Blue Lake Rancheria, and the Wiyot Tribe.

Determinations Made by the University of California, Berkeley and the United States Army Corps of Engineers, San Francisco District
